Printed in U.S.A. First printing.
December 2022.

Trademarks

RTI, Real-Time Innovations, Connex, NDDS, the RTI logo, 1RTI and the phrase, “Your Systems. Working as one.” are registered trademarks, trademarks or service marks of Real-Time Innovations, Inc. All other trademarks belong to their respective owners.

Copy and Use Restrictions

No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form (including electronic, mechanical, photocopy, and facsimile) without the prior written permission of Real-Time Innovations, Inc. The software described in this document is furnished solely under and subject to RTI's standard terms and conditions available at <https://www.rti.com/terms> and in accordance with your License Acknowledgement Certificate (LAC) and Maintenance and Support Certificate (MSC), except to the extent otherwise accepted in writing by a corporate officer of RTI.

This is an independent publication and is neither affiliated with, nor authorized, sponsored, or approved by, Microsoft Corporation.

The security features of this product include software developed by the OpenSSL Project for use in the OpenSSL Toolkit (<http://www.openssl.org/>). This product includes cryptographic software written by Eric Young (eay@cryptsoft.com). This product includes software written by Tim Hudson (tjh@cryptsoft.com).

Notice

Any deprecations or removals noted in this document serve as notice under the Real-Time Innovations, Inc. Maintenance Policy #4220 and/or any other agreements by and between RTI and customer regarding maintenance and support of RTI's software.

Deprecated means that the item is still supported in the release, but will be removed in a future release. *Removed* means that the item is discontinued or no longer supported. By specifying that an item is deprecated in a release, RTI hereby provides customer notice that RTI reserves the right after one year from the date of such release and, with or without further notice, to immediately terminate maintenance (including without limitation, providing updates and upgrades) for the item, and no longer support the item, in a future release.

1 Supported Platforms

RTI® Monitor is supported on the platforms in [Table 1 Supported Platforms](#). For details on these platforms, see the *RTI Connex DDS Core Libraries Platform Notes*.

Note: POSIX®-compliant architectures that end with "FACE_GP" are not supported.

Table 1 Supported Platforms

Operating System	Version
Linux®	All platforms on Intel x64 CPUs listed in the <i>RTI Connex DDS Core Libraries Release Notes</i> for the same version number.
macOS®	
Windows®	

Monitor is also supported on the platforms in [Table 2 Custom Supported Platforms](#); these are target platforms for which RTI offers custom support. If you are interested in one of these platforms, please contact your local RTI representative or email sales@rti.com.

Table 2 Custom Supported Platforms

Operating System	Version
Linux	RedHawk™ Linux 8.2.1 on Intel x64 CPUs

To use *Monitor*, you will also need:

- *RTI Connex DDS* with the same version number (already included in the bundle).
- OpenJDK JDK 11 (already included in the bundle).
- For Windows systems: the appropriate Microsoft® Visual Studio® Redistributable libraries (already included in the Windows bundle).

2 Compatibility

For backward compatibility information between 6.1.2 and previous releases, see the *Migration Guide* on the RTI Community Portal (<https://community.rti.com/documentation>).

Monitor can be used to monitor applications built with *Connex DDS* that also use [Monitoring Library](#) (part of *Connex DDS*). Use the same version number for *Monitor* and *Connex DDS*.

Monitor is built on top of *Connex DDS*. Therefore, you should refer to the [Compatibility section of the RTI Connex DDS Core Libraries Release Notes](#) for other compatibility information.

Monitor has been tested with OpenJDK JDK 11, which is included in the installation package. No other versions of Java are supported.

3 What's New in 6.1.2

3.1 New Platforms

This release adds support for these platforms:

OS	Version	CPU	RTI Architecture Abbreviation
Linux	Ubuntu 22.04	x64	x64Linux4gcc7.3.0
	RedHawk™ Linux 8.2.1 (custom-supported platform)	x64	x64RedHawk8.2gcc8.3.1
macOS	macOS 12	x64	x64Darwin17clang9.0
Windows	Windows 11	x64	x64Win64VS2017

4 What's Fixed in 6.1.2

4.1 Unable to Start Some Tools on Windows Systems in Certain Cases

On Windows systems, *Monitor* (as well as *Admin Console* and *Launcher*) failed to start when the installation path contained whitespaces and the user did not have admin privileges. This issue has been fixed.

[RTI Issue ID MONITOR-392]

5 Previous Releases

5.1 What's New in 6.1.1

5.1.1 Third-Party Software Upgrades

The following third-party software used by *Monitor* has been upgraded:

Third-Party Software	Previous Version	Current Version
AdoptOpenJDK®JRE	11.0.7	11.0.13
Apache®Log4j2™	1.2.16	2.17.1

For information on third-party software used by *Connex DDS* products, see the "3rdPartySoftware" documents in your installation: `<NDDSHOME>/doc/manuals/connex_dds_professional/release_notes_3rdparty`.

5.2 What's New in 6.1.0

5.2.1 New platforms

This release adds support for these platforms:

- macOS 10.15 (x64)
- Red Hat® Enterprise Linux 7.6 (x64)
- Ubuntu® 20.04 LTS (x64)

5.2.2 Removed platforms

These platforms are no longer supported:

- 32-bit (x86) Linux and Windows platforms
- macOS 10.12
- Red Hat Enterprise Linux 5.2 (custom-supported target platform)
- RedHawk™ Linux 6.5 on x86 (custom-supported target platform)
- SUSE Linux Enterprise Server 11
- Ubuntu® 12.04 LTS

5.2.3 New version of Java

This release uses (and includes) AdoptOpenJDK JRE version 11 (instead of Oracle JRE version 8).

5.2.4 Instance information

Monitor now displays instance information for the DataReader and DataWriter caches. This information is also aggregated for higher-level entities, allowing for easier debugging and a deeper understanding of instance usage in a system.

5.2.5 Asynchronous Publisher Statistics

Monitor now displays statistics for DataWriters that use asynchronous publishing.

5.2.6 Added display of new dropped-sample statuses

Monitor now displays several new dropped-sample statistics being provided by the *Connex DDS* library.

5.2.7 Updated Monitor's look and feel

FlatLaf has been integrated with *Monitor's* UI to improve the look and feel of the application.

6 Known Issues

- *Monitor* will show monitoring information for an application properly only if all the monitoring Description topics are published and not filtered (this is the default setting).

The **Description** topics are needed to properly place objects in the tree views. The per-matched and per-locator topics are needed for the System Overview panel's Matches option to work properly.

- The aggregation capability will not work correctly with applications that publish monitoring data at a rate that is different than the aggregation rate used in *Monitor*.
- *Monitor* does not support DomainParticipants that use WireProtocolQosPolicyAutoKind RTPS_AUTO_ID_FROM_MAC.
- The internal DomainParticipant (1) and DataWriters (13) created by *Monitor* are incorrectly included in the counts for remote participants or remote writers in the Status panel, even though the monitoring library has been configured to exclude internally created entities in the count.
- When running the **rtimonitor** script in a terminal on a macOS system, you may see the following warning:

```
WARNING: GL pipe is running in software mode (Renderer ID=0x1020400)
```

This does not affect *Monitor's* functionality and will be addressed in a future release. [RTI ISSUE ID MONITOR-242]
