## Chapter 1 Supported Platforms

1.1 Paths Mentioned in Documentation .....	4
--	---

## Chapter 2 AIX Platforms

2.1 Support for Modern C++ API .....	10
2.2 Multicast Support .....	10
2.3 Transports .....	11
2.3.1 Notes for Using Shared Memory .....	11
2.4 Unsupported Features .....	11
2.5 Thread Configuration .....	12
2.5.1 Changing Thread Priority .....	13
2.6 Libraries Required for Using Monitoring .....	13
2.7 Libraries Required for Zero Copy Transfer Over Shared Memory .....	14

## Chapter 3 Android Platforms

3.1 Support for Modern C++ API .....	19
3.2 Multicast Support .....	19
3.3 Transports .....	20
3.4 Unsupported Features .....	20
3.5 Monotonic Clock Support .....	20
3.6 Thread Configuration .....	20
3.7 Support for 'Find Package' CMake Script .....	22
3.8 Libraries Required for Using Monitoring .....	22
3.9 Libraries Required for Using RTI Secure WAN Transport APIs .....	22
3.10 Libraries Required for Using RTI TCP Transport and TLS Support APIs .....	23

## Chapter 4 INTEGRITY Platforms

4.1 Required Patches for INTEGRITY 10.0.2 and 11.0.4 .....	28
4.2 Support for Modern C++ API .....	29

---

4.3 Multicast Support .....	29
4.4 Supported Transports .....	29
4.5 Unsupported Features .....	29
4.6 Thread Configuration .....	30
4.6.1 Socket-Enabled and POSIX-Enabled Threads are Required .....	31
4.7 Libraries Required for Using Distributed Logger .....	32
4.8 Libraries Required for Using Monitoring .....	32
4.9 Libraries Required for Zero Copy Transfer Over Shared Memory .....	33
4.10 Diagnostics on INTEGRITY Systems .....	33
4.11 Running over IP Backplane on a Dy4 Champ-AVII Board .....	33
4.12 Multi-NIC Support on INTEGRITY 5.0 .....	33
4.13 Out-of-the-box Transport Compatibility with Other Connex DDSS Platforms .....	33
4.13.1 Smaller Shared-Memory Receive-Resource Queue Size .....	34
4.13.2 Using Shared Memory on INTEGRITY Systems .....	34
4.13.3 Shared Memory Limitations on INTEGRITY Systems .....	35
4.14 Using rttidssping and rttidsspy on INTEGRITY Systems .....	36
4.15 Issues with INTEGRITY Systems .....	36
4.15.1 Delay When Writing to Unreachable Peers .....	36
4.15.2 Linking with 'libivfs.a' without a File System .....	36
4.15.3 Compiler Warnings Regarding Unrecognized #pragma Directives .....	36
4.15.4 Warning when Loading Connex DDSS Applications on INTEGRITY Systems .....	37
<b>Chapter 5 INtime Platforms</b>	
5.1 Support for Modern C++ API .....	42
5.2 Multicast Support .....	42
5.3 Supported Transports .....	43
5.4 Unsupported Features .....	43
5.5 Monotonic Clock Support .....	43
5.6 Libraries Required for Using Distributed Logger Support .....	43
5.7 Libraries Required for Using Monitoring .....	43
5.8 Libraries Required for Zero Copy Transfer over Shared Memory .....	44
<b>Chapter 6 iOS Platforms</b>	
6.1 Supported Languages .....	47
6.1.1 Support for Modern C++ API .....	47
6.2 Multicast Support .....	47
6.3 Transports .....	48
6.4 Unsupported Features .....	48

---

6.5 Thread Configuration .....	48
6.6 Libraries Required for Using Distributed Logger .....	49
6.7 Libraries Required for Using Monitoring .....	50
6.8 Libraries Required for Using RTI Secure WAN Transport .....	50
<b>Chapter 7 Linux Platforms</b>	
7.1 Support for Modern C++ API .....	62
7.2 Multicast Support .....	62
7.3 Supported Transports .....	62
7.3.1 Shared Memory Support .....	63
7.4 Monotonic Clock Support .....	63
7.5 Thread Configuration .....	63
7.5.1 Support for Controlling CPU Core Affinity for RTI Threads .....	63
7.5.2 Using REALTIME_PRIORITY .....	65
7.6 Durable Writer History and Durable Reader State Features .....	65
7.7 Support for 'Find Package' CMake Script .....	66
7.8 Libraries Required for Using Distributed Logger .....	66
7.9 Libraries Required for Using Monitoring .....	66
7.10 Libraries Required for Using RTI Secure WAN Transport APIs .....	67
7.11 Libraries Required for Using RTI TCP Transport and TLS Support APIs .....	68
7.12 Libraries Required for Zero Copy Transfer Over Shared Memory .....	68
<b>Chapter 8 LynxOS Platforms</b>	
8.1 Support for Modern C++ API .....	72
8.2 Multicast Support .....	72
8.3 Supported Transports .....	73
8.3.1 Shared Memory Support .....	73
8.4 Unsupported Features .....	74
8.5 Thread Configuration .....	74
8.6 Libraries Required for Using Monitoring .....	75
8.7 Libraries Required for Zero Copy Transfer Over Shared Memory .....	76
8.8 IP Fragmentation Issues .....	76
<b>Chapter 9 OS X Platforms</b>	
9.1 Support for Modern C++ API .....	82
9.2 Multicast Support .....	82
9.3 Supported Transports .....	83
9.4 Unsupported Features .....	83
9.5 System Integrity Protection (SIP) .....	83

---

9.5.1 SIP and Java Applications .....	83
9.5.2 SIP and Connex Tools, Infrastructure Services, and Utilities .....	84
9.6 Thread Configuration .....	85
9.7 Support for 'Find Package' CMake Script .....	86
9.8 Libraries Required for Using Distributed Logger .....	86
9.9 Libraries Required for Using Monitoring .....	86
9.10 Libraries Required for Using RTI Secure WAN Transport APIs .....	87
9.11 Libraries Required for Using RTI TCP Transport APIs .....	87
9.12 Libraries Required for Zero Copy Transfer Over Shared Memory .....	88
<b>Chapter 10 QNX Platforms</b>	
10.1 Required Change for Building with C++ Libraries for QNX Platforms .....	95
10.2 Support for Modern C++ API .....	95
10.3 Multicast Support .....	95
10.4 Supported Transports .....	96
10.5 Unsupported Features .....	96
10.6 Monotonic Clock Support .....	96
10.7 Thread Configuration .....	97
10.8 Libraries Required for Using Distributed Logger .....	98
10.9 Libraries Required for Using Monitoring .....	98
10.10 Libraries Required for Using RTI Secure WAN Transport APIs .....	99
10.11 Libraries Required for Using RTI TCP Transport APIs .....	99
10.12 Libraries Required for Zero Copy Transfer Over Shared Memory .....	100
10.13 Restarting Applications on QNX Systems .....	100
<b>Chapter 11 Solaris Platforms</b>	
11.1 Support for Modern C++ API .....	106
11.2 Multicast Support .....	106
11.3 Supported Transports .....	106
11.3.1 Shared Memory Support .....	106
11.3.2 Increasing Available Shared Resources .....	106
11.4 Unsupported Features .....	107
11.5 Monotonic Clock Support .....	107
11.6 Thread Configuration .....	108
11.7 Libraries Required for Using Monitoring .....	109
11.8 Libraries Required for using RTI Secure WAN Transport APIs .....	109
11.9 Libraries Required for Zero Copy Transfer Over Shared Memory .....	110
<b>Chapter 12 VxWorks Platforms</b>	

12.1 Notes for VxWorks 7.0 Platforms .....	119
12.2 Notes for VxWorks 653 Platforms .....	120
12.3 Increasing the Stack Size .....	120
12.4 Dynamic Libraries for Kernel Mode on VxWorks Systems .....	120
12.5 Libraries for RTP Mode on VxWorks Systems .....	121
12.6 Requirement for Restarting Applications .....	121
12.7 Support for Modern C++ API .....	121
12.8 Multicast Support .....	122
12.9 Supported Transports .....	122
12.9.1 Shared-Memory Communication between Applications Running in Kernel Mode and RTP Requires Explicitly Set Participant ID .....	123
12.9.2 How To Run Connex DDS Libraries in Kernels Built without Shared Memory .....	123
12.10 Unsupported Features .....	124
12.11 Monotonic Clock Support .....	124
12.12 Use of Real-Time Clock .....	124
12.13 Thread Configuration .....	124
12.14 Memory Settings for VxWorks 653 2.x Platforms .....	126
12.15 Libraries Required for Using Distributed Logger .....	127
12.16 Libraries Required for Using Monitoring .....	128
12.17 Libraries Required for Zero-Copy Transfer Over Shared Memory .....	128
12.18 Increasing the Receive Socket Buffer Size .....	129
12.19 Required Kernel Components for VxWorks 653 v 2.3 .....	129
<b>Chapter 13 Windows Platforms</b>	
13.1 Requirements when Using Microsoft Visual Studio .....	144
13.2 Linking with Libraries for Windows Platforms .....	145
13.3 Use Dynamic MFC Library, Not Static .....	145
13.4 .NET API Requires Thread Affinity .....	145
13.5 ODBC Database Compatibility .....	146
13.6 Support for Modern C++ API .....	146
13.7 Multicast Support .....	146
13.8 Supported Transports .....	146
13.9 Monotonic Clock Support .....	147
13.10 Thread Configuration .....	147
13.10.1 Support for Controlling CPU Core Affinity for RTI Threads .....	148
13.11 Durable Writer History and Durable Reader State Features .....	149
13.12 Support for 'Find Package' CMake Script .....	149
13.13 Libraries Required for Using Distributed Logger Support .....	149

---

---

13.14 Libraries Required for Using Monitoring .....	149
13.15 Libraries Required for Using RTI Secure WAN Transport APIs .....	150
13.16 Libraries Required for Using RTI TCP Transport APIs .....	150
13.17 Libraries Required for Zero Copy Transfer Over Shared Memory .....	151
13.18 Domain ID Support .....	151

# Chapter 1 Supported Platforms

This document provides platform-specific instructions on how to compile, link, and run *RTI*<sup>®</sup> *Connex*<sup>®</sup> *DDS* applications.

For each platform, this document provides information on:

- Supported operating systems and compilers
- Required *Connex DDS* and system libraries
- Required compiler and linker flags, and environment variables for running the application (if any)
- Details on how the *Connex DDS* libraries were built
- Modern C++ API support
- Multicast support
- Supported transports
- Monotonic clock support
- Thread configuration
- Durable Writer History and Durable Reader State features support
- Support for 'Find Package' CMake script
- Required libraries for using additional features (such as Distributed Logger, Monitoring, Secure WAN, TLS, Zero Copy transfer over shared memory)

**Table 1.1 Supported Platforms**

Operating System	Version
AIX <sup>®</sup>	AIX 7.1
Android <sup>™</sup> (target only)	Android 5.0, 5.1

**Table 1.1 Supported Platforms**

Operating System	Version
INTEGRITY® (target only)	INTEGRITY 10.0.2, 11.0.4, 11.4.4
iOS® (target only)	iOS 8.2
Linux® (ARM® CPU)	NI™ Linux 3 Raspbian Wheezy 7.0 Ubuntu® 16.04 LTS
Linux (Intel® CPU)	CentOS™ 6.0, 6.2 - 6.4, 7.0 Red Hat® Enterprise Linux 6.0 - 6.5, 6.7, 6.8, 7.0, 7.3, 7.5 Ubuntu 12.04 LTS, 14.04 LTS, 16.04 LTS, 18.04 LTS SUSE® Linux Enterprise Server 11 SP2, 11 SP3, 12 Wind River® Linux 7
LynxOS® (target only)	LynxOS 5.0
OS X®	OS X 10.11 - 10.13
QNX® (target only)	QNX Neutrino® 6.4.1, 6.5, 7.0
Solaris™	Solaris 2.10 (Only available by request.)
VxWorks® (target only)	VxWorks 6.9, 6.9.3.2, 6.9.4.2, 6.9.4.6, 7.0 VxWorks 653 2.3 (Only available by request.)
Windows®	Windows 7, 8, 8.1, 10 <sup>a</sup> Windows Server 2008 R2 Windows Server 2012 R2 Windows Server 2016

The following table lists additional target libraries available for *Connex DDS*, for which RTI offers custom support. If you are interested in using one of these platforms, please contact your local RTI sales representative or email [sales@rti.com](mailto:sales@rti.com).

**Table 1.2 Custom Supported Platforms**

Operating System	Version
INTEGRITY	INTEGRITY 5.0.11 on MPC 8349 CPU
INtime® for Windows	INtime 6.3 with Visual Studio 2017 on x86 CPU <sup>b</sup>

<sup>a</sup>Per Microsoft, this should be compatible with Windows 10 IoT Enterprise with Windows native app.

<sup>b</sup>Tested on 64-bit Windows 10 operating system.

Table 1.2 Custom Supported Platforms

Operating System	Version
Linux	Debian® 7 on ARMv7 CPU
	Freescale™ 1.4 on QorIQ or P4040/P4080/P4081 CPU
	Red Hat Enterprise Linux 5.2 on x86 CPU
	RedHawk™ Linux 6.0 on x64 CPU
	RedHawk Linux 6.5 on i86 and x64 CPUs
	Wind River Linux 7 and 8 on ARMv7 CPU
	Xilinx® 14.2 on ARMv7 CPU
	Yocto Project® 2.2 on 64-bit ARMv8 CPU
QNX	QNX 6.5 on PPC E500 v2 CPU
	QNX 6.6 on ARMv7 and x86 CPUs
	QNX 7.0 on ARMv7 CPU
VxWorks	VxWorks 6.9.3 on ARMv7 and PPC CPUs
	VxWorks 6.9.3.2 on MIPS CPU
	VxWorks 653 2.5.0.2 on PPC e500v2 CPU

## 1.1 Paths Mentioned in Documentation

The documentation refers to:

- **<NDDSHOME>**

This refers to the installation directory for *RTI® Connex® DDS*. The default installation paths are:

- Mac® OS X® systems:  
/Applications/rti\_connex\_dds-6.0.0
- UNIX-based systems, non-*root* user:  
/home/<your user name>/rti\_connex\_dds-6.0.0
- UNIX-based systems, *root* user:  
/opt/rti\_connex\_dds-6.0.0
- Windows® systems, user without Administrator privileges:  
<your home directory>\rti\_connex\_dds-6.0.0
- Windows systems, user with Administrator privileges:  
C:\Program Files\rti\_connex\_dds-6.0.0

You may also see \$NDDSHOME or %NDDSHOME%, which refers to an environment variable set to the installation path.

Wherever you see <NDDSHOME> used in a path, replace it with your installation path.

**Note for Windows Users:** When using a command prompt to enter a command that includes the path **C:\Program Files** (or any directory name that has a space), enclose the path in quotation marks. For example:

```
"C:\Program Files\rti_connex_dds-6.0.0\bin\rtiddsgen"
```

Or if you have defined the NDDSHOME environment variable:

```
"%NDDSHOME%\bin\rtiddsgen"
```

- **<path to examples>**

By default, examples are copied into your home directory the first time you run *RTI Launcher* or any script in <NDDSHOME>/bin. This document refers to the location of the copied examples as <path to examples>.

Wherever you see <path to examples>, replace it with the appropriate path.

Default path to the examples:

- Mac OS X systems: /Users/<your user name>/rti\_workspace/6.0.0/examples
- UNIX-based systems: /home/<your user name>/rti\_workspace/6.0.0/examples

- Windows systems: **<your Windows documents folder>\rti\_workspace\6.0.0\examples**

Where 'your Windows documents folder' depends on your version of Windows. For example, on Windows 10, the folder is **C:\Users\<your user name>\Documents**.

Note: You can specify a different location for **rti\_workspace**. You can also specify that you do not want the examples copied to the workspace. For details, see *Controlling Location for RTI Workspace and Copying of Examples* in the *RTI Connex DDS Core Libraries Getting Started Guide*.

# Chapter 2 AIX Platforms

[Table 2.1](#) lists the architectures supported on the IBM® AIX operating system.

**Table 2.1 Supported AIX Target Platforms**

Operating System	CPU	Compiler	RTI Architecture Abbreviation
AIX 7.1	POWER7 (32-bit mode)	IBM xIC_r for AIX v12.1	p7AIX7.1xlc12.1
		IBM Java 1.8	
	POWER7 (64-bit mode)	IBM xIC_r for AIX v12.1	64p7AIX7.1xlc12.1
		IBM Java 1.8	

[Table 2.2 Building Instructions for AIX Architectures](#) lists the compiler flags and the libraries you will need to link into your application.

See also:

- [2.6 Libraries Required for Using Monitoring on page 13](#)
- [2.7 Libraries Required for Zero Copy Transfer Over Shared Memory on page 14](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 2.3 Running Instructions for AIX Architectures](#) provides details on the environment variables that must be set at run time for an AIX architecture.

[Table 2.4 Library-Creation Details for AIX Architectures](#) provides details on how the libraries were built. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

Table 2.2 Building Instructions for AIX Architectures

API	Library Format	Required RTI Libraries <sup>ab c</sup>	Required System Libraries <sup>d</sup>	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a  libniddscz.a libniddscorez.a librticonnextmsgcppz.a	-ldl -lnsl -lm -pthread	-DRTI_AIX -DRTI_UNIX -q[32 64] <sup>e</sup> -qlongdouble
	Static Debug	libniddscppzd.a or libniddscpp2zd.a  libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a		
	Dynamic Release	libniddscpp.so or libniddscpp2.so  libniddsc.so libniddscore.so librticonnextmsgcpp.so	-ldl -lnsl -lm -pthread -brtl	
	Dynamic Debug	libniddscppd.so or libniddscpp2d.so  libniddscd.so libniddscored.so librticonnextmsgcppd.so		

<sup>a</sup>Choose libniddscpp\*.\* for the Traditional C++ API or libniddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>Connexx DDS C/C++ libraries are in  $\${NDDSHOME}/lib/<architecture>$ . NDDSHOME is where Connexx DDS is installed, see [1.1 Paths Mentioned in Documentation on page 4](#)

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the RTI Connexx DDS Professional, Evaluation, or Basic package type. It is not provided with the RTI Connexx DDS Core package type.

<sup>d</sup>Transports (other than the default IP transport) such as StarFabric may require linking in additional libraries. For details, see the API Reference HTML documentation or contact support@rti.com.

<sup>e</sup>Use '-q32' if you build 32-bit code or '-q64' for 64-bit code.

Table 2.2 Building Instructions for AIX Architectures

API	Library Format	Required RTI Libraries <sup>ab c</sup>	Required System Libraries <sup>d</sup>	Required Compiler Flags
C	Static Release	libnddscz.a libnddscorz.a librticonnextmsgcz.a	-ldl -lnsl -lm -pthread	-DRTI_AIX -DRTI_UNIX -q[32 64] <sup>e</sup> -qlongdouble -qthreaded <sup>f</sup>
	Static Debug	libnddsczd.a libnddscorz.d.a librticonnextmsgcz.d.a		
	Dynamic Release	libnddsc.so libnddscorz.so librticonnextmsgcz.so	-ldl -lnsl -lm -pthread -brtl	
	Dynamic Debug	libnddscd.so libnddscorz.d.so librticonnextmsgcz.d.so		
Java	Release	nddsjava.jar rticonnextmsg.jar	N/A	N/A
	Debug	nddsjavad.jar rticonnextmsgd.jar		

<sup>a</sup>Choose `libnddscpp*.*` for the Traditional C++ API or `libnddscpp2*.*` for the Modern C++ API.

<sup>b</sup>*Connex* DDS C/C++ libraries are in `${NDDSHOME}/lib/<architecture>`. `NDDSHOME` is where *Connex* DDS is installed, see [1.1 Paths Mentioned in Documentation on page 4](#)

<sup>c</sup>The `*rticonnextmsg*` library only applies if you have the RTI *Connex* DDS Professional, Evaluation, or Basic package type. It is not provided with the RTI *Connex* DDS Core package type.

<sup>d</sup>Transports (other than the default IP transport) such as StarFabric may require linking in additional libraries. For details, see the API Reference HTML documentation or contact [support@rti.com](mailto:support@rti.com).

<sup>e</sup>Use `'-q32'` if you build 32-bit code or `'-q64'` for 64-bit code.

<sup>f</sup>The `'-qthreaded'` option is automatically set if you use one of the compilers that ends with `'_r'`, such as `cc_r`, `xlcr_r`, `xlc_r`. See the IBM XLC reference manual for more information.

**Table 2.3 Running Instructions for AIX Architectures**

RTI Architecture	Library Format (Release & Debug)	Required Environment Variables <sup>ab</sup>
All supported AIX architectures for Java	N/A	LIBPATH=\$(NDDSHOME)/lib/<arch>: \$(LIBPATH) EXTSHM=ON
All other supported architectures	Static	EXTSHM=ON
	Dynamic	LIBPATH=\$(NDDSHOME)/lib/<arch>: \$(LIBPATH) EXTSHM=ON

**Table 2.4 Library-Creation Details for AIX Architectures**

RTI Architecture	Library Format (Static & Dynamic)	Compiler Flags Used by RTI <sup>c</sup>	Libraries Used by RTI <sup>d</sup>
p7AIX7.1xlc12.1	Release	-q32 -qwam64 -qlongdouble -qalias=noansi -qplic=large -qthreaded -D_POSIX_C_SOURCE-E=199506L -D_EXTENSIONS -O -qflag=i:i -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU-U=Power7+ -DNDEBUG	-lC128
	Debug	-q32 -qwam64 -qlongdouble -qalias=noansi -qplic=large -qthreaded -D_POSIX_C_SOURCE-E=199506L -D_EXTENSIONS -O -qflag=i:i -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU-U=Power7+ -g	-lC128

<sup>a</sup>See [2.3.1 Notes for Using Shared Memory on page 11](#)

<sup>b</sup>`{NDDSHOME}` represents the root directory of your *Connex DDS* installation. `{LIBPATH}` represents the value of the LIBPATH variable prior to changing it to support *Connex DDS*. When using `nddsjava.jar`, the Java virtual machine (JVM) will attempt to load release versions of the native libraries (`nddsjava.so`, `nddscore.so`, `nddsc.so`). When using `nddsjavad.jar`, the JVM will attempt to load debug versions of the native libraries (`nddsjavad.so`, `nddscored.so`, `nddsd.so`).

<sup>c</sup>*Connex DDS* was built using the 'xlc\_r' compiler. See IBM's XLC reference manual for a description of the different compilers. For a list of the additional settings (defined by default) for the 'xlc\_r' compiler, see the file `/etc/vac.cfg.53`.

<sup>d</sup>Linking without the 128-bit versions of the C Runtime Library when your program uses 128-bit long doubles (for example, if you specify `-qldb128` or `-qlongdouble` alone) may produce unpredictable results. Therefore, RTI libraries compiled with `-qlongdouble` are linked using `-lC128`. For more information, please consult the IBM compiler reference website:

[http://pic.dhe.ibm.com/infocenter/comphelp/v121v141/index.jsp?topic=%2Fcom.ibm.xlcpp121.aix.doc%2Fcompiler\\_ref%2Fopt\\_ldb128.html](http://pic.dhe.ibm.com/infocenter/comphelp/v121v141/index.jsp?topic=%2Fcom.ibm.xlcpp121.aix.doc%2Fcompiler_ref%2Fopt_ldb128.html)

**Table 2.4 Library-Creation Details for AIX Architectures**

RTI Architecture	Library Format (Static & Dynamic)	Compiler Flags Used by RTI <sup>a</sup>	Libraries Used by RTI <sup>b</sup>
64p7AIX7.1xlc12.1	Release	-q64 -qwam64 -qlongdouble -qalias=noansi -qplic=large -qthreaded -D_POSIX_C_SOURCE-E=199506L -D EXTENSIONS -O -qflag=i:i -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU-U=Power7+ -DNDEBUG	-lC128
	Debug	-q64 -qwam64 qlongdouble -qalias=noansi -qplic=large -qthreaded -D_POSIX_C_SOURCE-E=199506L -D EXTENSIONS -O -qflag=i:i -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU-U=Power7+ -g	-lC128
All supported AIX architectures for Java	Release	-target 1.5 -source 1.5	
	Debug	-target 1.5 -source 1.5 -g	

## 2.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all AIX 7.1 platforms and has been tested with C++03.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 2.2 Multicast Support

Multicast is supported on all AIX platforms and is configured out of the box. That is, the default value for the initial peers list (NDDS\_DISCOVERY\_PEERS) includes a multicast address. See the API Reference HTML documentation for more information.

<sup>a</sup>*Connex DDS* was built using the 'xlc\_r' compiler. See IBM's XLC reference manual for a description of the different compilers. For a list of the additional settings (defined by default) for the 'xlc\_r' compiler, see the file `/etc/vac.cfg.53`.

<sup>b</sup>Linking without the 128-bit versions of the C Runtime Library when your program uses 128-bit long doubles (for example, if you specify `-qldb128` or `-qlongdouble` alone) may produce unpredictable results. Therefore, RTI libraries compiled with `-qlongdouble` are linked using `-lC128`. For more information, please consult the IBM compiler reference website: [http://pic.dhe.ibm.com/infocenter/comphelp/v121v141/index.jsp?topic=%2Fcom.ibm.xlcpp121.aix.doc%2Fcompiler\\_ref%2Fopt\\_ldb128.html](http://pic.dhe.ibm.com/infocenter/comphelp/v121v141/index.jsp?topic=%2Fcom.ibm.xlcpp121.aix.doc%2Fcompiler_ref%2Fopt_ldb128.html)

## 2.3 Transports

- **Shared memory:** Supported and enabled by default.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Not supported.
- **TCP/IPv4:** Not supported.

### 2.3.1 Notes for Using Shared Memory

By default, the maximum number of shared memory segments you can use with AIX is quite small and limits the capability of *Connex DDS* applications to work properly over shared memory. To increase the maximum number of shared memory segments an application can use, set the following environment variable before invoking your *Connex DDS* application:

```
EXTSHM=ON
```

This environment variable is not required if your application does not use the shared memory transport.

To see a list of shared memory resources in use, please use the '**ipcs**' command. To clean up shared memory and shared semaphore resources, please use the '**ipcrm**' command.

The shared memory keys used by *Connex DDS* are in the range of 0x400000. For example:

```
ipcs -m | grep 0x004
```

The shared semaphore keys used by *Connex DDS* are in the range of 0x800000; the shared mutex keys are in the range of 0xb00000. For example:

```
ipcs -s | grep 0x008  
ipcs -s | grep 0x00b
```

Please refer to the shared-memory transport online documentation for details on the shared memory and semaphore keys used by *Connex DDS*.

## 2.4 Unsupported Features

These features are not supported on AIX platforms:

- Controlling CPU Core Affinity
- Distributed Logger
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script
- Monotonic clock

## 2.5 Thread Configuration

See [Table 2.5 Thread Settings for AIX Platforms below](#) and [Table 2.6 Thread-Priority Definitions for AIX Platforms on the next page](#).

**Table 2.5 Thread Settings for AIX Platforms**

Applicable Thread	DDS_ ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	192*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	OS default thread priority
	stack_size	192*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	4*192*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	4*192*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 2.6 Thread-Priority Definitions for AIX Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

## 2.5.1 Changing Thread Priority

Due to the AIX threading-model implementation, there are situations that require you to run your *Connex* DDS application with root privileges:

- **For all APIs:** Your application must have *root* privileges to use the thread option, `DDS_THREAD_SETTINGS_REALTIME_PRIORITY`, for the event and receiver pool thread QoS (`DDS_DomainParticipantQos.event.thread`, `DDS_DomainParticipantQos.receiver_pool_thread`).
- **For the Java API only:** Your application must have *root* privileges to change the event and receiver pool thread priorities (`DDS_DomainParticipantQos.event.thread`, `DDS_DomainParticipantQos.receiver_pool_thread`).

## 2.6 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex* DDS application is linked with the static release version of the *Connex* DDS libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Notes:**

- Memory and CPU usage is not available in monitoring data.
- If you plan to use *static* libraries, the RTI library from [Table 2.7 Additional Libraries for Using Monitoring below](#) must appear *first* in the list of libraries to be linked.

**Table 2.7 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimonitoringz.a	librtimonitoringzd.a	librtimonitoring.so	librtimonitoringd.so

**2.7 Libraries Required for Zero Copy Transfer Over Shared Memory**

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 2.8 Additional Libraries for Zero Copy Transfer Over Shared Memory below](#).

**Table 2.8 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

# Chapter 3 Android Platforms

[Table 3.1](#) lists the architectures supported on the Android® operating system.

**Table 3.1 Supported Android Target Platforms**

Operating System	CPU	Compiler	RTI Architecture Abbreviation
Android 5.0, 5.1	ARMv7A	gcc 4.9 (NDK r10e) <sup>a</sup>	armv7aAndroid5.0gcc4.9ndkr10e
		Java Platform, Standard Edition JDK 1.8 <sup>b</sup>	

See [Table 3.2 Building Instructions for Android Architectures](#) for a list of the compiler flags and libraries you will need to link into your application.

See also:

- [3.8 Libraries Required for Using Monitoring on page 22](#)
- [3.9 Libraries Required for Using RTI Secure WAN Transport APIs on page 22](#)
- [3.10 Libraries Required for Using RTI TCP Transport and TLS Support APIs on page 23](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 3.3 Running Instructions for Android Architectures](#) provides details on the environment variables that must be set at run time for an Android architecture.

[Table 3.4 Library-Creation Details for Android Architectures](#) provides details on how the libraries were built. This table is provided strictly for informational purposes; you do not need to use these

---

<sup>a</sup>Built against Android 5.0 and tested on Android 5.0.2.

<sup>b</sup>Dalvik VM is JDK 1.5 with some features from 1.6 (See Android documentation for details.)

parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

*Connex DDS* supports the Android operating system as a *target* platform. The target can be in one of two configurations: a consumer device (e.g., a Google™ Nexus™ 7 tablet) or as a "raw" Linux distribution. Building applications for the target occurs on a development machine using an Android SDK and, for C/C++, an Android NDK.

For a consumer device, all programs (applications and DDS utilities) must be installed on the device as Apps (\*.apk files). All Android Apps are loaded and executed by an instance of the Dalvik VM running as a Linux process. No *Connex DDS* components or libraries have to be pre-installed on the device—that is taken care of by the Android build and packaging tools. See the Android documentation for a full description of building and packaging Android Apps.

For a raw Linux distribution, all programs are executables that are linked with the necessary *Connex DDS* libraries (see [Table 3.1 Supported Android Target Platforms](#)). The build process is similar to other Linux variants, see Section 9.3 in the *RTI Connex DDS Core Libraries User's Manual*.

#### **‘Release’ and ‘Debug’ Terminology:**

Android and *Connex DDS* use these terms differently. For Android, "release" and "debug" refer to how application packages (\*.apk) are signed as part of the Android Security Model. A "release" package is cryptographically signed by a key that can be trusted by virtue of some certificate chain. A "debug" package is signed by a key distributed with the SDK. It says nothing about the origin of the package. It allows the package to be installed during development testing, hence "debug." For *Connex DDS*, debug means libraries created with debug symbols to facilitate debugging with gdb, for example. A "release" library does not contain debug information.

#### **Additional Documentation:**

See the [RTI Connex DDS Core Libraries Getting Started Guide Addendum for Android Systems](#).

Table 3.2 Building Instructions for Android Architectures

API	Library Format	Required RTI Libraries and JAR Files <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libnddscppz.a or libnddscpp2z.a libnddscz.a libnddscorz.a libgnustl_shared.a librticonnextmsgcppz.a	-L\$(SYSROOT)/usr/lib -llog -lm -lc -lgnustl_shared	-march=armv7-a -mfloat-abi=softfp -mfpu=vfpv3-d16 -mlong-calls -DRTI_UNIX -DRTI_ANDROID
	Static Debug	libnddscppzd.a or libnddscpp2zd.a libnddsczd.a libnddscorz.d.a libgnustl_shared.a librticonnextmsgcppzd.a		
	Dynamic Release	libnddscpp.so or libnddscpp2.so libnddsc.so libnddscorz.so libgnustl_shared.so librticonnextmsgcpp.so		
	Dynamic Debug	libnddscppd.so or libnddscpp2d.so libnddscd.so libnddscorz.d.so libgnustl_shared.so librticonnextmsgcppd.so		

<sup>a</sup>Choose libnddscpp\*.\* for the Traditional C++ API or libnddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The RTI C/C++/Java libraries are in \$(NDDSHOME)/lib/<architecture>.

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS Professional*, *Evaluation*, or *Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

Table 3.2 Building Instructions for Android Architectures

API	Library Format	Required RTI Libraries and JAR Files <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	libnndscz.a libnndscorez.a librticonnextmsgcz.a	-L\$(SYSROOT)/usr/lib -log -lm -lc	-march=armv7-a -mfloat-abi=softfp -mfpu=vfpv3-d16 -mlong-calls -DRTI_UNIX -DRTI_ANDROID

	Debug	-fpic -DLINUX -O -Wall -Wno-unknown-pragmas -Wno-address -Wno-unused-but-setvariable -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=cortex-a9 -DTARGET-T="armv7aAndroid5.0gcc4.9ndkr10e" -c -Wp,-MD
armv7aAndroid5.0gcc4.9ndkr10e for Java	Release	-target 1.5 -source 1.5
	Debug	-target 1.5 -source 1.5 -g

## 3.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all Android platforms and has been tested with both C++03 and C++11.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 3.2 Multicast Support

Multicast is available on supported Android platforms and is configured out of the box. That is, the default value for the initial peers list (NDDS\_DISCOVERY\_PEERS) includes a multicast address. See the API Reference HTML documentation for more information. Multicast has not been tested for this release and so, though available, is not officially supported. This should be addressed in a future release.

## 3.3 Transports

- **Shared memory:** Not supported for this release. For a consumer device, shared memory communication between Apps is often not desirable.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Not supported. The IPv6 stack implementation has been evolving in parallel with the Android OS. For many of the supported Android versions there is either no or insufficient IPv6 support.
- **TCP/IPv4:** Supported.

## 3.4 Unsupported Features

These features are not supported on Android platforms:

- Controlling CPU Core Affinity
- Distributed Logger
- Durable Writer History and Durable Reader State
- Zero Copy Transfer Over Shared Memory

## 3.5 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on all Android platforms.

## 3.6 Thread Configuration

See [Table 3.5 Thread Settings for Android Platforms below](#) and [Table 3.6 Thread-Priority Definitions for Android Platforms on the facing page](#).

**Table 3.5 Thread Settings for Android Platforms**

Applicable Threads	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	OS default stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	

**Table 3.5 Thread Settings for Android Platforms**

Applicable Threads	DDS_ThreadSettings_ t	Platform-Specific Setting
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	OS default thread priority
	stack_size	OS default stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	

**Table 3.6 Thread-Priority Definitions for Android Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

## 3.7 Support for 'Find Package' CMake Script

The 'Find Package' CMake script is supported on Android 5.0 and 5.1 platforms.

For information on using this script, see [Building Applications using CMake, in the RTI Connex DDS Core Libraries User's Manual](#).

## 3.8 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Note:** If you plan to use *static* libraries, the RTI library from [Table 3.7 Additional Libraries for Using Monitoring below](#) must appear *first* in the list of libraries to be linked.

**Table 3.7 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.so	librtmonitoringd.so

## 3.9 Libraries Required for Using RTI Secure WAN Transport APIs

*RTI Secure WAN Transport* is only available on specific architectures. See the *RTI Secure WAN Transport Release Notes* and *RTI Secure WAN Transport Installation Guide* for details.

To use the *Secure WAN Transport* APIs, link against the additional libraries in [Table 3.8 Additional Libraries for Using RTI Secure WAN Transport APIs on Android Systems on the facing page](#). Select the files appropriate for your chosen library format.

**Table 3.8 Additional Libraries for Using RTI Secure WAN Transport APIs on Android Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Dynamic Release	libnddstransportwan.so libnddstransporttls.so	librtisslsupport.so
Dynamic Debug	libnddstransportwand.so libnddstransporttlsd.so	
Static Release	libnddstransportwanz.a libnddstransporttlsz.a	
Static Debug	libnddstransportwanzd.a libnddstransporttlszd.a	

### 3.10 Libraries Required for Using RTI TCP Transport and TLS Support APIs

To use the TCP Transport APIs, link against the additional libraries in [Table 3.9 Additional Libraries for using RTI TCP Transport APIs on Android Systems below](#). If you are using *RTI TLS Support*, also link against the libraries in [Table 3.10 Additional Libraries for using RTI TCP Transport APIs on Android Systems with TLS Enabled on the next page](#). Select the files appropriate for your chosen library format.

**Table 3.9 Additional Libraries for using RTI TCP Transport APIs on Android Systems**

Library Format	RTI TCP Transport Libraries <sup>c</sup>
Dynamic Release	libnddstransporttcp.so
Dynamic Debug	libnddstransporttcpd.so
Static Release	libnddstransporttcpz.a
Static Debug	libnddstransporttcpzd.a

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <openssl install dir>/<architecture>/lib.

<sup>c</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

**Table 3.10 Additional Libraries for using RTI TCP Transport APIs on Android Systems with TLS Enabled**

Library Format	RTI TCP Transport Libraries <sup>a</sup>
Dynamic Release	libnddstls.so
Dynamic Debug	libnddstlsd.so
Static Release	libnddstlsz.a
Static Debug	libnddstlszd.a
OpenSSL Libraries	libtisslsupport.so

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

# Chapter 4 INTEGRITY Platforms

Table 4.1 lists the architectures supported on the INTEGRITY<sup>®</sup> operating system<sup>a</sup>.

**Table 4.1 Supported INTEGRITY Target Platforms**

Operating System	CPU	Compiler	IP Stack	RTI Architecture Abbreviation
INTEGRITY 5.0.11 <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	MPC8349	Multi 4.2.4	GHnet2 TCP/IP stack	mpc8349Inty5.0.11.mds8349
INTEGRITY 10.0.2	x86	Multi 5.0.6	GHNet IPv4 stack	pentiumInty10.0.2.pcx86 <sup>b</sup>
INTEGRITY 11.0.4	P4080	Multi 6.1.4	GHNet2 v2	p4080Inty11.devtree-fsl-e500m-c.comp2013.5.4 <sup>c</sup>
	Pentium class	Multi 6.1.4	GHNet2	pentiumInty11.pcx86-smp
INTEGRITY 11.4.4	x64	Multi 7.1.6	GHNet2	pentiumInty11.pcx64

Table 4.2 Building Instructions for INTEGRITY Architectures on page 27 lists the compiler flags and the libraries you will need to link into your application.

Do not mix release and debug libraries.

See also:

- [4.8 Libraries Required for Using Monitoring on page 32](#)

---

<sup>a</sup>For use with Windows and Solaris hosts, as supported by Green Hills Software.

<sup>b</sup>See [4.1 Required Patches for INTEGRITY 10.0.2 and 11.0.4 on page 28](#).

<sup>c</sup>See [4.1 Required Patches for INTEGRITY 10.0.2 and 11.0.4 on page 28](#).

- [4.9 Libraries Required for Zero Copy Transfer Over Shared Memory on page 33](#)

[Table 4.3 Running Instructions for INTEGRITY Architectures on page 28](#) provides details on the environment variables that must be set at run time for an INTEGRITY architecture.

[Table 4.4 Library-Creation Details for INTEGRITY Architectures on page 28](#) provides details on how the libraries were built. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

Table 4.2 Building Instructions for INTEGRITY Architectures

API	Library Format	Required RTI Libraries <sup>abcd</sup>	Required System Libraries <sup>e</sup>	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libnndscppz.a or libnndscpp2z.a  libnndscz.a libnndscorez.a librticonnextmsgcppz.a	libsocket.a libnet.a libposix.a	INTEGRITY 5.0.11: RTI_INTY  All others: RTI_INTY --exceptions
	Static Debug	libnndscppzd.a or libnndscpp2zd.a  libnndsczd.a libnndscorezd.a (libnndscppzd.dba or libnndscpp2zd.dba)  (libnndsczd.dba) (libnndscorezd.dba)(lib- rticonnextmsgczd.dba) librticonnextmsgcppzd.a		
C	Static Release	libnndscz.a libnndscorez.a librticonnextmsgcz.a		
	Static Debug	libnndsczd.a libnndscorezd.a (libnndsczd.dba) (libnndscorezd.dba) (librticonnextmsgczd.dba) librticonnextmsgczd.a		

<sup>a</sup>Choose libnndscpp\*.\* for the Traditional C++ API or libnndscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The \*.dba files contain the debugging information. You can link without these, as long as they are located in the same directory as the matching \*.d.a file (so that the MULTI® IDE can find the debug information).

<sup>c</sup>The RTI C/C++ libraries are in \$(NDDSHOME)/lib/<architecture>.

<sup>d</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS Professional*, *Evaluation*, or *Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

<sup>e</sup>Transports (other than the default IP transport) such as StarFabric may require linking in additional libraries. For further details, see the API Reference HTML documentation or contact support@rti.com.

## 4.1 Required Patches for INTEGRITY 10.0.2 and 11.0.4

For INTEGRITY 10.0.2 and 11.0.4 platforms, you must install these patches from Green Hills Software:

- INTEGRITY 10.0.2 Platforms
  - pentiumInty10.0.2.pcx86: **patch\_6901.iff**

- INTEGRITY 11.0.4 Platforms
  - p4080Inty11.devtree-fsl-e500mc.comp2013.5.4: **patch\_8154.iff, patch\_8155.iff, patch\_8246.iff**

For more information on these patches, please contact your Green Hills Software representative.

## 4.2 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all INTEGRITY platforms except INTEGRITY 5.0.11, and has been tested with C++03.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 4.3 Multicast Support

Multicast is supported on all INTEGRITY platforms.

## 4.4 Supported Transports

- **Shared memory:** Supported, enabled by default. To clean up shared memory resources, reboot the kernel.
- **UDPv4:** Supported, enabled by default.
- **UDPv6:** Not supported.
- **TCP/IPv4:** Not supported.

## 4.5 Unsupported Features

The RTI FlatData™ language binding is not supported on INTEGRITY 5.0.11 (mpc8349Inty5.0.11.mds8349) platforms.

The Modern C++ API for Request-Reply Communication is not supported on INTEGRITY 10.0.2 (pentiumInty10.0.2.pcx86) and INTEGRITY 5.0.11(mpc8349Inty5.0.11.mds8349) platforms. The Traditional C++ API for Request-Reply is supported.

These features are not supported on any INTEGRITY platform:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script
- Monotonic clock

## 4.6 Thread Configuration

Table 4.5 lists the thread settings for INTEGRITY platforms.

Table 4.6 and Table 4.7 list the thread-priority definitions.

**Table 4.5 Thread Settings for INTEGRITY Platforms**

Applicable Thread	DDS_ ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	16
	stack_size	32*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STUDIO
	priority	60
	stack_size	32*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	80
	stack_size	4*32*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STUDIO
	priority	100
	stack_size	4*32*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 4.6 Thread-Priority Definitions for INTEGRITY 5 and 11 Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	16
THREAD_PRIORITY_HIGH	120
THREAD_PRIORITY_ABOVE_NORMAL	100
THREAD_PRIORITY_NORMAL	90
THREAD_PRIORITY_BELOW_NORMAL	80
THREAD_PRIORITY_LOW	60

**Table 4.7 Thread-Priority Definitions for INTEGRITY 10 Platforms**

Thread Priority Definitions	Operating System Priority
THREAD_PRIORITY_DEFAULT	127
THREAD_PRIORITY_HIGH	127
THREAD_PRIORITY_ABOVE_NORMAL	100
THREAD_PRIORITY_NORMAL	90
THREAD_PRIORITY_BELOW_NORMAL	80
THREAD_PRIORITY_LOW	1

### 4.6.1 Socket-Enabled and POSIX-Enabled Threads are Required

On INTEGRITY platforms, *Connex DDS* internally relies on the POSIX API for many of its system calls. As a result, any thread calling *Connex DDS* must be POSIX-enabled. By default, the 'Initial' thread of an address space is POSIX-enabled, provided the address space has been linked with **libposix.a**. Additional user threads that call *Connex DDS* must be spawned from the Initial thread using **pthread\_create**. Only then is the created thread also POSIX-enabled. Note that tasks created at build time using the Integrate utility are *not* POSIX-enabled.

Furthermore, threads calling *Connex DDS* must be socket-enabled. This can be achieved by calling **InitLibSocket()** before making any *Connex DDS* calls and calling **ShutdownLibSocket** before the thread terminates. Note that an Initial thread is, by default, socket-enabled when the address space is linked with **libsocket.a**. Please refer to the *INTEGRITY Development Guide* for more information.

## 4.7 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is supported on INTEGRITY 11.0.4 on a P4080 CPU (p4080Inty11.devtree-fsl-e500mc.comp2013.5.4) and INTEGRITY 11.4.4 on an x64 CPU (pentiumInty11.pcx64). It is not supported on other INTEGRITY platforms.

Table 4.8 lists the additional libraries you will need in order to use *Distributed Logger*.

**Table 4.8 Additional Libraries for using RTI Distributed Logger**

Language	Static	
	Release	Debug <sup>a</sup>
C	librtidlcz.a	librtidlczd.a (librtidlczd.dba)
C++ (Traditional API)	librtidlcz.a librtidlcppz.a	librtidlczd.a librtidlcppzd.a (librtidlczd.dba) (librtidlcppzd.dba)

## 4.8 Libraries Required for Using Monitoring

Make sure you are consistent in your use of debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the release version of the *Connex DDS* libraries, you will need to also use the release version of the monitoring library.

### Notes:

- The RTI library in Table 4.9 must appear *first* in the list of libraries to be linked.
- Automatic loading of the dynamic monitoring library through QoS is not supported.
- Memory and CPU usage is not available in monitoring data.

**Table 4.9 Additional Libraries for Using Monitoring**

Static Release	Static Debug
librtimonitoringz.a	librtimonitoringzd.a

<sup>a</sup>The \*.dba files contain the debugging information. You can link without these, as long as they are located in the same directory as the matching \*.d.a file (so that the MULTI® IDE can find the debug information).

## 4.9 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 4.10](#).

**Table 4.10 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug
librtimetpz.a	librtimetpzd.a

## 4.10 Diagnostics on INTEGRITY Systems

*Connex DDS* libraries for the INTEGRITY platforms use `consolestring()`, which prints debugging information to the serial console when available. Using the serial console as opposed to the target I/O window (host I/O) is generally recommended. Host I/O will affect the real-time performance of the target. For more information on `consolestring()`, please refer to the *INTEGRITY Development Guide*.

## 4.11 Running over IP Backplane on a Dy4 Champ-AVII Board

*Connex DDS* can run on all four CPUs, provided the following hold true:

- *Connex DDS* applications on CPUs B, C and D only exchange data with applications on a different CPU or off-board.
- The IP backplane and associated routing has been properly configured. *Connex DDS* has been tested with the following libraries built into the INTEGRITY kernel: **debug**, **res**, **load**, **socket**, **itcpip**, **lbp**, **queue**, **ifbp**, **idb**, **bsl**.

## 4.12 Multi-NIC Support on INTEGRITY 5.0

Due to limitations with the API of the InterPeak stack for INTEGRITY 5.0, *Connex DDS* only supports a single NIC when the InterPeak stack is used. This NIC must be called “**eth0**”. By default on an INTEGRITY system, this will correspond to the first network card, which can be changed by reconfiguring the kernel. This limitation does not affect the InterNiche stack.

## 4.13 Out-of-the-box Transport Compatibility with Other Connex DDS Platforms

Due to some default kernel parameters on INTEGRITY platforms, the default value for `message_size_max` for the UDPv4 transport, and the default values for `message_size_max`, `received_message_count_max`, and `rcv_buffer_size` for the shared-memory transport, are different than those for other platforms. This will cause out-of-the-box compatibility issues that may result in lack of communication. For more information on transport incompatibility, see [1.1 Transport Compatibility on page 1](#), in the *RTI Connex*

*DDS Core Libraries Release Notes*. The mismatch in transport configuration between INTEGRITY and other platforms applies to *Connex DDS 5.1.0* and higher.

To address the compatibility issues, you can change the default transport settings of other platforms to match those of the INTEGRITY platform. Alternatively, you can update the INTEGRITY kernel parameters as described below so that the INTEGRITY platform will support larger transport settings.

The directive, `GM_IP_FRAG_ENTRY_MAX_SIZE`, limits the size of UDP packets that can be sent and received by INTEGRITY platforms. For details on this directive, please see Section 5.4.2 in the `networking.pdf` manual provided with the INTEGRITY kernel. The default value of `GM_IP_FRAG_ENTRY_MAX_SIZE` is 9216 bytes (not 16,000 bytes as is stated in the INTEGRITY documentation), which is why the default `message_size_max` for all transports supported for INTEGRITY is 9216 bytes.

If you want to send UDP messages larger than 9k, you must increase the value of `GM_IP_FRAG_ENTRY_MAX_SIZE` and rebuild the kernel. (You may also have to reconfigure other kernel parameters such as the socket, stack, and heap sizes to accommodate the larger value for `GM_IP_FRAG_ENTRY_MAX_SIZE`.) Failing to increase this value will cause failures when sending large UDP packets, and in some cases (for example with the 5.0.11 kernel) the `sendto()` call will fail silently.

### 4.13.1 Smaller Shared-Memory Receive-Resource Queue Size

INTEGRITY's shared-memory pluggable transport uses the shared-memory POSIX API. This API is part of the standard INTEGRITY distribution and is shipped as a library. The current version (5.0.4) of this library uses a hard-coded value for the total amount of memory that can be shared with an address space. This limits the overall buffer space that can be used by the *DomainParticipants* within the same address space to communicate over shared memory with other *DomainParticipants*.

To allow more *DomainParticipants* to run within the same address space, we reduced the default size of the queue for each receive resource of the shared memory transport. The queue size is reduced to eight messages (the default for other platforms is 32). This change only applies to INTEGRITY architectures and this default value can be overwritten through the shared memory transport QoS.

### 4.13.2 Using Shared Memory on INTEGRITY Systems

*Connex DDS* uses the single address-space POSIX library to implement the shared-memory transport on INTEGRITY 5.0 and 10.0 operating systems.

To use shared-memory, you must configure your system to include the POSIX shared-memory library. The `posix_shm_manager` must be running in an "AddressSpace" solely dedicated to it. After building any *Connex DDS* application that uses shared memory, you must use the `intex` utility (provided with the INTEGRITY development environment) to pack the application with multiple address-spaces: one (or more) to contain the *Connex DDS* application(s), and another one to contain the `posix_shm_manager`.

*Connex DDS* will run on a target without the `posix_shm_manager`, but the POSIX functions will fail and return `ENOSYS`, and the participants will fail to communicate through shared memory.

To include the POSIX Shared-Memory Manager in its own Address Space:

The project files generated by *rtiddsgen* for MULTI will create the shared-memory manager for you. Please follow these steps:

1. Specify the path to your INTEGRITY distribution in the **\_default.gpj** top-level project file by adding the following line (modify it according to the path to your INTEGRITY distribution):

```
-os_dir=/local/applications/integrity/integrity-10.0.2
```

2. Build the project.
3. Before running your *Connex* DDS application on a target, download the **posix\_shm\_manager** file (generated by the build) onto the target.

The POSIX Shared Memory Manager will start automatically after the download and your applications will be able to use shared memory.

#### Notes:

- Only *one* **posix\_shm\_manager** is needed on a particular target. INTEGRITY offers the option of building this **posix\_shm\_manager** *inside* the kernel. Please refer to the INTEGRITY documentation.
- If you are already using shared memory through the POSIX library, there may be a possible conflict.
- INTEGRITY 5 has two different types of POSIX library: a single-address space one (or 'light') and another one (complete POSIX implementation). *Connex* DDS uses the first one, but will work if you are using the complete POSIX implementation.

### 4.13.3 Shared Memory Limitations on INTEGRITY Systems

If several applications are running on the same INTEGRITY node and are using shared memory, once an application is stopped, it cannot be restarted. When the application is stopped (gracefully or ungracefully), any new application on the same domain index within the same DDS domain will fail to start until the shared memory manager is also restarted.

Additionally, if the application is stopped ungracefully, the remaining applications will print several error messages such as the following until *Connex* DDS purges the stopped application from its database:

```
Resource Manager send error = 0x9
```

This error message is logged from INTEGRITY's POSIX shared memory manager, *not* from *Connex* DDS. The error message is benign and will not prevent the remaining applications from communicating with each other or with application on other nodes.

The workaround is to either restart the stopped application with a different participant index or shut down all the other applications and the shared memory manager, then restart everything.

## 4.14 Using `rtiddsping` and `rtiddsspy` on INTEGRITY Systems

While the RTI libraries for INTEGRITY can be used with any BSP, providing the processor falls under the same category (for example, the `ppc7400...` RTI libraries can be used on any target with a PPC74xx processor), `rtiddsping` and `rtiddsspy` are provided as executables, and therefore are BSP-dependent. You will not be able to run them successfully on your target if it is not compatible with the BSP listed in the architecture name (such as `pcx86-smp`). In this case, you will need to re-integrate the `rtiddsping` and `rtiddsspy` applications. Please refer to your hardware documentation for peripheral compatibility across BSPs.

## 4.15 Issues with INTEGRITY Systems

### 4.15.1 Delay When Writing to Unreachable Peers

On INTEGRITY systems, if a publishing application's initial peers list includes a nonexistent (or simply unreachable) host, calls to `write()` may block for approximately 1 second.

This long block is caused by the stack trying to resolve the invalid/unreachable host. Most IP stacks do not block the sending thread because of this reason, and you may include invalid/unreachable hosts in your initial-peers list. If you find that your stack does block the sending thread, please consult your IP stack vendor on how to change its behavior. [RTI Issue ID CORE-1637]

### 4.15.2 Linking with 'libivfs.a' without a File System

If you link your application with `libivfs.a` and are using a system that does not have a file system, you may notice the application blocks for 2 seconds at start-up.

### 4.15.3 Compiler Warnings Regarding Unrecognized `#pragma` Directives

Building *Connex* DDS projects for INTEGRITY causes the compiler to produce several warnings about `#pragma` directives not recognized in some *Connex* DDS header files. For example:

```
Building default.bld
"C:/ndds/ndds.4.4x/include/ndds/dds_c/dds_c_infrastructure.h", line 926:
warning: unrecognized #pragma
    #pragma warning(push)
    ^

"C:/ndds/ndds.4.4x/include/ndds/dds_c/dds_c_infrastructure.h", line 927:
warning: unrecognized #pragma
    #pragma warning(disable:4190)
    ^

"C:/ndds/ndds.4.4x/include/ndds/dds_c/dds_c_infrastructure.h", line 945:
warning: unrecognized #pragma
    #pragma warning(pop)
    ^
```

These warnings do not compromise the final application produced and can be safely ignored.

## 4.15.4 Warning when Loading Connex DDS Applications on INTEGRITY Systems

When a *Connex DDS* application compiled with the *rtiddsgen*-generated project files is loaded on an INTEGRITY 5.0.x target, the following warning appears:

```
"Warning: Program is linked with libc.so POSIX signals  
and cancellation will not work."
```

The *Connex DDS* libraries do not use the additional features provided by the full POSIX implementation, therefore the warning can safely be ignored. This warning is due to the fact that the *rtiddsgen*-generated project files use the Single AddressSpace POSIX library by default, not the full POSIX implementation on INTEGRITY (POSIX System). The *Connex DDS* libraries only require Single AddressSpace POSIX to function correctly, but will still work if you are using the POSIX System. The message indicates that items such as inter-process signaling or process-shared semaphores will not be available (more information can be found in the *INTEGRITY Libraries and Utilities User's Guide*, chapter "Introduction to POSIX on INTEGRITY").

# Chapter 5 INtime Platforms

Table 5.1 lists the supported INtime® platforms.

**Table 5.1 Custom Supported INtime Platforms**

Operating System	CPU	Compiler	RTI Architecture Abbreviation
INtime 6.3 <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	x86	Microsoft Visual Studio 2017	i86INtime6.3VS2017

For more information on using this platform, including important prerequisites, see the [RTI Connex DDS Core Libraries Getting Started Guide Addendum for INtime Systems](#).

Table 5.2 Building Instructions on the next page lists the compiler flags and libraries you will need to link into your application.

Table 5.3 Running Instructions on page 41 shows the environment variables required to be set at run time.

Table 5.4 Library-Creation Details on page 41 provides details on how these custom libraries were built. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

## 5.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for INtime platforms.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 5.2 Multicast Support

Multicast is supported and is configured out of the box. That is, the default value for the initial peers list (`NDDS_DISCOVERY_PEERS`) includes a multicast address. See the online documentation for more information.

## 5.3 Supported Transports

- **Shared memory:** Supported and enabled by default
- **UDPv4:** Supported and enabled by default
- **UDPv6:** Supported, with traffic class support. The transport is not enabled by default; the peers list must be modified to support IPv6.
- **TCP/IPv4:** Not supported.

## 5.4 Unsupported Features

These features are not supported on INtime platforms:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script

## 5.5 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on INtime platforms.

## 5.6 Libraries Required for Using Distributed Logger Support

*RTI Distributed Logger* is supported on INtime platforms. [Table 5.5](#) lists the additional libraries you will need in order to use *Distributed Logger*.

**Table 5.5 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C	rtidlcz.lib	rtidlczd.lib	rtidlc.rsl	rtidlcd.rsl
C++ (Traditional API)	rtidlcz.lib rtidlcppz.lib	rtidlczd.lib rtidlcppzd.lib	rtidlc.rsl rtidlcpp.rsl	rtidlcd.rsl rtidlcppd.rsl

## 5.7 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex* DDS application is linked with the static release version of the *Connex* DDS libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Table 5.6 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
rtmonitoringz.lib Psapi.lib	rtmonitoringzd.lib Psapi.lib	rtmonitoring.lib rtmonitoring.rsl	rtmonitoringd.lib rtmonitoringd.rsl

## 5.8 Libraries Required for Zero Copy Transfer over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 5.7](#).

**Table 5.7 Additional Libraries for Zero Copy Transfer over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
nddsmetpz.lib	nddsmetpzd.lib	nddsmetp.rsl	nddsmetpd.rsl

# Chapter 6 iOS Platforms

[Table 6.1](#) lists the supported iOS architectures.

**Table 6.1 iOS Platforms**

Operating System	CPU	Compiler	RTI Architecture Abbreviation
iOS® 8.2	Dual-Core 64-bit Apple® A7	clang6.1	arm64iOS8clang6.1
	x86	clang 6.1	x86_64iOS8clang6.1

[Table 6.2 Building Instructions for iOS Architectures](#) lists the compiler flags and libraries you will need to link into your application. Make sure you are consistent in your use of release and debug versions of the libraries. Do not mix release and debug libraries.

See also:

- [6.6 Libraries Required for Using Distributed Logger on page 49](#)
- [6.7 Libraries Required for Using Monitoring on page 50](#)
- [6.8 Libraries Required for Using RTI Secure WAN Transport on page 50](#)

Table 6.2 Building Instructions for iOS Architectures

API	Library Format	Required RTI Libraries <sup>a b</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	libniddscz.a libniddscorez.a librticonnextmsgcz.a	For arm64iOS8clang6.1: -arch arm64	-DRTI_UNIX
	Static Debug	libniddsczd.a libniddscorezd.a librticonnextmsgczd.a	For x86_64iOS8clang6.1: -arch x86_64	-DRTI_IOS
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a libniddscz.a libniddscorez.a librticonnextmsgcppz.a	For arm64iOS8clang6.1: -arch arm64	-DRTI_UNIX
	Static Debug	libniddscppzd.a or libniddscpp2zd.a libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a	For x86_64iOS8clang6.1: -arch x86_64	-DRTI_IOS

### Universal Libraries Not Supported:

RTI does not package architecture support in universal libraries. This is done to minimize deployment size. If you prefer universal libraries, you can create them with **libtool**. For example, to create a combined library for `niddscorez.a` in a directory `iOS8clang6.1`:

```
cd $NDDSHOME/lib
mkdir iOS8clang6.1
libtool -o iOS8clang6.1/libniddscorez.a arm64iOS8clang6.1/libniddscorez.a x86_64iOS8clang6.1/libniddscorez.a
```

Repeat for all the other *Connex DDS* libraries.

[Table 6.3 Running Instructions for iOS Architectures on the facing page](#) provides details on the environment variables that must be set at run time.

<sup>a</sup>Choose `libniddscpp*.a` for the Traditional C++ API or `libniddscpp2*.a` for the Modern C++ API

<sup>b</sup>The `*rticonnextmsg*` library only applies if you have the *RTI Connex DDS* Professional, Evaluation, or Basic package type. It is not provided with the *RTI Connex DDS* Core package type.

**Table 6.3 Running Instructions for iOS Architectures**

RTI Architecture	Library Format	Environment Variables
arm64iOS8clang6.1 x86_64iOS8clang6.1	Static	None required

[Table 6.4 Library-Creation Details for iOS Architectures below](#) provides details on how the iOS libraries were built. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

**Table 6.4 Library-Creation Details for iOS Architectures**

RTI Architecture	Library Format (Static)	Compiler Flags Used by RTI
arm64iOS8clang6.1	Release	arm64iOS8clang6.1 -arch arm64 -Wno-trigraphs -fpascal-strings -fasm-blocks -fmessage-length=0 -fdiagnostics-show-note-include-stack -fmacro-backtrace-limit=0 -O0 -Wparentheses -Wswitch -Wno-unknown-pragmas -Wno-shadow -Wno-four-char-constants -Wno-conversion -Wno-constant-conversion -Wno-int-conversion -Wno-bool-conversion -Wno-enum-conversion -Wshorten-64-to-32 -Wpointer-sign -Wno-newline-eof -Wno-return-type-c-linkage -Wno-c++11-narrowing -stdlib=libc++ -std=c++11
	Debug	arm64iOS8clang6.1 -arch arm64 -Wno-trigraphs -fpascal-strings -fasm-blocks -fmessage-length=0 -fdiagnostics-show-note-include-stack -fmacro-backtrace-limit=0 -O0 -Wparentheses -Wswitch -Wno-unknown-pragmas -Wno-shadow -Wno-four-char-constants -Wno-conversion -Wno-constant-conversion -Wno-int-conversion -Wno-bool-conversion -Wno-enum-conversion -Wshorten-64-to-32 -Wpointer-sign -Wno-newline-eof -Wno-return-type-c-linkage -Wno-c++11-narrowing -stdlib=libc++ -std=c++11
x86_64iOS8clang6.1	Release	x86_64iOS8clang6.1 -arch x86_64 -Wno-trigraphs -fpascal-strings -fasm-blocks -fmessage-length=0 -fdiagnostics-show-note-include-stack -fmacro-backtrace-limit=0 -O0 -Wparentheses -Wswitch -Wno-unknown-pragmas -Wno-shadow -Wno-four-char-constants -Wno-conversion -Wno-constant-conversion -Wno-int-conversion -Wno-bool-conversion -Wno-enum-conversion -Wshorten-64-to-32 -Wpointer-sign -Wno-newline-eof -Wno-return-type-c-linkage -Wno-c++11-narrowing -stdlib=libc++ -std=c++11
	Debug	x86_64iOS8clang6.1 -arch x86_64 -Wno-trigraphs -fpascal-strings -fasm-blocks -fmessage-length=0 -fdiagnostics-show-note-include-stack -fmacro-backtrace-limit=0 -O0 -Wparentheses -Wswitch -Wno-unknown-pragmas -Wno-shadow -Wno-four-char-constants -Wno-conversion -Wno-constant-conversion -Wno-int-conversion -Wno-bool-conversion -Wno-enum-conversion -Wshorten-64-to-32 -Wpointer-sign -Wno-newline-eof -Wno-return-type-c-linkage -Wno-c++11-narrowing -stdlib=libc++ -std=c++11

## 6.1 Supported Languages

The iOS libraries support the C, C++, C++03, and C++11 APIs.

### 6.1.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all supported iOS platforms and has been tested with both C++03 and C++11.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 6.2 Multicast Support

Multicast is supported on all iOS platforms and is configured out of the box. That is, the default value for the initial peers list (**NDDS\_DISCOVERY\_PEERS**) includes a multicast address. See the API Reference HTML documentation for more information.

## 6.3 Transports

- **Shared memory:** Not supported.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Not supported.
- **TCP/IPv4:** Supported.

## 6.4 Unsupported Features

These features are not supported for iOS platforms:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script
- Monotonic clock
- Zero Copy Transfer Over Shared Memory
- RTI DDS Ping and Spy
- RTI Prototyper

## 6.5 Thread Configuration

See [Table 6.5 Thread Settings for iOS Platforms below](#) and [Table 6.6 Thread-Priority Definitions for iOS Platforms on the facing page](#).

**Table 6.5 Thread Settings for iOS Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 6.5 Thread Settings for iOS Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 6.6 Thread-Priority Definitions for iOS Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

## 6.6 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is supported on the platforms in [Table 6.1 iOS Platforms on page 45](#).

To use the Distributed Logger APIs, link against the additional libraries in [Table 6.7 Additional Libraries for using RTI Distributed Logger below](#).

**Table 6.7 Additional Libraries for using RTI Distributed Logger**

Language	Release	Debug
C	librtidlcz.a	librtidlczd.a
C++ (Traditional and Modern APIs)	librtidlcppz.a	librtidlcppzd.a

## 6.7 Libraries Required for Using Monitoring

Make sure you are consistent in your use of debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the release version of the *Connex DDS* libraries, you will need to also use the release version of the monitoring library. Do not mix release and debug libraries.

**Note:** The RTI library from the following table must appear *first* in the list of libraries to be linked.

**Table 6.8 Additional Libraries for Using Monitoring**

Static Release	Static Debug
librtimonitoringz.a	librtimonitoringzd.a

## 6.8 Libraries Required for Using RTI Secure WAN Transport

To use RTI Secure WAN Transport, see the [RTI Secure WAN Transport Release Notes](#) and [RTI Secure WAN Transport Installation Guide](#) (or if not already installed, you can find the documentation here: <https://community.rti.com/documentation>).

To use the Secure WAN Transport APIs, link against the additional libraries in [Table 6.9 Additional Libraries for using RTI Secure WAN Transport APIs on iOS Systems on the facing page](#). (Select the files appropriate for your chosen library format.)

**Table 6.9 Additional Libraries for using RTI Secure WAN Transport APIs on iOS Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Static Release	libnddstransportwanz.a libnddstransporttlsz.a	libsslz.a
Static Debug	libnddstransportwanzd.a libnddstransporttlszd.a	libcryptoz.a

<sup>a</sup>The libraries are in `<NDDSHOME>/lib/<architecture>`.

<sup>b</sup>These libraries are in `<openssl install dir>/<architecture>/lib`.

# Chapter 7 Linux Platforms

First, see the basic instructions for compiling on Linux® platforms provided in ["Building Applications" in the User's Manual](#). The following tables provide supplemental information.

[Table 7.1 Linux Platforms on Intel CPUs below](#) and [Table 7.2 Linux Platforms on non-Intel CPUs on page 54](#) list the supported Linux architectures.

**Table 7.1 Linux Platforms on Intel CPUs**

Operating System	CPU	Compiler	RTI Architecture Abbreviation

Table 7.3 Building Instructions for Linux Architectures on page 57 lists the compiler flags and libraries you will need to link into your application.

<sup>a</sup>These libraries require a hardware FPU in the processor and are compatible with systems that have soft-float libc. See platform notes for compiler flag details.

<sup>b</sup>Requires [Linaro Gnueabihf Cross Compiler](#).

See also:

- [7.8 Libraries Required for Using Distributed Logger on page 66](#)
- [7.9 Libraries Required for Using Monitoring on page 66](#)
- [7.10 Libraries Required for Using RTI Secure WAN Transport APIs on page 67](#)
- [7.11 Libraries Required for Using RTI TCP Transport and TLS Support APIs on page 68](#)
- [7.12 Libraries Required for Zero Copy Transfer Over Shared Memory on page 68](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

Table 7.3 Building Instructions for Linux Architectures

API	Library Format	Required RTI Libraries or Jar Files <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libnddscppz.a or libnddscpp2z.a  libnddscz.a libnddscorz.a librticonnextmsgcz.a	-ldl -lnsl -lm -pthread -lrt  For Yocto Project, also add: -L/usr/lib/nptl	64-bit architectures (except Yocto Project): -DRTI_UNIX -m64  32-bit architectures: -DRTI_UNIX -m32  Ubuntu: For dynamic release and dynamic debug libraries, also add the following: -Wl,--no-as-needed  Wind River Linux 7/8 on ARMv7, Xilinx: -DRTI_UNIX  Yocto Project: -DRTI_UNIX -m32 --sysroot=SYSROOT
	Static Debug	libnddscppzd.a or libnddscpp2zd.a  libnddsczd.a libnddscorzd.a librticonnextmsgcppzd.a		
	Dynamic Release	libnddscpp.so or libnddscpp2.so  libnddsc.so libnddscorz.so librticonnextmsgcpp.so		
	Dynamic Debug	libnddscppd.so or libnddscpp2d.so  libnddscd.so libnddscord.so librticonnextmsgcppd.so		

<sup>a</sup>Choose libnddscpp\*.\* for the Traditional C++ API or libnddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>RTI C/C++/Java libraries are in <NDDSHOME>/lib/<architecture>. The jar files are in <NDDSHOME>/lib/java.

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the RTI *Connex* DDS Professional, Evaluation, or Basic package type. It is not provided with the Core package type.

Table 7.3 Building Instructions for Linux Architectures

API	Library Format	Required RTI Libraries or Jar Files <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	libnddscz.a libnddscorz.a librticonnextmsgcz.a	-ldl -lnsl -lm -pthread -lrt  For Yocto Project, also add: -L/usr/lib/nptl	64-bit architectures (except Yocto Project): -DRTI_UNIX -m64
	Static Debug	libnddsczd.a libnddscorz.d.a librticonnextmsgcz.d.a		32-bit architectures: -DRTI_UNIX -m32
	Dynamic Release	libnddsc.so libnddscorz.so librticonnextmsgc.so		Ubuntu: For dynamic release and dynamic debug libraries, also add the following: -Wl,-no-as-needed
	Dynamic Debug	libnddscd.so libnddscorz.d.so librticonnextmsgcd.so		Wind River Linux 7/8 on ARMv7, Xilinx: -DRTI_UNIX  Yocto Project: -DRTI_UNIX -m32 --sysroot=SYSROOT
Java	Release	nddsjava.jar rticonnextmsg.jar	N/A	None required
	Debug	nddsjavad.jar rticonnextmsgd.jar		

Table 7.4 Running Instructions for Linux Architectures below provides details on the environment variables that must be set at run time for a Linux architecture. When running on 64-bit Java architectures (x64Linux2.6...), use the **-d64** flag on the command-line.

Table 7.4 Running Instructions for Linux Architectures

RTI Architecture	Library Format	Environment Variables
All supported Linux architectures when using Java	N/A	LD_LIBRARY_PATH= \${NDDSHOME}/lib/<architecture>: \${LD_LIBRARY_PATH} <b>Note:</b> For all 64-bit Java architectures (...64Linux...), use <b>-d64</b> in the command line.

<sup>a</sup>Choose libnddscpp\*.\* for the Traditional C++ API or libnddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>RTI C/C++/Java libraries are in <NDDSHOME>/lib/<architecture>. The jar files are in <NDDSHOME>/lib/java.

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the RTI *Connex* DDS Professional, Evaluation, or Basic package type. It is not provided with the Core package type.

**Table 7.4 Running Instructions for Linux Architectures**

RTI Architecture	Library Format	Environment Variables
All supported Linux architectures when <u>not</u> using Java	Static (Release & Debug)	None required
	Dynamic (Release & Debug)	LD_LIBRARY_PATH= \${NDDSHOME}/lib/<architecture>; \${LD_LIBRARY_PATH}

[Table 7.5 Library-Creation Details for Linux Architectures below](#) provides details on how the Linux libraries were built. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

## 7.1 Support for Modern C++ API

*Connex* DDS provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all the platforms in [Table 7.1 Linux Platforms on Intel CPUs on page 52](#) and [Table 7.2 Linux Platforms on non-Intel CPUs on page 54](#).

Some platforms have been tested only on C++03, whereas others have been tested with both C++03 and C++11. C++03 is typically supported with gcc3.4.2 and above. C++11 is typically supported with gcc4.7.2 and above.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 7.2 Multicast Support

Multicast is supported on all Linux platforms and is configured out of the box. That is, the default value for the initial peers list (`NDDS_DISCOVERY_PEERS`) includes a multicast address. See the API Reference HTML documentation for more information.

## 7.3 Supported Transports

- **Shared memory:** Supported and enabled by default. To clean up shared memory resources, reboot the kernel.

- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Supported for all platforms *except* Raspbian Wheezy 7.0 and NI Linux 3.

The UDPv6 transport is not enabled by default, and the peers list must be modified to support IPv6.

Traffic Class support is only provided on architectures with gcc 4.1.0 or later that support the UDPv6 transport.

- **TCP/IPv4:** Supported for all Linux platforms *except* Freescale, RedHawk 6.0, Red Hat Enterprise Linux 5.2, Wind River Linux 7/8 on ARMv7, and Yocto Project. This is *not* a built-in transport.

## 7.3.1 Shared Memory Support

To see a list of shared memory resources in use, please use the **'ipcs'** command. To clean up shared memory and shared semaphore resources, please use the **'ipcrm'** command.

The shared memory keys used by *Connex DDS* are in the range of 0x400000. For example:

```
ipcs -m | grep 0x004
```

The shared semaphore keys used by *Connex DDS* are in the range of 0x800000; the shared mutex keys are in the range of 0xb00000. For example:

```
ipcs -s | grep 0x008
ipcs -s | grep 0x00b
```

Please refer to the shared-memory transport online documentation for details on the shared memory and semaphore keys used by *Connex DDS*.

## 7.4 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported.

## 7.5 Thread Configuration

[Table 7.6 Thread Settings for Linux Platforms on the facing page](#) lists the thread settings for Linux platforms.

See also: [Table 7.7 Thread-Priority Definitions for Linux Platforms on page 65](#) and [Table 7.8 Thread Kinds for Linux Platforms on page 65](#).

### 7.5.1 Support for Controlling CPU Core Affinity for RTI Threads

Support for controlling CPU core affinity (described in ["Controlling CPU Core Affinity" in the User's Manual](#)) is available on all supported Linux/SUSE platforms.

Table 7.6 Thread Settings for Linux Platforms

Applicable Thread	DDS_ ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	Empty CPU list (Supported on Linux and SUSE platforms)
	cpu_rotation	DDS_THREAD_SETTINGS_CPU_NO_ROTATION (Supported on Linux and SUSE platforms)
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	Empty CPU list (Supported on Linux and SUSE platforms)
	cpu_rotation	DDS_THREAD_SETTINGS_CPU_NO_ROTATION (Supported on Linux and SUSE platforms)
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	Empty CPU list (Supported on Linux and SUSE platforms)
	cpu_rotation	DDS_THREAD_SETTINGS_CPU_NO_ROTATION (Supported on Linux and SUSE platforms)
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	Empty CPU list (Supported on Linux and SUSE platforms)
	cpu_rotation	DDS_THREAD_SETTINGS_CPU_NO_ROTATION (Supported on Linux and SUSE platforms)

**Table 7.7 Thread-Priority Definitions for Linux Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

**Table 7.8 Thread Kinds for Linux Platforms**

Thread Kinds	Operating-System Configuration <sup>a</sup>
DDS_THREAD_SETTINGS_FLOATING_POINT	N/A
DDS_THREAD_SETTINGS_STDIO	N/A
DDS_THREAD_SETTINGS_REALTIME_PRIORITY	Set schedule policy to SCHED_FIFO
DDS_THREAD_SETTINGS_PRIORITY_ENFORCE	N/A

## 7.5.2 Using REALTIME\_PRIORITY

If the **mask** field includes `DDS_THREAD_SETTINGS_REALTIME_PRIORITY`, a value must also be explicitly specified for the "priority" field in the QoS. (This is because using `DDS_THREAD_SETTINGS_REALTIME_PRIORITY` changes the scheduler used by Linux for the thread to `SCHED_FIFO`. If the **priority** field is not explicitly set, it will default to a value of 0, but this is an invalid value for a priority when using `SCHED_FIFO`.) Note that running with `REALTIME_PRIORITY` requires the appropriate privileges: the process will need to be run with root privileges on Linux in order to set the scheduler.

## 7.6 Durable Writer History and Durable Reader State Features

The Durable Writer History and Durable Reader State features have been tested with the following Linux architectures:

- Ubuntu 12.04 LTS (i86Linux2.6gcc4.6.3, x64Linux2.6gcc4.6.3)

<sup>a</sup>See the Linux programmer's manuals for more information

To use the Durable Writer History and Durable Reader State features, you must install a relational database. Only MySQL® is supported.

For information on database setup and the versions supported, please see the [RTI Connex DDS Core Libraries Getting Started Guide Addendum for Database Setup](#).

## 7.7 Support for 'Find Package' CMake Script

The 'Find Package' CMake script is supported on the following platforms:

- Linux platforms on Intel CPUs (see [Table 7.1 Linux Platforms on Intel CPUs on page 52](#))
- Raspbian Wheezy 7.0 (armv6vfpLinux3.xgcc4.7.2)

For information on using this script, see [Building Applications using CMake, in the RTI Connex DDS Core Libraries User's Manual](#).

## 7.8 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is supported on all the platforms in [Table 7.1 Linux Platforms on Intel CPUs on page 52](#) and [Table 7.2 Linux Platforms on non-Intel CPUs on page 54](#) *except* RedHawk Linux 6.0 and Red Hat Enterprise Linux 5.2.

To use the Distributed Logger APIs, link against the additional libraries in [Table 7.9](#). (Select the files appropriate for your chosen library format.)

**Table 7.9 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C	librtidlc.a	librtidlcd.a	librtidlc.so	librtidcd.so
C++ (Traditional API)	librtidlc.a librtidlcppz.a	librtidlcd.a librtidlcppzd.a	librtidlc.so librtidlcpp.so	librtidcd.so librtidlcppd.so
Java	N/A	N/A	distlog.jar distlogdatamodel.jar	distlog.jar distlogdatamodel.jar

## 7.9 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Note:** If you plan to use *static* libraries, the RTI library in [Table 7.10](#) must appear *first* in the list of libraries to be linked.

**Table 7.10 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimonitoringz.a	librtimonitoringzd.a	librtimonitoring.so	librtimonitoringd.so

## 7.10 Libraries Required for Using RTI Secure WAN Transport APIs

If you choose to use *RTI Secure WAN Transport*, it must be downloaded and installed separately.

It is only available for specific architectures. See the [RTI Secure WAN Transport Release Notes](#) and [RTI Secure WAN Transport Installation Guide](#) (or if it is not already installed, you can find the documentation here: <https://community.rti.com/documentation>).

To use the *Secure WAN Transport* APIs, link against the additional libraries in [Table 7.11](#). Select the files appropriate for your chosen library format.

**Table 7.11 Additional Libraries for using RTI Secure WAN Transport APIs on UNIX-Based Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Dynamic Release	libnddstransportwan.so libnddstransporttls.so	libssl.so libcrypto.so
Dynamic Debug	libnddstransportwand.so libnddstransporttlsd.so	
Static Release	libnddstransporttlsz.a libnddstransporttlszd.a	
Static Debug	libnddstransportwanz.a libnddstransportwanzd.a	

<sup>a</sup>The libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <openssl install dir>/<architecture>/lib.

## 7.11 Libraries Required for Using RTI TCP Transport and TLS Support APIs

To use the TCP Transport APIs, link against the additional libraries in [Table 7.12](#).

If you are using *RTI TLS Support*, see [Table 7.13](#). Select the files appropriate for your chosen library format.

*RTI TLS Support* is an optional product for use with the TCP transport that is included with *RTI Connex*® *DDS*. If you choose to use *TLS Support*, it must be installed on top of a *Connex DDS* installation with the same version number; it can only be used on architectures that support TCP transport (see the [RTI TLS Support Release Notes](#)).

**Table 7.12 Additional Libraries for using RTI TCP Transport APIs on UNIX-Based Systems**

Library Format	RTI TCP Transport Libraries <sup>a</sup>
Dynamic Release	libnddstransporttcp.so
Dynamic Debug	libnddstransporttcpd.so
Static Release	libnddstransporttcpz.a
Static Debug	libnddstransporttcpzd.a

**Table 7.13 Additional Libraries for using RTI TCP Transport APIs on UNIX-Based Systems with TLS Enabled**

Library Format	RTI TLS Libraries <sup>b</sup>
Dynamic Release	libnddstls.so
Dynamic Debug	libnddstlstd.so
Static Release	libnddstlsz.a
Static Debug	libnddstlszd.a
OpenSSL Libraries	libssl.so libcrypto.so

## 7.12 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 7.14](#).

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

**Table 7.14 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimpz.a	librtimpzd.a	librtimp.so	librtimpd.so

# Chapter 8 LynxOS Platforms

[Table 8.1](#) lists the architectures supported on LynxOS® operating systems.

**Table 8.1 Supported LynxOS Platforms**

Operating System	CPU	Compiler	RTI Architecture
LynxOS 5.0	PPC 74xx (such as 7410)	gcc 3.4.3	ppc7400Lynx5.0.0gcc3.4.3

[Table 8.2](#) and [Table 8.3](#) list the compiler flags and libraries you will need to link into your application.

See also:

- [8.6 Libraries Required for Using Monitoring on page 75](#)
- [8.7 Libraries Required for Zero Copy Transfer Over Shared Memory on page 76](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 8.4](#) provides details on the environment variables that must be set at run time for a LynxOS architecture.

[Table 8.5](#) provides details on how the libraries were built by RTI. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

**Note:** The Java API is not currently supported on LynxOS platforms. If you would like Java to be supported on LynxOS, please contact your RTI account manager.

Table 8.2 Building Instructions for LynxOS Architectures

API	Library Format <sup>a</sup>	Required RTI Libraries <sup>bcd</sup>
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a  libniddscz.a libniddscorez.a librticonnextmsgcppz.a
	Static Debug	libniddscppzd.a or libniddscpp2zd.a  libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a
	Dynamic Release	libniddscpp.so or libniddscpp2.so  libniddsc.so libniddscore.so librticonnextmsgcpp.so
	Dynamic Debug	libniddscppd.so or libniddscpp2d.so  libniddscd.so libniddscored.so librticonnextmsgcppd.so
C	Static Release	libniddscz.a libniddscorez.a librticonnextmsgcz.a
	Static Debug	libniddsczd.a libniddscorezd.a librticonnextmsgczd.a
	Dynamic Release	libniddsc.so libniddscore.so librticonnextmsgc.so
	Dynamic Debug	libniddscd.so libniddscored.so librticonnextmsgcd.so

<sup>a</sup>Dynamic libraries are not supported under LynxOS-178.

<sup>b</sup>Choose libniddscpp\*.\* for the Traditional C++ API or libniddscpp2\*.\* for the Modern C++ API.

<sup>c</sup>The RTI C/C++ libraries are in \$(NDDSHOME)/lib/<architecture> (where \$(NDDSHOME) is where *Connex DDS* is installed, see [1.1 Paths Mentioned in Documentation on page 4](#)).

<sup>d</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS* Professional, Evaluation, or Basic package type. It is not provided with the *RTI Connex DDS* Core package type.

**Table 8.3 Building Instructions for LynxOS Architectures**

API	RTI Architecture	Required System Libraries	Required Compiler Flags
C and C++ (Traditional and Modern APIs)	i86Lynx4.0.0gcc3.2.2	-ldb -lm -lrpc -lc -llynx	-DRTI_LYNX -mthreads -mshared
	ppc7400Lynx5.0.0gcc3.4.3		For ppc7400Lynx5.0.0gcc3.4.3, also add: -RTI_LYNX500

**Table 8.4 Running Instructions for LynxOS Architectures**

RTI Architecture	Library Format (Release & Debug)	Required Environment Variables
All supported LynxOS architectures	Static	None required
	Dynamic	LD_LIBRARY_PATH=\${NDDSHOME}/lib/<architecture>:\${LD_LIBRARY_PATH}

**Table 8.5 Library-Creation Details for LynxOS Architectures**

RTI Architecture	Library Format (Static & Dynamic)	Compiler Flags Used by RTI
ppc7400Lynx5.0.0gcc3.4.3	Release	-mcpu=7400 -maltivec -mabi=altivec -fno-exceptions -mthreads -mshared -fPIC -D_POSIX_THREADS_CALLS -D__NO_INCLUDE_WARN__ -O -Wall -Wno-unknown-pragmas -DPtrIntType-e=long -DCSREAL_IS_FLOAT -DCPU=PPC7400 -DTARGET="ppc7400Lynx5.0.0gcc3.4.3" -DNDEBUG -c -Wp,-MD
	Debug	-mcpu=7400 -maltivec -mabi=altivec -fno-exceptions -mthreads -mshared -fPIC -D_POSIX_THREADS_CALLS -D__NO_INCLUDE_WARN__ -O -Wall -Wno-unknown-pragmas -DPtrIntType-e=long -DCSREAL_IS_FLOAT -DCPU=PPC7400 -DTARGET="ppc7400Lynx5.0.0gcc3.4.3" -c -Wp,-MD

## 8.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is only available for the LynxOS 5.0 platform and has been tested only with C++03.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 8.2 Multicast Support

Multicast is supported on all LynxOS platforms, but it is not configured out of the box. That is, the default value for the initial peers list (NDDS\_DISCOVERY\_PEERS) does not include a multicast address.

To configure a LynxOS target to use multicast, you need to add routes so multicast packets will be sent via the proper network interfaces. To add routes, use the "route add" command. The specific parameters depend on how the target is configured, the name of the interface (such as `elx10` in the example below), etc. Please refer to your LynxOS documentation for details on the "route add" command.

For example:

```
route add -net 224.0.0.0 -netmask 240.0.0.0 -interface elx10
```

**Note—Group Address Ignored for Multicast Reception on Loopback:** On LynxOS architectures, the multicast-loopback implementation ignores the group address when receiving messages. This causes *Connex DDS* to receive all outgoing multicast traffic originating from the host for that port. Thus, if you have two participants on the same host and in the same DDS domain, both listening for discovery traffic over multicast, they will discover each other, regardless of the multicast address to which they are listening. (The correct behavior would be to receive messages only for the addresses to which the current process (not the host) is subscribed.)

## 8.3 Supported Transports

- **Shared memory:** Supported and enabled by default.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Not supported.
- **TCP/IPv4:** Not supported.

### 8.3.1 Shared Memory Support

To see a list of shared memory resources in use, use the '`ipcs`' command. To clean up shared memory and shared semaphore resources, use the '`ipcrm`' command.

The shared memory keys used by *Connex DDS* are in the range of 0x400000. For example:

```
ipcs -m | grep 0x004
```

The shared semaphore keys used by *Connex DDS* are in the range of 0x800000; the shared mutex keys are in the range of 0xb00000. For example:

```
ipcs -s | grep 0x008  
ipcs -s | grep 0x00b
```

Please refer to the shared-memory transport online documentation for details on the shared memory and semaphore keys used by *Connex DDS*.

## 8.4 Unsupported Features

These features are not supported on LynxOS platforms:

- Controlling CPU Core Affinity
- Distributed Logger
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script
- Monotonic clock

## 8.5 Thread Configuration

See [Table 8.6 Thread Settings for LynxOS Platforms below](#) and [Table 8.7 Thread-Priority Definitions for LynxOS Platforms on the next page](#).

**Table 8.6 Thread Settings for LynxOS Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	17
	stack_size	64*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	10
	stack_size	64*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	13
	stack_size	4*64*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 8.6 Thread Settings for LynxOS Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	29
	stack_size	4*64*1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 8.7 Thread-Priority Definitions for LynxOS Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	17
THREAD_PRIORITY_HIGH	32
THREAD_PRIORITY_ABOVE_NORMAL	29
THREAD_PRIORITY_NORMAL	17
THREAD_PRIORITY_BELOW_NORMAL	13
THREAD_PRIORITY_LOW	10

## 8.6 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex* DDS application is linked with the static release version of the *Connex* DDS libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

### Notes:

- Automatic loading of the dynamic monitoring library through QoS is not supported.
- Memory and CPU usage is not available in monitoring data.

- If you plan to use *static* libraries, the RTI library in [Table 8.8](#) must appear *first* in the list of libraries to be linked.

**Table 8.8 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.so	librtmonitoringd.so

## 8.7 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 8.9](#).

**Table 8.9 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

## 8.8 IP Fragmentation Issues

The LynxOS platforms do not support IP fragmentation over the loopback interface due to a bug in the OS (see below). The maximum size of a UDP packet that can be sent over the loopback interface is therefore limited by the size of the MTU on this interface, which by default is 16384 bytes. Since the default **message\_size\_max** for the builtin-UDPv4 transport is 65507 bytes (the maximum UDP user payload), you must adjust the size of the MTU of the loopback interface to accommodate UDP messages larger than 16384 bytes (including the UDP header). You can increase the size of the MTU with the following command:

```
> ifconfig lo0 mtu 65535
```

**Note:** The maximum size of the MTU on the loopback interface is 65535, which will allow RTPS payloads of 65507 bytes.

For more information on this issue, contact LynuxWorks Support about bug #30191.

# Chapter 9 OS X Platforms

[Table 9.1 Supported OS X Platforms](#) lists the architectures supported on Mac OS X operating systems.

**Table 9.1 Supported OS X Platforms**

Operating System	CPU	Compiler	RTI Architecture Abbreviation
OS X 10.11 (see Notes below)	x64	clang 7.0	x64Darwin15clang7.0
		Java Platform, Standard Edition JDK 1.8	
OS X 10.12	x64	clang 8.0	x64Darwin16clang8.0
		Java Platform, Standard Edition JDK 1.8	
OS X 10.13	x64	clang 9.0	x64Darwin17clang9.0
		Java Platform, Standard Edition JDK 1.8	

[Table 9.2 Building Instructions for OS X Architectures on page 79](#) lists the compiler flags and libraries you will need to link into your application.

See also:

- [9.8 Libraries Required for Using Distributed Logger on page 86](#)
- [9.9 Libraries Required for Using Monitoring on page 86](#)
- [9.10 Libraries Required for Using RTI Secure WAN Transport APIs on page 87](#)
- [9.11 Libraries Required for Using RTI TCP Transport APIs on page 87](#)
- [9.12 Libraries Required for Zero Copy Transfer Over Shared Memory on page 88](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 9.3 Running Instructions for OS X Architectures on page 81](#) provides details on the environment variables that must be set at run time for an OS X architecture.

[Table 9.4 Library-Creation Details for OS X Architectures on page 82](#) provides details on how the libraries were built by RTI. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

Table 9.2 Building Instructions for OS X Architectures

API	Library Format	Required RTI Libraries <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a  libniddscz.a libniddscorez.a librticonnextmsgcppz.a	-ldl -lm -lpthread	-dynamic -pthread -lc -single_module -DRTI_UNIX -DRTI_DARWIN -DRTI_64BIT
	Static Debug	libniddscppzd.a or libniddscpp2zd.a  libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a		
	Dynamic Release	libniddscpp.dylib or libniddscpp2.dylib  libniddsc.dylib libniddscore.dylib librticonnextmsgcpp.dylib		
	Dynamic Debug	libniddscppd.dylib or libniddscpp2d.dylib  libniddscd.dylib libniddscored.dylib librticonnextmsgcppd.dylib		

<sup>a</sup>Choose libniddscpp\*.\* for the Traditional C++ API or libniddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The *Connex* DDS C/C++ libraries are in <NDDSHOME>/lib/<architecture>/.

<NDDSHOME> is where *Connex* DDS is installed, see [1.1 Paths Mentioned in Documentation on page 4](#)

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex* DDS Professional, Evaluation, or Basic package type. It is not provided with the *RTI Connex* DDS Core package type.

Table 9.2 Building Instructions for OS X Architectures

API	Library Format	Required RTI Libraries <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	libnddscz.a libnddscorz.a librticonnextmsgcz.a	-ldl -lm -lpthread	-dynamic -lpthread -lc -single_module -DRTI_UNIX -DRTI_DARWIN -DRTI_64BIT
	Static Debug	libnddsczd.a libnddscorz.d.a librticonnextmsgcz.d.a		
	Dynamic Release	libnddsc.dylib libnddscorz.dylib librticonnextmsgc.dylib		
	Dynamic Debug	libnddscd.dylib libnddscorz.d.dylib librticonnextmsgcd.dylib		
Java	Release	nddsjava.jar rticonnextmsg.jar	N/A	None required
	Debug	nddsjavad.jar rticonnextmsgd.jar		

<sup>a</sup>Choose libnddscpp\*.\* for the Traditional C++ API or libnddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The *Connex* DDS C/C++ libraries are in <NDDSHOME>/lib/<architecture>/.

<NDDSHOME> is where *Connex* DDS is installed, see [1.1 Paths Mentioned in Documentation on page 4](#)

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex* DDS Professional, Evaluation, or Basic package type. It is not provided with the *RTI Connex* DDS Core package type.

Table 9.3 Running Instructions for OS X Architectures

RTI Architecture	Library Format (Release & Debug)	Required Environment Variables <sup>a</sup>
x64Darwin15clang7.0	Static	None required
	Dynamic	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin15clang7.0:\${DYLD_LIBRARY_PATH}
x64Darwin15clang7.0 for Java	N/A	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin15clang7.0:\${DYLD_LIBRARY_PATH}
x64Darwin16clang8.0	Static	None required
	Dynamic	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin16clang8.0:\${DYLD_LIBRARY_PATH}
x64Darwin16clang8.0 for Java	N/A	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin16clang8.0:\${DYLD_LIBRARY_PATH}
x64Darwin17clang9.0	Static	None required
	Dynamic	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin17clang9.0:\${DYLD_LIBRARY_PATH}
x64Darwin17clang9.0 for Java	N/A	DYLD_LIBRARY_PATH=\${NDDSHOME}/lib/x64Darwin17clang9.0:\${DYLD_LIBRARY_PATH}

<sup>a</sup>`${NDDSHOME}` is where *Connex* DDS is installed. `${DYLD_LIBRARY_PATH}` represents the value of the `DYLD_LIBRARY_PATH` variable prior to changing it to support *Connex* DDS. When using `nddsjava.jar`, the Java virtual machine (JVM) will attempt to load release versions of the native libraries (`nddsjava.dylib`, `nddscore.dylib`, `nddsc.dylib`). When using `nddsjava.d.jar`, the JVM will attempt to load debug versions of the native libraries (`nddsjava.dylib`, `nddscore.dylib`, `nddsc.dylib`).

Table 9.4 Library-Creation Details for OS X Architectures

RTI Architecture	Library Format (Static & Dynamic)	Compiler Flags Used by RTI
x64Darwin15clang7.0	Release	-x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64 -DNDEBUG
	Debug	-x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64
x64Darwin15clang7.0 for Java	Release	-target 1.5 -source 1.5
	Debug	-target 1.5 -source 1.5 -g
x64Darwin16clang8.0	Release	/usr/bin/clang++ -x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64 -DNDEBUG
	Debug	/usr/bin/clang++ -x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64
x64Darwin16clang8.0 for Java	Release	-target 1.5 -source 1.5
	Debug	-target 1.5 -source 1.5 -g
x64Darwin17clang9.0	Release	-x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64 -DTARGET="x64Darwin17clang9.0" -DNDEBUG
	Debug	-x c -arch x86_64 -mtune=core2 -Wno-trigraphs -fpascal-strings -fasm-blocks -g -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=AMD64 -DTARGET="x64Darwin17clang9.0"
x64Darwin17clang9.0 for Java	Release	-target 1.5 -source 1.5
	Debug	-target 1.5 -source 1.5 -g

## 9.1 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all OS X platforms and has been tested with both C++03 and C++11.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 9.2 Multicast Support

Multicast is supported on OS X platforms and is configured out of the box. That is, the default value for the initial peers list (**NDDS\_DISCOVERY\_PEERS**) includes a multicast address. See the online documentation for more information.

## 9.3 Supported Transports

- **Shared memory:** Supported and enabled by default.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Supported on OS X 10.13 (x64Darwin17clang9.0).
- **TCP/IPv4:** Supported.

## 9.4 Unsupported Features

These features are not supported on OS X platforms:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- Monotonic clock

## 9.5 System Integrity Protection (SIP)

A feature called System Integrity Protection (SIP) was introduced in OS X 10.11. If enabled, this feature strips out the environment variable `DYLD_LIBRARY_PATH`, which is used to specify the location of shared libraries for a program. For more details, see <https://support.apple.com/en-us/HT204899>.

### 9.5.1 SIP and Java Applications

If you run *Connex* DDS applications using a Java Runtime Environment located under one of the paths protected by SIP (e.g., `/usr/bin`) and rely on the `DYLD_LIBRARY_PATH` environment variable to set the path to the *Connex* DDS run-time libraries (or any other third party run-time libraries, such as OpenSSL), Java will fail to load them with an error message such as:

```
The library libnddsjava.dylib could not be loaded by your operating system
```

To overcome this limitation, when running Java applications on OS X you must use the `java.library.path` variable instead of the `DYLD_LIBRARY_PATH` environment variable to indicate the path to the *Connex* DDS libraries. This is automatically performed by the scripts to run applications generated by the *RTI Code Generator*. However, if you are manually running your *Connex* DDS application using the Java Runtime Environment, or you are writing our own scripts to run your Java application, you can indicate it as follows:

```
java -Djava.library.path="<installation_dir>/lib/<architecture>" -classpath .:"<installation_dir>/lib/java/nddsjava.jar" <your_class>
```

Additionally, some *Connex* DDS applications may need to dynamically load functionality that is implemented in separate libraries (e.g., for the RTI Monitoring Library or transport plugins such as *RTI Secure WAN Transport* or *RTI TLS Support*). In that case, specifying the path to the `lib` directory using `java.lib-`

**rarty.path** is not sufficient, because the path to those libraries is not exposed to the underlying *Connex DDS* infrastructure.

To work around this limitation, you must provide the full path and extension of the dynamic libraries that are loaded at run time. In the case of the RTI Monitoring Library, this implies adding the following to your XML configuration file:

```
<participant_qos>
  <property>
    <value>
      <element>
        <name>rti.monitor.library</name>
        <value>/full-path-to-librtimonitoring.dylib</value>
      </element>
      <!-- ... -->
    </value>
  </property>
</participant_qos>
```

Likewise, for transport plugins that are loaded dynamically (e.g., the TCP transport plugin), you must add the full path to the XML configuration file:

```
<participant_qos>
  <property>
    <!-- ... -->
    <value>
      <element>
        <name>dds.transport.TCPv4.tcp1.library</name>
        <value>/full-path-to-libnddstransporttcp.dylib</value>
      </element>
      <!-- ... -->
    </value>
  </property>
</participant_qos>
```

For more on transport plugins, see [9.10 Libraries Required for Using RTI Secure WAN Transport APIs on page 87](#) and [9.11 Libraries Required for Using RTI TCP Transport APIs on page 87](#).

## 9.5.2 SIP and Connex Tools, Infrastructure Services, and Utilities

The SIP feature also makes it impossible for the scripts under `<installation_dir>/bin` to pick up the value of the `DYLD_LIBRARY_PATH` environment variable at run time. To work around this issue, *Connex DDS* tools, infrastructure services, and utilities rely on `RTI_LD_LIBRARY_PATH`, an alternative environment variable that can be used in lieu of `DYLD_LIBRARY_PATH` and `LD_LIBRARY_PATH` to add library paths on UNIX-like systems.

For example, to add `<OPENSSLHOME>/lib` and `<NDDSHOME>/lib/<architecture>` (i.e., the library paths required for running *RTI Routing Service* with the Secure WAN or TLS transports) to your library path, you can export the `RTI_LD_LIBRARY_PATH` environment variable and run *Routing Service* as follows:

```
export RTI_LD_LIBRARY_PATH=<OPENSSLHOME>;/lib:<NDDSHOME>;/lib/<ARCHITECTURE>;
./<installation_dir>/bin/rtiroutingservice -cfgName <your_configuration>
```

## 9.6 Thread Configuration

See [Table 9.5 Thread Settings for OS X Platforms below](#) and [Table 9.6 Thread-Priority Definitions for OS X Platforms on the next page](#).

**Table 9.5 Thread Settings for OS X Platforms**

Applicable Thread	DDS_ ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STUDIO
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 9.6 Thread-Priority Definitions for OS X Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

## 9.7 Support for 'Find Package' CMake Script

The 'Find Package' CMake script is supported on all OS X platforms in [Table 9.1 Supported OS X Platforms on page 77](#).

For information on using this script, see [Building Applications using CMake, in the RTI Connex DDS Core Libraries User's Manual](#).

## 9.8 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is supported on OS X platforms. [Table 9.7](#) lists the additional libraries you will need in order to use *Distributed Logger*.

**Table 9.7 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C++ (Traditional API)	librtidlcz.a librtidlcppz.a	librtidlczd.a librtidlcppzd.a	librtidlc.dylib librtidlcpp.dylib	librtidlcd.dylib librtidlcppd.dylib
C	librtidlcz.a	librtidlczd.a	librtidlc.dylib	librtidlcd.dylib
Java	N/A	N/A	distlog.jar distlogdatamodel.jar	distlogd.jar distlogdatamodeld.jar

## 9.9 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Note:** If you are plan to use *static* libraries, the RTI library in [Table 9.8](#) must appear *first* in the list of libraries to be linked.

**Table 9.8 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.dylib	librtmonitoringd.dylib

## 9.10 Libraries Required for Using RTI Secure WAN Transport APIs

If you choose to use *RTI Secure WAN Transport*, it must be downloaded and installed separately. It is available on all OS X architectures. See the [RTI Secure WAN Transport Release Notes](#) and [RTI Secure WAN Transport Installation Guide](#).

To use the Secure WAN Transport APIs, link against the additional libraries in [Table 9.9](#) . (Select the files appropriate for your chosen library format.)

**Table 9.9 Additional Libraries for using RTI Secure WAN Transport APIs on OS X Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Dynamic Release	libnddstransportwan.dylib libnddstransporttls.dylib	libssl.so libcrypto.so
Dynamic Debug	libnddstransportwand.dylib libnddstransporttlsd.dylib	
Static Release	libnddstransporttlsz.a libnddstransporttlszd.a	
Static Debug	libnddstransportwanz.a libnddstransportwanzd.a	

## 9.11 Libraries Required for Using RTI TCP Transport APIs

To use the TCP Transport APIs, link against the additional libraries in [Table 9.10](#). If you are using *RTI TLS Support*, see [Table 9.11](#). (Select the files appropriate for your chosen library format.)

<sup>a</sup>The libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <openssl install dir>/<architecture>/lib.

**Table 9.10 Additional Libraries for using RTI TCP Transport APIs on OS X Systems**

Library Format	RTI TCP Transport Libraries <sup>a</sup>
Dynamic Release	libnndstransporttcp.so
Dynamic Debug	libnndstransporttcpd.so
Static Release	libnndstransporttcpz.a
Static Debug	libnndstransporttcpzd.a

**Table 9.11 Additional Libraries for using RTI TCP Transport APIs on OS X Systems with TLS Enabled**

Library Format	RTI TLS Libraries <sup>b</sup>
Dynamic Release	libnndstls.so
Dynamic Debug	libnndstlsd.so
Static Release	libnndstlsz.a
Static Debug	libnndstlszd.a
OpenSSL Libraries	libssl.so libcrypto.so

## 9.12 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 9.12](#).

**Table 9.12 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

# Chapter 10 QNX Platforms

Table 10.1 lists the architectures supported on QNX operating systems.

**Table 10.1 Supported QNX Platforms<sup>c</sup>**

Operating System	CPU	Compiler	RTI Architecture
QNX Neutrino 6.4.1	x86	qcc 4.3.3 with GNU C++ libraries	i86QNX6.4.1qcc_gpp
QNX Neutrino 6.5	x86	qcc 4.4.2 with GNU C++ libraries	i86QNX6.5qcc_gpp4.4.2
	PowerPC™ E500 V2 core <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	qcc (gcc 4.4.2)	ppce500v2QNX6.5.0qcc_cpp4.4.2
QNX Neutrino 6.5 SP1 <sup>a</sup>	ARMv7	qcc 4.4.2 with Dinkum libraries	armv7aQNX6.5.0SP1qcc_cpp4.4.2

---

<sup>a</sup>These libraries require a hardware FPU in the processor and are compatible with systems that have hard-float libc. See platform notes for compiler flags details.

<sup>c</sup>For use with Windows, Linux or Solaris host as supported by QNX and RTI.

Table 10.1 Supported QNX Platforms<sup>b</sup>

Operating System	CPU	Compiler	RTI Architecture
QNX Neutrino 6.6.0	ARMv7 See note regarding patches below. <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	qcc_cpp 4.7.3 with Dinkumware libraries	armv7aQNX6.6.0qcc_cpp4.7.3

	x64	qcc 7.0.0 with LLVM default libraries	x64QNX7.0.0qcc_cxx5.4.0
		qcc 7.0.0 with GNU C++ libraries	x64QNX7.0.0qcc_gpp5.4.0

**Note regarding patches:** The libraries for QNX Neutrino 6.6.0 on ARMv7 (armv7aQNX6.6.0qcc\_cpp4.7.3) and x86 (i86QNX6.6qcc\_cpp4.7.3), and QNX Neutrino 7.0 on ARMv7 (armv7QNX7.0.0qcc\_cxx5.4.0) were built with the following patches and tested on systems that have these patches installed:

- QNX Software Development Platform 6.6 Graphics Patch (Patch ID 3875)
- QNX Software Development Platform 6.6 Header Files Patch (Patch ID 3851)
- Patch-660-3885-diskimage.tar for the BSP

<sup>a</sup>These libraries require a hardware FPU in the processor and are compatible with systems that have hard-float libc. See platform notes for compiler flags details.

<sup>b</sup>For use with Windows, Linux or Solaris host as supported by QNX and RTI.

[Table 10.2 Building Instructions for QNX Architectures on the next page](#) lists the libraries you will need to link into your application.

See also:

- [10.8 Libraries Required for Using Distributed Logger on page 98](#)
- [10.9 Libraries Required for Using Monitoring on page 98](#)
- [10.10 Libraries Required for Using RTI Secure WAN Transport APIs on page 99](#)
- [10.11 Libraries Required for Using RTI TCP Transport APIs on page 99](#)
- [10.12 Libraries Required for Zero Copy Transfer Over Shared Memory on page 100](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 10.3 Running Instructions for QNX Architectures on page 93](#) provides details on the environment variables that must be set at run time for a QNX architecture.

[Table 10.4 Library-Creation Details for QNX Architectures on page 93](#) provides details on how the QNX libraries were built.

Table 10.2 Building Instructions for QNX Architectures

API	Library Format	RTI Libraries <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a  libniddscz.a libniddscorez.a librticonnextmsgcppz.a	-lm -lsocket	-DRTI_QNX
	Static Debug	libniddscppzd.a or libniddscpp2zd.a  libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a		
	Dynamic Release	libniddscpp.so or libniddscpp2.so  libniddsc.so libniddscore.so librticonnextmsgcpp.so		
	Dynamic Debug	libniddscppd.so or libniddscpp2d.so  libniddscd.so libniddscored.so librticonnextmsgcppd.so		
C	Static Release	libniddscz.a libniddscorez.a librticonnextmsgcz.a	-lm -lsocket	-DRTI_QNX
	Static Debug	libniddsczd.a libniddscorezd.a librticonnextmsgczd.a		
	Dynamic Release	libniddsc.so libniddscore.so librticonnextmsgc.so		
	Dynamic Debug	libniddscd.so libniddscored.so librticonnextmsgcd.so		

<sup>a</sup>Choose libniddscpp\*.\* for the Traditional C++ API or libniddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The DDS C/C++ libraries are in \$(NDDSHOME)/lib/<architecture>.

<sup>c</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS Professional*, *Evaluation*, or *Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

Table 10.3 Running Instructions for QNX Architectures

RTI Architecture	Library Format (Release & Debug)	Environment Variables
All supported QNX architectures	Static	None required
	Dynamic	LD_LIBRARY_PATH= \${NDDSHOME}/lib/<architecture>: \${LD_LIBRARY_PATH} <sup>a</sup>

Table 10.4 Library-Creation Details for QNX Architectures

RTI Architecture	Library Format (Static & Dynamic)	Compiler Flags Used by RTI

	Debug	qcc -Vgcc/4.7.3,gcc_ntoarmv7le_cpp -lang-c -fPIC -fexceptions -DFD_SETSIZE=512 -g -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=ARMV7 -DTARGET-T="armv7aQNX6.6.0qcc_cpp4.7.3"
armv7QNX7.0.0 qcc_cxx5.4.0	Release	qcc -Vgcc/5.4.0,gcc_ntoarmv7le -Y_cxx -O -Wall -Wno-unknown-pragmas -fPIC -fexceptions -DFD_SETSIZE=512 -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=ARM7 -DTARGET-T="armv7QNX7.0.0qcc_cxx5.4.0" -DNDEBUG
	Debug	qcc -Vgcc/5.4.0,gcc_ntoarmv7le -Y_cxx -g -Wall -Wno-unknown-pragmas -fPIC -fexceptions -DFD_SETSIZE=512 -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=ARM7 -DTARGET="armv7QNX7.0.0qcc_cxx5.4.0"

<sup>a</sup>`${NDDSHOME}` represents the root directory of your *Connex* DDS installation. `${LD_LIBRARY_PATH}` represents the value of the `LD_LIBRARY_PATH` variable prior to changing it to support *Connex* DDS. When using `nndsjava.jar`, the Java virtual machine (JVM) will attempt to load release versions of the native libraries. When using `nndsjavad.jar`, the JVM will attempt to load debug versions of the native libraries.

Table 10.4 Library-Creation Details for QNX Architectures

## 10.1 Required Change for Building with C++ Libraries for QNX Platforms

For QNX architectures in *Connex DDS 5.0* and higher:

The C++ libraries are built *without* the **-fno-rtti** flag and *with* the **-fexceptions** flag. To build QNX architectures with *Connex DDS 5.0* and higher, you must build your C++ applications *without* **-fno-exceptions** in order to link with the RTI libraries. In summary:

- Do *not* use **-fno-exceptions** when building a C++ application or the build will fail. It is not necessary to use **-fexceptions**, but doing so will not cause a problem.
- It is no longer necessary to use **-fno-rtti**, but doing so will not cause a problem.

## 10.2 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all QNX platforms and has been tested with C++03.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 10.3 Multicast Support

Multicast is supported on QNX platforms and is configured out of the box. That is, the default value for the initial peers list (NDDS\_DISCOVERY\_PEERS) includes a multicast address. See the online documentation for more information.

## 10.4 Supported Transports

- **Shared Memory:** Supported and enabled by default.

To see a list of the shared memory resources, enter:

```
'ls /dev/shmem/RTIOsapiSharedMemorySegment-*'
```

To clean up the shared memory resources, remove the files listed in **dev/shmem/**. The shared resource names used by *Connex DDS* begin with **'RTIOsapiSharedMemorySem-'**. To see a list of shared semaphores, enter:

```
'ls /dev/sem/RTIOsapiSharedMemorySemMutex*'
```

To clean up the shared semaphore resources, remove the files listed in **/dev/sem/**.

The permissions for the semaphores created by *Connex DDS* are modified by the process' **umask** value. If you want to have shared memory support between different users, run the command **"umask 000"** to change the default **umask** value to 0 before running your *Connex DDS* application.

- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Supported. The transport is not enabled by default; the peers list must be modified to support IPv6. No Traffic Class support.

To use the UDPv6 transport, the network stack must provide IPv6 capability. Enabling UDPv6 may involve switching the network stack server and setting up IPv6 route entries.

- **TCP/IPv4:** Supported on all platforms except QNX Neutrino 6.4.1 (i86QNX6.4.1qcc\_gpp), QNX Neutrino 7.0.0 on ARMv7 (armv7QNX7.0.0qcc\_cxx5.4.0), and QNX Neutrino 6.5 on PPC (ppce500v2QNX6.5.0qcc\_cpp4.4.2).

## 10.5 Unsupported Features

These features are not supported on QNX platforms:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script

## 10.6 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on QNX platforms.

## 10.7 Thread Configuration

See [Table 10.5 Thread Settings for QNX Platforms below](#) and [Table 10.6 Thread-Priority Definitions for QNX Platforms on the next page](#).

**Table 10.5 Thread Settings for QNX Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	10
	stack_size	64 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	8
	stack_size	64 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	9
	stack_size	4 * 64 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	12
	stack_size	4 * 64 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 10.6 Thread-Priority Definitions for QNX Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	10
THREAD_PRIORITY_HIGH	14
THREAD_PRIORITY_ABOVE_NORMAL	12
THREAD_PRIORITY_NORMAL	10
THREAD_PRIORITY_BELOW_NORMAL	8
THREAD_PRIORITY_LOW	6

## 10.8 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is supported on all QNX platforms except armv7aQNX6.5.0SP1qcc\_cpp4.4.2.

[Table 10.7](#) lists the additional libraries you will need in order to use *Distributed Logger*.

**Table 10.7 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C	librtidlcz.a	librtidlczd.a	librtidlc.so	librtidcd.so
C++ (Traditional API)	librtidlcz.a librtidlcppz.a	librtidlczd.a librtidlcppzd.a	librtidlc.so librtidlcpp.so	librtidlcd.so librtidlcppd.so

## 10.9 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Note:** If you are plan to use *static* libraries, the RTI library from [Table 10.8](#) must appear *first* in the list of libraries to be linked.

**Table 10.8 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.so <sup>a</sup>	librtmonitoringd.so <sup>b</sup>

## 10.10 Libraries Required for Using RTI Secure WAN Transport APIs

If you choose to use *RTI Secure WAN Transport*, it must be downloaded and installed separately. It is only available for QNX 6.5 architectures. See the [RTI Secure WAN Transport Release Notes](#) and [RTI Secure WAN Transport Installation Guide](#) for details.

To use the Secure WAN Transport APIs, link against the additional libraries in [Table 10.9](#) . (Select the files appropriate for your chosen library format.)

**Table 10.9 Additional Libraries for using RTI Secure WAN Transport APIs on QNX 6.5 Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>c</sup>	OpenSSL Libraries <sup>d</sup>
Dynamic Release	libnddstransportwan.so libnddstransporttls.so	libssl.so libcrypto.so
Dynamic Debug	libnddstransportwand.so libnddstransporttlsd.so	
Static Release	libnddstransporttlsz.a libnddstransporttlszd.a	
Static Debug	libnddstransportwanz.a libnddstransportwanzd.a	

## 10.11 Libraries Required for Using RTI TCP Transport APIs

To use the TCP Transport APIs, link against the additional libraries in [Table 10.10 Additional Libraries for using RTI TCP Transport APIs on QNX 6.5 Systems on the next page](#). It is only available for QNX 6.5 architectures.

If you are using *RTI TLS Support*, see [Table 10.11 Additional Libraries for using RTI TCP Transport APIs on QNX Systems with TLS Enabled on the next page](#). (Select the files appropriate for your chosen library format.)

<sup>a</sup>To use dynamic libraries, make sure the permissions on the .so library files are readable by everyone.

<sup>b</sup>To use dynamic libraries, make sure the permissions on the .so library files are readable by everyone.

<sup>c</sup>The libraries are in <NDDSHOME>/lib/<architecture>.

<sup>d</sup>These libraries are in <openssl install dir>/<architecture>/lib.

**Table 10.10 Additional Libraries for using RTI TCP Transport APIs on QNX 6.5 Systems**

Library Format	RTI TCP Transport Libraries <sup>a</sup>
Dynamic Release	libnndstransporttcp.so
Dynamic Debug	libnndstransporttcpd.so
Static Release	libnndstransporttcpz.a
Static Debug	libnndstransporttcpzd.a

**Table 10.11 Additional Libraries for using RTI TCP Transport APIs on QNX Systems with TLS Enabled**

Library Format	RTI TLS Libraries <sup>b</sup>
Dynamic Release	libnndstls.so
Dynamic Debug	libnndstlsd.so
Static Release	libnndstlsz.a
Static Debug	libnndstlszd.a
OpenSSL Libraries	libssl.so libcrypto.so

## 10.12 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 10.12 below](#).

**Table 10.12 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

## 10.13 Restarting Applications on QNX Systems

Due to a limitation in the POSIX API, if a process is unexpectedly interrupted in the middle of a critical section of code that is protected by a shared mutex semaphore, the OS is unable to automatically release the semaphore, making it impossible to reuse it by another application.

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

The *Connex* DDS shared-memory transport uses a shared mutex to protect access to the shared memory area across multiple processes.

It is possible under some extreme circumstances that if one application crashes or terminates ungracefully while executing code inside a critical section, the other applications sharing the same resource will not be able to continue their execution. If this situation occurs, you must manually delete the shared-memory mutex before re-launching any application in the same DDS domain.

# Chapter 11 Solaris Platforms

**Note:** Solaris platforms are only available by request.

[Table 11.1 Supported Solaris Platforms](#) lists the architectures supported on Solaris operating systems.

**Table 11.1 Supported Solaris Platforms**

Operating System	CPU	Compiler or Software Development Kit	RTI Architecture
Solaris 10	UltraSPARC with native 64-bit support	gcc3.4.2	sparc64Sol2.10gcc3.4.2
		Java Platform, Standard Edition JDK 1.8	

[Table 11.2 Building Instructions for Solaris Architectures on the next page](#) lists the compiler flags and the libraries you will need to link into your application.

See also:

- [11.7 Libraries Required for Using Monitoring on page 109](#)
- [11.8 Libraries Required for using RTI Secure WAN Transport APIs on page 109](#)
- [11.9 Libraries Required for Zero Copy Transfer Over Shared Memory on page 110](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

[Table 11.3 Running Instructions for Solaris Architectures on page 105](#) provides details on the environment variables that must be set at run time for a Solaris architecture.

When running on a Java 64-bit architecture, use the **-d64** flag in the command-line.

Table 11.4 Library-Creation Details for Solaris Architectures on page 105 provides details on how the libraries were built by RTI. This table is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

**Table 11.2 Building Instructions for Solaris Architectures**

API	Library Format	RTI Libraries or Jar Files <sup>abc</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	libniddscz.a libniddscorez.a librticonnextmsgcz.a	sparc64Sol2.10gcc3.4.2: -ldl -lnsl -lsocket -lgen -lposix4 -lpthread -lm -lc	-DRTI_UNIX -m64

Table 11.4 Library-Creation Details for Solaris Architectures

	Library Format	Compiler Flags Used by RTI
sparc64Sol2.10gcc3.4.2 <sup>c</sup>	Static and Dynamic Release	-m64 -fPIC -D_POSIX_C_SOURCE=199506L -D__EXTENSIONS__ -DSolaris2 -DSVR5 -DSUN4 SOLARIS2 -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=SPARC -DTARGET="\sparc64Sol2.10gcc3.4.2\" -DNDEBUG -c -Wp, -MD
	Static and Dynamic Debug	-m64 -fPIC -D_POSIX_C_SOURCE=199506L -D__EXTENSIONS__ -DSolaris2 -DSVR5 -DSUN4 SOLARIS2 -g -O -Wall -Wno-unknown-pragmas -DPtrIntType=long -DCSREAL_IS_FLOAT -DCPU=SPARC -DTARGET="\sparc64Sol2.10gcc3.4.2\" -c -Wp, -MD
All supported Solaris architectures for Java	Dynamic Release	-target 1.5 -source 1.5
	Dynamic Debug	-target 1.5 -source 1.5 -g

<sup>a</sup> \${NDDSHOME} is where *Connex* *DDS* is installed. \${LD\_LIBRARY\_PATH} represents the value of the LD\_LIBRARY\_PATH variable prior to changing it to support *Connex* *DDS*. When using *nndsjava.jar*, the Java virtual machine (JVM) will attempt to load release versions of the native libraries. When using *nndsjavad.jar*, the JVM will attempt to load debug versions of the native libraries.

<sup>b</sup> \${NDDSHOME} is where *Connex* *DDS* is installed. \${LD\_LIBRARY\_PATH} represents the value of the LD\_LIBRARY\_PATH variable prior to changing it to support *Connex* *DDS*. When using *nndsjava.jar*, the Java virtual machine (JVM) will attempt to load release versions of the native libraries. When using *nndsjavad.jar*, the JVM will attempt to load debug versions of the native libraries.

<sup>c</sup>The C++ *libnndscpp* dynamic libraries were linked using *g++*; the C dynamic libraries, i.e. *libnndscore* and *libnndsc*, were linked using *gcc*.

## 11.1 Support for Modern C++ API

*Connex* DDS provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all Solaris platforms and has been tested with C++03.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 11.2 Multicast Support

Multicast is supported on Solaris platforms and is configured out of the box. That is, the default value for the initial peers list (`NDDS_DISCOVERY_PEERS`) includes a multicast address. See the online documentation for more information.

## 11.3 Supported Transports

- **Shared memory:** Supported and enabled by default.
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Supported for all Solaris 2.10 platforms. The transport is not enabled by default, and the peers list must be modified to support IPv6. Traffic Class support is only provided for Solaris 2.10 platforms.
- **TCP/IPv4:** Not supported.

### 11.3.1 Shared Memory Support

To see a list of shared memory resources in use, use the `'ipcs'` command. To clean up shared memory and shared semaphore resources, use the `'ipcrm'` command.

The shared memory keys used by *Connex* DDS are in the range of 0x400000. For example:

```
ipcs -m | grep 0x4
```

The shared semaphore keys used by *Connex* DDS are in the range of 0x800000; the shared mutex keys are in the range of 0xb00000. For example:

```
ipcs -s | grep 0x8  
ipcs -s | grep 0xb
```

Please refer to the shared-memory transport online documentation for details on the shared memory and semaphore keys used by *Connex* DDS.

### 11.3.2 Increasing Available Shared Resources

*Connex* DDS uses System V semaphores to manage shared memory communication. If you plan to run multiple *Connex* DDS applications on the same node, at the same time, you may need to increase the number of available semaphores.

Each *Connex DDS* application that has shared memory enabled allocates 4 individual semaphores. The Solaris system defaults allow only 10 per host, which may not be enough (one is often used by the system, so you'll run out at the 3rd application).

To increase the number of semaphores available to *Connex DDS*, change the values of the following two parameters in `/etc/system`. (Starting in Solaris 10, there is an alternate mechanism to control these values, but changing `/etc/system` will also work.) The following values are just an example:

```
set semsys:seminfo_semmni = 100
set semsys:seminfo_semmns = 100
```

If these parameters already exist in `/etc/system`, change their values; otherwise, add the above lines to your `/etc/system` file.

**WARNING:** Changing `/etc/system` should be done VERY carefully—incorrect editing of the file can render your system unbootable!

"System V" semaphores are allocated by creating groups of individual semaphores. The first parameter above controls the maximum number of semaphore groups and the second controls the maximum total number of semaphores (within any and all groups). Each *Connex DDS* application that has shared memory enabled allocates 4 groups of 1 semaphore each (per DDS domain). So setting the two values to the same number will work fine as far as *Connex DDS* is concerned. However, if other applications in the system want to allocate bigger groups, you could set "semsys:seminfo\_semmns" larger than "semsys:seminfo\_semmni." (Setting `semmni` bigger than `semmns` does not make any sense, since groups can't have less than 1 semaphore.)

In the absence of other applications using them, having 100 System V semaphores will allow you to use 25 domain ID/participant index combinations for *Connex DDS* applications. You probably will not need to increase the shared memory parameters, since the default allows 100 shared memory areas, enough for 50 applications.

## 11.4 Unsupported Features

These features are not supported on Solaris platforms:

- Controlling CPU Core Affinity
- Distributed Logger
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script

## 11.5 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on all Solaris platforms.

## 11.6 Thread Configuration

See [Table 11.5 Thread Settings for Solaris Platforms below](#) and [Table 11.6 Thread-Priority Definitions for Solaris Platforms on the next page](#).

**Table 11.5 Thread Settings for Solaris Platforms**

Applicable Thread	DDS_ ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	OS default thread priority
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 11.6 Thread-Priority Definitions for Solaris Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	If any of these constants are used to set the priority of the thread in the QoS, the OS's default thread priority will be used.
THREAD_PRIORITY_HIGH	
THREAD_PRIORITY_ABOVE_NORMAL	
THREAD_PRIORITY_NORMAL	
THREAD_PRIORITY_BELOW_NORMAL	
THREAD_PRIORITY_LOW	

## 11.7 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex* DDS application is linked with the static release version of the *Connex* DDS libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

### Notes:

- Memory usage is not available in monitoring data.
- If you plan to use *static* libraries, the RTI library in [Table 11.7](#) must appear *first* in the list of libraries to be linked.

**Table 11.7 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.so	librtmonitoringd.so

## 11.8 Libraries Required for using RTI Secure WAN Transport APIs

This section is only relevant if you have installed RTI Secure WAN Transport. This feature is not part of the standard *Connex* DDS package. If you choose to use it, it must be downloaded and installed sep-

arately. It is only available on specific architectures. See the [RTI Secure WAN Transport Release Notes](#) and [RTI Secure WAN Transport Installation Guide](#) for details.

To use the Secure WAN Transport APIs, link against the additional libraries in [Table 11.8](#). (Select the files appropriate for your chosen library format.)

**Table 11.8 Additional Libraries for using RTI Secure WAN Transport APIs**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Dynamic Release	libnddstransportwan.so libnddstransporttls.so	libssl.a libcrypto.a
Dynamic Debug	libnddstransportwand.so libnddstransporttlsd.so	
Static Release	libnddstransporttlsz.a libnddstransporttlszd.a	
Static Debug	libnddstransportwanz.a libnddstransportwanzd.a	

## 11.9 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 11.9](#).

**Table 11.9 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

<sup>a</sup>These libraries are in <NDDSHOME>/lib/<architecture>.

<sup>b</sup>These libraries are in <openssl install dir>/<architecture>/lib, where <openssl install dir> is where OpenSSL is i.

# Chapter 12 VxWorks Platforms

Table 12.1 lists the architectures supported on VxWorks operating systems. You can build a VxWorks application by cross-compiling from your development host.

**Table 12.1 VxWorks Target Platforms**

Operating System	CPU	Compiler	RTI Architecture <sup>a</sup>
VxWorks 6.9	x86	gcc 4.3.3	For Kernel Modules: pentiumVx6.9gcc4.3.3 For Real Time Processes: pentiumVx6.9gcc4.3.3_rtp
	Any PowerPC CPU with floating-point hardware that is backwards-compatible with 32-bit PowerPC 604	gcc 4.3.3	For Kernel Modules: ppc604Vx6.9gcc4.3.3 For Real Time Processes: ppc604Vx6.9gcc4.3.3_rtp
VxWorks 6.9.3	ARMv7 <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	gcc 4.3.3	For Kernel Modules: armv7aVx6.9gcc4.3.3 For Real-Time Processes: armv7aVx6.9gcc4.3.3_rtp
	PPC (e500v2) <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	gcc 4.3.3	For Kernel Modules: ppce500v2Vx6.9gcc4.3.3 For Real-Time Processes: ppce500v2Vx6.9gcc4.3.3_rtp

---

<sup>a</sup>For use with Windows and/or Solaris Hosts as supported by Wind River Systems.

Table 12.1 VxWorks Target Platforms

Operating System	CPU	Compiler	RTI Architecture <sup>a</sup>
VxWorks 6.9.3.2	x64	gcc 4.3.3	For Kernel Modules: pentium64Vx6.9gcc4.3.3 For Real Time Processes: pentium64Vx6.9gcc4.3.3_rtp
	MIPS <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	gcc 4.3.3	For Kernel Modules: mips32r2sfbeVx6.9gcc4.3.3 For Real-Time Processes: mips32r2sfbeVx6.9gcc4.3.3_rtp
VxWorks 6.9.4.2	PPC (e500v2)	gcc 4.3.3	For Kernel Modules: ppce500v2Vx6.9.4gcc4.3.3 For Real-Time Processes: ppce500v2Vx6.9.4gcc4.3.3_rtp
	Any PowerPC CPU with floating-point hardware that is backwards-compatible with 32-bit PowerPC 604	gcc 4.3.3	For Kernel Modules: ppc604Vx6.9.4gcc4.3.3 For Real Time Processes: ppc604Vx6.9.4gcc4.3.3_rtp
VxWorks 6.9.4.6	PowerPC®	Diab 5.9.1	For Kernel Modules: ppce6500Vx6.9.4.6diab5.9.1 For Real-Time Processes: ppce6500Vx6.9.4.6diab5.9.1_rtp
VxWorks 7.0 SR0510	x64	gcc 4.8.1.6	For Kernel Modules: pentium64Vx7.0gcc4.8.1 For Real Time Processes: pentium64Vx7.0gcc4.8.1_rtp
VxWorks 653 2.3 Only available by request.	PPC 8641D	gcc 3.3.2	sbc8641Vx653-2.3gcc3.3.2
VxWorks 653 2.5.0.2 <i>Custom-supported target platform. Contact your RTI sales representative or sales@rti.com for more information.</i>	PowerPC® E500v2 CPU with floating point hardware	gcc 4.3.3	ppce500v2Vx653-2.5gcc4.3.3 <sup>b</sup>

The following tables list the libraries you will need to link into your application and the required compiler flags:

<sup>a</sup>For use with Windows and/or Solaris Hosts as supported by Wind River Systems.

<sup>b</sup>The set of libraries for this architecture was tested on a p2020 board with a custom BSP (Board Support Package).

- [Table 12.2 Building Instructions for VxWorks 6.x - 7.x Architectures on the next page](#)
- [Table 12.3 Building Instructions for VxWorks 653 Architectures on page 115](#)

For other libraries that you may need, see:

- [12.15 Libraries Required for Using Distributed Logger on page 127](#)
- [12.16 Libraries Required for Using Monitoring on page 128](#)
- [12.17 Libraries Required for Zero-Copy Transfer Over Shared Memory on page 128](#)

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

Compiling a *Connex DDS* application for VxWorks depends on the development platform. For more information, such as specific compiler flags, see the *VxWorks Programmer's Guide*. [Table 12.4 Library-Creation Details for All VxWorks Architectures on page 116](#) provides details on how the VxWorks libraries were built. We recommend that you use similar settings.

Cross-compiling for any VxWorks platform is similar to building for a UNIX target. To build a VxWorks application, create a makefile that reflects the compiler and linker for your target with appropriate flags defined. There will be several target-specific compile flags you must set to build correctly. For more information, see the *VxWorks Programmer's Guide*.

Table 12.2 Building Instructions for VxWorks 6.x - 7.x Architectures

API	Library Format	Required RTI Libraries <sup>abc</sup>	Required Kernel Components	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	libniddscppz.a or libniddscpp2z.a libniddscz.a libniddscorez.a librticonnextmsgcppz.a	INCLUDE_TIMESTAMP INCLUDE_POSIX_CLOCKS For RTI architectures with SMP support also use: INCLUDE_TLS	-DRTI_VXWORKS
	Static Debug	libniddscppzd.a or libniddscpp2zd.a libniddsczd.a libniddscorezd.a librticonnextmsgcppzd.a		
	Dynamic Release	libniddscpp2.so librticonnextmsgcpp.so libniddsc.so libniddscore.so libniddscpp.so		
	Dynamic De- bug	libniddscpp2d.so librticonnextmsgcppd.so libniddscd.so libniddscored.so libniddscppd.so		
C	Static Release	libniddscz.a libniddscorez.a librticonnextmsgcz.a	INCLUDE_TIMESTAMP INCLUDE_POSIX_CLOCKS For RTI architectures with SMP support, also use: INCLUDE_TLS	-DRTI_VXWORKS
	Static Debug	libniddsczd.a libniddscorezd.a librticonnextmsgczd.a		
	Dynamic Release	libniddsc.so libniddscore.so librticonnextmsgc.so		
	Dynamic De- bug	libniddscd.so libniddscored.so librticonnextmsgcd.so		

<sup>a</sup>Choose libniddscpp\*.\* for the Traditional C++ API or libniddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The *Connex DDS C/C++* libraries are in <NDDSHOME>/lib/<architecture>.

<sup>c</sup>The *\*rticonnextmsg\** library only applies if you have the *RTI Connex DDS Professional, Evaluation, or Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

Table 12.3 Building Instructions for VxWorks 653 Architectures

API	Library Format	Required RTI Libraries <sup>a</sup>	Required Kernel Components	Required Compiler Flags
C++ (Traditional API)	Static Release	libnndscppz.a libnndscz.a libnndscorez.a librticonnextmsgcppz.a	See <a href="#">12.2 Notes for VxWorks 653 Platforms on page 120</a> .	For VxWorks 653 v2.3: -DRTI_VXWORKS -DRTI_VX653  For VxWorks 653 v2.5.0.2: -DRTI_VXWORKS -DRTI_VX653=2502
	Static Debug	libnndscppzd.a libnndsczd.a libnndscorezd.a librticonnextmsgcppzd.a		
	Dynamic Release	libnndscpp.so libnndsc.so libnndscore.so librticonnextmsgcpp.so		
	Dynamic Debug	libnndscppd.so libnndscd.so libnndscored.so librticonnextmsgcppd.so		
C	Static Release	libnndscz.a libnndscorez.a librticonnextmsgcz.a	See <a href="#">12.2 Notes for VxWorks 653 Platforms on page 120</a> .	For VxWorks 653 v2.3: -DRTI_VXWORKS -DRTI_VX653  For VxWorks 653 v2.5.0.2: -DRTI_VXWORKS -DRTI_VX653=2502
	Static Debug	libnndsczd.a libnndscorezd.a librticonnextmsgczd.a		
	Dynamic Release	libnndsc.so libnndscore.so librticonnextmsgc.so		
	Dynamic Debug	libnndscd.so libnndscored.so librticonnextmsgcd.so		

<sup>a</sup>The *Connex* DDS C/C++ libraries are in <NDDSHOME>/lib/<architecture>.

## 12.1 Notes for VxWorks 7.0 Platforms

- Required Makefile Change

For VxWorks 7.0 platforms only: After you run *rtidds*gen, either edit the generated makefile to specify which VxWorks Source Build (VSB) you want to use or set an environment variable called `VSB_DIR` that points to the VSB. In the generated makefile, find this line and change it to match your VSB directory:

```
VSF_DIR = # Specify your VSB directory here.
```

**Note:** RTI uses a VSB based on the `itl_generic` BSP (provided by Wind River) to build the *Connex* DDS libraries for VxWorks 7.0 x64.

- Known Defects
  - When using VxWorks 7.0 64-bit RTP mode, there is a bug in the `getsockopt()` function: the `optlen` parameter is not properly set. Refer to Wind River defect V7NET-1293
  - When using VxWorks 7.0 64-bit RTP mode, an incorrect number of sections is introduced in the resulting ELF binaries, so the VxWorks kernel cannot load them. Refer to Wind River defect VXW7-3771.

## 12.2 Notes for VxWorks 653 Platforms

- For VxWorks 653 v2.3 platforms: See [Table 12.11 Required Kernel Components for VxWorks 653 v 2.3 on page 129](#).
- For VxWorks 653 v2.5.0.2 platforms: Add the following on top of the default components added by Wind River to support your architecture:
  - `INCLUDE_DEBUG_UTIL`
  - `INCLUDE_FACE_POSIX_SOCKET_DRV`
- VxWorks 653 platforms do not support the Zero Copy transfer over shared memory feature.
- See also: [12.14 Memory Settings for VxWorks 653 2.x Platforms on page 126](#) and [12.10 Unsupported Features on page 124](#).

## 12.3 Increasing the Stack Size

*Connex* DDS applications may require more than the default stack size on VxWorks.

To prevent stack overrun, you can create/enable the *DomainParticipant* in a thread with a larger stack, or increase the default stack size of the shell task by recompiling the kernel. For more information, please see the Solutions on the RTI Community portal, accessible from <https://community.rti.com/kb>.

## 12.4 Dynamic Libraries for Kernel Mode on VxWorks Systems

The *Connex* DDS Professional, Research, Evaluation, and Basic packages include support for the Request-Reply Communication Pattern, for all platforms in [Table 12.1 VxWorks Target Platforms on page 111](#) and all programming languages, with one exception: VxWorks 6.9.4.6 supports Request-Reply in the C API only.

When using a *Connex* DDS dynamic library for Request-Reply for kernel-mode, you need to perform an extra host processing step called *munching* and apply it to any application that is linking against the Request-Reply library.

In VxWorks kernel-mode, before a C++ module can be downloaded to the VxWorks kernel, it must undergo an additional host processing step known as *munching*. This step is necessary for proper initialization of static objects and to ensure that the C++ run-time support calls the correct constructor/destructors in the correct order for all static objects.

If you need to use the Request-Reply API for kernel-mode with dynamically linked libraries, you need to *munch* your application and link or load the *Connex DDS* library for request/reply, in addition to the standard *Connex DDS* libraries for core, C, and C++.

## 12.5 Libraries for RTP Mode on VxWorks Systems

Dynamic libraries are *not* available for VxWorks systems with Real Time Processes (RTP mode) on PowerPC (PPC) CPUs. This is due to a platform limitation in VxWorks PPC platforms that puts an upper bound on the size of the Global Offset Table (GOT) for any single library, which limits how many symbols the library can export. Some *Connex DDS* libraries (in particular, *libniddsc*) export a number of symbols that exceed this upper bound.

Dynamic libraries *are* available for VxWorks systems with RTP mode on Pentium CPUs.

## 12.6 Requirement for Restarting Applications

When restarting a VxWorks application, you may need to change the 'appId' value. In general, this is only required if you still have other *Connex DDS* applications running on other systems that were talking to the restarted application. If all the *Connex DDS* applications are restarted, there should be no problem.

This section explains why this is necessary and how to change the appId.

All *Connex DDS* applications must have a unique GUID (globally unique ID). This GUID is composed of a hostId and an appId. RTI implements unique appIds by using the process ID of the application. On VxWorks systems, an application's process ID will often be the same across reboots. This may cause logged errors during the discovery process, or discovery may not complete successfully for the restarted application.

The workaround is to manually provide a unique appId each time the application starts. The appId is stored in the *DomainParticipant's* WireProtocol QosPolicy. There are two general approaches to providing a unique appId. The first approach is to save the appId in NVRAM or the file system, and then increment the appId across reboots. The second approach is to base the appId on something that is likely to be different across reboots, such as a time-based register.

## 12.7 Support for Modern C++ API

*Connex DDS* provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all VxWorks platforms except VxWorks 653 and VxWorks 6.9.4.6.

The supported platforms have been tested with both C++03 and C++11. C++ 03 is typically supported with gcc 3.4.2 and above. C++11 is typically supported with gcc 4.7.2.

Both the default and STL plugins are supported, with this exception:

- For VxWorks 6.9.4 on PPC e500v2 (ppce500v2Vx6.9.4gcc4.3.3), only the default plugin is supported for C++03 or C++11.

For VxWorks 7.0 on x64 (pentium64Vx7.0gcc4.8.1), C++03 is supported in kernel mode and C++11 is supported in RTP mode.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 12.8 Multicast Support

Multicast is supported by VxWorks 6.9.x and 7.x. It is also supported by VxWorks 653 2.3.x (as long as you use a third-party socket library, for details, please contact Wind River Services or RTI Support) and VxWorks 653 2.5.x (this version includes a socket library by default).

Multicast is configured out of the box. That is, the default value for the initial peers list (NDDS\_DISCOVERY\_PEERS) includes a multicast address. See the API Reference HTML documentation for more information.

### Known Defects:

- If you have a Wind River account, you can find more information about defect VXW6-19089 (also known as WIND00418701) here:

<https://support2.windriver.com/index.php?page=defects&on=view&id=VXW6-19089>.

This issue has been fixed in VxWorks 6.9.3.2. If you need a patch for your version of VxWorks, or for more information about this issue, please contact Wind River.

- There is a known defect when using VxWorks 6.9.3.2 in a multicast scenario. If you have a Wind River account, you can find more information about defect VXW6-80771 here:

<https://support2.windriver.com/index.php?page=defects&on=view&id=VXW6-80771>.

If you are using VxWorks 6.9.3.2 and want to use multicast, please contact Wind River to get an official patch to fix this issue.

## 12.9 Supported Transports

- **Shared memory:** Shared memory is supported and enabled by default on all VxWorks 6.x and higher architectures. It is not supported on VxWorks 653 platforms. See also:

- [12.9.1 Shared-Memory Communication between Applications Running in Kernel Mode and RTP Requires Explicitly Set Participant ID below](#)
- [12.9.2 How To Run Connex DDS Libraries in Kernels Built without Shared Memory below](#)
- **UDPv4:** Supported and enabled by default.
- **UDPv6:** Supported on VxWorks 6.7 and higher platforms, except VxWorks 6.9.3, 6.9.3.2 on MIPS CPU, 6.9.4.6 and VxWorks 653. No Traffic Class support.
- **TCP/IPv4:** Not supported.

### 12.9.1 Shared-Memory Communication between Applications Running in Kernel Mode and RTP Requires Explicitly Set Participant ID

By default, applications using the auto-generated Participant ID (-1) cannot communicate between user space and kernel space on the same host via SHMEM. The root cause is that the participants use the same participant ID. Therefore the workaround for this issue is to explicitly provide a participant ID when creating the *DomainParticipants*. The participant ID is set in the *DomainParticipant's* WireProtocol QoS policy.

### 12.9.2 How To Run Connex DDS Libraries in Kernels Built without Shared Memory

Since *Connex DDS* libraries support shared memory as a built-in transport, building a kernel without shared-memory support will cause loading or linking errors, depending on whether the *Connex DDS* libraries are loaded after boot, or linked at kernel build time.

The most straightforward way to fix these errors is to include shared-memory support in the kernel ( `INCLUDE_SHARED_DATA` in the kernel build parameters ).

However, in some versions of VxWorks, it is not possible to include shared-memory support without also including RTP support. If you are unwilling or unable to include shared-memory support in your configuration, you will need to do the following:

1. Add the component `INCLUDE_POSIX_SEM`
2. Define stubs that return failure for the missing symbols **sdOpen** and **sdUnmap** as described below:
  - For **sdOpen**, we recommend providing an implementation that returns `NULL`, and sets `errno` to `ENOSYS`. For the function prototype, refer to the file **sdLib.h** in the VxWorks distribution.
  - For **sdUnmap**, we recommend providing an implementation that returns `ERROR` and sets `errno` to `ENOSYS`. For the function prototype, refer to the file **sdLibCommon.h** in the VxWorks distribution.

In addition to providing the symbol stubs for **sdOpen** and **sdUnmap**, we also recommend disabling the SHMEM transport by using the **transport\_builtin** mask in the QoS configuration.

## 12.10 Unsupported Features

The VxWorks 653 2.3 (sbc8641Vx653-2.3gcc3.3.2) platform does not support the Zero-Copy transfer over shared memory feature or the RTI FlatData language binding.

The Modern C++ API for Request-Reply Communication is not supported on VxWorks 653 and VxWorks 6.9.4.6 platforms. The Traditional C++ API for Request-Reply is supported.

These features are not supported on any VxWorks platforms:

- Controlling CPU Core Affinity
- Durable Writer History and Durable Reader State
- 'Find Package' CMake script

## 12.11 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on VxWorks 6.x and higher platforms. This feature is not supported on VxWorks 653 platforms.

## 12.12 Use of Real-Time Clock

Starting with 5.3.0, *Connex DDS* uses the Real Time Clock to get the time from the System Clock on VxWorks 6.x and higher platforms. Previously **tickGet()** was used for the system clock.

## 12.13 Thread Configuration

See these tables:

- [Table 12.5 Thread Setting for VxWorks Platforms \(Applies to Kernel Tasks or Real-Time Process Threads\) on the facing page](#)
- [Table 12.6 Thread-Priority Definitions for VxWorks Platforms on page 126](#)
- [Table 12.7 Thread Kinds for VxWorks Platforms on page 126](#)

**Table 12.5 Thread Setting for VxWorks Platforms (Applies to Kernel Tasks or Real-Time Process Threads)**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread	mask	OS default thread type
	priority	100
	stack_size	30 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STUDIO
	priority	120
	stack_size	30 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	110
	stack_size	4 * 30 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	71
	stack_size	4 * 30 * 1024
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 12.6 Thread-Priority Definitions for VxWorks Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	100
THREAD_PRIORITY_HIGH	68
THREAD_PRIORITY_ABOVE_NORMAL	71
THREAD_PRIORITY_NORMAL	100
THREAD_PRIORITY_BELOW_NORMAL	110
THREAD_PRIORITY_LOW	120

**Table 12.7 Thread Kinds for VxWorks Platforms**

Thread Kinds	Operating-System Configuration <sup>a</sup>
DDS_THREAD_SETTINGS_FLOATING_POINT	Uses VX_FP_TASK when calling taskSpawn()
DDS_THREAD_SETTINGS_STDIO	Uses VX_STDIO when calling taskSpawn() (Kernel mode only)
DDS_THREAD_SETTINGS_REALTIME_PRIORITY	Configures the schedule policy to SCHED_FIFO.
DDS_THREAD_SETTINGS_PRIORITY_ENFORCE	N/A

## 12.14 Memory Settings for VxWorks 653 2.x Platforms

*Connex* DDS 6.0.0 has been tested with the following memory settings to run a simple C++ HelloWorld application using *Connex* DDS libraries for VxWorks 653 2.x. Please use these settings as a guideline only, as your requirements may vary depending on your use case and platform:

For the Application:

```
<ApplicationDescription>
<MemorySize
  MemorySizeBss="0x5000"
  MemorySizeText="0xFb0000"
  MemorySizeData="f000"
  MemorySizeRoData="0x220000"/>
```

<sup>a</sup>See VxWorks manuals for additional information.

For the POS:

```
<SharedLibraryDescription>
<MemorySize
MemorySizeBss="0x60000"
MemorySizeText="0x7000"
MemorySizeData="8000"
MemorySizeRoData="0x6000"/>
```

## 12.15 Libraries Required for Using Distributed Logger

*RTI Distributed Logger* is only supported on these VxWorks architectures:

- VxWorks 6.9.4:
  - pentium64Vx6.9gcc4.3.3
  - pentium64Vx6.9gcc4.3.3\_rtp
  - ppce500v2Vx6.9.4gcc4.3.3
  - ppce500v2Vx6.9.4gcc4.3.3\_rtp
  - ppc604Vx6.9.4gcc4.3.3
  - ppc604Vx6.9.4gcc4.3.3\_rtp
- VxWorks 6.9.4.6
  - ppce6500Vx6.9.4.6diab5.9.1
  - ppce6500Vx6.9.4.6diab5.9.1\_rtp
- VxWorks 7.0
  - pentiumVx7.0gcc4.3.3, pentiumVx7.0gcc4.3.3\_rtp
  - pentium64Vx7.0gcc4.8.1, pentium64Vx7.0gcc4.8.1\_rtp

[Table 12.8](#) lists the additional libraries you will need in order to use *Distributed Logger*.

**Table 12.8 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C	librtidlc.a	librtidlczd.a	librtidlc.so	librtidcd.so
C++ (Traditional API)	librtidlc.a librtidlcppz.a	librtidlczd.a librtidlcppzd.a	librtidlc.so librtidlcpp.so	librtidlcd.so librtidlcppd.so

## 12.16 Libraries Required for Using Monitoring

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

### Notes:

- Automatic loading of the dynamic monitoring library through QoS is not supported.
- Memory and CPU usage is not available in monitoring data.
- If you plan to use *static* libraries, the RTI library from [Table 12.9](#) must appear *first* in the list of libraries to be linked.

**Table 12.9 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtmonitoringz.a	librtmonitoringzd.a	librtmonitoring.so <sup>a</sup>	librtmonitoringd.so <sup>b</sup>

## 12.17 Libraries Required for Zero-Copy Transfer Over Shared Memory

To use the Zero-Copy Transfer Over Shared Memory feature, link against the additional library in [Table 12.10](#).

**Note:** This feature is not supported on VxWorks 653 platforms.

**Table 12.10 Additional Libraries for Zero-Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
librtimetpz.a	librtimetpzd.a	librtimetp.so	librtimetpd.so

<sup>a</sup>Dynamic libraries are not supported for VxWorks platforms on PPC CPUs using RTP mode.

<sup>b</sup>Dynamic libraries are not supported for VxWorks platforms on PPC CPUs using RTP mode.

## 12.18 Increasing the Receive Socket Buffer Size

For *Connex DDS* applications running on VxWorks 6.7 or higher systems and using UDPv4, we recommend setting the property `dds.transport.UDPv4.builtin.recv_socket_buffer_size` to a value of 128000 or higher. This recommendation is due to Wind River's usage of extra receive socket buffer space to correct Wind River defect number WIND00135312.

## 12.19 Required Kernel Components for VxWorks 653 v 2.3

**Table 12.11 Required Kernel Components for VxWorks 653 v 2.3<sup>b</sup>**

INCLUDE_ARINC_SCHEDULER_INIT	INCLUDE_NETINET_IF_SUBR
INCLUDE_ARP_API	INCLUDE_NETINET_IGMP
INCLUDE_AUXCLK	INCLUDE_NETINET_IN

INCLUDE_NET_TASK	INCLUDE_USER_APPL
INCLUDE_NETDEV_CONFIG	INCLUDE_USR_DEVSPLIT

<sup>b</sup>Install `partition_socket_driver_v1.3`. Follow instructions from Wind River for the installation.

**Table 12.11 Required Kernel Components for VxWorks 653 v 2.3<sup>b</sup>**

INCLUDE_NETDEV_NAMEGET	INCLUDE_USR_FS_UTILS
INCLUDE_NETINET_IF	INCLUDE_WDB
INCLUDE_NETINET_IF_ETHER	INCLUDE_WDB_COMM_END <sup>a</sup>

---

<sup>a</sup>SELECT\_WDB\_COMM\_TYPE can only have one type at a time. In order to add INCLUDE\_WDB\_COMM\_END, you should remove INCLUDE\_WDB\_COMM\_PIPE.

<sup>b</sup>Install partition\_socket\_driver\_v1.3. Follow instructions from Wind River for the installation.

# Chapter 13 Windows Platforms

First, see the basic instructions for compiling on Windows systems in the [RTI Connex DDS Core Libraries User's Manual](#) (see the chapter on Building Applications).

The following tables provide supplemental information. [Table 13.1](#) lists the architectures supported on Windows operating systems.

**Table 13.1 Supported Windows Platforms**

Operating System	CPU	Visual Studio® Version	RTI Architecture Abbreviation	.NET Version <sup>a</sup>	JDK Version
Windows 7	x86	VS 2010 SP1	i86Win32VS2010	4.0	1.8
		VS 2017 Version 15.7.3	i86Win32VS2017	4.6.1	
	x64	VS 2010 SP1	x64Win64VS2010	4.0	
		VS 2017 Version 15.7.3	x64Win64VS2017	4.6.1	
Windows 8	x86	VS 2012 Update 4	i86Win32VS2012	4.5	1.8
		VS 2013 Update 4	i86Win32VS2013	4.5.1	
	x64	VS 2012 Update 4	x64Win64VS2012	4.5	
		VS 2013 Update 4	x64Win64VS2013	4.5.1	
Windows 8.1	x86	VS 2013 Update 4	i86Win32VS2013	4.5.1	1.8

---

<sup>a</sup>The RTI .NET assemblies are supported for both the C++/CLI and C# languages. The type support code generated by *rtiddsgen* is in C++/CLI; compiling the generated type support code requires Microsoft Visual C++. Calling the assembly from C# requires Microsoft Visual C#.

**Table 13.1 Supported Windows Platforms**

Operating System	CPU	Visual Studio® Version	RTI Architecture Abbreviation	.NET Version <sup>a</sup>	JDK Version
Windows 10	x86	VS 2015 Update 3	i86Win32VS2015	4.6	1.8
		VS 2017 Update 2 <sup>b</sup>	i86Win32VS2017	4.6.1	
	x64	VS 2015 Update 3	x64Win64VS2015	4.6	
		VS 2017 Update 2	x64Win64VS2017	4.6.1	
Windows Server 2008 R2	x64	VS 2010 SP1	x64Win64VS2010	4.0	1.8
Windows Server 2012 R2	x64	VS 2012 Update 4	x64Win64VS2012	4.5	1.8
		VS 2013 Update 4	x64Win64VS2013	4.5.1	
		VS 2015 Update 3	x64Win64VS2015	4.6	
Windows Server 2016	x86	VS 2015 Update 3	i86Win32VS2015	4.6	1.8
		VS 2017 Update 2	i86Win32VS2017	4.6.1	
	x64	VS 2015 Update 3	x64Win64VS2015	4.6	
		VS 2017 Update 2	x64Win64VS2017	4.6.1	

The compiler flags and the libraries you will need to link into your application are in the following tables:

- Windows host platforms: [Table 13.2 Building Instructions for Windows Host Architectures on the facing page](#)
- Windows target platforms: [Table 13.3 Building Instructions for Windows Target Architectures on page 137](#)

See also:

- [13.13 Libraries Required for Using Distributed Logger Support on page 149](#)
- [13.14 Libraries Required for Using Monitoring on page 149](#)

<sup>a</sup>The RTI .NET assemblies are supported for both the C++/CLI and C# languages. The type support code generated by *rtiddsgen* is in C++/CLI; compiling the generated type support code requires Microsoft Visual C++. Calling the assembly from C# requires Microsoft Visual C#.

<sup>b</sup>According to Microsoft, anything that works on this platform will also work on Windows IoT Enterprise with the Windows native application.

- [13.15 Libraries Required for Using RTI Secure WAN Transport APIs on page 150](#)
- [13.16 Libraries Required for Using RTI TCP Transport APIs on page 150](#)
- [13.17 Libraries Required for Zero Copy Transfer Over Shared Memory on page 151](#)

To use libraries that are *statically* linked into an application, link in all of the libraries listed in one of the rows of these tables. To use *dynamic* link libraries (DLL) on Windows systems, link in all of the libraries listed in one of the ‘Dynamic’ sections of the appropriate table. When the application executes, it will attempt to dynamically link in the libraries, which are in the directory  $\$(NDDSHOME)\lib\langle architecture \rangle$  (this directory must be placed on the path before the executable is started).

Windows libraries are provided in formats with and without debugging symbols. Choose the format appropriate for your current work. Do not mix libraries built for different formats.

[Table 13.4 Running Instructions for Windows Architectures on page 139](#) provides details on the environment variables that must be set at run time for a Windows architecture.

For details on how the libraries were built by RTI, see [Table 13.5 Library-Creation Details for Windows Architectures on page 140](#). This information is provided strictly for informational purposes; you do not need to use these parameters to compile your application. You may find this information useful if you are involved in any in-depth debugging.

**Table 13.2 Building Instructions for Windows Host Architectures**

API	Library Format	RTI Libraries or Jar Files <sup>ab</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	nddscz.lib nddscorz.lib rticonnextmsgcz.lib	netapi32.lib advapi32.lib user32.lib ws2_32.lib	/D "RTI_WIN32" /MD
	Static Debug	nddsczd.lib nddscorzd.lib rticonnextmsgczd.lib		/D "RTI_WIN32" /MDd
	Dynamic Release	nddsc.lib nddscorz.lib rticonnextmsgc.lib		/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MD
	Dynamic Debug	nddscd.lib nddscorzd.lib rticonnextmsgcd.lib		/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MDd

<sup>a</sup>Choose `nddscpp*.*` for the Traditional C++ API or `nddscpp2*.*` for the Modern C++ API.

<sup>b</sup>The RTI C/C++/Java libraries are in  $\langle NDDSHOME \rangle \backslash lib \backslash \langle architecture \rangle$ . Jar files are in  $\langle NDDSHOME \rangle \backslash lib \backslash java$ .

Table 13.2 Building Instructions for Windows Host Architectures

API	Library Format	RTI Libraries or Jar Files <sup>ab</sup>	Required System Libraries	Required Compiler Flags
C++ (Traditional and Modern APIs)	Static Release	nddscppz.lib or nddscpp2z.lib nddscz.lib nddscorez.lib rticonnextmsgcppz.lib	netapi32.lib advapi32.lib user32.lib ws2_32.lib	/D "RTI_WIN32" /MD
	Static Debug	nddscppzd.lib or nddscpp2zd.lib nddsczd.lib nddscorezd.lib rticonnextmsgcppzd.lib		/D "RTI_WIN32" /MDd
	Dynamic Release	nddscpp.lib or nddscpp2.lib nddsc.lib nddscore.lib rticonnextmsgcpp.lib		/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MD
	Dynamic Debug	nddscppd.lib or nddscpp2d.lib nddscd.lib nddscored.lib rticonnextmsgcppd.lib		/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MDd

<sup>a</sup>Choose nddscpp\*. \* for the Traditional C++ API or nddscpp2\*. \* for the Modern C++ API.

<sup>b</sup>The RTI C/C++/Java libraries are in <NDDSHOME>\lib\<architecture>. Jar files are in <NDDSHOME>\lib\java.

Table 13.2 Building Instructions for Windows Host Architectures

API	Library Format	RTI Libraries or Jar Files <sup>ab</sup>	Required System Libraries	Required Compiler Flags
C++/CLI	Release	nddscpp.lib nddsc.lib nddscore.lib nddsdotnet<version>.dll <sup>c</sup> rticonnextmsgdotnet<version>.dll	N/A	/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MD /D "WIN32_LEAN_AND_MEAN"
	Debug	nddscppd.lib nddscd.lib nddscored.lib nddsdotnet<version>d.dll <sup>d</sup> rticonnextmsgdotnet<version>d.dll		/D "RTI_WIN32" /D "NDDS_DLL_VARIABLE" /MDd /D "WIN32_LEAN_AND_MEAN"
C#	Release	nddsdotnet<version>.dll <sup>e</sup> rticonnextmsgdotnet<version>.dll	N/A	N/A
	Debug	nddsdotnet<version>d.dll <sup>f</sup> rticonnextmsgdotnet<version>d.dll		

<sup>a</sup>Choose nddscpp\*.\* for the Traditional C++ API or nddscpp2\*.\* for the Modern C++ API.

<sup>b</sup>The RTI C/C++/Java libraries are in <NDDSHOME>\lib\<architecture>. Jar files are in <NDDSHOME>\lib\java.

<sup>c</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

<sup>d</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

<sup>e</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

<sup>f</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

Table 13.2 Building Instructions for Windows Host Architectures

API	Library Format	RTI Libraries or Jar Files <sup>ab</sup>	Required System Libraries	Required Compiler Flags
Java	Release	nddsjava.jar rticonnextmsg.jar	N/A	N/A
	Debug	nddsjavad.jar rticonnextmsgd.jar		

Table 13.3 Building Instructions for Windows Target Architectures

API	Library Format	RTI Libraries or Jar Files <sup>cd</sup>	Required System Libraries	Required Compiler Flags
C	Static Release	nddscz.lib nddscorez.lib rticonnextmsgcz.lib	netapi32.lib advapi32.lib user32.lib ws2_32.lib	/Gd /MD /D "WIN32" /D "RTI_WIN32" /D "NDEBUG"
	Static Debug	nddsczd.lib nddscorezd.lib rticonnextmsgczd.lib		/Gd /MDd /D "WIN32" /D "RTI_WIN32"

	Dynamic Release	nddscpp.lib or nddscpp2.lib nddsc.lib nddscore.lib rticonnextmsgcpp.lib		/Gd /EHsc /MD /D "WIN32" /D "NDDS_DLL_VARIABLE" /D "RTI_WIN32" /D "NDEBUG"
	Dynamic Debug	nddscppd.lib or nddscpp2d.lib nddscd.lib nddscored.lib rticonnextmsgcppd.lib		/Gd /EHsc /MDd /D "WIN32" /D "NDDS_DLL_VARIABLE" /D "RTI_WIN32"
C#	Release	nddsdotnet<version>.dll <sup>c</sup> rticonnextmsgdotnet<version>.dll	N/A	N/A

<sup>a</sup>The RTI C/C++/Java libraries are in <NDDSHOME>\lib\<architecture>. Jar files are in <NDDSHOME>\lib\java.

<sup>b</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS Professional*, *Evaluation*, or *Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

<sup>c</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

Table 13.3 Building Instructions for Windows Target Architectures

API	Library Format	RTI Libraries or Jar Files <sup>ab</sup>	Required System Libraries	Required Compiler Flags
	Debug	nddsdotnet<version>d.dll <sup>c</sup> rticonnextmsgdotnet<version>d.dll		
C++/CLI	Release	nddscpp.lib nddsc.lib nddscore.lib rticonnextmsgdotnet<version>.dll	netapi32.lib advapi32.lib user32.lib ws2_32.lib	/Gd /EHsc /MD /D "WIN32" /D "NDDS_DLL_VARIABLE" /D "RTI_WIN32" /D "NDEBUG"
	Debug	nddscppd.lib nddscd.lib nddscored.lib rticonnextmsgdotnet<version>d.dll		/Gd /EHsc /MDd /D "WIN32" /D "NDDS_DLL_VARIABLE" /D "RTI_WIN32"
Java	Release	nddsjava.jar rticonnextmsg.jar	N/A	N/A
	Debug	nddsjavad.jar rticonnextmsgd.jar		

Table 13.4 Running Instructions for Windows Architectures

RTI Architecture	Library Format	Environment Variables <sup>d</sup>
All supported Windows architectures for Java	N/A	Path=%NDDSHOME%\lib\ <i>architecture</i> ; %Path%
All other supported Windows architectures	Static (Release and Debug)	None required
	Dynamic (Release and Debug)	Path=%NDDSHOME%\lib\ <i>architecture</i> ; %Path%

<sup>a</sup>The RTI C/C++/Java libraries are in <NDDSHOME>\lib\*architecture*. Jar files are in <NDDSHOME>\lib\java.

<sup>b</sup>The \*rticonnextmsg\* library only applies if you have the *RTI Connex DDS Professional*, *Evaluation*, or *Basic* package type. It is not provided with the *RTI Connex DDS Core* package type.

<sup>c</sup>Some library names include a [version], which depends on your version of .NET. For .NET 2.0, omit the [version]. For other .NET versions, use the digits, such as 451 or 46. See [Table 13.1 Supported Windows Platforms on page 132](#) for supported .NET versions.

<sup>d</sup>%Path% represents the value of the Path variable prior to changing it to support *Connex DDS*. When using nddsjava.jar, the Java virtual machine (JVM) will attempt to load release versions of the native libraries. When using nddsjavad.jar, the JVM will attempt to load debug versions of the native libraries.

## 13.1 Requirements when Using Microsoft Visual Studio

**Note:** Debug versions of applications and the various Visual C++ DLLs are not redistributable. Therefore, if you want to run debug versions, you must have the compiler installed.

### When Using Visual Studio 2010 — Service Pack 1 Requirement

You must have Visual Studio 2010 Service Pack 1 or the Microsoft Visual C++ 2010 SP1 Redistributable Package installed on the machine where you are *running* an application linked with dynamic libraries.

This includes dynamically linked C/C++ and all .NET and Java applications. To run an application built with debug libraries of the above RTI architecture packages, you must have Visual Studio 2010 Service Pack 1 installed.

The Microsoft Visual C++ 2010 Service Pack 1 Redistributable Package can be obtained from the following Microsoft websites:

**For x86 architectures:** <https://www.microsoft.com/en-us/download/details.aspx?id=8328>

**For x64 architectures:** <https://www.microsoft.com/en-us/download/details.aspx?id=13523>

### When Using Visual Studio 2012 — Update 4 Redistributable Package Requirement

You must have the Visual C++ Redistributable for Visual Studio 2012 Update 4 installed on the machine where you are *running* an application linked with dynamic libraries. This includes dynamically linked C/C++ and all .NET and Java applications.

You can download Visual C++ Redistributable for Visual Studio 2012 Update 4 from this Microsoft website: <http://www.microsoft.com/en-ca/download/details.aspx?id=30679>

### When Using Visual Studio 2013 — Redistributable Package Requirement

You must have Visual C++ Redistributable for Visual Studio 2013 installed on the machine where you are *running* an application linked with dynamic libraries. This includes C/C++ dynamically linked and all .NET and Java applications.

You can download Visual C++ Redistributable for Visual Studio 2013 from this Microsoft website: <https://www.microsoft.com/en-us/download/details.aspx?id=40784>

### When Using Visual Studio 2015 — Update 3 Redistributable Package Requirement

You must have the Visual C++ Redistributable for Visual Studio 2015 Update 3 installed on the machine where you are running an application linked with dynamic libraries. This includes C/C++ dynamically linked and all .NET and Java applications.

You can download the Visual C++ Redistributable for Visual Studio 2015 Update 3 from this Microsoft website: <https://www.microsoft.com/en-us/download/details.aspx?id=53840>.

### When Using Visual Studio 2017 — Redistributable Package Requirement

You must have the Visual C++ Redistributable for Visual Studio 2017 installed on the machine where you

are running an application linked with dynamic libraries. This includes C/C++ dynamically linked and all .NET and Java applications.

You can download the Visual C++ Redistributable for Visual Studio 2017 from this Microsoft website: <https://www.visualstudio.com/downloads>. Look for "Microsoft Visual C++ Redistributable for Visual Studio 2017" in the section called "Other Tools and Frameworks."

## 13.2 Linking with Libraries for Windows Platforms

Starting with *Connex* DDS 5.2.5, all *Connex* DDS libraries for Windows platforms (static release/debug, dynamic release/debug) now link with the dynamic Windows C Run-Time (CRT). Previously, the static *Connex* DDS libraries statically linked the CRT.

If you have an existing Windows project that was linking with the *Connex* DDS static libraries, you will need to change the RunTime Library settings:

- In Visual Studio, select C/C++, Code Generation, Runtime Library and use Multi-threaded DLL (**/MD**) instead of Multi-threaded (**/MT**) for static release libraries, and Multi-threaded Debug DLL (**/MDd**) instead of Multi-threaded Debug (**/MTd**) for static debug libraries.
- For command-line compilation, use **/MD** instead of **/MT** for static release libraries, and **/MDd** instead of **/MTd** for static debug libraries.

In addition, you may need to ignore the static run-time libraries in their static configurations:

- In Visual Studio, select **Linker, Input** in the project properties and add **libcmtd;libcmtd** to the **'Ignore Specific Default Libraries'** entry.
- For command-line linking, add **/NODEFAULTLIB:"libcmtd" /NODEFAULTLIB:"libcmtd"** to the linker options.

## 13.3 Use Dynamic MFC Library, Not Static

To avoid communication problems in your *Connex* DDS application, use the dynamic MFC library, not the static version.

If you use the static version, your *Connex* DDS application may stop receiving DDS samples once the Windows sockets are initialized.

## 13.4 .NET API Requires Thread Affinity

To maintain proper concurrency control, .NET threads that call a *Connex* DDS API must correspond one-to-one with operating system threads. In most applications, this will always be the case. However, it may not be the case if the threads you are using are managed in a more advanced way—for example, Microsoft SQL Server does this, or you may do so in your own application.

If you intend to call *Connex* DDS APIs from explicitly managed threads, you must first call **Thread.BeginThreadAffinity()** in each such thread to ensure that it remains attached to a single operating system thread. See <http://msdn.microsoft.com/en-us/library/system.threading.thread.beginthreadaffinity.aspx>.

When you are done making RTI calls from a given thread, call **Thread.EndThreadAffinity()**.

In any case, be sure to consult the API Reference HTML documentation for more information about the thread safety contracts of the operations you use.

## 13.5 ODBC Database Compatibility

The Durable Writer History and Durable Reader State features have been tested with the following architectures:

- i86Win32VS2010
- x64Win64VS2010

To use the Durable Writer History and Durable Reader State features, you must install a relational database. Only MySQL is supported.

For more information on database setup and the versions supported, please see the [RTI Connex DDS Core Libraries Getting Started Guide Addendum for Database Setup](#).

## 13.6 Support for Modern C++ API

*Connex* DDS provides two different C++ APIs, which we refer to as the "Traditional C++" and "Modern C++" APIs. The Modern C++ API is available for all Windows platforms. Except for Visual Studio 2010, both C++03 and C++11 have been tested. For Visual Studio 2010, only C++03 has been tested.

For more information on Modern C++, see ["Traditional vs. Modern C++" in the User's Manual](#).

## 13.7 Multicast Support

Multicast is supported on all platforms and is configured out of the box. That is, the default value for the initial peers list (**NDDS\_DISCOVERY\_PEERS**) includes a multicast address. See the online documentation for more information.

## 13.8 Supported Transports

- **Shared memory:** Shared memory is supported and enabled by default. The Windows operating system manages the shared memory resources automatically. Cleanup is not required.
- **UDPv4:** Supported and enabled by default.

- **UDPv6:** Supported but disabled on architectures that use Visual Studio. The peers list (**NDDS\_DISCOVERY\_PEERS**) must be modified to support UDPv6. No Traffic Class support.
- **TCP/IPv4:** Supported on architectures that use Visual Studio. (This is *not* a built-in transport.)

## 13.9 Monotonic Clock Support

The monotonic clock (described in ["Clock Selection" in the User's Manual](#)) is supported on all Windows platforms.

### 13.10 Thread Configuration

See [Table 13.6 Thread Settings for Windows Platforms](#) below, [Table 13.7 Thread-Priority Definitions for Windows Platforms on the facing page](#), and [Table 13.8 Thread Kinds for Windows Platforms on the facing page](#).

**Table 13.6 Thread Settings for Windows Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
Asynchronous Publisher, Asynchronous flushing thread,	mask	OS default thread type
	priority	0
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Database thread	mask	DDS_THREAD_SETTINGS_STDIO
	priority	-3
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported
Event thread	mask	DDS_THREAD_SETTINGS_STDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	-2
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 13.6 Thread Settings for Windows Platforms**

Applicable Thread	DDS_ThreadSettings_t	Platform-Specific Setting
ReceiverPool threads	mask	DDS_THREAD_SETTINGS_STUDIO   DDS_THREAD_SETTINGS_FLOATING_POINT
	priority	2
	stack_size	OS default thread stack size
	cpu_list	CPU core affinity not supported
	cpu_rotation	CPU core affinity not supported

**Table 13.7 Thread-Priority Definitions for Windows Platforms**

Thread-Priority Definition	Operating-System Priority
THREAD_PRIORITY_DEFAULT	0
THREAD_PRIORITY_HIGH	3
THREAD_PRIORITY_ABOVE_NORMAL	2
THREAD_PRIORITY_NORMAL	0
THREAD_PRIORITY_BELOW_NORMAL	-2
THREAD_PRIORITY_LOW	-3

**Table 13.8 Thread Kinds for Windows Platforms**

Thread Kinds	Operating-System Configuration <sup>a</sup>
DDS_THREAD_SETTINGS_FLOATING_POINT	N/A
DDS_THREAD_SETTINGS_STUDIO	
DDS_THREAD_SETTINGS_REALTIME_PRIORITY	
DDS_THREAD_SETTINGS_PRIORITY_ENFORCE	

## 13.10.1 Support for Controlling CPU Core Affinity for RTI Threads

Support for controlling CPU core affinity is not available for Windows platforms.

<sup>a</sup>See Windows manuals for additional information.

## 13.11 Durable Writer History and Durable Reader State Features

The Durable Writer History and Durable Reader State features are only supported on platforms that use 32-bit/64-bit Visual Studio 2008 and Visual Studio 2010.

## 13.12 Support for 'Find Package' CMake Script

The 'Find Package' CMake script is supported on all Windows platforms in [Table 13.1 Supported Windows Platforms on page 132](#).

For information on using this script, see [Building Applications using CMake, in the RTI Connex DDS Core Libraries User's Manual](#).

## 13.13 Libraries Required for Using Distributed Logger Support

*RTI Distributed Logger* is supported on all Windows platforms. [Table 13.9](#) lists the additional libraries you will need to use *Distributed Logger*.

**Table 13.9 Additional Libraries for using RTI Distributed Logger**

Language	Static		Dynamic	
	Release	Debug	Release	Debug
C	rtidlcz.lib	rtidlczd.lib	rtidlc.dll	rtidlcd.dll
C++ (Traditional API)	rtidlcz.lib rtidlcppz.lib	rtidlczd.lib rtidlcppzd.lib	rtidlc.dll rtidlcpp.dll	rtidlcd.dll rtidlcppd.dll
Java	N/A	N/A	distlog.jar distlogdatamodel.jar	distlogd.jar distlogdatamodeld.jar

## 13.14 Libraries Required for Using Monitoring

To use the *RTI Secure WAN Transport* APIs, add the libraries in [Table 13.10](#) to your project files.

Make sure you are consistent in your use of static, dynamic, debug and release versions of the libraries. For example, if your *Connex DDS* application is linked with the static release version of the *Connex DDS* libraries, you will need to also use the static release version of the monitoring library. Do not link both static and dynamic libraries. Similarly, do not mix release and debug libraries.

If you are statically linking your application with DDS libraries and you want to add monitoring to your application, you will also need to statically link the monitoring library. The library cannot be loaded dynamically strictly through the QoS profile because it also depends on DDS to publish its data. Therefore, it depends on DDS; the DDS functionality would cause duplicate symbols to be found resulting, in the termination of the process.

**Table 13.10 Additional Libraries for Using Monitoring**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
rtmonitoringz.lib Psapi.lib	rtmonitoringzd.lib Psapi.lib	rtmonitoring.lib rtmonitoring.dll	rtmonitoringd.lib rtmonitoringd.dll

## 13.15 Libraries Required for Using RTI Secure WAN Transport APIs

To use the *RTI Secure WAN Transport* APIs, add the libraries in [Table 13.11](#) to your project files.

**Table 13.11 Additional Libraries for Using RTI Secure WAN Transport APIs on Windows Systems**

Library Format	RTI Secure WAN Transport Libraries <sup>a</sup>	OpenSSL Libraries <sup>b</sup>
Dynamic Release	nddstransportwan.lib nddstransporttls.lib	ssleay32.lib libeay32.lib
Dynamic Debug	nddstransporttlsd.lib nddstransportwand.lib	
Static Release	nddstransportwanz.lib nddstransporttlsz.lib	
Static Debug	nddstransportwanzd.lib nddstransporttlszd.lib	

## 13.16 Libraries Required for Using RTI TCP Transport APIs

To use the TCP Transport APIs, link against the additional libraries in [Table 13.12](#). If you are also using *RTI TLS Support*, see [Table 13.13](#). (Select the files appropriate for your chosen library format.)

**Table 13.12 Additional Libraries for Using RTI TCP Transport APIs on Windows Systems**

Library Format	RTI TCP Transport Libraries <sup>c</sup>
Dynamic Release	nddstransporttcp.dll
Dynamic Debug	nddstransporttcpd.dll

<sup>a</sup>These libraries are in <<NDDSHOME>\lib\<architecture>

<sup>b</sup>These libraries are in <openssl install dir>\<architecture>\lib, where <openssl install dir> is where OpenSSL is installed

<sup>c</sup>The libraries are in <NDDSHOME>\lib\<architecture>

**Table 13.12 Additional Libraries for Using RTI TCP Transport APIs on Windows Systems**

Library Format	RTI TCP Transport Libraries <sup>a</sup>
Static Release	nddstransporttcpz.lib
Static Debug	nddstransporttcpzd.lib

**Table 13.13 Additional Libraries for Using RTI TCP Transport APIs on Windows Systems with TLS Enabled**

Library Format	RTI TLS Libraries <sup>b</sup>
Dynamic Release	nddstls.dll
Dynamic Debug	nddstlsd.dll
Static Release	nddstlsz.dll
Static Debug	nddstlszd.dll
OpenSSL Libraries	ssleay32.lib libeay32.lib

## 13.17 Libraries Required for Zero Copy Transfer Over Shared Memory

To use the Zero Copy transfer over shared memory feature, link against the additional library in [Table 13.14](#).

**Table 13.14 Additional Libraries for Zero Copy Transfer Over Shared Memory**

Static Release	Static Debug	Dynamic Release	Dynamic Debug
nddsmetpz.lib	nddsmetpzd.lib	nddsmetp.dll	nddsmetpd.dll

## 13.18 Domain ID Support

On Windows platforms, you should avoid using ports 49152 through 65535 for inbound traffic. *Connex* *DDS*'s ephemeral ports (see [Ports Used for Discovery](#)) may be within that range (see [https://msdn.microsoft.com/en-us/library/windows/desktop/ms737550\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms737550(v=vs.85).aspx)).

<sup>a</sup>The libraries are in <NDDSHOME>\lib\<architecture>

<sup>b</sup>The libraries are in <NDDSHOME>\lib\<architecture>

With the default `RtpsWellKnownPorts` settings, port 49152 corresponds to domain ID 167, so using domain IDs 168 through 232 on Windows platforms introduces the risk of a port collision and failure to create the *DomainParticipant* when using multicast discovery. You may see this error:

```
RTIOsapiSocket_bindWithIP:OS bind() failure, error 0X271D: An attempt was made to access a socket in a way forbidden by its access permissions.
```
