# 1 Supported Platforms

*RTI® Monitor* is supported on the platforms in [Table 1.1 Supported Platforms](#). For details on these platforms, see the *RTI Connex DDS Core Libraries Platform Notes*.

**Note:** POSIX®-compliant architectures that end with "FACE\_GP" are not supported.

**Table 1.1 Supported Platforms**

Operating System	Version
Linux®	All Linux platforms on x64 CPUs listed in the <i>RTI Connex® DDS Core Libraries Release Notes</i> for the same version number.
macOS®	All macOS platforms listed in the <i>RTI Connex DDS Core Libraries Release Notes</i> for the same version number.
Windows®	All Windows platforms listed in the <i>RTI Connex DDS Core Libraries Release Notes</i> for the same version number.

*Monitor* is also supported on the platforms in [Table 1.2 Custom Supported Platforms](#); these are target platforms for which RTI offers custom support. If you are interested in one of these platforms, please contact your local RTI representative or email [sales@rti.com](mailto:sales@rti.com).

**Table 1.2 Custom Supported Platforms**

Operating System	Version
Linux	RedHawk™ Linux 6.5 (x64)

To use *Monitor*, you will also need:

- *RTI Connex DDS* with the same version number (already included in the bundle).
- OpenJDK JDK 11 (already included in the bundle).

- For Windows systems: the appropriate Microsoft® Visual Studio® Redistributable libraries (already included in the Windows bundle).

## 2 Compatibility

For backward compatibility information between 6.1.0 and previous releases, see the *Migration Guide* on the RTI Community Portal (<https://community.rti.com/documentation>).

*Monitor* can be used to monitor applications built with *Connex DDS* that also use [Monitoring Library](#) (part of *Connex DDS*). Use the same version number for *Monitor* and *Connex DDS*.

*Monitor* is built on top of *Connex DDS*. Therefore, you should refer to the [Compatibility section of the RTI Connex DDS Core Libraries Release Notes](#) for other compatibility information.

*Monitor* has been tested with OpenJDK JDK 11, which is included in the installation package. No other versions of Java are supported.

## 3 What's New in 6.1.0

### 3.1 New platforms

This release adds support for these platforms:

- macOS 10.15 (x64)
- Red Hat® Enterprise Linux 7.6 (x64)
- Ubuntu® 20.04 LTS (x64)

### 3.2 Removed platforms

These platforms are no longer supported:

- 32-bit (x86) Linux and Windows platforms
- macOS 10.12
- Red Hat Enterprise Linux 5.2 (custom-supported target platform)
- RedHawk™ Linux 6.5 on x86 (custom-supported target platform)
- SUSE Linux Enterprise Server 11
- Ubuntu® 12.04 LTS

### 3.3 New version of Java

This release uses (and includes) AdoptOpenJDK JRE version 11 (instead of Oracle JRE version 8).

### 3.4 Instance information

*Monitor* now displays instance information for the DataReader and DataWriter caches. This information is also aggregated for higher-level entities, allowing for easier debugging and a deeper

understanding of instance usage in a system.

### **3.5 Asynchronous Publisher Statistics**

*Monitor* now displays statistics for DataWriters that use asynchronous publishing.

### **3.6 Added display of new dropped-sample statuses**

*Monitor* now displays several new dropped-sample statistics being provided by the *Connex DDS* library.

### **3.7 Updated Monitor's look and feel**

FlatLaf has been integrated with *Monitor's* UI to improve the look and feel of the application.

## 4 Known Issues

- *Monitor* will show monitoring information for an application properly only if all the monitoring Description topics are published and not filtered (this is the default setting).

The **Description** topics are needed to properly place objects in the tree views. The per-matched and per-locator topics are needed for the System Overview panel's Matches option to work properly.

- The aggregation capability will not work correctly with applications that publish monitoring data at a rate that is different than the aggregation rate used in *Monitor*.
- *Monitor* does not support DomainParticipants that use WireProtocolQosPolicyAutoKind RTPS\_AUTO\_ID\_FROM\_MAC.
- The internal DomainParticipant (1) and DataWriters (13) created by *Monitor* are incorrectly included in the counts for remote participants or remote writers in the Status panel, even though the monitoring library has been configured to exclude internally created entities in the count.
- When running the **rtimonitor** script in a terminal on a macOS system, you may see the following warning:

```
WARNING: GL pipe is running in software mode (Renderer ID=0x1020400)
```

This does not affect *Monitor's* functionality and will be addressed in a future release. [RTI ISSUE ID MONITOR-242]
