<b>1 RTI Connex</b>	<b>1</b>
1.1 Available Documentation . . . . .	1
1.1.1 The documents for the Core Libraries and Utilities are: . . . . .	2
1.1.2 The API Reference HTML documentation contains: . . . . .	2
1.2 Feedback and Support for this Release. . . . .	2
<b>2 Module Index</b>	<b>3</b>
2.1 Modules . . . . .	3
<b>3 Namespace Index</b>	<b>7</b>
3.1 Namespace List . . . . .	7
<b>4 Hierarchical Index</b>	<b>9</b>
4.1 Class Hierarchy . . . . .	9
<b>5 Class Index</b>	<b>17</b>
5.1 Class List . . . . .	17
<b>6 File Index</b>	<b>35</b>
6.1 File List . . . . .	35
<b>7 Module Documentation</b>	<b>37</b>
7.1 RTI Connex Exceptions . . . . .	37
7.1.1 Detailed Description . . . . .	38
7.2 Clock Selection . . . . .	38
7.2.1 Available Clocks . . . . .	38
7.2.2 Clock Selection Strategy . . . . .	39
7.2.3 Configuring Clock Selection . . . . .	39
7.3 Domain Module . . . . .	39
7.3.1 Detailed Description . . . . .	40
7.4 DomainParticipantFactory . . . . .	40
7.4.1 Detailed Description . . . . .	41
7.4.2 Macro Definition Documentation . . . . .	41
7.4.2.1 DDSTheParticipantFactory . . . . .	42
7.4.3 Typedef Documentation . . . . .	42
7.4.3.1 DDSDomainParticipantFactory_RegisterTypeFunction . . . . .	42
7.4.4 Function Documentation . . . . .	42
7.4.4.1 DDS_DomainParticipantFactoryQos_equals() . . . . .	42
7.4.4.2 print() . . . . .	43
7.4.4.3 to_string() [1/6] . . . . .	43
7.4.4.4 to_string() [2/6] . . . . .	44

---

7.4.4.5 to_string() [3/6]	45
7.4.4.6 to_string() [4/6]	46
7.4.4.7 to_string() [5/6]	46
7.4.4.8 to_string() [6/6]	47
7.4.5 Variable Documentation	48
7.4.5.1 DDS_PARTICIPANT_QOS_DEFAULT	48
7.4.5.2 DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT	49
7.5 DomainParticipants	49
7.5.1 Detailed Description	50
7.5.2 Typedef Documentation	51
7.5.2.1 DDS_DomainId_t	51
7.5.3 Function Documentation	51
7.5.3.1 DDS_DomainParticipantQos_equals()	51
7.5.3.2 print()	51
7.5.3.3 to_string() [1/6]	52
7.5.3.4 to_string() [2/6]	53
7.5.3.5 to_string() [3/6]	53
7.5.3.6 to_string() [4/6]	54
7.5.3.7 to_string() [5/6]	55
7.5.3.8 to_string() [6/6]	56
7.5.4 Variable Documentation	56
7.5.4.1 DDS_TOPIC_QOS_DEFAULT	56
7.5.4.2 DDS_PUBLISHER_QOS_DEFAULT	57
7.5.4.3 DDS_SUBSCRIBER_QOS_DEFAULT	58
7.5.4.4 DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT	58
7.5.4.5 DDS_SQLFILTER_NAME	59
7.5.4.6 DDS_STRINGMATCHFILTER_NAME	59
7.6 Built-in Topics	59
7.6.1 Detailed Description	60
7.7 Topic Module	61
7.7.1 Detailed Description	62
7.8 Topics	62
7.8.1 Detailed Description	64
7.8.2 Typedef Documentation	64

7.21.3.7 to_string() [5/6] . . . . .	146
7.21.3.8 to_string() [6/6] . . . . .	147
7.22 Read Conditions . . . . .	147
7.22.1 Detailed Description . . . . .	148
7.23 Query Conditions . . . . .	148
7.23.1 Detailed Description . . . . .	148
7.24 Data Samples . . . . .	148
7.24.1 Detailed Description . . . . .	149
7.24.2 Function Documentation . . . . .	149
7.24.2.1 DDS_CoherentSetInfo_equals() . . . . .	149
7.24.2.2 DDS_CoherentSetInfo_copy() . . . . .	150
7.24.2.3 DDS_SampleInfo_get_sample_identity() . . . . .	150
7.24.2.4 DDS_SampleInfo_get_related_sample_identity() . . . . .	150
7.25 Topic Queries . . . . .	151
7.25.1 Detailed Description . . . . .	152
7.25.2 Debugging Topic Queries . . . . .	152
7.25.2.1 The Built-in ServiceRequest DataReader . . . . .	153
7.25.2.2 The on_service_request_accepted DataWriter Listener Callback . . . . .	153
7.25.2.3 Reading TopicQuery Samples . . . . .	153
7.25.3 Typedef Documentation . . . . .	154
7.25.3.1 DDS_TopicQuerySelection . . . . .	154
7.25.3.2 DDS_TopicQueryData . . . . .	154
7.25.4 Enumeration Type Documentation . . . . .	154
7.25.4.1 DDS_TopicQuerySelectionKind . . . . .	154
7.25.5 Variable Documentation . . . . .	155
7.25.5.1 DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER . . . . .	155
7.25.5.2 DDS_TOPIC_QUERY_SELECTION_SELECT_ALL . . . . .	155
7.26 Sample States . . . . .	155
7.26.1 Detailed Description . . . . .	156
7.26.2 Typedef Documentation . . . . .	156
7.26.2.1 DDS_SampleStateMask . . . . .	156
7.26.3 Enumeration Type Documentation . . . . .	156

---

7.26.3.1 DDS_SampleStateKind . . . . .	156
7.26.4 Variable Documentation . . . . .	157
7.26.4.1 DDS_ANY_SAMPLE_STATE . . . . .	157
7.27 View States . . . . .	157
7.27.1 Detailed Description . . . . .	158
7.27.2 Typedef Documentation . . . . .	158
7.27.2.1 DDS_ViewStateMask . . . . .	158
7.27.3 Enumeration Type Documentation . . . . .	158
7.27.3.1 DDS_ViewStateKind . . . . .	158
7.27.4 Variable Documentation . . . . .	159
7.27.4.1 DDS_ANY_VIEW_STATE . . . . .	159
7.28 Instance States . . . . .	159
7.28.1 Detailed Description . . . . .	160
7.28.2 Typedef Documentation . . . . .	160
7.28.2.1 DDS_InstanceStateMask . . . . .	160
7.28.3 Enumeration Type Documentation . . . . .	160
7.28.3.1 DDS_InstanceStateKind . . . . .	160
7.28.4 Variable Documentation . . . . .	161
7.28.4.1 DDS_ANY_INSTANCE_STATE . . . . .	161
7.28.4.2 DDS_NOT_ALIVE_INSTANCE_STATE . . . . .	161
7.29 Stream Kinds . . . . .	161
7.29.1 Detailed Description . . . . .	162
7.29.2 Typedef Documentation . . . . .	162
7.29.2.1 DDS_StreamKindMask . . . . .	162
7.29.3 Enumeration Type Documentation . . . . .	162
7.29.3.1 DDS_StreamKind . . . . .	162
7.30 Infrastructure Module . . . . .	162
7.30.1 Detailed Description . . . . .	164
7.30.2 Variable Documentation . . . . .	164
7.30.2.1 DDS_QOS_PRINT_ALL . . . . .	164
7.31 Built-in Sequences . . . . .	164
7.31.1 Detailed Description . . . . .	165
7.32 Multi-channel DataWriters . . . . .	165
7.32.1 What is a Multi-channel DataWriter? . . . . .	166
7.32.2 Configuration on the Writer Side . . . . .	166
7.32.3 Configuration on the Reader Side . . . . .	166
7.32.4 Reliability with Multi-Channel DataWriters . . . . .	166
7.32.4.1 Reliable Delivery . . . . .	166
7.32.4.2 Reliable Protocol Considerations . . . . .	167

---

7.33	Transports	167
7.33.1	Detailed Description	168
7.33.2	Overview	168
7.33.3	Transport Aliases	168
7.33.4	Transport Lifecycle	169
7.33.5	Transport Class Attributes	169
7.33.6	Transport Instance Attributes	170
7.33.7	Transport Network Address	171
7.33.8	Transport Send Route	171
7.33.9	Transport Receive Route	172
7.34	Installing Transport Plugins	172
7.34.1	Detailed Description	173
7.34.2	Loading Transport Plugins through Property QoS Policy of Domain Participant	173
7.34.3	Typedef Documentation	176
7.34.3.1	NDDS_Transport_Handle_t	176
7.34.3.2	NDDS_Transport_create_plugin	176
7.34.4	Function Documentation	177
7.34.4.1	NDDS_Transport_Handle_is_nil()	177
7.34.5	Variable Documentation	177
7.34.5.1	NDDS_TRANSPORT_HANDLE_NIL	177
7.35	Built-in Transport Plugins	177
7.35.1	Detailed Description	178
7.36	Creating New Transport Plugins	178
7.37	Queries and Filters Syntax	179
7.37.1	Syntax for DDS Queries and Filters	179
7.37.2	SQL grammar in BNF	179
7.37.3	Token expression	180
7.37.4	String Parameters	182
7.37.5	Type compatability in Predicate	182
7.37.6	SQL Extension: Regular Expression Matching	183
7.37.7	Character Encoding	184
7.37.8	Unicode Normalization	184
7.37.9	Examples	185
7.38	Logging and Version	185
7.38.1	Detailed Description	185
7.39	General Utilities and Compliance Configuration	185
7.39.1	Detailed Description	186
7.40	Observability	186
7.40.1	Detailed Description	186

---

7.41 Request-Reply Pattern . . . . .	186
7.41.1 Detailed Description . . . . .	186
7.42 Requester . . . . .	187
7.42.1 Detailed Description . . . . .	187
7.43 Replier . . . . .	187
7.43.1 Detailed Description . . . . .	187
7.44 Infrastructure . . . . .	188
7.44.1 Detailed Description . . . . .	189
7.44.2 Function Documentation . . . . .	189
7.44.2.1 make_valid_sample_iterator() . . . . .	189
7.44.2.2 move() . . . . .	190
7.45 Utilities . . . . .	190
7.45.1 Detailed Description . . . . .	191
7.46 Durability and Persistence . . . . .	191
7.46.1 Durable Writer History . . . . .	191
7.46.2 Durable Reader State . . . . .	192
7.46.3 Data Durability . . . . .	192
7.46.4 Durability and Persistence Based on Virtual GUID . . . . .	192
7.46.5 Configuring Durable Writer History . . . . .	193
7.46.6 Configuring Durable Reader State . . . . .	195
7.46.7 Configuring Data Durability . . . . .	196
7.47 System Properties . . . . .	196
7.47.1 System Properties List . . . . .	196
7.47.2 System Resource Consideration . . . . .	197
7.48 Configuring QoS Profiles with XML . . . . .	197
7.48.1 Loading QoS Profiles from XML Resources . . . . .	197
7.48.2 URL . . . . .	199
7.48.2.1 URL groups . . . . .	199
7.48.2.2 NDDS_QOS_PROFILES environment variable . . . . .	199
7.48.2.3 Built-In QoS Profiles . . . . .	199
7.49 Publication Example . . . . .	199
7.49.1 A typical publication example . . . . .	200
7.50 Subscription Example . . . . .	200
7.50.1 A typical subscription example . . . . .	201
7.51 Participant Use Cases . . . . .	201
7.51.1 Turning off auto-enable of newly created participant(s) . . . . .	202
7.51.2 Getting the factory . . . . .	202
7.51.3 Setting up a participant . . . . .	202
7.51.4 Tearing down a participant . . . . .	203

---

7.52 Topic Use Cases . . . . .	203
7.52.1 Registering a user data type . . . . .	203
7.52.2 Setting up a topic . . . . .	203
7.52.3 Tearing down a topic . . . . .	204
7.53 FlowController Use Cases . . . . .	204
7.53.1 Creating a flow controller . . . . .	204
7.53.2 Flow controlling a data writer . . . . .	204
7.53.3 Using the built-in flow controllers . . . . .	205
7.53.4 Shaping the network traffic for a particular transport . . . . .	206
7.53.5 Coalescing multiple samples in a single network packet . . . . .	206
7.54 Publisher Use Cases . . . . .	206
7.54.1 Setting up a publisher . . . . .	206
7.54.2 Tearing down a publisher . . . . .	206
7.55 DataWriter Use Cases . . . . .	207
7.55.1 Setting up a data writer . . . . .	207
7.55.2 Managing instances . . . . .	207
7.55.3 Sending data . . . . .	208
7.55.4 Tearing down a data writer . . . . .	208
7.56 Subscriber Use Cases . . . . .	208
7.56.1 Setting up a subscriber . . . . .	208
7.56.2 Set up subscriber to access received data . . . . .	209
7.56.3 Access received data via a subscriber . . . . .	209
7.56.4 Access received data coherently and/or in order . . . . .	210
7.56.5 Tearing down a subscriber . . . . .	210
7.57 DataReader Use Cases . . . . .	210
7.57.1 Setting up a data reader . . . . .	210
7.57.2 Managing instances . . . . .	211
7.57.3 Set up reader to access received data . . . . .	211
7.57.4 Access received data via a reader . . . . .	211
7.57.5 Taking data . . . . .	211
7.57.6 Reading data . . . . .	212
7.57.7 Tearing down a data reader . . . . .	213
7.58 Entity Use Cases . . . . .	213
7.58.1 Enabling an entity . . . . .	213
7.58.2 Checking if a status changed on an entity. . . . .	213
7.58.3 Changing the QoS for an entity . . . . .	213
7.58.4 Changing the listener and enabling/disabling statuses associated with it . . . . .	214
7.58.5 Enabling/Disabling statuses associated with a status condition . . . . .	214
7.59 Waitset Use Cases . . . . .	215

---

7.59.1	Setting up a wait-set . . . . .	215
7.59.2	Waiting for condition(s) to trigger . . . . .	216
7.59.3	Tearing down a wait-set . . . . .	216
7.60	Transport Use Cases . . . . .	216
7.60.1	Changing the automatically registered built-in transports . . . . .	216
7.60.2	Changing the properties of the automatically registered builtin transports . . . . .	217
7.60.3	Creating a transport . . . . .	217
7.60.4	Deleting a transport . . . . .	217
7.60.5	Registering a transport with a participant . . . . .	218
7.60.6	Adding receive routes for a transport . . . . .	219
7.60.7	Adding send routes for a transport . . . . .	219
7.61	Filter Use Cases . . . . .	219
7.61.1	Introduction   . . . . .	219
7.61.1.1	Overview of ContentFilteredTopic . . . . .	220
7.61.1.2	Overview of QueryCondition . . . . .	220
7.61.2	Filtering with ContentFilteredTopic . . . . .	221
7.61.3	Filtering with Query Conditions . . . . .	221
7.61.4	Filtering Performance . . . . .	222
7.62	Creating Custom Content Filters . . . . .	222
7.62.1	Introduction . . . . .	223
7.62.2	The Custom Content Filter API . . . . .	223
7.62.2.1	The compile function . . . . .	223
7.62.2.2	The evaluate function . . . . .	223
7.62.2.3	The finalize function . . . . .	224
7.62.3	Example Using C format strings . . . . .	224
7.62.3.1	Writing the Compile Function . . . . .	224
7.62.3.2	Writing the Evaluate Function . . . . .	224
7.62.3.3	Writing the Finalize Function . . . . .	224
7.62.3.4	Registering the Filter . . . . .	225
7.62.3.5	Unregistering the Filter . . . . .	225
7.63	Large Data Use Cases . . . . .	225
7.63.1	Introduction   . . . . .	225
7.63.2	Writing Large Data . . . . .	226
7.63.3	Receiving Large Data . . . . .	226
7.64	Request-Reply Examples . . . . .	226
7.64.1	Request-Reply Examples . . . . .	226
7.64.2	Requester Creation . . . . .	228
7.64.3	Creating a Requester with optional parameters . . . . .	228
7.64.4	Basic Requester example . . . . .	228

---

7.64.5 Taking loaned samples . . . . .	229
7.64.6 Taking samples by copy . . . . .	229
7.64.7 Correlating requests and replies . . . . .	230
7.64.8 Basic Requester example using SampleRef . . . . .	231
7.64.9 Creating a Replier . . . . .	232
7.64.10 Basic Replier example . . . . .	232
7.64.11 SimpleReplier example . . . . .	233
7.64.12 Error handling example . . . . .	233
7.64.13 Configuring Request-Reply QoS profiles . . . . .	234

## RTI Connex

### Core Libraries and Utilities

Real-Time Innovations, Inc.

RTI Connex is network middleware for real-time distributed applications. It provides the communications services that programmers need to distribute time-critical data between embedded and/or enterprise devices or nodes. RTI Connex uses the publish-subscribe communications model to make data distribution efficient and robust.

The RTI Connex Application Programming Interface (API) is based on the OMG's Data Distribution Service (DDS) specification, version 1.4. The most recent publication of this specification can be found in the [Catalog of OMG Specifications](#) under "Platform Categories".

**Note:** this documentation is for the **RTI Connex Traditional C++ API**, the **RTI Connex Modern C++ API** is also available.

### 1.1 Available Documentation.

The documentation for this release is provided in two forms: the API Reference HTML documentation and PDF documents. If you are new to RTI Connex, the **Documentation Roadmap** (p. 235) will provide direction on how to learn about this product.

### 1.1.1 The documents for the Core Libraries and Utilities are:

- **What 's New.** An overview of the new features in this release.
- **Release Notes.** System requirements, compatibility, what's fixed in this release, and known issues.
- **Platform Notes.** Specific details, such as compilation setting and libraries, related to building and using RTI Connex on the various supported platforms.
- **Getting Started Guide.** Core value and concepts behind the product, taking you step-by-step through the creation of a simple example application. Developers should read this document first.
- **Code Generator User's Manual.** Information about using rttidsgen to generate code from data types.
- **User's Manual.** Introduction to RTI Connex, product tour and conceptual presentation of the functionality of RTI Connex.
- **QoS Reference Guide.** A compact summary of supported Quality of Service (QoS) policies.
- **XML-Based Application Creation Getting Started Guide.** Details on how to use XML-↔ Based Application Creation.
- **Extensible Types Guide.** Additional information about extensible types.
- See more `documentation` on RTI Community.

### 1.1.2 The API Reference HTML documentation contains:

- **RTI Connex DDS API Reference** (p. 239) - The RTI Connex API reference.
- **Additional RTI Connex Communication Patterns** (p. 242) - RTI Connex APIs for additional communication patterns
- **Programming How-To's** (p. 243) - Describes and shows the common tasks done using the API.

The API Reference HTML documentation can be accessed through the tree view in the left frame of the web browser window. The bulk of the documentation is found under the entry labeled "Modules".

## 1.2 Feedback and Support for this Release.

We welcome any input on how to improve RTI Connex to suit your needs. If you have questions or comments about this release, please visit the RTI Customer Portal at <https://support.rti.com>.

The Customer Portal provides access to RTI software, documentation, and support. It also allows you to log support cases. Furthermore, the portal provides detailed solutions and a free public knowledge base. To access the software, documentation or log support cases, the RTI Customer Portal requires a username and password. You will receive this in the email confirming your purchase. If you do not have this email, please contact `license@rti.com`. Resetting your login password can be done directly at the RTI Customer Portal.

# Chapter 2

## Module Index

### 2.1 Modules

Here is a list of all modules:

Documentation Roadmap . . . . .	235
Conventions . . . . .	236
Using DDS:: Namespace . . . . .	238
RTI Connex DDS API Reference . . . . .	239
Domain Module . . . . .	39
DomainParticipantFactory . . . . .	40
DomainParticipantConfigParams . . . . .	517
DomainParticipants . . . . .	49
Built-in Topics . . . . .	59
Participant Built-in Topics . . . . .	294
Topic Built-in Topics . . . . .	295
Publication Built-in Topics . . . . .	297
Subscription Built-in Topics . . . . .	298
ServiceRequest Built-in Topic . . . . .	300
Common types and functions . . . . .	303
Topic Module . . . . .	61
Topics . . . . .	62
Zero Copy Transfer Over Shared Memory . . . . .	70
User Data Type Support . . . . .	71
Type Code Support . . . . .	76
Built-in Types . . . . .	92
String Built-in Type . . . . .	312
KeyedString Built-in Type . . . . .	312
Octets Built-in Type . . . . .	313
KeyedOctets Built-in Type . . . . .	314
Built-in Topic's Trust Types . . . . .	95
Dynamic Data . . . . .	99
DDS-Specific Primitive Types . . . . .	315
FlatData Topic-Types . . . . .	568
FlatData Builders . . . . .	558

FlatData Samples . . . . .	561
FlatData Offsets . . . . .	564
Publication Module . . . . .	103
Publishers . . . . .	103
Data Writers . . . . .	111
Flow Controllers . . . . .	118
Multi-channel DataWriters . . . . .	165
Subscription Module . . . . .	124
Subscribers . . . . .	126
DataReaders . . . . .	134
Read Conditions . . . . .	147
Query Conditions . . . . .	148
Topic Queries . . . . .	151
Data Samples . . . . .	148
Sample States . . . . .	155
View States . . . . .	157
Instance States . . . . .	159
Stream Kinds . . . . .	161
SampleProcessor . . . . .	550
Infrastructure Module . . . . .	162
Clock Selection . . . . .	38
Time Support . . . . .	320
GUID Support . . . . .	328
Sequence Number Support . . . . .	331
Exception Codes . . . . .	333
Return Codes . . . . .	335
Status Kinds . . . . .	337
QoS Policies . . . . .	353
ASYNCHRONOUS_PUBLISHER . . . . .	363
AVAILABILITY . . . . .	364
BATCH . . . . .	364
DATABASE . . . . .	365
DATA_READER_PROTOCOL . . . . .	366
DATA_READER_RESOURCE_LIMITS . . . . .	367
DATA_REPRESENTATION . . . . .	369
Compression Settings . . . . .	372
DATA_TAG . . . . .	376
DATA_WRITER_PROTOCOL . . . . .	381
DATA_WRITER_RESOURCE_LIMITS . . . . .	382
DATA_WRITER_TRANSFER_MODE . . . . .	385
DEADLINE . . . . .	385
DESTINATION_ORDER . . . . .	386
DISCOVERY . . . . .	388
NDDS_DISCOVERY_PEERS . . . . .	464
DISCOVERY_CONFIG . . . . .	389
DOMAIN_PARTICIPANT_RESOURCE_LIMITS . . . . .	396
DURABILITY . . . . .	398
DURABILITY_SERVICE . . . . .	402
ENTITY_FACTORY . . . . .	402
ENTITY_NAME . . . . .	403
EVENT . . . . .	404
HISTORY . . . . .	405
GROUP_DATA . . . . .	406

LATENCY_BUDGET	407
LIFESPAN	408
LIVELINESS	409
LOCATORFILTER	410
LOGGING	411
MONITORING	412
MULTICHANNEL	413
OWNERSHIP	414
OWNERSHIP_STRENGTH	415
PARTITION	416
PRESENTATION	417
PROFILE	418
PROPERTY	419
PUBLISH_MODE	429
READER_DATA_LIFECYCLE	432
RECEIVER_POOL	432
RELIABILITY	433
RESOURCE_LIMITS	437
SERVICE	438
SYSTEM_RESOURCE_LIMITS	440
TIME_BASED_FILTER	440
TOPIC_DATA	441
TOPIC_QUERY_DISPATCH	442
TRANSPORT_BUILTIN	443
TRANSPORT_MULTICAST	447
Multicast Settings	463
Multicast Mapping	463
TRANSPORT_MULTICAST_MAPPING	448
TRANSPORT_PRIORITY	449
TRANSPORT_SELECTION	450
TRANSPORT_UNICAST	451
Unicast Settings	462
TYPE_CONSISTENCY_ENFORCEMENT	451
TYPESUPPORT	453
USER_DATA	455
WRITER_DATA_LIFECYCLE	456
WIRE_PROTOCOL	456
Extended Qos Support	462
Thread Settings	350
Entity Support	471
Conditions and WaitSets	471
AsyncWaitSet	292
Cookie	473
Sample Flags	473
WriteParams	476
Heap Support in C	479
Builtin Qos Profiles	481
User-managed Threads	519
Octet Buffer Support	547
Sequence Support	550
Built-in Sequences	164
String Support	551
Transports	167
Installing Transport Plugins	172

Built-in Transport Plugins . . . . .	177
UDP Transport Plugin definitions . . . . .	258
Shared Memory Transport . . . . .	260
UDPv4 Transport . . . . .	266
Real-Time WAN Transport . . . . .	276
UDPv6 Transport . . . . .	283
Creating New Transport Plugins . . . . .	178
Transport Plugins Configuration . . . . .	245
Transport Address . . . . .	252
Queries and Filters Syntax . . . . .	179
Logging and Version . . . . .	185
Version . . . . .	522
Logging . . . . .	523
Activity Context . . . . .	530
General Utilities and Compliance Configuration . . . . .	185
Compliance Configuration . . . . .	535
Heap Monitoring . . . . .	539
Network Capture . . . . .	540
Other Utilities . . . . .	546
Observability . . . . .	186
Observability Library . . . . .	520
Durability and Persistence . . . . .	191
System Properties . . . . .	196
Configuring QoS Profiles with XML . . . . .	197
Additional RTI Connex Communication Patterns . . . . .	242
Request-Reply Pattern . . . . .	186
Requester . . . . .	187
Replier . . . . .	187
Infrastructure . . . . .	188
RTI Connex Exceptions . . . . .	37
Utilities . . . . .	190
Programming How-To's . . . . .	243
Publication Example . . . . .	199
Subscription Example . . . . .	200
Participant Use Cases . . . . .	201
Topic Use Cases . . . . .	203
FlowController Use Cases . . . . .	204
Publisher Use Cases . . . . .	206
DataWriter Use Cases . . . . .	207
Subscriber Use Cases . . . . .	208
DataReader Use Cases . . . . .	210
Entity Use Cases . . . . .	213
Waitset Use Cases . . . . .	215
Transport Use Cases . . . . .	216
Filter Use Cases . . . . .	219
Creating Custom Content Filters . . . . .	222
Large Data Use Cases . . . . .	225
Request-Reply Examples . . . . .	226
Interface . . . . .	244

## Chapter 3

# Namespace Index

### 3.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

<b>connext</b>	Namespace for Connext . . . . .	571
<b>rti</b>	The RTI namespace . . . . .	573
<b>rti::flat</b>	<< <i>extension</i> >> (p. 237) Support for <b>FlatData Topic-Types</b> (p. 568) . . . . .	573

# Chapter 4

## Hierarchical Index

### 4.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

rti::flat::AbstractBuilder	579
rti::flat::AbstractListBuilder< detail::DHeaderGenerator >	581
rti::flat::AbstractSequenceBuilder< detail::DHeaderGenerator >	584
rti::flat::FinalSequenceBuilder< ElementOffset >	1645
rti::flat::MutableSequenceBuilder< ElementBuilder >	1744
rti::flat::MutableArrayBuilder< ElementBuilder, N >	1740
rti::flat::AbstractListBuilder< detail::primitive_sequence_dheader_gen< T >::type >	581
rti::flat::AbstractSequenceBuilder< detail::primitive_sequence_dheader_gen< T >::type >	584
rti::flat::PrimitiveSequenceBuilder< T >	1864
rti::flat::AbstractListBuilder< detail::primitive_sequence_dheader_gen< char >::type >	581
rti::flat::AbstractSequenceBuilder< detail::primitive_sequence_dheader_gen< char >::type >	584
rti::flat::PrimitiveSequenceBuilder< char >	1864
rti::flat::StringBuilder	1943
rti::flat::AbstractListBuilder< DHeaderGen >	581
rti::flat::AbstractSequenceBuilder< DHeaderGen >	584
rti::flat::AggregationBuilder	585
rti::flat::UnionBuilder< int32_t >	1947
MyFlatUnionBuilder	1764
MyFlatMutableBuilder	1750
rti::flat::UnionBuilder< Discriminator >	1947
DDS_AcknowledgmentInfo	586
DDS_AckResponseData_t	588

connext::WriteSampleRef< T >	1952

# Chapter 5

## Class Index

### 5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<b>rti::flat::AbstractAlignedList</b> < <b>ElementOffset</b> >	
Base class of Offsets to sequences and arrays of non-primitive members . . . . .	577
<b>rti::flat::AbstractBuilder</b>	
Base class of all <b>Builders</b> (p. 558) . . . . .	579
<b>rti::flat::AbstractListBuilder</b> < <b>DHeaderGen</b> >	
Base class of all array and sequence builders . . . . .	581
<b>rti::flat::AbstractPrimitiveList</b> < <b>T</b> >	
Base class for Offsets to sequences and arrays of primitive types . . . . .	582
<b>rti::flat::AbstractSequenceBuilder</b> < <b>DHeaderGen</b> >	
Base class of Builders for sequence members . . . . .	584
<b>rti::flat::AggregationBuilder</b>	
Base class of struct and union builders . . . . .	585
<b>connext::AlreadyDeletedException</b>	
The object target of this operation has already been deleted . . . . .	585
<b>connext::BadParameterException</b>	
Illegal parameter value . . . . .	586
<b>DDS_AcknowledgmentInfo</b>	
Information about an application-level acknowledged sample . . . . .	586
<b>DDS_AckResponseData_t</b>	
Data payload of an application-level acknowledgment . . . . .	588
<b>DDS_AllocationSettings_t</b>	
Resource allocation settings . . . . .	588
<b>DDS_AnnotationParameterValue</b>	
Annotation parameter value . . . . .	590
<b>DDS_AsynchronousPublisherQosPolicy</b>	
Configures the mechanism that sends user data in an external middleware thread . . . . .	590
<b>DDS_AsyncWaitSetProperty_t</b>	
Specifies the <b>DDSAsyncWaitSet</b> (p. 1259) behavior . . . . .	594
<b>DDS_AvailabilityQosPolicy</b>	
Configures the availability of data . . . . .	596

<b>DDS_BatchQosPolicy</b>	Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples . . . . .	600
<b>DDS_BooleanSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Boolean</b> (p. 320) > . . . . .	604
<b>DDS_BuiltinTopicKey_t</b>	The key type of the built-in topic types . . . . .	604
<b>DDS_BuiltinTopicReaderResourceLimits_t</b>	Built-in topic reader's resource limits . . . . .	605
<b>DDS_ChannelSettings_t</b>	Type used to configure the properties of a channel . . . . .	610
<b>DDS_ChannelSettingsSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_ChannelSettings_t</b> (p. 610) > . . . . .	612
<b>DDS_CharSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Char</b> (p. 317) > . . . . .	613
<b>DDS_CoherentSetInfo_t</b>	<< <i>extension</i> >> (p. 237) Type definition for a coherent set info . . . . .	613
<b>DDS_CompressionSettings_t</b>	<< <i>extension</i> >> (p. 237) Settings related to compressing user data . . . . .	614
<b>DDS_ContentFilterProperty_t</b>	<< <i>extension</i> >> (p. 237) Type used to provide all the required information to enable content filtering	616
<b>DDS_Cookie_t</b>	<< <i>extension</i> >> (p. 237) Sequence of bytes . . . . .	618
<b>DDS_CookieSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Cookie_t</b> (p. 618) > . . . . .	619
<b>DDS_DatabaseQosPolicy</b>	Various threads and resource limits settings used by RTI Connex to control its internal database . .	619
<b>DDS_DataReaderCacheStatus</b>	<< <i>extension</i> >> (p. 237) The status of the reader's cache . . . . .	623
<b>DDS_DataReaderProtocolQosPolicy</b>	Along with <b>DDS_WireProtocolQosPolicy</b> (p. 1244) and <b>DDS_DataWriterProtocolQosPolicy</b> (p. 673), this QoS policy configures the DDS on-the-network protocol (RTPS) . . . . .	630
<b>DDS_DataReaderProtocolStatus</b>	<< <i>extension</i> >> (p. 237) The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic . . . . .	633
<b>DDS_DataReaderQos</b>	QoS policies supported by a <b>DDSDataReader</b> (p. 1288) entity . . . . .	644
<b>DDS_DataReaderResourceLimitsInstanceReplacementSettings</b>	Instance replacement kind applied to each instance state . . . . .	653
<b>DDS_DataReaderResourceLimitsQosPolicy</b>	Various settings that configure how a <b>DDSDataReader</b> (p. 1288) allocates and uses physical memory for internal resources . . . . .	654
<b>DDS_DataRepresentationIdSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_DataRepresentationId_t</b> (p. 370) > . . . . .	667
<b>DDS_DataRepresentationQosPolicy</b>	This QoS policy contains a list of representation identifiers and compression settings used by <b>DDSDataWriter</b> (p. 1321) and <b>DDSDataReader</b> (p. 1288) entities to negotiate which data representation and compression settings to use . . . . .	668
<b>DDS_DataTags</b>	Definition of <b>DDS_DataTagQosPolicy</b> (p. 377) . . . . .	670
<b>DDS_DataWriterCacheStatus</b>	<< <i>extension</i> >> (p. 237) The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue . . . . .	671

<b>DDS_DataWriterProtocolQosPolicy</b>	
Protocol that applies only to <b>DDSDataWriter</b> (p. 1321) instances	673
<b>DDS_DataWriterProtocolStatus</b>	
<< <i>extension</i> >> (p. 237) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic	678
<b>DDS_DataWriterQos</b>	
QoS policies supported by a <b>DDSDataWriter</b> (p. 1321) entity	689
<b>DDS_DataWriterResourceLimitsQosPolicy</b>	
Various settings that configure how a <b>DDSDataWriter</b> (p. 1321) allocates and uses physical memory for internal resources	698
<b>DDS_DataWriterShmemRefTransferModeSettings</b>	
Settings related to transferring data using shared memory references	705
<b>DDS_DataWriterTransferModeQosPolicy</b>	
<< <i>extension</i> >> (p. 237) Qos related to transferring data	706
<b>DDS_DeadlineQosPolicy</b>	
Expresses the maximum duration (deadline) within which an instance is expected to be updated	707
<b>DDS_DestinationOrderQosPolicy</b>	
Controls how the middleware will deal with data sent by multiple <b>DDSDataWriter</b> (p. 1321) entities for the same instance of data (i.e., same <b>DDSTopic</b> (p. 1617) and key)	709
<b>DDS_DiscoveryConfigQosPolicy</b>	
Settings for discovery configuration	712
<b>DDS_DiscoveryQosPolicy</b>	
<< <i>extension</i> >> (p. 237) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications	731
<b>DDS_DomainParticipantConfigParams_t</b>	
<< <i>extension</i> >> (p. 237) Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration	734
<b>DDS_DomainParticipantFactoryQos</b>	
QoS policies supported by a <b>DDSDomainParticipantFactory</b> (p. 1426)	737
<b>DDS_DomainParticipantProtocolStatus</b>	
<< <i>extension</i> >> (p. 237) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message	740
<b>DDS_DomainParticipantQos</b>	
QoS policies supported by a <b>DDSDomainParticipant</b> (p. 1351) entity	741
<b>DDS_DomainParticipantResourceLimitsQosPolicy</b>	
Various settings that configure how a <b>DDSDomainParticipant</b> (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties	746
<b>DDS_DoubleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Double</b> (p. 319) >	767
<b>DDS_DurabilityQosPolicy</b>	
This QoS policy specifies whether or not RTI Connex will store and deliver previously published data samples to new <b>DDSDataReader</b> (p. 1288) entities that join the network later	767
<b>DDS_DurabilityServiceQosPolicy</b>	
Various settings to configure the external <i>RTI Persistence Service</i> used by RTI Connex for Data↔ Writers with a <b>DDS_DurabilityQosPolicy</b> (p. 767) setting of <b>DDS_PERSISTENT_DURABILITY_↔ QOS</b> (p. 401) or <b>DDS_TRANSIENT_DURABILITY_QOS</b> (p. 401)	771
<b>DDS_Duration_t</b>	
Type for <i>duration</i> representation	774
<b>DDS_DynamicData</b>	
A sample of any complex data type, which can be inspected and manipulated reflectively	775
<b>DDS_DynamicDataInfo</b>	
A descriptor for a <b>DDS_DynamicData</b> (p. 775) object	892
<b>DDS_DynamicDataJsonParserProperties_t</b>	
A collection of attributes used to configure <b>DDS_DynamicData</b> (p. 775) objects	892

<b>DDS_DynamicDataMemberInfo</b>	A descriptor for a single member (i.e. field) of dynamically defined data type . . . . .	893
<b>DDS_DynamicDataProperty_t</b>	A collection of attributes used to configure <b>DDS_DynamicData</b> (p. 775) objects . . . . .	895
<b>DDS_DynamicDataSeq</b>	An ordered collection of <b>DDS_DynamicData</b> (p. 775) elements . . . . .	896
<b>DDS_DynamicDataTypeProperty_t</b>	A collection of attributes used to configure <b>DDSDynamicDataTypeSupport</b> (p. 1456) objects . . . . .	896
<b>DDS_DynamicDataTypeSerializationProperty_t</b>	Properties that govern how data of a certain type will be serialized on the network . . . . .	897
<b>DDS_EndpointGroup_t</b>	Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum	900
<b>DDS_EndpointGroupSeq</b>	A sequence of <b>DDS_EndpointGroup_t</b> (p. 900) . . . . .	900
<b>DDS_EndpointTrustAlgorithmInfo</b>	Trust Plugins algorithm information associated with the discovered endpoint . . . . .	901
<b>DDS_EndpointTrustInterceptorAlgorithmInfo</b>	Trust Plugins interception algorithm information associated with the discovered endpoint . . . . .	902
<b>DDS_EndpointTrustProtectionInfo</b>	Trust Plugins Protection information associated with the discovered endpoint . . . . .	902
<b>DDS_EntityFactoryQosPolicy</b>	A QoS policy for all <b>DDSEntity</b> (p. 1463) types that can act as factories for one or more other <b>DDSEntity</b> (p. 1463) types . . . . .	903
<b>DDS_EntityNameQosPolicy</b>	Assigns a name and a role name to a <b>DDSDomainParticipant</b> (p. 1351), <b>DDSPublisher</b> (p. 1550), <b>DDSSubscriber</b> (p. 1592), <b>DDSDataWriter</b> (p. 1321) or <b>DDSDataReader</b> (p. 1288). Except for <b>DDSPublisher</b> (p. 1550) and <b>DDSSubscriber</b> (p. 1592), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system . . . . .	905
<b>DDS_EnumMember</b>	A description of a member of an enumeration . . . . .	906
<b>DDS_EnumMemberSeq</b>	Defines a sequence of enumerator members . . . . .	907
<b>DDS_EventQosPolicy</b>	Settings for event . . . . .	908
<b>DDS_ExpressionProperty</b>	Provides additional information about the filter expression passed to <b>DDSWriterContentFilter</b> ↔ <b>::writer_compile</b> (p. 1638) . . . . .	910
<b>DDS_FilterSampleInfo</b>	Provides meta information associated with the sample . . . . .	911
<b>DDS_FloatSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Float</b> (p. 319) > . . . . .	912
<b>DDS_FlowControllerProperty_t</b>	Determines the flow control characteristics of the <b>DDSFlowController</b> (p. 1468) . . . . .	912
<b>DDS_FlowControllerTokenBucketProperty_t</b>	<b>DDSFlowController</b> (p. 1468) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties . . . . .	914
<b>DDS_GroupDataQosPolicy</b>	Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 59) during discovery . . . . .	916
<b>DDS_GUID_t</b>	Type for <i>GUID</i> (Global Unique Identifier) representation . . . . .	918
<b>DDS_HistoryQosPolicy</b>	Specifies the behavior of RTI Connex in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers . . . . .	919

<b>DDS_InconsistentTopicStatus</b>	
<b>DDS_INCONSISTENT_TOPIC_STATUS</b> (p. 343)	921
<b>DDS_InstanceHandleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_InstanceHandle_t</b> (p. 74) >	923
<b>DDS_Int8Seq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Int8</b> (p. 318) >	923
<b>DDS_InvalidLocalIdentityAdvanceNoticeStatus</b>	
<b>DDS_INVALID_LOCAL_IDENTITY_ADVANCE_NOTICE_STATUS</b> (p. 347)	924
<b>DDS_KeyedOctets</b>	
Built-in type consisting of a variable-length array of opaque bytes and a string that is the key	924
<b>DDS_KeyedOctetsSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_KeyedOctets</b> (p. 924) >	926
<b>DDS_KeyedString</b>	
Keyed string built-in type	927
<b>DDS_KeyedStringSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_KeyedString</b> (p. 927) >	929
<b>DDS_LatencyBudgetQosPolicy</b>	
Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications	929
<b>DDS_LifespanQosPolicy</b>	
Specifies how long the data written by the <b>DDSDataWriter</b> (p. 1321) is considered valid	931
<b>DDS_LivelinessChangedStatus</b>	
<b>DDS_LIVELINESS_CHANGED_STATUS</b> (p. 346)	932
<b>DDS_LivelinessLostStatus</b>	
<b>DDS_LIVELINESS_LOST_STATUS</b> (p. 346)	934
<b>DDS_LivelinessQosPolicy</b>	
Specifies and configures the mechanism that allows <b>DDSDataReader</b> (p. 1288) entities to detect when <b>DDSDataWriter</b> (p. 1321) entities become disconnected or "dead."	936
<b>DDS_Locator_t</b>	
<< <i>extension</i> >> (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports	939
<b>DDS_LocatorFilter_t</b>	
Specifies the configuration of an individual channel within a MultiChannel DataWriter	940
<b>DDS_LocatorFilterQosPolicy</b>	
The QoS policy used to report the configuration of a MultiChannel DataWriter as part of <b>DDS_PublicationBuiltinTopicData</b> (p. 1010)	941
<b>DDS_LocatorFilterSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_LocatorFilter_t</b> (p. 940) >	943
<b>DDS_LocatorSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_Locator_t</b> (p. 939) >	943
<b>DDS_LoggingQosPolicy</b>	
Configures the RTI Connex logging facility	943
<b>DDS_LongDoubleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_LongDouble</b> (p. 319) >	947
<b>DDS_LongLongSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_LongLong</b> (p. 319) >	947
<b>DDS_LongSeq</b>	
Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Long</b> (p. 318) >	948
<b>DDS_MonitoringDedicatedParticipantSettings</b>	
Configures the use of a dedicated <b>DDSDomainParticipant</b> (p. 1351) to distribute the RTI Connex application telemetry data	948
<b>DDS_MonitoringDistributionSettings</b>	
Configures the distribution of telemetry data	950

<b>DDS_MonitoringEventDistributionSettings</b>	Configures the distribution of event metrics . . . . .	952
<b>DDS_MonitoringLoggingDistributionSettings</b>	Configures the distribution of log messages . . . . .	954
<b>DDS_MonitoringLoggingForwardingSettings</b>	Configures the forwarding levels of log messages for the different <b>NDDS_Config_LogFacility</b> (p. 528) . . . . .	956
<b>DDS_MonitoringMetricSelection</b>	This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources . . . . .	958
<b>DDS_MonitoringMetricSelectionSeq</b>	Declares IDL <code>sequence &lt; DDS_MonitoringMetricSelection (p. 958) &gt;</code> . . . . .	960
<b>DDS_MonitoringPeriodicDistributionSettings</b>	Configures the distribution of periodic metrics . . . . .	960
<b>DDS_MonitoringQosPolicy</b>	Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connexx telemetry data	962
<b>DDS_MonitoringTelemetryData</b>	Configures the telemetry data that will be distributed . . . . .	963
<b>DDS_MultiChannelQosPolicy</b>	Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data . . . . .	964
<b>DDS_Octets</b>	Built-in type consisting of a variable-length array of opaque bytes . . . . .	967
<b>DDS_OctetSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Octet</b> (p. 317) > . . . . .	969
<b>DDS_OctetsSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Octets</b> (p. 967) > . . . . .	969
<b>DDS_OfferedDeadlineMissedStatus</b>	<b>DDS_OFFERED_DEADLINE_MISSED_STATUS</b> (p. 343) . . . . .	970
<b>DDS_OfferedIncompatibleQosStatus</b>	<b>DDS_OFFERED_INCOMPATIBLE_QOS_STATUS</b> (p. 344) . . . . .	971
<b>DDS_OwnershipQosPolicy</b>	Specifies whether it is allowed for multiple <b>DDSDataWriter</b> (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated . . . . .	973
<b>DDS_OwnershipStrengthQosPolicy</b>	Specifies the value of the strength used to arbitrate among multiple <b>DDSDataWriter</b> (p. 1321) objects that attempt to modify the same instance of a data type (identified by <b>DDSTopic</b> (p. 1617) + key) . . . . .	978
<b>DDS_ParticipantBuiltinTopicData</b>	Entry created when a DomainParticipant object is discovered . . . . .	979
<b>DDS_ParticipantBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_ParticipantBuiltinTopicData</b> (p. 979) > . . . . .	984
<b>DDS_ParticipantTrustAlgorithmInfo</b>	Trust Plugins algorithm information associated with the discovered DomainParticipant . . . . .	984
<b>DDS_ParticipantTrustInterceptorAlgorithmInfo</b>	Trust Plugins interception algorithm information associated with the discovered DomainParticipant . . . . .	985
<b>DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo</b>	Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant . . . . .	986
<b>DDS_ParticipantTrustProtectionInfo</b>	Trust Plugins Protection information associated with the discovered DomainParticipant . . . . .	987
<b>DDS_ParticipantTrustSignatureAlgorithmInfo</b>	Trust Plugins signature algorithm information associated with the discovered DomainParticipant . . . . .	988

<b>DDS_PartitionQosPolicy</b>	Set of strings that introduces logical partitions in <b>DDSDomainParticipant</b> (p. 1351), <b>DDSPublisher</b> (p. 1550), or <b>DDSSubscriber</b> (p. 1592) entities . . . . .	989
<b>DDS_PersistentStorageSettings</b>	Configures durable writer history and durable reader state . . . . .	991
<b>DDS_PresentationQosPolicy</b>	Specifies how the samples representing changes to data instances are presented to a subscribing application . . . . .	996
<b>DDS_PrintFormatProperty</b>	A collection of attributes used to configure how data samples will be formatted when converted to a string . . . . .	1001
<b>DDS_ProductVersion_t</b>	<< <i>extension</i> >> (p. 237) Type used to represent the current version of RTI Connext . . . . .	1003
<b>DDS_ProfileQosPolicy</b>	Configures the way that XML documents containing QoS profiles are loaded by RTI Connext . . . . .	1004
<b>DDS_Property_t</b>	Properties are name/value pairs objects . . . . .	1006
<b>DDS_PropertyQosPolicy</b>	Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery . . . . .	1007
<b>DDS_PropertySeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Property_t</b> (p. 1006) > . . . . .	1009
<b>DDS_ProtocolVersion_t</b>	<< <i>extension</i> >> (p. 237) Type used to represent the version of the RTPS protocol . . . . .	1009
<b>DDS_PublicationBuiltinTopicData</b>	Entry created when a <b>DDSDataWriter</b> (p. 1321) is discovered in association with its Publisher . . . . .	1010
<b>DDS_PublicationBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_PublicationBuiltinTopicData</b> (p. 1010) > . . . . .	1019
<b>DDS_PublicationMatchedStatus</b>	<b>DDS_PUBLICATION_MATCHED_STATUS</b> (p. 347) . . . . .	1020
<b>DDS_PublisherQos</b>	QoS policies supported by a <b>DDSPublisher</b> (p. 1550) entity . . . . .	1022
<b>DDS_PublishModeQosPolicy</b>	Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its <i>own</i> thread to send data, instead of the user thread . . . . .	1025
<b>DDS_QosPolicyCount</b>	Type to hold a counter for a <b>DDS_QosPolicyId_t</b> (p. 360) . . . . .	1029
<b>DDS_QosPolicyCountSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_QosPolicyCount</b> (p. 1029) > . . . . .	1030
<b>DDS_QosPrintAll_t</b>	Special type which is used to select the <i>to_string</i> overloads when printing Qos objects . . . . .	1030
<b>DDS_QosPrintFormat</b>	A collection of attributes used to configure how a QoS appears when printed . . . . .	1031
<b>DDS_QueryConditionParams</b>	<< <i>extension</i> >> (p. 237) Input parameters for <b>DDSDataReader::create_querycondition_w_↔params</b> (p. 1294) . . . . .	1033
<b>DDS_ReadConditionParams</b>	<< <i>extension</i> >> (p. 237) Input parameters for <b>DDSDataReader::create_readcondition_w_↔params</b> (p. 1293) . . . . .	1034
<b>DDS_ReaderDataLifecycleQosPolicy</b>	Controls how a DataReader manages the lifecycle of the data that it has received . . . . .	1035

<b>DDS_ReceiverPoolQosPolicy</b>	Configures threads used by RTI Connex to receive and process data from transports (for example, UDP sockets) . . . . .	1038
<b>DDS_ReliabilityQosPolicy</b>	Indicates the level of reliability offered/requested by RTI Connex . . . . .	1041
<b>DDS_ReliableReaderActivityChangedStatus</b>	<< <i>extension</i> >> (p. 237) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer . . . . .	1044
<b>DDS_ReliableWriterCacheChangedStatus</b>	<< <i>extension</i> >> (p. 237) A summary of the state of a data writer's cache of unacknowledged samples written . . . . .	1046
<b>DDS_ReliableWriterCacheEventCount</b>	<< <i>extension</i> >> (p. 237) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold . . . . .	1049
<b>DDS_RequestedDeadlineMissedStatus</b>	<b>DDS_REQUESTED_DEADLINE_MISSED_STATUS</b> (p. 344) . . . . .	1050
<b>DDS_RequestedIncompatibleQosStatus</b>	<b>DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS</b> (p. 344) . . . . .	1051
<b>DDS_ResourceLimitsQosPolicy</b>	Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics . . . . .	1052
<b>DDS_RTTPS_EntityId_t</b>	From the DDS-RTTPS specification: type used to hold the suffix part of the globally-unique RTTPS-entity identifiers . . . . .	1056
<b>DDS_RTTPS_GUID_t</b>	From the DDS-RTTPS specification: type used to hold a globally-unique RTTPS-entity identifier . . . . .	1057
<b>DDS_RtpsReliableReaderProtocol_t</b>	Qos related to reliable reader protocol defined in RTTPS . . . . .	1057
<b>DDS_RtpsReliableWriterProtocol_t</b>	QoS related to the reliable writer protocol defined in RTTPS . . . . .	1061
<b>DDS_RtpsWellKnownPorts_t</b>	RTTPS well-known port mapping configuration . . . . .	1076
<b>DDS_SampleIdentity_t</b>	Type definition for a Sample Identity . . . . .	1081
<b>DDS_SampleInfo</b>	Information that accompanies each sample that is read or taken . . . . .	1082
<b>DDS_SampleInfoSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_SampleInfo</b> (p. 1082) > . . . . .	1093
<b>DDS_SampleLostStatus</b>	<b>DDS_SAMPLE_LOST_STATUS</b> (p. 345) . . . . .	1093
<b>DDS_SampleRejectedStatus</b>	<b>DDS_SAMPLE_REJECTED_STATUS</b> (p. 345) . . . . .	1094
<b>DDS_SequenceNumber_t</b>	Type for <i>sequence</i> number representation . . . . .	1095
<b>DDS_ServiceQosPolicy</b>	Service associated with a DDS entity . . . . .	1096
<b>DDS_ServiceRequest</b>	A request coming from one of the built-in services . . . . .	1097
<b>DDS_ServiceRequestAcceptedStatus</b>	<b>DDS_SERVICE_REQUEST_ACCEPTED_STATUS</b> (p. 348) . . . . .	1099
<b>DDS_ServiceRequestSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_ServiceRequest</b> (p. 1097) > . . . . .	1101

<b>DDS_ShortSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Short</b> (p. 318) > . . . . .	1101
<b>DDS_StringSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < char* > with value type semantics . . . . .	1102
<b>DDS_StructMember</b>	A description of a member of a struct . . . . .	1103
<b>DDS_StructMemberSeq</b>	Defines a sequence of struct members . . . . .	1105
<b>DDS_SubscriberQos</b>	QoS policies supported by a <b>DDSSubscriber</b> (p. 1592) entity . . . . .	1105
<b>DDS_SubscriptionBuiltinTopicData</b>	Entry created when a <b>DDSDataReader</b> (p. 1288) is discovered in association with its Subscriber . . . . .	1108
<b>DDS_SubscriptionBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_SubscriptionBuiltinTopicData</b> (p. 1108) > . . . . .	1117
<b>DDS_SubscriptionMatchedStatus</b>	<b>DDS_SUBSCRIPTION_MATCHED_STATUS</b> (p. 347) . . . . .	1117
<b>DDS_SystemResourceLimitsQosPolicy</b>	<< <i>extension</i> >> (p. 237) Configures <b>DDSDomainParticipant</b> (p. 1351)-independent resources used by RTI Connext. Mainly used to change the maximum number of <b>DDSDomainParticipant</b> (p. 1351) entities that can be created within a single process (address space) . . . . .	1120
<b>DDS_Tag</b>	Tags are name/value pair objects . . . . .	1122
<b>DDS_TagSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Tag</b> (p. 1122) > . . . . .	1122
<b>DDS_ThreadSettings_t</b>	The properties of a thread of execution . . . . .	1123
<b>DDS_Time_t</b>	Type for <i>time</i> representation . . . . .	1125
<b>DDS_TimeBasedFilterQosPolicy</b>	Filter that allows a <b>DDSDataReader</b> (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data . . . . .	1126
<b>DDS_TopicBuiltinTopicData</b>	Entry created when a Topic object discovered . . . . .	1128
<b>DDS_TopicBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_TopicBuiltinTopicData</b> (p. 1128) > . . . . .	1133
<b>DDS_TopicDataQosPolicy</b>	Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 59) during discovery . . . . .	1133
<b>DDS_TopicQos</b>	QoS policies supported by a <b>DDSTopic</b> (p. 1617) entity . . . . .	1135
<b>DDS_TopicQueryData</b>	<< <i>extension</i> >> (p. 237) Provides information about a <b>DDSTopicQuery</b> (p. 1627) . . . . .	1140
<b>DDS_TopicQueryDispatchQosPolicy</b>	Configures the ability of a <b>DDSDataWriter</b> (p. 1321) to publish samples in response to a <b>DDSTopicQuery</b> (p. 1627) . . . . .	1141
<b>DDS_TopicQuerySelection</b>	<< <i>extension</i> >> (p. 237) Specifies the data query that defines a <b>DDSTopicQuery</b> (p. 1627) . . . . .	1143
<b>DDS_TransportBuiltinQosPolicy</b>	Specifies which built-in transports are used . . . . .	1144
<b>DDS_TransportInfo_t</b>	Contains the <i>class_id</i> and <i>message_size_max</i> of an installed transport . . . . .	1145
<b>DDS_TransportInfoSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_TransportInfo_t</b> (p. 1145) > . . . . .	1146

<b>DDS_TransportMulticastMapping_t</b>	Type representing a list of multicast mapping elements . . . . .	1147
<b>DDS_TransportMulticastMappingFunction_t</b>	Type representing an external mapping function . . . . .	1148
<b>DDS_TransportMulticastMappingQosPolicy</b>	Specifies a list of topic_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data . . . . .	1149
<b>DDS_TransportMulticastMappingSeq</b>	Declares IDL <code>sequence&lt; DDS_TransportMulticastMapping_t</code> (p. 1147) > . . . . .	1151
<b>DDS_TransportMulticastQosPolicy</b>	Specifies the multicast address on which a <b>DDSDataReader</b> (p. 1288) wants to receive its data. It can also specify a port number as well as a subset of the available (at the <b>DDSDomainParticipant</b> (p. 1351) level) transports with which to receive the multicast data . . . . .	1151
<b>DDS_TransportMulticastSettings_t</b>	Type representing a list of multicast locators . . . . .	1153
<b>DDS_TransportMulticastSettingsSeq</b>	Declares IDL <code>sequence&lt; DDS_TransportMulticastSettings_t</code> (p. 1153) > . . . . .	1155
<b>DDS_TransportPriorityQosPolicy</b>	This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities . . . . .	1155
<b>DDS_TransportSelectionQosPolicy</b>	Specifies the physical transports a <b>DDSDataWriter</b> (p. 1321) or <b>DDSDataReader</b> (p. 1288) may use to send or receive data . . . . .	1157
<b>DDS_TransportUnicastQosPolicy</b>	Specifies a subset of transports and a port number that can be used by an Entity to receive data . . . . .	1158
<b>DDS_TransportUnicastSettings_t</b>	Type representing a list of unicast locators . . . . .	1160
<b>DDS_TransportUnicastSettingsSeq</b>	Declares IDL <code>sequence&lt; DDS_TransportUnicastSettings_t</code> (p. 1160) > . . . . .	1161
<b>DDS_TrustAlgorithmRequirements</b>	Type to describe Trust Plugins algorithm requirements for an entity . . . . .	1162
<b>DDS_TypeAllocationParams_t</b>	Configures whether or not to allocate pointer and optional members . . . . .	1163
<b>DDS_TypeCode</b>	The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with <code>rtiddsgen</code> (see the <code>Code Generator User's Manual</code> ) or to modify types you define yourself at runtime . . . . .	1164
<b>DDS_TypeCodeFactory</b>	A singleton factory for creating, copying, and deleting data type definitions dynamically . . . . .	1210
<b>DDS_TypeCodePrintFormatProperty</b>	A collection of attributes used to configure how a <code>TypeCode</code> appears when converted to a string . . . . .	1224
<b>DDS_TypeConsistencyEnforcementQosPolicy</b>	Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it . . . . .	1228
<b>DDS_TypeDeallocationParams_t</b>	Configures whether to release or not pointer and optional members . . . . .	1231
<b>DDS_TypeSupportQosPolicy</b>	Allows you to attach application-specific values to a <b>DDSDataWriter</b> (p. 1321) or <b>DDSDataReader</b> (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization . . . . .	1232
<b>DDS_UInt8Seq</b>	Instantiates <code>FooSeq</code> (p. 1697) < <b>DDS_UInt8</b> (p. 318) > . . . . .	1234
<b>DDS_UnionMember</b>	A description of a member of a union . . . . .	1235

<b>DDS_UnionMemberSeq</b>	Defines a sequence of union members . . . . .	1236
<b>DDS_UnsignedLongLongSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_UnsignedLongLong</b> (p. 319) > . . . . .	1236
<b>DDS_UnsignedLongSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_UnsignedLong</b> (p. 318) > . . . . .	1237
<b>DDS_UnsignedShortSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_UnsignedShort</b> (p. 318) > . . . . .	1237
<b>DDS_UserDataQosPolicy</b>	Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 59) during discovery . . . . .	1237
<b>DDS_ValueMember</b>	A description of a member of a value type . . . . .	1239
<b>DDS_ValueMemberSeq</b>	Defines a sequence of value members . . . . .	1241
<b>DDS_VendorId_t</b>	<< <i>extension</i> >> (p. 237) Type used to represent the vendor of the service implementing the RTPS protocol . . . . .	1241
<b>DDS_WaitSetProperty_t</b>	<< <i>extension</i> >> (p. 237) Specifies the <b>DDSWaitSet</b> (p. 1629) behavior for multiple trigger events . . . . .	1242
<b>DDS_WcharSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Wchar</b> (p. 317) > . . . . .	1243
<b>DDS_WireProtocolQosPolicy</b>	Specifies the wire-protocol-related attributes for the <b>DDSDomainParticipant</b> (p. 1351) . . . . .	1244
<b>DDS_WriteParams_t</b>	<< <i>extension</i> >> (p. 237) Input parameters for writing with <b>FooDataWriter::write_w_params</b> (p. 1688), <b>FooDataWriter::dispose_w_params</b> (p. 1691), <b>FooDataWriter::register_instance_w_params</b> (p. 1680), <b>FooDataWriter::unregister_instance_w_params</b> (p. 1683) . . . . .	1251
<b>DDS_WriterDataLifecycleQosPolicy</b>	Controls how a <b>DDSDataWriter</b> (p. 1321) handles the lifecycle of the instances (keys) that it is registered to manage . . . . .	1256
<b>DDS_WstringSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDS_Wchar</b> (p. 317)* > . . . . .	1259
<b>DDSAsyncWaitSet</b>	A class for dispatching <b>DDSCondition</b> (p. 1276) objects using separate threads of execution. You can see this class as an extension of a <b>DDSWaitSet</b> (p. 1629) that allows asynchronously waiting for the attached <b>DDSCondition</b> (p. 1276) objects to trigger and provide a notification by calling <b>DDSCondition::dispatch</b> (p. 1278) . . . . .	1259
<b>DDSAsyncWaitSetCompletionToken</b>	<< <i>interface</i> >> (p. 237) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the <b>DDSAsyncWaitSet</b> (p. 1259) behavior . . . . .	1273
<b>DDSAsyncWaitSetListener</b>	<< <i>interface</i> >> (p. 237) Listener for receiving event notifications related to the thread pool of the <b>DDSAsyncWaitSet</b> (p. 1259) . . . . .	1275
<b>DDSCondition</b>	<< <i>interface</i> >> (p. 237) Root class for all the conditions that may be attached to a <b>DDSWaitSet</b> (p. 1629) . . . . .	1276
<b>DDSConditionHandler</b>	<< <i>extension</i> >> (p. 237) << <i>interface</i> >> (p. 237) Handler called by the <b>DDSCondition</b> ↔ : <b>dispatch</b> (p. 1278) . . . . .	1278
<b>DDSConditionSeq</b>	Instantiates <b>FooSeq</b> (p. 1697) < <b>DDSCondition</b> (p. 1276) > . . . . .	1279

<b>DDSContentFilter</b>	
<< <i>interface</i> >> (p. 237) Interface to be used by a custom filter of a <b>DDSContentFilteredTopic</b> (p. 1283) . . . . .	1280
<b>DDSContentFilteredTopic</b>	
<< <i>interface</i> >> (p. 237) Specialization of <b>DDSTopicDescription</b> (p. 1624) that allows for content-based subscriptions . . . . .	1283
<b>DDSDataReader</b>	
<< <i>interface</i> >> (p. 237) Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached <b>DDSSubscriber</b> (p. 1592) .	1288
<b>DDSDataReaderListener</b>	
<< <i>interface</i> >> (p. 237) <b>DDSListener</b> (p. 1526) for reader status . . . . .	1315
<b>DDSDataReaderSeq</b>	
Declares IDL <i>sequence</i> < <b>DDSDataReader</b> (p. 1288) > . . . . .	1317
<b>DDSDataReaderStatusConditionHandler</b>	
<< <i>interface</i> >> (p. 237) Realization of a <b>DDSConditionHandler</b> (p. 1278) that handles the status of a <b>DDSDataReader</b> (p. 1288) . . . . .	1318
<b>DDSDataTagQosPolicyHelper</b>	
Policy helpers that facilitate management of the data tags in the input policy . . . . .	1320
<b>DDSDataWriter</b>	
<< <i>interface</i> >> (p. 237) Allows an application to set the value of the data to be published under a given <b>DDSTopic</b> (p. 1617) . . . . .	1321
<b>DDSDataWriterListener</b>	
<< <i>interface</i> >> (p. 237) <b>DDSListener</b> (p. 1526) for writer status . . . . .	1344
<b>DDSDomainEntity</b>	
<< <i>interface</i> >> (p. 237) Abstract base class for all DDS entities except for the <b>DDSDomainParticipant</b> (p. 1351) . . . . .	1350
<b>DDSDomainParticipant</b>	
<< <i>interface</i> >> (p. 237) Container for all <b>DDSDomainEntity</b> (p. 1350) objects . . . . .	1351
<b>DDSDomainParticipantFactory</b>	
<< <i>singleton</i> >> (p. 238) << <i>interface</i> >> (p. 237) Allows creation and destruction of <b>DDSDomainParticipant</b> (p. 1351) objects . . . . .	1426
<b>DDSDomainParticipantListener</b>	
<< <i>interface</i> >> (p. 237) Listener for participant status . . . . .	1454
<b>DDSDynamicDataReader</b>	
Reads (subscribes to) objects of type <b>DDS_DynamicData</b> (p. 775) . . . . .	1456
<b>DDSDynamicDataTypeSupport</b>	
A factory for registering a dynamically defined type and creating <b>DDS_DynamicData</b> (p. 775) objects	1456
<b>DDSDynamicDataWriter</b>	
Writes (publishes) objects of type <b>DDS_DynamicData</b> (p. 775) . . . . .	1462
<b>DDSEntity</b>	
<< <i>interface</i> >> (p. 237) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition . . . . .	1463
<b>DDSFlowController</b>	
<< <i>interface</i> >> (p. 237) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous <b>DDSDataWriter</b> (p. 1321) instances are allowed to write data . . . . .	1468
<b>DDSGuardCondition</b>	
<< <i>interface</i> >> (p. 237) A specific <b>DDSCondition</b> (p. 1276) whose <i>trigger_value</i> is completely under the control of the application . . . . .	1471
<b>DDSKeyedOctetsDataReader</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataReader</i> < <b>DDS_KeyedOctets</b> (p. 924) > . . . . .	1473
<b>DDSKeyedOctetsDataWriter</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataWriter</i> < <b>DDS_KeyedOctets</b> (p. 924) > . . . . .	1482

<b>DDSKeyedOctetsTypeSupport</b>	
<< <i>interface</i> >> (p. 237) <b>DDS_KeyedOctets</b> (p. 924) type support	1495
<b>DDSKeyedStringDataReader</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataReader</i> < <b>DDS_KeyedString</b> (p. 927) >	1501
<b>DDSKeyedStringDataWriter</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataWriter</i> < <b>DDS_KeyedString</b> (p. 927) >	1510
<b>DDSKeyedStringTypeSupport</b>	
<< <i>interface</i> >> (p. 237) Keyed string type support	1520
<b>DDSListener</b>	
<< <i>interface</i> >> (p. 237) Abstract base class for all Listener interfaces	1526
<b>DDSMultiTopic</b>	
[Not supported (optional)] << <i>interface</i> >> (p. 237) A specialization of <b>DDSTopicDescription</b> (p. 1624) that allows subscriptions that combine/filter/rearrange data coming from several topics	1529
<b>DDSOctetsDataReader</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataReader</i> < <b>DDS_Octets</b> (p. 967) >	1532
<b>DDSOctetsDataWriter</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataWriter</i> < <b>DDS_Octets</b> (p. 967) >	1536
<b>DDSOctetsTypeSupport</b>	
<< <i>interface</i> >> (p. 237) <b>DDS_Octets</b> (p. 967) type support	1543
<b>DDSParticipantBuiltinTopicDataDataReader</b>	
Instantiates <i>DataReader</i> < <b>DDS_ParticipantBuiltinTopicData</b> (p. 979) >	1548
<b>DDSParticipantBuiltinTopicDataTypeSupport</b>	
Instantiates <i>TypeSupport</i> < <b>DDS_ParticipantBuiltinTopicData</b> (p. 979) >	1548
<b>DDSPROPERTYQOSPolicyHelper</b>	
Policy helpers that facilitate management of the properties in the input policy	1549
<b>DDSPublicationBuiltinTopicDataDataReader</b>	
Instantiates <i>DataReader</i> < <b>DDS_PublicationBuiltinTopicData</b> (p. 1010) >	1549
<b>DDSPublicationBuiltinTopicDataTypeSupport</b>	
Instantiates <i>TypeSupport</i> < <b>DDS_PublicationBuiltinTopicData</b> (p. 1010) >	1550
<b>DDSPublisher</b>	
<< <i>interface</i> >> (p. 237) A publisher is the object responsible for the actual dissemination of publications	1550
<b>DDSPublisherListener</b>	
<< <i>interface</i> >> (p. 237) <b>DDSListener</b> (p. 1526) for <b>DDSPublisher</b> (p. 1550) status	1571
<b>DDSPublisherSeq</b>	
Declares IDL <i>sequence</i> < <b>DDSPublisher</b> (p. 1550) >	1572
<b>DDSQueryCondition</b>	
<< <i>interface</i> >> (p. 237) These are specialised <b>DDSReadCondition</b> (p. 1574) objects that allow the application to also specify a filter on the locally available data	1573
<b>DDSReadCondition</b>	
<< <i>interface</i> >> (p. 237) Conditions specifically dedicated to read operations and attached to one <b>DDSDataReader</b> (p. 1288)	1574
<b>DDSServiceRequestDataReader</b>	
Instantiates <i>DataReader</i> < <b>DDS_ServiceRequest</b> (p. 1097) >	1577
<b>DDSServiceRequestTypeSupport</b>	
Instantiates <i>TypeSupport</i> < <b>DDS_ServiceRequest</b> (p. 1097) >	1577
<b>DDSStatusCondition</b>	
<< <i>interface</i> >> (p. 237) A specific <b>DDSCondition</b> (p. 1276) that is associated with each <b>DDSEntity</b> (p. 1463)	1578
<b>DDSStringDataReader</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataReader</i> < <i>char*</i> >	1580
<b>DDSStringDataWriter</b>	
<< <i>interface</i> >> (p. 237) Instantiates <i>DataWriter</i> < <i>char*</i> >	1584

<b>DDSStringTypeSupport</b>	
<< <i>interface</i> >> (p. 237) String type support	. . . . . 1587
<b>DDSSubscriber</b>	
<< <i>interface</i> >> (p. 237) A subscriber is the object responsible for actually receiving data from a subscription	. . . . . 1592
<b>DDSSubscriberListener</b>	
<< <i>interface</i> >> (p. 237) <b>DDSListener</b> (p. 1526) for status about a subscriber	. . . . . 1613
<b>DDSSubscriberSeq</b>	
Declares IDL <i>sequence</i> < <b>DDSSubscriber</b> (p. 1592) >	. . . . . 1614
<b>DDSSubscriptionBuiltinTopicDataReader</b>	
Instantiates <i>DataReader</i> < <b>DDS_SubscriptionBuiltinTopicData</b> (p. 1108) >	. . . . . 1614
<b>DDSSubscriptionBuiltinTopicDataTypeSupport</b>	
Instantiates <i>TypeSupport</i> < <b>DDS_SubscriptionBuiltinTopicData</b> (p. 1108) >	. . . . . 1615
<b>DDSThreadFactory</b>	
<< <i>extension</i> >> (p. 237) << <i>interface</i> >> (p. 237) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the <b>DDSThreadFactory_OnSpawnedFunction</b> (p. 519) that specifies the operation to run in the new thread	. . . . . 1615
<b>DDSTopic</b>	
<< <i>interface</i> >> (p. 237) The most basic description of the data to be published and subscribed	. . . . . 1617
<b>DDSTopicBuiltinTopicDataReader</b>	
Instantiates <i>DataReader</i> < <b>DDS_TopicBuiltinTopicData</b> (p. 1128) >	. . . . . 1622
<b>DDSTopicBuiltinTopicDataTypeSupport</b>	
Instantiates <i>TypeSupport</i> < <b>DDS_TopicBuiltinTopicData</b> (p. 1128) >	. . . . . 1623
<b>DDSTopicDescription</b>	
<< <i>interface</i> >> (p. 237) Base class for <b>DDSTopic</b> (p. 1617), <b>DDSContentFilteredTopic</b> (p. 1283), and <b>DDSMultiTopic</b> (p. 1529)	. . . . . 1624
<b>DDSTopicListener</b>	
<< <i>interface</i> >> (p. 237) <b>DDSListener</b> (p. 1526) for <b>DDSTopic</b> (p. 1617) entities	. . . . . 1626
<b>DDSTopicQuery</b>	
<< <i>extension</i> >> (p. 237) Allows a <b>DDSDataReader</b> (p. 1288) to query the sample cache of its matching <b>DDSDataWriter</b> (p. 1321)	. . . . . 1627
<b>DDSTopicQueryHelper</b>	
Helpers to provide utility operations related to <b>DDSTopicQuery</b> (p. 1627)	. . . . . 1628
<b>DDSTypeSupport</b>	
<< <i>interface</i> >> (p. 237) An abstract <i>marker</i> interface that has to be specialized for each concrete user data type that will be used by the application	. . . . . 1629
<b>DDSWaitSet</b>	
<< <i>interface</i> >> (p. 237) Allows an application to wait until one or more of the attached <b>DDSCondition</b> (p. 1276) objects has a <i>trigger_value</i> of <b>DDS_BOOLEAN_TRUE</b> (p. 317) or else until the timeout expires	. . . . . 1629
<b>DDSWriterContentFilter</b>	
<< <i>interface</i> >> (p. 237) Interface to be used by a custom filter of a <b>DDSContentFilteredTopic</b> (p. 1283)	. . . . . 1637
<b>rti::flat::FinalAlignedArrayOffset&lt; ElementOffset, N &gt;</b>	
Offset to an array of final elements	. . . . . 1641
<b>rti::flat::FinalArrayOffset&lt; ElementOffset, N &gt;</b>	
Offset to an array of final elements	. . . . . 1643
<b>rti::flat::FinalOffset&lt; T &gt;</b>	
The base class of all Offsets to a final struct type	. . . . . 1645
<b>rti::flat::FinalSequenceBuilder&lt; ElementOffset &gt;</b>	
Builds a sequence member of fixed-size elements	. . . . . 1645
<b>rti::flat::flat_type_traits&lt; T &gt;</b>	
Given a <b>Sample</b> (p. 1916), an <b>Offset</b> or a <b>Builder</b> , it allows obtaining the other types	. . . . . 1647

<b>Foo</b>	A representative user-defined data type . . . . .	1648
<b>FooDataReader</b>	<< <i>interface</i> >> (p. 237) << <i>generic</i> >> (p. 237) User data type-specific data reader . . . . .	1649
<b>FooDataWriter</b>	<< <i>interface</i> >> (p. 237) << <i>generic</i> >> (p. 237) User data type specific data writer . . . . .	1676
<b>FooSeq</b>	<< <i>interface</i> >> (p. 237) << <i>generic</i> >> (p. 237) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as <b>Foo</b> (p. 1648) . . . . .	1697
<b>FooTypeSupport</b>	<< <i>interface</i> >> (p. 237) << <i>generic</i> >> (p. 237) User data type specific interface . . . . .	1711
<b>connext::IllegalOperationException</b>	The operation was called under improper circumstances . . . . .	1724
<b>connext::ImmutablePolicyException</b>	Application attempted to modify an immutable QoS policy . . . . .	1724
<b>connext::InconsistentPolicyException</b>	Application specified a set of QoS policies that are not consistent with each other . . . . .	1725
<b>connext::IsInvalidSamplePredicate&lt; T &gt;</b>	Predicate-class to determine if a sample contains invalid data . . . . .	1725
<b>connext::IsReplyRelatedPredicate&lt; T &gt;</b>	Predicate-class to match replies by their related request . . . . .	1725
<b>connext::IsValidSamplePredicate&lt; T &gt;</b>	Predicate-class to determine if a sample contains valid data . . . . .	1727
<b>connext::LoanedSamples&lt; T &gt;</b>	Provides access to a collection of middleware-loaned samples . . . . .	1727
<b>connext::LoanedSamples&lt; T &gt;::LoanMemento</b>	A simple value-type for the internal representation of the a <b>LoanedSamples</b> (p. 1727) object . . . . .	1736
<b>connext::LogicException</b>	Base class of all RTI Connext exceptions caused by a logic error . . . . .	1737
<b>connext::MessagingLibraryVersion</b>	The Connext Messaging Library version . . . . .	1737
<b>connext::MessagingVersion</b>	The Connext Messaging version . . . . .	1738
<b>rti::flat::MutableArrayBuilder&lt; ElementBuilder, N &gt;</b>	Builds an array member of variable-size elements . . . . .	1740

<b>connex::NotEnabledException</b>	
Operation invoked on a <b>DDSEntity</b> (p. 1463) that is not yet enabled	1855
<b>rti::flat::OffsetBase</b>	
Base class of all Offset types	1856
<b>connex::OutOfResourcesException</b>	
RTI Connex ran out of the resources needed to complete the operation	1860
<b>connex::PreconditionNotMetException</b>	
A pre-condition for the operation was not met	1861
<b>rti::flat::PrimitiveArrayOffset&lt; T, N &gt;</b>	
Offset to an array of primitive elements	1861

<b>rti::flat::PrimitiveConstOffset</b> < T >	
A const Offset to an optional primitive member . . . . .	1862
<b>rti::flat::PrimitiveOffset</b> < T >	
An Offset to an optional primitive member . . . . .	1863
<b>rti::flat::PrimitiveSequenceBuilder</b> < T >	
Builds a sequence of primitive members . . . . .	1864
<b>rti::flat::PrimitiveSequenceOffset</b> < T >	
Offset to a sequence of primitive elements . . . . .	1867
<b>connext::Replier</b> < TReq, TRep >	
Allows receiving requests and sending replies . . . . .	1868
<b>connext::ReplierListener</b> < TReq, TRep >	
Called when a <b>connext::Replier</b> (p. 1868) has new available requests . . . . .	1880
<b>connext::ReplierParams</b> < TReq, TRep >	
Contains the parameters for creating a <b>connext::Replier</b> (p. 1868) . . . . .	1881
<b>connext::Requester</b> < TReq, TRep >	
Allows sending requests and receiving replies . . . . .	1886
<b>connext::RequesterParams</b>	
Contains the parameters for creating a <b>connext::Requester</b> (p. 1886) . . . . .	1907
<b>connext::RuntimeException</b>	
Generic, unspecified error . . . . .	1912
<b>connext::Sample</b> < T >	
A data sample and related info received from the middleware . . . . .	1912
<b>rti::flat::Sample</b> < OffsetType >	
The generic definition of FlatData topic-types . . . . .	1916
<b>connext::SampleIterator</b> < T, IsConst >	
STL-compliant random-access iterator for SampleRef<T> . . . . .	1920
<b>connext::SampleRef</b> < T >	
A data sample and related information received from the middleware . . . . .	1920
<b>rti::flat::SequenceIterator</b> < E, OffsetKind >	
Iterator for collections of Offsets . . . . .	1926
<b>rti::flat::SequenceOffset</b> < ElementOffset >	
Offset to a sequence of non-primitive elements . . . . .	1934
<b>connext::SimpleReplier</b> < TReq, TRep >	
A callback-based replier . . . . .	1935
<b>connext::SimpleReplierListener</b> < TReq, TRep >	
The listener called by a <b>SimpleReplier</b> (p. 1935) . . . . .	1937
<b>connext::SimpleReplierParams</b> < TReq, TRep >	
Contains the parameters for creating a <b>connext::SimpleReplier</b> (p. 1935) . . . . .	1939
<b>rti::flat::StringBuilder</b>	
Builds a string . . . . .	1943
<b>rti::flat::StringOffset</b>	
Offset to a string . . . . .	1945
<b>connext::TimeoutException</b>	
The operation timed out (does not apply to wait or receive operations) . . . . .	1946
<b>TransportAllocationSettings_t</b>	
Allocation settings used by various internal buffers . . . . .	1947
<b>rti::flat::UnionBuilder</b> < Discriminator >	
Base class of builders for user-defined mutable unions . . . . .	1947
<b>connext::UnsupportedException</b>	
Unsupported operation . . . . .	1948
<b>connext::WriteSample</b> < T >	
A sample for writing data . . . . .	1948
<b>connext::WriteSampleRef</b> < T >	
A reference to a data sample for writing . . . . .	1952

## Module Documentation

### 7.1 RTI Connex Exceptions

RTI Connex return-code exceptions.

#### Classes

- class **connex::RuntimeException**  
*Generic, unspecified error.*
- class **connex::LogicException**  
*Base class of all RTI Connex exceptions caused by a logic error.*
- class **connex::UnsupportedException**  
*Unsupported operation.*
- class **connex::BadParameterException**  
*Illegal parameter value.*
- class **connex::PreconditionNotMetException**  
*A pre-condition for the operation was not met.*
- class **connex::ImmutablePolicyException**  
*Application attempted to modify an immutable QoS policy.*
- class **connex::InconsistentPolicyException**  
*Application specified a set of QoS policies that are not consistent with each other.*
- class **connex::NotEnabledException**  
*Operation invoked on a **DDSEntity** (p. 1463) that is not yet enabled.*
- class **connex::AlreadyDeletedException**  
*The object target of this operation has already been deleted.*
- class **connex::IllegalOperationException**  
*The operation was called under improper circumstances.*
- class **connex::TimeoutException**  
*The operation timed out (does not apply to wait or receive operations)*
- class **connex::OutOfResourcesException**  
*RTI Connex ran out of the resources needed to complete the operation.*

### 7.1.1 Detailed Description

RTI Connex return-code exceptions.

The request-reply API reports internal DDS errors as exceptions. Each RTI Connex return code maps to a exception.

All exceptions inherit from the C++ standard exceptions `std::logic_error` or `std::runtime_error`.

Note that `RETCODE_TIMEOUT` and `RETCODE_NO_DATA` are not thrown in the request-reply API, because they are not considered errors. For example in case of no data or timeouts operations may return empty containers (e.g. `connex::Requester::take_replies(int)` (p. 1899)) or false (e.g. `connex::Requester::wait_for_replies(int, const Duration_t&)` (p. 1896)).

**Return Codes** (p. 335)

**Error handling example** (p. 233)

## 7.2 Clock Selection

APIs related to clock selection.

APIs related to clock selection.

RTI Connex uses clocks to measure time and generate timestamps.

The middleware uses two clocks, an internal clock and an external clock. The internal clock is used to measure time and handles all timing in the middleware. The external clock is used solely to generate timestamps, such as the source timestamp and the reception timestamp, in addition to providing the time given by `DDSDomainParticipant::get_current_time` (p. 1398).

### 7.2.1 Available Clocks

Two clock implementations are generally available, the monotonic clock and the realtime clock.

The monotonic clock provides times that are monotonic from a clock that is not adjustable. This clock is useful to use in order to not be subject to changes in the system or realtime clock, which may be adjusted by the user or via time synchronization protocols. However, this time generally starts from an arbitrary point in time, such as system startup. Note that this clock is not available for all architectures. Please see the [Platform Notes](#) for the architectures on which it is supported. For the purposes of clock selection, this clock can be referenced by the name "monotonic".

The realtime clock provides the realtime of the system. This clock may generally be monotonic but may not be guaranteed to be so. It is adjustable and may be subject to small and large changes in time. The time obtained from this clock is generally a meaningful time in that it is the amount of time from a known epoch. For the purposes of clock selection, this clock can be referenced by the names "realtime" or "system".

## 7.2.2 Clock Selection Strategy

By default, both the internal and external clocks use the real-time clock. If you want your application to be robust to changes in the system time, you may use the monotonic clock as the internal clock, and leave the system clock as the external clock. Note, however, that this may slightly diminish performance in that both the send and receive paths may need to obtain times from both clocks. Since the monotonic clock is not available on all architectures, you may want to specify "monotonic,realtime" for the `internal_clock` (see the table below). By doing so, the middleware will attempt to use the monotonic clock if available, and will fall back to the realtime clock if the monotonic clock is not available.

If you want your application to be robust to changes in the system time, you are not relying on source timestamps, and you want to avoid obtaining times from both clocks, you may use the monotonic clock for both the internal and external clocks.

## 7.2.3 Configuring Clock Selection

To configure the clock selection, use the **PROPERTY** (p. 419) QoS policy associated with the **DDSDomainParticipant** (p. 1351).

See also

**DDS\_PropertyQosPolicy** (p. 1007)

The following table lists the supported clock selection properties.

**Table 7.1 Clock Selection Properties**

Property	Description
<code>dds.clock.external_clock</code>	Comma-delimited list of clocks to use for the external clock, in the order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"
<code>dds.clock.internal_clock</code>	Comma-delimited list of clocks to use for the internal clock, in the order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"

## 7.3 Domain Module

Contains the **DDSDomainParticipant** (p. 1351) class that acts as an entrypoint of RTI Connex and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1351) also acts as a container for the other objects that make up RTI Connex.

## Modules

- **DomainParticipantFactory**  
*DDSDomainParticipantFactory* (p. 1426) entity and associated elements
- **DomainParticipants**  
*DDSDomainParticipant* (p. 1351) entity and associated elements
- **Built-in Topics**  
*Built-in objects created by RTI Connexnt but accessible to the application.*

### 7.3.1 Detailed Description

Contains the **DDSDomainParticipant** (p. 1351) class that acts as an endpoint of RTI Connexnt and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1351) also acts as a container for the other objects that make up RTI Connexnt.

## 7.4 DomainParticipantFactory

**DDSDomainParticipantFactory** (p. 1426) entity and associated elements

### Modules

- **DomainParticipantConfigParams**  
<<extension>> (p. 237) *DDS\_DomainParticipantConfigParams\_t* (p. 734)

### Classes

- struct **DDS\_DomainParticipantFactoryQos**  
*QoS policies supported by a DDSDomainParticipantFactory* (p. 1426).
- class **DDSDomainParticipantFactory**  
<<singleton>> (p. 238) <<interface>> (p. 237) *Allows creation and destruction of DDSDomainParticipant* (p. 1351) objects.

### Macros

- #define **DDSTheParticipantFactory DDSDomainParticipantFactory::get\_instance()**  
*Can be used as an alias for the singleton factory returned by the operation DDSDomainParticipantFactory::get\_instance* (p. 1429).

### Typedefs

- typedef **DDS\_ReturnCode\_t(\* DDSDomainParticipantFactory\_RegisterTypeFunction)** ( **DDSDomainParticipant** \*participant, const char \*type\_name)  
*Prototype of a register type function.*

## Functions

- **DDS\_Boolean DDS\_DomainParticipantFactoryQos\_equals** (const struct **DDS\_DomainParticipantFactoryQos** \*self, const struct **DDS\_DomainParticipantFactoryQos** \*other)  
*Compares two **DDS\_DomainParticipantFactoryQos** (p. 737) for equality.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::print** () const  
*Prints this **DDS\_DomainParticipantFactoryQos** (p. 737) to stdout.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DomainParticipantFactoryQos** &base) const  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DomainParticipantFactoryQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).*

## Variables

- const struct **DDS\_DomainParticipantQos DDS\_PARTICIPANT\_QOS\_DEFAULT**  
*Special value for creating a **DomainParticipant** with default QoS.*
- const struct **DDS\_DomainParticipantConfigParams\_t DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT**  
*Special value for creating a **DDSDomainParticipant** (p. 1351) from configuration using default parameters.*

### 7.4.1 Detailed Description

**DDSDomainParticipantFactory** (p. 1426) entity and associated elements

### 7.4.2 Macro Definition Documentation

### 7.4.2.1 DDSTheParticipantFactory

```
#define DDSTheParticipantFactory DDSDomainParticipantFactory::get_instance()
```

Can be used as an alias for the singleton factory returned by the operation `DDSDomainParticipantFactory::get_instance` (p. 1429).

See also

`DDSDomainParticipantFactory::get_instance` (p. 1429)

Examples

`HelloWorld_publisher.cxx`, and `HelloWorld_subscriber.cxx`.

## 7.4.3 Typedef Documentation

### 7.4.3.1 DDSDomainParticipantFactory\_RegisterTypeFunction

```
typedef DDS_ReturnCode_t (* DDSDomainParticipantFactory_RegisterTypeFunction) ( DDSDomainParticipant
*participant, const char *type_name)
```

Prototype of a register type function.

Parameters

<i>participant</i>	<< <i>inout</i> >> (p. 238) <code>DDSDomainParticipant</code> (p. 1351) participant the type is registered with.
<i>type_name</i>	<< <i>in</i> >> (p. 238) Name the type is registered with.

Exceptions

<i>One</i>	of the <code>Standard Return Codes</code> (p. 336)
------------	--

## 7.4.4 Function Documentation

### 7.4.4.1 DDS\_DomainParticipantFactoryQos\_equals()

```
DDS_Boolean DDS_DomainParticipantFactoryQos_equals (
    const struct DDS_DomainParticipantFactoryQos * self,
    const struct DDS_DomainParticipantFactoryQos * other )
```

Compares two **DDS\_DomainParticipantFactoryQos** (p. 737) for equality.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This DomainParticipantFactoryQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other DomainParticipantFactoryQos to be compared with this DomainParticipantFactoryQos.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_DomainParticipantFactoryQos::operator!=()**, and **DDS\_DomainParticipantFactoryQos::operator==()**.

#### 7.4.4.2 print()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::print ( ) const [inline]
```

Prints this **DDS\_DomainParticipantFactoryQos** (p. 737) to stdout.

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 737) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### 7.4.4.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 737) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantFactoryQos** (p. 737) is written to the buffer.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45)

## 7.4.4.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DomainParticipantFactoryQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).

This overload behaves the same as **DDS\_DomainParticipantFactoryQos::to\_string** (p. 43) but allows the caller to specify the **DDS\_DomainParticipantFactoryQos** (p. 737), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DomainParticipantFactoryQos</b> (p. 737) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

See also

**DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45)

References **DDS\_QosPrintFormat\_INITIALIZER**.

#### 7.4.4.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).

This overload behaves the same as **DDS\_DomainParticipantFactoryQos::to\_string** (p. 43) but allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the output.

Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

See also

**DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

#### 7.4.4.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DomainParticipantFactoryQos & base,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 737) and the **DDS\_DomainParticipantFactoryQos** (p. 737) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantFactoryQos** (p. 737) is written to the buffer.

##### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DomainParticipantFactoryQos</b> (p. 737) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

##### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### 7.4.4.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).

This overload behaves the same as **DDS\_DomainParticipantFactoryQos::to\_string** (p. 43) but prints the entire **DDS\_DomainParticipantFactoryQos** (p. 737) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

##### For example

```
DomainParticipantFactoryQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.4.4.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 737).

This overload behaves the same as the **DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 46) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 737). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantFactoryQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantFactoryQos&, const DDS\_QosPrintFormat&) const** (p. 45)

## 7.4.5 Variable Documentation

### 7.4.5.1 DDS\_PARTICIPANT\_QOS\_DEFAULT

```
const struct DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT [extern]
```

Special value for creating a DomainParticipant with default QoS.

When used in **DDSDomainParticipantFactory::create\_participant** (p. 1442), this special value is used to indicate that the **DDSDomainParticipant** (p. 1351) should be created with the default **DDSDomainParticipant** (p. 1351) QoS by means of the operation **DDSDomainParticipantFactory::get\_default\_participant\_qos()** (p. 1432) and using the resulting QoS to create the **DDSDomainParticipant** (p. 1351).

When used in **DDSDomainParticipantFactory::set\_default\_participant\_qos** (p. 1430), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipantFactory::set\_default\_participant\_qos** (p. 1430) operation had never been called.

When used in **DDSDomainParticipant::set\_qos** (p. 1408), this special value is used to indicate that the QoS of the **DDSDomainParticipant** (p. 1351) should be changed to match the current default QoS set in the **DDSDomainParticipantFactory** (p. 1426) that the **DDSDomainParticipant** (p. 1351) belongs to.

RTI Connexx treats this special value as a constant.

## Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values from the DomainParticipant factory; for this purpose, use **DDSDomainParticipantFactory::get\_default\_participant\_qos** (p. 1432).

## See also

**NDDS\_DISCOVERY\_PEERS** (p. 464)

**DDSDomainParticipantFactory::set\_default\_participant\_qos()** (p. 1430)  
**DDSDomainParticipant::set\_qos()** (p. 1408)

## Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

### 7.4.5.2 DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT

```
const struct DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT [extern]
```

Special value for creating a **DDSDomainParticipant** (p. 1351) from configuration using default parameters.

This value can be used only in **DDSDomainParticipantFactory::create\_participant\_from\_config\_w\_params** (p. 1450) and indicates that the **DDSDomainParticipant** (p. 1351) must be created applying the information defined in the participant configuration. That is, the domain ID, participant entity name, and QoS profiles for all the entities will be retrieved from the configuration.

RTI Connext treats this special value as a constant.

- const char \*const **DDS\_STRINGMATCHFILTER\_NAME**  
*<<extension>> (p. 237) The name of the built-in **StringMatch** filter that can be used with **ContentFilteredTopics** and **MultiChannel DataWriters**.*

### 7.5.1 Detailed Description

**DDSDomainParticipant** (p. 1351) entity and associated elements

## 7.5.2 Typedef Documentation

### 7.5.2.1 DDS\_DomainId\_t

```
typedef DDS_DOMAINID_TYPE_NATIVE DDS_DomainId_t
```

An integer that indicates in which domain a **DDSDomainParticipant** (p. 1351) communicates.

Participants with the same **DDS\_DomainId\_t** (p. 51) are said to be in the same domain, and can thus communicate with one another.

The lower limit for a domain ID is 0. The upper limit for a domain ID is determined by the guidelines stated in **DDS\_↔RtpsWellKnownPorts\_t** (p. 1076) (specifically **DDS\_RtpsWellKnownPorts\_t::domain\_id\_gain** (p. 1078))

## 7.5.3 Function Documentation

### 7.5.3.1 DDS\_DomainParticipantQos\_equals()

```
DDS_Boolean DDS_DomainParticipantQos_equals (
    const struct DDS_DomainParticipantQos * self,
    const struct DDS_DomainParticipantQos * other )
```

Compares two **DDS\_DomainParticipantQos** (p. 741) for equality.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This DomainParticipantQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other DomainParticipantQos to be compared with this DomainParticipantQos.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_DomainParticipantQos::operator!=()**, and **DDS\_DomainParticipantQos::operator==(())**.

### 7.5.3.2 print()

```
DDS_ReturnCode_t DDS_DomainParticipantQos::print ( ) const [inline]
```

Prints this **DDS\_DomainParticipantQos** (p. 741) to stdout.

Only the differences between this **DDS\_DomainParticipantQos** (p. 741) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.5.3.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

Only the differences between this **DDS\_DomainParticipantQos** (p. 741) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantQos** (p. 741) is written to the buffer.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54)

## 7.5.3.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DomainParticipantQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

This overload behaves the same as **DDS\_DomainParticipantQos::to\_string** (p. 52) but allows the caller to specify the **DDS\_DomainParticipantQos** (p. 741), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DomainParticipantQos</b> (p. 741) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.5.3.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

This overload behaves the same as **DDS\_DomainParticipantQos::to\_string** (p. 52) but allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the output.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

## 7.5.3.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DomainParticipantQos & base,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

Only the differences between this **DDS\_DomainParticipantQos** (p. 741) and the **DDS\_DomainParticipantQos** (p. 741) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantQos** (p. 741) is written to the buffer.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DomainParticipantQos</b> (p. 741) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## 7.5.3.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

This overload behaves the same as **DDS\_DomainParticipantQos::to\_string** (p. 52) but prints the entire **DDS\_DomainParticipantQos** (p. 741) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

## For example

```
DomainParticipantQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.5.3.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).

This overload behaves the same as the **DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 55) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 741). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DomainParticipantQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DomainParticipantQos&, const DDS\_QosPrintFormat&) const** (p. 54)

## 7.5.4 Variable Documentation

### 7.5.4.1 DDS\_TOPIC\_QOS\_DEFAULT

```
const struct DDS_TopicQos DDS_TOPIC_QOS_DEFAULT [extern]
```

Special value for creating a **DDSTopic** (p. 1617) with default QoS.

When used in **DDSDomainParticipant::create\_topic** (p. 1382), this special value is used to indicate that the **DDSTopic** (p. 1617) should be created with the default **DDSTopic** (p. 1617) QoS by means of the operation `get_default_topic_qos` and using the resulting QoS to create the **DDSTopic** (p. 1617).

When used in **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369) operation had never been called.

When used in **DDSTopic::set\_qos** (p. 1619), this special value is used to indicate that the QoS of the **DDSTopic** (p. 1617) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1351) that the **DDSTopic** (p. 1617) belongs to.

### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Topic; for this purpose, use **DDSDomainParticipant::get\_default\_topic\_qos** (p. 1368).

### See also

**DDSDomainParticipant::create\_topic** (p. 1382)

**DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369)

**DDSTopic::set\_qos** (p. 1619)

### Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

#### 7.5.4.2 DDS\_PUBLISHER\_QOS\_DEFAULT

```
const struct DDS_PublisherQos DDS_PUBLISHER_QOS_DEFAULT [extern]
```

Special value for creating a **DDSPublisher** (p. 1550) with default QoS.

When used in **DDSDomainParticipant::create\_publisher** (p. 1376), this special value is used to indicate that the **DDSPublisher** (p. 1550) should be created with the default **DDSPublisher** (p. 1550) QoS by means of the operation **get\_default\_publisher\_qos** and using the resulting QoS to create the **DDSPublisher** (p. 1550).

When used in **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372) operation had never been called.

When used in **DDSPublisher::set\_qos** (p. 1568), this special value is used to indicate that the QoS of the **DDSPublisher** (p. 1550) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1351) that the **DDSPublisher** (p. 1550) belongs to.

### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Publisher; for this purpose, use **DDSDomainParticipant::get\_default\_publisher\_qos** (p. 1371).

### See also

**DDSDomainParticipant::create\_publisher** (p. 1376)

**DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372)

**DDSPublisher::set\_qos** (p. 1568)

### Examples

**HelloWorld\_publisher.cxx**.

### 7.5.4.3 DDS\_SUBSCRIBER\_QOS\_DEFAULT

```
const struct DDS_SubscriberQos DDS_SUBSCRIBER_QOS_DEFAULT [extern]
```

Special value for creating a **DDSSubscriber** (p. 1592) with default QoS.

When used in **DDSDomainParticipant::create\_subscriber** (p. 1379), this special value is used to indicate that the **DDSSubscriber** (p. 1592) should be created with the default **DDSSubscriber** (p. 1592) QoS by means of the operation **get\_default\_subscriber\_qos** and using the resulting QoS to create the **DDSSubscriber** (p. 1592).

When used in **DDSDomainParticipant::set\_default\_subscriber\_qos** (p. 1374), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set\_default\_subscriber\_qos** (p. 1374) operation had never been called.

When used in **DDSSubscriber::set\_qos** (p. 1609), this special value is used to indicate that the QoS of the **DDSSubscriber** (p. 1592) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1351) that the **DDSSubscriber** (p. 1592) belongs to.

#### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Subscriber; for this purpose, use **DDSDomainParticipant::get\_default\_subscriber\_qos** (p. 1373).

#### See also

**DDSDomainParticipant::create\_subscriber** (p. 1379)  
**DDSDomainParticipant::get\_default\_subscriber\_qos** (p. 1373)  
**DDSSubscriber::set\_qos** (p. 1609)

#### Examples

**HelloWorld\_subscriber.cxx.**

### 7.5.4.4 DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT

```
const struct DDS_FlowControllerProperty_t DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT [extern]
```

<<*extension*>> (p. 237) Special value for creating a **DDSFlowController** (p. 1468) with default property.

When used in **DDSDomainParticipant::create\_flowcontroller** (p. 1391) and **DDSFlowController::set\_property** (p. 1469), this special value represents the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_flowcontroller\_property** (p. 1363), or else, if the call was never made, the default values listed in **DDS\_FlowControllerProperty\_t** (p. 912).

When used in **DDSDomainParticipant::set\_default\_flowcontroller\_property** (p. 1363), this special value indicates that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set\_default\_flowcontroller\_property** (p. 1363) operation had never been called.

### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default properties for a FlowController; for this purpose, use **DDSDomainParticipant::get\_default\_flowcontroller\_property** (p. 1362).

### See also

**DDSDomainParticipant::create\_flowcontroller** (p. 1391)

**DDSDomainParticipant::set\_default\_flowcontroller\_property** (p. 1363)

**DDSFlowController::set\_property** (p. 1469)

#### 7.5.4.5 DDS\_SQLFILTER\_NAME

```
const char* const DDS_SQLFILTER_NAME
```

<<**extension**>> (p. 237) The name of the built-in SQL filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

### See also

**Queries and Filters Syntax** (p. 179)

#### 7.5.4.6 DDS\_STRINGMATCHFILTER\_NAME

```
const char* const DDS_STRINGMATCHFILTER_NAME
```

<<**extension**>> (p. 237) The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

The StringMatch Filter is a subset of the SQL filter; it only supports the MATCH relational operator on a single string field.

### See also

**Queries and Filters Syntax** (p. 179)

## 7.6 Built-in Topics

Built-in objects created by RTI Connext but accessible to the application.

## Modules

- **Participant Built-in Topics**  
*Builtin topic for accessing information about the DomainParticipants discovered by RTI Connex.*
- **Topic Built-in Topics**  
*Builtin topic for accessing information about the Topics discovered by RTI Connex.*
- **Publication Built-in Topics**  
*Builtin topic for accessing information about the Publications discovered by RTI Connex.*
- **Subscription Built-in Topics**  
*Builtin topic for accessing information about the Subscriptions discovered by RTI Connex.*
- **ServiceRequest Built-in Topic**  
*Builtin topic for accessing requests from different services within RTI Connex.*
- **Common types and functions**  
*Types and functions related to the built-in topics.*

### 7.6.1 Detailed Description

Built-in objects created by RTI Connex but accessible to the application.

RTI Connex must discover and keep track of the remote entities, such as new participants in the domain. This information may also be important to the application, which may want to react to this discovery, or else access it on demand.

A set of built-in topics and corresponding **DDSDataReader** (p. 1288) objects are introduced to be used by the application to access this discovery information.

The information can be accessed as if it were normal application data. This allows the application to know when there are any changes in those values by means of the **DDSListener** (p. 1526) or the **DDSCondition** (p. 1276) mechanisms.

The built-in data-readers all belong to a built-in **DDSSubscriber** (p. 1592), which can be retrieved by using the method **DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393). The built-in **DDSDataReader** (p. 1288) objects can be retrieved by using the operation **DDSSubscriber::lookup\_datareader** (p. 1604), with the topic name as a parameter.

Built-in entities have default listener settings as well. The built-in **DDSSubscriber** (p. 1592) and all of its built-in topics have 'nil' listeners with all statuses appearing in their listener masks (acting as a NO-OP listener that does not reset communication status). The built-in DataReaders have null listeners with no statuses in their masks.

The information that is accessible about the remote entities by means of the built-in topics includes all the QoS policies that apply to the corresponding remote Entity. These QoS policies appear as normal 'data' fields inside the data read by means of the built-in Topic. Additional information is provided to identify the Entity and facilitate the application logic.

The built-in **DDSDataReader** (p. 1288) will not provide data pertaining to entities created from the same **DDSDomainParticipant** (p. 1351) under the assumption that such entities are already known to the application that created them.

The discovery information provided by each built-in reader won't be received until it is first looked up. And if the DomainParticipant was created in a disabled state (see **DDS\_EntityFactoryQosPolicy** (p. 903)), the built-in subscriber and readers will need to be enabled explicitly (by the **DDSEntity::enable** (p. 1466) operation).

Refer to **DDS\_ParticipantBuiltinTopicData** (p. 979), **DDS\_TopicBuiltinTopicData** (p. 1128), **DDS\_SubscriptionBuiltinTopicData** (p. 1108) and **DDS\_PublicationBuiltinTopicData** (p. 1010) for a description of all the built-in topics and their contents.

The QoS of the built-in **DDSSubscriber** (p. 1592) and **DDSDataReader** (p. 1288) objects is given by the following table:

Table 7.18 QoS of built-in *DDSSubscriber* (p. 1592) and *DDSDataReader* (p. 1288)

QoS	Value
<b>DDS_UserDataQoSPolicy</b> (p. 1237)	0-length sequence
<b>DDS_TopicDataQoSPolicy</b> (p. 1133)	0-length sequence
<b>DDS_GroupDataQoSPolicy</b> (p. 916)	0-length sequence
<b>DDS_DurabilityQoSPolicy</b> (p. 767)	<b>DDS_TRANSIENT_LOCAL_DURABILITY_QOS</b> (p. 401)
<b>DDS_DurabilityServiceQoSPolicy</b> (p. 771)	Does not apply as <b>DDS_DurabilityQoSPolicyKind</b> (p. 400) is <b>DDS_TRANSIENT_LOCAL_DURABILITY_QOS</b> (p. 401)
<b>DDS_PresentationQoSPolicy</b> (p. 996)	access_scope = <b>DDS_TOPIC_PRESENTATION_QOS</b> (p. 418) coherent_access = <b>DDS_BOOLEAN_FALSE</b> (p. 317) ordered_access = <b>DDS_BOOLEAN_FALSE</b> (p. 317)
<b>DDS_DeadlineQoSPolicy</b> (p. 707)	Period = infinite

<b>DDS_DestinationOrderQoSPolicy</b> (p. 709)	<b>DDS_BY_RECEPTION_TIMESTAMP</b> ↔ <b>DESTINATIONORDER_QOS</b> (p. 387)
<b>DDS_HistoryQoSPolicy</b> (p. 919)	kind = <b>DDS_KEEP_LAST_HISTORY_QOS</b> (p. 406) depth = 1
<b>DDS_ResourceLimitsQoSPolicy</b> (p. 1052)	max_samples = <b>DDS_LENGTH_UNLIMITED</b> (p. 438) max_instances = <b>DDS_LENGTH_UNLIMITED</b> (p. 438) max_samples_per_instance = <b>DDS_LENGTH_UNLIMITED</b> (p. 438)
<b>DDS_ReaderDataLifecycleQoSPolicy</b> (p. 1035)	autopurge_nowriter_samples_delay = infinite autopurge_disposed_samples_delay = infinite
<b>DDS_EntityFactoryQoSPolicy</b> (p. 903)	autoenable_created_entities = <b>DDS_BOOLEAN_TRUE</b> (p. 317)

## 7.7 Topic Module

Contains the **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529) classes, the **DDSTopicListener** (p. 1626) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1617) objects and attach QoS policies to them.

### Modules

- Topics

*DDSTopic* (p. 1617) entity and associated elements

- **Zero Copy Transfer Over Shared Memory**

<<extension>> (p. 237) *Zero Copy transfer over shared memory*

- **User Data Type Support**

*Defines generic classes and macros to support user data types.*

- **Type Code Support**

<<extension>> (p. 237) A **DDS\_TypeCode** (p. 1164) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 99) capability or to inspect the type information you receive from remote readers and writers.

- **Built-in Types**

*RTI Connext provides a set of very simple data types for you to use with the topics in your application.*

- **Built-in Topic's Trust Types**

*Types used as part of **DDS\_ParticipantBuiltinTopicData** (p. 979), **DDS\_PublicationBuiltinTopicData** (p. 1010), **DDS\_←\_SubscriptionBuiltinTopicData** (p. 1108) to describe Trust Plugins configuration.*

- **Dynamic Data**

<<extension>> (p. 237) *The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.*

- **DDS-Specific Primitive Types**

*Basic DDS value types for use in user data types.*

- **FlatData Topic-Types**

<<extension>> (p. 237) *FlatData Language Binding for IDL topic-types*

### 7.7.1 Detailed Description

Contains the **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529) classes, the **DDSTopicListener** (p. 1626) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1617) objects and attach QoS policies to them.

## 7.8 Topics

**DDSTopic** (p. 1617) entity and associated elements

### Classes

- struct **DDS\_PrintFormatProperty**

*A collection of attributes used to configure how data samples will be formatted when converted to a string.*

- struct **DDS\_InconsistentTopicStatus**

**DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343)

- struct **DDS\_TopicQos**

*QoS policies supported by a **DDSTopic** (p. 1617) entity.*

- struct **DDS\_ExpressionProperty**

*Provides additional information about the filter expression passed to **DDSWriterContentFilter::writer\_compile** (p. 1638)*

- struct **DDS\_FilterSampleInfo**

*Provides meta information associated with the sample.*

- class **DDSTopicDescription**  
 <<*interface*>> (p. 237) Base class for **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529).
- class **DDSContentFilteredTopic**  
 <<*interface*>> (p. 237) Specialization of **DDSTopicDescription** (p. 1624) that allows for content-based subscriptions.
- class **DDSMultiTopic**  
 [Not supported (optional)] <<*interface*>> (p. 237) A specialization of **DDSTopicDescription** (p. 1624) that allows subscriptions that combine/filter/rearrange data coming from several topics.
- class **DDSTopic**  
 <<*interface*>> (p. 237) The most basic description of the data to be published and subscribed.
- class **DDSTopicListener**  
 <<*interface*>> (p. 237) **DDSTopicListener** (p. 1526) for **DDSTopic** (p. 1617) entities.
- class **DDSContentFilter**  
 <<*interface*>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283)
- class **DDSWriterContentFilter**  
 <<*interface*>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283).

## Typedefs

- typedef struct **DDS\_PrintFormatProperty DDS\_PrintFormatProperty**  
 A collection of attributes used to configure how data samples will be formatted when converted to a string.

## Enumerations

- enum **DDS\_PrintFormatKind** {  
**DDS\_DEFAULT\_PRINT\_FORMAT** ,  
**DDS\_XML\_PRINT\_FORMAT** ,  
**DDS\_JSON\_PRINT\_FORMAT** }  
 Format kinds available when converting data samples to string representations.

## Functions

- **DDS\_Boolean DDS\_TopicQos\_equals** (const struct **DDS\_TopicQos** \*self, const struct **DDS\_TopicQos** \*other)  
 Compares two **DDS\_TopicQos** (p. 1135) for equality.
- **DDS\_ReturnCode\_t DDS\_TopicQos::print** () const  
 Prints this **DDS\_TopicQos** (p. 1135) to stdout.
- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
 Obtains a string representation of this **DDS\_TopicQos** (p. 1135).
- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_TopicQos** &base) const  
 Obtains a string representation of this **DDS\_TopicQos** (p. 1135).
- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
 Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_TopicQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_TopicQos** (p. 1135).*
- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
*Obtains a string representation of this **DDS\_TopicQos** (p. 1135).*
- **DDS\_ReturnCode\_t DDS\_TopicQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_TopicQos** (p. 1135).*

## Variables

- const struct **DDS\_PrintFormatProperty DDS\_PRINT\_FORMAT\_PROPERTY\_DEFAULT**  
*Sentinel constant indicating default values for **DDS\_PrintFormatProperty** (p. 1001).*

## 7.8.1 Detailed Description

**DDSTopic** (p. 1617) entity and associated elements

## 7.8.2 Typedef Documentation

### 7.8.2.1 DDS\_PrintFormatProperty

```
typedef struct DDS_PrintFormatProperty DDS_PrintFormatProperty
```

A collection of attributes used to configure how data samples will be formatted when converted to a string.

## 7.8.3 Enumeration Type Documentation

### 7.8.3.1 DDS\_PrintFormatKind

```
enum DDS_PrintFormatKind
```

Format kinds available when converting data samples to string representations.

## Enumerator

DDS_DEFAULT_PRINT_FORMAT	Use a default format specific to RTI Connexx to represent the data when converting to a string.
DDS_XML_PRINT_FORMAT	Use an XML format to represent the data when converting to a string.
DDS_JSON_PRINT_FORMAT	Use a JSON format to represent the data when converting to a string.

## 7.8.4 Function Documentation

### 7.8.4.1 DDS\_TopicQos\_equals()

```
DDS_Boolean DDS_TopicQos_equals (
    const struct DDS_TopicQos * self,
    const struct DDS_TopicQos * other )
```

Compares two **DDS\_TopicQos** (p. 1135) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This TopicQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other TopicQos to be compared with this TopicQos

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_TopicQos::operator!=()**, and **DDS\_TopicQos::operator==()**.

### 7.8.4.2 print()

```
DDS_ReturnCode_t DDS_TopicQos::print ( ) const [inline]
```

Prints this **DDS\_TopicQos** (p. 1135) to stdout.

Only the differences between this **DDS\_TopicQos** (p. 1135) and the documented default are printed. If you wish to print everything regardless, see **DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.8.4.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

Only the differences between this **DDS\_TopicQos** (p. 1135) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_TopicQos** (p. 1135) is written to the buffer.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68)

### 7.8.4.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_TopicQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

This overload behaves the same as **DDS\_TopicQos::to\_string** (p. 65) but allows the caller to specify the **DDS\_TopicQos** (p. 1135), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_TopicQos</b> (p. 1135) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.8.4.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

This overload behaves the same as **DDS\_TopicQos::to\_string** (p. 65) but allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the output.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QoSPrintFormat&) const** (p. 68)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

### 7.8.4.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_TopicQos & base,
    const DDS_QoSPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

Only the differences between this **DDS\_TopicQos** (p. 1135) and the **DDS\_TopicQos** (p. 1135) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_TopicQos** (p. 1135) is written to the buffer.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_TopicQos</b> (p. 1135) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QoSPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.8.4.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

This overload behaves the same as **DDS\_TopicQos::to\_string** (p. 65) but prints the entire **DDS\_TopicQos** (p. 1135) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

#### For example

```
TopicQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

#### Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.8.4.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1135).

This overload behaves the same as the **DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 68) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1135). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_TopicQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_TopicQos&, const DDS\_QosPrintFormat&) const** (p. 68)

## 7.8.5 Variable Documentation

### 7.8.5.1 DDS\_PRINT\_FORMAT\_PROPERTY\_DEFAULT

```
const struct DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT
```

Sentinel constant indicating default values for **DDS\_PrintFormatProperty** (p. 1001).

Pass this object instead of your own **DDS\_PrintFormatProperty** (p. 1001) object to use the default property values:

```
retCode = FooTypeSupport::data_to_string(
    sample,
    DDS_PRINT_FORMAT_PROPERTY_DEFAULT);
```

## See also

**DDS\_PrintFormatProperty** (p. 1001)

## 7.9 Zero Copy Transfer Over Shared Memory

<<**extension**>> (p. 237) Zero Copy transfer over shared memory

<<**extension**>> (p. 237) Zero Copy transfer over shared memory

## Note

For a description of Zero Copy transfer over shared memory and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connex User's Manual**.

For buildable **code examples**, see <https://community.rti.com/kb/flatdata-and-zerocopy-examples>.

Zero Copy transfer over shared memory is available in the C API, in the Traditional C++ API, and in the Modern C++ API.

## 7.10 User Data Type Support

Defines generic classes and macros to support user data types.

### Classes

- struct **DDS\_TypeAllocationParams\_t**  
*Configures whether or not to allocate pointer and optional members.*
- struct **DDS\_TypeDeallocationParams\_t**  
*Configures whether to release or not pointer and optional members.*
- struct **Foo**  
*A representative user-defined data type.*
- struct **DDS\_InstanceHandleSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_InstanceHandle_t` (p. 74) > .*
- class **FooTypeSupport**  
*<<interface>> (p. 237) <<generic>> (p. 237) User data type specific interface.*
- class **DDSTypeSupport**  
*<<interface>> (p. 237) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

### Macros

- #define **DDS\_TYPESUPPORT\_CPP**(TTypeSupport, TData)  
*Declares the interface required to support a user data type.*
- #define **DDS\_DATAWRITER\_CPP**(TDataWriter, TData)  
*Declares the interface required to support a user data type specific data writer.*
- #define **DDS\_DATAREADER\_W\_DATA\_CONSISTENCY\_CHECK**(TDataReader, TDataSeq, TData)  
*Declares the interface required to support a user data type-specific data reader.*

### Typedefs

- typedef **DDS\_HANDLE\_TYPE\_NATIVE DDS\_InstanceHandle\_t**  
*Type definition for an instance handle.*

### Functions

- **DDS\_Boolean DDS\_InstanceHandle\_equals** (const **DDS\_InstanceHandle\_t** \*self, const **DDS\_InstanceHandle\_t** \*other)  
*Compares this instance handle with another handle for equality.*
- int **DDS\_InstanceHandle\_compare** (const **DDS\_InstanceHandle\_t** \*self, const **DDS\_InstanceHandle\_t** \*other)  
*Compares this instance handle with another handle.*
- void **DDS\_InstanceHandle\_copy** (**DDS\_InstanceHandle\_t** \*self, const **DDS\_InstanceHandle\_t** \*other)  
*Copies this instance handle into another handle.*
- **DDS\_Boolean DDS\_InstanceHandle\_is\_nil** (const **DDS\_InstanceHandle\_t** \*self)  
*Compare this handle to `DDS_HANDLE_NIL` (p. 76).*

## Variables

- const **DDS\_InstanceHandle\_t DDS\_HANDLE\_NIL**

*The NIL instance handle.*

### 7.10.1 Detailed Description

Defines generic classes and macros to support user data types.

DDS specifies strongly typed interfaces to read and write user data. For each data class defined by the application, there is a number of specialised classes that are required to facilitate the type-safe interaction of the application with RTI Connex.

RTI Connex provides an automatic means to generate all these type-specific classes with the `rtiddsgen` utility. The complete set of automatic classes created for a hypothetical user data type named **Foo** (p. 1648) are shown below.

an application data type named **Foo** (p. 1648) "

The macros defined here declare the strongly typed APIs needed to support an arbitrary user defined data of type **Foo** (p. 1648).

#### See also

the `Code Generator User's Manual`

### 7.10.2 Macro Definition Documentation

#### 7.10.2.1 DDS\_TYPESUPPORT\_CPP

```
#define DDS_TYPESUPPORT_CPP (
    TTypeSupport,
    TData )
```

Declares the interface required to support a user data type.

#### Defines:

**FooTypeSupport** (p. 1711) TypeSupport of type **Foo** (p. 1648), i.e. **FooTypeSupport** (p. 1711)

#### Examples

**HelloWorldSupport.cxx.**

### 7.10.2.2 DDS\_DATAWRITER\_CPP

```
#define DDS_DATAWRITER_CPP (
    TDataWriter,
    TData )
```

Declares the interface required to support a user data type specific data writer.

**Uses:**

**FooTypeSupport** (p. 1711) user data type, **Foo** (p. 1648)

**Defines:**

**FooDataWriter** (p. 1676) **DDSDataWriter** (p.1321) of type **Foo** (p.1648), i.e. **FooDataWriter** (p. 1676)

### 7.10.2.3 DDS\_DATAREADER\_W\_DATA\_CONSISTENCY\_CHECK

```
#define DDS_DATAREADER_W_DATA_CONSISTENCY_CHECK (
    TDataReader,
    TDataSeq,
    TData )
```

Declares the interface required to support a user data type-specific data reader.

**Uses:**

**FooTypeSupport** (p. 1711) user data type, **Foo** (p. 1648)  
**FooSeq** (p. 1697) sequence of user data type, `sequence<::Foo>`

**Defines:**

**FooDataReader** (p. 1649) **DDSDataReader** (p.1288) of type **Foo** (p.1648), i.e. **FooDataReader** (p. 1649)

**See also**

**FooSeq** (p. 1697)

**Examples**

**HelloWorldSupport.cxx.**

### 7.10.3 Typedef Documentation

#### 7.10.3.1 DDS\_InstanceHandle\_t

```
typedef DDS_HANDLE_TYPE_NATIVE DDS_InstanceHandle_t
```

Type definition for an instance handle.

Handle to identify different instances of the same **DDSTopic** (p. 1617) of a certain type.

See also

**FooDataWriter::register\_instance** (p. 1678)

**DDS\_SampleInfo::instance\_handle** (p. 1087)

### 7.10.4 Function Documentation

#### 7.10.4.1 DDS\_InstanceHandle\_equals()

```
DDS_Boolean DDS_InstanceHandle_equals (
    const DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle for equality.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This handle. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The other handle to be compared with this handle. Cannot be NULL.

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two handles have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

See also

**DDS\_InstanceHandle\_is\_nil** (p. 75)

### 7.10.4.2 DDS\_InstanceHandle\_compare()

```
int DDS_InstanceHandle_compare (
    const DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This handle. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The other handle to be compared with this handle. Cannot be NULL.

#### Returns

If the two handles are equal, the function returns 0. If *self* is greater than *other* the function returns a positive number; otherwise, it returns a negative number.

#### See also

**DDS\_InstanceHandle\_is\_nil** (p. 75)

### 7.10.4.3 DDS\_InstanceHandle\_copy()

```
void DDS_InstanceHandle_copy (
    DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Copies this instance handle into another handle.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) The source handle. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The destination handle to be copied into. Cannot be NULL.

### 7.10.4.4 DDS\_InstanceHandle\_is\_nil()

```
DDS_Boolean DDS_InstanceHandle_is_nil (
    const DDS_InstanceHandle_t * self )
```

Compare this handle to **DDS\_HANDLE\_NIL** (p. 76).

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given instance handle is equal to **DDS\_HANDLE\_NIL** (p. 76) or **DDS\_↔  
BOOLEAN\_FALSE** (p. 317) otherwise.

**See also**

**DDS\_InstanceHandle\_equals** (p. 74)

## 7.10.5 Variable Documentation

### 7.10.5.1 DDS\_HANDLE\_NIL

```
const DDS_InstanceHandle_t DDS_HANDLE_NIL [extern]
```

The NIL instance handle.

Special **DDS\_InstanceHandle\_t** (p. 74) value

**See also**

**DDS\_InstanceHandle\_is\_nil** (p. 75)

**Examples**

**HelloWorld\_publisher.cxx.**

## 7.11 Type Code Support

<<*extension*>> (p. 237) A **DDS\_TypeCode** (p. 1164) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 99) capability or to inspect the type information you receive from remote readers and writers.

## Classes

- struct **DDS\_TypeCodePrintFormatProperty**  
*A collection of attributes used to configure how a TypeCode appears when converted to a string.*
- struct **DDS\_TypeCode**  
*The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with `rtiddsgen` (see the *Code Generator User's Manual*) or to modify types you define yourself at runtime.*
- struct **DDS\_StructMember**  
*A description of a member of a struct.*
- struct **DDS\_StructMemberSeq**  
*Defines a sequence of struct members.*
- struct **DDS\_UnionMember**  
*A description of a member of a union.*
- struct **DDS\_UnionMemberSeq**  
*Defines a sequence of union members.*
- struct **DDS\_EnumMember**  
*A description of a member of an enumeration.*
- struct **DDS\_EnumMemberSeq**  
*Defines a sequence of enumerator members.*
- struct **DDS\_ValueMember**  
*A description of a member of a value type.*
- struct **DDS\_ValueMemberSeq**  
*Defines a sequence of value members.*
- struct **DDS\_TypeCodeFactory**  
*A singleton factory for creating, copying, and deleting data type definitions dynamically.*

## Macros

- #define **DDS\_TYPECODE\_MEMBER\_ID\_INVALID**  
*A sentinel indicating an invalid `DDS_TypeCode` (p. 1164) member ID.*
- #define **DDS\_TYPECODE\_INDEX\_INVALID**  
*A sentinel indicating an invalid `DDS_TypeCode` (p. 1164) member index.*
- #define **DDS\_TYPECODE\_NOT\_BITFIELD**  
*Indicates that a member of a type is not a bitfield.*
- #define **DDS\_VM\_NONE**  
*Constant used to indicate that a value type has no modifiers.*
- #define **DDS\_VM\_CUSTOM**  
*Constant used to indicate that a value type has the `custom` modifier.*
- #define **DDS\_VM\_ABSTRACT**  
*Constant used to indicate that a value type has the `abstract` modifier.*
- #define **DDS\_VM\_TRUNCATABLE**  
*Constant used to indicate that a value type has the `truncatable` modifier.*
- #define **DDS\_PRIVATE\_MEMBER**  
*Constant used to indicate that a value type member is private.*
- #define **DDS\_PUBLIC\_MEMBER**  
*Constant used to indicate that a value type member is public.*

- **#define DDS\_TYPECODE\_NONKEY\_MEMBER**  
A flag indicating that a type member is optional and not part of the key.
- **#define DDS\_TYPECODE\_KEY\_MEMBER**  
A flag indicating that a type member is part of the key for that type, and therefore required.
- **#define DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER**  
A flag indicating that a type member is not part of the key but is nevertheless required.
- **#define DDS\_TypeCode\_PrintFormat\_INITIALIZER**  
Static initializer for *DDS\_TypeCodePrintFormatProperty* (p. 1224).

## Typedefs

- **typedef short DDS\_ValueModifier**  
Modifier type for a value type.
- **typedef short DDS\_Visibility**  
Type to indicate the visibility of a value type member.

## Enumerations

- **enum DDS\_TypeCodePrintFormatKind {**  
**DDS\_TYPE\_CODE\_PRINT\_KIND\_IDL ,**  
**DDS\_TYPE\_CODE\_PRINT\_KIND\_XML }**  
*The different formats to print a DDS\_TypeCode (p. 1164).*
- **enum DDS\_TCKind {**  
**DDS\_TK\_NULL ,**  
**DDS\_TK\_SHORT ,**  
**DDS\_TK\_LONG ,**  
**DDS\_TK\_USHORT ,**  
**DDS\_TK\_ULONG ,**  
**DDS\_TK\_FLOAT ,**  
**DDS\_TK\_DOUBLE ,**  
**DDS\_TK\_BOOLEAN ,**  
**DDS\_TK\_CHAR ,**  
**DDS\_TK\_OCTET ,**  
**DDS\_TK\_STRUCT ,**  
**DDS\_TK\_UNION ,**  
**DDS\_TK\_ENUM ,**  
**DDS\_TK\_STRING ,**  
**DDS\_TK\_SEQUENCE ,**  
**DDS\_TK\_ARRAY ,**  
**DDS\_TK\_ALIAS ,**  
**DDS\_TK\_LONGLONG ,**  
**DDS\_TK\_ULONGLONG ,**  
**DDS\_TK\_LONGDOUBLE ,**  
**DDS\_TK\_WCHAR ,**  
**DDS\_TK\_WSTRING ,**  
**DDS\_TK\_VALUE ,**  
**DDS\_TK\_SPARSE ,**  
**DDS\_TK\_RAW\_BYTES = 0x7e ,**  
**DDS\_TK\_RAW\_BYTES\_KEYED = 0x7f ,**

```

DDS_TK_FINAL_EXTENSIBILITY = 0x4000 ,
DDS_TK_MUTABLE_EXTENSIBILITY = 0x2000 ,
DDS_TK_FLAT_DATA_LANGUAGE_BINDING = RTI_XCDR_TK_FLAGS_IS_FLAT_DATA ,
DDS_TK_SHMEM_REF_TRANSFER_MODE = RTI_XCDR_TK_FLAGS_IS_SHMEM_REF }

```

*Enumeration type for **DDS\_TypeCode** (p. 1164) kinds.*

- enum **DDS\_ExtensibilityKind** {  
**DDS\_FINAL\_EXTENSIBILITY** ,  
**DDS\_EXTENSIBLE\_EXTENSIBILITY** ,  
**DDS\_MUTABLE\_EXTENSIBILITY** }

*Type to indicate the extensibility of a type.*

## Variables

- **DDS\_TypeCode DDS\_g\_tc\_null**  
*Basic NULL type.*
- **DDS\_TypeCode DDS\_g\_tc\_short**  
*Basic 16-bit signed integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_long**  
*Basic 32-bit signed integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_ushort**  
*Basic unsigned 16-bit integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_ulong**  
*Basic unsigned 32-bit integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_float**  
*Basic 32-bit floating point type.*
- **DDS\_TypeCode DDS\_g\_tc\_double**  
*Basic 64-bit floating point type.*
- **DDS\_TypeCode DDS\_g\_tc\_boolean**  
*Basic Boolean type.*
- **DDS\_TypeCode DDS\_g\_tc\_char**  
*Basic single-byte character type.*
- **DDS\_TypeCode DDS\_g\_tc\_octet**  
*Basic octet/byte type.*
- **DDS\_TypeCode DDS\_g\_tc\_longlong**  
*Basic 64-bit integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_ulonglong**  
*Basic unsigned 64-bit integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_longdouble**  
*Basic 128-bit floating point type.*
- **DDS\_TypeCode DDS\_g\_tc\_wchar**  
*Basic four-byte character type.*

### 7.11.1 Detailed Description

<<*extension*>> (p. 237) A **DDS\_TypeCode** (p. 1164) is a mechanism for representing a type at runtime. RTI Connex can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 99) capability or to inspect the type information you receive from remote readers and writers.

Type codes are values that are used to describe arbitrarily complex types at runtime. Type code values are manipulated via the **DDS\_TypeCode** (p. 1164) class, which has an analogue in CORBA.

A **DDS\_TypeCode** (p. 1164) value consists of a type code *kind* (represented by the **DDS\_TCKind** (p. 86) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS\_TypeCode** (p. 1164), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

There are a number of uses for type codes. The type code mechanism can be used to unambiguously match type representations. The **DDS\_TypeCode::equal** (p. 1171) method is a more reliable test than comparing the string type names, requiring equivalent definitions of the types.

### 7.11.2 Accessing a Local ::DDS\_TypeCode

When generating types with `rtiddsgen`, type codes are always enabled. For these types, a **DDS\_TypeCode** (p. 1164) may be accessed by calling the `Foo_get_typecode` function for a type "Foo", which returns a **DDS\_TypeCode** (p. 1164) pointer. via the **FooTypeCode.VALUE** member. This API also includes support for dynamic creation of **DDS\_TypeCode** (p. 1164) values, typically for use with the **Dynamic Data** (p. 99) API. You can create a **DDS\_TypeCode** (p. 1164) using the **DDS\_TypeCodeFactory** (p. 1210) class. You will construct the **DDS\_TypeCode** (p. 1164) recursively, from the outside in: start with the type codes for primitive types, then compose them into complex types like arrays, structures, and so on. You will find the following methods helpful:

- **DDS\_TypeCodeFactory::get\_primitive\_tc** (p. 1213), which provides the **DDS\_TypeCode** (p. 1164) instances corresponding to the primitive types (e.g. **DDS\_TK\_LONG** (p. 86), **DDS\_TK\_SHORT** (p. 86), and so on).
- **DDS\_TypeCodeFactory::create\_string\_tc** (p. 1221) and **DDS\_TypeCodeFactory::create\_wstring\_tc** (p. 1222) create a **DDS\_TypeCode** (p. 1164) representing a text string with a certain *bound* (i.e. maximum length).
- **DDS\_TypeCodeFactory::create\_array\_tc** (p. 1223) and **DDS\_TypeCodeFactory::create\_sequence\_tc** (p. 1222) create a **DDS\_TypeCode** (p. 1164) for a collection based on the **DDS\_TypeCode** (p. 1164) for its elements.
- **DDS\_TypeCodeFactory::create\_struct\_tc** (p. 1214) and **DDS\_TypeCodeFactory::create\_value\_tc** (p. 1215) create a **DDS\_TypeCode** (p. 1164) for a structured type.

### 7.11.3 Accessing a Remote ::DDS\_TypeCode

In addition to being used locally, RTI Connex can transmit **DDS\_TypeCode** (p. 1164) on the network between participants. This information can be used to access information about types used remotely at runtime, for example to be able to publish or subscribe to topics of arbitrarily types (see **Dynamic Data** (p. 99)). This functionality is useful for a generic system monitoring tool like `rtiddsspy`.

Remote **DDS\_TypeCode** (p. 1164) information is shared during discovery over the publication and subscription built-in topics and can be accessed using the built-in readers for these topics; see **Built-in Topics** (p. 59). Discovered **DDS\_TypeCode** (p. 1164) values are not cached by RTI Connex upon receipt and are therefore not available from the built-in topic data returned by **DDSDataWriter::get\_matched\_subscription\_data** (p. 1332) or **DDSDataReader::get\_matched\_publication\_data** (p. 1300).

The space available locally to deserialize a discovered remote **DDS\_TypeCode** (p. 1164) is specified by the **DDSDomainParticipant** (p. 1351)'s **DDS\_DomainParticipantResourceLimitsQoSPolicy::type\_code\_max\_serialized\_length** (p. 760) QoS parameter. To support especially complex type codes, it may be necessary for you to increase the value of this parameter.

## 7.11.4 Macro Definition Documentation

### 7.11.4.1 DDS\_TYPECODE\_MEMBER\_ID\_INVALID

```
#define DDS_TYPECODE_MEMBER_ID_INVALID
```

A sentinel indicating an invalid **DDS\_TypeCode** (p. 1164) member ID.

### 7.11.4.2 DDS\_TYPECODE\_INDEX\_INVALID

```
#define DDS_TYPECODE_INDEX_INVALID
```

A sentinel indicating an invalid **DDS\_TypeCode** (p. 1164) member index.

### 7.11.4.3 DDS\_TYPECODE\_NOT\_BITFIELD

```
#define DDS_TYPECODE_NOT_BITFIELD
```

Indicates that a member of a type is not a bitfield.

### 7.11.4.4 DDS\_VM\_NONE

```
#define DDS_VM_NONE
```

Constant used to indicate that a value type has no modifiers.

See also

**DDS\_ValueModifier** (p. 85)

Examples

**HelloWorld.cxx.**

#### 7.11.4.5 DDS\_VM\_CUSTOM

```
#define DDS_VM_CUSTOM
```

Constant used to indicate that a value type has the `custom` modifier.

This modifier is used to specify whether the value type uses custom marshaling.

See also

**DDS\_ValueModifier** (p. 85)

#### 7.11.4.6 DDS\_VM\_ABSTRACT

```
#define DDS_VM_ABSTRACT
```

Constant used to indicate that a value type has the `abstract` modifier.

An abstract value type may not be instantiated.

See also

**DDS\_ValueModifier** (p. 85)

#### 7.11.4.7 DDS\_VM\_TRUNCATABLE

```
#define DDS_VM_TRUNCATABLE
```

Constant used to indicate that a value type has the `truncatable` modifier.

A value with a state that derives from another value with a state can be declared as truncatable. A truncatable type means the object can be truncated to the base type.

See also

**DDS\_ValueModifier** (p. 85)

#### 7.11.4.8 DDS\_PRIVATE\_MEMBER

```
#define DDS_PRIVATE_MEMBER
```

Constant used to indicate that a value type member is private.

See also

**DDS\_Visibility** (p. 85)

**DDS\_PUBLIC\_MEMBER** (p. 83)

#### 7.11.4.9 DDS\_PUBLIC\_MEMBER

```
#define DDS_PUBLIC_MEMBER
```

Constant used to indicate that a value type member is public.

See also

**DDS\_Visibility** (p. 85)

**DDS\_PRIVATE\_MEMBER** (p. 82)

Examples

**HelloWorld.cxx.**

#### 7.11.4.10 DDS\_TYPECODE\_NONKEY\_MEMBER

```
#define DDS_TYPECODE_NONKEY_MEMBER
```

A flag indicating that a type member is optional and not part of the key.

If a type is used with the **Dynamic Data** (p. 99) facility, a **DDS\_DynamicData** (p. 775) sample of the type will only contain a value for a **DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 83) field if one has been explicitly set (see, for example, **DDS\_↔\_DynamicData::set\_long** (p. 853)). The middleware will *not* assume any default value.

See also

**DDS\_TYPECODE\_KEY\_MEMBER** (p. 83)

**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84)

**DDS\_TYPECODE\_KEY\_MEMBER** (p. 83)

**DDS\_TypeCode::add\_member** (p. 1199)

**DDS\_TypeCode::add\_member\_ex** (p. 1201)

**DDS\_TypeCode::is\_member\_key** (p. 1178)

**DDS\_TypeCode::is\_member\_required** (p. 1180)

**DDS\_StructMember::is\_key** (p. 1104)

**DDS\_ValueMember::is\_key** (p. 1240)

#### 7.11.4.11 DDS\_TYPECODE\_KEY\_MEMBER

```
#define DDS_TYPECODE_KEY_MEMBER
```

A flag indicating that a type member is part of the key for that type, and therefore required.

If a type is used with the **Dynamic Data** (p. 99) facility, all **DDS\_DynamicData** (p. 775) samples of the type will contain a value for all **DDS\_TYPECODE\_KEY\_MEMBER** (p. 83) fields. If you do not set a value of the member explicitly (see, for example, **DDS\_DynamicData::set\_long** (p. 853)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

See also

- DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84)
- DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 83)
- DDS\_TypeCode::add\_member** (p. 1199)
- DDS\_TypeCode::add\_member\_ex** (p. 1201)
- DDS\_TypeCode::is\_member\_key** (p. 1178)
- DDS\_TypeCode::is\_member\_required** (p. 1180)
- DDS\_StructMember::is\_key** (p. 1104)
- DDS\_ValueMember::is\_key** (p. 1240)

#### 7.11.4.12 DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER

```
#define DDS_TYPECODE_NONKEY_REQUIRED_MEMBER
```

A flag indicating that a type member is not part of the key but is nevertheless required.

This is the most common kind of member.

If a type is used with the **Dynamic Data** (p. 99) facility, all **DDS\_DynamicData** (p. 775) samples of the type will contain a value for all **DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84) fields. If you do not set a value of the member explicitly (see, for example, **DDS\_DynamicData::set\_long** (p. 853)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

### 7.11.4.13 DDS\_TypeCode\_PrintFormat\_INITIALIZER

```
#define DDS_TypeCode_PrintFormat_INITIALIZER
```

Static initializer for **DDS\_TypeCodePrintFormatProperty** (p. 1224).

Use this initializer to ensure that new objects don't have uninitialized contents.

```
struct DDS_TypeCodePrintFormatProperty property = DDS_TypeCodePrintFormatProperty;
```

## 7.11.5 Typedef Documentation

### 7.11.5.1 DDS\_ValueModifier

```
typedef short DDS_ValueModifier
```

Modifier type for a value type.

See also

**DDS\_VM\_NONE** (p. 81)

**DDS\_VM\_CUSTOM** (p. 81)

**DDS\_VM\_ABSTRACT** (p. 82)

**DDS\_VM\_TRUNCATABLE** (p. 82)

### 7.11.5.2 DDS\_Visibility

```
typedef short DDS_Visibility
```

Type to indicate the visibility of a value type member.

See also

**DDS\_PRIVATE\_MEMBER** (p. 82)

**DDS\_PUBLIC\_MEMBER** (p. 83)

## 7.11.6 Enumeration Type Documentation

### 7.11.6.1 DDS\_TypeCodePrintFormatKind

```
enum DDS_TypeCodePrintFormatKind
```

The different formats to print a **DDS\_TypeCode** (p. 1164).

## Enumerator

DDS_TYPE_CODE_PRINT_KIND_IDL	Indicates that a <b>DDS_TypeCode</b> (p. 1164) is to be printed in IDL format.
DDS_TYPE_CODE_PRINT_KIND_XML	Indicates that a <b>DDS_TypeCode</b> (p. 1164) is to be printed in XML format.

## 7.11.6.2 DDS\_TCKind

```
enum DDS_TCKind
```

Enumeration type for **DDS\_TypeCode** (p. 1164) kinds.

Type code kinds are modeled as values of this type.

## Enumerator

DDS_TK_NULL	Indicates that a type code does not describe anything.
DDS_TK_SHORT	short type.
DDS_TK_LONG	long type.
DDS_TK_USHORT	unsigned short type.
DDS_TK_ULONG	unsigned long type.
DDS_TK_FLOAT	float type.
DDS_TK_DOUBLE	double type.
DDS_TK_BOOLEAN	boolean type.
DDS_TK_CHAR	char type.
DDS_TK_OCTET	octet type.
DDS_TK_STRUCT	struct type.
DDS_TK_UNION	union type.
DDS_TK_ENUM	enumerated type.
DDS_TK_STRING	string type.
DDS_TK_SEQUENCE	sequence type.
DDS_TK_ARRAY	array type.
DDS_TK_ALIAS	alias (typedef) type.
DDS_TK_LONGLONG	long long type.
DDS_TK_ULONGLONG	unsigned long long type.
DDS_TK_LONGDOUBLE	long double type.
DDS_TK_WCHAR	wide char type.
DDS_TK_WSTRING	wide string type.
DDS_TK_VALUE	value type.

### 7.11.6.3 DDS\_ExtensibilityKind

enum **DDS\_ExtensibilityKind**

Type to indicate the extensibility of a type.

Enumerator

DDS_FINAL_EXTENSIBILITY	<p>Specifies that a type has FINAL extensibility. A type may be final, indicating that the range of its possible values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.</p> <p>The following types are always final:</p> <ul style="list-style-type: none"> <li>• <b>DDS_TK_ARRAY</b> (p. 86)</li> <li>• All primitive types</li> </ul>
DDS_EXTENSIBLE_EXTENSIBILITY	<p>Specifies that a type has EXTENSIBLE extensibility. A type may be appendable (formerly called extensible), indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.</p>
DDS_MUTABLE_EXTENSIBILITY	<p>Specifies that a type has MUTABLE extensibility. A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.</p> <p>The following types are always mutable:</p> <ul style="list-style-type: none"> <li>• <b>DDS_TK_SEQUENCE</b> (p. 86)</li> <li>• <b>DDS_TK_STRING</b> (p. 86)</li> <li>• <b>DDS_TK_WSTRING</b> (p. 86)</li> </ul>

## 7.11.7 Variable Documentation

### 7.11.7.1 DDS\_g\_tc\_null

**DDS\_TypeCode** DDS\_g\_tc\_null

Basic NULL type.

For new code, **DDS\_TypeCodeFactory::get\_primitive\_tc** (p. 1213) is preferred to using this global variable.

See also

**DDS\_TypeCodeFactory::get\_primitive\_tc** (p. 1213)

### 7.11.7.2 DDS\_g\_tc\_short

`DDS_TypeCode DDS_g_tc_short`

Basic 16-bit signed integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Short` (p. 318)

### 7.11.7.3 DDS\_g\_tc\_long

`DDS_TypeCode DDS_g_tc_long`

Basic 32-bit signed integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Long` (p. 318)

### 7.11.7.4 DDS\_g\_tc\_ushort

`DDS_TypeCode DDS_g_tc_ushort`

Basic unsigned 16-bit integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_UnsignedShort` (p. 318)

#### 7.11.7.5 DDS\_g\_tc\_ulong

`DDS_TypeCode DDS_g_tc_ulong`

Basic unsigned 32-bit integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_UnsignedLong` (p. 318)

#### 7.11.7.6 DDS\_g\_tc\_float

`DDS_TypeCode DDS_g_tc_float`

Basic 32-bit floating point type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Float` (p. 319)

#### 7.11.7.7 DDS\_g\_tc\_double

`DDS_TypeCode DDS_g_tc_double`

Basic 64-bit floating point type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Double` (p. 319)

### 7.11.7.8 DDS\_g\_tc\_boolean

`DDS_TypeCode DDS_g_tc_boolean`

Basic Boolean type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Boolean` (p. 320)

### 7.11.7.9 DDS\_g\_tc\_char

`DDS_TypeCode DDS_g_tc_char`

Basic single-byte character type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Char` (p. 317)

### 7.11.7.10 DDS\_g\_tc\_octet

`DDS_TypeCode DDS_g_tc_octet`

Basic octet/byte type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Octet` (p. 317)

### 7.11.7.11 DDS\_g\_tc\_longlong

`DDS_TypeCode DDS_g_tc_longlong`

Basic 64-bit integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_LongLong` (p. 319)

### 7.11.7.12 DDS\_g\_tc\_ulonglong

`DDS_TypeCode DDS_g_tc_ulonglong`

Basic unsigned 64-bit integer type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_UnsignedLongLong` (p. 319)

### 7.11.7.13 DDS\_g\_tc\_longdouble

`DDS_TypeCode DDS_g_tc_longdouble`

Basic 128-bit floating point type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_LongDouble` (p. 319)

### 7.11.7.14 DDS\_g\_tc\_wchar

`DDS_TypeCode DDS_g_tc_wchar`

Basic four-byte character type.

For new code, `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory::get_primitive_tc` (p. 1213)

`DDS_Wchar` (p. 317)

## 7.12 Built-in Types

RTI Connex provides a set of very simple data types for you to use with the topics in your application.

### Modules

- **String Built-in Type**  
*Built-in type consisting of a single character string.*
- **KeyedString Built-in Type**  
*Built-in type consisting of a string payload and a second string that is the key.*
- **Octets Built-in Type**  
*Built-in type consisting of a variable-length array of opaque bytes.*
- **KeyedOctets Built-in Type**  
*Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.*

### 7.12.1 Detailed Description

RTI Connex provides a set of very simple data types for you to use with the topics in your application.

The middleware provides four built-in types:

- **String**: A payload consisting of a single string of characters. This type has no key.
- **DDS\_KeyedString** (p. 927): A payload consisting of a single string of characters and a second string, the key, that identifies the instance to which the sample belongs.
- **DDS\_Octets** (p. 967): A payload consisting of an opaque variable-length array of bytes. This type has no key.
- **DDS\_KeyedOctets** (p. 924): A payload consisting of an opaque variable-length array of bytes and a string, the key, that identifies the instance to which the sample belongs.

The **String** and **DDS\_KeyedString** (p. 927) types are appropriate for simple text-based applications. The **DDS\_Octets** (p. 967) and **DDS\_KeyedOctets** (p. 924) types are appropriate for applications that perform their own custom data serialization, such as legacy applications still in the process of migrating to RTI Connex. In most cases, string-based or structured data is preferable to opaque data, because the latter cannot be easily visualized in tools or used with content-based filters (see **DDSContentFilteredTopic** (p. 1283)).

The built-in types are very simple in order to get you up and running as quickly as possible. If you need a structured data type you can define your own type with exactly the fields you need in one of two ways:

- At compile time, by generating code from an IDL or XML file using the `rtiddsgen` utility
- At runtime, by using the **Dynamic Data** (p. 99) API

### 7.12.2 Managing Memory for Builtin Types

When a sample is written, the `DataWriter` serializes it and stores the result in a buffer obtained from a pool of preallocated buffers. In the same way, when a sample is received, the `DataReader` deserializes it and stores the result in a sample coming from a pool of preallocated samples.

For builtin types, the maximum size of the buffers/samples and depends on the nature of the application using the builtin type.

You can configure the maximum size of the builtin types on a per-`DataWriter` and per-`DataReader` basis using the **DDS\_PropertyQosPolicy** (p. 1007) in `DataWriters`, `DataReaders` or `Participants`.

The following table lists the supported builtin type properties to configure memory allocation. When the properties are defined in the `DomainParticipant`, they are applicable to all `DataWriters` and `DataReaders` belonging to the `DomainParticipant` unless they are overwritten in the `DataWriters` and `DataReaders`.

**Table 7.33 Builtin Types Allocation Properties**

Property	Description
<code>dds.builtin_type.string.alloc_size</code>	Maximum size of the strings published by the <b>DDSStringDataWriter</b> (p. 1584) or received by the <b>DDSStringDataReader</b> (p. 1580) (includes the NULL-terminated character). Default: <code>dds.builtin_type.string.max_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_string.alloc_key_size</code>	Maximum size of the keys used by the <b>DDSKeyedStringDataWriter</b> (p. 1510) or <b>DDSKeyedStringDataReader</b> (p. 1501) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_string.max_key_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_string.alloc_size</code>	Maximum size of the strings published by the <b>DDSKeyedStringDataWriter</b> (p. 1510) or received by the <b>DDSKeyedStringDataReader</b> (p. 1501) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_string.max_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.octets.alloc_size</code>	Maximum size of the octet sequences published by the <b>DDSOctetsDataWriter</b> (p. 1536) or received by the <b>DDSOctetsDataReader</b> (p. 1532). Default: <code>dds.builtin_type.octets.max_size</code> if defined. Otherwise, 2048.
<code>dds.builtin_type.keyed_octets.alloc_key_size</code>	Maximum size of the key published by the <b>DDSKeyedOctetsDataWriter</b> (p. 1482) or received by the <b>DDSKeyedOctetsDataReader</b> (p. 1473) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_octets.max_key_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_octets.alloc_size</code>	Maximum size of the octets sequences published by a <b>DDSKeyedOctetsDataWriter</b> (p. 1482) or received by a <b>DDSKeyedOctetsDataReader</b> (p. 1473). Default: <code>dds.builtin_type.keyed_octets.max_size</code> if defined. Otherwise, 2048.

The previous properties must be set consistently with respect to the corresponding `*.max_size` properties that set the maximum size of the builtin types in the typecode.

### 7.12.3 Typecodes for Builtin Types

The typecodes associated with the builtin types are generated from the following IDL type definitions:

```
module DDS {
    struct String {
        string value;
    };

    struct KeyedString {
        string key;
        string value;
    };

    struct Octets {
        sequence<octet> value;
    };

    struct KeyedOctets {
        string key;
        sequence<octet> value;
    };
};
```

The maximum size of the strings and sequences that will be included in the type code definitions can be configured on a per-DomainParticipant-basis by using the properties in following table.

**Table 7.34 Properties for Allocating Size of Builtin Types, per DomainParticipant**

Property	Description
<code>dds.builtin_type.string.max_size</code>	Maximum size of the strings published by the StringDataWriters and received by the StringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
<code>dds.builtin_type.keyed_string.max_key_size</code>	Maximum size of the keys used by the KeyedStringDataWriters and KeyedStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
<code>dds.builtin_type.keyed_string.max_size</code>	Maximum size of the strings published by the KeyedStringDataWriters and received by the KeyedStringDataReaders belonging to a DomainParticipant using the builtin type (includes the NULL-terminated character). Default: 1024
<code>dds.builtin_type.octets.max_size</code>	Maximum size of the octet sequences published by the OctetsDataWriters and received by the OctetsDataReader belonging to a DomainParticipant. Default: 2048

Property	Description
dds.builtin_type.keyed_octets.max_key_size	Maximum size of the keys used by the KeyedOctetsStringDataWriters and KeyedOctetsStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_octets.max_size	Maximum size of the octet sequences published by the KeyedOctetsDataWriters and received by the KeyedOctetsDataReaders belonging to a DomainParticipant. Default: 2048

For more information about the built-in types, including how to control memory usage and maximum lengths, please see the "Data Types and DDS Data Samples" chapter in the `User's Manual`.

## 7.13 Built-in Topic's Trust Types

Types used as part of `DDS_ParticipantBuiltinTopicData` (p.979), `DDS_PublicationBuiltinTopicData` (p.1010), `DDS_SubscriptionBuiltinTopicData` (p.1108) to describe Trust Plugins configuration.

### Classes

- struct **DDS\_ParticipantTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered DomainParticipant.*
- struct **DDS\_EndpointTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered endpoint.*
- struct **DDS\_TrustAlgorithmRequirements**  
*Type to describe Trust Plugins algorithm requirements for an entity.*
- struct **DDS\_ParticipantTrustSignatureAlgorithmInfo**  
*Trust Plugins signature algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo**  
*Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_EndpointTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered endpoint.*
- struct **DDS\_EndpointTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered endpoint.*

## Typedefs

- typedef **DDS\_UnsignedLong DDS\_ParticipantTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_PluginParticipantTrustAttributesMask**
- typedef struct **DDS\_ParticipantTrustProtectionInfo DDS\_ParticipantTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered DomainParticipant.*
- typedef **DDS\_UnsignedLong DDS\_EndpointTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_PluginEndpointTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_VendorEndpointTrustAttributesMask**
- typedef struct **DDS\_EndpointTrustProtectionInfo DDS\_EndpointTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered endpoint.*
- typedef **DDS\_UnsignedLong DDS\_TrustAlgorithmBit**
- typedef **DDS\_UnsignedLong DDS\_TrustAlgorithmSet**
- typedef struct **DDS\_TrustAlgorithmRequirements DDS\_TrustAlgorithmRequirements**  
*Type to describe Trust Plugins algorithm requirements for an entity.*
- typedef struct **DDS\_ParticipantTrustSignatureAlgorithmInfo DDS\_ParticipantTrustSignatureAlgorithmInfo**  
*Trust Plugins signature algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo**  
*Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustInterceptorAlgorithmInfo DDS\_ParticipantTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustAlgorithmInfo DDS\_ParticipantTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_EndpointTrustInterceptorAlgorithmInfo DDS\_EndpointTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered endpoint.*
- typedef struct **DDS\_EndpointTrustAlgorithmInfo DDS\_EndpointTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered endpoint.*

### 7.13.1 Detailed Description

Types used as part of **DDS\_ParticipantBuiltinTopicData** (p.979), **DDS\_PublicationBuiltinTopicData** (p.1010), **DDS\_SubscriptionBuiltinTopicData** (p.1108) to describe Trust Plugins configuration.

These types are used to describe how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins.

The meaning of the contents of these types may vary depending on what Trust Plugins the DomainParticipant is using. For information about how these types interact with the RTI Security Plugins, please refer to the *RTI Security Plugins User's Manual*.

### 7.13.2 Typedef Documentation

#### 7.13.2.1 DDS\_ParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_ParticipantTrustAttributesMask
```

#### 7.13.2.2 DDS\_PluginParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginParticipantTrustAttributesMask
```

#### 7.13.2.3 DDS\_ParticipantTrustProtectionInfo

```
typedef struct DDS_ParticipantTrustProtectionInfo DDS_ParticipantTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered DomainParticipant.

#### 7.13.2.4 DDS\_EndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_EndpointTrustAttributesMask
```

#### 7.13.2.5 DDS\_PluginEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginEndpointTrustAttributesMask
```

#### 7.13.2.6 DDS\_VendorEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_VendorEndpointTrustAttributesMask
```

#### 7.13.2.7 DDS\_EndpointTrustProtectionInfo

```
typedef struct DDS_EndpointTrustProtectionInfo DDS_EndpointTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered endpoint.

### 7.13.2.8 DDS\_TrustAlgorithmBit

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmBit
```

### 7.13.2.9 DDS\_TrustAlgorithmSet

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmSet
```

### 7.13.2.10 DDS\_TrustAlgorithmRequirements

```
typedef struct DDS_TrustAlgorithmRequirements DDS_TrustAlgorithmRequirements
```

Type to describe Trust Plugins algorithm requirements for an entity.

### 7.13.2.11 DDS\_ParticipantTrustSignatureAlgorithmInfo

```
typedef struct DDS_ParticipantTrustSignatureAlgorithmInfo DDS_ParticipantTrustSignatureAlgorithmInfo
```

Trust Plugins signature algorithm information associated with the discovered DomainParticipant.

### 7.13.2.12 DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo

```
typedef struct DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo
```

Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

### 7.13.2.13 DDS\_ParticipantTrustInterceptorAlgorithmInfo

```
typedef struct DDS_ParticipantTrustInterceptorAlgorithmInfo DDS_ParticipantTrustInterceptorAlgorithmInfo
```

Trust Plugins interception algorithm information associated with the discovered DomainParticipant.

### 7.13.2.14 DDS\_ParticipantTrustAlgorithmInfo

```
typedef struct DDS_ParticipantTrustAlgorithmInfo DDS_ParticipantTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered DomainParticipant.

### 7.13.2.15 DDS\_EndpointTrustInterceptorAlgorithmInfo

```
typedef struct DDS_EndpointTrustInterceptorAlgorithmInfo DDS_EndpointTrustInterceptorAlgorithmInfo
```

Trust Plugins interception algorithm information associated with the discovered endpoint.

### 7.13.2.16 DDS\_EndpointTrustAlgorithmInfo

```
typedef struct DDS_EndpointTrustAlgorithmInfo DDS_EndpointTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered endpoint.

## 7.14 Dynamic Data

<<*extension*>> (p. 237) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

### Classes

- struct **DDS\_DynamicDataProperty\_t**  
*A collection of attributes used to configure DDS\_DynamicData (p. 775) objects.*
- struct **DDS\_DynamicDataTypeSerializationProperty\_t**  
*Properties that govern how data of a certain type will be serialized on the network.*
- struct **DDS\_DynamicDataInfo**  
*A descriptor for a DDS\_DynamicData (p. 775) object.*
- struct **DDS\_DynamicDataMemberInfo**  
*A descriptor for a single member (i.e. field) of dynamically defined data type.*
- struct **DDS\_DynamicData**  
*A sample of any complex data type, which can be inspected and manipulated reflectively.*
- struct **DDS\_DynamicDataSeq**  
*An ordered collection of DDS\_DynamicData (p. 775) elements.*
- struct **DDS\_DynamicDataTypeProperty\_t**  
*A collection of attributes used to configure DDSDynamicDataTypeSupport (p. 1456) objects.*
- struct **DDS\_DynamicDataJsonParserProperties\_t**  
*A collection of attributes used to configure DDS\_DynamicData (p. 775) objects.*
- class **DDSDynamicDataTypeSupport**  
*A factory for registering a dynamically defined type and creating DDS\_DynamicData (p. 775) objects.*
- class **DDSDynamicDataReader**  
*Reads (subscribes to) objects of type DDS\_DynamicData (p. 775).*
- class **DDSDynamicDataWriter**  
*Writes (publishes) objects of type DDS\_DynamicData (p. 775).*

## Macros

- `#define DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED`  
*A sentinel value that indicates that no member ID is needed in order to perform some operation.*

## Typedefs

- `typedef DDS_Long DDS_DynamicDataMemberId`  
*An integer that uniquely identifies some member of a data type within that type.*

## Variables

- `const struct DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT`  
*Sentinel constant indicating default values for `DDS_DynamicDataProperty_t` (p. 895).*
- `const struct DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT`  
*Sentinel constant indicating default values for `DDS_DynamicDataTypeProperty_t` (p. 896).*
- `struct DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT`  
*Sentinel constant indicating default values for `DDS_DynamicDataProperty_t` (p. 895).*

### 7.14.1 Detailed Description

<<*extension*>> (p. 237) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

**1. Obtain a `DDS_TypeCode` (p. 1164) (see `Type Code Support` (p. 76)) that defines the type definition you want to use.**

A `DDS_TypeCode` (p. 1164) includes a type's *kind* (`DDS_TCKind` (p. 86)), *name*, and *members* (that is, fields). You can create your own `DDS_TypeCode` (p. 1164) using the `DDS_TypeCodeFactory` (p. 1210) class – see, for example, the `DDS_TypeCodeFactory::create_struct_tc` (p. 1214) method. Alternatively, you can use a remote `DDS_TypeCode` (p. 1164) that you discovered on the network (see `Built-in Topics` (p. 59)) or one generated by `rtiddsgen` (see the `Code Generator User's Manual`).

**2. Wrap the `DDS_TypeCode` (p. 1164) in a `DDSDynamicDataTypeSupport` (p. 1456) object.**

See the constructor `DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport` (p. 1457). This object lets you connect the type definition to a `DDSDomainParticipant` (p. 1351) and manage data samples (of type `DDS_DynamicData` (p. 775)).

**3. Register the `DDSDynamicDataTypeSupport` (p. 1456) with one or more domain participants.**

See `DDSDynamicDataTypeSupport::register_type` (p. 1459). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

**4. Create a `DDSTopic` (p. 1617) from the `DDSDomainParticipant` (p. 1351).**

Use the name under which you registered your data type – see `DDSDomainParticipant::create_topic` (p. 1382). This `DDSTopic` (p. 1617) is what you will use to produce and consume data.

**5. Create a DDSDynamicDataWriter (p. 1462) and/or DDSDynamicDataReader (p. 1456).**

These objects will produce and/or consume data (of type **DDS\_DynamicData** (p. 775)) on the **DDSTopic** (p. 1617). You can create these objects directly from the **DDSDomainParticipant** (p. 1351) – see **DDSDomainParticipant::create\_datawriter** (p. 1415) and **DDSDomainParticipant::create\_datareader** (p. 1418) – or by first creating intermediate **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592) objects – see **DDSDomainParticipant::create\_publisher** (p. 1376) and **DDSDomainParticipant::create\_subscriber** (p. 1379).

**6. Write and/or read the data of interest.****7. Tear down the objects described above.**

You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **DDSDomainParticipant** (p. 1351) is optional; all types are automatically unregistered when the **DDSDomainParticipant** (p. 1351) itself is deleted.

## 7.14.2 Macro Definition Documentation

### 7.14.2.1 DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED

```
#define DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED
```

A sentinel value that indicates that no member ID is needed in order to perform some operation.

Most commonly, this constant will be used in "get" operations to indicate that a lookup should be performed based on a name, not on an ID.

See also

**DDS\_DynamicDataMemberId** (p. 101)

## 7.14.3 Typedef Documentation

### 7.14.3.1 DDS\_DynamicDataMemberId

```
typedef DDS_Long DDS_DynamicDataMemberId
```

An integer that uniquely identifies some member of a data type within that type.

The range of a member ID is the range of an unsigned short integer, except for the value 0, which is reserved.

See also

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

## 7.14.4 Variable Documentation

### 7.14.4.1 DDS\_DYNAMIC\_DATA\_PROPERTY\_DEFAULT

```
const struct DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 895).

Pass this object instead of your own **DDS\_DynamicDataProperty\_t** (p. 895) object to use the default property values:

```
DDS_DynamicData* sample = new DDS_DynamicData(  
    myTypeCode,  
    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

**DDS\_DynamicDataProperty\_t** (p. 895)

Examples

**HelloWorldPlugin.cxx.**

### 7.14.4.2 DDS\_DYNAMIC\_DATA\_TYPE\_PROPERTY\_DEFAULT

```
const struct DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataTypeProperty\_t** (p. 896).

Pass this object instead of your own **DDS\_DynamicDataTypeProperty\_t** (p. 896) object to use the default property values:

```
DDS_DynamicDataTypeSupport* support = new DDS_DynamicDataTypeSupport(  
    myTypeCode,  
    &DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT);
```

See also

**DDS\_DynamicDataTypeProperty\_t** (p. 896)

### 7.14.4.3 DDS\_DYNAMIC\_DATA\_JSON\_PARSER\_PROPERTIES\_DEFAULT

```
struct DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT
[extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 895).

Pass this object instead of your own **DDS\_DynamicDataProperty\_t** (p. 895) object to use the default property values:

```
DDS_DynamicData* sample = new DDS_DynamicData(
    myTypeCode,
    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

**DDS\_DynamicDataProperty\_t** (p. 895)

## 7.15 Publication Module

Contains the **DDSFlowController** (p. 1468), **DDSPublisher** (p. 1550), and **DDSDataWriter** (p. 1321) classes as well as the **DDSPublisherListener** (p. 1571) and **DDSDataWriterListener** (p. 1344) interfaces, and more generally, all that is needed on the publication side.

### Modules

- **Publishers**
  - DDSPublisher* (p. 1550) entity and associated elements
- **Data Writers**
  - DDSDataWriter* (p. 1321) entity and associated elements
- **Flow Controllers**
  - <<extension>> (p. 237) *DDSFlowController* (p. 1468) and associated elements
- **Multi-channel DataWriters**
  - APIs related to Multi-channel DataWriters.*

### 7.15.1 Detailed Description

Contains the **DDSFlowController** (p. 1468), **DDSPublisher** (p. 1550), and **DDSDataWriter** (p. 1321) classes as well as the **DDSPublisherListener** (p. 1571) and **DDSDataWriterListener** (p. 1344) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

## 7.16 Publishers

**DDSPublisher** (p. 1550) entity and associated elements

## Classes

- struct **DDS\_PublisherQos**  
*QoS policies supported by a **DDSPublisher** (p. 1550) entity.*
- class **DDSPublisherListener**  
*<<interface>> (p. 237) **DDSListener** (p. 1526) for **DDSPublisher** (p. 1550) status.*
- class **DDSPublisherSeq**  
*Declares IDL sequence < **DDSPublisher** (p. 1550) > .*
- class **DDSPublisher**  
*<<interface>> (p. 237) A publisher is the object responsible for the actual dissemination of publications.*

## Functions

- **DDS\_Boolean DDS\_PublisherQos\_equals** (const struct **DDS\_PublisherQos** \*self, const struct **DDS\_PublisherQos** \*other)  
*Compares two **DDS\_PublisherQos** (p. 1022) for equality.*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::print** () const  
*Prints this **DDS\_PublisherQos** (p. 1022) to stdout.*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_PublisherQos** &base) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_PublisherQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).*

## Variables

- const struct **DDS\_DataWriterQos DDS\_DATAWRITER\_QOS\_DEFAULT**  
*Special value for creating **DDSDataWriter** (p. 1321) with default QoS.*
- const struct **DDS\_DataWriterQos DDS\_DATAWRITER\_QOS\_USE\_TOPIC\_QOS**  
*Special value for creating **DDSDataWriter** (p. 1321) with a combination of the default **DDS\_DataWriterQos** (p. 689) and the **DDS\_TopicQos** (p. 1135).*

### 7.16.1 Detailed Description

**DDSPublisher** (p. 1550) entity and associated elements

## 7.16.2 Function Documentation

### 7.16.2.1 DDS\_PublisherQos\_equals()

```
DDS_Boolean DDS_PublisherQos_equals (
    const struct DDS_PublisherQos * self,
    const struct DDS_PublisherQos * other )
```

Compares two **DDS\_PublisherQos** (p. 1022) for equality.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This PublisherQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other PublisherQos to be compared with this PublisherQos.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_PublisherQos::operator!=()**, and **DDS\_PublisherQos::operator==()**.

### 7.16.2.2 print()

```
DDS_ReturnCode_t DDS_PublisherQos::print ( ) const [inline]
```

Prints this **DDS\_PublisherQos** (p. 1022) to stdout.

Only the differences between this **DDS\_PublisherQos** (p. 1022) and the documented default are printed. If you wish to print everything regardless, see **DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_PublisherQos&, const DDS\_QosPrintFormat&) const** (p. 108). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.16.2.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

Only the differences between this **DDS\_PublisherQos** (p. 1022) and the documented default are printed to `idref_↵` `PublisherQose` string. If you wish to print everything regardless, see **DDS\_PublisherQos::to\_string(char\*, DDS\_↵** **UnsignedLong&, const DDS\_PublisherQos&, const DDS\_QosPrintFormat&) const** (p. 108). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_PublisherQos** (p. 1022) is written to the buffer.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_PublisherQos&, const DDS\_↵** **QosPrintFormat&) const** (p. 108)

### 7.16.2.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_PublisherQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

This overload behaves the same as **DDS\_PublisherQos::to\_string** (p. 105) but allows the caller to specify the **DDS\_↵** **PublisherQos** (p. 1022), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_PublisherQos</b> (p. 1022) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_PublisherQos&, const DDS\_QosPrintFormat&) const** (p. 108)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.16.2.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

This overload behaves the same as **DDS\_PublisherQos::to\_string** (p. 105) but allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the output.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_PublisherQos&, const DDS\_QoSPrintFormat&) const** (p. 108)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

## 7.16.2.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_PublisherQos & base,
    const DDS_QoSPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

Only the differences between this **DDS\_PublisherQos** (p. 1022) and the **DDS\_PublisherQos** (p. 1022) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string\_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_PublisherQos** (p. 1022) is written to the buffer.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the string_size parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_PublisherQos</b> (p. 1022) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QoSPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## 7.16.2.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

This overload behaves the same as **DDS\_PublisherQos::to\_string** (p. 105) but prints the entire **DDS\_PublisherQos** (p. 1022) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

## For example

```
PublisherQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_PublisherQos&, const DDS\_QosPrintFormat&) const** (p. 108)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.16.2.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1022).

This overload behaves the same as the **DDS\_PublisherQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 108) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1022). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_PublisherQos::to\_string**(char\*, **DDS\_UnsignedLong&**, const **DDS\_PublisherQos&**, const **DDS\_QosPrintFormat&**) const (p. 108)

### 7.16.3 Variable Documentation

#### 7.16.3.1 DDS\_DATAWRITER\_QOS\_DEFAULT

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT [extern]
```

Special value for creating **DDSDataWriter** (p. 1321) with default QoS.

When used in **DDSPublisher::create\_datawriter** (p. 1558), this special value is used to indicate that the **DDSDataWriter** (p. 1321) should be created with the default **DDSDataWriter** (p. 1321) QoS by means of the operation **get\_default\_datawriter\_qos** and using the resulting QoS to create the **DDSDataWriter** (p. 1321).

When used in **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554) operation had never been called.

When used in **DDSDataWriter::set\_qos** (p. 1336), this special value is used to indicate that the QoS of the **DDSDataWriter** (p. 1321) should be changed to match the current default QoS set in the **DDSPublisher** (p. 1550) that the **DDSDataWriter** (p. 1321) belongs to.

## Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataWriter; for this purpose, use **DDSDomainParticipant::get\_default\_datawriter\_qos** (p. 1358).

## See also

**DDSPublisher::create\_datawriter** (p. 1558)  
**DDSPublisher::set\_default\_datawriter\_qos** (p. 1554)  
**DDSDataWriter::set\_qos** (p. 1336)

## Examples

**HelloWorld\_publisher.cxx.**

### 7.16.3.2 DDS\_DATAWRITER\_QOS\_USE\_TOPIC\_QOS

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDSDataWriter** (p. 1321) with a combination of the default **DDS\_DataWriterQos** (p. 689) and the **DDS\_TopicQos** (p. 1135).

The use of this value is equivalent to the application obtaining the default **DDS\_DataWriterQos** (p. 689) and the **DDS\_TopicQos** (p. 1135) (by means of the operation **DDSTopic::get\_qos** (p. 1621)) and then combining these two QoS using the operation **DDSPublisher::copy\_from\_topic\_qos** (p. 1566) whereby any policy that is set on the **DDS\_TopicQos** (p. 1135) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDSDataWriter** (p. 1321).

This value should only be used in **DDSPublisher::create\_datawriter** (p. 1558).

See also

- DDSPublisher::create\_datawriter** (p. 1558)
- DDSPublisher::get\_default\_datawriter\_qos** (p. 1553)

- struct **DDS\_PublicationMatchedStatus**  
*DDS\_PUBLICATION\_MATCHED\_STATUS* (p. 347)
- struct **DDS\_ServiceRequestAcceptedStatus**  
*DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS* (p. 348)
- struct **DDS\_ReliableWriterCacheEventCount**  
<<extension>> (p. 237) *The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.*
- struct **DDS\_ReliableWriterCacheChangedStatus**  
<<extension>> (p. 237) *A summary of the state of a data writer's cache of unacknowledged samples written.*
- struct **DDS\_ReliableReaderActivityChangedStatus**  
<<extension>> (p. 237) *Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.*

- struct **DDS\_DataWriterCacheStatus**
  - <<**extension**>> (p. 237) *The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.*
- struct **DDS\_DataWriterProtocolStatus**
  - <<**extension**>> (p. 237) *The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.*
- struct **DDS\_AcknowledgmentInfo**
  - Information about an application-level acknowledged sample.*
- struct **DDS\_DataWriterQos**
  - QoS policies supported by a **DDSDataWriter** (p. 1321) entity.*
- class **FooDataWriter**
  - <<**interface**>> (p. 237) <<**generic**>> (p. 237) *User data type specific data writer.*
- class **DDSDataWriterListener**
  - <<**interface**>> (p. 237) **DDSListener** (p. 1526) *for writer status.*
- class **DDSDataWriter**
  - <<**interface**>> (p. 237) *Allows an application to set the value of the data to be published under a given **DDSTopic** (p. 1617).*

## Functions

- **DDS\_Boolean DDS\_DataWriterQos\_equals** (const struct **DDS\_DataWriterQos** \*self, const struct **DDS\_DataWriterQos** \*other)
  - Compares two **DDS\_DataWriterQos** (p. 689) for equality.*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::print** () const
  - Prints this **DDS\_DataWriterQos** (p. 689) to stdout.*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataWriterQos** &base) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataWriterQos** &base, const **DDS\_QosPrintFormat** &format) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const
  - Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).*

### 7.17.1 Detailed Description

**DDSDataWriter** (p. 1321) entity and associated elements

## 7.17.2 Function Documentation

### 7.17.2.1 DDS\_DataWriterQos\_equals()

```
DDS_Boolean DDS_DataWriterQos_equals (
    const struct DDS_DataWriterQos * self,
    const struct DDS_DataWriterQos * other )
```

Compares two **DDS\_DataWriterQos** (p. 689) for equality.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This DataWriterQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other DataWriterQos to be compared with this DataWriterQos.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_DataWriterQos::operator!=()**, and **DDS\_DataWriterQos::operator==()**.

### 7.17.2.2 print()

```
DDS_ReturnCode_t DDS_DataWriterQos::print ( ) const [inline]
```

Prints this **DDS\_DataWriterQos** (p. 689) to stdout.

Only the differences between this **DDS\_DataWriterQos** (p. 689) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QosPrintFormat&) const** (p. 116). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.17.2.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

Only the differences between this **DDS\_DataWriterQos** (p. 689) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QosPrintFormat&) const** (p. 116). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataWriterQos** (p. 689) is written to the buffer.

#### Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_↔  
QosPrintFormat&) const** (p. 116)

### 7.17.2.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DataWriterQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

This overload behaves the same as **DDS\_DataWriterQos::to\_string** (p. 113) but allows the caller to specify the **DDS\_↔  
\_DataWriterQos** (p. 689), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_DataWriterQos</b> (p. 689) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QoSPrintFormat&) const** (p. 116)

References **DDS\_QoSPrintFormat\_INITIALIZER**.

## 7.17.2.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QoSPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

This overload behaves the same as **DDS\_DataWriterQos::to\_string** (p. 113) but allows the caller to specify the **DDS\_QoSPrintFormat** (p. 1031) which is used to format the output.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QoSPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QosPrintFormat&) const** (p. 116)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

## 7.17.2.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DataWriterQos & base,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

Only the differences between this **DDS\_DataWriterQos** (p. 689) and the **DDS\_DataWriterQos** (p. 689) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string\_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataWriterQos** (p. 689) is written to the buffer.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the string_size parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_DataWriterQos</b> (p. 689) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## 7.17.2.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

This overload behaves the same as **DDS\_DataWriterQos::to\_string** (p. 113) but prints the entire **DDS\_DataWriterQos** (p. 689) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

## For example

```
DataWriterQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QosPrintFormat&) const** (p. 116)

References **DDS\_QosPrintFormat\_INITIALIZER**.

## 7.17.2.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 689).

This overload behaves the same as the **DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 116) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 689). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataWriterQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataWriterQos&, const DDS\_QosPrintFormat&) const** (p. 116)

## 7.18 Flow Controllers

<<**extension**>> (p. 237) **DDSFlowController** (p. 1468) and associated elements

### Classes

- struct **DDS\_FlowControllerTokenBucketProperty\_t**  
*DDSFlowController* (p. 1468) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.
- struct **DDS\_FlowControllerProperty\_t**  
*Determines the flow control characteristics of the DDSFlowController* (p. 1468).
- class **DDSFlowController**  
 <<**interface**>> (p. 237) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDSDataWriter** (p. 1321) instances are allowed to write data.

### Enumerations

- enum **DDS\_FlowControllerSchedulingPolicy** {  
**DDS\_RR\_FLOW\_CONTROLLER\_SCHED\_POLICY** ,  
**DDS\_EDF\_FLOW\_CONTROLLER\_SCHED\_POLICY** ,  
**DDS\_HPF\_FLOW\_CONTROLLER\_SCHED\_POLICY** }  
*Kinds of flow controller scheduling policy.*

## Variables

- char \* **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME**  
*[default]* Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in default flow controller.
- char \* **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME**  
 Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in fixed-rate flow controller.
- char \* **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME**  
 Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in on-demand flow controller.

### 7.18.1 Detailed Description

<<*extension*>> (p. 237) **DDSFlowController** (p. 1468) and associated elements

**DDSFlowController** (p. 1468) provides the network traffic shaping capability to asynchronous **DDSDataWriter** (p. 1321) instances. For use cases and advantages of publishing asynchronously, please refer to **DDS\_PublishModeQosPolicy** (p. 1025) of **DDS\_DataWriterQos** (p. 689).

See also

- DDS\_PublishModeQosPolicy** (p. 1025)
- DDS\_DataWriterQos::publish\_mode** (p. 696)
- DDS\_AsynchronousPublisherQosPolicy** (p. 590)

### 7.18.2 Enumeration Type Documentation

#### 7.18.2.1 DDS\_FlowControllerSchedulingPolicy

```
enum DDS_FlowControllerSchedulingPolicy
```

Kinds of flow controller scheduling policy.

Samples written by an asynchronous **DDSDataWriter** (p. 1321) are not sent in the context of the **FooDataWriter::write** (p. 1683) call. Instead, the middleware puts the samples in a queue for future processing. The **DDSFlowController** (p. 1468) associated with each asynchronous DataWriter instance determines when the samples are actually sent.

Each **DDSFlowController** (p. 1468) maintains a separate FIFO queue for each unique destination (remote application). Samples written by asynchronous **DDSDataWriter** (p. 1321) instances associated with the flow controller, are placed in the queues that correspond to the intended destinations of the sample.

When tokens become available, a flow controller must decide which queue(s) to grant tokens first. This is determined by the flow controller's scheduling policy. Once a queue has been granted tokens, it is serviced by the asynchronous publishing thread. The queued up samples will be coalesced and sent to the corresponding destination. The number of samples sent depends on the data size and the number of tokens granted.

QoS:

- DDS\_FlowControllerProperty\_t** (p. 912)

## Enumerator

DDS_RR_FLOW_CONTROLLER_SCHED_POLICY	<p>Indicates to flow control in a round-robin fashion. Whenever tokens become available, the flow controller distributes the tokens uniformly across all of its (non-empty) destination queues. No destinations are prioritized. Instead, all destinations are treated equally and are serviced in a round-robin fashion.</p>
DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY	<p>Indicates to flow control in an earliest-deadline-first fashion. A sample's deadline is determined by the time it was written plus the latency budget of the <code>DataWriter</code> at the time of the write call (as specified in the <b>DDS_LatencyBudgetQosPolicy</b> (p. 929)). The relative priority of a flow controller's destination queue is determined by the earliest deadline across all samples it contains.</p> <p>When tokens become available, the <b>DDSFlowController</b> (p. 1468) distributes tokens to the destination queues in order of their deadline priority. In other words, the queue containing the sample with the earliest deadline is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal deadline value, the corresponding destination queues are serviced in a round-robin fashion.</p> <p>Hence, under the default <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 931) setting, an <code>EDF_FLOW_CONTROLLER_SCHED_POLICY</code> <b>DDSFlowController</b> (p. 1468) preserves the order in which the user calls <b>FooDataWriter::write</b> (p. 1683) across the <code>DataWriters</code> associated with the flow controller.</p> <p>Since the <b>DDS_LatencyBudgetQosPolicy</b> (p. 929) is mutable, a sample written second may contain an earlier deadline than the sample written first if the <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 931) value is sufficiently decreased in between writing the two samples. In that case, if the first sample is not yet written (still in queue waiting for its turn), it inherits the priority corresponding to the (earlier) deadline from the second sample.</p> <p>In other words, the priority of a destination queue is always determined by the earliest deadline among all samples contained in the queue. This priority inheritance approach is required in order to both honor the updated <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 931) and adhere to the <b>DDSDataWriter</b> (p. 1321) in-order data delivery guarantee.</p> <p><b>[default]</b> for <b>DDSDataWriter</b> (p. 1321)</p>

## Enumerator

DDS_HPF_FLOW_CONTROLLER_SCHED_POLICY	<p>Indicates to flow control in a highest-priority-first fashion. Determines the next destination queue to service as determined by the publication priority of the <b>DDSDataWriter</b> (p. 1321), channel of multi-channel DataWriter, or individual sample.</p> <p>The relative priority of a flow controller's destination queue is determined by the highest publication priority of all samples it contains.</p> <p>When tokens become available, the <b>DDSFlowController</b> (p. 1468) distributes tokens to the destination queues in order of their publication priority. In other words, the queue containing the sample with the highest publication priority is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal publication priority, the corresponding destination queues are serviced in a round-robin fashion.</p> <p>This priority inheritance approach is required in order to both honor the designated publication priority and adhere to the <b>DDSDataWriter</b> (p. 1321) in-order data delivery guarantee.</p>
--------------------------------------	--

### 7.18.3 Variable Documentation

#### 7.18.3.1 DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME

```
char* DDS_DEFAULT_FLOW_CONTROLLER_NAME [extern]
```

**[default]** Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in default flow controller.

RTI Connext provides several built-in **DDSFlowController** (p. 1468) for use with an asynchronous **DDSDataWriter** (p. 1321). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

By default, flow control is disabled. That is, the built-in **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 121) flow controller does not apply any flow control. Instead, it allows data to be sent asynchronously as soon as it is written by the **DDSDataWriter** (p. 1321).

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1468) with the following **DDS\_FlowController**←  
**Property\_t** (p. 912) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) = **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED↔\_POLICY** (p. 120)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `max_tokens` = **DDS\_LENGTH\_UNLIMITED** (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_added_per_period` = **DDS\_LENGTH↔\_UNLIMITED** (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_leaked_per_period` = 0
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `period` = 60 seconds
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `bytes_per_token` = **DDS\_LENGTH\_UNLIMITED** (p. 438)

#### See also

- DDSPublisher::create\_datawriter** (p. 1558)
- DDSDomainParticipant::lookup\_flowcontroller** (p. 1392)
- DDSFlowController::set\_property** (p. 1469)
- DDS\_PublishModeQosPolicy** (p. 1025)
- DDS\_AsynchronousPublisherQosPolicy** (p. 590)

### 7.18.3.2 DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME

```
char* DDS_FIXED_RATE_FLOW_CONTROLLER_NAME [extern]
```

Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in fixed-rate flow controller.

RTI Connext provides several builtin **DDSFlowController** (p. 1468) for use with an asynchronous **DDSDataWriter** (p. 1321). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME** (p. 122) flow controller shapes the network traffic by allowing data to be sent only once every second. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1468) with the following **DDS\_FlowController↔Property\_t** (p. 912) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) = **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED↔\_POLICY** (p. 120)

- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `max_tokens = DDS_LENGTH_UNLIMITED` (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_added_per_period = DDS_LENGTH_UNLIMITED` (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_leaked_per_period = DDS_LENGTH_UNLIMITED` (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `period = 1 second`
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `bytes_per_token = DDS_LENGTH_UNLIMITED` (p. 438)

See also

- DDSPublisher::create\_datawriter** (p. 1558)
- DDSDomainParticipant::lookup\_flowcontroller** (p. 1392)
- DDSFlowController::set\_property** (p. 1469)
- DDS\_PublishModeQosPolicy** (p. 1025)
- DDS\_AsynchronousPublisherQosPolicy** (p. 590)

### 7.18.3.3 DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME

```
char* DDS_ON_DEMAND_FLOW_CONTROLLER_NAME [extern]
```

Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027) that refers to the built-in on-demand flow controller.

RTI Connext provides several builtin **DDSFlowController** (p. 1468) for use with an asynchronous **DDSDataWriter** (p. 1321). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 123) allows data to be sent only when the user calls **DDSFlowController::trigger\_flow** (p. 1470). With each trigger, all accumulated data since the previous trigger is sent (across all **DDSPublisher** (p. 1550) or **DDSDataWriter** (p. 1321) instances). In other words, the network traffic shape is fully controlled by the user. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

This external trigger source is ideal for users who want to implement some form of closed-loop flow control or who want to only put data on the wire every so many samples (e.g. with the number of samples based on **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1779)).

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1468) with the following **DDS\_FlowController\_Property\_t** (p. 912) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) = **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED↔\_POLICY** (p. 120)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `max_tokens` = **DDS\_LENGTH\_UNLIMITED** (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_added_per_period` = **DDS\_LENGTH↔\_UNLIMITED** (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `tokens_leaked_per_period` = **DDS↔\_LENGTH\_UNLIMITED** (p. 438)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `period` = **DDS\_DURATION\_INFINITE** (p. 326)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) `bytes_per_token` = **DDS\_LENGTH\_UNLIMITED** (p. 438)

- DDS\_AsynchronousPublisherQosPolicy** (p. 590)

## 7.19 Subscription Module

Contains the **DDSSubscriber** (p. 1592), **DDSDataReader** (p. 1288), **DDSReadCondition** (p. 1574), **DDSQuery↔Condition** (p. 1573), and **DDSTopicQuery** (p. 1627) classes, as well as the **DDSSubscriberListener** (p. 1613) and **DDSDataReaderListener** (p. 1315) interfaces, and more generally, all that is needed on the subscription side.

### Modules

- **Subscribers**
  - DDSSubscriber* (p. 1592) entity and associated elements
- **DataReaders**
  - DDSDataReader* (p. 1288) entity and associated elements
- **Data Samples**
  - DDS\_SampleInfo* (p. 1082), *DDS\_SampleStateKind* (p. 156), *DDS\_ViewStateKind* (p. 158), *DDS\_InstanceStateKind* (p. 160) and associated elements
- **SampleProcessor**
  - <<experimental>> (p. 237) <<extension>> (p. 237) Utility to concurrently read and process the data samples received by *DDSDataReader* (p. 1288).

### 7.19.1 Detailed Description

Contains the **DDSSubscriber** (p. 1592), **DDSDataReader** (p. 1288), **DDSReadCondition** (p. 1574), **DDSQueryCondition** (p. 1573), and **DDSTopicQuery** (p. 1627) classes, as well as the **DDSSubscriberListener** (p. 1613) and **DDSDataReaderListener** (p. 1315) interfaces, and more generally, all that is needed on the subscription side.

"DCPS Subscription package"

### 7.19.2 Access to data samples

Data is made available to the application by the following operations on **DDSDataReader** (p. 1288) objects: **FooDataReader::read** (p. 1651), **FooDataReader::read\_w\_condition** (p. 1657), **FooDataReader::take** (p. 1652), **FooDataReader::take\_w\_condition** (p. 1658), and the other variants of `read()` and `take()`.

The general semantics of the `read()` operation is that the application only gets access to the corresponding data (i.e. a precise instance value); the data remains the responsibility of RTI Connext and can be read again.

The semantics of the `take()` operations is that the application takes full responsibility for the data; that data will no longer be available locally to RTI Connext. Consequently, it is possible to access the same information multiple times only if all previous accesses were `read()` operations, not `take()`.

Each of these operations returns a collection of `Data` values and associated **DDS\_SampleInfo** (p. 1082) objects. Each data value represents an atom of data information (i.e., a value for one instance). This collection may contain samples related to the same or different instances (identified by the key). Multiple samples can refer to the same instance if the settings of the **HISTORY** (p. 405) QoS allow for it.

These operations reset the read communication statuses; see **Changes in read communication status** (p. 340).

**To return the memory back to the middleware, every `read()` or `take()` that retrieves a sequence of samples must be followed with a call to `FooDataReader::return_loan` (p. 1672).**

See also

**Interpretation of the SampleInfo** (p. 1083)

#### 7.19.2.1 Data access patterns

The application accesses data by means of the operations `read` or `take` on the **DDSDataReader** (p. 1288). These operations return an ordered collection of `DataSamples` consisting of a **DDS\_SampleInfo** (p. 1082) part and a `Data` part.

The way RTI Connext builds the collection depends on QoS policies set on the **DDSDataReader** (p. 1288) and **DDSSubscriber** (p. 1592), as well as the `source_timestamp` of the samples, and the parameters passed to the `read()` / `take()` operations, namely:

- the desired sample states (any combination of **DDS\_SampleStateKind** (p. 156))
- the desired view states (any combination of **DDS\_ViewStateKind** (p. 158))

- the desired instance states (any combination of **DDS\_InstanceStateKind** (p. 160))

The `read()` and `take()` operations are non-blocking and just deliver what is currently available that matches the specified states.

The `read_w_condition()` and `take_w_condition()` operations take a **DDSReadCondition** (p. 1574) object as a parameter instead of sample, view or instance states. The behaviour is that the samples returned will only be those for which the condition is **DDS\_BOOLEAN\_TRUE** (p. 317). These operations, in conjunction with **DDSReadCondition** (p. 1574) objects and a **DDSWaitSet** (p. 1629), allow performing waiting reads.

Once the data samples are available to the data readers, they can be read or taken by the application. The basic rule is that the application may do this in any order it wishes. This approach is very flexible and allows the application ultimate control.

To access data coherently, or in order, the **PRESENTATION** (p. 417) QoS must be set properly.

## 7.20 Subscribers

**DDSSubscriber** (p. 1592) entity and associated elements

### Classes

- struct **DDS\_SubscriberQos**  
*QoS policies supported by a **DDSSubscriber** (p. 1592) entity.*
- class **DDSSubscriberListener**  
*<<interface>> (p. 237) **DDSListener** (p. 1526) for status about a subscriber.*
- class **DDSSubscriberSeq**  
*Declares IDL sequence < **DDSSubscriber** (p. 1592) > .*
- class **DDSSubscriber**  
*<<interface>> (p. 237) A subscriber is the object responsible for actually receiving data from a subscription.*

### Functions

- **DDS\_Boolean DDS\_SubscriberQos\_equals** (const struct **DDS\_SubscriberQos** \*self, const struct **DDS\_SubscriberQos** \*other)  
*Compares two **DDS\_SubscriberQos** (p. 1105) for equality.*
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::print** () const  
*Prints this **DDS\_SubscriberQos** (p. 1105) to stdout.*
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_SubscriberQos** &base) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*

- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_SubscriberQos** &base, const **DDS\_QosPrintFormat** &format) const  
Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).
- **DDS\_ReturnCode\_t DDS\_SubscriberQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

## Variables

- const struct **DDS\_DataReaderQos DDS\_DATAREADER\_QOS\_DEFAULT**  
Special value for creating data reader with default QoS.
- const struct **DDS\_DataReaderQos DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS**  
Special value for creating **DDSDataReader** (p. 1288) with a combination of the default **DDS\_DataReaderQos** (p. 644) and the **DDS\_TopicQos** (p. 1135).

### 7.20.1 Detailed Description

**DDSSubscriber** (p. 1592) entity and associated elements

### 7.20.2 Function Documentation

#### 7.20.2.1 DDS\_SubscriberQos\_equals()

```
DDS_Boolean DDS_SubscriberQos_equals (
    const struct DDS_SubscriberQos * self,
    const struct DDS_SubscriberQos * other )
```

Compares two **DDS\_SubscriberQos** (p. 1105) for equality.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This SubscriberQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other SubscriberQos to be compared with this SubscriberQos.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_SubscriberQos::operator!=()**, and **DDS\_SubscriberQos::operator==()**.

### 7.20.2.2 print()

```
DDS_ReturnCode_t DDS_SubscriberQos::print ( ) const [inline]
```

Prints this **DDS\_SubscriberQos** (p. 1105) to stdout.

Only the differences between this **DDS\_SubscriberQos** (p. 1105) and the documented default are printed. If you wish to print everything regardless, see **DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_QosPrintFormat&) const** (p. 130). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.20.2.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

Only the differences between this **DDS\_SubscriberQos** (p. 1105) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_QosPrintFormat&) const** (p. 130). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_SubscriberQos** (p. 1105) is written to the buffer.

#### Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_↔  
QosPrintFormat&) const** (p. 130)

## 7.20.2.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_SubscriberQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

This overload behaves the same as **DDS\_SubscriberQos::to\_string** (p. 128) but allows the caller to specify the **DDS\_↔  
\_SubscriberQos** (p. 1105), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <b>in</b> >> (p. 238) The <b>DDS_SubscriberQos</b> (p. 1105) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_↔  
QosPrintFormat&) const** (p. 130)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.20.2.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

This overload behaves the same as **DDS\_SubscriberQos::to\_string** (p. 128) but allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the output.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_QosPrintFormat&) const** (p. 130)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

### 7.20.2.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_SubscriberQos & base,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

Only the differences between this **DDS\_SubscriberQos** (p. 1105) and the **DDS\_SubscriberQos** (p. 1105) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_SubscriberQos** (p. 1105) is written to the buffer.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_SubscriberQos</b> (p. 1105) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## 7.20.2.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

This overload behaves the same as **DDS\_SubscriberQos::to\_string** (p. 128) but prints the entire **DDS\_SubscriberQos** (p. 1105) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

## For example

```
SubscriberQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_QosPrintFormat&) const** (p. 130)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.20.2.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).

This overload behaves the same as the **DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 131) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1105). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_SubscriberQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_SubscriberQos&, const DDS\_QosPrintFormat&) const** (p. 130)

## 7.20.3 Variable Documentation

### 7.20.3.1 DDS\_DATAREADER\_QOS\_DEFAULT

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT [extern]
```

Special value for creating data reader with default QoS.

When used in **DDSSubscriber::create\_datareader** (p. 1599), this special value is used to indicate that the **DDSDataReader** (p. 1288) should be created with the default **DDSDataReader** (p. 1288) QoS by means of the operation **get\_default\_datareader\_qos** and using the resulting QoS to create the **DDSDataReader** (p. 1288).

When used in **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595) operation had never been called.

When used in **DDSDataReader::set\_qos** (p. 1306), this special value is used to indicate that the QoS of the **DDSDataReader** (p. 1288) should be changed to match the current default QoS set in the **DDSSubscriber** (p. 1592) that the **DDSDataReader** (p. 1288) belongs to.

#### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataReader; for this purpose, use **DDSDomainParticipant::get\_default\_datareader\_qos** (p. 1360).

#### See also

**DDSSubscriber::create\_datareader** (p. 1599)  
**DDSSubscriber::set\_default\_datareader\_qos** (p. 1595)  
**DDSDataReader::set\_qos** (p. 1306)

#### Examples

**HelloWorld\_subscriber.cxx.**

### 7.20.3.2 DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDSDataReader** (p. 1288) with a combination of the default **DDS\_DataReaderQos** (p. 644) and the **DDS\_TopicQos** (p. 1135).

The use of this value is equivalent to the application obtaining the default **DDS\_DataReaderQos** (p. 644) and the **DDS\_TopicQos** (p. 1135) (by means of the operation **DDSTopic::get\_qos** (p. 1621)) and then combining these two QoS using the operation **DDSSubscriber::copy\_from\_topic\_qos** (p. 1608) whereby any policy that is set on the **DDS\_TopicQos** (p. 1135) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDSDataReader** (p. 1288).

This value should only be used in **DDSSubscriber::create\_datareader** (p. 1599).

#### See also

**DDSSubscriber::create\_datareader** (p. 1599)  
**DDSSubscriber::get\_default\_datareader\_qos** (p. 1595)  
**DDSTopic::get\_qos** (p. 1621)  
**DDSSubscriber::copy\_from\_topic\_qos** (p. 1608)

## 7.21 DataReaders

**DDSDataReader** (p. 1288) entity and associated elements

### Modules

- **Read Conditions**  
*DDSReadCondition* (p. 1574) and associated elements
- **Query Conditions**  
*DDSQueryCondition* (p. 1573) and associated elements
- **Topic Queries**  
*DDSTopicQuery* (p. 1627) and associated elements.

### Classes

- struct **DDS\_RequestedDeadlineMissedStatus**  
*DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS* (p. 344)
- struct **DDS\_LivelinessChangedStatus**  
*DDS\_LIVELINESS\_CHANGED\_STATUS* (p. 346)
- struct **DDS\_RequestedIncompatibleQosStatus**  
*DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS* (p. 344)
- struct **DDS\_SampleLostStatus**  
*DDS\_SAMPLE\_LOST\_STATUS* (p. 345)
- struct **DDS\_SampleRejectedStatus**  
*DDS\_SAMPLE\_REJECTED\_STATUS* (p. 345)
- struct **DDS\_SubscriptionMatchedStatus**  
*DDS\_SUBSCRIPTION\_MATCHED\_STATUS* (p. 347)
- struct **DDS\_DataReaderCacheStatus**  
<<extension>> (p. 237) *The status of the reader's cache.*
- struct **DDS\_DataReaderProtocolStatus**  
<<extension>> (p. 237) *The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.*
- struct **DDS\_DataReaderQos**  
*QoS policies supported by a DDSDataReader* (p. 1288) entity.
- class **FooDataReader**  
<<interface>> (p. 237) <<generic>> (p. 237) *User data type-specific data reader.*
- class **DDSDataReaderSeq**  
*Declares IDL sequence < DDSDataReader* (p. 1288) > .
- class **DDSDataReaderListener**  
<<interface>> (p. 237) *DDSListener* (p. 1526) *for reader status.*
- class **DDSDataReader**  
<<interface>> (p. 237) *Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached DDSSubscriber* (p. 1592).

## Enumerations

- enum **DDS\_SampleLostStatusKind** {

- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataReaderQos** &base) const  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataReaderQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).*

- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).
- **DDS\_ReturnCode\_t DDS\_DataReaderQos::to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

### 7.21.1 Detailed Description

**DDSDataReader** (p. 1288) entity and associated elements

### 7.21.2 Enumeration Type Documentation

#### 7.21.2.1 DDS\_SampleLostStatusKind

enum **DDS\_SampleLostStatusKind**

<<*extension*>> (p. 237) Kinds of reasons why a sample was lost.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

Enumerator

DDS_NOT_LOST	The sample was not lost. This constant is an extension to the DDS standard.
DDS_LOST_BY_WRITER	A <b>DDSDataWriter</b> (p. 1321) removed the sample before being received by the <b>DDSDataReader</b> (p. 1288). This constant is an extension to the DDS standard.
DDS_LOST_BY_INSTANCES_LIMIT	A resource limit on the number of instances ( <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1055)) was reached. This constant is an extension to the DDS standard.  See also  <b>DDS_ResourceLimitsQosPolicy</b> (p. 1052)
DDS_LOST_BY_REMOTE_WRITERS_PER_INSTANCE_LIMIT	A resource limit on the number of remote writers for a single instance from which a <b>DDSDataReader</b> (p. 1288) may read ( <b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers_per_instance</b> (p. 656)) was reached. This constant is an extension to the DDS standard.  See also  <b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)

## Enumerator

DDS_LOST_BY_INCOMPLETE_COHERENT_SET	<p>A sample is lost because it is part of an incomplete coherent set. An incomplete coherent set is a coherent set for which some of the samples are missing. For example, consider a <b>DDSDataWriter</b> (p. 1321) using <b>DDS_KEEP_LAST_HISTORY_QOS</b> (p. 406) with a depth of 1. The DataWriter publishes two samples of the same instance as part of a coherent set 'CS1'; the first sample of 'CS1' is replaced by a new sample before it can be successfully delivered to the <b>DDSDataReader</b> (p. 1288). In this case, the coherent set containing the two samples is considered incomplete. The new sample, by default, will not be provided to the application, and will be reported as <b>LOST_BY_INCOMPLETE_COHERENT_SET</b>. (You can change this default behavior by setting <b>DDS_PresentationQosPolicy::drop_incomplete_coherent_set</b> (p. 1000) to FALSE. If you do, the new sample will be provided to the application, but it will be marked as part of an incomplete coherent set in the <b>DDS_SampleInfo</b> (p. 1082) structure.)</p> <p>This constant is an extension to the DDS standard.</p>
DDS_LOST_BY_LARGE_COHERENT_SET	<p>A sample is lost because it is part of a large coherent set. A large coherent set is a coherent set that cannot fit all at once into the <b>DDSDataReader</b> (p. 1288) queue because resource limits are exceeded. For example, if <b>DDS_ResourceLimitsQosPolicy::max_samples_per_instance</b> (p. 1055) on the DataReader is 10 and the coherent set has 15 samples for a given instance, the coherent set is a large coherent set that will be considered incomplete.</p> <p>The resource limits that can lead to large coherent sets are: <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055), <b>DDS_ResourceLimitsQosPolicy::max_samples_per_instance</b> (p. 1055), <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1055), and <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 657).</p> <p>This constant is an extension to the DDS standard.</p>

## Enumerator

<p>DDS_LOST_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435): a resource limit on the number of samples from a given remote writer that a <b>DDSDataReader</b> (p. 1288) may store (<b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 657)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 657) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT</b> (p. 141). This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_LOST_BY_VIRTUAL_WRITERS_LIMIT</p>	<p>A resource limit on the number of virtual writers from which a <b>DDSDataReader</b> (p. 1288) may read (<b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_virtual_writers</b> (p. 662)) was reached. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_LOST_BY_REMOTE_WRITERS_PER_SAMPLE_LIMIT</p>	<p>A resource limit on the number of remote writers per sample (<b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers_per_sample</b> (p. 663)) was reached. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_LOST_BY_AVAILABILITY_WAITING_TIME</p>	<p><b>DDS_AvailabilityQosPolicy::max_data_availability_waiting_time</b> (p. 599) expired. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_AvailabilityQosPolicy</b> (p. 596)</p>

## Enumerator

<p>DDS_LOST_BY_REMOTE_WRITER_SAMPLES_↔ PER_VIRTUAL_QUEUE_LIMIT</p>	<p>A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a <b>DDSDataReader</b> (p. 1288) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_LOST_BY_OUT_OF_MEMORY</p>	<p>A sample was lost because there was not enough memory to store the sample. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_LOST_BY_UNKNOWN_INSTANCE</p>	<p>A received sample was lost because it doesn't contain enough information for the reader to know what instance it is associated with. This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_DESERIALIZATION_FAILURE</p>	<p>A received sample was lost because it could not be deserialized. This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_DECODE_FAILURE</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435): A received sample was lost because it could not be decoded. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435), the sample will be rejected, not lost, with reason <b>DDS_REJECTED_BY_DECODE_FAILURE</b> (p. 142). This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435): A resource limit on the number of samples per instance (<b>DDS_ResourceLimitsQosPolicy::max_samples_↔ per_instance</b> (p. 1055)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_ResourceLimitsQosPolicy::max_↔ samples_per_instance</b> (p. 1055) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_↔ SAMPLES_PER_INSTANCE_LIMIT</b> (p. 141). This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_ResourceLimitsQosPolicy</b> (p. 1052)</p>

## Enumerator

DDS_LOST_BY_SAMPLES_LIMIT	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435): A resource limit on the number of samples (<b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_SAMPLES_LIMIT</b> (p. 140). This constant is an extension to the DDS standard.</p> <p>See also</p> <p style="text-align: center;"><b>DDS_ResourceLimitsQosPolicy</b> (p. 1052)</p>
---------------------------	---

## 7.21.2.2 DDS\_SampleRejectedStatusKind

```
enum DDS_SampleRejectedStatusKind
```

Kinds of reasons for rejecting a sample.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

## Enumerator

DDS_NOT_REJECTED	The sample was not rejected.
DDS_REJECTED_BY_INSTANCES_LIMIT	<p>Connnext DDS does not reject samples based on instance limits (<b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1055)), so this value will never be used.</p> <p>See also</p> <p style="text-align: center;"><b>DDS_LOST_BY_INSTANCES_LIMIT&lt;P&gt;</b> (p. 136) This value is not currently used by our middleware, but has been kept because it is part of the DDS specification.</p>
DDS_REJECTED_BY_SAMPLES_LIMIT	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435): A resource limit on the number of samples (<b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055) will trigger a loss, not a rejection, with reason <b>DDS_LOST_BY_SAMPLES_LIMIT</b> (p. 140).</p> <p>See also</p> <p style="text-align: center;"><b>DDS_ResourceLimitsQosPolicy</b> (p. 1052)</p>
	Generated by Doxygen

## Enumerator

<p>DDS_REJECTED_BY_SAMPLES_PER_INSTANCE_↔ _LIMIT</p>	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435): A resource limit on the number of samples per instance (<b>DDS_ResourceLimitsQosPolicy::max_↔ samples_per_instance</b> (p. 1055)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_ResourceLimitsQosPolicy_↔ ::max_samples_per_instance</b> (p. 1055) will trigger a loss, not a rejection, with reason <b>DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT</b> (p. 139).</p> <p>See also</p> <p>ResourceLimitsQosPolicy</p>
<p>DDS_REJECTED_BY_SAMPLES_PER_REMOTE_↔ WRITER_LIMIT</p>	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435): a resource limit on the number of samples from a given remote writer that a <b>DDSDataReader</b> (p. 1288) may store (<b>DDS_DataReaderResourceLimitsQos_↔ Policy::max_samples_per_remote_writer</b> (p. 657)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435), reaching <b>DDS_DataReaderResourceLimitsQos_↔ Policy::max_samples_per_remote_writer</b> (p. 657) will trigger a loss, not a rejection, with reason <b>DDS_LOST_↔ _BY_SAMPLES_PER_REMOTE_WRITER_LIMIT</b> (p. 138). This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>
<p>DDS_REJECTED_BY_REMOTE_WRITER_↔ SAMPLES_PER_VIRTUAL_QUEUE_LIMIT</p>	<p>A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a <b>DDSDataReader</b> (p. 1288) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)</p>

## Enumerator

DDS_REJECTED_BY_DECODE_FAILURE	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435): A received sample was rejected because it could not be decoded. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435), the sample will be lost, not rejected, with reason <b>DDS_LOST_BY_DECODE_FAILURE</b> (p. 139). If a sample was rejected for this reason and the <b>DDSDataWriter</b> (p. 1321) set <b>DDS_DataWriter</b>↔<b>ProtocolQosPolicy::disable_inline_keyhash</b> (p. 675) to <b>DDS_BOOLEAN_TRUE</b> (p. 317), then <b>DDS_SampleRejectedStatus::last_instance_handle</b> (p. 1095) may not be correct if the sample was encrypted.</p> <p>This constant is an extension to the DDS standard.</p>
--------------------------------	--

## 7.21.3 Function Documentation

## 7.21.3.1 DDS\_DataReaderQos\_equals()

```
DDS_Boolean DDS_DataReaderQos_equals (
    const struct DDS_DataReaderQos * self,
    const struct DDS_DataReaderQos * other )
```

Compares two **DDS\_DataReaderQos** (p. 644) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This DataReaderQos.
<i>other</i>	<< <i>in</i> >> (p. 238) The other DataReaderQos to be compared with this DataReaderQos.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

Referenced by **DDS\_DataReaderQos::operator!=()**, and **DDS\_DataReaderQos::operator==(())**.

## 7.21.3.2 print()

```
DDS_ReturnCode_t DDS_DataReaderQos::print ( ) const [inline]
```

Prints this **DDS\_DataReaderQos** (p. 644) to stdout.

Only the differences between this **DDS\_DataReaderQos** (p. 644) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

### 7.21.3.3 to\_string() [1/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

Only the differences between this **DDS\_DataReaderQos** (p. 644) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1031).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataReaderQos** (p. 644) is written to the buffer.

#### Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145)

### 7.21.3.4 to\_string() [2/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DataReaderQos & base ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

This overload behaves the same as **DDS\_DataReaderQos::to\_string** (p. 143) but allows the caller to specify the **DDS\_↔\_DataReaderQos** (p. 644), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DataReaderQos</b> (p. 644) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_↔\_QosPrintFormat&) const** (p. 145)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.21.3.5 to\_string() [3/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

This overload behaves the same as **DDS\_DataReaderQos::to\_string** (p. 143) but allows the caller to specify the **DDS\_↔\_QosPrintFormat** (p. 1031) which is used to format the output.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145)

References **DDS\_RETCODE\_ERROR**, and **DDS\_RETCODE\_OK**.

## 7.21.3.6 to\_string() [4/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_DataReaderQos & base,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

Only the differences between this **DDS\_DataReaderQos** (p. 644) and the **DDS\_DataReaderQos** (p. 644) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataReaderQos** (p. 644) is written to the buffer.

## Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DataReaderQos</b> (p. 644) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## 7.21.3.7 to\_string() [5/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

This overload behaves the same as **DDS\_DataReaderQos::to\_string** (p. 143) but prints the entire **DDS\_DataReaderQos** (p. 644) object. The only valid value for the argument of type **DDS\_QosPrintAll\_t** (p. 1030) is **DDS\_QOS\_PRINT\_ALL** (p. 164).

## For example

```
DataReaderQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS\_QosPrintFormat** (p. 1031).

## Parameters

<i>string</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

## See also

**DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145)

References **DDS\_QosPrintFormat\_INITIALIZER**.

### 7.21.3.8 to\_string() [6/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
    char * string,
    DDS_UnsignedLong & string_size,
    const DDS_QosPrintAll_t & ,
    const DDS_QosPrintFormat & format ) const [inline]
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 644).

This overload behaves the same as the **DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 146) overload. The only difference is that it allows the caller to specify the **DDS\_QosPrintFormat** (p. 1031) which is used to format the resultant string.

#### Parameters

<i>string</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 644). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>format</i>	<< <i>in</i> >> (p. 238) The <b>DDS_QosPrintFormat</b> (p. 1031) to be used to format the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 336) if no error was encountered.

#### See also

**DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_DataReaderQos&, const DDS\_QosPrintFormat&) const** (p. 145)

## 7.22 Read Conditions

**DDSReadCondition** (p. 1574) and associated elements

### Classes

- struct **DDS\_ReadConditionParams**
  - <<*extension*>> (p. 237) Input parameters for **DDSDataReader::create\_readcondition\_w\_params** (p. 1293)
- class **DDSReadCondition**
  - <<*interface*>> (p. 237) Conditions specifically dedicated to read operations and attached to one **DDSDataReader** (p. 1288).

### 7.22.1 Detailed Description

**DDSReadCondition** (p. 1574) and associated elements

## 7.23 Query Conditions

**DDSQueryCondition** (p. 1573) and associated elements

### Classes

- struct **DDS\_QueryConditionParams**

***DDS\_StreamKind** (p. 162) and associated elements*

## Classes

- struct **DDS\_CoherentSetInfo\_t**  
 <<extension>> (p. 237) Type definition for a coherent set info.
- struct **DDS\_SampleInfo**  
 Information that accompanies each sample that is read or taken.
- struct **DDS\_SampleInfoSeq**  
 Declares IDL sequence < **DDS\_SampleInfo** (p. 1082) > .

## Functions

- **DDS\_Boolean DDS\_CoherentSetInfo\_equals** (const struct **DDS\_CoherentSetInfo\_t** \*self, const struct **DDS\_CoherentSetInfo\_t** \*other)  
 Compares this CoherentSetInfo with another CoherentSetInfo for equality.
- void **DDS\_CoherentSetInfo\_copy** (struct **DDS\_CoherentSetInfo\_t** \*self, const struct **DDS\_CoherentSetInfo\_t** \*other)  
 Copies another CoherentSetInfo into this CoherentSetInfo.
- void **DDS\_SampleInfo\_get\_sample\_identity** (const struct **DDS\_SampleInfo** \*self, struct **DDS\_SampleIdentity\_t** \*identity)  
 <<extension>> (p. 237) Retrieves the identity of the sample
- void **DDS\_SampleInfo\_get\_related\_sample\_identity** (const struct **DDS\_SampleInfo** \*self, struct **DDS\_SampleIdentity\_t** \*related\_identity)  
 <<extension>> (p. 237) Retrieves the identity of a sample related to this one

### 7.24.1 Detailed Description

**DDS\_SampleInfo** (p. 1082), **DDS\_SampleStateKind** (p. 156), **DDS\_ViewStateKind** (p. 158), **DDS\_InstanceStateKind** (p. 160) and associated elements

### 7.24.2 Function Documentation

#### 7.24.2.1 DDS\_CoherentSetInfo\_equals()

```
DDS_Boolean DDS_CoherentSetInfo_equals (
    const struct DDS_CoherentSetInfo_t * self,
    const struct DDS_CoherentSetInfo_t * other )
```

Compares this CoherentSetInfo with another CoherentSetInfo for equality.

#### Parameters

<i>self</i>	<<in>> (p. 238) This CoherentSetInfo. Cannot be NULL.
<i>other</i>	<<in>> (p. 238) The other CoherentSetInfo to be compared with this GUID. Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p.317) if the two `CoherentSetInfos` have equal values, or **DDS\_BOOLEAN\_FALSE** (p.317) otherwise.

7.24.2.2 `DDS_CoherentSetInfo_copy()`

```
void DDS_CoherentSetInfo_copy (
    struct DDS_CoherentSetInfo_t * self,
    const struct DDS_CoherentSetInfo_t * other )
```

Copies another `CoherentSetInfo` into this `CoherentSetInfo`.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This <code>CoherentSetInfo</code> . Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The other <code>CoherentSetInfo</code> to be copied.

7.24.2.3 `DDS_SampleInfo_get_sample_identity()`

```
void DDS_SampleInfo_get_sample_identity (
    const struct DDS_SampleInfo * self,
    struct DDS_SampleIdentity_t * identity )
```

<<*extension*>> (p. 237) Retrieves the identity of the sample

The identity is composed of the `DDS_SampleInfo::original_publication_virtual_guid` (p.1090) and the `DDS_SampleInfo::original_publication_virtual_sequence_number` (p.1090)

## See also

`DDS_SampleInfo_get_related_sample_identity` (p.150)

7.24.2.4 `DDS_SampleInfo_get_related_sample_identity()`

```
void DDS_SampleInfo_get_related_sample_identity (
    const struct DDS_SampleInfo * self,
    struct DDS_SampleIdentity_t * related_identity )
```

<<*extension*>> (p. 237) Retrieves the identity of a sample related to this one

A sample can be logically related to another sample, when the `DDSDataWriter` (p.1321) wrote it using `DDS_WriteParams_t::related_sample_identity` (p.1252). By default, a sample does not have a related sample, and this operation returns `DDS_UNKNOWN_SAMPLE_IDENTITY` (p.479).

The related identity is composed of the `DDS_SampleInfo::related_original_publication_virtual_guid` (p.1090) and the `DDS_SampleInfo::related_original_publication_virtual_sequence_number` (p.1091)

See also

**DDS\_WriteParams\_t::related\_sample\_identity** (p. 1252)

## 7.25 Topic Queries

**DDSTopicQuery** (p. 1627) and associated elements.

### Classes

- struct **DDS\_TopicQuerySelection**  
 <<extension>> (p. 237) Specifies the data query that defines a **DDSTopicQuery** (p. 1627)
- struct **DDS\_TopicQueryData**  
 <<extension>> (p. 237) Provides information about a **DDSTopicQuery** (p. 1627)
- class **DDSTopicQuery**  
 <<extension>> (p. 237) Allows a **DDSDataReader** (p. 1288) to query the sample cache of its matching **DDSDataWriter** (p. 1321).
- class **DDSTopicQueryHelper**  
 Helpers to provide utility operations related to **DDSTopicQuery** (p. 1627).

### Typedefs

- typedef struct **DDS\_TopicQuerySelection DDS\_TopicQuerySelection**  
 <<extension>> (p. 237) Specifies the data query that defines a **DDSTopicQuery** (p. 1627)
- typedef struct **DDS\_TopicQueryData DDS\_TopicQueryData**  
 <<extension>> (p. 237) Provides information about a **DDSTopicQuery** (p. 1627)

### Enumerations

- enum **DDS\_TopicQuerySelectionKind** {  
**DDS\_TOPIC\_QUERY\_SELECTION\_KIND\_HISTORY\_SNAPSHOT** ,  
**DDS\_TOPIC\_QUERY\_SELECTION\_KIND\_CONTINUOUS** }  
 Kinds of **TopicQuerySelection**.

### Variables

- const struct **DDS\_TopicQuerySelection DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER**  
 Special value for creating a **DDSTopicQuery** (p. 1627) that applies the same filter as the **DataReader's DDSContentFilteredTopic** (p. 1283).
- const struct **DDS\_TopicQuerySelection DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL**  
 Special value for creating a **DDSTopicQuery** (p. 1627) that selects all the samples in a **DDSDataWriter** (p. 1321) cache.

### 7.25.1 Detailed Description

**DDSTopicQuery** (p. 1627) and associated elements.

TopicQueries allow a **DDSDataReader** (p. 1288) to query the sample cache of its matching **DDSDataWriter** (p. 1321). A user can create a **DDSTopicQuery** (p. 1627) with the **DDSDataReader::create\_topic\_query** (p. 1309) API. When a DataReader

creates a TopicQuery, DDS will propagate it to other DomainParticipants and their DataWriters. When a DataWriter matching with the DataReader that created the TopicQuery receives it, it will send the cached samples that pass the TopicQuery's filter.

To configure how to dispatch a TopicQuery, the **DDS\_DataWriterQos** (p. 689) includes the **DDS\_TopicQueryDispatchQosPolicy** (p. 1141) policy. By default, a DataWriter ignores TopicQueries unless they are explicitly enabled using this policy.

The delivery of TopicQuery samples occurs in a separate RTPS channel. This allows DataReaders to receive TopicQuery samples and live samples in parallel. This is a key difference with respect to the Durability QoS policy.

Late-joining DataWriters will also discover existing TopicQueries. To delete a TopicQuery you must use **DDSDataReader::delete\_topic\_query** (p. 1310).

After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

By default, a TopicQuery queries the samples that were in the DataWriter cache at the time the DataWriter receives the TopicQuery. However a TopicQuery can be created in a "continuous" mode. A DataWriter will continue delivering samples that pass a continuous TopicQuery filter until the DataReader application explicitly deletes it.

The samples received in response to a TopicQuery are stored in the associated DataReader's cache. Any of the read/take operations can retrieve TopicQuery samples. The field **DDS\_SampleInfo::topic\_query\_guid** (p. 1092) associates each sample to its TopicQuery. If the read sample is not in response to a TopicQuery then this field will be **DDS\_GUID\_UNKNOWN** (p. 331). Note that the same data may be received several times, depending on how many TopicQueries the DataReader creates and their TopicQuerySelection.

You can choose to read or take only TopicQuery samples, only live samples, or both. To support this ReadConditions and QueryConditions provide the **DDSDataReader::create\_querycondition\_w\_params** (p. 1294) and **DDSDataReader::create\_readcondition\_w\_params** (p. 1293) APIs.

Each TopicQuery is identified by a GUID that can be accessed using the **DDSTopicQuery::get\_guid** (p. 1627) method.

### 7.25.2 Debugging Topic Queries

There are a number of ways in which to gain more insight into what is happening in an application that is creating Topic Queries.

### 7.25.2.1 The Built-in ServiceRequest DataReader

TopicQueries are communicated to publishing applications through a built-in **DDS\_ServiceRequest** (p. 1097) channel. The ServiceRequest channel is designed to be generic so that it can be used for many different purposes, one of which is TopicQueries.

When a DataReader creates a TopicQuery, a **DDS\_ServiceRequest** (p. 1097) message is sent containing the TopicQuery information. Just as there are built-in DataReaders for **DDS\_ParticipantBuiltinTopicData** (p. 979), **DDS\_SubscriptionBuiltinTopicData** (p. 1108), and **DDS\_PublicationBuiltinTopicData** (p. 1010), there is a fourth built-in DataReader for ServiceRequests.

The new built-in DataReader can be retrieved using the built-in subscriber and **DDSSubscriber::lookup\_datareader** (p. 1604). The topic name is **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303). Installing a listener with the **DDSDataReaderListener::on\_data\_available** (p. 1317) callback implemented will allow a publishing application to be notified whenever a TopicQuery has been received from a subscribing application.

The **DDS\_ServiceRequest::service\_id** (p. 1098) of a **DDS\_ServiceRequest** (p. 1097) corresponding to a **DDSTopicQuery** (p. 1627) will be **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 302) and the **DDS\_ServiceRequest::instance\_id** (p. 1098) will be equal to the GUID of the **DDSTopicQuery** (p. 1627) (see **DDSTopicQuery::get\_guid** (p. 1627)).

The **DDS\_ServiceRequest::request\_body** (p. 1098) is a sequence of bytes containing more information about the TopicQuery. This information can be retrieved using the **DDSTopicQueryHelper::topic\_query\_data\_from\_service\_request** (p. 1628) function. The resulting **DDS\_TopicQueryData** (p. 1140) contains the **DDS\_TopicQuerySelection** (p. 1143) that the **DDSTopicQuery** (p. 1627) was created with, the GUID of the original DataReader that created the TopicQuery, and the topic name of that DataReader. Note: When TopicQueries are propagated through one or more Routing Services, the last DataReader that issued the TopicQuery will be a Routing Service DataReader. The **DDS\_TopicQueryData::original\_related\_reader\_guid** (p. 1140), however, will be that of the first DataReader to have created the TopicQuery.

### 7.25.2.2 The on\_service\_request\_accepted DataWriter Listener Callback

It is possible that a **DDS\_ServiceRequest** (p. 1097) for a **DDSTopicQuery** (p. 1627) is received but is not immediately dispatched to a DataWriter. This can happen, for example, if a DataWriter was not matching with a DataReader at the time that the TopicQuery was received by the publishing application. The **DDSDataWriterListener::on\_service\_request\_accepted** (p. 1350) callback notifies a DataWriter when a ServiceRequest has been dispatched to that DataWriter. The **DDS\_ServiceRequestAcceptedStatus** (p. 1099) provides information about how many ServiceRequests have been accepted by the DataWriter since the last time that the status was read. The status also includes the **DDS\_ServiceRequestAcceptedStatus::last\_request\_handle** (p. 1100), which is the **DDS\_InstanceHandle\_t** (p. 74) of the last ServiceRequest that was accepted. This instance handle can be used to read samples per instance from the built-in ServiceRequest DataReader and correlate which ServiceRequests have been dispatched to which DataWriters.

### 7.25.2.3 Reading TopicQuery Samples

Data samples that are received by a DataReader in response to a TopicQuery can be identified with two pieces of information from the corresponding **DDS\_SampleInfo** (p. 1082) to the sample. First, if the **DDS\_SampleInfo::topic\_query\_guid** (p. 1092) is not equal to **DDS\_GUID\_UNKNOWN** (p. 331) then the sample is in response to the TopicQuery with that GUID (see **DDSTopicQuery::get\_guid** (p. 1627)). Second, if the sample is in response to a TopicQuery and the **DDS\_SampleInfo::flag** (p. 1091) **DDS\_INTERMEDIATE\_TOPIC\_QUERY\_SAMPLE** (p. 475) flag is set then this is not the last sample in response to the TopicQuery for a DataWriter identified by **DDS\_SampleInfo::original\_publication\_virtual\_guid** (p. 1090). If that flag is not set then there will be no more samples corresponding to that TopicQuery coming from the DataWriter.

## 7.25.3 Typedef Documentation

### 7.25.3.1 DDS\_TopicQuerySelection

```
typedef struct DDS_TopicQuerySelection DDS_TopicQuerySelection
```

<<*extension*>> (p. 237) Specifies the data query that defines a **DDSTopicQuery** (p. 1627)

The query format is similar to the expression and parameters of a **DDSQueryCondition** (p. 1573) or a **DDSContentFilteredTopic** (p. 1283), as described in **DDSDomainParticipant::create\_contentfilteredtopic\_with\_filter** (p. 1386).

There are two special queries:

- **DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL** (p. 155)
- **DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER** (p. 155)

See also

**Queries and Filters Syntax** (p. 179)

### 7.25.3.2 DDS\_TopicQueryData

```
typedef struct DDS_TopicQueryData DDS_TopicQueryData
```

<<*extension*>> (p. 237) Provides information about a **DDSTopicQuery** (p. 1627)

Contains the information about a TopicQuery that can be retrieved using **DDSTopicQueryHelper::topic\_query\_data\_from\_service\_request** (p. 1628).

See also

**DDSTopicQueryHelper::topic\_query\_data\_from\_service\_request** (p. 1628)

## 7.25.4 Enumeration Type Documentation

### 7.25.4.1 DDS\_TopicQuerySelectionKind

```
enum DDS_TopicQuerySelectionKind
```

Kinds of TopicQuerySelection.

See also

**DDS\_TopicQuerySelection** (p. 1143)

## Enumerator

DDS_TOPIC_QUERY_SELECTION_KIND_↔ HISTORY_SNAPSHOT	Indicates that the <b>DDSTopicQuery</b> (p. 1627) may only select samples that were in the DataWriter cache upon reception. <b>[default]</b>
DDS_TOPIC_QUERY_SELECTION_KIND_↔ CONTINUOUS	Indicates that the <b>DDSTopicQuery</b> (p. 1627) may continue selecting samples published after its reception.  The subscribing application must explicitly delete the TopicQuery (see <b>DDSDataReader::delete_topic_query</b> (p. 1310)) to signal the DataWriters to stop publishing samples for it.

### 7.25.5 Variable Documentation

#### 7.25.5.1 DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER [extern]
```

Special value for creating a **DDSTopicQuery** (p. 1627) that applies the same filter as the DataReader's **DDSContent**↔  
**FilteredTopic** (p. 1283).

If the **DDSDataReader** (p. 1288) that creates the **DDSTopicQuery** (p. 1627) uses a **DDSContentFilteredTopic** (p. 1283), this **DDS\_TopicQuerySelection** (p. 1143) value indicates that the TopicQuery should use the same filter.

Otherwise it behaves as **DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL** (p. 155).

#### 7.25.5.2 DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_SELECT_ALL [extern]
```

Special value for creating a **DDSTopicQuery** (p. 1627) that selects all the samples in a **DDSDataWriter** (p. 1321) cache.

## 7.26 Sample States

**DDS\_SampleStateKind** (p. 156) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_SampleStateMask**  
A bit-mask (list) of sample states, i.e. **DDS\_SampleStateKind** (p. 156).

## Enumerations

- enum **DDS\_SampleStateKind** {  
**DDS\_READ\_SAMPLE\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_READ\_SAMPLE\_STATE** = 0x0001 << 1 }

*Indicates whether or not a sample has ever been read.*

## Variables

- const **DDS\_SampleStateMask** **DDS\_ANY\_SAMPLE\_STATE**  
*Any sample state **DDS\_READ\_SAMPLE\_STATE** (p. 157) | **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157).*

### 7.26.1 Detailed Description

**DDS\_SampleStateKind** (p. 156) and associated elements

### 7.26.2 Typedef Documentation

#### 7.26.2.1 DDS\_SampleStateMask

```
typedef DDS_UnsignedLong DDS_SampleStateMask
```

A bit-mask (list) of sample states, i.e. **DDS\_SampleStateKind** (p. 156).

### 7.26.3 Enumeration Type Documentation

#### 7.26.3.1 DDS\_SampleStateKind

```
enum DDS_SampleStateKind
```

Indicates whether or not a sample has ever been read.

For each sample received, the middleware internally maintains a `sample_state` relative to each **DDSDataReader** (p. 1288). The sample state can be either:

- **DDS\_READ\_SAMPLE\_STATE** (p. 157) indicates that the **DDSDataReader** (p. 1288) has already accessed that sample by means of a read or take operation.
- **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157) indicates that the **DDSDataReader** (p. 1288) has not accessed that sample before.

The sample state will, in general, be different for each sample in the collection returned by read or take.

## Enumerator

DDS_READ_SAMPLE_STATE	Sample has been read.
DDS_NOT_READ_SAMPLE_STATE	Sample has not been read.

## 7.26.4 Variable Documentation

### 7.26.4.1 DDS\_ANY\_SAMPLE\_STATE

```
const DDS_SampleStateMask DDS_ANY_SAMPLE_STATE [extern]
```

Any sample state **DDS\_READ\_SAMPLE\_STATE** (p. 157) | **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157).

## Examples

**HelloWorld\_subscriber.cxx.**

## 7.27 View States

**DDS\_ViewStateKind** (p. 158) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_ViewStateMask**  
A bit-mask (list) of view states, i.e. **DDS\_ViewStateKind** (p. 158).

### Enumerations

- enum **DDS\_ViewStateKind** {  
**DDS\_NEW\_VIEW\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_NEW\_VIEW\_STATE** = 0x0001 << 1 }  
*Indicates whether or not an instance is new.*

### Variables

- const **DDS\_ViewStateMask DDS\_ANY\_VIEW\_STATE**  
Any view state **DDS\_NEW\_VIEW\_STATE** (p. 159) | **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 159).

### 7.27.1 Detailed Description

**DDS\_ViewStateKind** (p. 158) and associated elements

### 7.27.2 Typedef Documentation

#### 7.27.2.1 DDS\_ViewStateMask

```
typedef DDS_UnsignedLong DDS_ViewStateMask
```

A bit-mask (list) of view states, i.e. **DDS\_ViewStateKind** (p. 158).

### 7.27.3 Enumeration Type Documentation

#### 7.27.3.1 DDS\_ViewStateKind

```
enum DDS_ViewStateKind
```

Indicates whether or not an instance is new.

For each instance (identified by the key), the middleware internally maintains a view state relative to each **DDSDataReader** (p. 1288). The view state can be either:

- **DDS\_NEW\_VIEW\_STATE** (p. 159) indicates that either this is the first time that the **DDSDataReader** (p. 1288) has ever accessed samples of that instance, or else that the **DDSDataReader** (p. 1288) has accessed previous samples of the instance, but the instance has since been reborn (i.e. become not-alive and then alive again). These two cases are distinguished by examining the **DDS\_SampleInfo::disposed\_generation\_count** (p. 1087) and the **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1087).
- **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 159) indicates that the **DDSDataReader** (p. 1288) has already accessed samples of the same instance and that the instance has not been reborn since.

The `view_state` available in the **DDS\_SampleInfo** (p. 1082) is a snapshot of the view state of the instance relative to the **DDSDataReader** (p. 1288) used to access the samples at the time the collection was obtained (i.e. at the time read or take was called). The `view_state` is therefore the same for all samples in the returned collection that refer to the same instance.

Once an instance has been detected as not having any "live" writers and all the samples associated with the instance are "taken" from the **DDSDataReader** (p. 1288), the middleware can reclaim all local resources regarding the instance. Future samples will be treated as "never seen."

## Enumerator

DDS_NEW_VIEW_STATE	New instance. This latest generation of the instance has not previously been accessed.
DDS_NOT_NEW_VIEW_STATE	Not a new instance. This latest generation of the instance has previously been accessed.

## 7.27.4 Variable Documentation

### 7.27.4.1 DDS\_ANY\_VIEW\_STATE

```
const DDS_ViewStateMask DDS_ANY_VIEW_STATE [extern]
```

Any view state **DDS\_NEW\_VIEW\_STATE** (p. 159) | **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 159).

## Examples

**HelloWorld\_subscriber.cxx.**

## 7.28 Instance States

**DDS\_InstanceStateKind** (p. 160) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_InstanceStateMask**  
A bit-mask (list) of instance states, i.e. **DDS\_InstanceStateKind** (p. 160).

### Enumerations

- enum **DDS\_InstanceStateKind** {  
**DDS\_ALIVE\_INSTANCE\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** = 0x0001 << 1 ,  
**DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** = 0x0001 << 2 }  
Indicates if the samples are from a live **DDSDataWriter** (p. 1321) or not.

### Variables

- const **DDS\_InstanceStateMask DDS\_ANY\_INSTANCE\_STATE**  
Any instance state **ALIVE\_INSTANCE\_STATE** | **NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** | **NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE**.
- const **DDS\_InstanceStateMask DDS\_NOT\_ALIVE\_INSTANCE\_STATE**  
Not alive instance state **NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** | **NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE**.

## 7.28.1 Detailed Description

**DDS\_InstanceStateKind** (p. 160) and associated elements

## 7.28.2 Typedef Documentation

### 7.28.2.1 DDS\_InstanceStateMask

```
typedef DDS_UnsignedLong DDS_InstanceStateMask
```

A bit-mask (list) of instance states, i.e. **DDS\_InstanceStateKind** (p. 160).

## 7.28.3 Enumeration Type Documentation

### 7.28.3.1 DDS\_InstanceStateKind

```
enum DDS_InstanceStateKind
```

Indicates if the samples are from a live **DDSDataWriter** (p. 1321) or not.

For each instance, the middleware internally maintains an instance state. The instance state can be:

- **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) indicates that (a) samples have been received for the instance, (b) there are live **DDSDataWriter** (p. 1321) entities writing the instance, and (c) the instance has not been explicitly disposed (or else more samples have been received after it was disposed).
- **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) indicates the instance was explicitly disposed by a **DDSDataWriter** (p. 1321) by means of the dispose operation.
- **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) indicates the instance has been declared as not-alive by the **DDSDataReader** (p. 1288) because it detected that there are no live **DDSDataWriter** (p. 1321) entities writing that instance.

The precise behavior events that cause the instance state to change depends on the setting of the OWNERSHIP QoS:

- If **OWNERSHIP** (p. 414) is set to **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415), then the instance state becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) only if the **DDSDataWriter** (p. 1321) that "owns" the instance explicitly disposes it. The instance state becomes **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) again only if the **DDSDataWriter** (p. 1321) that owns the instance writes it.
- If **OWNERSHIP** (p. 414) is set to **DDS\_SHARED\_OWNERSHIP\_QOS** (p. 415), then the instance state becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) if any **DDSDataWriter** (p. 1321) explicitly disposes the instance. The instance state becomes **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) as soon as any **DDSDataWriter** (p. 1321) writes the instance again.

The instance state available in the **DDS\_SampleInfo** (p. 1082) is a snapshot of the instance state of the instance at the time the collection was obtained (i.e. at the time read or take was called). The instance state is therefore the same for all samples in the returned collection that refer to the same instance.

## Enumerator

DDS_ALIVE_INSTANCE_STATE	Instance is currently in existence.
DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE	Not alive disposed instance. The instance has been disposed by a DataWriter.
DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE	Not alive no writers for instance. None of the <b>DDSDataWriter</b> (p. 1321) objects that are currently alive (according to the <b>LIVELINESS</b> (p. 409)) are writing the instance.

## 7.28.4 Variable Documentation

### 7.28.4.1 DDS\_ANY\_INSTANCE\_STATE

```
const DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE [extern]
```

Any instance state ALIVE\_INSTANCE\_STATE | NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE | NOT\_ALIVE\_NO\_↔ WRITERS\_INSTANCE\_STATE.

## Examples

**HelloWorld\_subscriber.cxx.**

### 7.28.4.2 DDS\_NOT\_ALIVE\_INSTANCE\_STATE

```
const DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE [extern]
```

Not alive instance state NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE | NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_↔ STATE.

## 7.29 Stream Kinds

**DDS\_StreamKind** (p. 162) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_StreamKindMask**  
A bit-mask (list) of stream kinds, i.e. **DDS\_StreamKind** (p. 162).

## Enumerations

- enum `DDS_StreamKind` {  
`DDS_LIVE_STREAM = 0x0001 << 0` ,  
`DDS_TOPIC_QUERY_STREAM = 0x0001 << 1` }  
*Indicates if the samples are TopicQuery samples or not.*

### 7.29.1 Detailed Description

`DDS_StreamKind` (p. 162) and associated elements

### 7.29.2 Typedef Documentation

#### 7.29.2.1 `DDS_StreamKindMask`

```
typedef DDS_UnsignedLong DDS_StreamKindMask
```

A bit-mask (list) of stream kinds, i.e. `DDS_StreamKind` (p. 162).

### 7.29.3 Enumeration Type Documentation

#### 7.29.3.1 `DDS_StreamKind`

```
enum DDS_StreamKind
```

Indicates if the samples are TopicQuery samples or not.

Enumerator

<code>DDS_LIVE_STREAM</code>	Sample is a live data sample.
<code>DDS_TOPIC_QUERY_STREAM</code>	Sample is a TopicQuery sample.

## 7.30 Infrastructure Module

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

## Modules

- **Clock Selection**  
*APIs related to clock selection.*
- **Time Support**  
*Time and duration types and defines.*
- **GUID Support**  
*<<extension>> (p. 237) GUID type and defines.*
- **Sequence Number Support**  
*<<extension>> (p. 237) Sequence number type and defines.*
- **Exception Codes**  
*<<extension>> (p. 237) Exception codes.*
- **Return Codes**  
*Types of return codes.*
- **Status Kinds**  
*Kinds of communication status.*
- **QoS Policies**  
*Quality of Service (QoS) policies.*
- **Entity Support**  
***DDSEntity** (p. 1463), **DDSListener** (p. 1526) and related items.*
- **Conditions and WaitSets**  
***DDSCondition** (p. 1276) and **DDSWaitSet** (p. 1629) and related items.*
- **Cookie**  
*<<extension>> (p. 237) Unique identifier for a written data sample*
- **Sample Flags**  
*<<extension>> (p. 237) Flags for samples.*
- **WriteParams**  
*<<extension>> (p. 237)*
- **Heap Support in C**  
*<<extension>> (p. 237) Heap allocation and free routines in C*
- **Builtin Qos Profiles**  
*<<extension>> (p. 237) QoS libraries, profiles, and snippets that are automatically built into RTI Connext.*
- **User-managed Threads**  
*User-managed thread infrastructure.*
- **Octet Buffer Support**  
*<<extension>> (p. 237) Octet buffer creation, cloning, and deletion.*
- **Sequence Support**  
*The **FooSeq** (p. 1697) interface allows you to work with variable-length collections of homogeneous data.*
- **String Support**  
*<<extension>> (p. 237) String creation, cloning, assignment, and deletion.*

## Classes

- struct **DDS\_QosPrintAll\_t**  
*Special type which is used to select the `to_string` overloads when printing Qos objects.*

## Variables

- const **DDS\_QosPrintAll\_t** **DDS\_QOS\_PRINT\_ALL**

*Sentinel value that is used to select the `to_string` overload which prints all of the values of a Qos object.*

### 7.30.1 Detailed Description

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

"DCPS Infrastructure package"

### 7.30.2 Variable Documentation

#### 7.30.2.1 DDS\_QOS\_PRINT\_ALL

```
const DDS_QosPrintAll_t DDS_QOS_PRINT_ALL [extern]
```

Sentinel value that is used to select the `to_string` overload which prints all of the values of a Qos object.

This sentinel value is used to select the `to_string` overload which prints the entirety of a Qos object (e.g., **DDS\_DataReaderQos::to\_string(char\*, DDS\_UnsignedLong&, const DDS\_QosPrintAll\_t&) const** (p. 146)).

*Instantiates FooSeq* (p. 1697) < *DDS\_Boolean* (p. 320) >
- struct **DDS\_StringSeq**  
*Instantiates FooSeq* (p. 1697) < *char\** > with value type semantics.
- struct **DDS\_WstringSeq**  
*Instantiates FooSeq* (p. 1697) < *DDS\_Wchar* (p. 317)\* >

### 7.31.1 Detailed Description

Defines sequences of primitive data type. .

## 7.32 Multi-channel DataWriters

APIs related to Multi-channel DataWriters.

APIs related to Multi-channel DataWriters.

### 7.32.1 What is a Multi-channel DataWriter?

A Multi-channel **DDSDataWriter** (p. 1321) is a **DDSDataWriter** (p. 1321) that is configured to send data over multiple multicast addresses, according to some filtering criteria applied to the data.

To determine which multicast addresses will be used to send the data, the middleware evaluates a set of filters that are configured for the **DDSDataWriter** (p. 1321). Each filter "guards" a channel (a set of multicast addresses). Each time a multi-channel **DDSDataWriter** (p. 1321) writes data, the filters are applied. If a filter evaluates to true, the data is sent over that filter's associated channel (set of multicast addresses). We refer to this type of filter as a Channel Guard filter.

### 7.32.2 Configuration on the Writer Side

To configure a multi-channel **DDSDataWriter** (p. 1321), simply define a list of all its channels in the **DDS\_MultiChannelQosPolicy** (p. 964).

The **DDS\_MultiChannelQosPolicy** (p. 964) is propagated along with discovery traffic. The value of this policy is available in **DDS\_PublicationBuiltinTopicData::locator\_filter** (p. 1018).

### 7.32.3 Configuration on the Reader Side

No special changes are required in a subscribing application to get data from a multichannel **DDSDataWriter** (p. 1321). If you want the **DDSDataReader** (p. 1288) to subscribe to only a subset of the channels, use a **DDSContentFilteredTopic** (p. 1283).

For more information on Multi-channel DataWriters, refer to the `User's Manual`.

### 7.32.4 Reliability with Multi-Channel DataWriters

#### 7.32.4.1 Reliable Delivery

Reliable delivery is only guaranteed when the **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is set to **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418) and the filters in **DDS\_MultiChannelQosPolicy** (p. 964) are keyed-only based.

If any of the guard filters are based on non-key fields, RTI Connext only guarantees reception of the most recent data from the MultiChannel DataWriter.

### 7.32.4.2 Reliable Protocol Considerations

Reliability is maintained on a per-channel basis. Each channel has its own reliability channel send queue. The size of that queue is limited by `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1055) and/or `DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 700).

The protocol parameters described in `DDS_DataWriterProtocolQosPolicy` (p. 673) are applied per channel, with the following exceptions:

`DDS_RtpsReliableWriterProtocol_t::low_watermark` (p. 1063) and `DDS_RtpsReliableWriterProtocol_t::high_watermark` (p. 1063): The low watermark and high watermark control the queue levels (in number of samples) that determine when to switch between regular and fast heartbeat rates. With MultiChannel DataWriters, `high_watermark` and `low_watermark` refer to the DataWriter's queue (not the reliability channel queue). Therefore, periodic heartbeating cannot be controlled on a per-channel basis.

Important: With MultiChannel DataWriters, `low_watermark` and `high_watermark` refer to application samples even if batching is enabled. This behavior differs from the one without MultiChannel DataWriters (where `low_watermark` and `high_watermark` refer to batches).

`DDS_RtpsReliableWriterProtocol_t::heartbeats_per_max_samples` (p. 1067): This field defines the number of heartbeats per send queue. For MultiChannel DataWriters, the value is applied per channel. However, the send queue size that is used to calculate the a piggyback heartbeat rate is defined per DataWriter (see `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1055))

Important: With MultiChannel DataWriters, `heartbeats_per_max_samples` refers to samples even if batching is enabled. This behavior differs from the one without MultiChannels DataWriters (where `heartbeats_per_max_samples` refers to batches).

With batching and MultiChannel DataWriters, the size of the DataWriter's send queue should be configured using `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1055) instead of `max_batches` `DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 700) in order to take advantage of `heartbeats_per_max_samples`.

## 7.33 Transports

APIs related to RTI Connex pluggable transports.

### Modules

*Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.*

### 7.33.1 Detailed Description

APIs related to RTI Connex transport pluggable transports.

### 7.33.2 Overview

RTI Connex has a pluggable transports architecture. The core of RTI Connex is transport agnostic; it does not make any assumptions about the actual transports used to send and receive messages. Instead, the RTI Connex core uses an abstract "transport API" to interact with the **transport plugins** which implement that API.

A transport plugin implements the abstract transport API and performs the actual work of sending and receiving messages over a physical transport. A collection of **builtin plugins** (see **Built-in Transport Plugins** (p. 177)) is delivered with RTI Connex for commonly used transports. New transport plugins can easily be created, thus enabling RTI Connex applications to run over transports that may not even be conceived yet. This is a powerful capability and that distinguishes RTI Connex from competing middleware approaches.

RTI Connex also provides a set of APIs for installing and configuring transport plugins to be used in an application. So that RTI Connex applications work out of the box, a subset of the builtin transport plugins is preconfigured by default (see **DDS\_TransportBuiltinQosPolicy** (p. 1144)). You can "turn-off" some or all of the builtin transport plugins. In addition, you can configure other transport plugins for use by the application.

### 7.33.3 Transport Aliases

In order to use a transport plugin instance in an RTI Connex application, it must be registered with a **DDSDomainParticipant** (p. 1351). When you register a transport, you specify a sequence of "alias" strings to symbolically refer to the transport plugin. The same alias strings can be used to register more than one transport plugin.

You can register multiple transport plugins with a **DDSDomainParticipant** (p. 1351). An **alias** symbolically refers to one or more transport plugins registered with the **DDSDomainParticipant** (p. 1351). Builtin transport plugin instances can be referred to using preconfigured aliases (see **TRANSPORT\_BUILTIN** (p. 443)).

A transport plugin's class name is automatically used as an implicit alias. It can be used to refer to all the transport plugin instances of that class.

You can use aliases to refer to transport plugins, in order to specify:

- the transport plugins to use for **discovery** (see **DDS\_DiscoveryQosPolicy::enabled\_transports** (p. 732)), and for **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities (see **DDS\_TransportSelectionQosPolicy** (p. 1157)).
- the **multicast** addresses on which to receive discovery messages (see **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733)), and the multicast addresses and ports on which to receive user data (see **DDS\_DataReaderQos::multicast** (p. 651)).
- the **unicast ports** used for user data (see **DDS\_TransportUnicastQosPolicy** (p. 1158)) on both **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities.
- the transport plugins used to parse an address string in a locator (**Locator Format** (p. 465) and **NDDS\_DISCOVERY\_PEERS** (p. 464)).

A **DDSDomainParticipant** (p. 1351) (and contained its entities) start using a transport plugin after the **DDSDomainParticipant** (p. 1351) is enabled (see **DDSEntity::enable** (p. 1466)). An entity will use *all* the transport plugins that match the specified transport QoS policy. All transport plugins are treated uniformly, regardless of how they were created or registered; there is no notion of some transports being more "special" than others.

### 7.33.4 Transport Lifecycle

A transport plugin is owned by whomever creates it. Thus, if you create and register a transport plugin with a **DDSDomainParticipant** (p. 1351), you are responsible for deleting it by calling its destructor. Note that builtin transport plugins (**TRANSPORT\_BUILTIN** (p. 443)) and transport plugins that are loaded through the **PROPERTY** (p. 419) QoS policy (see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 173)) are automatically managed by RTI Connext.

A user-created transport plugin must not be deleted while it is still in use by a **DDSDomainParticipant** (p. 1351). This generally means that a user-created transport plugin instance can only be deleted after the **DDSDomainParticipant** (p. 1351) with which it was registered is deleted (see **DDSDomainParticipantFactory::delete\_participant** (p. 1445)). Note that a transport plugin *cannot* be "unregistered" from a **DDSDomainParticipant** (p. 1351).

A transport plugin instance cannot be registered with more than one **DDSDomainParticipant** (p. 1351) at a time. This requirement is necessary to guarantee the multi-threaded safety of the transport API.

If the same physical transport resources are to be used with more than one **DDSDomainParticipant** (p. 1351) in the same address space, the transport plugin should be written in such a way so that it can be instantiated multiple times—once for each **DDSDomainParticipant** (p. 1351) in the address space. Note that it is always possible to write the transport plugin so that multiple transport plugin instances share the same underlying resources; however the burden (if any) of guaranteeing multi-threaded safety to access shared resource shifts to the transport plugin developer.

### 7.33.5 Transport Class Attributes

A transport plugin instance is associated with two kinds of attributes:

- the *class* attributes that are decided by the plugin writer; these are invariant across all instances of the transport plugin class, and
- the *instance* attributes that can be set on a per instance basis by the transport plugin user.

Every transport plugin must specify the following class attributes.

**transport class id** (see **NDDS\_Transport\_Property\_t::classid** (p. 1777)) Identifies a transport plugin implementation class. It denotes a unique "class" to which the transport plugin instance belongs. The class is used to distinguish between different transport plugin implementations. Thus, a transport plugin vendor should ensure that its transport plugin implementation has a unique class.

Two transport plugin instances report the same class *iff* they have compatible implementations. Transport plugin instances with mismatching classes are not allowed (by the RTI Connext Core) to communicate with one another.

Multiple implementations (possibly from different vendors) for a physical transport mechanism can co-exist in an RTI Connext application, provided they use different transport class IDs.

The class ID can also be used to distinguish between different transport protocols over the same physical transport network (e.g., UDP vs. TCP over the IP routing infrastructure).

**transport significant address bit count** (see **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778)) RTI Connext's addressing is modeled after the IPv6 and uses 128-bit addresses ( **Transport Address** (p. 252) ) to route messages.

A transport plugin is expected to map the transport's internal addressing scheme to 128-bit addresses. Depending on the sign of this attribute, this mapping uses only *N* least significant bits (LSB) if positive or *N* most significant bits (MSB) if negative; these bits are specified by this attribute.

The remaining bits of an address using the  $128 - \text{abs}(\text{bit address})$  representation will be considered as part of the "network address" (see **Transport Network Address** (p. 171)) and thus ignored by the transport plugin's internal addressing scheme.

For *unicast* addresses, the transport plugin is expected to ignore the higher ( $128 - \text{NDDS\_Transport\_Property\_t::address\_bit\_count}$  (p. 1778)) bits. RTI Connex is free to manipulate those bits freely in the addresses passed in/out to the transport plugin APIs.

Theoretically, the significant address bits count,  $N$  is related to the size of the underlying transport network as follows:

$$\text{address\_bits\_count} \geq \text{ceil}(\log_2(\text{total\_addressable\_transport\_unicast\_interfaces}))$$

The equality holds when the most compact (theoretical) internal address mapping scheme is used. A practical address mapping scheme may waste some bits.

### 7.33.6 Transport Instance Attributes

The *per instance* attributes to configure the plugin instance are generally passed in to the plugin constructor. These are defined by the transport plugin writer, and can be used to:

- customize the behavior of an instance of a transport plugin, including the send and the receiver buffer sizes, the maximum message size, various transport level classes of service (CoS), and so on.

- specify the resource values, network interfaces to use, various transport level policies, and so on.

RTI Connex requires that every transport plugin instance must specify the `NDDS_Transport_Property_t::message_size_max` (p. 1779) and `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).

It is up to the transport plugin developer to make these available for configuration to transport plugin user.

Note that it is important that the instance attributes are "compatible" between the sending side and the receiving side of communicating applications using different instances of a transport plugin class. For example, if one side is configured to send messages larger than can be received by the other side, then communications via the plugin may fail.

### 7.33.7 Transport Network Address

The address bits not used by the transport plugin for its internal addressing constitute its network address bits.

In order for RTI Connex to properly route the messages, each unicast interface in the RTI Connex *domain* must have a unique address. RTI Connex allows the user to specify the value of the network address when installing a transport plugin via the `NDDSTransportSupport::register_transport()` (p. 1834) API.

The network address for a transport plugin should be chosen such that the resulting fully qualified 128-bit address will be unique in the RTI Connex domain. Thus, if two instances of a transport plugin are registered with a `DDSDomainParticipant` (p. 1351), they will be at different network addresses in order for their unicast interfaces to have unique fully qualified 128-bit addresses. It is also possible to create multiple transports with the same network address, as it can be useful for certain use cases; note that this will require special entity configuration for most transports to avoid clashes in resource use (e.g. sockets for UDPv4 transport).

### 7.33.8 Transport Send Route

By default, a transport plugin is configured to send outgoing messages destined to addresses in the network address range at which the plugin was registered.

RTI Connex allows the user to configure the routing of outgoing messages via the `NDDSTransportSupport::add_send_route()` (p. 1836) API, so that a transport plugin will be used to send messages only to certain ranges of destination addresses. The method can be called multiple times for a transport plugin, with different address ranges.

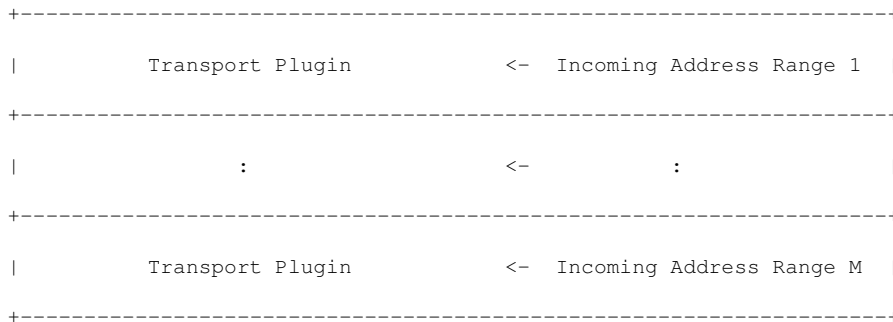

The user can set up a routing table to restrict the use of a transport plugin to send messages to selected addresses ranges.

### 7.33.9 Transport Receive Route

By default, a transport plugin is configured to receive incoming messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of incoming messages via the `NDDSTransportSupport::add_receive_route()` (p. 1836) API, so that a transport plugin will be used to receive messages only on certain ranges of addresses. The method can be called multiple times for a transport plugin, with different address ranges.

The user can set up a routing table to restrict the use of a transport plugin to receive messages from selected ranges. For example, the user may restrict a transport plugin to

- receive messages from a certain multicast address range.
- receive messages only on certain unicast interfaces (when multiple unicast interfaces are available on the transport plugin).

## 7.34 Installing Transport Plugins

Installing and configuring transports used by RTI Connext.

### Classes

- class **NDDSTransportSupport**  
 <<*interface*>> (p. 237) *The utility class used to configure RTI Connext pluggable transports.*

### Typedefs

- typedef `NDDS_TRANSPORT_HANDLE_TYPE_NATIVE` **NDDS\_Transport\_Handle\_t**  
*An opaque type representing the handle to a transport plugin registered with a **DDSDomainParticipant** (p. 1351).*
- typedef `NDDS_Transport_Plugin`  `(*)( * NDDS_Transport_create_plugin) ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQosPolicy *property_in)`  
*Function prototype for creating plugin through **DDS\_PropertyQosPolicy** (p. 1007).*

## Functions

*Is the given transport handle the NIL transport handle?*

## Variables

- const **NDDS\_Transport\_Handle\_t NDDS\_TRANSPORT\_HANDLE\_NIL**  
*The NIL transport handle.*

### 7.34.1 Detailed Description

Installing and configuring transports used by RTI Connex.

There is more than one way to install a transport plugin for use with RTI Connex:

- If it is a builtin transport plugin, by specifying a bitmask in **DDS\_TransportBuiltinQoSPolicy** (p. 1144) (see **Built-in Transport Plugins** (p. 177))
- For all other non-builtin transport plugins, by dynamically loading the plugin through **PROPERTY** (p. 419) QoS policy settings of **DDSDomainParticipant** (p. 1351) (only supported on architectures that support dynamic libraries, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 173))
- By explicitly creating a transport plugin and registering the plugin with a **DDSDomainParticipant** (p. 1351) through **NDDSTransportSupport::register\_transport** (p. 1834) (for both builtin and non-builtin plugins)

In the first two cases, the lifecycle of the transport plugin is automatically managed by RTI Connex. In the last case, user is responsible for deleting the transport plugin after the **DDSDomainParticipant** (p. 1351) is deleted. See **Transport Lifecycle** (p. 169) for details.

### 7.34.2 Loading Transport Plugins through Property QoS Policy of Domain Participant

On architectures that support dynamic libraries, a non-builtin transport plugin written in C/C++ and built as a dynamic-link library (\*.dll/\*.so) can be loaded by RTI Connex through the **PROPERTY** (p. 419) QoS policy settings of the **DDSDomainParticipant** (p. 1351).

Dynamic libraries are supported on all architectures except INTEGRITY and certain VxWorks platforms. For VxWorks, dynamic libraries are only supported for architectures that are on Pentium/Arm CPUs AND use kernel mode.

The dynamic-link library (and all the dependent libraries) need to be in the library search path during runtime (in the **LD\_LIBRARY\_PATH** environment variable on Linux systems, **DYLD\_LIBRARY\_PATH** on macOS systems, or **Path** on Windows systems).

To allow dynamic loading of the transport plugin, the transport plugin must implement the RTI Connex abstract transport API and must provide a function with the signature **NDDS\_Transport\_create\_plugin** (p. 176) that can be called by RTI Connex to create an instance of the transport plugin. The name of the dynamic library that contains the transport plugin implementation, the name of the function and properties that can be used to create the plugin, and the aliases and network address that are used to register the plugin can all be specified through the **PROPERTY** (p. 419) QoS policy of the **DDSDomainParticipant** (p. 1351).

The following table lists the property names that are used to load the transport plugins dynamically:

Table 7.73 Properties for dynamically loading and registering transport plugins

Property Name	Description	Required?
dds.transport.load_plugins	Comma-separated strings indicating the prefix names of all plugins that will be loaded by RTI Connext. Up to 8 plugins may be specified. For example, "dds.transport.TCPv4.tcp1, dds.<transport.TCPv4.tcp2", In the following examples, <TRANSPORT_<PREFIX> is used to indicate one element of this string that is used as a prefix in the property names for all the settings that are related to the plugin. <TRANSPORT_PREFIX> must begin with "dds.transport." (such as "dds.transport.<mytransport").	YES
<TRANSPORT_PREFIX>.library	Should be set to the name of the dynamic library (*.so for Linux systems, *.dylib for macOS systems, and *.dll for Windows systems) that contains the transport plugin implementation. This library (and all the other dependent dynamic libraries) needs to be in the library search path used by RTI Connext during run time (pointed to by the environment variable <b>LD_LIBRARY_&lt;PATH</b> on Linux systems, <b>DYLD_LIBRARY_PATH</b> on macOS systems, or <b>Path</b> on Windows systems).	YES
<TRANSPORT_PREFIX>.create_function	Should be set to the name of the function with the prototype of <b>NDDS_Transport_create_&lt;plugin</b> (p. 176) that can be called by RTI Connext to create an instance of the plugin. The resulting transport plugin will then be registered by RTI Connext through <b>NDDSTransport_&lt;Support::register_transport</b> (p. 1834)	YES
<TRANSPORT_PREFIX>.aliases	Used to register the transport plugin returned by <b>NDDS_Transport_create_plugin</b> (p.176) (as specified by <TRANSPORT_<PREFIX>.create_function) to the <b>DDSDomainParticipant</b> (p.1351). Refer to <b>aliases_in</b> parameter in <b>NDDSTransport_&lt;Support::register_transport</b> (p.1834) for details. Aliases should be specified as a comma-separated string, with each comma delimiting an alias. If it is not specified, <TRANSPORT_<PREFIX> –without the leading "dds.transport" – is used as the default alias for the plugin.	NO

Property Name	Description	Required?
<TRANSPORT_PREFIX>.network_address	Used to register the transport plugin returned by <b>NDDS_Transport_create_plugin</b> (p.176) (as specified by <TRANSPORT_PREFIX>.create_function) to the <b>DDSDomainParticipant</b> (p.1351). Refer to <b>network_address_in</b> parameter in <b>NDDSTransportSupport::register_transport</b> (p.1834) for details. If it is not specified, the <b>network_address_out</b> output parameter from <b>NDDS_Transport_create_plugin</b> (p.176) is used. The default value is a zeroed out network address.	NO
<TRANSPORT_PREFIX>.<property_name>	Property that is passed into <b>NDDS_Transport_create_plugin</b> (p.176) (as specified by <TRANSPORT_PREFIX>.create_function) for creating the transport plugin. This property name-value pair will be passed to <b>NDDS_Transport_create_plugin</b> (p.176) after stripping out <TRANSPORT_PREFIX> from the property name. The parsing of this property and configuring the transport using this property should be handled by the implementation of each transport plugin. Multiple <TRANSPORT_PREFIX>.<property_name> can be specified. Note: "library", "create_function", "aliases" and "network_address" cannot be used as the <property_name> due to conflicts with other builtin property names.	NO

A transport plugin is dynamically created and registered to the **DDSDomainParticipant** (p.1351) by RTI Connext when:

- the **DDSDomainParticipant** (p.1351) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDSSubscriber::lookup\_datareader** (p.1604)),

whichever happens first.

Any changes to the transport plugin related properties in the **PROPERTY** (p.419) QoS policy after the transport plugin has been registered with the **DDSDomainParticipant** (p.1351) will have no effect.

See also

**Transport Use Cases** (p.216)

### 7.34.3 Typedef Documentation

#### 7.34.3.1 NDDS\_Transport\_Handle\_t

```
typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE NDDS_Transport_Handle_t
```

An opaque type representing the handle to a transport plugin registered with a **DDSDomainParticipant** (p. 1351).

A transport handle represents the association between a **DDSDomainParticipant** (p. 1351) and a transport plugin.

#### 7.34.3.2 NDDS\_Transport\_create\_plugin

```
typedef NDDS_Transport_Plugin *(* NDDS_Transport_create_plugin) ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQoSPolicy *property_in)
```

Function prototype for creating plugin through **DDS\_PropertyQoSPolicy** (p. 1007).

By specifying some predefined property names in **DDS\_PropertyQoSPolicy** (p. 1007), RTI Connexx can call a function from a dynamic library to create a transport plugin and register the returned plugin with a **DDSDomainParticipant** (p. 1351).

This is the function prototype of the function as specified in "<TRANSPORT\_PREFIX>.create\_function" of **DDS\_PropertyQoSPolicy** (p. 1007) QoS policy that will be called by RTI Connexx to create the transport plugin. See **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 173) for details.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Optional output parameter. If the network address is not specified in "<TRANSPORT_PREFIX>.network_address" in <b>DDS_PropertyQoSPolicy</b> (p. 1007), this is the default network address that is used to register the returned transport plugin using <b>NDDSTransportSupport::register_transport</b> (p. 1834) . This parameter will never be null. The default value is a zeroed-out network address.
<i>property_in</i>	<< <b>in</b> >> (p. 238) <b>property_in</b> contains all the name-value pair properties that matches the format "<TRANSPORT_PREFIX>.<property_name>" in <b>DDS_PropertyQoSPolicy</b> (p. 1007) that can be used to create the transport plugin. Only <property_name> is passed in - the plugin prefix will be stripped out in the property name. Note: predefined <TRANSPORT_PREFIX> properties "library", "create_function", "aliases" and "network_address" will not be passed to this function. This parameter will never be null.

#### Returns

Upon success, a valid non-NIL transport plugin. NIL upon failure.

### 7.34.4 Function Documentation

#### 7.34.4.1 NDDS\_Transport\_Handle\_is\_nil()

```
DDS_Boolean NDDS_Transport_Handle_is_nil (
    const NDDS_Transport_Handle_t * self )
```

Is the given transport handle the NIL transport handle?

Returns

**DDS\_BOOLEAN\_TRUE** (p.317) if the given transport handle is equal to **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 177) or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

### 7.34.5 Variable Documentation

#### 7.34.5.1 NDDS\_TRANSPORT\_HANDLE\_NIL

```
const NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL [extern]
```

The NIL transport handle.

## 7.35 Built-in Transport Plugins

Transport plugins delivered with RTI Connext.

### Modules

- **UDP Transport Plugin definitions**  
*UDP Transport Plugin definitions.*
- **Shared Memory Transport**  
*Built-in transport plug-in for inter-process communications using shared memory (**NDDS\_TRANSPORT\_CLASSID\_↔SHMEM** (p. 249)).*
- **UDPv4 Transport**  
*Transport plug-in using UDP/IPv4 (**NDDS\_TRANSPORT\_CLASSID\_UDPv4** (p. 249)).*
- **Real-Time WAN Transport**  
*Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN** (p. 251)).*
- **UDPv6 Transport**  
*Transport plug-in using UDP/IPv6 (**NDDS\_TRANSPORT\_CLASSID\_UDPv6** (p. 250)).*

### 7.35.1 Detailed Description

Transport plugins delivered with RTI Connext.

The **TRANSPORT\_BUILTIN** (p. 443) specifies the collection of transport plugins that can be automatically configured and managed by RTI Connext as a convenience to the user.

These transport plugins can simply be turned "on" or "off" by a specifying a bitmask in **DDS\_TransportBuiltinQosPolicy** (p. 1144), thus bypassing the steps for setting up a transport plugin. RTI Connext preconfigures the transport plugin properties, the network address, and the aliases to "factory defined" values.

If a builtin transport plugin is turned "on" in **DDS\_TransportBuiltinQosPolicy** (p. 1144), the plugin is implicitly created and registered to the corresponding **DDSDomainParticipant** (p. 1351) by RTI Connext when:

- the **DDSDomainParticipant** (p. 1351) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDSSubscriber::lookup\_datareader** (p. 1604)),

whichever happens first.

Each builtin transport contains its own set of properties. For example, the **::UDPv4 Transport** (p. 266) allows the application to specify whether or not multicast is supported, the maximum size of the message, and provides a mechanism for the application to filter out network interfaces.

The builtin transport plugin properties can be changed by the method **NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838) or by using the **PROPERTY** (p. 419) QoS policy associated with the **DDSDomainParticipant** (p. 1351). Builtin transport plugin properties specified in **DDS\_PropertyQosPolicy** (p. 1007) always overwrite the ones specified through **NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838). Refer to the specific builtin transport for the list of property names that can be specified through **PROPERTY** (p. 419) QoS policy.

Any changes to the builtin transport properties after the builtin transports have been registered with will have no effect.

See also

**NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838) **DDS\_PropertyQosPolicy** (p. 1007)

The built-in transport plugins can also be instantiated and registered by the user, following the steps for **Registering a transport with a participant** (p. 218). This is useful when the application needs different values for the network addresses.

## 7.36 Creating New Transport Plugins

Developing new transport plugins for RTI Connext.

Developing new transport plugins for RTI Connext.

RTI Connext provides an abstract "C" language API for creating new transport plugins. If you are interested in creating a new transport plugin for RTI Connext, please contact your RTI representative or email [sales@rti.com](mailto:sales@rti.com).

## 7.37 Queries and Filters Syntax

### 7.37.1 Syntax for DDS Queries and Filters

A subset of the WHERE clause in SQL is used in several parts of the specification:

- The *filter\_expression* in the **DDSContentFilteredTopic** (p. 1283)
- The *query\_expression* in the **DDSQueryCondition** (p. 1573)
- <<*extension*>> (p. 237) The *filter\_expression* in the **DDS\_TopicQuerySelection** (p. 1143)
- <<*extension*>> (p. 237) The *filter\_expression* in the **DDS\_ChannelSettings\_t** (p. 610)

Those expressions may use a subset of SQL, extended with the possibility to use program variables in the SQL expression. The allowed SQL expressions are defined with the BNF-grammar below.

The following notational conventions are made:

- *NonTerminals* are typeset in italics.
- 'Terminals' are quoted and typeset in a fixed width font. They are written in upper case in most cases in the BNF-grammar below, but should be case insensitive.
- **TOKENS** are typeset in bold.
- The notation (*element* // ',') represents a non-empty comma-separated list of *elements*.

### 7.37.2 SQL grammar in BNF

```

FilterExpression ::= Condition
Condition      ::= Predicate
                | Condition 'AND' Condition
                | Condition 'OR' Condition
                | 'NOT' Condition
                | '(' Condition ')'
Predicate     ::= ComparisonPredicate
                | BetweenPredicate
ComparisonPredicate ::= ComparisonTerm RelOp ComparisonTerm
ComparisonTerm    ::= FieldIdentifier
                | Parameter
BetweenPredicate  ::= FieldIdentifier 'BETWEEN' Range
                | FieldIdentifier 'NOT BETWEEN' Range
FieldIdentifier   ::= FIELDNAME
                | IDENTIFIER
RelOp            ::= '=' | '>' | '>=' | '<' | '<=' | '<>' | 'LIKE' | 'MATCH'
Range            ::= Parameter 'AND' Parameter
Parameter       ::= INTEGERVALUE
                | CHARVALUE
                | FLOATVALUE
                | STRING
                | ENUMERATEDVALUE
                | BOOLEANVALUE
                | NULLVALUE
                | PARAMETER

```

### 7.37.3 Token expression

The syntax and meaning of the tokens used in the SQL grammar is described as follows:

- **IDENTIFIER** - An identifier for a FIELDNAME, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '\_' but may not start with a digit.

Formal notation:

```
IDENTIFIER: LETTER ( PART_LETTER)*
where LETTER: [ "A"-"Z", "_", "a"-"z" ]
      PART_LETTER: [ "A"-"Z", "_", "a"-"z", "0"-"9" ]
```

- **FIELDNAME** - A fieldname is a reference to a field in the data structure. The dot '.' is used to navigate through nested structures. The number of dots that may be used in a FIELDNAME is unlimited. The FIELDNAME can refer to fields at any depth in the data structure. The names of the field are those specified in the IDL definition of the corresponding structure, which may or may not match the fieldnames that appear on the language-specific (e.g., C/C++, Java) mapping of the structure. To reference to the  $n+1$  element in an array or sequence, use the notation '[ $n$ ]', where  $n$  is a natural number (zero included). FIELDNAME must resolve to a primitive IDL type; that is either boolean, octet, (unsigned) short, (unsigned) long, (unsigned) long long, float double, char, wchar, string, wstring, or enum.

Formal notation:

```
FIELDNAME: FieldNamePart ( "." FieldNamePart )*
where FieldNamePart : IDENTIFIER ( "[" Index "]" )*
      Index> : (["0"-"9"])+
              | ["0x", "0X"] (["0"-"9", "A"-"F", "a"-"f"])+
```

Primitive IDL types referenced by FIELDNAME are treated as different types in *Predicate* according to the following table:

Predicate Data Type	IDL Type
BOOLEANVALUE	boolean
INTEGERVALUE	octet, (unsigned) short, (unsigned) long, (unsigned) long long
FLOATVALUE	float, double
CHARVALUE	char, wchar
STRING	string, wstring
ENUMERATEDVALUE	enum

- **TOPICNAME** - A topic name is an identifier for a topic, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '\_' but may not start with a digit.

Formal notation:

TOPICNAME : IDENTIFIER

- **INTEGERVALUE** - Any series of digits, optionally preceded by a plus or minus sign, representing a decimal integer value within the range of the system. 64-bit integers (int64 and uint64) must be followed by either l or L, otherwise the value is treated as a 32-bit integer. A hexadecimal number is preceded by 0x and must be a valid hexadecimal expression.

Formal notation:

```
INTEGERVALUE : ([ "+", "-" ])? ([ "0"-"9" ])+ [ ("L", "l") ]?
              | ([ "+", "-" ])? [ "0x", "0X" ] ([ "0"-"9", "A"-"F", "a"-"f" ])+ [ ("L", "l") ]?
```

- **CHARVALUE** - A single character enclosed between single quotes.

Formal notation:

```
CHARVALUE : "'" (~["'"])?''
```

- **FLOATVALUE** - Any series of digits, optionally preceded by a plus or minus sign and optionally including a floating point ('.'). A power-of-ten expression may be postfixed, which has the syntax *en* or *En*, where *n* is a number, optionally preceded by a plus or minus sign.

Formal notation:

```
FLOATVALUE : ([ "+", "-" ])? ([ "0"-"9" ])* ( "." )? ([ "0"-"9" ])+ ( EXPONENT )?
where EXPONENT: [ "e", "E" ] ([ "+", "-" ])? ([ "0"-"9" ])+
```

- **STRING** - Any series of characters encapsulated in single quotes, except the single quote itself.

Formal notation:

```
STRING : "'" (~["'"])*''
```

- **ENUMERATEDVALUE** - An enumerated value is a reference to a value declared within an enumeration. Enumerated values consist of the name of the enumeration label enclosed in single quotes. The name used for the enumeration label must correspond to the label names specified in the IDL definition of the enumeration.

Formal notation:

```
ENUMERATEDVALUE : "'" ["A" - "Z", "a" - "z"] ["A" - "Z", "a" - "z", "_", "0" - "9"]* "'"
```

- **BOOLEANVALUE** - Can either be 'TRUE' or 'FALSE', case insensitive.

Formal notation (case insensitive):

```
BOOLEANVALUE : ["TRUE", "FALSE"]
```

- **NULLVALUE** - Can be null, and is case insensitive.

Formal notation (case insensitive):

```
NULLVALUE : "null"
```

- **PARAMETER** - A parameter is of the form %*n*, where *n* represents a natural number (zero included) smaller than 100. It refers to the *n* + 1<sup>th</sup> argument in the given context. Argument can only in primitive type value format. It cannot be a FIELDNAME.

Formal notation:

```
PARAMETER : "%" (["0"-"9"])+
```

### 7.37.4 String Parameters

Strings used as parameter values must contain the enclosing quotation marks (') within the parameter value, and not place the quotation marks within the expression statement. For example, the following expression is legal:

```
" symbol MATCH %0 " with parameter 0 = " 'IBM' "
```

whereas the following expression will not compile:

```
" symbol MATCH '%0' " with parameter 0 = " IBM "
```

### 7.37.5 Type compatability in Predicate

Only certain combination of type comparisons are valid in *Predicate*. The following table marked all the compatible pairs with 'YES':

	BOOLEANVALUE	INTEGERVALUE	FLOATVALUE	CHARVALUE	STRING	ENUMERATEDVALUE
BOOLEAN	YES					
INTEGERVALUE		YES	YES			
FLOATVALUE		YES	YES			
CHARVALUE				YES	YES	YES
STRING				YES	YES(*1)	YES
ENUMERATEDVALUE		YES		YES(*2)	YES(*2)	YES(*3)

- (\*1) See **SQL Extension: Regular Expression Matching** (p. 183)
- (\*2) Because the formal notation of the Enumeration values, they are compatible with string and char literals, but they are not compatible with string or char variables, i.e., "MyEnum='EnumValue'" would be correct, but "MyEnum=MyString" is not allowed.
- (\*3) Only for same type Enums.

### 7.37.6 SQL Extension: Regular Expression Matching

The relational operator MATCH may only be used with string fields. The right-hand operator is a string *pattern*. A string pattern specifies a template that the left-hand field value must match. The characters `,^?*[]-^!%` have special meanings unless they are escaped by the escape character `\`.

MATCH is case-sensitive.

The pattern allows limited "wild card" matching under the following rules:

Character	Meaning
,	"," separates a list of alternate patterns. The field string is matched if it matches one or more of the patterns.
/	"/" in the pattern string matches a / in the field string. This character is used to separate a sequence of mandatory substrings.
?	"?" in the pattern string matches any single <i>non-special</i> characters in the field string.
*	"*" in the pattern string matches 0 or more <i>non-special</i> characters in field string.
<b>[charlist]</b>	Matches any one of the characters from the list of characters in <i>charlist</i> .
<b>[s-e]</b>	Matches any character any character from s to e, inclusive.
%	"%" is used to designate filter expressions parameters.
<b>[!charlist]</b> or <b>[^charlist]</b>	Matches any characters not in <i>charlist</i> (not supported).
<b>[!s-e]</b> or <b>[^s-e]</b>	Matches any characters not in the interval [s-e] (not supported).
\	Escape character for special characters.

The syntax is similar to the POSIX fnmatch syntax (1003.2-1992 section B.6). The MATCH syntax is also similar to the 'subject' strings of TIBCO Rendezvous.

**Note:** To use special characters as regular characters in regular expressions, you must escape them using the character `\`. For example, 'A]' is considered a malformed expression and the result is undefined.

### 7.37.7 Character Encoding

The default encoding for IDL strings is UTF-8. RTI Connext offers ISO 8859-1 as an alternative encoding for IDL strings.

In order to configure ISO 8859-1 as the encoding for filtering of IDL strings, you can set the DomainParticipant property **dds.domain\_participant.filtering\_character\_encoding** to ISO-8859:

The possible values for **dds.domain\_participant.filtering\_character\_encoding** are:

- **UTF-8** (default value)
- **ISO-8859-1**

### 7.37.8 Unicode Normalization

Unicode supports multiple ways to encode some characters, most notably accented characters. A composed character in Unicode can often have a number of different ways of representing the character. For example:

- Precomposed `é` is represented by `\u1e3c`
- Composed `é = E + ^` is represented by `\u004c + \u032d`

The lexical comparison of the two characters above will return false. In order to do the correct comparison the characters need to be normalized, that is, reduced to the same character composition.

When the character encoding for filtering of IDL strings is UTF-8, the Unicode normalization behavior can be controlled using a DomainParticipant property called **dds.domain\_participant.filtering\_unicode\_normalization**.

The possible values of the normalization property are:

- **OFF**: Disables normalization
- **NFD**: Canonical Decomposition
- **NFC (default value)**: Canonical Decomposition, followed by Canonical Composition
- **NFK**: Compatibility Decomposition, followed by Canonical Composition
- **NFKC\_Casefold**: Casefold followed by NFKC normalization

Because normalization may affect performance, and it is enabled by default, the property allows disabling the normalization process per DomainParticipant using the value OFF. However, you should be aware that doing this may lead to unexpected behavior.

### 7.37.9 Examples

Assuming Topic "Location" has as an associated type a structure with fields "flight\_id, x, y, z", and Topic "FlightPlan" has as fields "flight\_id, source, destination". The following are examples of using these expressions.

Example of a **filter\_expression** (for **DDSContentFilteredTopic** (p. 1283)) or a **query\_expression** (for **DDSQueryCondition** (p. 1573)):

- `"z < 1000 AND x < 23"`

Examples of a **filter\_expression** using **MATCH** (for **DDSContentFilteredTopic** (p. 1283)) operator:

- `"symbol MATCH 'NASDAQ/GOOG' "`
- `"symbol MATCH 'NASDAQ/[A-M]*' "`

## 7.38 Logging and Version

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

### Modules

- **Version**  
*Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.*
- **Logging**  
*Configure how much debugging information is reported during runtime and where it is logged.*

### 7.38.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

## 7.39 General Utilities and Compliance Configuration

API of general utilities used in the RTI Connext distribution.

### Modules

- **Compliance Configuration**  
*APIs to configure compliance with certain standard specifications.*
- **Heap Monitoring**  
*Monitor memory allocations done by the middleware on the native heap.*
- **Network Capture**  
*Save network traffic into a capture file for further analysis.*
- **Other Utilities**  
*Other Utilities, such as **NDDSUtility::spin** (p. 1840).*

### 7.39.1 Detailed Description

API of general utilities used in the RTI Connex distribution.

## 7.40 Observability

API of RTI Connex Observability Framework.

### Modules

- **Observability Library**  
*RTI Monitoring Library 2.0.*

### 7.40.1 Detailed Description

API of RTI Connex Observability Framework.

## 7.41 Request-Reply Pattern

Support for the request-reply communication pattern.

### Modules

- **Requester**  
*connex::Requester* (p. 1886) and associated elements
- **Replier**  
*connex::Replier* (p. 1868), *connex::SimpleReplier* (p. 1935) and associated elements

### 7.41.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- **connex::Requester** (p. 1886)
- **connex::Replier** (p. 1868) (and a simpler version **connex::SimpleReplier** (p. 1935))

This functionality is built on top of RTI Connex.

A Requester publishes a request topic and subscribes to a reply topic. A Replier subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

Internal RTI Connex errors are reported as **exceptions** (p. 37).

To use request-reply in your application, include the following header file:

```
"ndds/ndds_requestreply_cpp.h"
```

See also

**Request-Reply Examples** (p. 226).

## 7.42 Requester

`connect::Requester` (p. 1886) and associated elements

### Classes

- class `connect::Requester`< `TReq`, `TRep` >  
*Allows sending requests and receiving replies.*
- class `connect::RequesterParams`  
*Contains the parameters for creating a `connect::Requester` (p. 1886).*

### 7.42.1 Detailed Description

`connect::Requester` (p. 1886) and associated elements

## 7.43 Replier

`connect::Replier` (p. 1868), `connect::SimpleReplier` (p. 1935) and associated elements

### Classes

- class `connect::Replier`< `TReq`, `TRep` >  
*Allows receiving requests and sending replies.*
- class `connect::SimpleReplierListener`< `TReq`, `TRep` >  
*The listener called by a `SimpleReplier` (p. 1935).*
- class `connect::ReplierListener`< `TReq`, `TRep` >  
*Called when a `connect::Replier` (p. 1868) has new available requests.*
- class `connect::ReplierParams`< `TReq`, `TRep` >  
*Contains the parameters for creating a `connect::Replier` (p. 1868).*
- class `connect::SimpleReplierParams`< `TReq`, `TRep` >  
*Contains the parameters for creating a `connect::SimpleReplier` (p. 1935).*
- class `connect::SimpleReplier`< `TReq`, `TRep` >  
*A callback-based replier.*

### 7.43.1 Detailed Description

`connect::Replier` (p. 1868), `connect::SimpleReplier` (p. 1935) and associated elements

## 7.44 Infrastructure

Infrastructure types for RTI Connex Messaging.

### Modules

- **RTI Connex Exceptions**  
*RTI Connex return-code exceptions.*

### Classes

- class **connex::Sample**< T >  
*A data sample and related info received from the middleware.*
- class **connex::SampleRef**< T >  
*A data sample and related information received from the middleware.*
- class **connex::WriteSample**< T >  
*A sample for writing data.*
- class **connex::WriteSampleRef**< T >  
*A reference to a data sample for writing.*
- class **connex::IsValidSamplePredicate**< T >  
*Predicate-class to determine if a sample contains valid data.*
- class **connex::IsInvalidSamplePredicate**< T >  
*Predicate-class to determine if a sample contains invalid data.*
- class **connex::IsReplyRelatedPredicate**< T >  
*Predicate-class to match replies by their related request.*
- class **connex::SampleIterator**< T, IsConst >  
*STL-compliant random-access iterator for SampleRef<T>*
- class **connex::LoanedSamples**< T >  
*Provides access to a collection of middleware-loaned samples.*

### Functions

- `template<typename T, bool IsConst>`  
`ValidSampleIterator< T, IsConst > connex::make_valid_sample_iterator ( SampleIterator< T, IsConst > related_iterator)`  
*Creates an iterator that only returns valid samples.*
- `template<typename T >`  
`LoanedSamples< T > connex::move ( LoanedSamples< T > &ls) throw ()`  
*Creates a new **LoanedSamples** (p. 1727) instance by moving the contents of an existing one.*

### 7.44.1 Detailed Description

Infrastructure types for RTI Connex Messaging.

This section describes the sample types used for reading and writing. These types encapsulate data and related information:

- **connex::Sample** (p. 1912) (used for reading)
- **connex::WriteSample** (p. 1948) (used for writing)

Sample and WriteSample are value types. They own the data and the related information and their constructor and destructor initializes and releases the data types.

There are two parallel versions that behave as reference types and hold references to existing data and information instances:

- **connex::SampleRef** (p. 1920)
- **connex::WriteSampleRef** (p. 1952)

There are different operations that provide loaned samples from the middleware. They return a **connex::LoadedSamples** (p. 1727). This container provides STL-compliant iterators.

Other convenience functions and types, useful in combination with STL algorithms are:

- **connex::make\_valid\_sample\_iterator()** (p. 189)
- **connex::IsValidSamplePredicate** (p. 1727)
- **connex::IsReplyRelatedPredicate** (p. 1725)

### 7.44.2 Function Documentation

#### 7.44.2.1 make\_valid\_sample\_iterator()

```
template<typename T , bool IsConst>
ValidSampleIterator< T, IsConst > connex::make_valid_sample_iterator (
    SampleIterator< T, IsConst > related_iterator )
```

Creates an iterator that only returns valid samples.

This operation returns an iterator adapter that behaves as the associated **connex::SampleIterator** (p. 1920) expect that it skips samples where **SampleRef::info()** (p. 1923).*valid\_data* is false

## Parameters

<i>related_iterator</i>	A regular <b>SampleIterator</b> (p. 1920) (e.g. <b>connext::LoanedSamples::begin</b> (p. 1735)) that serves as the start point.
-------------------------	---

## Returns

An iterator pointing to the first valid sample on or after *related\_iterator* or the end of the associated **connext::LoanedSamples** (p. 1727) if there are no valid samples.

## See also

**connext::LoanedSamples::begin** (p. 1735)

**Taking samples by copy** (p. 229)

## 7.44.2.2 move()

```
template<typename T >
LoanedSamples< T > connext::move (
    LoanedSamples< T > & ls ) throw ( )
```

Creates a new **LoanedSamples** (p. 1727) instance by moving the contents of an existing one.

The parameter object loses the ownership of the underlying samples and its state is reset as if it was default initialized. This function must be used to move any named **LoanedSamples** instance (lvalue) in and out of a function by-value. Using this function is not necessary if the original **LoanedSamples** is an rvalue. Moving is a very efficient operation and is guaranteed to not throw any exception.

## Parameters

<i>ls</i>	The <b>LoanedSamples</b> (p. 1727) object that transfers its ownership of the contained samples into the returned object. After this call, <i>ls</i> is empty.
-----------	--

## Returns

A new **LoanedSamples** (p. 1727) object, the new loan owner, with the same contents as *ls* had.

## See also

**connext::LoanedSamples** (p. 1727)

## 7.45 Utilities

Utilities for the RTI Connex Messaging module.

## Classes

- class **connext::MessagingLibraryVersion**  
*The Connext Messaging Library version.*
- class **connext::MessagingVersion**  
*The Connext Messaging version.*

### 7.45.1 Detailed Description

Utilities for the RTI Connext Messaging module.

Connext Messaging Utilities

## 7.46 Durability and Persistence

APIs related to RTI Connext Durability and Persistence.

APIs related to RTI Connext Durability and Persistence.

RTI Connext offers the following mechanisms for achieving durability and persistence:

- **Durable Writer History** (p. 191)
- **Durable Reader State** (p. 192)
- **Data Durability** (p. 192)

To use the first two features, you need a relational database, which is not included with RTI Connext. Supported databases are listed in the [Release Notes](#).

The third feature, provided by RTI Persistence Service, can use the filesystem or a relational database to persist information.

These three features can be used separately or in combination.

### 7.46.1 Durable Writer History

This feature allows a **DDSDataWriter** (p. 1321) to locally persist its local history cache so that it can survive shutdowns, crashes and restarts. When an application restarts, each **DDSDataWriter** (p. 1321) that has been configured to have durable writer history automatically loads all the data in its history cache from disk and can carry on sending data as if it had never stopped executing. To the rest of the system, it will appear as if the **DDSDataWriter** (p. 1321) had been temporarily disconnected from the network and then reappeared.

See also

**Configuring Durable Writer History** (p. 193)

### 7.46.2 Durable Reader State

This feature allows a **DDSDataReader** (p. 1288) to locally persist its state and remember the sequence numbers it has already received. When an application restarts, each **DDSDataReader** (p. 1288) that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the **DDSDataReader** (p. 1288) before the restart will not be provided to the application again.

See also

**Configuring Durable Reader State** (p. 195)

### 7.46.3 Data Durability

This feature is a full implementation of the OMG DDS Persistence Profile. The **DURABILITY** (p. 398) QoS lets an application configure a **DDSDataWriter** (p. 1321) such that the information written by the **DDSDataWriter** (p. 1321) survives beyond the lifetime of the **DDSDataWriter** (p. 1321). In this manner, a late-joining **DDSDataReader** (p. 1288) can subscribe and receive the information even after the **DDSDataWriter** (p. 1321) application is no longer executing. To use this feature, you need RTI Persistence Service – an optional product that can be purchased separately.

### 7.46.4 Durability and Persistence Based on Virtual GUID

Every modification to the global dataspace made by a **DDSDataWriter** (p. 1321) is identified by a pair (virtual GUID, sequence number).

- The virtual GUID (Global Unique Identifier) is a 16-byte character identifier associated with a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288); it is used to uniquely identify this entity in the global data space.
- The sequence number is a 64-bit identifier that identifies changes published by a specific **DDSDataWriter** (p. 1321).

Several **DDSDataWriter** (p. 1321) entities can be configured with the same virtual GUID. If each of these **DDSDataWriter** (p. 1321) entities publishes a sample with sequence number '0', the sample will only be received once by the **DDSDataReader** (p. 1288) entities subscribing to the content published by the **DDSDataWriter** (p. 1321) entities.

RTI Connext also uses the virtual GUID (Global Unique Identifier) to associate a persisted state (state in permanent storage) to the corresponding DDS entity.

For example, the history of a **DDSDataWriter** (p. 1321) will be persisted in a database table with a name generated from the virtual GUID of the **DDSDataWriter** (p. 1321). If the **DDSDataWriter** (p. 1321) is restarted, it must have associated the same virtual GUID to restore its previous history.

Likewise, the state of a **DDSDataReader** (p. 1288) will be persisted in a database table whose name is generated from the **DDSDataReader** (p. 1288) virtual GUID

A **DDSDataWriter** (p. 1321)'s virtual GUID can be configured using **DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 674). Similarly, a **DDSDataReader** (p. 1288)'s virtual GUID can be configured using **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p. 631).

The **DDS\_PublicationBuiltinTopicData** (p. 1010) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108) structures include the virtual GUID associated with the discovered publication or subscription.

Refer to the `User's Manual` for additional use cases.

See also

**DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 674) **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p. 631).

### 7.46.5 Configuring Durable Writer History

To configure a **DDSDataWriter** (p. 1321) to have durable writer history, use the **PROPERTY** (p. 419) QoS policy associated with the **DDSDataWriter** (p. 1321) or the **DDSDomainParticipant** (p. 1351).

Properties defined for the **DDSDomainParticipant** (p. 1351) will be applied to all the **DDSDataWriter** (p. 1321) objects belonging to the **DDSDomainParticipant** (p. 1351), unless the property is overwritten by the **DDSDataWriter** (p. 1321).

See also

**DDS\_PropertyQosPolicy** (p. 1007)

The following table lists the supported durable writer history properties.

**Table 7.80 Durable Writer History Properties**

Property	Description
dds.data_writer.history.plugin_name	Must be set to "dds.data_writer.history.odbc_plugin.builtin" to enable durable writer history in the DataWriter. This property is required.
dds.data_writer.history.odbc_plugin.builtin.dsn	The ODBC DSN (Data Source Name) associated with the database where the writer history must be persisted. This property is required.
dds.data_writer.history.odbc_plugin.builtin.driver	This property tells RTI Connex which ODBC driver to load. If the property is not specified, RTI Connex will try to use the standard ODBC driver manager library : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems.
dds.data_writer.history.odbc_plugin.builtin.username	Configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.password	Configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.shared	If set to 1, RTI Connex creates a single connection per DSN that will be shared across DataWriters within the same Publisher. If set to 0 (the default), a <b>DDSDataWriter</b> (p. 1321) will create its own database connection. Default: 0

Property	Description
dds.data_writer.history.odbc_plugin.builtin.instance_↔ cache_max_size	These properties configure the resource limits associated with the ODBC writer history caches. To minimize the number of accesses to the database, RTI Connexx uses two caches, one for samples and one for instances. The initial and maximum sizes of these caches are configured using these properties. The resource limits <code>initial_instances</code> , <code>max_↔instances</code> , <code>initial_samples</code> , <code>max_samples</code> and <code>max_↔samples_per_instance</code> in the <b>DDS_ResourceLimits_↔QosPolicy</b> (p. 1052) are used to configure the maximum number of samples and instances that can be stored in the relational database. Default: <b>DDS_Resource_↔LimitsQosPolicy::max_instances</b> (p. 1055)
dds.data_writer.history.odbc_plugin.builtin.instance_↔ cache_init_size	See description above. Default: <b>DDS_Resource_↔LimitsQosPolicy::initial_instances</b> (p. 1056)
dds.data_writer.history.odbc_plugin.builtin.sample_↔ cache_max_size	See description above. Default: 32 (the minimum)
dds.data_writer.history.odbc_plugin.builtin.sample_↔ cache_init_size	See description above. Default: 32
dds.data_writer.history.odbc_plugin.builtin.restore	This property indicates whether or not the persisted writer history must be restored once the <b>DDSDataWriter</b> (p. 1321) is restarted. If the value is 0, the content of the database associated with the <b>DDSDataWriter</b> (p. 1321) being restarted will be deleted. If the value is 1, the <b>DDSDataWriter</b> (p. 1321) will restore its previous state from the database content. Default: 1
dds.data_writer.history.odbc_plugin.builtin.in_memory_↔ _state	This property determines how much state will be kept in memory by the ODBC writer history in order to avoid accessing the database. When <code>in_memory_state</code> is equal to 1, <code>instance_↔cache_max_size</code> is always equal to <b>DDS_Resource_↔LimitsQosPolicy::max_instances</b> (p. 1055) (it cannot be changed). In addition, the ODBC writer history will keep in memory a fixed state overhead of 24 bytes per sample. In this operating mode, the ODBC writer history provides the best performance. However, the restore operation will be slower and the maximum number of samples that the writer history can manage will be limited by the available physical memory. If <code>in_memory_state</code> is equal to 0, all the state will be kept in the underlying database. In this operating mode, the maximum number of samples in the writer history will not be limited by the physical memory available unless the underlying database is an in-memory database (Times_↔Ten). Default: 1

### 7.46.6 Configuring Durable Reader State

To configure a **DDSDataReader** (p. 1288) with durable reader state, use the **PROPERTY** (p. 419) QoS policy associated with the **DDSDataReader** (p. 1288) or **DDSDomainParticipant** (p. 1351).

A property defined in the **DDSDomainParticipant** (p. 1351) will be applicable to all the **DDSDataReader** (p. 1288) belonging to the **DDSDomainParticipant** (p. 1351) unless it is overwritten by the **DDSDataReader** (p. 1288).

See also

**DDS\_PropertyQosPolicy** (p. 1007)

The following table lists the supported durable reader state properties.

**Table 7.81 Durable Reader State Properties**

Property	Description
dds.data_reader.state.odbc.dsn	The ODBC DSN (Data Source Name) associated with the database where the <b>DDSDataReader</b> (p. 1288) state must be persisted. This property is required.
dds.data_reader.state.filter_redundant_samples	To enable durable reader state, this property must be set to 1. Otherwise, the reader state will not be kept and/or persisted. When the reader state is not maintained, RTI Connext does not filter duplicate samples that may be coming from the same virtual writer. By default, this property is set to 1.
dds.data_reader.state.odbc.driver	This property is used to indicate which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library↔ : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems).
dds.data_reader.state.odbc.username	This property configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.odbc.password	This property configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.restore	This property indicates if the persisted <b>DDSData</b> ↔ <b>Reader</b> (p. 1288) state must be restored or not once the <b>DDSDataReader</b> (p. 1288) is restarted. If this property is 0, the previous state will be deleted from the database. If it is 1, the <b>DDSDataReader</b> (p. 1288) will restore its previous state from the database content. Default: 1
dds.data_reader.state.checkpoint_frequency	This property controls how often the reader state is stored in the database. A value of N means to store the state once every N samples. A high value will provide better performance. However, if the reader is restarted it may receive some duplicate samples. These samples will be filtered by the middleware and they will not be propagated to the application. Default: 1

Property	Description
dds.data_reader.state.persistence_service.request_↔ depth	This property indicates the number of most recent historical samples that the persisted <b>DDSDataReader</b> (p. 1288) wants to receive when it starts up. Default: 0

### 7.46.7 Configuring Data Durability

RTI Connext implements **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401) and **DDS\_PERSISTENT\_DURABILITY\_↔  
QOS** (p. 401) durability using RTI Persistence Service, available for purchase as a separate RTI product.

For more information on RTI Persistence Service, refer to the `User's Manual`, or the RTI Persistence Service API Reference HTML documentation.

See also

**DURABILITY** (p. 398)

## 7.47 System Properties

System Properties.

System Properties.

RTI Connext uses the **DDS\_PropertyQosPolicy** (p. 1007) of a DomainParticipant to maintain a set of properties that provide system information such as hostname.

Unless the default **DDS\_DomainParticipantQos** (p. 741) value is overwritten, the system properties are automatically set in the **DDS\_DomainParticipantQos** (p. 741) obtained by calling the method **DDSDomainParticipantFactory↔  
::get\_default\_participant\_qos** (p. 1432) or using the constant **DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48).

System properties are also automatically set in the **DDS\_DomainParticipantQos** (p. 741) loaded from an XML QoS profile unless you disable property inheritance using the attribute **inherit** in the XML tag `<property>`.

By default, the system properties are propagated to other DomainParticipants in the system and can be accessed through **DDS\_ParticipantBuiltinTopicData::property** (p. 980).

You can disable the propagation of individual properties by setting the flag **DDS\_Property\_t::propagate** (p. 1007) to **DDS\_BOOLEAN\_FALSE** (p. 317) or by removing the property using the method **DDSPropertyQosPolicyHelper↔  
::remove\_property** (p. 427).

The number of system properties set on the **DDS\_DomainParticipantQos** (p. 741) is platform specific.

### 7.47.1 System Properties List

The following table lists the supported system properties. For more information, see `System Properties`, in the `Core Libraries User's Manual`.

Property Name	Description
dds.sys_info.hostname	Name of the host where the process is running
dds.sys_info.process_id	Process ID
dds.sys_info.username	Name of the user running the process
dds.sys_info.execution_timestamp	Time when the execution started
dds.sys_info.creation_timestamp	Time when the executable was created
dds.sys_info.executable_filepath	Name and full path of the executable
dds.sys_info.target	Architecture for which the library was compiled

### 7.47.2 System Resource Consideration

System properties are affected by the resource limits `DDS_DomainParticipantResourceLimitsQosPolicy`↔  
`::participant_property_list_max_length` (p. 762) and `DDS_DomainParticipantResourceLimitsQosPolicy`↔  
`::participant_property_string_max_length` (p. 762).

## 7.48 Configuring QoS Profiles with XML

APIs related to XML QoS Profiles.

APIs related to XML QoS Profiles.

### 7.48.1 Loading QoS Profiles from XML Resources

A 'QoS profile' is a group of QoS settings, specified in XML format. By using QoS profiles, you can change QoS settings without recompiling the application.

The QoS profiles are loaded the first time any of the following operations are called:

- `DDSDomainParticipantFactory::create_participant` (p. 1442)
- `DDSDomainParticipantFactory::create_participant_with_profile` (p. 1443)
- `DDSDomainParticipantFactory::set_default_participant_qos_with_profile` (p. 1431)
- `DDSDomainParticipantFactory::get_default_participant_qos` (p. 1432)
- `DDSDomainParticipantFactory::set_default_library` (p. 1433)
- `DDSDomainParticipantFactory::set_default_profile` (p. 1434)
- `DDSDomainParticipantFactory::get_participant_qos_from_profile` (p. 1436)
- `DDSDomainParticipantFactory::get_topic_qos_from_profile` (p. 1440)
- `DDSDomainParticipantFactory::get_topic_qos_from_profile_w_topic_name` (p. 1441)

- **DDSDomainParticipantFactory::get\_publisher\_qos\_from\_profile** (p. 1437)
- **DDSDomainParticipantFactory::get\_subscriber\_qos\_from\_profile** (p. 1437)
- **DDSDomainParticipantFactory::get\_datawriter\_qos\_from\_profile** (p. 1438)
- **DDSDomainParticipantFactory::get\_datawriter\_qos\_from\_profile\_w\_topic\_name** (p. 1438)
- **DDSDomainParticipantFactory::get\_datareader\_qos\_from\_profile** (p. 1439)
- **DDSDomainParticipantFactory::get\_datareader\_qos\_from\_profile\_w\_topic\_name** (p. 1440)
- **DDSDomainParticipantFactory::get\_qos\_profile\_libraries** (p. 1442)
- **DDSDomainParticipantFactory::get\_qos\_profiles** (p. 1442)
- **DDSDomainParticipantFactory::load\_profiles** (p. 1447)

The QoS profiles are reloaded replacing previously loaded profiles when the following operations are called:

- **DDSDomainParticipantFactory::set\_qos** (p. 1446)
- **DDSDomainParticipantFactory::reload\_profiles** (p. 1447)

The **DDSDomainParticipantFactory::unload\_profiles** (p. 1448) operation will free the resources associated with the XML QoS profiles.

There are five ways to configure the XML resources (listed by load order):

- The file `NDDS_QOS_PROFILES.xml` in `$NDDSHOME/resource/xml` is loaded if it exists and **DDS\_ProfileQosPolicy::ignore\_resource\_profile** (p. 1005) in **DDS\_ProfileQosPolicy** (p. 1004) is set to **DDS\_BOOLEAN\_FALSE** (p. 317) (first to be loaded). An example file, `NDDS_QOS_PROFILES.example.xml`, is available for reference.
- The URL groups separated by semicolons referenced by the environment variable `NDDS_QOS_PROFILES` are loaded if they exist and **DDS\_ProfileQosPolicy::ignore\_environment\_profile** (p. 1005) in **DDS\_ProfileQosPolicy** (p. 1004) is set to **DDS\_BOOLEAN\_FALSE** (p. 317).
- The file `USER_QOS_PROFILES.xml` in the working directory will be loaded if it exists and **DDS\_ProfileQosPolicy::ignore\_user\_profile** (p. 1005) in **DDS\_ProfileQosPolicy** (p. 1004) is set to **DDS\_BOOLEAN\_FALSE** (p. 317).
- The URL groups referenced by **DDS\_ProfileQosPolicy::url\_profile** (p. 1005) in **DDS\_ProfileQosPolicy** (p. 1004) will be loaded if specified.
- The sequence of XML strings referenced by **DDS\_ProfileQosPolicy::string\_profile** (p. 1005) will be loaded if specified (last to be loaded).

The above methods can be combined together.

## 7.48.2 URL

The location of the XML resources (only files and strings are supported) is specified using a URL (Uniform Resource Locator) format. For example:

File Specification: `file:///usr/local/default_dds.xml`

String Specification: `str://"<dds><qos_library> . . . </qos_library>&lt;/dds>"`

If the URL schema name is omitted, RTI Connext will assume a file name. For example:

File Specification: `/usr/local/default_dds.xml`

### 7.48.2.1 URL groups

To provide redundancy and fault tolerance, you can specify multiple locations for a single XML document via URL groups. The syntax of a URL group is as follows:

`[URL1 | URL2 | URL2 | . . . | URLn]`

For example:

`[ file:///usr/local/default_dds.xml | file:///usr/local/alternative_default_↵  
dds.xml]`

Only one of the elements in the group will be loaded by RTI Connext, starting from the left.

Brackets are not required for groups with a single URL.

### 7.48.2.2 NDDS\_QOS\_PROFILES environment variable

The environment variable `NDDS_QOS_PROFILES` contains a list of URL groups separated by `'`:

The URL groups referenced by the environment variable are loaded if they exist and `DDS_ProfileQosPolicy::ignore_↵  
_environment_profile` (p. 1005) is set to `DDS_BOOLEAN_FALSE` (p. 317)

### 7.48.2.3 Built-In QoS Profiles

There are also a number of built-in QoS profiles that can be used without having to load any configurations from outside XML resources. For more information on these built-in profiles see **Built-in QoS Profiles** (p. 481).

For more information on XML Configuration, refer to the `User's Manual`.

## 7.49 Publication Example

A data publication example.

A data publication example.

### 7.49.1 A typical publication example

#### Prep

- Create user data types using `rtiddsgen`. See the `Code Generator User's Manual`.

#### Set up

- **Get the factory** (p. 202)
- **Set up participant** (p. 202)
- **Set up publisher** (p. 206)
- **Register user data type(s)** (p. 203)
- **Set up topic(s)** (p. 203)
- **Set up data writer(s)** (p. 207)

#### Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 213)

#### Send data

- **Send data** (p. 208)

#### Tear down

- **Tear down data writer(s)** (p. 208)
- **Tear down topic(s)** (p. 204)
- **Tear down publisher** (p. 206)
- **Tear down participant** (p. 203)

## 7.50 Subscription Example

A data subscription example.

A data subscription example.

### 7.50.1 A typical subscription example

#### Prep

- Create user data types using `rtiddsgen`. See the `Code Generator User's Manual`.

#### Set up

- **Get the factory** (p. 202)
- **Set up participant** (p. 202)
- **Set up subscriber** (p. 208)
- **Register user data type(s)** (p. 203)
- **Set up topic(s)** (p. 203)
- **Set up data reader(s)** (p. 210)
  
- **Set up data reader** (p. 211) **OR Set up subscriber** (p. 209) to receive data

#### Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 213)

#### Receive data

- Access received data either **via a reader** (p. 211) **OR via a subscriber** (p. 209) (possibly in a **ordered or coherent** (p. 210) manner)

#### Tear down

- **Tear down data reader(s)** (p. 213)
- **Tear down topic(s)** (p. 204)
- **Tear down subscriber** (p. 210)
- **Tear down participant** (p. 203)

## 7.51 Participant Use Cases

Working with domain participants.

Working with domain participants.

### 7.51.1 Turning off auto-enable of newly created participant(s)

- [Get the factory \(p. 202\)](#)
- [Change the value of the ENTITY\\_FACTORY \(p. 402\) for the DDSDomainParticipantFactory \(p. 1426\)](#)

```
DDS_DomainParticipantFactoryQos factory_qos;

if (factory->get_qos(factory_qos) != DDS_RETCODE_OK) {
    printf("***Error: failed to get domain participant factory qos\n");
}
/* Change the QosPolicy to create disabled participants */
factory_qos.entity_factory.autoenable_created_entities = DDS_BOOLEAN_FALSE;
if (factory->set_qos(factory_qos) != DDS_RETCODE_OK) {
    printf("***Error: failed to set domain participant factory qos\n");
}
```

### 7.51.2 Getting the factory

- [Get the DDSDomainParticipantFactory \(p. 1426\) instance:](#)

```
DDSDomainParticipantFactory* factory = NULL;
factory = DDSDomainParticipantFactory::get_instance();
if (factory == NULL) {
    // ... error
}
```

### 7.51.3 Setting up a participant

- [Get the factory \(p. 202\)](#)
- [Create DDSDomainParticipant \(p. 1351\):](#)

```
DDS_DomainParticipantQos participant_qos;
DDSDomainParticipantListener* participant_listener = NULL;
DDS_ReturnCode_t retcode;
// Set the initial peers. This list includes all the computers the
// application may communicate with, along with the maximum number of
// RTI Data Distribution Service participants that can concurrently
// run on that computer. This list only needs to be a superset of the
// actual list of computers and participants that will be running at
// any time.
const char* NDDS_DISCOVERY_INITIAL_PEERS[] = {
    "host1",
    "10.10.30.192",
    "1@localhost",
    "2@host2",
    "my://", /* all unicast addr on transport plugins with alias "my" */
    "2@shmem://", /* shared memory */
    "FF00:ABCD::0",
    "sf://0/0/R", /* StarFabric transport plugin */
    "1@FF00:0:1234::0",
    "225.1.2.3",
    "3@225.1.0.55",
    "FAA0::0#0/0/R",
};
const DDS_Long NDDS_DISCOVERY_INITIAL_PEERS_LENGTH =
    sizeof(NDDS_DISCOVERY_INITIAL_PEERS)/sizeof(const char*);
// initialize participant_qos with default values
retcode = factory->get_default_participant_qos(participant_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default participant qos\n");
}
if (!participant_qos.discovery.initial_peers.from_array(
    NDDS_DISCOVERY_INITIAL_PEERS,
    NDDS_DISCOVERY_INITIAL_PEERS_LENGTH)) {
    printf("***Error: failed to set discovery.initial_peers qos\n");
}
// Create the participant
```

```

DDSDomainParticipant* participant =
    factory->create_participant(domain_id,
                               participant_qos,
                               participant_listener,
                               DDS_STATUS_MASK_NONE);
if (participant == NULL) {
    printf("***Error: failed to create domain participant\n");
};
return participant;

```

### 7.51.4 Tearing down a participant

- **Get the factory** (p. 202)
- **Delete DDSDomainParticipant** (p. 1351):
 

```

DDS_ReturnCode_t retcode;
retcode = factory->delete_participant(participant);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

## 7.52 Topic Use Cases

Working with topics.

Working with topics.

### 7.52.1 Registering a user data type

- **Set up participant** (p. 202)
- **Register user data type of type T under the name "My\_Type"**

```

const char* type_name = "My_Type";
DDS_ReturnCode_t retcode;
retcode = FooTypeSupport::register_type(participant, type_name);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}

```

### 7.52.2 Setting up a topic

- **Set up participant** (p. 202)
- **Ensure user data type is registered** (p. 203)
- **Create a DDSTopic** (p. 1617) under the name "my\_topic"
 

```

const char* topic_name = "my_topic";
const char* type_name = "My_Type"; // user data type
DDS_TopicQos topic_qos;
DDS_ReturnCode_t retcode;
// MyTopicListener is user defined and
// extends DDSListener
DDSListener* topic_listener = new MyTopicListener(); // or = NULL
retcode = participant->get_default_topic_qos(topic_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
DDS_Topic* topic = participant->create_topic(topic_name, type_name,
                                           topic_qos, topic_listener,
                                           DDS_STATUS_MASK_ALL);

if (topic == NULL) {
    // ... error
};

```

### 7.52.3 Tearing down a topic

- Delete **DDSTopic** (p. 1617):

```
DDS_ReturnCode_t retcode;
retcode = participant->delete_topic(topic);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

## 7.53 FlowController Use Cases

Working with flow controllers.

Working with flow controllers.

### 7.53.1 Creating a flow controller

- Set up participant (p. 202)

- Create a flow controller

```
DDS_ReturnCode_t retcode;
DDSFlowController *controller = NULL;
DDS_FlowControllerProperty_t property;
retcode = participant->get_default_flowcontroller_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default flow controller property\n");
}
// optionally modify flow controller property values
controller = participant->create_flowcontroller(
    "my flow controller name", property);
if (controller == NULL) {
    printf("***Error: failed to create flow controller\n");
}
```

### 7.53.2 Flow controlling a data writer

- Set up participant (p. 202)

- Create flow controller (p. 204)

- Create an asynchronous data writer, **FooDataWriter** (p. 1676), of user data type **Foo** (p. 1648) :

```
DDS_DataWriterQos writer_qos;
DDS_ReturnCode_t retcode;
// MyWriterListener is user defined and
// extends DDSDataWriterListener
MyWriterListener* writer_listener = new MyWriterListener(); // or = NULL
retcode = publisher->get_default_datawriter_qos(writer_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
/* Change the writer QoS to publish asynchronously */
writer_qos.publish_mode.kind = DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS;
/* Setup to use the previously created flow controller */
writer_qos.publish_mode.flow_controller_name =
    DDS_String_dup("my flow controller name");
/* Samples queued for asynchronous write are subject to the History QoS policy */
writer_qos.history.kind = DDS_KEEP_ALL_HISTORY_QOS;
FooDataWriter* writer = publisher->create_datawriter(topic,
    writer_qos,
    writer_listener,
    DDS_STATUS_MASK_ALL);
```

```

if (writer == NULL) {
    // ... error
};
/* Send data asynchronously... */
/* Wait for asynchronous send completes, if desired */
retcode = writer->wait_for_asynchronous_publishing(timeout);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to wait for asynchronous publishing\n");
}

```

### 7.53.3 Using the built-in flow controllers

RTI Connext provides several built-in flow controllers.

The **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 121) built-in flow controller provides the basic asynchronous writer behavior. When calling **FooDataWriter::write** (p. 1683), the call signals the **DDSPublisher** (p. 1550) asynchronous publishing thread (**DDS\_PublisherQos::asynchronous\_publisher** (p. 1025)) to send the actual data. As with any **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) **DDSDataWriter** (p. 1321), the **FooDataWriter::write** (p. 1683) call returns immediately afterwards. The data is sent immediately in the context of the **DDSPublisher** (p. 1550) asynchronous publishing thread.

When using the **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME** (p. 122) flow controller, data is also sent in the context of the **DDSPublisher** (p. 1550) asynchronous publishing thread, but at a regular fixed interval. The thread accumulates samples from different **DDSDataWriter** (p. 1321) instances and generates data on the wire only once per **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 915).

In contrast, the **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 123) flow controller permits flow only when **DDSFlowController::trigger\_flow** (p. 1470) is called. The data is still sent in the context of the **DDSPublisher** (p. 1550) asynchronous publishing thread. The thread accumulates samples from different **DDSDataWriter** (p. 1321) instances (across any **DDSPublisher** (p. 1550)) and sends all data since the previous trigger.

The properties of the built-in **DDSFlowController** (p. 1468) instances can be adjusted.

- **Set up participant** (p. 202)

- **Lookup built-in flow controller**

```

DDSFlowController *controller = NULL;
controller = participant->lookup_flowcontroller(
    DDS_DEFAULT_FLOW_CONTROLLER_NAME);
/* This should never happen, built-in flow controllers are always created */
if (controller == NULL) {
    printf("***Error: failed to lookup flow controller\n");
}

```

- **Change property of built-in flow controller, if desired**

```

DDS_ReturnCode_t retcode;
DDS_FlowControllerProperty_t property;
/* Get the property of the flow controller */
retcode = controller->get_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get flow controller property\n");
}
/* Change the property value as desired */
property.token_bucket.period.sec = 2;
property.token_bucket.period.nanosec = 0;
/* Update the flow controller property */
retcode = controller->set_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to set flow controller property\n");
}

```

- **Create a data writer using the correct flow controller name** (p. 204)

### 7.53.4 Shaping the network traffic for a particular transport

- **Set up participant** (p. 202)
- **Create the transports** (p. 216)
- **Create a separate flow controller for each transport** (p. 204)
- Configure **DDSDataWriter** (p. 1321) instances to only use a single transport
- **Associate all data writers using the same transport to the corresponding flow controller** (p. 204)
- For each transport, the corresponding flow controller limits the network traffic based on the token bucket properties

### 7.53.5 Coalescing multiple samples in a single network packet

- **Set up participant** (p. 202)
- **Create a flow controller with a desired token bucket period** (p. 204)
- **Associate the data writer with the flow controller** (p. 204)
- Multiple samples written within the specified period will be coalesced into a single network packet (provided that `tokens_added_per_period` and `bytes_per_token` permit).

## 7.54 Publisher Use Cases

Working with publishers.

Working with publishers.

### 7.54.1 Setting up a publisher

- **Set up participant** (p. 202)
- **Create a DDSPublisher** (p. 1550)
 

```
DDS_PublisherQos publisher_qos;
// MyPublisherListener is user defined and
// extends DDSPublisherListener
DDSPublisherListener* publisher_listener =
    = new MyPublisherListener(); // or = NULL
participant->get_default_publisher_qos(publisher_qos);
DDSPublisher* publisher = participant->create_publisher(publisher_qos,
                                                       publisher_listener,
                                                       DDS_STATUS_MASK_ALL);

if (publisher == NULL) {
    // ... error
};
```

### 7.54.2 Tearing down a publisher

- **Delete DDSPublisher** (p. 1550):
 

```
DDS_ReturnCode_t retcode;
retcode = participant->delete_publisher(publisher);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

## 7.55 DataWriter Use Cases

Working with data writers.

Working with data writers.

### 7.55.1 Setting up a data writer

- **Set up publisher** (p. 206)
- **Set up a topic** (p. 203)
- **Create a data writer, `FooDataWriter`** (p. 1676), of user data type `Foo` (p. 1648) :

```
DDS_DataWriterQos writer_qos;
DDS_ReturnCode_t retcode;
// MyWriterListener is user defined and
// extends DDSDataWriterListener
MyWriterListener* writer_listener = new MyWriterListener(); // or = NULL
retcode = publisher->get_default_datawriter_qos(writer_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
FooDataWriter* writer = publisher->create_datawriter(topic,
                                                    writer_qos,
                                                    writer_listener,
                                                    DDS_STATUS_MASK_ALL);

if (writer == NULL) {
    // ... error
};
```

### 7.55.2 Managing instances

- **Getting an instance "key" value of user data type `Foo`** (p. 1648)

```
Foo* data = ...; // user data
retcode = writer->get_key_value(*data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- **Registering an instance of type `Foo`** (p. 1648)

```
DDS_InstanceHandle_t instance_handle = DDS_HANDLE_NIL;
instance_handle = writer->register_instance(data);
```

- **Unregistering an instance of type `Foo`** (p. 1648)

```
retcode = writer->unregister_instance(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- **Disposing of an instance of type `Foo`** (p. 1648)

```
retcode = writer->dispose(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

### 7.55.3 Sending data

- **Set up data writer** (p. 207)
- **Register instance** (p. 207)
- **Write instance of type Foo** (p. 1648)

```

Foo* data; // user data
DDS_InstanceHandle_t instance_handle =
    DDS_HANDLE_NIL; // or a valid registered handle
DDS_ReturnCode_t retcode;
retcode = writer->write(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

### 7.55.4 Tearing down a data writer

- **Delete DDSDataWriter** (p. 1321):

```

DDS_ReturnCode_t retcode;
retcode = publisher->delete_datawriter(writer);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

## 7.56 Subscriber Use Cases

Working with subscribers.

Working with subscribers.

### 7.56.1 Setting up a subscriber

- **Set up participant** (p. 202)
- **Create a DDSSubscriber** (p. 1592)

```

DDS_SubscriberQos subscriber_qos;
DDS_ReturnCode_t retcode;
// MySubscriberListener is user defined and
// extends DDSSubscriberListener
DDSSubscriberListener* subscriber_listener =
    new MySubscriberListener(); // or = NULL
retcode = participant->get_default_subscriber_qos(subscriber_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
};
DDSSubscriber* subscriber =
    participant->create_subscriber(subscriber_qos,
    subscriber_listener,
    DDS_STATUS_MASK_ALL);

if (subscriber == NULL) {
    // ... error
};

```

## 7.56.2 Set up subscriber to access received data

- **Set up subscriber** (p. 208)
- Set up to handle the `DDS_DATA_ON_READERS_STATUS` status, in one or both of the following two ways.
- **Enable `DDS_DATA_ON_READERS_STATUS` for the `DDSSubscriberListener` associated with the subscriber** (p. 214)
  - The processing to handle the status change is done in the `DDSSubscriberListener::on_data_on_readers()` (p. 1614) method of the attached listener.
  - Typical processing will **access the received data** (p. 209), either in arbitrary order or in a **coherent and ordered manner** (p. 210).
- **Enable `DDS_DATA_ON_READERS_STATUS` for the `DDSStatusCondition` associated with the subscriber** (p. 214)
  - The processing to handle the status change is done **when the subscriber's attached status condition is triggered** (p. 216) and the `DDS_DATA_ON_READERS_STATUS` status on the subscriber is changed.
  - Typical processing will **access the received data** (p. 209), either in an arbitrary order or in a **coherent and ordered manner** (p. 210).

## 7.56.3 Access received data via a subscriber

- **Ensure subscriber is set up to access received data** (p. 209)
- **Get the list of readers that have data samples available:**

```

DDSDataReaderSeq reader_seq; // holder for list/set of readers
DDS_SampleStateMask sample_state_mask = DDS_NOT_READ_SAMPLE_STATE;
DDS_ViewStateMask view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t retcode;
// get_datareadersX is not supported yet.
retcode = subscriber->get_datareaders(reader_seq,
                                     sample_state_mask,
                                     view_state_mask,
                                     instance_state_mask);

if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```
- Upon successfully getting the list of readers with data, process the data readers to either:
  - **Read the data in each reader** (p. 212), **OR**
  - **Take the data in each reader** (p. 211)

If the intent is to access the data **coherently or in order** (p. 210), the list of data readers *must* be processed in the order returned:

```

for(int i = 0; i < reader_seq.length(); ++i) {

    TDataReader* reader = reader_seq[i];
    // Take the data from reader,
    // OR
    // Read the data from reader
}

```

- **Alternatively,** call `DDSSubscriber::notify_datareaders` (p. 1608) to invoke the `DDSDataReaderListener` (p. 1315) for each of the data readers.
 

```

retcode = subscriber->notify_datareaders();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

### 7.56.4 Access received data coherently and/or in order

To access the received data coherently and/or in an ordered manner, according to the settings of the `DDS_↔PresentationQosPolicy` (p. 996) attached to a `DDSSubscriber` (p. 1592):

- **Ensure subscriber is set up to access received data** (p. 209)

- Indicate that data will be accessed via the subscriber:

```
retcode = subscriber->begin_access();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- **Access received data via the subscriber, making sure that the data readers are processed in the order returned.** (p. 209)

- Indicate that the data access via the subscriber is done:

```
retcode = subscriber->end_access();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

### 7.56.5 Tearing down a subscriber

- **Delete DDSSubscriber** (p. 1592):

```
DDS_ReturnCode_t retcode;
retcode = participant->delete_subscriber(subscriber);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

## 7.57 DataReader Use Cases

Working with data readers.

Working with data readers.

### 7.57.1 Setting up a data reader

- **Set up subscriber** (p. 208)

- **Set up a topic** (p. 203)

- **Create a data reader, FooDataReader** (p. 1649), of user data type **Foo** (p. 1648) :

```
DDS_DataReaderQos reader_qos;
DDS_ReturnCode_t retcode;
// MyReaderListener is user defined and
// extends DDSDataReaderListener
DDSDataReaderListener* reader_listener =
    new MyReaderListener(); // or = NULL
retcode = subscriber->get_default_datareader_qos(reader_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
};
FooDataReader* reader = subscriber->create_datareader(topic,
                                                    reader_qos,
                                                    reader_listener,
                                                    DDS_STATUS_MASK_ALL);

if (reader == NULL) {
    // ... error
};
```

## 7.57.2 Managing instances

- Given a data reader
 

```
FooDataReader* reader = ...;
```
- Getting an instance "key" value of user data type `Foo` (p. 1648)
 

```
Foo data; // user data of type Foo
// ...
retcode = reader->get_key_value(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

## 7.57.3 Set up reader to access received data

- **Set up data reader** (p. 210)
- Set up to handle the `DDS_DATA_AVAILABLE_STATUS` status, in one or both of the following two ways.
- **Enable `DDS_DATA_AVAILABLE_STATUS` for the `DDSDataReaderListener` associated with the data reader** (p. 214)
  - The processing to handle the status change is done in the `DDSDataReaderListener::on_data_available` (p. 1317) method of the attached listener.
  - Typical processing will **access the received data** (p. 211).
- **Enable `DDS_DATA_AVAILABLE_STATUS` for the `DDSStatusCondition` associated with the data reader** (p. 214)
  - The processing to handle the status change is done **when the data reader's attached status condition is triggered** (p. 216) and the `DDS_DATA_AVAILABLE_STATUS` status on the data reader is changed.
  - Typical processing will **access the received data** (p. 211).

## 7.57.4 Access received data via a reader

- **Ensure reader is set up to access received data** (p. 211)
- Access the received data, by either:
  - **Taking the received data in the reader** (p. 211), **OR**
  - **Reading the received data in the reader** (p. 212)

## 7.57.5 Taking data

- **Ensure reader is set up to access received data** (p. 211)

- Take samples of user data type T. The samples are removed from the Service. The caller is responsible for deallocating the buffers.

```

FooSeq          data_seq; // holder for sequence of user data type Foo
DDS_SampleInfoSeq info_seq; // holder for sequence of DDS_SampleInfo
long            max_samples = DDS_LENGTH_UNLIMITED;
DDS_SampleStateMask sample_state_mask = DDS_ANY_SAMPLE_STATE;
DDS_ViewStateMask  view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t  retcode;
retcode = reader->take(data_seq, info_seq,
                      max_samples,
                      sample_state_mask,
                      view_state_mask,
                      instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

- Use the received data

```

// Use the received data samples 'data_seq' and associated information 'info_seq'
for(int i = 0; i < data_seq.length(); ++i) {
    // use... data_seq[i] ...
    // use... info_seq[i] ...
}

```

- Return the data samples and the information buffers back to the middleware. *IMPORTANT*: Once this call returns, you must not retain any pointers to any part of any sample or sample info object.

```

retcode = reader->return_loan(data_seq, info_seq);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

## 7.57.6 Reading data

- **Ensure reader is set up to access received data** (p.211)
- **Read samples of user data type Foo** (p.1648). The samples are not removed from the Service. It remains responsible for deallocating the buffers.

```

FooSeq          data_seq; // holder for sequence of user data type Foo
DDS_SampleInfoSeq info_seq; // holder for sequence of DDS_SampleInfo
long            max_samples = DDS_LENGTH_UNLIMITED;
DDS_SampleStateMask sample_state_mask = DDS_NOT_READ_SAMPLE_STATE;
DDS_ViewStateMask  view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t  retcode;
retcode = reader->read(data_seq, info_seq,
                      max_samples,
                      sample_state_mask,
                      view_state_mask,
                      instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

- Use the received data

```

// Use the received data samples 'data_seq' and associated
// information 'info_seq'
for(int i = 0; i < data_seq.length(); ++i) {
    // use... data_seq[i] ...
    // use... info_seq[i] ...
}

```

- Return the data samples and the information buffers back to the middleware

```

retcode = reader->return_loan(data_seq, info_seq);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}

```

### 7.57.7 Tearing down a data reader

- Delete **DDSDataReader** (p. 1288):
 

```
DDS_ReturnCode_t retcode;
retcode = subscriber->delete_datareader(reader);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

## 7.58 Entity Use Cases

Working with entities.

Working with entities.

### 7.58.1 Enabling an entity

- To enable an **DDSEntity** (p. 1463)
 

```
if (entity->enable() != DDS_RETCODE_OK) {
    printf("***Error: failed to enable entity\n");
}
```

### 7.58.2 Checking if a status changed on an entity.

- Given an **DDSEntity** (p. 1463) and a **DDS\_StatusKind** (p. 342) to check for, get the list of statuses that have changed since the last time they were respectively cleared.
 

```
DDS_StatusMask status_changes_mask = entity->get_status_changes();
```
- Check if `status_kind` was changed since the last time it was cleared. A plain communication status change is cleared when the status is read using the entity's `get_<plain communication status>()` method. A read communication status change is cleared when the data is taken from the middleware via a `TDataReader_←take()` call [see **Changes in Status** (p. 339) for details].
 

```
if (status_changes_mask & status_kind) {
    return true;
} else {
    /* ... YES, status_kind changed ... */
    return false; /* ... NO, status_kind did NOT change ... */
}
```

### 7.58.3 Changing the QoS for an entity

The QoS for an entity can be specified at the entity creation time. Once an entity has been created, its QoS can be manipulated as follows.

- Get an entity's QoS settings using **get\_qos (abstract)** (p. 1465)
 

```
if (entity->get_qos(qos) != DDS_RETCODE_OK) {
    printf("***Error: failed to get qos\n");
}
```
- Change the desired qos policy fields
 

```
/* Change the desired qos policies */
/* qos.policy.field = ... */
```

- Set the qos using **set\_qos (abstract)** (p. 1464).

```
switch (entity->set_qos(qos)) {
  case DDS_RETCODE_OK: { /* success */
    } break;
  case DDS_RETCODE_IMMUTABLE_POLICY: {
    printf("***Error: tried changing a policy that can only be"
           "          set at entity creation time\n");
    } break;
  case DDS_RETCODE_INCONSISTENT_POLICY: {
    printf("***Error: tried changing a policy to a value inconsistent"
           "          with other policy settings\n");
    } break;
  default: {
    printf("***Error: some other failure\n");
    }
}
```

#### 7.58.4 Changing the listener and enabling/disabling statuses associated with it

The listener for an entity can be specified at the entity creation time. By default the listener is *enabled* for all the statuses supported by the entity.

Once an entity has been created, its listener and/or the statuses for which it is enabled can be manipulated as follows.

- User defines entity listener methods

```
/* ... methods defined by EntityListener ... */
public class MyEntityListener implements DDSListener {
  // ... methods defined by EntityListener ...
}
```

- Get an entity's listener using **get\_listener (abstract)** (p. 1466)

```
entity_listener = entity->get_listener();
```

- Enable `status_kind` for the listener

```
enabled_status_list |= status_kind;
```

- Disable `status_kind` for the listener

```
enabled_status_list &= ~status_kind;
```

- Set an entity's listener to `entity_listener` using **set\_listener (abstract)** (p. 1465). Only enable the listener for the statuses specified by the `enabled_status_list`.

```
if (entity->set_listener(entity_listener, enabled_status_list)
    != DDS_RETCODE_OK) {
  printf("***Error: setting entity listener\n");
}
```

#### 7.58.5 Enabling/Disabling statuses associated with a status condition

Upon entity creation, by default, all the statuses are *enabled* for the `DDS_StatusCondition` associated with the entity.

Once an entity has been created, the list of statuses for which the `DDS_StatusCondition` is triggered can be manipulated as follows.

- Given an entity, a `status_kind`, and the associated `status_condition`:

```
statuscondition = entity->get_statuscondition();
```

- Get the list of statuses enabled for the `status_condition`

```
enabled_status_list = statuscondition->get_enabled_statuses();
```

- Check if the given `status_kind` is enabled for the `status_condition`

```
if (enabled_status_list & status_kind) {
    /*... YES, status_kind is enabled ... */
} else {
    /* ... NO, status_kind is NOT enabled ... */
}
```

- Enable `status_kind` for the `status_condition`

```
if (statuscondition->set_enabled_statuses(enabled_status_list | status_kind)
    != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

- Disable `status_kind` for the `status_condition`

```
if (statuscondition->set_enabled_statuses(enabled_status_list & ~status_kind)
    != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

## 7.59 Waitset Use Cases

Using wait-sets and conditions.

Using wait-sets and conditions.

### 7.59.1 Setting up a wait-set

- Create a wait-set

```
DDSWaitSet* waitset = new DDSWaitSet();
```

- Attach conditions

```
DDSCondition* cond1 = ...;
DDSCondition* cond2 = entity->get_statuscondition();
DDSCondition* cond3 = reader->create_readcondition(DDS_NOT_READ_SAMPLE_STATE,
                                                  DDS_ANY_VIEW_STATE,
                                                  DDS_ANY_INSTANCE_STATE);
DDSCondition* cond4 = new DDSGuardCondition();
DDSCondition* cond5 = ...;
DDS_ReturnCode_t retcode;
retcode = waitset->attach_condition(cond1);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond2);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond3);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond4);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond5);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
}
```

## 7.59.2 Waiting for condition(s) to trigger

- Set up a wait-set (p. 215)
- Wait for a condition to trigger or timeout, whichever occurs first

```

DDS_Duration_t timeout = { 0, 1000000 }; // 1ms
DDSConditionSeq active_conditions; // holder for active conditions
bool is_cond1_triggered = false;
bool is_cond2_triggered = false;
DDS_ReturnCode_t retcode;
retcode = waitset->wait(active_conditions, timeout);
if (retcode != DDS_RETCODE_OK) {
    if (retcode == DDS_RETCODE_TIMEOUT) {
        // Timeout
    } else {
        // Failure
    } else {
        // success, check if "cond1" or "cond2" are triggered:
        for(int i = 0; i < active_conditions.length(); ++i) {
            if (active_conditions[i] == cond1) {
                printf("Cond1 was triggered!");
                is_cond1_triggered = true;
            }
            if (active_conditions[i] == cond2) {
                printf("Cond2 was triggered!");
                is_cond2_triggered = true;
            }
            if (is_cond1_triggered && is_cond2_triggered) {
                break;
            }
        }
    }
    if (is_cond1_triggered) {
        // ... do something because "cond1" was triggered ...
    }
    if (is_cond2_triggered) {
        // ... do something because "cond2" was triggered ...
    }
    return retcode;
}

```

## 7.59.3 Tearing down a wait-set

- Delete the wait-set

```

delete waitset;
waitset = NULL;

```

## 7.60 Transport Use Cases

Working with pluggable transports.

Working with pluggable transports.

### 7.60.1 Changing the automatically registered built-in transports

- The `DDS_TRANSPORTBUILTIN_MASK_DEFAULT` (p. 444) specifies the transport plugins that will be automatically registered with a newly created `DDSDomainParticipant` (p. 1351) by default.
- This default can be changed by changing the value of the value of `TRANSPORT_BUILTIN` (p. 443) Qos Policy on the `DDSDomainParticipant` (p. 1351)
- To change the `DDS_DomainParticipantQos::transport_builtin` (p. 744) Qos Policy:

```

DDS_DomainParticipantQos participant_qos;

factory->get_default_participant_qos(participant_qos);

participant_qos.transport_builtin.mask = DDS_TRANSPORTBUILTIN_SHMEM |
DDS_TRANSPORTBUILTIN_UDPv4;

```

## 7.60.2 Changing the properties of the automatically registered builtin transports

The behavior of the automatically registered builtin transports can be altered by changing their properties.

- Tell the **DDSDomainParticipantFactory** (p. 1426) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 202)

- Get the property of the desired builtin transport plugin, say **::UDPv4 Transport** (p. 266)

```
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT;

if (NDDSTransportSupport::get_builtin_transport_property(
    participant,
    DDS_TRANSPORTBUILTIN_UDPv4,
    (struct NDDS_Transport_Property_t&)property)
    != DDS_RETCODE_OK) {
    printf("***Error: get builtin transport property\n");
}
```

- Change the property fields as desired. Note that the properties should be changed carefully, as inappropriate values may prevent communications. For example, the **::UDPv4 Transport** (p. 266) properties can be changed to support **large messages** (assuming the underlying operating system's UDPv4 stack supports the large message size). Note: if `message_size_max` is increased from the default for any of the built-in transports, then the **DDS↔\_ReceiverPoolQosPolicy::buffer\_size** (p. 1040) on the DomainParticipant should also be changed.

```
/* Decrease the UDPv4 maximum message size to 9K (small messages). */
property.parent.message_size_max = 9216;
property.recv_socket_buffer_size = 9216;
property.send_socket_buffer_size = 9216;
```

- Set the property of the desired builtin transport plugin, say **::UDPv4 Transport** (p. 266)

```
if (NDDSTransportSupport::set_builtin_transport_property(
    participant,
    DDS_TRANSPORTBUILTIN_UDPv4,
    (struct NDDS_Transport_Property_t&)property)
    != DDS_RETCODE_OK) {
    printf("***Error: set builtin transport property\n");
}
```

- **Enable the participant** (p. 213) to turn on communications with other participants in the domain using the new properties for the automatically registered builtin transport plugins.

## 7.60.3 Creating a transport

- A transport plugin is created using methods provided by the supplier of the transport plugin.

- For example to create an instance of the **::UDPv4 Transport** (p. 266)

```
NDDS_Transport_Plugin* transport = NULL;
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT;
transport = NDDS_Transport_UDPv4_new(&property);
if (transport == NULL) {
    printf("***Error: creating transport plugin\n");
}
```

## 7.60.4 Deleting a transport

- A transport plugin can only be deleted only after the **DDSDomainParticipant** (p. 1351) with which it is registered is deleted.

- The virtual destructor provided by the abstract transport plugin API can be used to delete a transport plugin.

```
transport->delete_cEA(transport, NULL);
```

### 7.60.5 Registering a transport with a participant

The basic steps for setting up transport plugins for use in an RTI Connex application are described below.

- Tell the **DDSDomainParticipantFactory** (p. 1426) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 202)

#### Optionally Changing the automatically registered built-in transports (p. 216)

#### Optionally Changing the properties of the automatically registered builtin transports (p. 217)

- Create a disabled **DDSDomainParticipant** (p. 1351), as described in **Setting up a participant** (p. 202)
- Decide on the **network address** (p. 171) for the transport plugin. The network address should be chosen so that the resulting fully qualified address is globally unique (across all transports used in the domain).

```
/* Decide on a network address (96 bits for UDPv4), such that the fully
   qualified unicast address for the transport's interfaces will be
   globally unique. For example, we use the network address:
       1234:1234:1234:0000
   It will be prepended to the unicast addresses of the transport plugin's
   interfaces, to give a fully qualified address that is unique in the
   domain.
*/
NDDS_Transport_Address_t network_address = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 0,0,0,0}};
```

- Decide on the **aliases** (p. 168) for the transport plugin. An alias can refer to one or more transport plugins. The transport class name (see **Builtin Transport Class Names** (p. 470)) are automatically appended to the user-provided aliases. Alias names are useful in creating logical groupings of transports, e.g. all the transports that are configured to support large messages may be given the alias "large\_message".

```
/* Decide aliases, i.e. the names by which this transport plugin will be known */
const char* ALIASES[] = {
    "my",
    "large_message",
};
const DDS_Long ALIASES_LENGTH = sizeof(ALIASES)/sizeof(const char*);

/* Initialize the aliases StringSeq */
DDS_StringSeq aliases;
if (!aliases.from_array(ALIASES, ALIASES_LENGTH)) {
    printf("***Error: creating initializing aliases\n");
}
}
```

- Register the transport plugin with the **DDSDomainParticipant** (p. 1351). Note that a transport plugin should **NOT be registered with more than one DomainParticipant**. It is the responsibility of the application programmer to ensure that this requirement is not violated.

```
NDDS_Transport_Handle_t handle = NDDS_TRANSPORT_HANDLE_NIL;

handle = NDDSTransportSupport::register_transport(
    participant,          /* Disabled Domain Participant */
    transport,           /* Transport plugin */
    aliases,             /* Transport aliases */
    network_address);   /* Transport network address */
if (NDDS_Transport_Handle_is_nil(&handle)) {
    printf("***Error: registering transport\n");
}
}
```

#### Optionally Adding receive routes for a transport (p. 219)

#### Optionally Adding send routes for a transport (p. 219)

- **Enable the participant** (p. 213) to turn on communications with other participants in the domain, using the newly registered transport plugins, and automatically registered builtin transport plugins (if any).

### 7.60.6 Adding receive routes for a transport

- Receive routes can be added to restrict address ranges on which incoming messages can be received. Any number of receive routes can be added, but these must be done before the participant is enabled.
- To restrict the address range from which incoming messages can be received by the transport plugin:

```
/* Restrict to receiving messages only on interfaces
   1234:1234:1234:10.10.*.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,0,0}};
if (NDDSTransportSupport::add_receive_route(handle, subnet, 112)
    != DDS_RETCODE_OK) {
    printf("***Error: adding receive route\n");
}
```

### 7.60.7 Adding send routes for a transport

- Send routes can be added to restrict the address ranges to which outgoing messages can be sent by the transport plugin. Any number of send routes can be added, but these must be done before the participant is enabled.
- To restrict address ranges to which outgoing messages can be sent by the transport plugin:

```
/* Restrict to sending messages only to addresses (subnets)
   1234:1234:1234:10.10.30.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,30,0}};
if (NDDSTransportSupport::add_send_route(handle, subnet, 120)
    != DDS_RETCODE_OK) {
    printf("***Error: adding send route\n");
}
```

## 7.61 Filter Use Cases

Working with data filters.

Working with data filters.

### 7.61.1 Introduction <br>

RTI Connexx supports filtering data either during the exchange from **DDSDataWriter** (p.1321) to **DDSDataReader** (p. 1288), or after the data has been stored at the **DDSDataReader** (p. 1288).

Filtering during the exchange process is performed by a **DDSContentFilteredTopic** (p. 1283), which is created by the **DDSDataReader** (p. 1288) as a way of specifying a subset of the data samples that it wishes to receive.

Filtering samples that have already been received by the **DDSDataReader** (p.1288) is performed by creating a **DDSQueryCondition** (p. 1573), which can then used to check for matching samples, be alerted when matching samples arrive, or retrieve matching samples through use of the **FooDataReader::read\_w\_condition** (p. 1657) or **FooDataReader::take\_w\_condition** (p. 1658) functions. (Conditions may also be used with the APIs **FooDataReader::read\_next\_instance\_w\_condition** (p. 1670) and **FooDataReader::take\_next\_instance\_w\_condition** (p. 1671).)

Filtering may be performed on any topic, either keyed or un-keyed, except the **Built-in Topics** (p. 59). Filtering may be performed on any field, subset of fields, or combination of fields, subject only to the limitations of the filter syntax, and some restrictions against filtering some *sparse value types* of the **Dynamic Data** (p. 99) API.

RTI Connexx contains built in support for filtering using SQL syntax, described in the **Queries and Filters Syntax** (p. 179) module.

### 7.61.1.1 Overview of ContentFilteredTopic

Each **DDSContentFilteredTopic** (p.1283) is created based on an existing **DDSTopic** (p.1617). The **DDSTopic** (p.1617) specifies the **field\_names** and **field\_types** of the data contained within the topic. The **DDSContentFilteredTopic** (p.1283), by means of its **filter\_expression** and **expression\_parameters**, further specifies the *values* of the data which the **DDSDataReader** (p.1288) wishes to receive.

Custom filters may also be constructed and utilized as described in the **Creating Custom Content Filters** (p.222) module.

Once the **DDSContentFilteredTopic** (p.1283) has been created, a **DDSDataReader** (p.1288) can be created using the filtered topic. The filter's characteristics are exchanged between the **DDSDataReader** (p.1288) and any matching **DDSDataWriter** (p.1321) during the discovery process.

If the **DDSDataWriter** (p.1321) allows (by **DDS\_DataWriterResourceLimitsQosPolicy::max\_remote\_reader\_filters** (p.700)), and the **DDSDataReader** (p.1288) 's **DDS\_TransportMulticastQosPolicy** (p.1151) is empty, then the **DDSDataWriter** (p.1321) will filter out samples that don't meet the filtering criteria.

If disallowed by the **DDSDataWriter** (p.1321), or the **DDSDataReader** (p.1288) has set the **DDS\_TransportMulticastQosPolicy** (p.1151), then the **DDSDataWriter** (p.1321) sends all samples to the **DDSDataReader** (p.1288), and the **DDSDataReader** (p.1288) discards any samples that do not meet the filtering criteria.

The **expression\_parameters** can be modified using **DDSContentFilteredTopic::set\_expression\_parameters** (p.1285). Any changes made to the filtering criteria by means of **DDSContentFilteredTopic::set\_expression\_parameters** (p.1285), will be conveyed to any connected **DDSDataWriter** (p.1321). New samples will be subject to the modified filtering criteria, but samples that have already been accepted or rejected are unaffected. However, if the **DDSDataReader** (p.1288) connects to a **DDSDataWriter** (p.1321) that *re-sends* its data, the re-sent samples will be subjected to the new filtering criteria.

### 7.61.1.2 Overview of QueryCondition

**DDSQueryCondition** (p.1573) combine aspects of the content filtering capabilities of **DDSContentFilteredTopic** (p.1283) with state filtering capabilities of **DDSReadCondition** (p.1574) to create a reconfigurable means of filtering or searching data in the **DDSDataReader** (p.1288) queue.

**DDSQueryCondition** (p.1573) may be created on a disabled **DDSDataReader** (p.1288), or after the **DDSDataReader** (p.1288) has been enabled. If the **DDSDataReader** (p.1288) is enabled, and has already received and stored samples in its queue, then all data samples in the are filtered against the **DDSQueryCondition** (p.1573) filter criteria at the time that the **DDSQueryCondition** (p.1573) is created. (Note that an exclusive lock is held on the **DDSDataReader** (p.1288) sample queue for the duration of the **DDSQueryCondition** (p.1573) creation).

Once created, incoming samples are filtered against all **DDSQueryCondition** (p.1573) filter criteria at the time of their arrival and storage into the **DDSDataReader** (p.1288) queue.

The number of **DDSQueryCondition** (p.1573) filters that an individual **DDSDataReader** (p.1288) may create is set by **DDS\_DataReaderResourceLimitsQosPolicy::max\_query\_condition\_filters** (p.664), to an upper maximum of 32.

## 7.61.2 Filtering with ContentFilteredTopic

- **Set up subscriber** (p. 208)
- **Set up a topic** (p. 203)
- **Create a ContentFilteredTopic, of user data type Foo** (p. 1648) :

```
DDSContentFilteredTopic *cft = NULL;
DDS_StringSeq cft_parameters(2);
const char* cft_param_list[] = {"1", "100"};
cft_parameters.from_array(cft_param_list, 2);
cft = participant->create_contentfilteredtopic("ContentFilteredTopic",
                                           Foo_topic,
                                           "value > %0 AND value < %1",
                                           cft_parameters);

if (cft == NULL) {
    printf("create_contentfilteredtopic error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

- **Create a FooReader using the ContentFilteredTopic:**

```
DDSDataReader *reader = NULL;
reader = subscriber->create_datareader(cft,
                                     datareader_qos, // or DDS_DATAREADER_QOS_DEFAULT
                                     reader_listener, // or NULL
                                     DDS_STATUS_MASK_ALL);

if (reader == NULL) {
    printf("create_datareader error\n");
    subscriber_shutdown(participant);
    return -1;
}
FooDataReader *Foo_reader = FooDataReader::narrow(reader);
if (Foo_reader == NULL) {
    printf("DataReader narrow error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

Once setup, reading samples with a **DDSContentFilteredTopic** (p. 1283) is exactly the same as normal reads or takes, as described in **DataReader Use Cases** (p. 210).

- **Changing filter criteria using set\_expression\_parameters:**

```
cft->get_expression_parameters(cft_parameters);
DDS_String_free(cft_parameters[0]);
DDS_String_free(cft_parameters[1]);
cft_parameters[0] = DDS_String_dup("5");
cft_parameters[1] = DDS_String_dup("9");
retcode = cft->set_expression_parameters(cft_parameters);
if (retcode != DDS_RETCODE_OK) {
    printf("set_expression_parameters error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

## 7.61.3 Filtering with Query Conditions

- **Given a data reader of type Foo** (p. 1648)

```
DDSDataReader *reader = ...;
FooDataReader *Foo_reader = FooDataReader::narrow(reader);
```

- **Creating a QueryCondition**

```
DDSQueryCondition *queryCondition = NULL;
DDS_StringSeq qc_parameters(2);
const char *qc_param_list[] = {"0", "100"};
qc_parameters.from_array(qc_param_list, 2);
queryCondition = reader->create_querycondition(DDS_NOT_READ_SAMPLE_STATE,
                                             DDS_ANY_VIEW_STATE,
                                             DDS_ALIVE_INSTANCE_STATE,
                                             "value > %0 AND value < %1",
                                             qc_parameters);
```

```

if (queryCondition == NULL) {
    printf("create_query_condition error\n");
    goto error_exit;
}

```

- **Reading matching samples with a DDSQueryCondition** (p. 1573)

```

FooSeq data_seq;
DDS_SampleInfoSeq info_seq;
retcode = Foo_reader->read_w_condition(data_seq, info_seq,
                                      DDS_LENGTH_UNLIMITED,
                                      queryCondition);

if (retcode == DDS_RETCODE_NO_DATA) {
    printf("no matching data\n");
} else if (retcode != DDS_RETCODE_OK) {
    printf("read_w_condition error %d\n", retcode);
    subscriber_shutdown(participant);
    return -1;
} else {
    for (i = 0; i < data_seq.length(); ++i) {
        if (info_seq[i].valid_data) {
            /* process your data here */
        }
    }
    retcode = Foo_reader->return_loan(data_seq, info_seq);
    if (retcode != DDS_RETCODE_OK) {
        printf("return loan error %d\n", retcode);
        subscriber_shutdown(participant);
        return -1;
    }
}

```

- **DDSQueryCondition::set\_query\_parameters** (p. 1574) is used similarly to **DDSContentFilteredTopic::set\_expression\_parameters** (p. 1285), and the same coding techniques can be used.
- Any **DDSQueryCondition** (p. 1573) that have been created must be deleted before the **DDSDataReader** (p. 1288) can be deleted. This can be done using **DDSDataReader::delete\_contained\_entities** (p. 1295) or manually as in:

```
retcode = reader->delete_readcondition(queryCondition);
```

#### 7.61.4 Filtering Performance

Although RTI Connex supports filtering on any field or combination of fields using the SQL syntax of the built-in filter, filters for keyed topics that filter solely on the contents of key fields have the potential for much higher performance. This is because for key-only filters, the **DDSDataReader** (p. 1288) caches the results of the filter (pass or not pass) for each instance. When another sample of the same instance is seen at the **DDSDataReader** (p. 1288), the filter results are retrieved from the cache, dispensing with the need to call the filter function.

This optimization applies to all filtering using the built-in SQL filter, performed by the **DDSDataReader** (p. 1288), for either **DDSContentFilteredTopic** (p. 1283) or **DDSQueryCondition** (p. 1573). This does *not* apply to filtering performed for **DDSContentFilteredTopic** (p. 1283) by the **DDSDataWriter** (p. 1321).

## 7.62 Creating Custom Content Filters

Working with custom content filters.

Working with custom content filters.

### 7.62.1 Introduction

By default, RTI Connext creates content filters with the `DDS_SQL_FILTER`, which implements a superset of the DDS-specified SQL `WHERE` clause. However, in many cases this filter may not be what you want. Some examples are:

- The default filter can only filter based on the content of a sample, not on a computation on the content of a sample. You can use a custom filter that is customized for a specific type and can filter based on a computation of the type members.
- You want to use a different filter language than SQL

This HOWTO explains how to write your own custom filter and is divided into the following sections:

- **The Custom Content Filter API** (p. 223)
- **Example Using C format strings** (p. 224)

### 7.62.2 The Custom Content Filter API

A custom content filter is created by calling the `DDSDomainParticipant::register_contentfilter` (p. 1364) function with a `DDSContentFilter` (p. 1280) that contains a `compile`, an `evaluate` function and a `finalize` function. `DDSContentFilteredTopic` (p. 1283) can be created with `DDSDomainParticipant::create_contentfilteredtopic_←with_filter` (p. 1386) to use this filter.

A custom content filter is used by RTI Connext at the following times during the life-time of a `DDSContentFilteredTopic` (p. 1283) (the function called is shown in parenthesis).

- When a `DDSContentFilteredTopic` (p. 1283) is created (`compile` (p. 223))
- When the filter parameters are changed on the `DDSContentFilteredTopic` (p. 1283) (`compile` (p. 223)) with `DDSContentFilteredTopic::set_expression_parameters` (p. 1285)
- When a sample is filtered (`evaluate` (p. 223)). This function is called by the RTI Connext core with a de-serialized sample
- When a `DDSContentFilteredTopic` (p. 1283) is deleted (`finalize` (p. 224))

#### 7.62.2.1 The compile function

The `compile` (p. 224) function is used to `compile` a filter expression and expression parameters. Please note that the term `compile` is intentionally loosely defined. It is up to the user to decide what this function should do and return.

See `DDSContentFilter::compile` (p. 1280) for details.

#### 7.62.2.2 The evaluate function

The `evaluate` (p. 224) function is called each time a sample is received to determine if a sample should be filtered out and discarded.

See `DDSContentFilter::evaluate` (p. 1282) for details.

### 7.62.2.3 The finalize function

The **finalize** (p. 224) function is called when an instance of the custom content filter is no longer needed. When this function is called, it is safe to free all resources used by this particular instance of the custom content filter.

See **DDSContentFilter::finalize** (p. 1282) for details.

## 7.62.3 Example Using C format strings

Assume that you have a type **Foo** (p. 1648).

You want to write a custom filter function that will drop all samples where the value of `Foo.x > x` and `x` is a value determined by an expression parameter. The filter will **only** be used to filter samples of type **Foo** (p. 1648).

### 7.62.3.1 Writing the Compile Function

The first thing to note is that we can ignore the filter expression, since we already know what the expression is. The second is that `x` is a parameter that can be changed. By using this information, the compile function is very easy to implement. Simply return the parameter string. This string will then be passed to the evaluate function every time a sample of this type is filtered.

Below is the entire **compile** (p. 223) function.

```
DDS_ReturnCode_t MyContentFilter::compile(
    void** new_compile_data, const char * /* expression */,
    const DDS_StringSeq& parameters, const DDS_TypeCode* /* type_code */,
    const char * /* type_class_name */,
    void * /* old_compile_data */) {
    *new_compile_data = (void*)DDS_String_dup(parameters[0]);
    return DDS_RETCODE_OK;
}
```

### 7.62.3.2 Writing the Evaluate Function

The next step is to implement the **evaluate** function. The evaluate function receives the parameter string with the actual value to test against. Thus the evaluate function must read the actual value from the parameter string before evaluating the expression. Below is the entire **evaluate** (p. 223) function.

```
DDS_Boolean MyContentFilter::evaluate(
    void* compile_data, const void* sample, const struct DDS_FilterSampleInfo * meta_data) {
    char *parameter = (char*)compile_data;
    DDS_Long x;
    Foo *foo_sample = (Foo*)sample;
    sscanf(parameter, "%d", &x);
    return (foo_sample->x > x ? DDS_BOOLEAN_FALSE : DDS_BOOLEAN_TRUE);
}
```

### 7.62.3.3 Writing the Finalize Function

The last function to write is the finalize function. It is safe to free all resources used by this particular instance of the custom content filter that is allocated in **compile**. Below is the entire **finalize** (p. 224) function.

```
void MyContentFilter::finalize(
    void* compile_data) {
    /* free parameter string from compile function */
    DDS_String_free((char *)compile_data);
}
```

### 7.62.3.4 Registering the Filter

Before the custom filter can be used, it must be registered with RTI Connext:

```
DDSDomainParticipant *myParticipant=NULL;
/* myParticipant = .... */
DDSContentFilter *myCustomFilter = new MyContentFilter();
if (myParticipant->register_contentfilter(
    (char*)"MyCustomFilter",
    myCustomFilter) != DDS_RETCODE_OK) {
    printf("Failed to register custom filter\n");
}
}
```

### 7.62.3.5 Unregistering the Filter

When the filter is no longer needed, it can be unregistered from RTI Connext:

```
DDSDomainParticipant *myParticipant = NULL;
/* myParticipant = .... */
DDSContentFilter *myCustomFilter =
    myParticipant->lookup_contentfilter((char*)"MyCustomFilter");
if (myCustomFilter != NULL) {
    if (myParticipant->unregister_contentfilter(
        (char*)"MyCustomFilter") != DDS_RETCODE_OK) {
        printf("Failed to unregister custom filter\n");
    }
    delete myCustomFilter;
}
}
```

## 7.63 Large Data Use Cases

Working with large data types.

Working with large data types.

### 7.63.1 Introduction <br>

RTI Connext supports data types whose size exceeds the maximum message size of the underlying transports. A **DDSDataWriter** (p. 1321) will fragment data samples when required. Fragments are automatically reassembled at the receiving end.

Once all fragments of a sample have been received, the new sample is passed to the **DDSDataReader** (p. 1288) which can then make it available to the user. Note that the new sample is treated as a regular sample at that point and its availability depends on standard QoS settings such as **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) and **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406).

The large data feature is fully supported by all DDS API's, so its use is mostly transparent. Some additional considerations apply as explained below.

### 7.63.2 Writing Large Data

In order to use the large data feature with the `DDS_RELIABLE_RELIABILITY_QOS` (p. 435) setting, the `DDSDataWriter` (p. 1321) must be configured as an asynchronous writer (`DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS` (p. 431)) with associated `DDSFlowController` (p. 1468).

While the use of an asynchronous writer and flow controller is optional when using the `DDS_BEST_EFFORT_RELIABILITY_QOS` (p. 435) setting, most large data use cases will benefit from the use of a flow controller to prevent flooding the network when fragments are being sent.

- [Set up writer](#) (p. 207)
- [Add flow control](#) (p. 204)

### 7.63.3 Receiving Large Data

Large data is supported by default and in most cases, no further changes are required.

The `DDS_DataReaderResourceLimitsQosPolicy` (p. 654) allows tuning the resources available to the `DDSDataReader` (p. 1288) for reassembling fragmented large data.

- [Set up reader](#) (p. 210)

## 7.64 Request-Reply Examples

Examples on how to use the request-reply API .

Examples on how to use the request-reply API .

Request-Reply code examples.

### 7.64.1 Request-Reply Examples

Requesters and Repliers provide a way to use the Request-Reply communication pattern on top of the DDS entities. An application uses a Requester to send requests to a Replier; another application using a Replier receives a request and can send one or more replies for that request. The Requester that sent the request (and only that one) will receive the reply (or replies).

#### DDS Types

RTI Connex uses DDS data types for sending and receiving requests and replies. Valid types are those generated by the `rtiddsgen` code generator, the DDS built-in types, and `DynamicData`. Refer to the `Core Libraries User's Manual` and the following links for more information:

- Code Generator User's Manual,
- **Using the DDS built-in types** (p. 92),
- **Using DynamicData** (p. 99)

### Set up

- **Create a DomainParticipant** (p. 202)
- **Create a requester** (p. 228)
- **Create a requester with parameters** (p. 228)
- **Create a replier** (p. 232)

### Requester: sending requests and receiving replies

- **Basic Requester example** (p. 228)
- **Taking loaned samples** (p. 229)
- **Taking samples by copy** (p. 229)
- **Correlation between requests and replies** (p. 230)

### Replier: receiving requests and sending replies

- **Basic Replier example** (p. 232)
- **SimpleReplier example** (p. 233)
- **Taking loaned samples** (p. 229)
- **Taking samples by copy** (p. 229)

### Error handling

- **Error handling example** (p. 233)

### Note

To use Request-Reply you need to build and link your application with the additional `rticonnextmsgcpp` library and include `ndds/ndds_requestreply_cpp.h`.

## 7.64.2 Requester Creation

- [Setting up a participant \(p. 202\)](#)
- [Creating a Requester](#)

```
using namespace connex;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Requester (if creation fails, the constructor throws)
Requester<Foo, Bar> * requester =
    new Requester<Foo, Bar>(participant, "TestService");
```

## 7.64.3 Creating a Requester with optional parameters

- [Setting up a participant \(p. 202\)](#)
- [Creating a Requester with additional parameters](#)

```
using namespace connex;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Requester with a QoS profile (located for example in
// USER_QOS_PROFILES.xml, in the current working directory)
RequesterParams requester_params(participant);
requester_params.service_name("TestService");
requester_params.qos_profile(
    "RequestReplyExampleProfiles", "RequesterExampleProfile");
Requester<Foo, Bar> * requester = new Requester<Foo, Bar>(requester_params);
```

See also

[Requester Creation \(p. 228\)](#)

[Configuring Request-Reply QoS profiles \(p. 234\)](#)

## 7.64.4 Basic Requester example

- [Requester Creation \(p. 228\)](#)
- [Creating a Requester with optional parameters \(p. 228\)](#)
- [Basic Requester example](#)

```
using namespace connex;
// Send request
WriteSample<Foo> request;
strcpy(request.data().message, "A Request");
requester->send_request(request);
// Create a reply Sample
Sample<Bar> reply;
// Receive reply (wait for it and get the sample)
bool received = requester->receive_reply(reply, MAX_WAIT);
if (received) {
    if(reply.info().valid_data) {
        std::cout << "Received reply: " << reply.data().message << std::endl;
    } else {
        std::cout << "Received invalid reply" << std::endl;
    }
} else {
    std::cout << "Reply not received" << std::endl;
}
```

- **Basic Requester example using the String built-in type** (p. 312)

```
using namespace connex;
// Create a Requester (this time we create it on the stack)
// The template parameter std::string maps to the String DDS built-in type
Requester<std::string, std::string> requester(participant, "TestServiceString");
// Send a request
requester.send_request("A string request");
// Receive reply
LoanedSamples<std::string> replies = requester.receive_replies(MAX_WAIT);
for (LoanedSamples<std::string>::iterator it = replies.begin();
     it != replies.end();
     ++it) {
    if (it->info().valid_data) {
        std::cout << "Received string reply: " << it->data() << std::endl;
    }
}
// When replies go out of scope, the loan is automatically returned
```

See also

**Basic Replier example** (p. 232)

**SimpleReplier example** (p. 233)

### 7.64.5 Taking loaned samples

- **Requester Creation** (p. 228)
- **Get iterator to loaned replies (no copies)**

```
using namespace connex;
// Get loaned samples
// Unlike receive_replies(), take_replies() doesn't block and returns an
// empty collection if there are no replies at that moment.
// (before that we can call requester->wait_for_replies)
LoanedSamples<Bar> replies = requester->take_replies();
// Iterate through the container of loaned samples.
// If there were no replies, the container is empty
for (LoanedSamples<Bar>::const_iterator it = replies.begin();
     it != replies.end();
     ++it) {
    if (it->info().valid_data) {
        std::cout << "Received reply: " << it->data().message << std::endl;
    }
}
// When replies go out of scope, the loan is automatically returned
```

See also

**Basic Requester example** (p. 228)

**Basic Replier example** (p. 232)

**Taking samples by copy** (p. 229)

### 7.64.6 Taking samples by copy

- **Requester Creation** (p. 228)
- **Get copies of the replies:**

```
using namespace connex;
// Get loaned samples
LoanedSamples<Bar> replies = requester->take_replies();
// Copy the contents using the STL-compliant iterator in LoanedSamples
std::list<Sample<Bar> > my_list;
std::copy(replies.begin(), replies.end(), std::back_inserter(my_list));
```

```

// We can copy to a container of Bar rather than Sample<Bar>,
// thanks to the implicit conversion from Sample<Bar> to Bar.
// If our application works with instances, we may have received
// invalid data (e.g. disposed instance). We can iterate through valid
// samples only using an iterator adapter.
std::vector<Bar> my_vector;
std::copy(
    make_valid_sample_iterator(replies.begin()),
    make_valid_sample_iterator(replies.end()),
    std::back_inserter(my_vector));
// When replies go out of scope, the loan is automatically returned

```

See also

**Basic Replier example** (p. 232)

**Taking loaned samples** (p. 229)

## 7.64.7 Correlating requests and replies

- **Requester Creation** (p. 228)
- **Example 1) Waiting for a reply to a specific request**

```

using namespace connext;
// Create requests
WriteSample<Foo> request1, request2;
strcpy(request1.data().message, "Request 1");
strcpy(request2.data().message, "Request 2");
// Send requests using WriteSample
requester->send_request(request1);
requester->send_request(request2);
// Wait for a reply to the second request
Sample<Bar> reply;
bool received = requester->wait_for_replies(
    1, MAX_WAIT, request2.identity());
if (!received) {
    std::cout << "Did not receive reply for request 2" << std::endl;
    return;
}
// Take that reply
requester->take_reply(reply, request2.identity());
// This postcondition should always be true
if (reply.related_identity() != request2.identity()) {
    throw std::runtime_error("postcondition failed");
}
if (reply.info().valid_data) {
    std::cout << "Received reply for request 2: "
        << reply.data().message << std::endl;
}
// Wait for a reply to the first request
received = requester->wait_for_replies(1, MAX_WAIT, request1.identity());
if (!received) {
    std::cout << "Did not receive reply for request 1" << std::endl;
    return;
}
// Take that reply
requester->take_reply(reply, request1.identity());
// This postcondition should always be true
if (reply.related_identity() != request1.identity()) {
    throw std::runtime_error("postcondition failed");
}
if (reply.info().valid_data) {
    std::cout << "Received reply for request 1: "
        << reply.data().message << std::endl;
}
}

```

- **Example 2) Correlating a reply after receiving it**

```

using namespace connext;
// Create requests
WriteSample<Foo> request1, request2;
strcpy(request1.data().message, "Request 1");
strcpy(request2.data().message, "Request 2");

```

```

// Send requests using WriteSample
requester->send_request(request1);
requester->send_request(request2);
// Wait for two replies. In this case we don't mind the
// reception order
bool received = requester->wait_for_replies(2, MAX_WAIT);
if (!received) {
    std::cout << "Replies not received" << std::endl;
    return;
}
LoanedSamples<Bar>::iterator it;
// Get all the replies
LoanedSamples<Bar> replies = requester->take_replies();
// Find the reply for request 1.
//
// We search using the STL find_if algorithm. The search range is all
// the elements in the replies container (from beginning to end).
// We use a predicate included in the Connex namespace that evaluates to
// true when a Sample's related_identity equals the identity that
// is passed to the constructor (request1's, in this case)
it = std::find_if(replies.begin(), replies.end(),
    IsReplyRelatedPredicate<Bar>(request1.identity()));
if (it != replies.end()) {
    std::cout << "Received reply for request 1: "
        << it->data().message << std::endl;
}
// Find the reply for request 2
it = std::find_if(replies.begin(), replies.end(),
    IsReplyRelatedPredicate<Bar>(request2.identity()));
if (it != replies.end()) {
    std::cout << "Received reply for request 2: "
        << it->data().message << std::endl;
}
// When replies go out of scope, the loan is automatically returned

```

**Basic Requester example** (p. 228)

**Basic Replier example** (p. 232)

### 7.64.8 Basic Requester example using SampleRef

This example is similar to **Basic Requester example** (p. 228) except it uses a `SampleRef` instance instead of a `Sample` instance.

- Assuming the variables you want to use already exist:

```

Foo request_data;
DDS::WriteParams_t request_params;
Bar reply_data;
DDS::SampleInfo reply_info;
// ...

```

- You can use `WriteSampleRef` and `SampleRef`:

```

using namespace connex;
// Create a request WriteSampleRef
WriteSampleRef<Foo> request;
request.set_data(request_data);
request.set_info(request_params);
// Send request
requester->send_request(request);
// Create a reply SampleRef
SampleRef<Bar> reply;
reply.set_data(reply_data);
reply.set_info(reply_info);
// Receive reply
bool received = requester->receive_reply(reply, MAX_WAIT);
if (received) {
    if(reply_info.valid_data) {
        std::cout << "Received reply: " << reply_data.message << std::endl;
    }
}

```

```

    } else {
        std::cout << "Received invalid reply" << std::endl;
    }
} else {
    std::cout << "Reply not received" << std::endl;
}
}

```

### 7.64.9 Creating a Replier

- [Setting up a participant](#) (p. 202)
- [Create a Replier](#)

```

using namespace connext;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Replier (if creation fails, the constructor throws exception)
Replier<Foo, Bar> * replier =
    new Replier<Foo, Bar>(participant, "TestService");

```

### 7.64.10 Basic Replier example

- [Creating a Replier](#) (p. 232)
- [Basic Replier example](#)

```

using namespace connext;
Sample<Foo> request;
// Receive one request
bool received = replier->receive_request(request, MAX_WAIT);
if (!received) {
    std::cout << "Requests not received" << std::endl;
    return false;
}
// A WriteSample automatically initializes and finalizes
// the data using the TypeSupport (in this case BarTypeSupport)
WriteSample<Bar> reply;
if (request.info().valid_data) {
    sprintf(reply.data().message, "Reply for %s", request.data().message);
    // Send a reply for that request
    replier->send_reply(reply, request.identity());
    // Note: a replier can send more than one reply for the same request
}

```

See also

**Basic Requester example** (p. 228)

### 7.64.11 SimpleReplier example

- Implement a listener

```
class MySimpleReplierListener : public SimpleReplierListener<Foo, Bar>
{
public:
    Bar * on_request_available(SampleRef<Foo> request)
    {
        if (!request.info().valid_data) {
            // In this example we don't reply to invalid data samples.
            // In other cases, it could make sense to reply
            // to a disposed instance, for example.
            return NULL;
        }
        sprintf(_reply.data().message, "Simple reply for %s",
            request.data().message);
        return &_reply.data();
    }
    void return_loan(Bar * reply)
    {
        // nothing to do
    }
private:
    // By using a WriteSample (instead of just Bar), the sample is
    // automatically initialized and released.
    WriteSample<Bar> _reply;
};
```

- And create a SimpleReplier with the listener

```
using namespace connex;
// Note: error checking omitted for simplicity
MySimpleReplierListener * listener = new MySimpleReplierListener();
SimpleReplier<Foo, Bar> * replier = new SimpleReplier<Foo, Bar>(
    participant, "TestService", *listener);
// After creation the SimpleReplier is already active and may call
// the listener
```

- This next example shows how to implement a listener for a SimpleReplier using the std::string type

```
class MyStringSimpleReplierListener :
public SimpleReplierListener<std::string, std::string>
{
public:
    // Note that the actual received type is const char*,
    // because internally, the middleware uses char*
    std::string * on_request_available(SampleRef<const char*> request)
    {
        if (!request.info().valid_data) {
            return NULL;
        }
        _reply = std::string("Simple string reply for ") + request.data();
        return &_reply;
    }
    void return_loan(std::string * reply)
    {
        // nothing to do
    }
private:
    std::string _reply;
};
```

See also

**Basic Requester example** (p. 228)

### 7.64.12 Error handling example

- Catching an exception from the request-reply API

```
using namespace connex;
// All the operations in the request-reply API
// throw exceptions in case of error.
// You can also set the verbosity level to warning for
// additional information
NDDSConfigLogger::get_instance()->set_verbosity(
```

```

    NDDS_CONFIG_LOG_VERBOSITY_WARNING);
//
// For example, this replier is sending a reply for a nonexistent request
//
WriteSample<Bar> reply;
DDS::SampleIdentity_t invalid_request_id;
try {
    replier->send_reply(reply, invalid_request_id);
} catch (const BadParameterException& ex) {
    std::cout << "Exception while sending reply: "
              << ex.what() << std::endl;
}
// Exceptions inherit from std::runtime_error or std::logic_error,
// so you can have a more general catch statement:
//
// This piece of code produces the same result as the previous one:
//
try {
    replier->send_reply(reply, invalid_request_id);
} catch (const std::exception& ex) {
    std::cout << "Exception while sending request: "
              << ex.what() << std::endl;
}
}

```

### 7.64.13 Configuring Request-Reply QoS profiles

If you do not specify your own QoS parameters (in `connext::RequesterParams` (p. 1907) and `connext::ReplierParams` (p. 1881)), a `connext::Requester` (p. 1886) and `connext::Replier` (p. 1868) are created using a default configuration.

That configuration is equivalent to the one in the following QoS profile called "default":

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<!--
```

```
Description
```

```
XML QoS Profile for HelloWorld
```

```
(c) Copyright, Real-Time Innovations, 2012. All rights reserved.
RTI grants Licensee a license to use, modify, compile, and create derivative
works of the software solely for use with RTI Connext DDS. Licensee may
redistribute copies of the software provided that all such copies are
subject to this license. The software is provided "as is", with no warranty
of any type, including any warranty for fitness for any purpose. RTI is
under no obligation to maintain or support the software. RTI shall not be
liable for any incidental or consequential damages arising out of the use
or inability to use the software.
```

```
The QoS configuration of the DDS entities in the generated example is loaded
from this file.
```

```
This file is used only when it is in the current working directory or when the
environment variable NDDS_QOS_PROFILES is defined and points to this file.
```

```
The profile in this file inherits from the builtin QoS profile
BuiltinQosLib::Generic.StrictReliable. That profile, along with all of the
other built-in QoS profiles can be found in the
BuiltinProfiles.documentationONLY.xml file located in the
$NDDSHOME/resource/xml/ directory.
```

```
You may use any of these QoS configurations in your application simply by
referring to them by the name shown in the
BuiltinProfiles.documentationONLY.xml file.
```

```
Also, following the QoS Profile composition pattern you can use QoS Snippets
to easily create your final QoS Profile. For further information visit:
https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance
```

```
There is a QoS Snippet library that contains a collection of
QoS Snippets that set some specific features or configurations. You can find
them in the BuiltinProfiles.documentationONLY.xml file as well.
```

```
You should not edit the file BuiltinProfiles.documentationONLY.xml directly.
However, if you wish to modify any of the values in a built-in profile, the
recommendation is to create a profile of your own and inherit from the built-in
profile you wish to modify. The NDDS_QOS_PROFILES.example.xml file (contained in
the same directory as the BuiltinProfiles.documentationONLY.xml file) shows how
to inherit from the built-in profiles.
```

For more information about XML QoS Profiles see the "Configuring QoS with XML" chapter in the RTI Connext DDS Core Libraries User's Manual.

```
-->
<dds xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

  xsi:noNamespaceSchemaLocation="file:///rti/jenkins/workspace/connextdds_htmldocs_support_connextdds_7.3.0/build/nddsgen.2
  <!-- QoS Library containing the QoS profile used in the generated example.

  A QoS library is a named set of QoS profiles.
-->
<qos_library name="HelloWorld_Library">
  <!-- QoS profile used to configure reliable communication between the DataWriter
  and DataReader created in the example code.

  A QoS profile groups a set of related QoS.
-->
<qos_profile name="HelloWorld_Profile" base_name="BuiltinQosLib::Generic.StrictReliable"
is_default_qos="true">
  <!-- QoS used to configure the data writer created in the example code -->
  <datawriter_qos>
    <publication_name>
      <name>HelloWorldDataWriter</name>
    </publication_name>
  </datawriter_qos>
  <!-- QoS used to configure the data reader created in the example code -->
  <datareader_qos>
    <subscription_name>
      <name>HelloWorldDataReader</name>
    </subscription_name>
  </datareader_qos>
  <domain_participant_qos>
    <!--
    The participant name, if it is set, will be displayed in the
    RTI tools, making it easier for you to tell one
    application from another when you're debugging.
    -->
    <participant_name>
      <name>HelloWorldParticipant</name>
      <role_name>HelloWorldParticipantRole</role_name>
    </participant_name>
  </domain_participant_qos>
</qos_profile>
</qos_library>
</dds>
```

You can use the profile called "RequesterExampleProfile", which modifies some parameters from the default. The example **Creating a Requester with optional parameters** (p. 228) shows how to create a `connext::Requester` (p. 1886) using this profile.

**Creating a Requester with optional parameters** (p. 228)

**Configuring QoS Profiles with XML** (p. 197)

## 7.65 Documentation Roadmap

This section contains a roadmap for the new user with pointers on what to read first.

If you are new to RTI Connext, we recommend starting in the following order:

- See the *Getting Started Guide*. This document provides download and installation instructions. It also lays out the core value and concepts behind the product and takes you step-by-step through the creation of a simple example application.
- The *User's Manual* describes the features of the product and how to use them. It is organized around the structure of the DDS APIs and certain common high-level tasks.

- The documentation in the **RTI Connext DDS API Reference** (p. 239) provides an overview of API classes and modules for the DDS data-centric publish-subscribe (DCPS) package from a programmer's perspective. Start by reading the documentation on the main page.
- After reading the high level module documentation, look at the **Publication Example** (p. 199) and **Subscription Example** (p. 200) for step-by-step examples of creating a publication and subscription. These are hyperlinked code snippets to the full API documentation, and provide a good place to begin learning the APIs.
- Next, work through your own application using the example code files generated by `rtiddsgen`. See the `Code Generator User's Manual`.
- To integrate similar code into your own application and build system, you will likely need to refer to the `Platform Notes`.

## 7.66 Conventions

This section describes the conventions used in the API documentation.

### 7.66.1 Unsupported Features

**[Not supported (optional)]** This note means that the optional feature from the DDS specification is not supported in the current release.

### 7.66.2 API Naming Conventions

#### 7.66.2.1 Structure & Class Names

RTI Data Distribution Service 4 makes a distinction between *value types* and *interface types*. Value types are types such as primitives, enumerations, strings, and structures whose identity and equality are determined solely by explicit state. Interface types are those abstract opaque data types that conceptually have an identity apart from their explicit state. Examples include all of the **DDSEntity** (p. 1463) subtypes, the **DDSCondition** (p. 1276) subtypes, and **DDSWaitSet** (p. 1629). Instances of value types are frequently transitory and are declared on the stack. Instances of interface types typically have longer lifecycles, are accessible by pointer only, and may be managed by a factory object.

Value and interface types are distinguished by their names: value types have names beginning with "DDS\_" (i.e. with an underscore); interface types have names beginning with "DDS" (i.e. with no underscore). Another way to think of it: C-style types – structures, enumerations, etc. – have names beginning with "DDS\_"; C++ classes have names beginning with "DDS."

### 7.66.3 API Documentation Terms

In the API documentation, the term `module` refers to a logical grouping of documentation and elements in the API.

At this time, typedefs that occur in the API, such as **DDS\_ReturnCode\_t** (p. 336) do not show up in the compound list or indices. This is a known limitation in the generated HTML.

## 7.66.4 Stereotypes

Commonly used stereotypes in the API documentation include the following.

### 7.66.4.1 Extensions

- `<<extension>>` (p. 237)
  - An RTI Connex product extension to the DDS standard specification.
  - The extension APIs complement the standard APIs specified by the OMG DDS specification. They are provided to improve product usability and enable access to product-specific features such as pluggable transports.

### 7.66.4.2 Experimental

- `<<experimental>>` (p. 237)
  - RTI Connex experimental features are used to evaluate new features and get user feedback.
  - These features are not guaranteed to be fully supported and might be implemented only of some of the programming languages supported bt RTI Connex
  - The functional APIs corresponding to experimental features can be distinguished from other APIs by the suffix '\_exp'.
  - Experimental features may or may not appear in future product releases.
  - The name of the experimental features APIs will change if they become officially supported. At the very least the suffix '\_exp' will be removed.
  - Experimental features should not be used in production.

### 7.66.4.3 Types

- `<<interface>>` (p. 237)
  - Pure interface type with *no state*.
  - Languages such as Java natively support the concept of an *interface* type, which is a collection of method signatures devoid of any dynamic state.
  - In C++, this is achieved via a class with all *pure virtual* methods and devoid of any instance variables (ie no dynamic state).
  - Interfaces are generally organized into a type hierarchy. Static typecasting along the interface type hierarchy is "safe" for valid objects.
- `<<generic>>` (p. 237)
  - A *generic* type is a *skeleton* class written in terms of generic parameters. Type-specific instantiations of such types are conventionally referred to in this documentation in terms of the hypothetical type "Foo"; for example: **FooSeq** (p. 1697), **FooDataType**, **FooDataWriter** (p. 1676), and **FooDataReader** (p. 1649).

- For portability and efficiency, we implement generics using C preprocessor macros, rather than using C++ templates.
  - A *generic* type interface is declared via a `#define` macro.
  - Concrete types are generated from the generic type statically at compile time. The implementation of the concrete types is provided via the generic macros which can then be compiled as normal C or C++ code.
- `<<singleton>>` (p. 238)
    - Singleton class. There is a single instance of the class.
    - Generally accessed via a `get_instance()` static method.

#### 7.66.4.4 Method Parameters

- `<<in>>` (p. 238)
  - An *input* parameter.
- `<<out>>` (p. 238)
  - An *output* parameter.
- `<<inout>>` (p. 238)
  - An *input* and *output* parameter.

## 7.67 Using DDS:: Namespace

This section describes the C++ namespace support in the DDS API.

### 7.67.1 DDS Namespace Support

In this documentation, all C++ classes, value types, interface types and constants have names beginning with either `"DDS_"` or `"DDS"`. Alternatively, `DDS` namespace can also be used to refer to all these classes, types or constant.

All the C++ API that begins with either `"DDS_"` or `"DDS"` can be replaced with its namespace equivalent. For example, `DDSDomainParticipant` (p. 1351) has a namespace equivalent of `DDS::DomainParticipant`, and `DDS_DomainParticipantQos` (p. 741) has a namespace equivalent of `DDS::DomainParticipantQos`.

In order to use the `DDS` namespace, an additional header file, `ndds_namespace_cpp.h`, will need to be included in your source file:

```
#include "ndds/ndds_cpp.h"
#include "ndds/ndds_namespace_cpp.h"
DDS::DomainParticipant *participant = NULL;
DDS::DomainParticipantQos participant_qos;
DDS::DomainParticipantListener *listener = NULL;
DDS::StatusKind status_kind = DDS::INCONSISTENT_TOPIC_STATUS;
DDS::Long counter = 0L;
```

If the namespace header file is not included in the source file, `DDS` namespace cannot be used in the RTI Connext API.

## 7.67.2 DDS Namespace and Primitive Types

By default, **DDS** namespace support for primitive types are included. With **DDS** namespace support, the difference between **DDS** types and native types can just be the capitalization in some cases:

```
#include "ndds/ndds_cpp.h"
#include "ndds/ndds_namespace_cpp.h"
using namespace DDS;
Long ddsCounter = 0L;
long nativeCounter = 0L;
```

If you want to exclude the **DDS** namespace support for primitive types, you can define **NDDS\_EXCLUDE\_PRIMITIVE\_TYPES\_FROM\_NAMESPACE** in your application before including the namespace header file. **DDS** namespace support for primitive types will then be excluded:

```
#include "ndds/ndds_cpp.h"
#define NDDS_EXCLUDE_PRIMITIVE_TYPES_FROM_NAMESPACE
#include "ndds/ndds_namespace_cpp.h"
using namespace DDS;
DDS_Long ddsCounter = 0;
long nativeCounter = 0;
```

For the rest of the documentation, the **DDS** prefix is used for all class /types/constants names. However, all the API with the **DDS** prefix can be replaced with **DDS** namespace instead if the namespace header file is included.

## 7.68 RTI Connex DDS API Reference

RTI Connex modules following the DDS module definitions.

### Modules

- **Domain Module**

Contains the **DDSDomainParticipant** (p. 1351) class that acts as an endpoint of RTI Connex and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1351) also acts as a container for the other objects that make up RTI Connex.

- **Topic Module**

Contains the **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529) classes, the **DDSTopicListener** (p. 1626) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1617) objects and attach QoS policies to them.

- **Publication Module**

Contains the **DDSFlowController** (p. 1468), **DDSPublisher** (p. 1550), and **DDSDataWriter** (p. 1321) classes as well as the **DDSPublisherListener** (p. 1571) and **DDSDataWriterListener** (p. 1344) interfaces, and more generally, all that is needed on the publication side.

- **Subscription Module**

Contains the **DDSSubscriber** (p. 1592), **DDSDataReader** (p. 1288), **DDSReadCondition** (p. 1574), **DDSQueryCondition** (p. 1573), and **DDSTopicQuery** (p. 1627) classes, as well as the **DDSSubscriberListener** (p. 1613) and **DDSDataReaderListener** (p. 1315) interfaces, and more generally, all that is needed on the subscription side.

- **Infrastructure Module**

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

- **Transports**

APIs related to RTI Connex pluggable transports.

- **Queries and Filters Syntax**

- **Logging and Version**

*APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.*

- **General Utilities and Compliance Configuration**  
*API of general utilities used in the RTI Connext distribution.*
- **Observability**  
*API of RTI Connext Observability Framework.*
- **Durability and Persistence**  
*APIs related to RTI Connext Durability and Persistence.*
- **System Properties**  
*System Properties.*
- **Configuring QoS Profiles with XML**  
*APIs related to XML QoS Profiles.*
- **Additional RTI Connext Communication Patterns**  
*Extensions to the RTI Connext publish-subscribe functionality.*

### 7.68.1 Detailed Description

RTI Connext modules following the DDS module definitions.

### 7.68.2 Overview

Information flows with the aid of the following constructs: **DDSPublisher** (p. 1550) and **DDSDataWriter** (p. 1321) on the sending side, **DDSSubscriber** (p. 1592) and **DDSDataReader** (p. 1288) on the receiving side.

- A **DDSPublisher** (p. 1550) is an object responsible for data distribution. It may publish data of different data types. A **TDataWriter** acts as a *typed* (i.e. each **DDSDataWriter** (p. 1321) object is dedicated to one application data type) accessor to a publisher. A **DDSDataWriter** (p. 1321) is the object the application must use to communicate to a publisher the existence and value of data objects of a given type. When data object values have been communicated to the publisher through the appropriate data-writer, it is the publisher's responsibility to perform the distribution (the publisher will do this according to its own QoS, or the QoS attached to the corresponding data-writer). A *publication* is defined by the association of a data-writer to a publisher. This association expresses the intent of the application to publish the data described by the data-writer in the context provided by the publisher.
- A **DDSSubscriber** (p. 1592) is an object responsible for receiving published data and making it available (according to the Subscriber's QoS) to the receiving application. It may receive and dispatch data of different specified types. To access the received data, the application must use a *typed* **TDataReader** attached to the subscriber. Thus, a *subscription* is defined by the association of a data-reader with a subscriber. This association expresses the intent of the application to subscribe to the data described by the data-reader in the context provided by the subscriber.

**DDSTopic** (p. 1617) objects conceptually fit between publications and subscriptions. Publications must be known in such a way that subscriptions can refer to them unambiguously. A **DDSTopic** (p. 1617) is meant to fulfill that purpose: it associates a name (unique in the domain i.e. the set of applications that are communicating with each other), a data type, and QoS related to the data itself. In addition to the topic QoS, the QoS of the **DDSDataWriter** (p. 1321) associated with that Topic and the QoS of the **DDSPublisher** (p. 1550) associated to the **DDSDataWriter** (p. 1321) control the behavior on the publisher's side, while the corresponding **DDSTopic** (p. 1617), **DDSDataReader** (p. 1288) and **DDSSubscriber** (p. 1592) QoS control the behavior on the subscriber's side.

When an application wishes to publish data of a given type, it must create a **DDSPublisher** (p. 1550) (or reuse an already created one) and a **DDSDataWriter** (p. 1321) with all the characteristics of the desired publication. Similarly, when an application wishes to receive data, it must create a **DDSSubscriber** (p. 1592) (or reuse an already created one) and a **DDSDataReader** (p. 1288) to define the subscription.

### 7.68.3 Conceptual Model

The overall conceptual model is shown below.

Notice that all the main communication objects (the specializations of Entity) follow unified patterns of:

- Supporting QoS (made up of several QoSPolicy); QoS provides a generic mechanism for the application to control the behavior of the Service and tailor it to its needs. Each **DDSEntity** (p. 1463) supports its own specialized kind of QoS policies (see **QoS Policies** (p. 353)).
- Accepting a **DDSListener** (p. 1526); listeners provide a generic mechanism for the middleware to notify the application of relevant asynchronous events, such as arrival of data corresponding to a subscription, violation of a QoS setting, etc. Each **DDSEntity** (p. 1463) supports its own specialized kind of listener. Listeners are related to changes in status conditions (see **Status Kinds** (p. 337)).

Note that only one Listener per entity is allowed (instead of a list of them). The reason for that choice is that this allows a much simpler (and, thus, more efficient) implementation as far as the middleware is concerned. Moreover, if it were required, the application could easily implement a listener that, when triggered, triggers in return attached 'sub-listeners'.

- Accepting a **DDSStatusCondition** (p.1578) (and a set of **DDSReadCondition** (p.1574) objects for the **DDSDataReader** (p.1288)); conditions (in conjunction with **DDSWaitSet** (p.1629) objects) provide support for an alternate communication style between the middleware and the application (i.e., wait-based rather than notification-based).

All DCPS entities are attached to a **DDSDomainParticipant** (p. 1351). A domain participant represents the local membership of the application in a domain. A *domain* is a distributed concept that links all the applications able to communicate with each other. It represents a communication plane: only the publishers and the subscribers attached to the same domain may interact.

**DDSDomainEntity** (p. 1350) is an intermediate object whose only purpose is to state that a DomainParticipant cannot contain other domain participants.

At the DCPS level, data types represent information that is sent atomically. For performance reasons, only plain data structures are handled by this level.

By default, each data modification is propagated individually, independently, and uncorrelated with other modifications. However, an application may request that several modifications be sent as a whole and interpreted as such at the recipient side. This functionality is offered on a Publisher/Subscriber basis. That is, these relationships can only be specified among **DDSDataWriter** (p. 1321) objects attached to the same **DDSPublisher** (p. 1550) and retrieved among **DDSDataReader** (p. 1288) objects attached to the same **DDSSubscriber** (p. 1592).

By definition, a **DDSTopic** (p. 1617) corresponds to a single data type. However, several topics may refer to the same data type. Therefore, a **DDSTopic** (p. 1617) identifies data of a single type, ranging from one single instance to a whole collection of instances of that given type. This is shown below for the hypothetical data type **Foo** (p. 1648).

In case a set of instances is gathered under the same topic, different instances must be distinguishable. This is achieved by means of the values of some data fields that form the **key** to that data set. The *key description* (i.e., the list of data fields whose value forms the key) has to be indicated to the middleware. The rule is simple: *different data samples with the same key value represent successive values for the same instance, while different data samples with different key values represent different instances*. If no key is provided, the data set associated with the **DDSTopic** (p. 1617) is restricted to a *single instance*.

Topics need to be known by the middleware and potentially propagated. Topic objects are created using the create operations provided by **DDSDomainParticipant** (p. 1351).

The interaction style is straightforward on the publisher's side: when the application decides that it wants to make data available for publication, it calls the appropriate operation on the related **DDSDataWriter** (p. 1321) (this, in turn, will trigger its **DDSPublisher** (p. 1550)).

On the subscriber's side however, there are more choices: relevant information may arrive when the application is busy doing something else or when the application is just waiting for that information. Therefore, depending on the way the application is designed, asynchronous notifications or synchronous access may be more appropriate. Both interaction modes are allowed, a **DDSListener** (p. 1526) is used to provide a callback for synchronous access and a **DDSWaitSet** (p. 1629) associated with one or several **DDSCondition** (p. 1276) objects provides asynchronous data access.

The same synchronous and asynchronous interaction modes can also be used to access changes that affect the middleware communication status (see **Status Kinds** (p. 337)). For instance, this may occur when the middleware asynchronously detects an inconsistency. In addition, other middleware information that may be relevant to the application (such as the list of the existing topics) is made available by means of **built-in topics** (p. 59) that the application can access as plain application data, using built-in data-readers.

#### 7.68.4 Modules

DCPS consists of five modules:

- **Infrastructure module** (p. 162) defines the abstract classes and the interfaces that are refined by the other modules. It also provides support for the two interaction styles (notification-based and wait-based) with the middleware.
- **Domain module** (p. 39) contains the **DDSDomainParticipant** (p. 1351) class that acts as an entrypoint of the Service and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1351) also acts as a container for the other objects that make up the Service.
- **Topic module** (p. 61) contains the **DDSTopic** (p. 1617) class, the **DDSTopicListener** (p. 1626) interface, and more generally, all that is needed by the application to define **DDSTopic** (p. 1617) objects and attach QoS policies to them.
- **Publication module** (p. 103) contains the **DDSPublisher** (p. 1550) and **DDSDataWriter** (p. 1321) classes as well as the **DDSPublisherListener** (p. 1571) and **DDSDataWriterListener** (p. 1344) interfaces, and more generally, all that is needed on the publication side.
- **Subscription module** (p. 124) contains the **DDSSubscriber** (p. 1592), **DDSDataReader** (p. 1288), **DDSReadCondition** (p. 1574), and **DDSQueryCondition** (p. 1573) classes, as well as the **DDSSubscriberListener** (p. 1613) and **DDSDataReaderListener** (p. 1315) interfaces, and more generally, all that is needed on the subscription side.

### 7.69 Additional RTI Connex Communication Patterns

Extensions to the RTI Connex publish-subscribe functionality.

## Modules

- **Request-Reply Pattern**  
*Support for the request-reply communication pattern.*
- **Infrastructure**  
*Infrastructure types for RTI Connex Messaging.*
- **Utilities**  
*Utilities for the RTI Connex Messaging module.*

### 7.69.1 Detailed Description

Extensions to the RTI Connex publish-subscribe functionality.

This section includes the **Request-Reply API** (p. 186).

## 7.70 Programming How-To's

These "How To"s illustrate how to apply RTI Connex APIs to common use cases.

## Modules

- **Publication Example**  
*A data publication example.*
- **Subscription Example**  
*A data subscription example.*
- **Participant Use Cases**  
*Working with domain participants.*
- **Topic Use Cases**  
*Working with topics.*
- **FlowController Use Cases**  
*Working with flow controllers.*
- **Publisher Use Cases**  
*Working with publishers.*
- **DataWriter Use Cases**  
*Working with data writers.*
- **Subscriber Use Cases**  
*Working with subscribers.*
- **DataReader Use Cases**  
*Working with data readers.*
- **Entity Use Cases**  
*Working with entities.*

- **Waitset Use Cases**  
*Using wait-sets and conditions.*
- **Transport Use Cases**  
*Working with pluggable transports.*
- **Filter Use Cases**  
*Working with data filters.*
- **Creating Custom Content Filters**  
*Working with custom content filters.*
- **Large Data Use Cases**  
*Working with large data types.*
- **Request-Reply Examples**  
*Examples on how to use the request-reply API .*

### 7.70.1 Detailed Description

These "How To"s illustrate how to apply RTI Connex API to common use cases.

These are a good starting point to familiarize yourself with DDS. You can use these code fragments as "templates" for writing your own code.

## 7.71 Interface

Abstraction of a Transport Plugin network interface.

### Classes

- struct **NDDS\_Transport\_Interface\_t**  
*Storage for the description of a network interface used by a Transport Plugin.*

### Enumerations

- enum **NDDS\_Transport\_Interface\_Status\_t** {  
  **NDDS\_TRANSPORT\_INTERFACE\_OFF** = 0 ,  
  **NDDS\_TRANSPORT\_INTERFACE\_ON** = 1 }  
*Interface status.*

### 7.71.1 Detailed Description

Abstraction of a Transport Plugin network interface.

A Transport Plugin may be able to use several logical or physical network interfaces in a single node (machine). For example, there may be multiple NICs for IP networks or multiple serial ports for serial networks.

An instance of a Transport Plugin is a conduit to one or more network interfaces associated with the transport.

Instances of a Transport Plugin must assign a unique unicast address to each of the network interfaces that it can use to send and receive messages. The unicast address should be within the range of addresses that are addressable by the Transport Plugin (as defined by the plugin itself).

Then, when RTI Connext sends a message to an unicast destination address, the destination address will be made of two parts. The network address and an interface address. The network address portion will be used by RTI Connext to select the Transport Plugin instance that will send the message. The interface address portion is passed to the Transport Plugin instance as the destination interface to which the message should be sent.

See also

**NDDS\_Transport\_Address\_t** (p. 1774) **NDDS\_Transport\_ClassId\_t** (p. 252)

### 7.71.2 Enumeration Type Documentation

#### 7.71.2.1 NDDS\_Transport\_Interface\_Status\_t

enum **NDDS\_Transport\_Interface\_Status\_t**

Interface status.

Enumerator

NDDS_TRANSPORT_INTERFACE_OFF	The transport interface is OFF.
NDDS_TRANSPORT_INTERFACE_ON	The transport interface is ON.

## 7.72 Transport Plugins Configuration

Transport plugins configuration with RTI Connext.

### Classes

- struct **NDDS\_Transport\_UUID**

*Univocally identifies a transport plugin instance.*

- struct **TransportAllocationSettings\_t**  
*Allocation settings used by various internal buffers.*
- struct **NDDS\_Transport\_Property\_t**  
*Base configuration structure that must be inherited by derived Transport Plugin classes.*

## Macros

- #define **NDDS\_TRANSPORT\_PORT\_INVALID** (( NDDS\_Transport\_Port\_t) 0)  
*Port 0 is considered to be invalid.*
- #define **NDDS\_TRANSPORT\_UUID\_SIZE** 12  
*Size of a NDDS\_Transport\_UUID (p. 1817).*
- #define **NDDS\_TRANSPORT\_LENGTH\_UNLIMITED** -1  
*Represent an unlimited length.*
- #define **NDDS\_TRANSPORT\_INTERFACE\_RANK\_UNKNOWN** 0  
*Rank interface as unknown or not yet set.*
- #define **NDDS\_TRANSPORT\_UUID\_UNKNOWN** {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED** (-1)  
*The constant used as 'unlimited' for the 'max\_count' field of the structure **TransportAllocationSettings\_t** (p. 1947).*
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC** (-1)  
*The constant used as 'automatic' for the 'incremental\_count' field of the structure **TransportAllocationSettings\_t** (p. 1947).*
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_DEFAULT**  
*The constant used as default value for the struct **TransportAllocationSettings\_t** (p. 1947).*
- #define **NDDS\_TRANSPORT\_CLASSID\_INVALID** (-1)  
*Invalid Transport Class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_UDPv4** (1)  
*Builtin IPv4 UDP/IP Transport Plugin class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_SHMEM** (0x01000000)  
*Builtin Shared-Memory Transport Plugin class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_SHMEM\_510** (2)  
*Builtin Shared-Memory Transport Plugin class ID for Connex 5.1.0 and earlier.*
- #define **NDDS\_TRANSPORT\_CLASSID\_UDPv6** (2)  
*Builtin IPv6 UDP/IP Transport Plugin class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_UDPv6\_510** (5)  
*Builtin IPv6 UDP/IP Transport Plugin class ID for Connex 5.1.0 and earlier.*
- #define **NDDS\_TRANSPORT\_CLASSID\_TCPV4\_LAN** (8)  
*IPv4 TCP/IP Transport Plugin class ID for LAN case.*
- #define **NDDS\_TRANSPORT\_CLASSID\_TCPV4\_WAN** (9)  
*IPv4 TCP/IP Transport Plugin class ID for WAN case.*
- #define **NDDS\_TRANSPORT\_CLASSNAME\_TCPV4\_WAN** "tcpv4\_wan"

## Typedefs

- `typedef RTI_UINT32 NDDS_Transport_Port_t`  
*Type for storing RTI Connex RTPS ports.*
- `typedef RTI_INT32 NDDS_Transport_Classid_t`  
*Type for storing RTI Connex Transport Plugin class IDs.*

### 7.72.1 Detailed Description

Transport plugins configuration with RTI Connex.

Transport plugins are configured using properties. Each transport plugin must derive its property from a base configuration structure `NDDS_Transport_Property_t` (p. 1776).

To see how to configure the Built-in Transport Plugins, see [Built-in Transport Plugins](#) (p. 177).

See also

[Built-in Transport Plugins](#) (p. 177)

### 7.72.2 Macro Definition Documentation

#### 7.72.2.1 NDDS\_TRANSPORT\_PORT\_INVALID

```
#define NDDS_TRANSPORT_PORT_INVALID (( NDDS_Transport_Port_t) 0)
```

Port 0 is considered to be invalid.

### 7.72.2.2 NDDS\_TRANSPORT\_UUID\_SIZE

```
#define NDDS_TRANSPORT_UUID_SIZE 12
```

Size of a **NDDS\_Transport\_UUID** (p. 1817).

### 7.72.2.3 NDDS\_TRANSPORT\_LENGTH\_UNLIMITED

```
#define NDDS_TRANSPORT_LENGTH_UNLIMITED -1
```

Represent an unlimited length.

### 7.72.2.4 NDDS\_TRANSPORT\_INTERFACE\_RANK\_UNKNOWN

```
#define NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN 0
```

Rank interface as unknown or not yet set.

### 7.72.2.5 NDDS\_TRANSPORT\_UUID\_UNKNOWN

```
#define NDDS_TRANSPORT_UUID_UNKNOWN {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
```

Value for UUIDs that have no known value. Used as default.

### 7.72.2.6 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED (-1)
```

The constant used as 'unlimited' for the 'max\_count' field of the structure **TransportAllocationSettings\_t** (p. 1947).

### 7.72.2.7 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC (-1)
```

The constant used as 'automatic' for the 'incremental\_count' field of the structure **TransportAllocationSettings\_t** (p. 1947).

Automatic means the buffer size will double at every reallocation.

### 7.72.2.8 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_DEFAULT

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT
```

**Value:**

```
{
    2L, /* initial_count */
    NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED, /* max_count */
    NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC /* incremental_count */
}
```

The constant used as default value for the struct **TransportAllocationSettings\_t** (p. 1947).

The default value defined in this constant, sets the buffer to have:

- initial\_count = 2 elements
- max\_count = **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED** (p. 248)
- incremental\_count = **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC**

### 7.72.2.9 NDDS\_TRANSPORT\_CLASSID\_INVALID

```
#define NDDS_TRANSPORT_CLASSID_INVALID (-1)
```

Invalid Transport Class ID.

Transport-Plugins implementations should set their class ID to a value different than this.

### 7.72.2.10 NDDS\_TRANSPORT\_CLASSID\_UDPv4

```
#define NDDS_TRANSPORT_CLASSID_UDPv4 (1)
```

Builtin IPv4 UDP/IP Transport Plugin class ID.

### 7.72.2.11 NDDS\_TRANSPORT\_CLASSID\_SHMEM

```
#define NDDS_TRANSPORT_CLASSID_SHMEM (0x01000000)
```

Builtin Shared-Memory Transport Plugin class ID.

### 7.72.2.12 NDDS\_TRANSPORT\_CLASSID\_SHMEM\_510

```
#define NDDS_TRANSPORT_CLASSID_SHMEM_510 (2)
```

Builtin Shared-Memory Transport Plugin class ID for Connex 5.1.0 and earlier.

### 7.72.2.13 NDDS\_TRANSPORT\_CLASSID\_UDPv6

```
#define NDDS_TRANSPORT_CLASSID_UDPv6 (2)
```

Builtin IPv6 UDP/IP Transport Plugin class ID.

### 7.72.2.14 NDDS\_TRANSPORT\_CLASSID\_UDPv6\_510

```
#define NDDS_TRANSPORT_CLASSID_UDPv6_510 (5)
```

Builtin IPv6 UDP/IP Transport Plugin class ID for Connex 5.1.0 and earlier.

### 7.72.2.15 NDDS\_TRANSPORT\_CLASSID\_TCPV4\_LAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_LAN (8)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case.

### 7.72.2.16 NDDS\_TRANSPORT\_CLASSID\_TCPV4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_WAN (9)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case.

### 7.72.2.17 NDDS\_TRANSPORT\_CLASSNAME\_TCPV4\_WAN

```
#define NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN "tcpv4_wan"
```

IPv4 TCP/IP Transport Plugin class name for WAN case.

### 7.72.2.18 NDDS\_TRANSPORT\_CLASSID\_TLsv4\_LAN

```
#define NDDS_TRANSPORT_CLASSID_TLsv4_LAN (10)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case with TLS enabled.

### 7.72.2.19 NDDS\_TRANSPORT\_CLASSID\_TLsv4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_TLsv4_WAN (11)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case with TLS enabled.

### 7.72.2.20 NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_UDPv4_WAN (0x01000001)
```

Builtin IPv4 UDP/IP Asymmetric Transport Plugin class ID.

### 7.72.2.21 NDDS\_TRANSPORT\_CLASSID\_RESERVED\_RANGE

```
#define NDDS_TRANSPORT_CLASSID_RESERVED_RANGE (1000)
```

Transport Plugin class IDs below this are reserved by RTI.

User-defined Transport-Plugins should use a class ID greater than this number.

### 7.72.2.22 NDDS\_TRANSPORT\_PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOANED

```
#define NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED (0x2)
```

Specified zero-copy behavior of transport.

A Transport Plugin may commit to one of three behaviors for zero copy receives:

1. Always does zero copy.
2. Sometimes does zero copy, up to the transport discretion.
3. Never does zero copy.

This bit should be set only if the Transport Plugin commits to always doing a zero copy receive, or more specifically, always loaning a buffer through its `receive_rEA()` call.

In that case, RTI Connex will not need to allocate storage for a message that it retrieves with the `receive_rEA()` call.

### 7.72.2.23 NDDS\_TRANSPORT\_PROPERTY\_GATHER\_SEND\_BUFFER\_COUNT\_MIN

```
#define NDDS_TRANSPORT_PROPERTY_GATHER_SEND_BUFFER_COUNT_MIN (3)
```

Minimum number of gather-send buffers that must be supported by a Transport Plugin implementation.

For the `NDDS_Transport_Property_t` (p. 1776) structure to be valid, the value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779) must be greater than or equal to this value.

## 7.72.3 Typedef Documentation

### 7.72.3.1 NDDS\_Transport\_Port\_t

```
typedef RTI_UINT32 NDDS_Transport_Port_t
```

Type for storing RTI Connex RTPS ports.

Unlike IPv4 Socket API ports, which are 2 bytes long, the RTI Connex representation of an RTPS port is 4 bytes.

### 7.72.3.2 NDDS\_Transport\_ClassId\_t

```
typedef RTI_INT32 NDDS_Transport_ClassId_t
```

Type for storing RTI Connex Transport Plugin class IDs.

Each implementation of a Transport Plugin must have a unique ID. For example, a UDP/IP Transport Plugin implementation must have a different ID than a Shared Memory Transport Plugin.

User-implemented Transport Plugins must have an ID higher than `NDDS_TRANSPORT_CLASSID_RESERVED_RANGE` (p. 251).

## 7.73 Transport Address

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

### Classes

- struct `NDDS_Transport_Address_t`

*Addresses are stored individually as network-ordered bytes.*

## Macros

- `#define NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER` `{{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}`  
*An invalid transport address. Used as an initializer.*
- `#define NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE` (72)  
*The minimum size of the buffer that should be passed to `NDDS_Transport_Address_to_string` (p. 255).*

## Functions

- `RTI_INT32 NDDS_Transport_Address_to_string` (const `NDDS_Transport_Address_t` \*self, char \*buffer\_↔ inout, `RTI_INT32` buffer\_length\_in)  
*Converts a numerical address to a printable string representation.*
- `RTIBool NDDS_Transport_Address_to_string_with_protocol_family_format` (const `NDDS_Transport_↔ Address_t` \*me, char \*buffer, `RTI_INT32` buffer\_length\_in, `RTIOSapiSocketAFKind` family)  
*Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.*
- `RTI_INT32 NDDS_Transport_Address_from_string` (`NDDS_Transport_Address_t` \*address\_out, const char \*address\_in)  
*Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.*
- void `NDDS_Transport_Address_print` (const `NDDS_Transport_Address_t` \*address\_in, const char \*desc\_in, `RTI_INT32` indent\_in)  
*Prints an address to standard out.*
- `RTI_INT32 NDDS_Transport_Address_is_ipv4` (const `NDDS_Transport_Address_t` \*address\_in)  
*Checks if an address is an IPv4 address.*
- `RTI_INT32 NDDS_Transport_Address_is_multicast` (const `NDDS_Transport_Address_t` \*address\_in)  
*Checks if an address is an IPv4 or IPv6 multicast address.*

## Variables

- const `NDDS_Transport_Address_t NDDS_TRANSPORT_ADDRESS_INVALID`  
*An invalid transport address.*

### 7.73.1 Detailed Description

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

The APIs of RTI Connex uses IPv6 address notation for all transports.

Transport Plugin implementations that are not IP-based are required to map whatever addressing scheme natively used by the physical transport (if any) to an address in IPv6 notation and vice versa.

IPv6 addresses are numerically stored in 16 bytes. An IPv6 address can be presented In string notation in a variety of ways. For example,

```
"00AF:0000:0037:FE01:0000:0000:034B:0089"
"AF:0:37:FE01:0:0:34B:89"
"AF:0:37:FE01::34B:89"
```

are all valid IPv6 presentation of the same address.

IPv4 address in dot notation can be used to specify the last 4 bytes of the address. For example,

```
"0000:0000:0000:0000:0000:192.168.0.1"
"0:0:0:0:0:192.168.0.1"
"::192.168.0.1"
```

are all valid IPv6 presentation of the same address.

For a complete description of valid IPv6 address notation, consult the IPv6 Addressing Architecture (RFC 2373).

Addresses are divided into unicast addresses and multicast addresses.

Multicast addresses are defined as

- Addresses that start with 0xFF. That is `FFxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx`.

or an IPv4 multicast address

- Address in the range `::224.0.0.0, ::239.255.255.255]`

Multicast addresses do not refer to any specific destination (network interface). Instead, they usually refer to a group of network interfaces, often called a "multicast group".

Unicast addresses always refer to a specific network interface.

## 7.73.2 Macro Definition Documentation

### 7.73.2.1 NDDS\_TRANSPORT\_ADDRESS\_INVALID\_INITIALIZER

```
#define NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
```

An invalid transport address. Used as an initializer.

For example: `NDDS_Transport_Address_t` (p.1774) `address = NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER;`

### 7.73.2.2 NDDS\_TRANSPORT\_ADDRESS\_STRING\_BUFFER\_SIZE

```
#define NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE (72)
```

The minimum size of the buffer that should be passed to `NDDS_Transport_Address_to_string` (p.255).

For regular addresses, the string size needs to be at least 40 to include space for 8 tuples of 4 characters each plus 7 delimiting colons plus a terminating NULL.

To support UDPv4\_WAN strings, it has been adjusted to 72 to fit the following representation (plus NULL terminator):  
`f=XXXXRBPU,u={FF,FF,FF,FF,FF,FF,FF,FF,FF},p=255.255.255.255:65555:65555`

### 7.73.3 Function Documentation

#### 7.73.3.1 NDDS\_Transport\_Address\_to\_string()

```
RTI_INT32 NDDS_Transport_Address_to_string (
    const NDDS_Transport_Address_t * self,
    char * buffer_inout,
    RTI_INT32 buffer_length_in )
```

Converts a numerical address to a printable string representation.

#### Precondition

The *buffer\_inout* provided must be at least **NDDS\_TRANSPORT\_ADDRESS\_STRING\_BUFFER\_SIZE** (p. 254) characters long.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) The address to be converted.
<i>buffer_inout</i>	<< <i>inout</i> >> (p. 238) Storage passed in which to return the string corresponding to the address.
<i>buffer_length_in</i> <i>_in</i>	<< <i>in</i> >> (p. 238) The length of the storage buffer. Must be >= <b>NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE</b> (p. 254)

#### Returns

1 upon success; 0 upon failure (not enough space in the provided buffer)

#### 7.73.3.2 NDDS\_Transport\_Address\_to\_string\_with\_protocol\_family\_format()

```
RTIBool NDDS_Transport_Address_to_string_with_protocol_family_format (
    const NDDS_Transport_Address_t * me,
    char * buffer,
    RTI_INT32 buffer_length_in,
    RTIOsapiSocketAFKind family )
```

Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.

#### Precondition

The *buffer\_inout* provided must be at least **NDDS\_TRANSPORT\_ADDRESS\_STRING\_BUFFER\_SIZE** (p. 254) characters long.

## Parameters

<i>me</i>	<< <i>in</i> >> (p. 238) The address to be converted.
<i>buffer</i>	<< <i>inout</i> >> (p. 238) Storage passed in which to return the string corresponding to the address.
<i>buffer_length</i> <i>_in</i>	<< <i>in</i> >> (p. 238) The length of the storage buffer. Must be >= <b>NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE</b> (p. 254)
<i>family</i>	<< <i>in</i> >> (p. 238) The protocol family RTI_OSAPI_SOCKET_AF_INET or RTI_OSAPI_SOCKET_AF_INET6

## Returns

RTI\_TRUE upon success; 0 upon failure (not enough space in the provided buffer)

## 7.73.3.3 NDDS\_Transport\_Address\_from\_string()

```
RTI_INT32 NDDS_Transport_Address_from_string (
    NDDS_Transport_Address_t * address_out,
    const char * address_in )
```

Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.

The address string must be in IPv4 dotted notation (X.X.X.X) or IPv6 presentation notation. The string cannot be a hostname since this function does not perform a hostname lookup.

## Parameters

<i>address_out</i>	<< <i>out</i> >> (p. 238) Numerical value of the address.
<i>address_in</i>	<< <i>in</i> >> (p. 238) String representation of an address.

## Returns

1 if *address\_out* contains a valid address  
0 if it was not able to convert the string into an address.

## 7.73.3.4 NDDS\_Transport\_Address\_print()

```
void NDDS_Transport_Address_print (
    const NDDS_Transport_Address_t * address_in,
    const char * desc_in,
    RTI_INT32 indent_in )
```

Prints an address to standard out.

## Parameters

<i>address</i> <sub>↔</sub> <i>_in</i>	<< <i>in</i> >> (p. 238) Address to be printed.
<i>desc_in</i>	<< <i>in</i> >> (p. 238) A prefix to be printed before the address.
<i>indent_in</i>	<< <i>in</i> >> (p. 238) Indentation level for the printout.

## 7.73.3.5 NDDS\_Transport\_Address\_is\_ipv4()

```
RTI_INT32 NDDS_Transport_Address_is_ipv4 (
    const NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 address.

## Parameters

<i>address</i> <sub>↔</sub> <i>_in</i>	<< <i>in</i> >> (p. 238) Address to be tested.
---	--

## Note

May be implemented as a macro for efficiency.

## Returns

1 if address is an IPv4 address

0 otherwise.

## 7.73.3.6 NDDS\_Transport\_Address\_is\_multicast()

```
RTI_INT32 NDDS_Transport_Address_is_multicast (
    const NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 or IPv6 multicast address.

## Parameters

<i>address</i> <sub>↔</sub> <i>_in</i>	<< <i>in</i> >> (p. 238) Address to be tested.
---	--

May be implemented as a macro for efficiency.

#### Returns

- 1 if address is a multicast address
- 0 otherwise.

### 7.73.4 Variable Documentation

#### 7.73.4.1 NDDS\_TRANSPORT\_ADDRESS\_INVALID

```
const NDDS_Transport_Address_t NDDS_TRANSPORT_ADDRESS_INVALID
```

An invalid transport address.

## 7.74 UDP Transport Plugin definitions

UDP Transport Plugin definitions.

### Classes

- struct **NDDS\_Transport\_UDP\_WAN\_CommPortsMappingInfo**  
*Type for storing UDP WAN communication ports.*

### Macros

- #define **NDDS\_TRANSPORT\_UDP\_PROPERTIES\_BITMAP\_DEFAULT** (0)  
*Default value of NDDS\_Transport\_Property\_t::properties\_bitmap (p. 1778).*
- #define **NDDS\_TRANSPORT\_UDP\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT** (16)  
*Default value of NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max (p. 1779).*
- #define **NDDS\_TRANSPORT\_UDP\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT** (-1)  
*Used to specify that os default be used to specify socket buffer size.*
- #define **NDDS\_TRANSPORT\_UDP\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT** (131072)  
*Default value of send\_socket\_buffer\_size.*
- #define **NDDS\_TRANSPORT\_UDP\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT** (131072)  
*Default value of recv\_socket\_buffer\_size.*
- #define **NDDS\_TRANSPORT\_UDP\_MULTICAST\_TTL\_DEFAULT** (1)  
*Default value of multicast\_ttl.*

## Typedefs

- typedef RTI\_UINT16 **NDDS\_Transport\_UDP\_Port**  
*UDP port.*

### 7.74.1 Detailed Description

UDP Transport Plugin definitions.

### 7.74.2 Macro Definition Documentation

#### 7.74.2.1 NDDS\_TRANSPORT\_UDP\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT (0)
```

Default value of **NDDS\_Transport\_Property\_t::properties\_bitmap** (p. 1778).

#### 7.74.2.2 NDDS\_TRANSPORT\_UDP\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (16)
```

Default value of **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1779).

This is also the maximum value that can be used when instantiating the udp transport.

16 is sufficient for RTI Connex, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

#### 7.74.2.3 NDDS\_TRANSPORT\_UDP\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT (-1)
```

Used to specify that os default be used to specify socket buffer size.

#### 7.74.2.4 NDDS\_TRANSPORT\_UDP\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT (131072)
```

Default value of `send_socket_buffer_size`.

#### 7.74.2.5 NDDS\_TRANSPORT\_UDP\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT (131072)
```

Default value of `recv_socket_buffer_size`.

#### 7.74.2.6 NDDS\_TRANSPORT\_UDP\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT (1)
```

Default value of `multicast_ttl`.

### 7.74.3 Typedef Documentation

#### 7.74.3.1 NDDS\_Transport\_UDP\_Port

```
typedef RTI_UINT16 NDDS_Transport_UDP_Port
```

UDP port.

## 7.75 Shared Memory Transport

Built-in transport plug-in for inter-process communications using shared memory (`NDDS_TRANSPORT_CLASSID_↔SHMEM` (p. 249)) .

### Classes

- struct `NDDS_Transport_Shmem_Property_t`

*Subclass of `NDDS_Transport_Property_t` (p. 1776) allowing specification of parameters that are specific to the shared-memory transport.*

## Macros

- #define **NDDS\_TRANSPORT\_SHMEM\_ADDRESS\_BIT\_COUNT** (-96)  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778).*
- #define **NDDS\_TRANSPORT\_SHMEM\_PROPERTIES\_BITMAP\_DEFAULT** ( **NDDS\_TRANSPORT\_↵  
PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOADED** )  
*Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1778).*
- #define **NDDS\_TRANSPORT\_SHMEM\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT** (1024)  
*Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).*
- #define **NDDS\_TRANSPORT\_SHMEM\_MESSAGE\_SIZE\_MAX\_DEFAULT** (65536)  
*Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).*
- #define **NDDS\_TRANSPORT\_SHMEM\_RECEIVED\_MESSAGE\_COUNT\_MAX\_DEFAULT** (64)  
*Default value of `NDDS_Transport_Shmem_Property_t::received_message_count_max` (p. 1785).*
- #define **NDDS\_TRANSPORT\_SHMEM\_RECEIVE\_BUFFER\_SIZE\_DEFAULT**  
*Default value of `NDDS_Transport_Shmem_Property_t::receive_buffer_size` (p. 1785).*
- #define **NDDS\_TRANSPORT\_SHMEM\_MAJOR\_AFTER\_BUG\_14240\_FIX** (2)  
*Major version for the transport plugin after fixing bug 14240 (RTI-28)*
- #define **NDDS\_TRANSPORT\_SHMEM\_PROPERTY\_DEFAULT**  
*Use this to initialize stack variable.*

## Functions

- `NDDS_Transport_Plugin * NDDS_Transport_Shmem_new` (const struct **NDDS\_Transport\_Shmem\_↵  
Property\_t** \*property\_in)  
*Create a new shmem process transport.*
- `NDDS_Transport_Plugin * NDDS_Transport_Shmem_create` ( **NDDS\_Transport\_Address\_t** \*default\_↵  
network\_address\_out, const struct **DDS\_PropertyQosPolicy** \*property\_in, const struct **DDS\_Product\_↵  
Version\_t** \*minimum\_compatibility\_version)  
*Create a new shmem process transport, using PropertyQosPolicy.*

### 7.75.1 Detailed Description

Built-in transport plug-in for inter-process communications using shared memory (**NDDS\_TRANSPORT\_CLASSID\_↵  
SHMEM** (p. 249)) .

This transport plugin uses System Shared Memory to send messages between processes on the same node. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_SHMEM\_ALIAS** (p. 446).

### 7.75.2 Compatibility of Sender and Receiver Transports

Opening a receiver "port" on shared memory corresponds to creating a shared memory segment using a name based on the port number. The transport plugin's properties are embedded in the shared memory segment.

When a sender tries to send to the shared memory port, it verifies that properties of the receiver's shared memory transport are compatible with those specified in its transport plugin. If not, the sender will fail to attach to the port and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_attachShmem:failed to initialize incompatible properties
NDDS_Transport_Shmem_attachShmem:countMax 0 > -19417345 or max size -19416188 > 2147482624
```

In this scenario, the properties of the sender or receiver transport plugin instances should be adjusted, so that they are compatible.

### 7.75.3 Crashing and Restarting Programs

If a process using shared memory crashes (say because the user typed in  $\wedge C$ ), resources associated with its shared memory ports may not be properly cleaned up. Later, if another RTI Connex process needs to open the same ports (say, the crashed program is restarted), it will attempt to reuse the shared memory segment left behind by the crashed process.

The reuse is allowed iff the properties of transport plugin are compatible with those embedded in the shared memory segment (i.e., of the original creator). Otherwise, the process will fail to open the ports, and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_create_recvresource_rrEA:failed to initialize shared
memory resource Cannot recycle existing shmem: size not compatible for key 0x1234
```

In this scenario, the shared memory segments must be cleaned up using appropriate platform specific commands. For details, please refer to the `Platform Notes`.

### 7.75.4 Shared Resource Keys

The transport uses the **shared memory segment keys**, given by the formula below.

```
0x400000 + port
```

The transport also uses signaling **shared semaphore** keys given by the formula below.

```
0x800000 + port
```

The transport also uses mutex **shared semaphore keys** given by the formula below.

```
0xb00000 + port
```

where the `port` is a function of the `domain_id` and the `participant_id`, as described in [DDS\\_WireProtocolQosPolicy::participant\\_id](#) (p. 1247)

See also

[DDS\\_WireProtocolQosPolicy::participant\\_id](#) (p. 1247)

[NDDSTransportSupport::set\\_builtin\\_transport\\_property\(\)](#) (p. 1838)

### 7.75.5 Creating and Registering Shared Memory Transport Plugin

RTI Connex can implicitly create this plugin and register with the [DDSDomainParticipant](#) (p. 1351) if this transport is specified in [DDS\\_TransportBuiltinQosPolicy](#) (p. 1144).

To specify the properties of the builtin shared memory transport that is implicitly registered, you can either:

- call [NDDSTransportSupport::set\\_builtin\\_transport\\_property](#) (p. 1838) or
- specify the pre-defined property names in [DDS\\_PropertyQosPolicy](#) (p. 1007) associated with the [DDSDomainParticipant](#) (p. 1351). (see [Shared Memory Transport Property Names in Property QoS Policy of Domain Participant](#) (p. 263)).

Builtin transport plugin properties specified in [DDS\\_PropertyQosPolicy](#) (p. 1007) always overwrite the ones specified through [NDDSTransportSupport::set\\_builtin\\_transport\\_property\(\)](#) (p. 1838). The default value is assumed on any unspecified property. Note that all properties should be set before the transport is implicitly created and registered by RTI Connex. See [Builtin Transport Plugins](#) (p. 177) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, [NDDS\\_Transport\\_Shmem\\_new\(\)](#) (p. 265) should be called. The instance should be registered with RTI Connex, see [NDDSTransportSupport::register\\_transport](#) (p. 1834). In some configurations, you may have to disable the builtin shared memory transport plugin instance ([DDS\\_TransportBuiltinQosPolicy](#) (p. 1144), [DDS\\_TRANSPORTBUILTIN\\_SHMEM](#) (p. 446)), to avoid port conflicts with the newly created plugin instance.

### 7.75.6 Shared Memory Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the `DDS_DomainParticipantQos::property` (p. 745) to configure the builtin shared memory transport plugin.

**Table 7.90 Property Strings for Shared Memory Transport**

Name	Descriptions
<code>dds.transport.shmem.builtin.parent.address_bit_count</code>	See <code>NDDS_Transport_Property_t::address_bit_count</code> (p. 1778)
<code>dds.transport.shmem.builtin.parent.properties_bitmap</code>	See <code>NDDS_Transport_Property_t::properties_bitmap</code> (p. 1778)
<code>dds.transport.shmem.builtin.parent.gather_send_buffer_count_max</code>	See <code>NDDS_Transport_Property_t::gather_send_buffer_count_max</code> (p. 1779)
<code>dds.transport.shmem.builtin.parent.message_size_max</code>	See <code>NDDS_Transport_Property_t::message_size_max</code> (p. 1779)
<code>dds.transport.shmem.builtin.parent.allow_interfaces</code>	See <code>NDDS_Transport_Property_t::allow_interfaces_list</code> (p. 1779) and <code>NDDS_Transport_Property_t::allow_interfaces_list_length</code> (p. 1780). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
<code>dds.transport.shmem.builtin.parent.deny_interfaces</code>	See <code>NDDS_Transport_Property_t::deny_interfaces_list</code> (p. 1780) and <code>NDDS_Transport_Property_t::deny_interfaces_list_length</code> (p. 1781). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
<code>dds.transport.shmem.builtin.parent.allow_multicast_interfaces</code>	See <code>NDDS_Transport_Property_t::allow_multicast_interfaces_list</code> (p. 1781) and <code>NDDS_Transport_Property_t::allow_multicast_interfaces_list_length</code> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
<code>dds.transport.shmem.builtin.parent.deny_multicast_interfaces</code>	See <code>NDDS_Transport_Property_t::deny_multicast_interfaces_list</code> (p. 1782) and <code>NDDS_Transport_Property_t::deny_multicast_interfaces_list_length</code> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
<code>dds.transport.shmem.builtin.parent.max_interface_count</code>	See <code>NDDS_Transport_Property_t::max_interface_count</code> (p. 1783)
<code>dds.transport.shmem.builtin.parent.thread_name_prefix</code>	See <code>NDDS_Transport_Property_t::thread_name_prefix</code> (p. 1783)
<code>dds.transport.shmem.builtin.received_message_count_max</code>	See <code>NDDS_Transport_Shmem_Property_t::received_message_count_max</code> (p. 1785)

Name	Descriptions
dds.transport.shmem.builtin.receive_buffer_size	See <code>NDDS_Transport_Shmem_Property_t::receive_buffer_size</code> (p. 1785)
dds.transport.shmem.builtin.enable_udp_debugging	See <code>NDDS_Transport_Shmem_Property_t::enable_udp_debugging</code> (p. 1786)
dds.transport.shmem.builtin.udp_debugging_address	See <code>NDDS_Transport_Shmem_Property_t::udp_debugging_address</code> (p. 1786)
dds.transport.shmem.builtin.udp_debugging_port	See <code>NDDS_Transport_Shmem_Property_t::udp_debugging_port</code> (p. 1787)

## 7.75.7 Macro Definition Documentation

### 7.75.7.1 NDDS\_TRANSPORT\_SHMEM\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_SHMEM_ADDRESS_BIT_COUNT (-96)
```

Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778).

### 7.75.7.2 NDDS\_TRANSPORT\_SHMEM\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_PROPERTIES_BITMAP_DEFAULT ( NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_↔  
ALWAYS_LOANED )
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1778).

### 7.75.7.3 NDDS\_TRANSPORT\_SHMEM\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (1024)
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).

**7.75.7.4 NDDS\_TRANSPORT\_SHMEM\_MESSAGE\_SIZE\_MAX\_DEFAULT**

```
#define NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT (65536)
```

Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).

**7.75.7.5 NDDS\_TRANSPORT\_SHMEM\_RECEIVED\_MESSAGE\_COUNT\_MAX\_DEFAULT**

```
#define NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT (64)
```

Default value of `NDDS_Transport_Shmem_Property_t::received_message_count_max` (p. 1785).

**7.75.7.6 NDDS\_TRANSPORT\_SHMEM\_RECEIVE\_BUFFER\_SIZE\_DEFAULT**

```
#define NDDS_TRANSPORT_SHMEM_RECEIVE_BUFFER_SIZE_DEFAULT
```

**Value:**

```
(NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT * \
 NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT / 4)
```

Default value of `NDDS_Transport_Shmem_Property_t::receive_buffer_size` (p. 1785).

**7.75.7.7 NDDS\_TRANSPORT\_SHMEM\_MAJOR\_AFTER\_BUG\_14240\_FIX**

```
#define NDDS_TRANSPORT_SHMEM_MAJOR_AFTER_BUG_14240_FIX (2)
```

Major version for the transport plugin after fixing bug 14240 (RTI-28)

**7.75.7.8 NDDS\_TRANSPORT\_SHMEM\_PROPERTY\_DEFAULT**

```
#define NDDS_TRANSPORT_SHMEM_PROPERTY_DEFAULT
```

Use this to initialize stack variable.

**7.75.8 Function Documentation****7.75.8.1 NDDS\_Transport\_Shmem\_new()**

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_new (
    const struct NDDS_Transport_Shmem_Property_t * property_in )
```

Create a new shmем process transport.

An application may create multiple transports, possibly for use in different domains.

## Parameters

<i>property_in</i>	<< <i>in</i> >> (p. 238) Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.
--------------------	--

## Returns

handle to a Shmem inter-process Transport Plugin on success  
 NULL on failure.

## 7.75.8.2 NDDS\_Transport\_Shmem\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const struct DDS_ProductVersion_t * minimum_compatibility_version )
```

Create a new shmem process transport, using PropertyQosPolicy.

An application may create multiple transports, possibly for use in different domains.

## Parameters

<i>default_network_address_out</i>	<< <i>out</i> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <i>in</i> >> (p. 238) Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.
<i>minimum_compatibility_version</i>	<< <i>in</i> >> (p. 238) Desired product version for the shared memory transport. If NULL, the default shared memory transport is used (no additional compatibility restrictions for the transport version). Please refer to the <i>minimum_compatibility_version</i> property for more information.

## Returns

handle to a Shmem inter-process Transport Plugin on success  
 NULL on failure.

## 7.76 UDPv4 Transport

Transport plug-in using UDP/IPv4 (**NDDS\_TRANSPORT\_CLASSID\_UDPv4** (p. 249)) .

## Classes

- struct **NDDS\_Transport\_UDPv4\_Property\_t**  
*Configurable IPv4/UDP Transport-Plugin properties.*

## Macros

- #define **NDDS\_TRANSPORT\_UDPv4\_ADDRESS\_BIT\_COUNT** (32)  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778).*
- #define **NDDS\_TRANSPORT\_UDPv4\_WAN\_ADDRESS\_BIT\_COUNT** (128)  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778) for UDPv4 asymmetric transport.*
- #define **NDDS\_TRANSPORT\_UDPv4\_PROPERTIES\_BITMAP\_DEFAULT** **NDDS\_TRANSPORT\_UDP\_↔  
PROPERTIES\_BITMAP\_DEFAULT**  
*Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1778).*
- #define **NDDS\_TRANSPORT\_UDPv4\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT** **NDDS\_↔  
TRANSPORT\_UDP\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT**  
*Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).*
- #define **NDDS\_TRANSPORT\_UDPv4\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT** **NDDS\_TRANSPORT\_↔  
UDP\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT**  
*Used to specify that os default be used to specify socket buffer size.*
- #define **NDDS\_TRANSPORT\_UDPv4\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT** **NDDS\_TRANSPORT\_↔  
UDP\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size` (p. 1790) and `NDDS_Transport_↔  
UDPv4_WAN_Property_t::send_socket_buffer_size` (p. 1799).*
- #define **NDDS\_TRANSPORT\_UDPv4\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT** **NDDS\_TRANSPORT\_↔  
UDP\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size` (p. 1790) and `NDDS_Transport_↔  
UDPv4_WAN_Property_t::recv_socket_buffer_size` (p. 1800).*
- #define **NDDS\_TRANSPORT\_UDPv4\_PAYLOAD\_SIZE\_MAX** (65507)  
*Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).*
- #define **NDDS\_TRANSPORT\_UDPv4\_MESSAGE\_SIZE\_MAX\_DEFAULT** **NDDS\_TRANSPORT\_UDPv4\_↔  
PAYLOAD\_SIZE\_MAX**  
*Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).*
- #define **NDDS\_TRANSPORT\_UDPv4\_MULTICAST\_TTL\_DEFAULT** **NDDS\_TRANSPORT\_UDP\_↔  
MULTICAST\_TTL\_DEFAULT**  
*Default value of `NDDS_Transport_UDPv4_Property_t::multicast_ttl` (p. 1791).*
- #define **NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_NEVER**  
*Value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1793) to specify non-blocking sockets.*
- #define **NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS**  
*[default] Value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1793) to specify blocking sockets.*
- #define **NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_DEFAULT** **NDDS\_TRANSPORT\_UDP\_BLOCKING\_↔  
DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1793) to specify blocking sockets.*
- #define **NDDS\_TRANSPORT\_UDPv4\_PROPERTY\_DEFAULT**  
*Use this to initialize a `NDDS_Transport_UDPv4_Property_t` (p. 1788) structure.*
- #define **NDDS\_Transport\_UDPv4\_string\_to\_address\_cEA** **NDDS\_Transport\_UDP\_string\_to\_address\_cEA**  
*Realization of `NDDS_Transport_String_To_Address_Fcn_cEA` for IP transports.*

## Functions

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_new (const struct NDDS_Transport_UDPv4_Property_t *property_in)`  
*Create an instance of a UDPv4 Transport Plugin.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQosPolicy *property_in)`  
*Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create_from_properties_with_prefix ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQosPolicy *property_in, const char *propertyPrefix)`  
*Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv4\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 7.76.1 Detailed Description

Transport plug-in using UDP/IPv4 (`NDDS_TRANSPORT_CLASSID_UDPv4` (p. 249)) .

This transport plugin uses UDPv4 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias `DDS_TRANSPORTBUILTIN_UDPv4_ALIAS` (p. 446).

You can configure an instance of this plugin to only use unicast or only use multicast, see `NDDS_Transport_UDPv4_Property_t::unicast_enabled` (p. 1790) and `NDDS_Transport_UDPv4_Property_t::multicast_enabled` (p. 1791).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the `NDDS_Transport_Property_t::max_interface_count` (p. 1783) and the "white" and "black" lists in the base property's fields (`NDDS_Transport_Property_t::allow_interfaces_list` (p. 1779), `NDDS_Transport_Property_t::deny_interfaces_list` (p. 1780), `NDDS_Transport_Property_t::allow_multicast_interfaces_list` (p. 1781), `NDDS_Transport_Property_t::deny_multicast_interfaces_list` (p. 1782)).

RTI Connexant can implicitly create this plugin and register with the `DDSDomainParticipant` (p. 1351) if this transport is specified in `DDS_TransportBuiltinQosPolicy` (p. 1144).

To specify the properties of the builtin UDPv4 transport that is implicitly registered, you can either:

- call `NDDSTransportSupport::set_builtin_transport_property` (p. 1838) or
- specify the predefined property names in `DDS_PropertyQosPolicy` (p. 1007) associated with the `DDSDomainParticipant` (p. 1351). (see [UDPv4 Transport Property Names in Property QoS Policy of Domain Participant](#) (p. 269)). Builtin transport plugin properties specified in `DDS_PropertyQosPolicy` (p. 1007) always overwrite the ones specified through `NDDSTransportSupport::set_builtin_transport_property()` (p. 1838). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connexant. Any properties set after the builtin transport is registered will be ignored. See [Built-in Transport Plugins](#) (p. 177) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, `NDDS_Transport_UDPv4_new()` (p. 274) should be called. The instance should be registered with RTI Connexant, see `NDDSTransportSupport::register_transport` (p. 1834). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (`DDS_TransportBuiltinQosPolicy` (p. 1144), `DDS_TRANSPORTBUILTIN_UDPv4` (p. 446)), to avoid port conflicts with the newly created plugin instance.

## 7.76.2 UDPv4 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the `DDS_DomainParticipantQos::property` (p. 745) to configure the builtin UDPv4 transport plugin.

**Table 7.93 Property Names for UDPv4 Transport Plugin**

Property Name	Description
<code>dds.transport.UDPv4.builtin.parent.classid</code>	See <code>NDDS_Transport_Property_t::classid</code> (p. 1777) Should be set to " <code>NDDS_TRANSPORT_CLASSID_↔ UDPv6</code> (p. 249)"
<code>dds.transport.UDPv4.builtin.parent.address_bit_count</code>	See <code>NDDS_Transport_Property_t::address_bit_↔ count</code> (p. 1778)
<code>dds.transport.UDPv4.builtin.parent.properties_bitmap</code>	See <code>NDDS_Transport_Property_t::properties_↔ bitmap</code> (p. 1778)
<code>dds.transport.UDPv4.builtin.parent.gather_send_↔ buffer_count_max</code>	See <code>NDDS_Transport_Property_t::gather_send_↔ buffer_count_max</code> (p. 1779)
<code>dds.transport.UDPv4.builtin.parent.message_size_max</code>	See <code>NDDS_Transport_Property_t::message_size_↔ max</code> (p. 1779)
<code>dds.transport.UDPv4.builtin.parent.allow_interfaces</code>	See <code>NDDS_Transport_Property_t::allow_↔ interfaces_list</code> (p. 1779) and <code>NDDS_Transport_↔ Property_t::allow_interfaces_list_length</code> (p. 1780). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, <code>127.0.0.1,eth0</code>
<code>dds.transport.UDPv4.builtin.parent.deny_interfaces</code>	See <code>NDDS_Transport_Property_t::deny_interfaces_↔ _list</code> (p. 1780) and <code>NDDS_Transport_Property_t_↔ ::deny_interfaces_list_length</code> (p. 1781). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: <code>127.0.0.1,eth0</code>
<code>dds.transport.UDPv4.builtin.parent.allow_multicast_↔ interfaces</code>	See <code>NDDS_Transport_Property_t::allow_multicast_↔ _interfaces_list</code> (p. 1781) and <code>NDDS_Transport_↔ Property_t::allow_multicast_interfaces_list_length</code> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: <code>127.0.0.1,eth0</code>
<code>dds.transport.UDPv4.builtin.parent.deny_multicast_↔ interfaces</code>	See <code>NDDS_Transport_Property_t::deny_multicast_↔ _interfaces_list</code> (p. 1782) and <code>NDDS_Transport_↔ Property_t::deny_multicast_interfaces_list_length</code> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: <code>127.0.0.1,eth0</code>
<code>dds.transport.UDPv4.builtin.parent.max_interface_count</code>	See <code>NDDS_Transport_Property_t::max_interface_↔ count</code> (p. 1783)
<code>dds.transport.UDPv4.builtin.parent.thread_name_prefix</code>	See <code>NDDS_Transport_Property_t::thread_name_↔ prefix</code> (p. 1783)
<code>dds.transport.UDPv4.builtin.send_socket_buffer_size</code>	See <code>NDDS_Transport_UDPv4_Property_t::send_↔ socket_buffer_size</code> (p. 1790)
<code>dds.transport.UDPv4.builtin.recv_socket_buffer_size</code>	See <code>NDDS_Transport_UDPv4_Property_t::recv_↔ socket_buffer_size</code> (p. 1790)

Property Name	Description
dds.transport.UDPv4.builtin.unicast_enabled	See <code>NDDS_Transport_UDPv4_Property_t::unicast_enabled</code> (p. 1790)
dds.transport.UDPv4.builtin.multicast_enabled	See <code>NDDS_Transport_UDPv4_Property_t::multicast_enabled</code> (p. 1791)
dds.transport.UDPv4.builtin.multicast_ttl	See <code>NDDS_Transport_UDPv4_Property_t::multicast_ttl</code> (p. 1791)
dds.transport.UDPv4.builtin.multicast_loopback_disabled	See <code>NDDS_Transport_UDPv4_Property_t::multicast_loopback_disabled</code> (p. 1791)
dds.transport.UDPv4.builtin.ignore_loopback_interface	See <code>NDDS_Transport_UDPv4_Property_t::ignore_loopback_interface</code> (p. 1791)
dds.transport.UDPv4.builtin.ignore_nonrunning_interfaces	See <code>NDDS_Transport_UDPv4_Property_t::ignore_nonrunning_interfaces</code> (p. 1792)
dds.transport.UDPv4.builtin.ignore_nonup_interfaces	<b>[DEPRECATED]</b> See <code>NDDS_Transport_UDPv4_Property_t::ignore_nonup_interfaces</code> (p. 1792)
dds.transport.UDPv4.builtin.no_zero_copy	<b>[DEPRECATED]</b> See <code>NDDS_Transport_UDPv4_Property_t::no_zero_copy</code> (p. 1793)
dds.transport.UDPv4.builtin.send_blocking	See <code>NDDS_Transport_UDPv4_Property_t::send_blocking</code> (p. 1793)
dds.transport.UDPv4.builtin.transport_priority_mask	See <code>NDDS_Transport_UDPv4_Property_t::transport_priority_mask</code> (p. 1794)
dds.transport.UDPv4.builtin.transport_priority_mapping_low	See <code>NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_low</code> (p. 1794)
dds.transport.UDPv4.builtin.transport_priority_mapping_high	See <code>NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high</code> (p. 1794)
dds.transport.UDPv4.builtin.send_ping	See <code>NDDS_Transport_UDPv4_Property_t::send_ping</code> (p. 1795)
dds.transport.UDPv4.builtin.force_interface_poll_detection	See <code>NDDS_Transport_UDPv4_Property_t::force_interface_poll_detection</code> (p. 1795)
dds.transport.UDPv4.builtin.interface_poll_period	See <code>NDDS_Transport_UDPv4_Property_t::interface_poll_period</code> (p. 1795)
dds.transport.UDPv4.builtin.reuse_multicast_receive_resource	See <code>NDDS_Transport_UDPv4_Property_t::reuse_multicast_receive_resource</code> (p. 1795)
dds.transport.UDPv4.builtin.protocol_overhead_max	See <code>NDDS_Transport_UDPv4_Property_t::protocol_overhead_max</code> (p. 1796)
dds.transport.UDPv4.builtin.disable_interface_tracking	See <code>NDDS_Transport_UDPv4_Property_t::disable_interface_tracking</code> (p. 1796)
dds.transport.UDPv4.builtin.public_address	See <code>NDDS_Transport_UDPv4_Property_t::public_address</code> (p. 1797)
dds.transport.UDPv4.builtin.join_multicast_group_timeout	See <code>NDDS_Transport_UDPv4_Property_t::join_multicast_group_timeout</code> (p. 1796)
dds.transport.UDPv4.builtin.port_offset	See <code>NDDS_Transport_UDPv4_Property_t::port_offset</code> (p. 1797)

### 7.76.3 Macro Definition Documentation

#### 7.76.3.1 NDDS\_TRANSPORT\_UDPV4\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPV4_ADDRESS_BIT_COUNT (32)
```

Default value of **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778).

#### 7.76.3.2 NDDS\_TRANSPORT\_UDPV4\_WAN\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPV4_WAN_ADDRESS_BIT_COUNT (128)
```

Default value of **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778) for UDPv4 asymmetric transport.

#### 7.76.3.3 NDDS\_TRANSPORT\_UDPV4\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_↔  
DEFAULT
```

Default value of **NDDS\_Transport\_Property\_t::properties\_bitmap** (p. 1778).

#### 7.76.3.4 NDDS\_TRANSPORT\_UDPV4\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_↔  
SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1779).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for RTI Connex, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

### 7.76.3.5 NDDS\_TRANSPORT\_UDPV4\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_DEFAULT NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT
```

Used to specify that os default be used to specify socket buffer size.

### 7.76.3.6 NDDS\_TRANSPORT\_UDPV4\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_SEND_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size` (p. 1790) and `NDDS_Transport_UDPv4_WAN_Property_t::send_socket_buffer_size` (p. 1799).

### 7.76.3.7 NDDS\_TRANSPORT\_UDPV4\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_RECV_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size` (p. 1790) and `NDDS_Transport_UDPv4_WAN_Property_t::recv_socket_buffer_size` (p. 1800).

### 7.76.3.8 NDDS\_TRANSPORT\_UDPV4\_PAYLOAD\_SIZE\_MAX

```
#define NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX (65507)
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).

### 7.76.3.9 NDDS\_TRANSPORT\_UDPV4\_MESSAGE\_SIZE\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_MESSAGE_SIZE_MAX_DEFAULT NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).

### 7.76.3.10 NDDS\_TRANSPORT\_UDPv4\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_MULTICAST_TTL_DEFAULT NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of **NDDS\_Transport\_UDPv4\_Property\_t::multicast\_ttl** (p. 1791).

### 7.76.3.11 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_NEVER

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_NEVER
```

Value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1793) to specify non-blocking sockets.

### 7.76.3.12 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_ALWAYS
```

**[default]** Value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1793) to specify blocking sockets.

### 7.76.3.13 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_DEFAULT NDDS_TRANSPORT_UDP_BLOCKING_DEFAULT
```

Default value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1793) to specify blocking sockets.

### 7.76.3.14 NDDS\_TRANSPORT\_UDPv4\_PROPERTY\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT
```

Use this to initialize a **NDDS\_Transport\_UDPv4\_Property\_t** (p. 1788) structure.

### 7.76.3.15 NDDS\_Transport\_UDPv4\_string\_to\_address\_cEA

```
#define NDDS_Transport_UDPv4_string_to_address_cEA NDDS_Transport_UDP_string_to_address_cEA
```

Realization of **NDDS\_Transport\_String\_To\_Address\_Fcn\_cEA** for IP transports.

Converts a host name string to a IPv4 address.

## Parameters

<i>self</i>	NOT USED. May be NULL.
<i>address_out</i>	<< <i>out</i> >> (p. 238) The corresponding numerical value in IPv4 format.
<i>address_in</i>	<< <i>in</i> >> (p. 238) The name of the IPv4 address. It can be a dot notation name or a host name. If NULL, then the IP address of the localhost will be returned.

## See also

NDDS\_Transport\_String\_To\_Address\_Fcn\_cEA for complete documentation.

## 7.76.4 Function Documentation

### 7.76.4.1 NDDS\_Transport\_UDPv4\_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_new (
    const struct NDDS_Transport_UDPv4_Property_t * property_in )
```

Create an instance of a UDPv4 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the NDDS\_Transport\_UDP\_↔ Property\_t::parent:

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1781),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1782)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>property_in</i>	<< <i>in</i> >> (p. 238) Desired behavior of this transport. May be NULL for default property.
--------------------	--

## Returns

A UDPv4 Transport Plugin instance on success; or NULL on failure.

## 7.76.4.2 NDDS\_Transport\_UDPv4\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS\_Transport\_UDPv4\_Property\_t::parent** (p. 1790):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1781),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1782)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>default_network_address_out</i>	<< <i>out</i> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <i>in</i> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745).

**Returns**

A UDPv4 Transport Plugin instance on success; or NULL on failure.

**7.76.4.3 NDDS\_Transport\_UDPv4\_create\_from\_properties\_with\_prefix()**

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv4\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

**Parameters**

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745).
<i>propertyPrefix</i>	a prefix for the properties. Expected UDP properties have the form prefix.property_name

**7.77 Real-Time WAN Transport**

Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN** (p. 251))

**Classes**

- struct **NDDS\_Transport\_UDPv4\_WAN\_Property\_t**  
*Configurable IPv4/UDP WAN Transport-Plugin properties.*

**Macros**

- #define **NDDS\_TRANSPORT\_UDPv4\_WAN\_PROPERTY\_DEFAULT**  
*Use this to initialize a **NDDS\_Transport\_UDPv4\_WAN\_Property\_t** (p. 1798) structure.*

## Functions

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_new` (const struct `NDDS_Transport_UDPv4_WAN_Property_t *property_in`)  
*Create an instance of a UDPv4\_WAN Transport Plugin.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`)  
*Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`, const char `*propertyPrefix`)  
*Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy. Same as `NDDS_Transport_UDPv4_WAN_create` but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 7.77.1 Detailed Description

Transport plug-in using UDP/IPv4 for WAN communications. (`NDDS_TRANSPORT_CLASSID_UDPv4_WAN` (p. 251))

RTI Real-Time WAN Transport (RWT) is a transport that enables secure, scalable, and high-performance communication over wide area networks (WANs), including public networks.

It extends RTI Connex capabilities to WAN environments. Real-Time WAN Transport uses UDPv4 as the underlying IP transport-layer protocol to better anticipate and adapt to the challenges of diverse network conditions, device mobility, and the dynamic nature of WAN system architectures.

Real-Time WAN Transport, in combination with RTI Cloud Discovery Service (CDS), provides a complete, seamless solution out of the box for WAN connectivity.

**This transport is not installed as part of an RTI Connex package; it must be downloaded and installed separately.**

Real-Time WAN Transport replaces the transport capabilities of the Secure WAN Transport optionally available with previous RTI Connex releases (prior to 7.0.0), and provides the following capabilities:

- NAT (Network Address Translator) traversal: Ability to communicate between DomainParticipants running in a Local Area Network (LAN) that is behind a NAT-enabled router, and DomainParticipants on the outside of the NAT across a WAN. This functionality is provided in combination with Cloud Discovery Service.
- IP mobility: Support for network transitions and changes in IP addresses in any of the DomainParticipants participating in the communication.
- Security: Secure communications between DomainParticipants using Security Plugins.

Real-Time WAN Transport does not require third-party components, such as STUN servers, or protocols like SIP to handle session establishment. Using a single API and security model, you can leverage the extensive capabilities of the RTI Connex framework and ecosystem, including tools and infrastructure services, even for real-time connectivity from edge to cloud and back in highly distributed systems that communicate across wide area networks.

This transport plugin uses UDPv4 sockets to send and receive messages. It supports unicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN\_ALIAS** (p. 446).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node by specifying the **NDDS\_Transport\_Property\_t::max\_interface\_count** (p. 1783) and the "white" and "black" lists in the base property's fields (**NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779), **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780)).

RTI Connex can implicitly create this plugin and register with the **DDSDomainParticipant** (p. 1351) if this transport is specified in **DDS\_TransportBuiltinQosPolicy** (p. 1144).

To specify the properties of the Real-Time WAN Transport that is implicitly registered, you can either:

- call **NDDSTransportSupport::set\_builtin\_transport\_property** (p. 1838) or
- specify the predefined property names in **DDS\_PropertyQosPolicy** (p. 1007) associated with the **DDSDomainParticipant** (p. 1351). (see **Real-Time WAN Transport Property** (p. 278)). Builtin transport plugin properties specified in **DDS\_PropertyQosPolicy** (p. 1007) always overwrite the ones specified through **NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connex. Any properties set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, **NDDS\_Transport\_UDPv4\_WAN\_new()** (p. 280) should be called. The instance should be registered with RTI Connex, see **NDDSTransportSupport::register\_transport** (p. 1834). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (**DDS\_TransportBuiltinQosPolicy** (p. 1144), **DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN** (p. 446)), to avoid port conflicts with the newly created plugin instance.

**For additional details on how to configure and use the Real-Time WAN Transport, see the Core Libraries User's Manual.**

## 7.77.2 Real-Time WAN Transport Property

Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS\_DomainParticipantQos::property** (p. 745) to configure the Real-Time WAN Transport plugin.

Table 7.98 Property Names for Real-Time WAN Transport Plugin

Property Name	Description
dds.transport.UDPv4_WAN.builtin.parent.classid	See <b>NDDS_Transport_Property_t::classid</b> (p. 1777) Should be set to "NDDS_TRANSPORT_CLASSID_↔ UDPv4_WAN (p. 251)"
dds.transport.UDPv4_WAN.builtin.parent.address_bit↔ _count	See <b>NDDS_Transport_Property_t::address_bit_↔ count</b> (p. 1778)
dds.transport.UDPv4_WAN.builtin.parent.properties_↔ bitmap	See <b>NDDS_Transport_Property_t::properties_↔ bitmap</b> (p. 1778)
dds.transport.UDPv4_WAN.builtin.parent.gather_↔ send_buffer_count_max	See <b>NDDS_Transport_Property_t::gather_send_↔ buffer_count_max</b> (p. 1779)
dds.transport.UDPv4_WAN.builtin.parent.message_↔ size_max	See <b>NDDS_Transport_Property_t::message_size_↔ max</b> (p. 1779)
dds.transport.UDPv4_WAN.builtin.parent.allow_↔ interfaces	See <b>NDDS_Transport_Property_t::allow_↔ interfaces_list</b> (p. 1779) and <b>NDDS_Transport_↔ Property_t::allow_interfaces_list_length</b> (p. 1780). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, 127.0.0.1,eth0
dds.transport.UDPv4_WAN.builtin.parent.deny_↔ interfaces	See <b>NDDS_Transport_Property_t::deny_interfaces_↔ _list</b> (p. 1780) and <b>NDDS_Transport_Property_t_↔ ::deny_interfaces_list_length</b> (p. 1781). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4_WAN.builtin.parent.max_↔ interface_count	See <b>NDDS_Transport_Property_t::max_interface_↔ count</b> (p. 1783)
dds.transport.UDPv4_WAN.builtin.parent.thread_↔ name_prefix	See <b>NDDS_Transport_Property_t::thread_name_↔ prefix</b> (p. 1783)
dds.transport.UDPv4_WAN.builtin.send_socket_↔ buffer_size	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::send_socket_buffer_size</b> (p. 1799)
dds.transport.UDPv4_WAN.builtin.recv_socket_buffer↔ _size	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::recv_socket_buffer_size</b> (p. 1800)
dds.transport.UDPv4_WAN.builtin.ignore_loopback_↔ interface	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::ignore_loopback_interface</b> (p. 1800)
dds.transport.UDPv4_WAN.builtin.ignore_nonrunning↔ _interfaces	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::ignore_nonrunning_interfaces</b> (p. 1801)
dds.transport.UDPv4_WAN.builtin.ignore_nonup_↔ interfaces	<b>[DEPRECATED]</b> See <b>NDDS_Transport_UDPv4_↔ WAN_Property_t::ignore_nonup_interfaces</b> (p. 1800)
dds.transport.UDPv4_WAN.builtin.no_zero_copy	<b>[DEPRECATED]</b> See <b>NDDS_Transport_UDPv4_↔ WAN_Property_t::no_zero_copy</b> (p. 1801)
dds.transport.UDPv4_WAN.builtin.send_blocking	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::send_blocking</b> (p. 1802)
dds.transport.UDPv4_WAN.builtin.transport_priority_↔ mask	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::transport_priority_mask</b> (p. 1802)
dds.transport.UDPv4_WAN.builtin.transport_priority_↔ mapping_low	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::transport_priority_mapping_low</b> (p. 1803)
dds.transport.UDPv4_WAN.builtin.transport_priority_↔ mapping_high	See <b>NDDS_Transport_UDPv4_WAN_Property_t_↔ ::transport_priority_mapping_high</b> (p. 1803)

Property Name	Description
dds.transport.UDPv4_WAN.builtin.send_ping	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::send_ping</a> (p. 1803)
dds.transport.UDPv4_WAN.builtin.force_interface_poll_detection	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::force_interface_poll_detection</a> (p. 1804)
dds.transport.UDPv4_WAN.builtin.interface_poll_period	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::interface_poll_period</a> (p. 1804)
dds.transport.UDPv4_WAN.builtin.protocol_overhead_max	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::protocol_overhead_max</a> (p. 1804)
dds.transport.UDPv4_WAN.builtin.disable_interface_tracking	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::disable_interface_tracking</a> (p. 1804)
dds.transport.UDPv4_WAN.builtin.public_address	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::public_address</a> (p. 1805)
dds.transport.UDPv4_WAN.builtin.comm_ports	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::comm_ports_list</a> (p. 1805)
dds.transport.UDPv4_WAN.builtin.port_offset	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::port_offset</a> (p. 1807)
dds.transport.UDPv4_WAN.builtin.binding_ping_period	See <a href="#">NDDS_Transport_UDPv4_WAN_Property_t::binding_ping_period</a> (p. 1807)

### 7.77.3 Macro Definition Documentation

#### 7.77.3.1 NDDS\_TRANSPORT\_UDPv4\_WAN\_PROPERTY\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_WAN_PROPERTY_DEFAULT
```

Use this to initialize a [NDDS\\_Transport\\_UDPv4\\_WAN\\_Property\\_t](#) (p. 1798) structure.

### 7.77.4 Function Documentation

### 7.77.4.1 NDDS\_Transport\_UDPv4\_WAN\_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_new (
    const struct NDDS_Transport_UDPv4_WAN_Property_t * property_in )
```

Create an instance of a UDPv4\_WAN Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the NDDS\_Transport\_UDP\_Property\_t↔::parent:

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

#### Parameters

<i>property↔_in</i>	<< <i>in</i> >> (p. 238) Desired behavior of this transport. May be NULL for default property.
---------------------	--

#### Returns

A UDPv4\_WAN Transport Plugin instance on success; or NULL on failure.

### 7.77.4.2 NDDS\_Transport\_UDPv4\_WAN\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the **NDDS\_Transport\_UDPv4\_WAN\_↔Property\_t::parent** (p. 1799):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745).

#### Returns

A UDPv4\_WAN Transport Plugin instance on success; or NULL on failure.

#### 7.77.4.3 NDDS\_Transport\_UDPv4\_WAN\_create\_from\_properties\_with\_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_↔UDPv4\_WAN\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745). <span style="float: right;">Generated by Doxygen</span>
<i>propertyPrefix</i>	Prefix for the properties. Expected UDP properties have the form prefix.property_name

## 7.78 UDPv6 Transport

Transport plug-in using UDP/IPv6 (`NDDS_TRANSPORT_CLASSID_UDPv6` (p. 250)) .

### Classes

- struct `NDDS_Transport_UDPv6_Property_t`  
*Configurable IPv6/UDP Transport-Plugin properties.*

### Macros

- `#define NDDS_TRANSPORT_UDPv6_ADDRESS_BIT_COUNT` (128)  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778).*
- `#define NDDS_TRANSPORT_UDPv6_PROPERTIES_BITMAP_DEFAULT` `NDDS_TRANSPORT_UDP_↔`  
`PROPERTIES_BITMAP_DEFAULT`  
*Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1778).*
- `#define NDDS_TRANSPORT_UDPv6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT` `NDDS_↔`  
`TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT`  
*Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).*
- `#define NDDS_TRANSPORT_UDPv6_SOCKET_BUFFER_SIZE_OS_DEFAULT` `NDDS_TRANSPORT_↔`  
`UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT`  
*Used to specify that os default be used to specify socket buffer size.*
- `#define NDDS_TRANSPORT_UDPv6_SEND_SOCKET_BUFFER_SIZE_DEFAULT` `NDDS_TRANSPORT_↔`  
`UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT`  
*Default value for `NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size` (p. 1809).*
- `#define NDDS_TRANSPORT_UDPv6_RECV_SOCKET_BUFFER_SIZE_DEFAULT` `NDDS_TRANSPORT_↔`  
`UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT`  
*Default value for `NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size` (p. 1809).*
- `#define NDDS_TRANSPORT_UDPv6_PAYLOAD_SIZE_MAX` (65487)  
*Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).*
- `#define NDDS_TRANSPORT_UDPv6_MESSAGE_SIZE_MAX_DEFAULT` `NDDS_TRANSPORT_UDPv6_↔`  
`PAYLOAD_SIZE_MAX`  
*Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).*
- `#define NDDS_TRANSPORT_UDPv6_MULTICAST_TTL_DEFAULT` `NDDS_TRANSPORT_UDP_↔`  
`MULTICAST_TTL_DEFAULT`  
*Default value of `NDDS_Transport_UDPv6_Property_t::multicast_ttl` (p. 1810).*
- `#define NDDS_TRANSPORT_UDPv6_BLOCKING_NEVER`  
*Value for `NDDS_Transport_UDPv6_Property_t::send_blocking` (p. 1812) to specify non-blocking sockets.*
- `#define NDDS_TRANSPORT_UDPv6_BLOCKING_ALWAYS`  
*[default] Value for `NDDS_Transport_UDPv6_Property_t::send_blocking` (p. 1812) to specify blocking sockets.*
- `#define NDDS_TRANSPORT_UDPv6_PROPERTY_DEFAULT`  
*Use this to initialize a `NDDS_Transport_UDPv6_Property_t` (p. 1808) structure.*
- `#define NDDS_Transport_UDPv6_string_to_address_cEA` `NDDS_Transport_UDP_string_to_address_cEA`  
*Realization of `NDDS_Transport_String_To_Address_Fcn_cEA` for IP transports.*

## Functions

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv6_new` (const struct `NDDS_Transport_UDPv6_Property_t *property_in`)  
*Create an instance of a UDPv6 Transport Plugin.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`)  
*Create an instance of a UDPv6 Transport Plugin, using the PropertyQoSPolicy.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create_from_properties_with_prefix` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`, const char `*propertyPrefix`)  
*Create an instance of a UDPv6 Transport Plugin, using the PropertyQoSPolicy. Same as `NDDS_Transport_UDPv6_create` but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 7.78.1 Detailed Description

Transport plug-in using UDP/IPv6 (`NDDS_TRANSPORT_CLASSID_UDPv6` (p. 250)) .

This transport plugin uses UDPv6 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias `DDS_TRANSPORTBUILTIN_UDPv6_ALIAS` (p. 446).

You can configure an instance of this plugin to only use unicast or only use multicast, see `NDDS_Transport_UDPv6_Property_t::unicast_enabled` (p. 1810) and `NDDS_Transport_UDPv6_Property_t::multicast_enabled` (p. 1810).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the `NDDS_Transport_Property_t::max_interface_count` (p. 1783) and the "white" and "black" lists in the base property's fields (`NDDS_Transport_Property_t::allow_interfaces_list` (p. 1779), `NDDS_Transport_Property_t::deny_interfaces_list` (p. 1780), `NDDS_Transport_Property_t::allow_multicast_interfaces_list` (p. 1781), `NDDS_Transport_Property_t::deny_multicast_interfaces_list` (p. 1782)).

RTI Connexant can implicitly create this plugin and register it with the `DDSDomainParticipant` (p. 1351) if this transport is specified in the `DDS_TransportBuiltinQoSPolicy` (p. 1144).

To specify the properties of the builtin UDPv6 transport that is implicitly registered, you can either:

- call `NDDSTransportSupport::set_builtin_transport_property` (p. 1838) or
- specify the predefined property names in `DDS_PropertyQoSPolicy` (p. 1007) associated with the `DDSDomainParticipant` (p. 1351). (see [UDPv6 Transport Property Names in Property QoS Policy of Domain Participant](#) (p. 285)). Builtin transport plugin properties specified in `DDS_PropertyQoSPolicy` (p. 1007) always overwrite the ones specified through `NDDSTransportSupport::set_builtin_transport_property()` (p. 1838). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connexant. Any properties that are set after the builtin transport is registered will be ignored. See [Built-in Transport Plugins](#) (p. 177) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, `NDDS_Transport_UDPv6_new()` (p. 290) should be called. The instance should be registered with RTI Connexant, see `NDDSTransportSupport::register_transport` (p. 1834). In some configurations, you may have to disable the builtin UDPv6 transport plugin instance (`DDS_TransportBuiltinQoSPolicy` (p. 1144), `DDS_TRANSPORTBUILTIN_UDPv6` (p. 446)), to avoid port conflicts with the newly created plugin instance.

## 7.78.2 UDPv6 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in **DDS\_PropertyQoSPolicy** (p. 1007) of a **DDSDomainParticipant** (p. 1351) to configure the builtin UDPv6 transport plugin.

**Table 7.102 Property Names for UDPv6 Transport Plugin**

Property Name	Description
dds.transport.UDPv6.builtin.parent.address_bit_count	See <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1778)
dds.transport.UDPv6.builtin.parent.properties_bitmap	See <b>NDDS_Transport_Property_t::properties_bitmap</b> (p. 1778)
dds.transport.UDPv6.builtin.parent.gather_send_buffer_count_max	See <b>NDDS_Transport_Property_t::gather_send_buffer_count_max</b> (p. 1779)
dds.transport.UDPv6.builtin.parent.message_size_max	See <b>NDDS_Transport_Property_t::message_size_max</b> (p. 1779)
dds.transport.UDPv6.builtin.parent.allow_interfaces	See <b>NDDS_Transport_Property_t::allow_interfaces_list</b> (p. 1779) and <b>NDDS_Transport_Property_t::allow_interfaces_list_length</b> (p. 1780). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.deny_interfaces	See <b>NDDS_Transport_Property_t::deny_interfaces_list</b> (p. 1780) and <b>NDDS_Transport_Property_t::deny_interfaces_list_length</b> (p. 1781). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.allow_multicast_interfaces	See <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list</b> (p. 1781) and <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list_length</b> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.deny_multicast_interfaces	See <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list</b> (p. 1782) and <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list_length</b> (p. 1782). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.max_interface_count	See <b>NDDS_Transport_Property_t::max_interface_count</b> (p. 1783)
dds.transport.UDPv6.builtin.parent.thread_name_prefix	See <b>NDDS_Transport_Property_t::thread_name_prefix</b> (p. 1783)
dds.transport.UDPv6.builtin.send_socket_buffer_size	See <b>NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size</b> (p. 1809)
dds.transport.UDPv6.builtin.recv_socket_buffer_size	See <b>NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size</b> (p. 1809)
dds.transport.UDPv6.builtin.unicast_enabled	See <b>NDDS_Transport_UDPv6_Property_t::unicast_enabled</b> (p. 1810)

Property Name	Description
dds.transport.UDPv6.builtin.multicast_enabled	See <code>NDDS_Transport_UDPv6_Property_t::multicast_enabled</code> (p. 1810)
dds.transport.UDPv6.builtin.multicast_ttl	See <code>NDDS_Transport_UDPv6_Property_t::multicast_ttl</code> (p. 1810)
dds.transport.UDPv6.builtin.multicast_loopback_disabled	See <code>NDDS_Transport_UDPv6_Property_t::multicast_loopback_disabled</code> (p. 1810)
dds.transport.UDPv6.builtin.ignore_loopback_interface	See <code>NDDS_Transport_UDPv6_Property_t::ignore_loopback_interface</code> (p. 1811)
dds.transport.UDPv6.builtin.ignore_nonrunning_interfaces	See <code>NDDS_Transport_UDPv6_Property_t::ignore_nonrunning_interfaces</code> (p. 1811)
dds.transport.UDPv6.builtin.no_zero_copy	[DEPRECATED] See <code>NDDS_Transport_UDPv6_Property_t::no_zero_copy</code> (p. 1812)
dds.transport.UDPv6.builtin.send_blocking	See <code>NDDS_Transport_UDPv6_Property_t::send_blocking</code> (p. 1812)
dds.transport.UDPv6.builtin.enable_v4mapped	See <code>NDDS_Transport_UDPv6_Property_t::enable_v4mapped</code> (p. 1812)
dds.transport.UDPv6.builtin.transport_priority_mask	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mask</code> (p. 1813)
dds.transport.UDPv6.builtin.transport_priority_mapping_low	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mapping_low</code> (p. 1813)
dds.transport.UDPv6.builtin.transport_priority_mapping_high	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mapping_high</code> (p. 1813)
dds.transport.UDPv6.builtin.send_ping	See <code>NDDS_Transport_UDPv6_Property_t::send_ping</code> (p. 1814) <code>interface_poll_detection_kind</code>
dds.transport.UDPv6.builtin.force_interface_poll_detection	See <code>NDDS_Transport_UDPv6_Property_t::force_interface_poll_detection</code> (p. 1814)
dds.transport.UDPv6.builtin.interface_poll_period	See <code>NDDS_Transport_UDPv6_Property_t::interface_poll_period</code> (p. 1814)
dds.transport.UDPv6.builtin.reuse_multicast_receive_resource	See <code>NDDS_Transport_UDPv6_Property_t::reuse_multicast_receive_resource</code> (p. 1814)
dds.transport.UDPv6.builtin.protocol_overhead_max	See <code>NDDS_Transport_UDPv6_Property_t::protocol_overhead_max</code> (p. 1815)
dds.transport.UDPv6.builtin.disable_interface_tracking	See <code>NDDS_Transport_UDPv6_Property_t::disable_interface_tracking</code> (p. 1815)
dds.transport.UDPv6.builtin.public_address	See <code>NDDS_Transport_UDPv6_Property_t::public_address</code> (p. 1816)
dds.transport.UDPv6.builtin.join_multicast_group_timeout	See <code>NDDS_Transport_UDPv6_Property_t::join_multicast_group_timeout</code> (p. 1815)
dds.transport.UDPv6.builtin.port_offset	See <code>NDDS_Transport_UDPv6_Property_t::port_offset</code> (p. 1816)

### 7.78.3 Macro Definition Documentation

#### 7.78.3.1 NDDS\_TRANSPORT\_UDPV6\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPV6_ADDRESS_BIT_COUNT (128)
```

Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1778).

#### 7.78.3.2 NDDS\_TRANSPORT\_UDPV6\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_↔  
DEFAULT
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1778).

#### 7.78.3.3 NDDS\_TRANSPORT\_UDPV6\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_↔  
SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1779).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for NDDS, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

#### 7.78.3.4 NDDS\_TRANSPORT\_UDPV6\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_DEFAULT NDDS_TRANSPORT_UDP_SOCKET_BUFFER_↔  
SIZE_OS_DEFAULT
```

Used to specify that os default be used to specify socket buffer size.

### 7.78.3.5 NDDS\_TRANSPORT\_UDPv6\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_SEND_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_SEND_SOCKET_↵  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size` (p. 1809).

### 7.78.3.6 NDDS\_TRANSPORT\_UDPv6\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_RECV_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_RECV_SOCKET_↵  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size` (p. 1809).

### 7.78.3.7 NDDS\_TRANSPORT\_UDPv6\_PAYLOAD\_SIZE\_MAX

```
#define NDDS_TRANSPORT_UDPv6_PAYLOAD_SIZE_MAX (65487)
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).

### 7.78.3.8 NDDS\_TRANSPORT\_UDPv6\_MESSAGE\_SIZE\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_MESSAGE_SIZE_MAX_DEFAULT NDDS_TRANSPORT_UDPv6_PAYLOAD_SIZE_MAX
```

Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1779).

### 7.78.3.9 NDDS\_TRANSPORT\_UDPv6\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_MULTICAST_TTL_DEFAULT NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of `NDDS_Transport_UDPv6_Property_t::multicast_ttl` (p. 1810).

**7.78.3.10 NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_NEVER**

```
#define NDDS_TRANSPORT_UDPv6_BLOCKING_NEVER
```

Value for **NDDS\_Transport\_UDPv6\_Property\_t::send\_blocking** (p. 1812) to specify non-blocking sockets.

**7.78.3.11 NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_ALWAYS**

```
#define NDDS_TRANSPORT_UDPv6_BLOCKING_ALWAYS
```

**[default]** Value for **NDDS\_Transport\_UDPv6\_Property\_t::send\_blocking** (p. 1812) to specify blocking sockets.

**7.78.3.12 NDDS\_TRANSPORT\_UDPv6\_PROPERTY\_DEFAULT**

```
#define NDDS_TRANSPORT_UDPv6_PROPERTY_DEFAULT
```

Use this to initialize a **NDDS\_Transport\_UDPv6\_Property\_t** (p. 1808) structure.

**7.78.3.13 NDDS\_Transport\_UDPv6\_string\_to\_address\_cEA**

```
#define NDDS_Transport_UDPv6_string_to_address_cEA NDDS_Transport_UDP_string_to_address_cEA
```

Realization of **NDDS\_Transport\_String\_To\_Address\_Fcn\_cEA** for IP transports.

Converts a host name string to a IPv6 address.

**Parameters**

<i>self</i>	NOT USED. May be NULL.
<i>address_out</i>	<< <b>out</b> >> (p. 238) The corresponding numerical value in IPv6 format.
<i>address_in</i>	<< <b>in</b> >> (p. 238) The name of the IPv6 address. It can be a dot notation name or a host name. If NULL, then the IP address of the localhost will be returned.

See also

`NDDS_Transport_String_To_Address_Fcn_cEA` for complete documentation.

## 7.78.4 Function Documentation

### 7.78.4.1 `NDDS_Transport_UDPv6_new()`

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_new (
    const struct NDDS_Transport_UDPv6_Property_t * property_in )
```

Create an instance of a UDPv6 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the `NDDS_Transport_UDPv6_Property_t::parent` (p. 1809):

- `NDDS_Transport_Property_t::allow_interfaces_list` (p. 1779),
- `NDDS_Transport_Property_t::deny_interfaces_list` (p. 1780),
- `NDDS_Transport_Property_t::allow_multicast_interfaces_list` (p. 1781),
- `NDDS_Transport_Property_t::deny_multicast_interfaces_list` (p. 1782)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

#### Parameters

<code><i>property_in</i></code>	<< <i>in</i> >> (p. 238) Desired behavior of this transport. May be NULL for default property.
---------------------------------	--

## Returns

A UDPv6 Transport Plugin instance on success; or NULL on failure.

## 7.78.4.2 NDDS\_Transport\_UDPv6\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS\_Transport\_UDPv6\_Property\_t::parent** (p. 1809):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1780),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1781),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1782)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- `*:*:*:*:*:*`
- `FE80:aBc::202:*`
- `*:aBC::2::2*`
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745).

## Returns

A UDPv6 Transport Plugin instance on success; or NULL on failure.

### 7.78.4.3 NDDS\_Transport\_UDPv6\_create\_from\_properties\_with\_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv6\_↔ create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 238) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 238) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 745).
<i>propertyPrefix</i>	a prefix for the properties. Expected UDP properties have the form prefix.property_name

## 7.79 AsyncWaitSet

<<**extension**>> (p. 237) A specialization of **DDSWaitSet** (p. 1629) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1276).

### Classes

- struct **DDS\_AsyncWaitSetProperty\_t**  
Specifies the **DDSAsyncWaitSet** (p. 1259) behavior.
- class **DDSAsyncWaitSetListener**  
<<**interface**>> (p. 237) Listener for receiving event notifications related to the thread pool of the **DDSAsyncWaitSet** (p. 1259).
- class **DDSAsyncWaitSetCompletionToken**  
<<**interface**>> (p. 237) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDSAsyncWaitSet** (p. 1259) behavior.
- class **DDSAsyncWaitSet**  
A class for dispatching **DDSCondition** (p. 1276) objects using separate threads of execution. You can see this class as an extension of a **DDSWaitSet** (p. 1629) that allows asynchronously waiting for the attached **DDSCondition** (p. 1276) objects to trigger and provide a notification by calling **DDSCondition::dispatch** (p. 1278).
- class **DDSDataReaderStatusConditionHandler**  
<<**interface**>> (p. 237) Realization of a **DDSConditionHandler** (p. 1278) that handles the status of a **DDSDataReader** (p. 1288).

## Variables

- const struct **DDS\_AsyncWaitSetProperty\_t** **DDS\_ASYNC\_WAITSET\_PROPERTY\_DEFAULT**  
Constant that defines the default property for a **DDSAsyncWaitSet** (p. 1259).
- static **DDSAsyncWaitSetCompletionToken** \*const **DDSAsyncWaitSet::COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT**  
For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to use the implicit completion token and wait on it for request completion.
- static **DDSAsyncWaitSetCompletionToken** \*const **DDSAsyncWaitSet::COMPLETION\_TOKEN\_IGNORE**  
For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to perform the action associating a 'null' completion token.

### 7.79.1 Detailed Description

<<**extension**>> (p. 237) A specialization of **DDSWaitSet** (p. 1629) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1276).

This class is a realization of the **Proactor** pattern applied to WaitSets and Conditions that provide a powerful component for your application process events leveraging concurrency.

### 7.79.2 Variable Documentation

#### 7.79.2.1 DDS\_ASYNC\_WAITSET\_PROPERTY\_DEFAULT

```
const struct DDS_AsyncWaitSetProperty_t DDS_ASYNC_WAITSET_PROPERTY_DEFAULT
```

Constant that defines the default property for a **DDSAsyncWaitSet** (p. 1259).

Value: `wait_set_property = DDS_WaitSetProperty_t_INITIALIZER (p.472), thread_pool_size = 1, thread_settings DDS_THREAD_SETTINGS_DEFAULT, thread_base_name = NULL wait_timeout = DDS_DURATION_INFINITE (p.326) level = 1`

#### 7.79.2.2 COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT

```
DDSAsyncWaitSetCompletionToken* const DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT  
[static]
```

For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to use the implicit completion token and wait on it for request completion.

If this sentinel is used, the **DDSAsyncWaitSet** (p. 1259) will use the completion token associated with the calling thread and will wait with an infinite timeout until the request completes successfully.

### 7.79.2.3 COMPLETION\_TOKEN\_IGNORE

```
DDSAsyncWaitSetCompletionToken* const DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE [static]
```

For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to perform the action associating a 'null' completion token.

This sentinel is a realization of the null object pattern of an **DDSAsyncWaitSetCompletionToken** (p. 1273). If this object is provided to a **DDSAsyncWaitSet** (p. 1259) operation, the resulting operation request will be associated with a 'null' completion token that behaves as no-op.

When 'nul' completion token is provided, the **DDSAsyncWaitSet** (p. 1259) operation returns immediately after it issues the internal request, and there is no mean for your application to wait for the request to complete.

You can use this sentinel when your application can operate on an **DDSAsyncWaitSet** (p. 1259) without needing to know when operation requests complete or your application uses other strategies to synchronize resources.

This sentinel is also useful when you need to perform operations on **DDSAsyncWaitSet** (p. 1259) from within one of the threads from its thread pool, where waiting on a valid **DDSAsyncWaitSetCompletionToken** (p. 1273) is forbidden.

## 7.80 Participant Built-in Topics

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connex.

### Classes

- struct **DDS\_ParticipantBuiltinTopicData**  
*Entry created when a DomainParticipant object is discovered.*
- struct **DDS\_ParticipantBuiltinTopicDataSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_ParticipantBuiltinTopicData` (p. 979) > .*
- class **DDSParticipantBuiltinTopicDataTypeSupport**  
*Instantiates `TypeSupport` < `DDS_ParticipantBuiltinTopicData` (p. 979) > .*
- class **DDSParticipantBuiltinTopicDataDataReader**  
*Instantiates `DataReader` < `DDS_ParticipantBuiltinTopicData` (p. 979) > .*

### Typedefs

- typedef struct **DDS\_ParticipantBuiltinTopicData DDS\_ParticipantBuiltinTopicData**  
*Entry created when a DomainParticipant object is discovered.*

### Variables

- const char \* **DDS\_PARTICIPANT\_TOPIC\_NAME**  
*Participant topic name.*

### 7.80.1 Detailed Description

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connex.

### 7.80.2 Typedef Documentation

#### 7.80.2.1 DDS\_ParticipantBuiltinTopicData

```
typedef struct DDS_ParticipantBuiltinTopicData DDS_ParticipantBuiltinTopicData
```

Entry created when a DomainParticipant object is discovered.

Data associated with the built-in topic **DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295). It contains QoS policies and additional information that apply to the remote **DDSDomainParticipant** (p. 1351).

See also

**DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295)

**DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

### 7.80.3 Variable Documentation

#### 7.80.3.1 DDS\_PARTICIPANT\_TOPIC\_NAME

```
const char* DDS_PARTICIPANT_TOPIC_NAME [extern]
```

Participant topic name.

Topic name of **DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

See also

**DDS\_ParticipantBuiltinTopicData** (p. 979)

**DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

## 7.81 Topic Built-in Topics

Builtin topic for accessing information about the Topics discovered by RTI Connex.

## Classes

- struct **DDS\_TopicBuiltinTopicData**  
*Entry created when a Topic object discovered.*
- struct **DDS\_TopicBuiltinTopicDataSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_TopicBuiltinTopicData` (p. 1128) > .*
- class **DDSTopicBuiltinTopicDataTypeSupport**  
*Instantiates `TypeSupport` < `DDS_TopicBuiltinTopicData` (p. 1128) > .*
- class **DDSTopicBuiltinTopicDataDataReader**  
*Instantiates `DataReader` < `DDS_TopicBuiltinTopicData` (p. 1128) > .*

## Typedefs

- typedef struct **DDS\_TopicBuiltinTopicData DDS\_TopicBuiltinTopicData**  
*Entry created when a Topic object discovered.*

## Variables

- const char \* **DDS\_TOPIC\_TOPIC\_NAME**  
*Topic topic name.*

### 7.81.1 Detailed Description

Builtin topic for accessing information about the Topics discovered by RTI Connxt.

### 7.81.2 Typedef Documentation

#### 7.81.2.1 DDS\_TopicBuiltinTopicData

```
typedef struct DDS_TopicBuiltinTopicData DDS_TopicBuiltinTopicData
```

Entry created when a Topic object discovered.

Data associated with the built-in topic **DDS\_TOPIC\_TOPIC\_NAME** (p. 297). It contains QoS policies and additional information that apply to the remote **DDSTopic** (p. 1617).

Note: The **DDS\_TopicBuiltinTopicData** (p. 1128) built-in topic is meant to convey information about discovered Topics. This Topic's samples are not propagated in a separate packet on the wire. Instead, the data is sent as part of the information carried by other built-in topics (**DDS\_PublicationBuiltinTopicData** (p. 1010) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108)). Therefore TopicBuiltinTopicData DataReaders will not receive any data.

See also

- DDS\_TOPIC\_TOPIC\_NAME** (p. 297)
- DDSTopicBuiltinTopicDataDataReader** (p. 1622)

### 7.81.3 Variable Documentation

#### 7.81.3.1 DDS\_TOPIC\_TOPIC\_NAME

```
const char* DDS_TOPIC_TOPIC_NAME [extern]
```

Topic topic name.

Topic name of `DDSTopicBuiltinTopicDataDataReader` (p. 1622)

See also

`DDS_TopicBuiltinTopicData` (p. 1128)

`DDSTopicBuiltinTopicDataDataReader` (p. 1622)

## 7.82 Publication Built-in Topics

Builtin topic for accessing information about the Publications discovered by RTI Connext.

### Classes

- struct `DDS_PublicationBuiltinTopicData`  
*Entry created when a `DDSDataWriter` (p. 1321) is discovered in association with its Publisher.*
- struct `DDS_PublicationBuiltinTopicDataSeq`  
*Instantiates `FooSeq` (p. 1697) < `DDS_PublicationBuiltinTopicData` (p. 1010) > .*
- class `DDSPublicationBuiltinTopicDataTypeSupport`  
*Instantiates `TypeSupport` < `DDS_PublicationBuiltinTopicData` (p. 1010) > .*
- class `DDSPublicationBuiltinTopicDataDataReader`  
*Instantiates `DataReader` < `DDS_PublicationBuiltinTopicData` (p. 1010) > .*

### Typedefs

- typedef struct `DDS_PublicationBuiltinTopicData DDS_PublicationBuiltinTopicData`  
*Entry created when a `DDSDataWriter` (p. 1321) is discovered in association with its Publisher.*

### Variables

- const char \* `DDS_PUBLICATION_TOPIC_NAME`  
*Publication topic name.*

## 7.82.1 Detailed Description

Builtin topic for accessing information about the Publications discovered by RTI Connex.

## 7.82.2 Typedef Documentation

### 7.82.2.1 DDS\_PublicationBuiltinTopicData

```
typedef struct DDS_PublicationBuiltinTopicData DDS_PublicationBuiltinTopicData
```

Entry created when a **DDSDataWriter** (p. 1321) is discovered in association with its Publisher.

Data associated with the built-in topic **DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298). It contains QoS policies and additional information that apply to the remote **DDSDataWriter** (p. 1321) the related **DDSPublisher** (p. 1550).

See also

**DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298)

**DDSPublicationBuiltinTopicDataDataReader** (p. 1549)

## 7.82.3 Variable Documentation

### 7.82.3.1 DDS\_PUBLICATION\_TOPIC\_NAME

```
const char* DDS_PUBLICATION_TOPIC_NAME [extern]
```

Publication topic name.

Topic name of **DDSPublicationBuiltinTopicDataDataReader** (p. 1549)

See also

**DDS\_PublicationBuiltinTopicData** (p. 1010)

**DDSPublicationBuiltinTopicDataDataReader** (p. 1549)

## 7.83 Subscription Built-in Topics

Builtin topic for accessing information about the Subscriptions discovered by RTI Connex.

## Classes

- struct **DDS\_SubscriptionBuiltinTopicData**  
*Entry created when a **DDSDataReader** (p. 1288) is discovered in association with its Subscriber.*
- struct **DDS\_SubscriptionBuiltinTopicDataSeq**  
*Instantiates **FooSeq** (p. 1697) < **DDS\_SubscriptionBuiltinTopicData** (p. 1108) > .*
- class **DDSSubscriptionBuiltinTopicDataTypeSupport**  
*Instantiates **TypeSupport** < **DDS\_SubscriptionBuiltinTopicData** (p. 1108) > .*
- class **DDSSubscriptionBuiltinTopicDataDataReader**  
*Instantiates **DataReader** < **DDS\_SubscriptionBuiltinTopicData** (p. 1108) > .*

## Typedefs

- typedef struct **DDS\_SubscriptionBuiltinTopicData** **DDS\_SubscriptionBuiltinTopicData**  
*Entry created when a **DDSDataReader** (p. 1288) is discovered in association with its Subscriber.*

## Variables

- const char \* **DDS\_SUBSCRIPTION\_TOPIC\_NAME**  
*Subscription topic name.*

### 7.83.1 Detailed Description

Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.

### 7.83.2 Typedef Documentation

#### 7.83.2.1 DDS\_SubscriptionBuiltinTopicData

```
typedef struct DDS_SubscriptionBuiltinTopicData DDS_SubscriptionBuiltinTopicData
```

Entry created when a **DDSDataReader** (p. 1288) is discovered in association with its Subscriber.

Data associated with the built-in topic **DDS\_SUBSCRIPTION\_TOPIC\_NAME** (p. 300). It contains QoS policies and additional information that apply to the remote **DDSDataReader** (p. 1288) the related **DDSSubscriber** (p. 1592).

See also

- DDS\_SUBSCRIPTION\_TOPIC\_NAME** (p. 300)
- DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)

### 7.83.3 Variable Documentation

#### 7.83.3.1 DDS\_SUBSCRIPTION\_TOPIC\_NAME

```
const char* DDS_SUBSCRIPTION_TOPIC_NAME [extern]
```

Subscription topic name.

Topic name of **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)

See also

**DDS\_SubscriptionBuiltinTopicData** (p. 1108)

**DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)

## 7.84 ServiceRequest Built-in Topic

Builtin topic for accessing requests from different services within RTI Connex.

### Classes

- struct **DDS\_ServiceRequest**  
*A request coming from one of the built-in services.*
- struct **DDS\_ServiceRequestSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_ServiceRequest` (p. 1097) > .*
- class **DDSServiceRequestTypeSupport**  
*Instantiates `TypeSupport` < `DDS_ServiceRequest` (p. 1097) > .*
- class **DDSServiceRequestDataReader**  
*Instantiates `DataReader` < `DDS_ServiceRequest` (p. 1097) > .*

### Typedefs

- typedef struct **DDS\_ServiceRequest DDS\_ServiceRequest**  
*A request coming from one of the built-in services.*

## Variables

- const **DDS\_Long DDS\_UNKNOWN\_SERVICE\_REQUEST\_ID**  
*An invalid Service Id.*
- const **DDS\_Long DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID**  
*Service Id for the **DDSTopicQuery** (p. 1627) Service.*
- const **DDS\_Long DDS\_LOCATOR\_REACHABILITY\_SERVICE\_REQUEST\_ID**  
*Service Id for the Locator Reachability Service.*
- const **DDS\_Long DDS\_INSTANCE\_STATE\_SERVICE\_REQUEST\_ID**  
*Service Id for the Instance State Request service.*
- const **DDS\_Long DDS\_MONITORING\_LIBRARY\_COMMAND\_SERVICE\_REQUEST\_ID**  
*Service Id for RTI Monitoring Library 2.0 Command Service Request.*
- const **DDS\_Long DDS\_MONITORING\_LIBRARY\_REPLY\_SERVICE\_REQUEST\_ID**  
*Service Id for RTI Monitoring Library 2.0 Reply Service Requests.*
- const char \* **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME**  
*Service Request topic name.*

### 7.84.1 Detailed Description

Builtin topic for accessing requests from different services within RTI Connex.

Currently, the **DDSTopicQuery** (p. 1627), Locator Reachability Instance State Consistency and Controlability (part of Observability) all rely on this topic.

See also

**Topic Queries** (p. 151) for an explanation of how TopicQueries use ServiceRequests and how you can access the ServiceRequests for debugging purposes in the section **The Built-in ServiceRequest DataReader** (p. 153).

### 7.84.2 Typedef Documentation

#### 7.84.2.1 DDS\_ServiceRequest

```
typedef struct DDS_ServiceRequest DDS_ServiceRequest
```

A request coming from one of the built-in services.

Data associated with the built-in topic **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303). It contains service-specific information.

See also

**DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303)

**DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

### 7.84.3 Variable Documentation

#### 7.84.3.1 DDS\_UNKNOWN\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_UNKNOWN_SERVICE_REQUEST_ID [extern]
```

An invalid Service Id.

#### 7.84.3.2 DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_TOPIC_QUERY_SERVICE_REQUEST_ID [extern]
```

Service Id for the **DDSTopicQuery** (p. 1627) Service.

#### 7.84.3.3 DDS\_LOCATOR\_REACHABILITY\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_LOCATOR_REACHABILITY_SERVICE_REQUEST_ID [extern]
```

Service Id for the Locator Reachability Service.

#### 7.84.3.4 DDS\_INSTANCE\_STATE\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_INSTANCE_STATE_SERVICE_REQUEST_ID [extern]
```

Service Id for the Instance State Request service.

#### 7.84.3.5 DDS\_MONITORING\_LIBRARY\_COMMAND\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID [extern]
```

Service Id for RTI Monitoring Library 2.0 Command Service Request.

RTI Monitoring Library 2.0 remote commands are sent using this service.

### 7.84.3.6 DDS\_MONITORING\_LIBRARY\_REPLY\_SERVICE\_REQUEST\_ID

```
const DDS_Long DDS_MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID [extern]
```

Service Id for RTI Monitoring Library 2.0 Reply Service Requests.

Replies to RTI Monitoring Library 2.0 remote commands are sent using this service.

### 7.84.3.7 DDS\_SERVICE\_REQUEST\_TOPIC\_NAME

```
const char* DDS_SERVICE_REQUEST_TOPIC_NAME [extern]
```

Service Request topic name.

Topic name of the `DDSServiceRequestDataReader` (p. 1577)

See also

`DDS_ServiceRequest` (p. 1097)

`DDSServiceRequestDataReader` (p. 1577)

## 7.85 Common types and functions

Types and functions related to the built-in topics.

### Classes

- struct `DDS_Locator_t`
  - <<*extension*>> (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.
- struct `DDS_LocatorSeq`
  - Declares IDL sequence < `DDS_Locator_t` (p. 939) >
- struct `DDS_ProtocolVersion_t`
  - <<*extension*>> (p. 237) Type used to represent the version of the RTPS protocol.
- struct `DDS_VendorId_t`
  - <<*extension*>> (p. 237) Type used to represent the vendor of the service implementing the RTPS protocol.
- struct `DDS_ProductVersion_t`
  - <<*extension*>> (p. 237) Type used to represent the current version of RTI Connex.
- struct `DDS_TransportInfo_t`
  - Contains the `class_id` and `message_size_max` of an installed transport.
- struct `DDS_TransportInfoSeq`
  - Instantiates `FooSeq` (p. 1697) < `DDS_TransportInfo_t` (p. 1145) > .
- struct `DDS_BuiltinTopicKey_t`
  - The key type of the built-in topic types.
- struct `DDS_ContentFilterProperty_t`
  - <<*extension*>> (p. 237) Type used to provide all the required information to enable content filtering.

## Macros

- **#define DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX 16**  
*Declares length of address field in locator.*
- **#define DDS\_PROTOCOLVERSION\_1\_0 { 1, 0 }**  
*The protocol version 1.0.*
- **#define DDS\_PROTOCOLVERSION\_1\_1 { 1, 1 }**  
*The protocol version 1.1.*
- **#define DDS\_PROTOCOLVERSION\_1\_2 { 1, 2 }**  
*The protocol version 1.2.*
- **#define DDS\_PROTOCOLVERSION\_2\_0 { 2, 0 }**  
*The protocol version 2.0.*
- **#define DDS\_PROTOCOLVERSION\_2\_1 { 2, 1 }**  
*The protocol version 2.1.*
- **#define DDS\_PROTOCOLVERSION { 2, 1 }**  
*The most recent protocol version. Currently 2.1.*
- **#define DDS\_VENDOR\_ID\_LENGTH\_MAX 2**  
*Length of vendor id.*
- **#define DDS\_PRODUCTVERSION\_UNKNOWN**  
*The value used when the product version is unknown.*

## Typedefs

- **typedef struct DDS\_Locator\_t DDS\_Locator\_t**  
*<<extension>> (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.*
- **typedef struct DDS\_ProtocolVersion\_t DDS\_ProtocolVersion\_t**  
*<<extension>> (p. 237) Type used to represent the version of the RTPS protocol.*
- **typedef struct DDS\_BuiltinTopicKey\_t DDS\_BuiltinTopicKey\_t**  
*The key type of the built-in topic types.*

## Functions

- **DDS\_Boolean DDS\_BuiltinTopicKey\_equals** (const **DDS\_BuiltinTopicKey\_t** \*self, const **DDS\_BuiltinTopicKey\_t** \*other)  
*Compares this Key with another Key for equality.*
- **void DDS\_BuiltinTopicKey\_copy** ( **DDS\_BuiltinTopicKey\_t** \*dst, const **DDS\_BuiltinTopicKey\_t** \*src)  
*Copies another Key into this Key.*
- **void DDS\_BuiltinTopicKey\_to\_guid** (const **DDS\_BuiltinTopicKey\_t** \*self, **DDS\_GUID\_t** \*dst)  
*Converts this Key into a GUID.*
- **void DDS\_BuiltinTopicKey\_from\_guid** ( **DDS\_BuiltinTopicKey\_t** \*self, const **DDS\_GUID\_t** \*src)  
*Initializes this Key from the input GUID.*
- **DDS\_Boolean DDS\_BuiltinTopicKey\_to\_instance\_handle** (const **DDS\_BuiltinTopicKey\_t** \*self, **DDS\_InstanceHandle\_t** \*dst)  
*Converts this Key into an InstanceHandle.*
- **DDS\_Boolean DDS\_BuiltinTopicKey\_from\_instance\_handle** ( **DDS\_BuiltinTopicKey\_t** \*self, const **DDS\_InstanceHandle\_t** \*src)  
*Initializes this Key from the input InstanceHandle.*

## Variables

- const struct **DDS\_Locator\_t DDS\_LOCATOR\_INVALID**  
*An invalid locator.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_INVALID**  
*Locator of this kind is invalid.*
- const **DDS\_UnsignedLong DDS\_LOCATOR\_PORT\_INVALID**  
*An invalid port.*
- const **DDS\_Octet DDS\_LOCATOR\_ADDRESS\_INVALID [ DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX]**  
*An invalid address.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_UDPv4**  
*A locator for a UDPv4 address.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_UDPv4\_WAN**  
*A locator for a UDPv4 asymmetric transport address.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_SHMEM**  
*A locator for an address accessed via shared memory.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_SHMEM\_510**  
*A locator for an address accessed via shared memory for RTI Connex 5.1.0 and earlier.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_UDPv6**  
*A locator for a UDPv6 address.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_UDPv6\_510**  
*A locator for a UDPv6 address for RTI Connex 5.1.0 and earlier.*
- const **DDS\_Long DDS\_LOCATOR\_KIND\_RESERVED**  
*Locator of this kind is reserved.*

### 7.85.1 Detailed Description

Types and functions related to the built-in topics.

### 7.85.2 Macro Definition Documentation

#### 7.85.2.1 DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX

```
#define DDS_LOCATOR_ADDRESS_LENGTH_MAX 16
```

Declares length of address field in locator.

### 7.85.2.2 DDS\_PROTOCOLVERSION\_1\_0

```
#define DDS_PROTOCOLVERSION_1_0 { 1, 0 }
```

The protocol version 1.0.

### 7.85.2.3 DDS\_PROTOCOLVERSION\_1\_1

```
#define DDS_PROTOCOLVERSION_1_1 { 1, 1 }
```

The protocol version 1.1.

### 7.85.2.4 DDS\_PROTOCOLVERSION\_1\_2

```
#define DDS_PROTOCOLVERSION_1_2 { 1, 2 }
```

The protocol version 1.2.

### 7.85.2.5 DDS\_PROTOCOLVERSION\_2\_0

```
#define DDS_PROTOCOLVERSION_2_0 { 2, 0 }
```

The protocol version 2.0.

### 7.85.2.6 DDS\_PROTOCOLVERSION\_2\_1

```
#define DDS_PROTOCOLVERSION_2_1 { 2, 1 }
```

The protocol version 2.1.

### 7.85.2.7 DDS\_PROTOCOLVERSION

```
#define DDS_PROTOCOLVERSION { 2, 1 }
```

The most recent protocol version. Currently 2.1.

### 7.85.2.8 DDS\_VENDOR\_ID\_LENGTH\_MAX

```
#define DDS_VENDOR_ID_LENGTH_MAX 2
```

Length of vendor id.

### 7.85.2.9 DDS\_PRODUCTVERSION\_UNKNOWN

```
#define DDS_PRODUCTVERSION_UNKNOWN
```

**Value:**

```
{ \
  DDS_PRODUCTVERSION_MAJOR_UNKNOWN, \
  DDS_PRODUCTVERSION_MINOR_UNKNOWN, \
  DDS_PRODUCTVERSION_RELEASE_UNKNOWN, \
  DDS_PRODUCTVERSION_REVISION_UNKNOWN \
}
```

The value used when the product version is unknown.

## 7.85.3 Typedef Documentation

### 7.85.3.1 DDS\_Locator\_t

```
typedef struct DDS_Locator_t DDS_Locator_t
```

<<*extension*>> (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.

### 7.85.3.2 DDS\_ProtocolVersion\_t

```
typedef struct DDS_ProtocolVersion_t DDS_ProtocolVersion_t
```

<<*extension*>> (p. 237) Type used to represent the version of the RTPS protocol.

### 7.85.3.3 DDS\_BuiltinTopicKey\_t

```
typedef struct DDS_BuiltinTopicKey_t DDS_BuiltinTopicKey_t
```

The key type of the built-in topic types.

Each remote **DDSEntity** (p. 1463) to be discovered can be uniquely identified by this key. This is the key of all the built-in topic data types.

See also

**DDS\_ParticipantBuiltinTopicData** (p. 979)

**DDS\_TopicBuiltinTopicData** (p. 1128)

**DDS\_PublicationBuiltinTopicData** (p. 1010)

**DDS\_SubscriptionBuiltinTopicData** (p. 1108)

## 7.85.4 Function Documentation

### 7.85.4.1 DDS\_BuiltinTopicKey\_equals()

```
DDS_Boolean DDS_BuiltinTopicKey_equals (
    const DDS_BuiltinTopicKey_t * self,
    const DDS_BuiltinTopicKey_t * other )
```

Compares this Key with another Key for equality.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This Key. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The other Key to be compared with this Key. Cannot be NULL.

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two Keys have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

### 7.85.4.2 DDS\_BuiltinTopicKey\_copy()

```
void DDS_BuiltinTopicKey_copy (
    DDS_BuiltinTopicKey_t * dst,
    const DDS_BuiltinTopicKey_t * src )
```

Copies another Key into this Key.

## Parameters

<i>dst</i>	<< <b>out</b> >> (p. 238) This Key. Cannot be NULL.
<i>src</i>	<< <b>in</b> >> (p. 238) The other Key to be copied. Cannot be NULL.

**7.85.4.3 DDS\_BuiltinTopicKey\_to\_guid()**

```
void DDS_BuiltinTopicKey_to_guid (
    const DDS_BuiltinTopicKey_t * self,
    DDS_GUID_t * dst )
```

Converts this Key into a GUID.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 238) This Key. Cannot be NULL.
<i>dst</i>	<< <b>out</b> >> (p. 238) The destination GUID. Cannot be NULL.

**7.85.4.4 DDS\_BuiltinTopicKey\_from\_guid()**

```
void DDS_BuiltinTopicKey_from_guid (
    DDS_BuiltinTopicKey_t * self,
    const DDS_GUID_t * src )
```

Initializes this Key from the input GUID.

## Parameters

<i>self</i>	<< <b>out</b> >> (p. 238) This Key. Cannot be NULL.
<i>src</i>	<< <b>in</b> >> (p. 238) The GUID to be used to initialize this Key. Cannot be NULL.

**7.85.4.5 DDS\_BuiltinTopicKey\_to\_instance\_handle()**

```
DDS_Boolean DDS_BuiltinTopicKey_to_instance_handle (
    const DDS_BuiltinTopicKey_t * self,
    DDS_InstanceHandle_t * dst )
```

Converts this Key into an InstanceHandle.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This Key. Cannot be NULL.
<i>dst</i>	<< <i>out</i> >> (p. 238) The destination InstanceHandle. Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success or **DDS\_BOOLEAN\_FALSE** (p. 317) on failure

## 7.85.4.6 DDS\_BuiltinTopicKey\_from\_instance\_handle()

```
DDS_Boolean DDS_BuiltinTopicKey_from_instance_handle (
    DDS_BuiltinTopicKey_t * self,
    const DDS_InstanceHandle_t * src )
```

Initializes this Key from the input InstanceHandle.

## Parameters

<i>self</i>	<< <i>out</i> >> (p. 238) This Key. Cannot be NULL.
<i>src</i>	<< <i>in</i> >> (p. 238) The InstanceHandle to be used to initialize this Key. Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success or **DDS\_BOOLEAN\_FALSE** (p. 317) on failure

## 7.85.5 Variable Documentation

## 7.85.5.1 DDS\_LOCATOR\_INVALID

```
const struct DDS_Locator_t DDS_LOCATOR_INVALID [extern]
```

An invalid locator.

## 7.85.5.2 DDS\_LOCATOR\_KIND\_INVALID

```
const DDS_Long DDS_LOCATOR_KIND_INVALID [extern]
```

Locator of this kind is invalid.

### 7.85.5.3 DDS\_LOCATOR\_PORT\_INVALID

```
const DDS_UnsignedLong DDS_LOCATOR_PORT_INVALID [extern]
```

An invalid port.

### 7.85.5.4 DDS\_LOCATOR\_ADDRESS\_INVALID

```
const DDS_Octet DDS_LOCATOR_ADDRESS_INVALID[ DDS_LOCATOR_ADDRESS_LENGTH_MAX] [extern]
```

An invalid address.

### 7.85.5.5 DDS\_LOCATOR\_KIND\_UDPv4

```
const DDS_Long DDS_LOCATOR_KIND_UDPv4 [extern]
```

A locator for a UDPv4 address.

### 7.85.5.6 DDS\_LOCATOR\_KIND\_UDPv4\_WAN

```
const DDS_Long DDS_LOCATOR_KIND_UDPv4_WAN [extern]
```

A locator for a UDPv4 asymmetric transport address.

### 7.85.5.7 DDS\_LOCATOR\_KIND\_SHMEM

```
const DDS_Long DDS_LOCATOR_KIND_SHMEM [extern]
```

A locator for an address accessed via shared memory.

### 7.85.5.8 DDS\_LOCATOR\_KIND\_SHMEM\_510

```
const DDS_Long DDS_LOCATOR_KIND_SHMEM_510 [extern]
```

A locator for an address accessed via shared memory for RTI Connex 5.1.0 and earlier.

### 7.85.5.9 DDS\_LOCATOR\_KIND\_UDPv6

```
const DDS_Long DDS_LOCATOR_KIND_UDPv6 [extern]
```

A locator for a UDPv6 address.

### 7.85.5.10 DDS\_LOCATOR\_KIND\_UDPv6\_510

```
const DDS_Long DDS_LOCATOR_KIND_UDPv6_510 [extern]
```

A locator for a UDPv6 address for RTI Connex 5.1.0 and earlier.

### 7.85.5.11 DDS\_LOCATOR\_KIND\_RESERVED

```
const DDS_Long DDS_LOCATOR_KIND_RESERVED [extern]
```

Locator of this kind is reserved.

## 7.86 String Built-in Type

Built-in type consisting of a single character string.

### Classes

- class **DDSStringTypeSupport**  
<<*interface*>> (p. 237) *String type support.*
- class **DDSStringDataReader**  
<<*interface*>> (p. 237) *Instantiates DataReader < char\* >.*
- class **DDSStringDataWriter**  
<<*interface*>> (p. 237) *Instantiates DataWriter < char\* >.*

### 7.86.1 Detailed Description

Built-in type consisting of a single character string.

## 7.87 KeyedString Built-in Type

Built-in type consisting of a string payload and a second string that is the key.

## Classes

- struct **DDS\_KeyedString**  
*Keyed string built-in type.*
- struct **DDS\_KeyedStringSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_KeyedString` (p. 927) > .*
- class **DDSKeyedStringTypeSupport**  
*<<interface>> (p. 237) Keyed string type support.*
- class **DDSKeyedStringDataReader**  
*<<interface>> (p. 237) Instantiates `DataReader` < `DDS_KeyedString` (p. 927) > .*
- class **DDSKeyedStringDataWriter**  
*<<interface>> (p. 237) Instantiates `DataWriter` < `DDS_KeyedString` (p. 927) > .*

## Typedefs

- typedef struct **DDS\_KeyedString DDS\_KeyedString**  
*Keyed string built-in type.*

### 7.87.1 Detailed Description

Built-in type consisting of a string payload and a second string that is the key.

### 7.87.2 Typedef Documentation

#### 7.87.2.1 DDS\_KeyedString

```
typedef struct DDS_KeyedString DDS_KeyedString
```

Keyed string built-in type.

## 7.88 Octets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes.

## Classes

- struct **DDS\_Octets**  
*Built-in type consisting of a variable-length array of opaque bytes.*
- struct **DDS\_OctetsSeq**  
*Instantiates `FooSeq` (p. 1697) < `DDS_Octets` (p. 967) > .*
- class **DDSOctetsTypeSupport**  
*<<interface>> (p. 237) `DDS_Octets` (p. 967) type support.*
- class **DDSOctetsDataReader**  
*<<interface>> (p. 237) Instantiates `DataReader` < `DDS_Octets` (p. 967) > .*
- class **DDSOctetsDataWriter**  
*<<interface>> (p. 237) Instantiates `DataWriter` < `DDS_Octets` (p. 967) > .*

## Typedefs

- typedef struct **DDS\_Octets DDS\_Octets**  
*Built-in type consisting of a variable-length array of opaque bytes.*

### 7.88.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes.

### 7.88.2 Typedef Documentation

#### 7.88.2.1 DDS\_Octets

```
typedef struct DDS_Octets DDS_Octets
```

Built-in type consisting of a variable-length array of opaque bytes.

## 7.89 KeyedOctets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

## Classes

- struct **DDS\_KeyedOctets**  
*Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.*
- struct **DDS\_KeyedOctetsSeq**  
*Instantiates `FooSeq` (p. 1697) < **DDS\_KeyedOctets** (p. 924) >.*
- class **DDSKeyedOctetsTypeSupport**  
*<<interface>> (p. 237) **DDS\_KeyedOctets** (p. 924) type support.*
- class **DDSKeyedOctetsDataReader**  
*<<interface>> (p. 237) Instantiates `DataReader` < **DDS\_KeyedOctets** (p. 924) >.*
- class **DDSKeyedOctetsDataWriter**  
*<<interface>> (p. 237) Instantiates `DataWriter` < **DDS\_KeyedOctets** (p. 924) >.*

## Typedefs

- typedef struct **DDS\_KeyedOctets DDS\_KeyedOctets**  
*Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.*

### 7.89.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

### 7.89.2 Typedef Documentation

#### 7.89.2.1 DDS\_KeyedOctets

```
typedef struct DDS_KeyedOctets DDS_KeyedOctets
```

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

## 7.90 DDS-Specific Primitive Types

Basic DDS value types for use in user data types.

## Macros

- #define **DDS\_BOOLEAN\_TRUE**  
*Defines "true" value of **DDS\_Boolean** (p. 320) data type.*
- #define **DDS\_BOOLEAN\_FALSE**  
*Defines "false" value of **DDS\_Boolean** (p. 320) data type.*

## Typedefs

- typedef RTICdrChar **DDS\_Char**  
*Defines a character data type, equivalent to IDL/CDR char.*
- typedef RTICdrWchar **DDS\_Wchar**  
*Defines a wide character data type, equivalent to IDL/CDR wchar.*
- typedef RTICdrOctet **DDS\_Octet**  
*Defines an opaque byte data type, equivalent to IDL/CDR octet.*
- typedef RTICdrOctet **DDS\_UInt8**  
*Defines a data type, equivalent to IDL/CDR uint8.*
- typedef RTICdrInt8 **DDS\_Int8**  
*Defines a data type, equivalent to IDL/CDR int8.*
- typedef RTICdrShort **DDS\_Short**  
*Defines a short integer data type, equivalent to IDL/CDR short.*
- typedef RTICdrUnsignedShort **DDS\_UnsignedShort**  
*Defines an unsigned short integer data type, equivalent to IDL/CDR unsigned short.*
- typedef RTICdrLong **DDS\_Long**  
*Defines a long integer data type, equivalent to IDL/CDR long.*
- typedef RTICdrUnsignedLong **DDS\_UnsignedLong**  
*Defines an unsigned long integer data type, equivalent to IDL/CDR unsigned long.*
- typedef RTICdrLongLong **DDS\_LongLong**  
*Defines an extra-long integer data type, equivalent to IDL/CDR long long.*
- typedef RTICdrUnsignedLongLong **DDS\_UnsignedLongLong**  
*Defines an unsigned extra-long data type, equivalent to IDL/CDR unsigned long long.*
- typedef RTICdrFloat **DDS\_Float**  
*Defines a single-precision floating-point data type, equivalent to IDL/CDR float.*
- typedef RTICdrDouble **DDS\_Double**  
*Defines a double-precision floating-point data type, equivalent to IDL/CDR double.*
- typedef RTICdrLongDouble **DDS\_LongDouble**  
*Defines an extra-precision floating-point data type, equivalent to IDL/CDR long double.*
- typedef RTICdrBoolean **DDS\_Boolean**  
*Defines a Boolean data type, equivalent to IDL/CDR boolean.*
- typedef RTICdrEnum **DDS\_Enum**  
*Defines an enumerated data type.*

### 7.90.1 Detailed Description

Basic DDS value types for use in user data types.

As part of the finalization of the DDS standard, a number of DDS-specific primitive types will be introduced. By using these types, you will ensure that your data is serialized consistently across platforms even if the C/C++ built-in types have different sizes on those platforms.

In this version of RTI Connex, the DDS primitive types are defined using the OMG's Common Data Representation (CDR) standard. In a future version of RTI Connex, you will be given the choice of whether to use these CDR-based types or C/C++ built-in types through a flag provided to the rttiddsgen tool.

Typedef's that begin with RTICdr are defined in `<NDDSHOME>/include/ndds/cdr/cdr_type.h`, which uses types that are further defined in `<NDDSHOME>/include/ndds/osapi/osapi_type.h`.

## 7.90.2 Macro Definition Documentation

### 7.90.2.1 DDS\_BOOLEAN\_TRUE

```
#define DDS_BOOLEAN_TRUE
```

Defines "true" value of **DDS\_Boolean** (p. 320) data type.

#### Examples

**HelloWorld.cxx.**

### 7.90.2.2 DDS\_BOOLEAN\_FALSE

```
#define DDS_BOOLEAN_FALSE
```

Defines "false" value of **DDS\_Boolean** (p. 320) data type.

#### Examples

**HelloWorld.cxx.**

## 7.90.3 Typedef Documentation

### 7.90.3.1 DDS\_Char

```
typedef RTICdrChar DDS_Char
```

Defines a character data type, equivalent to IDL/CDR `char`.

An 8-bit quantity that encodes a single byte character from any byte-oriented code set.

### 7.90.3.2 DDS\_Wchar

```
typedef RTICdrWchar DDS_Wchar
```

Defines a wide character data type, equivalent to IDL/CDR `wchar`.

A 16-bit quantity that contains a wide character encoded in UTF-16.

### 7.90.3.3 DDS\_Octet

```
typedef RTICdrOctet  DDS_Octet
```

Defines an opaque byte data type, equivalent to IDL/CDR `octet`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

### 7.90.3.4 DDS\_UInt8

```
typedef RTICdrOctet  DDS_UInt8
```

Defines a data type, equivalent to IDL/CDR `uint8`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

### 7.90.3.5 DDS\_Int8

```
typedef RTICdrInt8   DDS_Int8
```

Defines a data type, equivalent to IDL/CDR `int8`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

### 7.90.3.6 DDS\_Short

```
typedef RTICdrShort  DDS_Short
```

Defines a short integer data type, equivalent to IDL/CDR `short`.

A 16-bit signed short integer value.

### 7.90.3.7 DDS\_UnsignedShort

```
typedef RTICdrUnsignedShort  DDS_UnsignedShort
```

Defines an unsigned short integer data type, equivalent to IDL/CDR `unsigned short`.

A 16-bit unsigned short integer value.

### 7.90.3.8 DDS\_Long

```
typedef RTICdrLong   DDS_Long
```

Defines a long integer data type, equivalent to IDL/CDR `long`.

A 32-bit signed long integer value.

### 7.90.3.9 DDS\_UnsignedLong

```
typedef RTICdrUnsignedLong DDS_UnsignedLong
```

Defines an unsigned long integer data type, equivalent to IDL/CDR `unsigned long`.

A 32-bit unsigned long integer value.

### 7.90.3.10 DDS\_LongLong

```
typedef RTICdrLongLong DDS_LongLong
```

Defines an extra-long integer data type, equivalent to IDL/CDR `long long`.

A 64-bit signed long long integer value.

### 7.90.3.11 DDS\_UnsignedLongLong

```
typedef RTICdrUnsignedLongLong DDS_UnsignedLongLong
```

Defines an unsigned extra-long data type, equivalent to IDL/CDR `unsigned long long`.

A 64-bit unsigned long long integer value.

### 7.90.3.12 DDS\_Float

```
typedef RTICdrFloat DDS_Float
```

Defines a single-precision floating-point data type, equivalent to IDL/CDR `float`.

A 32-bit floating-point value.

### 7.90.3.13 DDS\_Double

```
typedef RTICdrDouble DDS_Double
```

Defines a double-precision floating-point data type, equivalent to IDL/CDR `double`.

A 64-bit floating-point value.

### 7.90.3.14 DDS\_LongDouble

```
typedef RTICdrLongDouble DDS_LongDouble
```

Defines an extra-precision floating-point data type, equivalent to IDL/CDR `long double`.

A 128-bit floating-point value.

Since some architectures do not support long double, RTI has defined character arrays that match the expected size of this type. On systems that do have native long double, you have to define `RTI_CDR_SIZEOF_LONG_DOUBLE` as 16 to map them to native types.

### 7.90.3.15 DDS\_Boolean

```
typedef RTICdrBoolean DDS_Boolean
```

Defines a Boolean data type, equivalent to IDL/CDR `boolean`.

An 8-bit Boolean value that is used to denote a data item that can only take one of the values `DDS_BOOLEAN_TRUE` (p. 317) (1) or `DDS_BOOLEAN_FALSE` (p. 317) (0).

#### Examples

**HelloWorld.cxx.**

### 7.90.3.16 DDS\_Enum

```
typedef RTICdrEnum DDS_Enum
```

Defines an enumerated data type.

Encoded as a signed 32-bit integer value. By default, the first enum identifier has the numeric value zero (0) (unless the value is provided explicitly). Successive enum identifiers take ascending numeric values, in order of declaration from left to right.

## 7.91 Time Support

Time and duration types and defines.

### Classes

- struct **DDS\_Duration\_t**  
*Type for duration representation.*
- struct **DDS\_Time\_t**  
*Type for time representation.*

## Macros

- **#define DDS\_TIME\_ZERO**  
*The default instant in time: zero seconds and zero nanoseconds.*

## Functions

- static **DDS\_Duration\_t DDS\_Duration\_t::from\_micros** ( **DDS\_UnsignedLongLong** microseconds)  
*Creates a new duration object from a duration expressed in microseconds.*
- static **DDS\_Duration\_t DDS\_Duration\_t::from\_millis** ( **DDS\_UnsignedLongLong** milliseconds)  
*Creates a new duration object from a duration expressed in milliseconds.*
- static **DDS\_Duration\_t DDS\_Duration\_t::from\_nanos** ( **DDS\_UnsignedLongLong** nanoseconds)  
*Creates a new duration object from a duration expressed in nanoseconds.*
- static **DDS\_Duration\_t DDS\_Duration\_t::from\_seconds** ( **DDS\_UnsignedLong** seconds)  
*Creates a new duration object from a duration expressed in seconds.*
- static **DDS\_Time\_t DDS\_Time\_t::from\_micros** ( **DDS\_UnsignedLongLong** microseconds)  
*Creates a new time object from a time expressed in microseconds.*
- static **DDS\_Time\_t DDS\_Time\_t::from\_millis** ( **DDS\_UnsignedLongLong** milliseconds)  
*Creates a new time object from a time expressed in milliseconds.*
- static **DDS\_Time\_t DDS\_Time\_t::from\_nanos** ( **DDS\_UnsignedLongLong** nanoseconds)  
*Creates a new time object from a time expressed in nanoseconds.*
- static **DDS\_Time\_t DDS\_Time\_t::from\_seconds** ( **DDS\_UnsignedLongLong** seconds)  
*Creates a new time object from a time expressed in seconds.*
- **DDS\_Boolean DDS\_Time\_is\_zero** (const struct **DDS\_Time\_t** \*time)  
*Check if time is zero.*
- **DDS\_Boolean DDS\_Time\_is\_invalid** (const struct **DDS\_Time\_t** \*time)
- **DDS\_Boolean DDS\_Duration\_is\_infinite** (const struct **DDS\_Duration\_t** \*duration)
- **DDS\_Boolean DDS\_Duration\_is\_auto** (const struct **DDS\_Duration\_t** \*duration)
- **DDS\_Boolean DDS\_Duration\_is\_zero** (const struct **DDS\_Duration\_t** \*duration)

## Variables

- const struct **DDS\_Time\_t DDS\_TIME\_MAX**  
*The maximum value of time.*
- const **DDS\_LongLong DDS\_TIME\_INVALID\_SEC**  
*A sentinel indicating an invalid second of time.*
- const **DDS\_UnsignedLong DDS\_TIME\_INVALID\_NSEC**  
*A sentinel indicating an invalid nano-second of time.*
- const struct **DDS\_Time\_t DDS\_TIME\_INVALID**  
*A sentinel indicating an invalid time.*
- const **DDS\_Long DDS\_DURATION\_INFINITE\_SEC**  
*An infinite second period of time.*
- const **DDS\_UnsignedLong DDS\_DURATION\_INFINITE\_NSEC**  
*An infinite nano-second period of time.*
- const struct **DDS\_Duration\_t DDS\_DURATION\_INFINITE**  
*An infinite period of time.*

- const **DDS\_Long DDS\_DURATION\_AUTO\_SEC**  
*An auto second period of time.*
- const **DDS\_UnsignedLong DDS\_DURATION\_AUTO\_NSEC**  
*An auto nano-second period of time.*
- const struct **DDS\_Duration\_t DDS\_DURATION\_AUTO**  
*Duration is automatically assigned.*
- const **DDS\_Long DDS\_DURATION\_ZERO\_SEC**  
*A zero-length second period of time.*
- const **DDS\_UnsignedLong DDS\_DURATION\_ZERO\_NSEC**  
*A zero-length nano-second period of time.*
- const struct **DDS\_Duration\_t DDS\_DURATION\_ZERO**  
*A zero-length period of time.*

### 7.91.1 Detailed Description

Time and duration types and defines.

### 7.91.2 Macro Definition Documentation

#### 7.91.2.1 DDS\_TIME\_ZERO

```
#define DDS_TIME_ZERO
```

The default instant in time: zero seconds and zero nanoseconds.

### 7.91.3 Function Documentation

#### 7.91.3.1 from\_micros() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_micros (
    DDS_UnsignedLongLong microseconds ) [static]
```

Creates a new duration object from a duration expressed in microseconds.

In case of an overflow this function returns **DDS\_DURATION\_INFINITE** (p. 326).

### 7.91.3.2 from\_millis() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_millis (
    DDS_UnsignedLongLong milliseconds ) [static]
```

Creates a new duration object from a duration expressed in milliseconds.

In case of an overflow this function returns **DDS\_DURATION\_INFINITE** (p. 326).

### 7.91.3.3 from\_nanos() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_nanos (
    DDS_UnsignedLongLong nanoseconds ) [static]
```

Creates a new duration object from a duration expressed in nanoseconds.

In case of an overflow this function returns **DDS\_DURATION\_INFINITE** (p. 326).

### 7.91.3.4 from\_seconds() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_seconds (
    DDS_UnsignedLong seconds ) [static]
```

Creates a new duration object from a duration expressed in seconds.

In case of an overflow this function returns **DDS\_DURATION\_INFINITE** (p. 326).

### 7.91.3.5 from\_micros() [2/2]

```
static DDS_Time_t DDS_Time_t::from_micros (
    DDS_UnsignedLongLong microseconds ) [static]
```

Creates a new time object from a time expressed in microseconds.

In case of an overflow this function returns **DDS\_TIME\_MAX** (p. 325).

### 7.91.3.6 from\_millis() [2/2]

```
static DDS_Time_t DDS_Time_t::from_millis (
    DDS_UnsignedLongLong milliseconds ) [static]
```

Creates a new time object from a time expressed in milliseconds.

In case of an overflow this function returns **DDS\_TIME\_MAX** (p. 325).

### 7.91.3.7 from\_nanos() [2/2]

```
static DDS_Time_t DDS_Time_t::from_nanos (
    DDS_UnsignedLongLong nanoseconds ) [static]
```

Creates a new time object from a time expressed in nanoseconds.

In case of an overflow this function returns **DDS\_TIME\_MAX** (p. 325).

### 7.91.3.8 from\_seconds() [2/2]

```
static DDS_Time_t DDS_Time_t::from_seconds (
    DDS_UnsignedLongLong seconds ) [static]
```

Creates a new time object from a time expressed in seconds.

In case of an overflow this function returns **DDS\_TIME\_MAX** (p. 325).

### 7.91.3.9 DDS\_Time\_is\_zero()

```
DDS_Boolean DDS_Time_is_zero (
    const struct DDS_Time_t * time )
```

Check if time is zero.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given time is equal to **DDS\_TIME\_ZERO** (p. 322) or **DDS\_BOOLEAN\_↔  
FALSE** (p. 317) otherwise.

### 7.91.3.10 DDS\_Time\_is\_invalid()

```
DDS_Boolean DDS_Time_is_invalid (
    const struct DDS_Time_t * time )
```

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given time is not valid (i.e. is negative)

### 7.91.3.11 DDS\_Duration\_is\_infinite()

```
DDS_Boolean DDS_Duration_is_infinite (  
    const struct DDS_Duration_t * duration )
```

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given duration is of infinite length.

### 7.91.3.12 DDS\_Duration\_is\_auto()

```
DDS_Boolean DDS_Duration_is_auto (  
    const struct DDS_Duration_t * duration )
```

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given duration has auto value.

### 7.91.3.13 DDS\_Duration\_is\_zero()

```
DDS_Boolean DDS_Duration_is_zero (  
    const struct DDS_Duration_t * duration )
```

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the given duration is of zero length.

## 7.91.4 Variable Documentation

### 7.91.4.1 DDS\_TIME\_MAX

```
const struct DDS_Time_t DDS_TIME_MAX [extern]
```

The maximum value of time.

#### 7.91.4.2 DDS\_TIME\_INVALID\_SEC

```
const DDS_LongLong DDS_TIME_INVALID_SEC [extern]
```

A sentinel indicating an invalid second of time.

#### 7.91.4.3 DDS\_TIME\_INVALID\_NSEC

```
const DDS_UnsignedLong DDS_TIME_INVALID_NSEC [extern]
```

A sentinel indicating an invalid nano-second of time.

#### 7.91.4.4 DDS\_TIME\_INVALID

```
const struct DDS_Time_t DDS_TIME_INVALID [extern]
```

A sentinel indicating an invalid time.

#### 7.91.4.5 DDS\_DURATION\_INFINITE\_SEC

```
const DDS_Long DDS_DURATION_INFINITE_SEC [extern]
```

An infinite second period of time.

#### 7.91.4.6 DDS\_DURATION\_INFINITE\_NSEC

```
const DDS_UnsignedLong DDS_DURATION_INFINITE_NSEC [extern]
```

An infinite nano-second period of time.

#### 7.91.4.7 DDS\_DURATION\_INFINITE

```
const struct DDS_Duration_t DDS_DURATION_INFINITE [extern]
```

An infinite period of time.

#### 7.91.4.8 DDS\_DURATION\_AUTO\_SEC

```
const DDS_Long DDS_DURATION_AUTO_SEC [extern]
```

An auto second period of time.

#### 7.91.4.9 DDS\_DURATION\_AUTO\_NSEC

```
const DDS_UnsignedLong DDS_DURATION_AUTO_NSEC [extern]
```

An auto nano-second period of time.

#### 7.91.4.10 DDS\_DURATION\_AUTO

```
const struct DDS_Duration_t DDS_DURATION_AUTO [extern]
```

Duration is automatically assigned.

#### 7.91.4.11 DDS\_DURATION\_ZERO\_SEC

```
const DDS_Long DDS_DURATION_ZERO_SEC [extern]
```

A zero-length second period of time.

#### 7.91.4.12 DDS\_DURATION\_ZERO\_NSEC

```
const DDS_UnsignedLong DDS_DURATION_ZERO_NSEC [extern]
```

A zero-length nano-second period of time.

#### 7.91.4.13 DDS\_DURATION\_ZERO

```
const struct DDS_Duration_t DDS_DURATION_ZERO [extern]
```

A zero-length period of time.

## 7.92 GUID Support

<<*extension*>> (p. 237) GUID type and defines.

### Classes

- struct **DDS\_RTPS\_EntityId\_t**  
*From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.*
- struct **DDS\_RTPS\_GUID\_t**  
*From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.*
- struct **DDS\_GUID\_t**  
*Type for GUID (Global Unique Identifier) representation.*

### Typedefs

- typedef **DDS\_Octet DDS\_RTPS\_GuidPrefix\_t**[DDS\_RTPS\_GUID\_PREFIX\_LENGTH]  
*From the DDS-RTPS specification: type used to hold the prefix of the globally-unique RTPS-entity identifiers.*
- typedef struct **DDS\_RTPS\_EntityId\_t DDS\_RTPS\_EntityId\_t**  
*From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.*
- typedef struct **DDS\_RTPS\_GUID\_t DDS\_RTPS\_GUID\_t**  
*From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.*
- typedef struct **DDS\_GUID\_t DDS\_GUID\_t**  
*Type for GUID (Global Unique Identifier) representation.*

### Functions

- **DDS\_Boolean DDS\_GUID\_equals** (const struct **DDS\_GUID\_t** \*self, const struct **DDS\_GUID\_t** \*other)  
*Compares this GUID with another GUID for equality.*
- int **DDS\_GUID\_compare** (const struct **DDS\_GUID\_t** \*self, const struct **DDS\_GUID\_t** \*other)  
*Compares two GUIDs.*
- void **DDS\_GUID\_copy** (struct **DDS\_GUID\_t** \*self, const struct **DDS\_GUID\_t** \*other)  
*Copies another GUID into this GUID.*

### Variables

- const struct **DDS\_GUID\_t DDS\_GUID\_AUTO**  
*Indicates that RTI Connexant should choose an appropriate virtual GUID.*
- const struct **DDS\_GUID\_t DDS\_GUID\_UNKNOWN**  
*Unknown GUID.*
- const struct **DDS\_GUID\_t DDS\_GUID\_ZERO**  
*Zero GUID.*

## 7.92.1 Detailed Description

<<*extension*>> (p. 237) GUID type and defines.

## 7.92.2 Typedef Documentation

### 7.92.2.1 DDS\_RTPS\_GuidPrefix\_t

```
typedef DDS_Octet DDS_RTPS_GuidPrefix_t [DDS_RTPS_GUID_PREFIX_LENGTH]
```

From the DDS-RTPS specification: type used to hold the prefix of the globally-unique RTPS-entity identifiers.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

### 7.92.2.2 DDS\_RTPS\_EntityId\_t

```
typedef struct DDS_RTPS_EntityId_t DDS_RTPS_EntityId_t
```

From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

### 7.92.2.3 DDS\_RTPS\_GUID\_t

```
typedef struct DDS_RTPS_GUID_t DDS_RTPS_GUID_t
```

From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

### 7.92.2.4 DDS\_GUID\_t

```
typedef struct DDS_GUID_t DDS_GUID_t
```

Type for *GUID* (Global Unique Identifier) representation.

Represents a 128 bit GUID.

Alternative representation of **DDS\_RTPS\_GUID\_t** (p. 1057). Memory and wire representation for this type is the same as the one for **DDS\_RTPS\_GUID\_t** (p. 1057).

## 7.92.3 Function Documentation

### 7.92.3.1 DDS\_GUID\_equals()

```
DDS_Boolean DDS_GUID_equals (  
    const struct DDS_GUID_t * self,  
    const struct DDS_GUID_t * other )
```

Compares this GUID with another GUID for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This GUID.
<i>other</i>	<< <i>in</i> >> (p. 238) The other GUID to be compared with this GUID.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the two GUIDs have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

## 7.92.3.2 DDS\_GUID\_compare()

```
int DDS_GUID_compare (
    const struct DDS_GUID_t * self,
    const struct DDS_GUID_t * other )
```

Compares two GUIDs.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) GUID to compare.
<i>other</i>	<< <i>in</i> >> (p. 238) GUID to compare.

## Returns

If the two GUIDs are equal or NULL, the function returns 0. If *self* is greater than *other*, the function returns a positive number; otherwise, it returns a negative number. Note that non-NULL is considered greater than NULL.

## 7.92.3.3 DDS\_GUID\_copy()

```
void DDS_GUID_copy (
    struct DDS_GUID_t * self,
    const struct DDS_GUID_t * other )
```

Copies another GUID into this GUID.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This GUID. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 238) The other GUID to be copied. Cannot be NULL.

## 7.92.4 Variable Documentation

### 7.92.4.1 DDS\_GUID\_AUTO

```
const struct DDS_GUID_t DDS_GUID_AUTO [extern]
```

Indicates that RTI Connexx should choose an appropriate virtual GUID.

If this special value is assigned to **DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 674) or **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p. 631), RTI Connexx will assign the virtual GUID automatically based on the RTPS or physical GUID.

### 7.92.4.2 DDS\_GUID\_UNKNOWN

```
const struct DDS_GUID_t DDS_GUID_UNKNOWN [extern]
```

Unknown GUID.

### 7.92.4.3 DDS\_GUID\_ZERO

```
const struct DDS_GUID_t DDS_GUID_ZERO [extern]
```

Zero GUID.

## 7.93 Sequence Number Support

<<*extension*>> (p. 237) Sequence number type and defines.

### Classes

- struct **DDS\_SequenceNumber\_t**  
*Type for sequence number representation.*

### Typedefs

- typedef struct **DDS\_SequenceNumber\_t** **DDS\_SequenceNumber\_t**  
*Type for sequence number representation.*

## Variables

- const struct **DDS\_SequenceNumber\_t DDS\_SEQUENCE\_NUMBER\_UNKNOWN**  
*Unknown sequence number.*
- const struct **DDS\_SequenceNumber\_t DDS\_SEQUENCE\_NUMBER\_ZERO**  
*Zero value for the sequence number.*
- const struct **DDS\_SequenceNumber\_t DDS\_SEQUENCE\_NUMBER\_MAX**  
*Highest, most positive value for the sequence number.*
- const struct **DDS\_SequenceNumber\_t DDS\_AUTO\_SEQUENCE\_NUMBER**  
*The sequence number is internally determined by RTI Connex.*

### 7.93.1 Detailed Description

<<*extension*>> (p. 237) Sequence number type and defines.

### 7.93.2 Typedef Documentation

#### 7.93.2.1 DDS\_SequenceNumber\_t

```
typedef struct DDS_SequenceNumber_t DDS_SequenceNumber_t
```

Type for *sequence* number representation.

Represents a 64-bit sequence number.

### 7.93.3 Variable Documentation

#### 7.93.3.1 DDS\_SEQUENCE\_NUMBER\_UNKNOWN

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_UNKNOWN [extern]
```

Unknown sequence number.

**7.93.3.2 DDS\_SEQUENCE\_NUMBER\_ZERO**

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_ZERO [extern]
```

Zero value for the sequence number.

**7.93.3.3 DDS\_SEQUENCE\_NUMBER\_MAX**

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_MAX [extern]
```

Highest, most positive value for the sequence number.

**7.93.3.4 DDS\_AUTO\_SEQUENCE\_NUMBER**

```
const struct DDS_SequenceNumber_t DDS_AUTO_SEQUENCE_NUMBER [extern]
```

The sequence number is internally determined by RTI Connex.

**7.94 Exception Codes**

<<*extension*>> (p. 237) Exception codes.

**Enumerations**

- enum **DDS\_ExceptionCode\_t** {
  - DDS\_NO\_EXCEPTION\_CODE** ,
  - DDS\_USER\_EXCEPTION\_CODE** ,
  - DDS\_SYSTEM\_EXCEPTION\_CODE** ,
  - DDS\_BAD\_PARAM\_SYSTEM\_EXCEPTION\_CODE** ,
  - DDS\_NO\_MEMORY\_SYSTEM\_EXCEPTION\_CODE** ,
  - DDS\_BAD\_TYPECODE\_SYSTEM\_EXCEPTION\_CODE** ,
  - DDS\_BADKIND\_USER\_EXCEPTION\_CODE** ,
  - DDS\_BOUNDS\_USER\_EXCEPTION\_CODE** ,
  - DDS\_IMMUTABLE\_TYPECODE\_SYSTEM\_EXCEPTION\_CODE = 8** ,
  - DDS\_BAD\_MEMBER\_NAME\_USER\_EXCEPTION\_CODE = 9** ,
  - DDS\_BAD\_MEMBER\_ID\_USER\_EXCEPTION\_CODE = 10** }

*Error codes used by the **DDS\_TypeCode** (p. 1164) class.*

## 7.94.1 Detailed Description

<<*extension*>> (p. 237) Exception codes.

These exceptions are used for error handling by the **Type Code Support** (p. 76) API.

## 7.94.2 Enumeration Type Documentation

### 7.94.2.1 DDS\_ExceptionCode\_t

```
enum DDS_ExceptionCode_t
```

Error codes used by the **DDS\_TypeCode** (p. 1164) class.

Exceptions are modeled via a special parameter passed to the operations.

#### Enumerator

DDS_NO_EXCEPTION_CODE	No failure occurred.
DDS_USER_EXCEPTION_CODE	User exception. This class is based on a similar class in CORBA.
DDS_SYSTEM_EXCEPTION_CODE	System exception. This class is based on a similar class in CORBA.
DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE	Exception thrown when a parameter passed to a call is considered illegal.
DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE	Exception thrown when there is not enough memory for a dynamic memory allocation.
DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE	Exception thrown when a malformed type code is found (for example, a type code with an invalid TCKind value).
DDS_BADKIND_USER_EXCEPTION_CODE	The exception BadKind is thrown when an inappropriate operation is invoked on a TypeCode object.
DDS_BOUNDS_USER_EXCEPTION_CODE	A user exception thrown when a parameter is not within the legal bounds.
DDS_IMMUTABLE_TYPECODE_SYSTEM_EXCEPTION_CODE	An attempt was made to modify a <b>DDS_TypeCode</b> (p. 1164) that was received from a remote object. The built-in publication and subscription readers provide access to information about the remote <b>DDSDataWriter</b> (p. 1321) and <b>DDSDataReader</b> (p. 1288) entities in the distributed system. Among other things, the data from these built-in readers contains the <b>DDS_TypeCode</b> (p. 1164) for these entities. Modifying this received <b>DDS_TypeCode</b> (p. 1164) is not permitted.

## Enumerator

<p>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_↔ CODE</p>	<p>The specified <b>DDS_TypeCode</b> (p. 1164) member name is invalid. This failure can occur, for example, when querying a field by name when no such name is defined in the type.</p> <p>See also</p> <p><b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_↔ _CODE</b> (p. 335)</p>
<p>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</p>	<p>The specified <b>DDS_TypeCode</b> (p. 1164) member ID is invalid. This failure can occur, for example, when querying a field by ID when no such ID is defined in the type.</p> <p>See also</p> <p><b>DDS_BAD_MEMBER_NAME_USER_↔ EXCEPTION_CODE</b> (p. 335)</p>

## 7.95 Return Codes

Types of return codes.

### Enumerations

- enum **DDS\_ReturnCode\_t** {  
**DDS\_RETCODE\_OK** ,  
**DDS\_RETCODE\_ERROR** ,  
**DDS\_RETCODE\_UNSUPPORTED** ,  
**DDS\_RETCODE\_BAD\_PARAMETER** ,  
**DDS\_RETCODE\_PRECONDITION\_NOT\_MET** ,  
**DDS\_RETCODE\_OUT\_OF\_RESOURCES** ,  
**DDS\_RETCODE\_NOT\_ENABLED** ,  
**DDS\_RETCODE\_IMMUTABLE\_POLICY** ,  
**DDS\_RETCODE\_INCONSISTENT\_POLICY** ,  
**DDS\_RETCODE\_ALREADY\_DELETED** ,  
**DDS\_RETCODE\_TIMEOUT** ,  
**DDS\_RETCODE\_NO\_DATA** ,  
**DDS\_RETCODE\_ILLEGAL\_OPERATION** ,  
**DDS\_RETCODE\_NOT\_ALLOWED\_BY\_SECURITY** }

*Type for return codes.*

### 7.95.1 Detailed Description

Types of return codes.

## 7.95.2 Standard Return Codes

Any operation with return type `DDS_ReturnCode_t` (p. 336) may return `DDS_RETCODE_OK` (p. 336), `DDS_RETCODE_ERROR` (p. 336) or `DDS_RETCODE_ILLEGAL_OPERATION` (p. 337). Any operation that takes one or more input parameters may additionally return `DDS_RETCODE_BAD_PARAMETER` (p. 336). Any operation on an object created from any of the factories may additionally return `DDS_RETCODE_ALREADY_DELETED` (p. 337). Any operation that is stated as optional may additionally return `DDS_RETCODE_UNSUPPORTED` (p. 336).

Thus, the standard return codes are:

- `DDS_RETCODE_ERROR` (p. 336)
- `DDS_RETCODE_ILLEGAL_OPERATION` (p. 337)
- `DDS_RETCODE_ALREADY_DELETED` (p. 337)
- `DDS_RETCODE_BAD_PARAMETER` (p. 336)
- `DDS_RETCODE_UNSUPPORTED` (p. 336)

Operations that may return any of the additional return codes will state so explicitly.

## 7.95.3 Enumeration Type Documentation

### 7.95.3.1 `DDS_ReturnCode_t`

enum `DDS_ReturnCode_t`

Type for return codes.

Errors are modeled as operation return codes of this type.

Enumerator

<code>DDS_RETCODE_OK</code>	Successful return.
<code>DDS_RETCODE_ERROR</code>	Generic, unspecified error.
<code>DDS_RETCODE_UNSUPPORTED</code>	Unsupported operation. Only returned by operations that are unsupported.
<code>DDS_RETCODE_BAD_PARAMETER</code>	Illegal parameter value. The value of the parameter that is passed in has illegal value. Things that fall into this category include NULL parameters and parameter values that are out of range.
<code>DDS_RETCODE_PRECONDITION_NOT_MET</code>	A pre-condition for the operation was not met. The system is not in the expected state when the function is called, or the parameter itself is not in the expected state when the function is called.

## Enumerator

DDS_RETCODE_OUT_OF_RESOURCES	RTI Connexant ran out of the resources needed to complete the operation.
DDS_RETCODE_NOT_ENABLED	Operation invoked on a <b>DDSEntity</b> (p. 1463) that is not yet enabled.
DDS_RETCODE_IMMUTABLE_POLICY	Application attempted to modify an immutable QoS policy.
DDS_RETCODE_INCONSISTENT_POLICY	Application specified a set of QoS policies that are not consistent with each other.
DDS_RETCODE_ALREADY_DELETED	The object target of this operation has already been deleted.
DDS_RETCODE_TIMEOUT	The operation timed out.
DDS_RETCODE_NO_DATA	Indicates a transient situation where the operation did not return any data but there is no inherent error.
DDS_RETCODE_ILLEGAL_OPERATION	The operation was called under improper circumstances. An operation was invoked on an inappropriate object or at an inappropriate time. This return code is similar to <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), except that there is no precondition that could be changed to make the operation succeed.
DDS_RETCODE_NOT_ALLOWED_BY_SECURITY	An operation on the DDS API that fails because the security plugins do not allow it. An operation on the DDS API that fails because the security plugins do not allow it. Currently unused because security checks happen during create, not enable, and create doesn't return a ReturnCode (SEC-731).

## 7.96 Status Kinds

Kinds of communication status.

### Macros

- `#define DDS_STATUS_MASK_NONE`  
*No bits are set.*
- `#define DDS_STATUS_MASK_ALL`  
*All bits are set.*

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_StatusMask**  
*A bit-mask (list) of concrete status types, i.e. **DDS\_StatusKind** (p. 342)].*

## Enumerations

- enum `DDS_StatusKind` {
  - `DDS_INCONSISTENT_TOPIC_STATUS`,
  - `DDS_OFFERED_DEADLINE_MISSED_STATUS`,
  - `DDS_REQUESTED_DEADLINE_MISSED_STATUS`,
  - `DDS_OFFERED_INCOMPATIBLE_QOS_STATUS`,
  - `DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS`,
  - `DDS_SAMPLE_LOST_STATUS`,
  - `DDS_SAMPLE_REJECTED_STATUS`,

  - `DDS_DATA_WRITER_APPLICATION_ACKNOWLEDGMENT_STATUS`,
  - `DDS_DATA_WRITER_INSTANCE_REPLACED_STATUS`,
  - `DDS_RELIABLE_WRITER_CACHE_CHANGED_STATUS`,
  - `DDS_RELIABLE_READER_ACTIVITY_CHANGED_STATUS`,
  - `DDS_DATA_WRITER_CACHE_STATUS`,
  - `DDS_DATA_WRITER_PROTOCOL_STATUS`,
  - `DDS_DATA_READER_CACHE_STATUS`,
  - `DDS_DATA_READER_PROTOCOL_STATUS`,
  - `DDS_DATA_WRITER_DESTINATION_UNREACHABLE_STATUS` = 0x00000001U << 30,
  - `DDS_DATA_WRITER_SAMPLE_REMOVED_STATUS` }

*Type for status kinds.*

### 7.96.1 Detailed Description

Kinds of communication status.

Entity:

**DDSEntity** (p. 1463)

QoS:

**QoS Policies** (p. 353)

Listener:

**DDSListener** (p. 1526)

Each concrete **DDSEntity** (p. 1463) is associated with a set of Status objects whose value represents the communication status of that entity. Each status value can be accessed with a corresponding method on the **DDSEntity** (p. 1463).

When these status values change, the corresponding **DDSStatusCondition** (p. 1578) objects are activated and the proper **DDSListener** (p. 1526) objects are invoked to asynchronously inform the application.

An application is notified of communication status by means of the **DDSListener** (p. 1526) or the **DDSWaitSet** (p. 1629) / **DDSCondition** (p. 1276) mechanism. The two mechanisms may be combined in the application (e.g., using **DDSWaitSet** (p. 1629) (s) / **DDSCondition** (p. 1276) (s) to access the data and **DDSListener** (p. 1526) (s) to be warned asynchronously of erroneous communication statuses).

It is likely that the application will choose one or the other mechanism for each particular communication status (not both). However, if both mechanisms are enabled, then the **DDSListener** (p. 1526) mechanism is used first and then the **DDSWaitSet** (p. 1629) objects are signalled.

The statuses may be classified into:

- *read communication statuses*: i.e., those that are related to arrival of data, namely **DDS\_DATA\_ON\_READERS\_STATUS** (p. 345) and **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345).
- *plain communication statuses*: i.e., all the others.

Read communication statuses are treated slightly differently than the others because they don't change independently. In other words, at least two changes will appear at the same time (**DDS\_DATA\_ON\_READERS\_STATUS** (p. 345) and **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345)) and even several of the last kind may be part of the set. This 'grouping' has to be communicated to the application.

For each plain communication status, there is a corresponding structure to hold the status value. These values contain the information related to the change of status, as well as information related to the statuses themselves (e.g., contains cumulative counts).

"Status Values"

## 7.96.2 Changes in Status

Associated with each one of an **DDSEntity** (p. 1463)'s communication status is a logical `StatusChangedFlag`. This flag indicates whether that particular communication status has changed since the last time the status was read by the application. The way the status changes is slightly different for the Plain Communication Status and the Read Communication status.

"\p StatusChangedFlag indicates if status has changed"

### 7.96.2.1 Changes in plain communication status

For the plain communication status, the `StatusChangedFlag` flag is initially set to `FALSE`. It becomes `TRUE` whenever the plain communication status changes and it is reset to `DDS_BOOLEAN_FALSE` (p. 317) each time the application accesses the plain communication status via the proper `get_<plain communication status>()` operation on the `DDSEntity` (p. 1463).

The communication status is also reset to `FALSE` whenever the associated listener operation is called as the listener implicitly accesses the status which is passed as a parameter to the operation. The fact that the status is reset prior to calling the listener means that if the application calls the `get_<plain communication status>` from inside the listener it will see the status already reset.

An exception to this rule is when the associated listener is the 'nil' listener. The 'nil' listener is treated as a NOOP and the act of calling the 'nil' listener does not reset the communication status.

For example, the value of the `StatusChangedFlag` associated with the `DDS_REQUESTED_DEADLINE_MISSED_STATUS` (p. 344) will become `TRUE` each time new deadline occurs (which increases `DDS_RequestedDeadlineMissedStatus::total_count` (p. 1050)). The value changes to `FALSE` when the application accesses the status via the corresponding `DDSDataReader::get_requested_deadline_missed_status` (p. 1303) method on the proper Entity

"Changes in \p StatusChangedFlag for plain communication status"

### 7.96.2.2 Changes in read communication status

For the read communication status, the `StatusChangedFlag` flag is initially set to `FALSE`. The `StatusChangedFlag` becomes `TRUE` when either a data-sample arrives or else the `DDS_ViewStateKind` (p. 158), `DDS_SampleStateKind` (p. 156), or `DDS_InstanceStateKind` (p. 160) of any existing sample changes for any reason other than a call to `FooDataReader::read` (p. 1651), `FooDataReader::take` (p. 1652) or their variants. Specifically any of the following events will cause the `StatusChangedFlag` to become `TRUE`:

- The arrival of new data.
- A change in the `DDS_InstanceStateKind` (p. 160) of a contained instance. This can be caused by either:
  - The arrival of the notification that an instance has been disposed by:
    - \* the `DDSDataWriter` (p. 1321) that owns it if `OWNERSHIP` (p. 414) QoS kind= `DDS_EXCLUSIVE_OWNERSHIP_QOS` (p. 415)
    - \* or by any `DDSDataWriter` (p. 1321) if `OWNERSHIP` (p. 414) QoS kind= `DDS_SHARED_OWNERSHIP_QOS` (p. 415)
  - The loss of liveness of the `DDSDataWriter` (p. 1321) of an instance for which there is no other `DDSDataWriter` (p. 1321).
  - The arrival of the notification that an instance has been unregistered by the only `DDSDataWriter` (p. 1321) that is known to be writing the instance.

Depending on the kind of `StatusChangedFlag`, the flag transitions to `FALSE` again as follows:

- The `DDS_DATA_AVAILABLE_STATUS` (p. 345) `StatusChangedFlag` becomes `FALSE` when either the corresponding listener operation (`on_data_available`) is called or the read or take operation (or their variants) is called on the associated `DDSDataReader` (p. 1288).

- The **DDS\_DATA\_ON\_READERS\_STATUS** (p. 345) `StatusChangedFlag` becomes `FALSE` when any of the following events occurs:
  - The corresponding listener operation (`on_data_on_readers`) is called.
  - The `on_data_available` listener operation is called on any **DDSDataReader** (p. 1288) belonging to the **DDSSubscriber** (p. 1592).
  - The read or take operation (or their variants) is called on any **DDSDataReader** (p. 1288) belonging to the **DDSSubscriber** (p. 1592).

"Changes in `\p StatusChangedFlag` for read communication status"

**DDSListener** (p. 1526)

**DDSWaitSet** (p. 1629), **DDSCondition** (p. 1276)

### 7.96.3 Macro Definition Documentation

#### 7.96.3.1 DDS\_STATUS\_MASK\_NONE

```
#define DDS_STATUS_MASK_NONE
```

No bits are set.

Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

#### 7.96.3.2 DDS\_STATUS\_MASK\_ALL

```
#define DDS_STATUS_MASK_ALL
```

All bits are set.

### 7.96.4 Typedef Documentation

### 7.96.4.1 DDS\_StatusMask

```
typedef DDS_UnsignedLong DDS_StatusMask
```

A bit-mask (list) of concrete status types, i.e. **DDS\_StatusKind** (p. 342)[].

The bit-mask is an efficient and compact representation of a fixed-length list of **DDS\_StatusKind** (p. 342) values.

Bits in the mask correspond to different statuses. You can choose which changes in status will trigger a callback by setting the corresponding status bits in this bit-mask and installing callbacks for each of those statuses.

The bits that are true indicate that the listener will be called back for changes in the corresponding status.

For example:

```
DDS_StatusMask mask = DDS_REQUESTED_DEADLINE_MISSED_STATUS |
                    DDS_DATA_AVAILABLE_STATUS;
datareader->set_listener(listener, mask);
```

Or

```
DDS_StatusMask mask = DDS_REQUESTED_DEADLINE_MISSED_STATUS |
                    DDS_DATA_AVAILABLE_STATUS;
datareader = subscriber->create_datareader(topic,
                                         DDS_DATAREADER_QOS_DEFAULT,
                                         listener, mask);
```

## 7.96.5 Enumeration Type Documentation

### 7.96.5.1 DDS\_StatusKind

```
enum DDS_StatusKind
```

Type for *status* kinds.

Each concrete **DDSEntity** (p. 1463) is associated with a set of *\*Status* objects whose values represent the communication status of that **DDSEntity** (p. 1463).

The communication statuses whose changes can be communicated to the application depend on the **DDSEntity** (p. 1463).

Each status value can be accessed with a corresponding method on the **DDSEntity** (p. 1463). The changes on these status values cause activation of the corresponding **DDSStatusCondition** (p. 1578) objects and trigger invocation of the proper **DDSListener** (p. 1526) objects to asynchronously inform the application. Note that not all statuses will activate the **DDSStatusCondition** (p. 1578) or have a corresponding listener callback. Refer to the documentation of the individual statuses for that information.

## Enumerator

<p>DDS_LIVELINESS_LOST_STATUS</p>	<p>The liveliness that the <b>DDSDataWriter</b> (p. 1321) has committed to through its <b>DDS_LivelinessQosPolicy</b> (p. 936) was not respected, thus <b>DDSDataReader</b> (p. 1288) entities will consider the <b>DDSDataWriter</b> (p. 1321) as no longer alive.</p> <p><b>Entity:</b></p> <p><b>DDSDataWriter</b> (p. 1321)</p> <p><b>QoS:</b></p> <p><b>LIVELINESS</b> (p. 409)</p> <p><b>Status:</b></p> <p><b>DDS_LivelinessLostStatus</b> (p. 934)</p> <p><b>Listener:</b></p> <p><b>DDSDataWriterListener</b> (p. 1344)</p>
<p>DDS_LIVELINESS_CHANGED_STATUS</p>	<p>The liveliness of one or more <b>DDSDataWriter</b> (p. 1321) that were writing instances read through the <b>DDSDataReader</b> (p. 1288) has changed. Some <b>DDSDataWriter</b> (p. 1321) have become alive or not_alive.</p> <p><b>Entity:</b></p> <p><b>DDSDataReader</b> (p. 1288)</p> <p><b>QoS:</b></p> <p><b>LIVELINESS</b> (p. 409)</p> <p><b>Status:</b></p> <p><b>DDS_LivelinessChangedStatus</b> (p. 932)</p> <p><b>Listener:</b></p> <p><b>DDSDataReaderListener</b> (p. 1315)</p>

## Enumerator

DDS_PUBLICATION_MATCHED_STATUS	<p>The <b>DDSDataWriter</b> (p. 1321) has found <b>DDSDataReader</b> (p. 1288) that matches the <b>DDSTopic</b> (p. 1617) and has compatible QoS.</p> <p>Entity: <b>DDSDataWriter</b> (p. 1321)</p> <p>Status: <b>DDS_PublicationMatchedStatus</b> (p. 1020)</p> <p>Listener: <b>DDSDataWriterListener</b> (p. 1344)</p>
DDS_SUBSCRIPTION_MATCHED_STATUS	<p>The <b>DDSDataReader</b> (p. 1288) has found <b>DDSDataWriter</b> (p. 1321) that matches the <b>DDSTopic</b> (p. 1617) and has compatible QoS.</p> <p>Entity: <b>DDSDataReader</b> (p. 1288)</p> <p>Status: <b>DDS_SubscriptionMatchedStatus</b> (p. 1117)</p> <p>Listener: <b>DDSDataReaderListener</b> (p. 1315)</p>
DDS_INVALID_LOCAL_IDENTITY_ADVANCE_↔ NOTICE_STATUS	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) The local <b>DDSDomainParticipant</b> (p. 1351) has or is about to have an invalid identity credential. Enables a <b>DDSDomainParticipant</b> (p. 1351) callback that is called when the local <b>DDSDomainParticipant</b> (p. 1351) has or is about to have an invalid identity credential. Currently, this status is only triggered when enabling the RTI Security Plugins. Please refer to the <code>RTI Security Plugins User's Manual</code> for more information.</p> <p>Entity: <b>DDSDomainParticipant</b> (p. 1351)</p> <p>Listener: <b>DDSDomainParticipantListener</b> (p. 1454)</p>

## Enumerator

<p>DDS_SERVICE_REQUEST_ACCEPTED_STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) A <b>DDSDataWriter</b> (p. 1321) has been issued a <b>DDS_ServiceRequest</b> (p. 1097) Enables a <b>DDSDataWriter</b> (p. 1321) callback that is called when a <b>DDS_ServiceRequest</b> (p. 1097) has been accepted and dispatched to the DataWriter.</p> <p>Entity:</p> <p style="padding-left: 40px;"><b>DDSDataWriter</b> (p. 1321)</p> <p>Listener:</p> <p style="padding-left: 40px;"><b>DDSDataWriterListener</b> (p. 1344)</p>
<p>DDS_DATA_WRITER_APPLICATION_↔ ACKNOWLEDGMENT_STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) A <b>DDSDataWriter</b> (p. 1321) has received an application-level acknowledgment for a sample Enables a <b>DDSDataWriter</b> (p. 1321) callback that is called when an application-level acknowledgment from a <b>DDSDataReader</b> (p. 1288) is received. The callback is called for each sample that is application-level acknowledged. Changes to this status do not trigger a <b>DDSStatusCondition</b> (p. 1578).</p> <p>Entity:</p> <p style="padding-left: 40px;"><b>DDSDataWriter</b> (p. 1321)</p> <p>Listener:</p> <p style="padding-left: 40px;"><b>DDSDataWriterListener</b> (p. 1344)</p>
<p>DDS_DATA_WRITER_INSTANCE_REPLACED_↔ STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) A <b>DDSDataWriter</b> (p. 1321) instance has been replaced Enables a <b>DDSDataWriter</b> (p. 1321) callback that is called when an instance in the writer queue is replaced.</p> <p>Entity:</p> <p style="padding-left: 40px;"><b>DDSDataWriter</b> (p. 1321)</p> <p>Listener:</p> <p style="padding-left: 40px;"><b>DDSDataWriterListener</b> (p. 1344)</p>

## Enumerator

<p>DDS_RELIABLE_WRITER_CACHE_CHANGED_↔ STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) The number of unacknowledged samples in a reliable writer's cache has changed such that it has reached a pre-defined trigger point. This status is considered changed at the following times: the cache is empty (i.e., contains no unacknowledged samples), the cache is full (i.e., the sample count has reached the value specified in <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1055)), or the number of samples has reached a high (see <b>DDS_RtpsReliableWriterProtocol_t::high_↔ watermark</b> (p. 1063)) or low (see <b>DDS_RtpsReliableWriterProtocol_t::low_watermark</b> (p. 1063)) watermark.</p> <p>Entity:</p> <p><b>DDSDataWriter</b> (p. 1321)</p> <p>Status:</p> <p><b>DDS_ReliableWriterCacheChangedStatus</b> (p. 1046)</p> <p>Listener:</p> <p><b>DDSDataWriterListener</b> (p. 1344)</p>
<p>DDS_RELIABLE_READER_ACTIVITY_CHANGED_↔ STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) One or more reliable readers has become active or inactive. A reliable reader is considered active by a reliable writer with which it is matched if that reader acknowledges the samples it has been sent in a timely fashion. For the definition of "timely" in this case, see <b>DDS_RtpsReliableWriterProtocol_t</b> (p. 1061) and <b>DDS_ReliableReaderActivityChangedStatus</b> (p. 1044).</p> <p>See also</p> <p><b>DDS_RtpsReliableWriterProtocol_t</b> (p. 1061)</p> <p><b>DDS_ReliableReaderActivityChangedStatus</b> (p. 1044)</p>
<p>DDS_DATA_WRITER_CACHE_STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) The status of the writer's cache. Changes to this status do not trigger a <b>DDSStatusCondition</b> (p. 1578).</p>
<p>DDS_DATA_WRITER_PROTOCOL_STATUS</p>	<p>&lt;&lt;<i>extension</i>&gt;&gt; (p. 237) The status of a writer's internal protocol related metrics The status of a writer's internal protocol-related metrics, such as the number of samples pushed, pulled, and filtered and the status of wire protocol traffic. Changes to this status information do not trigger a <b>DDSStatusCondition</b> (p. 1578).</p>

## Enumerator

DDS_DATA_READER_CACHE_STATUS	<< <i>extension</i> >> (p. 237) The status of the reader's cache. Changes to this status do not trigger a <b>DDSStatusCondition</b> (p. 1578).
DDS_DATA_READER_PROTOCOL_STATUS	<< <i>extension</i> >> (p. 237) The status of a reader's internal protocol related metrics The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic. Changes to this status do not trigger a <b>DDSStatusCondition</b> (p. 1578).
DDS_DATA_WRITER_SAMPLE_REMOVED_STATUS	<< <i>extension</i> >> (p. 237) A <b>DDSDataWriter</b> (p. 1321) has removed a sample from its queue. Enables a <b>DDSDataWriter</b> (p. 1321) callback that is called when a sample is removed from its queue.  Entity:  <b>DDSDataWriter</b> (p. 1321)  Listener:  <b>DDSDataWriterListener</b> (p. 1344)

## 7.97 Thread Settings

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

### Classes

- struct **DDS\_ThreadSettings\_t**  
*The properties of a thread of execution.*

### Macros

- #define **DDS\_THREAD\_SETTINGS\_KIND\_MASK\_DEFAULT**  
*The mask of default thread options.*

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_ThreadSettingsKindMask**  
*A mask of which each bit is taken from **DDS\_ThreadSettingsKind** (p. 352).*

## Enumerations

- enum `DDS_ThreadSettingsKind` {  
`DDS_THREAD_SETTINGS_FLOATING_POINT` ,  
`DDS_THREAD_SETTINGS_STUDIO` ,  
`DDS_THREAD_SETTINGS_REALTIME_PRIORITY` ,  
`DDS_THREAD_SETTINGS_PRIORITY_ENFORCE` ,  
`DDS_THREAD_SETTINGS_CANCEL_ASYNCHRONOUS` }

*A collection of flags used to configure threads of execution.*

- enum `DDS_ThreadSettingsCpuRotationKind` {  
`DDS_THREAD_SETTINGS_CPU_NO_ROTATION` ,  
`DDS_THREAD_SETTINGS_CPU_RR_ROTATION` }

*Determines how `DDS_ThreadSettings_t::cpu_list` (p. 1124) affects processor affinity for thread-related QoS policies that apply to multiple threads.*

### 7.97.1 Detailed Description

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

### 7.97.2 Macro Definition Documentation

#### 7.97.2.1 `DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT`

```
#define DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT
```

The mask of default thread options.

### 7.97.3 Typedef Documentation

#### 7.97.3.1 `DDS_ThreadSettingsKindMask`

```
typedef DDS_UnsignedLong DDS_ThreadSettingsKindMask
```

A mask of which each bit is taken from `DDS_ThreadSettingsKind` (p. 352).

See also

`DDS_ThreadSettings_t` (p. 1123)

## 7.97.4 Enumeration Type Documentation

### 7.97.4.1 DDS\_ThreadSettingsKind

enum `DDS_ThreadSettingsKind`

A collection of flags used to configure threads of execution.

Not all of these options may be relevant for all operating systems. Consult `Platform Notes` for additional details.

See also

`DDS_ThreadSettingsKindMask` (p. 351)

Enumerator

<code>DDS_THREAD_SETTINGS_FLOATING_POINT</code>	Code executed within the thread may perform floating point operations. Currently applicable only for VxWorks platforms, where user callbacks use floating-point operations.
<code>DDS_THREAD_SETTINGS_STDIO</code>	Code executed within the thread may access standard I/O. Currently applicable only for VxWorks platforms, where user callbacks do standard I/O operations.
<code>DDS_THREAD_SETTINGS_REALTIME_PRIORITY</code>	The thread will be scheduled on a FIFO basis.
<code>DDS_THREAD_SETTINGS_PRIORITY_ENFORCE</code>	Strictly enforce this thread's priority.
<code>DDS_THREAD_SETTINGS_CANCEL_↔ ASYNCHRONOUS</code>	Allows the thread to be cancelled without first reaching a cancellable state or cancellation point.

### 7.97.4.2 DDS\_ThreadSettingsCpuRotationKind

enum `DDS_ThreadSettingsCpuRotationKind`

Determines how `DDS_ThreadSettings_t::cpu_list` (p. 1124) affects processor affinity for thread-related QoS policies that apply to multiple threads.

## 7.97.5 Controlling CPU Core Affinity for RTI Threads

Most thread-related QoS settings apply to a single thread (such as for the `DDS_EventQosPolicy` (p. 908), `DDS_↔  
DatabaseQosPolicy` (p. 619), and `DDS_AsynchronousPublisherQosPolicy` (p. 590)). However, the thread settings in the `DDS_ReceiverPoolQosPolicy` (p. 1038) control every receive thread created. In this case, there are several schemes to map M threads to N processors; the rotation kind controls which scheme is used.

Controlling CPU Core Affinity is only relevant to the **DDS\_ReceiverPoolQoSPolicy** (p. 1038). It is ignored within other QoS policies that include **DDS\_ThreadSettings\_t** (p. 1123).

If **DDS\_ThreadSettings\_t::cpu\_list** (p. 1124) is empty, the rotation is irrelevant since no affinity adjustment will occur. Suppose instead that **DDS\_ThreadSettings\_t::cpu\_list** (p. 1124) = {0, 1} and that the middleware creates three receive threads: {A, B, C}. If **DDS\_ThreadSettings\_t::cpu\_rotation** (p. 1124) is **DDS\_THREAD\_SETTINGS\_CPU\_↔NO\_ROTATION** (p. 353), threads A, B and C will have the same processor affinities (0-1), and the OS will control thread scheduling within this bound. It is common to denote CPU affinities as a bitmask, where set bits represent allowed processors to run on. This mask is printed in hex, so a CPU core affinity of 0-1 can be represented by the mask 0x3.

If **DDS\_ThreadSettings\_t::cpu\_rotation** (p. 1124) is **DDS\_THREAD\_SETTINGS\_CPU\_RR\_ROTATION** (p. 353), each thread will be assigned in round-robin fashion to one of the processors in **DDS\_ThreadSettings\_t::cpu\_list** (p. 1124); perhaps thread A to 0, B to 1, and C to 0. Note that the order in which internal middleware threads spawn is unspecified.

Not all of these options may be relevant for all operating systems. Refer to the Platform Notes for further information.

#### Enumerator

DDS_THREAD_SETTINGS_CPU_NO_ROTATION	Any thread controlled by this QoS can run on any listed processor, as determined by OS scheduling.
DDS_THREAD_SETTINGS_CPU_RR_ROTATION	Threads controlled by this QoS will be assigned one processor from the list in round-robin order.

## 7.98 QoS Policies

Quality of Service (QoS) policies.

### Modules

- **ASYNCHRONOUS\_PUBLISHER**  
 <<extension>> (p. 237) Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1550) instances.
- **AVAILABILITY**  
 <<extension>> (p. 237) Configures the availability of data.
- **BATCH**  
 <<extension>> (p. 237) Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1321) instances.
- **DATABASE**  
 <<extension>> (p. 237) Various threads and resource limits settings used by RTI Connext to control its internal database.
- **DATA\_READER\_PROTOCOL**  
 <<extension>> (p. 237) Specifies the DataReader-specific protocol QoS.
- **DATA\_READER\_RESOURCE\_LIMITS**  
 <<extension>> (p. 237) Various settings that configure how DataReaders allocate and use physical memory for internal resources.
- **DATA\_REPRESENTATION**  
 A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288).

- **DATA\_TAG**  
Stores (name, value) pairs that can be used to determine access permissions.
- **DATA\_WRITER\_PROTOCOL**  
<<extension>> (p. 237) Along with **DDS\_WireProtocolQoSPolicy** (p. 1244) and **DDS\_DataReaderProtocolQoSPolicy** (p. 630), this QoS policy configures the DDS on-the-network protocol (RTPS).
- **DATA\_WRITER\_RESOURCE\_LIMITS**  
<<extension>> (p. 237) Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.
- **DATA\_WRITER\_TRANSFER\_MODE**  
<<extension>> (p. 237) Specifies the DataWriter transfer mode QoS.
- **DEADLINE**  
Expresses the maximum duration (deadline) within which an instance is expected to be updated.
- **DESTINATION\_ORDER**  
Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1550) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1617) and key).
- **DISCOVERY**  
<<extension>> (p. 237) Specifies the attributes required to discover participants in the domain.
- **DISCOVERY\_CONFIG**  
<<extension>> (p. 237) Specifies the discovery configuration QoS.
- **DOMAIN\_PARTICIPANT\_RESOURCE\_LIMITS**  
<<extension>> (p. 237) Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.
- **DURABILITY**  
This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.
- **DURABILITY\_SERVICE**  
Various settings to configure the external RTI Persistence Service used by RTI Connext for DataWriters with a **DDS\_DurabilityQoSPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401).
- **ENTITY\_FACTORY**  
A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.
- **ENTITY\_NAME**  
<<extension>> (p. 237) Assigns a name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.
- **EVENT**  
<<extension>> (p. 237) Configures the internal thread in a DomainParticipant that handles timed events.
- **HISTORY**  
Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.
- **GROUP\_DATA**  
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.
- **LATENCY\_BUDGET**  
Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.
- **LIFESPAN**  
Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.
- **LIVELINESS**

Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead".

- **LOCATORFILTER**

<<extension>> (p. 237) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS↔\_PublicationBuiltinTopicData** (p. 1010).

- **LOGGING**

<<extension>> (p. 237) Configures the RTI Connex logging facility.

- **MONITORING**

Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connex telemetry data.

- **MULTICHANNEL**

<<extension>> (p. 237) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

- **OWNERSHIP**

Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

- **OWNERSHIP\_STRENGTH**

Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).

- **PARTITION**

Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) entities.

- **PRESENTATION**

Specifies how the samples representing changes to data instances are presented to a subscribing application.

- **PROFILE**

<<extension>> (p. 237) Configures the way that XML documents containing QoS profiles are loaded by RTI Connex.

- **PROPERTY**

<<extension>> (p. 237) Stores (name, value) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

- **PUBLISH\_MODE**

<<extension>> (p. 237) Specifies how RTI Connex sends application data on the network. This QoS policy can be used to tell RTI Connex to use its own thread to send data, instead of the user thread.

- **READER\_DATA\_LIFECYCLE**

Controls how a DataReader manages the lifecycle of the data that it has received.

- **RECEIVER\_POOL**

<<extension>> (p. 237) Configures threads used by RTI Connex to receive and process data from transports (for example, UDP sockets).

- **RELIABILITY**

Indicates the level of reliability offered/requested by RTI Connex.

- **RESOURCE\_LIMITS**

Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

- **SERVICE**

<<extension>> (p. 237) Service QoS policy is used to indicate what kind of service is associated with the DDS entity.

- **SYSTEM\_RESOURCE\_LIMITS**

<<extension>> (p. 237) Configures DomainParticipant-independent resources used by RTI Connex.

- **TIME\_BASED\_FILTER**

Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.

- **TOPIC\_DATA**

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

- **TOPIC\_QUERY\_DISPATCH**

Configures the ability of a **DDSDataWriter** (p. 1321) to publish historical samples.

- **TRANSPORT\_BUILTIN**

<<**extension**>> (p. 237) Specifies which built-in transports are used.

- **TRANSPORT\_MULTICAST**

<<**extension**>> (p. 237) Specifies the multicast address on which a **DDSDataReader** (p. 1288) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1351) level) transports with which to receive the multicast data.

- **TRANSPORT\_MULTICAST\_MAPPING**

<<**extension**>> (p. 237) Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

- **TRANSPORT\_PRIORITY**

This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

- **TRANSPORT\_SELECTION**

<<**extension**>> (p. 237) Specifies the physical transports that a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.

- **TRANSPORT\_UNICAST**

<<**extension**>> (p. 237) Specifies a subset of transports and a port number that can be used by an Entity to receive data.

- **TYPE\_CONSISTENCY\_ENFORCEMENT**

Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

- **TYPESUPPORT**

<<**extension**>> (p. 237) Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

- **USER\_DATA**

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

- **WRITER\_DATA\_LIFECYCLE**

Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

- **WIRE\_PROTOCOL**

<<**extension**>> (p. 237) Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1351).

- **Extended QoS Support**

<<**extension**>> (p. 237) Types and defines used in extended QoS policies.

## Classes

- struct **DDS\_QoSPrintFormat**

A collection of attributes used to configure how a QoS appears when printed.

- struct **DDS\_QoSPolicyCount**

Type to hold a counter for a **DDS\_QoSPolicyId\_t** (p. 360).

- struct **DDS\_QoSPolicyCountSeq**

Declares IDL sequence < **DDS\_QoSPolicyCount** (p. 1029) >

## Macros

- `#define DDS_QosPrintFormat_INITIALIZER`  
*Static initializer for `DDS_QosPrintFormat` (p. 1031).*
- `#define DDS_QOS_POLICY_COUNT`  
*Number of QoS policies in `DDS_QosPolicyId_t` (p. 360).*

## Enumerations

*Type to identify QoS Policies.*

### 7.98.1 Detailed Description

Quality of Service (QoS) policies.

Data Distribution Service (DDS) relies on the use of QoS. A QoS is a set of characteristics that controls some aspect of the behavior of DDS. A QoS is comprised of individual QoS policies (objects conceptually deriving from an *abstract QoSPolicy* class).

"Supported QoS policies"

The QoSPolicy provides the basic mechanism for an application to specify quality of service parameters. It has an attribute name that is used to uniquely identify each QoSPolicy.

QoSPolicy implementation is comprised of a name, an ID, and a type. The type of a QoSPolicy value may be atomic, such as an integer or float, or compound (a structure). Compound types are used whenever multiple parameters must be set coherently to define a consistent value for a QoSPolicy.

QoS (i.e., a list of QoSPolicy objects) may be associated with all **DDSEntity** (p. 1463) objects in the system such as **DDSTopic** (p. 1617), **DDSDataWriter** (p. 1321), **DDSDataReader** (p. 1288), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), and **DDSDomainParticipant** (p. 1351).

## 7.98.2 Specifying QoS on entities

QoS Policies can be set programmatically when an **DDSEntity** (p. 1463) is created, or modified with the **DDSEntity** (p. 1463)'s **set\_qos (abstract)** (p. 1464) method.

QoS Policies can also be configured from XML resources (files, strings). With this approach, you can change the QoS without recompiling the application. For more information, see **Configuring QoS Profiles with XML** (p. 197).

To customize a **DDSEntity** (p. 1463)'s QoS before creating the entity, the correct pattern is:

- First, initialize a QoS object with the appropriate INITIALIZER constructor.
- Call the relevant `get_<entity>_default_qos()` method.
- Modify the QoS values as desired.
- Finally, create the entity.

Each `QoSPolicy` is treated independently from the others. This approach has the advantage of being very extensible. However, there may be cases where several policies are in conflict. Consistency checking is performed each time the policies are modified via the **set\_qos (abstract)** (p. 1464) operation, or when the **DDSEntity** (p. 1463) is created.

When a policy is changed after being set to a given value, it is not required that the new value be applied instantaneously; RTI Connext is allowed to apply it after a transition phase. In addition, some `QoSPolicy` have immutable semantics, meaning that they can only be specified either at **DDSEntity** (p. 1463) creation time or else prior to calling the **DDSEntity::enable** (p. 1466) operation on the entity.

Each **DDSEntity** (p. 1463) can be configured with a list of `QoSPolicy` objects. However, not all QoS Policies are supported by each **DDSEntity** (p. 1463). For instance, a **DDSDomainParticipant** (p. 1351) supports a different set of QoS Policies than a **DDSTopic** (p. 1617) or a **DDSPublisher** (p. 1550).

Additional properties that are not exposed through the formal QoS policies can also be set for an **DDSEntity** (p. 1463) via the **DDS\_PropertyQoSPolicy** (p. 1007). These properties are described in the `Property Reference Guide`.

## 7.98.3 QoS compatibility

In several cases, for communications to occur properly (or efficiently), a `QoSPolicy` on the publisher side must be compatible with a corresponding policy on the subscriber side. For example, if a **DDSSubscriber** (p. 1592) requests to receive data reliably while the corresponding **DDSPublisher** (p. 1550) defines a best-effort policy, communication will not happen as requested.

To address this issue and maintain the desirable decoupling of publication and subscription as much as possible, the `QoSPolicy` specification follows the **subscriber-requested, publisher-offered pattern**.

In this pattern, the subscriber side can specify a "requested" value for a particular `QoSPolicy`. The publisher side specifies an "offered" value for that `QoSPolicy`. RTI Connext will then determine whether the value requested by the subscriber side is compatible with what is offered by the publisher side. If the two policies are compatible, then communication will be established. If the two policies are not compatible, RTI Connext will not establish communications between the two **DDSEntity** (p. 1463) objects and will record this fact by means of the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) on the publisher end and **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) on the subscriber end. The application can detect this fact by means of a **DDSListener** (p. 1526) or a **DDSCondition** (p. 1276).

The following **properties** are defined on a `QoSPolicy`.

- **RxO (p. 360) property**

The QoSPolicy objects that need to be set in a compatible manner between the **publisher** and **subscriber** end are indicated by the setting of the **RxO** (p. 360) property:

- **RxO** (p. 360) = **YES**

indicates that the policy can be set both at the publishing and subscribing ends and the values must be set in a compatible manner. In this case the compatible values are explicitly defined.

- **RxO** (p. 360) = **NO**

indicates that the policy can be set both at the publishing and subscribing ends but the two settings are independent. That is, all combinations of values are compatible.

- **RxO** (p. 360) = **N/A**

indicates that the policy can only be specified at either the publishing or the subscribing end, but not at both ends. So compatibility does not apply.

- **Changeable (p. 360)property**

Determines whether a QoSPolicy can be changed.

- **NO** (p. 360) -- policy can only be specified at **DDSEntity** (p. 1463) creation time.

- **UNTIL ENABLE** (p. 360) -- policy can only be changed before the **DDSEntity** (p. 1463) is enabled.

- **YES** (p. 360) -- policy can be changed at any time.

## 7.98.4 Macro Definition Documentation

### 7.98.4.1 DDS\_QoSPrintFormat\_INITIALIZER

```
#define DDS_QoSPrintFormat_INITIALIZER
```

Static initializer for **DDS\_QoSPrintFormat** (p. 1031).

Use this initializer to ensure that new objects do not have uninitialized contents.

```
struct DDS_QoSPrintFormat format = DDS_QoSPrintFormat_INITIALIZER;
```

See also

**DDS\_QoSPrintFormat** (p. 1031)

### 7.98.4.2 DDS\_QOS\_POLICY\_COUNT

```
#define DDS_QOS_POLICY_COUNT
```

Number of QoS policies in **DDS\_QoSPolicyId\_t** (p. 360).

## 7.98.5 Enumeration Type Documentation

### 7.98.5.1 DDS\_QoSPolicyId\_t

```
enum DDS_QoSPolicyId_t
```

Type to identify QoS Policies.

## Enumerator

DDS_INVALID_QOS_POLICY_ID	Identifier for an invalid QoS policy.
DDS_USERDATA_QOS_POLICY_ID	Identifier for <b>DDS_UserDataQosPolicy</b> (p. 1237).
DDS_DURABILITY_QOS_POLICY_ID	Identifier for <b>DDS_DurabilityQosPolicy</b> (p. 767).
DDS_PRESENTATION_QOS_POLICY_ID	Identifier for <b>DDS_PresentationQosPolicy</b> (p. 996).
DDS_DEADLINE_QOS_POLICY_ID	Identifier for <b>DDS_DeadlineQosPolicy</b> (p. 707).
DDS_LATENCYBUDGET_QOS_POLICY_ID	Identifier for <b>DDS_LatencyBudgetQosPolicy</b> (p. 929).
DDS_OWNERSHIP_QOS_POLICY_ID	Identifier for <b>DDS_OwnershipQosPolicy</b> (p. 973).
DDS_OWNERSHIPSTRENGTH_QOS_POLICY_ID	Identifier for <b>DDS_OwnershipStrengthQosPolicy</b> (p. 978).
DDS_LIVELINESS_QOS_POLICY_ID	Identifier for <b>DDS_LivelinessQosPolicy</b> (p. 936).
DDS_TIMEBASEDFILTER_QOS_POLICY_ID	Identifier for <b>DDS_TimeBasedFilterQosPolicy</b> (p. 1126).
DDS_PARTITION_QOS_POLICY_ID	Identifier for <b>DDS_PartitionQosPolicy</b> (p. 989).
DDS_RELIABILITY_QOS_POLICY_ID	Identifier for <b>DDS_ReliabilityQosPolicy</b> (p. 1041).
DDS_DESTINATIONORDER_QOS_POLICY_ID	Identifier for <b>DDS_DestinationOrderQosPolicy</b> (p. 709).
DDS_HISTORY_QOS_POLICY_ID	Identifier for <b>DDS_HistoryQosPolicy</b> (p. 919).
DDS_RESOURCELIMITS_QOS_POLICY_ID	Identifier for <b>DDS_ResourceLimitsQosPolicy</b> (p. 1052).
DDS_ENTITYFACTORY_QOS_POLICY_ID	Identifier for <b>DDS_EntityFactoryQosPolicy</b> (p. 903).
DDS_WRITERDATALIFECYCLE_QOS_POLICY_ID	Identifier for <b>DDS_WriterDataLifecycleQosPolicy</b> (p. 1256).
DDS_READERDATALIFECYCLE_QOS_POLICY_ID	Identifier for <b>DDS_ReaderDataLifecycleQosPolicy</b> (p. 1035).
DDS_TOPICDATA_QOS_POLICY_ID	Identifier for <b>DDS_TopicDataQosPolicy</b> (p. 1133).
DDS_GROUPDATA_QOS_POLICY_ID	Identifier for <b>DDS_GroupDataQosPolicy</b> (p. 916).
DDS_TRANSPORTPRIORITY_QOS_POLICY_ID	Identifier for <b>DDS_TransportPriorityQosPolicy</b> (p. 1155).
DDS_LIFESPAN_QOS_POLICY_ID	Identifier for <b>DDS_LifespanQosPolicy</b> (p. 931).
DDS_DURABILITYSERVICE_QOS_POLICY_ID	Identifier for <b>DDS_DurabilityServiceQosPolicy</b> (p. 771).
DDS_DATA_REPRESENTATION_QOS_POLICY_ID	Identifier for <b>DDS_DataRepresentationQosPolicy</b> (p. 668).
DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_ID	Identifier for <b>DDS_TypeConsistencyEnforcementQosPolicy</b> (p. 1228).
DDS_DATATAG_QOS_POLICY_ID	Identifier for <b>DDS_DataTagQosPolicy</b> (p. 377).
DDS_WIREPROTOCOL_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_WireProtocolQosPolicy</b> (p. 1244)
DDS_DISCOVERY_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DiscoveryQosPolicy</b> (p. 731)
DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 654)
DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DataWriterResourceLimitsQosPolicy</b> (p. 698)

## Enumerator

DDS_DATAREADERPROTOCOL_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DataReaderProtocolQosPolicy</b> (p. 630)
DDS_DATAWRITERPROTOCOL_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DataWriterProtocolQosPolicy</b> (p. 673)
DDS_DOMAINPARTICIPANTRESOURCELIMITS_↔ QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DomainParticipantResourceLimitsQosPolicy</b> (p. 746)
DDS_EVENT_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_EventQosPolicy</b> (p. 908)
DDS_DATABASE_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DatabaseQosPolicy</b> (p. 619)
DDS_RECEIVERPOOL_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_ReceiverPoolQosPolicy</b> (p. 1038)
DDS_DISCOVERYCONFIG_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DiscoveryConfigQosPolicy</b> (p. 712)
DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_SystemResourceLimitsQosPolicy</b> (p. 1120)
DDS_TRANSPORTSELECTION_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TransportSelectionQosPolicy</b> (p. 1157)
DDS_TRANSPORTUNICAST_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TransportUnicastQosPolicy</b> (p. 1158)
DDS_TRANSPORTMULTICAST_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TransportMulticastQosPolicy</b> (p. 1151)
DDS_TRANSPORTBUILTIN_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TransportBuiltinQosPolicy</b> (p. 1144)
DDS_TYPESUPPORT_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TypeSupportQosPolicy</b> (p. 1232)
DDS_PROPERTY_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_PropertyQosPolicy</b> (p. 1007)
DDS_PUBLISHMODE_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_PublishModeQosPolicy</b> (p. 1025)
DDS_ASYNCHRONOUSPUBLISHER_QOS_↔ POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_AsynchronousPublisherQosPolicy</b> (p. 590)
DDS_ENTITYNAME_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_EntityNameQosPolicy</b> (p. 905)
DDS_BATCH_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_BatchQosPolicy</b> (p. 600)
DDS_PROFILE_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_ProfileQosPolicy</b> (p. 1004)
DDS_LOCATORFILTER_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_LocatorFilterQosPolicy</b> (p. 941)
DDS_MULTICHANNEL_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_MultiChannelQosPolicy</b> (p. 964)
DDS_AVAILABILITY_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_AvailabilityQosPolicy</b> (p. 596)
DDS_TRANSPORTMULTICASTMAPPING_QOS_↔ POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TransportMulticastMappingQosPolicy</b> (p. 1149)

## Enumerator

DDS_LOGGING_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_LoggingQosPolicy</b> (p. 943)
DDS_TOPICQUERYDISPATCH_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_TopicQueryDispatchQosPolicy</b> (p. 1141)
DDS_DATAWRITERTRANSFERMODE_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_DataWriterTransferModeQosPolicy</b> (p. 706)
DDS_MONITORING_QOS_POLICY_ID	<< <i>extension</i> >> (p. 237) Identifier for <b>DDS_MonitoringQosPolicy</b> (p. 962)

## 7.99 ASYNCHRONOUS\_PUBLISHER

<<*extension*>> (p. 237) Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1550) instances.

### Classes

- struct **DDS\_AsynchronousPublisherQosPolicy**  
*Configures the mechanism that sends user data in an external middleware thread.*

### Variables

- const char \*const **DDS\_ASYNCHRONOUSPUBLISHER\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_AsynchronousPublisherQosPolicy** (p. 590).*

#### 7.99.1 Detailed Description

<<*extension*>> (p. 237) Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1550) instances.

#### 7.99.2 Variable Documentation

##### 7.99.2.1 DDS\_ASYNCHRONOUSPUBLISHER\_QOS\_POLICY\_NAME

```
const char* const DDS_ASYNCHRONOUSPUBLISHER_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_AsynchronousPublisherQosPolicy** (p. 590).

## 7.100 AVAILABILITY

<<*extension*>> (p. 237) Configures the availability of data.

### Classes

- struct **DDS\_EndpointGroup\_t**  
*Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.*
- struct **DDS\_EndpointGroupSeq**  
*A sequence of **DDS\_EndpointGroup\_t** (p. 900).*
- struct **DDS\_AvailabilityQosPolicy**  
*Configures the availability of data.*

### Variables

- const char \*const **DDS\_AVAILABILITY\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_AvailabilityQosPolicy** (p. 596).*

#### 7.100.1 Detailed Description

<<*extension*>> (p. 237) Configures the availability of data.

#### 7.100.2 Variable Documentation

##### 7.100.2.1 DDS\_AVAILABILITY\_QOS\_POLICY\_NAME

```
const char* const DDS_AVAILABILITY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_AvailabilityQosPolicy** (p. 596).

## 7.101 BATCH

<<*extension*>> (p. 237) Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1321) instances.

### Classes

- struct **DDS\_BatchQosPolicy**  
*Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.*

## Variables

- const char \*const **DDS\_BATCH\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_BatchQosPolicy** (p. 600).*

### 7.101.1 Detailed Description

<<**extension**>> (p. 237) Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1321) instances.

### 7.101.2 Variable Documentation

#### 7.101.2.1 DDS\_BATCH\_QOS\_POLICY\_NAME

```
const char* const DDS_BATCH_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_BatchQosPolicy** (p. 600).

## 7.102 DATABASE

<<**extension**>> (p. 237) Various threads and resource limits settings used by RTI Connex to control its internal database.

## Classes

- struct **DDS\_DatabaseQosPolicy**  
*Various threads and resource limits settings used by RTI Connex to control its internal database.*

## Variables

- const char \*const **DDS\_DATABASE\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DatabaseQosPolicy** (p. 619).*

### 7.102.1 Detailed Description

<<**extension**>> (p. 237) Various threads and resource limits settings used by RTI Connex to control its internal database.

## 7.102.2 Variable Documentation

### 7.102.2.1 DDS\_DATABASE\_QOS\_POLICY\_NAME

```
const char* const DDS_DATABASE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DatabaseQosPolicy** (p. 619).

## 7.103 DATA\_READER\_PROTOCOL

<<*extension*>> (p. 237) Specifies the DataReader-specific protocol QoS.

### Classes

- struct **DDS\_DataReaderProtocolQosPolicy**

*Along with **DDS\_WireProtocolQosPolicy** (p. 1244) and **DDS\_DataWriterProtocolQosPolicy** (p. 673), this QoS policy configures the DDS on-the-network protocol (RTPS).*

### Variables

- const char \*const **DDS\_DATAREADERPROTOCOL\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_DataReaderProtocolQosPolicy** (p. 630).*

### 7.103.1 Detailed Description

<<*extension*>> (p. 237) Specifies the DataReader-specific protocol QoS.

### 7.103.2 Variable Documentation

#### 7.103.2.1 DDS\_DATAREADERPROTOCOL\_QOS\_POLICY\_NAME

```
const char* const DDS_DATAREADERPROTOCOL_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataReaderProtocolQosPolicy** (p. 630).

## 7.104 DATA\_READER\_RESOURCE\_LIMITS

<<**extension**>> (p. 237) Various settings that configure how DataReaders allocate and use physical memory for internal resources.

### Classes

- struct **DDS\_DataReaderResourceLimitsInstanceReplacementSettings**  
*Instance replacement kind applied to each instance state.*
- struct **DDS\_DataReaderResourceLimitsQosPolicy**  
*Various settings that configure how a **DDSDataReader** (p. 1288) allocates and uses physical memory for internal resources.*

### Enumerations

- enum **DDS\_DataReaderInstanceRemovalKind** {  
**DDS\_NO\_INSTANCE\_REMOVAL** = PRES\_NO\_INSTANCE\_REMOVAL ,  
**DDS\_EMPTY\_INSTANCE\_REMOVAL** = PRES\_EMPTY\_INSTANCE\_REMOVAL ,  
**DDS\_FULLY\_PROCESSED\_INSTANCE\_REMOVAL** = PRES\_FULLY\_PROCESSED\_INSTANCE\_REMOVAL ,  
**DDS\_ANY\_INSTANCE\_REMOVAL** = PRES\_ANY\_INSTANCE\_REMOVAL }  
*Sets the kinds of instances that can be replaced when instance resource limits (**DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055)) are reached.*

### Variables

- const char \*const **DDS\_DATAREADERRESOURCELIMITS\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).*
- const **DDS\_Long DDS\_AUTO\_MAX\_TOTAL\_INSTANCES**  
<<**extension**>> (p. 237) *This value is used to make **DDS\_DataReaderResourceLimitsQosPolicy::max\_total\_instances** (p. 661) equal to **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055).*

### 7.104.1 Detailed Description

<<**extension**>> (p. 237) Various settings that configure how DataReaders allocate and use physical memory for internal resources.

### 7.104.2 Enumeration Type Documentation

#### 7.104.2.1 DDS\_DataReaderInstanceRemovalKind

```
enum DDS_DataReaderInstanceRemovalKind
```

Sets the kinds of instances that can be replaced when instance resource limits (**DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055)) are reached.

See also

**DDS\_DataReaderResourceLimitsQosPolicy::instance\_replacement** (p. 666)

## Enumerator

DDS_NO_INSTANCE_REMOVAL	<p>No instance can be removed. If an instance resource is required because <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1055) is reached, this setting will disallow instances from being replaced. Samples for new instances will be dropped and reported as lost with reason <b>DDS_LOST_BY_INSTANCES_LIMIT</b> (p. 136).</p>
DDS_EMPTY_INSTANCE_REMOVAL	<p>Only empty instances can be removed. Instances can be replaced only if they are empty. An instance is considered empty when all samples have been taken or removed from the DataReader queue due to the <b>DDS_LifespanQosPolicy</b> (p. 931) or sample purging due to the <b>DDS_ReaderDataLifecycleQosPolicy</b> (p. 1035), and there are no outstanding loans on any of the instance's samples.</p>
DDS_FULLY_PROCESSED_INSTANCE_REMOVAL	<p>Only fully-processed instances can be removed. An instance is considered fully processed if every sample for the instance has been processed by the application. A sample is considered processed by the application depending on the <b>DDS_ReliabilityQosPolicy::kind</b> (p. 1043):</p> <ul style="list-style-type: none"> <li>• <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435) (depends on the <b>DDS_ReliabilityQosPolicy</b>↔ <b>AcknowledgmentModeKind</b> (p. 435)):       <ul style="list-style-type: none"> <li>– <b>DDS_PROTOCOL</b>↔ <b>ACKNOWLEDGMENT_MODE</b> (p. 435) or <b>DDS_APPLICATION_AUTO</b>↔ <b>ACKNOWLEDGMENT_MODE</b> (p. 435): The sample is considered processed when it has been read or taken by the application and <code>return_loan</code> has been called.</li> <li>– <b>DDS_APPLICATION_EXPLICIT</b>↔ <b>ACKNOWLEDGMENT_MODE</b> (p. 436): The sample is considered processed when the subscribing application has explicitly acknowledged the DDS sample, the <code>AppAckConf</code> has been received, and the application has called <code>return_loan</code>.</li> </ul> </li> <li>• <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 435): All samples are considered processed when they have been read or taken by the application and <code>return_loan</code> has been called.</li> </ul>
DDS_ANY_INSTANCE_REMOVAL	<p>Any instance can be removed. Instances can be replaced regardless of whether the subscribing application has processed all of the samples. Samples that have not been processed will be removed.</p>

### 7.104.3 Variable Documentation

#### 7.104.3.1 DDS\_DATAREADERRESOURCELIMITS\_QOS\_POLICY\_NAME

```
const char* const DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).

#### 7.104.3.2 DDS\_AUTO\_MAX\_TOTAL\_INSTANCES

```
const DDS_Long DDS_AUTO_MAX_TOTAL_INSTANCES [extern]
```

<<**extension**>> (p. 237) This value is used to make **DDS\_DataReaderResourceLimitsQosPolicy::max\_total\_instances** (p. 661) equal to **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055).

## 7.105 DATA\_REPRESENTATION

A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288).

### Modules

- **Compression Settings**

<<**extension**>> (p. 237) *Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.*

### Classes

- struct **DDS\_DataRepresentationIdSeq**

*Declares IDL sequence < DDS\_DataRepresentationId\_t (p. 370) >*

- struct **DDS\_DataRepresentationQosPolicy**

*This QoS policy contains a list of representation identifiers and compression settings used by DDSDataWriter (p. 1321) and DDSDataReader (p. 1288) entities to negotiate which data representation and compression settings to use.*

### Typedefs

- typedef **DDS\_Short DDS\_DataRepresentationId\_t**

*A two-byte signed integer that identifies a data representation.*

## Variables

- const **DDS\_DataRepresentationId\_t DDS\_XCDR\_DATA\_REPRESENTATION**  
*Corresponds to the Extended Common Data Representation encoding version 1.*
- const **DDS\_DataRepresentationId\_t DDS\_XML\_DATA\_REPRESENTATION**  
*Corresponds to the XML Data Representation (unsupported).*
- const **DDS\_DataRepresentationId\_t DDS\_XCDR2\_DATA\_REPRESENTATION**  
*Corresponds to the Extended Common Data Representation encoding version 2.*
- const **DDS\_DataRepresentationId\_t DDS\_AUTO\_DATA\_REPRESENTATION**  
*Representation is automatically chosen based on the type.*
- const char \*const **DDS\_DATA\_REPRESENTATION\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DataRepresentationQosPolicy** (p. 668).*

### 7.105.1 Detailed Description

A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288).

### 7.105.2 Typedef Documentation

#### 7.105.2.1 DDS\_DataRepresentationId\_t

```
typedef DDS_Short DDS_DataRepresentationId_t
```

A two-byte signed integer that identifies a data representation.

### 7.105.3 Variable Documentation

#### 7.105.3.1 DDS\_XCDR\_DATA\_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XCDR_DATA_REPRESENTATION [extern]
```

Corresponds to the Extended Common Data Representation encoding version 1.

### 7.105.3.2 DDS\_XML\_DATA\_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XML_DATA_REPRESENTATION [extern]
```

Corresponds to the XML Data Representation (unsupported).

#### Note

This value is currently not supported.

### 7.105.3.3 DDS\_XCDR2\_DATA\_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XCDR2_DATA_REPRESENTATION [extern]
```

Corresponds to the Extended Common Data Representation encoding version 2.

### 7.105.3.4 DDS\_AUTO\_DATA\_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_AUTO_DATA_REPRESENTATION [extern]
```

Representation is automatically chosen based on the type.

For plain language binding, if the `allowed_data_representation` annotation is not specified or if it contains the value XCDR, RTI Connexx translates this field to **DDS\_XCDR\_DATA\_REPRESENTATION** (p.370). Otherwise, it translates this field to **DDS\_XCDR2\_DATA\_REPRESENTATION** (p.371).

For the **FlatData language binding** (p.568), RTI Connexx translates this field to **DDS\_XCDR2\_DATA\_↔ REPRESENTATION** (p.371).

#### Examples

```
HelloWorldPlugin.cxx.
```

### 7.105.3.5 DDS\_DATA\_REPRESENTATION\_QOS\_POLICY\_NAME

```
const char* const DDS_DATA_REPRESENTATION_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataRepresentationQosPolicy** (p.668).

## 7.106 Compression Settings

<<*extension*>> (p. 237) Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.

### Classes

- struct **DDS\_CompressionSettings\_t**  
<<*extension*>> (p. 237) Settings related to compressing user data.

### Macros

- #define **DDS\_COMPRESSION\_ID\_MASK\_NONE** (( **DDS\_CompressionIdMask**) (0))  
<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) used to disable user-data compression for an endpoint.
- #define **DDS\_COMPRESSION\_ID\_MASK\_ALL**  
<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with all the supported built-in compression algorithms enabled.
- #define **DDS\_COMPRESSION\_LEVEL\_BEST\_COMPRESSION** (10)  
<<*extension*>> (p. 237) The best compression ratio possible for a compression algorithm.
- #define **DDS\_COMPRESSION\_LEVEL\_BEST\_SPEED** (1)  
<<*extension*>> (p. 237) The best compression speed possible for a compression algorithm.
- #define **DDS\_COMPRESSION\_LEVEL\_DEFAULT** **DDS\_COMPRESSION\_LEVEL\_BEST\_COMPRESSION**  
<<*extension*>> (p. 237) Default level of compression.
- #define **DDS\_COMPRESSION\_THRESHOLD\_DEFAULT** 8192  
<<*extension*>> (p. 237) Default threshold from which a serialized sample will be eligible to be compressed.
- #define **DDS\_COMPRESSION\_ID\_MASK\_PUBLICATION\_DEFAULT** **DDS\_COMPRESSION\_ID\_MASK\_↔**  
**NONE**  
<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with the default value for publication.
- #define **DDS\_COMPRESSION\_ID\_MASK\_SUBSCRIPTION\_DEFAULT**  
<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with the default value for subscription.

### Typedefs

- typedef **DDS\_UnsignedLong** **DDS\_CompressionId\_t**  
<<*extension*>> (p. 237) A four-byte signed integer that identifies a single compression algorithm.
- typedef **DDS\_UnsignedLong** **DDS\_CompressionIdMask**  
<<*extension*>> (p. 237) A four-byte signed integer that identifies a mask of the compression IDs that the algorithms enabled.

### Variables

- const **DDS\_CompressionId\_t** **DDS\_COMPRESSION\_ID\_ZLIB**  
<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm ZLIB. This is the only built-in compression algorithm that is supported when batching is enabled.
- const **DDS\_CompressionId\_t** **DDS\_COMPRESSION\_ID\_BZIP2**  
<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm BZIP2.
- const **DDS\_CompressionId\_t** **DDS\_COMPRESSION\_ID\_LZ4**  
<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm LZ4.

## 7.106.1 Detailed Description

<<*extension*>> (p. 237) Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.

## 7.106.2 Macro Definition Documentation

### 7.106.2.1 DDS\_COMPRESSION\_ID\_MASK\_NONE

```
#define DDS_COMPRESSION_ID_MASK_NONE (( DDS_CompressionIdMask) (0))
```

<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) used to disable user-data compression for an endpoint.

### 7.106.2.2 DDS\_COMPRESSION\_ID\_MASK\_ALL

```
#define DDS_COMPRESSION_ID_MASK_ALL
```

**Value:**

```
((DDS_CompressionIdMask) \  
 (DDS_COMPRESSION_ID_ZLIB_BIT | DDS_COMPRESSION_ID_BZIP2_BIT \  
 | DDS_COMPRESSION_ID_LZ4_BIT))
```

<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with all the supported built-in compression algorithms enabled.

### 7.106.2.3 DDS\_COMPRESSION\_LEVEL\_BEST\_COMPRESSION

```
#define DDS_COMPRESSION_LEVEL_BEST_COMPRESSION (10)
```

<<*extension*>> (p. 237) The best compression ratio possible for a compression algorithm.

See also

**DDS\_CompressionSettings\_t::writer\_compression\_level** (p. 615)

#### 7.106.2.4 DDS\_COMPRESSION\_LEVEL\_BEST\_SPEED

```
#define DDS_COMPRESSION_LEVEL_BEST_SPEED (1)
```

<<**extension**>> (p. 237) The best compression speed possible for a compression algorithm.

See also

**DDS\_CompressionSettings\_t::writer\_compression\_level** (p. 615)

#### 7.106.2.5 DDS\_COMPRESSION\_LEVEL\_DEFAULT

```
#define DDS_COMPRESSION_LEVEL_DEFAULT DDS_COMPRESSION_LEVEL_BEST_COMPRESSION
```

<<**extension**>> (p. 237) Default level of compression.

See also

**DDS\_CompressionSettings\_t::writer\_compression\_level** (p. 615)

#### 7.106.2.6 DDS\_COMPRESSION\_THRESHOLD\_DEFAULT

```
#define DDS_COMPRESSION_THRESHOLD_DEFAULT 8192
```

<<**extension**>> (p. 237) Default threshold from which a serialized sample will be eligible to be compressed.

See also

**DDS\_CompressionSettings\_t::writer\_compression\_threshold** (p. 616)

This value has been decided after some performance tests, it's a prudent value that will ensure, in most cases with all of the algorithms, that we are going to compress the sample.

#### 7.106.2.7 DDS\_COMPRESSION\_ID\_MASK\_PUBLICATION\_DEFAULT

```
#define DDS_COMPRESSION_ID_MASK_PUBLICATION_DEFAULT DDS_COMPRESSION_ID_MASK_NONE
```

<<**extension**>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with the default value for publication.

See also

**DDS\_CompressionSettings\_t::compression\_ids** (p. 615)

**DDS\_COMPRESSION\_ID\_MASK\_SUBSCRIPTION\_DEFAULT** (p. 374)

### 7.106.2.8 DDS\_COMPRESSION\_ID\_MASK\_SUBSCRIPTION\_DEFAULT

```
#define DDS_COMPRESSION_ID_MASK_SUBSCRIPTION_DEFAULT
```

**Value:**

```
(DDS_COMPRESSION_ID_ZLIB_BIT | DDS_COMPRESSION_ID_BZIP2_BIT \  
 | DDS_COMPRESSION_ID_LZ4_BIT)
```

<<*extension*>> (p. 237) **DDS\_CompressionIdMask** (p. 375) mask with the default value for subscription.

See also

**DDS\_CompressionSettings\_t::compression\_ids** (p. 615)

**DDS\_COMPRESSION\_ID\_MASK\_PUBLICATION\_DEFAULT** (p. 374)

## 7.106.3 Typedef Documentation

### 7.106.3.1 DDS\_CompressionId\_t

```
typedef DDS_UnsignedLong DDS_CompressionId_t
```

<<*extension*>> (p. 237) A four-byte signed integer that identifies a single compression algorithm.

### 7.106.3.2 DDS\_CompressionIdMask

```
typedef DDS_UnsignedLong DDS_CompressionIdMask
```

<<*extension*>> (p. 237) A four-byte signed integer that identifies a mask of the compression IDs that the algorithms enabled.

## 7.106.4 Variable Documentation

### 7.106.4.1 DDS\_COMPRESSION\_ID\_ZLIB

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_ZLIB [extern]
```

<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm ZLIB. This is the only built-in compression algorithm that is supported when batching is enabled.

### 7.106.4.2 DDS\_COMPRESSION\_ID\_BZIP2

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_BZIP2 [extern]
```

<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm BZIP2.

### 7.106.4.3 DDS\_COMPRESSION\_ID\_LZ4

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_LZ4 [extern]
```

<<*extension*>> (p. 237) Corresponds to the ID of the compression algorithm LZ4.

## 7.107 DATA\_TAG

Stores (name, value) pairs that can be used to determine access permissions.

### Classes

- struct **DDS\_Tag**  
*Tags are name/value pair objects.*
- struct **DDS\_TagSeq**  
*Declares IDL sequence < DDS\_Tag (p. 1122) >*
- struct **DDS\_DataTags**  
*Definition of DDS\_DataTagQosPolicy (p. 377).*
- class **DDSDataTagQosPolicyHelper**  
*Policy helpers that facilitate management of the data tags in the input policy.*

### Typedefs

- typedef struct **DDS\_DataTags DDS\_DataTagQosPolicy**  
*Stores (name, value) pairs that can be used to determine access permissions.*

### Functions

- static **DDS\_Long** **DDSDataTagQosPolicyHelper::get\_number\_of\_tags** ( **DDS\_DataTagQosPolicy** &policy)  
*Gets the number of data tags in the input policy.*
- static **DDS\_ReturnCode\_t** **DDSDataTagQosPolicyHelper::assert\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name, const char \*value)  
*Asserts the tag identified by name in the input policy.*
- static **DDS\_ReturnCode\_t** **DDSDataTagQosPolicyHelper::add\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name, const char \*value)  
*Adds a new tag to the input policy.*
- static struct **DDS\_Tag \*** **DDSDataTagQosPolicyHelper::lookup\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name)  
*Searches by tag name for a tag in the input policy.*
- static **DDS\_ReturnCode\_t** **DDSDataTagQosPolicyHelper::remove\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name)  
*Removes a tag from the input policy.*

## Variables

- const char \*const **DDS\_DATATAG\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_DataTagQosPolicy** (p. 377).*

### 7.107.1 Detailed Description

Stores (name, value) pairs that can be used to determine access permissions.

The **DDS\_DataTagQosPolicy** (p. 377) can be used to associate a set of tags in the form of (name, value) pairs with a **DDSDataReader** (p. 1288) or **DDSDataWriter** (p. 1321). This is similar to the **DDS\_PropertyQosPolicy** (p. 1007), except you cannot select whether or not a particular pair should be propagated (included in the built-in topic). Data tags are always propagated. The Access Control plugin may use the tags to determine publish and subscribe permissions.

### 7.107.2 Typedef Documentation

#### 7.107.2.1 DDS\_DataTagQosPolicy

```
typedef struct DDS_DataTags DDS_DataTagQosPolicy
```

Stores (name, value) pairs that can be used to determine access permissions.

Entity:

**DDSDataReader** (p. 1288) **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A;

**Changeable** (p. 360) = **NO** (p. 360)

### 7.107.3 Usage

The DATA\_TAG QoS policy can be used to associate a set of tags in the form of (name, value) pairs with a **DDSDataReader** (p. 1288) or **DDSDataWriter** (p. 1321). This is similar to the **DDS\_PropertyQosPolicy** (p. 1007), except for the following differences:

- Data tags are always propagated. You cannot select whether or not a particular pair should be propagated.
- Data tags are not exposed to API functions, such as **DDSDataWriter::get\_matched\_subscription\_data** (p. 1332), that receive **DDS\_PublicationBuiltinTopicData** (p. 1010) or **DDS\_SubscriptionBuiltinTopicData** (p. 1108) as a parameter.
- Connex passes data tags to the Access Control Security Plugin, which may use them to decide whether to allow or deny the corresponding entities.

There are helper functions to facilitate working with data tags. See the **DATA\_TAG** (p. 376) page.

## 7.107.4 Function Documentation

### 7.107.4.1 `get_number_of_tags()`

```
static DDS_Long DDSDataTagQosPolicyHelper::get_number_of_tags (
    DDS_DataTagQosPolicy & policy ) [static]
```

Gets the number of data tags in the input policy.

#### Precondition

policy cannot be NULL.

#### Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
---------------	--

#### Returns

Number of data tags.

### 7.107.4.2 `assert_tag()`

```
static DDS_ReturnCode_t DDSDataTagQosPolicyHelper::assert_tag (
    DDS_DataTagQosPolicy & policy,
    const char * name,
    const char * value ) [static]
```

Asserts the tag identified by name in the input policy.

If the tag already exists, this function replaces its current value with the new one.

If the tag identified by name does not exist, this function adds it to the tag set.

This function increases the maximum number of elements of the policy sequence by 10 when this number is not enough to store the new tag.

#### Precondition

policy, name and value cannot be NULL.

## Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Tag name.
<i>value</i>	<< <i>in</i> >> (p. 238) Tag value.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## 7.107.4.3 add\_tag()

```
static DDS_ReturnCode_t DDSDataTagQosPolicyHelper::add_tag (
    DDS_DataTagQosPolicy & policy,
    const char * name,
    const char * value ) [static]
```

Adds a new tag to the input policy.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connex.

If the maximum number of elements of the policy sequence is not enough to store the new tag, this function will increase it by 10.

If the tag already exists, the function will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Precondition

policy, name and value cannot be NULL.

The tag is not in the policy.

## Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Tag name.
<i>value</i>	<< <i>in</i> >> (p. 238) Tag value.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

#### 7.107.4.4 lookup\_tag()

```
static struct DDS_Tag * DDSDataTagQosPolicyHelper::lookup_tag (
    DDS_DataTagQosPolicy & policy,
    const char * name ) [static]
```

Searches by tag name for a tag in the input policy.

##### Precondition

policy, name and value cannot be NULL.

##### Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Tag name.

##### Returns

The function returns the first tag with the given name. If such a tag does not exist, the function returns NULL.

#### 7.107.4.5 remove\_tag()

```
static DDS_ReturnCode_t DDSDataTagQosPolicyHelper::remove_tag (
    DDS_DataTagQosPolicy & policy,
    const char * name ) [static]
```

Removes a tag from the input policy.

If the tag does not exist, the function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

##### Precondition

policy and name cannot be NULL.

The tag is in the policy.

##### Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Tag name.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
-----	--

## 7.107.5 Variable Documentation

### 7.107.5.1 DDS\_DATATAG\_QOS\_POLICY\_NAME

```
const char* const DDS_DATATAG_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataTagQosPolicy** (p. 377).

## 7.108 DATA\_WRITER\_PROTOCOL

<<*extension*>> (p. 237) Along with **DDS\_WireProtocolQosPolicy** (p. 1244) and **DDS\_DataReaderProtocolQosPolicy** (p. 630), this QoS policy configures the DDS on-the-network protocol (RTPS).

### Classes

- struct **DDS\_DataWriterProtocolQosPolicy**  
*Protocol that applies only to **DDSDataWriter** (p. 1321) instances.*

### Variables

- const char \*const **DDS\_DATAWRITERPROTOCOL\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DataWriterProtocolQosPolicy** (p. 673).*

### 7.108.1 Detailed Description

<<*extension*>> (p. 237) Along with **DDS\_WireProtocolQosPolicy** (p. 1244) and **DDS\_DataReaderProtocolQosPolicy** (p. 630), this QoS policy configures the DDS on-the-network protocol (RTPS).

### 7.108.2 Variable Documentation

### 7.108.2.1 DDS\_DATAWRITERPROTOCOL\_QOS\_POLICY\_NAME

```
const char* const DDS_DATAWRITERPROTOCOL_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataWriterProtocolQosPolicy** (p. 673).

## 7.109 DATA\_WRITER\_RESOURCE\_LIMITS

<<**extension**>> (p. 237) Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.

### Classes

- struct **DDS\_DataWriterResourceLimitsQosPolicy**

*Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.*

### Enumerations

- enum **DDS\_DataWriterResourceLimitsInstanceReplacementKind** {  
**DDS\_UNREGISTERED\_INSTANCE\_REPLACEMENT** ,  
**DDS\_ALIVE\_INSTANCE\_REPLACEMENT** ,  
**DDS\_DISPOSED\_INSTANCE\_REPLACEMENT** ,  
**DDS\_ALIVE\_THEN\_DISPOSED\_INSTANCE\_REPLACEMENT** ,  
**DDS\_DISPOSED\_THEN\_ALIVE\_INSTANCE\_REPLACEMENT** ,  
**DDS\_ALIVE\_OR\_DISPOSED\_INSTANCE\_REPLACEMENT** }

*Sets the kinds of instances that can be replaced when instance resource limits are reached.*

### Variables

- const char \*const **DDS\_DATAWRITERRESOURCELIMITS\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_DataWriterResourceLimitsQosPolicy** (p. 698).*

### 7.109.1 Detailed Description

<<**extension**>> (p. 237) Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.

### 7.109.2 Enumeration Type Documentation

### 7.109.2.1 DDS\_DataWriterResourceLimitsInstanceReplacementKind

enum **DDS\_DataWriterResourceLimitsInstanceReplacementKind**

Sets the kinds of instances that can be replaced when instance resource limits are reached.

When **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) is reached, a **DDSDataWriter** (p. 1321) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kind specified by **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 701).

Only instances whose states match the specified kinds are eligible to be replaced. In addition, an instance must have had all of its samples fully acknowledged for it to be considered replaceable.

For all kinds, a **DDSDataWriter** (p. 1321) will replace the oldest instance satisfying that kind. For example, when the kind is **DDS\_UNREGISTERED\_INSTANCE\_REPLACEMENT** (p. 383), a **DDSDataWriter** (p. 1321) will remove the oldest, fully acknowledged, unregistered instance, if such an instance exists.

If no replaceable instance exists, the invoked function will either return with an appropriate out-of-resources return code, or in the case of a write, it may first block to wait for an instance to be acknowledged. Otherwise, the **DDSDataWriter** (p. 1321) will replace the old instance with the new instance, and invoke, if available, the **DDSDataWriterListener::on\_instance\_replaced** (p. 1349) to notify the user about an instance being replaced.

A **DDSDataWriter** (p. 1321) checks for replaceable instances in the following order, stopping once a replaceable instance is found:

- If **DDS\_DataWriterResourceLimitsQosPolicy::replace\_empty\_instances** (p. 701) is **DDS\_BOOLEAN\_TRUE** (p. 317), a **DDSDataWriter** (p. 1321) first tries replacing instances that have no samples. These empty instances can be unregistered, disposed, or alive.
- Next, a **DDSDataWriter** (p. 1321) tries replacing unregistered instances. Since an unregistered instance indicates that the **DDSDataWriter** (p. 1321) is done modifying it, unregistered instances are replaced before instances of any other state (alive, disposed). This is the same as the **DDS\_UNREGISTERED\_INSTANCE\_REPLACEMENT** (p. 383) kind.
- Then, a **DDSDataWriter** (p. 1321) tries replacing what is specified by **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 701). With unregistered instances already checked, this leaves alive and disposed instances. When both alive and disposed instances may be replaced, the kind specifies whether the particular order matters (e.g., **DISPOSED\_THEN\_ALIVE**, **ALIVE\_THEN\_DISPOSED**) or not (**ALIVE\_OR\_DISPOSED**).

QoS:

**DDS\_DataWriterResourceLimitsQosPolicy** (p. 698)

Enumerator

DDS_UNREGISTERED_INSTANCE_REPLACEMENT	Allows a <b>DDSDataWriter</b> (p. 1321) to reclaim unregistered acknowledged instances. By default, all instance replacement kinds first attempt to reclaim an unregistered, acknowledged instance. Used in <b>DDS_DataWriterResourceLimitsQosPolicy::instance_replacement</b> (p. 701) [default]
---------------------------------------	---

## Enumerator

DDS_ALIVE_INSTANCE_REPLACEMENT	Allows a <b>DDSDataWriter</b> (p. 1321) to reclaim alive, acknowledged instances. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a <b>DDSDataWriter</b> (p. 1321) to reclaim an alive, acknowledged instance, where an alive instance is a registered, non-disposed instance. The least recently registered or written alive instance will be reclaimed.
DDS_DISPOSED_INSTANCE_REPLACEMENT	Allows a <b>DDSDataWriter</b> (p. 1321) to reclaim disposed acknowledged instances. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a <b>DDSDataWriter</b> (p. 1321) to reclaim a disposed, acknowledged instance. The least recently disposed instance will be reclaimed.
DDS_ALIVE_THEN_DISPOSED_INSTANCE_REPLACEMENT ↔	Allows a <b>DDSDataWriter</b> (p. 1321) first to reclaim an alive, acknowledged instance, and then, if necessary, a disposed, acknowledged instance. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a <b>DDSDataWriter</b> (p. 1321) to first try reclaiming an alive, acknowledged instance. If no instance is reclaimable, then it tries reclaiming a disposed, acknowledged instance. The least recently used (i.e., registered, written, or disposed) instance will be reclaimed.
DDS_DISPOSED_THEN_ALIVE_INSTANCE_REPLACEMENT ↔	Allows a <b>DDSDataWriter</b> (p. 1321) first to reclaim a disposed, acknowledged instance, and then, if necessary, an alive, acknowledged instance. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a <b>DDSDataWriter</b> (p. 1321) to first try reclaiming a disposed, acknowledged instance. If no instance is reclaimable, then it tries reclaiming an alive, acknowledged instance. The least recently used (i.e., disposed, registered, or written) instance will be reclaimed.
DDS_ALIVE_OR_DISPOSED_INSTANCE_REPLACEMENT ↔	Allows a <b>DDSDataWriter</b> (p. 1321) to reclaim either an alive acknowledged instance or a disposed acknowledged instance. When an unregistered acknowledged instance is not available to reclaim, this kind allows a <b>DDSDataWriter</b> (p. 1321) to reclaim either an alive, acknowledged instance or a disposed, acknowledged instance. If both instance kinds are available to reclaim, the <b>DDSDataWriter</b> (p. 1321) will reclaim the least recently used (i.e. disposed, registered, or written) instance.

## 7.109.3 Variable Documentation

### 7.109.3.1 DDS\_DATAWRITERRESOURCELIMITS\_QOS\_POLICY\_NAME

```
const char* const DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataWriterResourceLimitsQosPolicy** (p. 698).

## 7.110 DATA\_WRITER\_TRANSFER\_MODE

<<*extension*>> (p. 237) Specifies the DataWriter transfer mode QoS.

### Classes

- struct **DDS\_DataWriterShmemRefTransferModeSettings**  
*Settings related to transferring data using shared memory references.*
- struct **DDS\_DataWriterTransferModeQosPolicy**  
<<*extension*>> (p. 237) *Qos related to transferring data*

### Variables

- const char \*const **DDS\_DATAWRITERTRANSFERMODE\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DataWriterTransferModeQosPolicy** (p. 706).*

### 7.110.1 Detailed Description

<<*extension*>> (p. 237) Specifies the DataWriter transfer mode QoS.

### 7.110.2 Variable Documentation

#### 7.110.2.1 DDS\_DATAWRITERTRANSFERMODE\_QOS\_POLICY\_NAME

```
const char* const DDS_DATAWRITERTRANSFERMODE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DataWriterTransferModeQosPolicy** (p. 706).

## 7.111 DEADLINE

Expresses the maximum duration (deadline) within which an instance is expected to be updated.

## Classes

- struct **DDS\_DeadlineQosPolicy**  
*Expresses the maximum duration (deadline) within which an instance is expected to be updated.*

## Variables

- const char \*const **DDS\_DEADLINE\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DeadlineQosPolicy** (p. 707).*

### 7.111.1 Detailed Description

Expresses the maximum duration (deadline) within which an instance is expected to be updated.

### 7.111.2 Variable Documentation

#### 7.111.2.1 DDS\_DEADLINE\_QOS\_POLICY\_NAME

```
const char* const DDS_DEADLINE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DeadlineQosPolicy** (p. 707).

## 7.112 DESTINATION\_ORDER

Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1550) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1617) and key).

## Classes

- struct **DDS\_DestinationOrderQosPolicy**  
*Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1321) entities for the same instance of data (i.e., same **DDSTopic** (p. 1617) and key).*

## Enumerations

- enum **DDS\_DestinationOrderQosPolicyKind** {  
**DDS\_BY\_RECEPTION\_TIMESTAMP\_DESTINATIONORDER\_QOS** ,  
**DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** }  
*Kinds of destination order.*
- enum **DDS\_DestinationOrderQosPolicyScopeKind** {  
**DDS\_INSTANCE\_SCOPE\_DESTINATIONORDER\_QOS** ,  
**DDS\_TOPIC\_SCOPE\_DESTINATIONORDER\_QOS** }  
*Scope of source destination order.*

## Variables

- const char \*const **DDS\_DESTINATIONORDER\_QOS\_POLICY\_NAME**  
Stringified human-readable name for **DDS\_DestinationOrderQosPolicy** (p. 709).

### 7.112.1 Detailed Description

Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1550) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1617) and key).

### 7.112.2 Enumeration Type Documentation

#### 7.112.2.1 DDS\_DestinationOrderQosPolicyKind

```
enum DDS_DestinationOrderQosPolicyKind
```

Kinds of destination order.

QoS:

**DDS\_DestinationOrderQosPolicy** (p. 709)

Enumerator

DDS_BY_RECEPTION_TIMESTAMP_↔ DESTINATIONORDER_QOS	<b>[default]</b> Indicates that data is ordered based on the reception time at each <b>DDSSubscriber</b> (p. 1592). Since each subscriber may receive the data at different times there is no guarantee that the changes will be seen in the same order. Consequently, it is possible for each subscriber to end up with a different final value for the data.
DDS_BY_SOURCE_TIMESTAMP_↔ DESTINATIONORDER_QOS	Indicates that data is ordered based on a time-stamp placed at the source (by RTI Connex or by the application). In any case this guarantees a consistent final value for the data in all subscribers.  Note: If Batching is needed along with <b>DDS_BY_↔SOURCE_TIMESTAMP_DESTINATIONORDER_QOS</b> (p. 387) and <b>DDS_INSTANCE_SCOPE_↔DESTINATIONORDER_QOS</b> (p. 388), then the <b>DDS_BatchQosPolicy::source_timestamp_↔resolution</b> (p. 602) and <b>DDS_BatchQosPolicy::thread_safe_write</b> (p. 603) setting of <b>DDS_BatchQosPolicy</b> (p. 600) should be set to <b>DDS_DURATION_ZERO</b> (p. 327) and <b>DDS_BOOLEAN_TRUE</b> (p. 317) respectively.

### 7.112.2.2 DDS\_DestinationOrderQosPolicyScopeKind

enum **DDS\_DestinationOrderQosPolicyScopeKind**

Scope of source destination order.

QoS:

**DDS\_DestinationOrderQosPolicy** (p. 709)

Enumerator

DDS_INSTANCE_SCOPE_DESTINATIONORDER_↔ QOS	<b>[default]</b> Indicates that data is ordered on a per instance basis if used along with <b>DDS_BY_SOURCE_↔ _TIMESTAMP_DESTINATIONORDER_QOS</b> (p. 387). The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same instance. The tolerance check is also applied per instance.
DDS_TOPIC_SCOPE_DESTINATIONORDER_QOS	Indicates that data is ordered on a per topic basis if used along with <b>DDS_BY_SOURCE_TIMESTAMP_↔ DESTINATIONORDER_QOS</b> (p. 387). The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same topic. The tolerance check is also applied per topic.

### 7.112.3 Variable Documentation

#### 7.112.3.1 DDS\_DESTINATIONORDER\_QOS\_POLICY\_NAME

const char\* const DDS\_DESTINATIONORDER\_QOS\_POLICY\_NAME [extern]

Stringified human-readable name for **DDS\_DestinationOrderQosPolicy** (p. 709).

## 7.113 DISCOVERY

<<*extension*>> (p. 237) Specifies the attributes required to discover participants in the domain.

## Modules

- **NDDS\_DISCOVERY\_PEERS**

Environment variable or a file that specifies the default values of **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) and **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733) contained in the **DDS\_DomainParticipantQos::discovery** (p. 744) qos policy.

## Classes

- struct **DDS\_DiscoveryQosPolicy**

<<**extension**>> (p. 237) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.

## Variables

- const char \*const **DDS\_DISCOVERY\_QOS\_POLICY\_NAME**

Stringified human-readable name for **DDS\_DiscoveryQosPolicy** (p. 731).

### 7.113.1 Detailed Description

<<**extension**>> (p. 237) Specifies the attributes required to discover participants in the domain.

### 7.113.2 Variable Documentation

#### 7.113.2.1 DDS\_DISCOVERY\_QOS\_POLICY\_NAME

```
const char* const DDS_DISCOVERY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DiscoveryQosPolicy** (p. 731).

## 7.114 DISCOVERY\_CONFIG

<<**extension**>> (p. 237) Specifies the discovery configuration QoS.

## Classes

- struct **DDS\_BuiltinTopicReaderResourceLimits\_t**

Built-in topic reader's resource limits.

- struct **DDS\_DiscoveryConfigQosPolicy**

Settings for discovery configuration.

## Macros

- **#define DDS\_DISCOVERYCONFIG\_BUILTIN\_PLUGIN\_MASK\_NONE**  
*No bits are set.*
- **#define DDS\_DISCOVERYCONFIG\_BUILTIN\_PLUGIN\_MASK\_DEFAULT**  
*The default value of `DDS_DiscoveryConfigQosPolicy::builtin_discovery_plugins` (p. 721).*
- **#define DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_NONE**  
*No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by `DDS_DiscoveryConfigBuiltinChannelKind` (p. 394) are able to be enabled or disabled by the user.*
- **#define DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_DEFAULT** (( `DDS_DiscoveryConfigBuiltinChannelKindMask`) `DDS_DISCOVERYCONFIG_SERVICE_REQUEST_CHANNEL`)  
*The default value of `DDS_DiscoveryConfigQosPolicy::enabled_builtin_channels` (p. 721).*
- **#define DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_ALL**  
*All bits are set, indicating that all channels are enabled.*

## Typedefs

- **typedef DDS\_Long DDS\_DiscoveryConfigBuiltinPluginKindMask**  
*A bit-mask (list) of built-in discovery plugins.*
- **typedef DDS\_UnsignedLong DDS\_DiscoveryConfigBuiltinChannelKindMask**  
*A bit-mask (list) of built-in channels.*

## Enumerations

- **enum DDS\_DiscoveryConfigBuiltinPluginKind** {  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_SPDP** ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_SEDP** ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_SDP** ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_EDS** = 0x0001 << 2 ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_DPSE** ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_SPDP2** ,  
**DDS\_DISCOVERYCONFIG\_BUILTIN\_SDP2** }  
*Built-in discovery plugins that can be used.*
- **enum DDS\_DiscoveryConfigBuiltinChannelKind** { **DDS\_DISCOVERYCONFIG\_SERVICE\_REQUEST\_CHANNEL** }  
*Built-in channels that can be enabled.*
- **enum DDS\_RemoteParticipantPurgeKind** {  
**DDS\_LIVELINESS\_BASED\_REMOTE\_PARTICIPANT\_PURGE** ,  
**DDS\_NO\_REMOTE\_PARTICIPANT\_PURGE** }  
*Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.*

## Variables

- **const char \*const DDS\_DISCOVERYCONFIG\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for `DDS_DiscoveryConfigQosPolicy` (p. 712).*

### 7.114.1 Detailed Description

<<*extension*>> (p. 237) Specifies the discovery configuration QoS.

### 7.114.2 Macro Definition Documentation

#### 7.114.2.1 DDS\_DISCOVERYCONFIG\_BUILTIN\_PLUGIN\_MASK\_NONE

```
#define DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_NONE
```

No bits are set.

See also

**DDS\_DiscoveryConfigBuiltinPluginKindMask** (p. 392)

#### 7.114.2.2 DDS\_DISCOVERYCONFIG\_BUILTIN\_PLUGIN\_MASK\_DEFAULT

```
#define DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_DEFAULT
```

The default value of **DDS\_DiscoveryConfigQosPolicy::builtin\_discovery\_plugins** (p. 721).

See also

**DDS\_DiscoveryConfigBuiltinPluginKindMask** (p. 392)

#### 7.114.2.3 DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_NONE

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_NONE
```

No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by **DDS\_DiscoveryConfigBuiltinChannelKind** (p. 394) are able to be enabled or disabled by the user.

See also

**DDS\_DiscoveryConfigBuiltinChannelKindMask** (p. 392)

#### 7.114.2.4 DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_DEFAULT

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_DEFAULT (( DDS_DiscoveryConfigBuiltinChannelKindMask) DDS_DISCOVERYCONFIG_SERVICE_REQUEST_CHANNEL)
```

The default value of `DDS_DiscoveryConfigQosPolicy::enabled_builtin_channels` (p. 721).

See also

[DDS\\_DiscoveryConfigBuiltinChannelKindMask](#) (p. 392)

#### 7.114.2.5 DDS\_DISCOVERYCONFIG\_BUILTIN\_CHANNEL\_MASK\_ALL

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_ALL
```

All bits are set, indicating that all channels are enabled.

See also

[DDS\\_DiscoveryConfigBuiltinChannelKindMask](#) (p. 392)

### 7.114.3 Typedef Documentation

#### 7.114.3.1 DDS\_DiscoveryConfigBuiltinPluginKindMask

```
typedef DDS_Long DDS_DiscoveryConfigBuiltinPluginKindMask
```

A bit-mask (list) of built-in discovery plugins.

The bit-mask is an efficient and compact representation of a fixed-length list of `DDS_DiscoveryConfigBuiltinPluginKind` (p. 393) values.

QoS:

[DDS\\_DiscoveryConfigQosPolicy](#) (p. 712)

### 7.114.3.2 DDS\_DiscoveryConfigBuiltinChannelKindMask

```
typedef DDS_UnsignedLong DDS_DiscoveryConfigBuiltinChannelKindMask
```

A bit-mask (list) of built-in channels.

The bit-mask is an efficient and compact representation of a fixed-length list of **DDS\_DiscoveryConfigBuiltinChannelKind** (p. 394) values.

QoS:

**DDS\_DiscoveryConfigQosPolicy** (p. 712)

## 7.114.4 Enumeration Type Documentation

### 7.114.4.1 DDS\_DiscoveryConfigBuiltinPluginKind

```
enum DDS_DiscoveryConfigBuiltinPluginKind
```

Built-in discovery plugins that can be used.

See also

**DDS\_DiscoveryConfigBuiltinPluginKindMask** (p. 392)

Enumerator

DDS_DISCOVERYCONFIG_BUILTIN_SPDP	Simple Participant Discovery Protocol. Enables the first phase of the Simple Discovery Protocol (SDP), in which DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant declaration messages, also known as participant DATA submessages or participant announcements.
DDS_DISCOVERYCONFIG_BUILTIN_SEDP	Simple Endpoint Discovery Protocol. Enables the second phase of the Simple Discovery Protocol (SDP), in which the information (GUID, QoS, etc.) about your application's DataReaders and DataWriters is exchanged by sending publication/subscription declarations in DATA messages, also known as publication DATAs and subscription DATAs.
DDS_DISCOVERYCONFIG_BUILTIN_SDP	<b>[default]</b> Simple discovery plugin. It is equivalent to SPDP + SEDP.

## Enumerator

DDS_DISCOVERYCONFIG_BUILTIN_DPSE	Dynamic Participant discovery, Static Endpoint discovery. Enables static endpoint discovery for a DomainParticipant. In this type of discovery, information from remote endpoints is extracted from a local DDS-XML file instead of being received over the network, reducing the number of exchanged packets and consequently reducing bandwidth consumption used for discovery. Using this value in <b>DDS_DiscoveryConfigBuiltinPluginKindMask</b> (p. 392) requires the 'librtlibedisc' library (included in the RTI Connex Professional bundles) to be reachable (PATH, LD_LIBRARY_PATH or DYLD_LIBRARY_PATH).
DDS_DISCOVERYCONFIG_BUILTIN_SPDP2	Simple Participant Discovery Protocol 2.0 (SPDP2) Enables the Simple Participant Discovery Protocol 2.0, in which a DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant bootstrap messages. These bootstrap messages contain only a subset of the information in the Simple Participant Discovery Protocol (SPDP) participant announcements that is required to match two participants and bootstrap the system. The DomainParticipant's full configuration is then sent reliably with participant configuration announcements. Two DomainParticipants that use SPDP2 will maintain liveliness using liveliness participant messages.
DDS_DISCOVERYCONFIG_BUILTIN_SDP2	Simple discovery plugin 2.0. It is equivalent to SPDP2 + SEDP.

## 7.114.4.2 DDS\_DiscoveryConfigBuiltinChannelKind

```
enum DDS_DiscoveryConfigBuiltinChannelKind
```

Built-in channels that can be enabled.

See also

**DDS\_DiscoveryConfigBuiltinChannelKindMask** (p. 392)

## Enumerator

DDS_DISCOVERYCONFIG_SERVICE_REQUEST_↔ CHANNEL	<b>[default]</b> Built-in ServiceRequest channel. Enables the ServiceRequest channel, which is required by the TopicQuery and locator reachability features. Disabling the ServiceRequest channel reduces resource consumption including network bandwidth, CPU utilization, and memory.
--	--

### 7.114.4.3 DDS\_RemoteParticipantPurgeKind

enum **DDS\_RemoteParticipantPurgeKind**

Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.

When discovery communication with a remote participant has been lost, the local participant must make a decision about whether to continue attempting to communicate with that participant and its contained entities. This "kind" is used to select the desired behavior.

This "kind" does not pertain to the situation in which a remote participant has been gracefully deleted and notification of that deletion have been successfully received by its peers. In that case, the local participant will immediately stop attempting to communicate with those entities and will remove the associated remote entity records from its internal database.

See also

**DDS\_DiscoveryConfigQosPolicy::remote\_participant\_purge\_kind** (p. 715)

Enumerator

<p>DDS_LIVELINESS_BASED_REMOTE_↔ PARTICIPANT_PURGE</p>	<p><b>[default]</b> Maintain knowledge of the remote participant for as long as it maintains its liveliness contract. A participant will continue attempting communication with its peers, even if discovery communication with them is lost, as long as the remote participants maintain their liveliness. If both discovery communication and participant liveliness are lost, however, the local participant will remove all records of the remote participant and its contained endpoints, and no further data communication with them will occur until and unless they are rediscovered.</p> <p>The liveliness contract a participant promises to its peers – its "liveliness lease duration" – is specified in its <b>DDS_DiscoveryConfigQosPolicy::participant_↔ liveliness_lease_duration</b> (p. 714) QoS field. It maintains that contract by writing data to those other participants with a writer that has a <b>DDS_LivelinessQosPolicyKind</b> (p. 409) of <b>DDS_AUTOMATIC_LIVELINESS_QOS</b> (p. 410) or <b>DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_↔ QOS</b> (p. 410) and by asserting itself (at the <b>DDS_DiscoveryConfigQosPolicy::participant_↔ liveliness_assert_period</b> (p. 715)) over the Simple Discovery Protocol.</p>
--	---

## Enumerator

DDS_NO_REMOTE_PARTICIPANT_PURGE	<p>Never "forget" a remote participant with which discovery communication has been lost. If a participant with this behavior loses discovery communication with a remote participant, it will nevertheless remember that remote participant and its endpoints and continue attempting to communicate with them indefinitely.</p> <p>This value has consequences for a participant's resource usage. If discovery communication with a remote participant is lost, but the same participant is later rediscovered, any relevant records that remain in the database will be reused. However, if it is not rediscovered, the records will continue to take up space in the database for as long as the local participant remains in existence.</p>
---------------------------------	--

## 7.114.5 Variable Documentation

### 7.114.5.1 DDS\_DISCOVERYCONFIG\_QOS\_POLICY\_NAME

```
const char* const DDS_DISCOVERYCONFIG_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DiscoveryConfigQosPolicy** (p. 712).

## 7.115 DOMAIN\_PARTICIPANT\_RESOURCE\_LIMITS

<<*extension*>> (p. 237) Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

### Classes

- struct **DDS\_AllocationSettings\_t**  
*Resource allocation settings.*
- struct **DDS\_DomainParticipantResourceLimitsQosPolicy**  
*Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*

### Enumerations

- enum **DDS\_DomainParticipantResourceLimitsIgnoredEntityReplacementKind** {  
**DDS\_NO\_REPLACEMENT\_IGNORED\_ENTITY\_REPLACEMENT** ,  
**DDS\_NOT\_ALIVE\_FIRST\_IGNORED\_ENTITY\_REPLACEMENT** }
- Available replacement policies for the ignored entities.*

## Variables

- const **DDS\_Long DDS\_AUTO\_COUNT**  
A special value indicating a quantity that is derived from another QoS value.
- const char \*const **DDS\_DOMAINPARTICIPANTRESOURCELIMITS\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_DomainParticipantResourceLimitsQosPolicy* (p. 746).

### 7.115.1 Detailed Description

<<*extension*>> (p. 237) Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

### 7.115.2 Enumeration Type Documentation

#### 7.115.2.1 DDS\_DomainParticipantResourceLimitsIgnoredEntityReplacementKind

```
enum DDS_DomainParticipantResourceLimitsIgnoredEntityReplacementKind
```

Available replacement policies for the ignored entities.

QoS:

**DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 746)

Enumerator

DDS_NO_REPLACEMENT_IGNORED_ENTITY_↔ REPLACEMENT	Default value for ignored_entity_replacement_kind, no replacement is done, the ignore will fail if the ignored_entity table is full.
DDS_NOT_ALIVE_FIRST_IGNORED_ENTITY_↔ REPLACEMENT	If the ignored_entity table is full and if there is at least one ignored participant in the table, the participant record that has been not updated for the longest time will be replaced. Note that if the table is full and there are no participant records to replace, the ignore will fail.

### 7.115.3 Variable Documentation

### 7.115.3.1 DDS\_AUTO\_COUNT

```
const DDS_Long DDS_AUTO_COUNT [extern]
```

A special value indicating a quantity that is derived from another QoS value.

### 7.115.3.2 DDS\_DOMAINPARTICIPANTRESOURCELIMITS\_QOS\_POLICY\_NAME

```
const char* const DDS_DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 746).

## 7.116 DURABILITY

This QoS policy specifies whether or not RTI Connexx will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.

### Classes

- struct **DDS\_PersistentStorageSettings**  
*Configures durable writer history and durable reader state.*
- struct **DDS\_DurabilityQosPolicy**  
*This QoS policy specifies whether or not RTI Connexx will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.*

### Enumerations

- enum **DDS\_PersistentJournalKind** {  
**DDS\_DELETE\_PERSISTENT\_JOURNAL** ,  
**DDS\_TRUNCATE\_PERSISTENT\_JOURNAL** ,  
**DDS\_PERSIST\_PERSISTENT\_JOURNAL** ,  
**DDS\_MEMORY\_PERSISTENT\_JOURNAL** ,  
**DDS\_WAL\_PERSISTENT\_JOURNAL** ,  
**DDS\_OFF\_PERSISTENT\_JOURNAL** }  
*Sets the journal mode of the persistent storage.*
- enum **DDS\_PersistentSynchronizationKind** {  
**DDS\_NORMAL\_PERSISTENT\_SYNCHRONIZATION** ,  
**DDS\_FULL\_PERSISTENT\_SYNCHRONIZATION** ,  
**DDS\_OFF\_PERSISTENT\_SYNCHRONIZATION** }  
*Determines the level of synchronization with the physical disk.*
- enum **DDS\_DurabilityQosPolicyKind** {  
**DDS\_VOLATILE\_DURABILITY\_QOS** ,  
**DDS\_TRANSIENT\_LOCAL\_DURABILITY\_QOS** ,  
**DDS\_TRANSIENT\_DURABILITY\_QOS** ,  
**DDS\_PERSISTENT\_DURABILITY\_QOS** }  
*Kinds of durability.*

## Variables

- const char \*const **DDS\_DURABILITY\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_DurabilityQosPolicy** (p. 767).*
- const **DDS\_Long DDS\_AUTO\_WRITER\_DEPTH**  
*A special value used as the default value for **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770).*

### 7.116.1 Detailed Description

This QoS policy specifies whether or not RTI Connex will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.

### 7.116.2 Enumeration Type Documentation

#### 7.116.2.1 DDS\_PersistentJournalKind

enum **DDS\_PersistentJournalKind**

Sets the journal mode of the persistent storage.

The rollback journal is used in SQLite to store the state of the persistent storage before a transaction is committed.

QoS:

**DDS\_DurabilityQosPolicy** (p. 767)

Enumerator

DDS_DELETE_PERSISTENT_JOURNAL	Deletes the rollback journal at the conclusion of each transaction.
DDS_TRUNCATE_PERSISTENT_JOURNAL	Commits transactions by truncating the rollback journal to zero-length instead of deleting it.
DDS_PERSIST_PERSISTENT_JOURNAL	Prevents the rollback journal from being deleted at the end of each transaction. Instead, the header of the journal is overwritten with zeros.
DDS_MEMORY_PERSISTENT_JOURNAL	Stores the rollback journal in volatile RAM. This saves disk I/O.
DDS_WAL_PERSISTENT_JOURNAL	Uses a write-ahead log instead of a rollback journal to implement transactions.
DDS_OFF_PERSISTENT_JOURNAL	Completely disables the rollback journal. If the application crashes in the middle of a transaction when the OFF journaling mode is set, the persistent storage will very likely be corrupted.

### 7.116.2.2 DDS\_PersistentSynchronizationKind

enum `DDS_PersistentSynchronizationKind`

Determines the level of synchronization with the physical disk.

QoS:

**DDS\_DurabilityQosPolicy** (p. 767)

Enumerator

DDS_NORMAL_PERSISTENT_SYNCHRONIZATION	Data (e.g., new sample) is written to disk at critical moments.
DDS_FULL_PERSISTENT_SYNCHRONIZATION	Data (e.g., new sample) is written to physical disk immediately.
DDS_OFF_PERSISTENT_SYNCHRONIZATION	No synchronization is enforced. Data will be written to physical disk when the operating system flushes its buffers.

### 7.116.2.3 DDS\_DurabilityQosPolicyKind

enum `DDS_DurabilityQosPolicyKind`

Kinds of durability.

QoS:

**DDS\_DurabilityQosPolicy** (p. 767)

Enumerator

DDS_VOLATILE_DURABILITY_QOS	<p><b>[default]</b> RTI Connexx does not need to keep any samples of data instances on behalf of any <b>DDSDataReader</b> (p. 1288) that is unknown by the <b>DDSDataWriter</b> (p. 1321) at the time the instance is written. In other words, RTI Connexx will only attempt to provide the data to existing subscribers.</p> <p>This option does not require RTI Persistence Service.</p>
-----------------------------	--

## Enumerator

DDS_TRANSIENT_LOCAL_DURABILITY_QOS	<p>RTI Connex will attempt to keep some samples so that they can be delivered to any potential late-joining <b>DDSDataReader</b> (p. 1288). Which particular samples are kept depends on other QoS such as <b>DDS_HistoryQosPolicy</b> (p. 919) and <b>DDS_ResourceLimitsQosPolicy</b> (p. 1052). RTI Connex is only required to keep the data in memory of the <b>DDSDataWriter</b> (p. 1321) that wrote the data. Data is not required to survive the <b>DDSDataWriter</b> (p. 1321).</p> <p>For this setting to be effective, you must also set the <b>DDS_ReliabilityQosPolicy::kind</b> (p. 1043) to <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 435). This option does not require RTI Persistence Service.</p>
DDS_TRANSIENT_DURABILITY_QOS	<p>RTI Connex will attempt to keep some samples so that they can be delivered to any potential late-joining <b>DDSDataReader</b> (p. 1288). Which particular samples are kept depends on other QoS such as <b>DDS_HistoryQosPolicy</b> (p. 919) and <b>DDS_ResourceLimitsQosPolicy</b> (p. 1052). RTI Connex is only required to keep the data in memory and not in permanent storage. Data is not tied to the lifecycle of the <b>DDSDataWriter</b> (p. 1321). Data will survive the <b>DDSDataWriter</b> (p. 1321).</p> <p>This option requires RTI Persistence Service.</p>
DDS_PERSISTENT_DURABILITY_QOS	<p>Data is kept on permanent storage, so that they can outlive a system session. This option requires RTI Persistence Service.</p>

### 7.116.3 Variable Documentation

#### 7.116.3.1 DDS\_DURABILITY\_QOS\_POLICY\_NAME

```
const char* const DDS_DURABILITY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DurabilityQosPolicy** (p. 767).

#### 7.116.3.2 DDS\_AUTO\_WRITER\_DEPTH

```
const DDS_Long DDS_AUTO_WRITER_DEPTH [extern]
```

A special value used as the default value for **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770).

This values resolves to the following:

- **DDS\_HistoryQosPolicy::depth** (p. 921) if the history kind is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406).
- **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055) in the **DDS\_ResourceLimitsQosPolicy** (p. 1052) if the history kind is **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406).

## 7.117 DURABILITY\_SERVICE

Various settings to configure the external *RTI Persistence Service* used by RTI Connex for DataWriters with a **DDS↔\_DurabilityQosPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT↔\_DURABILITY\_QOS** (p. 401).

### Classes

- struct **DDS\_DurabilityServiceQosPolicy**

*Various settings to configure the external RTI Persistence Service used by RTI Connex for DataWriters with a **DDS↔\_DurabilityQosPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT↔\_DURABILITY\_QOS** (p. 401).*

### Variables

- const char \*const **DDS\_DURABILITYSERVICE\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_DurabilityServiceQosPolicy** (p. 771).*

#### 7.117.1 Detailed Description

Various settings to configure the external *RTI Persistence Service* used by RTI Connex for DataWriters with a **DDS↔\_DurabilityQosPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT↔\_DURABILITY\_QOS** (p. 401).

#### 7.117.2 Variable Documentation

##### 7.117.2.1 DDS\_DURABILITYSERVICE\_QOS\_POLICY\_NAME

```
const char* const DDS_DURABILITYSERVICE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_DurabilityServiceQosPolicy** (p. 771).

## 7.118 ENTITY\_FACTORY

A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.

### Classes

- struct **DDS\_EntityFactoryQosPolicy**

*A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.*

## Variables

- const char \*const **DDS\_ENTITYFACTORY\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_EntityFactoryQosPolicy* (p. 903).

### 7.118.1 Detailed Description

A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.

### 7.118.2 Variable Documentation

#### 7.118.2.1 DDS\_ENTITYFACTORY\_QOS\_POLICY\_NAME

```
const char* const DDS_ENTITYFACTORY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_EntityFactoryQosPolicy** (p. 903).

## 7.119 ENTITY\_NAME

<<*extension*>> (p. 237) Assigns a name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

## Classes

- struct **DDS\_EntityNameQosPolicy**  
*Assigns a name and a role name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.*

## Variables

- const char \*const **DDS\_ENTITYNAME\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_EntityNameQosPolicy* (p. 905).

### 7.119.1 Detailed Description

<<*extension*>> (p. 237) Assigns a name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

### 7.119.2 Variable Documentation

#### 7.119.2.1 DDS\_ENTITYNAME\_QOS\_POLICY\_NAME

```
const char* const DDS_ENTITYNAME_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_EntityNameQosPolicy** (p. 905).

## 7.120 EVENT

<<*extension*>> (p. 237) Configures the internal thread in a DomainParticipant that handles timed events.

### Classes

- struct **DDS\_EventQosPolicy**  
*Settings for event.*

### Variables

- const char \*const **DDS\_EVENT\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_EventQosPolicy** (p. 908).*

### 7.120.1 Detailed Description

<<*extension*>> (p. 237) Configures the internal thread in a DomainParticipant that handles timed events.

### 7.120.2 Variable Documentation

### 7.120.2.1 DDS\_EVENT\_QOS\_POLICY\_NAME

```
const char* const DDS_EVENT_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_EventQosPolicy** (p. 908).

## 7.121 HISTORY

Specifies the behavior of RTI Connex in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

### Classes

- struct **DDS\_HistoryQosPolicy**

*Specifies the behavior of RTI Connex in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.*

### Enumerations

- enum **DDS\_HistoryQosPolicyKind** {  
    **DDS\_KEEP\_LAST\_HISTORY\_QOS** ,  
    **DDS\_KEEP\_ALL\_HISTORY\_QOS** }

*Kinds of history.*

### Variables

- const char \*const **DDS\_HISTORY\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_HistoryQosPolicy** (p. 919).*

### 7.121.1 Detailed Description

Specifies the behavior of RTI Connex in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

### 7.121.2 Enumeration Type Documentation

#### 7.121.2.1 DDS\_HistoryQosPolicyKind

```
enum DDS_HistoryQosPolicyKind
```

Kinds of history.

QoS:

**DDS\_HistoryQosPolicy** (p. 919)

## Enumerator

DDS_KEEP_LAST_HISTORY_QOS	<p><b>[default]</b> Keep the last <code>depth</code> samples. On the publishing side, RTI Connexx will only attempt to keep the most recent <code>depth</code> samples of each instance of data (identified by its key) managed by the <b>DDSDataWriter</b> (p. 1321). Invalid samples representing a disposal or unregistration of an instance count towards the depth and may replace other DDS samples currently in the DataWriter queue for the same instance.</p> <p>On the subscribing side, the <b>DDSDataReader</b> (p. 1288) will only attempt to keep the most recent <code>depth</code> samples received for each instance (identified by its key) until the application takes them via the <b>DDSDataReader</b> (p. 1288) 's <b>take()</b> operation.</p> <p>Invalid samples representing a disposal or unregistration of an instance do not count towards the history depth and will not replace other DDS samples currently in the DataReader queue for the same instance.</p>
DDS_KEEP_ALL_HISTORY_QOS	<p>Keep <i>all</i> the samples. On the publishing side, RTI Connexx will attempt to keep all samples (representing each value written) of each instance of data (identified by its key) managed by the <b>DDSDataWriter</b> (p. 1321) until they can be delivered to all subscribers.</p> <p>On the subscribing side, RTI Connexx will attempt to keep all samples of each instance of data (identified by its key) managed by the <b>DDSDataReader</b> (p. 1288). These samples are kept until the application takes them from RTI Connexx via the <b>take()</b> operation.</p>

### 7.121.3 Variable Documentation

#### 7.121.3.1 DDS\_HISTORY\_QOS\_POLICY\_NAME

```
const char* const DDS_HISTORY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_HistoryQosPolicy** (p. 919).

## 7.122 GROUP\_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### Classes

- struct **DDS\_GroupDataQosPolicy**

*Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.*

## Variables

- const char \*const **DDS\_GROUPDATA\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_GroupDataQosPolicy** (p. 916).*

### 7.122.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### 7.122.2 Variable Documentation

#### 7.122.2.1 DDS\_GROUPDATA\_QOS\_POLICY\_NAME

```
const char* const DDS_GROUPDATA_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_GroupDataQosPolicy** (p. 916).

## 7.123 LATENCY\_BUDGET

Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

## Classes

- struct **DDS\_LatencyBudgetQosPolicy**  
*Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.*

## Variables

- const char \*const **DDS\_LATENCYBUDGET\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_LatencyBudgetQosPolicy** (p. 929).*

### 7.123.1 Detailed Description

Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

## 7.123.2 Variable Documentation

### 7.123.2.1 DDS\_LATENCYBUDGET\_QOS\_POLICY\_NAME

```
const char* const DDS_LATENCYBUDGET_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_LatencyBudgetQosPolicy** (p. 929).

## 7.124 LIFESPAN

Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.

### Classes

- struct **DDS\_LifespanQosPolicy**  
*Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.*

### Variables

- const char \*const **DDS\_LIFESPAN\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_LifespanQosPolicy** (p. 931).*

## 7.124.1 Detailed Description

Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.

## 7.124.2 Variable Documentation

### 7.124.2.1 DDS\_LIFESPAN\_QOS\_POLICY\_NAME

```
const char* const DDS_LIFESPAN_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_LifespanQosPolicy** (p. 931).

## 7.125 LIVELINESS

Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead."

### Classes

- struct **DDS\_LivelinessQosPolicy**

*Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead."*

### Enumerations

- enum **DDS\_LivelinessQosPolicyKind** {  
    **DDS\_AUTOMATIC\_LIVELINESS\_QOS** ,  
    **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** ,  
    **DDS\_MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** }

*Kinds of liveliness.*

### Variables

- const char \*const **DDS\_LIVELINESS\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_LivelinessQosPolicy** (p. 936).*

### 7.125.1 Detailed Description

Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead."

### 7.125.2 Enumeration Type Documentation

#### 7.125.2.1 DDS\_LivelinessQosPolicyKind

enum **DDS\_LivelinessQosPolicyKind**

*Kinds of liveliness.*

QoS:

**DDS\_LivelinessQosPolicy** (p. 936)

## Enumerator

DDS_AUTOMATIC_LIVELINESS_QOS	<b>[default]</b> The infrastructure will automatically signal liveliness for the <b>DDSDataWriter</b> (p. 1321) (s) at least as often as required by the <b>DDSDataWriter</b> (p. 1321) (S) <code>lease_duration</code> . A <b>DDSDataWriter</b> (p. 1321) with this setting does not need to take any specific action in order to be considered 'alive.' The <b>DDSDataWriter</b> (p. 1321) is only 'not alive' when the participant to which it belongs terminates (gracefully or not), or when there is a network problem that prevents the current participant from contacting that remote participant.
DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_QOS	RTI Connext will assume that as long as at least one <b>DDSDataWriter</b> (p. 1321) belonging to the <b>DDSDomainParticipant</b> (p. 1351) (or the <b>DDSDomainParticipant</b> (p. 1351) itself) has asserted its liveliness, then the other DataWriters belonging to that same <b>DDSDomainParticipant</b> (p. 1351) are also alive. The user application takes responsibility to signal liveliness to RTI Connext either by calling <b>DDSDomainParticipant::assert_liveliness</b> (p. 1399), or by calling <b>DDSDataWriter::assert_liveliness</b> (p. 1329), or <b>FooDataWriter::write</b> (p. 1683) on any <b>DDSDataWriter</b> (p. 1321) belonging to the <b>DDSDomainParticipant</b> (p. 1351).
DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS	RTI Connext will only assume liveliness of the <b>DDSDataWriter</b> (p. 1321) if the application has asserted liveliness of that <b>DDSDataWriter</b> (p. 1321) itself. The user application takes responsibility to signal liveliness to RTI Connext using the <b>DDSDataWriter::assert_liveliness</b> (p. 1329) method, or by writing some data.

### 7.125.3 Variable Documentation

#### 7.125.3.1 DDS\_LIVELINESS\_QOS\_POLICY\_NAME

```
const char* const DDS_LIVELINESS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_LivelinessQosPolicy** (p. 936).

## 7.126 LOCATORFILTER

<<*extension*>> (p. 237) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS\_PublicationBuiltinTopicData** (p. 1010).

## Classes

- struct **DDS\_LocatorFilter\_t**  
*Specifies the configuration of an individual channel within a MultiChannel DataWriter.*
- struct **DDS\_LocatorFilterSeq**  
*Declares IDL `sequence< DDS_LocatorFilter_t` (p. 940) >.*
- struct **DDS\_LocatorFilterQosPolicy**  
*The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS\_PublicationBuiltinTopicData** (p. 1010).*

## Variables

- const char \*const **DDS\_LOCATORFILTER\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_LocatorFilterQosPolicy** (p. 941).*

### 7.126.1 Detailed Description

<<*extension*>> (p. 237) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS\_PublicationBuiltinTopicData** (p. 1010).

### 7.126.2 Variable Documentation

#### 7.126.2.1 DDS\_LOCATORFILTER\_QOS\_POLICY\_NAME

```
const char* const DDS_LOCATORFILTER_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_LocatorFilterQosPolicy** (p. 941).

## 7.127 LOGGING

<<*extension*>> (p. 237) Configures the RTI Connex logging facility.

## Classes

- struct **DDS\_LoggingQosPolicy**  
*Configures the RTI Connex logging facility.*

### 7.127.1 Detailed Description

<<*extension*>> (p. 237) Configures the RTI Connex logging facility.

## 7.128 MONITORING

Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connex telemetry data.

### Classes

- struct **DDS\_MonitoringDedicatedParticipantSettings**  
*Configures the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.*
- struct **DDS\_MonitoringEventDistributionSettings**  
*Configures the distribution of event metrics.*
- struct **DDS\_MonitoringPeriodicDistributionSettings**  
*Configures the distribution of periodic metrics.*
- struct **DDS\_MonitoringLoggingDistributionSettings**  
*Configures the distribution of log messages.*
- struct **DDS\_MonitoringDistributionSettings**  
*Configures the distribution of telemetry data.*
- struct **DDS\_MonitoringMetricSelection**  
*This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.*
- struct **DDS\_MonitoringMetricSelectionSeq**  
*Declares IDL *sequence* < **DDS\_MonitoringMetricSelection** (p. 958) >*
- struct **DDS\_MonitoringLoggingForwardingSettings**  
*Configures the forwarding levels of log messages for the different **NDDS\_Config\_LogFacility** (p. 528).*
- struct **DDS\_MonitoringTelemetryData**  
*Configures the telemetry data that will be distributed.*
- struct **DDS\_MonitoringQosPolicy**  
*Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connex telemetry data.*

### Variables

- const char \*const **DDS\_MONITORING\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_MonitoringQosPolicy** (p. 962).*

### 7.128.1 Detailed Description

Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connex telemetry data.

## 7.128.2 Variable Documentation

### 7.128.2.1 DDS\_MONITORING\_QOS\_POLICY\_NAME

```
const char* const DDS_MONITORING_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_MonitoringQosPolicy** (p. 962).

## 7.129 MULTICHANNEL

<<*extension*>> (p. 237) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

### Classes

- struct **DDS\_ChannelSettings\_t**  
*Type used to configure the properties of a channel.*
- struct **DDS\_ChannelSettingsSeq**  
*Declares IDL sequence< DDS\_ChannelSettings\_t (p. 610) >*
- struct **DDS\_MultiChannelQosPolicy**  
*Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.*

### Variables

- const char \*const **DDS\_MULTICHANNEL\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for DDS\_MultiChannelQosPolicy (p. 964).*

### 7.129.1 Detailed Description

<<*extension*>> (p. 237) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

### 7.129.2 Variable Documentation

### 7.129.2.1 DDS\_MULTICHANNEL\_QOS\_POLICY\_NAME

```
const char* const DDS_MULTICHANNEL_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_MultiChannelQosPolicy** (p. 964).

## 7.130 OWNERSHIP

Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

### Classes

- struct **DDS\_OwnershipQosPolicy**

*Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.*

### Enumerations

- enum **DDS\_OwnershipQosPolicyKind** {  
    **DDS\_SHARED\_OWNERSHIP\_QOS** ,  
    **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** }

*Kinds of ownership.*

### Variables

- const char \*const **DDS\_OWNERSHIP\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_OwnershipQosPolicy** (p. 973).*

### 7.130.1 Detailed Description

Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

### 7.130.2 Enumeration Type Documentation

#### 7.130.2.1 DDS\_OwnershipQosPolicyKind

```
enum DDS_OwnershipQosPolicyKind
```

Kinds of ownership.

QoS:

**DDS\_OwnershipQosPolicy** (p. 973)

## Enumerator

DDS_SHARED_OWNERSHIP_QOS	<b>[default]</b> Indicates shared ownership for each instance. Multiple writers are allowed to update the same instance and all the updates are made available to the readers. In other words there is no concept of an owner for the instances. This is the <b>default</b> behavior if the <b>OWNERSHIP</b> (p. 414) policy is not specified or supported.
DDS_EXCLUSIVE_OWNERSHIP_QOS	Indicates each instance can only be owned by one <b>DDSDataWriter</b> (p. 1321), but the owner of an instance can change dynamically. The selection of the owner is controlled by the setting of the <b>OWNERSHIP_STRENGTH</b> (p. 415) policy. The owner is always set to be the highest-strength <b>DDSDataWriter</b> (p. 1321) object among the ones currently active (as determined by the <b>LIVELINESS</b> (p. 409)).

### 7.130.3 Variable Documentation

#### 7.130.3.1 DDS\_OWNERSHIP\_QOS\_POLICY\_NAME

```
const char* const DDS_OWNERSHIP_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_OwnershipQosPolicy** (p. 973).

## 7.131 OWNERSHIP\_STRENGTH

Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).

### Classes

- struct **DDS\_OwnershipStrengthQosPolicy**

*Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).*

### Variables

- const char \*const **DDS\_OWNERSHIPSTRENGTH\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_OwnershipStrengthQosPolicy** (p. 978).*

### 7.131.1 Detailed Description

Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).

### 7.131.2 Variable Documentation

#### 7.131.2.1 DDS\_OWNERSHIPSTRENGTH\_QOS\_POLICY\_NAME

```
const char* const DDS_OWNERSHIPSTRENGTH_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_OwnershipStrengthQosPolicy** (p. 978).

## 7.132 PARTITION

Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) entities.

### Classes

- struct **DDS\_PartitionQosPolicy**

*Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) entities.*

### Variables

- const char \*const **DDS\_PARTITION\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_PartitionQosPolicy** (p. 989).*

### 7.132.1 Detailed Description

Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) entities.

### 7.132.2 Variable Documentation

### 7.132.2.1 DDS\_PARTITION\_QOS\_POLICY\_NAME

```
const char* const DDS_PARTITION_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_PartitionQosPolicy** (p. 989).

## 7.133 PRESENTATION

Specifies how the samples representing changes to data instances are presented to a subscribing application.

### Classes

- struct **DDS\_PresentationQosPolicy**

*Specifies how the samples representing changes to data instances are presented to a subscribing application.*

### Enumerations

- enum **DDS\_PresentationQosPolicyAccessScopeKind** {  
**DDS\_INSTANCE\_PRESENTATION\_QOS** ,  
**DDS\_TOPIC\_PRESENTATION\_QOS** ,  
**DDS\_GROUP\_PRESENTATION\_QOS** ,  
**DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** }

*Kinds of presentation "access scope".*

### Variables

- const char \*const **DDS\_PRESENTATION\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_PresentationQosPolicy** (p. 996).*

### 7.133.1 Detailed Description

Specifies how the samples representing changes to data instances are presented to a subscribing application.

### 7.133.2 Enumeration Type Documentation

#### 7.133.2.1 DDS\_PresentationQosPolicyAccessScopeKind

```
enum DDS_PresentationQosPolicyAccessScopeKind
```

Kinds of presentation "access scope".

Access scope determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.

QoS:

**DDS\_PresentationQosPolicy** (p. 996)

## Enumerator

DDS_INSTANCE_PRESENTATION_QOS	<b>[default]</b> Scope spans only a single instance. Indicates that changes to one instance need not be coherent nor ordered with respect to changes to any other instance. In other words, order and coherent changes apply to each instance separately.
DDS_TOPIC_PRESENTATION_QOS	Scope spans all instances within the same <b>DDSDataWriter</b> (p. 1321), but not across instances in different <b>DDSDataWriter</b> (p. 1321) entities.
DDS_GROUP_PRESENTATION_QOS	Scope spans all instances belonging to <b>DDSDataWriter</b> (p. 1321) entities within the same <b>DDSPublisher</b> (p. 1550).
DDS_HIGHEST_OFFERED_PRESENTATION_QOS	This value only applies to a <b>DDSSubscriber</b> (p. 1592). The <b>DDSSubscriber</b> (p. 1592) will use the access scope specified by each remote <b>DDSPublisher</b> (p. 1550).

### 7.133.3 Variable Documentation

#### 7.133.3.1 DDS\_PRESENTATION\_QOS\_POLICY\_NAME

```
const char* const DDS_PRESENTATION_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_PresentationQosPolicy** (p. 996).

## 7.134 PROFILE

<<*extension*>> (p. 237) Configures the way that XML documents containing QoS profiles are loaded by RTI Connxt.

### Classes

- struct **DDS\_ProfileQosPolicy**

*Configures the way that XML documents containing QoS profiles are loaded by RTI Connxt.*

### Variables

- const char \*const **DDS\_PROFILE\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_ProfileQosPolicy** (p. 1004).*

### 7.134.1 Detailed Description

<<*extension*>> (p. 237) Configures the way that XML documents containing QoS profiles are loaded by RTI Connex.

### 7.134.2 Variable Documentation

#### 7.134.2.1 DDS\_PROFILE\_QOS\_POLICY\_NAME

```
const char* const DDS_PROFILE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_ProfileQosPolicy** (p. 1004).

## 7.135 PROPERTY

<<*extension*>> (p. 237) Stores (name, value) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

### Classes

- struct **DDS\_Property\_t**  
*Properties are name/value pairs objects.*
- struct **DDS\_PropertySeq**  
*Declares IDL sequence < DDS\_Property\_t (p. 1006) >*
- struct **DDS\_PropertyQosPolicy**  
*Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*
- class **DDSPROPERTYQOSPOLICYHELPER**  
*Policy helpers that facilitate management of the properties in the input policy.*

### Typedefs

- typedef struct **DDS\_PropertyQosPolicy DDS\_PropertyQosPolicy**  
*Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*
- typedef enum **DDS\_PropertyQosPolicyMutability DDS\_PropertyQosPolicyMutability**  
*Determines if, and when, the value of a property can change.*

## Enumerations

- enum **DDS\_PropertyQosPolicyMutability** {  
**DDS\_PROPERTY\_QOS\_MUTABLE** ,  
**DDS\_PROPERTY\_QOS\_MUTABLE\_UNTIL\_ENABLE** ,  
**DDS\_PROPERTY\_QOS\_IMMUTABLE** }

*Determines if, and when, the value of a property can change.*

## Functions

- **DDS\_PropertyQosPolicyMutability** **DDS\_PropertyQosPolicyHelper\_get\_property\_mutability** (const char \*name, const struct **DDS\_PropertyQosPolicy** \*policy)  
*Returns the mutability type of a property.*
- static **DDS\_Long** **DDSPROPERTYQOSPolicyHelper::get\_number\_of\_properties** ( **DDS\_PropertyQosPolicy** &policy)  
*Gets the number of properties in the input policy.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::assert\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const char \*value, **DDS\_Boolean** propagate)  
*Asserts the property identified by name in the input policy.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::add\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const char \*value, **DDS\_Boolean** propagate)  
*Adds a new property to the input policy.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::assert\_pointer\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const void \*pointer)  
*Asserts the property identified by name in the input policy. Used when the property to store is a pointer.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::add\_pointer\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const void \*pointer)  
*Adds a new property to the input policy. Used when the property to store is a pointer.*
- static struct **DDS\_Property\_t**\* **DDSPROPERTYQOSPolicyHelper::lookup\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name)  
*Searches for a property in the input policy given its name.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::remove\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name)  
*Removes a property from the input policy.*
- static **DDS\_ReturnCode\_t** **DDSPROPERTYQOSPolicyHelper::get\_properties** ( **DDS\_PropertyQosPolicy** &policy, struct **DDS\_PropertySeq** &properties, const char \*name\_prefix)  
*Retrieves a list of properties whose names match the input prefix.*

## Variables

- const char \*const **DDS\_PROPERTY\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_PropertyQosPolicy** (p. 1007).*

### 7.135.1 Detailed Description

<<**extension**>> (p. 237) Stores (name, value) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

RTI Connex will automatically set some system properties in the **DDS\_PropertyQosPolicy** (p. 1007) associated with a **DDS\_DomainParticipantQos** (p. 741). See **System Properties** (p. 196) for additional details.

## 7.135.2 Typedef Documentation

### 7.135.2.1 DDS\_PropertyQoSPolicy

```
typedef struct DDS_PropertyQoSPolicy DDS_PropertyQoSPolicy
```

Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

Entity:

**DDSDomainParticipant** (p. 1351) **DDSDataReader** (p. 1288) **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A;  
**Changeable** (p. 360) = **YES** (p. 360)

See also

**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

## 7.135.3 Usage

The PROPERTY QoS policy can be used to associate a set of properties in the form of (name, value) pairs with a **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321), or **DDSDomainParticipant** (p. 1351). This is similar to the **DDS\_UserDataQoSPolicy** (p. 1237), except this policy uses (name, value) pairs, and you can select whether or not a particular pair should be propagated (included in the builtin topic).

You can find a complete list of predefined properties in the [Property Reference Guide](#).

This QoS policy may be used to configure:

- Durable Writer History, see **Configuring Durable Writer History** (p. 193)
- Durable Reader State, see **Configuring Durable Reader State** (p. 195)
- Builtin Transport Plugins, see **UDIPv4 Transport Property Names in Property QoS Policy of Domain Participant** (p. 269), **UDIPv6 Transport Property Names in Property QoS Policy of Domain Participant** (p. 285), and **Shared Memory Transport Property Names in Property QoS Policy of Domain Participant** (p. 263)
- Extension Transport Plugins, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 173)
- **Clock Selection** (p. 38)

In addition, you may add your own name/value pairs to the Property QoS policy of an Entity. Via this QoS policy, you can direct RTI Connex to propagate these name/value pairs with the discovery information for the Entity. Applications that discover the Entity can then access the user-specific name/value pairs in the discovery information of the remote Entity. This allows you to add meta-information about an Entity for application-specific use, for example, authentication/authorization certificates (which can also be done using the **DDS\_UserDataQoSPolicy** (p. 1237) or **DDS\_Group↔DataQoSPolicy** (p. 916)).

### 7.135.3.1 Reasons for Using the PropertyQoSPolicy

- Supports dynamic loading of extension transports
- Supports multiple instances of the builtin transports
- Allows full pluggable transport configuration for non-C/C++ language bindings (Java, .NET, etc.)
- Avoids the process of creating entities disabled, changing their QoS settings, then enabling them
- Allows selection of clock

Some of the RTI Connexnt capabilities configurable via the Property QoS policy can also be configured in code via APIs. However, the Property QoS policy allows you to configure those parameters via XML files. In addition, some of the configuration APIs will only work if the Entity was created in a disabled state and then enabled after the configuration change was applied. By configuring those parameters using the Property QoS policy during entity creation, you avoid the additional work of first creating a disabled entity and then enabling it afterwards.

There are helper functions to facilitate working with properties, see the **PROPERTY** (p. 419) page.

### 7.135.3.2 DDS\_PropertyQoSPolicyMutability

```
typedef enum DDS_PropertyQoSPolicyMutability DDS_PropertyQoSPolicyMutability
```

Determines if, and when, the value of a property can change.

## 7.135.4 Enumeration Type Documentation

### 7.135.4.1 DDS\_PropertyQoSPolicyMutability

```
enum DDS_PropertyQoSPolicyMutability
```

Determines if, and when, the value of a property can change.

#### Enumerator

DDS_PROPERTY_QOS_MUTABLE	The property is mutable: it can be changed at any time.
DDS_PROPERTY_QOS_MUTABLE_UNTIL_ENABLE	The property can only be changed before enabling the entity.
DDS_PROPERTY_QOS_IMMUTABLE	The property is immutable: it can only be specified when creating the entity.

## 7.135.5 Function Documentation

### 7.135.5.1 DDS\_PropertyQosPolicyHelper\_get\_property\_mutability()

```
DDS_PropertyQosPolicyMutability DDS_PropertyQosPolicyHelper_get_property_mutability (
    const char * name,
    const struct DDS_PropertyQosPolicy * policy )
```

Returns the mutability type of a property.

If the property does not exist, **DDS\_PROPERTY\_QOS\_MUTABLE** (p. 422) is returned. Otherwise, it returns the mutability type of the specified property. See **DDS\_PropertyQosPolicyMutability** (p. 422) for more information of the different mutability types.

#### Parameters

<i>name</i>	<< <i>in</i> >> (p. 238). The name of the property for which we want to know the mutability type.
<i>policy</i>	<< <i>in</i> >> (p. 238). These are the properties in which we are going to look for the property with the provided name.

#### Returns

The mutability type of the input property.

### 7.135.5.2 get\_number\_of\_properties()

```
static DDS_Long DDSPropertyQosPolicyHelper::get_number_of_properties (
    DDS_PropertyQosPolicy & policy ) [static]
```

Gets the number of properties in the input policy.

#### Precondition

policy cannot be NULL.

#### Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
---------------	--

**Returns**

Number of properties.

**7.135.5.3 assert\_property()**

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::assert_property (
    DDS_PropertyQosPolicy & policy,
    const char * name,
    const char * value,
    DDS_Boolean propagate ) [static]
```

Asserts the property identified by name in the input policy.

If the property already exists, this function replaces its current value with the new one.

If the property identified by name does not exist, this function adds it to the property set.

This function increases the maximum number of elements of the policy sequence when this number is not enough to store the new property.

**Precondition**

policy, name and value cannot be NULL.

**Parameters**

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Property name.
<i>value</i>	<< <i>in</i> >> (p. 238) Property value.
<i>propagate</i>	<< <i>in</i> >> (p. 238) Indicates if the property will be propagated on discovery.

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

**7.135.5.4 add\_property()**

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::add_property (
    DDS_PropertyQosPolicy & policy,
    const char * name,
```

```
const char * value,
    DDS_Boolean propagate ) [static]
```

Adds a new property to the input policy.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connex.

If the maximum number of elements of the policy sequence is not enough to store the new property, this function will increase it.

If the property already exists the function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Precondition

policy, name and value cannot be NULL.

The property is not in the policy.

#### Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Property name.
<i>value</i>	<< <i>in</i> >> (p. 238) Property value.
<i>propagate</i>	<< <i>in</i> >> (p. 238) Indicates if the property will be propagated on discovery.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

#### 7.135.5.5 assert\_pointer\_property()

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::assert_pointer_property (
    DDS_PropertyQosPolicy & policy,
    const char * name,
    const void * pointer ) [static]
```

Asserts the property identified by name in the input policy. Used when the property to store is a pointer.

This is a function similar to **DDSPropertyQosPolicyHelper::assert\_property** (p. 424). However, instead of passing a stringified version of the pointer, this function receives a pointer as the value.

If the property already exists, this function replaces its current value with the new one.

If the property identified by name does not exist, this function adds it to the property set.

This function increases the maximum number of elements of the policy sequence when this number is not enough to store the new property.

The properties asserted by this function will not be propagated on discovery.

**Precondition**

policy and name cannot be NULL.

**Parameters**

<i>policy</i>	<< <b><i>in</i></b> >> (p. 238) Input policy.
<i>name</i>	<< <b><i>in</i></b> >> (p. 238) Property name.
<i>pointer</i>	<< <b><i>in</i></b> >> (p. 238) The pointer to store in the property.

**Returns**

One of the **Standard Return Codes** (p. 336) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

**7.135.5.6 add\_pointer\_property()**

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::add_pointer_property (
    DDS_PropertyQosPolicy & policy,
    const char * name,
    const void * pointer ) [static]
```

Adds a new property to the input policy. Used when the property to store is a pointer.

This is a function similar to **DDSPropertyQosPolicyHelper::add\_property** (p. 424). However, instead of passing a stringified version of the pointer, this function receives a pointer as the value.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connex.

If the maximum number of elements of the policy sequence is not enough to store the new property, this function will increase it.

If the property already exists the function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The properties added by this function will not be propagated on discovery.

**Precondition**

policy and name cannot be NULL.

The property is not in the policy.

**Parameters**

<i>policy</i>	<< <b><i>in</i></b> >> (p. 238) Input policy.
<i>name</i>	<< <b><i>in</i></b> >> (p. 238) Property name.
<i>pointer</i>	<< <b><i>in</i></b> >> (p. 238) The pointer to store in the property.

**Returns**

One of the **Standard Return Codes** (p. 336) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336)

**7.135.5.7 lookup\_property()**

```
static struct DDS_Property_t * DDSPropertyQosPolicyHelper::lookup_property (
    DDS_PropertyQosPolicy & policy,
    const char * name ) [static]
```

Searches for a property in the input policy given its name.

**Precondition**

*policy*, *name* and *value* cannot be NULL.

**Parameters**

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Property name.

**Returns**

The function returns the first property with the given name. If such a property does not exist, the function returns NULL.

**7.135.5.8 remove\_property()**

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::remove_property (
    DDS_PropertyQosPolicy & policy,
    const char * name ) [static]
```

Removes a property from the input policy.

If the property does not exist, the function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

**Precondition**

*policy* and *name* cannot be NULL.

The property is in the policy.

## Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>name</i>	<< <i>in</i> >> (p. 238) Property name.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	--

7.135.5.9 `get_properties()`

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::get_properties (
    DDS_PropertyQosPolicy & policy,
    struct DDS_PropertySeq & properties,
    const char * name_prefix ) [static]
```

Retrieves a list of properties whose names match the input prefix.

If the properties sequence doesn't own its buffer, and its maximum is less than the total number of properties matching the input prefix, it will be filled up to its maximum and fail with an error of **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

## Precondition

`policy`, `properties` and `name_prefix` cannot be NULL.

## Parameters

<i>policy</i>	<< <i>in</i> >> (p. 238) Input policy.
<i>properties</i>	<< <i>inout</i> >> (p. 238) A <b>DDS_PropertySeq</b> (p. 1009) object where the set or list of properties will be returned.
<i>name_prefix</i>	Name prefix.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	--

## 7.135.6 Variable Documentation

### 7.135.6.1 DDS\_PROPERTY\_QOS\_POLICY\_NAME

```
const char* const DDS_PROPERTY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_PropertyQosPolicy** (p. 1007).

## 7.136 PUBLISH\_MODE

<<**extension**>> (p. 237) Specifies how RTI Connex sends application data on the network. This QoS policy can be used to tell RTI Connex to use its *own* thread to send data, instead of the user thread.

### Classes

- struct **DDS\_PublishModeQosPolicy**

*Specifies how RTI Connex sends application data on the network. This QoS policy can be used to tell RTI Connex to use its own thread to send data, instead of the user thread.*

### Macros

- #define **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED**

*Initializer value for **DDS\_PublishModeQosPolicy::priority** (p. 1028) and/or **DDS\_ChannelSettings\_t::priority** (p. 611).*

- #define **DDS\_PUBLICATION\_PRIORITY\_AUTOMATIC**

*Constant value for **DDS\_PublishModeQosPolicy::priority** (p. 1028) and/or **DDS\_ChannelSettings\_t::priority** (p. 611).*

### Enumerations

- enum **DDS\_PublishModeQosPolicyKind** {  
**DDS\_SYNCHRONOUS\_PUBLISH\_MODE\_QOS** ,  
**DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** }

*Kinds of publishing mode.*

### Variables

- const char \*const **DDS\_PUBLISHMODE\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_PublishModeQosPolicy** (p. 1025).*

### 7.136.1 Detailed Description

<<**extension**>> (p. 237) Specifies how RTI Connex sends application data on the network. This QoS policy can be used to tell RTI Connex to use its *own* thread to send data, instead of the user thread.

## 7.136.2 Macro Definition Documentation

### 7.136.2.1 DDS\_PUBLICATION\_PRIORITY\_UNDEFINED

```
#define DDS_PUBLICATION_PRIORITY_UNDEFINED
```

Initializer value for **DDS\_PublishModeQosPolicy::priority** (p. 1028) and/or **DDS\_ChannelSettings\_t::priority** (p. 611).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the lowest possible value. For multi-channel data writers, if either the data writer or channel priority is NOT set to this value, then the publication priority of the entity will be set to the defined value.

### 7.136.2.2 DDS\_PUBLICATION\_PRIORITY\_AUTOMATIC

```
#define DDS_PUBLICATION_PRIORITY_AUTOMATIC
```

Constant value for **DDS\_PublishModeQosPolicy::priority** (p. 1028) and/or **DDS\_ChannelSettings\_t::priority** (p. 611).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the largest priority value of any sample currently queued for publication by the data writer or data writer channel.

## 7.136.3 Enumeration Type Documentation

### 7.136.3.1 DDS\_PublishModeQosPolicyKind

```
enum DDS_PublishModeQosPolicyKind
```

Kinds of publishing mode.

QoS:

**DDS\_PublishModeQosPolicy** (p. 1025)

## Enumerator

DDS_SYNCHRONOUS_PUBLISH_MODE_QOS	<p>Indicates to send data synchronously. If <b>DDS_DataWriterProtocolQosPolicy::push_on_write</b> (p. 675) is <b>DDS_BOOLEAN_TRUE</b> (p. 317), data is sent immediately in the context of <b>FooDataWriter::write</b> (p. 1683).</p> <p>As data is sent immediately in the context of the user thread, no flow control is applied.</p> <p>See also</p> <p><b>DDS_DataWriterProtocolQosPolicy::push_on_write</b> (p. 675)</p> <p><b>[default]</b> for <b>DDSDataWriter</b> (p. 1321)</p>
DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS	<p>Indicates to send data asynchronously. Configures the <b>DDSDataWriter</b> (p. 1321) to delegate the task of data transmission to a separate publishing thread. The <b>FooDataWriter::write</b> (p. 1683) call does not send the data, but instead schedules the data to be sent later by its associated <b>DDSPublisher</b> (p. 1550).</p> <p>Each <b>DDSPublisher</b> (p. 1550) uses its dedicated publishing thread (<b>DDS_PublisherQos::asynchronous_publisher</b> (p. 1025)) to send data for all its asynchronous DataWriters. For each asynchronous DataWriter, the associated <b>DDSFlowController</b> (p. 1468) determines when the publishing thread is allowed to send the data.</p> <p><b>DDSDataWriter::wait_for_asynchronous_publishing</b> (p. 1335) and <b>DDSPublisher::wait_for_asynchronous_publishing</b> (p. 1567) enable you to determine when the data has actually been sent.</p> <p>See also</p> <p><b>DDSFlowController</b> (p. 1468)</p> <p><b>DDS_HistoryQosPolicy</b> (p. 919)</p> <p><b>DDSDataWriter::wait_for_asynchronous_publishing</b> (p. 1335)</p> <p><b>DDSPublisher::wait_for_asynchronous_publishing</b> (p. 1567)</p> <p><b>NDDS_Transport_Property_t::gather_send_buffer_count_max</b> (p. 1779)</p>

## 7.136.4 Variable Documentation

### 7.136.4.1 DDS\_PUBLISHMODE\_QOS\_POLICY\_NAME

```
const char* const DDS_PUBLISHMODE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_PublishModeQosPolicy** (p. 1025).

## 7.137 READER\_DATA\_LIFECYCLE

Controls how a DataReader manages the lifecycle of the data that it has received.

### Classes

- struct **DDS\_ReaderDataLifecycleQosPolicy**  
*Controls how a DataReader manages the lifecycle of the data that it has received.*

### Variables

- const char \*const **DDS\_READERDATALIFECYCLE\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_ReaderDataLifecycleQosPolicy** (p. 1035).*

### 7.137.1 Detailed Description

Controls how a DataReader manages the lifecycle of the data that it has received.

### 7.137.2 Variable Documentation

#### 7.137.2.1 DDS\_READERDATALIFECYCLE\_QOS\_POLICY\_NAME

```
const char* const DDS_READERDATALIFECYCLE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_ReaderDataLifecycleQosPolicy** (p. 1035).

## 7.138 RECEIVER\_POOL

<<**extension**>> (p. 237) Configures threads used by RTI Connex to receive and process data from transports (for example, UDP sockets).

## Classes

- struct **DDS\_ReceiverPoolQosPolicy**

*Configures threads used by RTI Connex to receive and process data from transports (for example, UDP sockets).*

## Variables

*Stringified human-readable name for **DDS\_ReliabilityQosPolicy** (p. 1041).*

### 7.139.1 Detailed Description

Indicates the level of reliability offered/requested by RTI Connex.

### 7.139.2 Enumeration Type Documentation

#### 7.139.2.1 DDS\_ReliabilityQosPolicyKind

```
enum DDS_ReliabilityQosPolicyKind
```

Kinds of reliability.

QoS:

**DDS\_ReliabilityQosPolicy** (p. 1041)

## Enumerator

DDS_BEST_EFFORT_RELIABILITY_QOS	<p>Indicates that it is acceptable to not retry propagation of any samples. Presumably new values for the samples are generated often enough that it is not necessary to re-send or acknowledge any samples.</p> <p><b>[default]</b> for <b>DDSDataReader</b> (p. 1288) and <b>DDSTopic</b> (p. 1617)</p>
DDS_RELIABLE_RELIABILITY_QOS	<p>Specifies RTI Connexx will attempt to deliver all samples in its history. Missed samples may be retried. In steady-state (no modifications communicated via the <b>DDSDataWriter</b> (p. 1321)), RTI Connexx guarantees that all samples in the <b>DDSDataWriter</b> (p. 1321) history will eventually be delivered to all the <b>DDSDataReader</b> (p. 1288) objects (subject to timeouts that indicate loss of communication with a particular <b>DDSSubscriber</b> (p. 1592)). Outside steady state, the <b>HISTORY</b> (p. 405) and <b>RESOURCE_LIMITS</b> (p. 437) policies will determine how samples become part of the history and whether samples can be discarded from it.</p> <p><b>[default]</b> for <b>DDSDataWriter</b> (p. 1321)</p>

## 7.139.2.2 DDS\_ReliabilityQosPolicyAcknowledgmentModeKind

enum **DDS\_ReliabilityQosPolicyAcknowledgmentModeKind**

<<*extension*>> (p. 237) Kinds of acknowledgment.

QoS:

**DDS\_ReliabilityQosPolicy** (p. 1041)

## Enumerator

DDS_PROTOCOL_ACKNOWLEDGMENT_MODE	<p>Samples are acknowledged by RTPS protocol. Samples are acknowledged according to the Real-Time Publish-Subscribe (RTPS) interoperability protocol.</p>
DDS_APPLICATION_AUTO_ACKNOWLEDGMENT_↔ MODE	<p>Samples are acknowledged automatically after a subscribing application has accessed them. A sample received by a <b>FooDataReader</b> (p. 1649) is acknowledged after the subscribing application accesses it, either through calling <b>FooDataReader::take</b> (p. 1652) or <b>FooDataReader::read</b> (p. 1651) on the DDS sample. If the read or take operation loans the samples, the acknowledgment is done after <b>FooDataReader::return_loan</b> (p. 1672) is called. Otherwise, for read or take operations that make a copy, acknowledgment is done after the read or take operations are executed.</p>

## Enumerator

DDS_APPLICATION_EXPLICIT_↔ ACKNOWLEDGMENT_MODE	Samples are acknowledged after the subscribing application explicitly calls <code>acknowledge</code> on the samples. Samples received by a <b>DDSDataReader</b> (p. 1288) are explicitly acknowledged by the subscribing application, after it calls either <b>DDSDataReader::acknowledge_all</b> (p. 1297) or <b>DDSDataReader::acknowledge_sample</b> (p. 1296).
---	--

## 7.139.2.3 DDS\_InstanceStateConsistencyKind

enum **DDS\_InstanceStateConsistencyKind**

<<*extension*>> (p. 237) Whether instance state consistency is enabled.

QoS:

**DDS\_ReliabilityQoSPolicy** (p. 1041)

## Enumerator

DDS_NO_RECOVER_INSTANCE_STATE_↔ CONSISTENCY	Instance state is not restored on a DataReader after reconnecting with a DataWriter until the DataWriter sends a new sample. When DataReaders rediscover DataWriters, they will not request updated instance state data. DataWriters always provide instance state data alongside each sample update regardless of this setting.
DDS_RECOVER_INSTANCE_STATE_↔ CONSISTENCY	Instance state is restored on the DataReader after it reconnects with a DataWriter that has regained liveliness, even before the DataWriter sends a new sample. When DataReaders rediscover DataWriters, they will request updated instance state data. DataWriters will respond to requests for updated instance state data and publish updates on the ServiceRequest channel. DataWriters still provide instance state data alongside each sample update regardless of this setting.  The following limitation applies to using <code>RECOVER_INSTANCE_STATE_↔CONSISTENCY</code> : If the <b>DDS_DestinationOrderQoSPolicyKind</b> (p. 387) is set to <b>DDS_BY_SOURCE_TIMESTAMP_↔DESTINATIONORDER_QOS</b> (p. 387), <code>RECOVER_INSTANCE_STATE_↔CONSISTENCY</code> can only be used if scope is set to <code>idref_DestinationOrderQoSPolicyScopeKind_↔INSTANCE_SCOPE_DESTINATIONORDER_QOS</code> (the default).

### 7.139.3 Variable Documentation

#### 7.139.3.1 DDS\_RELIABILITY\_QOS\_POLICY\_NAME

```
const char* const DDS_RELIABILITY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_ReliabilityQosPolicy** (p. 1041).

## 7.140 RESOURCE\_LIMITS

Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

### Classes

- struct **DDS\_ResourceLimitsQosPolicy**

*Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.*

### Variables

- const char \*const **DDS\_RESOURCELIMITS\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_ResourceLimitsQosPolicy** (p. 1052).*
- const **DDS\_Long** **DDS\_LENGTH\_UNLIMITED**  
*A special value indicating an unlimited quantity.*

#### 7.140.1 Detailed Description

Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

#### 7.140.2 Variable Documentation

### 7.140.2.1 DDS\_RESOURCELIMITS\_QOS\_POLICY\_NAME

```
const char* const DDS_RESOURCELIMITS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_ResourceLimitsQosPolicy** (p. 1052).

### 7.140.2.2 DDS\_LENGTH\_UNLIMITED

```
const DDS_Long DDS_LENGTH_UNLIMITED [extern]
```

A special value indicating an unlimited quantity.

#### Examples

**HelloWorld\_subscriber.cxx.**

Referenced by **connext::Requester< TReq, TRep >::read\_replies()**, and **connext::Requester< TReq, TRep >::take\_replies()**.

## 7.141 SERVICE

<<**extension**>> (p. 237) Service QoS policy is used to indicate what kind of service is associated with the DDS entity.

### Classes

- struct **DDS\_ServiceQosPolicy**  
*Service associated with a DDS entity.*

### Enumerations

- enum **DDS\_ServiceQosPolicyKind** {  
**DDS\_NO\_SERVICE\_QOS** ,  
**DDS\_PERSISTENCE\_SERVICE\_QOS** ,  
**DDS\_QUEUING\_SERVICE\_QOS** ,  
**DDS\_ROUTING\_SERVICE\_QOS** ,  
**DDS\_RECORDING\_SERVICE\_QOS** ,  
**DDS\_REPLAY\_SERVICE\_QOS** ,  
**DDS\_DATABASE\_INTEGRATION\_SERVICE\_QOS** ,  
**DDS\_WEB\_INTEGRATION\_SERVICE\_QOS** ,  
**DDS\_OBSERVABILITY\_COLLECTOR\_SERVICE\_QOS** }  
*Kinds of service.*

## Variables

- const char \*const **DDS\_SERVICE\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_ServiceQosPolicy* (p. 1096).

### 7.141.1 Detailed Description

<<*extension*>> (p. 237) Service QoS policy is used to indicate what kind of service is associated with the DDS entity.

### 7.141.2 Enumeration Type Documentation

#### 7.141.2.1 DDS\_ServiceQosPolicyKind

enum **DDS\_ServiceQosPolicyKind**

Kinds of service.

QoS:

**DDS\_ServiceQosPolicy** (p. 1096)

Enumerator

DDS_NO_SERVICE_QOS	There is no service associated with the entity.
DDS_PERSISTENCE_SERVICE_QOS	The entity is an entity created by RTI Persistence Service.
DDS_QUEUING_SERVICE_QOS	The entity is an entity created by RTI Queuing Service.
DDS_ROUTING_SERVICE_QOS	The entity is an entity created by RTI Routing Service.
DDS_RECORDING_SERVICE_QOS	The entity is an entity created by RTI Recording Service.
DDS_REPLAY_SERVICE_QOS	The entity is an entity created by RTI Replay Service.
DDS_DATABASE_INTEGRATION_SERVICE_QOS	The entity is an entity created by RTI Database Integration Service.
DDS_WEB_INTEGRATION_SERVICE_QOS	The entity is an entity created by RTI Web Integration Service.
DDS_OBSERVABILITY_COLLECTOR_SERVICE_QOS	The entity is an entity created by RTI Observability Collector Service.

### 7.141.3 Variable Documentation

### 7.141.3.1 DDS\_SERVICE\_QOS\_POLICY\_NAME

```
const char* const DDS_SERVICE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_ServiceQosPolicy** (p. 1096).

## 7.142 SYSTEM\_RESOURCE\_LIMITS

<<**extension**>> (p. 237) Configures DomainParticipant-independent resources used by RTI Connex.

### Classes

- struct **DDS\_SystemResourceLimitsQosPolicy**  
 <<**extension**>> (p. 237) Configures **DDSDomainParticipant** (p. 1351)-independent resources used by RTI Connex. Mainly used to change the maximum number of **DDSDomainParticipant** (p. 1351) entities that can be created within a single process (address space).

### Variables

- const char \*const **DDS\_SYSTEMRESOURCELIMITS\_QOS\_POLICY\_NAME**  
 Stringified human-readable name for **DDS\_SystemResourceLimitsQosPolicy** (p. 1120).

### 7.142.1 Detailed Description

<<**extension**>> (p. 237) Configures DomainParticipant-independent resources used by RTI Connex.

### 7.142.2 Variable Documentation

#### 7.142.2.1 DDS\_SYSTEMRESOURCELIMITS\_QOS\_POLICY\_NAME

```
const char* const DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_SystemResourceLimitsQosPolicy** (p. 1120).

## 7.143 TIME\_BASED\_FILTER

Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.

## Classes

- struct **DDS\_TimeBasedFilterQosPolicy**

*Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.*

## Variables

- const char \*const **DDS\_TIMEBASEDFILTER\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_TimeBasedFilterQosPolicy** (p. 1126).*

### 7.143.1 Detailed Description

Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.

### 7.143.2 Variable Documentation

#### 7.143.2.1 DDS\_TIMEBASEDFILTER\_QOS\_POLICY\_NAME

```
const char* const DDS_TIMEBASEDFILTER_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TimeBasedFilterQosPolicy** (p. 1126).

## 7.144 TOPIC\_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

## Classes

- struct **DDS\_TopicDataQosPolicy**

*Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.*

## Variables

- const char \*const **DDS\_TOPICDATA\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_TopicDataQosPolicy** (p. 1133).*

### 7.144.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### 7.144.2 Variable Documentation

#### 7.144.2.1 DDS\_TOPICDATA\_QOS\_POLICY\_NAME

```
const char* const DDS_TOPICDATA_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TopicDataQosPolicy** (p. 1133).

## 7.145 TOPIC\_QUERY\_DISPATCH

Configures the ability of a **DDSDataWriter** (p. 1321) to publish historical samples.

### Classes

- struct **DDS\_TopicQueryDispatchQosPolicy**  
*Configures the ability of a **DDSDataWriter** (p. 1321) to publish samples in response to a **DDSTopicQuery** (p. 1627).*

### Variables

- const char \*const **DDS\_TOPICQUERYDISPATCH\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_TopicQueryDispatchQosPolicy** (p. 1141).*

### 7.145.1 Detailed Description

Configures the ability of a **DDSDataWriter** (p. 1321) to publish historical samples.

### 7.145.2 Variable Documentation

## 7.145.2.1 DDS\_TOPICQUERYDISPATCH\_QOS\_POLICY\_NAME

```
const char* const DDS_TOPICQUERYDISPATCH_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TopicQueryDispatchQosPolicy** (p. 1141).

## 7.146 TRANSPORT\_BUILTIN

<<*extension*>> (p. 237) Specifies which built-in transports are used.

## Classes

- struct **DDS\_TransportBuiltinQosPolicy**  
*Specifies which built-in transports are used.*

## Macros

- #define **DDS\_TRANSPORTBUILTIN\_MASK\_NONE**  
*None of the built-in transports will be registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.*
- #define **DDS\_TRANSPORTBUILTIN\_MASK\_DEFAULT**  
*The default value of **DDS\_TransportBuiltinQosPolicy::mask** (p. 1145).*
- #define **DDS\_TRANSPORTBUILTIN\_MASK\_ALL**  
*All the available built-in transports are registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.*

## Typedefs

- typedef **DDS\_Long DDS\_TransportBuiltinKindMask**  
*A mask of **DDS\_TransportBuiltinKind** (p. 445) bits.*

## Enumerations

- enum **DDS\_TransportBuiltinKind** {  
**DDS\_TRANSPORTBUILTIN\_UDPv4** ,  
**DDS\_TRANSPORTBUILTIN\_SHMEM** ,  
**DDS\_TRANSPORTBUILTIN\_INTRA** = 0x00000001 << 2 ,  
**DDS\_TRANSPORTBUILTIN\_UDPv6** ,  
**DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN** }  
*Built-in transport kind.*

## Variables

- const char \*const **DDS\_TRANSPORTBUILTIN\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_TransportBuiltinQosPolicy** (p. 1144).*
- const char \*const **DDS\_TRANSPORTBUILTIN\_SHMEM\_ALIAS**  
*Alias name for the shared memory built-in transport: "builtin.shmem".*
- const char \*const **DDS\_TRANSPORTBUILTIN\_UDPv4\_ALIAS**  
*Alias name for the UDPv4 built-in transport: "builtin.udpv4".*
- const char \*const **DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN\_ALIAS**  
*Alias name for the UDPv4 asymmetric built-in transport: "builtin.udpv4\_wan".*
- const char \*const **DDS\_TRANSPORTBUILTIN\_UDPv6\_ALIAS**  
*Alias name for the UDPv6 built-in transport: "builtin.udpv6".*

### 7.146.1 Detailed Description

<<**extension**>> (p. 237) Specifies which built-in transports are used.

See also

**Changing the automatically registered built-in transports** (p. 216)

### 7.146.2 Macro Definition Documentation

#### 7.146.2.1 DDS\_TRANSPORTBUILTIN\_MASK\_NONE

```
#define DDS_TRANSPORTBUILTIN_MASK_NONE
```

None of the built-in transports will be registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.

The user must explicitly register transports using **NDDSTransportSupport::register\_transport** (p. 1834).

See also

**DDS\_TransportBuiltinKindMask** (p. 445)

### 7.146.2.2 DDS\_TRANSPORTBUILTIN\_MASK\_DEFAULT

```
#define DDS_TRANSPORTBUILTIN_MASK_DEFAULT
```

The default value of `DDS_TransportBuiltinQosPolicy::mask` (p. 1145).

The set of builtin transport plugins that will be automatically registered with the participant by default. The user can register additional transports using `NDDSTransportSupport::register_transport` (p. 1834).

**[default]** [UDPv4|Shmem]

See also

`DDS_TransportBuiltinKindMask` (p. 445)

### 7.146.2.3 DDS\_TRANSPORTBUILTIN\_MASK\_ALL

```
#define DDS_TRANSPORTBUILTIN_MASK_ALL
```

All the available built-in transports are registered automatically when the `DDSDomainParticipant` (p. 1351) is enabled.

See also

`DDS_TransportBuiltinKindMask` (p. 445)

## 7.146.3 Typedef Documentation

### 7.146.3.1 DDS\_TransportBuiltinKindMask

```
typedef DDS_Long DDS_TransportBuiltinKindMask
```

A mask of `DDS_TransportBuiltinKind` (p. 445) bits.

QoS:

`DDS_TransportBuiltinQosPolicy` (p. 1144)

## 7.146.4 Enumeration Type Documentation

### 7.146.4.1 DDS\_TransportBuiltinKind

```
enum DDS_TransportBuiltinKind
```

Built-in transport kind.

See also

`DDS_TransportBuiltinKindMask` (p. 445)

## Enumerator

DDS_TRANSPORTBUILTIN_UDPv4	Built-in UDPv4 transport, :: <b>UDPv4 Transport</b> (p. 266).
DDS_TRANSPORTBUILTIN_SHMEM	Built-in shared memory transport, :: <b>Shared Memory Transport</b> (p. 260).
DDS_TRANSPORTBUILTIN_UDPv6	Built-in UDPv6 transport, :: <b>UDPv6 Transport</b> (p. 283).
DDS_TRANSPORTBUILTIN_UDPv4_WAN	Built-in UDPv4 asymmetric transport, :: <b>Real-Time WAN Transport</b> (p. 276).

## 7.146.5 Variable Documentation

### 7.146.5.1 DDS\_TRANSPORTBUILTIN\_QOS\_POLICY\_NAME

```
const char* const DDS_TRANSPORTBUILTIN_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TransportBuiltinQosPolicy** (p. 1144).

### 7.146.5.2 DDS\_TRANSPORTBUILTIN\_SHMEM\_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_SHMEM_ALIAS [extern]
```

Alias name for the shared memory built-in transport: "builtin.shmem".

### 7.146.5.3 DDS\_TRANSPORTBUILTIN\_UDPv4\_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv4_ALIAS [extern]
```

Alias name for the UDPv4 built-in transport: "builtin.udpv4".

### 7.146.5.4 DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN\_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv4_WAN_ALIAS [extern]
```

Alias name for the UDPv4 asymmetric built-in transport: "builtin.udpv4\_wan".

### 7.146.5.5 DDS\_TRANSPORTBUILTIN\_UDPv6\_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv6_ALIAS [extern]
```

Alias name for the UDPv6 built-in transport: "builtin.udpv6".

## 7.147 TRANSPORT\_MULTICAST

<<*extension*>> (p. 237) Specifies the multicast address on which a **DDSDataReader** (p. 1288) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1351) level) transports with which to receive the multicast data.

### Modules

- **Multicast Settings**  
*Multicast communication settings.*
- **Multicast Mapping**  
*Multicast communication mapping.*

### Classes

- struct **DDS\_TransportMulticastQosPolicy**  
*Specifies the multicast address on which a **DDSDataReader** (p. 1288) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **DDSDomainParticipant** (p. 1351) level) transports with which to receive the multicast data.*

### Enumerations

- enum **DDS\_TransportMulticastQosPolicyKind** {  
**DDS\_AUTOMATIC\_TRANSPORT\_MULTICAST\_QOS** ,  
**DDS\_UNICAST\_ONLY\_TRANSPORT\_MULTICAST\_QOS** }
- Transport Multicast Policy Kind.*

### Variables

- const char \*const **DDS\_TRANSPORTMULTICAST\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for **DDS\_TransportMulticastQosPolicy** (p. 1151).*

### 7.147.1 Detailed Description

<<*extension*>> (p. 237) Specifies the multicast address on which a **DDSDataReader** (p. 1288) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1351) level) transports with which to receive the multicast data.

## 7.147.2 Enumeration Type Documentation

### 7.147.2.1 DDS\_TransportMulticastQosPolicyKind

enum `DDS_TransportMulticastQosPolicyKind`

Transport Multicast Policy Kind.

See also

[DDS\\_TransportMulticastQosPolicy](#) (p. 1151)

Enumerator

DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS	Selects the multicast address automatically. NOTE: This setting is required when using the <a href="#">DDS_TransportMulticastMappingQosPolicy</a> (p. 1149).
DDS_UNICAST_ONLY_TRANSPORT_MULTICAST_↔ QOS	Selects a unicast-only mode.

## 7.147.3 Variable Documentation

### 7.147.3.1 DDS\_TRANSPORTMULTICAST\_QOS\_POLICY\_NAME

const char\* const `DDS_TRANSPORTMULTICAST_QOS_POLICY_NAME` [extern]

Stringified human-readable name for [DDS\\_TransportMulticastQosPolicy](#) (p. 1151).

## 7.148 TRANSPORT\_MULTICAST\_MAPPING

<<*extension*>> (p. 237) Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

### Classes

- struct `DDS_TransportMulticastMappingQosPolicy`

*Specifies a list of topic\_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data.*

## Variables

- const char \*const **DDS\_TRANSPORTMULTICASTMAPPING\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_TransportMulticastMappingQosPolicy* (p. 1149).

### 7.148.1 Detailed Description

<<*extension*>> (p. 237) Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

### 7.148.2 Variable Documentation

#### 7.148.2.1 DDS\_TRANSPORTMULTICASTMAPPING\_QOS\_POLICY\_NAME

```
const char* const DDS_TRANSPORTMULTICASTMAPPING_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for *DDS\_TransportMulticastMappingQosPolicy* (p. 1149).

## 7.149 TRANSPORT\_PRIORITY

This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

## Classes

- struct **DDS\_TransportPriorityQosPolicy**  
*This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities.*

## Variables

- const char \*const **DDS\_TRANSPORTPRIORITY\_QOS\_POLICY\_NAME**  
Stringified human-readable name for *DDS\_TransportPriorityQosPolicy* (p. 1155).

### 7.149.1 Detailed Description

This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

## 7.149.2 Variable Documentation

### 7.149.2.1 DDS\_TRANSPORTPRIORITY\_QOS\_POLICY\_NAME

```
const char* const DDS_TRANSPORTPRIORITY_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TransportPriorityQosPolicy** (p. 1155).

## 7.150 TRANSPORT\_SELECTION

<<*extension*>> (p. 237) Specifies the physical transports that a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.

### Classes

- struct **DDS\_TransportSelectionQosPolicy**

*Specifies the physical transports a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.*

### Variables

- const char \*const **DDS\_TRANSPORTSELECTION\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_TransportSelectionQosPolicy** (p. 1157).*

### 7.150.1 Detailed Description

<<*extension*>> (p. 237) Specifies the physical transports that a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.

### 7.150.2 Variable Documentation

#### 7.150.2.1 DDS\_TRANSPORTSELECTION\_QOS\_POLICY\_NAME

```
const char* const DDS_TRANSPORTSELECTION_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TransportSelectionQosPolicy** (p. 1157).

## 7.151 TRANSPORT\_UNICAST

<<*extension*>> (p. 237) Specifies a subset of transports and a port number that can be used by an Entity to receive data.

### Modules

- **Unicast Settings**

*Unicast communication settings.*

### Classes

- struct **DDS\_TransportUnicastQosPolicy**

*Specifies a subset of transports and a port number that can be used by an Entity to receive data.*

### Variables

- const char \*const **DDS\_TRANSPORTUNICAST\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_TransportUnicastQosPolicy** (p. 1158).*

#### 7.151.1 Detailed Description

<<*extension*>> (p. 237) Specifies a subset of transports and a port number that can be used by an Entity to receive data.

#### 7.151.2 Variable Documentation

##### 7.151.2.1 DDS\_TRANSPORTUNICAST\_QOS\_POLICY\_NAME

```
const char* const DDS_TRANSPORTUNICAST_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TransportUnicastQosPolicy** (p. 1158).

## 7.152 TYPE\_CONSISTENCY\_ENFORCEMENT

Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

## Classes

- struct **DDS\_TypeConsistencyEnforcementQosPolicy**

*Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.*

## Enumerations

- enum **DDS\_TypeConsistencyKind** {  
  **DDS\_DISALLOW\_TYPE\_COERCION** ,  
  **DDS\_ALLOW\_TYPE\_COERCION** ,  
  **DDS\_AUTO\_TYPE\_COERCION** }

*Kinds of type consistency.*

## Variables

- const char \*const **DDS\_TYPE\_CONSISTENCY\_ENFORCEMENT\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228).*

### 7.152.1 Detailed Description

Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

### 7.152.2 Enumeration Type Documentation

#### 7.152.2.1 DDS\_TypeConsistencyKind

enum **DDS\_TypeConsistencyKind**

Kinds of type consistency.

QoS:

**DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228)

## Enumerator

DDS_DISALLOW_TYPE_COERCION	The DataWriter and the DataReader must support the same data type in order for them to communicate. This is the degree of type consistency enforcement required by the <a href="#">OMG DDS Specification</a> prior to the <a href="#">OMG Extensible and Dynamic Topic Types for DDS Specification</a> .
DDS_ALLOW_TYPE_COERCION	The DataWriter and the DataReader need not support the same data type in order for them to communicate as long as the DataReader's type is assignable from the DataWriter's type. For example, the following two extensible types will be assignable to each other since MyDerivedType contains all the members of MyBaseType (member_1) plus some additional elements (member_2). <pre>struct MyBaseType {     long member_1; };  struct MyDerivedType: MyBaseType {     long member_2; };</pre> <p>Even if MyDerivedType was not explicitly inheriting from MyBaseType the types would still be assignable. For example:</p> <pre>struct MyBaseType {     long member_1; };  struct MyDerivedType {     long member_1;     long member_2; };</pre> <p>For additional information on type assignability refer to the <a href="#">OMG Extensible and Dynamic Topic Types for DDS Specification</a>.</p>
DDS_AUTO_TYPE_COERCION	This AUTO value will be applied as <b>DDS_DISALLOW_TYPE_COERCION</b> (p. 453) when the data type is annotated with @transfer_mode(SHMEM_REF) and the @language_binding is PLAIN (default) while using C, Traditional C++, or Modern C++ APIs. In all other cases, this AUTO value will be applied as <b>DDS_ALLOW_TYPE_COERCION</b> (p. 453). <b>[default]</b>

### 7.152.3 Variable Documentation

#### 7.152.3.1 DDS\_TYPE\_CONSISTENCY\_ENFORCEMENT\_QOS\_POLICY\_NAME

```
const char* const DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228).

## 7.153 TYPESUPPORT

<< **extension** >> (p. 237) Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

## Classes

- struct **DDS\_TypeSupportQosPolicy**

Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

## Enumerations

- enum **DDS\_CdrPaddingKind** {  
**DDS\_ZERO\_CDR\_PADDING** ,  
**DDS\_NOT\_SET\_CDR\_PADDING** ,  
**DDS\_AUTO\_CDR\_PADDING** }

The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

## Variables

- const char \*const **DDS\_TYPESUPPORT\_QOS\_POLICY\_NAME**

Stringified human-readable name for **DDS\_TypeSupportQosPolicy** (p. 1232).

### 7.153.1 Detailed Description

<< *extension* >> (p. 237) Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

### 7.153.2 Enumeration Type Documentation

#### 7.153.2.1 DDS\_CdrPaddingKind

enum **DDS\_CdrPaddingKind**

The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

#### Enumerator

<b>DDS_ZERO_CDR_PADDING</b>	Padding bytes will be set to zeros during CDR serialization.
<b>DDS_NOT_SET_CDR_PADDING</b>	Padding bytes will not be set to any value during CDR serialization.
<b>DDS_AUTO_CDR_PADDING</b>	When set on a <b>DDSDomainParticipant</b> (p. 1351) the default behavior is <b>DDS_NOT_SET_CDR_PADDING</b> (p. 454). When set on a <b>DDSDataWriter</b> (p. 1321) or <b>DDSDataReader</b> (p. 1288) the behavior is to inherit the value from the <b>DDSDomainParticipant</b> (p. 1351).

### 7.153.3 Variable Documentation

#### 7.153.3.1 DDS\_TYPESUPPORT\_QOS\_POLICY\_NAME

```
const char* const DDS_TYPESUPPORT_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_TypeSupportQosPolicy** (p. 1232).

## 7.154 USER\_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### Classes

- struct **DDS\_UserDataQosPolicy**

*Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.*

### Variables

- const char \*const **DDS\_USERDATA\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_UserDataQosPolicy** (p. 1237).*

### 7.154.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### 7.154.2 Variable Documentation

#### 7.154.2.1 DDS\_USERDATA\_QOS\_POLICY\_NAME

```
const char* const DDS_USERDATA_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_UserDataQosPolicy** (p. 1237).

## 7.155 WRITER\_DATA\_LIFECYCLE

Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

### Classes

- struct **DDS\_WriterDataLifecycleQosPolicy**

*Controls how a **DDSDataWriter** (p. 1321) handles the lifecycle of the instances (keys) that it is registered to manage.*

### Variables

- const char \*const **DDS\_WRITERDATALIFECYCLE\_QOS\_POLICY\_NAME**

*Stringified human-readable name for **DDS\_WriterDataLifecycleQosPolicy** (p. 1256).*

### 7.155.1 Detailed Description

Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

### 7.155.2 Variable Documentation

#### 7.155.2.1 DDS\_WRITERDATALIFECYCLE\_QOS\_POLICY\_NAME

```
const char* const DDS_WRITERDATALIFECYCLE_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_WriterDataLifecycleQosPolicy** (p. 1256).

## 7.156 WIRE\_PROTOCOL

<<*extension*>> (p. 237) Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1351).

### Classes

- struct **DDS\_RtpsWellKnownPorts\_t**

*RTPS well-known port mapping configuration.*

- struct **DDS\_WireProtocolQosPolicy**

*Specifies the wire-protocol-related attributes for the **DDSDomainParticipant** (p. 1351).*

## Macros

- #define **DDS\_RTPTS\_RESERVED\_PORT\_MASK\_DEFAULT**  
*The default value of `DDS_WireProtocolQosPolicy::rtps_reserved_port_mask` (p. 1250).*
- #define **DDS\_RTPTS\_RESERVED\_PORT\_MASK\_NONE**  
*No bits are set.*
- #define **DDS\_RTPTS\_RESERVED\_PORT\_MASK\_ALL**  
*All bits are set.*

## Typedefs

- typedef **DDS\_Long DDS\_RtpsReservedPortKindMask**  
*A mask of `DDS_RtpsReservedPortKind` (p. 459) bits.*

## Enumerations

- enum **DDS\_RtpsReservedPortKind** {  
**DDS\_RTPTS\_RESERVED\_PORT\_BUILTIN\_UNICAST** = 0x0001 << 0 ,  
**DDS\_RTPTS\_RESERVED\_PORT\_BUILTIN\_MULTICAST** = 0x0001 << 1 ,  
**DDS\_RTPTS\_RESERVED\_PORT\_USER\_UNICAST** = 0x0001 << 2 ,  
**DDS\_RTPTS\_RESERVED\_PORT\_USER\_MULTICAST** = 0x0001 << 3 }  
*RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable.*
- enum **DDS\_WireProtocolQosPolicyAutoKind** {  
**DDS\_RTPTS\_AUTO\_ID\_FROM\_IP** = 0 ,  
**DDS\_RTPTS\_AUTO\_ID\_FROM\_MAC** = 1 ,  
**DDS\_RTPTS\_AUTO\_ID\_FROM\_UUID** = 2 }  
*Mechanism to automatically calculate the GUID prefix.*

## Variables

- const struct **DDS\_RtpsWellKnownPorts\_t DDS\_RTI\_BACKWARDS\_COMPATIBLE\_RTPTS\_WELL\_KNOWN\_PORTS**  
*Assign to use well-known port mappings which are compatible with previous versions of the RTI Connex middleware.*
- const struct **DDS\_RtpsWellKnownPorts\_t DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS**  
*Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.*
- const char \*const **DDS\_WIREPROTOCOL\_QOS\_POLICY\_NAME**  
*Stringified human-readable name for `DDS_WireProtocolQosPolicy` (p. 1244).*

### 7.156.1 Detailed Description

<<*extension*>> (p. 237) Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1351).

### 7.156.2 Macro Definition Documentation

### 7.156.2.1 DDS\_RTPS\_RESERVED\_PORT\_MASK\_DEFAULT

```
#define DDS_RTPS_RESERVED_PORT_MASK_DEFAULT
```

**Value:**

```
((DDS_RtpsReservedPortKindMask) DDS_RTPS_RESERVED_PORT_BUILTIN_UNICAST \  
 | DDS_RTPS_RESERVED_PORT_BUILTIN_MULTICAST | DDS_RTPS_RESERVED_PORT_USER_UNICAST)
```

The default value of **DDS\_WireProtocolQosPolicy::rtps\_reserved\_port\_mask** (p. 1250).

Most of the ports that may be needed by DDS will be reserved by the transport when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **DDS\_RtpsWellKnownPorts\_t** (p. 1076) will be detected at this time and the enable operation will fail.

This setting will avoid reserving the **usertraffic** multicast port, which is not actually used unless there are DataReaders that enable multicast but fail to specify a port.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

**See also**

**DDS\_RtpsReservedPortKindMask** (p. 459)

### 7.156.2.2 DDS\_RTPS\_RESERVED\_PORT\_MASK\_NONE

```
#define DDS_RTPS_RESERVED_PORT_MASK_NONE
```

No bits are set.

None of the ports that are needed by DDS will be allocated until they are specifically required. With this value set, automatic participant Id selection will be based on selecting a port for discovery (metatraffic) unicast traffic on a single transport.

**See also**

**DDS\_RtpsReservedPortKindMask** (p. 459)

### 7.156.2.3 DDS\_RTPS\_RESERVED\_PORT\_MASK\_ALL

```
#define DDS_RTPS_RESERVED_PORT_MASK_ALL
```

All bits are set.

All of the ports that may be needed by DDS will be reserved when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **DDS\_RtpsWellKnownPorts\_t** (p. 1076) will be detected at this time, and the enable operation will fail.

Note that this will also reserve the **usertraffic** multicast port which is not actually used unless there are DataReaders that enable multicast but fail to specify a port. To avoid unnecessary resource usage for these ports, use **RTPS\_RESERVED\_PORT\_MASK\_DEFAULT**.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

See also

**DDS\_RtpsReservedPortKindMask** (p. 459)

## 7.156.3 Typedef Documentation

### 7.156.3.1 DDS\_RtpsReservedPortKindMask

```
typedef DDS_Long DDS_RtpsReservedPortKindMask
```

A mask of **DDS\_RtpsReservedPortKind** (p. 459) bits.

QoS:

**DDS\_WireProtocolQosPolicy** (p. 1244)

## 7.156.4 Enumeration Type Documentation

### 7.156.4.1 DDS\_RtpsReservedPortKind

```
enum DDS_RtpsReservedPortKind
```

RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable.

See also

**DDS\_WireProtocolQosPolicy::rtps\_reserved\_port\_mask** (p. 1250)

## Enumerator

DDS_RTPS_RESERVED_PORT_BUILTIN_UNICAST	Select the <b>metatraffic</b> unicast port.
DDS_RTPS_RESERVED_PORT_BUILTIN_MULTICAST	Select the <b>metatraffic</b> multicast port.
DDS_RTPS_RESERVED_PORT_USER_UNICAST	Select the <b>usertraffic</b> unicast port.
DDS_RTPS_RESERVED_PORT_USER_MULTICAST	Select the <b>usertraffic</b> multicast port.

## 7.156.4.2 DDS\_WireProtocolQosPolicyAutoKind

```
enum DDS_WireProtocolQosPolicyAutoKind
```

Mechanism to automatically calculate the GUID prefix.

## See also

**DDS\_WireProtocolQosPolicy::rtps\_auto\_id\_kind** (p. 1250)

## Enumerator

DDS_RTPS_AUTO_ID_FROM_IP	Builds the GUID prefix using the IPv4 address and process ID. Uses the IPv4 address of the first up-and-running interface of the host machine and the process ID to build the GUID prefix.
DDS_RTPS_AUTO_ID_FROM_MAC	Builds the GUID prefix using the MAC address and process ID. Uses the first 32 bits of the MAC address assigned to the first up-and-running interface and the process ID to build the GUID prefix. Note to Android Users: DDS_RTPS_AUTO_ID_FROM_MAC is not supported in recent versions of Android (6.0 and later).
DDS_RTPS_AUTO_ID_FROM_UUID	Builds the GUID prefix by selecting the UUID-based algorithm (default). This method of generating the GUID prefix does not require having a network interface and is friendly to IP mobility scenarios in which an RTI Connex application may start in a node that does not have a physical network interface enabled.

## 7.156.5 Variable Documentation

## 7.156.5.1 DDS\_RTI\_BACKWARDS\_COMPATIBLE\_RTPS\_WELL\_KNOWN\_PORTS

```
const struct DDS_RtpsWellKnownPorts_t DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS [extern]
```

Assign to use well-known port mappings which are compatible with previous versions of the RTI Connex middleware.

Assign **DDS\_WireProtocolQosPolicy::rtps\_well\_known\_ports** (p. 1249) to this value to remain compatible with previous versions of the RTI Connex middleware that used fixed port mappings.

The following are the `rtps_well_known_ports` values for **DDS\_RTI\_BACKWARDS\_COMPATIBLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 460):

```
port_base = 7400
domain_id_gain = 10
participant_id_gain = 1000
builtin_multicast_port_offset = 2
builtin_unicast_port_offset = 0
user_multicast_port_offset = 1
user_unicast_port_offset = 3
```

These settings are *not* compliant with OMG's DDS Interoperability Wire Protocol. To comply with the specification, please use **DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 461).

See also

**DDS\_WireProtocolQosPolicy::rtps\_well\_known\_ports** (p. 1249)

**DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 461)

### 7.156.5.2 DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS

```
const struct DDS_RtpsWellKnownPorts_t DDS_INTEROPERABLE_RTPTS_WELL_KNOWN_PORTS [extern]
```

Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

Assign **DDS\_WireProtocolQosPolicy::rtps\_well\_known\_ports** (p. 1249) to this value to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

The following are the `rtps_well_known_ports` values for **DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 461):

```
port_base = 7400
domain_id_gain = 250
participant_id_gain = 2
builtin_multicast_port_offset = 0
builtin_unicast_port_offset = 10
user_multicast_port_offset = 1
user_unicast_port_offset = 11
```

Assuming a maximum port number of 65535 (UDPv4), the above settings enable the use of about 230 domains with up to 120 Participants per node per domain.

These settings are *not* backwards compatible with previous versions of the RTI Connex middleware that used fixed port mappings. For backwards compability, please use **DDS\_RTI\_BACKWARDS\_COMPATIBLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 460).

See also

**DDS\_WireProtocolQosPolicy::rtps\_well\_known\_ports** (p. 1249)

**DDS\_RTI\_BACKWARDS\_COMPATIBLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 460)

### 7.156.5.3 DDS\_WIREPROTOCOL\_QOS\_POLICY\_NAME

```
const char* const DDS_WIREPROTOCOL_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS\_WireProtocolQosPolicy** (p. 1244).

## 7.157 Extended Qos Support

<<*extension*>> (p. 237) Types and defines used in extended QoS policies.

### Modules

- **Thread Settings**

*The properties of a thread of execution. Consult Platform Notes for additional platform specific details.*

### Classes

- struct **DDS\_RtpsReliableReaderProtocol\_t**  
*Qos related to reliable reader protocol defined in RTPS.*
- struct **DDS\_RtpsReliableWriterProtocol\_t**  
*QoS related to the reliable writer protocol defined in RTPS.*

### 7.157.1 Detailed Description

<<*extension*>> (p. 237) Types and defines used in extended QoS policies.

## 7.158 Unicast Settings

Unicast communication settings.

### Classes

- struct **DDS\_TransportUnicastSettings\_t**  
*Type representing a list of unicast locators.*
- struct **DDS\_TransportUnicastSettingsSeq**  
*Declares IDL sequence< DDS\_TransportUnicastSettings\_t (p. 1160) >*

### 7.158.1 Detailed Description

Unicast communication settings.

## 7.159 Multicast Settings

Multicast communication settings.

### Classes

- struct **DDS\_TransportMulticastSettings\_t**  
*Type representing a list of multicast locators.*
- struct **DDS\_TransportMulticastSettingsSeq**  
*Declares IDL `sequence`< **DDS\_TransportMulticastSettings\_t** (p. 1153) >*

### 7.159.1 Detailed Description

Multicast communication settings.

## 7.160 Multicast Mapping

Multicast communication mapping.

### Classes

- struct **DDS\_TransportMulticastMappingFunction\_t**  
*Type representing an external mapping function.*
- struct **DDS\_TransportMulticastMapping\_t**  
*Type representing a list of multicast mapping elements.*
- struct **DDS\_TransportMulticastMappingSeq**  
*Declares IDL `sequence`< **DDS\_TransportMulticastMapping\_t** (p. 1147) >*

### 7.160.1 Detailed Description

Multicast communication mapping.

## 7.161 NDDS\_DISCOVERY\_PEERS

Environment variable or a file that specifies the default values of **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) and **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733) contained in the **DDS\_DomainParticipantQos**↔**::discovery** (p. 744) qos policy.

Environment variable or a file that specifies the default values of **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) and **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733) contained in the **DDS\_DomainParticipantQos**↔**::discovery** (p. 744) qos policy.

The default value of the **DDS\_DomainParticipantQos** (p. 741) is obtained by calling **DDSDomainParticipantFactory**↔**::get\_default\_participant\_qos()** (p. 1432).

NDDS\_DISCOVERY\_PEERS specifies the default value of the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) and **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733) fields, when the default participant QoS policies have not been explicitly set by the user (i.e., **DDSDomainParticipantFactory::set\_default\_participant\_qos()** (p. 1430) has never been called or was called using **DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)).

If NDDS\_DISCOVERY\_PEERS does *not* contain a multicast address, then the string sequence **DDS\_DiscoveryQos**↔**Policy::multicast\_receive\_addresses** (p. 733) is cleared and the RTI discovery process will not listen for discovery messages via multicast.

If NDDS\_DISCOVERY\_PEERS contains one or more multicast addresses, the addresses will be stored in **DDS**↔**DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733), starting at element 0. They will be stored in the order in which they appear in NDDS\_DISCOVERY\_PEERS.

Note: IPv4 multicast addresses must have a prefix. Therefore, when using the UDPv6 transport: if there are any IPv4 multicast addresses in the peers list, make sure they have "udpv4://" in front of them (such as udpv4://239.255.0.1).

Note: Currently, RTI Connext will only listen for discovery traffic on the first multicast address (element 0) in **DDS**↔**DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733).

NDDS\_DISCOVERY\_PEERS provides a mechanism to dynamically switch the discovery configuration of an RTI Connext application without recompilation. The application programmer is free to not use the default values; instead use values supplied by other means.

NDDS\_DISCOVERY\_PEERS can be specified either in an environment variable as comma (',') separated "peer descriptors" (see **Peer Descriptor Format** (p. 465)) or in a file. These formats are described below.

### 7.161.1 Peer Descriptor Format

A **peer descriptor** string specifies a range of participants at a given `locator`. Peer descriptor strings are used in the `DDS_DiscoveryQosPolicy::initial_peers` (p. 732) field and the `DDSDomainParticipant::add_peer()` (p. 1409) operation.

The anatomy of a `peer` descriptor is illustrated below using a UDPv4 transport and a custom "StarFabric" transport example.

A peer descriptor consists of:

optional **Participant ID Limit**. If a simple integer is specified, it indicates the maximum participant ID to be contacted by the RTI Connex discovery mechanism at the given `locator`. If that integer is enclosed in square brackets (e.g.: [2]) *only* that Participant ID will be used. You can also specify a range in the form of [a-b]: in this case only the Participant IDs in that specific range are contacted. If omitted, a default value of 4 is implied: participant IDs 0,1,2,3, and 4 will be contacted.

- **Locator**. See **Locator Format** (p. 465).

These are separated by the '@' character. The separator may be omitted if a participant ID limit is not explicitly specified.

Note that the "participant ID limit" only applies to unicast locators; it is ignored for multicast locators (and therefore should be omitted for multicast peer descriptors).

#### 7.161.1.1 Locator Format

A **locator** string specifies a transport and an address in string format. Locators are used to form peer descriptors. A locator is equivalent to a peer descriptor with the default maximum participant ID.

A locator consists of:

optional **Transport name** (**alias** or `class`). This identifies the set of transport plugins (**Transport Aliases** (p. 168)) that may be used to parse the `address` portion of the locator. Note that a transport class name is an implicit alias that is used to refer to all the transport plugin instances of that class.

optional **Address**. See **Address Format** (p. 466).

These are separated by the "://" string. The separator is specified if and only if a transport name is specified.

If a transport name is specified, the address may be omitted; in that case, all the unicast addresses (across all transport plugin instances) associated with the transport class are implied. Thus, a locator string may specify several addresses.

If an address is specified, the transport name and the separator string may be omitted; in that case all the available transport plugins (for the **DDSEntity** (p. 1463)) may be used to parse the address string.

### 7.161.1.2 Address Format

An **address** string specifies a transport-independent network address that qualifies a **transport-dependent** address string. Addresses are used to form locators. Addresses are also used in **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733), and **DDS\_TransportMulticastSettings\_t::receive\_address** (p. 1154) fields. An address is equivalent to a locator in which the transport name and separator are omitted.

An address consists of:

optional **Network Address**. An address in IPv4 or IPv6 string notation. If omitted, the network address of the transport is implied (**Transport Network Address** (p. 171)).

optional **Transport Address**. A string that is passed to the transport for processing. The transport maps this string into **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778) bits. If omitted the network address is used as the fully qualified address.

These are separated by the '#' character. If a separator is specified, it must be followed by a non-empty string which is passed to the transport plugin. If the separator is omitted, it is treated as a transport address with an implicit network address (of the transport plugin). The implicit network address is the address used when registering the transport: e.g, the UDPv4 implicit network address is 0.0.0.0.0.0.0.0.0.0.

The bits resulting from the transport address string are combined with the network address. The least or most significant **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778) bits of the network address are ignored and replaced with the transport address. The sign of the **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1778) value determines whether the most significant bits (negative sign) or least significant bits (positive sign) are ignored (**Transport Network Address** (p. 171)).

### 7.161.2 NDDS\_DISCOVERY\_PEERS Environment Variable Format

NDDS\_DISCOVERY\_PEERS can be specified via an environment variable of the same name, consisting of a sequence of peer descriptors separated by the comma (',') character.

#### Examples

Multicast (maximum participant ID is irrelevant)

- 239.255.0.1

Default maximum participant ID on localhost

- localhost

Default maximum participant ID on host 192.168.1.1 (IPv4)

- 192.168.1.1

Default maximum participant ID on host FAA0::0 (IPv6)

- FAA0::1

Default maximum participant ID on host himalaya accessed using the "udp4" transport plugin(s) (IPv4)

- udp4://himalaya

Default maximum participant ID on localhost using the "udp4" transport plugin(s) registered at network address FAA0::0

- udp4://FAA0::0#localhost

Default maximum participant ID on host 0/0/R (StarFabric)

- 0/0/R
- #0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s)

- starfabric://0/0/R
- starfabric://#0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s) registered at network address FAA0::0

- starfabric://FBB0::0#0/0/R

Default maximum participant ID on all unicast addresses accessed via the "starfabric" (StarFabric) transport plugin(s)

- starfabric://

Default maximum participant ID on all unicast addresses accessed via the "shmem" (shared memory) transport plugin(s) registered at network address FCC0::0

- shmem://FCC0::0

Default maximum participant ID on hosts himalaya and gangotri

- himalaya,gangotri

Maximum participant ID of 1 on hosts himalaya and gangotri

- 1@himalaya,1@gangotri

Combinations of above

- 239.255.0.1,localhost,192.168.1.1,0/0/R
- FAA0::1,FAA0::0#localhost,FBB0::0#0/0/R
- udp4://himalaya,udp4://FAA0::0#localhost,#0/0/R
- starfabric://0/0/R,starfabric://FBB0::0#0/0/R,shmem://
- starfabric://,shmem://FCC0::0,1@himalaya,1@gangotri

### 7.161.3 NDDS\_DISCOVERY\_PEERS File Format

NDDS\_DISCOVERY\_PEERS can be specified via a file of the same name in the program's current working directory. A NDDS\_DISCOVERY\_PEERS file would contain a sequence of peer descriptors separated by whitespace or the comma (',') character. The file may also contain comments starting with a semicolon (;) character till the end of the line.

#### Example:

```
;; NDDS_DISCOVERY_PEERS - Discovery Configuration File

;;

;;

;; NOTE:

;; 1. This file must be in the current working directory, i.e.
;;    in the folder from which the application is launched.

;;

;; 2. This file takes precedence over the environment variable NDDS_DISCOVERY_PEERS

;;

;; Multicast

239.255.0.1           ; The default dds discovery multicast address

;; Unicast

localhost,192.168.1.1 ; A comma can be used a separator

FAA0::1 FAA0::0#localhost ; Whitespace can be used as a separator

1@himalaya           ; Maximum participant ID of 1 on 'himalaya'

1@gangotri

;; UDPv4

udpv4://himalaya     ; 'himalaya' via 'udpv4' transport plugin(s)

udpv4://FAA0::0#localhost ; 'localhost' via 'udpv4' transport
                        ; plugin registered at network address FAA0::0

;; Shared Memory

shmem://              ; All 'shmem' transport plugin(s)

builtin.shmem://      ; The builtin 'shmem' transport plugin

shmem://FCC0::0       ; Shared memory transport plugin registered
                        ;
                        ; at network address FCC0::0

;; StarFabric

0/0/R                 ; StarFabric node 0/0/R

starfabric://0/0/R    ; 0/0/R accessed via 'starfabric'
                        ;
                        ; transport plugin(s)
```

```

starfabric://FBB0::0#0/0/R ; StarFabric transport plugin registered
                        ;           at network address FBB0::0
starfabric://           ; All 'starfabric' transport plugin(s)

```

#### 7.161.4 NDDS\_DISCOVERY\_PEERS Precedence

If the current working directory from which the RTI Connext application is launched contains a file called NDDS\_↔DISCOVERY\_PEERS, and an environment variable named NDDS\_DISCOVERY\_PEERS is also defined, the file takes precedence; the environment variable is ignored.

#### 7.161.5 NDDS\_DISCOVERY\_PEERS Default Value

If NDDS\_DISCOVERY\_PEERS is not specified (either as a file in the current working directory, or as an environment variable), it implicitly defaults to the following.

```

;; Multicast (only on platforms which allow UDPv4 multicast out of the box)
;;
;; This allows any dds applications anywhere on the local network to
;; discover each other over UDPv4.
builtin.udpv4://239.255.0.1 ; dds's default discovery multicast address
                        ; This is also the default multicast receive address
;; Unicast - UDPv4 (on all platforms)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over UDP/IPv4.
builtin.udpv4://127.0.0.1
;; Unicast - Shared Memory (only on platforms that support shared memory)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over shared memory.
builtin.shmem://

```

### 7.161.6 Builtin Transport Class Names

The class names for the builtin transport plugins are:

- `shmem` - **::Shared Memory Transport** (p. 260)
- `udpv4` - **::UD Pv4 Transport** (p. 266)
- `udpv6` - **::UD Pv6 Transport** (p. 283)

These may be used as the transport names in the **Locator Format** (p. 465).

### 7.161.7 NDDS\_DISCOVERY\_PEERS and Local Host Communication

Suppose you want to communicate with other RTI Connex t applications on the same host and you are setting `NDDS_DISCOVERY_PEERS` explicitly (generally in order to use unicast discovery with applications on other hosts).

If the local host platform does not support the shared memory transport, then you can include the name of the local host in the `NDDS_DISCOVERY_PEERS` list.

If the local host platform supports the shared memory transport, then you can do one of the following:

- Include `"shmem://"` in the `NDDS_DISCOVERY_PEERS` list. This will cause shared memory to be used for discovery and data traffic for applications on the same host.

or:

- Include the name of the local host in the `NDDS_DISCOVERY_PEERS` list and disable the shared memory transport in the **DDS\_TransportBuiltinQosPolicy** (p. 1144) of the **DDSDomainParticipant** (p. 1351). This will cause UDP loopback to be used for discovery and data traffic for applications on the same host.

(To check if your platform supports shared memory, see the `Platform Notes`.)

- DDSDomainParticipant::add\_peer()** (p. 1409)
- DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)
- DDSDomainParticipantFactory::get\_default\_participant\_qos()** (p. 1432)
- Transport Aliases** (p. 168)
- Transport Network Address** (p. 171)
- NDDSTransportSupport::register\_transport()** (p. 1834)

## 7.162 Entity Support

**DDSEntity** (p. 1463), **DDSListener** (p. 1526) and related items.

### Classes

- class **DDSListener**
  - <<*interface*>> (p. 237) *Abstract base class for all Listener interfaces.*
- class **DDSEntity**
  - <<*interface*>> (p. 237) *Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.*
- class **DDSDomainEntity**
  - <<*interface*>> (p. 237) *Abstract base class for all DDS entities except for the **DDSDomainParticipant** (p. 1351).*

### 7.162.1 Detailed Description

**DDSEntity** (p. 1463), **DDSListener** (p. 1526) and related items.

**DDSEntity** (p. 1463) subtypes are created and destroyed by factory objects. With the exception of **DDSDomainParticipant** (p. 1351), whose factory is **DDSDomainParticipantFactory** (p. 1426), all **DDSEntity** (p. 1463) factory objects are themselves **DDSEntity** (p. 1463) subtypes as well.

*Important:* all **DDSEntity** (p. 1463) delete operations are inherently thread-unsafe. The user must take extreme care that a given **DDSEntity** (p. 1463) is not destroyed in one thread while being used concurrently (including being deleted concurrently) in another thread. An operation's effect in the presence of the concurrent deletion of the operation's target **DDSEntity** (p. 1463) is undefined.

## 7.163 Conditions and WaitSets

**DDSCondition** (p. 1276) and **DDSWaitSet** (p. 1629) and related items.

### Modules

- **AsyncWaitSet**
  - <<*extension*>> (p. 237) *A specialization of **DDSWaitSet** (p. 1629) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1276).*

## Classes

- struct **DDS\_WaitSetProperty\_t**  
 <<*extension*>> (p. 237) Specifies the **DDSWaitSet** (p. 1629) behavior for multiple trigger events.
- struct **DDSConditionSeq**  
 Instantiates **FooSeq** (p. 1697) < **DDSCondition** (p. 1276) >
- class **DDSConditionHandler**  
 <<*extension*>> (p. 237) <<*interface*>> (p. 237) Handler called by the **DDSCondition::dispatch** (p. 1278).
- class **DDSCondition**  
 <<*interface*>> (p. 237) Root class for all the conditions that may be attached to a **DDSWaitSet** (p. 1629).
- class **DDSGuardCondition**  
 <<*interface*>> (p. 237) A specific **DDSCondition** (p. 1276) whose *trigger\_value* is completely under the control of the application.
- class **DDSStatusCondition**  
 <<*interface*>> (p. 237) A specific **DDSCondition** (p. 1276) that is associated with each **DDSEntity** (p. 1463).
- class **DDSWaitSet**  
 <<*interface*>> (p. 237) Allows an application to wait until one or more of the attached **DDSCondition** (p. 1276) objects has a *trigger\_value* of **DDS\_BOOLEAN\_TRUE** (p. 317) or else until the timeout expires.

## Macros

- #define **DDS\_WaitSetProperty\_t\_INITIALIZER**  
 <<*extension*>> (p. 237) Initializer for new property instances.

### 7.163.1 Detailed Description

**DDSCondition** (p. 1276) and **DDSWaitSet** (p. 1629) and related items.

### 7.163.2 Macro Definition Documentation

#### 7.163.2.1 DDS\_WaitSetProperty\_t\_INITIALIZER

```
#define DDS_WaitSetProperty_t_INITIALIZER
```

#### Value:

```
{ \
  1, DDS_DURATION_INFINITE_VALUE \
}
```

<<*extension*>> (p. 237) Initializer for new property instances.

Default property specifies `max_event_count = 1` and `max_event_delay = DDS_DURATION_INFINITE`

## 7.164 Cookie

<<*extension*>> (p. 237) Unique identifier for a written data sample

### Classes

- struct **DDS\_Cookie\_t**  
<<*extension*>> (p. 237) Sequence of bytes.
- struct **DDS\_CookieSeq**  
Declares IDL sequence < *DDS\_Cookie\_t* (p. 618) > .

### Functions

- void \* **DDS\_Cookie\_t::to\_pointer** () const  
Returns the pointer previously stored in the cookie.

#### 7.164.1 Detailed Description

<<*extension*>> (p. 237) Unique identifier for a written data sample

#### 7.164.2 Function Documentation

##### 7.164.2.1 to\_pointer()

```
void * DDS_Cookie_t::to_pointer ( ) const
```

Returns the pointer previously stored in the cookie.

##### Precondition

The cookie's value was filled with a pointer; otherwise, the value returned may not be a valid memory address.

##### Returns

The pointer stored in the cookie.

## 7.165 Sample Flags

<<*extension*>> (p. 237) Flags for samples.

## Typedefs

- typedef enum **DDS\_SampleFlagBits** **DDS\_SampleFlagBits**  
*Type to identify the sample flags reserved by RTI.*
- typedef **DDS\_Long** **DDS\_SampleFlag**  
*A set of flags that can be associated with a sample.*

## Enumerations

- enum **DDS\_SampleFlagBits** {  
**DDS\_REDELIVERED\_SAMPLE** ,  
**DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** ,  
**DDS\_REPLICATE\_SAMPLE** ,  
**DDS\_LAST\_SHARED\_READER\_QUEUE\_SAMPLE** ,  
**DDS\_INTERMEDIATE\_TOPIC\_QUERY\_SAMPLE** ,  
**DDS\_WRITER\_REMOVED\_BATCH\_SAMPLE** = PRES\_WRITER\_REMOVED\_BATCH\_SAMPLE ,  
**DDS\_DISCOVERY\_SERVICE\_SAMPLE** = PRES\_DISCOVERY\_SERVICE\_SAMPLE }  
*Type to identify the sample flags reserved by RTI.*

### 7.165.1 Detailed Description

<<*extension*>> (p. 237) Flags for samples.

### 7.165.2 Typedef Documentation

#### 7.165.2.1 DDS\_SampleFlagBits

```
typedef enum DDS_SampleFlagBits DDS_SampleFlagBits
```

Type to identify the sample flags reserved by RTI.

#### 7.165.2.2 DDS\_SampleFlag

```
typedef DDS_Long DDS_SampleFlag
```

A set of flags that can be associated with a sample.

- Least-significant bits [0-7] are reserved by RTI
- Least-significant bits [8-15] are application specific
- Least-significant bits [16-31] are invalid and cannot be used

### 7.165.3 Enumeration Type Documentation

#### 7.165.3.1 DDS\_SampleFlagBits

enum `DDS_SampleFlagBits`

Type to identify the sample flags reserved by RTI.

Enumerator

<code>DDS_REDELIVERED_SAMPLE</code>	Indicates that a sample has been redelivered by RTI Queuing Service.
<code>DDS_INTERMEDIATE_REPLY_SEQUENCE_SAMPLE</code>	Indicates that a response sample is not the last response sample for a given request. This bit is usually set by Connex Repliers sending multiple responses for a request.
<code>DDS_REPLICATE_SAMPLE</code>	Indicates if a sample must be broadcast by one RTI Queuing Service replica to other replicas.
<code>DDS_LAST_SHARED_READER_QUEUE_SAMPLE</code>	Indicates that a sample is the last sample in a SharedReaderQueue for a QueueConsumer DataReader.
<code>DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE</code>	Indicates that a sample for a TopicQuery will be followed by more samples. This flag only applies to samples that have been published as a response to a <b>DDSTopicQuery</b> (p. 1627). When this bit is not set and <b>DDS_SampleInfo::topic_query_guid</b> (p. 1092) is different from <b>DDS_GUID_UNKNOWN</b> (p. 331), this sample is the last sample for that TopicQuery coming from the DataWriter identified by <b>DDS_SampleInfo::original_publication_virtual_guid</b> (p. 1090).
<code>DDS_WRITER_REMOVED_BATCH_SAMPLE</code>	This flag will be set if the sample was accepted into the DataReader queue even though it was marked by the DataWriter as removed. A sample can be marked as removed by the DataWriter in a batch when it is replaced due to the <b>DDS_KEEP_LAST_HISTORY_QOS</b> (p. 406) <b>DDS_HistoryQoSPolicy</b> (p. 919) QoS or because the duration in <b>DDS_LifespanQoSPolicy</b> (p. 931) was reached. If the DataReader sets the property "dds.data_reader.accept_writer_removed_batch_samples" to true, the removed sample will be accepted into the DataReader queue and this flag will be set.
<code>DDS_DISCOVERY_SERVICE_SAMPLE</code>	This flag will be set if the sample was sent by Cloud Discovery Service. The samples sent by Cloud Discovery Service are participant announcement samples on the ParticipantBuiltinTopic.

## 7.166 WriteParams

<<*extension*>> (p. 237)

### Classes

- struct **DDS\_SampleIdentity\_t**  
*Type definition for a Sample Identity.*
- struct **DDS\_AckResponseData\_t**  
*Data payload of an application-level acknowledgment.*
- struct **DDS\_WriteParams\_t**  
<<*extension*>> (p. 237) Input parameters for writing with **FooDataWriter::write\_w\_params** (p. 1688), **FooDataWriter::dispose\_w\_params** (p. 1691), **FooDataWriter::register\_instance\_w\_params** (p. 1680), **FooDataWriter::unregister\_instance\_w\_params** (p. 1683)

### Functions

- **DDS\_Boolean DDS\_SampleIdentity\_equals** (const struct **DDS\_SampleIdentity\_t** \*self, const struct **DDS\_SampleIdentity\_t** \*other)  
*Compares this sample identity with another sample identity for equality.*
- void **DDS\_WriteParams\_reset** (struct **DDS\_WriteParams\_t** \*self)  
*Resets all the fields to their default values.*

### Variables

- struct **DDS\_GUID\_t DDS\_SampleIdentity\_t::writer\_guid**  
*16-byte identifier identifying the virtual GUID.*
- struct **DDS\_SequenceNumber\_t DDS\_SampleIdentity\_t::sequence\_number**  
*monotonically increasing 64-bit integer that identifies the sample in the data source.*
- const struct **DDS\_SampleIdentity\_t DDS\_AUTO\_SAMPLE\_IDENTITY**  
*The AUTO sample identity.*
- const struct **DDS\_SampleIdentity\_t DDS\_UNKNOWN\_SAMPLE\_IDENTITY**  
*An invalid or unknown sample identity.*
- const struct **DDS\_WriteParams\_t DDS\_WRITEPARAMS\_DEFAULT**  
*Initializer for **DDS\_WriteParams\_t** (p. 1251).*

#### 7.166.1 Detailed Description

<<*extension*>> (p. 237)

#### 7.166.2 Function Documentation

### 7.166.2.1 DDS\_SampleIdentity\_equals()

```
DDS_Boolean DDS_SampleIdentity_equals (  
    const struct DDS_SampleIdentity_t * self,  
    const struct DDS_SampleIdentity_t * other )
```

Compares this sample identity with another sample identity for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 238) This sample identity.
<i>other</i>	<< <i>in</i> >> (p. 238) The other sample identity to be compared with this sample identity.

## Returns

**DDS\_BOOLEAN\_TRUE** (p.317) if the two sample identities have equal values, or **DDS\_BOOLEAN\_FALSE** (p.317) otherwise.

7.166.2.2 **DDS\_WriteParams\_reset()**

```
void DDS_WriteParams_reset (
    struct DDS_WriteParams_t * self )
```

Resets all the fields to their default values.

This operation is useful to reset all the fields to their automatic value when **DDS\_WriteParams\_t::replace\_auto** (p.1251) is enabled and the same params instance is used in multiple calls to **FooDataWriter::write\_w\_params** (p.1688)

## 7.166.3 Variable Documentation

7.166.3.1 **writer\_guid**

```
struct DDS_GUID_t DDS_SampleIdentity_t::writer_guid
```

16-byte identifier identifying the virtual GUID.

7.166.3.2 **sequence\_number**

```
struct DDS_SequenceNumber_t DDS_SampleIdentity_t::sequence_number
```

monotonically increasing 64-bit integer that identifies the sample in the data source.

### 7.166.3.3 DDS\_AUTO\_SAMPLE\_IDENTITY

```
const struct DDS_SampleIdentity_t DDS_AUTO_SAMPLE_IDENTITY [extern]
```

The AUTO sample identity.

Special **DDS\_AUTO\_SAMPLE\_IDENTITY** (p. 478) value {**DDS\_GUID\_AUTO** (p. 331), **DDS\_AUTO\_SEQUENCE\_↔  
NUMBER** (p. 333)}

### 7.166.3.4 DDS\_UNKNOWN\_SAMPLE\_IDENTITY

```
const struct DDS_SampleIdentity_t DDS_UNKNOWN_SAMPLE_IDENTITY [extern]
```

An invalid or unknown sample identity.

Special **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 479) value {**DDS\_GUID\_UNKNOWN** (p. 331), **DDS\_SEQUENCE\_↔  
\_NUMBER\_UNKNOWN** (p. 332)}

### 7.166.3.5 DDS\_WRITEPARAMS\_DEFAULT

```
const struct DDS_WriteParams_t DDS_WRITEPARAMS_DEFAULT [extern]
```

Initializer for **DDS\_WriteParams\_t** (p. 1251).

## 7.167 Heap Support in C

<<*extension*>> (p. 237) Heap allocation and free routines in C

### Functions

- void \* **DDS\_Heap\_malloc** (size\_t numElem, size\_t size)  
*Performs the logical equivalent of calloc().*
- void \* **DDS\_Heap\_malloc** (size\_t size)  
*Performs the logical equivalent of malloc().*
- void **DDS\_Heap\_free** (void \*ptr)  
*Performs the logical equivalent of free().*

### 7.167.1 Detailed Description

<<*extension*>> (p. 237) Heap allocation and free routines in C

The methods in this class ensure consistent cross-platform implementations for memory allocation (**DDS\_Heap\_↔  
malloc()** (p. 480) and **DDS\_Heap\_malloc()** (p. 480)) and deletion (**DDS\_Heap\_free()** (p. 480)).

Applications need to use these routines to reserve memory that the middleware will release or to free memory that the middleware has allocated.

For example, to allocate an optional member in a sample use **DDS\_Heap\_malloc()** (p. 480)/ **DDS\_Heap\_malloc()** (p. 480); to release an optional member previously reserved by **FooTypeSupport::create\_data()** (p. 1715), use **DDS\_↔  
\_Heap\_free()** (p. 480).

## 7.167.2 Function Documentation

### 7.167.2.1 DDS\_Heap\_calloc()

```
void * DDS_Heap_calloc (
    size_t numElem,
    size_t size )
```

Performs the logical equivalent of calloc().

Allocates unused space for an array with `numElem` elements each of whose size in bytes is `size`. The memory will be initialized to zeros.

#### Parameters

<i>numElem</i>	<< <i>in</i> >> (p. 238) The number of elements in the array to be allocated
<i>size</i>	<< <i>in</i> >> (p. 238) The size in bytes of each element in the array

#### Returns

If insufficient memory is available, this method will return NULL. Otherwise, upon success it returns a pointer to the allocated space.

### 7.167.2.2 DDS\_Heap\_malloc()

```
void * DDS_Heap_malloc (
    size_t size )
```

Performs the logical equivalent of malloc().

Allocates unused space for an object of the specified `size`. The memory will be initialized to zeros.

#### Parameters

<i>size</i>	<< <i>in</i> >> (p. 238) The size in bytes of the object to be allocated
-------------	--

#### Returns

If insufficient memory is available, this method will return NULL. Otherwise, upon success it returns a pointer to the allocated space.

### 7.167.2.3 DDS\_Heap\_free()

```
void DDS_Heap_free (
    void * ptr )
```

Performs the logical equivalent of free().

Deallocates the space pointed to by `ptr` and made available for further allocation.

#### Parameters

<code>ptr</code>	<< <i>in</i> >> (p. 238) A pointer to the space to be deallocated
------------------	---

## 7.168 Builtin Qos Profiles

<<*extension*>> (p. 237) QoS libraries, profiles, and snippets that are automatically built into RTI Connext.

### Variables

- const char \*const **DDS\_BUILTIN\_QOS\_LIB**  
*A library of non-experimental QoS profiles.*
- const char \*const **DDS\_PROFILE\_BASELINE\_ROOT**  
*The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.*
- const char \*const **DDS\_PROFILE\_BASELINE**  
*The most up-to-date QoS default values.*
- const char \*const **DDS\_PROFILE\_BASELINE\_5\_0\_0**  
*The QoS default values for version 5.0.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_5\_1\_0**  
*The QoS default values for version 5.1.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_5\_2\_0**  
*The QoS default values for version 5.2.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_5\_3\_0**  
*The QoS default values for version 5.3.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_6\_0\_0**  
*The QoS default values for version 6.0.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_6\_1\_0**  
*The QoS default values for version 6.1.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_7\_0\_0**  
*The QoS default values for version 7.0.0.*
- const char \*const **DDS\_PROFILE\_BASELINE\_7\_1\_0**  
*The QoS default values for version 7.1.0.*
- const char \*const **DDS\_PROFILE\_GENERIC\_COMMON**  
*A common Participant base profile.*
- const char \*const **DDS\_PROFILE\_GENERIC\_MONITORING\_COMMON**

*Enables RTI Monitoring Library.*

- const char \*const **DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY**  
*Sets the values necessary to communicate with RTI Connex Micro.*
- const char \*const **DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY\_2\_4\_9**  
*Sets the values necessary to communicate with RTI Connex Micro versions 2.4.4 through at least 2.4.9.*
- const char \*const **DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY\_2\_4\_3**  
*Sets the values necessary to communicate with RTI Connex Micro versions 2.4.3 and earlier.*
- const char \*const **DDS\_PROFILE\_GENERIC\_OTHER\_DDS\_VENDOR\_COMPATIBILITY**  
*Sets the values necessary to interoperate with other DDS vendors.*
- const char \*const **DDS\_PROFILE\_GENERIC\_510\_TRANSPORT\_COMPATIBILITY**  
*Sets the values necessary to interoperate with RTI Connex 5.1.0 using the UDPv6 and/or SHMEM transports.*
- const char \*const **DDS\_BUILTIN\_QOS\_LIB\_EXP**  
*A library of experimental QoS profiles.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE**  
*Enables strict reliability.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE**  
*Enables keep-last reliability.*
- const char \*const **DDS\_PROFILE\_GENERIC\_BEST\_EFFORT**  
*Enables best-effort reliability kind.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_HIGH\_THROUGHPUT**  
*A profile that can be used to achieve high throughput.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LOW\_LATENCY**  
*A profile that can be used to achieve low latency.*
- const char \*const **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA**  
*A common Participant base profile to facilitate sending large data.*
- const char \*const **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA\_MONITORING**  
*Configures Participants for large data and monitoring.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA**  
*Configures endpoints for sending large data with strict reliability.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA**  
*Configures endpoints for sending large data with keep-last reliability.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_FAST\_FLOW**  
*Configures strictly reliable communication for large data with a fast flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_MEDIUM\_FLOW**  
*Configures strictly reliable communication for large data with a medium flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_SLOW\_FLOW**  
*Configures strictly reliable communication for large data with a slow flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_FAST\_FLOW**  
*Configures keep-last reliable communication for large data with a fast flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_MEDIUM\_FLOW**  
*Configures keep-last reliable communication for large data with a medium flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_SLOW\_FLOW**  
*Configures keep-last reliable communication for large data with a slow flow controller.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_TRANSIENT\_LOCAL**  
*Persists the samples of a DataWriter as long as the entity exists.*
- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_TRANSIENT**  
*Persists samples using RTI Persistence Service.*

- const char \*const **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_PERSISTENT**  
*Persists samples in permanent storage, like a disk, using RTI Persistence Service.*
- const char \*const **DDS\_PROFILE\_GENERIC\_AUTO\_TUNING**  
*Enables the Turbo Mode batching and Auto Throttle experimental features.*
- const char \*const **DDS\_PROFILE\_GENERIC\_MINIMAL\_MEMORY\_FOOTPRINT**  
*Uses a set of QoS which reduces the memory footprint of the application.*
- const char \*const **DDS\_PROFILE\_GENERIC\_SECURITY**  
*Loads the DDS Secure builtin plugins.*
- const char \*const **DDS\_PROFILE\_GENERIC\_MONITORING2**  
*The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.*
- const char \*const **DDS\_PROFILE\_PATTERN\_PERIODIC\_DATA**  
*Used for applications that expect periodic data.*
- const char \*const **DDS\_PROFILE\_PATTERN\_STREAMING**  
*Used for applications that stream data.*
- const char \*const **DDS\_PROFILE\_PATTERN\_RELIABLE\_STREAMING**  
*Used for applications that stream data and require reliable communication.*
- const char \*const **DDS\_PROFILE\_PATTERN\_EVENT**  
*Used for applications that handle events.*
- const char \*const **DDS\_PROFILE\_PATTERN\_ALARM\_EVENT**  
*Used for applications that handle alarm events.*
- const char \*const **DDS\_PROFILE\_PATTERN\_STATUS**  
*Used for applications whose samples represent statuses.*
- const char \*const **DDS\_PROFILE\_PATTERN\_ALARM\_STATUS**  
*Used for applications in which samples represent alarm statuses.*
- const char \*const **DDS\_PROFILE\_PATTERN\_LAST\_VALUE\_CACHE**  
*Used for applications that only need the last published value.*
- const char \*const **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB**  
*A library of QoS Snippets.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_COMMON**  
*QoS Snippet that configures the reliability protocol with a common configuration.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_ALL**  
*QoS Snippet that configures the reliability protocol for KEEP\_ALL.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_LAST**  
*QoS Snippet that configures the reliability protocol for KEEP\_LAST.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_HIGH\_RATE**  
*QoS Snippet that configures the reliability protocol for sending data at a high rate.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_LOW\_LATENCY**  
*QoS Snippet that configures the reliability protocol for sending data at low latency.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_LARGE\_DATA**  
*QoS Snippet that configures the reliability protocol for large data.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_DATACACHE\_LARGE\_DATA\_DYNAMICMEMALLOC**  
*Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_COMMON**  
*QoS Snippet that optimizes discovery with a common configuration.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_PARTICIPANT\_COMPACT**  
*QoS Snippet that optimizes the Participant QoS to send less discovery information.*
- const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_ENDPOINT\_FAST**

- QoS Snippet that optimizes the Endpoint Discovery to be faster.*

  - const char \*const **DDS\_SNIPPET\_OPTIMIZATION\_TRANSPORT\_LARGE\_BUFFERS**
- QoS Snippet that increases the Participant default buffer that shm and udpv4 use.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_RELIABLE**
- QoS Snippet that sets RELIABILITY QoS to RELIABLE.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_BEST\_EFFORT**
- QoS Snippet that sets RELIABILITY QoS to BEST\_EFFORT.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_LAST\_1**
- QoS Snippet that sets HISTORY QoS to KEEP\_LAST kind with depth 1.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_ALL**
- QoS Snippet that sets HISTORY QoSPolicy to KEEP\_ALL kind.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_PUBLISH\_MODE\_ASYNCHRONOUS**
- QoS Snippet that sets PUBLISH\_MODE QoSPolicy to ASYNCHRONOUS kind.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_TRANSIENT\_LOCAL**
- QoS Snippet that sets DURABILITY QoSPolicy to TRANSIENT\_LOCAL kind.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_TRANSIENT**
- QoS Snippet that sets DURABILITY QoSPolicy to TRANSIENT kind.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_PERSISTENT**
- QoS Snippet that sets DURABILITY QoSPolicy to PERSISTENT kind.*

  - const char \*const **DDS\_SNIPPET\_QOS\_POLICY\_BATCHING\_ENABLE**
- QoS Snippet that sets BATCH QoSPolicy to true.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_838MBPS**
- QoS Snippet that configures and set a FlowController of 838 Mbps.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_209MBPS**
- QoS Snippet that configures and sets a FlowController of 209 Mbps.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_52MBPS**
- QoS Snippet that configures and sets a FlowController of 52 Mbps.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_AUTO\_TUNING\_ENABLE**
- QoS Snippet that enables auto\_throttle and turbo\_mode to true.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_MONITORING\_ENABLE**
- QoS Snippet that enables the use of the RTI Monitoring Library.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_MONITORING2\_ENABLE**
- QoS Snippet that enables the use of the RTI Monitoring Library 2.0.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_SECURITY\_ENABLE**
- QoS Snippet that enables security using the Builtin Security Plugins.*

  - const char \*const **DDS\_SNIPPET\_FEATURE\_TOPIC\_QUERY\_ENABLE**
- QoS Snippet that enables Topic Query.*

  - const char \*const **DDS\_SNIPPET\_TRANSPORT\_TCP\_LAN\_CLIENT**
- QoS Snippet that configures a TCP LAN Client over DDS.*

  - const char \*const **DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_SYMMETRIC\_CLIENT**
- QoS Snippet that configures a symmetric WAN TCP Client over DDS.*

  - const char \*const **DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_ASYMMETRIC\_SERVER**
- QoS Snippet that an asymmetric WAN TCP Server over DDS.*

  - const char \*const **DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_ASYMMETRIC\_CLIENT**
- QoS Snippet that configures an asymmetric WAN TCP Client over DDS.*

  - const char \*const **DDS\_SNIPPET\_TRANSPORT\_UDP\_AVOID\_IP\_FRAGMENTATION**

*QoS Snippet that configures RTI Connex and the UDP built-in transports (UDPv4, UDPv6, UDPv4\_WAN) to avoid IP fragmentation.*

- const char \*const **DDS\_SNIPPET\_TRANSPORT\_UDP\_WAN**

*QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4\_WAN).*

- const char \*const **DDS\_SNIPPET\_COMPATIBILITY\_CONNEXT\_MICRO\_VERSION\_2\_4\_3**

*QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connex Micro 2.4.3.*

- const char \*const **DDS\_SNIPPET\_COMPATIBILITY\_OTHER\_DDS\_VENDORS\_ENABLE**

*QoS Snippet that configures RTI Connex to interoperate with other DDS vendors.*

- const char \*const **DDS\_SNIPPET\_5\_1\_0\_TRANSPORT\_ENABLE**

*QoS Snippet that configures RTI Connex to interoperate with RTI Connex 5.1.0 and below for UDPv6 and SHMEM transports.*

### 7.168.1 Detailed Description

<<**extension**>> (p. 237) QoS libraries, profiles, and snippets that are automatically built into RTI Connex.

The built-in profiles can be accessed in QoS XML configuration files and by using any of the APIs that accept library and profiles names by using the constants or string versions as documented on this page.

The built-in profiles are provided as a way to quickly and easily configure RTI Connex applications with a set of QoS values aimed at achieving a specific behavior.

There are three built-in QoS libraries:

- BuiltinQosLib: A library containing built-in QoS Profiles.
- BuiltinQosLibExp: A library containing experimental QoS Profiles. Experimental QoS Profiles are new QoS Profiles that have been tested internally but have not gone through an extensive validation period. Therefore, some of the settings may change in future releases based on customer and internal feedback. After validation, experimental QoS Profiles will be moved into the non-experimental library.
- BuiltinQosSnippetLib: A library containing QoS Snippets that are ready to use as elements for the QoS Profile composition pattern. For further information about this pattern visit the following article: <https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance>

There are three types of profiles:

- Baseline.X.X.X: These profiles represent the QoS defaults for /ndds version X.X.X. To access the defaults for the latest RTI Connex version, use the BuiltinQosLib::Baseline profile.
- Generic.X: These profiles allow you to easily configure different features and communication use-cases with RTI Connex. For example, there is a Generic.StrictReliable profile for use when your application has a requirement for no data loss.
- Pattern.X: These profiles inherit from the Generic.X profiles and allow you to configure various domain-specific communication use cases. For example, there is a Pattern.Alarm profile that can be used to manage the generation and consumption of alarm events.

There are several types of QoS Snippets. These are the current QoS Snippets available:

- **Optimization.X:** these QoS Snippets optimize one or more parameters related to the X QoS Policy or a specific use-case.
- **QoSPolicy.X.Y:** these QoS Snippets set a specific QoS Policy X to the value Y.
- **Feature.X:** these QoS Snippets set all the needed QoS values to enable/modify a specific feature.
- **Transport.X:** these QoS Snippets set a specific transport defined by X. This transport may have specific scenarios that are also specified in the name.
- **Compatibility.X:** these QoS Snippets change the specific QoS policies to ensure compatibility with specific products or versions specified by X.

These QoS Profiles can be used as base profiles in XML configuration, then QoS Snippets can modify specific aspects of this base QoS Profile, and finally files and values can be modified to fit a specific system's needs. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQoSLib::Generic.Common">
  <domain_participant_qos base_name="BuiltinQoSLib::Generic.Monitoring.Common">
    <base_name>
      <element>BuiltinQoSSnippetLib::Feature.Monitoring.Enable</element>
    </base_name>
    <!-- Override and add values -->
  </domain_participant_qos>
</qos_profile>
```

The QoS Profiles can also be used in any APIs that call for a QoS library and profile name, for example, the `create_*_with_profile()` APIs. To create a **DDSDDataWriter** (p. 1321) configured to send large data:

```
writer = DDS_DomainParticipant_create_datawriter_with_profile(
    participant, topic,
    ::DDS_BUILTIN_QOS_LIB,
    ::DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW,
    NULL, ::DDS_STATUS_MASK_NONE);
```

All the built-in QoS Profiles and QoS Snippets are documented in the `BaselineRoot.documentationONLY.xml` and `BuiltinProfiles.documentationONLY.xml` files that are included in the `NDDSHOME/xml` directory of the RTI Connex installation.

- `BaselineRoot.documentationONLY.xml` contains the root baseline QoS profile that corresponds to the default values of RTI Connex 5.0.0.
- `BuiltinProfiles.documentationONLY.xml` contains the rest of the built-in QoS Profiles and QoS Snippets.

## 7.168.2 Variable Documentation

### 7.168.2.1 DDS\_BUILTIN\_QOS\_LIB

```
const char* const DDS_BUILTIN_QOS_LIB [extern]
```

A library of non-experimental QoS profiles.

String-version: "BuiltinQosLib"

### 7.168.2.2 DDS\_PROFILE\_BASELINE\_ROOT

```
const char* const DDS_PROFILE_BASELINE_ROOT [extern]
```

The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.

This profile contains the root baseline QoS values from which all other Baseline.X.X.X profiles inherit. These values correspond to the default values for RTI Connex 5.0.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.Root"

### 7.168.2.3 DDS\_PROFILE\_BASELINE

```
const char* const DDS_PROFILE_BASELINE [extern]
```

The most up-to-date QoS default values.

You can use this profile if you want your application to pick up and use any new QoS default settings each time a new RTI Connex version is released – without changing your application code.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline"

### 7.168.2.4 DDS\_PROFILE\_BASELINE\_5\_0\_0

```
const char* const DDS_PROFILE_BASELINE_5_0_0 [extern]
```

The QoS default values for version 5.0.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.5.0.0"

### 7.168.2.5 DDS\_PROFILE\_BASELINE\_5\_1\_0

```
const char* const DDS_PROFILE_BASELINE_5_1_0 [extern]
```

The QoS default values for version 5.1.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.5.1.0"

### 7.168.2.6 DDS\_PROFILE\_BASELINE\_5\_2\_0

```
const char* const DDS_PROFILE_BASELINE_5_2_0 [extern]
```

The QoS default values for version 5.2.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.5.2.0"

### 7.168.2.7 DDS\_PROFILE\_BASELINE\_5\_3\_0

```
const char* const DDS_PROFILE_BASELINE_5_3_0 [extern]
```

The QoS default values for version 5.3.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.5.3.0"

### 7.168.2.8 DDS\_PROFILE\_BASELINE\_6\_0\_0

```
const char* const DDS_PROFILE_BASELINE_6_0_0 [extern]
```

The QoS default values for version 6.0.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.6.0.0"

### 7.168.2.9 DDS\_PROFILE\_BASELINE\_6\_1\_0

```
const char* const DDS_PROFILE_BASELINE_6_1_0 [extern]
```

The QoS default values for version 6.1.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.6.1.0"

**7.168.2.10 DDS\_PROFILE\_BASELINE\_7\_0\_0**

```
const char* const DDS_PROFILE_BASELINE_7_0_0 [extern]
```

The QoS default values for version 7.0.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.7.0.0"

**7.168.2.11 DDS\_PROFILE\_BASELINE\_7\_1\_0**

```
const char* const DDS_PROFILE_BASELINE_7_1_0 [extern]
```

The QoS default values for version 7.1.0.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Baseline.7.1.0"

**7.168.2.12 DDS\_PROFILE\_GENERIC\_COMMON**

```
const char* const DDS_PROFILE_GENERIC_COMMON [extern]
```

A common Participant base profile.

All Generic.X and Pattern.X profiles inherit from this profile.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.Common"

**7.168.2.13 DDS\_PROFILE\_GENERIC\_MONITORING\_COMMON**

```
const char* const DDS_PROFILE_GENERIC_MONITORING_COMMON [extern]
```

Enables RTI Monitoring Library.

Generic Base participant QoS Profile that enables RTI Monitoring Library.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Monitoring.Common", apply the QoS Snippet "BuiltinQos↔ SnippetLib::Feature.Monitoring.Enable" via composition. For example:

```
<qos_profile name="MyProfile">
```

```
  <base_name>
```

```
    <element>BuiltinQosSnippetLib::Feature.Monitoring.Enable</element>
```

```
  </base_name>
```

```
</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">
```

```
  <domain_participant_qos base_name="BuiltinQosLib::Generic.Monitoring.Common">
```

```
</qos_profile>
```

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.Monitoring.Common"

#### 7.168.2.14 DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY [extern]
```

Sets the values necessary to communicate with RTI Connex Micro.

This profile will always represent the QoS values required for interoperability between the most recent version of RTI Connex Micro at the time of release of the most recent version of RTI Connex.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.ConnexMicroCompatibility"

#### 7.168.2.15 DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY\_2\_4\_9

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9 [extern]
```

Sets the values necessary to communicate with RTI Connex Micro versions 2.4.4 through at least 2.4.9.

At the time of the release of RTI Connex 5.3.0 it was not necessary to set any QoS values in order to interoperate with RTI Connex Micro. This applies to RTI Connex Micro versions 2.4.4 and later. The most recent version of RTI Connex Micro at the time of release of RTI Connex 5.3.0 was 2.4.9. There is no guarantee that this profile will interoperate with versions of RTI Connex Micro after 2.4.9.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.ConnexMicroCompatibility.2.4.9"

#### 7.168.2.16 DDS\_PROFILE\_GENERIC\_CONNEXT\_MICRO\_COMPATIBILITY\_2\_4\_3

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3 [extern]
```

Sets the values necessary to communicate with RTI Connex Micro versions 2.4.3 and earlier.

RTI Connex Micro versions 2.4.3 and earlier only supported the **DDS\_MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** (p. 410) LivelinessQos kind. In order to be compatible with these versions of RTI Connex Micro, the **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) must have their Liveliness kind changed to this value because the default kind in RTI Connex is **DDS\_AUTOMATIC\_LIVELINESS\_QOS** (p. 410).

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.ConnexMicroCompatibility.2.4.3"

#### 7.168.2.17 DDS\_PROFILE\_GENERIC\_OTHER\_DDS\_VENDOR\_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY [extern]
```

Sets the values necessary to interoperate with other DDS vendors.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.OtherDDSVendorCompatibility"

### 7.168.2.18 DDS\_PROFILE\_GENERIC\_510\_TRANSPORT\_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY [extern]
```

Sets the values necessary to interoperate with RTI Connex 5.1.0 using the UDPv6 and/or SHMEM transports.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.510TransportCompatibility"

### 7.168.2.19 DDS\_BUILTIN\_QOS\_LIB\_EXP

```
const char* const DDS_BUILTIN_QOS_LIB_EXP [extern]
```

A library of experimental QoS profiles.

Experimental profiles are new profiles that have been tested internally but have not gone through an extensive validation period. Therefore some of the settings may change in future releases based on customer and internal feedback. After validation, experimental profiles will be moved into the non-experimental library.

QoS Profiles in this library are deprecated. They have been moved to "BuiltinQosLib". You should use the QoS Profiles from "BuiltinQosLib" instead of the ones in "BuiltinQosLibExp". The experimental profiles are still defined here to avoid backward compatibility issues.

String-version: "BuiltinQosLibExp"

### 7.168.2.20 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE [extern]
```

Enables strict reliability.

Configures communication to be "strict reliable" where every sample is reliably delivered.

Combines the use of the **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) for **DDS\_ReliabilityQosPolicy** (p. 1041) with a **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406) for the **DDS\_HistoryQosPolicyKind** (p. 405).

This QoS Profile also optimizes the reliability protocol setting for this configuration.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable"

### 7.168.2.21 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE [extern]
```

Enables keep-last reliability.

Like the Generic.StrictReliable profile, this profile ensures in-order delivery of samples. However, new data can overwrite data that has not yet been acknowledged by the reader, therefore causing possible sample loss.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable"

### 7.168.2.22 DDS\_PROFILE\_GENERIC\_BEST\_EFFORT

```
const char* const DDS_PROFILE_GENERIC_BEST_EFFORT [extern]
```

Enables best-effort reliability kind.

This profile enables best-effort communication. No effort or resources are spent to track whether or not sent samples are received. Minimal resources are used. This is the most deterministic method of sending data since there is no indeterministic delay that can be introduced by resending data. Data samples may be lost. This setting is good for periodic data.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.BestEffort"

### 7.168.2.23 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_HIGH\_THROUGHPUT

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT [extern]
```

A profile that can be used to achieve high throughput.

This QoS Profile extends the **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE** (p. 491) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE** (p. 491) QoS Profile..

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.HighThroughput"

### 7.168.2.24 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LOW\_LATENCY

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY [extern]
```

A profile that can be used to achieve low latency.

This QoS Profile extends the **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE** (p. 491) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE** (p. 491) QoS Profile.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.LowLatency"

### 7.168.2.25 DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA

```
const char* const DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA [extern]
```

A common Participant base profile to facilitate sending large data.

This is a common Participant base QoS Profile that configures 3 different flow controllers: 838, 209, and 52 Mbps that can each be used to throttle application data flow at different rates.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.Participant.LargeData"

### 7.168.2.26 DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA\_MONITORING

```
const char* const DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING [extern]
```

Configures Participants for large data *and* monitoring.

This is a common base Participant QoS Profile to configure Participants to both handle large data and use RTI Monitoring Library.

This QoS Profile is deprecated. It is included for backwards compatibility.

It is recommended that instead of inheriting from this QoS Profile, new applications apply the following QoS Snippets to their application-specific QoS Profiles:

Enable Monitoring

- **DDS\_SNIPPET\_FEATURE\_MONITORING\_ENABLE** (p. 512)

Enable Large Data + optimizations

- **DDS\_SNIPPET\_QOS\_POLICY\_PUBLISH\_MODE\_ASYNCHRONOUS** (p. 508)
- **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_LARGE\_DATA** (p. 504)
- **DDS\_SNIPPET\_OPTIMIZATION\_DATACACHE\_LARGE\_DATA\_DYNAMICMEMALLOC** (p. 504) In Library↔  
: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.Participant.LargeData.Monitoring"

See also

**DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA** (p. 492)

**DDS\_PROFILE\_GENERIC\_MONITORING\_COMMON** (p. 489)

### 7.168.2.27 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA [extern]
```

Configures endpoints for sending large data with strict reliability.

This QoS Profile extends the **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA** (p. 492) QoS Profile to handle sending large samples. This QoS Profile optimizes memory usage per sample within RTI Connex, but it does not do any flow control. You can use this QoS Profile directly, which enables asynchronous publication with the default flow controller (i.e. no flow control) or you can use one of the three QoS Profiles below (Generic.StrictReliable.LargeData.\*↔Flow), which uses this QoS Profile as a common base QoS Profile. Each of these three QoS Profiles uses one of the three flow controllers defined in **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA** (p. 492) in order to throttle application data flow.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.LargeData"

### 7.168.2.28 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA [extern]
```

Configures endpoints for sending large data with keep-last reliability.

This QoS Profile is similar to the **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA** (p. 492) QoS Profile, but also adds QoS Snippets to handle sending large data. You can use this QoS Profile directly, which enables the default flow controller (i.e., no flow control) or you can choose one of the three QoS Profiles below (Generic.KeepLastReliable.↔LargeData.\*Flow) which uses this QoS Profile as a common base QoS Profile. Each of these three QoS Profiles uses one of the three flow controllers defined in **DDS\_PROFILE\_GENERIC\_PARTICIPANT\_LARGE\_DATA** (p. 492) in order to throttle application data flow.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.LargeData"

### 7.168.2.29 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_FAST\_FLOW

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW [extern]
```

Configures strictly reliable communication for large data with a fast flow controller.

Strictly reliable communication for large data with a 838 Mbps (~ 100 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.LargeData.FastFlow"

**7.168.2.30 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_MEDIUM\_FLOW**

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW [extern]
```

Configures strictly reliable communication for large data with a medium flow controller.

Strictly reliable communication for large data with a 209Mbps (~ 25 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.LargeData.MediumFlow"

**7.168.2.31 DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LARGE\_DATA\_SLOW\_FLOW**

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW [extern]
```

Configures strictly reliable communication for large data with a slow flow controller.

Strictly reliable communication for large data with a 52 MB/sec (~ 6.25 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.StrictReliable.LargeData.SlowFlow"

**7.168.2.32 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_FAST\_FLOW**

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW [extern]
```

Configures keep-last reliable communication for large data with a fast flow controller.

Keep-last reliable communication for large data with a 838 Mbps (~ 100 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.LargeData.FastFlow"

**7.168.2.33 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_MEDIUM\_FLOW**

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW [extern]
```

Configures keep-last reliable communication for large data with a medium flow controller.

Keep-last reliable communication for large data with a 209Mbps (~ 25 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.LargeData.MediumFlow"

### 7.168.2.34 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA\_SLOW\_FLOW

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW [extern]
```

Configures keep-last reliable communication for large data with a slow flow controller.

Keep-last reliable communication for large data with a 52 MB/sec (~ 6.25 MB/sec) flow controller.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.LargeData.SlowFlow"

### 7.168.2.35 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_TRANSIENT\_LOCAL

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL [extern]
```

Persists the samples of a DataWriter as long as the entity exists.

This profile extends the **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE** (p. 491) profile, but persists the samples of a **DDSDataWriter** (p. 1321) as long as the entity exists in order to deliver them to late-joining DataReaders.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.TransientLocal"

### 7.168.2.36 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_TRANSIENT

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT [extern]
```

Persists samples using RTI Persistence Service.

This profile extends the **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE** (p. 491) profile, but persists samples using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.Transient"

### 7.168.2.37 DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_PERSISTENT

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT [extern]
```

Persists samples in permanent storage, like a disk, using RTI Persistence Service.

This profile extends the **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE** (p. 491) profile, but persists samples in permanent storage, such as a disk, using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.KeepLastReliable.Persistent"

**7.168.2.38 DDS\_PROFILE\_GENERIC\_AUTO\_TUNING**

```
const char* const DDS_PROFILE_GENERIC_AUTO_TUNING [extern]
```

Enables the Turbo Mode batching and Auto Throttle experimental features.

Turbo Mode batching adjusts the maximum number of bytes of a batch based on how frequently samples are being written. Auto Throttle auto-adjusts the speed at which a writer will write samples, based on the number of unacknowledged samples in its queue.

These features are designed to auto-adjust the publishing behavior within a system in order to achieve the best possible performance with regards to throughput and latency.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.AutoTuning"

**7.168.2.39 DDS\_PROFILE\_GENERIC\_MINIMAL\_MEMORY\_FOOTPRINT**

```
const char* const DDS_PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT [extern]
```

Uses a set of QoS which reduces the memory footprint of the application.

Uses a set of QoS which reduces the memory footprint of the application.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Generic.MinimalMemoryFootprint"

**7.168.2.40 DDS\_PROFILE\_GENERIC\_SECURITY**

```
const char* const DDS_PROFILE_GENERIC_SECURITY [extern]
```

Loads the DDS Secure builtin plugins.

Generic Base Participant Profile that enables the builtin DDS Security Plugins.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Security", apply the QoS Snippet "BuiltinQosSnippetLib::Feature.Security.Enable" via composition. For example:

```
<qos_profile name="MyProfile">
  <base_name>
    <element>BuiltinQosSnippetLib::Feature.Security.Enable</element>
  </base_name>
</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">
  <domain_participant_qos base_name="BuiltinQosLib::Generic.Security">
  </domain_participant_qos>
</qos_profile>
```

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486)

String-version: "Generic.Security"

### 7.168.2.41 DDS\_PROFILE\_GENERIC\_MONITORING2

```
const char* const DDS_PROFILE_GENERIC_MONITORING2 [extern]
```

The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.

This profile inherits from **DDS\_PROFILE\_GENERIC\_MINIMAL\_MEMORY\_FOOTPRINT** (p. 497).

The following DomainParticipant QoS policy of this profile cannot be modified and it is overwritten by the RTI Monitoring Library 2.0:

- Discovery Config Built-in Channel Kind.

The following DataWriter and DataReader QoS policies of this profile cannot be modified and they are overwritten by the RTI Monitoring Library 2.0:

- Reliability Kind.
- Durability Kind.
- History Kind.
- Publish Mode Kind.
- Protocol -> RTPS Reliable Writer -> Max Heartbeat Retries.

This profile uses Topic Filters to select the DataWriter and DataReader QoS depending on the Observability Distribution Topic.

You should be using this profile or a profile inheriting from it when you configure the distribution of telemetry data using the <distribution\_settings> tag under <monitoring> for the <participant\_factory\_qos>.

Note: This profile does not enable the use of the RTI Monitoring Library 2.0. To do that you can use the Snippet **DDS\_SNIPPET\_FEATURE\_MONITORING2\_ENABLE** (p. 513).

String-version: "Generic.Monitoring2"

See also

**RTI\_MONITORING\_PERIODIC\_TOPIC\_NAME** (p. 521)

**RTI\_MONITORING\_EVENT\_TOPIC\_NAME** (p. 521)

**RTI\_MONITORING\_LOGGING\_TOPIC\_NAME** (p. 522)

#### 7.168.2.42 DDS\_PROFILE\_PATTERN\_PERIODIC\_DATA

```
const char* const DDS_PROFILE_PATTERN_PERIODIC_DATA [extern]
```

Used for applications that expect periodic data.

This QoS Profile is intended to be used for applications that expect periodic data such as sensor data. The deadline that is set in this profile can be used to detect when DataWriters are not publishing data with the expected periodicity.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.PeriodicData"

#### 7.168.2.43 DDS\_PROFILE\_PATTERN\_STREAMING

```
const char* const DDS_PROFILE_PATTERN_STREAMING [extern]
```

Used for applications that stream data.

The data sent in streaming applications is commonly periodic. Therefore this profile simply inherits from the **DDS\_PROFILE\_PATTERN\_PERIODIC\_DATA** (p. 498) profile. Note: With this QoS Profile, the application may lose data, which may be acceptable in use cases such as video conferencing.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.Streaming"

#### 7.168.2.44 DDS\_PROFILE\_PATTERN\_RELIABLE\_STREAMING

```
const char* const DDS_PROFILE_PATTERN_RELIABLE_STREAMING [extern]
```

Used for applications that stream data *and* require reliable communication.

Sometimes streaming applications require reliable communication while still tolerating some data loss. In this case, we inherit from the **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE** (p. 491) QoS Profile and the following QoS Snippets:

- **DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_RELIABLE** (p. 506)
- **DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_LAST\_1** (p. 507)
- **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_LAST** (p. 502)

This QoS Snippet also increases the **DDS\_HistoryQosPolicy::depth** (p. 921) to reduce the probability of losing samples.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.ReliableStreaming"

### 7.168.2.45 DDS\_PROFILE\_PATTERN\_EVENT

```
const char* const DDS_PROFILE_PATTERN_EVENT [extern]
```

Used for applications that handle events.

This QoS Profile can be used by applications in which samples represent events such as button pushes or alerts. When events are triggered, the system should almost always do something, meaning that you don't want the system to lose the event. This means that the system requires strictly reliable communication. To enable it, use the following QoS Snippets:

- **DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_RELIABLE** (p. 506)
- **DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_ALL** (p. 508)
- **DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_ALL** (p. 502)

Since events and alerts are critical and non-periodic data, it is important to detect situations in which communication between a **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) is broken. This is why this profile sets the **DDS\_↔\_LivelinessQosPolicy** (p. 936). If the **DDSDataWriter** (p. 1321) does not assert its liveliness in a timely manner, the **DDSDataReader** (p. 1288) will report 'loss of liveliness' to the application.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.Event"

### 7.168.2.46 DDS\_PROFILE\_PATTERN\_ALARM\_EVENT

```
const char* const DDS_PROFILE_PATTERN_ALARM_EVENT [extern]
```

Used for applications that handle alarm events.

An alarm is a type of event; therefore this profile simply inherits from **DDS\_PROFILE\_PATTERN\_EVENT** (p. 499).

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.AlarmEvent"

### 7.168.2.47 DDS\_PROFILE\_PATTERN\_STATUS

```
const char* const DDS_PROFILE_PATTERN_STATUS [extern]
```

Used for applications whose samples represent statuses.

This QoS Profile can be used by applications in which samples represent state variables whose values remain valid as long as they don't explicitly change. State variables typically do not change periodically. State variables and their values should also be available to applications that appear after the value originally changed because it is unreasonable to have to wait until the next change of state, which may be indeterminate.

Whether to use this QoS Profile or **DDS\_PROFILE\_PATTERN\_PERIODIC\_DATA** (p. 498) can often be an application choice. For example, if a DataWriter is publishing temperature sensor data, it could use the **DDS\_PROFILE\_↔\_PATTERN\_PERIODIC\_DATA** (p. 498) QoS Profile and publish the data at a fixed rate or it could use the **DDS\_↔\_PROFILE\_PATTERN\_STATUS** (p. 500) QoS Profile and only publish the temperature when it changes more than 1 degree.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.Status"

### 7.168.2.48 DDS\_PROFILE\_PATTERN\_ALARM\_STATUS

```
const char* const DDS_PROFILE_PATTERN_ALARM_STATUS [extern]
```

Used for applications in which samples represent alarm statuses.

An alarm status is a type of status; therefore this QoS Profile simply inherits from **DDS\_PROFILE\_PATTERN\_STATUS** (p. 500).

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.AlarmStatus"

### 7.168.2.49 DDS\_PROFILE\_PATTERN\_LAST\_VALUE\_CACHE

```
const char* const DDS_PROFILE_PATTERN_LAST_VALUE_CACHE [extern]
```

Used for applications that only need the last published value.

With this QoS Profile, a **DDSDataWriter** (p. 1321) will keep in its queue the last value that was published for each sample instance. Late-joining DataReaders will get that value when they join the system. This QoS Profile inherits from **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_TRANSIENT\_LOCAL** (p. 496) because the use case requires delivery to late-joiners.

In Library: **DDS\_BUILTIN\_QOS\_LIB** (p. 486) and **DDS\_BUILTIN\_QOS\_LIB\_EXP** (p. 491)

String-version: "Pattern.LastValueCache"

### 7.168.2.50 DDS\_BUILTIN\_QOS\_SNIPPET\_LIB

```
const char* const DDS_BUILTIN_QOS_SNIPPET_LIB [extern]
```

A library of QoS Snippets.

String-version: "BuiltinQosSnippetLib"

### 7.168.2.51 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_COMMON

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON [extern]
```

QoS Snippet that configures the reliability protocol with a common configuration.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet defines parameters common to a set of "alternative" QoS Snippets that configure the reliability protocol.

Modified QoS Parameters:

- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

This QoS Snippet configures the reliability protocol parameters for more aggressive (faster) heartbeats so that sample loss is detected and repaired faster.

This QoS Snippet also sets the **DDS\_RtpsReliableWriterProtocol\_t::max\_heartbeat\_retries** (p. 1066), which works in combination with the heartbeat rate to determine when the **DDSDataWriter** (p. 1321) considers a **DDSDataReader** (p. 1288) non-responsive. This QoS Snippet configures the **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677) parameters so that the **DDSDataWriter** (p. 1321) considers the **DDSDataReader** (p. 1288) to be "inactive" after 500 unresponded heartbeats.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.Common"

### 7.168.2.52 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_ALL

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL [extern]
```

QoS Snippet that configures the reliability protocol for KEEP\_ALL.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1321) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1321) with **DDS\_HistoryQosPolicyKind** (p. 405) set to **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406).

Modified QoS Parameters:

- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

Note that this QoS Snippet does not configure the **DDS\_ReliabilityQosPolicy** (p. 1041) or **DDS\_HistoryQosPolicy** (p. 919) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.KeepAll"

### 7.168.2.53 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_KEEP\_LAST

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST [extern]
```

QoS Snippet that configures the reliability protocol for KEEP\_LAST.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1321) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1321) with **DDS\_HistoryQosPolicyKind** (p. 405) set to **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406).

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

Note that this QoS Snippet does not configure the **DDS\_ReliabilityQosPolicy** (p. 1041) or **DDS\_HistoryQosPolicy** (p. 919) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.KeepLast"

### 7.168.2.54 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_HIGH\_RATE

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE [extern]
```

QoS Snippet that configures the reliability protocol for sending data at a high rate.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1321) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1321) that is writing messages at high rates, especially in situations where throughput is favored over latency.

Modified QoS Parameters:

- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

This QoS Snippet sets a fast rate of heartbeats so that errors are detected and repaired more swiftly.

Note that to get the highest throughput you may need to apply additional changes to the final QoS Profile. See the QoS Profile **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_HIGH\_THROUGHPUT** (p. 492) for further information.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.HighRate"

### 7.168.2.55 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_LOW\_LATENCY

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY [extern]
```

QoS Snippet that configures the reliability protocol for sending data at low latency.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet modifies the Reliable Protocol parameters to accomplish low latency.

Modified QoS Parameters:

- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

Note that to get the lowest latency you may need to apply additional changes to the final QoS Profile. See the QoS Profile **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE\_LOW\_LATENCY** (p. 492) for further information.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.LowLatency"

### 7.168.2.56 DDS\_SNIPPET\_OPTIMIZATION\_RELIABILITY\_PROTOCOL\_LARGE\_DATA

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA [extern]
```

QoS Snippet that configures the reliability protocol for large data.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

Modifies the Reliable Protocol parameters and Resource Limits to work with Large Data.

Modified QoS Parameters:

- **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633)

Note that to send large data you need to apply additional changes that configure the data caches, asynchronous writing, transport buffers, etc. See, for example, **DDS\_PROFILE\_GENERIC\_KEEP\_LAST\_RELIABLE\_LARGE\_DATA** (p. 494), and derivatives for fully functional Large Data QoS Profiles.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.ReliabilityProtocol.LargeData"

**7.168.2.57 DDS\_SNIPPET\_OPTIMIZATION\_DATACACHE\_LARGE\_DATA\_DYNAMICMEMALLOC**

```
const char* const DDS_SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC [extern]
```

Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataWriterQos** (p. 689) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.data\_writer.history.memory↔\_manager.\*"
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ResourceLimitsQosPolicy** (p. 1052)
- **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.data\_reader.history↔\_memory\_manager.\*"

This configuration is needed to handle data that contains unbounded sequences or strings. This QoS Snippet is also recommended if samples can have very different sizes and the bigger samples can be very large.

If dynamic memory allocation is not used for the larger samples, then all samples are allocated to their maximum size which can consume a lot of resources.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.DataCache.LargeData.DynamicMemAlloc"

**7.168.2.58 DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_COMMON**

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_COMMON [extern]
```

QoS Snippet that optimizes discovery with a common configuration.

Optimizes the **DDS\_DomainParticipantQos** (p. 741) to detect faster discovery changes. This QoS Snippet increases the speed moderately so that it fits the normal scenarios.

Modified QoS Parameters:

- **DDS\_DiscoveryConfigQosPolicy::participant\_liveliness\_lease\_duration** (p. 714)
- **DDS\_DiscoveryConfigQosPolicy::participant\_liveliness\_assert\_period** (p. 715)
- **DDS\_DiscoveryConfigQosPolicy::max\_liveliness\_loss\_detection\_period** (p. 716)
- **DDS\_DiscoveryConfigQosPolicy::initial\_participant\_announcements** (p. 716)
- **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719)
- **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.Discovery.Common"

### 7.168.2.59 DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_PARTICIPANT\_COMPACT

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT [extern]
```

QoS Snippet that optimizes the Participant QoS to send less discovery information.

Modified QoS Parameters:

- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.participant.inter\_↔ participant.\*"
- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.sys\_info.\*"

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.Discovery.Participant.Compact"

### 7.168.2.60 DDS\_SNIPPET\_OPTIMIZATION\_DISCOVERY\_ENDPOINT\_FAST

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST [extern]
```

QoS Snippet that optimizes the Endpoint Discovery to be faster.

This is useful when using security, to prevent a noticeable delay.

Modified QoS Parameters:

- **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719)
- **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.Discovery.Endpoint.Fast"

### 7.168.2.61 DDS\_SNIPPET\_OPTIMIZATION\_TRANSPORT\_LARGE\_BUFFERS

```
const char* const DDS_SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS [extern]
```

QoS Snippet that increases the Participant default buffer that shm and udpv4 use.

This is useful when using Large Data

Modified QoS Parameters:

- **DDS\_ReceiverPoolQosPolicy** (p. 1038)
- **DDS\_TransportBuiltinQosPolicy** (p. 1144)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Optimization.Transport.LargeBuffers"

### 7.168.2.62 DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_RELIABLE

```
const char* const DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE [extern]
```

QoS Snippet that sets RELIABILITY QoS to RELIABLE.

This also configures a blocking time in case the **DDSDataWriter** (p. 1321) writes faster than the DataReaders can accommodate.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_ReliabilityQosPolicy** (p. 1041)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ReliabilityQosPolicy** (p. 1041)

Note that by itself enabling reliability does not ensure that every sample written is delivered to the DataReaders. This is because the **DDSDataWriter** (p. 1321) and/or **DDSDataReader** (p. 1288) can be configured to override samples in its cache based on the configuration of the **DDS\_HistoryQosPolicy** (p. 919) QoS policy.

To ensure delivery of every sample (at the expense of potentially blocking the **DDSDataWriter** (p. 1321)), use the QoS Profile **DDS\_PROFILE\_GENERIC\_STRICT\_RELIABLE** (p. 491) or one of the derived QoS Profiles.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Reliability.Reliable"

### 7.168.2.63 DDS\_SNIPPET\_QOS\_POLICY\_RELIABILITY\_BEST\_EFFORT

```
const char* const DDS_SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT [extern]
```

QoS Snippet that sets RELIABILITY QoS to BEST\_EFFORT.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_ReliabilityQosPolicy** (p. 1041)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_ReliabilityQosPolicy** (p. 1041)

With best-effort, there are no resources spent to confirm delivery of samples nor repairs of any samples that may be lost.

Best-effort communication reduces jitter; therefore, the delay between sending data and receiving it is more deterministic for the samples that are actually received. Best-effort is good for periodic data where it may be better to get the next value than to wait for the previous one to be repaired.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Reliability.BestEffort"

#### 7.168.2.64 DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_LAST\_1

```
const char* const DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1 [extern]
```

QoS Snippet that sets HISTORY QoS to KEEP\_LAST kind with depth 1.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_HistoryQosPolicy** (p. 919)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_HistoryQosPolicy** (p. 919)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QosPolicy.History.KeepLast\_1"

#### 7.168.2.65 DDS\_SNIPPET\_QOS\_POLICY\_HISTORY\_KEEP\_ALL

```
const char* const DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL [extern]
```

QoS Snippet that sets HISTORY QosPolicy to KEEP\_ALL kind.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_HistoryQosPolicy** (p. 919)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_HistoryQosPolicy** (p. 919)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QosPolicy.History.KeepAll"

#### 7.168.2.66 DDS\_SNIPPET\_QOS\_POLICY\_PUBLISH\_MODE\_ASYNCHRONOUS

```
const char* const DDS_SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS [extern]
```

QoS Snippet that sets PUBLISH\_MODE QosPolicy to ASYNCHRONOUS kind.

Modified QoS Parameters:

- **DDS\_PublishModeQosPolicy** (p. 1025)

Asynchronous Publish mode decouples the application thread that calls the **DDSDataWriter** (p. 1321) "write" operation from the thread used to send the data on the network. See <https://community.rti.com/glossary/asynchronous-writer>

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QosPolicy.PublishMode.Asynchronous"

**7.168.2.67 DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_TRANSIENT\_LOCAL**

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL [extern]
```

QoS Snippet that sets DURABILITY QoSPolicy to TRANSIENT\_LOCAL kind.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_DurabilityQosPolicy** (p. 767)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_DurabilityQosPolicy** (p. 767)

DataWriters will store and send previously published DDS samples for delivery to newly discovered DataReaders as long as the **DDSDataWriter** (p. 1321) still exists. For this setting to be effective, you must also set the **DDS\_ReliabilityQosPolicyKind** (p. 434) to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) (not Best Effort). Which particular DDS samples are kept depends on other QoS settings such as **DDS\_HistoryQosPolicy** (p. 919) and **DDS\_ResourceLimitsQosPolicy** (p. 1052).

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Durability.TransientLocal"

**7.168.2.68 DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_TRANSIENT**

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT [extern]
```

QoS Snippet that sets DURABILITY QoSPolicy to TRANSIENT kind.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_DurabilityQosPolicy** (p. 767)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_DurabilityQosPolicy** (p. 767)

RTI Connext will store previously published DDS samples in memory using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **DDS\_HistoryQosPolicy** (p. 919) and **DDS\_ResourceLimitsQosPolicy** (p. 1052) of the Persistence Service DataWriters. These QoS Policies can be configured in the Persistence Service configuration file or through the **DDS\_DurabilityQosPolicyKind** (p. 400) of the DataWriters configured with **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401).

You need a Persistence Service instance running to use this behavior.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Durability.Transient"

### 7.168.2.69 DDS\_SNIPPET\_QOS\_POLICY\_DURABILITY\_PERSISTENT

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT [extern]
```

QoS Snippet that sets DURABILITY QoSPolicy to PERSISTENT kind.

Modified QoS Parameters:

- **DDS\_DataWriterQos** (p. 689) => **DDS\_DurabilityQosPolicy** (p. 767)
- **DDS\_DataReaderQos** (p. 644) => **DDS\_DurabilityQosPolicy** (p. 767)

RTI Connext will store previously published DDS samples in permanent storage, like a disk, using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **DDS\_HistoryQosPolicy** (p. 919) and **DDS\_ResourceLimitsQosPolicy** (p. 1052) in the Persistence Service DataWriters. These QoS Policies can be configured in the Persistence Service configuration file or through the **DDS\_DurabilityQosPolicyKind** (p. 400) of the DataWriters configured with **DDS\_PERSISTENT\_↔ DURABILITY\_QOS** (p. 401).

You need a Persistence Service instance running to use this behavior.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Durability.Persistent"

### 7.168.2.70 DDS\_SNIPPET\_QOS\_POLICY\_BATCHING\_ENABLE

```
const char* const DDS_SNIPPET_QOS_POLICY_BATCHING_ENABLE [extern]
```

QoS Snippet that sets BATCH QoSPolicy to true.

Modified QoS Parameters:

- **DDS\_BatchQosPolicy** (p. 600)

This QoS Snippet specifies and configures the mechanism that allows RTI Connext to collect multiple user data DDS samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "QoSPolicy.Batching.Enable"

### 7.168.2.71 DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_838MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS [extern]
```

QoS Snippet that configures and set a FlowController of 838 Mbps.

Defines a **DDSFlowController** (p. 1468) and configures the **DDS\_DataWriterQos** (p. 689) with it.

This is a **DDSFlowController** (p. 1468) of 838 Mbps (~ 100 MB/sec)

Modified QoS Parameters:

- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.flow\_controller.↔ token\_bucket.\*"
- **DDS\_PublishModeQosPolicy** (p. 1025)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.FlowController.838Mbps"

### 7.168.2.72 DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_209MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS [extern]
```

QoS Snippet that configures and sets a FlowController of 209 Mbps.

Defines a **DDSFlowController** (p. 1468) and configures the **DDS\_DataWriterQos** (p. 689) with it.

This is a **DDSFlowController** (p. 1468) of 209 Mbps (~ 25 MB/sec)

Modified QoS Parameters:

- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.flow\_controller.↔ token\_bucket.\*"
- **DDS\_PublishModeQosPolicy** (p. 1025)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.FlowController.209Mbps"

### 7.168.2.73 DDS\_SNIPPET\_FEATURE\_FLOW\_CONTROLLER\_52MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS [extern]
```

QoS Snippet that configures and sets a FlowController of 52 Mbps.

Defines a **DDSFlowController** (p. 1468) and configures the **DDS\_DataWriterQos** (p. 689) with it.

This is a **DDSFlowController** (p. 1468) of 52 Mbps (~ 6.25 MB/sec)

Modified QoS Parameters:

- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.flow\_controller.↔ token\_bucket.\*"
- **DDS\_PublishModeQosPolicy** (p. 1025)

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.FlowController.52Mbps"

### 7.168.2.74 DDS\_SNIPPET\_FEATURE\_AUTO\_TUNING\_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_AUTO_TUNING_ENABLE [extern]
```

QoS Snippet that enables auto\_throttle and turbo\_mode to true.

Sets the **DDS\_DomainParticipantQos** (p. 741) properties to enable auto\_throttle and turbo\_mode to true.

Modified QoS Parameters:

- **DDS\_DomainParticipantQos** (p. 741) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.domain\_↔ participant.auto\_throttle"
- **DDS\_DataWriterQos** (p. 689) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.data\_writer.auto\_throttle.↔ enable"
- **DDS\_DataWriterQos** (p. 689) => **DDS\_PropertyQosPolicy** (p. 1007) named "dds.data\_writer.enable\_turbo\_↔ mode"

The domain\_participant.auto\_throttle configures the **DDSDomainParticipant** (p. 1351) to gather internal measurements (during **DDSDomainParticipant** (p. 1351) creation) that are required for the Auto Throttle feature. This allows Data\_↔ Writers belonging to this **DDSDomainParticipant** (p. 1351) to use the Auto Throttle feature.

The turbo\_mode adjusts the batch max\_data\_bytes based on how frequently the **DDSDataWriter** (p. 1321) writes data.

Data\_writer.auto\_throttle enables automatic throttling in the **DDSDataWriter** (p. 1321) so it can automatically adjust the writing rate and the send window size; this minimizes the need for repairing DDS samples and improves latency.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.AutoTuning.Enable"

**7.168.2.75 DDS\_SNIPPET\_FEATURE\_MONITORING\_ENABLE**

```
const char* const DDS_SNIPPET_FEATURE_MONITORING_ENABLE [extern]
```

QoS Snippet that enables the use of the RTI Monitoring Library.

To enable the use of RTI Monitoring Library apply this QoS Snippet to the QoS Profile used to create your **DDSDomain**↔  
**Participant** (p. 1351). For example:

```
<qos_profile name="MyProfile">
  <base_name>
    <element>BuiltinQosLib::Feature.Monitoring.Enable</element>
  </base_name>
</qos_profile>
```

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.Monitoring.Enable"

**7.168.2.76 DDS\_SNIPPET\_FEATURE\_MONITORING2\_ENABLE**

```
const char* const DDS_SNIPPET_FEATURE_MONITORING2_ENABLE [extern]
```

QoS Snippet that enables the use of the RTI Monitoring Library 2.0.

QoS Snippet to enable the use of the RTI Monitoring Library 2.0 with a dedicated DomainParticipant publishing telemetry data from your application in domain ID 2. All metrics are enabled for all resources in this profile.

To enable the use of RTI Monitoring Library 2.0, apply this QoS Snippet to the QoS Profile used to create your Domain↔  
**ParticipantFactory**. For example:

```
<qos_profile name="MyProfile" is_default_participant_factory_profile="true">
  <base_name>
    <element>BuiltinQosSnippetLib::Feature.Monitoring2.Enable</element>
  </base_name>
</qos_profile>
```

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.Monitoring2.Enable"

**7.168.2.77 DDS\_SNIPPET\_FEATURE\_SECURITY\_ENABLE**

```
const char* const DDS_SNIPPET_FEATURE_SECURITY_ENABLE [extern]
```

QoS Snippet that enables security using the Builtin Security Plugins.

To enable the use of the Builtin DDS Security Library apply this QoS Snippet to the QoS Profile used to create your **DDSDomainParticipant** (p. 1351). For example:

```
<qos_profile name="MyProfile">
  <base_name>
    <element>BuiltinQosLib::Feature.Security.Enable</element>
  </base_name>
</qos_profile>
```

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.Security.Enable"

### 7.168.2.78 DDS\_SNIPPET\_FEATURE\_TOPIC\_QUERY\_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_TOPIC_QUERY_ENABLE [extern]
```

QoS Snippet that enables Topic Query.

To enable the use of the RTI Connex **DDSTopicQuery** (p. 1627) feature, apply this QoS Snippet to the QoS Profile used to create your **DDSDataWriter** (p. 1321). For example:

```
<qos_profile name="MyProfile">
  <base_name>
    <element>BuiltinQosLib::Feature.TopicQuery.Enable</element>
  </base_name>
</qos_profile>
```

For more information on Topic Query see the "Topic Queries" chapter in the `User's Manual`.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Feature.TopicQuery.Enable"

### 7.168.2.79 DDS\_SNIPPET\_TRANSPORT\_TCP\_LAN\_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_LAN_CLIENT [extern]
```

QoS Snippet that configures a TCP LAN Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the `initial_peers` and the property `dds.transport.TCPv4.tcp1.server_bind_port` are incorrect (just sample strings). Therefore, they must be modified:

- `initial_peers`: should point to the remote client IP and port.
- `server_bind_port`: is the port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1463). These new values will overwrite the current invalid values.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.TCP.LAN.Client"

### 7.168.2.80 DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_SYMMETRIC\_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT [extern]
```

QoS Snippet that configures a symmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties `dds.transport.TCPv4.tcp1.public_address` and `dds.transport.TCPv4.tcp1.server_bind_port` are incorrect (just sample strings). Also the `initial_peers` information is not correct. Therefore, the following must be modified:

- `initial_peers`: should point to the remote client IP and port.
- `public_address`: public IP address where this application can be reached.
- `server_bind_port`: port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1463). These new values will overwrite the current invalid values.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.TCP.WAN.Symmetric.Client"

### 7.168.2.81 DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_ASYMMETRIC\_SERVER

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER [extern]
```

QoS Snippet that an asymmetric WAN TCP Server over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties `dds.transport.TCPv4.tcp1.public_address` and `dds.transport.TCPv4.tcp1.server_bind_port` are incorrect (just sample strings). Therefore, they must be modified to the corresponding `public_address` and `port_↔` number. This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1463). These new values will overwrite the current invalid values.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.TCP.WAN.Asymmetric.Server"

### 7.168.2.82 DDS\_SNIPPET\_TRANSPORT\_TCP\_WAN\_ASYMMETRIC\_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT [extern]
```

QoS Snippet that configures an asymmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The value of `discovery.initial_peers` and `public_ip` have to match the values set on the Server side (**DDS\_SNIPPET\_↔TRANSPORT\_TCP\_WAN\_ASYMMETRIC\_SERVER** (p. 515)). This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1463). This new value will overwrite the current invalid value.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.TCP.WAN.Asymmetric.Client"

### 7.168.2.83 DDS\_SNIPPET\_TRANSPORT\_UDP\_AVOID\_IP\_FRAGMENTATION

```
const char* const DDS_SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION [extern]
```

QoS Snippet that configures RTI Connex and the UDP built-in transports (UDPv4, UDPv6, UDPv4\_WAN) to avoid IP fragmentation.

For WAN communications and, in general, for communications in third party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

This snippet provides a way to avoid IP fragmentation in Connex applications using the built-in UDP transports. Instead, Connex will be responsible for fragmentation, which is done at the RTPS level.

Among other changes, this configuration changes the transport MTU (`message_size_max`) to be 1400 bytes. Notice that this change will affect other transports such as SHMEM since Connex chooses the minimum transport MTU across all enabled transports to determine the maximum size of outgoing RTPS messages.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.UDP.AvoidIPFragmentation"

### 7.168.2.84 DDS\_SNIPPET\_TRANSPORT\_UDP\_WAN

```
const char* const DDS_SNIPPET_TRANSPORT_UDP_WAN [extern]
```

QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4\_WAN).

The snippet disables all the other built-in transports and avoids the use of IP fragmentation.

For WAN communications and, in general, for communications in third-party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Transport.UDP.WAN"

### 7.168.2.85 DDS\_SNIPPET\_COMPATIBILITY\_CONNEXT\_MICRO\_VERSION\_2\_4\_3

```
const char* const DDS_SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3 [extern]
```

QoS Snippet that configures sets LIVENESS QoS to be compatible with RTI Connex Micro 2.4.3.

QoS Snippet that sets the **DDS\_DataReaderQos** (p. 644) and **DDS\_DataWriterQos** (p. 689) **DDS\_LivelinessQos**↔ **PolicyKind** (p. 409) to **DDS\_MANUAL\_BY\_TOPIC\_LIVENESS\_QOS** (p. 410) It also disables the built-in shared memory transport.

Modified QoS Parameters:

- **DDS\_DataReaderQos** (p. 644) => **DDS\_LivelinessQosPolicy** (p. 936)
- **DDS\_DataWriterQos** (p. 689) => **DDS\_LivelinessQosPolicy** (p. 936)
- **DDS\_TransportBuiltinQosPolicy** (p. 1144)

RTI Connex Micro versions 2.4.3 and earlier only supported **DDS\_MANUAL\_BY\_TOPIC\_LIVENESS\_QOS** (p. 410) **DDS\_LivelinessQosPolicyKind** (p. 409). In order to be compatible with RTI Connex Micro 2.4.3, the **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) must have their **DDS\_LivelinessQosPolicyKind** (p. 409) changed to this value because the default kind in RTI Connex is **DDS\_AUTOMATIC\_LIVENESS\_QOS** (p. 410).

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Compatibility.ConnexMicro.Version243"

**7.168.2.86 DDS\_SNIPPET\_COMPATIBILITY\_OTHER\_DDS\_VENDORS\_ENABLE**

```
const char* const DDS_SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE [extern]
```

QoS Snippet that configures RTI Connex to interoperate with other DDS vendors.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Compatibility.OtherDDSVendor.Enable"

**7.168.2.87 DDS\_SNIPPET\_5\_1\_0\_TRANSPORT\_ENABLE**

```
const char* const DDS_SNIPPET_5_1_0_TRANSPORT_ENABLE [extern]
```

QoS Snippet that configures RTI Connex to interoperate with RTI Connex 5.1.0 and below for UDPv6 and SHMEM transports.

In Library: **DDS\_BUILTIN\_QOS\_SNIPPET\_LIB** (p. 501)

String-version: "Compatibility.510Transport.Enable"

**7.169 DomainParticipantConfigParams**

<<*extension*>> (p. 237) **DDS\_DomainParticipantConfigParams\_t** (p. 734)

**Classes**

- struct **DDS\_DomainParticipantConfigParams\_t**

<<*extension*>> (p. 237) *Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration.*

**Macros**

- #define **DDS\_DomainParticipantConfigParams\_t\_INITIALIZER**

<<*extension*>> (p. 237) *Initializer for new DDS\_DomainParticipantConfigParams\_t (p. 734).*

**Variables**

- const int **DDS\_DOMAIN\_ID\_USE\_XML\_CONFIG**

<<*extension*>> (p. 237) *Special value to be used with DDS\_DomainParticipantConfigParams\_t (p. 734) to indicate that a participant is created using the domain ID specified in the participant configuration.*

- const char \* **DDS\_ENTITY\_NAME\_USE\_XML\_CONFIG**

<<*extension*>> (p. 237) *Special value to be used with DDS\_DomainParticipantConfigParams\_t (p. 734) to indicate that a participant created is with an autogenerated entity name.*

- const char \* **DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG**

<<*extension*>> (p. 237) *Special value to be used with DDS\_DomainParticipantConfigParams\_t (p. 734) to indicate that entities are created from the QoS profile specified in the participant configuration.*

### 7.169.1 Detailed Description

<<*extension*>> (p. 237) **DDS\_DomainParticipantConfigParams\_t** (p. 734)

### 7.169.2 Macro Definition Documentation

#### 7.169.2.1 DDS\_DomainParticipantConfigParams\_t\_INITIALIZER

```
#define DDS_DomainParticipantConfigParams_t_INITIALIZER
```

<<*extension*>> (p. 237) Initializer for new **DDS\_DomainParticipantConfigParams\_t** (p. 734).

No memory is allocated. New **DDS\_DomainParticipantConfigParams\_t** (p. 734) instances stored in the stack should be initialized with this value before they are passed to any methods. .

### 7.169.3 Variable Documentation

#### 7.169.3.1 DDS\_DOMAIN\_ID\_USE\_XML\_CONFIG

```
const int DDS_DOMAIN_ID_USE_XML_CONFIG [extern]
```

<<*extension*>> (p. 237) Special value to be used with **DDS\_DomainParticipantConfigParams\_t** (p. 734) to indicate that a participant is created using the domain ID specified in the participant configuration.

This variable contains a constant sentinel value that is compared when creating the entities from configuration.

#### 7.169.3.2 DDS\_ENTITY\_NAME\_USE\_XML\_CONFIG

```
const char* DDS_ENTITY_NAME_USE_XML_CONFIG [extern]
```

<<*extension*>> (p. 237) Special value to be used with **DDS\_DomainParticipantConfigParams\_t** (p. 734) to indicate that a participant created is with an autogenerated entity name.

This variable contains a constant sentinel value that is lexicographically compared when creating the entities from configuration.

### 7.169.3.3 DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG

```
const char* DDS_QOS_ELEMENT_NAME_USE_XML_CONFIG [extern]
```

<<*extension*>> (p. 237) Special value to be used with **DDS\_DomainParticipantConfigParams\_t** (p. 734) to indicate that entities are created from the QoS profile specified in the participant configuration.

This variable contains a constant sentinel value that is lexicographically compared when creating the entities from configuration.

## 7.170 User-managed Threads

User-managed thread infrastructure.

### Classes

- class **DDSThreadFactory**

<<*extension*>> (p. 237) <<*interface*>> (p. 237) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the **DDSThreadFactory\_OnSpawnedFunction** (p. 519) that specifies the operation to run in the new thread.

### Typedefs

- typedef DDS\_ThreadFactory\_OnSpawnedFunction **DDSThreadFactory\_OnSpawnedFunction**

Prototype of the function that must be called on a new thread created by a **DDSThreadFactory** (p. 1615).

### 7.170.1 Detailed Description

User-managed thread infrastructure.

Core feature that allows users to provide the threads to RTI Connext.

"::DDSThreadFactory"

The model follows the abstract factory pattern. A **DDSThreadFactory** (p.1615) instance can be set in the **DDSDomainParticipantFactory** (p.1426) so that **DDSDomainParticipant** (p.1351) will use it for thread creation and deletion.

### 7.170.2 Typedef Documentation

#### 7.170.2.1 DDSThreadFactory\_OnSpawnedFunction

```
typedef DDS_ThreadFactory_OnSpawnedFunction DDSThreadFactory_OnSpawnedFunction
```

Prototype of the function that must be called on a new thread created by a **DDSThreadFactory** (p. 1615).

## Parameters

<code>thread_param</code>	<< <i>in</i> >> (p. 238) Single argument that this operation receives. It is the data this operation needs to perform.
---------------------------	--

## 7.171 Observability Library

RTI Monitoring Library 2.0.

### Functions

- void **RTI\_Monitoring\_initialize** (void)  
*Initializes Monitoring Library 2.0.*

### Variables

- const char \*const **RTI\_MONITORING\_PERIODIC\_TOPIC\_NAME**  
*The name of the Monitoring Topic used for periodic metrics distribution.*
- const char \*const **RTI\_MONITORING\_EVENT\_TOPIC\_NAME**  
*The name of the Monitoring Topic used for event metrics distribution.*
- const char \*const **RTI\_MONITORING\_LOGGING\_TOPIC\_NAME**  
*The name of the Monitoring Topic used for log messages distribution.*

### 7.171.1 Detailed Description

RTI Monitoring Library 2.0.

RTI Monitoring Library 2.0 is one component of the RTI Connex Observability Framework which allows collecting and distributing telemetry data (metrics and logs) associated with the observable resources created by an RTI Connex application.

In this release, the only Observable resources are the following entities: **DDSDataWriter** (p. 1321), **DDSDataReader** (p. 1288), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDomainParticipant** (p. 1351), **DDSTopic** (p. 1617) and Application (a process running RTI Connex).

The library also accepts remote commands to change the set of distributed telemetry data at run-time.

The data distributed by RTI Monitoring Library 2.0 is sent to an RTI Observability Collector Service instance, which forwards the data to other RTI Observability Collector Service instances or stores the data in third-party observability backends such as Prometheus or Grafana Loki.

RTI Monitoring Library 2.0 is a separate library (rtimonitoring2), and applications can use it in three different modes:

- **Dynamically loaded:** This is the default mode, and it requires that the `rtmonitoring2` shared library is in the library search path.
- **Dynamic linking:** The application is linked with the `rtmonitoring2` shared library.
- **Static linking:** The application is linked with the `rtmonitoring2` static library.

The last two modes require calling the API **RTI\_Monitoring\_initialize** (p. 521) in your application before any other RTI Connex API.

Dynamic and static linking are only supported in C and C++ applications.

To enable use of RTI Monitoring Library 2.0 and configure its behavior, use the **DDS\_MonitoringQoSPolicy** (p. 962) QoS policy on the **DDSDomainParticipantFactory** (p. 1426). This QoS policy can be configured programmatically or via XML.

## 7.171.2 Function Documentation

### 7.171.2.1 RTI\_Monitoring\_initialize()

```
void RTI_Monitoring_initialize (  
    void )
```

Initializes Monitoring Library 2.0.

This method must be called before calling any other RTI Connex API if the application links with RTI Monitoring Library 2.0 dynamically or statically.

## 7.171.3 Variable Documentation

### 7.171.3.1 RTI\_MONITORING\_PERIODIC\_TOPIC\_NAME

```
const char* const RTI_MONITORING_PERIODIC_TOPIC_NAME
```

The name of the Monitoring Topic used for periodic metrics distribution.

String version: "DCPSPeriodicStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

### 7.171.3.2 RTI\_MONITORING\_EVENT\_TOPIC\_NAME

```
const char* const RTI_MONITORING_EVENT_TOPIC_NAME
```

The name of the Monitoring Topic used for event metrics distribution.

String version: "DCPSEventStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

### 7.171.3.3 RTI\_MONITORING\_LOGGING\_TOPIC\_NAME

```
const char* const RTI_MONITORING_LOGGING_TOPIC_NAME
```

The name of the Monitoring Topic used for log messages distribution.

String version: "DCPSLoggingStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

## 7.172 Version

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

### Classes

- struct **NDDS\_Config\_LibraryVersion\_t**  
*The version of a single library shipped as part of an RTI Connext distribution.*
- class **NDDSConfigVersion**  
<<*interface*>> (p. 237) *The version of an RTI Connext distribution.*

### 7.172.1 Detailed Description

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

There are three ways to obtain version information: looking at the revision files, using Visual Studio or the command line, or programmatically at run time. This HTML documentation includes a reference for consulting the APIs that allow you to get version information programmatically. For more information see the RTI Connext DDS Core Libraries User's Manual.

The version information includes four fields:

- Major product version.
- Minor product version.
- Release letter for product version.
- Revision number of product.

## 7.173 Logging

Configure how much debugging information is reported during runtime and where it is logged.

### Modules

- **Activity Context**

*Add contextual information to log messages.*

### Classes

- struct **NDDS\_Config\_LogMessage**

*Log message.*

- class **NDDSConfigLoggerDevice**

*<<interface>> (p. 237) Logging device interface. Use for user-defined logging devices.*

- class **NDDSConfigLogger**

*<<interface>> (p. 237) The singleton type used to configure RTI Connex logging.*

### Enumerations

- enum **NDDS\_Config\_LogVerbosity** {  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_SILENT** ,  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_ERROR** ,  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_WARNING** ,  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_STATUS\_LOCAL** ,  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_STATUS\_REMOTE** ,  
**NDDS\_CONFIG\_LOG\_VERBOSITY\_STATUS\_ALL** }

*The verbositys at which RTI Connex diagnostic information is logged.*

- enum **NDDS\_Config\_LogLevel** {  
**NDDS\_CONFIG\_LOG\_LEVEL\_FATAL\_ERROR** ,  
**NDDS\_CONFIG\_LOG\_LEVEL\_ERROR** ,  
**NDDS\_CONFIG\_LOG\_LEVEL\_WARNING** ,  
**NDDS\_CONFIG\_LOG\_LEVEL\_STATUS\_LOCAL** ,  
**NDDS\_CONFIG\_LOG\_LEVEL\_STATUS\_REMOTE** ,  
**NDDS\_CONFIG\_LOG\_LEVEL\_DEBUG** }

*Level category assigned to RTI Connex log messages returned to an output device.*

- enum **NDDS\_Config\_SyslogLevel** {  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_EMERGENCY** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_ALERT** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_CRITICAL** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_ERROR** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_WARNING** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_NOTICE** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_INFORMATIONAL** ,  
**NDDS\_CONFIG\_SYSLOG\_LEVEL\_DEBUG** }

*Syslog level category assigned to RTI Connex log messages. See *Syslog Level and Verbosity Mapping*, in the *Core Libraries User's Manual*, for more information.*

- enum `NDDS_Config_LogCategory` {  
`NDDS_CONFIG_LOG_CATEGORY_PLATFORM` ,  
`NDDS_CONFIG_LOG_CATEGORY_COMMUNICATION` ,  
`NDDS_CONFIG_LOG_CATEGORY_DATABASE` ,  
`NDDS_CONFIG_LOG_CATEGORY_ENTITIES` ,  
`NDDS_CONFIG_LOG_CATEGORY_API` ,  
`NDDS_CONFIG_LOG_CATEGORY_DISCOVERY` ,  
`NDDS_CONFIG_LOG_CATEGORY_SECURITY` ,  
`NDDS_CONFIG_LOG_CATEGORY_USER` ,  
`NDDS_CONFIG_LOG_CATEGORY_ALL` }

*Categories of logged messages.*

- enum `NDDS_Config_LogPrintFormat` { }

*The format used to output RTI Connex diagnostic information.*

- enum `NDDS_Config_LogFacility` {  
`NDDS_CONFIG_LOG_FACILITY_USER` ,  
`NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT` ,  
`NDDS_CONFIG_LOG_FACILITY_SERVICE` ,  
`NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE` }

*A number that identifies the source of a log message.*

- enum `NDDS_Config_SyslogVerbosity` {  
`NDDS_CONFIG_SYSLOG_VERBOSITY_SILENT` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_EMERGENCY` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_ALERT` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_CRITICAL` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_ERROR` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_WARNING` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_NOTICE` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_INFORMATIONAL` ,  
`NDDS_CONFIG_SYSLOG_VERBOSITY_DEBUG` }

*The Syslog verbosity levels at which RTI Connex diagnostic information is logged. These Syslog verbosity levels are mapped to `NDDS_Config_LogVerbosity` (p. 524). See *Syslog Level and Verbosity Mapping*, in the *Core Libraries User's Manual*, for more information.*

### 7.173.1 Detailed Description

Configure how much debugging information is reported during runtime and where it is logged.

### 7.173.2 Enumeration Type Documentation

#### 7.173.2.1 `NDDS_Config_LogVerbosity`

```
enum NDDS_Config_LogVerbosity
```

The verbosity levels at which RTI Connex diagnostic information is logged.

## Enumerator

NDDS_CONFIG_LOG_VERBOSITY_SILENT	No further output will be logged.
NDDS_CONFIG_LOG_VERBOSITY_ERROR	Only error and fatal error messages will be logged. An error indicates something wrong in the functioning of RTI Connex. The most common cause of errors is incorrect configuration.
NDDS_CONFIG_LOG_VERBOSITY_WARNING	Both error and warning messages will be logged. A warning indicates that RTI Connex is taking an action that may or may not be what you intended. Some configuration information is also logged at this verbosity to aid in debugging.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_LOCAL	Errors, warnings, and verbose information about the lifecycles of local RTI Connex objects will be logged.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_↔ REMOTE	Errors, warnings, and verbose information about the lifecycles of remote RTI Connex objects will be logged.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_ALL	Errors, warnings, verbose information about the lifecycles of local and remote RTI Connex objects, and periodic information about RTI Connex threads will be logged.

## 7.173.2.2 NDDS\_Config\_LogLevel

```
enum NDDS_Config_LogLevel
```

Level category assigned to RTI Connex log messages returned to an output device.

## Enumerator

NDDS_CONFIG_LOG_LEVEL_FATAL_ERROR	The message describes a fatal error. A fatal error indicates an unrecoverable situation in the functioning of RTI Connex. Error messages with this log level usually indicate a violation of an internal invariant or a segfault, and may include the function call stack where the fatal error happened.
NDDS_CONFIG_LOG_LEVEL_ERROR	The message describes an error. An error indicates a non-fatal problem in the functioning of RTI Connex. Errors are usually recoverable and will not stop application execution, although they may prevent some features from working properly. The most common cause of non-fatal errors is incorrect configuration and incorrect arguments.
NDDS_CONFIG_LOG_LEVEL_WARNING	The message describes a warning. A warning indicates that RTI Connex is taking an action that may or may not be what you intended. Some configuration information is also logged at this verbosity to aid in debugging.
NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL	The message contains information about the lifecycles of local RTI Connex objects will be logged.
NDDS_CONFIG_LOG_LEVEL_STATUS_REMOTE	The message contains information about the lifecycles of remote RTI Connex objects will be logged.
NDDS_CONFIG_LOG_LEVEL_DEBUG	The message contains debug information that might be relevant to your application.

### 7.173.2.3 NDDS\_Config\_SyslogLevel

enum **NDDS\_Config\_SyslogLevel**

Syslog level category assigned to RTI Connex log messages. See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.

#### Enumerator

NDDS_CONFIG_SYSLOG_LEVEL_EMERGENCY	System is unusable. Maps to <b>NDDS_CONFIG_LOG_LEVEL_FATAL_ERROR</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_ALERT	Should be corrected immediately. Maps to <b>NDDS_CONFIG_LOG_LEVEL_ERROR</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_CRITICAL	Critical conditions. Maps to <b>NDDS_CONFIG_LOG_LEVEL_ERROR</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_ERROR	Error conditions. Maps to <b>NDDS_CONFIG_LOG_LEVEL_ERROR</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_WARNING	May indicate that an error will occur if action is not taken. Maps to <b>NDDS_CONFIG_LOG_LEVEL_WARNING</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_NOTICE	Events that are unusual, but not error conditions. Maps to <b>NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_INFORMATIONAL	Normal operational messages that require no action. Maps to <b>NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL</b> (p. 525).
NDDS_CONFIG_SYSLOG_LEVEL_DEBUG	Information useful to developers for debugging the application. Maps to <b>NDDS_CONFIG_LOG_LEVEL_DEBUG</b> (p. 525).

### 7.173.2.4 NDDS\_Config\_LogCategory

enum **NDDS\_Config\_LogCategory**

Categories of logged messages.

The **NDDSConfigLogger::get\_verbosity\_by\_category** (p. 1824) and **NDDSConfigLogger::set\_verbosity\_by\_category** (p. 1825) can be used to specify different verbosity levels for different categories of messages.

## Enumerator

NDDS_CONFIG_LOG_CATEGORY_PLATFORM	Log messages pertaining to the underlying platform (hardware and OS) on which RTI Connex is running are in this category.
NDDS_CONFIG_LOG_CATEGORY_↔ COMMUNICATION	Log messages pertaining to data serialization and deserialization and network traffic are in this category.
NDDS_CONFIG_LOG_CATEGORY_DATABASE	Log messages pertaining to the internal database in which RTI Connex objects are stored are in this category.
NDDS_CONFIG_LOG_CATEGORY_ENTITIES	Log messages pertaining to local and remote entities, and to a subset of the discovery process, are in this category. (To see all discovery-related messages, use the DISCOVERY category.)
NDDS_CONFIG_LOG_CATEGORY_API	Log messages pertaining to the API layer of RTI Connex (such as method argument validation) are in this category.
NDDS_CONFIG_LOG_CATEGORY_DISCOVERY	Log messages pertaining to discovery are in this category.
NDDS_CONFIG_LOG_CATEGORY_SECURITY	Log messages pertaining to security are in this category. These messages include any messages logged by RTI Connex components even if they are not related to the Security Plugins.
NDDS_CONFIG_LOG_CATEGORY_USER	Log messages that are generated by the user using the following log APIs: <b>NDDSConfigLogger::emergency</b> (p. 1827), <b>NDDSConfigLogger::alert</b> (p. 1828), <b>NDDSConfigLogger::critical</b> (p. 1828), <b>NDDSConfigLogger::error</b> (p. 1828), <b>NDDSConfigLogger::warning</b> (p. 1828), <b>NDDSConfigLogger::notice</b> (p. 1828), <b>NDDSConfigLogger::informational</b> (p. 1829), <b>NDDSConfigLogger::debug</b> (p. 1829).
NDDS_CONFIG_LOG_CATEGORY_ALL	Log messages pertaining to all categories in RTI Connex.

## 7.173.2.5 NDDS\_Config\_LogPrintFormat

```
enum NDDS_Config_LogPrintFormat
```

The format used to output RTI Connex diagnostic information.

## Enumerator

NDDS_CONFIG_LOG_PRINT_FORMAT_DEFAULT	(default) Print message, method name, log level, <b>Activity Context</b> (p. 530) (what was happening when the event occurred), and logging category.
NDDS_CONFIG_LOG_PRINT_FORMAT_↔ TIMESTAMPED	Print message, method name, log level, <b>Activity Context</b> (p. 530), logging category, and timestamp.

## Enumerator

NDDS_CONFIG_LOG_PRINT_FORMAT_VERBOSE	Print message with all available context information (includes thread identifier, message location).
NDDS_CONFIG_LOG_PRINT_FORMAT_VERBOSE↔ _TIMESTAMPED	Print message with all available context information, and timestamp.
NDDS_CONFIG_LOG_PRINT_FORMAT_DEBUG	Print a set of fields (including message number and backtrace information) that may be useful for internal debugging.
NDDS_CONFIG_LOG_PRINT_FORMAT_MINIMAL	Print only message number and message location.
NDDS_CONFIG_LOG_PRINT_FORMAT_MAXIMAL	Print all available fields.

## 7.173.2.6 NDDS\_Config\_LogFacility

enum **NDDS\_Config\_LogFacility**

A number that identifies the source of a log message.

In the Syslog Protocol, the Facility is a numerical code that represents the machine process that created a Syslog event. RTI Connex uses the facility to represent the source of a given log message.

## Enumerator

NDDS_CONFIG_LOG_FACILITY_USER	A log message produced by the APIs that log user messages in <b>NDDSConfigLogger</b> (p. 1822) (e.g., <b>NDDSConfigLogger::emergency</b> (p. 1827)). Numerical code: 1
NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT	A security-related message logged by the RTI Security Plugins Logging Plugin. Numerical code: 10
NDDS_CONFIG_LOG_FACILITY_SERVICE	A log message produced by an Infrastructure Service, such as Routing Service. Infrastructure Services operate using the Core Libraries. The messages that the Core Libraries create are categorized under the MIDDLEWARE facility. Log messages that are directly generated by the Infrastructure Service itself are marked with the SERVICE facility. Numerical code: 22
NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE	A log message produced by RTI Connex Core Libraries. Numerical code: 23

## 7.173.2.7 NDDS\_Config\_SyslogVerbosity

enum **NDDS\_Config\_SyslogVerbosity**

The Syslog verbosity at which RTI Connex diagnostic information is logged. These Syslog verbosity are mapped to **NDDS\_Config\_LogVerbosity** (p. 524). See *Syslog Level and Verbosity Mapping*, in the Core Libraries User's Manual, for more information.

#### Enumerator

NDDS_CONFIG_SYSLOG_VERBOSITY_SILENT	No messages will be logged. (lowest verbosity) Equivalent to <b>NDDS_CONFIG_LOG_VERBOSITY_SILENT</b> (p. 525).
NDDS_CONFIG_SYSLOG_VERBOSITY_↔ EMERGENCY	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_ERROR</b> (p. 525) when interpreted by RTI Connex. (That's why this level actually logs more than just emergency messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_ALERT	Emergency, critical, and alert messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_ERROR</b> (p. 525) when interpreted by RTI Connex. (That's why this level actually logs more than just emergency, critical and alert messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_CRITICAL	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_ERROR</b> (p. 525) when interpreted by RTI Connex. (That's why this level actually logs more than just emergency and critical messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_ERROR	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_ERROR</b> (p. 525) when interpreted by RTI Connex.
NDDS_CONFIG_SYSLOG_VERBOSITY_WARNING	Emergency, critical, alert, error, and warning messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_WARNING</b> (p. 525) when interpreted by RTI Connex.
NDDS_CONFIG_SYSLOG_VERBOSITY_NOTICE	Emergency, critical, alert, error, warning, notice and informational messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_↔ VERBOSITY_STATUS_REMOTE</b> (p. 525) when interpreted by RTI Connex. (That's why this level actually logs more than just emergency, critical, alert, error, warning and notice messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_↔ INFORMATIONAL	Emergency, critical, alert, error, warning, notice, and informational messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_↔ VERBOSITY_STATUS_REMOTE</b> (p. 525) when interpreted by RTI Connex.
NDDS_CONFIG_SYSLOG_VERBOSITY_DEBUG	All messages will be logged. This Syslog verbosity level is translated to <b>NDDS_CONFIG_LOG_VERBOSITY_STATUS_ALL</b> (p. 525) when interpreted by RTI Connex.

## 7.174 Activity Context

Add contextual information to log messages.

### Classes

- class **NDDSSConfigActivityContext**

*Activity Context APIs.*

### Macros

- #define **NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_DEFAULT** RTI\_OSAPI\_ACTIVITY\_↔  
CONTEXT\_ATTRIBUTE\_MASK\_DEFAULT  
*Provide the default attributes of the resource of the Activity Context.*
- #define **NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_NONE** RTI\_OSAPI\_ACTIVITY\_↔  
CONTEXT\_ATTRIBUTE\_MASK\_NONE  
*Not provide any attribute of the resource of the Activity Context.*
- #define **NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_ALL** RTI\_OSAPI\_ACTIVITY\_↔  
CONTEXT\_ATTRIBUTE\_MASK\_ALL  
*Provide all the possibles attributes of the resource of the Activity Context.*

### Typedefs

- typedef **DDS\_Long NDDSS\_Config\_ActivityContextAttributeKindMask**  
*The attributes **NDDSS\_Config\_ActivityContextAttributeKind** (p. 532) used in the string representation of the Activity Context can be configured through this mask.*

### Enumerations

- enum **NDDSS\_Config\_ActivityContextAttributeKind** {  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_GUID\_PREFIX** ,  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_TOPIC** ,  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_TYPE** ,  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_ENTITY\_KIND** ,  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_DOMAIN\_ID** ,  
**NDDSS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_ENTITY\_NAME** }  
*The resources of the **Activity Context** (p. 530) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.*

### Functions

- static void **NDDSSConfigActivityContext::set\_attribute\_mask** ( **NDDSS\_Config\_ActivityContextAttribute\_↔  
KindMask** attribute\_format)  
*Set the **NDDSS\_Config\_ActivityContextAttributeKindMask** (p. 532) of the Activity Context.*

### 7.174.1 Detailed Description

Add contextual information to log messages.

The Activity Context is a group of resources and activities associated with an action such as the creation of an entity.

- A resource is a abstraction of an entity. It can contain attributes such as Topic or domain ID.
- An activity is a general task that the resource is doing, such as "Getting QoS".

Logging context is one of the formats RTI Connex logging infrastructure supports. It is used by default in **NDDS\_CONFIG\_LOG\_PRINT\_FORMAT\_DEFAULT** (p.527). It provides information about resources and activities. The activity context is used in two places:

- Logging: activity context is one of the **NDDS\_Config\_LogPrintFormat** (p.527) DDS logging infrastructure supports. If that format is set every time RTI Connex logs a message, it will contain the contextual information.
- Heap monitoring: every time memory is allocated and heap monitoring is enabled, the string representation of the activity context will be associated with the allocation. This information will be available when taking the snapshot.

For example, in the creation of a DataWriter, the activity context will provide information about:

- Resource: the Publisher creating the DataWriter. Attributes of the publisher will be GUID, kind, name and domain ID.
- Activity: entity creation. It will have two parameters, the entity kind and the Topic. In the example below, these are "Writer" and "TestTopic".

The string representation of the above activity context would be:

```
[0X101A76B, 0X79E5D71, 0X50EE914:0X1C1:0X80000088{Entity=Pu,Name=TestPublisher,Domain=1}|CREATE Writer WITH TOPIC TestTopic]
```

Another example could be when a DataWriter writes a sample. The activity context will provide information about:

- Resource: the DataWriter writing the sample. The attributes of the DataWriter will be GUID, name, kind, Topic, data type, and the domain ID.
- Activity will be "write a sample".

The string representation of the activity context will be:

```
[0X101A76B, 0X79E5D71, 0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]
```

### 7.174.2 Macro Definition Documentation

### 7.174.2.1 NDDS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_DEFAULT

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE_↔
_MASK_DEFAULT
```

Provide the default attributes of the resource of the Activity Context.

### 7.174.2.2 NDDS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_NONE

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE_↔
_MASK_NONE
```

Not provide any attribute of the resource of the Activity Context.

### 7.174.2.3 NDDS\_CONFIG\_ACTIVITY\_CONTEXT\_ATTRIBUTE\_MASK\_ALL

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE_↔
_MASK_ALL
```

Provide all the possibles attributes of the resource of the Activity Context.

## 7.174.3 Typedef Documentation

### 7.174.3.1 NDDS\_Config\_ActivityContextAttributeKindMask

```
typedef DDS_Long NDDS_Config_ActivityContextAttributeKindMask
```

The attributes **NDDS\_Config\_ActivityContextAttributeKind** (p. 532) used in the string representation of the Activity Context can be configured through this mask.

This mask indicates what attributes of the resource are used when RTI Connexxt logs a message or when the Heap Monitoring utility saves statistics for a memory allocation.

## 7.174.4 Enumeration Type Documentation

### 7.174.4.1 NDDS\_Config\_ActivityContextAttributeKind

```
enum NDDS_Config_ActivityContextAttributeKind
```

The resources of the **Activity Context** (p. 530) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.

## Enumerator

<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_GUID_PREFIX</p>	<p>Provide the entity GUID prefix to the resource of the Activity Context. For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo}]</li> <li>The GUID prefix is 0X101A76B,0X79E5D71,0X50EE914. If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_GUID_PREFIX</b> (p. 533) is not set, the string representation will not show the GUID prefix: [:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo}]</li> </ul>
<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_TOPIC</p>	<p>Provide the Topic to the resource of the Activity Context. The topic attribute is specified by "Topic". For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo}]</li> <li>The Topic is "test." If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_TOPIC</b> (p. 533) is not set, the string representation will not show the Topic: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Type=Foo}]</li> </ul>
<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_TYPE</p>	<p>Provide the data type to the resource of the Activity Context. The type attribute is specified by "Type". For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo}]</li> <li>The data type is "Foo." If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_TYPE</b> (p. 533) is not set, the string representation will not show the data type: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test}]</li> </ul>

## Enumerator

<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_ENTITY_KIND</p>	<p>Provide the entity kind to the resource of the Activity Context. The kind attribute is specified by "Entity". For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite</li> <li>The entity kind is "Writer." If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_ENTITY_KIND</b> (p. 534) is not set, the string representation will not show the entity kind: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite</li> </ul>
<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_DOMAIN_ID</p>	<p>Provide the domain ID to the resource of the Activity Context. The domain attribute is specified by "Domain". For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite</li> <li>The domain ID is "1." If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_DOMAIN_ID</b> (p. 534) is not set, the string representation will not show the domain ID: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite</li> </ul>
<p>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_ENTITY_NAME</p>	<p>Provide the entity name to the resource of the Activity Context. The name attribute is specified by "Name". For example:</p> <ul style="list-style-type: none"> <li>For the following string representation of the context: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite</li> <li>The entity name is "testDataWriterName." If the bit <b>NDDS_CONFIG_ACTIVITY_CONTEXT_↔ ATTRIBUTE_ENTITY_NAME</b> (p. 534) is not set, the string representation will not show the entity name: [0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Entity=DW, Topic=te</li> </ul>

## 7.174.5 Function Documentation

### 7.174.5.1 set\_attribute\_mask()

```
static void NDDSSConfigActivityContext::set_attribute_mask (
    NDDS_Config_ActivityContextAttributeKindMask attribute_format ) [static]
```

Set the `NDDS_Config_ActivityContextAttributeKindMask` (p. 532) of the Activity Context.

## 7.175 Compliance Configuration

APIs to configure compliance with certain standard specifications.

### Classes

- class `NDDSSConfigCompliance`  
*APIs to configure the XTypes compliance mask.*

### Macros

`NDDS_CONFIG_XTYPES_DHEADER_IN_NON_PRIMITIVE_COLLECTIONS_BIT` ,  
`NDDS_CONFIG_XTYPES_ENUM_AS_PRIMITIVE_IN_COLLECTIONS_BIT` ,  
`NDDS_CONFIG_XTYPES_PARAMETER_LENGTH_WITH_PADDING_BIT` ,  
`NDDS_CONFIG_XTYPES_ENCAPSULATION_OPTIONS_WITH_PADDING_BIT` }  
*The bits for the `NDDS_Config_XTypesComplianceMask` (p. 536) with different aspects of the Extended CDR encoding (XCDR and XCDR2).*

### 7.175.1 Detailed Description

APIs to configure compliance with certain standard specifications.

## 7.175.2 Macro Definition Documentation

### 7.175.2.1 NDDS\_CONFIG\_XTYPES\_COMPLIANCE\_MASK\_VENDOR

```
#define NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_VENDOR
```

XTypes vendor compliance mask. This value is fully aligned with the XTypes specification.

The mask sets the following bits:

- **NDDS\_CONFIG\_XTYPES\_DHEADER\_IN\_NON\_PRIMITIVE\_COLLECTIONS\_BIT** (p. 538)
- **NDDS\_CONFIG\_XTYPES\_ENCAPSULATION\_OPTIONS\_WITH\_PADDING\_BIT** (p. 539)

The HEX value for the mask is: 0x00000009.

### 7.175.2.2 NDDS\_CONFIG\_XTYPES\_COMPLIANCE\_MASK\_DEFAULT

```
#define NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT
```

Default XTypes compliance mask.

The mask sets the following bits:

- **NDDS\_CONFIG\_XTYPES\_PARAMETER\_LENGTH\_WITH\_PADDING\_BIT** (p. 538)
- **NDDS\_CONFIG\_XTYPES\_ENCAPSULATION\_OPTIONS\_WITH\_PADDING\_BIT** (p. 539)

The HEX value for the mask is: 0x0000000C.

## 7.175.3 Typedef Documentation

### 7.175.3.1 NDDS\_Config\_XTypesComplianceMask

```
typedef DDS_UnsignedLong NDDS_Config_XTypesComplianceMask
```

XTypes compliance mask.

The **NDDS\_Config\_XTypesComplianceMask** (p. 536) configures different aspects of the Extended CDR encoding (XCDR and XCDR2).

Applications that don't use the exact same XTypes compliance mask may not be interoperable.

By default, data serialization is not fully compliant with Extended CDR encoding due to bugs when implementing the standard. These bugs do not result in breaking functional correctness. They only affect interoperability with other vendors.

You can change the default compliance mask for an application using any of the following mechanisms:

- Setting the environment variable **NDDS\_XTYPES\_COMPLIANCE\_MASK**
- Calling the function **NDDSConfigCompliance::set\_xtypes\_mask** (p. 1821)

The environment variable will be automatically loaded when a **DDSDomainParticipantFactory** (p. 1426) is created. If you need to load it before that, use the function **NDDSConfigCompliance::load\_compliance\_masks** (p. 1821).

The format of the environment variable is an unsigned integer, which can be in HEX notation. For example: 0x00000001.

The default value is **NDDS\_CONFIG\_XTYPES\_COMPLIANCE\_MASK\_DEFAULT** (p. 536).

To be fully compliant with the XTypes specification, set the mask to **NDDS\_CONFIG\_XTYPES\_COMPLIANCE\_MASK\_VENDOR** (p. 536).

[default] **NDDS\_CONFIG\_XTYPES\_COMPLIANCE\_MASK\_DEFAULT** (p. 536)

## 7.175.4 Enumeration Type Documentation

### 7.175.4.1 NDDS\_Config\_XTypesComplianceMaskBits

```
enum NDDS_Config_XTypesComplianceMaskBits
```

The bits for the **NDDS\_Config\_XTypesComplianceMask** (p. 536) with different aspects of the Extended CDR encoding (XCDR and XCDR2).

See also

**NDDS\_Config\_XTypesComplianceMask<P>** (p. 536)

## Enumerator

<p>NDDS_CONFIG_XTYPES_DHEADER_IN_NON_↔ PRIMITIVE_COLLECTIONS_BIT</p>	<p>When this bit is set, the serialization of sequences and arrays with non-primitive members includes a DHEADER. Value: 0x00000001 To be compatible with the XTypes specification, this bit must be set. This bit only applies to XCDR2 encoding. Limitation: For FlatData, the compliant encoding is applied to arrays and sequences of mutable types, but not final types . The serialization of final types containing arrays of non-primitive types in the FlatData language binding is not compliant with Extended CDR encoding version 2 in any case.</p>
<p>NDDS_CONFIG_XTYPES_ENUM_AS_PRIMITIVE_↔ IN_COLLECTIONS_BIT</p>	<p>When this bit is set, enums are considered primitive types in collection types. Value: 0x00000002 A DHEADER will not be added to collections of enums if <b>NDDS_CONFIG_XTYPES_DHEADER_IN_NON_↔ PRIMITIVE_COLLECTIONS_BIT</b> (p. 538) is set. To be compatible with the XTypes specification, this bit must be unset. This bit only applies to XCDR2 encoding.</p>
<p>NDDS_CONFIG_XTYPES_PARAMETER_LENGTH_↔ _WITH_PADDING_BIT</p>	<p>When this bit is set, the length of a member header in a mutable type or an optional member will include padding bytes to a 4-byte boundary. Value: 0x00000004 To be compatible with the XTypes specification, this bit must be unset. This bit only applies to XCDR encoding.</p>

## Enumerator

<p>NDDS_CONFIG_XTYPES_ENCAPSULATION_OPTIONS_WITH_PADDING_BIT ↔</p>	<p>When this bit is set, RTI Connex will set the padding bits in the options field of the encapsulation header of a serialized payload. Value: 0x00000008</p> <p>When this bit is set RTI Connex will set the least significant two bits in the second byte of the options field to a value that encodes the number of padding bytes needed after the end of the serialized payload in order to reach the next 4-byte aligned offset. Specifically, the least significant two bits shall be set to binary 00 if no padding bits would be needed and binary 01, 10, or 11 if, respectively, there would be one, two, or three bytes of padding needed. These bits in the options field will be interpreted by a DataReader to determine where the serialized data exactly ended.</p> <p>To be compatible with the XTypes specification, this bit must be set.</p> <p>To be compatible with the following Micro versions this bit must be unset because those versions of Micro did not support padding bits and will discard any data with encapsulations options not set to 0.</p> <ul style="list-style-type: none"> <li>• RTI Connex Micro 3.x.y.z</li> <li>• RTI Connex Micro 2.4.15.1</li> <li>• RTI Connex Micro 2.4.14.0 and 2.4.14.1</li> <li>• RTI Connex Micro 2.4.13.1 through 2.4.13.5</li> <li>• RTI Connex Micro 2.4.12.z</li> </ul> <p>This bit applies to both, XCDR and XCDR2 encodings.</p>

## 7.176 Heap Monitoring

Monitor memory allocations done by the middleware on the native heap.

### Classes

- class **NDDSUtilityHeapMonitoring**  
*Heap Monitoring APIs.*

### Enumerations

- enum **NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_FORMAT** {  
**NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_BIT\_TOPIC** ,  
**NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_BIT\_FUNCTION** ,  
**NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_BIT\_ACTIVITY** ,  
**NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_DEFAULT** ,  
**NDDS\_UTILITY\_HEAP\_MONITORING\_SNAPSHOT\_CONTENT\_MINIMAL** }  
*Bitmap used to decide which information of the snapshot will be displayed.*

### 7.176.1 Detailed Description

Monitor memory allocations done by the middleware on the native heap.

RTI Connexx allows you to monitor the memory allocations done by the middleware on the native heap. This feature can be used to analyze and debug unexpected memory growth.

After `NDDUtilityHeapMonitoring::enable` (p. 1843) is called, you may invoke `NDDUtilityHeapMonitoring::take_heap_snapshot` (p. 1844) to save the current heap memory usage to a file. By comparing two snapshots, you can tell if new memory has been allocated and, in many cases, where.

### 7.176.2 Enumeration Type Documentation

#### 7.176.2.1 NDDS\_Utility\_HeapMonitoringSnapshotContentFormat

```
enum NDDS_Utility_HeapMonitoringSnapshotContentFormat
```

Bitmap used to decide which information of the snapshot will be displayed.

Enumerator

<code>NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_TOPIC</code>	Add the topic to the snapshot of heap monitoring.
<code>NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_FUNCTION</code>	Add the function name to the snapshot of heap monitoring.
<code>NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_ACTIVITY</code>	Add the activity context to the snapshot of heap monitoring. The user can select the information that will be part of the activity context by using the API <code>NDDConfigActivityContext::set_attribute_mask</code> (p. 534).
<code>NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_DEFAULT</code>	Add all the optional attributes to the snapshot of heap monitoring.
<code>NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_MINIMAL</code>	Not add any optional attribute to the snapshot of heap monitoring.

## 7.177 Network Capture

### 7.177.1 Detailed Description

Save network traffic into a capture file for further analysis.

RTI Connex allows you to capture the network traffic that one or more DomainParticipants send or receive. This feature can be used to analyze and debug communication problems between your DDS applications. When network capture is enabled, each DomainParticipant will generate a pcap-based file that can then be opened by a packet analyzer like Wireshark, provided the right dissectors are installed.

To some extent, network capture can be used as an alternative to existing pcap-based network capture software (such as Wireshark). This will be the case when you are only interested in analyzing the traffic a DomainParticipant sends/receives. In this scenario, network capture will actually have some advantages over using more general pcap-based network capture applications: RTI's network capture includes additional information such as security-related data; it also removes information that is not needed, such as user data, when you want to reduce the capture size. That said, RTI's network capture is not a replacement for other pcap-based network capture applications: it only captures the traffic exchanged by the DomainParticipants, but it does not capture any other traffic exchanged through the system network interfaces.

To capture network traffic `NDDUtilityNetworkCapture::enable` (p.1847) must be invoked before creating any DomainParticipant. Similarly, `NDDUtilityNetworkCapture::disable` (p.1848) must be called after deleting all participants. In between these calls, you may start, stop, pause or resume capturing traffic for one or all participants.

### 7.177.2 Capturing

#### Shared Memory Traffic

Every RTPS frame in network capture has a source and a destination associated with it. In the case of shared memory traffic, a process identifier and a port determine the source and destination endpoints.

Access to the process identifier (PID) of the source for inbound traffic requires changes in the shared memory segments. These changes would break shared memory compatibility with previous versions of RTI Connex. For this reason, by default, network capture will not populate the value of the source PID for inbound shared memory traffic.

If interoperability with previous versions of RTI Connex is not necessary, you can generate capture files containing the source PID for inbound traffic. To do so, configure the value of the `'dds.transport.minimum_compatibility_version'` property to 6.1.0. (See `DDS_PropertyQosPolicy` (p. 1007)).

```
<domain_participant_qos>
  <property>
    <value>
      <element>
        <name>dds.transport.minimum_compatibility_version</name>
        <value>6.1.0</value>
        <propagate>false</propagate>
      </element>
    </value>
  </property>
</domain_participant_qos>
```

This property is never propagated, so it must be consistently configured throughout the whole system.

**Note:** Changing the value of this property affects the type of shared memory segments that RTI Connex uses. For that reason, you may see the following warning, resulting from leftover shared memory segments:

```
[0xC733A001,0xB248F671,0xAEC4A0C1:0x000001C1{Domain=200}|CREATE DP|ENABLE]
  NDDS_Transport_Shmem_is_segment_compatible:incompatible shared memory protocol detected.
```

Current version 4.0 not compatible with 2.0.

The leftover shared memory segments can be removed using the `ipcrm` command. See <https://community.rti.com/kb/what-are-possible-solutions-common-shared-memory-issues> for more information.

## 7.177.3 Macro Definition Documentation

### 7.177.3.1 NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_MASK\_DEFAULT

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_DEFAULT
```

Default mask for **NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_KIND** (p. 545): do not remove any content.

It is equivalent to **NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_MASK\_NONE** (p. 543).

**[default]** Do not remove any content.

### 7.177.3.2 NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_MASK\_NONE

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_NONE
```

The RTPS frames in the capture file will be saved as they are.

### 7.177.3.3 NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_MASK\_ALL

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_ALL
```

The RTPS frames in the capture file will not include user data (either plain or encrypted).

Its value is the result of setting the bits for removing user data and removing encrypted data: (**NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_USER\_SERIALIZED\_DATA** (p. 545)) | **NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_ENCRYPTED\_DATA** (p. 545))

### 7.177.3.4 NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_DEFAULT

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_DEFAULT
```

Default mask for **NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_DEFAULT** (p. 544).

It is equivalent to **NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_ALL** (p. 544).

**[default]** Capture all traffic: inbound and outbound.

### 7.177.3.5 NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_NONE

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_NONE
```

Do not capture any traffic.

### 7.177.3.6 NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_ALL

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_ALL
```

Capture all traffic (both inbound and outbound).

The value is equal to setting both the input and output bits of the mask: (**NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_IN** (p. 546) | **NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_OUT** (p. 546)).

## 7.177.4 Typedef Documentation

### 7.177.4.1 NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_KIND\_MASK

```
typedef DDS_Long NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_KIND_MASK
```

Mask that indicates a combination of content types.

The masks are based on a combination (or only one) of the **NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_KIND** (p. 545) bitmaps.

See also

**NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_KIND** (p. 545)

### 7.177.4.2 NDDS\_Utility\_NetworkCaptureTrafficKindMask

```
typedef DDS_Long NDDS_Utility_NetworkCaptureTrafficKindMask
```

Mask that indicates the traffic direction to capture.

The masks are based on a combination (or only one) of the **NDDS\_Utility\_NetworkCaptureTrafficKind** (p.545) bitmaps.

See also

**NDDS\_Utility\_NetworkCaptureTrafficKind** (p. 545)

### 7.177.4.3 NDDS\_Utility\_NetworkCaptureParams\_t

```
typedef struct NDDS_Utility_NetworkCaptureParams_t NDDS_Utility_NetworkCaptureParams_t
```

Input parameters for starting network capture.

## 7.177.5 Enumeration Type Documentation

### 7.177.5.1 NDDS\_Utility\_NetworkCaptureContentKind

```
enum NDDS_Utility_NetworkCaptureContentKind
```

Bitmap used to specify a content type, i.e., a part of the RTPS frame.

Several values can be combined. Read **NDDS\_Utility\_NetworkCaptureContentKindMask** (p.544) for typical combinations.

Enumerator

NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_USER_↔ SERIALIZED_DATA	The serialized data coming from a user.
NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_ENCRYPTED_↔ DATA	The encrypted user data.

### 7.177.5.2 NDDS\_Utility\_NetworkCaptureTrafficKind

enum `NDDS_Utility_NetworkCaptureTrafficKind`

Bitmap used to specify whether we want to capture inbound or outbound traffic.

Several values can be combined. Read `NDDS_Utility_NetworkCaptureTrafficKindMask` (p. 544) for typical combinations.

Enumerator

<code>NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_OUT</code>	Do not capture outbound traffic.
<code>NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_IN</code>	Do not capture inbound traffic.

## 7.177.6 Variable Documentation

### 7.177.6.1 NDDS\_UTILITY\_NETWORK\_CAPTURE\_PARAMETERS\_DEFAULT

```
const NDDS_Utility_NetworkCaptureParams_t NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_DEFAULT [extern]
```

Default parameters used in Network Capture.

The default parameters can be used as initializers to ensure that new objects do not have uninitialized contents.

Initialization of a `NDDS_Utility_NetworkCaptureParams_t` (p. 1817) type can be done either by assigning to the default parameters:

```
struct NDDS_Utility_NetworkCaptureParams_t params = NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_DEFAULT;
```

Or equivalently, by using its initializer method:

```
struct NDDS_Utility_NetworkCaptureParams_t params;
```

```
NDDS_Utility_NetworkCaptureParams_t_initialize(&params);
```

In either case, do not forget to finalize the parameters when you don't need them any more:

```
NDDS_Utility_NetworkCaptureParams_t_finalize(&params);
```

The values that are used by default for the parameters can be found in the description of each of the members in `NDDS_Utility_NetworkCaptureParams_t` (p. 1817).

## 7.178 Other Utilities

Other Utilities, such as `NDDSUtility::spin` (p. 1840).

## Classes

- class **NDDSLM**  
*Other Utilities APIs.*
- class **NDDUtility**  
*Other Utilities APIs.*

### 7.178.1 Detailed Description

Other Utilities, such as **NDDUtility::spin** (p. 1840).

## 7.179 Octet Buffer Support

<<*extension*>> (p. 237) Octet buffer creation, cloning, and deletion.

## Functions

- unsigned char \* **DDS\_OctetBuffer\_alloc** (unsigned int size)  
*Create a new empty OctetBuffer that can hold up to `size` octets.*
- unsigned char \* **DDS\_OctetBuffer\_dup** (const unsigned char \*buffer, unsigned int size)  
*Clone an OctetBuffer.*
- void **DDS\_OctetBuffer\_free** (unsigned char \*buffer)  
*Delete an OctetBuffer.*

### 7.179.1 Detailed Description

<<*extension*>> (p. 237) Octet buffer creation, cloning, and deletion.

The methods in this class ensure consistent cross-platform implementations for OctetBuffer creation (**DDS\_OctetBuffer\_alloc**(`p. 548`)), deletion (**DDS\_OctetBuffer\_free**(`p. 549`)), and cloning (**DDS\_OctetBuffer\_dup**(`p. 549`)) that preserve the mutable value type semantics. These are to be viewed as methods that define an `OctetBuffer` class whose data is represented by a `'unsigned char*`.

## 7.179.2 Conventions

The following conventions govern the memory management of OctetBuffers in RTI Connex.

- The DDS implementation ensures that when value types containing OctetBuffers are passed back and forth to the DDS APIs, the OctetBuffers are created/deleted/cloned using the `OctetBuffer` class methods.
  - Value types containing OctetBuffers have ownership of the contained OctetBuffer. Thus, when a value type is deleted, the contained octet buffer field is also deleted.
- The user must ensure that when value types containing OctetBuffers are passed back and forth to the DDS APIs, the OctetBuffers are created/deleted/cloned using the `OctetBuffer` class methods.

The representation of an OctetBuffer in C/C++ unfortunately does not allow programs to detect how much memory has been allocated for a OctetBuffer. RTI Connex must therefore make some assumptions when a user requests that a OctetBuffer be copied into. The following rules apply when RTI Connex is copying into an OctetBuffer.

- If the 'unsigned char\*' is NULL, RTI Connex will allocate a new OctetBuffer on behalf of the user. *To avoid leaking memory, you must ensure that the OctetBuffer will be freed (see **Usage** (p. 548) below) in C. For C++, the destructor of the valuetype containing the OctetBuffer will free it automatically.*
- If the 'unsigned char\*' is not NULL, RTI Connex will assume that you are managing the OctetBuffer's memory yourself and have allocated enough memory to store the OctetBuffer to be copied. *RTI Connex will copy into your memory; to avoid memory corruption, be sure to allocate enough of it. Also, do not pass structures containing junk pointers into RTI Connex; you are likely to crash.*

## 7.179.3 Usage

This requirement can generally be assured by adhering to the following *idiom* for manipulating OctetBuffers.

```
Always use
    DDS_OctetBuffer_alloc() to create,
    DDS_OctetBuffer_dup() to clone,
    DDS_OctetBuffer_free() to delete
a 'unsigned char*' that is passed back and forth between
user code and the DDS C/C++ APIs.
```

Not adhering to this idiom can result in bad pointers, and incorrect memory being freed.

In addition, the user code should be vigilant to avoid memory leaks. It is good practice to:

- Balance occurrences of `DDS_OctetBuffer_alloc()` (p. 548), with matching occurrences of `DDS_OctetBuffer_↵free()` (p. 549) in the code.
- Finalize value types containing OctetBuffer. In C++ the destructor accomplishes this automatically. in C, explicit "destructor" functions are provided.

## 7.179.4 Function Documentation

### 7.179.4.1 DDS\_OctetBuffer\_alloc()

```
unsigned char * DDS_OctetBuffer_alloc (
    unsigned int size )
```

Create a new empty OctetBuffer that can hold up to `size` octets.

An OctetBuffer created by this method must be deleted using **DDS\_OctetBuffer\_free()** (p. 549).

This function will allocate enough memory to hold an OctetBuffer of `size` octets.

#### Parameters

<i>size</i>	<< <i>in</i> >> (p. 238) Size of the buffer.
-------------	--

#### Returns

A newly created non-NULL OctetBuffer upon success or NULL upon failure.

Referenced by **DDS\_KeyedOctets::DDS\_KeyedOctets()**, and **DDS\_Octets::DDS\_Octets()**.

### 7.179.4.2 DDS\_OctetBuffer\_dup()

```
unsigned char * DDS_OctetBuffer_dup (
    const unsigned char * buffer,
    unsigned int size )
```

Clone an OctetBuffer.

An OctetBuffer created by this method must be deleted using `DDS_OctetBuffer_free()`

#### Parameters

<i>buffer</i>	<< <i>in</i> >> (p. 238) The OctetBuffer to duplicate.
<i>size</i>	<< <i>in</i> >> (p. 238) Size of the OctetBuffer to duplicate.

#### Returns

If `src == NULL` or `size < 0`, this method always returns NULL. Otherwise, upon success it returns a newly created OctetBuffer whose value is `src`; upon failure it returns NULL.

### 7.179.4.3 DDS\_OctetBuffer\_free()

```
void DDS_OctetBuffer_free (
    unsigned char * buffer )
```

Delete an OctetBuffer.

#### Precondition

`buffer` must be either NULL, or must have been created using **DDS\_OctetBuffer\_alloc()** (p. 548), **DDS\_↔OctetBuffer\_dup()** (p. 549)

#### Parameters

<code>buffer</code>	<< <i>in</i> >> (p. 238) The buffer to delete.
---------------------	--

Referenced by **DDS\_KeyedOctets::~~DDS\_KeyedOctets()**, and **DDS\_Octets::~~DDS\_Octets()**.

## 7.180 SampleProcessor

<<*experimental*>> (p. 237) <<*extension*>> (p. 237) Utility to concurrently read and process the data samples received by **DDSDataReader** (p. 1288).

<<*experimental*>> (p. 237) <<*extension*>> (p. 237) Utility to concurrently read and process the data samples received by **DDSDataReader** (p. 1288).

## 7.181 Sequence Support

The **FooSeq** (p. 1697) interface allows you to work with variable-length collections of homogeneous data.

### Modules

- **Built-in Sequences**

*Defines sequences of primitive data type. .*

### Classes

- struct **FooSeq**

<<*interface*>> (p. 237) <<*generic*>> (p. 237) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **Foo** (p. 1648).

### 7.181.1 Detailed Description

The **FooSeq** (p. 1697) interface allows you to work with variable-length collections of homogeneous data.

This interface is instantiated for each concrete element type in order to provide compile-time type safety to applications. The **Built-in Sequences** (p. 164) are pre-defined instantiations for the primitive data types.

When you use the `rtiddsgen` code generation tool, it will automatically generate concrete sequence instantiations for each of your own custom types.

## 7.182 String Support

<<*extension*>> (p. 237) String creation, cloning, assignment, and deletion.

### Functions

- `char * DDS_String_alloc (size_t length)`  
*Create a new empty string that can hold up to `length` characters.*
- `char * DDS_String_dup (const char *str)`  
*Clone a string. Creates a new string that duplicates the value of `string`.*
- `char * DDS_String_replace (char **string_ptr, const char *new_value)`  
*Assign a new value to a string. Replaces the string pointed to by `string_ptr`, with a string whose value is `new_value`.*
- `void DDS_String_free (char *str)`  
*Delete a string.*
- `DDS_Wchar * DDS_Wstring_alloc ( DDS_UnsignedLong length)`  
*Create a new empty string that can hold up to `length` wide characters.*
- `DDS_UnsignedLong DDS_Wstring_length (const DDS_Wchar *str)`  
*Get the number of wide characters in the given string.*
- `DDS_Wchar * DDS_Wstring_copy ( DDS_Wchar *dst, const DDS_Wchar *src)`  
*Copy the source string over the destination string reallocating the space if it's necessary.*
- `DDS_Wchar * DDS_Wstring_copy_and_widen ( DDS_Wchar *dst, const char *src)`  
*Copy the source string over the destination string, widening each character.*
- `DDS_Wchar * DDS_Wstring_dup (const DDS_Wchar *str)`  
*Clone a string of wide characters. Creates a new string that duplicates the value of `string`.*
- `DDS_Wchar * DDS_Wstring_dup_and_widen (const char *str)`  
*Clone a string of characters as a string of wide characters.*
- `void DDS_Wstring_free ( DDS_Wchar *str)`  
*Delete a string.*

### 7.182.1 Detailed Description

<<*extension*>> (p. 237) String creation, cloning, assignment, and deletion.

The methods in this class ensure consistent cross-platform implementations for string creation (**DDS\_String\_alloc()** (p. 553)), deletion (**DDS\_String\_free()** (p. 554)), and cloning (**DDS\_String\_dup()** (p. 553)) that preserve the mutable value type semantics. These are to be viewed as methods that define a `string` class whose data is represented by a `'char*'`.

### 7.182.2 String Conventions

The following conventions govern the memory management of strings in RTI Connex.

- The DDS implementation ensures that when value types containing strings are passed back and forth to the DDS APIs, the strings are created/deleted/assigned/cloned using the `string` class methods.
  - Value types containing strings have ownership of the contained string. Thus, when a value type is deleted, the contained string field is also deleted.
  - **DDS\_StringSeq** (p. 1102) is a value type that contains strings; it owns the memory for the contained strings. When a **DDS\_StringSeq** (p. 1102) is assigned or deleted, the contained strings are also assigned or deleted respectively.
- The user must ensure that when value types containing strings are passed back and forth to the DDS APIs, the strings are created/deleted/assigned/cloned using the `String` class methods.

The representation of a string in C/C++ unfortunately does not allow programs to detect how much memory has been allocated for a string. RTI Connex must therefore make some assumptions when a user requests that a string be copied into. The following rules apply when RTI Connex is copying into a string or string sequence:

- If the 'char\*' is NULL, RTI Connex will log a warning and allocate a new string on behalf of the user. *To avoid leaking memory, you must ensure that the string will be freed (see **Usage** (p. 552) below).*
- If the 'char\*' is not NULL, RTI Connex will assume that you are managing the string's memory yourself and have allocated enough memory to store the string to be copied. *RTI Connex will copy into your memory; to avoid memory corruption, be sure to allocate enough of it. Also, do not pass structures containing junk pointers into RTI Connex; you are likely to crash.*

### 7.182.3 Usage

This requirement can generally be assured by adhering to the following *idiom* for manipulating strings.

Always use  
`DDS_String_alloc()` to create,  
`DDS_String_dup()` to clone,  
`DDS_String_free()` to delete  
 a string 'char\*' that is passed back and forth between  
 user code and the DDS C/C++ APIs.

Not adhering to this idiom can result in bad pointers, and incorrect memory being freed.

In addition, the user code should be vigilant to avoid memory leaks. It is good practice to:

- Balance occurrences of **DDS\_String\_alloc()** (p. 553), **DDS\_String\_dup()** (p. 553), with matching occurrences of **DDS\_String\_free()** (p. 554) in the code.
- Finalize value types containing strings. In C++ the destructor accomplishes this automatically. In C, explicit "destructor" functions are provided; these functions are typically called "finalize."

#### Note

When dealing with the **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p.1027) and **DDS\_MultiChannelQosPolicy::filter\_name** (p. 966) fields, we advise taking a look at the sample code for how to properly assign new values and free the old ones.

#### See also

**DDS\_StringSeq** (p. 1102)

## 7.182.4 Function Documentation

### 7.182.4.1 DDS\_String\_alloc()

```
char * DDS_String_alloc (
    size_t length )
```

Create a new empty string that can hold up to `length` characters.

A string created by this method must be deleted using **DDS\_String\_free()** (p. 554).

This function will allocate enough memory to hold a string of `length` characters, **plus** one additional byte to hold the NULL terminating character.

#### Parameters

<i>length</i>	<< <i>in</i> >> (p. 238) Capacity of the string.
---------------	--

#### Returns

A newly created non-NULL string upon success or NULL upon failure.

#### Examples

**HelloWorld.cxx.**

Referenced by **DDS\_KeyedOctets::DDS\_KeyedOctets()**, and **DDS\_KeyedString::DDS\_KeyedString()**.

### 7.182.4.2 DDS\_String\_dup()

```
char * DDS_String_dup (
    const char * str )
```

Clone a string. Creates a new string that duplicates the value of `string`.

A string created by this method must be deleted using **DDS\_String\_free()** (p. 554)

#### Parameters

<i>str</i>	<< <i>in</i> >> (p. 238) The string to duplicate.
------------	---

**Returns**

If `string == NULL`, this method always returns `NULL`. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns `NULL`.

**7.182.4.3 DDS\_String\_replace()**

```
char * DDS_String_replace (
    char ** string_ptr,
    const char * new_value )
```

Assign a new value to a string. Replaces the string pointed to by `string_ptr`, with a string whose value is `new_value`.

A string created by this method must be deleted using **DDS\_String\_free()** (p. 554).

This function is most commonly used when manipulating string sequences, **DDS\_StringSeq** (p. 1102).

**Precondition**

`string_ptr` be a non-NULL pointer. `*string_ptr` must be either `NULL`, or a string created using **DDS\_String\_alloc()** (p. 553) or **DDS\_String\_dup()** (p. 553), or **DDS\_String\_replace()** (p. 554).

**Parameters**

<code>string_ptr</code>	<< <i>inout</i> >> (p. 238) Pointer to the string to replace.
<code>new_value</code>	<< <i>in</i> >> (p. 238) The value of the replacement string.

**Returns**

If `new_value = NULL`, this method always returns `NULL`. Otherwise, upon success it returns `*string_ptr` whose value is `new_value`; upon failure it returns `NULL`.

**Postcondition**

If `new_value = NULL`, `*string_ptr == NULL`. Otherwise, upon success `string_ptr` contains a pointer to a string whose value is `new_value`; upon failure, `string_ptr` is left unchanged.

**7.182.4.4 DDS\_String\_free()**

```
void DDS_String_free (
    char * str )
```

Delete a string.

**Precondition**

`string` must be either NULL, or must have been created using `DDS_String_alloc()` (p. 553), `DDS_String_dup()` (p. 553)

**Parameters**

<code>str</code>	<< <i>in</i> >> (p. 238) The string to delete.
------------------	--

**Examples**

**HelloWorld.cxx.**

Referenced by `DDS_KeyedOctets::DDS_KeyedOctets()`, `DDS_KeyedString::DDS_KeyedString()`, `DDS_KeyedOctets::~~DDS_KeyedOctets()`, and `DDS_KeyedString::~~DDS_KeyedString()`.

**7.182.4.5 DDS\_Wstring\_alloc()**

```
DDS_Wchar * DDS_Wstring_alloc (
    DDS_UnsignedLong length )
```

Create a new empty string that can hold up to `length` wide characters.

A string created by this method must be deleted using `DDS_Wstring_free()` (p. 557)

This function will allocate enough memory to hold a string of `length` characters, **plus** one additional wide character to hold the NULL terminator.

**Parameters**

<code>length</code>	<< <i>in</i> >> (p. 238) Capacity of the string.
---------------------	--

**Returns**

A newly created non-NULL string upon success or NULL upon failure.

**7.182.4.6 DDS\_Wstring\_length()**

```
DDS_UnsignedLong DDS_Wstring_length (
    const DDS_Wchar * str )
```

Get the number of wide characters in the given string.

The result does not count the terminating zero character.

## Parameters

<i>str</i>	<< <i>in</i> >> (p. 238) A non-NULL string.
------------	---

## Returns

The number of wide characters in the string.

## 7.182.4.7 DDS\_Wstring\_copy()

```
DDS_Wchar * DDS_Wstring_copy (
    DDS_Wchar * dst,
    const DDS_Wchar * src )
```

Copy the source string over the destination string reallocating the space if it's necessary.

## Parameters

<i>dst</i>	
<i>src</i>	

## Returns

*dst*

## 7.182.4.8 DDS\_Wstring\_copy\_and\_widen()

```
DDS_Wchar * DDS_Wstring_copy_and_widen (
    DDS_Wchar * dst,
    const char * src )
```

Copy the source string over the destination string, widening each character.

## Parameters

<i>dst</i>	<< <i>in</i> >> (p. 238) A non-NULL string to be overwritten by <i>src</i> .
<i>src</i>	<< <i>in</i> >> (p. 238) A non-NULL string to be copied over <i>dst</i> .

**Returns**

`dst`

**7.182.4.9 DDS\_Wstring\_dup()**

```
DDS_wchar * DDS_Wstring_dup (
    const DDS_wchar * str )
```

Clone a string of wide characters. Creates a new string that duplicates the value of `string`.

A string created by this method must be deleted using **DDS\_Wstring\_free()** (p. 557).

**Parameters**

<code>str</code>	<< <i>in</i> >> (p. 238) The string to duplicate.
------------------	---

**Returns**

If `string == NULL`, this method always returns `NULL`. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns `NULL`.

**7.182.4.10 DDS\_Wstring\_dup\_and\_widen()**

```
DDS_wchar * DDS_Wstring_dup_and_widen (
    const char * str )
```

Clone a string of characters as a string of wide characters.

A string created by this method must be deleted using **DDS\_Wstring\_free()** (p. 557)

**Parameters**

<code>str</code>	<< <i>in</i> >> (p. 238) The string to duplicate.
------------------	---

**Returns**

If `string == NULL`, this method always returns `NULL`. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns `NULL`.

### 7.182.4.11 DDS\_Wstring\_free()

```
void DDS_Wstring_free (
    DDS_Wchar * str )
```

Delete a string.

#### Precondition

`string` must either NULL, or must have been created using `DDS_Wstring_alloc()` (p. 555), `DDS_Wstring_dup()` (p. 557), or `DDS_Wstring_replace()`

#### Parameters

<code>str</code>	<< <i>in</i> >> (p. 238) The string to delete.
------------------	--

## 7.183 FlatData Builders

A Builder allows creating and initializing variable-size data.

### Classes

- class **rti::flat::AggregationBuilder**  
*Base class of struct and union builders.*
- class **rti::flat::UnionBuilder< Discriminator >**  
*Base class of builders for user-defined mutable unions.*
- class **MyFlatMutableBuilder**  
*Represents the Builder for an arbitrary user-defined mutable type.*
- class **MyFlatUnionBuilder**  
*Represents the Builder for an arbitrary user-defined mutable IDL union.*
- class **rti::flat::AbstractBuilder**  
*Base class of all Builders (p. 558).*
- class **rti::flat::AbstractListBuilder< DHeaderGen >**  
*Base class of all array and sequence builders.*
- class **rti::flat::MutableArrayBuilder< ElementBuilder, N >**  
*Builds an array member of variable-size elements.*
- class **rti::flat::AbstractSequenceBuilder< DHeaderGen >**  
*Base class of Builders for sequence members.*
- class **rti::flat::MutableSequenceBuilder< ElementBuilder >**  
*Builds a sequence member of variable-size elements.*
- class **rti::flat::FinalSequenceBuilder< ElementOffset >**  
*Builds a sequence member of fixed-size elements.*
- class **rti::flat::PrimitiveSequenceBuilder< T >**  
*Builds a sequence of primitive members.*
- class **rti::flat::StringBuilder**  
*Builds a string.*

## Functions

- `template<typename TopicType >`  
`rti::flat::flat_type_traits< TopicType >::builder rti::flat::build_data (typename TopicType::DataWriter *writer)`  
*Begins building a new sample.*
- `template<typename BuilderType >`  
`void rti::flat::discard_builder (typename rti::flat::flat_type_traits< BuilderType >::flat_type::DataWriter *writer, BuilderType &builder)`  
*Discards a sample builder.*

### 7.183.1 Detailed Description

A Builder allows creating and initializing variable-size data.

Builders allow creating variable-size **FlatData samples** (p. 561), as described in **Publishing FlatData** (p. 570).

There are the following Builder types:

Category	Builder type
User types	For example: <ul style="list-style-type: none"> <li>• <b>MyFlatMutableBuilder</b> (p. 1750), a mutable struct</li> <li>• <b>MyFlatUnionBuilder</b> (p. 1764), a union</li> <li>• Final structs are fixed-size and do not have a Builder (see for example <b>MyFlatMutableBuilder::add_my_final()</b> (p. 1755)).</li> </ul>
Arrays	<ul style="list-style-type: none"> <li>• <b>rti::flat::MutableArrayBuilder</b> (p. 1740)</li> <li>• Arrays of final elements are fixed-size and do not have a Builder (see for example <b>MyFlatMutableBuilder::add_my_final_array()</b> (p. 1755)).</li> </ul>
Sequences	<ul style="list-style-type: none"> <li>• <b>rti::flat::MutableSequenceBuilder</b> (p. 1744) for sequences of mutable elements</li> <li>• <b>rti::flat::FinalSequenceBuilder</b> (p. 1645) for sequences of final elements</li> <li>• <b>rti::flat::PrimitiveSequenceBuilder</b> (p. 1864) for sequences of primitive elements</li> <li>• <b>rti::flat::StringBuilder</b> (p. 1943)</li> </ul>
Primitive types	<ul style="list-style-type: none"> <li>• Primitive members are added using one of the member functions of the Builder of the type that contains them. See for example <b>MyFlatMutableBuilder::add_my_primitive()</b> (p. 1754)</li> </ul>

Builder for user types, such as **MyFlatMutableBuilder** (p. 1750), can behave as **sample builders**, when they build a sample, or **member builders** when they build a member for another Builder (such as the Builder returned by **MyFlatMutableBuilder::build\_my\_mutable()** (p. 1756)). All the other Builder types (sequences, arrays) are always member builders (such as the Builder returned by **MyFlatMutableBuilder::build\_my\_final\_seq()** (p. 1755)).

Builders are **move-only** types. They cannot be copied, only moved. When you assign a Builder as the return value of a function, this happens automatically.

```
// the return value of 'build_data' is moved into 'builder'
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
```

To explicitly move a Builder variable in the Traditional C++ API, call its **move ()** (p. 190) member function

### 7.183.2 Builder Error Management

The Traditional C++ API reports Builder errors by setting a flag that can be checked with the member function **check\_↔\_failure()** (p. 581). After each Builder operation, `check_failure()` must be called to check (and clear) the error flag.

In addition, in case of error, operations that return another Builder, such as **MyFlatMutableBuilder::build\_my\_↔\_mutable()** (p. 1756), return an invalid Builder (**is\_valid()** (p. 580) is `false`). Operations that return an Offset, such as **MyFlatMutableBuilder::add\_my\_final()** (p. 1755) return a "null" Offset when they fail (see **Offset Error Management** (p. 566)).

See also

**MyFlatMutableBuilder** (p. 1750) for more information specific to builders for user types.

### 7.183.3 Function Documentation

#### 7.183.3.1 build\_data()

```
template<typename TopicType >
rti::flat::flat_type_traits< TopicType >::builder rti::flat::build_data (
    typename TopicType::DataWriter * writer )
```

Begins building a new sample.

#### Template Parameters

<i>TopicType</i>	A FlatData mutable type that corresponds to the type of the DataWriter argument.
------------------	--

#### Parameters

<i>writer</i>	The writer that will be used to write this sample.
---------------	--

#### Returns

The Builder to build the sample. For example if `TopicType` is **MyFlatMutable** (p. 562), this function returns a **MyFlatMutableBuilder** (p. 1750). In case of error, this function returns an **invalid Builder** (p. 580)

Once you have completed the sample, call `finish_sample()` (p. 1753) to obtain a `MyFlatMutable` (p. 562) sample that can be written with `writer`.

If the building of this sample needs to be aborted before calling `finish_sample()`, use `rti::flat::discard_builder()` (p. 561). If, after obtaining a sample with `finish_sample()`, this sample is not written, then discard it with `FooDataWriter::discard_loan()` (p. 1696).

#### See also

`FooDataWriter::get_loan` (p. 1695), the function that `build_data()` (p. 560) uses to obtain the memory required to build the sample.

`Publishing FlatData` (p. 570)

References `DDS_BOOLEAN_TRUE`, and `DDS_RETCODE_OK`.

### 7.183.3.2 discard\_builder()

```
template<typename BuilderType >
void rti::flat::discard_builder (
    typename rti::flat::flat_type_traits< BuilderType >::flat_type::DataWriter * writer,
    BuilderType & builder )
```

Discards a sample builder.

#### Template Parameters

<i>TopicType</i>	An IDL-defined FlatData type that corresponds to the type of the DataWriter argument.
------------------	---

This function invalidates and discards a builder before it is `finished()` and before the sample it would have created was written.

#### Parameters

<i>writer</i>	The writer that was used to create the builder
<i>builder</i>	The builder, created with <code>rti::flat::build_data(writer)</code> ;

## 7.184 FlatData Samples

A Sample represents an instance of the IDL topic-type and contains the data in serialized format.

### Classes

- class `rti::flat::Sample< OffsetType >`

*The generic definition of FlatData topic-types.*

- struct **rti::flat::flat\_type\_traits**< T >

*Given a **Sample** (p. 1916), an **Offset** or a **Builder**, it allows obtaining the other types.*

## Typedefs

- typedef **rti::flat::Sample**< **MyFlatFinalOffset** > **MyFlatFinal**  
*Represents an arbitrary user-defined FlatData final IDL struct.*
- typedef **rti::flat::Sample**< **MyFlatMutableOffset** > **MyFlatMutable**  
*Represents an arbitrary user-defined flat mutable IDL struct.*
- typedef **rti::flat::Sample**< **MyFlatUnionOffset** > **MyFlatUnion**  
*Represents an arbitrary user-defined flat mutable IDL union.*

### 7.184.1 Detailed Description

A **Sample** represents an instance of the IDL topic-type and contains the data in serialized format.

All FlatData topic-types are instantiations of **rti::flat::Sample** (p. 1916). This documentation uses the following three example types to illustrate the different ways FlatData IDL types map to C++:

- **MyFlatFinal** (p. 562), the type generated for a final IDL struct
- **MyFlatMutable** (p. 562), the type generated for a mutable IDL struct
- **MyFlatUnion** (p. 563), the type generated for an IDL union

### 7.184.2 Typedef Documentation

#### 7.184.2.1 MyFlatFinal

```
typedef rti::flat::Sample< MyFlatFinalOffset> MyFlatFinal
```

Represents an arbitrary user-defined FlatData final IDL struct.

This documentation uses the following example IDL definition of MyFlatFinal:

```
@language_binding(FLAT_DATA)
@final
struct MyFlatFinal {
    long my_primitive;
    FlatFinalBar my_complex; // Another arbitrary final FlatData type
    long my_primitive_array[10];
    FlatFinalBar my_complex_array[10];
};
```

For this type, **rtiddsgen** generates:

- **MyFlatFinal** (this instantiation of **Sample**),
- **MyFlatFinalOffset** (p. 1746).

Note that, as a final FlatData type, **MyFlatFinal** can only contain fixed-size types, such as primitives, other final FlatData structs, and arrays of fixed-size types.

Samples of **MyFlatFinal** are created with **FooDataWriter::get\_loan** (p. 1695). After creating a final **Sample**, modify its values using the **MyFlatFinalOffset** (p. 1746) returned by **root()** (p. 1918).

### 7.184.2.2 MyFlatMutable

```
typedef rti::flat::Sample< MyFlatMutableOffset> MyFlatMutable
```

Represents an arbitrary user-defined flat mutable IDL struct.

This documentation uses the following example IDL definition of MyFlatMutable:

```
@language_binding(FLAT_DATA)
@mutable
struct MyFlatMutable {
    long my_primitive;
    @optional long my_optional_primitive;
    long my_primitive_array[10];
    sequence<long, 10> my_primitive_seq;
    MyFlatFinal my_final;
    MyFlatFinal my_final_array[10];
    sequence<MyFlatFinal, 10> my_final_seq;
    FlatMutableBar my_mutable;
    FlatMutableBar my_mutable_array[10];
    sequence<FlatMutableBar, 10> my_mutable_seq;
    string<255> my_string;
    sequence<string<255>, 10> my_string_seq;
};
```

For this type, **rtiddsgen** generates:

- MyFlatMutable (this instantiation of Sample),
- **MyFlatMutableOffset** (p. 1757),
- **MyFlatMutableBuilder** (p. 1750).

As a mutable FlatData type, MyFlatMutable is not restricted to fixed-size members. Samples of MyFlatMutable are created with **rti::flat::build\_data()** (p. 560), which returns a **MyFlatMutableBuilder** (p. 1750). Once built, a mutable Sample can't change in size, but the value of members that already exist can be changed using the **MyFlatMutableOffset** (p. 1757) returned by **root()** (p. 1918).

### 7.184.2.3 MyFlatUnion

```
typedef rti::flat::Sample< MyFlatUnionOffset> MyFlatUnion
```

Represents an arbitrary user-defined flat mutable IDL union.

This documentation uses the following example IDL definition of MyFlatUnion:

```
@language_binding(FLAT_DATA)
@mutable
union MyFlatUnion switch (long) {
    case 0:
        long my_primitive;
    case 1:
    case 2:
        MyFlatMutable my_mutable;
    case 3:
        MyFlatFinal my_final;
};
```

#### Note

FlatData unions can only be **mutable** since unions are, by definition, variable-size types.

For this type, **rtiddsgen** generates:

- MyFlatUnion (this instantiation of Sample),
- **MyFlatUnionOffset** (p. 1767),
- **MyFlatUnionBuilder** (p. 1764).

## 7.185 FlatData Offsets

Offsets provide access to the members of a FlatData Sample.

### Classes

- class **MyFlatFinalOffset**  
*Represents the Offset to an arbitrary user-defined FlatData final IDL struct.*
- class **MyFlatMutableOffset**  
*Represents the Offset to an arbitrary user-defined FlatData mutable IDL struct.*
- class **MyFlatUnionOffset**  
*Represents the Offset to an arbitrary user-defined FlatData mutable IDL union.*
- class **rti::flat::OffsetBase**  
*Base class of all Offset types.*
- class **rti::flat::FinalOffset< T >**  
*The base class of all Offsets to a final struct type.*
- class **rti::flat::MutableOffset**  
*The base class of all Offsets to a final struct type.*
- struct **rti::flat::PrimitiveConstOffset< T >**  
*A const Offset to an optional primitive member.*
- struct **rti::flat::PrimitiveOffset< T >**  
*An Offset to an optional primitive member.*
- class **rti::flat::Sequenceliterator< E, OffsetKind >**  
*Iterator for collections of Offsets.*
- class **rti::flat::AbstractPrimitiveList< T >**  
*Base class for Offsets to sequences and arrays of primitive types.*
- class **rti::flat::PrimitiveSequenceOffset< T >**  
*Offset to a sequence of primitive elements.*
- class **rti::flat::PrimitiveArrayOffset< T, N >**  
*Offset to an array of primitive elements.*
- class **rti::flat::StringOffset**  
*Offset to a string.*
- class **rti::flat::AbstractAlignedList< ElementOffset >**  
*Base class of Offsets to sequences and arrays of non-primitive members.*
- class **rti::flat::SequenceOffset< ElementOffset >**  
*Offset to a sequence of non-primitive elements.*
- class **rti::flat::MutableArrayOffset< ElementOffset, N >**  
*Offset to an array of variable-size elements.*
- class **rti::flat::FinalArrayOffset< ElementOffset, N >**  
*Offset to an array of final elements.*
- class **rti::flat::FinalAlignedArrayOffset< ElementOffset, N >**  
*Offset to an array of final elements.*

## Functions

- template<typename OffsetType >  
**flat\_type\_traits**< OffsetType >::plain\_type \* **rti::flat::plain\_cast** (OffsetType &offset)  
*Casts into an equivalent plain C++ type.*
- template<typename OffsetType >  
 const **flat\_type\_traits**< OffsetType >::plain\_type \* **rti::flat::plain\_cast** (const OffsetType &offset)  
*Const version of plain\_cast.*

### 7.185.1 Detailed Description

Offsets provide access to the members of a FlatData Sample.

An Offset represents a position within a **FlatData Sample** (p. 561) that allows accessing a member of that Sample, or the Sample's **root** (p. 1918).

Offsets can be described as **iterators**. They represent a position in a buffer, not the value itself. As such, they're lightweight objects that can be copied to point to the same data.

There are the following Offset types to access the different IDL types:

Category	Offset type
User types	For example: <ul style="list-style-type: none"> <li>• <b>MyFlatFinalOffset</b> (p. 1746), an Offset to a final struct</li> <li>• <b>MyFlatMutableOffset</b> (p. 1757), an Offset to a mutable struct</li> <li>• <b>MyFlatUnionOffset</b> (p. 1767), an Offset to a union</li> </ul>
Arrays	<ul style="list-style-type: none"> <li>• <b>rti::flat::PrimitiveArrayOffset</b> (p. 1861)</li> <li>• <b>rti::flat::FinalArrayOffset</b> (p. 1643) (array of final elements in a final type)</li> <li>• <b>rti::flat::FinalAlignedArrayOffset</b> (p. 1641) (array of final elements in a mutable type)</li> <li>• <b>rti::flat::MutableArrayOffset</b> (p. 1742)</li> </ul>
Sequences	<ul style="list-style-type: none"> <li>• <b>rti::flat::PrimitiveSequenceOffset</b> (p. 1867)</li> <li>• <b>rti::flat::SequenceOffset</b> (p. 1934)</li> </ul>
Primitive types	<ul style="list-style-type: none"> <li>• The type itself, such as <code>double</code></li> <li>• <b>rti::flat::PrimitiveOffset</b> (p. 1863) (when the member is optional)</li> </ul>

Offsets for user types are generated by **rtiddsgen** and provide methods to access the type's members by their names. Offsets for arrays and sequences provide methods to access each element.

Some offsets allow accessing the data through a pointer to the equivalent plain C++ type, which generally provides better performance. See `rti::flat::plain_cast()` (p. 566).

## 7.185.2 Offset Error Management

Functions that return an Offset may return a "null" Offset (one such that `is_null()` (p. 1857) returns `true`).

An Offset may be null if a member doesn't exist in the **Sample** (p. 561). For example, if the member 'my\_final' in **MyFlatMutable** (p. 562) doesn't exist (because it wasn't added while building the Sample, or because it wasn't received in the subscribing application), `MyFlatMutableOffset::my_final()` (p. 1762) returns a null Offset. Note that a **member in a final type** (for example, `MyFlatFinalOffset::my_complex()` (p. 1749)) always exists, except in the case of an error.

In addition to that, a function may return a null Offset for any error condition.

## 7.185.3 Function Documentation

### 7.185.3.1 `plain_cast()` [1/2]

```
template<typename OffsetType >
flat_type_traits< OffsetType >::plain_type * rti::flat::plain_cast (
    OffsetType & offset )
```

Casts into an equivalent plain C++ type.

Some FlatData types can be cast to their equivalent **plain** definition as a regular non-FlatData C++ type. This is a more efficient way to access the data. This function casts, if possible, the member pointed to by the offset argument to an equivalent plain C++ type. Any changes made through the plain type are reflected in the FlatData sample.

#### Template Parameters

<i>OffsetType</i>	The Offset type
-------------------	-----------------

#### Precondition

`plain_cast` requires the type to meet the following restrictions:

- The type must be a final struct, or an array or sequence of members of a type that meets these restrictions (including primitive types)
- The type must be defined in a way such that the packing of the plain C++ type doesn't differ from the padding in XCDR2.
- The type may not inherit from another type.
- In addition, the sample must be serialized in the native endianness. For example, if a subscribing application on a little-endian platform receives a sample published from a big-endian system, it is not possible to `plain_cast` the sample or any of its members, except if the member is a primitive array or sequence of 1-byte elements.

**offset.is\_cpp\_compatible()** (p. 1857) indicates if the member meets the requirements. If the type doesn't, this function returns NULL.

#### Parameters

<i>offset</i>	The offset to the member to cast.
---------------	-----------------------------------

#### Returns

The data that *offset* referred to, cast as a plain C++ type with the same definition. If *offset* is an array or sequence member, the returned pointer represents a C++ array with the same number of elements.

The following table summarizes the possible parameters to this function (assuming that they meet the previous requirements), and the return type in each case:

OffsetType	return type
Offset to a final struct, such as <b>MyFlatFinalOffset</b> (p.1746)	MyFlatFinalPlainHelper* (pointer to a single element). This is a type with the same IDL definition, but without @language_binding (FLAT_DATA).
Offset to an array of final structs, such as <b>FinalArrayOffset</b> (p.1643) <MyFlatFinalOffset (p.1746), N>	MyFlatFinalPlainHelper* (array of N elements)
Offset to a sequence of final structs, such as <b>SequenceOffset</b> (p.1934) <MyFlatFinalOffset (p.1746)>	MyFlatFinalPlainHelper* (array of offset.element_count() elements)
Offset to an array of primitive types, such as <b>PrimitiveArrayOffset</b> (p.1861) <int32_t, N>	int32_t* (array of N elements)
Offset to a sequence of primitive types, such as <b>PrimitiveSequenceOffset</b> (p.1867) <int32_t>	int32_t* (array of offset.element_count() elements)

Due to the performance advantages that `plain_cast` offers, it is recommended to define FlatData types in a way that their largest member(s) can be `plain_cast`.

The following example shows how to use `plain_cast` to cast a **MyFlatFinalOffset** (p. 1746) into the type with the same IDL definition as **MyFlatFinal** (p. 562), but without the `@language_binding (FLAT_DATA)` annotation:

```
MyFlatMutable *my_sample = ...;
auto my_root = my_sample->root();
auto my_final = my_root.my_final();
// Get the plain C++ type and modify an array
auto my_final_plain = rti::flat::plain_cast(my_final);
my_final_plain->my_primitive(3); // this is using the plain C++ setter
my_final_plain->my_complex_array()[1].x(20); // this is a std::array
// The change to my_complex_array is reflected in the FlatData sample
std::cout << my_final.my_primitive() << std::endl; // 3
std::cout << my_final.my_complex_array().get_element(1).x() << std::endl; // 20
```

This example shows how to use `plain_cast` to efficiently build a sequence of final elements and a sequence of integers, both members of a mutable type:

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
// 1)
//
// Build a sequence of 5 elements with add_n() instead of 5 calls to
// add_next()
```

```

rti::flat::FinalSequenceBuilder<MyFlatFinalOffset> seq_builder =
    builder.build_my_final_seq();
seq_builder.add_n(5);
// Finish the member, getting the offset to the member
rti::flat::SequenceOffset<MyFlatFinalOffset> seq_offset = seq_builder.finish();
// Cast it to an array of plain C++ type and initialize it.
// This way to initialize it is more efficient than add_next().
auto seq_elements = rti::flat::plain_cast(seq_offset);
for (int i = 0; i < 5; i++) {
    seq_elements[i].my_primitive(i);
    // ...
}
// 2)
//
// Build a sequence of 1000 integers
auto seq_builder = builder.build_my_primitive_seq();
// make space for 1000 elements, but leave them uninitialized
seq_builder.add_n(1000);
auto seq_offset = seq_builder.finish();
// Initialize the elements:
int32_t *elements = rti::flat::plain_cast(seq_offset);
for (int i = 0; i < 1000; i++) {
    elements[i] = ...;
}
// ... continue building the sample using 'builder'

```

### 7.185.3.2 plain\_cast() [2/2]

```

template<typename OffsetType >
const flat_type_traits< OffsetType >::plain_type * rti::flat::plain_cast (
    const OffsetType & offset )

```

Const version of plain\_cast.

## 7.186 FlatData Topic-Types

<<*extension*>> (p. 237) FlatData Language Binding for IDL topic-types

### Modules

- **FlatData Builders**  
*A Builder allows creating and initializing variable-size data.*
- **FlatData Samples**  
*A Sample represents an instance of the IDL topic-type and contains the data in serialized format.*
- **FlatData Offsets**  
*Offsets provide access to the members of a FlatData Sample.*

## 7.186.1 Detailed Description

<<**extension**>> (p. 237) FlatData Language Binding for IDL topic-types

### Note

For a complete description of the FlatData language binding and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connex User's Manual**.

For buildable **code examples**, see <https://community.rti.com/kb/flatdata-and-zero-copy-examples>.

The FlatData language binding is available in the Traditional C++ API and in the Modern C++ API.

RTI FlatData™ is a language binding for IDL types in which the in-memory representation of a sample matches the wire representation. Therefore, the cost of serialization/deserialization is zero.

To select FlatData as the language binding of a type, annotate it with `@language_binding(FLAT_DATA)` in IDL or apply the attribute `languageBinding="flat_data"` in XML.

There are some restrictions regarding the kinds of types to which the FlatData language binding can be applied.

- For final types, the FlatData language binding can be applied only to fixed-size types. A fixed-size type is a type whose wire representation always has the same size. This includes primitive types, arrays of fixed-size types, and structs containing only members of fixed-size types. Unions are not fixed-size types.
- For mutable types, any member is permitted.
- Extensible types cannot be marked as FlatData.

Final types are more efficient, but more restrictive. In general, a good compromise is to define mutable top-level types, but making sure their largest data members are final.

When a type is marked with the FlatData language binding, its mapping into C++ is different than that of a regular type (plain language binding). Rather than a single C++ class with direct access to its members, for a FlatData type **rtiddsgen** generates the following:

- A **Sample** (p. 561), the data in serialized format
- An **Offset** (p. 564), which allows reading the data members of that type inside a Sample, and modifying them without changing the size
- A **Builder** (p. 558), if the type is mutable, which allows creating a variable-size Sample

For example, for the IDL types **MyFlatFinal** (p. 562) and **MyFlatMutable** (p. 562) **rtiddsgen** generates the following C++ types:

- The Sample types **MyFlatFinal** (p. 562) and **MyFlatMutable** (p. 562)
- The Offset types **MyFlatFinalOffset** (p. 1746) and **MyFlatMutableOffset** (p. 1757).
- The Builder type **MyFlatMutableBuilder** (p. 1750).

## 7.186.2 Publishing FlatData

The typical way to publish FlatData samples includes the following steps:

- Create a **FooDataWriter** (p. 1676) as you would for a non-FlatData (plain) topic-type (see **Setting up a data writer** (p. 207)).

(For final topic-types such as **MyFlatFinal** (p. 562))

- Obtain a FlatData sample with **FooDataWriter::get\_loan** (p. 1695).  

```
MyFlatFinal *foo_sample = writer.get_loan();
```
- Initialize the sample, starting from the **root()** (p. 1918) offset.  

```
MyFlatFinalOffset foo_root = foo_sample->root();
foo_root.my_primitive(3);
auto my_complex_offset = foo_root.my_complex();
// ... initialize my_complex_offset
```

(For mutable topic-types such as **MyFlatMutable** (p. 562))

- Obtain a **Builder** (p. 558) to create a variable-size sample with **rti::flat::build\_data()** (p. 560).  

```
MyFlatMutableBuilder foo_builder = rti::flat::build_data(writer);
```
- Use this builder (and possibly nested member builders) to initialize the members.  

```
foo_builder.add_my_primitive(3);
auto my_mutable_builder = foo_builder.build_my_mutable();
// ... build 'my_mutable' (a member with a mutable type)
my_mutable_builder.finish(); // completes a member
auto my_final_offset = foo_builder.add_my_final();
// ... initialize 'my_final' (a member with a final type)
```
- Obtain the completed sample with **MyFlatMutableBuilder::finish\_sample()** (p. 1753). After that, the builder is no longer usable, and the sample size cannot change.  

```
MyFlatMutable *foo_sample = foo_builder.finish_sample();
```
- Optionally, it is possible to change the values of the sample accessing its **root()**, as long as the size doesn't change. For example, if the sample was built with a sequence member with two elements, it is possible to modify any of those elements, but it's not possible to add a third element.

(For both final and mutable topic-types)

- Write the sample with **FooDataWriter::write** (p. 1683).  

```
writer.write(*foo_sample);
```

After write, the DataWriter owns the FlatData sample. This allows avoiding additional copies, the main goal of the Flat↔Data language binding. This means that the sample cannot be reused. The DataWriter will return it to the sample pool when appropriate, as described in **FooDataWriter::get\_loan** (p. 1695).

## 7.186.3 Subscribing to FlatData

To subscribe to a topic using a FlatData topic-type:

- Create a **FooDataReader** (p. 1649) normally (see **Setting up a data reader** (p. 210)).
- Read or take the samples using a loaning operation, such as **FooDataReader::take** (p. 1652) (copying read/take operations cannot be used with FlatData types).
- Access the **root()** (p. 1918) offset, and any of the sample's members from there.

Note that the language binding is a local concept. It is possible to publish with a FlatData topic-type and subscribe to it with a **plain** topic-type with the same (or assignable) definition. It is also possible to use a plain topic-type on the publisher side and subscribe to it using FlatData. The DataWriter or DataReader of the plain topic-type has to use **DDS\_XCDR2\_DATA\_REPRESENTATION** (p. 371) in **DDS\_DataRepresentationQosPolicy** (p. 668).

## Chapter 8

# Namespace Documentation

### 8.1 connext Namespace Reference

Namespace for Connex.

#### Classes

- class **AlreadyDeletedException**  
*The object target of this operation has already been deleted.*
- class **BadParameterException**  
*Illegal parameter value.*
- class **IllegalOperationException**  
*The operation was called under improper circumstances.*
- class **ImmutablePolicyException**  
*Application attempted to modify an immutable QoS policy.*
- class **InconsistentPolicyException**  
*Application specified a set of QoS policies that are not consistent with each other.*
- class **IsInvalidSamplePredicate**  
*Predicate-class to determine if a sample contains invalid data.*
- class **IsReplyRelatedPredicate**  
*Predicate-class to match replies by their related request.*
- class **IsValidSamplePredicate**  
*Predicate-class to determine if a sample contains valid data.*
- class **LoanedSamples**  
*Provides access to a collection of middleware-loaned samples.*
- class **LogicException**  
*Base class of all RTI Connex exceptions caused by a logic error.*
- class **MessagingLibraryVersion**  
*The Connex Messaging Library version.*
- class **MessagingVersion**  
*The Connex Messaging version.*

- class **NotEnabledException**  
*Operation invoked on a **DDSEntity** (p. 1463) that is not yet enabled.*
- class **OutOfResourcesException**  
*RTI Connex ran out of the resources needed to complete the operation.*
- class **PreconditionNotMetException**  
*A pre-condition for the operation was not met.*
- class **Replier**  
*Allows receiving requests and sending replies.*
- class **ReplierListener**  
*Called when a **connex::Replier** (p. 1868) has new available requests.*
- class **ReplierParams**  
*Contains the parameters for creating a **connex::Replier** (p. 1868).*
- class **Requester**  
*Allows sending requests and receiving replies.*
- class **RequesterParams**  
*Contains the parameters for creating a **connex::Requester** (p. 1886).*
- class **RuntimeException**  
*Generic, unspecified error.*
- class **Sample**  
*A data sample and related info received from the middleware.*
- class **SampleIterator**  
*STL-compliant random-access iterator for **SampleRef**<T>*
- class **SampleRef**  
*A data sample and related information received from the middleware.*
- class **SimpleReplier**  
*A callback-based replier.*
- class **SimpleReplierListener**  
*The listener called by a **SimpleReplier** (p. 1935).*
- class **SimpleReplierParams**  
*Contains the parameters for creating a **connex::SimpleReplier** (p. 1935).*
- class **TimeoutException**  
*The operation timed out (does not apply to wait or receive operations)*
- class **UnsupportedException**  
*Unsupported operation.*
- class **WriteSample**  
*A sample for writing data.*
- class **WriteSampleRef**  
*A reference to a data sample for writing.*

## Functions

- `template<typename T, bool IsConst>`  
`ValidSampleIterator< T, IsConst > make_valid_sample_iterator ( SampleIterator< T, IsConst > related_↔ iterator)`  
*Creates an iterator that only returns valid samples.*
- `template<typename T >`  
`LoanedSamples< T > move ( LoanedSamples< T > &ls) throw ()`  
*Creates a new **LoanedSamples** (p. 1727) instance by moving the contents of an existing one.*

*Base class of builders for user-defined mutable unions.*

## Functions

- template<typename OffsetType >  
**flat\_type\_traits**< OffsetType >::plain\_type \* **plain\_cast** (OffsetType &offset)  
*Casts into an equivalent plain C++ type.*
- template<typename OffsetType >  
const **flat\_type\_traits**< OffsetType >::plain\_type \* **plain\_cast** (const OffsetType &offset)  
*Const version of plain\_cast.*
- template<typename TopicType >  
**rti::flat::flat\_type\_traits**< TopicType >::builder **build\_data** (typename TopicType::DataWriter \*writer)

*Begins building a new sample.*

- `template<typename BuilderType >`  
`void discard_builder (typename rti::flat::flat_type_traits< BuilderType >::flat_type::DataWriter *writer,`  
`BuilderType &builder)`

*Discards a sample builder.*

### 8.3.1 Detailed Description

<<**extension**>> (p. 237) Support for **FlatData Topic-Types** (p. 568)

## Chapter 9

# Class Documentation

### 9.1 rti::flat::AbstractAlignedList< ElementOffset > Class Template Reference

Base class of Offsets to sequences and arrays of non-primitive members.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::AbstractAlignedList< ElementOffset >:

#### Public Types

- typedef **Sequenceliterator**< ElementOffset, typename ElementOffset::offset\_kind > **iterator**  
*The iterator type, **Sequenceliterator** (p. 1926).*

#### Public Member Functions

- **iterator begin** ()  
*Gets an iterator to the first Offset.*
- **iterator end** ()  
*Gets an iterator to the past-the-end element.*

#### 9.1.1 Detailed Description

```
template<typename ElementOffset>
class rti::flat::AbstractAlignedList< ElementOffset >
```

Base class of Offsets to sequences and arrays of non-primitive members.

## Template Parameters

<i>ElementOffset</i>	The Offset type of the elements
----------------------	---------------------------------

## 9.1.2 Member Typedef Documentation

### 9.1.2.1 iterator

```
template<typename ElementOffset >
typedef SequenceIterator<ElementOffset, typename ElementOffset::offset_kind> rti::flat::↔
AbstractAlignedList< ElementOffset >::iterator
```

The iterator type, **SequenceIterator** (p. 1926).

## 9.1.3 Member Function Documentation

### 9.1.3.1 begin()

```
template<typename ElementOffset >
iterator rti::flat::AbstractAlignedList< ElementOffset >::begin ( ) [inline]
```

Gets an iterator to the first Offset.

**begin()** (p. 578) and **end()** (p. 578) enable the use of range-for loops, for example:

```
SequenceOffset<MyFlatMutableOffset> sequence_offset = my_type_offset.my_sequence();
for (auto element : sequence_offset) {
    std::cout << element.x() << std::endl;
}
```

References **rti::flat::OffsetBase::get\_buffer\_size()**.

### 9.1.3.2 end()

```
template<typename ElementOffset >
iterator rti::flat::AbstractAlignedList< ElementOffset >::end ( ) [inline]
```

Gets an iterator to the past-the-end element.

References **rti::flat::OffsetBase::get\_buffer\_size()**.

## 9.2 rti::flat::AbstractBuilder Class Reference

Base class of all **Builders** (p. 558).

```
#include <Builder.hpp>
```

Inheritance diagram for rti::flat::AbstractBuilder:

### Public Member Functions

- void **discard** ()  
*Discards a member in process of being built.*
- bool **is\_nested** () const  
*Returns whether this is a member Builder.*
- bool **is\_valid** () const  
*Whether this Builder is valid.*
- rti::xcdr::length\_t **capacity** () const  
*Returns the total capacity in bytes.*
- bool **check\_failure** ()  
*Checks if the previous operation failed and resets the failure flag.*

### Protected Member Functions

- virtual **~AbstractBuilder** ()  
*If this is a member Builder, it calls finish().*

### 9.2.1 Detailed Description

Base class of all **Builders** (p. 558).

### 9.2.2 Constructor & Destructor Documentation

#### 9.2.2.1 ~AbstractBuilder()

```
virtual rti::flat::AbstractBuilder::~~AbstractBuilder ( ) [inline], [protected], [virtual]
```

If this is a member Builder, it calls finish().

If this Builder is building a member (that is, **is\_nested()** (p. 580) is true), and the object goes out of scope before finish() has been called, its destructor calls finish(). Note, however, that it won't report any error.

If this Builder is building a sample (is\_nested()), its destructor doesn't do anything.

## 9.2.3 Member Function Documentation

### 9.2.3.1 `discard()`

```
void rti::flat::AbstractBuilder::discard ( ) [inline]
```

Discards a member in process of being built.

This function ends the creation of a member, returning the Builder of the type that contains the member to its previous state, as if this member had never been built.

#### Precondition

This object must be a member Builder, not a sample Builder.

This method is useful when during the building of a member an error occurs and the application wants to roll back, instead of finishing an incomplete member.

### 9.2.3.2 `is_nested()`

```
bool rti::flat::AbstractBuilder::is_nested ( ) const [inline]
```

Returns whether this is a member Builder.

A member Builder is a Builder that has been created by calling a "build\_<member>" function on another Builder (for example, **MyFlatMutableBuilder::build\_my\_mutable()** (p. 1756)).

#### Returns

True if this is a member Builder, or false if this is a sample Builder.

### 9.2.3.3 `is_valid()`

```
bool rti::flat::AbstractBuilder::is_valid ( ) const [inline]
```

Whether this Builder is valid.

A Builder is not valid when it is default-constructed, or after any of these functions is called: `finish()`, `finish_sample()`, **`discard()`** (p. 580).

Since the Traditional C++ API doesn't use exceptions, certain function failures due to the Builder running out resources are also reported by invalidating the Builder.

### 9.2.3.4 capacity()

```
rti::xcdr::length_t rti::flat::AbstractBuilder::capacity ( ) const [inline]
```

Returns the total capacity in bytes.

The capacity is the total number of bytes this Builder can contain. For a sample Builder (that is, one such that `is_nested()` (p. 580) returns false), `rti::flat::build_data` (p. 560) reserves enough bytes to accommodate any sample of a given type.

### 9.2.3.5 check\_failure()

```
bool rti::flat::AbstractBuilder::check_failure ( ) [inline]
```

Checks if the previous operation failed and resets the failure flag.

This function must be called after each Builder operation to check if it succeeded. Note that after calling `check_failure()` (p. 581) the error flag is reset, so a subsequent call will always return false.

#### Returns

True if there was a failure in the previous operation, false if there was no failure since the last call to `check_failure`.

## 9.3 rti::flat::AbstractListBuilder< DHeaderGen > Class Template Reference

Base class of all array and sequence builders.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for `rti::flat::AbstractListBuilder< DHeaderGen >`:

### Protected Member Functions

- unsigned int `element_count () const`  
*Returns the current number of elements that have been added.*

## Additional Inherited Members

### 9.3.1 Detailed Description

```
template<typename DHeaderGen>
class rti::flat::AbstractListBuilder< DHeaderGen >
```

Base class of all array and sequence builders.

### 9.3.2 Member Function Documentation

#### 9.3.2.1 element\_count()

```
template<typename DHeaderGen >
unsigned int rti::flat::AbstractListBuilder< DHeaderGen >::element_count ( ) const [inline],
[protected]
```

Returns the current number of elements that have been added.

## 9.4 rti::flat::AbstractPrimitiveList< T > Class Template Reference

Base class for Offsets to sequences and arrays of primitive types.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::AbstractPrimitiveList< T >:

### Public Member Functions

- T **get\_element** (unsigned int i) const  
*Returns an element by index.*
- bool **set\_element** (unsigned int i, T value)  
*Sets an element by index.*

#### 9.4.1 Detailed Description

```
template<typename T>
class rti::flat::AbstractPrimitiveList< T >
```

Base class for Offsets to sequences and arrays of primitive types.

## Template Parameters

<i>T</i>	The primitive type
----------	--------------------

## 9.4.2 Member Function Documentation

## 9.4.2.1 get\_element()

```
template<typename T >
T rti::flat::AbstractPrimitiveList< T >::get_element (
    unsigned int i ) const [inline]
```

Returns an element by index.

## Parameters

<i>i</i>	The zero-based index of the element
----------	-------------------------------------

## See also

[rti::flat::plain\\_cast\(\)](#) (p. 566) for a method to access all the elements at once

## 9.4.2.2 set\_element()

```
template<typename T >
bool rti::flat::AbstractPrimitiveList< T >::set_element (
    unsigned int i,
    T value ) [inline]
```

Sets an element by index.

## Parameters

<i>i</i>	The zero-based index of the element to set
<i>value</i>	The value to set

## Returns

true if it was possible to set the element, or false if this collection has less than  $i - 1$  elements.

See also

`rti::flat::plain_cast()` (p. 566) for a method to access all the elements at once

## 9.5 `rti::flat::AbstractSequenceBuilder< DHeaderGen >` Class Template Reference

Base class of Builders for sequence members.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for `rti::flat::AbstractSequenceBuilder< DHeaderGen >`:

### Public Member Functions

- unsigned int `element_count ()` const  
*Returns the current number of elements that have been added.*

### Additional Inherited Members

#### 9.5.1 Detailed Description

```
template<typename DHeaderGen>
class rti::flat::AbstractSequenceBuilder< DHeaderGen >
```

Base class of Builders for sequence members.

This class contains only implementation details and doesn't add any public function to **AbstractListBuilder** (p. 581).

#### 9.5.2 Member Function Documentation

### 9.5.2.1 element\_count()

```
template<typename DHeaderGen >
unsigned int rti::flat::AbstractListBuilder< DHeaderGen >::element_count ( ) const [inline]
```

Returns the current number of elements that have been added.

## 9.6 rti::flat::AggregationBuilder Class Reference

Base class of struct and union builders.

```
#include <AggregationBuilders.hpp>
```

Inheritance diagram for rti::flat::AggregationBuilder:

### Additional Inherited Members

#### 9.6.1 Detailed Description

Base class of struct and union builders.

This class contains implementation details and doesn't add any public function to **AbstractBuilder** (p. 579). See **MyFlatMutableBuilder** (p. 1750) for a concrete example of a struct builder.

## 9.7 connext::AlreadyDeletedException Class Reference

The object target of this operation has already been deleted.

Inheritance diagram for connext::AlreadyDeletedException:

### 9.7.1 Detailed Description

The object target of this operation has already been deleted.

See also

**DDS\_RETCODE\_ALREADY\_DELETED** (p. 337)

## 9.8 connext::BadParameterException Class Reference

Illegal parameter value.

Inheritance diagram for connext::BadParameterException:

### 9.8.1 Detailed Description

Illegal parameter value.

See also

**DDS\_RETCODE\_BAD\_PARAMETER** (p. 336)

## 9.9 DDS\_AcknowledgmentInfo Struct Reference

Information about an application-level acknowledged sample.

### Public Attributes

- **DDS\_InstanceHandle\_t subscription\_handle**  
*Subscription handle of the acknowledging DDSDataReader (p. 1288).*
- struct **DDS\_SampleIdentity\_t sample\_identity**  
*Identity of the sample being acknowledged.*
- **DDS\_Boolean valid\_response\_data**  
*Flag indicating validity of the user response data in the acknowledgment.*
- struct **DDS\_AckResponseData\_t response\_data**  
*User data payload of application-level acknowledgment message.*

## 9.9.1 Detailed Description

Information about an application-level acknowledged sample.

When acknowledging a sample, the reader provides the writer with information about the sample being acknowledged. The AcknowledgmentInfo structure provides the identity and cookie of the sample being acknowledged, as well as user data payload provided by the reader.

## 9.9.2 Member Data Documentation

### 9.9.2.1 subscription\_handle

```
DDS_InstanceHandle_t DDS_AcknowledgmentInfo::subscription_handle
```

Subscription handle of the acknowledging **DDSDataReader** (p. 1288).

### 9.9.2.2 sample\_identity

```
struct DDS_SampleIdentity_t DDS_AcknowledgmentInfo::sample_identity
```

Identity of the sample being acknowledged.

See also

**DDS\_SampleIdentity\_t** (p. 1081)

### 9.9.2.3 valid\_response\_data

```
DDS_Boolean DDS_AcknowledgmentInfo::valid_response_data
```

Flag indicating validity of the user response data in the acknowledgment.

This flag is true when the **DDS\_RtpsReliableReaderProtocol\_t::min\_app\_ack\_response\_keep\_duration** (p. 1060) has not yet elapsed for the acknowledgment's response data.

The flag is false when that duration has elapsed for the response data.

### 9.9.2.4 response\_data

```
struct DDS_AckResponseData_t DDS_AcknowledgmentInfo::response_data
```

User data payload of application-level acknowledgment message.

Response data set by **DDSDataReader** (p. 1288) when sample was acknowledged.

## 9.10 DDS\_AckResponseData\_t Struct Reference

Data payload of an application-level acknowledgment.

### Public Attributes

- struct **DDS\_OctetSeq** value  
*a sequence of octets*

### 9.10.1 Detailed Description

Data payload of an application-level acknowledgment.

### 9.10.2 Member Data Documentation

#### 9.10.2.1 value

```
struct DDS_OctetSeq DDS_AckResponseData_t::value
```

a sequence of octets

**[default]** empty (zero-length)

**[range]** Octet sequence of length [0, **DDS\_DataReaderResourceLimitsQosPolicy::max\_app\_ack\_response\_length** (p. 664)],

## 9.11 DDS\_AllocationSettings\_t Struct Reference

Resource allocation settings.

## Public Attributes

- **DDS\_Long initial\_count**  
*The initial count of resources.*
- **DDS\_Long max\_count**  
*The maximum count of resources.*
- **DDS\_Long incremental\_count**  
*The incremental count of resources.*

### 9.11.1 Detailed Description

Resource allocation settings.

QoS:

**DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 746)

### 9.11.2 Member Data Documentation

#### 9.11.2.1 initial\_count

**DDS\_Long** DDS\_AllocationSettings\_t::initial\_count

The initial count of resources.

The initial resources to be allocated.

**[default]** It depends on the case.

**[range]** [0, 1 million], < max\_count, (or = max\_count only if increment\_count == 0)

#### 9.11.2.2 max\_count

**DDS\_Long** DDS\_AllocationSettings\_t::max\_count

The maximum count of resources.

The maximum resources to be allocated.

**[default]** Depends on the case.

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), > initial\_count (or = initial\_count only if increment\_count == 0)

### 9.11.2.3 incremental\_count

**DDS\_Long** DDS\_AllocationSettings\_t::incremental\_count

The incremental count of resources.

The resource to be allocated when more resources are needed.

**[default]** Depends on the case.

**[range]** -1 (Double the amount of extra memory allocated each time memory is needed) or [1,1 million] (or = 0 only if initial\_count == max\_count)

## 9.12 DDS\_AnnotationParameterValue Struct Reference

Annotation parameter value.

### 9.12.1 Detailed Description

Annotation parameter value.

This structure is use to represent an annotation parameter value. For example, the value of the annotation **[default]** for an aggregation type member.

## 9.13 DDS\_AsynchronousPublisherQosPolicy Struct Reference

Configures the mechanism that sends user data in an external middleware thread.

### Public Attributes

- **DDS\_Boolean disable\_asynchronous\_write**  
*Disable asynchronous publishing.*
- struct **DDS\_ThreadSettings\_t thread**  
*Settings of the publishing thread.*
- **DDS\_Boolean disable\_asynchronous\_batch**  
*Disable asynchronous batch flushing.*
- struct **DDS\_ThreadSettings\_t asynchronous\_batch\_thread**  
*Settings of the batch flushing thread.*
- **DDS\_Boolean disable\_topic\_query\_publication**  
*Disable topic query publication.*
- struct **DDS\_ThreadSettings\_t topic\_query\_publication\_thread**  
*Settings of the **DDSTopicQuery** (p. 1627) publication thread.*

### 9.13.1 Detailed Description

Configures the mechanism that sends user data in an external middleware thread.

Specifies the asynchronous publishing and asynchronous batch flushing settings of the **DDSPublisher** (p. 1550) instances.

The QoS policy specifies whether asynchronous publishing and asynchronous batch flushing are enabled for the **DDSDataWriter** (p. 1321) entities belonging to this **DDSPublisher** (p. 1550). If so, the publisher will spawn up to two threads, one for asynchronous publishing and one for asynchronous batch flushing.

This policy also configures the settings of the **DDSTopicQuery** (p. 1627) publication thread. The publisher will spawn this thread only if one or more DataWriters enable TopicQueries.

See also

**DDS\_BatchQosPolicy** (p. 600).

**DDS\_PublishModeQosPolicy** (p. 1025).

Entity:

**DDSPublisher** (p. 1550)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.13.2 Usage

You can use this QoS policy to reduce the amount of time your application thread spends sending data.

You can also use it, along with **DDS\_PublishModeQosPolicy** (p. 1025) and a **DDSFlowController** (p. 1468), to send large data reliably. "Large" in this context means that the data that cannot be sent as a single packet by a network transport. For example, to send data larger than 63K reliably using UDP/IP, you must configure RTI Connex to fragment the data and send it asynchronously.

The asynchronous *publisher* thread is shared by all **DDS\_ASYNCRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) **DDSDataWriter** (p. 1321) instances that belong to this publisher and handles their data transmission chores.

The asynchronous *batch flushing* thread is shared by all **DDSDataWriter** (p. 1321) instances with batching enabled that belong to this publisher.

This QoS policy also allows you to adjust the settings of the asynchronous publishing and the asynchronous batch flushing threads. To use different threads for two different **DDSDataWriter** (p. 1321) entities, the instances must belong to different **DDSPublisher** (p. 1550) instances.

A **DDSPublisher** (p. 1550) must have asynchronous publishing enabled for its **DDSDataWriter** (p. 1321) instances to write asynchronously.

A **DDSPublisher** (p. 1550) must have asynchronous batch flushing enabled in order to flush the batches of its **DDSDataWriter** (p. 1321) instances asynchronously. However, no asynchronous batch flushing thread will be started until the first **DDSDataWriter** (p. 1321) instance with batching enabled is created from this **DDSPublisher** (p. 1550).

### 9.13.3 Member Data Documentation

#### 9.13.3.1 `disable_asynchronous_write`

```
DDS_Boolean DDS_AsymynchronousPublisherQosPolicy::disable_asynchronous_write
```

Disable asynchronous publishing.

If set to **DDS\_BOOLEAN\_TRUE** (p. 317), any **DDSDataWriter** (p. 1321) created with **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337).

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

#### 9.13.3.2 `thread`

```
struct DDS_ThreadSettings_t DDS_AsymynchronousPublisherQosPolicy::thread
```

Settings of the publishing thread.

There is only one asynchronous publishing thread per **DDSPublisher** (p. 1550).

**[default]** priority below normal.

The actual value depends on your architecture:

For Windows: -2

For Linux: OS default priority

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** mask = **DDS\_THREAD\_SETTINGS\_KIND\_MASK\_DEFAULT** (p. 351)

#### 9.13.3.3 `disable_asynchronous_batch`

```
DDS_Boolean DDS_AsymynchronousPublisherQosPolicy::disable_asynchronous_batch
```

Disable asynchronous batch flushing.

If set to **DDS\_BOOLEAN\_TRUE** (p. 317), any **DDSDataWriter** (p. 1321) created with batching enabled will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337).

If **DDS\_BatchQosPolicy::max\_flush\_delay** (p. 602) is different than **DDS\_DURATION\_INFINITE** (p. 326), **DDS\_AsymynchronousPublisherQosPolicy::disable\_asynchronous\_batch** (p. 592) must be set **DDS\_BOOLEAN\_FALSE** (p. 317).

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.13.3.4 asynchronous\_batch\_thread

```
struct DDS_ThreadSettings_t DDS_AsyncronousPublisherQosPolicy::asynchronous_batch_thread
```

Settings of the batch flushing thread.

There is only one asynchronous batch flushing thread per **DDSPublisher** (p. 1550).

**[default]** priority below normal.

The actual value depends on your architecture:

For Windows: -2

For Linux: OS default priority

For a complete list of platform specific values, please refer to `Platform Notes`. **[default]** The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** mask = `DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT` (p. 351)

### 9.13.3.5 disable\_topic\_query\_publication

```
DDS_Boolean DDS_AsyncronousPublisherQosPolicy::disable_topic_query_publication
```

Disable topic query publication.

If set to `DDS_BOOLEAN_TRUE` (p. 317), any `DDSDataWriter` (p. 1321) created with `DDS_TopicQueryDispatch`↔  
`QosPolicy::enable` (p. 1142) set to `DDS_BOOLEAN_TRUE` (p. 317) will fail with `DDS_RETCODE_INCONSISTENT`↔  
`_POLICY` (p. 337).

**[default]** `DDS_BOOLEAN_FALSE` (p. 317)

### 9.13.3.6 topic\_query\_publication\_thread

```
struct DDS_ThreadSettings_t DDS_AsyncronousPublisherQosPolicy::topic_query_publication_thread
```

Settings of the `DDSTopicQuery` (p. 1627) publication thread.

There is only one TopicQuery publication thread per **DDSPublisher** (p. 1550). This thread will exist as long as one or more `DDSDataWriter` (p. 1321) enables TopicQueries (via `DDS_DataWriterQos::topic_query_dispatch` (p. 697)).

**[default]** priority below normal.

The actual value depends on your architecture:

For Windows: -2

For Linux: OS default priority

For a complete list of platform specific values, please refer to `Platform Notes`. **[default]** The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** mask = `DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT` (p. 351)

## 9.14 DDS\_AsyncWaitSetProperty\_t Struct Reference

Specifies the **DDSAsyncWaitSet** (p. 1259) behavior.

### Public Attributes

- struct **DDS\_WaitSetProperty\_t** **waitset\_property**  
*Specifies the behavior of the asynchronous wait behavior, which is equivalent to the wait mechanism of a **DDSWaitSet** (p. 1629).*
- **DDS\_UnsignedLong** **thread\_pool\_size**  
*Number of threads that conform the thread pool of the **DDSAsyncWaitSet** (p. 1259).*
- struct **DDS\_ThreadSettings\_t** **thread\_settings**  
***DDS\_ThreadSettings\_t** (p. 1123) for each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).*
- char \* **thread\_name\_prefix**  
*Prefix used to composed the name of each thread that conforms the thread pool the **DDSAsyncWaitSet** (p. 1259).*
- struct **DDS\_Duration\_t** **wait\_timeout**  
*Asynchronous wait timeout.*
- **DDS\_Long** **level**  
*Specifies the level of an **DDSAsyncWaitSet** (p. 1259).*

### 9.14.1 Detailed Description

Specifies the **DDSAsyncWaitSet** (p. 1259) behavior.

This property allows configuring the behavior of the asynchronous wait and the **DDSCondition** (p. 1276) dispatch, as well as the parameters of the thread pool.

See also

**DDS\_WaitSetProperty\_t** (p. 1242)

**DDS\_ThreadSettings\_t** (p. 1123)

### 9.14.2 Member Data Documentation

#### 9.14.2.1 waitset\_property

```
struct DDS_WaitSetProperty_t DDS_AsyncWaitSetProperty_t::waitset_property
```

Specifies the behavior of the asynchronous wait behavior, which is equivalent to the wait mechanism of a **DDSWaitSet** (p. 1629).

See also

**DDS\_WaitSetProperty\_t** (p. 1242)

### 9.14.2.2 thread\_pool\_size

```
DDS_UnsignedLong DDS_AsyncWaitSetProperty_t::thread_pool_size
```

Number of threads that conform the thread pool of the **DDSAsyncWaitSet** (p. 1259).

Size must be equal or greater than one.

**[default]** 1

### 9.14.2.3 thread\_settings

```
struct DDS_ThreadSettings_t DDS_AsyncWaitSetProperty_t::thread_settings
```

**DDS\_ThreadSettings\_t** (p. 1123) for each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).

Each thread within the pool is created with the same settings.

**[default]** Default thread settings values.

See also

**DDS\_ThreadSettings\_t** (p. 1123)

### 9.14.2.4 thread\_name\_prefix

```
char* DDS_AsyncWaitSetProperty_t::thread_name_prefix
```

Prefix used to composed the name of each thread that conforms the thread pool the **DDSAsyncWaitSet** (p. 1259).

The composed name has the form:

`thread_name_prefix##[index]AWs` where [index] is an integer that identifies the thread relative to the **DDSAsyncWaitSet** (p. 1259).

If NULL, the default prefix will be used.

**[default]** NULL (use default prefix)

### 9.14.2.5 wait\_timeout

```
struct DDS_Duration_t DDS_AsyncWaitSetProperty_t::wait_timeout
```

Asynchronous wait timeout.

Specifies the maximum amount of time the leader thread of the **DDSAsyncWaitSet** (p. 1259) waits for an attached **DDSCondition** (p. 1276) to trigger before it wakes up.

Duration must be a value greater than zero.

See also

**DDSWaitSet::wait** (p. 1634)

[default] **DDS\_DURATION\_INFINITE** (p. 326)

### 9.14.2.6 level

```
DDS_Long DDS_AsyncWaitSetProperty_t::level
```

Specifies the level of an **DDSAsyncWaitSet** (p. 1259).

The level prevents an application to deadlock when it uses multiple **DDSAsyncWaitSet** (p. 1259) instances that call operations on each other from the context of one of their thread pool's thread.

Inside the context of one of these threads, the application can synchronize only with other **DDSAsyncWaitSet** (p. 1259) of bigger level.

[default] 1

## 9.15 DDS\_AvailabilityQosPolicy Struct Reference

Configures the availability of data.

### Public Attributes

- **DDS\_Boolean enable\_required\_subscriptions**  
*Enables support for required subscriptions in a **DDSDataWriter** (p. 1321).*
- struct **DDS\_Duration\_t max\_data\_availability\_waiting\_time**  
*Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.*
- struct **DDS\_Duration\_t max\_endpoint\_availability\_waiting\_time**  
*Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).*
- struct **DDS\_EndpointGroupSeq required\_matched\_endpoint\_groups**  
*A sequence of endpoint groups.*

### 9.15.1 Detailed Description

Configures the availability of data.

Entity:

**DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **YES** (p. 360) (only on a **DDSDataWriter** (p. 1321) except for the member **DDS\_↔ AvailabilityQosPolicy::enable\_required\_subscriptions** (p. 599))

### 9.15.2 Usage

This QoS policy is used in the context of two features:

- Collaborative DataWriters
- Required Subscriptions

#### Collaborative DataWriters

The Collaborative DataWriters feature allows having multiple DataWriters publishing samples from a common logical data source. The DataReaders will combine the samples coming from the DataWriters in order to reconstruct the correct order at the source.

This QoS policy allows you to configure the ordering and combination process in the DataReader and can be used to support two different use cases:

- **Ordered delivery of samples in high-availability scenarios** One example of this is RTI Persistence Service. When a late-joining DataReader configured with **DDS\_DurabilityQosPolicy** (p. 767) set to **DDS\_PERSISTENT\_↔ \_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401) joins a DDS domain, it will start receiving historical samples from multiple DataWriters. For example, if the original DataWriter is still alive, the newly created DataReader will receive samples from the original DataWriter and one or more RTI Persistence Service DataWriters (PRSTDataWriters). This policy can be used to configure the sample ordering process on the DataReader.
- **Ordered delivery of samples in load-balanced scenarios** Multiple instances of the same application can work together to process and deliver samples. When the samples arrive through different data-paths out of order, the DataReader will be able to reconstruct the order at the destination. An example of this is when multiple instances of RTI Persistence Service are used to persist the data. Persisting data to a database on disk can be a bottleneck for throughput. You can improve scalability and performance by dividing the workload across different instances of RTI Persistence Service that use different databases. For example, samples larger than 10 are persisted by Persistence Service 1, samples less than or equal to 10 are persisted by Persistence Service 2.

- **Ordered delivery of samples with Group Ordered Access** This policy can also be used to configure the sample ordering process when the Subscriber is configured with **DDS\_PresentationQosPolicy** (p.996) `access_scope` set to **DDS\_GROUP\_PRESENTATION\_QOS** (p.418). In this case, the Subscriber must deliver in order the samples published by a group of DataWriters that belong to the same Publisher and have `access_scope` set to **DDS\_GROUP\_PRESENTATION\_QOS** (p.418).

Each sample published in a DDS domain for a given logical data source is uniquely identified by a pair (virtual GUID, virtual sequence number). Samples from the same data source (same virtual GUID) can be published by different DataWriters. A DataReader will deliver a sample (VGUIDn, VSNm) to the application if one of the following conditions is satisfied:

- (VGUIDn, VSNm-1) has already been delivered to the application.
- All the known DataWriters publishing VGUIDn have announced that they do not have (VGUIDn, VSNm-1).
- None of the known DataWriters publishing GUIDn have announced potential availability of (VGUIDn, VSNm-1) and both timeouts in this QoS policy have expired.

A DataWriter announces potential availability of samples by using virtual heartbeats (HBs).

When **DDS\_PresentationQosPolicy::access\_scope** (p.1000) is set to **DDS\_TOPIC\_PRESENTATION\_QOS** (p.418) or **DDS\_INSTANCE\_PRESENTATION\_QOS** (p.418), the virtual HB contains information about the samples contained in the **DDSDataWriter** (p.1321) history.

When **DDS\_PresentationQosPolicy::access\_scope** (p.1000) is set to **DDS\_GROUP\_PRESENTATION\_QOS** (p.418), the virtual HB contains information about all DataWriters in the **DDSPublisher** (p.1550).

The frequency at which virtual HBs are sent is controlled by the protocol parameters **DDS\_RtpsReliableWriterProtocol\_t::virtual\_heartbeat\_period** (p.1066) and **DDS\_RtpsReliableWriterProtocol\_t::samples\_per\_virtual\_heartbeat** (p.1066).

### Required Subscriptions

In the context of Required Subscriptions, this QoS policy can be used to configure a set of Required Subscriptions on a **DDSDataWriter** (p.1321).

Required subscriptions are preconfigured, named subscriptions that may leave and subsequently rejoin the network from time to time, at the same or different physical locations. Any time a required subscription is disconnected, any samples that would have been delivered to it are stored for delivery if and when the subscription rejoins the network.

### 9.15.3 Consistency

For a DataWriter, the setting of **AVAILABILITY** (p.364) must be set consistently with that of the **RELIABILITY** (p.433) and **DURABILITY** (p.398).

If **DDS\_AvailabilityQosPolicy::enable\_required\_subscriptions** (p.599) is set to **DDS\_BOOLEAN\_TRUE** (p.317), **DDS\_ReliabilityQosPolicy::kind** (p.1043) must be set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p.435), **DDS\_DurabilityQosPolicy** (p.767) must be set to a value different than **DDS\_VOLATILE\_DURABILITY\_QOS** (p.400), and **DDS\_DurabilityQosPolicy::writer\_depth** (p.770) must be set to either **DDS\_AUTO\_WRITER\_DEPTH** (p.401) or **DDS\_LENGTH\_UNLIMITED** (p.438).

## 9.15.4 Member Data Documentation

### 9.15.4.1 enable\_required\_subscriptions

```
DDS_Boolean DDS_AvailabilityQosPolicy::enable_required_subscriptions
```

Enables support for required subscriptions in a **DDSDataWriter** (p. 1321).

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.15.4.2 max\_data\_availability\_waiting\_time

```
struct DDS_Duration_t DDS_AvailabilityQosPolicy::max_data_availability_waiting_time
```

Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.

#### Collaborative DataWriters

A sample identified by (VGUIDn, VSNm) will be delivered to the application if this timeout expires for the sample and the following two conditions are satisfied:

- None of the known DataWriters publishing VGUIDn have announced potential availability of (VGUIDn, VSNm-1).
- The DataWriters for all the endpoint groups specified in **required\_matched\_endpoint\_groups** (p. 599) have been discovered or **max\_endpoint\_availability\_waiting\_time** (p. 599) has expired.

#### Required Subscriptions

This field is not applicable to Required Subscriptions.

**[default]** **DDS\_DURATION\_AUTO** (p. 327) (**DDS\_DURATION\_INFINITE** (p. 326) for **DDS\_GROUP\_PRESENTATION\_↔\_QOS** (p. 418)). Otherwise, 0 seconds

**[range]** [0, **DDS\_DURATION\_INFINITE** (p. 326)], **DDS\_DURATION\_AUTO** (p. 327)

### 9.15.4.3 max\_endpoint\_availability\_waiting\_time

```
struct DDS_Duration_t DDS_AvailabilityQosPolicy::max_endpoint_availability_waiting_time
```

Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).

#### Collaborative DataWriters

The set of endpoint groups that are required to provide samples for a data source can be configured using **required\_↔\_matched\_endpoint\_groups** (p. 599).

A non-consecutive sample identified by (VGUIDn, VSNm) cannot be delivered to the application unless DataWriters for all the endpoint groups in **required\_matched\_endpoint\_groups** (p. 599) are discovered or this timeout expires.

#### Required Subscriptions

This field is not applicable to Required Subscriptions.

**[default]** **DDS\_DURATION\_AUTO** (p. 327) (**DDS\_DURATION\_INFINITE** (p. 326) for **DDS\_GROUP\_PRESENTATION\_↔\_QOS** (p. 418)). Otherwise, 0 seconds

**[range]** [0, **DDS\_DURATION\_INFINITE** (p. 326)], **DDS\_DURATION\_AUTO** (p. 327)

#### 9.15.4.4 required\_matched\_endpoint\_groups

```
struct DDS_EndpointGroupSeq DDS_AvailabilityQosPolicy::required_matched_endpoint_groups
```

A sequence of endpoint groups.

##### Collaborative DataWriters

In the context of Collaborative DataWriters, it specifies the set of endpoint groups that are expected to provide samples for the same data source.

The quorum count in a group represents the number of DataWriters that must be discovered for that group before the DataReader is allowed to provide non consecutive samples to the application.

A DataWriter becomes a member of an endpoint group by configuring the role\_name in **DDS\_DataWriterQos**↔::**publication\_name** (p. 697).

##### Required Subscriptions

In the context of Required Subscriptions, it specifies the set of Required Subscriptions on a **DDSDataWriter** (p. 1321).

Each Required Subscription is specified by a name and a quorum count.

The quorum count represents the number of DataReaders that have to acknowledge the sample before it can be considered fully acknowledged for that Required Subscription.

A DataReader is associated with a Required Subscription by configuring the role\_name in **DDS\_DataReaderQos**↔::**subscription\_name** (p. 652).

**[default]** Empty sequence

## 9.16 DDS\_BatchQosPolicy Struct Reference

Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.

### Public Attributes

- **DDS\_Boolean enable**  
*Specifies whether or not batching is enabled.*
- **DDS\_Long max\_data\_bytes**  
*The maximum cumulative length of all serialized samples in a batch.*
- **DDS\_Long max\_samples**  
*The maximum number of samples in a batch.*
- struct **DDS\_Duration\_t max\_flush\_delay**  
*The maximum flush delay.*
- struct **DDS\_Duration\_t source\_timestamp\_resolution**  
*Batch source timestamp resolution.*
- **DDS\_Boolean thread\_safe\_write**  
*Determines whether or not the write operation is thread safe.*

### 9.16.1 Detailed Description

Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.

This QoS policy configures the ability of the middleware to collect multiple user data samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

This QoS policy can be used to dramatically increase effective throughput for small data samples. Usually, throughput for small samples (size < 2048 bytes) is limited by CPU capacity and not by network bandwidth. Batching many smaller samples to be sent in a single large packet will increase network utilization, and thus throughput, in terms of samples per second.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

### 9.16.2 Member Data Documentation

#### 9.16.2.1 enable

```
DDS_Boolean DDS_BatchQoSPolicy::enable
```

Specifies whether or not batching is enabled.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

#### 9.16.2.2 max\_data\_bytes

```
DDS_Long DDS_BatchQoSPolicy::max_data_bytes
```

The maximum cumulative length of all serialized samples in a batch.

A batch is flushed automatically when this maximum is reached.

`max_data_bytes` does not include the meta data associated with the batch samples. Each sample has at least 8 bytes of meta data containing information such as the timestamp and sequence number. The meta data can be as large as 52 bytes for keyed topics and 20 bytes for unkeyed topics.

Note: Batches must contain whole samples. If a new batch is started and its initial sample causes the serialized size to exceed `max_data_bytes`, RTI Connexx will send the sample in a single batch.

**[default]** 1024

**[range]** [1, **DDS\_LENGTH\_UNLIMITED** (p. 438)]

### 9.16.3 Consistency

The setting of `DDS_BatchQosPolicy::max_data_bytes` (p.601) must be consistent with `DDS_BatchQosPolicy::max_samples` (p.602). For these two values to be consistent, they cannot be both `DDS_LENGTH_UNLIMITED` (p.438).

#### 9.16.3.1 max\_samples

```
DDS_Long DDS_BatchQosPolicy::max_samples
```

The maximum number of samples in a batch.

A batch is flushed automatically when this maximum is reached.

[default] `DDS_LENGTH_UNLIMITED` (p.438)

[range] [1, `DDS_LENGTH_UNLIMITED` (p.438)]

### 9.16.4 Consistency

The setting of `DDS_BatchQosPolicy::max_samples` (p.602) must be consistent with `DDS_BatchQosPolicy::max_data_bytes` (p.601). For these two values to be consistent, they cannot be both `DDS_LENGTH_UNLIMITED` (p.438).

#### 9.16.4.1 max\_flush\_delay

```
struct DDS_Duration_t DDS_BatchQosPolicy::max_flush_delay
```

The maximum flush delay.

A batch is flushed automatically after the delay specified by this parameter.

The delay is measured from the time the first sample in the batch is written by the application.

[default] `DDS_DURATION_INFINITE` (p.326)

[range] [0, `DDS_DURATION_INFINITE` (p.326)]

### 9.16.5 Consistency

The setting of `DDS_BatchQosPolicy::max_flush_delay` (p.602) must be consistent with `DDS_AsymynchronousPublisherQosPolicy::disable_asynchronous_batch` (p.592) and `DDS_BatchQosPolicy::thread_safe_write` (p.603). If the delay is different than `DDS_DURATION_INFINITE` (p.326), `DDS_AsymynchronousPublisherQosPolicy::disable_asynchronous_batch` (p.592) must be set to `DDS_BOOLEAN_FALSE` (p.317) and `DDS_BatchQosPolicy::thread_safe_write` (p.603) must be set to `DDS_BOOLEAN_TRUE` (p.317).

### 9.16.5.1 source\_timestamp\_resolution

```
struct DDS_Duration_t DDS_BatchQosPolicy::source_timestamp_resolution
```

Batch source timestamp resolution.

The value of this field determines how the source timestamp is associated with the samples in a batch.

A sample written with timestamp 't' inherits the source timestamp 't2' associated with the previous sample unless ('t' - 't2') > source\_timestamp\_resolution.

If source\_timestamp\_resolution is set to **DDS\_DURATION\_INFINITE** (p. 326), every sample in the batch will share the source timestamp associated with the first sample.

If source\_timestamp\_resolution is set to zero, every sample in the batch will contain its own source timestamp corresponding to the moment when the sample was written.

The performance of the batching process is better when source\_timestamp\_resolution is set to **DDS\_DURATION\_↔INFINITE** (p. 326).

[default] **DDS\_DURATION\_INFINITE** (p. 326)

[range] [0, **DDS\_DURATION\_INFINITE** (p. 326)]

## 9.16.6 Consistency

The setting of **DDS\_BatchQosPolicy::source\_timestamp\_resolution** (p. 602) must be consistent with **DDS\_Batch↔QosPolicy::thread\_safe\_write** (p. 603). If **DDS\_BatchQosPolicy::thread\_safe\_write** (p. 603) is set to **DDS\_↔BOOLEAN\_FALSE** (p. 317), **DDS\_BatchQosPolicy::source\_timestamp\_resolution** (p. 602) must be set to **DDS\_↔\_DURATION\_INFINITE** (p. 326).

### 9.16.6.1 thread\_safe\_write

```
DDS_Boolean DDS_BatchQosPolicy::thread_safe_write
```

Determines whether or not the write operation is thread safe.

If this parameter is set to **DDS\_BOOLEAN\_TRUE** (p. 317), multiple threads can call write on the **DDSDataWriter** (p. 1321) concurrently.

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

## 9.16.7 Consistency

The setting of **DDS\_BatchQosPolicy::thread\_safe\_write** (p. 603) must be consistent with **DDS\_BatchQosPolicy↔::source\_timestamp\_resolution** (p. 602). If **DDS\_BatchQosPolicy::thread\_safe\_write** (p. 603) is set to **DDS\_↔BOOLEAN\_FALSE** (p. 317), **DDS\_BatchQosPolicy::source\_timestamp\_resolution** (p. 602) must be set to **DDS\_↔\_DURATION\_INFINITE** (p. 326).

## 9.17 DDS\_BooleanSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Boolean** (p. 320) >

### 9.17.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Boolean** (p. 320) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Boolean** (p. 320)

**FooSeq** (p. 1697)

## 9.18 DDS\_BuiltinTopicKey\_t Struct Reference

The key type of the built-in topic types.

### Public Attributes

- **DDS\_BUILTIN\_TOPIC\_KEY\_TYPE\_NATIVE value** [DDS\_BUILTIN\_TOPIC\_KEY\_TYPE\_NATIVE\_LENGTH]  
*An array of four integers that uniquely represents a remote **DDSEntity** (p. 1463).*

### 9.18.1 Detailed Description

The key type of the built-in topic types.

Each remote **DDSEntity** (p. 1463) to be discovered can be uniquely identified by this key. This is the key of all the built-in topic data types.

See also

**DDS\_ParticipantBuiltinTopicData** (p. 979)

**DDS\_TopicBuiltinTopicData** (p. 1128)

**DDS\_PublicationBuiltinTopicData** (p. 1010)

**DDS\_SubscriptionBuiltinTopicData** (p. 1108)

## 9.18.2 Member Data Documentation

### 9.18.2.1 value

```
DDS_BUILTIN_TOPIC_KEY_TYPE_NATIVE DDS_BuiltinTopicKey_t::value[DDS_BUILTIN_TOPIC_KEY_TYPE_NATIVE↔
_LENGTH]
```

An array of four integers that uniquely represents a remote **DDSEntity** (p. 1463).

## 9.19 DDS\_BuiltinTopicReaderResourceLimits\_t Struct Reference

Built-in topic reader's resource limits.

### Public Attributes

- **DDS\_Long initial\_samples**  
*Initial number of samples.*
- **DDS\_Long max\_samples**  
*Maximum number of samples.*
- **DDS\_Long initial\_infos**  
*Initial number of sample infos.*
- **DDS\_Long max\_infos**  
*Maximum number of sample infos.*
- **DDS\_Long initial\_outstanding\_reads**  
*The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1288).*
- **DDS\_Long max\_outstanding\_reads**  
*The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1288).*
- **DDS\_Long max\_samples\_per\_read**  
*Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1288).*
- **DDS\_Boolean disable\_fragmentation\_support**  
*Determines whether the built-in topic **DDSDataReader** (p. 1288) can receive fragmented samples.*
- **DDS\_Long max\_fragmented\_samples**  
*The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1288) may store fragments at a given point in time.*
- **DDS\_Long initial\_fragmented\_samples**  
*The initial number of samples for which a built-in topic **DDSDataReader** (p. 1288) may store fragments.*
- **DDS\_Long max\_fragmented\_samples\_per\_remote\_writer**  
*The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1288) may store fragments.*
- **DDS\_Long max\_fragments\_per\_sample**  
*Maximum number of fragments for a single sample.*
- **DDS\_Boolean dynamically\_allocate\_fragmented\_samples**  
*Determines whether the built-in topic **DDSDataReader** (p. 1288) pre-allocates storage for storing fragmented samples.*

### 9.19.1 Detailed Description

Built-in topic reader's resource limits.

Defines the resources that can be used for a built-in-topic data reader.

A built-in topic data reader subscribes reliably to built-in topics containing declarations of new entities or updates to existing entities in the domain. Keys are used to differentiate among entities of the same type. RTI Connext assigns a unique key to each entity in a domain.

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

QoS:

**DDS\_DiscoveryConfigQosPolicy** (p. 712)

### 9.19.2 Member Data Documentation

#### 9.19.2.1 initial\_samples

**DDS\_Long** `DDS_BuiltinTopicReaderResourceLimits_t::initial_samples`

Initial number of samples.

This should be a value between 1 and initial number of instance of the built-in-topic reader, depending on how many instances are sending data concurrently.

**[default]** 64

**[range]** [1, 1 million], <= max\_samples

#### 9.19.2.2 max\_samples

**DDS\_Long** `DDS_BuiltinTopicReaderResourceLimits_t::max_samples`

Maximum number of samples.

This should be a value between 1 and max number of instance of the built-in-topic reader, depending on how many instances are sending data concurrently. Also, it should not be less than initial\_samples.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), >= initial\_samples

### 9.19.2.3 initial\_infos

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::initial\_infos

Initial number of sample infos.

The initial number of info units that a built-in topic **DDSDataReader** (p. 1288) can have. Info units are used to store **DDS\_SampleInfo** (p. 1082).

**[default]** 64

**[range]** [1, 1 million] <= max\_infos

### 9.19.2.4 max\_infos

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_infos

Maximum number of sample infos.

The maximum number of info units that a built-in topic **DDSDataReader** (p. 1288) can use to store **DDS\_SampleInfo** (p. 1082).

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), >= initial\_infos

### 9.19.2.5 initial\_outstanding\_reads

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::initial\_outstanding\_reads

The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1288).

Must be less than or equal to max\_outstanding\_reads.

**[default]** 2

**[range]** [1, 1024]

### 9.19.2.6 max\_outstanding\_reads

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_outstanding\_reads

The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1288).

Must be greater than or equal to initial\_outstanding\_reads.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1024] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.19.2.7 max\_samples\_per\_read

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_samples\_per\_read

Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1288).

**[default]** 1024

**[range]** [1, 65536]

### 9.19.2.8 disable\_fragmentation\_support

**DDS\_Boolean** DDS\_BuiltinTopicReaderResourceLimits\_t::disable\_fragmentation\_support

Determines whether the built-in topic **DDSDataReader** (p. 1288) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.19.2.9 max\_fragmented\_samples

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_fragmented\_samples

The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1288) may store fragments at a given point in time.

At any given time, a built-in topic **DDSDataReader** (p. 1288) may store fragments for up to `max_fragmented_↔ samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different built-in topic **DDSDataWriter** (p. 1321) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **DDS\_BuiltinTopicReaderResourceLimits\_t::max\_samples** (p. 606).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **DDS\_BuiltinTopicReaderResourceLimits\_t::disable\_fragmentation\_support** (p. 608) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 1024

**[range]** [1, 1 million]

### 9.19.2.10 initial\_fragmented\_samples

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::initial\_fragmented\_samples

The initial number of samples for which a built-in topic **DDSDataReader** (p. 1288) may store fragments.

Only applies if **DDS\_BuiltinTopicReaderResourceLimits\_t::disable\_fragmentation\_support** (p. 608) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 4

**[range]** [1,1024], <= max\_fragmented\_samples

### 9.19.2.11 max\_fragmented\_samples\_per\_remote\_writer

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_fragmented\_samples\_per\_remote\_writer

The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1288) may store fragments.

Logical limit so a single remote writer cannot consume all available resources.

Only applies if **DDS\_BuiltinTopicReaderResourceLimits\_t::disable\_fragmentation\_support** (p. 608) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 256

**[range]** [1, 1 million], <= max\_fragmented\_samples

### 9.19.2.12 max\_fragments\_per\_sample

**DDS\_Long** DDS\_BuiltinTopicReaderResourceLimits\_t::max\_fragments\_per\_sample

Maximum number of fragments for a single sample.

Only applies if **DDS\_BuiltinTopicReaderResourceLimits\_t::disable\_fragmentation\_support** (p. 608) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.19.2.13 dynamically\_allocate\_fragmented\_samples

`DDS_Boolean DDS_BuiltinTopicReaderResourceLimits_t::dynamically_allocate_fragmented_samples`

Determines whether the built-in topic **DDSDataReader** (p. 1288) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to **DDS\_BOOLEAN\_FALSE** (p. 317), the middleware will allocate memory upfront for storing fragments for up to **DDS\_DataReaderResourceLimitsQoSPolicy::initial\_fragmented\_samples** (p. 660) samples. This memory may grow up to **DDS\_DataReaderResourceLimitsQoSPolicy::max\_fragmented\_samples** (p. 659) if needed.

Only applies if **DDS\_DataReaderResourceLimitsQoSPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_BOOLEAN\_FALSE** (p. 317).

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

## 9.20 DDS\_ChannelSettings\_t Struct Reference

Type used to configure the properties of a channel.

### Public Attributes

- struct **DDS\_TransportMulticastSettingsSeq multicast\_settings**  
*A sequence of **DDS\_TransportMulticastSettings\_t** (p. 1153) used to configure the multicast addresses associated with a channel.*
- char \* **filter\_expression**  
*A logical expression used to determine the data that will be published in the channel.*
- **DDS\_Long priority**  
*Publication priority.*

### 9.20.1 Detailed Description

Type used to configure the properties of a channel.

QoS:

**DDS\_MultiChannelQoSPolicy** (p. 964)

## 9.20.2 Member Data Documentation

### 9.20.2.1 multicast\_settings

```
struct DDS_TransportMulticastSettingsSeq DDS_ChannelSettings_t::multicast_settings
```

A sequence of **DDS\_TransportMulticastSettings\_t** (p. 1153) used to configure the multicast addresses associated with a channel.

The sequence cannot be empty.

The maximum number of multicast locators in a channel is limited to 16 (a locator is defined by a transport alias, a multicast address and a port). Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain\_participant.max\_announced\_locator\_list\_size' property in the **DDS\_PropertyQosPolicy** (p. 1007) associated with the **DDS\_DomainParticipantQos** (p. 741).

**[default]** Empty sequence (invalid value)

### 9.20.2.2 filter\_expression

```
char* DDS_ChannelSettings_t::filter_expression
```

A logical expression used to determine the data that will be published in the channel.

If the expression evaluates to TRUE, a sample will be published on the channel.

An empty string always evaluates the expression to TRUE.

A NULL value is not allowed.

The syntax of the expression will depend on the value of **DDS\_MultiChannelQosPolicy::filter\_name** (p. 966)

*Important:* This value must be an allocated string with **DDS\_String\_alloc** (p. 553) or **DDS\_String\_dup** (p. 553). It should not be assigned to a string constant.

The filter expression length (including NULL-terminated character) cannot be greater than **DDS\_DomainParticipantResourceLimitsQosPolicy::channel\_filter\_expression\_max\_length** (p. 762).

See also

**Queries and Filters Syntax** (p. 179)

**[default]** NULL (invalid value)

### 9.20.2.3 priority

**DDS\_Long** DDS\_ChannelSettings\_t::priority

Publication priority.

A positive integer value designating the relative priority of the channel, used to determine the transmission order of pending writes.

Use of publication priorities requires the asynchronous publisher (**DDS\_ASYNCHRONOUS\_PUBLISH\_MODE**↔**\_QOS** (p. 431)) with **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) set to **DDS\_HPF\_FLOW**↔**CONTROLLER\_SCHED\_POLICY** (p. 121).

Larger numbers have higher priority.

If the publication priority of the channel is any value other than **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430), then the channel's priority will take precedence over the data writer's priority.

If the publication priority of the channel is set to **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430), then the channel's priority will be set to the value of the data writer's priority.

If the publication priority of both the data writer and the channel are **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430), the channel will be assigned the lowest priority value.

If the publication priority of the channel is **DDS\_PUBLICATION\_PRIORITY\_AUTOMATIC** (p. 430), then the channel will be assigned the priority of the largest publication priority of all samples in the channel. The publication priority of each sample can be set in the **DDS\_WriteParams\_t** (p. 1251) of the **FooDataWriter::write\_w\_params** (p. 1688) function.

[default] **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430)

## 9.21 DDS\_ChannelSettingsSeq Struct Reference

Declares IDL `sequence< DDS_ChannelSettings_t (p. 610) >`

### 9.21.1 Detailed Description

Declares IDL `sequence< DDS_ChannelSettings_t (p. 610) >`

A sequence of **DDS\_ChannelSettings\_t** (p. 610) used to configure the channels' properties. If the length of the sequence is zero, the **DDS\_MultiChannelQosPolicy** (p. 964) has no effect.

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_ChannelSettings\_t** (p. 610)

Instantiates **FooSeq** (p. 1697) < **DDS\_Char** (p. 317) >

### 9.22.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Char** (p. 317) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Char** (p. 317)

**FooSeq** (p. 1697)

## 9.23 DDS\_CoherentSetInfo\_t Struct Reference

<<*extension*>> (p. 237) Type definition for a coherent set info.

### Public Attributes

- **DDS\_GUID\_t group\_guid**  
*The coherent set group GUID.*
- **DDS\_SequenceNumber\_t coherent\_set\_sequence\_number**  
*Sequence number that identifies a sample as part of a **DDSDataWriter** (p. 1321) coherent set.*
- **DDS\_SequenceNumber\_t group\_coherent\_set\_sequence\_number**  
*Sequence number that identifies a sample as part of a group coherent set.*
- **DDS\_Boolean incomplete\_coherent\_set**  
*Indicates if a sample is part of an incomplete coherent set.*

### 9.23.1 Detailed Description

<<*extension*>> (p. 237) Type definition for a coherent set info.

A CoherentSetInfo provides information about the coherent set associated with a sample.

### 9.23.2 Member Data Documentation

### 9.23.2.1 group\_guid

```
DDS_GUID_t DDS_CoherentSetInfo_t::group_guid
```

The coherent set group GUID.

This GUID identifies the **DDSDataWriter** (p. 1321) or the group of DataWriters publishing the coherent set, depending on the value of **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) in the **DDSSubscriber** (p. 1592).

### 9.23.2.2 coherent\_set\_sequence\_number

```
DDS_SequenceNumber_t DDS_CoherentSetInfo_t::coherent_set_sequence_number
```

Sequence number that identifies a sample as part of a **DDSDataWriter** (p. 1321) coherent set.

When **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) in the **DDSSubscriber** (p. 1592) is set to **DDS\_↔INSTANCE\_PRESENTATION\_QOS** (p. 418) or **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418), the coherent set associated with a sample is identified by the pair (group\_guid, coherent\_set\_sequence\_number).

### 9.23.2.3 group\_coherent\_set\_sequence\_number

```
DDS_SequenceNumber_t DDS_CoherentSetInfo_t::group_coherent_set_sequence_number
```

Sequence number that identifies a sample as part of a group coherent set.

When **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) in the **DDSSubscriber** (p. 1592) is set to **DDS\_↔GROUP\_PRESENTATION\_QOS** (p. 418), the coherent set associated with a sample is identified by the pair (group\_↔guid, group\_coherent\_set\_sequence\_number).

### 9.23.2.4 incomplete\_coherent\_set

```
DDS_Boolean DDS_CoherentSetInfo_t::incomplete_coherent_set
```

Indicates if a sample is part of an incomplete coherent set.

## 9.24 DDS\_CompressionSettings\_t Struct Reference

<<*extension*>> (p. 237) Settings related to compressing user data.

### Public Attributes

- **DDS\_CompressionIdMask compression\_ids**  
<<*extension*>> (p. 237) Mask that represents the compression algorithms enabled.
- **DDS\_UnsignedLong writer\_compression\_level**  
<<*extension*>> (p. 237) The level of compression to use when compressing data.
- **DDS\_Long writer\_compression\_threshold**  
<<*extension*>> (p. 237) The threshold, in bytes, above which a serialized sample will be eligible to be compressed.

## 9.24.1 Detailed Description

<<*extension*>> (p. 237) Settings related to compressing user data.

QoS:

**DDS\_DataRepresentationQosPolicy** (p. 668)

## 9.24.2 Member Data Documentation

### 9.24.2.1 compression\_ids

**DDS\_CompressionIdMask** DDS\_CompressionSettings\_t::compression\_ids

<<*extension*>> (p. 237) Mask that represents the compression algorithms enabled.

A bitmap that represents the compression algorithm IDs (**DDS\_CompressionIdMask** (p. 375)) that are supported by the endpoint. The **DDSDataWriter** (p. 1321) creation will fail if more than one algorithm is provided.

If a **DDSDataWriter** (p. 1321) inherits multiple compression IDs from a **DDSTopic** (p. 1617), only the least significant bit enabled will be inherited. This forces the following order of preference: **DDS\_COMPRESSION\_ID\_ZLIB** (p. 375), **DDS\_COMPRESSION\_ID\_BZIP2** (p. 375), **DDS\_COMPRESSION\_ID\_LZ4** (p. 376).

Interactions with Security and Batching: Currently, the only algorithm that is supported when compression and batching are enabled on the same **DDSDataWriter** (p. 1321) is **DDS\_COMPRESSION\_ID\_ZLIB** (p. 375).

The combination of compression, batching, and data protection is supported. First, compression is applied to the entire batch. Then, data protection is applied to the compressed batch.

Note: When **DDS\_DataWriterProtocolQosPolicy::serialize\_key\_with\_dispose** (p. 676) is enabled and a dispose message is sent, the serialized key is not compressed.

**[default]** For **DDSTopic** (p. 1617), **DDSDataWriter** (p. 1321) a **DDS\_CompressionIdMask** (p. 375) mask set to **DDS\_←\_COMPRESSION\_ID\_MASK\_NONE** (p. 373)

**[default]** For **DDSDataReader** (p. 1288) a **DDS\_CompressionIdMask** (p. 375) mask set to **DDS\_←\_COMPRESSION\_ID\_MASK\_ALL** (p. 373).

### 9.24.2.2 writer\_compression\_level

**DDS\_UnsignedLong** DDS\_CompressionSettings\_t::writer\_compression\_level

<<**extension**>> (p. 237) The level of compression to use when compressing data.

Compression algorithms typically allow you to choose a level with which to compress the data. Each level has trade-offs between the resulting compression ratio and the speed of compression.

**[range]** [0, 10]

The value 1 represents the fastest compression time and the lowest compression ratio. The value 10 represents the slowest compression time but the highest compression ratio.

A value of 0 disables compression.

**[default]** DDS\_COMPRESSION\_LEVEL\_BEST\_COMPRESSION (p. 373)

#### Note

Only available for a **DDSDataWriter** (p. 1321) and **DDSTopic** (p. 1617).

### 9.24.2.3 writer\_compression\_threshold

**DDS\_Long** DDS\_CompressionSettings\_t::writer\_compression\_threshold

<<**extension**>> (p. 237) The threshold, in bytes, above which a serialized sample will be eligible to be compressed.

Any sample with a serialized size greater than or equal to the threshold will be eligible to be compressed. All samples with an eligible serialized size will be compressed. Only if the compressed size is smaller than the serialized size will the sample be stored and sent compressed on the wire.

For batching we check the maximum serialized size of the batch, calculated as `serialized_sample_max_size * DDS_↔ BatchQosPolicy::max_samples` (p. 602)

**[range]** [0, 2147483647] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

Setting the threshold to **DDS\_LENGTH\_UNLIMITED** (p. 438) disables the compression.

**[default]** DDS\_COMPRESSION\_THRESHOLD\_DEFAULT (p. 374) (8192)

#### Note

Only available for a **DDSDataWriter** (p. 1321) and **DDSTopic** (p. 1617).

## 9.25 DDS\_ContentFilterProperty\_t Struct Reference

<<**extension**>> (p. 237) Type used to provide all the required information to enable content filtering.

## Public Attributes

- char \* **content\_filter\_topic\_name**  
*Name of the Content-filtered Topic associated with the Reader.*
- char \* **related\_topic\_name**  
*Name of the Topic related to the Content-filtered Topic.*
- char \* **filter\_class\_name**  
*Identifies the filter class this filter belongs to. RTPS can support multiple filter classes (SQL, regular expressions, custom filters, etc).*
- char \* **filter\_expression**  
*The actual filter expression. Must be a valid expression for the filter class specified using filterClassName.*
- struct **DDS\_StringSeq expression\_parameters**  
*Defines the value for each parameter in the filter expression.*

### 9.25.1 Detailed Description

<<*extension*>> (p. 237) Type used to provide all the required information to enable content filtering.

### 9.25.2 Member Data Documentation

#### 9.25.2.1 content\_filter\_topic\_name

```
char* DDS_ContentFilterProperty_t::content_filter_topic_name
```

Name of the Content-filtered Topic associated with the Reader.

#### 9.25.2.2 related\_topic\_name

```
char* DDS_ContentFilterProperty_t::related_topic_name
```

Name of the Topic related to the Content-filtered Topic.

#### 9.25.2.3 filter\_class\_name

```
char* DDS_ContentFilterProperty_t::filter_class_name
```

Identifies the filter class this filter belongs to. RTPS can support multiple filter classes (SQL, regular expressions, custom filters, etc).

### 9.25.2.4 filter\_expression

```
char* DDS_ContentFilterProperty_t::filter_expression
```

The actual filter expression. Must be a valid expression for the filter class specified using filterClassName.

### 9.25.2.5 expression\_parameters

```
struct DDS_StringSeq DDS_ContentFilterProperty_t::expression_parameters
```

Defines the value for each parameter in the filter expression.

## 9.26 DDS\_Cookie\_t Struct Reference

<<*extension*>> (p. 237) Sequence of bytes.

### Public Member Functions

- void \* **to\_pointer** () const  
*Returns the pointer previously stored in the cookie.*

### Public Attributes

- struct **DDS\_OctetSeq** value  
*a sequence of octets*

### 9.26.1 Detailed Description

<<*extension*>> (p. 237) Sequence of bytes.

### 9.26.2 Member Data Documentation

#### 9.26.2.1 value

```
struct DDS_OctetSeq DDS_Cookie_t::value
```

a sequence of octets

**[default]** Empty (zero-sized)

## 9.27 DDS\_CookieSeq Struct Reference

Declares IDL sequence < DDS\_Cookie\_t (p. 618) > .

### 9.27.1 Detailed Description

Declares IDL sequence < DDS\_Cookie\_t (p. 618) > .

**FooSeq** (p. 1697)

## 9.28 DDS\_DatabaseQosPolicy Struct Reference

Various threads and resource limits settings used by RTI Connex to control its internal database.

### Public Attributes

- struct **DDS\_ThreadSettings\_t thread**  
*Database thread settings.*
- struct **DDS\_Duration\_t shutdown\_timeout**  
*The maximum wait time during a shutdown.*
- struct **DDS\_Duration\_t cleanup\_period**  
*The period at which the database thread wakes up to remove deleted records.*
- struct **DDS\_Duration\_t shutdown\_cleanup\_period**  
*The clean-up period used during database shut-down.*
- **DDS\_Long initial\_records**  
*The initial number of total records.*
- **DDS\_Long max\_skiplist\_level**  
*The maximum level of the skiplist.*
- **DDS\_Long max\_weak\_references**  
*The maximum number of weak references.*
- **DDS\_Long initial\_weak\_references**  
*The initial number of weak references.*

### 9.28.1 Detailed Description

Various threads and resource limits settings used by RTI Connex to control its internal database.

RTI uses an internal in-memory "database" to store information about entities created locally as well as remote entities found during the discovery process. This database uses a background thread to garbage-collect records related to deleted entities. When the **DDSDomainParticipant** (p. 1351) that maintains this database is deleted, it shuts down this thread.

The Database QoS policy is used to configure how RTI Connex manages its database, including how often it cleans up, the priority of the database thread, and limits on resources that may be allocated by the database.

You may be interested in modifying the **DDS\_DatabaseQosPolicy::shutdown\_timeout** (p. 620) and **DDS\_DatabaseQosPolicy::shutdown\_cleanup\_period** (p. 621) parameters to decrease the time it takes to delete a **DDSDomainParticipant** (p. 1351) when your application is shutting down.

The **DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 746) controls the memory allocation for elements stored in the database.

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) **NO** (p. 360)

### 9.28.2 Member Data Documentation

#### 9.28.2.1 thread

```
struct DDS_ThreadSettings_t DDS_DatabaseQosPolicy::thread
```

Database thread settings.

There is only one database thread: the clean-up thread.

**[default]** Priority: LOW.

The actual value depends on your architecture:

For Windows: -3

For Linux: OS default priority

For a complete list of platform specific values, please refer to [Platform Notes](#).

**[default]** Stack Size: The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to [Platform Notes](#).

**[default]** Mask: **DDS\_THREAD\_SETTINGS\_STUDIO** (p. 352)

### 9.28.2.2 shutdown\_timeout

```
struct DDS_Duration_t DDS_DatabaseQosPolicy::shutdown_timeout
```

The maximum wait time during a shutdown.

The domain participant will exit after the timeout, even if the database has not been fully cleaned up.

**[default]** 15 seconds

**[range]** [0,DDS\_DURATION\_INFINITE (p. 326)]

### 9.28.2.3 cleanup\_period

```
struct DDS_Duration_t DDS_DatabaseQosPolicy::cleanup_period
```

The period at which the database thread wakes up to remove deleted records.

**[default]** 61 seconds

**[range]** [0,1 year]

### 9.28.2.4 shutdown\_cleanup\_period

```
struct DDS_Duration_t DDS_DatabaseQosPolicy::shutdown_cleanup_period
```

The clean-up period used during database shut-down.

If you would like to shorten the time taken for a DomainParticipant to shutdown, you can decrease this value.

It is recommended to set this value to something other than 0 if running in an RTOS environment, to avoid CPU starvation.

**[default]** 10 milliseconds

**[range]** [0,1 year]

### 9.28.2.5 initial\_records

```
DDS_Long DDS_DatabaseQosPolicy::initial_records
```

The initial number of total records.

**[default]** 1024

**[range]** [1,10 million]

### 9.28.2.6 max\_skiplist\_level

**DDS\_Long** DDS\_DatabaseQosPolicy::max\_skiplist\_level

The maximum level of the skiplist.

The skiplist is used to keep records in the database. Usually, the search time is  $\log_2(N)$ , where  $N$  is the total number of records in one skiplist. However, once  $N$  exceeds  $2^n$ , where  $n$  is the maximum skiplist level, the search time will become more and more linear. Therefore, the maximum level should be set such that  $2^n$  is larger than the maximum( $N$  among all skiplists). Usually, the maximum  $N$  is the maximum number of remote and local writers or readers.

**[default]** 7

**[range]** [1,31]

### 9.28.2.7 max\_weak\_references

**DDS\_Long** DDS\_DatabaseQosPolicy::max\_weak\_references

The maximum number of weak references.

A weak reference is an internal data structure that refers to a record within RTI Connex't internal database. This field configures the maximum number of such references that RTI Connex't may create.

The actual number of weak references is permitted to grow from an initial value (indicated by **DDS\_DatabaseQosPolicy::initial\_weak\_references** (p. 622)) to this maximum. To prevent RTI Connex't from allocating any weak references after the system has reached a steady state, set the initial and maximum values equal to one another. To indicate that the number of weak references should continue to grow as needed indefinitely, set this field to **DDS\_LENGTH\_UNLIMITED** (p. 438). Be aware that although a single weak reference occupies very little memory, allocating a very large number of them can have a significant impact on your overall memory usage.

Tuning this value precisely is difficult without intimate knowledge of the structure of RTI Connex't database; doing so is an advanced feature not required by most applications. The default value has been chosen to be sufficient for reasonably large systems. If you believe you may need to modify this value, please consult with RTI support personnel for assistance.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_weak\_references

See also

**DDS\_DatabaseQosPolicy::initial\_weak\_references** (p. 622)

### 9.28.2.8 initial\_weak\_references

`DDS_Long DDS_DatabaseQosPolicy::initial_weak_references`

The initial number of weak references.

See `DDS_DatabaseQosPolicy::max_weak_references` (p. 622) for more information about what a weak reference is.

If the QoS set contains an `initial_weak_references` value that is too small to ever grow to `DDS_DatabaseQosPolicy::max_weak_references` (p. 622) using RTI ConnexT<sup>®</sup> internal algorithm, this value will be adjusted upwards as necessary. Subsequent accesses of this value will reveal the actual initial value used.

Changing the value of this field is an advanced feature; it is recommended that you consult with RTI support personnel before doing so.

**[default]** 2049, which is the minimum initial value imposed by REDA when the maximum is unlimited. If a lower value is specified, it will simply be increased to 2049 automatically.

**[range]** [1, 100 million], <= max\_weak\_references

See also

`DDS_DatabaseQosPolicy::max_weak_references` (p. 622)

## 9.29 DDS\_DataReaderCacheStatus Struct Reference

<<*extension*>> (p. 237) The status of the reader's cache.

### Public Attributes

- **DDS\_LongLong sample\_count\_peak**  
*The highest number of samples in the reader's queue over the lifetime of the reader.*
- **DDS\_LongLong sample\_count**  
*The number of samples in the reader's queue.*
- **DDS\_LongLong old\_source\_timestamp\_dropped\_sample\_count**  
*The number of samples dropped as a result of receiving a sample older than the last one, using `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387).*
- **DDS\_LongLong tolerance\_source\_timestamp\_dropped\_sample\_count**  
*The number of samples dropped as a result of receiving a sample in the future, using `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387).*
- **DDS\_LongLong ownership\_dropped\_sample\_count**  
*The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.*
- **DDS\_LongLong content\_filter\_dropped\_sample\_count**  
*The number of user samples filtered by the DataReader due to Content-Filtered Topics.*
- **DDS\_LongLong time\_based\_filter\_dropped\_sample\_count**  
*The number of user samples filtered by the DataReader due to `DDS_TimeBasedFilterQosPolicy` (p. 1126).*
- **DDS\_LongLong expired\_dropped\_sample\_count**

The number of samples expired by the `DataReader` due to **DDS\_LifespanQosPolicy** (p. 931) or the autopurge sample delays.

- **DDS\_LongLong virtual\_duplicate\_dropped\_sample\_count**

The number of virtual duplicate samples dropped by the `DataReader`. A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.

- **DDS\_LongLong replaced\_dropped\_sample\_count**

The number of samples replaced by the `DataReader` due to **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406) replacement.

- **DDS\_LongLong writer\_removed\_batch\_sample\_dropped\_sample\_count**

The number of batch samples received by the `DataReader` that were marked as removed by the `DataWriter`.

- **DDS\_LongLong total\_samples\_dropped\_by\_instance\_replacement**

The number of samples with sample state **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157) that were dropped when removing an instance due to instance replacement. See **DDS\_DataReaderResourceLimitsQosPolicy::instance\_replacement** (p. 666) for more details about when instances are replaced.

- **DDS\_LongLong alive\_instance\_count**

The number of instances in the `DataReader`'s queue with an instance state equal to **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161).

- **DDS\_LongLong alive\_instance\_count\_peak**

The highest value of **DDS\_DataReaderCacheStatus::alive\_instance\_count** (p. 627) over the lifetime of the `DataReader`.

- **DDS\_LongLong no\_writers\_instance\_count**

The number of instances in the `DataReader`'s queue with an instance state equal to **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

- **DDS\_LongLong no\_writers\_instance\_count\_peak**

The highest value of **DDS\_DataReaderCacheStatus::no\_writers\_instance\_count** (p. 628) over the lifetime of the `DataReader`.

- **DDS\_LongLong disposed\_instance\_count**

The number of instances in the `DataReader`'s queue with an instance state equal to **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).

- **DDS\_LongLong disposed\_instance\_count\_peak**

The highest value of **DDS\_DataReaderCacheStatus::disposed\_instance\_count** (p. 628) over the lifetime of the `DataReader`.

- **DDS\_LongLong detached\_instance\_count**

The number of minimal instance states currently being maintained in the `DataReader`'s queue.

- **DDS\_LongLong detached\_instance\_count\_peak**

The highest value of **DDS\_DataReaderCacheStatus::detached\_instance\_count** (p. 629) over the lifetime of the `DataReader`.

- **DDS\_LongLong compressed\_sample\_count**

The number of received samples compressed by a `DataWriter`.

### 9.29.1 Detailed Description

<<**extension**>> (p. 237) The status of the reader's cache.

Entity:

**DDSDataReader** (p. 1288)

### 9.29.2 Member Data Documentation

### 9.29.2.1 sample\_count\_peak

`DDS_LongLong DDS_DataReaderCacheStatus::sample_count_peak`

The highest number of samples in the reader's queue over the lifetime of the reader.

### 9.29.2.2 sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::sample_count`

The number of samples in the reader's queue.

includes samples that may not yet be available to be read or taken by the user, due to samples being received out of order or **PRESENTATION** (p. 417)

### 9.29.2.3 old\_source\_timestamp\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::old_source_timestamp_dropped_sample_count`

The number of samples dropped as a result of receiving a sample older than the last one, using **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387).

When the DataReader is using **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387):

- If the DataReader receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped.
- If the DataReader receives a sample for an instance with a source timestamp that is equal to the last source timestamp received for the instance and the writer has a higher virtual GUID, the sample is dropped.

### 9.29.2.4 tolerance\_source\_timestamp\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::tolerance_source_timestamp_dropped_sample_count`

The number of samples dropped as a result of receiving a sample in the future, using **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387).

When the DataReader is using **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387): the DataReader will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than the `source_timestamp_tolerance`. Otherwise, the sample is dropped.

### 9.29.2.5 ownership\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::ownership_dropped_sample_count`

The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.

When using Exclusive Ownership, the DataReader receives data from multiple DataWriters. Each instance can only be owned by one DataWriter.

If other DataWriters write samples on this instance, the samples will be dropped.

### 9.29.2.6 content\_filter\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::content_filter_dropped_sample_count`

The number of user samples filtered by the DataReader due to Content-Filtered Topics.

When using a content filter on the DataReader side, if the sample received by the DataReader does not pass the filter, it will be dropped.

### 9.29.2.7 time\_based\_filter\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count`

The number of user samples filtered by the DataReader due to **DDS\_TimeBasedFilterQosPolicy** (p. 1126).

When using **TIME\_BASED\_FILTER** (p. 440) on the DataReader side, if the sample received by the DataReader does not pass the minimum\_separation filter, it will be dropped.

### 9.29.2.8 expired\_dropped\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::expired_dropped_sample_count`

The number of samples expired by the DataReader due to **DDS\_LifespanQosPolicy** (p. 931) or the autopurge sample delays.

- **DDS\_LifespanQosPolicy** (p. 931)  
When a sample expires due to **DDS\_LifespanQosPolicy** (p. 931), the data is removed from the DataReader caches. This sample will be considered dropped if its **DDS\_SampleStateKind** (p. 156) was **DDS\_NOT\_READ**↔  
**\_SAMPLE\_STATE** (p. 157).
- **DDS\_ReaderDataLifecycleQosPolicy::autopurge\_nowriter\_samples\_delay** (p. 1037)  
When a sample expires due to **DDS\_ReaderDataLifecycleQosPolicy::autopurge\_nowriter\_samples\_delay** (p. 1037), this sample will be considered dropped if its **DDS\_SampleStateKind** (p. 156) was **DDS\_NOT\_READ**↔  
**\_SAMPLE\_STATE** (p. 157).
- **DDS\_ReaderDataLifecycleQosPolicy::autopurge\_disposed\_samples\_delay** (p. 1037)  
When a sample expires due to **DDS\_ReaderDataLifecycleQosPolicy::autopurge\_disposed\_samples\_delay** (p. 1037), this sample will be considered dropped if its **DDS\_SampleStateKind** (p. 156) was **DDS\_NOT\_READ**↔  
**\_SAMPLE\_STATE** (p. 157).

### 9.29.2.9 virtual\_duplicate\_dropped\_sample\_count

**DDS\_LongLong** DDS\_DataReaderCacheStatus::virtual\_duplicate\_dropped\_sample\_count

The number of virtual duplicate samples dropped by the DataReader. A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.

When two DataWriters with the same logical data source publish a sample with the same sequence\_number, one sample will be dropped and the other will be received by the DataReader.

This can happen when multiple writers are writing on behalf of the same original DataWriter: for example, in systems with redundant Routing Services or when a DataReader is receiving samples both directly from the original DataWriter and from an instance of Persistence Service.

### 9.29.2.10 replaced\_dropped\_sample\_count

**DDS\_LongLong** DDS\_DataReaderCacheStatus::replaced\_dropped\_sample\_count

The number of samples replaced by the DataReader due to **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406) replacement.

When the number of samples for an instance in the queue reaches the **DDS\_HistoryQosPolicy::depth** (p. 921) value, a new sample for the instance will replace the oldest sample for the instance in the queue.

The new sample will be accepted and the old sample will be dropped.

This counter will only be updated if the replaced sample's **DDS\_SampleStateKind** (p. 156) was **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157).

### 9.29.2.11 writer\_removed\_batch\_sample\_dropped\_sample\_count

**DDS\_LongLong** DDS\_DataReaderCacheStatus::writer\_removed\_batch\_sample\_dropped\_sample\_count

The number of batch samples received by the DataReader that were marked as removed by the DataWriter.

When the DataReader receives a batch, the batch can contain samples marked as removed by the DataWriter. Examples of removed samples in a batch could be because of sample replacement due to **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406) **DDS\_HistoryQosPolicy** (p. 919) QoS on the DataWriter or because the duration in **DDS\_LifespanQosPolicy** (p. 931) was reached. By default, any sample marked as removed from a batch is dropped (unless you set the `dds.data_reader.accept_writer_removed_batch_samples` property in the **DDS\_PropertyQosPolicy** (p. 1007) to true). Note: Historical data with removed batch samples written before the DataReader joined the DDS domain will also be included in the count.

### 9.29.2.12 total\_samples\_dropped\_by\_instance\_replacement

**DDS\_LongLong** DDS\_DataReaderCacheStatus::total\_samples\_dropped\_by\_instance\_replacement

The number of samples with sample state **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157) that were dropped when removing an instance due to instance replacement. See **DDS\_DataReaderResourceLimitsQosPolicy::instance\_replacement** (p. 666) for more details about when instances are replaced.

### 9.29.2.13 `alive_instance_count`

`DDS_LongLong DDS_DataReaderCacheStatus::alive_instance_count`

The number of instances in the DataReader's queue with an instance state equal to `DDS_ALIVE_INSTANCE_STATE` (p. 161).

### 9.29.2.14 `alive_instance_count_peak`

`DDS_LongLong DDS_DataReaderCacheStatus::alive_instance_count_peak`

The highest value of `DDS_DataReaderCacheStatus::alive_instance_count` (p. 627) over the lifetime of the DataReader.

See also

`DDS_DataReaderCacheStatus::alive_instance_count` (p. 627)

### 9.29.2.15 `no_writers_instance_count`

`DDS_LongLong DDS_DataReaderCacheStatus::no_writers_instance_count`

The number of instances in the DataReader's queue with an instance state equal to `DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE` (p. 161).

### 9.29.2.16 `no_writers_instance_count_peak`

`DDS_LongLong DDS_DataReaderCacheStatus::no_writers_instance_count_peak`

The highest value of `DDS_DataReaderCacheStatus::no_writers_instance_count` (p. 628) over the lifetime of the DataReader.

See also

`DDS_DataReaderCacheStatus::no_writers_instance_count` (p. 628)

### 9.29.2.17 disposed\_instance\_count

**DDS\_LongLong** DDS\_DataReaderCacheStatus::disposed\_instance\_count

The number of instances in the DataReader's queue with an instance state equal to **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).

### 9.29.2.18 disposed\_instance\_count\_peak

**DDS\_LongLong** DDS\_DataReaderCacheStatus::disposed\_instance\_count\_peak

The highest value of **DDS\_DataReaderCacheStatus::disposed\_instance\_count** (p. 628) over the lifetime of the DataReader.

See also

**DDS\_DataReaderCacheStatus::disposed\_instance\_count** (p. 628)

### 9.29.2.19 detached\_instance\_count

**DDS\_LongLong** DDS\_DataReaderCacheStatus::detached\_instance\_count

The number of minimal instance states currently being maintained in the DataReader's queue.

If **DDS\_DataReaderResourceLimitsQosPolicy::keep\_minimum\_state\_for\_instances** (p. 664) is true, the DataReader will keep up to a maximum of **DDS\_DataReaderResourceLimitsQosPolicy::max\_total\_instances** (p. 661) detached instances in its queue. For a more in-depth description of detached instances, refer to **DDS\_DataReaderResourceLimitsQosPolicy::max\_total\_instances** (p. 661).

### 9.29.2.20 detached\_instance\_count\_peak

**DDS\_LongLong** DDS\_DataReaderCacheStatus::detached\_instance\_count\_peak

The highest value of **DDS\_DataReaderCacheStatus::detached\_instance\_count** (p. 629) over the lifetime of the DataReader.

See also

**DDS\_DataReaderCacheStatus::detached\_instance\_count** (p. 629)

### 9.29.2.21 compressed\_sample\_count

`DDS_LongLong DDS_DataReaderCacheStatus::compressed_sample_count`

The number of received samples compressed by a DataWriter.

These include data, dispose, and unregister samples sent by a DataWriter.

## 9.30 DDS\_DataReaderProtocolQosPolicy Struct Reference

Along with [DDS\\_WireProtocolQosPolicy](#) (p. 1244) and [DDS\\_DataWriterProtocolQosPolicy](#) (p. 673), this QoS policy configures the DDS on-the-network protocol (RTPS).

### Public Attributes

- struct **DDS\_GUID\_t virtual\_guid**  
*The virtual GUID (Global Unique Identifier).*
- **DDS\_UnsignedLong rtps\_object\_id**  
*The RTPS Object ID.*
- **DDS\_Boolean expects\_inline\_qos**  
*Specifies whether this DataReader expects inline QoS with every sample.*
- **DDS\_Boolean disable\_positive\_acks**  
*Whether the reader sends positive acknowledgements to writers.*
- **DDS\_Boolean propagate\_dispose\_of\_unregister\_instances**  
*Indicates whether or not an instance can move to the **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) state without being in the **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) state.*
- **DDS\_Boolean propagate\_unregister\_of\_disposed\_instances**  
*Indicates whether or not an instance can move to the **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) state directly from the **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).*
- struct **DDS\_RtpsReliableReaderProtocol\_t rtps\_reliable\_reader**  
*RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1288). This parameter only has effect if the reader is configured with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) **DDS\_↔ReliabilityQosPolicyKind** (p. 434).*

### 9.30.1 Detailed Description

Along with [DDS\\_WireProtocolQosPolicy](#) (p. 1244) and [DDS\\_DataWriterProtocolQosPolicy](#) (p. 673), this QoS policy configures the DDS on-the-network protocol (RTPS).

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and [DDS\\_DataReaderProtocolQosPolicy](#) (p. 630) give you control over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connexx responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **DDS\_ReliabilityQoSPolicy** (p. 1041) for more information on the per-DataReader/↔ DataWriter reliability configuration. **DDS\_HistoryQoSPolicy** (p. 919) and **DDS\_ResourceLimitsQoSPolicy** (p. 1052) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDataReader** (p. 1288)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.30.2 Member Data Documentation

### 9.30.2.1 virtual\_guid

```
struct DDS_GUID_t DDS_DataReaderProtocolQosPolicy::virtual_guid
```

The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **DDSDataReader** (p. 1288).

The association between a **DDSDataReader** (p. 1288) and its persisted state is done using the virtual GUID.

**[default] DDS\_GUID\_AUTO** (p. 331)

### 9.30.2.2 rtps\_object\_id

```
DDS_UnsignedLong DDS_DataReaderProtocolQosPolicy::rtps_object_id
```

The RTPS Object ID.

This value is used to determine the RTPS object ID of a data reader according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connexx will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data reader.

A `rtps_object_id` value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connexx. In those cases, the recommendation is not to use automatic object ID assignment.

**[default] DDS RTPS\_AUTO\_ID** (p. ??)

**[range]** [0,0x00ffffff]

### 9.30.2.3 expects\_inline\_qos

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::expects_inline_qos
```

Specifies whether this DataReader expects inline QoS with every sample.

RTI Connex DataWriters do not match with DataReaders that set this field to **DDS\_BOOLEAN\_TRUE** (p. 317) (because RTI Connex DataWriters do not support sending inline QoS), but here is how the field is meant to be used:

In RTI Connex, a **DDSDataReader** (p. 1288) nominally relies on Discovery to propagate QoS on a matched **DDSDataWriter** (p. 1321).

Alternatively, a **DDSDataReader** (p. 1288) may get information on a matched **DDSDataWriter** (p. 1321) through QoS sent inline with a sample.

Asserting **DDS\_DataReaderProtocolQosPolicy::expects\_inline\_qos** (p. 631) indicates to a matching **DDSDataWriter** (p. 1321) that this **DDSDataReader** (p. 1288) expects to receive inline QoS with every sample. The complete set of inline QoS that a **DDSDataWriter** (p. 1321) may send inline is specified by the Real-Time Publish-Subscribe (RTPS) Wire Interoperability Protocol.

Because RTI Connex **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) cache Discovery information, inline QoS are largely redundant and thus unnecessary. Only for other stateless implementations whose **DDSDataReader** (p. 1288) does not cache Discovery information is inline QoS necessary.

Also note that inline QoS are additional wire-payload that consume additional bandwidth and serialization and deserialization time.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.30.2.4 disable\_positive\_acks

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::disable_positive_acks
```

Whether the reader sends positive acknowledgements to writers.

If set to **DDS\_BOOLEAN\_TRUE** (p. 317), the reader does not send positive acknowledgments (ACKs) in response to Heartbeat messages. The reader will send negative acknowledgements (NACKs) when a Heartbeat advertises samples that it has not received.

Otherwise, if set to **DDS\_BOOLEAN\_FALSE** (p. 317) (the default), the reader will send ACKs to writers that expect ACKs (**DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks** (p. 675) = **DDS\_BOOLEAN\_FALSE** (p. 317)) and it will not send ACKs to writers that disable ACKs (**DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks** (p. 675) = **DDS\_BOOLEAN\_TRUE** (p. 317))

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.30.2.5 propagate\_dispose\_of\_unregistered\_instances

**DDS\_Boolean** DDS\_DataReaderProtocolQosPolicy::propagate\_dispose\_of\_unregistered\_instances

Indicates whether or not an instance can move to the **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) state without being in the **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) state.

This field only applies to keyed readers.

When the field is set to **DDS\_BOOLEAN\_TRUE** (p. 317), the DataReader will receive dispose notifications even if the instance is not alive.

To guarantee the key availability through the usage of the API **FooDataReader::get\_key\_value** (p. 1673), this option should be used in combination with setting **DDS\_DataWriterProtocolQosPolicy::serialize\_key\_with\_dispose** (p. 676) on the DataWriter to **DDS\_BOOLEAN\_TRUE** (p. 317).

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.30.2.6 propagate\_unregister\_of\_disposed\_instances

**DDS\_Boolean** DDS\_DataReaderProtocolQosPolicy::propagate\_unregister\_of\_disposed\_instances

Indicates whether or not an instance can move to the **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) state directly from the **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).

This field only applies to keyed readers.

When the field is set to **DDS\_BOOLEAN\_TRUE** (p. 317), the DataReader will receive unregister notifications even if the instance is not alive.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.30.2.7 rtps\_reliable\_reader

**struct DDS\_RtpsReliableReaderProtocol\_t** DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader

RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1288). This parameter only has effect if the reader is configured with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) **DDS\_↔ ReliabilityQosPolicyKind** (p. 434).

For details, refer to the **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

[default] See **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

## 9.31 DDS\_DataReaderProtocolStatus Struct Reference

<<**extension**>> (p. 237) The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.

## Public Attributes

- **DDS\_LongLong received\_sample\_count**  
*The number of samples received by a DataReader.*
- **DDS\_LongLong received\_sample\_count\_change**  
*The change in `DDS_DataReaderProtocolStatus::received_sample_count` (p. 636) since the last time the status was read.*
- **DDS\_LongLong received\_sample\_bytes**  
*The number of bytes received by a DataReader.*
- **DDS\_LongLong received\_sample\_bytes\_change**  
*The change in `DDS_DataReaderProtocolStatus::received_sample_bytes` (p. 637) since the last time the status was read.*
- **DDS\_LongLong duplicate\_sample\_count**  
*The number of samples from a remote DataWriter received, not for the first time, by a local DataReader.*
- **DDS\_LongLong duplicate\_sample\_count\_change**  
*The change in `DDS_DataReaderProtocolStatus::duplicate_sample_count` (p. 637) since the last time the status was read.*
- **DDS\_LongLong duplicate\_sample\_bytes**  
*The number of bytes of samples from a remote DataWriter received, not for the first time, by a local DataReader.*
- **DDS\_LongLong duplicate\_sample\_bytes\_change**  
*The change in `DDS_DataReaderProtocolStatus::duplicate_sample_bytes` (p. 638) since the last time the status was read.*
- **DDS\_LongLong filtered\_sample\_count**  
*[DEPRECATED]. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔`  
`DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)*
- **DDS\_LongLong filtered\_sample\_count\_change**  
*[DEPRECATED]. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔`  
`DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)*
- **DDS\_LongLong filtered\_sample\_bytes**  
*[DEPRECATED]. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔`  
`DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)*
- **DDS\_LongLong filtered\_sample\_bytes\_change**  
*[DEPRECATED]. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔`  
`DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)*
- **DDS\_LongLong received\_heartbeat\_count**  
*The number of Heartbeats from a remote DataWriter received by a local DataReader.*
- **DDS\_LongLong received\_heartbeat\_count\_change**  
*The change in `DDS_DataReaderProtocolStatus::received_heartbeat_count` (p. 639) since the last time the status was read.*
- **DDS\_LongLong received\_heartbeat\_bytes**  
*The number of bytes of Heartbeats from a remote DataWriter received by a local DataReader.*
- **DDS\_LongLong received\_heartbeat\_bytes\_change**  
*The change in `DDS_DataReaderProtocolStatus::received_heartbeat_bytes` (p. 639) since the last time the status was read.*
- **DDS\_LongLong sent\_ack\_count**  
*The number of ACKs sent from a local DataReader to a matching remote DataWriter.*
- **DDS\_LongLong sent\_ack\_count\_change**  
*The change in `DDS_DataReaderProtocolStatus::sent_ack_count` (p. 640) since the last time the status was read.*
- **DDS\_LongLong sent\_ack\_bytes**

- The number of bytes of ACKs sent from a local DataReader to a matching remote DataWriter.*

  - **DDS\_LongLong sent\_ack\_bytes\_change**

*The change in `DDS_DataReaderProtocolStatus::sent_ack_bytes` (p. 640) since the last time the status was read.*
  - **DDS\_LongLong sent\_nack\_count**

*The number of NACKs sent from a local DataReader to a matching remote DataWriter.*
  - **DDS\_LongLong sent\_nack\_count\_change**

*The change in `DDS_DataReaderProtocolStatus::sent_nack_count` (p. 640) since the last time the status was read.*
  - **DDS\_LongLong sent\_nack\_bytes**

*The number of bytes of NACKs sent from a local DataReader to a matching remote DataWriter.*
  - **DDS\_LongLong sent\_nack\_bytes\_change**

*The change in `DDS_DataReaderProtocolStatus::sent_nack_bytes` (p. 641) since the last time the status was read.*
  - **DDS\_LongLong received\_gap\_count**

*The number of GAPS received from remote DataWriter to this DataReader.*
  - **DDS\_LongLong received\_gap\_count\_change**

*The change in `DDS_DataReaderProtocolStatus::received_gap_count` (p. 641) since the last time the status was read.*
  - **DDS\_LongLong received\_gap\_bytes**

*The number of bytes of GAPS received from remote DataWriter to this DataReader.*
  - **DDS\_LongLong received\_gap\_bytes\_change**

*The change in `DDS_DataReaderProtocolStatus::received_gap_bytes` (p. 641) since the last time the status was read.*
  - **DDS\_LongLong rejected\_sample\_count**

*The number of times a sample is rejected because it cannot be accepted by a reliable DataReader.*
  - **DDS\_LongLong rejected\_sample\_count\_change**

*The change in `DDS_DataReaderProtocolStatus::rejected_sample_count` (p. 642) since the last time the status was read.*
  - struct **DDS\_SequenceNumber\_t first\_available\_sample\_sequence\_number**

*Sequence number of the first available sample in a matched DataWriters reliability queue.*
  - struct **DDS\_SequenceNumber\_t last\_available\_sample\_sequence\_number**

*Sequence number of the last available sample in a matched Datawriter's reliability queue.*
  - struct **DDS\_SequenceNumber\_t last\_committed\_sample\_sequence\_number**

*Sequence number of the newest sample received from the matched DataWriter committed to the DataReader's queue.*
  - **DDS\_Long uncommitted\_sample\_count**

*Number of received samples that are not yet available to be read or taken, due to being received out of order.*
  - **DDS\_LongLong out\_of\_range\_rejected\_sample\_count**

*The number of samples dropped by the DataReader due to received window is full and the sample is out-of-order.*
  - **DDS\_LongLong received\_fragment\_count**

*The number of `DATA_FRAG` messages that have been received by this DataReader.*
  - **DDS\_LongLong dropped\_fragment\_count**

*The number of `DATA_FRAG` messages that have been dropped by a DataReader.*
  - **DDS\_LongLong reassembled\_sample\_count**

*The number of fragmented samples that have been reassembled by a DataReader.*
  - **DDS\_LongLong sent\_nack\_fragment\_count**

*The number of NACK fragments that have been sent from a DataReader to a DataWriter.*
  - **DDS\_LongLong sent\_nack\_fragment\_bytes**

*The number of NACK fragment bytes that have been sent from a DataReader to a DataWriter.*

### 9.31.1 Detailed Description

<<*extension*>> (p. 237) The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.

Entity:

**DDSDataReader** (p. 1288)

### 9.31.2 Member Data Documentation

#### 9.31.2.1 received\_sample\_count

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_sample\_count

The number of samples received by a DataReader.

Depending on how the **DDS\_DataReaderProtocolStatus** (p. 633) was obtained this may count samples coming from a specific DataWriter or from all the DataWriters that are matched with the DataReader.

If the **DDS\_DataReaderProtocolStatus** (p. 633) is obtained using the **DDSDataReader::get\_datareader\_protocol\_status** (p. 1305) operation then it will count samples from any DataWriter. If the DataReaderProtocolStatus is obtained using the **DDSDataReader::get\_matched\_publication\_datareader\_protocol\_status** (p. 1305) then it will count the samples for the DataWriter specified as a parameter to the function.

Duplicate samples arriving from the DataWriter(s) (e.g. via multiple network paths) are detected prior to increasing this counter. The duplicate samples are counted by **DDS\_DataReaderProtocolStatus::duplicate\_sample\_count** (p. 637).

If the DataReader has specified a ContentFilter the received samples that do not pass the filter are part of this counter. The filtered samples are counted by **DDS\_DataReaderProtocolStatus::filtered\_sample\_count** (p. 638).

Samples rejected because they do not fit on the DataReader Queue are also part of this counter.

Note the received\_sample\_count counts samples received from all DataWriters and it does not necessarily match the number of samples accepted into the DataReader Queue. This is because:

- Samples can also be inserted into the DataReader Queue by lifecycle events that are locally detected like an instance becoming not alive as a result of DataWriters leaving the network.
- Samples can be filtered out due to ContentFilter or TimeFilter
- Samples can be rejected because there is no space in DataReader Queue

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

### 9.31.2.2 received\_sample\_count\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_count_change`

The change in `DDS_DataReaderProtocolStatus::received_sample_count` (p. 636) since the last time the status was read.

See also

`DDS_DataReaderProtocolStatus::received_sample_count` (p. 636)

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

### 9.31.2.3 received\_sample\_bytes

`DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_bytes`

The number of bytes received by a DataReader.

See also

`DDS_DataReaderProtocolStatus::received_sample_count` (p. 636)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

### 9.31.2.4 received\_sample\_bytes\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_bytes_change`

The change in `DDS_DataReaderProtocolStatus::received_sample_bytes` (p. 637) since the last time the status was read.

See also

`DDS_DataReaderProtocolStatus::received_sample_count_change` (p. 636)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

### 9.31.2.5 duplicate\_sample\_count

`DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_count`

The number of samples from a remote DataWriter received, not for the first time, by a local DataReader.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

### 9.31.2.6 duplicate\_sample\_count\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_count_change`

The change in `DDS_DataReaderProtocolStatus::duplicate_sample_count` (p. 637) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

### 9.31.2.7 duplicate\_sample\_bytes

`DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_bytes`

The number of bytes of samples from a remote DataWriter received, not for the first time, by a local DataReader.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

### 9.31.2.8 duplicate\_sample\_bytes\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_bytes_change`

The change in `DDS_DataReaderProtocolStatus::duplicate_sample_bytes` (p. 638) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

### 9.31.2.9 filtered\_sample\_count

`DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_count`

**[DEPRECATED]**. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔_DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)

### 9.31.2.10 filtered\_sample\_count\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_count_change`

**[DEPRECATED]**. See: `DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count` (p. 626) `DDS_↔_DataReaderCacheStatus::content_filter_dropped_sample_count` (p. 626)

### 9.31.2.11 filtered\_sample\_bytes

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::filtered\_sample\_bytes

[DEPRECATED]. See: [DDS\\_DataReaderCacheStatus::time\\_based\\_filter\\_dropped\\_sample\\_count](#) (p. 626) [DDS\\_DataReaderCacheStatus::content\\_filter\\_dropped\\_sample\\_count](#) (p. 626)

### 9.31.2.12 filtered\_sample\_bytes\_change

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::filtered\_sample\_bytes\_change

[DEPRECATED]. See: [DDS\\_DataReaderCacheStatus::time\\_based\\_filter\\_dropped\\_sample\\_count](#) (p. 626) [DDS\\_DataReaderCacheStatus::content\\_filter\\_dropped\\_sample\\_count](#) (p. 626)

### 9.31.2.13 received\_heartbeat\_count

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_heartbeat\_count

The number of Heartbeats from a remote DataWriter received by a local DataReader.

### 9.31.2.14 received\_heartbeat\_count\_change

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_heartbeat\_count\_change

The change in [DDS\\_DataReaderProtocolStatus::received\\_heartbeat\\_count](#) (p. 639) since the last time the status was read.

### 9.31.2.15 received\_heartbeat\_bytes

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_heartbeat\_bytes

The number of bytes of Heartbeats from a remote DataWriter received by a local DataReader.

### 9.31.2.16 received\_heartbeat\_bytes\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::received_heartbeat_bytes_change`

The change in `DDS_DataReaderProtocolStatus::received_heartbeat_bytes` (p. 639) since the last time the status was read.

### 9.31.2.17 sent\_ack\_count

`DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_count`

The number of ACKs sent from a local DataReader to a matching remote DataWriter.

### 9.31.2.18 sent\_ack\_count\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_count_change`

The change in `DDS_DataReaderProtocolStatus::sent_ack_count` (p. 640) since the last time the status was read.

### 9.31.2.19 sent\_ack\_bytes

`DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_bytes`

The number of bytes of ACKs sent from a local DataReader to a matching remote DataWriter.

### 9.31.2.20 sent\_ack\_bytes\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_bytes_change`

The change in `DDS_DataReaderProtocolStatus::sent_ack_bytes` (p. 640) since the last time the status was read.

### 9.31.2.21 sent\_nack\_count

`DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_count`

The number of NACKs sent from a local DataReader to a matching remote DataWriter.

### 9.31.2.22 sent\_nack\_count\_change

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::sent\_nack\_count\_change

The change in **DDS\_DataReaderProtocolStatus::sent\_nack\_count** (p. 640) since the last time the status was read.

### 9.31.2.23 sent\_nack\_bytes

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::sent\_nack\_bytes

The number of bytes of NACKs sent from a local DataReader to a matching remote DataWriter.

### 9.31.2.24 sent\_nack\_bytes\_change

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::sent\_nack\_bytes\_change

The change in **DDS\_DataReaderProtocolStatus::sent\_nack\_bytes** (p. 641) since the last time the status was read.

### 9.31.2.25 received\_gap\_count

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_gap\_count

The number of GAPS received from remote DataWriter to this DataReader.

### 9.31.2.26 received\_gap\_count\_change

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_gap\_count\_change

The change in **DDS\_DataReaderProtocolStatus::received\_gap\_count** (p. 641) since the last time the status was read.

### 9.31.2.27 received\_gap\_bytes

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::received\_gap\_bytes

The number of bytes of GAPS received from remote DataWriter to this DataReader.

### 9.31.2.28 received\_gap\_bytes\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::received_gap_bytes_change`

The change in `DDS_DataReaderProtocolStatus::received_gap_bytes` (p. 641) since the last time the status was read.

### 9.31.2.29 rejected\_sample\_count

`DDS_LongLong DDS_DataReaderProtocolStatus::rejected_sample_count`

The number of times a sample is rejected because it cannot be accepted by a reliable DataReader.

Samples rejected by a reliable DataReader will be NACKed, and they will have to be resent by the DataWriter if they are still available in the DataWriter queue.

This counter will always be 0 when using `DDS_BEST_EFFORT_RELIABILITY_QOS` (p. 435).

### 9.31.2.30 rejected\_sample\_count\_change

`DDS_LongLong DDS_DataReaderProtocolStatus::rejected_sample_count_change`

The change in `DDS_DataReaderProtocolStatus::rejected_sample_count` (p. 642) since the last time the status was read.

This counter will always be 0 when using `DDS_BEST_EFFORT_RELIABILITY_QOS` (p. 435).

### 9.31.2.31 first\_available\_sample\_sequence\_number

`struct DDS_SequenceNumber_t DDS_DataReaderProtocolStatus::first_available_sample_sequence_number`

Sequence number of the first available sample in a matched DataWriters reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

### 9.31.2.32 last\_available\_sample\_sequence\_number

`struct DDS_SequenceNumber_t DDS_DataReaderProtocolStatus::last_available_sample_sequence_number`

Sequence number of the last available sample in a matched Datawriter's reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

### 9.31.2.33 last\_committed\_sample\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataReaderProtocolStatus::last_committed_sample_sequence_number
```

Sequence number of the newest sample received from the matched DataWriter committed to the DataReader's queue.

Applicable only when retrieving matched DataWriter statuses.

For best-effort DataReaders, this is the sequence number of the latest sample received.

For reliable DataReaders, this is the sequence number of the latest sample that is available to be read or taken from the DataReader's queue.

### 9.31.2.34 uncommitted\_sample\_count

```
DDS_Long DDS_DataReaderProtocolStatus::uncommitted_sample_count
```

Number of received samples that are not yet available to be read or taken, due to being received out of order.

Applicable only when retrieving matched DataWriter statuses.

### 9.31.2.35 out\_of\_range\_rejected\_sample\_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::out_of_range_rejected_sample_count
```

The number of samples dropped by the DataReader due to received window is full and the sample is out-of-order.

When using **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435); if the DataReader received samples out-of-order, they are stored internally until the missing samples are received. The number of out-of-order samples that the DataReader can keep is set by **DDS\_RtpsReliableReaderProtocol\_t::receive\_window\_size** (p. 1059). When the received window is full any out-of-order sample received will be dropped.

### 9.31.2.36 received\_fragment\_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::received_fragment_count
```

The number of DATA\_FRAG messages that have been received by this DataReader.

This statistic is incremented upon the receipt of each DATA\_FRAG message. Fragments from duplicate samples do not count towards this statistic. Applicable only when data is fragmented.

### 9.31.2.37 dropped\_fragment\_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::dropped_fragment_count
```

The number of DATA\_FRAG messages that have been dropped by a DataReader.

This statistic does not include malformed fragments. Applicable only when data is fragmented.

### 9.31.2.38 reassembled\_sample\_count

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::reassembled\_sample\_count

The number of fragmented samples that have been reassembled by a DataReader.

This statistic is incremented when all of the fragments which are required to reassemble an entire sample have been received. Applicable only when data is fragmented.

### 9.31.2.39 sent\_nack\_fragment\_count

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::sent\_nack\_fragment\_count

The number of NACK fragments that have been sent from a DataReader to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

### 9.31.2.40 sent\_nack\_fragment\_bytes

**DDS\_LongLong** DDS\_DataReaderProtocolStatus::sent\_nack\_fragment\_bytes

The number of NACK fragment bytes that have been sent from a DataReader to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

## 9.32 DDS\_DataReaderQos Struct Reference

QoS policies supported by a **DDSDataReader** (p. 1288) entity.

## Public Member Functions

- bool **operator==** (const **DDS\_DataReaderQos** &r) const  
*Compares two DataReaderQos objects for equality.*
- bool **operator!=** (const **DDS\_DataReaderQos** &r) const  
*Compares two DataReaderQos objects for inequality.*
- **DDS\_ReturnCode\_t print** () const  
*Prints this DDS\_DataReaderQos (p. 644) to stdout.*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataReaderQos** &base) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_DataReaderQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this DDS\_DataReaderQos (p. 644).*

## Public Attributes

- struct **DDS\_DurabilityQosPolicy durability**

- struct **DDS\_EntityNameQosPolicy** `subscription_name`  
<<extension>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).
- struct **DDS\_TransportPriorityQosPolicy** `transport_priority`  
Transport priority policy, **TRANSPORT\_PRIORITY** (p. 449).
- struct **DDS\_TypeSupportQosPolicy** `type_support`  
<<extension>> (p. 237) type support data, **TYPESUPPORT** (p. 453).

### 9.32.1 Detailed Description

QoS policies supported by a **DDSDataReader** (p. 1288) entity.

You must set certain members in a consistent manner:

**DDS\_DataReaderQos::deadline** (p. 648) .period >= **DDS\_DataReaderQos::time\_based\_filter** (p. 650) .minimum↔  
\_separation

**DDS\_DataReaderQos::history** (p. 649) .depth <= **DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_samples↔  
\_per\_instance

**DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_samples\_per\_instance <= **DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_samples **DDS\_DataReaderQos::resource\_limits** (p. 649) .initial\_samples <= **DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_samples

**DDS\_DataReaderQos::resource\_limits** (p. 649) .initial\_instances <= **DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_instances

**DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .initial\_remote\_writers\_per\_instance <= **DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .max\_remote\_writers\_per\_instance

**DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .initial\_infos <= **DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .max\_infos

**DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .max\_remote\_writers\_per\_instance <= **DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .max\_remote\_writers

**DDS\_DataReaderQos::reader\_resource\_limits** (p. 650) .max\_samples\_per\_remote\_writer <= **DDS\_DataReaderQos::resource\_limits** (p. 649) .max\_samples

length of **DDS\_DataReaderQos::user\_data** (p. 649) .value <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .reader\_user\_data\_max\_length

If any of the above are not true, **DDSDataReader::set\_qos** (p. 1306) and **DDSDataReader::set\_qos\_with\_profile** (p. 1307) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) and **DDSSubscriber::create\_datareader** (p. 1599) will return NULL.

## 9.32.2 Member Function Documentation

### 9.32.2.1 operator==( )

```
bool DDS_DataReaderQos::operator==(
    const DDS_DataReaderQos & r ) const [inline]
```

Compares two DataReaderQos objects for equality.

See also

**DDS\_DataReaderQos\_equals** (p. 142)

References **DDS\_DataReaderQos\_equals()**.

### 9.32.2.2 operator"!=(())

```
bool DDS_DataReaderQos::operator!=(  
    const DDS_DataReaderQos & r ) const [inline]
```

Compares two DataReaderQos objects for inequality.

See also

**DDS\_DataReaderQos\_equals** (p. 142)

References **DDS\_DataReaderQos\_equals()**.

## 9.32.3 Member Data Documentation

### 9.32.3.1 durability

```
struct DDS_DurabilityQosPolicy DDS_DataReaderQos::durability
```

Durability policy, **DURABILITY** (p. 398).

### 9.32.3.2 deadline

```
struct DDS_DeadlineQosPolicy DDS_DataReaderQos::deadline
```

Deadline policy, **DEADLINE** (p. 385).

### 9.32.3.3 latency\_budget

```
struct DDS_LatencyBudgetQosPolicy DDS_DataReaderQos::latency_budget
```

Latency budget policy, **LATENCY\_BUDGET** (p. 407).

#### 9.32.3.4 liveliness

```
struct DDS_LivelinessQosPolicy DDS_DataReaderQos::liveliness
```

Liveliness policy, **LIVELINESS** (p. 409).

#### 9.32.3.5 reliability

```
struct DDS_ReliabilityQosPolicy DDS_DataReaderQos::reliability
```

Reliability policy, **RELIABILITY** (p. 433).

#### 9.32.3.6 destination\_order

```
struct DDS_DestinationOrderQosPolicy DDS_DataReaderQos::destination_order
```

Destination order policy, **DESTINATION\_ORDER** (p. 386).

#### 9.32.3.7 history

```
struct DDS_HistoryQosPolicy DDS_DataReaderQos::history
```

History policy, **HISTORY** (p. 405).

#### 9.32.3.8 resource\_limits

```
struct DDS_ResourceLimitsQosPolicy DDS_DataReaderQos::resource_limits
```

Resource limits policy, **RESOURCE\_LIMITS** (p. 437).

#### 9.32.3.9 user\_data

```
struct DDS_UserDataQosPolicy DDS_DataReaderQos::user_data
```

User data policy, **USER\_DATA** (p. 455).

### 9.32.3.10 ownership

```
struct DDS_OwnershipQosPolicy DDS_DataReaderQos::ownership
```

Ownership policy, **OWNERSHIP** (p. 414).

### 9.32.3.11 time\_based\_filter

```
struct DDS_TimeBasedFilterQosPolicy DDS_DataReaderQos::time_based_filter
```

Time-based filter policy, **TIME\_BASED\_FILTER** (p. 440).

### 9.32.3.12 reader\_data\_lifecycle

```
struct DDS_ReaderDataLifecycleQosPolicy DDS_DataReaderQos::reader_data_lifecycle
```

Reader data lifecycle policy, **READER\_DATA\_LIFECYCLE** (p. 432).

### 9.32.3.13 representation

```
struct DDS_DataRepresentationQosPolicy DDS_DataReaderQos::representation
```

Data representation policy, **DATA\_REPRESENTATION** (p. 369).

### 9.32.3.14 type\_consistency

```
struct DDS_TypeConsistencyEnforcementQosPolicy DDS_DataReaderQos::type_consistency
```

Type consistency enforcement policy, **TYPE\_CONSISTENCY\_ENFORCEMENT** (p. 451).

### 9.32.3.15 data\_tags

```
DDS_DataTagQosPolicy DDS_DataReaderQos::data_tags
```

DataTag policy, **DATA\_TAG** (p. 376).

### 9.32.3.16 reader\_resource\_limits

```
struct DDS_DataReaderResourceLimitsQosPolicy DDS_DataReaderQos::reader_resource_limits
```

<<*extension*>> (p. 237) **DDSDataReader** (p. 1288) resource limits policy, **DATA\_READER\_RESOURCE\_LIMITS** (p. 367). This policy is an extension to the DDS standard.

### 9.32.3.17 protocol

```
struct DDS_DataReaderProtocolQosPolicy DDS_DataReaderQos::protocol
```

<<*extension*>> (p. 237) **DDSDataReader** (p. 1288) protocol policy, **DATA\_READER\_PROTOCOL** (p. 366)

### 9.32.3.18 transport\_selection

```
struct DDS_TransportSelectionQosPolicy DDS_DataReaderQos::transport_selection
```

<<*extension*>> (p. 237) Transport selection policy, **TRANSPORT\_SELECTION** (p. 450).

Specifies the transports available for use by the **DDSDataReader** (p. 1288).

### 9.32.3.19 unicast

```
struct DDS_TransportUnicastQosPolicy DDS_DataReaderQos::unicast
```

<<*extension*>> (p. 237) Unicast transport policy, **TRANSPORT\_UNICAST** (p. 451).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **DDSDataWriter** (p. 1321) entities in the domain.

### 9.32.3.20 multicast

```
struct DDS_TransportMulticastQosPolicy DDS_DataReaderQos::multicast
```

<<*extension*>> (p. 237) Multicast transport policy, **TRANSPORT\_MULTICAST** (p. 447).

Specifies the multicast group addresses and ports on which **messages** can be received.

The multicast addresses are used to receive messages from **DDSDataWriter** (p. 1321) entities in the domain.

### 9.32.3.21 property

```
struct DDS_PropertyQosPolicy DDS_DataReaderQos::property
```

<<*extension*>> (p. 237) Property policy, **PROPERTY** (p. 419). See also [Property Reference Guide](#).

### 9.32.3.22 service

```
struct DDS_ServiceQosPolicy DDS_DataReaderQos::service
```

<<*extension*>> (p. 237) Service policy, **SERVICE** (p. 438).

### 9.32.3.23 availability

```
struct DDS_AvailabilityQosPolicy DDS_DataReaderQos::availability
```

<<*extension*>> (p. 237) Availability policy, **AVAILABILITY** (p. 364).

### 9.32.3.24 subscription\_name

```
struct DDS_EntityNameQosPolicy DDS_DataReaderQos::subscription_name
```

<<*extension*>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).

### 9.32.3.25 transport\_priority

```
struct DDS_TransportPriorityQosPolicy DDS_DataReaderQos::transport_priority
```

Transport priority policy, **TRANSPORT\_PRIORITY** (p. 449).

### 9.32.3.26 type\_support

```
struct DDS_TypeSupportQosPolicy DDS_DataReaderQos::type_support
```

<<*extension*>> (p. 237) type support data, **TYPESUPPORT** (p. 453).

Optional value that is passed to a type plugin's `on_endpoint_attached` and `deserialization` functions.

## 9.33 DDS\_DataReaderResourceLimitsInstanceReplacementSettings Struct Reference

Instance replacement kind applied to each instance state.

### Public Attributes

- **DDS\_DataReaderInstanceRemovalKind** `alive_instance_removal`  
Removal kind applied to alive (`DDS_ALIVE_INSTANCE_STATE` (p. 161)) instances.
- **DDS\_DataReaderInstanceRemovalKind** `disposed_instance_removal`  
Removal kind applied to disposed (`DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE` (p. 161)) instances.
- **DDS\_DataReaderInstanceRemovalKind** `no_writers_instance_removal`  
Removal kind applied to fully-unregistered (`DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE` (p. 161)) instances.

### 9.33.1 Detailed Description

Instance replacement kind applied to each instance state.

[default]

- `DDS_DataReaderResourceLimitsInstanceReplacementSettings::alive_instance_removal` (p. 653) = `DDS_NO_INSTANCE_REMOVAL` (p. 368)
- `DDS_DataReaderResourceLimitsInstanceReplacementSettings::disposed_instance_removal` (p. 653) = `DDS_EMPTY_INSTANCE_REMOVAL` (p. 368)
- `DDS_DataReaderResourceLimitsInstanceReplacementSettings::no_writers_instance_removal` (p. 654) = `DDS_EMPTY_INSTANCE_REMOVAL` (p. 368)

See also

`DDS_DataReaderResourceLimitsQosPolicy::instance_replacement` (p. 666)

### 9.33.2 Member Data Documentation

#### 9.33.2.1 `alive_instance_removal`

`DDS_DataReaderInstanceRemovalKind` `DDS_DataReaderResourceLimitsInstanceReplacementSettings::alive_instance_removal`

Removal kind applied to alive (`DDS_ALIVE_INSTANCE_STATE` (p. 161)) instances.

[default] `DDS_NO_INSTANCE_REMOVAL` (p. 368)

### 9.33.2.2 disposed\_instance\_removal

`DDS_DataReaderInstanceRemovalKind DDS_DataReaderResourceLimitsInstanceReplacementSettings::disposed_instance_removal`

Removal kind applied to disposed (`DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE` (p. 161)) instances.

[default] `DDS_EMPTY_INSTANCE_REMOVAL` (p. 368)

### 9.33.2.3 no\_writers\_instance\_removal

`DDS_DataReaderInstanceRemovalKind DDS_DataReaderResourceLimitsInstanceReplacementSettings::no_writers_instance_removal`

Removal kind applied to fully-unregistered (`DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE` (p. 161)) instances.

[default] `DDS_EMPTY_INSTANCE_REMOVAL` (p. 368)

## 9.34 DDS\_DataReaderResourceLimitsQosPolicy Struct Reference

Various settings that configure how a `DDSDataReader` (p. 1288) allocates and uses physical memory for internal resources.

### Public Attributes

- **DDS\_Long max\_remote\_writers**  
*The maximum number of remote writers from which a `DDSDataReader` (p. 1288) may read, including all instances.*
- **DDS\_Long max\_remote\_writers\_per\_instance**  
*The maximum number of remote writers from which a `DDSDataReader` (p. 1288) may read a single instance.*
- **DDS\_Long max\_samples\_per\_remote\_writer**  
*The maximum number of out-of-order samples from a given remote `DDSDataWriter` (p. 1321) that a `DDSDataReader` (p. 1288) may store when maintaining a reliable connection to the `DDSDataWriter` (p. 1321).*
- **DDS\_Long max\_infos**  
*The maximum number of info units that a `DDSDataReader` (p. 1288) can use to store `DDS_SampleInfo` (p. 1082).*
- **DDS\_Long initial\_remote\_writers**  
*The initial number of remote writers from which a `DDSDataReader` (p. 1288) may read, including all instances.*
- **DDS\_Long initial\_remote\_writers\_per\_instance**  
*The initial number of remote writers from which a `DDSDataReader` (p. 1288) may read a single instance.*
- **DDS\_Long initial\_infos**  
*The initial number of info units that a `DDSDataReader` (p. 1288) can have, which are used to store `DDS_SampleInfo` (p. 1082).*
- **DDS\_Long initial\_outstanding\_reads**  
*The initial number of outstanding calls to read/take (or one of their variants) on the same `DDSDataReader` (p. 1288) for which memory has not been returned by calling `FooDataReader::return_loan` (p. 1672).*
- **DDS\_Long max\_outstanding\_reads**

The maximum number of outstanding read/take calls (or one of their variants) on the same **DDSDataReader** (p. 1288) for which memory has not been returned by calling **FooDataReader::return\_loan** (p. 1672).

- **DDS\_Long max\_samples\_per\_read**  
The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652). If more data exists in the middleware, the application will need to issue multiple read/take calls.
- **DDS\_Boolean disable\_fragmentation\_support**  
Determines whether the **DDSDataReader** (p. 1288) can receive fragmented samples.
- **DDS\_Long max\_fragmented\_samples**  
The maximum number of samples for which the **DDSDataReader** (p. 1288) may store fragments at a given point in time.
- **DDS\_Long initial\_fragmented\_samples**  
The initial number of samples for which a **DDSDataReader** (p. 1288) may store fragments.
- **DDS\_Long max\_fragmented\_samples\_per\_remote\_writer**  
The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1288) may store fragments.
- **DDS\_Long max\_fragments\_per\_sample**  
Maximum number of fragments for a single sample.
- **DDS\_Boolean dynamically\_allocate\_fragmented\_samples**  
Determines whether the **DDSDataReader** (p. 1288) pre-allocates storage for storing fragmented samples.
- **DDS\_Long max\_total\_instances**  
Maximum number of instances for which a DataReader will keep state.
- **DDS\_Long max\_remote\_virtual\_writers**  
The maximum number of remote virtual writers from which a **DDSDataReader** (p. 1288) may read, including all instances.
- **DDS\_Long initial\_remote\_virtual\_writers**  
The initial number of remote virtual writers from which a **DDSDataReader** (p. 1288) may read, including all instances.
- **DDS\_Long max\_remote\_virtual\_writers\_per\_instance**  
The maximum number of virtual remote writers that can be associated with an instance.
- **DDS\_Long initial\_remote\_virtual\_writers\_per\_instance**  
The initial number of virtual remote writers per instance.
- **DDS\_Long max\_remote\_writers\_per\_sample**  
The maximum number of remote writers allowed to write the same sample.
- **DDS\_Long max\_query\_condition\_filters**  
The maximum number of query condition filters a reader is allowed.
- **DDS\_Long max\_app\_ack\_response\_length**  
Maximum length of application-level acknowledgment response data.
- **DDS\_Boolean keep\_minimum\_state\_for\_instances**  
Whether or not keep a minimum instance state for up to **DDS\_DataReaderResourceLimitsQosPolicy::max\_total\_instances** (p. 661).
- **DDS\_Long initial\_topic\_queries**  
The initial number of TopicQueries allocated by a **DDSDataReader** (p. 1288).
- **DDS\_Long max\_topic\_queries**  
The maximum number of active TopicQueries that a **DDSDataReader** (p. 1288) can create.
- struct **DDS\_AllocationSettings\_t shmem\_ref\_transfer\_mode\_attached\_segment\_allocation**  
Allocation resource for the shared memory segments attached by the **DDSDataReader** (p. 1288).
- struct **DDS\_DataReaderResourceLimitsInstanceReplacementSettings instance\_replacement**  
Sets the kind of instances allowed to be replaced for each instance state (**DDS\_InstanceStateKind** (p. 160)) when a DataReader reaches **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055).
- struct **DDS\_Duration\_t autopurge\_remote\_not\_alive\_writer\_delay**  
Maximum duration for which the **DDSDataReader** (p. 1288) will maintain information regarding a **DDSDataWriter** (p. 1321) once the **DDSDataWriter** (p. 1321) has become not alive.

### 9.34.1 Detailed Description

Various settings that configure how a **DDSDataReader** (p. 1288) allocates and uses physical memory for internal resources.

DataReaders must allocate internal structures to handle the maximum number of DataWriters that may connect to it, whether or not a **DDSDataReader** (p. 1288) handles data fragmentation and how many data fragments that it may handle (for data samples larger than the MTU of the underlying network transport), how many simultaneous outstanding loans of internal memory holding data samples can be provided to user code, as well as others.

Most of these internal structures start at an initial size and, by default, will grow as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **DDSDataReader** (p. 1288). By setting the initial size to the maximum size, you will prevent RTI Connexx from dynamically allocating any memory after the creation of the **DDSDataReader** (p. 1288).

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDataReader** (p. 1288)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.34.2 Member Data Documentation

#### 9.34.2.1 max\_remote\_writers

```
DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers
```

The maximum number of remote writers from which a **DDSDataReader** (p. 1288) may read, including all instances.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), >= initial\_remote\_writers, >= max\_remote\_writers\_↔ per\_instance

For unkeyed types, this value has to be equal to max\_remote\_writers\_per\_instance if max\_remote\_writers\_per\_instance is not equal to **DDS\_LENGTH\_UNLIMITED** (p. 438).

Note: For efficiency, set max\_remote\_writers >= **DDS\_DataReaderResourceLimitsQosPolicy::max\_↔ remote\_writers\_per\_instance** (p. 656).

### 9.34.2.2 max\_remote\_writers\_per\_instance

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_remote\_writers\_per\_instance

The maximum number of remote writers from which a **DDSDataReader** (p. 1288) may read a single instance.

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 1024] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\leq$  max\_remote\_writers or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_remote\_writers\_per\_instance

For unkeyed types, this value has to be equal to max\_remote\_writers if it is not **DDS\_LENGTH\_UNLIMITED** (p. 438).

Note: For efficiency, set max\_remote\_writers\_per\_instance  $\leq$  **DDS\_DataReaderResourceLimitsQosPolicy::max\_remote\_writers** (p. 656)

### 9.34.2.3 max\_samples\_per\_remote\_writer

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_samples\_per\_remote\_writer

The maximum number of out-of-order samples from a given remote **DDSDataWriter** (p. 1321) that a **DDSDataReader** (p. 1288) may store when maintaining a reliable connection to the **DDSDataWriter** (p. 1321).

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\leq$  **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055)

### 9.34.2.4 max\_infos

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_infos

The maximum number of info units that a **DDSDataReader** (p. 1288) can use to store **DDS\_SampleInfo** (p. 1082).

When read/take is called on a DataReader, the DataReader passes a sequence of data samples and an associated sample info sequence. The sample info sequence contains additional information for each data sample.

max\_infos determines the resources allocated for storing sample info. This memory is loaned to the application when passing a sample info sequence.

Note that sample info is a snapshot, generated when read/take is called.

max\_infos should not be less than max\_samples.

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_infos

### 9.34.2.5 initial\_remote\_writers

`DDS_Long DDS_DataReaderResourceLimitsQosPolicy::initial_remote_writers`

The initial number of remote writers from which a **DDSDataReader** (p. 1288) may read, including all instances.

**[default]** 2

**[range]** [1, 1 million], <= max\_remote\_writers

For unkeyed types this value has to be equal to initial\_remote\_writers\_per\_instance.

Note: For efficiency, set initial\_remote\_writers >= **DDS\_DataReaderResourceLimitsQosPolicy::initial\_remote\_writers\_per\_instance** (p. 658).

### 9.34.2.6 initial\_remote\_writers\_per\_instance

`DDS_Long DDS_DataReaderResourceLimitsQosPolicy::initial_remote_writers_per_instance`

The initial number of remote writers from which a **DDSDataReader** (p. 1288) may read a single instance.

**[default]** 2

**[range]** [1,1024], <= max\_remote\_writers\_per\_instance

For unkeyed types this value has to be equal to initial\_remote\_writers.

Note: For efficiency, set initial\_remote\_writers\_per\_instance <= **DDS\_DataReaderResourceLimitsQosPolicy::initial\_remote\_writers** (p. 657).

### 9.34.2.7 initial\_infos

`DDS_Long DDS_DataReaderResourceLimitsQosPolicy::initial_infos`

The initial number of info units that a **DDSDataReader** (p. 1288) can have, which are used to store **DDS\_SampleInfo** (p. 1082).

**[default]** 32

**[range]** [1,1 million], <= max\_infos

### 9.34.2.8 initial\_outstanding\_reads

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::initial\_outstanding\_reads

The initial number of outstanding calls to read/take (or one of their variants) on the same **DDSDataReader** (p. 1288) for which memory has not been returned by calling **FooDataReader::return\_loan** (p. 1672).

**[default]** 2

**[range]** [1, 65536], <= max\_outstanding\_reads

### 9.34.2.9 max\_outstanding\_reads

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_outstanding\_reads

The maximum number of outstanding read/take calls (or one of their variants) on the same **DDSDataReader** (p. 1288) for which memory has not been returned by calling **FooDataReader::return\_loan** (p. 1672).

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 65536] or **DDS\_LENGTH\_UNLIMITED** (p. 438), >= initial\_outstanding\_reads

### 9.34.2.10 max\_samples\_per\_read

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_samples\_per\_read

The maximum number of data samples that the application can receive from the middleware in a single call to **Foo←DataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652). If more data exists in the middleware, the application will need to issue multiple read/take calls.

When reading data using listeners, the expected number of samples available for delivery in a single `take` call is typically small: usually just one, in the case of unbatched data, or the number of samples in a single batch, in the case of batched data. (See **DDS\_BatchQosPolicy** (p. 600) for more information about this feature.) When polling for data or using a **DDSWaitSet** (p. 1629), however, multiple samples (or batches) could be retrieved at once, depending on the data rate.

A larger value for this parameter makes the API simpler to use at the expense of some additional memory consumption.

**[default]** 1024

**[range]** [1,65536]

### 9.34.2.11 disable\_fragmentation\_support

**DDS\_Boolean** DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support

Determines whether the **DDSDataReader** (p. 1288) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.34.2.12 max\_fragmented\_samples

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_fragmented\_samples

The maximum number of samples for which the **DDSDataReader** (p. 1288) may store fragments at a given point in time.

At any given time, a **DDSDataReader** (p. 1288) may store fragments for up to `max_fragmented_samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different **DDSDataWriter** (p. 1321) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 1024

**[range]** [1, 1 million]

### 9.34.2.13 initial\_fragmented\_samples

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::initial\_fragmented\_samples

The initial number of samples for which a **DDSDataReader** (p. 1288) may store fragments.

Only applies if **DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 4

**[range]** [1,1024], <= max\_fragmented\_samples

### 9.34.2.14 max\_fragmented\_samples\_per\_remote\_writer

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_fragmented\_samples\_per\_remote\_writer

The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1288) may store fragments.

Logical limit so a single remote writer cannot consume all available resources.

Only applies if **DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_↔ BOOLEAN\_FALSE** (p. 317).

**[default]** 256

**[range]** [1, 1 million], <= max\_fragmented\_samples

### 9.34.2.15 max\_fragments\_per\_sample

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_fragments\_per\_sample

Maximum number of fragments for a single sample.

Only applies if **DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_↔  
BOOLEAN\_FALSE** (p. 317).

[default] **DDS\_LENGTH\_UNLIMITED** (p. 438)

[range] [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.34.2.16 dynamically\_allocate\_fragmented\_samples

**DDS\_Boolean** DDS\_DataReaderResourceLimitsQosPolicy::dynamically\_allocate\_fragmented\_samples

Determines whether the **DDSDataReader** (p. 1288) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to **DDS\_BOOLEAN\_FALSE** (p. 317), the middleware will allocate memory upfront for storing fragments for up to **DDS\_DataReaderResourceLimitsQosPolicy↔  
::initial\_fragmented\_samples** (p. 660) samples. This memory may grow up to **DDS\_DataReaderResourceLimits↔  
QosPolicy::max\_fragmented\_samples** (p. 659) if needed.

Only applies if **DDS\_DataReaderResourceLimitsQosPolicy::disable\_fragmentation\_support** (p. 659) is **DDS\_↔  
BOOLEAN\_FALSE** (p. 317).

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

### 9.34.2.17 max\_total\_instances

**DDS\_Long** `DDS_DataReaderResourceLimitsQosPolicy::max_total_instances`

Maximum number of instances for which a DataReader will keep state.

The maximum number of instances actively managed by a DataReader is determined by **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055).

These instances have associated DataWriters or samples in the DataReader's queue and are visible to the user through operations such as **FooDataReader::take** (p. 1652), **FooDataReader::read** (p. 1651), and **FooDataReader::get\_key\_value** (p. 1673).

The features Durable Reader State, MultiChannel DataWriters and RTI Persistence Service require RTI Connex to keep some internal state even for instances without DataWriters or samples in the DataReader's queue. The additional state is used to filter duplicate samples that could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

The total maximum number of instances that will be managed by the middleware, including instances without associated DataWriters or samples, is determined by `max_total_instances`.

When a new instance is received, RTI Connex will check the resource limit **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055). If the limit is exceeded, RTI Connex will drop the sample with the reason `LOST_BY_INSTANCES_LIMIT`. If the limit is not exceeded, RTI Connex will check `max_total_instances`. If `max_total_instances` is exceeded, RTI Connex will replace an existing instance without DataWriters and samples with the new one. The application could receive duplicate samples for the replaced instance if it becomes alive again.

The `max_total_instances` limit is not used if **DDS\_DataReaderResourceLimitsQosPolicy::keep\_minimum\_state\_for\_instances** (p. 664) is false, and in that case should be left at the default value.

**[default]** `DDS_AUTO_MAX_TOTAL_INSTANCES` (p. 369)

**[range]** [1, 1 million] or `DDS_LENGTH_UNLIMITED` (p. 438) or `DDS_AUTO_MAX_TOTAL_INSTANCES` (p. 369),  $\geq$  **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055)

### 9.34.2.18 max\_remote\_virtual\_writers

**DDS\_Long** `DDS_DataReaderResourceLimitsQosPolicy::max_remote_virtual_writers`

The maximum number of remote virtual writers from which a **DDSDataReader** (p. 1288) may read, including all instances.

When **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is set to `DDS_GROUP_PRESENTATION_QOS` (p. 418), this value determines the maximum number of DataWriter groups that can be managed by the **DDSSubscriber** (p. 1592) containing this **DDSDataReader** (p. 1288).

Since the **DDSSubscriber** (p. 1592) may contain more than one **DDSDataReader** (p. 1288), only the setting of the first applies.

**[default]** `DDS_LENGTH_UNLIMITED` (p. 438)

**[range]** [1, 1 million] or `DDS_LENGTH_UNLIMITED` (p. 438),  $\geq$  `initial_remote_virtual_writers`,  $\geq$  `max_remote_virtual_writers_per_instance`

### 9.34.2.19 initial\_remote\_virtual\_writers

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::initial\_remote\_virtual\_writers

The initial number of remote virtual writers from which a **DDSDataReader** (p. 1288) may read, including all instances.

**[default]** 2

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), <= max\_remote\_virtual\_writers

### 9.34.2.20 max\_remote\_virtual\_writers\_per\_instance

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_remote\_virtual\_writers\_per\_instance

The maximum number of virtual remote writers that can be associated with an instance.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1024] or **DDS\_LENGTH\_UNLIMITED** (p. 438), >= initial\_remote\_virtual\_writers\_per\_instance

For unkeyed types, this value is ignored.

The features of Durable Reader State and MultiChannel DataWriters, and RTI Persistence Service require RTI Connex to keep some internal state per virtual writer and instance that is used to filter duplicate samples. These duplicate samples could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

Once an association between a remote virtual writer and an instance is established, it is permanent – it will not disappear even if the physical writer incarnating the virtual writer is destroyed.

If max\_remote\_virtual\_writers\_per\_instance is exceeded for an instance, RTI Connex will not associate this instance with new virtual writers. Duplicates samples from these virtual writers will not be filtered on the reader.

If you are not using Durable Reader State, MultiChannel DataWriters or RTI Persistence Service in your system, you can set this property to 1 to optimize resources.

### 9.34.2.21 initial\_remote\_virtual\_writers\_per\_instance

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::initial\_remote\_virtual\_writers\_per\_instance

The initial number of virtual remote writers per instance.

**[default]** 2

**[range]** [1, 1024], <= max\_remote\_virtual\_writers\_per\_instance

For unkeyed types, this value is ignored.

### 9.34.2.22 max\_remote\_writers\_per\_sample

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_remote\_writers\_per\_sample

The maximum number of remote writers allowed to write the same sample.

One scenario in which two DataWriters may write the same sample is Persistence Service. The DataReader may receive the same sample coming from the original DataWriter and from a Persistence Service DataWriter. **[default]** 3

**[range]** [1, 1024]

### 9.34.2.23 max\_query\_condition\_filters

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_query\_condition\_filters

The maximum number of query condition filters a reader is allowed.

**[default]** 4

**[range]** [0, 32]

This value determines the maximum number of unique query condition content filters that a reader may create.

Each query condition content filter is comprised of both its `query_expression` and `query_parameters`. Two query conditions that have the same `query_expression` will require unique query condition filters if their `query_parameters` differ. Query conditions that differ only in their state masks will share the same query condition filter.

### 9.34.2.24 max\_app\_ack\_response\_length

**DDS\_Long** DDS\_DataReaderResourceLimitsQosPolicy::max\_app\_ack\_response\_length

Maximum length of application-level acknowledgment response data.

The maximum length of response data in an application-level acknowledgment.

When set to zero, no response data is sent with application-level acknowledgments.

**[default]** 1

**[range]** [0, 32768]

### 9.34.2.25 keep\_minimum\_state\_for\_instances

`DDS_Boolean` DDS\_DataReaderResourceLimitsQosPolicy::keep\_minimum\_state\_for\_instances

Whether or not keep a minimum instance state for up to `DDS_DataReaderResourceLimitsQosPolicy::max_total_instances` (p. 661).

The features Durable Reader State, multi-channel DataWriters, and Persistence Service require RTI Connext to keep some minimal internal state even for instances without DataWriters or DDS samples in the DataReader's queue, or that have been purged due to a dispose. The additional state is used to filter duplicate DDS samples that could be coming from different DataWriter channels or from multiple executions of Persistence Service. The total maximum number of instances that will be managed by the middleware, including instances without associated DataWriters or DDS samples or that have been purged due to a dispose, is determined by `DDS_DataReaderResourceLimitsQosPolicy::max_total_instances` (p. 661).

This additional state will only be kept for up to `max_total_instances` if this field is set to `DDS_BOOLEAN_TRUE` (p. 317), otherwise the additional state will not be kept for any instances.

The minimum state includes information such as the source timestamp of the last sample received by the instance and the last sequence number received from a virtual GUID.

[default] `DDS_BOOLEAN_TRUE` (p. 317)

### 9.34.2.26 initial\_topic\_queries

`DDS_Long` DDS\_DataReaderResourceLimitsQosPolicy::initial\_topic\_queries

The initial number of TopicQueries allocated by a `DDSDataReader` (p. 1288).

[default] 1

See also

`DDSTopicQuery` (p. 1627)

### 9.34.2.27 max\_topic\_queries

`DDS_Long` DDS\_DataReaderResourceLimitsQosPolicy::max\_topic\_queries

The maximum number of active TopicQueries that a `DDSDataReader` (p. 1288) can create.

Once this limit is reached, a `DDSDataReader` (p. 1288) can create more TopicQueries only if it deletes some of the previously created ones.

[default] `DDS_LENGTH_UNLIMITED` (p. 438)

See also

`DDSTopicQuery` (p. 1627)

### 9.34.2.28 shmем\_ref\_transfer\_mode\_attached\_segment\_allocation

```
struct DDS_AllocationSettings_t DDS_DataReaderResourceLimitsQosPolicy::shmем_ref_transfer_mode_↔
attached_segment_allocation
```

Allocation resource for the shared memory segments attached by the **DDSDataReader** (p. 1288).

The `max_count` does not limit the total number of shared memory segments used by the **DDSDataReader** (p. 1288). When this limit is hit, the **DDSDataReader** (p. 1288) will try to detach from a segment that doesn't contain any loaned samples and attach to a new segment. If samples are loaned from all attached segments, then the **DDSDataReader** (p. 1288) will fail to attach to the new segment. This scenario will result in a sample loss.

**[default]** `initial_count = DDS_AUTO_COUNT` (p. 397) (**DDS\_DataReaderResourceLimitsQosPolicy::initial\_↔remote\_writers** (p. 657)); `max_count = DDS_AUTO_COUNT` (p. 397) (**DDS\_DataReaderResourceLimitsQos\_↔Policy::max\_remote\_writers** (p. 656)); `incremental_count = DDS_AUTO_COUNT` (p. 397) (0 if `initial_count = max_↔count`; -1 otherwise);

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.34.2.29 instance\_replacement

```
struct DDS_DataReaderResourceLimitsInstanceReplacementSettings DDS_DataReaderResourceLimitsQos_↔
Policy::instance_replacement
```

Sets the kind of instances allowed to be replaced for each instance state (**DDS\_InstanceStateKind** (p. 160)) when a DataReader reaches **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055).

When **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) is reached, a **DDSDataReader** (p. 1288) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kinds specified by this field.

A DataReader can choose what kinds of instances can be replaced for each **DDS\_InstanceStateKind** (p. 160) separately. This means, for example, that a DataReader can choose to not allow replacing alive (**DDS\_ALIVE\_INSTANCE\_↔\_STATE** (p. 161)) instances but allow replacement of empty disposed (**DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_↔\_STATE** (p. 161)) instances.

Only instances whose states match the specified kinds are eligible to be replaced. In addition, there must be no outstanding loans on any of the samples belonging to the instance for it to be considered for replacement.

For all kinds, a **DDSDataReader** (p. 1288) will replace the least-recently-updated instance satisfying that kind. An instance is considered 'updated' when a valid sample or dispose sample is received and accepted for that instance. When using **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415), only samples that are received from the owner of the instance will cause the instance to be considered updated. An instance is not considered updated when an unregister sample is received because the unregister message simply indicates that there is one less writer that has updates for the instance, not that the instance itself was updated.

If no replaceable instance exists, the sample for the new instance will be considered lost with lost reason **DDS\_LOST\_↔\_BY\_INSTANCES\_LIMIT** (p. 136) and the instance will not be asserted into the DataReader queue.

**[default]**

- **DDS\_DataReaderResourceLimitsInstanceReplacementSettings::alive\_instance\_removal** (p. 653) = **DDS\_↔\_NO\_INSTANCE\_REMOVAL** (p. 368)
- **DDS\_DataReaderResourceLimitsInstanceReplacementSettings::disposed\_instance\_removal** (p. 653) = **DDS\_EMPTY\_INSTANCE\_REMOVAL** (p. 368)
- **DDS\_DataReaderResourceLimitsInstanceReplacementSettings::no\_writers\_instance\_removal** (p. 654) = **DDS\_EMPTY\_INSTANCE\_REMOVAL** (p. 368)

See also

**DDS\_DataReaderResourceLimitsInstanceReplacementSettings** (p. 653)

### 9.34.2.30 autopurge\_remote\_not\_alive\_writer\_delay

```
struct DDS_Duration_t DDS_DataReaderResourceLimitsQosPolicy::autopurge_remote_not_alive_writer_↔
delay
```

Maximum duration for which the **DDSDataReader** (p. 1288) will maintain information regarding a **DDSDataWriter** (p. 1321) once the **DDSDataWriter** (p. 1321) has become not alive.

After this time elapses, the **DDSDataReader** (p. 1288) will purge all internal information regarding the not alive **DDSDataWriter** (p. 1321).

See also

**DDS\_LivelinessQosPolicy** (p. 936) for more information on when a **DDSDataWriter** (p. 1321) is considered not alive.

When set to **DDS\_DURATION\_AUTO** (p. 327), this parameter is set to 10 times the value of **DDS\_DiscoveryConfig↔QosPolicy::participant\_liveliness\_lease\_duration** (p. 714).

This QoS only applies when the **DDSDataReader** (p. 1288) is using **DDS\_RECOVER\_INSTANCE\_STATE\_↔CONSISTENCY** (p. 436) for the **DDS\_ReliabilityQosPolicy::instance\_state\_consistency\_kind** (p. 1044) QoS. When using **DDS\_RECOVER\_INSTANCE\_STATE\_CONSISTENCY** (p. 436), a **DDSDataReader** (p. 1288) keeps state about all **DDSDataWriter** (p. 1321) entities and the instances they were writing in order to be able to transition those instances back to their correct state if liveliness with the **DDSDataWriter** (p. 1321) is recovered. This can cause unbounded memory growth if that state is never purged and **DDSDataWriter** (p. 1321) entities continuously come and go in a system. This QoS avoids that unbounded memory growth by setting a time at which that state will be purged.

This QoS should be set such that it is longer than the longest period of time for which a **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) are expected to be disconnected and then reconnected in your system.

An alternative to using this QoS to purge the state is to set the **DDS\_DataReaderResourceLimitsQosPolicy::max↔\_remote\_writers** (p. 656) QoS to a finite value. If that QoS is set to a finite value and the number of alive + not alive **DDSDataWriter** (p. 1321) entities reaches the limit when a new **DDSDataWriter** (p. 1321) is discovered, the oldest not alive **DDSDataWriter** (p. 1321) will be replaced.

[default] **DDS\_DURATION\_AUTO** (p. 327)

[range] > 0 or **DDS\_DURATION\_AUTO** (p. 327)

## 9.35 DDS\_DataRepresentationIdSeq Struct Reference

Declares IDL sequence < **DDS\_DataRepresentationId\_t** (p. 370) >

### 9.35.1 Detailed Description

Declares IDL `sequence` < **DDS\_DataRepresentationId\_t** (p. 370) >

See also

**DDS\_DataRepresentationId\_t** (p. 370)

## 9.36 DDS\_DataRepresentationQosPolicy Struct Reference

This QoS policy contains a list of representation identifiers and compression settings used by **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities to negotiate which data representation and compression settings to use.

### Public Attributes

- struct **DDS\_DataRepresentationIdSeq** `value`  
*Sequence of representation identifiers.*
- struct **DDS\_CompressionSettings\_t** `compression_settings`  
<<*extension*>> (p. 237) *Structure that contains the compression settings.*

### 9.36.1 Detailed Description

This QoS policy contains a list of representation identifiers and compression settings used by **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities to negotiate which data representation and compression settings to use.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_↔ STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

See also

**DATA\_REPRESENTATION** (p. 369)

This policy has request-offer semantics for both representation and compression. For representation, a **DDSDataWriter** (p. 1321) may only offer a single representation. Attempting to put multiple representations in a **DDSDataWriter** (p. 1321) will result in **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337). A **DDSDataWriter** (p. 1321) will use its offered policy to communicate with its matched **DDSDataReader** (p. 1288) entities. A **DDSDataReader** (p. 1288) requests one or more representations. If a **DDSDataWriter** (p. 1321) offers a representation that is contained within the sequence of the **DDSDataReader** (p. 1288), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When representations are specified in the **DDS\_TopicQos** (p. 1135), **DDSPublisher::copy\_from\_topic\_qos** (p. 1566) copies the first element of the sequence, and **DDSSubscriber::copy\_from\_topic\_qos** (p. 1608) copies the whole sequence.

For Compression, only the **DDS\_CompressionSettings\_t::compression\_ids** (p. 615) is propagated and a **DDSDataWriter** (p. 1321) may only offer a single compression id. Attempting to put multiple **compression\_ids** in a **DDSDataWriter** (p. 1321) will result in **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337).

A **DDSDataWriter** (p. 1321) will use its offered compression algorithm to compress data that it sends to its matched **DDSDataReader** (p. 1288) entities. A **DDSDataReader** (p. 1288) requests zero or more compression algorithms. If a **DDSDataWriter** (p. 1321) offers a representation that is contained within the algorithms requested by the **DDSDataReader** (p. 1288), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When compression IDs are specified in the **DDS\_TopicQos** (p. 1135), **DDSPublisher::copy\_from\_topic\_qos** (p. 1566) copies a single compression ID (see **DDS\_CompressionSettings\_t::compression\_ids** (p. 615)), and **DDSSubscriber::copy\_from\_topic\_qos** (p. 1608) copies all of the **compression\_ids**.

## 9.36.2 Member Data Documentation

### 9.36.2.1 value

```
struct DDS_DataRepresentationIdSeq DDS_DataRepresentationQosPolicy::value
```

Sequence of representation identifiers.

**[default]** For **DDSTopic** (p. 1617), **DDSDataWriter** (p. 1321), and **DDSDataReader** (p. 1288), a list with one element: **DDS\_AUTO\_DATA\_REPRESENTATION** (p. 371).

Note

An empty sequence is equivalent to a list with one element: **DDS\_XCDR\_DATA\_REPRESENTATION** (p. 370).

### 9.36.2.2 compression\_settings

```
struct DDS_CompressionSettings_t DDS_DataRepresentationQosPolicy::compression_settings
```

<<*extension*>> (p. 237) Structure that contains the compression settings.

compression\_ids:

**[default]** The value depends on the entity

**DDSDataWriter** (p. 1321) and **DDSTopic** (p. 1617) are set to **DDS\_COMPRESSION\_ID\_MASK\_NONE** (p. 373)

**DDSDataReader** (p. 1288) **DDS\_COMPRESSION\_ID\_MASK\_ALL** (p. 373)

writer\_compression\_level:

**[default]** The value depends on the entity

**DDSDataWriter** (p. 1321) and **DDSTopic** (p. 1617) are set to **DDS\_COMPRESSION\_LEVEL\_DEFAULT** (p. 374)

**DDSDataReader** (p. 1288) NOT SUPPORTED

writer\_compression\_threshold:

**[default]** The value depends on the entity

**DDSDataWriter** (p. 1321) and **DDSTopic** (p. 1617) are set to **DDS\_COMPRESSION\_THRESHOLD\_DEFAULT** (p. 374)

**DDSDataReader** (p. 1288) NOT SUPPORTED

## 9.37 DDS\_DataTags Struct Reference

Definition of **DDS\_DataTagQosPolicy** (p. 377).

### Public Attributes

- struct **DDS\_TagSeq tags**

*Sequence of data tags.*

### 9.37.1 Detailed Description

Definition of **DDS\_DataTagQosPolicy** (p. 377).

### 9.37.2 Member Data Documentation

### 9.37.2.1 tags

```
struct DDS_TagSeq DDS_DataTags::tags
```

Sequence of data tags.

**[default]** An empty list.

## 9.38 DDS\_DataWriterCacheStatus Struct Reference

<<**extension**>> (p. 237) The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.

### Public Attributes

- **DDS\_LongLong sample\_count\_peak**  
*The highest value of `DDS_DataWriterCacheStatus::sample_count` (p. 672) over the lifetime of the DataWriter.*
- **DDS\_LongLong sample\_count**  
*The number of samples in the DataWriter's queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.*
- **DDS\_LongLong alive\_instance\_count**  
*The number of instances currently in the DataWriter's queue that have an `instance_state` equal to `DDS_ALIVE` ↔ `INSTANCE_STATE` (p. 161).*
- **DDS\_LongLong alive\_instance\_count\_peak**  
*The highest value of `DDS_DataWriterCacheStatus::alive_instance_count` (p. 672) over the lifetime of the DataWriter.*
- **DDS\_LongLong disposed\_instance\_count**  
*The number of instances currently in the DataWriter's queue that have an `instance_state` equal to `DDS_NOT_ALIVE` ↔ `DISPOSED_INSTANCE_STATE` (p. 161) (due to, for example, being disposed via the `FooDataWriter::dispose` (p. 1689) operation).*
- **DDS\_LongLong disposed\_instance\_count\_peak**  
*The highest value of `DDS_DataWriterCacheStatus::disposed_instance_count` (p. 672) over the lifetime of the DataWriter.*
- **DDS\_LongLong unregistered\_instance\_count**  
*The number of instances currently in the DataWriter's queue that the DataWriter has unregistered from via the `FooDataWriter::unregister_instance` (p. 1680) operation.*
- **DDS\_LongLong unregistered\_instance\_count\_peak**  
*The highest value of `DDS_DataWriterCacheStatus::unregistered_instance_count` (p. 673) over the lifetime of the DataWriter.*

### 9.38.1 Detailed Description

<<**extension**>> (p. 237) The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.

Entity:

**DDSDataWriter** (p. 1321)

## 9.38.2 Member Data Documentation

### 9.38.2.1 sample\_count\_peak

**DDS\_LongLong** DDS\_DataWriterCacheStatus::sample\_count\_peak

The highest value of **DDS\_DataWriterCacheStatus::sample\_count** (p. 672) over the lifetime of the DataWriter.

### 9.38.2.2 sample\_count

**DDS\_LongLong** DDS\_DataWriterCacheStatus::sample\_count

The number of samples in the DataWriter's queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.

### 9.38.2.3 alive\_instance\_count

**DDS\_LongLong** DDS\_DataWriterCacheStatus::alive\_instance\_count

The number of instances currently in the DataWriter's queue that have an instance\_state equal to **DDS\_ALIVE\_↔INSTANCE\_STATE** (p. 161).

### 9.38.2.4 alive\_instance\_count\_peak

**DDS\_LongLong** DDS\_DataWriterCacheStatus::alive\_instance\_count\_peak

The highest value of **DDS\_DataWriterCacheStatus::alive\_instance\_count** (p. 672) over the lifetime of the DataWriter.

### 9.38.2.5 disposed\_instance\_count

**DDS\_LongLong** DDS\_DataWriterCacheStatus::disposed\_instance\_count

The number of instances currently in the DataWriter's queue that have an instance\_state equal to **DDS\_NOT\_↔ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) (due to, for example, being disposed via the **FooDataWriter::dispose** (p. 1689) operation).

### 9.38.2.6 disposed\_instance\_count\_peak

**DDS\_LongLong** DDS\_DataWriterCacheStatus::disposed\_instance\_count\_peak

The highest value of **DDS\_DataWriterCacheStatus::disposed\_instance\_count** (p. 672) over the lifetime of the DataWriter.

### 9.38.2.7 unregistered\_instance\_count

**DDS\_LongLong** DDS\_DataWriterCacheStatus::unregistered\_instance\_count

The number of instances currently in the DataWriter's queue that the DataWriter has unregistered from via the **FooDataWriter::unregister\_instance** (p. 1680) operation.

### 9.38.2.8 unregistered\_instance\_count\_peak

**DDS\_LongLong** DDS\_DataWriterCacheStatus::unregistered\_instance\_count\_peak

The highest value of **DDS\_DataWriterCacheStatus::unregistered\_instance\_count** (p. 673) over the lifetime of the DataWriter.

## 9.39 DDS\_DataWriterProtocolQosPolicy Struct Reference

Protocol that applies only to **DDSDataWriter** (p. 1321) instances.

### Public Attributes

- struct **DDS\_GUID\_t virtual\_guid**  
*The virtual GUID (Global Unique Identifier).*
- **DDS\_UnsignedLong rtps\_object\_id**  
*The RTPS Object ID.*
- **DDS\_Boolean push\_on\_write**  
*Whether to push sample out when write is called.*
- **DDS\_Boolean disable\_positive\_acks**  
*Controls whether or not the writer expects positive acknowledgements from matching readers.*
- **DDS\_Boolean disable\_inline\_keyhash**  
*Controls whether or not a keyhash is propagated on the wire with each sample.*
- **DDS\_Boolean serialize\_key\_with\_dispose**  
*Controls whether or not the serialized key is propagated on the wire with dispose samples.*
- **DDS\_Boolean propagate\_app\_ack\_with\_no\_response**  
*Controls whether or not a **DDSDataWriter** (p. 1321) receives **DDSDataWriterListener::on\_application\_acknowledgment** (p. 1349) notifications with an empty or invalid response.*
- struct **DDS\_RtpsReliableWriterProtocol\_t rtps\_reliable\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1321). This parameter only has effect if both the writer and the matching reader are configured with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) **DDS\_ReliabilityQosPolicyKind** (p. 434).*
- struct **DDS\_SequenceNumber\_t initial\_virtual\_sequence\_number**  
*Determines, the initial virtual sequence number for this DataWriter.*

### 9.39.1 Detailed Description

Protocol that applies only to **DDSDataWriter** (p. 1321) instances.

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and **DDS\_DataWriterProtocolQosPolicy** (p. 673) give you control over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connexxt responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **DDS\_ReliabilityQosPolicy** (p. 1041) for more information on the per-DataReader/↔ DataWriter reliability configuration. **DDS\_HistoryQosPolicy** (p. 919) and **DDS\_ResourceLimitsQosPolicy** (p. 1052) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.39.2 Member Data Documentation

#### 9.39.2.1 virtual\_guid

```
struct DDS_GUID_t DDS_DataWriterProtocolQosPolicy::virtual_guid
```

The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **DDSDataWriter** (p. 1321).

RTI Connexxt uses the virtual GUID to associate a persisted writer history to a specific **DDSDataWriter** (p. 1321).

The RTI Connexxt Persistence Service uses the virtual GUID to send samples on behalf of the original **DDSDataWriter** (p. 1321).

**[default] DDS\_GUID\_AUTO** (p. 331)

### 9.39.2.2 rtps\_object\_id

**DDS\_UnsignedLong** DDS\_DataWriterProtocolQosPolicy::rtps\_object\_id

The RTPS Object ID.

This value is used to determine the RTPS object ID of a data writer according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connexx will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data writer.

A rtps\_object\_id value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connexx. In those cases, the recommendation is not to use automatic object ID assignment.

**[default]** DDS\_RTPS\_AUTO\_ID (p. ??)

**[range]** [0,0x00ffffff]

### 9.39.2.3 push\_on\_write

**DDS\_Boolean** DDS\_DataWriterProtocolQosPolicy::push\_on\_write

Whether to push sample out when write is called.

If set to **DDS\_BOOLEAN\_TRUE** (p. 317) (the default), the writer will send a sample every time write is called. Otherwise, the sample is put into the queue waiting for a NACK from remote reader(s) to be sent out.

**[default]** DDS\_BOOLEAN\_TRUE (p. 317)

### 9.39.2.4 disable\_positive\_acks

**DDS\_Boolean** DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks

Controls whether or not the writer expects positive acknowledgements from matching readers.

If set to **DDS\_BOOLEAN\_TRUE** (p. 317), the writer does not expect readers to send send positive acknowledgments to the writer. Consequently, instead of keeping a sample queued until all readers have positively acknowledged it, the writer will keep a sample for at least **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_min\_sample\_keep\_duration** (p. 1070), after which the sample is logically considered as positively acknowledged.

If set to **DDS\_BOOLEAN\_FALSE** (p. 317) (the default), the writer expects to receive positive acknowledgements from its acknowledging readers (**DDS\_DataReaderProtocolQosPolicy::disable\_positive\_acks** (p. 632) = **DDS\_BOOLEAN\_FALSE** (p. 317)) and it applies the keep-duration to its non-acknowledging readers (**DDS\_DataReaderProtocolQosPolicy::disable\_positive\_acks** (p. 632) = **DDS\_BOOLEAN\_TRUE** (p. 317)).

A writer with both acknowledging and non-acknowledging readers keeps a sample queued until acknowledgements have been received from all acknowledging readers and the keep-duration has elapsed for non-acknowledging readers.

**[default]** DDS\_BOOLEAN\_FALSE (p. 317)

### 9.39.2.5 `disable_inline_keyhash`

`DDS_Boolean DDS_DataWriterProtocolQosPolicy::disable_inline_keyhash`

Controls whether or not a keyhash is propagated on the wire with each sample.

This field only applies to keyed writers.

With each key, RTI Connex associates an internal 16-byte representation, called a keyhash.

When this field is `DDS_BOOLEAN_FALSE` (p. 317), the keyhash is sent on the wire with every data instance.

When this field is `DDS_BOOLEAN_TRUE` (p. 317), the keyhash is not sent on the wire and the readers must compute the value using the received data.

If the *reader* is CPU bound, sending the keyhash on the wire may increase performance, because the reader does not have to get the keyhash from the data.

If the *writer* is CPU bound, sending the keyhash on the wire may decrease performance, because it requires more bandwidth (16 more bytes per sample).

Note: Setting `disable_inline_keyhash` to `DDS_BOOLEAN_TRUE` (p. 317) is not compatible with using RTI Real-Time Connect or RTI Recorder.

[default] `DDS_BOOLEAN_FALSE` (p. 317)

### 9.39.2.6 `serialize_key_with_dispose`

`DDS_Boolean DDS_DataWriterProtocolQosPolicy::serialize_key_with_dispose`

Controls whether or not the serialized key is propagated on the wire with dispose samples.

This field only applies to keyed writers.

We recommend setting this field to `DDS_BOOLEAN_TRUE` (p. 317) if there are DataReaders where `DDS_DataReaderProtocolQosPolicy::propagate_dispose_of_unregistered_instances` (p. 632) is also `DDS_BOOLEAN_TRUE` (p. 317).

When setting `serialize_key_with_dispose` to `FALSE`, only a key hash is included in the dispose meta-sample sent by a DataWriter for a dispose action. If a dispose meta-sample only includes the key hash, then DataReaders must have previously received an actual data sample for the instance being disposed, in order for a DataReader to map a key hash/instance handle to actual key values.

If an actual data sample was never received for an instance and `serialize_key_with_dispose` is set to `FALSE`, then the DataReader application will not be able to determine the value of the key that was disposed, since `FooDataReader::get_key_value` (p. 1673) will not be able to map an instance handle to actual key values.

By setting `serialize_key_with_dispose` to `TRUE`, the values of the key members of a data type will be sent in the dispose meta-sample for a dispose action by the DataWriter. This allows the DataReader to map an instance handle to the values of the key members even when receiving a dispose meta-sample without previously having received a data sample for the instance.

*Important:* When this field is `DDS_BOOLEAN_TRUE` (p. 317), batching will not be compatible with RTI Connex 4.3e, 4.4b, or 4.4c. The `DDSDataReader` (p. 1288) entities will receive incorrect data and/or encounter deserialization errors.

[default] `DDS_BOOLEAN_FALSE` (p. 317)

### 9.39.2.7 propagate\_app\_ack\_with\_no\_response

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::propagate_app_ack_with_no_response
```

Controls whether or not a **DDSDataWriter** (p.1321) receives **DDSDataWriterListener::on\_application\_↔ acknowledgment** (p.1349) notifications with an empty or invalid response.

When this field is set to **DDS\_BOOLEAN\_FALSE** (p.317), the callback **DDSDataWriterListener::on\_application\_↔ acknowledgment** (p.1349) will not be invoked if the sample being acknowledged has an empty or invalid response.

**[default] DDS\_BOOLEAN\_TRUE** (p.317)

### 9.39.2.8 rtps\_reliable\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p.1321). This parameter only has effect if both the writer and the matching reader are configured with **DDS\_RELIABLE\_↔ RELIABILITY\_QOS** (p.435) **DDS\_ReliabilityQosPolicyKind** (p.434).

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p.1061)

**[default] [default]** See **DDS\_RtpsReliableWriterProtocol\_t** (p.1061)

### 9.39.2.9 initial\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolQosPolicy::initial_virtual_sequence_number
```

Determines, the initial virtual sequence number for this DataWriter.

By default, the virtual sequence number of the first sample published by a DataWriter will be 1 for DataWriters that do not use durable writer history. For durable writers, the default virtual sequence number will be the last sequence number they published in a previous execution, plus one. So, when a non-durable DataWriter is restarted and must continue communicating with the same DataReaders, its samples start over with sequence number 1. Durable DataWriters start over where the last sequence number left off, plus one.

This QoS setting allows overwriting the default initial virtual sequence number.

Normally, this parameter is not expected to be modified; however, in some scenarios when continuing communication after restarting, applications may require the DataWriter's virtual sequence number to start at something other than the value described above. An example would be to enable non-durable DataWriters to start at the last sequence number published, plus one, similar to the durable DataWriter. This property enables you to make such a configuration, if desired.

The virtual sequence number can be overwritten as well on a per sample basis by updating **DDS\_WriteParams\_t\_↔ ::identity** (p.1252) in the **FooDataWriter::write\_w\_params** (p.1688).

**[default] DDS\_AUTO\_SEQUENCE\_NUMBER** (p.333)

## 9.40 DDS\_DataWriterProtocolStatus Struct Reference

<<*extension*>> (p. 237) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

### Public Attributes

- **DDS\_LongLong pushed\_sample\_count**  
*The number of user samples pushed on write from a local DataWriter to a matching remote DataReader.*
- **DDS\_LongLong pushed\_sample\_count\_change**  
*The change in `DDS_DataWriterProtocolStatus::pushed_sample_count` (p. 680) since the last time the status was read.*
- **DDS\_LongLong pushed\_sample\_bytes**  
*The number of bytes of user samples pushed on write from a local DataWriter to a matching remote DataReader.*
- **DDS\_LongLong pushed\_sample\_bytes\_change**  
*The change in `DDS_DataWriterProtocolStatus::pushed_sample_bytes` (p. 680) since the last time the status was read.*
- **DDS\_LongLong filtered\_sample\_count**  
*[Not supported.] The number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics.*
- **DDS\_LongLong filtered\_sample\_count\_change**  
*[Not supported.] The incremental change in the number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.*
- **DDS\_LongLong filtered\_sample\_bytes**  
*[Not supported.] The number of bytes of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics.*
- **DDS\_LongLong filtered\_sample\_bytes\_change**  
*[Not supported.] The incremental change in the number of bytes of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.*
- **DDS\_LongLong sent\_heartbeat\_count**  
*The number of Heartbeats sent between a local DataWriter and matching remote DataReader.*
- **DDS\_LongLong sent\_heartbeat\_count\_change**  
*The change in `DDS_DataWriterProtocolStatus::sent_heartbeat_count` (p. 682) since the last time the status was read.*
- **DDS\_LongLong sent\_heartbeat\_bytes**  
*The number of bytes of Heartbeats sent between a local DataWriter and matching remote DataReader.*
- **DDS\_LongLong sent\_heartbeat\_bytes\_change**  
*The change in `DDS_DataWriterProtocolStatus::sent_heartbeat_bytes` (p. 682) since the last time the status was read.*
- **DDS\_LongLong pulled\_sample\_count**  
*The number of user samples pulled from local DataWriter by matching DataReaders.*
- **DDS\_LongLong pulled\_sample\_count\_change**  
*The change in `DDS_DataWriterProtocolStatus::pulled_sample_count` (p. 682) since the last time the status was read.*
- **DDS\_LongLong pulled\_sample\_bytes**  
*The number of bytes of user samples pulled from local DataWriter by matching DataReaders.*
- **DDS\_LongLong pulled\_sample\_bytes\_change**  
*The change in `DDS_DataWriterProtocolStatus::pulled_sample_bytes` (p. 683) since the last time the status was read.*
- **DDS\_LongLong received\_ack\_count**  
*The number of ACKs from a remote DataReader received by a local DataWriter.*
- **DDS\_LongLong received\_ack\_count\_change**  
*The change in `DDS_DataWriterProtocolStatus::received_ack_count` (p. 683) since the last time the status was read.*
- **DDS\_LongLong received\_ack\_bytes**

*The number of bytes of ACKs from a remote DataReader received by a local DataWriter.*

- **DDS\_LongLong received\_ack\_bytes\_change**

*The change in `DDS_DataWriterProtocolStatus::received_ack_bytes` (p. 684) since the last time the status was read.*

- **DDS\_LongLong received\_nack\_count**

*The number of NACKs from a remote DataReader received by a local DataWriter.*

- **DDS\_LongLong received\_nack\_count\_change**

*The change in `DDS_DataWriterProtocolStatus::received_nack_count` (p. 684) since the last time the status was read.*

- **DDS\_LongLong received\_nack\_bytes**

*The number of bytes of NACKs from a remote DataReader received by a local DataWriter.*

- **DDS\_LongLong received\_nack\_bytes\_change**

*The change in `DDS_DataWriterProtocolStatus::received_nack_bytes` (p. 684) since the last time the status was read.*

- **DDS\_LongLong sent\_gap\_count**

*The number of GAPS sent from local DataWriter to matching remote DataReaders.*

- **DDS\_LongLong sent\_gap\_count\_change**

*The change in `DDS_DataWriterProtocolStatus::sent_gap_count` (p. 685) since the last time the status was read.*

- **DDS\_LongLong sent\_gap\_bytes**

*The number of bytes of GAPS sent from local DataWriter to matching remote DataReaders.*

- **DDS\_LongLong sent\_gap\_bytes\_change**

*The change in `DDS_DataWriterProtocolStatus::sent_gap_bytes` (p. 685) since the last time the status was read.*

- **DDS\_LongLong rejected\_sample\_count**

*[Not supported.]*

- **DDS\_LongLong rejected\_sample\_count\_change**

*[Not supported.]*

- **DDS\_Long send\_window\_size**

*Current maximum number of outstanding samples allowed in the DataWriter's queue.*

- struct **DDS\_SequenceNumber\_t first\_available\_sample\_sequence\_number**

*The sequence number of the first available sample currently queued in the local DataWriter.*

- struct **DDS\_SequenceNumber\_t last\_available\_sample\_sequence\_number**

*The sequence number of the last available sample currently queued in the local DataWriter.*

- struct **DDS\_SequenceNumber\_t first\_unacknowledged\_sample\_sequence\_number**

*The sequence number of the first unacknowledged sample currently queued in the local DataWriter.*

- struct **DDS\_SequenceNumber\_t first\_available\_sample\_virtual\_sequence\_number**

*The virtual sequence number of the first available sample currently queued in the local DataWriter.*

- struct **DDS\_SequenceNumber\_t last\_available\_sample\_virtual\_sequence\_number**

*The virtual sequence number of the last available sample currently queued in the local DataWriter.*

- struct **DDS\_SequenceNumber\_t first\_unacknowledged\_sample\_virtual\_sequence\_number**

*The virtual sequence number of the first unacknowledged sample currently queued in the local DataWriter.*

- **DDS\_InstanceHandle\_t first\_unacknowledged\_sample\_subscription\_handle**

*The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local DataWriter.*

- struct **DDS\_SequenceNumber\_t first\_unelapsed\_keep\_duration\_sample\_sequence\_number**

*The sequence number of the first sample whose keep duration has not yet elapsed.*

- **DDS\_LongLong pushed\_fragment\_count**

*The number of `DATA_FRAG` messages that have been pushed by this DataWriter.*

- **DDS\_LongLong pushed\_fragment\_bytes**

*The number of bytes of `DATA_FRAG` messages that have been pushed by this DataWriter.*

- **DDS\_LongLong pulled\_fragment\_count**

*The number of `DATA_FRAG` messages that have been pulled from this DataWriter.*

- **DDS\_LongLong pulled\_fragment\_bytes**  
*The number of bytes of DATA\_FRAG messages that have been pulled from this DataWriter.*
- **DDS\_LongLong received\_nack\_fragment\_count**  
*The number of NACK\_FRAG messages that have been received by this DataWriter.*
- **DDS\_LongLong received\_nack\_fragment\_bytes**  
*The number of bytes of NACK\_FRAG messages that have been received by this DataWriter.*

### 9.40.1 Detailed Description

<<*extension*>> (p. 237) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

Entity:

**DDSDataWriter** (p. 1321)

### 9.40.2 Member Data Documentation

#### 9.40.2.1 pushed\_sample\_count

**DDS\_LongLong** DDS\_DataWriterProtocolStatus::pushed\_sample\_count

The number of user samples pushed on write from a local DataWriter to a matching remote DataReader.

Counts protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing. The count is the number of sends done internally, and it may be greater than the number of user writes.

For large data, counts whole samples, not fragments. The fragment count is tracked in the **DDS\_DataWriterProtocolStatus::pushed\_fragment\_count** (p. 688) statistic.

#### 9.40.2.2 pushed\_sample\_count\_change

**DDS\_LongLong** DDS\_DataWriterProtocolStatus::pushed\_sample\_count\_change

The change in **DDS\_DataWriterProtocolStatus::pushed\_sample\_count** (p. 680) since the last time the status was read.

Counts protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing.

For large data, counts whole samples, not fragments.

### 9.40.2.3 pushed\_sample\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_bytes`

The number of bytes of user samples pushed on write from a local DataWriter to a matching remote DataReader.

Counts bytes of protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing. The count of bytes corresponds to the number of sends done internally, and it may be greater than the number of user writes.

When data fragmentation is used, this statistic is incremented as fragments are written.

### 9.40.2.4 pushed\_sample\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_bytes_change`

The change in `DDS_DataWriterProtocolStatus::pushed_sample_bytes` (p. 680) since the last time the status was read.

Counts bytes of protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing.

When data fragmentation is used, this statistic is incremented as fragments are written.

### 9.40.2.5 filtered\_sample\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_count`

**[Not supported.]** The number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics.

### 9.40.2.6 filtered\_sample\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_count_change`

**[Not supported.]** The incremental change in the number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.

### 9.40.2.7 filtered\_sample\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_bytes`

**[Not supported.]** The number of bytes of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics.

### 9.40.2.8 filtered\_sample\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_bytes_change`

**[Not supported.]** The incremental change in the number of bytes of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.

### 9.40.2.9 sent\_heartbeat\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_count`

The number of Heartbeats sent between a local DataWriter and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

### 9.40.2.10 sent\_heartbeat\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_count_change`

The change in `DDS_DataWriterProtocolStatus::sent_heartbeat_count` (p.682) since the last time the status was read.

### 9.40.2.11 sent\_heartbeat\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_bytes`

The number of bytes of Heartbeats sent between a local DataWriter and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

### 9.40.2.12 sent\_heartbeat\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_bytes_change`

The change in `DDS_DataWriterProtocolStatus::sent_heartbeat_bytes` (p.682) since the last time the status was read.

### 9.40.2.13 pulled\_sample\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_count`

The number of user samples pulled from local DataWriter by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when `DDS_DataWriterProtocolQosPolicy::push_on_write` (p. 675) is `DDS_BOOLEAN_FALSE` (p. 317).

When data fragmentation is used, this statistic is incremented as fragments are written.

### 9.40.2.14 pulled\_sample\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_count_change`

The change in `DDS_DataWriterProtocolStatus::pulled_sample_count` (p. 682) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when `DDS_DataWriterProtocolQosPolicy::push_on_write` (p. 675) is `DDS_BOOLEAN_FALSE` (p. 317).

For large data, counts whole samples, not fragments.

### 9.40.2.15 pulled\_sample\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_bytes`

The number of bytes of user samples pulled from local DataWriter by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when `DDS_DataWriterProtocolQosPolicy::push_on_write` (p. 675) is `DDS_BOOLEAN_FALSE` (p. 317).

When data fragmentation is used, this statistic is incremented as fragments are written.

### 9.40.2.16 pulled\_sample\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_bytes_change`

The change in `DDS_DataWriterProtocolStatus::pulled_sample_bytes` (p. 683) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when `DDS_DataWriterProtocolQosPolicy::push_on_write` (p. 675) is `DDS_BOOLEAN_FALSE` (p. 317).

For large data, counts bytes of whole samples, not fragments.

#### 9.40.2.17 received\_ack\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_count`

The number of ACKs from a remote DataReader received by a local DataWriter.

#### 9.40.2.18 received\_ack\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_count_change`

The change in `DDS_DataWriterProtocolStatus::received_ack_count` (p. 683) since the last time the status was read.

#### 9.40.2.19 received\_ack\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_bytes`

The number of bytes of ACKs from a remote DataReader received by a local DataWriter.

#### 9.40.2.20 received\_ack\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_bytes_change`

The change in `DDS_DataWriterProtocolStatus::received_ack_bytes` (p. 684) since the last time the status was read.

#### 9.40.2.21 received\_nack\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_count`

The number of NACKs from a remote DataReader received by a local DataWriter.

#### 9.40.2.22 received\_nack\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_count_change`

The change in `DDS_DataWriterProtocolStatus::received_nack_count` (p. 684) since the last time the status was read.

#### 9.40.2.23 received\_nack\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_bytes`

The number of bytes of NACKs from a remote DataReader received by a local DataWriter.

#### 9.40.2.24 received\_nack\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_bytes_change`

The change in `DDS_DataWriterProtocolStatus::received_nack_bytes` (p. 684) since the last time the status was read.

#### 9.40.2.25 sent\_gap\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_count`

The number of GAPS sent from local DataWriter to matching remote DataReaders.

#### 9.40.2.26 sent\_gap\_count\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_count_change`

The change in `DDS_DataWriterProtocolStatus::sent_gap_count` (p. 685) since the last time the status was read.

#### 9.40.2.27 sent\_gap\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_bytes`

The number of bytes of GAPS sent from local DataWriter to matching remote DataReaders.

#### 9.40.2.28 sent\_gap\_bytes\_change

`DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_bytes_change`

The change in `DDS_DataWriterProtocolStatus::sent_gap_bytes` (p. 685) since the last time the status was read.

**9.40.2.29 rejected\_sample\_count**

```
DDS_LongLong DDS_DataWriterProtocolStatus::rejected_sample_count
```

[Not supported.]

**9.40.2.30 rejected\_sample\_count\_change**

```
DDS_LongLong DDS_DataWriterProtocolStatus::rejected_sample_count_change
```

[Not supported.]

**9.40.2.31 send\_window\_size**

```
DDS_Long DDS_DataWriterProtocolStatus::send_window_size
```

Current maximum number of outstanding samples allowed in the DataWriter's queue.

Spans the range from **DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p.1072) to **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p.1073).

**9.40.2.32 first\_available\_sample\_sequence\_number**

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::first_available_sample_sequence_number
```

The sequence number of the first available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

**9.40.2.33 last\_available\_sample\_sequence\_number**

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::last_available_sample_sequence_number
```

The sequence number of the last available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

#### 9.40.2.34 first\_unacknowledged\_sample\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::first_unacknowledged_sample_sequence_↔  
number
```

The sequence number of the first unacknowledged sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

#### 9.40.2.35 first\_available\_sample\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::first_available_sample_virtual_sequence_↔  
_number
```

The virtual sequence number of the first available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

#### 9.40.2.36 last\_available\_sample\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::last_available_sample_virtual_sequence_↔  
_number
```

The virtual sequence number of the last available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

#### 9.40.2.37 first\_unacknowledged\_sample\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::first_unacknowledged_sample_virtual_↔  
sequence_number
```

The virtual sequence number of the first unacknowledged sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

#### 9.40.2.38 first\_unacknowledged\_sample\_subscription\_handle

```
DDS_InstanceHandle_t DDS_DataWriterProtocolStatus::first_unacknowledged_sample_subscription_↔  
handle
```

The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local DataWriter.

Applies only for local DataWriter status.

### 9.40.2.39 first\_unelapsed\_keep\_duration\_sample\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolStatus::first_unelapsed_keep_duration_sample_↔  
sequence_number
```

The sequence number of the first sample whose keep duration has not yet elapsed.

Applicable only when **DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks** (p. 675) is set.

Sequence number of the first sample kept in the DataWriter's queue whose keep\_duration (applied when **DDS\_Data↔  
WriterProtocolQosPolicy::disable\_positive\_acks** (p. 675) is set) has not yet elapsed.

Applies only for local DataWriter status.

### 9.40.2.40 pushed\_fragment\_count

```
DDS_LongLong DDS_DataWriterProtocolStatus::pushed_fragment_count
```

The number of DATA\_FRAG messages that have been pushed by this DataWriter.

This statistic is incremented as each DATA\_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

### 9.40.2.41 pushed\_fragment\_bytes

```
DDS_LongLong DDS_DataWriterProtocolStatus::pushed_fragment_bytes
```

The number of bytes of DATA\_FRAG messages that have been pushed by this DataWriter.

This statistic is incremented as each DATA\_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

### 9.40.2.42 pulled\_fragment\_count

```
DDS_LongLong DDS_DataWriterProtocolStatus::pulled_fragment_count
```

The number of DATA\_FRAG messages that have been pulled from this DataWriter.

This statistic is incremented as each DATA\_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

### 9.40.2.43 pulled\_fragment\_bytes

```
DDS_LongLong DDS_DataWriterProtocolStatus::pulled_fragment_bytes
```

The number of bytes of DATA\_FRAG messages that have been pulled from this DataWriter.

This statistic is incremented as each DATA\_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

#### 9.40.2.44 received\_nack\_fragment\_count

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_fragment_count`

The number of NACK\_FRAG messages that have been received by this DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

#### 9.40.2.45 received\_nack\_fragment\_bytes

`DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_fragment_bytes`

The number of bytes of NACK\_FRAG messages that have been received by this DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

## 9.41 DDS\_DataWriterQos Struct Reference

QoS policies supported by a `DDSDataWriter` (p. 1321) entity.

### Public Member Functions

- `bool operator==` (const `DDS_DataWriterQos` &r) const  
*Compares two DataWriterQos objects for equality.*
- `bool operator!=` (const `DDS_DataWriterQos` &r) const  
*Compares two DataWriterQos objects for inequality.*
- `DDS_ReturnCode_t print` () const  
*Prints this DDS\_DataWriterQos (p. 689) to stdout.*
- `DDS_ReturnCode_t to_string` (char \*string, `DDS_UnsignedLong` &string\_size) const  
*Obtains a string representation of this DDS\_DataWriterQos (p. 689).*
- `DDS_ReturnCode_t to_string` (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_DataWriterQos` &base) const  
*Obtains a string representation of this DDS\_DataWriterQos (p. 689).*
- `DDS_ReturnCode_t to_string` (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_QosPrintFormat` &format) const

- struct **DDS\_TypeSupportQosPolicy type\_support**
  - <<extension>> (p. 237) *Type support data*, **TYPESUPPORT** (p. 453).

### 9.41.1 Detailed Description

QoS policies supported by a **DDSDataWriter** (p. 1321) entity.

You must set certain members in a consistent manner:

- **DDS\_DataWriterQos::history** (p. 693) .depth <= **DDS\_DataWriterQos::resource\_limits** (p. 694) .max\_↔ samples\_per\_instance
- **DDS\_DataWriterQos::resource\_limits** (p. 694) .max\_samples\_per\_instance <= **DDS\_DataWriterQos**↔  
**::resource\_limits** (p. 694) .max\_samples
- **DDS\_DataWriterQos::resource\_limits** (p. 694) .initial\_samples <= **DDS\_DataWriterQos::resource\_limits**  
(p. 694) .max\_samples
- **DDS\_DataWriterQos::resource\_limits** (p. 694) .initial\_instances <= **DDS\_DataWriterQos::resource\_limits**  
(p. 694) .max\_instances
- length of **DDS\_DataWriterQos::user\_data** (p. 694) .value <= **DDS\_DomainParticipantQos::resource\_limits**  
(p. 744) .writer\_user\_data\_max\_length

If any of the above are not true, **DDSDataWriter::set\_qos** (p. 1336) and **DDSDataWriter::set\_qos\_with\_profile** (p. 1337) and **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554) and **DDSPublisher::set\_default\_datawriter**↔  
**\_qos\_with\_profile** (p. 1555) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) and **DDSPublisher**↔  
**::create\_datawriter** (p. 1558) and **DDSPublisher::create\_datawriter\_with\_profile** (p. 1559) and will return NULL.

Entity:

**DDSDataWriter** (p. 1321)

See also

**QoS Policies** (p. 353) allowed ranges within each Qos.

## 9.41.2 Member Function Documentation

### 9.41.2.1 operator==( )

```
bool DDS_DataWriterQos::operator==(
    const DDS_DataWriterQos & r ) const [inline]
```

Compares two DataWriterQos objects for equality.

See also

**DDS\_DataWriterQos\_equals** (p. 113)

References **DDS\_DataWriterQos\_equals()**.

### 9.41.2.2 operator!=( )

```
bool DDS_DataWriterQos::operator!=(
    const DDS_DataWriterQos & r ) const [inline]
```

Compares two DataWriterQos objects for inequality.

See also

**DDS\_DataWriterQos\_equals** (p. 113)

References **DDS\_DataWriterQos\_equals()**.

## 9.41.3 Member Data Documentation

### 9.41.3.1 durability

```
struct DDS_DurabilityQosPolicy DDS_DataWriterQos::durability
```

Durability policy, **DURABILITY** (p. 398).

### 9.41.3.2 durability\_service

```
struct DDS_DurabilityServiceQosPolicy DDS_DataWriterQos::durability_service
```

DurabilityService policy, **DURABILITY\_SERVICE** (p. 402).

### 9.41.3.3 deadline

```
struct DDS_DeadlineQosPolicy DDS_DataWriterQos::deadline
```

Deadline policy, **DEADLINE** (p. 385).

### 9.41.3.4 latency\_budget

```
struct DDS_LatencyBudgetQosPolicy DDS_DataWriterQos::latency_budget
```

Latency budget policy, **LATENCY\_BUDGET** (p. 407).

### 9.41.3.5 liveliness

```
struct DDS_LivelinessQosPolicy DDS_DataWriterQos::liveliness
```

Liveliness policy, **LIVELINESS** (p. 409).

### 9.41.3.6 reliability

```
struct DDS_ReliabilityQosPolicy DDS_DataWriterQos::reliability
```

Reliability policy, **RELIABILITY** (p. 433).

### 9.41.3.7 destination\_order

```
struct DDS_DestinationOrderQosPolicy DDS_DataWriterQos::destination_order
```

Destination order policy, **DESTINATION\_ORDER** (p. 386).

#### 9.41.3.8 history

```
struct DDS_HistoryQosPolicy DDS_DataWriterQos::history
```

History policy, **HISTORY** (p. 405).

#### 9.41.3.9 resource\_limits

```
struct DDS_ResourceLimitsQosPolicy DDS_DataWriterQos::resource_limits
```

Resource limits policy, **RESOURCE\_LIMITS** (p. 437).

#### 9.41.3.10 transport\_priority

```
struct DDS_TransportPriorityQosPolicy DDS_DataWriterQos::transport_priority
```

Transport priority policy, **TRANSPORT\_PRIORITY** (p. 449).

#### 9.41.3.11 lifespan

```
struct DDS_LifespanQosPolicy DDS_DataWriterQos::lifespan
```

Lifespan policy, **LIFESPAN** (p. 408).

#### 9.41.3.12 user\_data

```
struct DDS_UserDataQosPolicy DDS_DataWriterQos::user_data
```

User data policy, **USER\_DATA** (p. 455).

#### 9.41.3.13 ownership

```
struct DDS_OwnershipQosPolicy DDS_DataWriterQos::ownership
```

Ownership policy, **OWNERSHIP** (p. 414).

#### 9.41.3.14 ownership\_strength

```
struct DDS_OwnershipStrengthQosPolicy DDS_DataWriterQos::ownership_strength
```

Ownership strength policy, **OWNERSHIP\_STRENGTH** (p. 415).

#### 9.41.3.15 writer\_data\_lifecycle

```
struct DDS_WriterDataLifecycleQosPolicy DDS_DataWriterQos::writer_data_lifecycle
```

Writer data lifecycle policy, **WRITER\_DATA\_LIFECYCLE** (p. 456).

#### 9.41.3.16 representation

```
struct DDS_DataRepresentationQosPolicy DDS_DataWriterQos::representation
```

Data representation policy, **DATA\_REPRESENTATION** (p. 369).

#### 9.41.3.17 data\_tags

```
DDS_DataTagQosPolicy DDS_DataWriterQos::data_tags
```

DataTag policy, **DATA\_TAG** (p. 376).

#### 9.41.3.18 writer\_resource\_limits

```
struct DDS_DataWriterResourceLimitsQosPolicy DDS_DataWriterQos::writer_resource_limits
```

<<*extension*>> (p. 237) Writer resource limits policy, **DATA\_WRITER\_RESOURCE\_LIMITS** (p. 382).

#### 9.41.3.19 protocol

```
struct DDS_DataWriterProtocolQosPolicy DDS_DataWriterQos::protocol
```

<<*extension*>> (p. 237) **DDSDataWriter** (p. 1321) protocol policy, **DATA\_WRITER\_PROTOCOL** (p. 381)

### 9.41.3.20 transport\_selection

```
struct DDS_TransportSelectionQosPolicy DDS_DataWriterQos::transport_selection
```

<<*extension*>> (p. 237) Transport plugin selection policy, **TRANSPORT\_SELECTION** (p. 450).

Specifies the transports available for use by the **DDSDataWriter** (p. 1321).

### 9.41.3.21 unicast

```
struct DDS_TransportUnicastQosPolicy DDS_DataWriterQos::unicast
```

<<*extension*>> (p. 237) Unicast transport policy, **TRANSPORT\_UNICAST** (p. 451).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **DDSDataReader** (p. 1288) entities in the domain.

### 9.41.3.22 publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DataWriterQos::publish_mode
```

<<*extension*>> (p. 237) Publish mode policy, **PUBLISH\_MODE** (p. 429).

Determines whether the **DDSDataWriter** (p. 1321) publishes data synchronously or asynchronously and how.

### 9.41.3.23 property

```
struct DDS_PropertyQosPolicy DDS_DataWriterQos::property
```

<<*extension*>> (p. 237) Property policy, **PROPERTY** (p. 419). See also `Property Reference Guide`.

```

<<*extension*>> (p. 237) TransferMode policy, **DATA\_WRITER\_TRANSFER\_MODE** (p. 385).

### 9.41.3.31 type\_support

```
struct DDS_TypeSupportQosPolicy DDS_DataWriterQos::type_support
```

<<**extension**>> (p. 237) Type support data, **TYPESUPPORT** (p. 453).

Optional value that is passed to a type plugin's `on_endpoint_attached` and serialization functions.

## 9.42 DDS\_DataWriterResourceLimitsQosPolicy Struct Reference

Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.

### Public Attributes

- **DDS\_Long initial\_concurrent\_blocking\_threads**  
*The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1321).*
- **DDS\_Long max\_concurrent\_blocking\_threads**  
*The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1321).*
- **DDS\_Long max\_remote\_reader\_filters**  
*The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1321) will perform content-based filtering.*
- **DDS\_Long initial\_batches**  
*Represents the initial number of batches a **DDSDataWriter** (p. 1321) will manage.*
- **DDS\_Long max\_batches**  
*Represents the maximum number of batches a **DDSDataWriter** (p. 1321) will manage.*
- **DDS\_DataWriterResourceLimitsInstanceReplacementKind instance\_replacement**  
*Sets the kinds of instances allowed to be replaced when instance resource limits are reached.*
- **DDS\_Boolean replace\_empty\_instances**  
*Whether or not to replace empty instances during instance replacement.*
- **DDS\_Boolean autoregister\_instances**  
*Whether or not to automatically register new instances.*
- **DDS\_Long initial\_virtual\_writers**  
*The initial number of virtual writers supported by a **DDSDataWriter** (p. 1321).*
- **DDS\_Long max\_virtual\_writers**  
*The maximum number of virtual writers supported by a **DDSDataWriter** (p. 1321).*
- **DDS\_Long max\_remote\_readers**  
*The maximum number of remote readers supported by a **DDSDataWriter** (p. 1321).*
- **DDS\_Long max\_app\_ack\_remote\_readers**  
*The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1321).*
- **DDS\_Long initial\_active\_topic\_queries**  
*Represents the initial number of active topic queries a **DDSDataWriter** (p. 1321) will manage.*
- **DDS\_Long max\_active\_topic\_queries**  
*Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1321) will manage.*
- struct **DDS\_AllocationSettings\_t writer\_loaned\_sample\_allocation**  
*Represents the allocation settings of loaned samples managed by a **DDSDataWriter** (p. 1321).*
- **DDS\_Boolean initialize\_writer\_loaned\_sample**  
*Whether or not to initialize loaned samples returned by a **DDSDataWriter** (p. 1321).*

### 9.42.1 Detailed Description

Various settings that configure how a **DDSDataWriter** (p. 1321) allocates and uses physical memory for internal resources.

DataWriters must allocate internal structures to handle the simultaneously blocking of threads trying to call **FooDataWriter::write** (p. 1683) on the same **DDSDataWriter** (p. 1321), for the storage used to batch small samples, and for content-based filters specified by DataReaders.

Most of these internal structures start at an initial size and, by default, will be grown as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **DDSDataWriter** (p. 1321). By setting the initial size to the maximum size, you will prevent RTI Connexx from dynamically allocating any memory after the creation of the **DDSDataWriter** (p. 1321).

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.42.2 Member Data Documentation

#### 9.42.2.1 initial\_concurrent\_blocking\_threads

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::initial\_concurrent\_blocking\_threads

The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1321).

This value only applies if **DDS\_HistoryQosPolicy** (p. 919) has its kind set to **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406) and **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) is > 0.

**[default]** 1

**[range]** [1, 10000], <= max\_concurrent\_blocking\_threads

### 9.42.2.2 max\_concurrent\_blocking\_threads

`DDS_Long DDS_DataWriterResourceLimitsQosPolicy::max_concurrent_blocking_threads`

The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1321).

This value only applies if **DDS\_HistoryQosPolicy** (p. 919) has its kind set to **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406) and **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) is  $> 0$ .

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 10000] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_concurrent\_blocking\_threads

### 9.42.2.3 max\_remote\_reader\_filters

`DDS_Long DDS_DataWriterResourceLimitsQosPolicy::max_remote_reader_filters`

The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1321) will perform content-based filtering.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [0,  $(2^{31}-2)$ ] or **DDS\_LENGTH\_UNLIMITED** (p. 438).

0: The **DDSDataWriter** (p. 1321) will not perform filtering for any **DDSDataReader** (p. 1288).

1 to  $(2^{31}-2)$ : The DataWriter will filter for up to the specified number of DataReaders. In addition, the Datawriter will store the result of the filtering per sample per DataReader.

**DDS\_LENGTH\_UNLIMITED** (p. 438): The DataWriter will filter for up to  $(2^{31}-2)$  DataReaders. However, in this case, the DataWriter will not store the filtering result per sample per DataReader. Thus, if a sample is resent (such as due to a loss of reliable communication), the sample will be filtered again.

### 9.42.2.4 initial\_batches

`DDS_Long DDS_DataWriterResourceLimitsQosPolicy::initial_batches`

Represents the initial number of batches a **DDSDataWriter** (p. 1321) will manage.

**[default]** 8

**[range]** [1,100 million]

See also

**DDS\_BatchQosPolicy** (p. 600)

### 9.42.2.5 max\_batches

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::max\_batches

Represents the maximum number of batches a **DDSDataWriter** (p. 1321) will manage.

[default] **DDS\_LENGTH\_UNLIMITED** (p. 438)

When batching is enabled, the maximum number of samples that a **DDSDataWriter** (p. 1321) can store is limited by this value and **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055).

[range] [1,100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438)  $\geq$  **DDS\_RtpsReliableWriterProtocol\_t**↔  
**::heartbeats\_per\_max\_samples** (p. 1067) if batching is enabled

See also

**DDS\_BatchQosPolicy** (p. 600)

### 9.42.2.6 instance\_replacement

**DDS\_DataWriterResourceLimitsInstanceReplacementKind** DDS\_DataWriterResourceLimitsQosPolicy::instance↔  
\_replacement

Sets the kinds of instances allowed to be replaced when instance resource limits are reached.

When a **DDSDataWriter** (p. 1321)'s number of active instances is greater than **DDS\_ResourceLimitsQosPolicy**↔  
**::max\_instances** (p. 1055), it will try to make room by replacing an existing instance. This field specifies the kinds of instances allowed to be replaced.

If a replaceable instance is not available, either an out-of-resources exception will be returned, or the writer may block if the instance reclamation was done when writing.

[default] **DDS\_UNREGISTERED\_INSTANCE\_REPLACEMENT** (p. 383)

See also

**DDS\_DataWriterResourceLimitsInstanceReplacementKind** (p. 382)

### 9.42.2.7 `replace_empty_instances`

```
DDS_Boolean DDS_DataWriterResourceLimitsQosPolicy::replace_empty_instances
```

Whether or not to replace empty instances during instance replacement.

When a `DDSDataWriter` (p. 1321) has more active instances than allowed by `DDS_ResourceLimitsQosPolicy::max_instances` (p. 1055), it tries to make room by replacing an existing instance. This field configures whether empty instances (i.e. instances with no samples) may be replaced. If set `DDS_BOOLEAN_TRUE` (p. 317), then a `DDSDataWriter` (p. 1321) will first try reclaiming empty instances, before trying to replace whatever is specified by `DDS_DataWriterResourceLimitsQosPolicy::instance_replacement` (p. 701).

[default] `DDS_BOOLEAN_FALSE` (p. 317)

See also

`DDS_DataWriterResourceLimitsInstanceReplacementKind` (p. 382)

### 9.42.2.8 `autoregister_instances`

```
DDS_Boolean DDS_DataWriterResourceLimitsQosPolicy::autoregister_instances
```

Whether or not to automatically register new instances.

[default] `DDS_BOOLEAN_FALSE` (p. 317)

When set to true, it is possible to write with a non-NIL handle of an instance that is not registered: the write operation will succeed and the instance will be registered. Otherwise, that write operation would fail.

See also

`FooDataWriter::write` (p. 1683)

### 9.42.2.9 `initial_virtual_writers`

```
DDS_Long DDS_DataWriterResourceLimitsQosPolicy::initial_virtual_writers
```

The initial number of virtual writers supported by a `DDSDataWriter` (p. 1321).

[default] 1

[range] [1, 1000000], or `DDS_LENGTH_UNLIMITED` (p. 438)

### 9.42.2.10 max\_virtual\_writers

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::max\_virtual\_writers

The maximum number of virtual writers supported by a **DDSDataWriter** (p. 1321).

Sets the maximum number of unique virtual writers supported by a **DDSDataWriter** (p. 1321), where virtual writers are added when samples are written with the virtual writer GUID.

This field is specially relevant in the configuration of Persistence Service DataWriters since these DataWriters will publish samples on behalf of multiple virtual writers.

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 1000000], or DDS\_LENGTH\_UNLIMITED (p. 438)

### 9.42.2.11 max\_remote\_readers

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::max\_remote\_readers

The maximum number of remote readers supported by a **DDSDataWriter** (p. 1321).

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 1000000], or DDS\_LENGTH\_UNLIMITED (p. 438)

### 9.42.2.12 max\_app\_ack\_remote\_readers

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::max\_app\_ack\_remote\_readers

The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1321).

**[default]** DDS\_LENGTH\_UNLIMITED (p. 438)

**[range]** [1, 1000000], or DDS\_LENGTH\_UNLIMITED (p. 438)

### 9.42.2.13 initial\_active\_topic\_queries

**DDS\_Long** DDS\_DataWriterResourceLimitsQosPolicy::initial\_active\_topic\_queries

Represents the initial number of active topic queries a **DDSDataWriter** (p. 1321) will manage.

**[default]** 1

**[range]** [1, 1000000]

See also

**DDS\_TopicQueryDispatchQosPolicy** (p. 1141)

### 9.42.2.14 max\_active\_topic\_queries

```
DDS_Long DDS_DataWriterResourceLimitsQosPolicy::max_active_topic_queries
```

Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1321) will manage.

When topic queries are enabled, the maximum number of topic queries that a **DDSDataWriter** (p. 1321) can publish data samples for at the same time is limited by this value.

When the DataWriter receives one topic query above this limit, it will wait to process it until it finishes publishing all the samples for at least one of the current topic queries.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1000000] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

See also

**DDS\_TopicQueryDispatchQosPolicy** (p. 1141)

### 9.42.2.15 writer\_loaned\_sample\_allocation

```
struct DDS_AllocationSettings_t DDS_DataWriterResourceLimitsQosPolicy::writer_loaned_sample_↔
allocation
```

Represents the allocation settings of loaned samples managed by a **DDSDataWriter** (p. 1321).

The number of samples loaned by a **DDSDataWriter** (p. 1321) via **FooDataWriter::get\_loan** (p. 1695) is limited by the **DDS\_AllocationSettings\_t::max\_count** (p. 589) of **DDS\_DataWriterResourceLimitsQosPolicy::writer\_loaned\_↔ sample\_allocation** (p. 704). **FooDataWriter::get\_loan** (p. 1695) returns NULL if and only if **DDS\_Allocation\_↔ Settings\_t::max\_count** (p. 589) samples have been loaned, and none of those samples has been written with **Foo\_↔ DataWriter::write** (p. 1683) or discarded via **FooDataWriter::discard\_loan** (p. 1696).

**[default]** `initial_count = DDS_AUTO_COUNT` (p. 397) (**DDS\_ResourceLimitsQosPolicy::initial\_samples** (p. 1055) + 1); `max_count = DDS_AUTO_COUNT` (p. 397) (**DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) + 1); `incremental_count = DDS_AUTO_COUNT` (p. 397) (0 if `initial_count = max_count`; `initial_count` otherwise);

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

See also

**FooDataWriter::get\_loan** (p. 1695)

**FooDataWriter::discard\_loan** (p. 1696)

### 9.42.2.16 initialize\_writer\_loaned\_sample

`DDS_Boolean DDS_DataWriterResourceLimitsQosPolicy::initialize_writer_loaned_sample`

Whether or not to initialize loaned samples returned by a `DDSDataWriter` (p. 1321).

[default] `DDS_BOOLEAN_FALSE` (p. 317)

See also

`FooDataWriter::get_loan` (p. 1695)

## 9.43 DDS\_DataWriterShmemRefTransferModeSettings Struct Reference

Settings related to transferring data using shared memory references.

### Public Attributes

- `DDS_Boolean enable_data_consistency_check`  
*Controls if samples can be checked for consistency.*

### 9.43.1 Detailed Description

Settings related to transferring data using shared memory references.

It is used to configure a `DDSDataWriter` (p. 1321) using **Zero Copy transfer over shared memory** (p. 70).

Properties:

`RxO` (p. 360) = N/A

`Changeable` (p. 360) = `NO` (p. 360)

QoS:

`DDS_DataWriterTransferModeQosPolicy` (p. 706)

### 9.43.2 Member Data Documentation

### 9.43.2.1 enable\_data\_consistency\_check

**DDS\_Boolean** DDS\_DataWriterShmemRefTransferModeSettings::enable\_data\_consistency\_check

Controls if samples can be checked for consistency.

When this setting is true, the **DDSDataWriter** (p. 1321) sends an incrementing sequence number as an inline QoS with every sample. This sequence number allows a **DDSDataReader** (p. 1288) to use the **FooDataReader::is\_data\_↔\_consistent** (p. 1675) API to detect if the **DDSDataWriter** (p. 1321) overwrote the sample before the **DDSDataReader** (p. 1288) could complete processing the sample.

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

## 9.44 DDS\_DataWriterTransferModeQosPolicy Struct Reference

<<*extension*>> (p. 237) Qos related to transferring data

### Public Attributes

- struct **DDS\_DataWriterShmemRefTransferModeSettings** **shmem\_ref\_settings**  
*Settings related to transferring data using shared memory references.*

### 9.44.1 Detailed Description

<<*extension*>> (p. 237) Qos related to transferring data

It contains qualitative settings related to the actions a **DDSDataWriter** (p. 1321) performs while transferring its data.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.44.2 Member Data Documentation

### 9.44.2.1 shmem\_ref\_settings

```
struct DDS_DataWriterShmemRefTransferModeSettings DDS_DataWriterTransferModeQosPolicy::shmem_ref_settings
```

Settings related to transferring data using shared memory references.

For details, refer to the [DDS\\_DataWriterShmemRefTransferModeSettings](#) (p. 705)

## 9.45 DDS\_DeadlineQosPolicy Struct Reference

Expresses the maximum duration (deadline) within which an instance is expected to be updated.

### Public Attributes

- struct **DDS\_Duration\_t period**  
*Duration of the deadline period.*

### 9.45.1 Detailed Description

Expresses the maximum duration (deadline) within which an instance is expected to be updated.

A **DDSDataReader** (p. 1288) expects a new sample updating the value of each instance at least once every `period`. That is, `period` specifies the maximum expected elapsed time between arriving data samples.

A **DDSDataWriter** (p. 1321) indicates that the application commits to write a new value (using the **DDSDataWriter** (p. 1321)) for each instance managed by the **DDSDataWriter** (p. 1321) at least once every `period`.

This QoS can be used during system integration to ensure that applications have been coded to meet design specifications.

It can also be used during runtime to detect when systems are performing outside of design specifications. Receiving applications can take appropriate actions to prevent total system failure when data is not received in time. For topics on which data is not expected to be periodic, `period` should be set to an infinite value.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343), **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344), **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = YES (p. 360)

### 9.45.2 Usage

This policy is useful for cases where a **DDSTopic** (p. 1617) is expected to have each instance updated periodically. On the publishing side this setting establishes a contract that the application must meet. On the subscribing side the setting establishes a minimum requirement for the remote publishers that are expected to supply the data values.

When RTI Connexnt 'matches' a **DDSDataWriter** (p. 1321) and a **DDSDataReader** (p. 1288) it checks whether the settings are compatible (i.e., *offered deadline*  $\leq$  *requested deadline*); if they are not, the two entities are informed (via the **DDSListener** (p. 1526) or **DDSCondition** (p. 1276) mechanism) of the incompatibility of the QoS settings and communication will not occur.

Assuming that the reader and writer ends have compatible settings, the fulfilment of this contract is monitored by RTI Connexnt and the application is informed of any violations by means of the proper **DDSListener** (p. 1526) or **DDSCondition** (p. 1276).

### 9.45.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered period*  $\leq$  *requested period* holds.

### 9.45.4 Consistency

The setting of the **DEADLINE** (p. 385) policy must be set consistently with that of the **TIME\_BASED\_FILTER** (p. 440).

For these two policies to be consistent the settings must be such that *deadline period*  $\geq$  *minimum\_separation*.

An attempt to set these policies in an inconsistent manner will result in **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) in **set\_qos (abstract)** (p. 1464), or the **DDSEntity** (p. 1463) will not be created.

For a **DDSDataReader** (p. 1288), the **DEADLINE** (p. 385) policy and **DDS\_TimeBasedFilterQosPolicy** (p. 1126) may interact such that even though the **DDSDataWriter** (p. 1321) is writing samples fast enough to fulfill its commitment to its own deadline, the **DDSDataReader** (p. 1288) may see violations of its deadline. This happens because RTI Connexnt will drop any samples received within the **DDS\_TimeBasedFilterQosPolicy::minimum\_separation** (p. 1128). To avoid triggering the **DDSDataReader** (p. 1288)'s deadline, even though the matched **DDSDataWriter** (p. 1321) is meeting its own deadline, set the two QoS parameters so that:

*reader deadline*  $\geq$  *reader minimum\_separation* + *writer deadline*

See **DDS\_TimeBasedFilterQosPolicy** (p. 1126) for more information about the interactions between deadlines and time-based filters.

See also

**DDS\_TimeBasedFilterQosPolicy** (p. 1126)

### 9.45.5 Member Data Documentation

### 9.45.5.1 period

```
struct DDS_Duration_t DDS_DeadlineQosPolicy::period
```

Duration of the deadline period.

[default] **DDS\_DURATION\_INFINITE** (p. 326)

[range] [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326),  $\geq$  **DDS\_TimeBasedFilterQosPolicy**↔  
::**minimum\_separation** (p. 1128)

## 9.46 DDS\_DestinationOrderQosPolicy Struct Reference

Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1321) entities for the same instance of data (i.e., same **DDSTopic** (p. 1617) and key).

### Public Attributes

- **DDS\_DestinationOrderQosPolicyKind kind**  
*Specifies the desired kind of destination order.*
- **DDS\_DestinationOrderQosPolicyScopeKind scope**  
*Specifies the desired scope of the source destination order.*
- struct **DDS\_Duration\_t source\_timestamp\_tolerance**  
<<*extension*>> (p. 237) *Allowed tolerance between source timestamps of consecutive samples.*

### 9.46.1 Detailed Description

Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1321) entities for the same instance of data (i.e., same **DDSTopic** (p. 1617) and key).

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS**↔  
**STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

## 9.46.2 Usage

When multiple DataWriters send data for the same topic, the order in which data from different DataWriters are received by the applications of different DataReaders may be different. So different DataReaders may not receive the same "last" value when DataWriters stop sending data.

This QoS policy controls how each subscriber resolves the final value of a data instance that is written by multiple **DDSDataWriter** (p. 1321) entities (which may be associated with different **DDSPublisher** (p. 1550) entities) running on different nodes.

This QoS can be used to create systems that have the property of "eventual consistency." Thus intermediate states across multiple applications may be inconsistent, but when DataWriters stop sending changes to the same topic, all applications will end up having the same state.

This QoS policy can be set for both DataWriters and DataReaders.

For the DataReader:

The default setting, **DDS\_BY\_RECEPTION\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387), indicates that (assuming the **OWNERSHIP\_STRENGTH** (p. 415) policy allows it) the latest received value for the instance should be the one whose value is kept. That is, data will be delivered by a **DDSDataReader** (p. 1288) in the order in which it was *received* (which may lead to inconsistent final values).

For **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387), if the scope is set to **DDS\_INSTANCE\_↔\_SCOPE\_DESTINATIONORDER\_QOS** (p. 388) (default), within each instance, the sample's source timestamp shall be used to determine the most recent information. This is the only setting that, in the case of concurrent same-strength DataWriters updating the same instance, ensures that all DataReaders end up with the same final value for the instance. If a DataReader receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped. The **SAMPLE\_REJECTED** status or the **SAMPLE\_LOST** status will not be updated.

If scope is set to **DDS\_TOPIC\_SCOPE\_DESTINATIONORDER\_QOS** (p. 388), the ordering is enforced per topic across all instances.

In addition, a DataReader will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than `source_timestamp_tolerance`. Otherwise, the DDS sample is dropped. The **SAMPLE\_REJECTED** status or the **SAMPLE\_LOST** status will not be updated.

For the DataWriter:

For the default setting, **DDS\_BY\_RECEPTION\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387), the DataWriter will not enforce source timestamp ordering when writing samples using the **FooDataWriter::write\_w\_params** (p. 1688) or **FooDataWriter::write\_w\_timestamp** (p. 1687) API. The source timestamp of a new sample can be older than the source timestamp of the previous samples.

When using **DDS\_BY\_SOURCE\_TIMESTAMP\_DESTINATIONORDER\_QOS** (p. 387), If scope is set to **DDS\_↔\_INSTANCE\_SCOPE\_DESTINATIONORDER\_QOS** (p. 388) (default), when writing a sample, the sample's timestamp must not be older than the timestamp of the previously written DDS sample for the same instance. If, however, the timestamp is older than the timestamp of the previously written DDS sample—but the difference is less than the `source_↔_timestamp_tolerance`—the DDS sample will use the previously written DDS sample's timestamp as its timestamp. Otherwise, if the difference is greater than the tolerance, the write will fail with retcode **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

If scope is set to **DDS\_TOPIC\_SCOPE\_DESTINATIONORDER\_QOS** (p. 388), a new sample timestamp must not be older than the timestamp of the previously written DDS sample, across all instances. (The ordering is enforced across all instances.)

### 9.46.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered kind*  $\geq$  *requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of `DDS_DestinationOrderQosPolicy::kind` (p. 711) are considered ordered such that `DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387)  $<$  `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387)

### 9.46.4 Member Data Documentation

#### 9.46.4.1 kind

```
DDS_DestinationOrderQosPolicyKind DDS_DestinationOrderQosPolicy::kind
```

Specifies the desired kind of destination order.

[default] `DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387),

#### 9.46.4.2 scope

```
DDS_DestinationOrderQosPolicyScopeKind DDS_DestinationOrderQosPolicy::scope
```

Specifies the desired scope of the source destination order.

Indicates if tolerance check and the current sample's timestamp is computed based on instance or topic basis.

[default] `DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS` (p. 388)

#### 9.46.4.3 source\_timestamp\_tolerance

```
struct DDS_Duration_t DDS_DestinationOrderQosPolicy::source_timestamp_tolerance
```

<< *extension* >> (p. 237) Allowed tolerance between source timestamps of consecutive samples.

When a `DDSDataWriter` (p. 1321) sets `DDS_DestinationOrderQosPolicyKind` (p. 387) to `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387), when writing a sample, its timestamp must not be less than the timestamp of the previously written sample. However, if it is less than the timestamp of the previously written sample but the difference is less than this tolerance, the sample will use the previously written sample's timestamp as its timestamp. Otherwise, if the difference is greater than this tolerance, the write will fail.

When a `DDSDataReader` (p. 1288) sets `DDS_DestinationOrderQosPolicyKind` (p. 387) to `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387), the `DDSDataReader` (p. 1288) will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than this tolerance. Otherwise, the sample is dropped.

[default] 100 milliseconds for `DDSDataWriter` (p. 1321), 30 seconds for `DDSDataReader` (p. 1288)

## 9.47 DDS\_DiscoveryConfigQosPolicy Struct Reference

Settings for discovery configuration.

### Public Attributes

- struct **DDS\_Duration\_t participant\_liveliness\_lease\_duration**  
*The liveliness lease duration for the participant.*
- struct **DDS\_Duration\_t participant\_liveliness\_assert\_period**  
*The period to assert liveliness for the participant.*
- struct **DDS\_Duration\_t participant\_announcement\_period**  
*The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).*
- **DDS\_RemoteParticipantPurgeKind remote\_participant\_purge\_kind**  
*The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.*
- struct **DDS\_Duration\_t max\_liveliness\_loss\_detection\_period**  
*The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.*
- **DDS\_Long initial\_participant\_announcements**  
*The number of initial announcements sent when a participant is first enabled.*
- **DDS\_Long new\_remote\_participant\_announcements**  
*The number of participant announcements sent when a remote participant is newly discovered.*
- struct **DDS\_Duration\_t min\_initial\_participant\_announcement\_period**  
*The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.*
- struct **DDS\_Duration\_t max\_initial\_participant\_announcement\_period**  
*The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.*
- struct **DDS\_BuiltinTopicReaderResourceLimits\_t participant\_reader\_resource\_limits**  
*Resource limits.*
- struct **DDS\_RtpsReliableReaderProtocol\_t publication\_reader**  
*RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.*
- struct **DDS\_BuiltinTopicReaderResourceLimits\_t publication\_reader\_resource\_limits**  
*Resource limits.*
- struct **DDS\_RtpsReliableReaderProtocol\_t subscription\_reader**  
*RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.*
- struct **DDS\_BuiltinTopicReaderResourceLimits\_t subscription\_reader\_resource\_limits**  
*Resource limits.*
- struct **DDS\_RtpsReliableWriterProtocol\_t publication\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.*
- struct **DDS\_WriterDataLifecycleQosPolicy publication\_writer\_data\_lifecycle**  
*Writer data lifecycle settings for a built-in publication writer.*
- struct **DDS\_RtpsReliableWriterProtocol\_t subscription\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.*
- struct **DDS\_WriterDataLifecycleQosPolicy subscription\_writer\_data\_lifecycle**  
*Writer data lifecycle settings for a built-in subscription writer.*

- **DDS\_DiscoveryConfigBuiltinPluginKindMask builtin\_discovery\_plugins**  
*Mask of built-in discovery plugin kinds.*
- **DDS\_DiscoveryConfigBuiltinChannelKindMask enabled\_built\_in\_channels**  
*The mask specifying which built-in channels should be enabled.*
- **DDS\_ReliabilityQosPolicyKind participant\_message\_reader\_reliability\_kind**  
*Reliability policy for a built-in participant message reader.*
- struct **DDS\_RtpsReliableReaderProtocol\_t participant\_message\_reader**  
*RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if `DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind` (p. 721) is set to `DDS_RELIABLE_RELIABILITY_QOS` (p. 435).*
- struct **DDS\_RtpsReliableWriterProtocol\_t participant\_message\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with `DDS_RELIABLE_RELIABILITY_QOS` (p. 435) `DDS_ReliabilityQosPolicyKind` (p. 434).*
- struct **DDS\_PublishModeQosPolicy publication\_writer\_publish\_mode**  
*Publish mode policy for the built-in publication writer.*
- struct **DDS\_PublishModeQosPolicy subscription\_writer\_publish\_mode**  
*Publish mode policy for the built-in subscription writer.*
- struct **DDS\_AsynchronousPublisherQosPolicy asynchronous\_publisher**  
*Asynchronous publishing settings for the discovery `DDSPublisher` (p. 1550) and all entities that are created by it.*
- struct **DDS\_Duration\_t default\_domain\_announcement\_period**  
*The period to announce a participant to the default domain 0.*
- **DDS\_Boolean ignore\_default\_domain\_announcements**  
*Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.*
- struct **DDS\_RtpsReliableWriterProtocol\_t service\_request\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in `DDS_ServiceRequest` (p. 1097) writer.*
- struct **DDS\_WriterDataLifecycleQosPolicy service\_request\_writer\_data\_lifecycle**  
*Writer data lifecycle settings for a built-in `DDS_ServiceRequest` (p. 1097) writer.*
- struct **DDS\_PublishModeQosPolicy service\_request\_writer\_publish\_mode**  
*Publish mode policy for the built-in service request writer.*
- struct **DDS\_RtpsReliableReaderProtocol\_t service\_request\_reader**  
*RTPS reliable reader protocol-related configuration settings for a built-in `DDS_ServiceRequest` (p. 1097) reader.*
- struct **DDS\_Duration\_t locator\_reachability\_assert\_period**  
*Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.*
- struct **DDS\_Duration\_t locator\_reachability\_lease\_duration**  
*The time period after which other DomainParticipants can consider one of their locators as "unreachable" if they do not receive a REACHABILITY PING from this DomainParticipant.*
- struct **DDS\_Duration\_t locator\_reachability\_change\_detection\_period**  
*Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.*
- struct **DDS\_RtpsReliableWriterProtocol\_t secure\_volatile\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.*
- struct **DDS\_PublishModeQosPolicy secure\_volatile\_writer\_publish\_mode**  
*Publish mode policy for the built-in secure volatile writer.*
- struct **DDS\_RtpsReliableReaderProtocol\_t secure\_volatile\_reader**  
*RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.*
- **DDS\_Long endpoint\_type\_object\_lb\_serialization\_threshold**

*Option to reduce the size required to propagate a TypeObject in Simple Endpoint Discovery.*

- struct **DDS\_Duration\_t dns\_tracker\_polling\_period**  
*Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.*
- struct **DDS\_PublishModeQosPolicy participant\_configuration\_writer\_publish\_mode**  
*Publish mode policy for the built-in participant configuration writer.*
- struct **DDS\_RtpsReliableWriterProtocol\_t participant\_configuration\_writer**  
*RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.*
- struct **DDS\_WriterDataLifecycleQosPolicy participant\_configuration\_writer\_data\_lifecycle**  
*Writer data lifecycle settings for a built-in participant configuration writer.*
- struct **DDS\_RtpsReliableReaderProtocol\_t participant\_configuration\_reader**  
*RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.*
- struct **DDS\_BuiltinTopicReaderResourceLimits\_t participant\_configuration\_reader\_resource\_limits**  
*Resource limits for the built-in topic participant configuration reader.*

### 9.47.1 Detailed Description

Settings for discovery configuration.

<<*extension*>> (p. 237) This QoS policy controls the amount of delay in discovering entities in the system and the amount of discovery traffic in the network.

The amount of network traffic required by the discovery process can vary widely, based on how your application has chosen to configure the middleware's network addressing (e.g., unicast vs. multicast, multicast TTL, etc.), the size of the system, whether all applications are started at the same time or whether start times are staggered, and other factors. Your application can use this policy to make tradeoffs between discovery completion time and network bandwidth utilization. In addition, you can introduce random back-off periods into the discovery process to decrease the probability of network contention when many applications start simultaneously.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.47.2 Member Data Documentation

### 9.47.2.1 participant\_liveliness\_lease\_duration

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::participant_liveliness_lease_duration
```

The liveliness lease duration for the participant.

This is the same as the expiration time of the DomainParticipant as defined in the RTPS protocol.

If the participant has not refreshed its own liveliness to other participants at least once within this period, it may be considered as stale by other participants in the network.

Should be strictly greater than **DDS\_DiscoveryConfigQosPolicy::participant\_liveliness\_assert\_period** (p. 715).

**[default]** 100 seconds

**[range]** [1 nanosec,1 year], > participant\_liveliness\_assert\_period

### 9.47.2.2 participant\_liveliness\_assert\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::participant_liveliness_assert_period
```

The period to assert liveliness for the participant.

The period at which the participant will refresh its liveliness to all the peers.

Should be strictly less than **DDS\_DiscoveryConfigQosPolicy::participant\_liveliness\_lease\_duration** (p. 714).

**[default]** 30 seconds

**[range]** [1 nanosec,1 year], < participant\_liveliness\_lease\_duration

### 9.47.2.3 participant\_announcement\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::participant_announcement_period
```

The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).

The **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) list **DDSDomainParticipant::add\_peer** (p. 1409) API are used to configure a set of potential peers that a DomainParticipant may discover. The **DDS\_DiscoveryConfigQosPolicy::participant\_announcement\_period** (p. 715) configures how frequently a DomainParticipant will announce itself to the subset of the configured potential peers that it has not matched with yet. Once a DomainParticipant matches with a DomainParticipant at one of configured potential peer locators, it will no longer announce itself to that locator at this period unless liveliness is lost.

This QoS policy is only supported when using the Simple Participant Discovery Protocol 2.0 (SPDP2). Setting this value when using the Simple Participant Discovery Protocol (SPDP) or other participant discovery protocols is not supported and will result in an error.

**[default]** **DDS\_DURATION\_AUTO** (p. 327) (Takes the value of **DDS\_DiscoveryConfigQosPolicy::participant\_liveliness\_assert\_period** (p. 715))

**[range]** [1 nanosec,1 year]

#### 9.47.2.4 remote\_participant\_purge\_kind

```
DDS_RemoteParticipantPurgeKind DDS_DiscoveryConfigQosPolicy::remote_participant_purge_kind
```

The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.

Most users will not need to change this value from its default, **DDS\_LIVELINESS\_BASED\_REMOTE\_PARTICIPANT\_PURGE** (p. 395). However, **DDS\_NO\_REMOTE\_PARTICIPANT\_PURGE** (p. 396) may be a good choice if the following conditions apply:

1. Discovery communication with a remote participant may be lost while data communication remains intact. Such will not typically be the case if discovery takes place over the Simple Discovery Protocol, but may be the case if the RTI Enterprise Discovery Service is used.
2. Extensive and prolonged lack of discovery communication between participants is not expected to be common, either because participant loss itself is expected to be rare, or because participants may be lost sporadically but will typically return again.
3. Maintaining inter-participant liveliness is problematic, perhaps because a participant has no writers with the appropriate **DDS\_LivelinessQosPolicyKind** (p. 409).

**[default]** **DDS\_LIVELINESS\_BASED\_REMOTE\_PARTICIPANT\_PURGE** (p. 395)

#### 9.47.2.5 max\_liveliness\_loss\_detection\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::max_liveliness_loss_detection_period
```

The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.

Notification of the loss of liveliness of a remote entity may come more quickly than this duration, depending on the liveliness contract between the local and remote entities and the capabilities of the discovery mechanism in use. For example, a **DDSDataReader** (p. 1288) will learn of the loss of liveliness of a matched **DDSDataWriter** (p. 1321) within the reader's offered liveliness lease duration.

Shortening this duration will increase the responsiveness of entities to communication failures. However, it will also increase the CPU usage of the application, as the liveliness of remote entities will be examined more frequently.

**[default]** 60 seconds

**[range]** [1 nanosec, 1 year]

#### 9.47.2.6 initial\_participant\_announcements

```
DDS_Long DDS_DiscoveryConfigQosPolicy::initial_participant_announcements
```

The number of initial announcements sent when a participant is first enabled.

**[default]** 5

**[range]** [1,1 million]

### 9.47.2.7 new\_remote\_participant\_announcements

```
DDS_Long DDS_DiscoveryConfigQosPolicy::new_remote_participant_announcements
```

The number of participant announcements sent when a remote participant is newly discovered.

These announcements are only sent to the newly discovered remote participant, they are not also broadcast to the initial\_peers list.

**[default]** 2

**[range]** [0,1 million]

### 9.47.2.8 min\_initial\_participant\_announcement\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period
```

The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between this and **DDS\_DiscoveryConfigQosPolicy::max\_initial\_participant\_announcement\_period** (p. 717) is introduced in between initial announcements when a new remote participant is discovered.

The setting of **DDS\_DiscoveryConfigQosPolicy::min\_initial\_participant\_announcement\_period** (p. 717) must be consistent with **DDS\_DiscoveryConfigQosPolicy::max\_initial\_participant\_announcement\_period** (p. 717). For these two values to be consistent, they must verify that:

**DDS\_DiscoveryConfigQosPolicy::min\_initial\_participant\_announcement\_period** (p. 717)  $\leq$  **DDS\_DiscoveryConfigQosPolicy::max\_initial\_participant\_announcement\_period** (p. 717).

**[default]** 10 milliseconds

**[range]** [1 nanosec,1 year]

### 9.47.2.9 max\_initial\_participant\_announcement\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period
```

The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between **DDS\_DiscoveryConfigQosPolicy::min\_initial\_participant\_announcement\_period** (p. 717) and this is introduced in between initial announcements when a new remote participant is discovered.

The setting of **DDS\_DiscoveryConfigQosPolicy::max\_initial\_participant\_announcement\_period** (p. 717) must be consistent with **DDS\_DiscoveryConfigQosPolicy::min\_initial\_participant\_announcement\_period** (p. 717). For these two values to be consistent, they must verify that:

**DDS\_DiscoveryConfigQosPolicy::min\_initial\_participant\_announcement\_period** (p. 717)  $\leq$  **DDS\_DiscoveryConfigQosPolicy::max\_initial\_participant\_announcement\_period** (p. 717).

**[default]** 1 second

**[range]** [1 nanosec,1 year]

### 9.47.2.10 participant\_reader\_resource\_limits

```
struct DDS_BuiltinTopicReaderResourceLimits_t DDS_DiscoveryConfigQosPolicy::participant_reader_↔  
resource_limits
```

Resource limits.

Resource limit of the built-in topic participant reader. For details, see [DDS\\_BuiltinTopicReaderResourceLimits\\_t](#) (p. 605).

### 9.47.2.11 publication\_reader

```
struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::publication_reader
```

RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.

For details, refer to the [DDS\\_RtpsReliableReaderProtocol\\_t](#) (p. 1057)

#### [default]

```
min_heartbeat_response_delay 0.0 seconds;  
max_heartbeat_response_delay 0.0 seconds;  
heartbeat_suppression_duration 0.0625 seconds;  
nack_period 5.0 seconds;  
receive_window_size 256;  
round_trip_time 0.0 seconds;  
app_ack_period 5.0 seconds;  
samples_per_app_ack 1;
```

### 9.47.2.12 publication\_reader\_resource\_limits

```
struct DDS_BuiltinTopicReaderResourceLimits_t DDS_DiscoveryConfigQosPolicy::publication_reader_↔  
resource_limits
```

Resource limits.

Resource limit of the built-in topic publication reader. For details, see [DDS\\_BuiltinTopicReaderResourceLimits\\_t](#) (p. 605).

### 9.47.2.13 subscription\_reader

```
struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::subscription_reader
```

RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.

For details, refer to the [DDS\\_RtpsReliableReaderProtocol\\_t](#) (p. 1057)

#### [default]

```
min_heartbeat_response_delay 0.0 seconds;  
max_heartbeat_response_delay 0.0 seconds;  
heartbeat_suppression_duration 0.0625 seconds;  
nack_period 5.0 seconds;  
receive_window_size 256;  
round_trip_time 0.0 seconds;  
app_ack_period 5.0 seconds;  
samples_per_app_ack 1;
```

**9.47.2.14 subscription\_reader\_resource\_limits**

```
struct DDS_BuiltinTopicReaderResourceLimits_t DDS_DiscoveryConfigQosPolicy::subscription_reader↔
_resource_limits
```

Resource limits.

Resource limit of the built-in topic subscription reader. For details, see **DDS\_BuiltinTopicReaderResourceLimits\_t** (p. 605).

**9.47.2.15 publication\_writer**

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::publication_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

**[default]**

```
low_watermark 0;
high_watermark 1;
heartbeat_period 3.0 seconds;
fast_heartbeat_period 3.0 seconds;
late_joiner_heartbeat_period 3.0 seconds;

disable_repair_piggyback_heartbeat DDS_BOOLEAN_FALSE (p. 317);
```

### 9.47.2.16 publication\_writer\_data\_lifecycle

```
struct DDS_WriterDataLifecycleQosPolicy DDS_DiscoveryConfigQosPolicy::publication_writer_data_↔
lifecycle
```

Writer data lifecycle settings for a built-in publication writer.

For details, refer to the **DDS\_WriterDataLifecycleQosPolicy** (p. 1256). **DDS\_WriterDataLifecycleQosPolicy**↔  
::**autodispose\_unregistered\_instances** (p. 1257) will always be forced to **DDS\_BOOLEAN\_TRUE** (p. 317).

### 9.47.2.17 subscription\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::subscription_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

#### [default]

```
low_watermark 0;
high_watermark 1;
heartbeat_period 3.0 seconds;
fast_heartbeat_period 3.0 seconds;
late_joiner_heartbeat_period 3.0 seconds;
virtual_heartbeat_period DDS_DURATION_INFINITE (p. 326);
samples_per_virtual_heartbeat DDS_LENGTH_UNLIMITED (p. 438);

disable_positive_acks_increase_sample_keep_duration_factor 150;
min_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
max_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
send_window_update_period 3s;
send_window_increase_factor 105;
send_window_decrease_factor 50;
enable_multicast_periodic_heartbeat DDS_BOOLEAN_FALSE (p. 317);
multicast_resend_threshold 2 readers;
disable_repair_piggyback_heartbeat DDS_BOOLEAN_FALSE (p. 317);
```

### 9.47.2.18 subscription\_writer\_data\_lifecycle

```
struct DDS_WriterDataLifecycleQosPolicy DDS_DiscoveryConfigQosPolicy::subscription_writer_data_↔
lifecycle
```

Writer data lifecycle settings for a built-in subscription writer.

For details, refer to the **DDS\_WriterDataLifecycleQosPolicy** (p. 1256). **DDS\_WriterDataLifecycleQosPolicy**↔  
::**autodispose\_unregistered\_instances** (p. 1257) will always be forced to **DDS\_BOOLEAN\_TRUE** (p. 317).

### 9.47.2.19 builtin\_discovery\_plugins

```
DDS_DiscoveryConfigBuiltinPluginKindMask DDS_DiscoveryConfigQosPolicy::builtin_discovery_plugins
```

Mask of built-in discovery plugin kinds.

There are several built-in discovery plugins. This mask enables the different plugins. Any plugin not enabled will not be created.

**[default] DDS\_DISCOVERYCONFIG\_BUILTIN\_SDP** (p. 393)

See also

**DDS\_DiscoveryConfigBuiltinPluginKind** (p. 393)

### 9.47.2.20 enabled\_builtin\_channels

```
DDS_DiscoveryConfigBuiltinChannelKindMask DDS_DiscoveryConfigQosPolicy::enabled_builtin_channels
```

The mask specifying which built-in channels should be enabled.

While there are a number of built-in channels that are used by Connex DDS, the only built-in channel which can currently be enabled or disabled is the Service Request Channel. This channel is used by the Locator Reachability and Topic Query features. If you are not using these features and wish to reduce network traffic and endpoint resource usage, you may disable the service request channel with this QoS.

**[default] DDS\_DISCOVERYCONFIG\_SERVICE\_REQUEST\_CHANNEL** (p. 394)

### 9.47.2.21 participant\_message\_reader\_reliability\_kind

```
DDS_ReliabilityQosPolicyKind DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_↔
_kind
```

Reliability policy for a built-in participant message reader.

For details, refer to the **DDS\_ReliabilityQosPolicyKind** (p. 434).

**[default] DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435)

### 9.47.2.22 participant\_message\_reader

```
struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::participant_message_reader
```

RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS\_DiscoveryConfigQosPolicy::participant\_message\_reader\_reliability\_kind** (p. 721) is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435).

For details, refer to the **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

#### [default]

```
min_heartbeat_response_delay 0.0 seconds;
max_heartbeat_response_delay 0.0 seconds;
heartbeat_suppression_duration 0.0625 seconds;
nack_period 5.0 seconds;
receive_window_size 256;
round_trip_time 0.0 seconds;
app_ack_period 5.0 seconds;
samples_per_app_ack 1;
```

### 9.47.2.23 participant\_message\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::participant_message_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS\_RELIABLE** ↔ **\_RELIABILITY\_QOS** (p. 435) **DDS\_ReliabilityQosPolicyKind** (p. 434).

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

#### [default]

```
low_watermark 0;
high_watermark 1;
heartbeat_period 1.0 seconds;
fast_heartbeat_period 1.0 seconds;
late_joiner_heartbeat_period 1.0 seconds;
virtual_heartbeat_period DDS_DURATION_INFINITE (p. 326);
samples_per_virtual_heartbeat DDS_LENGTH_UNLIMITED (p. 438);
max_heartbeat_retries 10;
inactivate_nonprogressing_readers DDS_BOOLEAN_FALSE (p. 317);
heartbeats_per_max_samples 1;
min_nack_response_delay 0.0 seconds;
max_nack_response_delay 0.0 seconds;
nack_suppression_duration 0.0 seconds;
max_bytes_per_nack_response 9216 bytes;
disable_positive_acks_min_sample_keep_duration 1.0 milliseconds;
disable_positive_acks_max_sample_keep_duration 1.0 seconds;
disable_positive_acks_enable_adaptive_sample_keep_duration DDS_BOOLEAN_TRUE (p. 317);
disable_positive_acks_decrease_sample_keep_duration_factor 95;
disable_positive_acks_increase_sample_keep_duration_factor 150;
min_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
```

max\_send\_window\_size **DDS\_LENGTH\_UNLIMITED** (p. 438);  
 send\_window\_update\_period 1s;  
 send\_window\_increase\_factor 105;  
 send\_window\_decrease\_factor 50;  
 enable\_multicast\_periodic\_heartbeat **DDS\_BOOLEAN\_FALSE** (p. 317);  
 multicast\_resend\_threshold 2 readers;  
 disable\_repair\_piggyback\_heartbeat **DDS\_BOOLEAN\_FALSE** (p. 317);

#### 9.47.2.24 publication\_writer\_publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DiscoveryConfigQosPolicy::publication_writer_publish_mode
```

Publish mode policy for the built-in publication writer.

Determines whether the Discovery built-in publication **DDSDataWriter** (p. 1321) publishes data synchronously or asynchronously and how.

#### 9.47.2.25 subscription\_writer\_publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DiscoveryConfigQosPolicy::subscription_writer_publish_mode
```

Publish mode policy for the built-in subscription writer.

Determines whether the Discovery built-in subscription **DDSDataWriter** (p. 1321) publishes data synchronously or asynchronously and how.

#### 9.47.2.26 asynchronous\_publisher

```
struct DDS_AsynchronousPublisherQosPolicy DDS_DiscoveryConfigQosPolicy::asynchronous_publisher
```

Asynchronous publishing settings for the discovery **DDSPublisher** (p. 1550) and all entities that are created by it.

#### 9.47.2.27 default\_domain\_announcement\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::default_domain_announcement_period
```

The period to announce a participant to the default domain 0.

The period at which a participant will announce itself to the default domain 0 using the default UDPv4 multicast group address for discovery traffic on that domain.

For domain 0, the default discovery multicast address is 239.255.0.1:7400.

To disable announcement to the default domain, set this period to **DDS\_DURATION\_INFINITE** (p. 326).

When this period is set to a value other than **DDS\_DURATION\_INFINITE** (p. 326) and **DDS\_DiscoveryConfigQosPolicy::ignore\_default\_domain\_announcements** (p. 724) is set to **DDS\_BOOLEAN\_FALSE** (p. 317), you can get information about participants running in different domains by creating a participant in domain 0 and implementing the `on_data_available` callback in the **DDS\_ParticipantBuiltinTopicData** (p. 979) built-in DataReader's listener.

You can learn the domain ID associated with a participant by looking at the field **DDS\_ParticipantBuiltinTopicData::domain\_id** (p. 981).

**[default]** 30 seconds

**[range]** [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

See also

**DDS\_ParticipantBuiltinTopicData::domain\_id** (p. 981)

**DDS\_DiscoveryConfigQosPolicy::ignore\_default\_domain\_announcements** (p. 724)

### 9.47.2.28 ignore\_default\_domain\_announcements

```
DDS_Boolean DDS_DiscoveryConfigQosPolicy::ignore_default_domain_announcements
```

Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.

This setting only applies to participants running on the default domain 0 and using the default port mapping.

When this setting is set to **DDS\_BOOLEAN\_TRUE** (p. 317), a participant running on the default domain 0 will ignore announcements from participants running on different domain IDs.

When this setting is set to **DDS\_BOOLEAN\_FALSE** (p. 317), a participant running on the default domain 0 will provide announcements from participants running on different domain IDs to the application via the **DDS\_ParticipantBuiltinTopicData** (p. 979) built-in DataReader.

**[default]** **DDS\_BOOLEAN\_TRUE** (p. 317)

See also

**DDS\_ParticipantBuiltinTopicData::domain\_id** (p. 981)

**DDS\_DiscoveryConfigQosPolicy::default\_domain\_announcement\_period** (p. 723)

### 9.47.2.29 service\_request\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::service_request_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS\_ServiceRequest** (p. 1097) writer.

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

**[default]**

low\_watermark 0;

high\_watermark 1;

heartbeat\_period 3.0 seconds;

fast\_heartbeat\_period 3.0 seconds;

late\_joiner\_heartbeat\_period 3.0 seconds;

virtual\_heartbeat\_period **DDS\_DURATION\_INFINITE** (p. 326);

samples\_per\_virtual\_heartbeat **DDS\_LENGTH\_UNLIMITED** (p. 438);

max\_heartbeat\_retries 10;

inactivate\_nonprogressing\_readers **DDS\_BOOLEAN\_FALSE** (p. 317);  
 heartbeats\_per\_max\_samples 8;  
 min\_nack\_response\_delay 0.0 seconds;  
 max\_nack\_response\_delay 0.0 seconds;  
 nack\_suppression\_duration 0.0 seconds;  
 max\_bytes\_per\_nack\_response 131072 bytes;  
 disable\_positive\_acks\_min\_sample\_keep\_duration 1.0 milliseconds;  
 disable\_positive\_acks\_max\_sample\_keep\_duration 1.0 seconds;  
 disable\_positive\_acks\_enable\_adaptive\_sample\_keep\_duration **DDS\_BOOLEAN\_TRUE** (p. 317);  
 disable\_positive\_acks\_decrease\_sample\_keep\_duration\_factor 95;  
 disable\_positive\_acks\_increase\_sample\_keep\_duration\_factor 150;  
 min\_send\_window\_size **DDS\_LENGTH\_UNLIMITED** (p. 438);  
 max\_send\_window\_size **DDS\_LENGTH\_UNLIMITED** (p. 438);  
 send\_window\_update\_period 3s;  
 send\_window\_increase\_factor 105;  
 send\_window\_decrease\_factor 50;  
 enable\_multicast\_periodic\_heartbeat **DDS\_BOOLEAN\_FALSE** (p. 317);  
 multicast\_resend\_threshold 2 readers;  
 disable\_repair\_piggyback\_heartbeat **DDS\_BOOLEAN\_FALSE** (p. 317);

#### 9.47.2.30 service\_request\_writer\_data\_lifecycle

```
struct DDS_WriterDataLifecycleQosPolicy DDS_DiscoveryConfigQosPolicy::service_request_writer_↔
data_lifecycle
```

Writer data lifecycle settings for a built-in **DDS\_ServiceRequest** (p. 1097) writer.

For details, refer to the **DDS\_WriterDataLifecycleQosPolicy** (p. 1256).

#### 9.47.2.31 service\_request\_writer\_publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DiscoveryConfigQosPolicy::service_request_writer_publish_mode
```

Publish mode policy for the built-in service request writer.

Determines whether the Discovery built-in service request **DDSDataWriter** (p. 1321) publishes data synchronously or asynchronously and how.

#### 9.47.2.32 service\_request\_reader

```
struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::service_request_reader
```

RTPS reliable reader protocol-related configuration settings for a built-in **DDS\_ServiceRequest** (p. 1097) reader.

For details, refer to the **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

##### [default]

min\_heartbeat\_response\_delay 0.0 seconds;  
 max\_heartbeat\_response\_delay 0.0 seconds;  
 heartbeat\_suppression\_duration 0.0625 seconds;  
 nack\_period 5.0 seconds;  
 receive\_window\_size 256;  
 round\_trip\_time 0.0 seconds;  
 app\_ack\_period 5.0 seconds;  
 samples\_per\_app\_ack 1;

### 9.47.2.33 locator\_reachability\_assert\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::locator_reachability_assert_period
```

Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.

This setting configures the period at which this **DDSDomainParticipant** (p. 1351) will ping all the locators that it has discovered from other DomainParticipants. This period should be strictly less than **DDS\_DiscoveryConfigQosPolicy::locator\_reachability\_lease\_duration** (p. 726).

If **DDS\_DiscoveryConfigQosPolicy::locator\_reachability\_lease\_duration** (p. 726) is **DDS\_DURATION\_INFINITE** (p. 326) this parameter is ignored. The DomainParticipant will not assert remote locators.

**[default]** 20 seconds

**[range]** [1 nanosec,1 year]

See also

**DDS\_DiscoveryConfigQosPolicy::locator\_reachability\_lease\_duration** (p. 726)

### 9.47.2.34 locator\_reachability\_lease\_duration

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::locator_reachability_lease_duration
```

The time period after which other DomainParticipants can consider one of their locators as "unreachable" if they do not receive a REACHABILITY PING from this DomainParticipant.

For the purpose of this explanation, we will use 'local' to refer to the DomainParticipant in which we configure `locator_reachability_lease_duration` and 'remote' to refer to the other DomainParticipants communicating with the local DomainParticipant.

This setting configures a timeout announced to the remote DomainParticipants. This timeout is used by the remote DomainParticipants as the maximum period by which a remote locator must be asserted by the local DomainParticipant (through a REACHABILITY PING message) before considering this locator as "unreachable" from the local DomainParticipant.

When a remote DomainParticipant detects that one of its locators is not reachable from the local DomainParticipant, it will notify the local DomainParticipant of this event. From that moment on, and until notified otherwise, the local DomainParticipant will not send RTPS messages to remote DomainParticipants using this locator.

If this value is set to **DDS\_DURATION\_INFINITE** (p. 326), the local DomainParticipant will send RTPS messages to a remote DomainParticipant on the locators announced by the remote DomainParticipant, regardless of whether or not the remote DomainParticipant can be reached using these locators.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326)

**[range]** [1 nanosec,1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.47.2.35 locator\_reachability\_change\_detection\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::locator_reachability_change_detection_period
```

Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.

This setting determines the maximum period at which this DomainParticipant will check to see if its locators are reachable from other DomainParticipants according to the other DomainParticipants' **DDS\_DiscoveryConfigQosPolicy**↔**::locator\_reachability\_lease\_duration** (p. 726) value.

If **DDS\_DiscoveryConfigQosPolicy::locator\_reachability\_lease\_duration** (p. 726) is **DDS\_DURATION\_INFINITE** (p. 326) this parameter is ignored. The DomainParticipant will not schedule an event to see if its locators are reachable from other DomainParticipants.

**[default]** 60 seconds

**[range]** [1 nanosec,1 year]

See also

**DDS\_DiscoveryConfigQosPolicy::locator\_reachability\_lease\_duration** (p. 726)

### 9.47.2.36 secure\_volatile\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::secure_volatile_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

**[default]**

```
low_watermark 0;
high_watermark 1;
heartbeat_period 1.0 second;
fast_heartbeat_period 250.0 milliseconds;
late_joiner_heartbeat_period 1.0 second;
virtual_heartbeat_period DDS_DURATION_INFINITE (p. 326);
samples_per_virtual_heartbeat DDS_LENGTH_UNLIMITED (p. 438);
max_heartbeat_retries DDS_LENGTH_UNLIMITED (p. 438);
inactivate_nonprogressing_readers DDS_BOOLEAN_FALSE (p. 317);
heartbeats_per_max_samples 1;
min_nack_response_delay 0.0 seconds;
max_nack_response_delay 0.0 seconds;
nack_suppression_duration 0.0 seconds;
max_bytes_per_nack_response 9216 bytes;
disable_positive_acks_min_sample_keep_duration 1.0 millisecond;
disable_positive_acks_max_sample_keep_duration 1.0 second;
disable_positive_acks_enable_adaptive_sample_keep_duration DDS_BOOLEAN_TRUE (p. 317);
```

```

disable_positive_acks_decrease_sample_keep_duration_factor 95;
disable_positive_acks_increase_sample_keep_duration_factor 150;
min_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
max_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
send_window_update_period 1.0 second;
send_window_increase_factor 105;
send_window_decrease_factor 50;
enable_multicast_periodic_heartbeat DDS_BOOLEAN_FALSE (p. 317);
multicast_resend_threshold 2 readers;
disable_repair_piggyback_heartbeat DDS_BOOLEAN_FALSE (p. 317);

```

### 9.47.2.37 secure\_volatile\_writer\_publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DiscoveryConfigQosPolicy::secure_volatile_writer_publish_mode
```

Publish mode policy for the built-in secure volatile writer.

Determines whether the built-in secure volatile **DDSDataWriter** (p.1321) publishes data synchronously or asynchronously and how.

### 9.47.2.38 secure\_volatile\_reader

```
struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::secure_volatile_reader
```

RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.

For details, refer to the **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

#### [default]

```

min_heartbeat_response_delay 0.0 seconds;
max_heartbeat_response_delay 0.0 seconds;
heartbeat_suppression_duration 0.0625 seconds;
nack_period 5.0 seconds;
receive_window_size 256;
round_trip_time 0.0 seconds;
app_ack_period 5.0 seconds;
samples_per_app_ack 1;

```

### 9.47.2.39 endpoint\_type\_object\_lb\_serialization\_threshold

```
DDS_Long DDS_DiscoveryConfigQosPolicy::endpoint_type_object_lb_serialization_threshold
```

Option to reduce the size required to propagate a TypeObject in Simple Endpoint Discovery.

Minimum size (in bytes) of the serialized TypeObject that will trigger the serialization of a TypeObjectLb instead of the regular TypeObject.

For example, setting this property to 1000 will trigger the serialization of the TypeObjectLb for TypeObjects whose serialized size is greater than 1000 Bytes.

The sentinel value -1 disables TypeObject compression.

**[default]** 0. The default value 0 enables TypeObject compression by always sending TypeObjectLb.

**[range]** [-1, 2147483647]

### 9.47.2.40 dns\_tracker\_polling\_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::dns_tracker_polling_period
```

Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.

RTI Connexx allows the use of hostnames instead of IP addresses when configuring initial peers for specific transports (e.g.: UDPv4 and UDPv6). The DNS tracker keeps the IP addresses of these hostnames updated. The DNS tracker builds a list of hostnames from the initial peers of a DomainParticipant, queries the DNS for those hostnames, and updates the resolved IP addresses when the IP addresses change. The frequency of these queries is defined by the DNS tracker polling period. When the period is set to **DDS\_DURATION\_INFINITE** (p. 326), the tracker is disabled.

RTI Connexx keeps information regarding the hostnames of peers if they are part of the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732). The information regarding peers added through the **DDSDomainParticipant::add\_peer** (p. 1409) operation is kept only if the DNS tracker has been enabled before adding a peer.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326)

**[range]** [1 second,1 year], **DDS\_DURATION\_INFINITE** (p. 326)

### 9.47.2.41 participant\_configuration\_writer\_publish\_mode

```
struct DDS_PublishModeQosPolicy DDS_DiscoveryConfigQosPolicy::participant_configuration_writer_↔  
publish_mode
```

Publish mode policy for the built-in participant configuration writer.

Determines whether the Discovery built-in participant configuration **DDSDataWriter** (p. 1321) publishes data synchronously or asynchronously and how.

### 9.47.2.42 participant\_configuration\_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DiscoveryConfigQosPolicy::participant_configuration_↔  
_writer
```

RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.

For details, refer to the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061)

**[default]**

```
low_watermark 0;  
high_watermark 1;  
heartbeat_period 3.0 seconds;  
fast_heartbeat_period 3.0 seconds;  
late_joiner_heartbeat_period 3.0 seconds;  
virtual_heartbeat_period DDS_DURATION_INFINITE (p. 326);  
samples_per_virtual_heartbeat DDS_LENGTH_UNLIMITED (p. 438);  
max_heartbeat_retries 10;
```

```

inactivate_nonprogressing_readers DDS_BOOLEAN_FALSE (p. 317);
heartbeats_per_max_samples 8;
min_nack_response_delay 0.0 seconds;
max_nack_response_delay 0.0 seconds;
nack_suppression_duration 0.0 seconds;
max_bytes_per_nack_response 131072 bytes;
disable_positive_acks_min_sample_keep_duration 1.0 milliseconds;
disable_positive_acks_max_sample_keep_duration 1.0 seconds;
disable_positive_acks_enable_adaptive_sample_keep_duration DDS_BOOLEAN_TRUE (p. 317);
disable_positive_acks_decrease_sample_keep_duration_factor 95;
disable_positive_acks_increase_sample_keep_duration_factor 150;
min_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
max_send_window_size DDS_LENGTH_UNLIMITED (p. 438);
send_window_update_period 3s;
send_window_increase_factor 105;
send_window_decrease_factor 50;
enable_multicast_periodic_heartbeat DDS_BOOLEAN_FALSE (p. 317);
multicast_resend_threshold 2 readers;
disable_repair_piggyback_heartbeat DDS_BOOLEAN_FALSE (p. 317);

```

#### 9.47.2.43 participant\_configuration\_writer\_data\_lifecycle

```

struct DDS_WriterDataLifecycleQosPolicy DDS_DiscoveryConfigQosPolicy::participant_configuration↔
_writer_data_lifecycle

```

Writer data lifecycle settings for a built-in participant configuration writer.

For details, refer to the **DDS\_WriterDataLifecycleQosPolicy** (p. 1256). **DDS\_WriterDataLifecycleQosPolicy↔::autodispose\_unregistered\_instances** (p. 1257) will always be forced to **DDS\_BOOLEAN\_TRUE** (p. 317).

#### 9.47.2.44 participant\_configuration\_reader

```

struct DDS_RtpsReliableReaderProtocol_t DDS_DiscoveryConfigQosPolicy::participant_configuration↔
_reader

```

RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.

For details, refer to the **DDS\_RtpsReliableReaderProtocol\_t** (p. 1057)

##### [default]

```

min_heartbeat_response_delay 0.0 seconds;
max_heartbeat_response_delay 0.0 seconds;
heartbeat_suppression_duration 0.0625 seconds;
nack_period 5.0 seconds;
receive_window_size 256;
round_trip_time 0.0 seconds;
app_ack_period 5.0 seconds;
samples_per_app_ack 1;

```

### 9.47.2.45 participant\_configuration\_reader\_resource\_limits

```
struct DDS_BuiltinTopicReaderResourceLimits_t DDS_DiscoveryConfigQosPolicy::participant_configuration←
_reader_resource_limits
```

Resource limits for the built-in topic participant configuration reader.

For details, see `DDS_BuiltinTopicReaderResourceLimits_t` (p. 605).

## 9.48 DDS\_DiscoveryQosPolicy Struct Reference

<<*extension*>> (p. 237) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.

### Public Attributes

- struct `DDS_StringSeq enabled_transports`  
*The transports available for use by the Discovery mechanism.*
- struct `DDS_StringSeq initial_peers`  
*Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.*
- struct `DDS_StringSeq multicast_receive_addresses`  
*Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain←→ Participant.*
- `DDS_Long metatraffic_transport_priority`  
*The transport priority to use for the Discovery meta-traffic.*
- `DDS_Boolean accept_unknown_peers`  
*Whether to accept a new participant that is not in the initial peers list.*
- `DDS_Boolean enable_endpoint_discovery`  
*Whether to automatically enable endpoint discovery for all the remote participants.*

### 9.48.1 Detailed Description

<<*extension*>> (p. 237) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.

Entity:

`DDSDomainParticipant` (p. 1351)

Properties:

`RxO` (p. 360) = N/A

`Changeable` (p. 360) = `NO` (p. 360)

## 9.48.2 Usage

This QoS policy identifies where on the network this application can *potentially* discover other applications with which to communicate.

The middleware will periodically send network packets to these locations, announcing itself to any remote applications that may be present, and will listen for announcements from those applications.

This QoS policy is an extension to the DDS standard.

See also

**NDDS\_DISCOVERY\_PEERS** (p. 464)

**DDS\_DiscoveryConfigQosPolicy** (p. 712)

## 9.48.3 Member Data Documentation

### 9.48.3.1 enabled\_transports

```
struct DDS_StringSeq DDS_DiscoveryQosPolicy::enabled_transports
```

The transports available for use by the Discovery mechanism.

Only these transports can be used by the discovery mechanism to send meta-traffic via the builtin endpoints (built-in **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321)).

Also determines the unicast addresses on which the Discovery mechanism will listen for meta-traffic. These along with the `domain_id` and `participant_id` determine the unicast locators on which the Discovery mechanism can receive meta-data.

The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 552). In particular, be careful to avoid a situation in which RTI Connex allocates a string on your behalf and you then reuse that string in such a way that RTI Connex believes it to have more memory allocated to it than it actually does.

Alias names for the builtin transports are defined in **TRANSPORT\_BUILTIN** (p. 443). These alias names are case sensitive and should be written in lowercase.

**[default]** Empty sequence. All the transports available to the DomainParticipant are available for use by the Discovery mechanism.

**[range]** Sequence of non-null, non-empty strings.

### 9.48.3.2 initial\_peers

```
struct DDS_StringSeq DDS_DiscoveryQosPolicy::initial_peers
```

Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.

As part of the participant discovery phase, the **DDSDomainParticipant** (p. 1351) will announce itself to the domain by sending participant DATA messages. The `initial_peers` specifies the initial list of peers that will be contacted. A remote **DDSDomainParticipant** (p. 1351) is discovered by receiving participant announcements from a remote peer. When the new remote **DDSDomainParticipant** (p. 1351) has been added to the participant's database, the endpoint discovery phase commences and information about the DataWriters and DataReaders is exchanged.

Each element of this list must be a peer descriptor in the proper format (see **Peer Descriptor Format** (p. 465)).

**[default]** builtin.udpv4://239.255.0.1, builtin.udpv4://127.0.0.1, builtin.shmem:// (See also **NDDS\_DISCOVERY\_PEERS** (p. 464))

**[range]** Sequence of arbitrary length.

See also

**Peer Descriptor Format** (p. 465)

**DDSDomainParticipant::add\_peer()** (p. 1409)

### 9.48.3.3 multicast\_receive\_addresses

```
struct DDS_StringSeq DDS_DiscoveryQosPolicy::multicast_receive_addresses
```

Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↔ Participant.

The multicast group addresses on which the Discovery mechanism will listen for meta-traffic.

Each element of this list must be a valid multicast address (IPv4 or IPv6) in the proper format (see **Address Format** (p. 466)).

The `domain_id` determines the multicast port on which the Discovery mechanism can receive meta-data.

If **NDDS\_DISCOVERY\_PEERS** does *not* contain a multicast address, then the string sequence **DDS\_DiscoveryQos↔ Policy::multicast\_receive\_addresses** (p. 733) is cleared and the RTI discovery process will not listen for discovery messages via multicast.

If **NDDS\_DISCOVERY\_PEERS** contains one or more multicast addresses, the addresses will be stored in **DDS\_↔ DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733), starting at element 0. They will be stored in the order they appear **NDDS\_DISCOVERY\_PEERS**.

Note: Currently, RTI Connext will only listen for discovery traffic on the first multicast address (element 0) in **DDS\_↔ DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 733).

**[default]** builtin.udpv4://239.255.0.1 (See also **NDDS\_DISCOVERY\_PEERS** (p. 464))

**[range]** Sequence of length [0,1], whose elements are multicast addresses. Currently only the first multicast address (if any) is used. The rest are ignored.

See also

**Address Format** (p. 466)

#### 9.48.3.4 metatraffic\_transport\_priority

```
DDS_Long DDS_DiscoveryQosPolicy::metatraffic_transport_priority
```

The transport priority to use for the Discovery meta-traffic.

The discovery metatraffic will be sent by the built-in **DDSDataWriter** (p. 1321) using this transport priority.

**[default]** 0

**[range]** [0, MAX\_UINT]

#### 9.48.3.5 accept\_unknown\_peers

```
DDS_Boolean DDS_DiscoveryQosPolicy::accept_unknown_peers
```

Whether to accept a new participant that is not in the initial peers list.

If **DDS\_BOOLEAN\_FALSE** (p. 317), the participant will only communicate with those in the initial peers list and those added via **DDSDomainParticipant::add\_peer()** (p. 1409).

If **DDS\_BOOLEAN\_TRUE** (p. 317), the participant will also communicate with all discovered remote participants.

Note: If `accept_unknown_peers` is **DDS\_BOOLEAN\_FALSE** (p. 317) and shared memory is disabled, applications on the same node will *not* communicate if only 'localhost' is specified in the peers list. If shared memory is disabled or 'shmem://' is not specified in the peers list, to communicate with other applications on the same node through the loopback interface, you must put the actual node address or hostname in **NDDS\_DISCOVERY\_PEERS** (p. 464).

**[default]** **DDS\_BOOLEAN\_TRUE** (p. 317)

#### 9.48.3.6 enable\_endpoint\_discovery

```
DDS_Boolean DDS_DiscoveryQosPolicy::enable_endpoint_discovery
```

Whether to automatically enable endpoint discovery for all the remote participants.

If **DDS\_BOOLEAN\_TRUE** (p. 317), endpoint discovery will automatically occur for every discovered remote participant.

If **DDS\_BOOLEAN\_FALSE** (p. 317), endpoint discovery will be initially disabled and manual activation is required for each discovered participant by calling **DDSDomainParticipant::resume\_endpoint\_discovery** (p. 1400).

**[default]** **DDS\_BOOLEAN\_TRUE** (p. 317)

## 9.49 DDS\_DomainParticipantConfigParams\_t Struct Reference

<<**extension**>> (p. 237) Input parameters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration.

## Public Attributes

- int **domain\_id**  
Domain ID from which the **DDSDomainParticipant** (p. 1351) is created.
- char \* **participant\_name**  
Name assigned to the **DDSDomainParticipant** (p. 1351).
- char \* **participant\_qos\_library\_name**  
QoS library name containing the QoS profile from which the **DDSDomainParticipant** (p. 1351) is created.
- char \* **participant\_qos\_profile\_name**  
QoS profile name from which the **DDSDomainParticipant** (p. 1351) is created.
- char \* **domain\_entity\_qos\_library\_name**  
QoS library name containing the QoS profile from which the all the **DDSDomainEntity** (p. 1350) defined under the participant configuration are created.
- char \* **domain\_entity\_qos\_profile\_name**  
QoS profile name from which the all the **DDSDomainEntity** (p. 1350) defined under the participant configuration are created.

### 9.49.1 Detailed Description

<<**extension**>> (p. 237) Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration.

### 9.49.2 Member Data Documentation

#### 9.49.2.1 domain\_id

```
int DDS_DomainParticipantConfigParams_t::domain_id
```

Domain ID from which the **DDSDomainParticipant** (p. 1351) is created.

Allows overriding the domain ID defined in the configuration for the participant to be created. If the special value **DDS\_↔\_DOMAIN\_ID\_USE\_XML\_CONFIG** (p. 518) is specified then the ID in the configuration will be used.

#### 9.49.2.2 participant\_name

```
char* DDS_DomainParticipantConfigParams_t::participant_name
```

Name assigned to the **DDSDomainParticipant** (p. 1351).

This is the name the name that will be set in the **DDS\_DomainParticipantQos::participant\_name** (p. 745). It allows overriding the participant name that is generated automatically.

When this member is lexicographically equal to the special value **DDS\_ENTITY\_NAME\_USE\_XML\_CONFIG** (p. 518) then an automatically generated name will be assigned.

### 9.49.2.3 participant\_qos\_library\_name

```
char* DDS_DomainParticipantConfigParams_t::participant_qos_library_name
```

QoS library name containing the QoS profile from which the **DDSDomainParticipant** (p. 1351) is created.

Allows overriding the QoS defined in the configuration for the participant to be created. This value only affects to the **DDSDomainParticipant** (p. 1351).

When this member is lexicographically equal to the special value **DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG** (p. 518) then the QoS library from the configuration will be applied. Also, the same action will apply for the QoS profile and the value in **DDS\_DomainParticipantConfigParams\_t::participant\_qos\_profile\_name** (p. 736) will be ignored.

### 9.49.2.4 participant\_qos\_profile\_name

```
char* DDS_DomainParticipantConfigParams_t::participant_qos_profile_name
```

QoS profile name from which the **DDSDomainParticipant** (p. 1351) is created.

Allows overriding the QoS defined in the configuration for the participant to be created. This value only affects to the **DDSDomainParticipant** (p. 1351).

When this member is lexicographically equal to the special value **DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG** (p. 518) then the QoS profile from the configuration will be applied. Also, the same action will apply for the QoS library and the value in **DDS\_DomainParticipantConfigParams\_t::participant\_qos\_library\_name** (p. 735) will be ignored.

### 9.49.2.5 domain\_entity\_qos\_library\_name

```
char* DDS_DomainParticipantConfigParams_t::domain_entity_qos_library_name
```

QoS library name containing the QoS profile from which the all the **DDSDomainEntity** (p. 1350) defined under the participant configuration are created.

Allows overriding the QoS defined in the configuration for the domain entities to be created. This value only affects to the **DDSDomainEntity** (p. 1350).

When this member is lexicographically equal to the special value **DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG** (p. 518) then the QoS library from the configuration will be applied. Also, the same action will apply for the QoS profile and the value in **DDS\_DomainParticipantConfigParams\_t::domain\_entity\_qos\_profile\_name** (p. 736) will be ignored.

### 9.49.2.6 domain\_entity\_qos\_profile\_name

```
char* DDS_DomainParticipantConfigParams_t::domain_entity_qos_profile_name
```

QoS profile name from which the all the **DDSDomainEntity** (p. 1350) defined under the participant configuration are created.

Allows overriding the QoS defined in the configuration for the domain entities to be created. This value only affects to the **DDSDomainEntity** (p. 1350).

When this member is lexicographically equal to the special value **DDS\_QOS\_ELEMENT\_NAME\_USE\_XML\_CONFIG** (p. 518) then the QoS profile from the configuration will be applied. Also, the same action will apply for the QoS library and the value in **DDS\_DomainParticipantConfigParams\_t::domain\_entity\_qos\_library\_name** (p. 736) will be ignored.

## 9.50 DDS\_DomainParticipantFactoryQos Struct Reference

QoS policies supported by a `DDSDomainParticipantFactory` (p. 1426).

### Public Member Functions

- bool **operator==** (const `DDS_DomainParticipantFactoryQos` &r) const  
*Compares two DomainParticipantFactoryQos objects for equality.*
- bool **operator!=** (const `DDS_DomainParticipantFactoryQos` &r) const  
*Compares two DomainParticipantFactoryQos objects for inequality.*
- `DDS_ReturnCode_t` **print** () const  
*Prints this `DDS_DomainParticipantFactoryQos` (p. 737) to stdout.*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size) const  
*Obtains a string representation of this `DDS_DomainParticipantQos` (p. 741).*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_DomainParticipantFactoryQos` &base) const  
*Obtains a string representation of this `DDS_DomainParticipantFactoryQos` (p. 737).*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_QosPrintFormat` &format) const  
*Obtains a string representation of this `DDS_DomainParticipantFactoryQos` (p. 737).*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_DomainParticipantFactoryQos` &base, const `DDS_QosPrintFormat` &format) const  
*Obtains a string representation of this `DDS_DomainParticipantFactoryQos` (p. 737).*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_QosPrintAll_t` &) const  
*Obtains a string representation of this `DDS_DomainParticipantFactoryQos` (p. 737).*
- `DDS_ReturnCode_t` **to\_string** (char \*string, `DDS_UnsignedLong` &string\_size, const `DDS_QosPrintAll_t` &, const `DDS_QosPrintFormat` &format) const  
*Obtains a string representation of this `DDS_DomainParticipantFactoryQos` (p. 737).*

### Public Attributes

- struct `DDS_EntityFactoryQosPolicy` **entity\_factory**  
*Entity factory policy, `ENTITY_FACTORY` (p. 402).*
- struct `DDS_SystemResourceLimitsQosPolicy` **resource\_limits**  
*<<extension>> (p. 237) System resource limits, `SYSTEM_RESOURCE_LIMITS` (p. 440).*
- struct `DDS_ProfileQosPolicy` **profile**  
*<<extension>> (p. 237) Qos profile policy, `PROFILE` (p. 418).*
- struct `DDS_LoggingQosPolicy` **logging**  
*<<extension>> (p. 237) Logging qos policy, `LOGGING` (p. 411).*
- struct `DDS_MonitoringQosPolicy` **monitoring**  
*<<extension>> (p. 237) Monitoring qos policy, `MONITORING` (p. 412).*

### 9.50.1 Detailed Description

QoS policies supported by a **DDSDomainParticipantFactory** (p. 1426).

Entity:

**DDSDomainParticipantFactory** (p. 1426)

See also

**QoS Policies** (p. 353) and allowed ranges within each Qos.

### 9.50.2 Member Function Documentation

#### 9.50.2.1 operator==( )

```
bool DDS_DomainParticipantFactoryQos::operator==(
    const DDS_DomainParticipantFactoryQos & r ) const [inline]
```

Compares two DomainParticipantFactoryQos objects for equality.

See also

**DDS\_DomainParticipantFactoryQos\_equals** (p. 42)

References **DDS\_DomainParticipantFactoryQos\_equals()**.

#### 9.50.2.2 operator!=( )

```
bool DDS_DomainParticipantFactoryQos::operator!=(
    const DDS_DomainParticipantFactoryQos & r ) const [inline]
```

Compares two DomainParticipantFactoryQos objects for inequality.

See also

**DDS\_DomainParticipantFactoryQos\_equals** (p. 42)

References **DDS\_DomainParticipantFactoryQos\_equals()**.

### 9.50.3 Member Data Documentation

#### 9.50.3.1 entity\_factory

```
struct DDS_EntityFactoryQosPolicy DDS_DomainParticipantFactoryQos::entity_factory
```

Entity factory policy, **ENTITY\_FACTORY** (p. 402).

#### 9.50.3.2 resource\_limits

```
struct DDS_SystemResourceLimitsQosPolicy DDS_DomainParticipantFactoryQos::resource_limits
```

<<*extension*>> (p. 237) System resource limits, **SYSTEM\_RESOURCE\_LIMITS** (p. 440).

Note: This QoS policy cannot be configured from XML configuration files.

#### 9.50.3.3 profile

```
struct DDS_ProfileQosPolicy DDS_DomainParticipantFactoryQos::profile
```

<<*extension*>> (p. 237) Qos profile policy, **PROFILE** (p. 418).

Note: This QoS policy cannot be configured from XML configuration files.

#### 9.50.3.4 logging

```
struct DDS_LoggingQosPolicy DDS_DomainParticipantFactoryQos::logging
```

<<*extension*>> (p. 237) Logging qos policy, **LOGGING** (p. 411).

#### 9.50.3.5 monitoring

```
struct DDS_MonitoringQosPolicy DDS_DomainParticipantFactoryQos::monitoring
```

<<*extension*>> (p. 237) Monitoring qos policy, **MONITORING** (p. 412).

This QoS policy is used to collect and emit telemetry data of a Connex application using RTI Monitoring Library 2.0.

## 9.51 DDS\_DomainParticipantProtocolStatus Struct Reference

<<*extension*>> (p. 237) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.

### Public Attributes

- **DDS\_LongLong corrupted\_rtps\_message\_count**  
*The number of corrupted RTPS messages detected by the domain participant.*
- **DDS\_LongLong corrupted\_rtps\_message\_count\_change**  
*The incremental change in the number of corrupted RTPS messages detected by the domain participant since the last time the status was read.*
- struct **DDS\_Time\_t last\_corrupted\_message\_timestamp**  
*The timestamp when the last corrupted RTPS message was detected by the domain participant.*

### 9.51.1 Detailed Description

<<*extension*>> (p. 237) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.

Entity:

**DDSDomainParticipant** (p. 1351) The corrupted messages are detected by validating the received CRC. The participant protocol status can be obtained by enabling **DDS\_WireProtocolQosPolicy::compute\_crc** (p. 1250) and **DDS\_WireProtocolQosPolicy::check\_crc** (p. 1250) at the publishing and subscribing application respectively.

### 9.51.2 Member Data Documentation

#### 9.51.2.1 corrupted\_rtps\_message\_count

**DDS\_LongLong** DDS\_DomainParticipantProtocolStatus::corrupted\_rtps\_message\_count

The number of corrupted RTPS messages detected by the domain participant.

Counts the corrupted RTPS messages received by the participant. It includes messages belonging to discovery and user traffic.

#### 9.51.2.2 corrupted\_rtps\_message\_count\_change

**DDS\_LongLong** DDS\_DomainParticipantProtocolStatus::corrupted\_rtps\_message\_count\_change

The incremental change in the number of corrupted RTPS messages detected by the domain participant since the last time the status was read.

### 9.51.2.3 last\_corrupted\_message\_timestamp

```
struct DDS_Time_t DDS_DomainParticipantProtocolStatus::last_corrupted_message_timestamp
```

The timestamp when the last corrupted RTPS message was detected by the domain participant.

## 9.52 DDS\_DomainParticipantQos Struct Reference

QoS policies supported by a **DDSDomainParticipant** (p. 1351) entity.

### Public Member Functions

- bool **operator==** (const **DDS\_DomainParticipantQos** &r) const  
*Compares two DomainParticipantQos objects for inequality.*
- bool **operator!=** (const **DDS\_DomainParticipantQos** &r) const  
*Compares two DomainParticipantQos objects for inequality.*
- **DDS\_ReturnCode\_t print** () const  
*Prints this **DDS\_DomainParticipantQos** (p. 741) to stdout.*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 741).*

  - <<*extension*>> (p. 237) *Type support data*, **TYPESUPPORT** (p. 453).

### 9.52.1 Detailed Description

QoS policies supported by a **DDSDomainParticipant** (p. 1351) entity.

Certain members must be set in a consistent manner:

Length of **DDS\_DomainParticipantQos::user\_data** (p. 743) .value <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .participant\_user\_data\_max\_length

For **DDS\_DomainParticipantQos::discovery\_config** (p. 745) .publication\_writer  
high\_watermark <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .local\_writer\_allocation .max\_count  
heartbeats\_per\_max\_samples <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .local\_writer\_allocation.↔  
max\_count

For **DDS\_DomainParticipantQos::discovery\_config** (p. 745) .subscription\_writer  
high\_watermark <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .local\_reader\_allocation.max\_count  
heartbeats\_per\_max\_samples <= **DDS\_DomainParticipantQos::resource\_limits** (p. 744) .local\_reader\_allocation.↔  
max\_count

If any of the above are not true, **DDSDomainParticipant::set\_qos** (p. 1408) and **DDSDomainParticipant::set\_qos\_with\_profile** (p. 1408) and **DDSDomainParticipantFactory::set\_default\_participant\_qos** (p. 1430) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337), and **DDSDomainParticipantFactory::create\_participant** (p. 1442) will fail.

Entity:

**DDSDomainParticipant** (p. 1351)

See also

**QoS Policies** (p. 353) and allowed ranges within each Qos.

**NDDS\_DISCOVERY\_PEERS** (p. 464)

## 9.52.2 Member Function Documentation

### 9.52.2.1 operator==( )

```
bool DDS_DomainParticipantQos::operator==(
    const DDS_DomainParticipantQos & r ) const [inline]
```

Compares two DomainParticipantQos objects for inequality.

See also

**DDS\_DomainParticipantQos\_equals** (p. 51)

References **DDS\_DomainParticipantQos\_equals()**.

### 9.52.2.2 operator!=( )

```
bool DDS_DomainParticipantQos::operator!=(
    const DDS_DomainParticipantQos & r ) const [inline]
```

Compares two DomainParticipantQos objects for inequality.

See also

**DDS\_DomainParticipantQos\_equals** (p. 51)

References **DDS\_DomainParticipantQos\_equals()**.

## 9.52.3 Member Data Documentation

### 9.52.3.1 user\_data

```
struct DDS_UserDataQosPolicy DDS_DomainParticipantQos::user_data
```

User data policy, **USER\_DATA** (p. 455).

### 9.52.3.2 entity\_factory

```
struct DDS_EntityFactoryQosPolicy DDS_DomainParticipantQos::entity_factory
```

Entity factory policy, **ENTITY\_FACTORY** (p. 402).

### 9.52.3.3 wire\_protocol

```
struct DDS_WireProtocolQosPolicy DDS_DomainParticipantQos::wire_protocol
```

<<*extension*>> (p. 237) Wire Protocol policy, **WIRE\_PROTOCOL** (p. 456).

The wire protocol (RTPS) attributes associated with the participant.

### 9.52.3.4 transport\_builtin

```
struct DDS_TransportBuiltinQosPolicy DDS_DomainParticipantQos::transport_builtin
```

<<*extension*>> (p. 237) Transport Builtin policy, **TRANSPORT\_BUILTIN** (p. 443).

### 9.52.3.5 default\_unicast

```
struct DDS_TransportUnicastQosPolicy DDS_DomainParticipantQos::default_unicast
```

<<*extension*>> (p. 237) Default Unicast Transport policy, **TRANSPORT\_UNICAST** (p. 451).

### 9.52.3.6 discovery

```
struct DDS_DiscoveryQosPolicy DDS_DomainParticipantQos::discovery
```

<<*extension*>> (p. 237) Discovery policy, **DISCOVERY** (p. 388).

### 9.52.3.7 resource\_limits

```
struct DDS_DomainParticipantResourceLimitsQosPolicy DDS_DomainParticipantQos::resource_limits
```

<<*extension*>> (p. 237) Domain participant resource limits policy, **DOMAIN\_PARTICIPANT\_RESOURCE\_LIMITS** (p. 396).

### 9.52.3.8 event

```
struct DDS_EventQosPolicy DDS_DomainParticipantQos::event
```

<<*extension*>> (p. 237) Event policy, **EVENT** (p. 404).

### 9.52.3.9 receiver\_pool

```
struct DDS_ReceiverPoolQosPolicy DDS_DomainParticipantQos::receiver_pool
```

<<*extension*>> (p. 237) Receiver pool policy, **RECEIVER\_POOL** (p. 432).

### 9.52.3.10 database

```
struct DDS_DatabaseQosPolicy DDS_DomainParticipantQos::database
```

<<*extension*>> (p. 237) Database policy, **DATABASE** (p. 365).

### 9.52.3.11 discovery\_config

```
struct DDS_DiscoveryConfigQosPolicy DDS_DomainParticipantQos::discovery_config
```

<<*extension*>> (p. 237) Discovery config policy, **DISCOVERY\_CONFIG** (p. 389).

### 9.52.3.12 property

```
struct DDS_PropertyQosPolicy DDS_DomainParticipantQos::property
```

<<*extension*>> (p. 237) Property policy, **PROPERTY** (p. 419). See also [Property Reference Guide](#).

### 9.52.3.13 participant\_name

```
struct DDS_EntityNameQosPolicy DDS_DomainParticipantQos::participant_name
```

<<*extension*>> (p. 237) The participant name. **ENTITY\_NAME** (p. 403)

### 9.52.3.14 multicast\_mapping

```
struct DDS_TransportMulticastMappingQosPolicy DDS_DomainParticipantQos::multicast_mapping
```

<<*extension*>> (p. 237) The multicast mapping policy. **TRANSPORT\_MULTICAST\_MAPPING** (p. 448)

### 9.52.3.15 service

```
struct DDS_ServiceQosPolicy DDS_DomainParticipantQos::service
```

<<*extension*>> (p. 237) The service qos policy. **SERVICE** (p. 438)

### 9.52.3.16 partition

```
struct DDS_PartitionQosPolicy DDS_DomainParticipantQos::partition
```

<<*extension*>> (p. 237) The partition qos policy. **PARTITION** (p. 416)

### 9.52.3.17 type\_support

```
struct DDS_TypeSupportQosPolicy DDS_DomainParticipantQos::type_support
```

<<*extension*>> (p. 237) Type support data, **TYPESUPPORT** (p. 453).

Optional value that is passed to a type plugin's on\_participant\_attached function.

## 9.53 DDS\_DomainParticipantResourceLimitsQosPolicy Struct Reference

Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

## Public Attributes

- struct **DDS\_AllocationSettings\_t local\_writer\_allocation**  
*Allocation settings applied to local DataWriters.*
- struct **DDS\_AllocationSettings\_t local\_reader\_allocation**  
*Allocation settings applied to local DataReaders.*

*Allocation settings applied to matching local reader and remote/local writer pairs.*
- struct **DDS\_AllocationSettings\_t ignored\_entity\_allocation**  
*Allocation settings applied to ignored entities.*
- struct **DDS\_AllocationSettings\_t content\_filtered\_topic\_allocation**  
*Allocation settings applied to content filtered topic.*
- struct **DDS\_AllocationSettings\_t content\_filter\_allocation**  
*Allocation settings applied to content filter.*
- struct **DDS\_AllocationSettings\_t read\_condition\_allocation**  
*Allocation settings applied to read condition pool.*
- struct **DDS\_AllocationSettings\_t query\_condition\_allocation**  
*Allocation settings applied to query condition pool.*
- struct **DDS\_AllocationSettings\_t outstanding\_asynchronous\_sample\_allocation**  
*Allocation settings applied to the maximum number of samples (from all **DDSDataWriter** (p. 1321)) waiting to be asynchronously written.*
- struct **DDS\_AllocationSettings\_t flow\_controller\_allocation**  
*Allocation settings applied to flow controllers.*
- **DDS\_Long local\_writer\_hash\_buckets**  
*Hash\_Buckets settings applied to local DataWriters.*
- **DDS\_Long local\_reader\_hash\_buckets**  
*Number of hash buckets for local DataReaders.*
- **DDS\_Long local\_publisher\_hash\_buckets**  
*Number of hash buckets for local Publisher.*
- **DDS\_Long local\_subscriber\_hash\_buckets**  
*Number of hash buckets for local Subscriber.*
- **DDS\_Long local\_topic\_hash\_buckets**  
*Number of hash buckets for local Topic.*

- **DDS\_Long remote\_writer\_hash\_buckets**  
*Number of hash buckets for remote DataWriters.*
- **DDS\_Long remote\_reader\_hash\_buckets**  
*Number of hash buckets for remote DataReaders.*
- **DDS\_Long remote\_participant\_hash\_buckets**  
*Number of hash buckets for remote DomainParticipants.*
- **DDS\_Long matching\_writer\_reader\_pair\_hash\_buckets**  
*Number of hash buckets for matching local writer and remote/local reader pairs.*
- **DDS\_Long matching\_reader\_writer\_pair\_hash\_buckets**  
*Number of hash buckets for matching local reader and remote/local writer pairs.*
- **DDS\_Long ignored\_entity\_hash\_buckets**  
*Number of hash buckets for ignored entities.*
- **DDS\_Long content\_filtered\_topic\_hash\_buckets**  
*Number of hash buckets for content filtered topics.*
- **DDS\_Long content\_filter\_hash\_buckets**  
*Number of hash buckets for content filters.*
- **DDS\_Long flow\_controller\_hash\_buckets**  
*Number of hash buckets for flow controllers.*
- **DDS\_Long max\_gather\_destinations**  
*Maximum number of destinations per RTI Connext send.*
- **DDS\_Long participant\_user\_data\_max\_length**  
*Maximum length of user data in [DDS\\_DomainParticipantQos](#) (p. 741) and [DDS\\_ParticipantBuiltinTopicData](#) (p. 979).*
- **DDS\_Long topic\_data\_max\_length**  
*Maximum length of topic data in [DDS\\_TopicQos](#) (p. 1135), [DDS\\_TopicBuiltinTopicData](#) (p. 1128), [DDS\\_PublicationBuiltinTopicData](#) (p. 1010) and [DDS\\_SubscriptionBuiltinTopicData](#) (p. 1108).*
- **DDS\_Long publisher\_group\_data\_max\_length**  
*Maximum length of group data in [DDS\\_PublisherQos](#) (p. 1022) and [DDS\\_PublicationBuiltinTopicData](#) (p. 1010).*
- **DDS\_Long subscriber\_group\_data\_max\_length**  
*Maximum length of group data in [DDS\\_SubscriberQos](#) (p. 1105) and [DDS\\_SubscriptionBuiltinTopicData](#) (p. 1108).*
- **DDS\_Long writer\_user\_data\_max\_length**  
*Maximum length of user data in [DDS\\_DataWriterQos](#) (p. 689) and [DDS\\_PublicationBuiltinTopicData](#) (p. 1010).*
- **DDS\_Long reader\_user\_data\_max\_length**  
*Maximum length of user data in [DDS\\_DataReaderQos](#) (p. 644) and [DDS\\_SubscriptionBuiltinTopicData](#) (p. 1108).*
- **DDS\_Long max\_partitions**  
*Maximum number of partition name strings allowable in a [DDS\\_PartitionQosPolicy](#) (p. 989).*
- **DDS\_Long max\_partition\_cumulative\_characters**  
*Maximum number of combined characters allowable in all partition names in a [DDS\\_PartitionQosPolicy](#) (p. 989).*
- **DDS\_Long type\_code\_max\_serialized\_length**  
*Maximum size of serialized string for type code.*
- **DDS\_Long type\_object\_max\_serialized\_length**  
*The maximum length, in bytes, that the buffer to serialize a `TypeObject` can consume.*
- **DDS\_Long serialized\_type\_object\_dynamic\_allocation\_threshold**  
*A threshold, in bytes, for dynamic memory allocation for the serialized `TypeObject`.*
- **DDS\_Long type\_object\_max\_deserialized\_length**  
*The maximum number of bytes that a deserialized `TypeObject` can consume.*
- **DDS\_Long deserialized\_type\_object\_dynamic\_allocation\_threshold**  
*A threshold, in bytes, for dynamic memory allocation for the deserialized `TypeObject`.*

- **DDS\_Long contentfilter\_property\_max\_length**  
*This field is the maximum length of all data related to a Content-filtered topic.*
- **DDS\_Long channel\_seq\_max\_length**  
*Maximum number of channels that can be specified in **DDS\_MultiChannelQosPolicy** (p. 964) for MultiChannel Data↔ Writers.*
- **DDS\_Long channel\_filter\_expression\_max\_length**  
*Maximum length of a channel **DDS\_ChannelSettings\_t::filter\_expression** (p. 611) in a MultiChannel DataWriter.*
- **DDS\_Long participant\_property\_list\_max\_length**  
*Maximum number of properties associated with the **DDSDomainParticipant** (p. 1351).*
- **DDS\_Long participant\_property\_string\_max\_length**  
*Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1351).*
- **DDS\_Long writer\_property\_list\_max\_length**  
*Maximum number of properties associated with a **DDSDataWriter** (p. 1321).*
- **DDS\_Long writer\_property\_string\_max\_length**  
*Maximum string length of the properties associated with a **DDSDataWriter** (p. 1321).*
- **DDS\_Long reader\_property\_list\_max\_length**  
*Maximum number of properties associated with a **DDSDataReader** (p. 1288).*
- **DDS\_Long reader\_property\_string\_max\_length**  
*Maximum string length of the properties associated with a **DDSDataReader** (p. 1288).*
- **DDS\_Long max\_endpoint\_groups**  
*Maximum number of **DDS\_EndpointGroup\_t** (p. 900) allowable in a **DDS\_AvailabilityQosPolicy** (p. 596).*
- **DDS\_Long max\_endpoint\_group\_cumulative\_characters**  
*Maximum number of combined role\_name characters allowed in all **DDS\_EndpointGroup\_t** (p. 900) in a **DDS\_↔ AvailabilityQosPolicy** (p. 596).*
- **DDS\_Long transport\_info\_list\_max\_length**  
*Maximum number of installed transports to send and receive information about in **DDS\_ParticipantBuiltinTopicData↔ ::transport\_info** (p. 981).*
- **DDS\_DomainParticipantResourceLimitsIgnoredEntityReplacementKind ignored\_entity\_replacement\_↔ kind**  
*Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS\_Domain↔ ParticipantResourceLimitsQosPolicy::ignored\_entity\_allocation** (p. 753) are reached.*
- struct **DDS\_AllocationSettings\_t remote\_topic\_query\_allocation**  
*Allocation settings applied to remote TopicQueries.*
- **DDS\_Long remote\_topic\_query\_hash\_buckets**  
*Number of hash buckets for remote TopicQueries.*
- **DDS\_Long writer\_data\_tag\_list\_max\_length**  
*Maximum number of data tags associated with a **DDSDataWriter** (p. 1321).*
- **DDS\_Long writer\_data\_tag\_string\_max\_length**  
*Maximum string length of the data tags associated with a **DDSDataWriter** (p. 1321).*
- **DDS\_Long reader\_data\_tag\_list\_max\_length**  
*Maximum number of data tags associated with a **DDSDataReader** (p. 1288).*
- **DDS\_Long reader\_data\_tag\_string\_max\_length**  
*Maximum string length of the data tags associated with a **DDSDataReader** (p. 1288).*
- **DDS\_UnsignedLong shmем\_ref\_transfer\_mode\_max\_segments**  
*Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1351).*

### 9.53.1 Detailed Description

Various settings that configure how a **DDSDomainParticipant** (p. 1351) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

This QoS policy sets maximum size limits on variable-length parameters used by the participant and its contained Entities. It also controls the initial and maximum sizes of data structures used by the participant to store information about locally-created and remotely-discovered entities (such as DataWriters/DataReaders), as well as parameters used by the internal database to size the hash tables it uses.

By default, a **DDSDomainParticipant** (p. 1351) is allowed to dynamically allocate memory as needed as users create local Entities such as **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) or as the participant discovers new applications to store their information. By setting fixed values for the maximum parameters in this QoS policy, you can bound the memory that can be allocated by a DomainParticipant. In addition, by setting the initial values to the maximum values, you can reduce the amount of memory allocated by DomainParticipants after the initialization period. Notice that memory can still be allocated dynamically after the initialization period. For example, when a new local **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) is created, the initial memory required for its queue is allocated dynamically.

The maximum sizes of different variable-length parameters such as the number of partitions that can be stored in the **DDS\_PartitionQoSPolicy** (p. 989), the maximum length of data store in the **DDS\_UserDataQoSPolicy** (p. 1237) and **DDS\_GroupDataQoSPolicy** (p. 916), and many others can be changed from their defaults using this QoS policy. However, it is important that all DomainParticipants that need to communicate with each other use the *same set* of maximum values. Otherwise, when these parameters are propagated from one **DDSDomainParticipant** (p. 1351) to another, a **DDSDomainParticipant** (p. 1351) with a smaller maximum length may reject the parameter, resulting in an error.

An important parameter in this QoS policy that is often changed by users is **DDS\_DomainParticipantResourceLimitsQoSPolicy::type\_object\_max\_serialized\_length** (p. 760).

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.53.2 Member Data Documentation

#### 9.53.2.1 local\_writer\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQoSPolicy::local_writer_allocation
```

Allocation settings applied to local DataWriters.

**[default]** initial\_count = 16; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.2 local\_reader\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::local_reader_↔  
allocation
```

Allocation settings applied to local DataReaders.

**[default]** initial\_count = 16; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.3 local\_publisher\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::local_publisher_↔  
allocation
```

Allocation settings applied to local Publisher.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.4 local\_subscriber\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::local_subscriber_↔  
allocation
```

Allocation settings applied to local Subscriber.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.5 local\_topic\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::local_topic_↔  
allocation
```

Allocation settings applied to local Topic.

**[default]** initial\_count = 16; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.6 remote\_writer\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::remote_writer_↔
allocation
```

Allocation settings applied to remote DataWriters.

Remote DataWriters include all DataWriters, both local and remote.

**[default]** initial\_count = 64; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.7 remote\_reader\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::remote_reader_↔
allocation
```

Allocation settings applied to remote DataReaders.

Remote DataReaders include all DataReaders, both local and remote.

**[default]** initial\_count = 64; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.8 remote\_participant\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::remote_participant_↔
_allocation
```

Allocation settings applied to remote DomainParticipants.

Remote DomainParticipants include all DomainParticipants, both local and remote.

**[default]** initial\_count = 16; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.9 matching\_writer\_reader\_pair\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::matching_writer_↔
reader_pair_allocation
```

Allocation settings applied to matching local writer and remote/local reader pairs.

**[default]** initial\_count = 32; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.10 matching\_reader\_writer\_pair\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::matching_reader_↔  
writer_pair_allocation
```

Allocation settings applied to matching local reader and remote/local writer pairs.

**[default]** initial\_count = 32; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.11 ignored\_entity\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_↔  
allocation
```

Allocation settings applied to ignored entities.

**[default]** initial\_count = 8; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.12 content\_filtered\_topic\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::content_filtered_↔  
topic_allocation
```

Allocation settings applied to content filtered topic.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.13 content\_filter\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::content_filter_↔  
allocation
```

Allocation settings applied to content filter.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438); incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.14 read\_condition\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::read_condition_↔
allocation
```

Allocation settings applied to read condition pool.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438), incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.15 query\_condition\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::query_condition_↔
allocation
```

Allocation settings applied to query condition pool.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438), incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.16 outstanding\_asynchronous\_sample\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::outstanding_↔
asynchronous_sample_allocation
```

Allocation settings applied to the maximum number of samples (from all **DDSDataWriter** (p. 1321)) waiting to be asynchronously written.

**[default]** initial\_count = 64; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438), incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.17 flow\_controller\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::flow_controller_↔
allocation
```

Allocation settings applied to flow controllers.

**[default]** initial\_count = 4; max\_count = **DDS\_LENGTH\_UNLIMITED** (p. 438), incremental\_count = -1

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.18 local\_writer\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::local_writer_hash_buckets`

Hash\_Buckets settings applied to local DataWriters.

**[default]** 4

**[range]** [1, 10000]

### 9.53.2.19 local\_reader\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::local_reader_hash_buckets`

Number of hash buckets for local DataReaders.

**[default]** 4

**[range]** [1, 10000]

### 9.53.2.20 local\_publisher\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::local_publisher_hash_buckets`

Number of hash buckets for local Publisher.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.21 local\_subscriber\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::local_subscriber_hash_buckets`

Number of hash buckets for local Subscriber.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.22 local\_topic\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::local_topic_hash_buckets`

Number of hash buckets for local Topic.

**[default]** 4

**[range]** [1, 10000]

### 9.53.2.23 remote\_writer\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::remote_writer_hash_buckets`

Number of hash buckets for remote DataWriters.

Remote DataWriters include all DataWriters, both local and remote.

**[default]** 16

**[range]** [1, 10000]

### 9.53.2.24 remote\_reader\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::remote_reader_hash_buckets`

Number of hash buckets for remote DataReaders.

Remote DataReaders include all DataReaders, both local and remote.

**[default]** 16

**[range]** [1, 10000]

### 9.53.2.25 remote\_participant\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::remote_participant_hash_buckets`

Number of hash buckets for remote DomainParticipants.

Remote DomainParticipants include all DomainParticipants, both local and remote.

**[default]** 4

**[range]** [1, 10000]

### 9.53.2.26 matching\_writer\_reader\_pair\_hash\_buckets

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::matching_writer_reader_pair_hash_buckets`

Number of hash buckets for matching local writer and remote/local reader pairs.

**[default]** 32

**[range]** [1, 10000]

### 9.53.2.27 matching\_reader\_writer\_pair\_hash\_buckets

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::matching\_reader\_writer\_pair\_hash\_buckets

Number of hash buckets for matching local reader and remote/local writer pairs.

**[default]** 32

**[range]** [1, 10000]

### 9.53.2.28 ignored\_entity\_hash\_buckets

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::ignored\_entity\_hash\_buckets

Number of hash buckets for ignored entities.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.29 content\_filtered\_topic\_hash\_buckets

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::content\_filtered\_topic\_hash\_buckets

Number of hash buckets for content filtered topics.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.30 content\_filter\_hash\_buckets

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::content\_filter\_hash\_buckets

Number of hash buckets for content filters.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.31 flow\_controller\_hash\_buckets

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::flow\_controller\_hash\_buckets

Number of hash buckets for flow controllers.

**[default]** 1

**[range]** [1, 10000]

### 9.53.2.32 max\_gather\_destinations

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::max_gather_destinations`

Maximum number of destinations per RTI Connex send.

When RTI Connex sends out a message, it has the capability to send to multiple destinations to be more efficient. The maximum number of destinations per RTI Connex send is specified by `max_gather_destinations`.

**[default]** 16

**[range]** [16, 1 million]

### 9.53.2.33 participant\_user\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::participant_user_data_max_length`

Maximum length of user data in `DDS_DomainParticipantQos` (p. 741) and `DDS_ParticipantBuiltinTopicData` (p. 979).

**[default]** 256

**[range]** [0,0x7ffffff]

### 9.53.2.34 topic\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::topic_data_max_length`

Maximum length of topic data in `DDS_TopicQos` (p.1135), `DDS_TopicBuiltinTopicData` (p.1128), `DDS_↔PublicationBuiltinTopicData` (p. 1010) and `DDS_SubscriptionBuiltinTopicData` (p.1108).

**[default]** 256

**[range]** [0,0x7ffffff]

### 9.53.2.35 publisher\_group\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::publisher_group_data_max_length`

Maximum length of group data in `DDS_PublisherQos` (p. 1022) and `DDS_PublicationBuiltinTopicData` (p. 1010).

**[default]** 256

**[range]** [0,0x7ffffff]

### 9.53.2.36 subscriber\_group\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::subscriber_group_data_max_length`

Maximum length of group data in **DDS\_SubscriberQos** (p. 1105) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108).

**[default]** 256

**[range]** [0,0x7fffffff]

### 9.53.2.37 writer\_user\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::writer_user_data_max_length`

Maximum length of user data in **DDS\_DataWriterQos** (p. 689) and **DDS\_PublicationBuiltinTopicData** (p. 1010).

**[default]** 256

**[range]** [0,0x7fffffff]

### 9.53.2.38 reader\_user\_data\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::reader_user_data_max_length`

Maximum length of user data in **DDS\_DataReaderQos** (p. 644) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108).

**[default]** 256

**[range]** [0,0x7fffffff]

### 9.53.2.39 max\_partitions

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::max_partitions`

Maximum number of partition name strings allowable in a **DDS\_PartitionQosPolicy** (p. 989).

This setting is made on a per DomainParticipant basis; it cannot be set individually on a per Publisher/Subscriber basis. However, the limit is enforced and applies per Publisher/Subscriber.

This value cannot exceed 64.

**[default]** 64

**[range]** [0,64]

#### 9.53.2.40 max\_partition\_cumulative\_characters

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::max\_partition\_cumulative\_characters

Maximum number of combined characters allowable in all partition names in a **DDS\_PartitionQosPolicy** (p. 989).

The maximum number of combined characters should account for a terminating NULL ("0") character for each partition name string.

This setting is made on a per DomainParticipant basis; it cannot be set individually on a per Publisher/Subscriber basis. However, the limit is enforced and applies per Publisher/Subscriber.

This value cannot exceed 256.

**[default]** 256

**[range]** [0,256]

#### 9.53.2.41 type\_code\_max\_serialized\_length

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::type\_code\_max\_serialized\_length

Maximum size of serialized string for type code.

This parameter is an alternative to **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length** (p. 760) for limiting the size of the type code that a **DDSDomainParticipant** (p. 1351) is able to store and propagate for user data types. Type codes can be used by external applications to understand user data types without having the data type predefined in compiled form. However, since type codes contain all of the information of a data structure, including the strings that define the names of the members of a structure, complex data structures can result in large type codes. So it is common for users to set this parameter to a large value, if used (by default, it is set to 0). However, as with all parameters in this QoS policy defining maximum sizes for variable-length elements, all DomainParticipants in the same domain should use the same value for this parameter. Note: TypeObject is now the standard method of exchanging type information in RTI Connext. It is recommended to use **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length** (p. 760) to configure the maximum serialized type object string.

**[default]** 0

**[range]** [0,0xffff]

#### 9.53.2.42 type\_object\_max\_serialized\_length

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length

The maximum length, in bytes, that the buffer to serialize a TypeObject can consume.

This parameter limits the size of the TypeObject that a DomainParticipant is able to propagate. Since TypeObjects contain all of the information of a data structure, including the strings that define the names of the members of a structure, complex data structures can result in TypeObjects larger than the default maximum of 8192 bytes. This field allows you to specify a larger value. The desired size for a given **DDS\_TypeCode** (p. 1164) can be obtained using **DDS\_TypeCode::get\_type\_object\_serialized\_size** (p. 1193).

**[default]** 8192

**[range]** [0,0x7ffffff]

### 9.53.2.43 serialized\_type\_object\_dynamic\_allocation\_threshold

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::serialized\_type\_object\_dynamic\_allocation\_threshold

A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject.

Above this threshold, the memory for a TypeObject is allocated dynamically. Below it, the memory is obtained from a pool of fixed-size buffers. The size of the buffers is equal to this threshold.

In case **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length** (p. 760) is different than **DDS\_LENGTH\_UNLIMITED** (p. 438) and is smaller than **DDS\_DomainParticipantResourceLimitsQosPolicy::serialized\_type\_object\_dynamic\_allocation\_threshold** (p. 760): **DDS\_DomainParticipantResourceLimitsQosPolicy::serialized\_type\_object\_dynamic\_allocation\_threshold** (p. 760) will be adjusted to **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length** (p. 760).

[default] 8192

[range] [0,0x7fffffff] <= **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_serialized\_length** (p. 760)

### 9.53.2.44 type\_object\_max\_deserialized\_length

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_deserialized\_length

The maximum number of bytes that a deserialized TypeObject can consume.

This parameter limits the size of the TypeObject that a DomainParticipant is able to store.

[default] **DDS\_LENGTH\_UNLIMITED** (p. 438)

[range] [0,0x7fffffff] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.53.2.45 deserialized\_type\_object\_dynamic\_allocation\_threshold

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::deserialized\_type\_object\_dynamic\_allocation\_threshold

A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject.

Above this threshold, the memory for a TypeObject is allocated dynamically. Below it, the memory is obtained from a pool of fixed-size buffers. The size of the buffers is equal to this threshold.

In case **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_deserialized\_length** (p. 761) is different than **DDS\_LENGTH\_UNLIMITED** (p. 438) and is smaller than **DDS\_DomainParticipantResourceLimitsQosPolicy::deserialized\_type\_object\_dynamic\_allocation\_threshold** (p. 761): **DDS\_DomainParticipantResourceLimitsQosPolicy::deserialized\_type\_object\_dynamic\_allocation\_threshold** (p. 761) will be adjusted to **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_deserialized\_length** (p. 761).

[default] 4096

[range] [0,0x7fffffff] <= **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_deserialized\_length** (p. 761)

### 9.53.2.46 contentfilter\_property\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::contentfilter_property_max_length`

This field is the maximum length of all data related to a Content-filtered topic.

This is the sum of the length of the ContentFilteredTopic name, the length of the related topic name, the length of the filter expression, the length of the filter parameters, and the length of the filter name. The maximum number of combined characters should account for a terminating NULL ('\0') character for each string.

**[default]** 256

**[range]** [0,0xffff]

### 9.53.2.47 channel\_seq\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::channel_seq_max_length`

Maximum number of channels that can be specified in **DDS\_MultiChannelQosPolicy** (p. 964) for MultiChannel Data↔ Writers.

**[default]** 32

**[range]** [0,0xffff]

### 9.53.2.48 channel\_filter\_expression\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::channel_filter_expression_max_length`

Maximum length of a channel **DDS\_ChannelSettings\_t::filter\_expression** (p. 611) in a MultiChannel DataWriter.

The length should account for a terminating NULL ('\0') character.

**[default]** 256

**[range]** [0,0xffff]

### 9.53.2.49 participant\_property\_list\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::participant_property_list_max_length`

Maximum number of properties associated with the **DDSDomainParticipant** (p. 1351).

**[default]** 32

**[range]** [0,0xffff]

### 9.53.2.50 participant\_property\_string\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::participant_property_string_max_length`

Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1351).

The string length is defined as the cumulative length in bytes, including the null terminating characters, of all the pairs (name, value) associated with the **DDSDomainParticipant** (p. 1351) properties.

**[default]** 4096

**[range]** [0,0xffff]

### 9.53.2.51 writer\_property\_list\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::writer_property_list_max_length`

Maximum number of properties associated with a **DDSDataWriter** (p. 1321).

**[range]** [0,0xffff]

**[default]** 32

### 9.53.2.52 writer\_property\_string\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::writer_property_string_max_length`

Maximum string length of the properties associated with a **DDSDataWriter** (p. 1321).

The string length is defined as the cumulative length in bytes, including the null terminating characters, of all the pairs (name, value) associated with the **DDSDataWriter** (p. 1321) properties.

**[default]** 1024

**[range]** [0,0xffff]

### 9.53.2.53 reader\_property\_list\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::reader_property_list_max_length`

Maximum number of properties associated with a **DDSDataReader** (p. 1288).

**[default]** 32

**[range]** [0,0xffff]

### 9.53.2.54 reader\_property\_string\_max\_length

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::reader\_property\_string\_max\_length

Maximum string length of the properties associated with a **DDSDataReader** (p. 1288).

The string length is defined as the cumulative length in bytes, including the null terminating characters, of all the pairs (name, value) associated with a **DDSDataReader** (p. 1288) properties.

**[default]** 1024

**[range]** [0,0xffff]

### 9.53.2.55 max\_endpoint\_groups

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::max\_endpoint\_groups

Maximum number of **DDS\_EndpointGroup\_t** (p. 900) allowable in a **DDS\_AvailabilityQosPolicy** (p. 596).

**[default]** 32

**[range]** [0,65535]

### 9.53.2.56 max\_endpoint\_group\_cumulative\_characters

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::max\_endpoint\_group\_cumulative\_characters

Maximum number of combined role\_name characters allowed in all **DDS\_EndpointGroup\_t** (p.900) in a **DDS\_↔AvailabilityQosPolicy** (p. 596).

The maximum number of combined characters should account for a terminating NULL character for each role\_name string.

**[default]** 1024

**[range]** [0,65535]

### 9.53.2.57 transport\_info\_list\_max\_length

**DDS\_Long** DDS\_DomainParticipantResourceLimitsQosPolicy::transport\_info\_list\_max\_length

Maximum number of installed transports to send and receive information about in **DDS\_ParticipantBuiltinTopicData↔::transport\_info** (p. 981).

**[default]** 12

**[range]** [0,100]

### 9.53.2.58 ignored\_entity\_replacement\_kind

```
DDS_DomainParticipantResourceLimitsIgnoredEntityReplacementKind DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_replacement_kind
```

Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS\_DomainParticipantResourceLimitsQosPolicy::ignored\_entity\_allocation** (p. 753) are reached.

When a **DDSDomainParticipant** (p. 1351)'s number of ignored entities is greater than **DDS\_DomainParticipantResourceLimitsQosPolicy::ignored\_entity\_allocation** (p. 753), the **DDSDomainParticipant** (p. 1351) will try to make room by replacing an existing ignored participant entry. This field specifies what entity is allowed to be replaced.

If a replaceable participant entry is not available, an out-of-resources exception will be returned.

**[default]** **DDS\_NO\_REPLACEMENT\_IGNORED\_ENTITY\_REPLACEMENT** (p. 397)

See also

**DDS\_DomainParticipantResourceLimitsIgnoredEntityReplacementKind** (p. 397)

### 9.53.2.59 remote\_topic\_query\_allocation

```
struct DDS_AllocationSettings_t DDS_DomainParticipantResourceLimitsQosPolicy::remote_topic_query_allocation
```

Allocation settings applied to remote TopicQueries.

Settings applied to the allocation of information about **DDSTopicQuery** (p. 1627) objects created by other participants and discovered by this participant.

When the participant receives a new topic query that would make the current count go above `max_count`, it is not processed until the current count drops (i.e. another topic query is cancelled). The topic query stays in the Built-in ServiceRequest DataReader queue until it can be processed or it is cancelled.

**[default]** `initial_count = 1; max_count = DDS_LENGTH_UNLIMITED` (p. 438); `incremental_count = -1`

**[range]** See allowed ranges in struct **DDS\_AllocationSettings\_t** (p. 588)

### 9.53.2.60 remote\_topic\_query\_hash\_buckets

```
DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::remote_topic_query_hash_buckets
```

Number of hash buckets for remote TopicQueries.

**[default]** 1

**[range]** [1, 10000]

See also

**DDS\_DomainParticipantResourceLimitsQosPolicy::remote\_topic\_query\_allocation** (p. 765)

### 9.53.2.61 writer\_data\_tag\_list\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::writer_data_tag_list_max_length`

Maximum number of data tags associated with a **DDSDataWriter** (p. 1321).

**[default]** 0

**[range]** [0,0xffff]

### 9.53.2.62 writer\_data\_tag\_string\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::writer_data_tag_string_max_length`

Maximum string length of the data tags associated with a **DDSDataWriter** (p. 1321).

The string length is defined as the cumulative length in bytes, including the null terminating characters, of all the pairs (name, value) associated with the **DDSDataWriter** (p. 1321) data tags.

**[default]** 0

**[range]** [0,0xffff]

### 9.53.2.63 reader\_data\_tag\_list\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::reader_data_tag_list_max_length`

Maximum number of data tags associated with a **DDSDataReader** (p. 1288).

**[default]** 0

**[range]** [0,0xffff]

### 9.53.2.64 reader\_data\_tag\_string\_max\_length

`DDS_Long DDS_DomainParticipantResourceLimitsQosPolicy::reader_data_tag_string_max_length`

Maximum string length of the data tags associated with a **DDSDataReader** (p. 1288).

The string length is defined as the cumulative length in bytes, including the null terminating characters, of all the pairs (name, value) associated with the **DDSDataReader** (p. 1288) data tags.

**[default]** 0

**[range]** [0,0xffff]

### 9.53.2.65 shmем\_ref\_transfer\_mode\_max\_segments

`DDS_UnsignedLong DDS_DomainParticipantResourceLimitsQosPolicy::shmем_ref_transfer_mode_max_↔ segments`

Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1351).

**[default]** 500

**[range]** [0,0xffffffff], but in practice, this value will be limited by the system-wide maximum number of shared memory segments. On a Linux machine, this value is provided by the kernel parameter `shmni`.

## 9.54 DDS\_DoubleSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Double** (p. 319) >

### 9.54.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Double** (p. 319) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

**DDS\_Double** (p. 319)

**FooSeq** (p. 1697)

## 9.55 DDS\_DurabilityQosPolicy Struct Reference

This QoS policy specifies whether or not RTI Connexx will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.

### Public Attributes

- **DDS\_DurabilityQosPolicyKind kind**  
*The kind of durability.*
- **DDS\_Boolean direct\_communication**  
<<*extension*>> (p. 237) Indicates whether or not a **TRANSIENT** or **PERSISTENT DDSDataReader** (p. 1288) should receive samples directly from a **TRANSIENT** or **PERSISTENT DDSDataWriter** (p. 1321)
- **DDS\_Long writer\_depth**  
<<*extension*>> (p. 237) Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1321) will send to a late-joining **DDSDataReader** (p. 1288).
- struct **DDS\_PersistentStorageSettings storage\_settings**  
*Configures durable writer history and durable reader state.*

### 9.55.1 Detailed Description

This QoS policy specifies whether or not RTI Connex will store and deliver previously published data samples to new **DDSDataReader** (p. 1288) entities that join the network later.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_↔  
STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

See also

**DURABILITY\_SERVICE** (p. 402)

### 9.55.2 Usage

It is possible for a **DDSDataWriter** (p. 1321) to start publishing data before all (or any) **DDSDataReader** (p. 1288) entities have joined the network.

Moreover, a **DDSDataReader** (p. 1288) that joins the network after some data has been written could potentially be interested in accessing the most current values of the data, as well as potentially some history.

This policy makes it possible for a late-joining **DDSDataReader** (p. 1288) to obtain previously published samples.

By helping to ensure that DataReaders get all data that was sent by DataWriters, regardless of when it was sent, using this QoS policy can increase system tolerance to failure conditions.

Note that although related, this does not strictly control what data RTI Connex will maintain internally. That is, RTI Connex may choose to maintain some data for its own purposes (e.g., flow control) and yet not make it available to late-joining readers if the **DURABILITY** (p. 398) policy is set to **DDS\_VOLATILE\_DURABILITY\_QOS** (p. 400).

### 9.55.2.1 Transient and Persistent Durability

For the purpose of implementing the DURABILITY QoS kind TRANSIENT or PERSISTENT, RTI Connexx behaves as if for each Topic that has **DDS\_DurabilityQosPolicy::kind** (p. 770) of **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401) or **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) there is a corresponding "built-in" **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) configured with the same DURABILITY kind. In other words, it is as if somewhere in the system, independent of the original **DDSDataWriter** (p. 1321), there is a built-in durable **DDSDataReader** (p. 1288) subscribing to that Topic and a built-in durable DataWriter re-publishing it as needed for the new subscribers that join the system. This functionality is provided by the *RTI Persistence Service*.

The Persistence Service can configure itself based on the QoS of your application's **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities. For each transient or persistent **DDSTopic** (p. 1617), the built-in fictitious Persistence Service **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) have their QoS configured from the QoS of your application's **DDSDataWriter** (p. 1321) and **DDSDataReader** (p. 1288) entities that communicate on that **DDSTopic** (p. 1617).

For a given **DDSTopic** (p. 1617), the usual request/offered semantics apply to the matching between any **DDSDataWriter** (p. 1321) in the domain that writes the **DDSTopic** (p. 1617) and the built-in transient/persistent **DDSDataReader** (p. 1288) for that **DDSTopic** (p. 1617); similarly for the built-in transient/persistent **DDSDataWriter** (p. 1321) for a **DDSTopic** (p. 1617) and any **DDSDataReader** (p. 1288) for the **DDSTopic** (p. 1617). As a consequence, a **DDSDataWriter** (p. 1321) that has an incompatible QoS will not send its data to the *RTI Persistence Service*, and a **DDSDataReader** (p. 1288) that has an incompatible QoS will not get data from it.

Incompatibilities between local **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) entities and the corresponding fictitious built-in transient/persistent entities cause the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) and **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) to change and the corresponding Listener invocations and/or signaling of **DDSCondition** (p. 1276) objects as they would with your application's own entities.

The value of **DDS\_DurabilityServiceQosPolicy::service\_cleanup\_delay** (p. 773) controls when *RTI Persistence Service* is able to remove all information regarding a data instances.

Information on a data instance is maintained until the following conditions are met:

1. The instance has been explicitly disposed (`instance_state = NOT_ALIVE_DISPOSED`),

and

1. All samples for the disposed instance have been acknowledged, including the dispose sample itself,

and

1. A time interval longer than **DDS\_DurabilityServiceQosPolicy::service\_cleanup\_delay** (p. 773) has elapsed since the moment RTI Connexx detected that the previous two conditions were met. (Note: Only values of zero or **DDS\_DURATION\_INFINITE** (p. 326) are currently supported for the `service_cleanup_delay`)

The utility of **DDS\_DurabilityServiceQosPolicy::service\_cleanup\_delay** (p. 773) is apparent in the situation where an application disposes an instance and it crashes before it has a chance to complete additional tasks related to the disposition. Upon restart, the application may ask for initial data to regain its state and the delay introduced by the `service_cleanup_delay` will allow the restarted application to receive the information on the disposed instance and complete the interrupted tasks.

### 9.55.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered kind*  $\geq$  *requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of DURABILITY kind are considered ordered such that **DDS\_VOLATILE\_DURABILITY\_QOS** (p. 400)  $<$  **DDS\_TRANSIENT\_LOCAL\_DURABILITY\_QOS** (p. 401)  $<$  **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401)  $<$  **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401).

### 9.55.4 Member Data Documentation

#### 9.55.4.1 kind

```
DDS_DurabilityQosPolicyKind DDS_DurabilityQosPolicy::kind
```

The kind of durability.

[default] **DDS\_VOLATILE\_DURABILITY\_QOS** (p. 400)

#### 9.55.4.2 direct\_communication

```
DDS_Boolean DDS_DurabilityQosPolicy::direct_communication
```

$\ll$  *extension*  $\gg$  (p. 237) Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1288) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1321)

When `direct_communication` is set to **DDS\_BOOLEAN\_TRUE** (p. 317), a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1288) will receive samples from both the original **DDSDataWriter** (p. 1321) configured with TRANSIENT or PERSISTENT durability and the **DDSDataWriter** (p. 1321) created by the persistence service. This peer-to-peer communication pattern provides low latency between end-points.

If the same sample is received from the original **DDSDataWriter** (p. 1321) and the persistence service, the middleware will discard the duplicate.

When `direct_communication` is set to **DDS\_BOOLEAN\_FALSE** (p. 317), a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1288) will only receive samples from the **DDSDataWriter** (p. 1321) created by the persistence service. This brokered communication pattern provides a way to guarantee eventual consistency.

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

### 9.55.4.3 writer\_depth

```
DDS_Long DDS_DurabilityQosPolicy::writer_depth
```

<<**extension**>> (p. 237) Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1321) will send to a late-joining **DDSDataReader** (p. 1288).

The default value, **DDS\_AUTO\_WRITER\_DEPTH** (p. 401), makes this parameter equal to the following:

- **DDS\_HistoryQosPolicy::depth** (p. 921) if the history kind is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406).
- **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055) in the **DDS\_ResourceLimitsQosPolicy** (p. 1052) if the history kind is **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406).

The `writer_depth` must be  $\leq$  **DDS\_HistoryQosPolicy::depth** (p. 921).

`writer_depth` applies only to non-volatile DataWriters (those for which the kind is **TRANSIENT\_LOCAL**, **TRANSIENT**, or **PERSISTENT**).

When **DDS\_BatchQosPolicy::enable** (p. 601) is set to true, `writer_depth` acts as a minimum number of samples per instance that will be sent to late joiners, as opposed to the maximum. As long as a batch contains a single sample that falls within the `writer_depth` for the instance to which it belongs, then the entire batch will be sent. This means that batches sent to late-joining DataReaders may contain more samples per instance than is specified by the `writer_depth` QoS setting.

When a DataWriter responds to a TopicQuery, the samples that are evaluated against the TopicQuery filter are only those samples that fall within the `writer_depth`, not the **DDS\_HistoryQosPolicy::depth** (p. 921).

Setting `writer_depth` on the DataReader side will be ignored.

[default] **DDS\_AUTO\_WRITER\_DEPTH** (p. 401)

### 9.55.4.4 storage\_settings

```
struct DDS_PersistentStorageSettings DDS_DurabilityQosPolicy::storage_settings
```

Configures durable writer history and durable reader state.

By default, durable writer history and durable reader state are disabled. This means that a DataWriter will not persist its historical cache and a DataReader will not persist its state.

To enable durable writer history and durable reader state set **DDS\_PersistentStorageSettings::enable** (p. 993) to **DDS\_BOOLEAN\_TRUE** (p. 317).

## 9.56 DDS\_DurabilityServiceQosPolicy Struct Reference

Various settings to configure the external *RTI Persistence Service* used by RTI Connex for DataWriters with a **DDS\_DurabilityQosPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401).

## Public Attributes

- struct **DDS\_Duration\_t service\_cleanup\_delay**  
Controls when the service is able to remove all information regarding a data instances.
- **DDS\_HistoryQoSPolicyKind history\_kind**  
The kind of history to apply in recouping durable data.
- **DDS\_Long history\_depth**  
Setting to use for the **DDS\_DurabilityQoSPolicy::writer\_depth** (p. 770) when recouping durable data.
- **DDS\_Long max\_samples**  
Part of resource limits QoS policy to apply when feeding a late joiner.
- **DDS\_Long max\_instances**  
Part of resource limits QoS policy to apply when feeding a late joiner.
- **DDS\_Long max\_samples\_per\_instance**  
Part of resource limits QoS policy to apply when feeding a late joiner.

### 9.56.1 Detailed Description

Various settings to configure the external *RTI Persistence Service* used by RTI Connex for DataWriters with a **DDS\_↔\_DurabilityQoSPolicy** (p. 767) setting of **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT\_↔\_DURABILITY\_QOS** (p. 401).

Entity:

**DDSTopic** (p. 1617), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

See also

**DURABILITY** (p. 398)  
**HISTORY** (p. 405)  
**RESOURCE\_LIMITS** (p. 437)

### 9.56.2 Usage

When a DataWriter's **DDS\_DurabilityQoSPolicy::kind** (p. 770) is **DDS\_PERSISTENT\_DURABILITY\_QOS** (p. 401) or **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 401), an external service, the *RTI Persistence Service*, is used to store and possibly forward the data sent by the **DDSDataWriter** (p. 1321) to **DDSDataReader** (p. 1288) objects that are created *after* the data was initially sent.

This QoS policy is used to configure certain parameters of the Persistence Service when it operates on the behalf of the **DDSDataWriter** (p. 1321), such as how much data to store. For example, it configures the **DURABILITY** (p. 398), **HISTORY** (p. 405), and the **RESOURCE\_LIMITS** (p. 437) used by the fictitious DataReader and DataWriter used by the Persistence Service. Note, however, that the Persistence Service itself may be configured to ignore these values and instead use values from its own configuration file.

### 9.56.3 Member Data Documentation

#### 9.56.3.1 service\_cleanup\_delay

```
struct DDS_Duration_t DDS_DurabilityServiceQosPolicy::service_cleanup_delay
```

Controls when the service is able to remove all information regarding a data instances.

When the service cleanup delay is set to 0, disposed instances will be completely removed from the service. Only values of 0 and **DDS\_DURATION\_INFINITE** (p. 326) are currently supported.

[default] 0

#### 9.56.3.2 history\_kind

```
DDS_HistoryQosPolicyKind DDS_DurabilityServiceQosPolicy::history_kind
```

The kind of history to apply in recouping durable data.

[default] **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406)

#### 9.56.3.3 history\_depth

```
DDS_Long DDS_DurabilityServiceQosPolicy::history_depth
```

Setting to use for the **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770) when recouping durable data.

If the **DDS\_HistoryQosPolicy::depth** (p. 921) is set to a value lower than this value, **DDS\_HistoryQosPolicy::depth** (p. 921) will be set equal to the value of this field.

[default] **DDS\_AUTO\_WRITER\_DEPTH** (p. 401) (1)

#### 9.56.3.4 max\_samples

```
DDS_Long DDS_DurabilityServiceQosPolicy::max_samples
```

Part of resource limits QoS policy to apply when feeding a late joiner.

[default] **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.56.3.5 max\_instances

`DDS_Long DDS_DurabilityServiceQosPolicy::max_instances`

Part of resource limits QoS policy to apply when feeding a late joiner.

[default] `DDS_LENGTH_UNLIMITED` (p. 438)

### 9.56.3.6 max\_samples\_per\_instance

`DDS_Long DDS_DurabilityServiceQosPolicy::max_samples_per_instance`

Part of resource limits QoS policy to apply when feeding a late joiner.

[default] `DDS_LENGTH_UNLIMITED` (p. 438)

## 9.57 DDS\_Duration\_t Struct Reference

Type for *duration* representation.

### Static Public Member Functions

- static `DDS_Duration_t from_micros` ( `DDS_UnsignedLongLong` microseconds)  
*Creates a new duration object from a duration expressed in microseconds.*
- static `DDS_Duration_t from_millis` ( `DDS_UnsignedLongLong` milliseconds)  
*Creates a new duration object from a duration expressed in milliseconds.*
- static `DDS_Duration_t from_nanos` ( `DDS_UnsignedLongLong` nanoseconds)  
*Creates a new duration object from a duration expressed in nanoseconds.*
- static `DDS_Duration_t from_seconds` ( `DDS_UnsignedLong` seconds)  
*Creates a new duration object from a duration expressed in seconds.*

### Public Attributes

- `DDS_Long sec`  
*seconds*
- `DDS_UnsignedLong nanosec`  
*nanoseconds*

### 9.57.1 Detailed Description

Type for *duration* representation.

Represents a time interval.

#### Examples

`HelloWorld_publisher.cxx`, and `HelloWorld_subscriber.cxx`.

## 9.57.2 Member Data Documentation

### 9.57.2.1 sec

**DDS\_Long** DDS\_Duration\_t::sec

seconds

### 9.57.2.2 nanosec

**DDS\_UnsignedLong** DDS\_Duration\_t::nanosec

nanoseconds

[range] [0,1000000000)

## 9.58 DDS\_DynamicData Struct Reference

A sample of any complex data type, which can be inspected and manipulated reflectively.

### Public Member Functions

- **DDS\_DynamicData** (const **DDS\_TypeCode** \*type, const **DDS\_DynamicDataProperty\_t** &property)  
*The constructor for new DDS\_DynamicData (p. 775) objects.*
- **DDS\_Boolean is\_valid** () const  
*Indicates whether the object was constructed properly.*
- **DDS\_ReturnCode\_t copy** (const **DDS\_DynamicData** &src)  
*Deeply copy from the given object to this object.*
- **DDS\_Boolean equal** (const **DDS\_DynamicData** &other) const  
*Indicate whether the contents of another DDS\_DynamicData (p. 775) sample are the same as those of this one.*
- **DDS\_DynamicData & operator=** (const **DDS\_DynamicData** &src)  
*Deeply copy from the given object to this object.*
- **DDS\_Boolean operator==** (const **DDS\_DynamicData** &other) const  
*Indicate whether the contents of another DDS\_DynamicData (p. 775) sample are the same as those of this one.*
- **DDS\_ReturnCode\_t clear\_all\_members** ()  
*Clear the contents of all data members of this object.*
- **DDS\_ReturnCode\_t clear\_optional\_member** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Clear the contents of a single optional data member of this object.*
- **DDS\_ReturnCode\_t clear\_member** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)

- Clear the contents of a single data member of this object.*
- **DDS\_Boolean is\_cdr ()** const  
*Determine if a DynamicData object is using CDR as its data representation.*
  - const char \* **get\_cdr\_buffer ( DDS\_UnsignedLong &length)** const  
*Get the CDR buffer associated with a DynamicData object.*
  - **DDS\_ReturnCode\_t set\_cdr\_buffer** (const char \*buffer, **DDS\_UnsignedLong** length)  
*Associate a CDR buffer with a DynamicData object.*
  - **DDS\_ReturnCode\_t from\_cdr\_buffer** (const char \*buffer, unsigned int length)  
*Deserializes a DynamicData object from a buffer of octets.*
  - **DDS\_ReturnCode\_t to\_cdr\_buffer** (char \*buffer, unsigned int &length)  
*Serializes a DynamicData object into a CDR buffer of octets.*
  - **DDS\_ReturnCode\_t to\_cdr\_buffer\_ex** (char \*buffer, unsigned int &length, **DDS\_DataRepresentationId\_t** representation)  
*Serializes a DynamicData object into a buffer of octets.*
  - **DDS\_ReturnCode\_t to\_string** (char \*str, **DDS\_UnsignedLong** &str\_size, const **DDS\_PrintFormatProperty** &property)  
*Get a string representation of a DynamicData object.*
  - **DDS\_ReturnCode\_t from\_string** (const char \*str, **DDS\_PrintFormatKind** format\_kind)  
*Populates a DynamicData object from a JSON string representation.*
  - **DDS\_ReturnCode\_t print** (FILE \*fp, int indent) const  
*Output a textual representation of this object and its contents to the given file.*
  - void **get\_info ( DDS\_DynamicDataInfo &info\_out)** const  
*Fill in the given descriptor with information about this **DDS\_DynamicData** (p. 775).*
  - **DDS\_ReturnCode\_t bind\_type** (const **DDS\_TypeCode** \*type)  
*If this **DDS\_DynamicData** (p. 775) object is not yet associated with a data type, set that type now to the given **DDS\_TypeCode** (p. 1164).*
  - **DDS\_ReturnCode\_t unbind\_type** ()  
*Dissociate this **DDS\_DynamicData** (p. 775) object from any particular data type.*
  - **DDS\_ReturnCode\_t bind\_complex\_member** ( **DDS\_DynamicData** &value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Use another **DDS\_DynamicData** (p. 775) object to provide access to a complex field of this **DDS\_DynamicData** (p. 775) object.*
  - **DDS\_ReturnCode\_t unbind\_complex\_member** ( **DDS\_DynamicData** &value)  
*Tear down the association created by a **DDS\_DynamicData::bind\_complex\_member** (p. 803) operation, committing any changes to the outer object since then.*
  - const **DDS\_TypeCode** \* **get\_type** () const  
*Get the data type, of which this **DDS\_DynamicData** (p. 775) represents an instance.*
  - **DDS\_TCKind** **get\_type\_kind** () const  
*Get the kind of this object's data type.*
  - **DDS\_UnsignedLong** **get\_member\_count** () const  
*Get the number of members in the type.*
  - **DDS\_Boolean** **member\_exists** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Indicates whether a member exists in this sample.*
  - **DDS\_Boolean** **member\_exists\_in\_type** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Indicates whether a member of a particular name/ID exists in this data sample's type.*
  - **DDS\_ReturnCode\_t** **get\_member\_info** ( **DDS\_DynamicDataMemberInfo** &info, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

Fill in the given descriptor with information about the identified member of this *DDS\_DynamicData* (p. 775) sample.

- **DDS\_ReturnCode\_t get\_member\_info\_by\_index** (struct **DDS\_DynamicDataMemberInfo** &info, **DDS\_↔UnsignedLong** index) const

Fill in the given descriptor with information about the identified member of this *DDS\_DynamicData* (p. 775) sample.

- **DDS\_ReturnCode\_t get\_member\_type** (const **DDS\_TypeCode** \*&type\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

Get the type of the given member of this sample.

- **DDS\_ReturnCode\_t is\_member\_key** (**DDS\_Boolean** &is\_key\_out, const char \*member\_name, **DDS\_↔DynamicDataMemberId** member\_id) const

Indicates whether a given member forms part of the key of this sample's data type.

- **DDS\_ReturnCode\_t get\_long** (**DDS\_Long** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Long* (p. 318) or another type implicitly convertible to it (*DDS\_Octet* (p. 317), *DDS\_Char* (p. 317), *DDS\_Short* (p. 318), *DDS\_UnsignedShort* (p. 318), or *DDS\_Enum* (p. 320)).

- **DDS\_ReturnCode\_t get\_short** (**DDS\_Short** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Short* (p. 318) or another type implicitly convertible to it (*DDS\_Octet* (p. 317) or *DDS\_Char* (p. 317)).

- **DDS\_ReturnCode\_t get\_ulong** (**DDS\_UnsignedLong** &value\_out, const char \*member\_name, **DDS\_↔DynamicDataMemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_UnsignedLong* (p. 318) or another type implicitly convertible to it (*DDS\_Octet* (p. 317), *DDS\_Char* (p. 317), *DDS\_Short* (p. 318), *DDS\_UnsignedShort* (p. 318), or *DDS\_Enum* (p. 320)).

- **DDS\_ReturnCode\_t get\_ushort** (**DDS\_UnsignedShort** &value\_out, const char \*member\_name, **DDS\_↔DynamicDataMemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_UnsignedShort* (p. 318) or another type implicitly convertible to it (*DDS\_Octet* (p. 317) or *DDS\_Char* (p. 317)).

- **DDS\_ReturnCode\_t get\_float** (**DDS\_Float** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Float* (p. 319).

- **DDS\_ReturnCode\_t get\_double** (**DDS\_Double** &value\_out, const char \*member\_name, **DDS\_Dynamic↔DataMemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Double* (p. 319) or another type implicitly convertible to it (*DDS\_Float* (p. 319)).

- **DDS\_ReturnCode\_t get\_boolean** (**DDS\_Boolean** &value\_out, const char \*member\_name, **DDS\_Dynamic↔DataMemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Boolean* (p. 320).

- **DDS\_ReturnCode\_t get\_char** (**DDS\_Char** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Char* (p. 317).

- **DDS\_ReturnCode\_t get\_octet** (**DDS\_Octet** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_Octet* (p. 317).

- **DDS\_ReturnCode\_t get\_longlong** (**DDS\_LongLong** &value\_out, const char \*member\_name, **DDS\_↔DynamicDataMemberId** member\_id) const

Get the value of the given field, which is of type *DDS\_LongLong* (p. 319) or another type implicitly convertible to it (*DDS\_↔Octet* (p. 317), *DDS\_Char* (p. 317), *DDS\_Short* (p. 318), *DDS\_UnsignedShort* (p. 318), *DDS\_Long* (p. 318), *DDS\_↔UnsignedLong* (p. 318), or *DDS\_Enum* (p. 320)).

- **DDS\_ReturnCode\_t get\_ulonglong** (**DDS\_UnsignedLongLong** &value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

Get the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 319) or another type implicitly convertible to it (**DDS\_Octet** (p. 317), **DDS\_Char** (p. 317), **DDS\_Short** (p. 318), **DDS\_UnsignedShort** (p. 318), **DDS\_Long** (p. 318), **DDS\_UnsignedLong** (p. 318), or **DDS\_Enum** (p. 320)).

- **DDS\_ReturnCode\_t get\_longdouble** (**DDS\_LongDouble** &value\_out, const char \*member\_name, **DDS\_↔DynamicDataMemberId** member\_id) const
 

Get the value of the given field, which is of type **DDS\_LongDouble** (p. 319) or another type implicitly convertible to it (**DDS\_Float** (p. 319) or **DDS\_Double** (p. 319)).
- **DDS\_ReturnCode\_t get\_wchar** (**DDS\_Wchar** &value\_out, const char \*member\_name, **DDS\_Dynamic↔DataMemberId** member\_id) const
 

Get the value of the given field, which is of type **DDS\_Wchar** (p. 317) or another type implicitly convertible to it (**DDS\_Char** (p. 317)).
- **DDS\_ReturnCode\_t get\_string** (char \*&value, **DDS\_UnsignedLong** \*size, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get the value of the given field, which is of type char\*.
- **DDS\_ReturnCode\_t get\_wstring** (**DDS\_Wchar** \*&value, **DDS\_UnsignedLong** \*size, const char \*member↔\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get the value of the given field, which is of type **DDS\_Wchar** (p. 317)\*.
- **DDS\_ReturnCode\_t get\_int8** (**DDS\_Int8** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const
 

Get the value of the given field, which is of type **DDS\_Int8** (p. 318).
- **DDS\_ReturnCode\_t get\_uint8** (**DDS\_UInt8** &value\_out, const char \*member\_name, **DDS\_DynamicData↔MemberId** member\_id) const
 

Get the value of the given field, which is of type **DDS\_UInt8** (p. 318).
- **DDS\_ReturnCode\_t get\_complex\_member** (**DDS\_DynamicData** &value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the value of the given field, which is of some composed type.
- **DDS\_ReturnCode\_t get\_long\_array** (**DDS\_Long** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member. The array may contain members of type **DDS\_Long** (p. 318) or **DDS\_Enum** (p. 320).
- **DDS\_ReturnCode\_t get\_short\_array** (**DDS\_Short** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t get\_ulong\_array** (**DDS\_UnsignedLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 318) or **DDS↔\_Enum** (p. 320).
- **DDS\_ReturnCode\_t get\_ushort\_array** (**DDS\_UnsignedShort** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t get\_float\_array** (**DDS\_Float** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t get\_double\_array** (**DDS\_Double** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t get\_boolean\_array** (**DDS\_Boolean** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t get\_char\_array** (**DDS\_Char** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_octet\_array** ( **DDS\_Octet** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_longlong\_array** ( **DDS\_LongLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_ulonglong\_array** ( **DDS\_UnsignedLongLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_longdouble\_array** ( **DDS\_LongDouble** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_wchar\_array** ( **DDS\_Wchar** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_int8\_array** ( **DDS\_Int8** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_uint8\_array** ( **DDS\_UInt8** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given array member.*

- **DDS\_ReturnCode\_t get\_long\_seq** ( **DDS\_LongSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_short\_seq** ( **DDS\_ShortSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_ulong\_seq** ( **DDS\_UnsignedLongSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_ushort\_seq** ( **DDS\_UnsignedShortSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_float\_seq** ( **DDS\_FloatSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_double\_seq** ( **DDS\_DoubleSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_boolean\_seq** ( **DDS\_BooleanSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_char\_seq** ( **DDS\_CharSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_octet\_seq** ( **DDS\_OctetSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const

*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t get\_longlong\_seq** ( **DDS\_LongLongSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t get\_ulonglong\_seq** ( **DDS\_UnsignedLongLongSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t get\_longdouble\_seq** ( **DDS\_LongDoubleSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t get\_wchar\_seq** ( **DDS\_WcharSeq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t get\_int8\_seq** ( **DDS\_Int8Seq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t get\_uint8\_seq** ( **DDS\_UInt8Seq** &seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id) const  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t set\_long** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Long** value)  
*Set the value of the given field, which is of type **DDS\_Long** (p. 318).*
- **DDS\_ReturnCode\_t set\_short** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Short** value)  
*Set the value of the given field, which is of type **DDS\_Short** (p. 318).*
- **DDS\_ReturnCode\_t set\_ulong** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedLong** (p. 318).*
- **DDS\_ReturnCode\_t set\_ushort** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedShort** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedShort** (p. 318).*
- **DDS\_ReturnCode\_t set\_float** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Float** value)  
*Set the value of the given field, which is of type **DDS\_Float** (p. 319).*
- **DDS\_ReturnCode\_t set\_double** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Double** value)  
*Set the value of the given field, which is of type **DDS\_Double** (p. 319).*
- **DDS\_ReturnCode\_t set\_boolean** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Boolean** value)  
*Set the value of the given field, which is of type **DDS\_Boolean** (p. 320).*
- **DDS\_ReturnCode\_t set\_char** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Char** value)  
*Set the value of the given field, which is of type **DDS\_Char** (p. 317).*
- **DDS\_ReturnCode\_t set\_octet** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Octet** value)  
*Set the value of the given field, which is of type **DDS\_Octet** (p. 317).*
- **DDS\_ReturnCode\_t set\_longlong** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_LongLong** value)  
*Set the value of the given field, which is of type **DDS\_LongLong** (p. 319).*

- **DDS\_ReturnCode\_t set\_ulonglong** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLongLong** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 319).*
- **DDS\_ReturnCode\_t set\_longdouble** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_LongDouble** value)  
*Set the value of the given field, which is of type **DDS\_LongDouble** (p. 319).*
- **DDS\_ReturnCode\_t set\_wchar** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Wchar** value)  
*Set the value of the given field, which is of type **DDS\_Wchar** (p. 317).*
- **DDS\_ReturnCode\_t set\_string** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const char \*value)  
*Set the value of the given field of type char\*.*
- **DDS\_ReturnCode\_t set\_wstring** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_Wchar** \*value)  
*Set the value of the given field of type **DDS\_Wchar** (p. 317)\*.*
- **DDS\_ReturnCode\_t set\_int8** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Int8** value)  
*Set the value of the given field, which is of type **DDS\_Int8** (p. 318).*
- **DDS\_ReturnCode\_t set\_uint8** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UInt8** value)  
*Set the value of the given field, which is of type **DDS\_UInt8** (p. 318).*
- **DDS\_ReturnCode\_t set\_complex\_member** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_DynamicData** &value)  
*Copy the state of the given **DDS\_DynamicData** (p. 775) object into a member of this object.*
- **DDS\_ReturnCode\_t set\_long\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Long** \*array)  
*Set the contents of the given array member. The array may contain members of type **DDS\_Long** (p. 318) or **DDS\_Enum** (p. 320).*
- **DDS\_ReturnCode\_t set\_short\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Short** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t set\_ulong\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_UnsignedLong** \*array)  
*Set the contents of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 318) or **DDS\_Enum** (p. 320).*
- **DDS\_ReturnCode\_t set\_ushort\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_UnsignedShort** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t set\_float\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Float** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t set\_double\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Double** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t set\_boolean\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Boolean** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t set\_char\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Char** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_octet\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Octet** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_longlong\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_LongLong** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_ulonglong\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_UnsignedLongLong** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_longdouble\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_LongDouble** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_wchar\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Wchar** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_int8\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Int8** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_uint8\_array** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_UInt8** \*array)

*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t set\_long\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_LongSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_short\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_ShortSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_ulong\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_UnsignedLongSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_ushort\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_UnsignedShortSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_float\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_FloatSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_double\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_DoubleSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_boolean\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_BooleanSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_char\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_CharSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_octet\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_OctetSeq** &value)

*Set the contents of the given sequence member.*

- **DDS\_ReturnCode\_t set\_longlong\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_LongLongSeq** &value)  
Set the contents of the given sequence member.
- **DDS\_ReturnCode\_t set\_ulonglong\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_UnsignedLongLongSeq** &value)  
Set the contents of the given sequence member.
- **DDS\_ReturnCode\_t set\_longdouble\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_LongDoubleSeq** &value)  
Set the contents of the given sequence member.
- **DDS\_ReturnCode\_t set\_wchar\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_WcharSeq** &value)  
Set the contents of the given sequence member.
- **DDS\_ReturnCode\_t set\_int8\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_Int8Seq** &value)  
Set the contents of the given sequence member.
- **DDS\_ReturnCode\_t set\_uint8\_seq** (const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_UInt8Seq** &value)  
Set the contents of the given sequence member.
- **~DDS\_DynamicData ()**  
Finalize and deallocate this **DDS\_DynamicData** (p. 775) sample.

### 9.58.1 Detailed Description

A sample of any complex data type, which can be inspected and manipulated reflectively.

Objects of type **DDS\_DynamicData** (p. 775) represent corresponding objects of the type identified by their **DDS\_TypeCode** (p. 1164). Because the definition of these types may not have existed at compile time on the system on which the application is running, you will interact with the data using an API of reflective getters and setters.

For example, if you had access to your data types at compile time, you could do this:

```
theValue = theObject.theField;
```

Instead, you will do something like this:

```
theValue = get(theObject, "theField");
```

**DDS\_DynamicData** (p. 775) objects can represent any complex data type, including those of type kinds **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86), and **DDS\_TK\_VALUE** (p. 86). They cannot represent objects of basic types (e.g., integers and strings). Since those type definitions always exist on every system, you can examine their objects directly.

### 9.58.2 Member Names and IDs

The members of a data type can be identified in one of two ways: by their name or by their numeric ID. The former is often more transparent to human users; the latter is typically faster.

You define the name and ID of a type member when you add that member to that type. If you define your type in IDL or XML, the name will be the field name that appears in the type definition; the ID will be the one-based index of the field in declaration order. For example, in the following IDL structure, the ID of `theLong` is 2.

```
struct MyNestedType {
```

```

char theChar;

octet theOctetArray[10];

long long theMultidimensionalArray[4][6][12];

sequence<long> myArrayOfSeq[8];

};

struct MyType {

    short theShort;

    long theLong;

    MyNestedType theNestedType;

};

```

For unions (**DDS\_TK\_UNION** (p. 86)), the ID of a member is the discriminator value corresponding to that member. To access the current discriminator of a union, you must use the **DDS\_DynamicData::get\_member\_info\_by\_index** (p. 810) operation on the DynamicData object using an index value of 0. This operation fills in a **DDS\_DynamicDataMemberInfo** (p. 893), then you can access the populated **DDS\_DynamicDataMemberInfo::member\_id** (p. 893) field to get the current discriminator. Once you know the value of the discriminator, you can use it in the proper get/set\_xxx() operations to access and set the member's value. Here is an example of accessing the discriminator:

```

DynamicDataMemberInfo memberInfo;

myDynamicData.get_member_info_by_index(memberInfo, 0);

DynamicDataMemberId discriminatorValue = memberInfo.member_id;

DDS_Long myMemberValue = myDynamicData.get_long(NULL, discriminatorValue);

```

### 9.58.2.1 Hierarchical Member Names

It is possible to refer to a nested member in a type without first having to use the **DDS\_DynamicData::bind\_complex\_member** (p. 803) API. You can do this by using a hierarchical name. A hierarchical member name is a concatenation of member names separated by the '.' character. The hierarchical name describes the complete path from a top-level type to the nested member. For example, in the above type, any DynamicData API that receives a member name will accept "theNestedType.theChar" to refer to the char member in MyNestedType:

```
char myChar = myDynamicData.get_char("theNestedType.theChar", DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
```

In order to access the value of theChar without using a hierarchical name, you would have to first bind to theNestedType and then get the value:

```
myDynamicData.bind_complex_member(myBoundData, "theNestedType", DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

DDS_Char myChar = myBoundData.get_char("theChar", DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
```

As you can see, using a hierarchical member name removes the need to call the **DDS\_DynamicData::bind\_complex\_member** (p. 803) and **DDS\_DynamicData::unbind\_complex\_member** (p. 805) APIs, and allows for access to nested members at any depth directly from the top-level type.

The member name can also contain indexes to address members in arrays and sequences. For example, to set the third member in the array theOctetArray, you can pass in "theNestedType.theOctetArray[2]" as the member name to the **DDS\_DynamicData::set\_octet** (p. 859) API. The index values when used as part of the member name are 0-based.

For multi-dimensional arrays, the indexes for each dimension should be listed comma-separated in between brackets. For example, to address a member of theMultidimensionalArray, the member name should be something like "theNestedType.theMultidimensionalArray[3,2,5]".

In complex types with arrays and sequences that contain other arrays and sequences, the hierarchical name may include multiple index values, one right after another. For example, in MyNestedType, myArrayOfSeq is an array of sequences. In order to set the third member of the sequence in the fourth member of the array, the member name would be "myNestedType.myArrayOfSeq[3][2]".

### 9.58.3 Arrays and Sequences

The "members" of array and sequence types, unlike those of structure and union types, don't have names or explicit member IDs. However, they may nevertheless be accessed by "ID": the ID is one more than the index. (The first element has ID 1, the second 2, etc.)

Multi-dimensional arrays are effectively flattened by this pattern. For example, for an array `theArray[4][5]`, accessing ID 7 is equivalent to index 6, or the second element of the second group of 5.

To determine the length of a collection-typed member of a structure or union, you have two choices:

1. Get the length along with the data: call the appropriate array accessor (see **Getters and Setters** (p. 786)) and check the resulting length.
2. Get the length without getting the data itself: call `DDS_DynamicData::get_member_info` (p. 808) and check the resulting `DDS_DynamicDataMemberInfo::element_count` (p. 894).

### 9.58.4 Available Functionality

The Dynamic Data API is large when measured by the number of methods it contains. But each method falls into one of a very small number of categories. You will find it easier to navigate this documentation if you understand these categories.

#### 9.58.4.1 Lifecycle and Utility Methods

Managing the lifecycle of `DDS_DynamicData` (p. 775) objects is simple. You have two choices:

1. Usually, you will go through a `DDSDynamicDataTypeSupport` (p. 1456) factory object, which will ensure that the type and property information for the new `DDS_DynamicData` (p. 775) object corresponds to a registered type in your system.
2. In certain advanced cases, such as when you're navigating a nested structure, you will want to have a `DDS_DynamicData` (p. 775) object that is not bound up front to any particular type, or you will want to initialize the object in a custom way. In that case, you can call the constructor directly.

Table 9.5 Lifecycle

<code>DDSDynamicDataTypeSupport</code> (p. 1456)	<code>DDS_DynamicData</code> (p. 775)
<code>DDSDynamicDataTypeSupport::create_data</code> (p. 1460)	<code>DDS_DynamicData::DDS_DynamicData(const DDS_TypeCode *, const DDS_DynamicDataProperty_t &amp;)</code> (p. 790)
<code>DDSDynamicDataTypeSupport::delete_data</code> (p. 1461)	<code>DDS_DynamicData::~DDS_DynamicData</code> (p. 791)

You can also copy `DDS_DynamicData` (p. 775) objects:

- `DDS_DynamicData::copy` (p. 792)
- `DDS_DynamicData::operator=` (p. 793)

You can test them for equality:

- `DDS_DynamicData::equal` (p. 793)
- `DDS_DynamicData::operator==` (p. 793)

And you can print their contents:

- `DDS_DynamicData::print` (p. 801)
- `DDSDynamicDataSupport::print_data` (p. 1461)

#### 9.58.4.2 Getters and Setters

Most methods get or set the value of some field. These methods are named according to the type of the field they access.

The names of types vary across languages. The programming API for each language reflects that programming language. However, if your chosen language does not use the same names as the language that you used to define your types (e.g., IDL), or if you need to interoperate among programming languages, you will need to understand these differences. They are explained the following table. (Note: for modern C++, see the RTI Connex Modern C++ API reference.)

**Table 9.6 Type Names Across Languages**

Type	IDL	C, Traditional C++	Java	Ada
16-bit integer	short	DDS_Short	short	Standard.DDS.↔ Short
32-bit integer	long	DDS_Long	int	Standard.DDS.Long
64-bit integer	long long	DDS_LongLong	long	Standard.DDS.↔ Long_Long
Unsigned 16-bit integer	unsigned short	DDS_Unsigned↔ Short	short	Standard.DDS.↔ Unsigned_Short
Unsigned 32-bit integer	unsigned long	DDS_Unsigned↔ Long	int	Standard.DDS.Long
Unsigned 64-bit integer	unsigned long long	DDS_Unsigned↔ LongLong	long	Standard.DDS.↔ Unsigned_Long_↔ Long
float	float	DDS_Float	float	Standard.DDS.Float
double	double	DDS_Double	double	Standard.DDS.↔ Double
long double	long double	DDS_LongDouble	N/A (see CORE-14091 known issue)	Standard.DDS.↔ Long_Double
character	char	DDS_Char	char	Standard.DDS.Char
wide character	wchar	DDS_Wchar	char	Standard.DDS.↔ Wchar

Type	IDL	C, Traditional C++	Java	Ada
octet	octet	DDS_Octet	byte	Standard.DDS.Octet
boolean	boolean	DDS_Boolean	boolean	Standard.DDS.↔ Boolean
string	string	DDS_Char*	String	Standard.DDS.↔ String
wstring	wstring	DDS_Wchar*	String	Standard.DDS.↔ Wide_String

When working with a **DDS\_DynamicData** (p. 775) object representing an array or sequence, calling one of the "get" methods below for an index that is out of bounds will result in **DDS\_RETCODE\_NO\_DATA** (p. 337). Calling "set" for an index that is past the end of a sequence will cause that sequence to automatically lengthen (filling with default contents).

When working with a **DDS\_DynamicData** (p. 775) object whose type contains optional members, calling one of the "get" methods below on an unset optional member or any member that is part of an unset complex optional member will result in **DDS\_RETCODE\_NO\_DATA** (p. 337).

Table 9.7 Basic Types

Get	Set
<b>DDS_DynamicData::get_long</b> (p. 812)	<b>DDS_DynamicData::set_long</b> (p. 853)
<b>DDS_DynamicData::get_ulong</b> (p. 814)	<b>DDS_DynamicData::set_ulong</b> (p. 854)
<b>DDS_DynamicData::get_short</b> (p. 813)	<b>DDS_DynamicData::set_short</b> (p. 854)

DDS_DynamicData::get_octet_array (p. 834)	DDS_DynamicData::set_octet_array (p. 874)
DDS_DynamicData::get_char_array (p. 833)	DDS_DynamicData::set_char_array (p. 873)
DDS_DynamicData::get_wchar_array (p. 838)	DDS_DynamicData::set_wchar_array (p. 877)

Table 9.10 Sequences of Basic Types

Get	Set
DDS_DynamicData::get_long_seq (p. 840)	DDS_DynamicData::set_long_seq (p. 880)
DDS_DynamicData::get_ulong_seq (p. 842)	DDS_DynamicData::set_ulong_seq (p. 881)
DDS_DynamicData::get_short_seq (p. 841)	DDS_DynamicData::set_short_seq (p. 880)
DDS_DynamicData::get_ushort_seq (p. 843)	DDS_DynamicData::set_ushort_seq (p. 882)
DDS_DynamicData::get_longlong_seq (p. 848)	DDS_DynamicData::set_longlong_seq (p. 887)
DDS_DynamicData::get_ulonglong_seq (p. 849)	DDS_DynamicData::set_ulonglong_seq (p. 888)
DDS_DynamicData::get_float_seq (p. 844)	DDS_DynamicData::set_float_seq (p. 883)
DDS_DynamicData::get_double_seq (p. 845)	DDS_DynamicData::set_double_seq (p. 884)
DDS_DynamicData::get_longdouble_seq (p. 850)	DDS_DynamicData::set_longdouble_seq (p. 888)
DDS_DynamicData::get_boolean_seq (p. 845)	DDS_DynamicData::set_boolean_seq (p. 884)
DDS_DynamicData::get_octet_seq (p. 847)	DDS_DynamicData::set_octet_seq (p. 886)
DDS_DynamicData::get_char_seq (p. 846)	DDS_DynamicData::set_char_seq (p. 885)
DDS_DynamicData::get_wchar_seq (p. 850)	DDS_DynamicData::set_wchar_seq (p. 889)

In addition to getting or setting a field, you can "clear" its value; that is, set it to a default zero value.

- `DDS_DynamicData::clear_all_members` (p. 794)
- `DDS_DynamicData::clear_optional_member` (p. 794)

#### 9.58.4.3 Query and Iteration

Not all components of your application will have static knowledge of all of the fields of your type. Sometimes, you will want to query meta-data about the fields that appear in a given data sample.

- **DDS\_DynamicData::get\_type** (p. 806)
- **DDS\_DynamicData::get\_type\_kind** (p. 806)
- **DDS\_DynamicData::get\_member\_type** (p. 810)
- **DDS\_DynamicData::get\_member\_info** (p. 808)
- **DDS\_DynamicData::get\_member\_count** (p. 806)
- **DDS\_DynamicData::get\_member\_info\_by\_index** (p. 810)
- **DDS\_DynamicData::member\_exists** (p. 807)
- **DDS\_DynamicData::member\_exists\_in\_type** (p. 808)
- **DDS\_DynamicData::is\_member\_key** (p. 811)

#### 9.58.4.4 Type/Object Association

Sometimes, you may want to change the association between a data object and its type. This is not something you can do with a typical object, but with **DDS\_DynamicData** (p. 775) objects, it is a powerful capability. It allows you to, for example, examine nested structures without copying them by using a "bound" **DDS\_DynamicData** (p. 775) object as a view into an enclosing **DDS\_DynamicData** (p. 775) object.

- **DDS\_DynamicData::bind\_type** (p. 802)
- **DDS\_DynamicData::unbind\_type** (p. 803)
- **DDS\_DynamicData::bind\_complex\_member** (p. 803)
- **DDS\_DynamicData::unbind\_complex\_member** (p. 805)

#### 9.58.4.5 Performance Considerations

By default, a DynamicData object stores its content in an implementation-specific representation that allows getting and setting its fields by name or ID.

When a sample is received, the CDR-formatted data is deserialized into this buffer.

When a sample is published, the data is serialized into CDR from the buffer and sent to the network.

However, there are scenarios where DynamicData is used for purposes that don't involve manipulating the object's content directly. Two common examples are:

- **Recording/Replaying:** Storing samples in persistent storage for later analysis or replay.
- **Bridging:** Transferring samples from one domain to another by transmitting samples received with a DynamicDataReader to another domain using a DynamicDataWriter.

RTI provides dedicated services, namely RTI Recording Service and RTI Routing Service, to address these use cases. However, in certain situations, you might be unable to utilize these services.

For scenarios where inspecting or modifying the content of DynamicData fields is unnecessary, DynamicData offers a high-performance method to configure a DataReader to avoid deserializing incoming samples into the internal representation. Additionally, the DynamicData API provides a method to link a CDR-formatted serialization buffer directly with a DynamicData object, facilitating direct transmission without converting the data from the internal representation to CDR.

To skip the deserialization of a DynamicData object on the DataReader side, you can set the field **DDS\_DynamicData::DataSerializationProperty\_t::skip\_deserialization** (p. 899) to **DDS\_BOOLEAN\_TRUE** (p. 317).

Once a sample is received, you can access the serialized buffer directly by using the **DDS\_DynamicData::get\_cdr\_buffer** (p. 796). This buffer can be stored in persistent storage in a Recording/Replaying use case.

To link a serialization buffer directly with a DynamicData object, you can use the **DDS\_DynamicData::set\_cdr\_buffer** (p. 797) method. This method allows you to set the buffer that will be used to serialize the DynamicData object when it is published.

#### MT Safety:

**UNSAFE.** In general, using a single **DDS\_DynamicData** (p. 775) object concurrently from multiple threads is *unsafe*.

#### Examples

**HelloWorldPlugin.cxx.**

## 9.58.5 Constructor & Destructor Documentation

### 9.58.5.1 DDS\_DynamicData()

```
DDS_DynamicData::DDS_DynamicData (
    const DDS_TypeCode * type,
    const DDS_DynamicDataProperty_t & property )
```

The constructor for new **DDS\_DynamicData** (p. 775) objects.

The type parameter may be NULL. In that case, this **DDS\_DynamicData** (p. 775) must be *bound* with **DDS\_DynamicData::bind\_type** (p. 802) or **DDS\_DynamicData::bind\_complex\_member** (p. 803) before it can be used.

If the **DDS\_TypeCode** (p. 1164) is not NULL, the newly constructed **DDS\_DynamicData** (p. 775) object will retain a reference to it. It is *not* safe to delete the **DDS\_TypeCode** (p. 1164) until all samples that use it have themselves been deleted.

In most cases, it is not necessary to call this constructor explicitly. Instead, use **DDSDynamicDataSupport::create\_data** (p. 1460), and the **DDS\_TypeCode** (p. 1164) and properties will be specified for you. Using the factory method also ensures that the memory management contract documented above is followed correctly, because the **DDSDynamicDataSupport** (p. 1456) object maintains the **DDS\_TypeCode** (p. 1164) used by the samples it creates.

However you create a **DDS\_DynamicData** (p. 775) object, you must delete it when you are finished with it. If you choose to use this constructor, delete the object with the destructor: **DDS\_DynamicData::~DDS\_DynamicData** (p. 791).

```
DDS_DynamicData* sample = new DDS_DynamicData(
    myType, myProperties);
// Failure indicated by is_valid() method.
// Do something...
delete sample;
```

**NOTE** that RTI Connexx does not explicitly generate any exceptions in this constructor, because C++ exception support is not consistent across all platforms on which RTI Connexx runs. Therefore, to check whether construction succeeded, you must use the **DDS\_DynamicData::is\_valid** (p. 791) method. Alternatively, you can create an **DDS\_DynamicData** (p. 775) object with **DDSDynamicDataSupport::create\_data** (p. 1460), which returns NULL on failure, eliminating the need to call **DDS\_DynamicData::is\_valid** (p. 791).

#### Parameters

<i>type</i>	<< <i>in</i> >> (p. 238) The type of which the new object will represent an object.
<i>property</i>	<< <i>in</i> >> (p. 238) Properties that configure the behavior of the new object. Most users can simply use <b>DDS_DYNAMIC_DATA_PROPERTY_DEFAULT</b> (p. 102).

#### See also

- DDS\_DynamicData::is\_valid** (p. 791)
- DDS\_DynamicData::~DDS\_DynamicData** (p. 791)
- DDSDynamicDataSupport::create\_data** (p. 1460)

#### 9.58.5.2 ~DDS\_DynamicData()

```
DDS_DynamicData::~DDS_DynamicData ( )
```

Finalize and deallocate this **DDS\_DynamicData** (p. 775) sample.

#### MT Safety:

UNSAFE.

#### See also

- DDS\_DynamicData::DDS\_DynamicData(const DDS\_TypeCode \*, const DDS\_DynamicDataProperty\_t &)** (p. 790)

## 9.58.6 Member Function Documentation

### 9.58.6.1 is\_valid()

```
DDS_Boolean DDS_DynamicData::is_valid ( ) const
```

Indicates whether the object was constructed properly.

This method returns **DDS\_BOOLEAN\_TRUE** (p. 317) if the constructor succeeded; it returns **DDS\_BOOLEAN\_FALSE** (p. 317) if the constructor failed for any reason, which should also have resulted in a log message. It is only necessary to call this method if you created the **DDS\_DynamicData** (p. 775) object using the constructor, **DDS\_DynamicData::↔ DDS\_DynamicData(const DDS\_TypeCode \*, const DDS\_DynamicDataProperty\_t &)** (p. 790).

Possible failure reasons include passing an invalid type or invalid properties to the constructor.

This method is necessary because C++ exception support is not consistent across all of the platforms on which RTI Connext runs. Therefore, the implementation does not throw any exceptions in the constructor.

#### MT Safety:

UNSAFE.

**DDS\_DynamicData::DDS\_DynamicData(const DDS\_TypeCode \*, const DDS\_DynamicDataProperty\_t &)** (p. 790)

### 9.58.6.2 copy()

```
DDS_ReturnCode_t DDS_DynamicData::copy (
    const DDS_DynamicData & src )
```

Deeply copy from the given object to this object.

#### MT Safety:

UNSAFE.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

See also

**DDS\_DynamicData::operator=** (p. 793)

### 9.58.6.3 equal()

```
DDS_Boolean DDS_DynamicData::equal (
    const DDS_DynamicData & other ) const
```

Indicate whether the contents of another **DDS\_DynamicData** (p. 775) sample are the same as those of this one.

This operation compares the data and type of existing members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 317). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

**MT Safety:**

UNSAFE.

See also

**DDS\_DynamicData::operator==** (p. 793)

### 9.58.6.4 operator=()

```
DDS_DynamicData & DDS_DynamicData::operator= (
    const DDS_DynamicData & src )
```

Deeply copy from the given object to this object.

**MT Safety:**

UNSAFE.

See also

**DDS\_DynamicData::copy** (p. 792)

### 9.58.6.5 operator==( )

```
DDS_Boolean DDS_DynamicData::operator== (
    const DDS_DynamicData & other ) const
```

Indicate whether the contents of another **DDS\_DynamicData** (p. 775) sample are the same as those of this one.

This operation compares the data and type of existing members.

#### MT Safety:

UNSAFE.

#### See also

**DDS\_DynamicData::equal** (p. 793)

### 9.58.6.6 clear\_all\_members()

```
DDS_ReturnCode_t DDS_DynamicData::clear_all_members ( )
```

Clear the contents of all data members of this object.

#### MT Safety:

UNSAFE.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### See also

**DDS\_DynamicData::clear\_optional\_member** (p. 794)

### 9.58.6.7 clear\_optional\_member()

```
DDS_ReturnCode_t DDS_DynamicData::clear_optional_member (
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single optional data member of this object.

This method is only applicable to optional members. Members of unions, sequences, and arrays are not considered optional.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member (to look up the member by name), or NULL (to look up the member by its ID).
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member (to look up the member by its ID), or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) (to look up the member by name). See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDS\_DynamicData::clear\_all\_members** (p. 794)

#### 9.58.6.8 clear\_member()

```
DDS_ReturnCode_t DDS_DynamicData::clear_member (
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single data member of this object.

This method can be used to clear both optional and non-optional members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member to clear or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member to clear or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DynamicData::clear\_all\_members** (p. 794)

## 9.58.6.9 is\_cdr()

```
DDS_Boolean DDS_DynamicData::is_cdr ( ) const
```

Determine if a DynamicData object is using CDR as its data representation.

This method returns **DDS\_BOOLEAN\_TRUE** (p. 317) if the DynamicData object is using CDR as its data representation, and **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

When the DynamicData object is using CDR as its data representation, many of the DynamicData APIs cannot be used. The DynamicData object will use CDR as its data representation when **DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 899) has been set to **DDS\_BOOLEAN\_TRUE** (p. 317) or **DDS\_DynamicData::set\_cdr\_buffer** (p. 797) has been used to associate a CDR buffer with the DynamicData object. See each functions's documentation for whether or not the function is supported for DynamicData objects in CDR format.

## See also

**DDS\_DynamicData::get\_cdr\_buffer** (p. 796)

**DDS\_DynamicData::set\_cdr\_buffer** (p. 797)

**DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 899)

### 9.58.6.10 get\_cdr\_buffer()

```
const char * DDS_DynamicData::get_cdr_buffer (
    DDS_UnsignedLong & length ) const
```

Get the CDR buffer associated with a DynamicData object.

This method returns the CDR buffer associated with a DynamicData object.

If the DynamicData object is not using CDR as its data representation, this method will return NULL and log an error.

To configure a DynamicData DataReader to not deserialize the incoming samples and keep the data in CDR format, you must set the configuration option **DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 899) to **DDS\_BOOLEAN\_TRUE** (p. 317).

#### MT Safety:

UNSAFE.

#### Parameters

<i>length</i>	<< <b>out</b> >> (p. 238) CDR buffer length.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.58.6.11 set\_cdr\_buffer()

```
DDS_ReturnCode_t DDS_DynamicData::set_cdr_buffer (
    const char * buffer,
    DDS_UnsignedLong length )
```

Associate a CDR buffer with a DynamicData object.

This method associates a CDR buffer with a DynamicData object.

In this context, 'associates' means that the DynamicData object will use the input buffer to store its value. Additionally, if the buffer is loaned, the application is responsible for keeping it alive.

If the DynamicData is owned by the reader, this method will return an error.

#### MT Safety:

UNSAFE.

## Parameters

<i>buffer</i>	<< <i>in</i> >> (p. 238) CDR buffer.
<i>length</i>	<< <i>in</i> >> (p. 238) CDR buffer length.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

9.58.6.12 `from_cdr_buffer()`

```
DDS_ReturnCode_t DDS_DynamicData::from_cdr_buffer (
    const char * buffer,
    unsigned int length )
```

Deserializes a DynamicData object from a buffer of octets.

This method deserializes a DynamicData object from a CDR buffer of octets.

The content of the buffer generated by the method `DDS_DynamicData::to_cdr_buffer` (p. 798) can be provided to this method to get the DynamicData object back.

This API is not supported when the DynamicData object is in CDR format and will fail with `DDS_RETCODE_↔PRECONDITION_NOT_MET` (p. 336). See `DDS_DynamicData::is_cdr` (p. 796) for more information.

## Parameters

<i>buffer</i>	<< <i>in</i> >> (p. 238). Deserialization buffer.
<i>length</i>	<< <i>in</i> >> (p. 238). Length of the serialized representation of the DynamicData object in the buffer.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

9.58.6.13 `to_cdr_buffer()`

```
DDS_ReturnCode_t DDS_DynamicData::to_cdr_buffer (
    char * buffer,
    unsigned int & length )
```

Serializes a DynamicData object into a CDR buffer of octets.

This method serializes a DynamicData object into a buffer of octets, using CDR as the data representation. Calling this method is equivalent to calling `DDS_DynamicData::to_cdr_buffer_ex` (p. 799) with `DDS_AUTO_DATA_↔ REPRESENTATION` (p. 371) as the representation.

The input buffer must be large enough to store the serialized representation of the DynamicData object. Otherwise, the method will return an error code.

To determine the minimum size of the input buffer, you must call this method with the buffer set to NULL.

#### Parameters

<i>buffer</i>	<< <b>out</b> >> (p. 238). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 238). When the buffer is set to NULL, after the method executes, length will contain the required size for the serialization buffer. When buffer is not NULL, length must contain the size of the input buffer when the method is invoked. After the method executes, length will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when <i>buffer</i> is set to NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### 9.58.6.14 to\_cdr\_buffer\_ex()

```
DDS_ReturnCode_t DDS_DynamicData::to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    DDS_DataRepresentationId_t representation )
```

Serializes a DynamicData object into a buffer of octets.

This method serializes a DynamicData object into a buffer of octets using the input data representation. See `DDS_↔ DynamicData::to_cdr_buffer` (p. 798) for details.

#### Parameters

<i>buffer</i>	<< <b>out</b> >> (p. 238). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 238). Serialization buffer length.
<i>representation</i>	<< <b>in</b> >> (p. 238). Representation used to serialize the data

#### 9.58.6.15 to\_string()

```
DDS_ReturnCode_t DDS_DynamicData::to_string (
    char * str,
```

```

    DDS_UnsignedLong & str_size,
    const DDS_PrintFormatProperty & property )

```

Get a string representation of a DynamicData object.

This method takes a dynamic data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the method will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS\_↔ RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### Parameters

<i>str</i>	<< <b>out</b> >> (p. 238). Output string representing the dynamic data sample.
<i>str_size</i>	<< <b>inout</b> >> (p. 238). When <i>str</i> is set to NULL, after the method executes, <i>str_size</i> will contain a buffer size big enough to hold the string representation of the data. When <i>str</i> is not NULL, <i>str_size</i> must contain the size of the input buffer when the method is invoked. If the size of the input buffer is too small, after the method executes, <i>str_size</i> will be updated to contain the required size of the string content and the method will return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
<i>property</i>	<< <b>in</b> >> (p. 238). Properties describing what the format of the output string should be. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

### 9.58.6.16 from\_string()

```

DDS_ReturnCode_t DDS_DynamicData::from_string (
    const char * str,
    DDS_PrintFormatKind format_kind )

```

Populates a DynamicData object from a JSON string representation.

This method takes a JSON string representing a data sample of this type, and uses it to populate this DynamicData.

#### Parameters

<i>str</i>	<< <b>in</b> >> (p. 238). The JSON string representation
<i>format_kind</i>	<< <b>in</b> >> (p. 238). Must be set to <b>DDS_JSON_PRINT_FORMAT</b> (p. 65), the only currently supported format.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
-----	--

## 9.58.6.17 print()

```
DDS_ReturnCode_t DDS_DynamicData::print (
    FILE * fp,
    int indent ) const
```

Output a textual representation of this object and its contents to the given file.

This method is equivalent to **DDSDynamicDataSupport::print\_data** (p. 1461).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## Precondition

The type must be an aggregation or collection. That is, its **DDS\_TCKind** (p. 86) must be one of: **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_VALUE** (p. 86), **DDS\_TK\_UNION** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86) or **DDS\_TK\_ARRAY** (p. 86), otherwise this function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## MT Safety:

UNSAFE.

## Parameters

<i>fp</i>	<< <i>in</i> >> (p. 238) The file into which the object should be printed (to print to standard output, provide the stream pointer 'stdout')
<i>indent</i>	<< <i>in</i> >> (p. 238) The output of this method will be pretty-printed. This argument indicates the amount of initial indentation of the output.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSDynamicDataSupport::print\_data** (p. 1461)

### 9.58.6.18 get\_info()

```
void DDS_DynamicData::get_info (
    DDS_DynamicDataInfo & info_out ) const
```

Fill in the given descriptor with information about this **DDS\_DynamicData** (p. 775).

This API is not supported when the DynamicData object is in CDR format and will print an error log. See **DDS\_↔ DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>info_out</i>	<<out>> (p. 238) The descriptor object whose contents will be overwritten by this operation.
-----------------	--

### 9.58.6.19 bind\_type()

```
DDS_ReturnCode_t DDS_DynamicData::bind_type (
    const DDS_TypeCode * type )
```

If this **DDS\_DynamicData** (p. 775) object is not yet associated with a data type, set that type now to the given **DDS\_↔ TypeCode** (p. 1164).

This advanced operation allows you to reuse a single **DDS\_DynamicData** (p. 775) object with multiple data types.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

```
DDS_DynamicData* myData = new DDS_DynamicData(NULL, myProperties);
```

```
DDS_TypeCode* myType = ...;
```

```
myData->bind_type(myType);
```

```
// Do something...
```

```
myData->unbind_type();
```

```
delete myData;
```

Note that the **DDS\_DynamicData** (p. 775) object will retain a reference to the **DDS\_TypeCode** (p. 1164) object you provide. It is *not* safe to delete the **DDS\_TypeCode** (p. 1164) until after it is unbound.

#### MT Safety:

UNSAFE.

## Parameters

<i>type</i>	<< <i>in</i> >> (p. 238) The type to associate with this <b>DDS_DynamicData</b> (p. 775) object.
-------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DynamicData::unbind\_type** (p. 803)

## 9.58.6.20 unbind\_type()

```
DDS_ReturnCode_t DDS_DynamicData::unbind_type ( )
```

Dissociate this **DDS\_DynamicData** (p. 775) object from any particular data type.

This step is necessary before the object can be associated with a new data type.

This operation clears all members as a side effect.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DynamicData::bind\_type** (p. 802)

**DDS\_DynamicData::clear\_all\_members** (p. 794)

## 9.58.6.21 bind\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData::bind_complex_member (
    DDS_DynamicData & value_out,
```

```
const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Use another **DDS\_DynamicData** (p. 775) object to provide access to a complex field of this **DDS\_DynamicData** (p. 775) object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

For example, consider the following data types:

```
struct MyFieldType {
    float theFloat;
};

struct MyOuterType {
    MyFieldType complexMember;
};
```

Suppose you have an instance of `MyOuterType`, and you would like to examine the contents of its member `complexMember`. To do this, you must *bind* another **DDS\_DynamicData** (p. 775) object to that member. This operation will bind the type code of the member to the provided **DDS\_DynamicData** (p. 775) object and perform additional initialization.

The following example demonstrates the usage pattern. Note that error handling has been omitted for brevity.

```
DDS_DynamicData outer = ...;

DDS_DynamicData toBeBound(NULL, myProperties);

outer.bind_complex_member(
    toBeBound,
    "complexMember",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

float theFloatValue = 0.0f;

toBeBound.get_float(
    theFloat,
    "theFloat"
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

outer.unbind_complex_member(toBeBound);
```

This operation is only permitted when the object `toBeBound` (named as in the example above) is not currently associated with any type, including already being bound to another member. You can see in the example that this object is created directly with the constructor and is not provided with a **DDS\_TypeCode** (p. 1164).

Only a single member of a given **DDS\_DynamicData** (p. 775) object may be bound at one time – however, members of members may be recursively bound to any depth. Furthermore, while the outer object has a bound member, it may only be modified through that bound member. That is, after calling this member, all "set" operations on the outer object will be disabled until **DDS\_DynamicData::unbind\_complex\_member** (p. 805) has been called. Furthermore, any bound member must be unbound before a sample can be written or deleted.

This method is logically related to **DDS\_DynamicData::get\_complex\_member** (p. 826) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a view into an outer

object, such that any change made to the inner object will be reflected in the outer. But the **DDS\_DynamicData::get\_↔\_complex\_member** (p. 826) operation *copies* the state of the nested object; changes to it will not be reflected in the source object.

*Note* that you can bind to a member of a sequence at an index that is past the current length of that sequence. In that case, this method behaves like a "set" method: it automatically lengthens the sequence (filling in default elements) to allow the bind to take place. See **Getters and Setters** (p. 786).

MT Safety:

UNSAFE.

Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) The object that you wish to bind to the field.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDS\_DynamicData::unbind\_complex\_member** (p. 805)

**DDS\_DynamicData::get\_complex\_member** (p. 826)

### 9.58.6.22 unbind\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData::unbind_complex_member (
    DDS_DynamicData & value )
```

Tear down the association created by a **DDS\_DynamicData::bind\_complex\_member** (p. 803) operation, committing any changes to the outer object since then.

Some changes to the outer object will not be observable until after you have performed this operation.

If you have called **DDS\_DynamicData::bind\_complex\_member** (p. 803) on a data sample, you must unbind before writing or deleting the sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>value</i>	<< <i>in</i> >> (p. 238) The same object you passed to <b>DDS_DynamicData::bind_complex_member</b> (p. 803). This argument is used for error checking purposes.
--------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::bind\_complex\_member** (p. 803)

**9.58.6.23 get\_type()**

```
const DDS_TypeCode * DDS_DynamicData::get_type ( ) const
```

Get the data type, of which this **DDS\_DynamicData** (p. 775) represents an instance.

## MT Safety:

UNSAFE.

**9.58.6.24 get\_type\_kind()**

```
DDS_TCKind DDS_DynamicData::get_type_kind ( ) const
```

Get the kind of this object's data type.

This is a convenience method. It's equivalent to calling **DDS\_DynamicData::get\_type** (p. 806) followed by **DDS\_↔TypeCode::kind** (p. 1168).

## MT Safety:

UNSAFE.

### 9.58.6.25 get\_member\_count()

```
DDS_UnsignedLong DDS_DynamicData::get_member_count ( ) const
```

Get the number of members in the type.

For objects of type kind **DDS\_TK\_ARRAY** (p. 86) or **DDS\_TK\_SEQUENCE** (p. 86), this method returns the number of elements in the collection.

For objects of type kind **DDS\_TK\_STRUCT** (p. 86) or **DDS\_TK\_VALUE** (p. 86), it returns the number of fields in the type.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

See also

**DDS\_DynamicData::get\_member\_info\_by\_index** (p. 810)

### 9.58.6.26 member\_exists()

```
DDS_Boolean DDS_DynamicData::member_exists (
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Indicates whether a member exists in this sample.

You only need to specify the name OR the ID (not both).

If the member doesn't exist in the type, this function returns false. In all other cases, it provides the same result as **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894), which is retrieved with **idref\_DynamicDataMember\_get\_↔member\_info**.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 317). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## See also

**DDS\_DynamicData::member\_exists\_in\_type** (p. 808)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

## 9.58.6.27 member\_exists\_in\_type()

```
DDS_Boolean DDS_DynamicData::member_exists_in_type (
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Indicates whether a member of a particular name/ID exists in this data sample's type.

You only need to specify the name OR the ID (not both).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 317). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## See also

**DDS\_DynamicData::member\_exists** (p. 807)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

## 9.58.6.28 get\_member\_info()

```
DDS_ReturnCode_t DDS_DynamicData::get_member_info (
    DDS_DynamicDataMemberInfo & info,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 775) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

This operation is valid for objects of **DDS\_TCKind** (p. 86) **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86), and **DDS\_TK\_VALUE** (p. 86).

## MT Safety:

UNSAFE.

When this sample represents a struct, a value type, or a union:

- If the specified member is not defined in the type, this function fails with **DDS\_RETCODE\_NO\_DATA** (p. 337).
- If the specified member is defined in the type but doesn't exist in this data sample, this function returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894) set to false.
- If the specified member is defined in the type and exists in this data sample, **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894) is true.

When this sample represents a sequence and `member_id` is the 1-based element index:

- If `member_id` is greater than the sequence's maximum length, this function fails with **DDS\_RETCODE\_NO\_DATA** (p. 337).
- If `member_id` is greater than the sequence's current length but smaller than or equal to its maximum length, this function returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894) set to false.
- If `member_id` is smaller than or equal to the current length, **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894) is true.

When this sample represents an array, this function either fails with **DDS\_RETCODE\_NO\_DATA** (p. 337) when the index is out of bounds or else returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 894) set to true.

## Parameters

<i>info</i>	<< <b>out</b> >> (p. 238) The descriptor object whose contents will be overwritten by this operations.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member for which to get the info or NULL to look up the member by its ID. Only one of the name and the ID may be unspecified.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member for which to get the info, or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DynamicData::get\_member\_info\_by\_index** (p. 810)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

9.58.6.29 **get\_member\_info\_by\_index()**

```
DDS_ReturnCode_t DDS_DynamicData::get_member_info_by_index (
    struct DDS_DynamicDataMemberInfo & info,
    DDS_UnsignedLong index ) const
```

Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 775) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

This operation is valid for objects of **DDS\_TCKind** (p. 86) **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_VALUE** (p. 86), and **DDS\_TK\_UNION** (p. 86).

## MT Safety:

UNSAFE.

## Parameters

<i>info</i>	<< <b>out</b> >> (p. 238) The descriptor object whose contents will be overwritten by this operations.
<i>index</i>	<< <b>in</b> >> (p. 238) The zero-base of the member for which to get the info.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DynamicData::get\_member\_info** (p. 808)

**DDS\_DynamicData::get\_member\_count** (p. 806)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

### 9.58.6.30 get\_member\_type()

```
DDS_ReturnCode_t DDS_DynamicData::get_member_type (
    const DDS_TypeCode *& type_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the type of the given member of this sample.

The member can be looked up either by name or by ID.

This operation is valid for objects of **DDS\_TCKind** (p. 86) **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), and **DDS\_TK\_VALUE** (p. 86). For type kinds **DDS\_TK\_ARRAY** (p. 86) and **DDS\_TK\_SEQUENCE** (p. 86), the index into the collection is taken to be one less than the ID, if specified. If this index is valid, this operation will return the content type of this collection.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>type_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument refers to the found member's type.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_DynamicData::get\_member\_info** (p. 808)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 101)

### 9.58.6.31 is\_member\_key()

```
DDS_ReturnCode_t DDS_DynamicData::is_member_key (
    DDS_Boolean & is_key_out,
```

```
const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Indicates whether a given member forms part of the key of this sample's data type.

This operation is only valid for samples of types of kind **DDS\_TK\_STRUCT** (p. 86) or **DDS\_TK\_VALUE** (p. 86).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>is_key_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument indicates whether the indicated member is part of the key.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.58.6.32 get\_long()

```
DDS_ReturnCode_t DDS_DynamicData::get_long (
    DDS_Long & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Long** (p. 318) or another type implicitly convertible to it (**DDS\_↔Octet** (p. 317), **DDS\_Char** (p. 317), **DDS\_Short** (p. 318), **DDS\_UnsignedShort** (p. 318), or **DDS\_Enum** (p. 320)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## See also

**DDS\_DynamicData::set\_long** (p. 853)

## 9.58.6.33 get\_short()

```
DDS_ReturnCode_t DDS_DynamicData::get_short (
    DDS_Short & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Short** (p. 318) or another type implicitly convertible to it (**DDS\_↔Octet** (p. 317) or **DDS\_Char** (p. 317)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_short** (p. 854)

### 9.58.6.34 get\_ulong()

```
DDS_ReturnCode_t DDS_DynamicData::get_ulong (
    DDS_UnsignedLong & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_UnsignedLong** (p. 318) or another type implicitly convertible to it (**DDS\_Octet** (p. 317), **DDS\_Char** (p. 317), **DDS\_Short** (p. 318), **DDS\_UnsignedShort** (p. 318), or **DDS\_Enum** (p. 320)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_ulong** (p. 854)

### 9.58.6.35 get\_ushort()

```
DDS_ReturnCode_t DDS_DynamicData::get_ushort (
    DDS_UnsignedShort & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_UnsignedShort** (p. 318) or another type implicitly convertible to it (**DDS\_Octet** (p. 317) or **DDS\_Char** (p. 317)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_ushort** (p. 855)

### 9.58.6.36 get\_float()

```
DDS_ReturnCode_t DDS_DynamicData::get_float (
    DDS_Float & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Float** (p. 319).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

#### See also

**DDS\_DynamicData::set\_float** (p. 856)

### 9.58.6.37 get\_double()

```
DDS_ReturnCode_t DDS_DynamicData::get_double (
    DDS_Double & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Double** (p. 319) or another type implicitly convertible to it (**DDS\_↔\_Float** (p. 319)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_double** (p. 857)

### 9.58.6.38 get\_boolean()

```
DDS_ReturnCode_t DDS_DynamicData::get_boolean (
    DDS_Boolean & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Boolean** (p. 320).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
Generated by Doxygen	

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## See also

**DDS\_DynamicData::set\_boolean** (p. 857)

**9.58.6.39 get\_char()**

```
DDS_ReturnCode_t DDS_DynamicData::get_char (
    DDS_Char & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Char** (p. 317).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)

### 9.58.6.41 get\_longlong()

```
DDS_ReturnCode_t DDS_DynamicData::get_longlong (
    DDS_LongLong & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_LongLong** (p. 319) or another type implicitly convertible to it (**DDS\_Octet** (p. 317), **DDS\_Char** (p. 317), **DDS\_Short** (p. 318), **DDS\_UnsignedShort** (p. 318), **DDS\_Long** (p. 318), **DDS\_UnsignedLong** (p. 318), or **DDS\_Enum** (p. 320)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

#### 9.58.6.42 get\_ulonglong()

```
DDS_ReturnCode_t DDS_DynamicData::get_ulonglong (
    DDS_UnsignedLongLong & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 319) or another type implicitly convertible to it (**DDS\_Octet** (p. 317), **DDS\_Char** (p. 317), **DDS\_Short** (p. 318), **DDS\_UnsignedShort** (p. 318), **DDS\_Long** (p. 318), **DDS\_UnsignedLong** (p. 318), or **DDS\_Enum** (p. 320)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## See also

## 9.58.6.43 get\_longdouble()

```
DDS_ReturnCode_t DDS_DynamicData::get_longdouble (
    DDS_LongDouble & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_LongDouble** (p. 319) or another type implicitly convertible to it (**DDS\_Float** (p. 319) or **DDS\_Double** (p. 319)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_longdouble** (p. 861)

### 9.58.6.44 get\_wchar()

```
DDS_ReturnCode_t DDS_DynamicData::get_wchar (
    DDS_Wchar & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Wchar** (p. 317) or another type implicitly convertible to it (**DDS\_↔\_Char** (p. 317)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

[DDS\\_DynamicData::set\\_wchar](#) (p. 862)

#### 9.58.6.45 get\_string()

```
DDS_ReturnCode_t DDS_DynamicData::get_string (
    char *& value,
    DDS_UnsignedLong * size,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type char\*.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See [DDS\\_DynamicData::is\\_cdr](#) (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>value</i>	<< <b>out</b> >> (p. 238) The string into which the middleware should copy the string member. The allocated size of this string is indicated by <i>size</i> argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If <i>value</i> is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will <i>not</i> free your string; instead, this operation will fail and <i>size</i> will contain the minimum required size.
<i>size</i>	<< <b>inout</b> >> (p. 238) As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

### 9.58.6.46 get\_wstring()

```
DDS_ReturnCode_t DDS_DynamicData::get_wstring (
    DDS_Wchar *& value,
    DDS_UnsignedLong * size,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Wchar** (p. 317)\*.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>value</i>	<< <b>out</b> >> (p. 238) The string into which the middleware should copy the string member. The allocated size of this string is indicated by <i>size</i> argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If <i>value</i> is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will <i>not</i> free your string; instead, this operation will fail and <i>size</i> will contain the minimum required size.
<i>size</i>	<< <b>inout</b> >> (p. 238) As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

### 9.58.6.47 get\_int8()

```
DDS_ReturnCode_t DDS_DynamicData::get_int8 (
    DDS_Int8 & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_Int8** (p. 318).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_int8** (p. 864)

### 9.58.6.48 get\_uint8()

```
DDS_ReturnCode_t DDS_DynamicData::get_uint8 (
    DDS_UInt8 & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get the value of the given field, which is of type **DDS\_UInt8** (p. 318).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>value_out</i>	<< <b>out</b> >> (p. 238) If this method returned success, this argument will contain the value of the indicated member.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

#### See also

**DDS\_DynamicData::set\_uint8** (p. 864)

### 9.58.6.49 get\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData::get_complex_member (
    DDS_DynamicData & value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the value of the given field, which is of some composed type.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

The member may be of type kind **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_VALUE** (p. 86), or **DDS\_TK\_UNION** (p. 86). It may be specified by name or by ID.

This method is logically related to **DDS\_DynamicData::bind\_complex\_member** (p. 803) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a *copy* of the data; changes to it will not be reflected in the source object.

MT Safety:

UNSAFE.

#### Parameters

<i>value_out</i>	<< <i>out</i> >> (p. 238) The <b>DDS_DynamicData</b> (p. 775) sample whose contents will be overwritten by this operation. This object must <i>not</i> be a bound member of another <b>DDS_DynamicData</b> (p. 775) sample.
<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

See also

**DDS\_DynamicData::set\_complex\_member** (p. 865)

**DDS\_DynamicData::bind\_complex\_member** (p. 803)

#### 9.58.6.50 get\_long\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_long_array (
    DDS_Long * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member. The array may contain members of type **DDS\_Long** (p. 318) or **DDS\_Enum** (p. 320).

This method will perform an automatic conversion from **DDS\_LongSeq** (p. 948).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the `DynamicData` object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_long\_array** (p. 867)

**DDS\_DynamicData::get\_long\_seq** (p. 840)

#### 9.58.6.51 get\_short\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_short_array (
    DDS_Short * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_ShortSeq** (p. 1101).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the `DynamicData` object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## See also

**DDS\_DynamicData::set\_short\_array** (p. 868)

## 9.58.6.52 get\_ulong\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_ulong_array (
    DDS_UnsignedLong * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 318) or **DDS\_Enum** (p. 320).

This method will perform an automatic conversion from **DDS\_UnsignedLongSeq** (p. 1237).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member</b>

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## See also

**DDS\_DynamicData::set\_ulong\_array** (p. 868)

**DDS\_DynamicData::get\_ulong\_seq** (p. 842)

9.58.6.53 **get\_ushort\_array()**

```
DDS_ReturnCode_t DDS_DynamicData::get_ushort_array (
    DDS_UnsignedShort * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_UnsignedShortSeq** (p. 1237).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <code>array</code> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

### 9.58.6.54 get\_float\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_float_array (
    DDS_Float * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_FloatSeq** (p. 912).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_float\_array** (p. 870)

**DDS\_DynamicData::get\_float\_seq** (p. 844)

### 9.58.6.55 get\_double\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_double_array (
    DDS_Double * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_DoubleSeq** (p. 767).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

#### See also

**DDS\_DynamicData::set\_double\_array** (p. 871)

## 9.58.6.56 get\_boolean\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_boolean_array (
    DDS_Boolean * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_BooleanSeq** (p. 604).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

See also

**DDS\_DynamicData::set\_boolean\_array** (p. 872)

**DDS\_DynamicData::get\_boolean\_seq** (p. 845)

## 9.58.6.57 get\_char\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_char_array (
    DDS_Char * array,
```

```

    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const

```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_CharSeq** (p. 613).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔  
PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

#### See also

**DDS\_DynamicData::set\_char\_array** (p. 873)

**DDS\_DynamicData::get\_char\_seq** (p. 846)

#### 9.58.6.58 get\_octet\_array()

```

DDS_ReturnCode_t DDS_DynamicData::get_octet_array (
    DDS_Octet * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const

```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_OctetSeq** (p. 969).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_← PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

### 9.58.6.59 get\_longlong\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_longlong_array (
    DDS_LongLong * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_LongLongSeq** (p. 947).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_← PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)

### 9.58.6.64 get\_uint8\_array()

```
DDS_ReturnCode_t DDS_DynamicData::get_uint8_array (
    DDS_UInt8 * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_UInt8Seq** (p. 1234).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>array</i>	<< <b>out</b> >> (p. 238) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 238) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337)
------------	---

## 9.58.6.65 get\_long\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::get_long_seq (
    DDS_LongSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Long** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>seq</i>	<< <b>out</b> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

```
DDS_ReturnCode_t DDS_DynamicData::get_short_seq (
    DDS_ShortSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Short** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>seq</i>	<< <i>out</i> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

9.58.6.74 `get_longlong_seq()`

```
DDS_ReturnCode_t DDS_DynamicData::get_longlong_seq (
    DDS_LongLongSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_LongLong** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>seq</i>	<< <b>out</b> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

## 9.58.6.75 get\_ulonglong\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::get_ulonglong_seq (
    DDS_UnsignedLongLongSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UnsignedLongLong** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>seq</i>	<< <b>out</b> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

### 9.58.6.76 get\_longdouble\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::get_longdouble_seq (
    DDS_LongDoubleSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_LongDouble** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↵**  
**PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>seq</i>	<< <b>out</b> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <b>in</b> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

## 9.58.6.77 get\_wchar\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::get_wchar_seq (
    DDS_WcharSeq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Wchar** (p. 317).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>seq</i>	<< <i>out</i> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

```
DDS_ReturnCode_t DDS_DynamicData::get_int8_seq (
    DDS_Int8Seq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Int8** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>seq</i>	<< <i>out</i> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

#### 9.58.6.79 get\_uint8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::get_uint8_seq (
    DDS_UInt8Seq & seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id ) const
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UInt8** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>seq</i>	<< <i>out</i> >> (p. 238) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336). If the member is optional and not set, this operation will return <b>DDS_RETCODE_NO_DATA</b> (p. 337). This operation may also return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).

## 9.58.6.80 set\_long()

```
DDS_ReturnCode_t DDS_DynamicData::set_long (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Long value )
```

Set the value of the given field, which is of type **DDS\_Long** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

------------	--

## See also

**DDS\_DynamicData::get\_short** (p. 813)

## 9.58.6.82 set\_ulong()

```
DDS_ReturnCode_t DDS_DynamicData::set_ulong (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong value )
```

Set the value of the given field, which is of type **DDS\_UnsignedLong** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_ulong** (p. 814)

## 9.58.6.83 set\_ushort()

```
DDS_ReturnCode_t DDS_DynamicData::set_ushort (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedShort value )
```

Set the value of the given field, which is of type **DDS\_UnsignedShort** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_ushort** (p. 815)

**9.58.6.84 set\_float()**

```
DDS_ReturnCode_t DDS_DynamicData::set_float (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Float value )
```

Set the value of the given field, which is of type **DDS\_Float** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

**DDS\_DynamicData::get\_float** (p. 815)

### 9.58.6.85 set\_double()

```
DDS_ReturnCode_t DDS_DynamicData::set_double (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Double value )
```

Set the value of the given field, which is of type **DDS\_Double** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

**DDS\_DynamicData::get\_double** (p. 816)

### 9.58.6.86 set\_boolean()

```
DDS_ReturnCode_t DDS_DynamicData::set_boolean (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Boolean value )
```

Set the value of the given field, which is of type **DDS\_Boolean** (p. 320).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

**DDS\_DynamicData::get\_boolean** (p. 817)

#### 9.58.6.87 set\_char()

```
DDS_ReturnCode_t DDS_DynamicData::set_char (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Char value )
```

Set the value of the given field, which is of type **DDS\_Char** (p. 317).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_char** (p. 818)

**9.58.6.88 set\_octet()**

```
DDS_ReturnCode_t DDS_DynamicData::set_octet (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Octet value )
```

Set the value of the given field, which is of type **DDS\_Octet** (p. 317).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_octet** (p. 819)

### 9.58.6.89 set\_longlong()

```
DDS_ReturnCode_t DDS_DynamicData::set_longlong (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_LongLong value )
```

Set the value of the given field, which is of type **DDS\_LongLong** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

#### See also

**DDS\_DynamicData::get\_longlong** (p. 819)

### 9.58.6.90 set\_ulonglong()

```
DDS_ReturnCode_t DDS_DynamicData::set_ulonglong (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLongLong value )
```

Set the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_ulonglong** (p. 820)

## 9.58.6.91 set\_longdouble()

```
DDS_ReturnCode_t DDS_DynamicData::set_longdouble (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_LongDouble value )
```

Set the value of the given field, which is of type **DDS\_LongDouble** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

**DDS\_DynamicData::get\_longdouble** (p. 821)

### 9.58.6.92 set\_wchar()

```
DDS_ReturnCode_t DDS_DynamicData::set_wchar (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Wchar value )
```

Set the value of the given field, which is of type **DDS\_Wchar** (p. 317).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

### 9.58.6.93 set\_string()

```
DDS_ReturnCode_t DDS_DynamicData::set_string (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const char * value )
```

Set the value of the given field of type `char*`.

This API is not supported when the `DynamicData` object is in CDR format and will fail with `DDS_RETCODE_↔PRECONDITION_NOT_MET` (p. 336). See `DDS_DynamicData::is_cdr` (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <code>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</code> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <code>DDS_RETCODE_OUT_OF_RESOURCES</code> (p. 337)
------------	--

See also

`DDS_DynamicData::get_string` (p. 823)

#### 9.58.6.94 set\_wstring()

```
DDS_ReturnCode_t DDS_DynamicData::set_wstring (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_Wchar * value )
```

Set the value of the given field of type `DDS_Wchar` (p. 317)\*.

This API is not supported when the `DynamicData` object is in CDR format and will fail with `DDS_RETCODE_↔PRECONDITION_NOT_MET` (p. 336). See `DDS_DynamicData::is_cdr` (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <code>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</code> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
Generated by Doxygen	
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_wstring** (p. 824)

**9.58.6.95 set\_int8()**

```
DDS_ReturnCode_t DDS_DynamicData::set_int8 (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Int8 value )
```

Set the value of the given field, which is of type **DDS\_Int8** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

------------	--

## See also

**DDS\_DynamicData::get\_int8** (p. 825)

## 9.58.6.96 set\_uint8()

```
DDS_ReturnCode_t DDS_DynamicData::set_uint8 (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UInt8 value )
```

Set the value of the given field, which is of type **DDS\_UInt8** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) The value to which to set the member.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_uint8** (p. 825)

## 9.58.6.97 set\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData::set_complex_member (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_DynamicData & value )
```

Copy the state of the given **DDS\_DynamicData** (p. 775) object into a member of this object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

The member may be of type kind **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_VALUE** (p. 86), or **DDS\_TK\_UNION** (p. 86). It may be specified by name or by ID.

### Example: Copying Data

This method can be used with `DDS_DynamicData::bind_complex_member` (p.803) to copy from one `DDS_DynamicData` (p.775) object to another efficiently. Suppose the following data structure:

```
struct Bar {
    short theShort;
};

struct Foo {
    Bar theBar;
};
```

Suppose we have two instances of `Foo` (p.1648), `foo_dst` and `foo_src`, and we want to replace the contents of `foo_dst.theBar` with the contents of `foo_src.theBar`. The following example shows how to do this (error handling has been omitted for the sake of brevity).

```
DDS_DynamicData* foo_dst = ...;

DDS_DynamicData* foo_src = ...;

DDS_DynamicData* bar = new DDS_DynamicData(NULL, myProperties);

// Point to the source of the copy:
foo_src->bind_complex_member(
    bar,
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

// Just one copy:
foo_dst->set_complex_member(
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED,
    bar);

// Tear down:
foo_src->unbind_complex_member(bar);

delete bar;
```

#### MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p.238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p.238) The ID of the member or <code>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</code> (p.101) to look up by name. See <b>Member Names and IDs</b> (p.783).
<i>value</i>	<< <i>in</i> >> (p.238) The source <code>DDS_DynamicData</code> (p.775) object whose contents will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_complex\_member** (p. 826)

## 9.58.6.98 set\_long\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_long_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Long * array )
```

Set the contents of the given array member. The array may contain members of type **DDS\_Long** (p. 318) or **DDS\_Enum** (p. 320).

This method will perform an automatic conversion to **DDS\_LongSeq** (p. 948).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

### 9.58.6.99 set\_short\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_short_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Short * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_ShortSeq** (p. 1101).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## 9.58.6.100 set\_ulong\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_ulong_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_UnsignedLong * array )
```

Set the contents of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 318) or **DDS\_Enum** (p. 320).

This method will perform an automatic conversion to **DDS\_UnsignedLongSeq** (p. 1237).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

## 9.58.6.101 set\_ushort\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_ushort_array (
    const char * member_name,
```

```

    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_UnsignedShort * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_UnsignedShortSeq** (p. 1237).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

#### 9.58.6.102 set\_float\_array()

```

    DDS_ReturnCode_t DDS_DynamicData::set_float_array (
        const char * member_name,
        DDS_DynamicDataMemberId member_id,
        DDS_UnsignedLong length,
        const DDS_Float * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_FloatSeq** (p. 912).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

### 9.58.6.103 set\_double\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_double_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Double * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_DoubleSeq** (p. 767).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

#### See also

**DDS\_DynamicData::get\_ulonglong\_array** (p. 836)

**DDS\_DynamicData::set\_ulonglong\_seq** (p. 888)

#### 9.58.6.109 set\_longdouble\_array()

```

DDS_ReturnCode_t DDS_DynamicData::set_longdouble_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_LongDouble * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_LongDoubleSeq** (p. 947).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

See also

### 9.58.6.110 set\_wchar\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_wchar_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Wchar * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_WcharSeq** (p. 1243).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**9.58.6.111 set\_int8\_array()**

```
DDS_ReturnCode_t DDS_DynamicData::set_int8_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Int8 * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_Int8Seq** (p. 923).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

## 9.58.6.112 set\_uint8\_array()

```
DDS_ReturnCode_t DDS_DynamicData::set_uint8_array (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_UInt8 * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_UInt8Seq** (p. 1234).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>length</i>	<< <i>in</i> >> (p. 238) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 238) The elements to copy.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

### 9.58.6.113 set\_long\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_long_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_LongSeq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Long** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## 9.58.6.114 set\_short\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_short_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_ShortSeq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Short** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

## 9.58.6.115 set\_ulong\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_ulong_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_UnsignedLongSeq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UnsignedLong** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

### 9.58.6.116 set\_ushort\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_ushort_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_UnsignedShortSeq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UnsignedShort** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

MT Safety:

UNSAFE.

Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

## 9.58.6.117 set\_float\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_float_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_FloatSeq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Float** (p. 319).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

**DDS\_DynamicData::get\_wchar\_seq** (p. 850)

**DDS\_DynamicData::set\_wchar\_array** (p. 877)

**9.58.6.126 set\_int8\_seq()**

```
DDS_ReturnCode_t DDS_DynamicData::set_int8_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_Int8Seq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Int8** (p. 318).

This API is not supported when the `DynamicData` object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

## See also

**DDS\_DynamicData::get\_int8\_seq** (p. 851)

**DDS\_DynamicData::set\_int8\_array** (p. 878)

## 9.58.6.127 set\_uint8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData::set_uint8_seq (
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_UInt8Seq & value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UInt8** (p. 318).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336). See **DDS\_DynamicData::is\_cdr** (p. 796) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>member_name</i>	<< <i>in</i> >> (p. 238) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 238) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 101) to look up by name. See <b>Member Names and IDs</b> (p. 783).
<i>value</i>	<< <i>in</i> >> (p. 238) A sequence, from which the elements will be copied.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)

**DDS\_DynamicData::get\_uint8\_seq** (p. 852)

**DDS\_DynamicData::set\_uint8\_array** (p. 879)

## 9.59 DDS\_DynamicDataInfo Struct Reference

A descriptor for a **DDS\_DynamicData** (p. 775) object.

### Public Attributes

- **DDS\_Long member\_count**  
*The number of data members in this **DDS\_DynamicData** (p. 775) sample.*
- **DDS\_Long stored\_size**  
*The number of bytes currently used to store the data of this **DDS\_DynamicData** (p. 775) sample.*

### 9.59.1 Detailed Description

A descriptor for a **DDS\_DynamicData** (p. 775) object.

See also

**DDS\_DynamicData::get\_info** (p. 801)

### 9.59.2 Member Data Documentation

#### 9.59.2.1 member\_count

**DDS\_Long** DDS\_DynamicDataInfo::member\_count

The number of data members in this **DDS\_DynamicData** (p. 775) sample.

#### 9.59.2.2 stored\_size

**DDS\_Long** DDS\_DynamicDataInfo::stored\_size

The number of bytes currently used to store the data of this **DDS\_DynamicData** (p. 775) sample.

## 9.60 DDS\_DynamicDataJsonParserProperties\_t Struct Reference

A collection of attributes used to configure **DDS\_DynamicData** (p. 775) objects.

### 9.60.1 Detailed Description

A collection of attributes used to configure **DDS\_DynamicData** (p. 775) objects.

## 9.61 DDS\_DynamicDataMemberInfo Struct Reference

A descriptor for a single member (i.e. field) of dynamically defined data type.

### Public Attributes

- **DDS\_DynamicDataMemberId** `member_id`  
*An integer that uniquely identifies the data member within this **DDS\_DynamicData** (p. 775) sample's type.*
- `const char *` **member\_name**  
*The string name of the data member.*
- **DDS\_Boolean** `member_exists`  
*Indicates whether the member exists in this sample.*
- **DDS\_TCKind** `member_kind`  
*The kind of type of this data member (e.g., integer, structure, etc.).*
- **DDS\_UnsignedLong** `element_count`  
*The number of elements within this data member.*
- **DDS\_TCKind** `element_kind`  
*The kind of type of the elements within this data member.*

### 9.61.1 Detailed Description

A descriptor for a single member (i.e. field) of dynamically defined data type.

See also

**DDS\_DynamicData::get\_member\_info** (p. 808)

### 9.61.2 Member Data Documentation

#### 9.61.2.1 member\_id

**DDS\_DynamicDataMemberId** `DDS_DynamicDataMemberInfo::member_id`

An integer that uniquely identifies the data member within this **DDS\_DynamicData** (p. 775) sample's type.

The member ID is assigned automatically by the middleware based on the member's declaration order within the type. It is a 1-based index of the member's position in the type.

See also

**DDS\_TCKind** (p. 86)

### 9.61.2.2 member\_name

```
const char* DDS_DynamicDataMemberInfo::member_name
```

The string name of the data member.

This name will be unique among members of the same type. However, a single named member may have multiple type representations.

### 9.61.2.3 member\_exists

```
DDS_Boolean DDS_DynamicDataMemberInfo::member_exists
```

Indicates whether the member exists in this sample.

A member that is defined in a type may not exist in a sample of that type in the following situations

- The member is optional and is unset
- Being part of a union, the discriminator doesn't select this member
- When getting the information about a sequence element, with index  $i$ , and  $i$  is greater than the current sequence length but smaller than its maximum length.

See also

**DDS\_DynamicData::member\_exists\_in\_type** (p. 808)

### 9.61.2.4 member\_kind

```
DDS_TCKind DDS_DynamicDataMemberInfo::member_kind
```

The kind of type of this data member (e.g., integer, structure, etc.).

This is a convenience field; it is equivalent to looking up the member in the **DDS\_TypeCode** (p. 1164) and getting the **DDS\_TCKind** (p. 86) from there.

### 9.61.2.5 element\_count

```
DDS_UnsignedLong DDS_DynamicDataMemberInfo::element_count
```

The number of elements within this data member.

This information is only valid for members of array or sequence types. Members of other types will always report zero (0) here.

### 9.61.2.6 element\_kind

`DDS_TCKind DDS_DynamicDataMemberInfo::element_kind`

The kind of type of the elements within this data member.

This information is only valid for members of array or sequence types. Members of other types will always report `DDS_TK_NULL` (p. 86) here.

## 9.62 DDS\_DynamicDataProperty\_t Struct Reference

A collection of attributes used to configure `DDS_DynamicData` (p. 775) objects.

### Public Attributes

- **DDS\_Long buffer\_initial\_size**  
*The initial amount of memory used by the underlying `DDS_DynamicData` (p. 775) buffer, in bytes.*
- **DDS\_Long buffer\_max\_size**  
*The maximum amount of memory that the underlying `DDS_DynamicData` (p. 775) buffer may use, in bytes.*

### 9.62.1 Detailed Description

A collection of attributes used to configure `DDS_DynamicData` (p. 775) objects.

### 9.62.2 Member Data Documentation

#### 9.62.2.1 buffer\_initial\_size

`DDS_Long DDS_DynamicDataProperty_t::buffer_initial_size`

The initial amount of memory used by the underlying `DDS_DynamicData` (p. 775) buffer, in bytes.

This property is used to configure the `DynamicData` objects that are created stand-alone as well as the `DynamicData` samples that are obtained from the sample pool that is created by each `DynamicData DataReader`.

If set to 0 (default): The initial buffer size will be set to the minimum amount of space required to hold the overhead required by the `DynamicData` internal representation (about 100 bytes) in addition to the minimum deserialized size of a sample. The minimum deserialized size of a sample assumes that all strings are allocated to their default values, sequences are left to length 0, and all optional members are unset.

If set to any value other than 0: The underlying buffer will be allocated to the provided size plus the overhead required by the `DynamicData` internal representation (about 100 bytes). If the provided size plus the overhead is less than the size used when `buffer_initial_size` is left to 0, then the default value is used.

See also

**DDS\_DynamicDataProperty\_t::buffer\_max\_size** (p. 895)

### 9.62.2.2 `buffer_max_size`

`DDS_Long DDS_DynamicDataProperty_t::buffer_max_size`

The maximum amount of memory that the underlying `DDS_DynamicData` (p. 775) buffer may use, in bytes.

This property is used to configure the `DynamicData` objects that are created stand-alone as well as the `DynamicData` samples that are obtained from the sample pool that is created by each `DynamicData DataReader`.

A `DynamicData` object will grow to this size from the initial size as needed. The `buffer_max_size` includes all overhead that is required for the internal `DynamicData` representation and therefore represents a hard upper limit on the size of the underlying `DynamicData` buffer.

If set to -1 (default): The buffer will grow unbounded to the size required to fit all members.

If set to any value other than -1: The buffer will not grow beyond this size. If setting a member's values requires the buffer to grow beyond this maximum, the member will fail to be set. If the buffer is required to grow beyond this maximum during deserialization, the sample will fail to be deserialized. The `buffer_max_size` cannot be smaller than the `buffer_initial_size`.

See also

`DDS_DynamicDataProperty_t::buffer_initial_size` (p. 895)

## 9.63 `DDS_DynamicDataSeq` Struct Reference

An ordered collection of `DDS_DynamicData` (p. 775) elements.

### 9.63.1 Detailed Description

An ordered collection of `DDS_DynamicData` (p. 775) elements.

Instantiates `FooSeq` (p. 1697) < `DDS_DynamicData` (p. 775) > .

See also

`FooSeq` (p. 1697)

`DDS_DynamicData` (p. 775)

## 9.64 `DDS_DynamicDataTypeProperty_t` Struct Reference

A collection of attributes used to configure `DDSDynamicDataTypeSupport` (p. 1456) objects.

## Public Attributes

- struct **DDS\_DynamicDataProperty\_t data**

*These properties will be provided to every new **DDS\_DynamicData** (p. 775) sample created from the **DDSDynamicData↔DataTypeSupport** (p. 1456).*

- struct **DDS\_DynamicDataTypeSerializationProperty\_t serialization**

*Properties that govern how the data of this type will be serialized on the network.*

### 9.64.1 Detailed Description

A collection of attributes used to configure **DDSDynamicDataTypeSupport** (p. 1456) objects.

The properties of a **DDSDynamicDataTypeSupport** (p. 1456) object contain the properties that will be used to instantiate any samples created by that object.

### 9.64.2 Member Data Documentation

#### 9.64.2.1 data

```
struct DDS_DynamicDataProperty_t DDS_DynamicDataTypeProperty_t::data
```

These properties will be provided to every new **DDS\_DynamicData** (p. 775) sample created from the **DDSDynamicData↔DataTypeSupport** (p. 1456).

These properties are also used to create the samples that are kept in the DataReader's queue.

#### 9.64.2.2 serialization

```
struct DDS_DynamicDataTypeSerializationProperty_t DDS_DynamicDataTypeProperty_t::serialization
```

Properties that govern how the data of this type will be serialized on the network.

## 9.65 DDS\_DynamicDataTypeSerializationProperty\_t Struct Reference

Properties that govern how data of a certain type will be serialized on the network.

## Public Attributes

- **DDS\_Boolean use\_42e\_compatible\_alignment**  
*[No longer supported] Use RTI Connex 4.2e-compatible alignment for large primitive types.*
- **DDS\_UnsignedLong max\_size\_serialized**  
*[No longer supported] If you were previously using this property, use `DDS_DynamicDataProperty_t::buffer_max_size` (p. 895) instead. The maximum number of bytes that objects of a given type could consume when serialized on the network.*
- **DDS\_UnsignedLong min\_size\_serialized**  
*[No longer supported] If you were previously using this property, use `DDS_DynamicDataProperty_t::buffer_initial_size` (p. 895) instead. The minimum number of bytes that objects of a given type could consume when serialized on the network.*
- **DDS\_Boolean trim\_to\_size**  
*Controls the growth of the buffer in a `DynamicData` object.*
- **DDS\_Boolean skip\_deserialization**  
*Enable skipping the deserialization of data on the `DataReader` side.*

### 9.65.1 Detailed Description

Properties that govern how data of a certain type will be serialized on the network.

### 9.65.2 Member Data Documentation

#### 9.65.2.1 use\_42e\_compatible\_alignment

`DDS_Boolean DDS_DynamicDataTypeSerializationProperty_t::use_42e_compatible_alignment`

**[No longer supported]** Use RTI Connex 4.2e-compatible alignment for large primitive types.

In RTI Connex 4.2e, the default alignment for large primitive types – `DDS_LongLong` (p. 319), `DDS_UnsignedLongLong` (p. 319), `DDS_Double` (p. 319), and `DDS_LongDouble` (p. 319) – was not RTPS-compliant. This compatibility mode allows applications targeting post-4.2e versions of RTI Connex to interoperate with 4.2e-based applications, regardless of the data types they use.

If this flag is not set, all data will be serialized in an RTPS-compliant manner, which for the types listed above, will not be interoperable with RTI Connex 4.2e.

#### 9.65.2.2 max\_size\_serialized

`DDS_UnsignedLong DDS_DynamicDataTypeSerializationProperty_t::max_size_serialized`

**[No longer supported]** If you were previously using this property, use `DDS_DynamicDataProperty_t::buffer_max_size` (p. 895) instead. The maximum number of bytes that objects of a given type could consume when serialized on the network.

This value is used to set the sizes of certain internal middleware buffers.

The effective value of the maximum serialized size will be the value of this field or the size automatically inferred from the type's `DDS_TypeCode` (p. 1164), whichever is smaller.

### 9.65.2.3 min\_size\_serialized

`DDS_UnsignedLong DDS_DynamicDataTypeSerializationProperty_t::min_size_serialized`

**[No longer supported]** If you were previously using this property, use `DDS_DynamicDataProperty_t::buffer_initial_size` (p. 895) instead. The minimum number of bytes that objects of a given type could consume when serialized on the network.

This value is used to set the sizes of certain internal middleware buffers.

Default: 0xFFFFFFFF, a sentinel that indicates that this value must be equal to the value specified in `max_size_serialized`.

### 9.65.2.4 trim\_to\_size

`DDS_Boolean DDS_DynamicDataTypeSerializationProperty_t::trim_to_size`

Controls the growth of the buffer in a DynamicData object.

This property only applies to DynamicData samples that are obtained from the sample pool that is created by each DynamicData DataReader.

If set to 0 (default): The buffer will not be reallocated unless the deserialized size of the incoming sample is greater than the current buffer size.

If set to 1: The buffer of a DynamicData object obtained from the DDS sample pool will be freed and re-allocated for each sample to just fit the size of the deserialized data of the incoming sample. The newly allocated size will not be smaller than `DDS_DynamicDataProperty_t::buffer_initial_size` (p. 895).

### 9.65.2.5 skip\_deserialization

`DDS_Boolean DDS_DynamicDataTypeSerializationProperty_t::skip_deserialization`

Enable skipping the deserialization of data on the DataReader side.

Setting this member to `DDS_BOOLEAN_TRUE` (p. 317) boosts the performance for use cases in which the application does not require accessing the value of the different members of the received DynamicData object. Those use cases include recording, replaying, and bridging. You can access the CDR buffer of a DynamicData object by calling the method `DDS_DynamicData::get_cdr_buffer` (p. 796). This configuration option is only available in C, Traditional C++, Modern C++, and Python language bindings.

When this option is set to `DDS_BOOLEAN_TRUE` (p. 317), many of the DynamicData APIs cannot be used to access or manipulate the received DynamicData object. See each function's documentation for whether or not the function is supported for DynamicData objects in CDR format.

See also

`DDS_DynamicData::is_cdr` (p. 796)

`DDS_DynamicData::get_cdr_buffer` (p. 796)

`DDS_DynamicData::set_cdr_buffer` (p. 797)

**[default]** `DDS_BOOLEAN_FALSE` (p. 317)

## 9.66 DDS\_EndpointGroup\_t Struct Reference

Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.

### Public Attributes

- char \* **role\_name**  
*Defines the role name of the endpoint group.*
- int **quorum\_count**  
*Defines the minimum number of members that satisfies the endpoint group.*

### 9.66.1 Detailed Description

Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.

### 9.66.2 Member Data Documentation

#### 9.66.2.1 role\_name

```
char* DDS_EndpointGroup_t::role_name
```

Defines the role name of the endpoint group.

If used in the **DDS\_AvailabilityQosPolicy** (p. 596) on a **DDSDataWriter** (p. 1321), it specifies the name that identifies a Durable Subscription.

The role name can be at most 255 characters in length.

#### 9.66.2.2 quorum\_count

```
int DDS_EndpointGroup_t::quorum_count
```

Defines the minimum number of members that satisfies the endpoint group.

If used in the **DDS\_AvailabilityQosPolicy** (p. 596) on a **DDSDataWriter** (p. 1321), it specifies the number of Data↔Readers that must acknowledge a sample before the sample is considered to be acknowledged by the Durable Subscription.

## 9.67 DDS\_EndpointGroupSeq Struct Reference

A sequence of **DDS\_EndpointGroup\_t** (p. 900).

### 9.67.1 Detailed Description

A sequence of **DDS\_EndpointGroup\_t** (p. 900).

In the context of Collaborative DataWriters, it can be used by a **DDSDataReader** (p. 1288) to define a group of remote DataWriters that the **DDSDataReader** (p. 1288) will wait to discover before skipping missing samples.

In the context of Durable Subscriptions, it can be used to create a set of Durable Subscriptions identified by a name and a quorum count.

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_EndpointGroup\_t** (p. 900)

## 9.68 DDS\_EndpointTrustAlgorithmInfo Struct Reference

Trust Plugins algorithm information associated with the discovered endpoint.

### Public Attributes

- **DDS\_EndpointTrustInterceptorAlgorithmInfo** **interceptor**

*Information regarding algorithms for interception of data and metadata exchanged by the endpoint.*

### 9.68.1 Detailed Description

Trust Plugins algorithm information associated with the discovered endpoint.

### 9.68.2 Member Data Documentation

#### 9.68.2.1 interceptor

**DDS\_EndpointTrustInterceptorAlgorithmInfo** `DDS_EndpointTrustAlgorithmInfo::interceptor`

Information regarding algorithms for interception of data and metadata exchanged by the endpoint.

## 9.69 DDS\_EndpointTrustInterceptorAlgorithmInfo Struct Reference

Trust Plugins interception algorithm information associated with the discovered endpoint.

### Public Attributes

- **DDS\_TrustAlgorithmSet required\_mask**  
*Trust Plugins algorithms used for interception of data and metadata exchanged by the endpoint.*
- **DDS\_TrustAlgorithmSet supported\_mask**  
*Trust Plugins algorithms supported for interception of data and metadata exchanged by the endpoint.*

### 9.69.1 Detailed Description

Trust Plugins interception algorithm information associated with the discovered endpoint.

### 9.69.2 Member Data Documentation

#### 9.69.2.1 required\_mask

`DDS_TrustAlgorithmSet DDS_EndpointTrustInterceptorAlgorithmInfo::required_mask`

Trust Plugins algorithms used for interception of data and metadata exchanged by the endpoint.

#### 9.69.2.2 supported\_mask

`DDS_TrustAlgorithmSet DDS_EndpointTrustInterceptorAlgorithmInfo::supported_mask`

Trust Plugins algorithms supported for interception of data and metadata exchanged by the endpoint.

## 9.70 DDS\_EndpointTrustProtectionInfo Struct Reference

Trust Plugins Protection information associated with the discovered endpoint.

## Public Attributes

- **DDS\_EndpointTrustAttributesMask** bitmask

*Information about how RTPS wire serialization, discovery, and liveliness interact with the associated Trust Plugins Protection configuration.*

- **DDS\_PluginEndpointTrustAttributesMask** plugin\_bitmask

*Internal plugin information that is opaque to DDS.*

### 9.70.1 Detailed Description

Trust Plugins Protection information associated with the discovered endpoint.

### 9.70.2 Member Data Documentation

#### 9.70.2.1 bitmask

**DDS\_EndpointTrustAttributesMask** DDS\_EndpointTrustProtectionInfo::bitmask

Information about how RTPS wire serialization, discovery, and liveliness interact with the associated Trust Plugins Protection configuration.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

#### 9.70.2.2 plugin\_bitmask

**DDS\_PluginEndpointTrustAttributesMask** DDS\_EndpointTrustProtectionInfo::plugin\_bitmask

Internal plugin information that is opaque to DDS.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

## 9.71 DDS\_EntityFactoryQosPolicy Struct Reference

A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.

## Public Attributes

- **DDS\_Boolean autoenable\_created\_entities**

*Specifies whether the entity acting as a factory automatically enables the instances it creates.*

### 9.71.1 Detailed Description

A QoS policy for all **DDSEntity** (p. 1463) types that can act as factories for one or more other **DDSEntity** (p. 1463) types.

Entity:

**DDSDomainParticipantFactory** (p. 1426), **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **YES** (p. 360)

### 9.71.2 Usage

This policy controls the behavior of the **DDSEntity** (p. 1463) as a factory for other entities. It controls whether or not child entities are created in the enabled state.

RTI Connext uses a factory design pattern for creating DDS Entities. That is, a parent entity must be used to create child entities. DomainParticipants create Topics, Publishers and Subscribers. Publishers create DataWriters. Subscribers create DataReaders.

By default, a child object is enabled upon creation (initialized and may be actively used). With this QoS policy, a child object can be created in a disabled state. A disabled entity is only partially initialized and cannot be used until the entity is enabled. Note: an entity can only be *enabled*; it cannot be *disabled* after it has been enabled.

This QoS policy is useful to synchronize the initialization of DDS Entities. For example, when a **DDSDataReader** (p. 1288) is created in an enabled state, its existence is immediately propagated for discovery and the **DDSDataReader** (p. 1288) object's listener called as soon as data is received. The initialization process for an application may extend beyond the creation of the **DDSDataReader** (p. 1288), and thus, it may not be desirable for the **DDSDataReader** (p. 1288) to start to receive or process any data until the initialization process is complete. So by creating readers in a disabled state, your application can make sure that no data is received until the rest of the application initialization is complete, and at that time, enable the them.

Note: if an entity is disabled, then all of the child entities it creates will be disabled, too, regardless of the setting of this QoS policy. However, enabling a disabled entity will enable all of its children if this QoS policy is set to automatically enable children entities.

This policy is mutable. A change in the policy affects only the entities created after the change, not any previously created entities.

### 9.71.3 Member Data Documentation

#### 9.71.3.1 autoenable\_created\_entities

**DDS\_Boolean** DDS\_EntityFactoryQosPolicy::autoenable\_created\_entities

Specifies whether the entity acting as a factory automatically enables the instances it creates.

The setting of `autoenable_created_entities` to **DDS\_BOOLEAN\_TRUE** (p. 317) indicates that the factory `create_<entity>` operation(s) will automatically invoke the **DDSEntity::enable** (p. 1466) operation each time a new **DDSEntity** (p. 1463) is created. Therefore, the **DDSEntity** (p. 1463) returned by `create_<entity>` will already be enabled. A setting of **DDS\_BOOLEAN\_FALSE** (p. 317) indicates that the **DDSEntity** (p. 1463) will not be automatically enabled. Your application will need to call **DDSEntity::enable** (p. 1466) itself.

The default setting of `autoenable_created_entities = DDS_BOOLEAN_TRUE` (p. 317) means that, by default, it is not necessary to explicitly call **DDSEntity::enable** (p. 1466) on newly created entities.

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

## 9.72 DDS\_EntityNameQosPolicy Struct Reference

Assigns a name and a role name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.

### Public Attributes

- char \* **name**  
*The name of the entity.*
- char \* **role\_name**  
*The entity role name.*

#### 9.72.1 Detailed Description

Assigns a name and a role name to a **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). Except for **DDSPublisher** (p. 1550) and **DDSSubscriber** (p. 1592), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.

Entity:

**DDSDomainParticipant** (p. 1351), **DDSSubscriber** (p. 1592), **DDSPublisher** (p. 1550), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO;  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

## 9.72.2 Usage

The name and role name can be at most 255 characters in length.

The strings must be null-terminated strings allocated with **DDS\_String\_alloc** (p. 553) or **DDS\_String\_dup** (p. 553).

If you provide a non-null pointer when getting the QoS, then it should point to valid memory that can be written to, to avoid ungraceful failures.

## 9.72.3 Member Data Documentation

### 9.72.3.1 name

```
char* DDS_EntityNameQosPolicy::name
```

The name of the entity.

**[default]** null

**[range]** Null terminated string with length not exceeding 255. It can be null.

### 9.72.3.2 role\_name

```
char* DDS_EntityNameQosPolicy::role_name
```

The entity role name.

With Durable Subscriptions this name is used to specify to which Durable Subscription the **DDSDataReader** (p. 1288) belongs.

With Collaborative DataWriters this name is used to specify to which endpoint group the **DDSDataWriter** (p. 1321) belongs.

**[range]** Null terminated string with length not exceeding 255. It can be null.

**[default]** null

## 9.73 DDS\_EnumMember Struct Reference

A description of a member of an enumeration.

## Public Attributes

- `char * name`  
*The name of the enumeration member.*
- `DDS_Long ordinal`  
*The value associated the the enumeration member.*

### 9.73.1 Detailed Description

A description of a member of an enumeration.

See also

[DDS\\_EnumMemberSeq](#) (p. 907)

[DDS\\_TypeCodeFactory::create\\_enum\\_tc](#) (p. 1218)

### 9.73.2 Member Data Documentation

#### 9.73.2.1 name

```
char* DDS_EnumMember::name
```

The name of the enumeration member.

Cannot be NULL.

#### 9.73.2.2 ordinal

```
DDS_Long DDS_EnumMember::ordinal
```

The value associated the the enumeration member.

## 9.74 DDS\_EnumMemberSeq Struct Reference

Defines a sequence of enumerator members.

### 9.74.1 Detailed Description

Defines a sequence of enumerator members.

See also

**DDS\_EnumMember** (p. 906)

**FooSeq** (p. 1697)

**DDS\_TypeCodeFactory::create\_enum\_tc** (p. 1218)

## 9.75 DDS\_EventQoSPolicy Struct Reference

Settings for event.

### Public Attributes

- struct **DDS\_ThreadSettings\_t** **thread**  
*Event thread QoS.*
- **DDS\_Long** **initial\_count**  
*The initial number of events.*
- **DDS\_Long** **max\_count**  
*The maximum number of events.*

### 9.75.1 Detailed Description

Settings for event.

In a **DDSDomainParticipant** (p. 1351), a thread is dedicated to handle all timed events, including checking for timeouts and deadlines and executing internal and user-defined timeout or exception handling routines/callbacks.

This QoS policy allows you to configure thread properties such as priority level and stack size. You can also configure the maximum number of events that can be posted to the event thread. By default, a **DDSDomainParticipant** (p. 1351) will dynamically allocate memory as needed for events posted to the event thread. However, by setting a maximum value or setting the initial and maximum value to be the same, you can either bound the amount of memory allocated for the event thread or prevent a **DDSDomainParticipant** (p. 1351) from dynamically allocating memory for the event thread after initialization.

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.75.2 Member Data Documentation

### 9.75.2.1 thread

```
struct DDS_ThreadSettings_t DDS_EventQosPolicy::thread
```

Event thread QoS.

There is only one event thread.

Priority:

**[default]** The actual value depends on your architecture:

For Windows: -2

For Linux: OS default priority

For a complete list of platform specific values, please refer to [Platform Notes](#).

Stack Size:

**[default]** The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to [Platform Notes](#).

Mask:

**[default]** mask = `DDS_THREAD_SETTINGS_FLOATING_POINT` (p. 352) | `DDS_THREAD_SETTINGS_STUDIO` (p. 352)

### 9.75.2.2 initial\_count

```
DDS_Long DDS_EventQosPolicy::initial_count
```

The initial number of events.

**[default]** 256

**[range]** [1, 1 million], <= max\_count

### 9.75.2.3 max\_count

```
DDS_Long DDS_EventQosPolicy::max_count
```

The maximum number of events.

The maximum number of events. If the limit is reached, no new event can be added.

**[default]** `DDS_LENGTH_UNLIMITED` (p. 438)

**[range]** [1, 1 million] or `DDS_LENGTH_UNLIMITED` (p. 438), >= initial\_count

## 9.76 DDS\_ExpressionProperty Struct Reference

Provides additional information about the filter expression passed to **DDSWriterContentFilter::writer\_compile** (p. 1638) .

### Public Attributes

- **DDS\_Boolean key\_only\_filter**  
*Indicates if the filter expression is based only on key fields. In this case, RTI Connexit itself can cache the filtering results.*
- **DDS\_Boolean writer\_side\_filter\_optimization**  
*Indicates if the filter implementation can cache the filtering result for the provided expression.*

### 9.76.1 Detailed Description

Provides additional information about the filter expression passed to **DDSWriterContentFilter::writer\_compile** (p. 1638) .

It is used by the filter implementation to indicate to the middleware whether or not the **DDSWriterContentFilter** (p. 1637) will cache the result of filter evaluation.

### 9.76.2 Member Data Documentation

#### 9.76.2.1 key\_only\_filter

```
DDS_Boolean DDS_ExpressionProperty::key_only_filter
```

Indicates if the filter expression is based only on key fields. In this case, RTI Connexit itself can cache the filtering results.

When this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317), it indicates to RTI Connexit that the filter expression is based only on key fields.

#### 9.76.2.2 writer\_side\_filter\_optimization

```
DDS_Boolean DDS_ExpressionProperty::writer_side_filter_optimization
```

Indicates if the filter implementation can cache the filtering result for the provided expression.

When this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317), RTI Connexit will do no caching or explicit filter evaluation for the associated **DDSDataReader** (p. 1288). Instead, it will rely on the filter implementation to provide appropriate results.

## 9.77 DDS\_FilterSampleInfo Struct Reference

Provides meta information associated with the sample.

### Public Attributes

- struct **DDS\_SampleIdentity\_t** **related\_sample\_identity**  
*The identity of another sample related to this one.*
- struct **DDS\_GUID\_t** **related\_source\_guid**  
*Identifies the application logical data source that is related to the sample being written.*
- struct **DDS\_GUID\_t** **related\_reader\_guid**  
*Identifies a DataReader that is logically related to the sample.*

### 9.77.1 Detailed Description

Provides meta information associated with the sample.

This can be used by a content filter to perform filtering on meta data.

### 9.77.2 Member Data Documentation

#### 9.77.2.1 related\_sample\_identity

```
struct DDS_SampleIdentity_t DDS_FilterSampleInfo::related_sample_identity
```

The identity of another sample related to this one.

The value of this field identifies another sample that is logically related to the one that is written. For example, the **DDSDataWriter** (p. 1321) created by a Replier uses this field to associate the identity of the request sample with a response sample.

To specify that there is no related sample identity, use the value **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 479).

A **DDSDataReader** (p. 1288) can inspect the related sample identity of a received sample by accessing the fields **DDS\_SampleInfo::related\_original\_publication\_virtual\_guid** (p. 1090) and **DDS\_SampleInfo::related\_original\_publication\_virtual\_sequence\_number** (p. 1091).

#### 9.77.2.2 related\_source\_guid

```
struct DDS_GUID_t DDS_FilterSampleInfo::related_source_guid
```

Identifies the application logical data source that is related to the sample being written.

The `related_source_guid` can be set by using the field **DDS\_WriteParams\_t::related\_source\_guid** (p. 1255) when writing a sample using the method **FooDataWriter::write\_w\_params** (p. 1688).

### 9.77.2.3 related\_reader\_guid

```
struct DDS_GUID_t DDS_FilterSampleInfo::related_reader_guid
```

Identifies a DataReader that is logically related to the sample.

The related\_reader\_guid can be set by using the field `DDS_WriteParams_t::related_reader_guid` (p. 1255) when writing a sample using the method `FooDataWriter::write_w_params` (p. 1688).

## 9.78 DDS\_FloatSeq Struct Reference

Instantiates `FooSeq` (p. 1697) < `DDS_Float` (p. 319) >

### 9.78.1 Detailed Description

Instantiates `FooSeq` (p. 1697) < `DDS_Float` (p. 319) >

Instantiates:

<<*generic*>> (p. 237) `FooSeq` (p. 1697)

See also

`DDS_Float` (p. 319)

`FooSeq` (p. 1697)

## 9.79 DDS\_FlowControllerProperty\_t Struct Reference

Determines the flow control characteristics of the `DDSFlowController` (p. 1468).

### Public Attributes

- `DDS_FlowControllerSchedulingPolicy scheduling_policy`  
*Scheduling policy.*
- struct `DDS_FlowControllerTokenBucketProperty_t token_bucket`  
*Settings for the token bucket.*

## 9.79.1 Detailed Description

Determines the flow control characteristics of the **DDSFlowController** (p. 1468).

The flow control characteristics shape the network traffic by determining how often and in what order associated asynchronous **DDSDataWriter** (p. 1321) instances are serviced and how much data they are allowed to send.

Note that these settings apply directly to the **DDSFlowController** (p.1468), and do not depend on the number of **DDSDataWriter** (p. 1321) instances the **DDSFlowController** (p. 1468) is servicing. For instance, the specified flow rate does *not* double simply because two **DDSDataWriter** (p. 1321) instances are waiting to write.

Entity:

**DDSFlowController** (p. 1468)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360) for **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p.913), **YES** (p. 360) for **DDS\_FlowControllerProperty\_t::token\_bucket** (p.913). However, the special value of **DDS\_DURATION\_INFINITE** (p.326) as **DDS\_FlowControllerTokenBucketProperty\_t::period** (p.915) is strictly used to create an *on-demand* **DDSFlowController** (p. 1468). The token period cannot toggle from an infinite to finite value (or vice versa). It can, however, change from one finite value to another.

## 9.79.2 Member Data Documentation

### 9.79.2.1 scheduling\_policy

```
DDS_FlowControllerSchedulingPolicy DDS_FlowControllerProperty_t::scheduling_policy
```

Scheduling policy.

Determines the scheduling policy for servicing the **DDSDataWriter** (p. 1321) instances associated with the **DDSFlowController** (p. 1468).

[default] **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED\_POLICY** (p. 120)

### 9.79.2.2 token\_bucket

```
struct DDS_FlowControllerTokenBucketProperty_t DDS_FlowControllerProperty_t::token_bucket
```

Settings for the token bucket.

## 9.80 DDS\_FlowControllerTokenBucketProperty\_t Struct Reference

**DDSFlowController** (p. 1468) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.

### Public Attributes

- **DDS\_Long max\_tokens**  
*Maximum number of tokens that can accumulate in the token bucket.*
- **DDS\_Long tokens\_added\_per\_period**  
*The number of tokens added to the token bucket per specified period.*
- **DDS\_Long tokens\_leaked\_per\_period**  
*The number of tokens removed from the token bucket per specified period.*
- struct **DDS\_Duration\_t period**  
*Period for adding tokens to and removing tokens from the bucket.*
- **DDS\_Long bytes\_per\_token**  
*Maximum number of bytes allowed to send for each token available.*

### 9.80.1 Detailed Description

**DDSFlowController** (p. 1468) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.

Asynchronously published samples are queued up and transmitted based on the token bucket flow control scheme. The token bucket contains tokens, each of which represents a number of bytes. Samples can be sent only when there are sufficient tokens in the bucket. As samples are sent, tokens are consumed. The number of tokens consumed is proportional to the size of the data being sent. Tokens are replenished on a periodic basis.

The rate at which tokens become available and other token bucket properties determine the network traffic flow.

Note that if the same sample must be sent to multiple destinations, separate tokens are required for each destination. Only when multiple samples are destined to the same destination will they be co-alesced and sent using the same token(s). In other words, each token can only contribute to a single network packet.

Entity:

**DDSFlowController** (p. 1468)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360). However, the special value of **DDS\_DURATION\_INFINITE** (p. 326) as **DDS\_↔FlowControllerTokenBucketProperty\_t::period** (p. 915) is strictly used to create an *on-demand DDSFlowController* (p. 1468). The token period cannot toggle from an infinite to finite value (or vice versa). It can, however, change from one finite value to another.

## 9.80.2 Member Data Documentation

### 9.80.2.1 max\_tokens

`DDS_Long DDS_FlowControllerTokenBucketProperty_t::max_tokens`

Maximum number of tokens than can accumulate in the token bucket.

The number of tokens in the bucket will never exceed this value. Any excess tokens are discarded. This property value, combined with `DDS_FlowControllerTokenBucketProperty_t::bytes_per_token` (p.916), determines the maximum allowable data burst.

Use `DDS_LENGTH_UNLIMITED` (p. 438) to allow accumulation of an unlimited amount of tokens (and therefore potentially an unlimited burst size).

[default] `DDS_LENGTH_UNLIMITED` (p. 438)

[range] [1, `DDS_LENGTH_UNLIMITED` (p. 438)]

### 9.80.2.2 tokens\_added\_per\_period

`DDS_Long DDS_FlowControllerTokenBucketProperty_t::tokens_added_per_period`

The number of tokens added to the token bucket per specified period.

`DDSFlowController` (p. 1468) transmits data only when tokens are available. Tokens are periodically replenished. This field determines the number of tokens added to the token bucket with each periodic replenishment.

Available tokens are distributed to associated `DDSDataWriter` (p. 1321) instances based on the `DDS_FlowControllerProperty_t::scheduling_policy` (p.913).

Use `DDS_LENGTH_UNLIMITED` (p. 438) to add the maximum number of tokens allowed by `DDS_FlowControllerTokenBucketProperty_t::max_tokens` (p. 915).

[default] `DDS_LENGTH_UNLIMITED` (p. 438)

[range] [1, `DDS_LENGTH_UNLIMITED` (p. 438)]

### 9.80.2.3 tokens\_leaked\_per\_period

`DDS_Long DDS_FlowControllerTokenBucketProperty_t::tokens_leaked_per_period`

The number of tokens removed from the token bucket per specified period.

`DDSFlowController` (p. 1468) transmits data only when tokens are available. When tokens are replenished and there are sufficient tokens to send all samples in the queue, this property determines whether any or all of the leftover tokens remain in the bucket.

Use `DDS_LENGTH_UNLIMITED` (p. 438) to remove all excess tokens from the token bucket once all samples have been sent. In other words, no token accumulation is allowed. When new samples are written after tokens were purged, the earliest point in time at which they can be sent is at the next periodic replenishment.

[default] 0

[range] [0, `DDS_LENGTH_UNLIMITED` (p. 438)]

### 9.80.2.4 period

```
struct DDS_Duration_t DDS_FlowControllerTokenBucketProperty_t::period
```

Period for adding tokens to and removing tokens from the bucket.

**DDSFlowController** (p. 1468) transmits data only when tokens are available. This field determines the period by which tokens are added or removed from the token bucket.

The special value **DDS\_DURATION\_INFINITE** (p.326) can be used to create an *on-demand* **DDSFlowController** (p. 1468), for which tokens are no longer replenished periodically. Instead, tokens must be added explicitly by calling **DDSFlowController::trigger\_flow** (p.1470). This external trigger adds **DDS\_FlowControllerTokenBucketProperty\_t::tokens\_added\_per\_period** (p. 915) tokens each time it is called (subject to the other property settings).

**[default]** 1 second

**[range]** [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.80.2.5 bytes\_per\_token

```
DDS_Long DDS_FlowControllerTokenBucketProperty_t::bytes_per_token
```

Maximum number of bytes allowed to send for each token available.

**DDSFlowController** (p. 1468) transmits data only when tokens are available. This field determines the number of bytes that can actually be transmitted based on the number of tokens.

Tokens are always consumed in whole by each **DDSDataWriter** (p.1321). That is, in cases where **DDS\_FlowControllerTokenBucketProperty\_t::bytes\_per\_token** (p.916) is greater than the sample size, multiple samples may be sent to the same destination using a single token (regardless of **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p.913)).

Where fragmentation is required, the fragment size will be **DDS\_FlowControllerTokenBucketProperty\_t::bytes\_per\_token** (p.916) or the minimum largest message size across all transports installed with the **DDSDataWriter** (p. 1321), whichever is less.

Use **DDS\_LENGTH\_UNLIMITED** (p. 438) to indicate that an unlimited number of bytes can be transmitted per token. In other words, a single token allows the recipient **DDSDataWriter** (p. 1321) to transmit all its queued samples to a single destination. A separate token is required to send to each additional destination.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1024,**DDS\_LENGTH\_UNLIMITED** (p. 438)]

## 9.81 DDS\_GroupDataQosPolicy Struct Reference

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

## Public Attributes

- struct **DDS\_OctetSeq** value  
*a sequence of octets*

### 9.81.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

Entity:

**DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **YES** (p. 360)

See also

**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.81.2 Usage

The additional information is attached to a **DDSPublisher** (p. 1550) or **DDSSubscriber** (p. 1592). This extra data is not used by RTI Connext itself. When a remote application discovers the **DDSPublisher** (p. 1550) or **DDSSubscriber** (p. 1592), it can access that information and use it for its own purposes.

Use cases for this QoS policy, as well as the **DDS\_TopicDataQosPolicy** (p. 1133) and **DDS\_UserDataQosPolicy** (p. 1237), are often application-to-application identification, authentication, authorization, and encryption purposes. For example, applications can use Group or User Data to send security certificates to each other for RSA-type security.

In combination with **DDSDataReaderListener** (p. 1315), **DDSDataWriterListener** (p. 1344) and operations such as **DDSDomainParticipant::ignore\_publication** (p. 1396) and **DDSDomainParticipant::ignore\_subscription** (p. 1396), this QoS policy can help an application to define and enforce its own security policies. For example, an application can implement matching policies similar to those of the **DDS\_PartitionQosPolicy** (p. 989), except the decision can be made based on an application-defined policy.

The use of this QoS is not limited to security; it offers a simple, yet flexible extensibility mechanism.

*Important:* RTI Connext stores the data placed in this policy in pre-allocated pools. It is therefore necessary to configure RTI Connext with the maximum size of the data that will be stored in policies of this type. This size is configured with **DDS\_DomainParticipantResourceLimitsQosPolicy::publisher\_group\_data\_max\_length** (p. 758) and **DDS\_DomainParticipantResourceLimitsQosPolicy::subscriber\_group\_data\_max\_length** (p. 758).

### 9.81.3 Member Data Documentation

#### 9.81.3.1 value

```
struct DDS_OctetSeq DDS_GroupDataQosPolicy::value
```

a sequence of octets

**[default]** Empty (zero-sized)

**[range]** Octet sequence of length [0,max\_length]

## 9.82 DDS\_GUID\_t Struct Reference

Type for *GUID* (Global Unique Identifier) representation.

### Public Attributes

- **DDS\_Octet value** [DDS\_GUID\_LENGTH]  
*A 16 byte array containing the GUID value.*

### 9.82.1 Detailed Description

Type for *GUID* (Global Unique Identifier) representation.

Represents a 128 bit GUID.

Alternative representation of **DDS\_RTSPS\_GUID\_t** (p. 1057). Memory and wire representation for this type is the same as the one for **DDS\_RTSPS\_GUID\_t** (p. 1057).

### 9.82.2 Member Data Documentation

#### 9.82.2.1 value

```
DDS_Octet DDS_GUID_t::value [DDS_GUID_LENGTH]
```

A 16 byte array containing the GUID value.

## 9.83 DDS\_HistoryQosPolicy Struct Reference

Specifies the behavior of RTI Connexx in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

### Public Attributes

- **DDS\_HistoryQosPolicyKind kind**  
*Specifies the kind of history to be kept.*
- **DDS\_Long depth**  
*Specifies the number of samples per instance to be kept, when the `kind` is `DDS_KEEP_LAST_HISTORY_QOS` (p. 406).*

### 9.83.1 Detailed Description

Specifies the behavior of RTI Connexx in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

This QoS policy specifies how much data must to stored by RTI Connexx for a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). It controls whether RTI Connexx should deliver only the most recent value, attempt to deliver all intermediate values, or do something in between.

On the publishing side, this QoS policy controls the samples that should be maintained by the **DDSDataWriter** (p. 1321) on behalf of existing **DDSDataReader** (p. 1288) entities. The behavior with regards to a **DDSDataReader** (p. 1288) entities discovered after a sample is written is controlled by the **DURABILITY** (p. 398) policy.

On the subscribing side, this QoS policy controls the samples that should be maintained until the application "takes" them from RTI Connexx.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

See also

**DDS\_ReliabilityQosPolicy** (p. 1041)  
**DDS\_HistoryQosPolicy** (p. 919)

### 9.83.2 Usage

This policy controls the behavior of RTI Connex when the value of an instance changes before it is finally communicated to **DDSDataReader** (p. 1288) entities.

When a **DDSDataWriter** (p. 1321) sends data, or a **DDSDataReader** (p. 1288) receives data, the data sent or received is stored in a cache whose contents are controlled by this QoS policy. This QoS policy interacts with **DDS\_ReliabilityQoSPolicy** (p. 1041) by controlling whether RTI Connex guarantees that *all* of the sent data is received (**DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406)) or if only the last N data values sent are guaranteed to be received (**DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406))—this is a reduced level of reliability.

The amount of data that is sent to new DataReaders who have configured their **DDS\_DurabilityQoSPolicy** (p. 767) to receive previously published data is controlled by **DDS\_DurabilityQoSPolicy::writer\_depth** (p. 770), not by the History QoS policy.

Note that the History QoS policy does not control the *physical* sizes of the send and receive queues. The memory allocation for the queues is controlled by the **DDS\_ResourceLimitsQoSPolicy** (p. 1052).

If `kind` is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406) (the default), then RTI Connex will only attempt to keep the latest values of the instance and discard the older ones. In this case, the value of `depth` regulates the maximum number of values (up to and including the most current one) RTI Connex will maintain and deliver until the samples are fully acknowledged. After N values have been sent or received, any new data will overwrite the oldest data in the queue. Thus the queue acts like a circular buffer of length N.

For keyed-data, there is different behavior on the publishing and subscribing sides associated with how invalid samples representing the disposal of or unregistration from an instance affect history.

On the publishing side, unregistering from or disposing of an instance creates an invalid sample that is accounted for in the history depth. This means that an invalid sample may replace a value that is currently being stored in the writer queue.

On the subscribing side, however, invalid samples do not count towards history depth and will not replace a value that is being stored in the reader queue.

On both the publishing and subscribing sides, there can only ever be one invalid sample per-instance and that one sample can be in different states depending on whether the instance has been disposed, unregistered, or both.

The default (and most common setting) for `depth` is 1, indicating that only the most recent value should be delivered.

If `kind` is **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406), then RTI Connex will attempt to maintain and deliver all the values of the instance to existing subscribers. The resources that RTI Connex can use to keep this history are limited by the settings of the **RESOURCE\_LIMITS** (p. 437). If the limit is reached, then the behavior of RTI Connex will depend on the **RELIABILITY** (p. 433). If the Reliability `kind` is **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435), then the old values will be discarded. If Reliability `kind` is **RELIABLE**, then RTI Connex will block the **DDSDataWriter** (p. 1321) until it can deliver the necessary old values to all subscribers.

### 9.83.3 Consistency

This QoS policy's `depth` must be consistent with the **RESOURCE\_LIMITS** (p. 437) `max_samples_per_instance`. For these two QoS to be consistent, they must verify that  $depth \leq max\_samples\_per\_instance$ .

See also

**DDS\_ResourceLimitsQoSPolicy** (p. 1052)

## 9.83.4 Member Data Documentation

### 9.83.4.1 kind

`DDS_HistoryQosPolicyKind` `DDS_HistoryQosPolicy::kind`

Specifies the kind of history to be kept.

For DataWriters, the samples are only kept either until they are fully acknowledged by all matching DataReaders or until they are replaced or removed. Samples can be replaced or removed for a number of reasons, including but not limited to `DDS_LifespanQosPolicy` (p. 931) expiration, replacement because the `DDS_HistoryQosPolicy::depth` (p. 921) has been exceeded, or one of the `DDS_ResourceLimitsQosPolicy` (p. 1052) settings has been exceeded.

[default] `DDS_KEEP_LAST_HISTORY_QOS` (p. 406)

### 9.83.4.2 depth

`DDS_Long` `DDS_HistoryQosPolicy::depth`

Specifies the number of samples per instance to be kept, when the `kind` is `DDS_KEEP_LAST_HISTORY_QOS` (p. 406).

If a value other than 1 (the default) is specified, it should be consistent with the settings of the `RESOURCE_LIMITS` (p. 437) policy. That is:

$\text{depth} \leq \text{DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance}$  (p. 1055)

When the `kind` is `DDS_KEEP_ALL_HISTORY_QOS` (p. 406), the depth has no effect. Its implied value is `infinity` (in practice limited by the settings of the `RESOURCE_LIMITS` (p. 437) policy).

When a DataWriter responds to a TopicQuery, the samples that are evaluated against the TopicQuery filter are only those samples that fall within the `DDS_DurabilityQosPolicy::writer_depth` (p. 770), not this depth.

[default] 1

[range] [1,100 million],  $\leq \text{DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance}$  (p. 1055)

## 9.84 DDS\_InconsistentTopicStatus Struct Reference

`DDS_INCONSISTENT_TOPIC_STATUS` (p. 343)

## Public Attributes

- **DDS\_Long total\_count**

*Total cumulative count of the pairs (**DDSDataReader** (p. 1288),**DDSDataWriter** (p. 1321)) whose topic names match the **DDSTopic** (p. 1617) to which this status is attached and whose types are inconsistent according to the rules defined in **DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228).*

- **DDS\_Long total\_count\_change**

*The incremental number of inconsistent pairs (**DDSDataReader** (p. 1288),**DDSDataWriter** (p. 1321)) for the **DDSTopic** (p. 1617) to which this status is attached, that have been discovered since the last time this status was read.*

### 9.84.1 Detailed Description

**DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343)

Entity:

**DDSTopic** (p. 1617)

Listener:

**DDSTopicListener** (p. 1626)

Every time a **DDSDataReader** (p. 1288) and **DDSDataWriter** (p. 1321) with the same **DDSTopic** (p. 1617) do not match because the type-consistency enforcement policy fails, the inconsistent topic status is updated for the **DDSTopic** (p. 1617).

See also

**DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228)

### 9.84.2 Member Data Documentation

#### 9.84.2.1 total\_count

**DDS\_Long** `DDS_InconsistentTopicStatus::total_count`

Total cumulative count of the pairs (**DDSDataReader** (p. 1288),**DDSDataWriter** (p. 1321)) whose topic names match the **DDSTopic** (p. 1617) to which this status is attached and whose types are inconsistent according to the rules defined in **DDS\_TypeConsistencyEnforcementQosPolicy** (p. 1228).

### 9.84.2.2 total\_count\_change

`DDS_Long DDS_InconsistentTopicStatus::total_count_change`

The incremental number of inconsistent pairs (**DDSDataReader** (p. 1288),**DDSDataWriter** (p. 1321)) for the **DDSTopic** (p. 1617) to which this status is attached, that have been discovered since the last time this status was read.

## 9.85 DDS\_InstanceHandleSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_InstanceHandle\_t** (p. 74) > .

### 9.85.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_InstanceHandle\_t** (p. 74) > .

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

Instantiates **FooSeq** (p. 1697) < **DDS\_Int8** (p. 318) >

### 9.86.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Int8** (p. 318) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Int8** (p. 318)

**FooSeq** (p. 1697)

## 9.87 DDS\_InvalidLocalIdentityAdvanceNoticeStatus Struct Reference

DDS\_INVALID\_LOCAL\_IDENTITY\_ADVANCE\_NOTICE\_STATUS (p. 347)

### Public Attributes

- struct **DDS\_Time\_t** **expiration\_time**  
*The time when the local identity will expire.*

### 9.87.1 Detailed Description

DDS\_INVALID\_LOCAL\_IDENTITY\_ADVANCE\_NOTICE\_STATUS (p. 347)

Currently, this status is only triggered when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information.

### 9.87.2 Member Data Documentation

#### 9.87.2.1 expiration\_time

```
struct DDS_Time_t DDS_InvalidLocalIdentityAdvanceNoticeStatus::expiration_time
```

The time when the local identity will expire.

## 9.88 DDS\_KeyedOctets Struct Reference

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

### Public Member Functions

- **DDS\_KeyedOctets** ()  
*Constructor.*
- **DDS\_KeyedOctets** (int key\_size, int size)  
*Constructor that specifies the allocated sizes.*
- **~DDS\_KeyedOctets** ()  
*Destructor.*

## Public Attributes

- char \* **key**  
*Instance key associated with the specified value.*
- int **length**  
*Number of octets to serialize.*
- unsigned char \* **value**  
*DDS\_Octets (p. 967) array value.*

### 9.88.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

### 9.88.2 Constructor & Destructor Documentation

#### 9.88.2.1 DDS\_KeyedOctets() [1/2]

```
DDS_KeyedOctets::DDS_KeyedOctets ( ) [inline]
```

Constructor.

The default constructor initializes the newly created object with NULL key, NULL value, and zero length.

#### 9.88.2.2 DDS\_KeyedOctets() [2/2]

```
DDS_KeyedOctets::DDS_KeyedOctets (
    int key_size,
    int size ) [inline]
```

Constructor that specifies the allocated sizes.

After this method is called, key is initialized with the empty string and length is set to zero.

If a memory allocation failure occurs, and the **DDS\_KeyedOctets** (p. 924) structure is allocated but the array and/or key string inside of it cannot be, the unallocated member will be NULL.

#### Parameters

<i>key_size</i>	<< <i>in</i> >> (p. 238) Size of the allocated key (with NULL-terminated character).
<i>size</i>	<< <i>in</i> >> (p. 238) Size of the allocated octets array.

References **DDS\_OctetBuffer\_alloc()**, **DDS\_String\_alloc()**, **DDS\_String\_free()**, **key**, and **value**.

### 9.88.2.3 ~DDS\_KeyedOctets()

```
DDS_KeyedOctets::~~DDS_KeyedOctets ( ) [inline]
```

Destructor.

References [DDS\\_OctetBuffer\\_free\(\)](#), [DDS\\_String\\_free\(\)](#), [key](#), and [value](#).

## 9.88.3 Member Data Documentation

### 9.88.3.1 key

```
char* DDS_KeyedOctets::key
```

Instance key associated with the specified value.

Referenced by [DDS\\_KeyedOctets\(\)](#), and [~DDS\\_KeyedOctets\(\)](#).

### 9.88.3.2 length

```
int DDS_KeyedOctets::length
```

Number of octets to serialize.

### 9.88.3.3 value

```
unsigned char* DDS_KeyedOctets::value
```

[DDS\\_Octets](#) (p. 967) array value.

Referenced by [DDS\\_KeyedOctets\(\)](#), and [~DDS\\_KeyedOctets\(\)](#).

## 9.89 DDS\_KeyedOctetsSeq Struct Reference

Instantiates [FooSeq](#) (p. 1697) < [DDS\\_KeyedOctets](#) (p. 924) >.

### 9.89.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_KeyedOctets** (p. 924) >.

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_KeyedOctets** (p. 924)

## 9.90 DDS\_KeyedString Struct Reference

Keyed string built-in type.

### Public Member Functions

- **DDS\_KeyedString** ()  
*Constructor.*
- **DDS\_KeyedString** (int key\_size, int size)  
*Constructor that specifies the allocated sizes.*
- **~DDS\_KeyedString** ()  
*Destructor.*

### Public Attributes

- char \* **key**  
*Instance key associated with the specified value.*
- char \* **value**  
*String value.*

### 9.90.1 Detailed Description

Keyed string built-in type.

### 9.90.2 Constructor & Destructor Documentation

**9.90.2.1 DDS\_KeyedString()** [1/2]

```
DDS_KeyedString::DDS_KeyedString ( ) [inline]
```

Constructor.

The default constructor initializes the newly created object with NULL key and value.

**9.90.2.2 DDS\_KeyedString()** [2/2]

```
DDS_KeyedString::DDS_KeyedString (
    int key_size,
    int size ) [inline]
```

Constructor that specifies the allocated sizes.

The allocated strings are initialized to empty ("").

If a memory allocation failure occurs, and the **DDS\_KeyedString** (p. 927) structure is allocated but one or both strings inside of it cannot be, the unallocated string will be NULL.

**Parameters**

<i>key_size</i>	<< <i>in</i> >> (p. 238) Size of the allocated key string (with NULL-terminated character).
<i>size</i>	<< <i>in</i> >> (p. 238) Size of the allocated value string (with NULL-terminated character).

References **DDS\_String\_alloc()**, **DDS\_String\_free()**, **key**, and **value**.

**9.90.2.3 ~DDS\_KeyedString()**

```
DDS_KeyedString::~~DDS_KeyedString ( ) [inline]
```

Destructor.

References **DDS\_String\_free()**, **key**, and **value**.

**9.90.3 Member Data Documentation**

### 9.90.3.1 key

```
char* DDS_KeyedString::key
```

Instance key associated with the specified value.

Referenced by [DDS\\_KeyedString\(\)](#), and [~DDS\\_KeyedString\(\)](#).

### 9.90.3.2 value

```
char* DDS_KeyedString::value
```

String value.

Referenced by [DDS\\_KeyedString\(\)](#), and [~DDS\\_KeyedString\(\)](#).

## 9.91 DDS\_KeyedStringSeq Struct Reference

Instantiates [FooSeq](#) (p. 1697) < [DDS\\_KeyedString](#) (p. 927) > .

### 9.91.1 Detailed Description

Instantiates [FooSeq](#) (p. 1697) < [DDS\\_KeyedString](#) (p. 927) > .

Instantiates:

<<*generic*>> (p. 237) [FooSeq](#) (p. 1697)

See also

[DDS\\_KeyedString](#) (p. 927)

## 9.92 DDS\_LatencyBudgetQosPolicy Struct Reference

Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

### Public Attributes

- struct [DDS\\_Duration\\_t](#) **duration**  
*Duration of the maximum acceptable delay.*

### 9.92.1 Detailed Description

Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

This policy is a *hint* to a DDS implementation; it can be used to change how it processes and sends data that has low latency requirements. The DDS specification does not mandate whether or how this policy is used.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES

**Changeable** (p. 360) = YES (p. 360)

See also

**DDS\_PublishModeQosPolicy** (p. 1025)

**DDSFlowController** (p. 1468)

### 9.92.2 Usage

This policy provides a means for the application to indicate to the middleware the urgency of the data communication. By having a non-zero *duration*, RTI Connext can optimize its internal operation.

RTI Connext uses it in conjunction with **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) **DDSDataWriter** (p. 1321) instances associated with a **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED\_POLICY** (p. 120) **DDSFlowController** (p. 1468) only. Together with the time of write, **DDS\_LatencyBudgetQosPolicy::duration** (p. 931) determines the deadline of each individual sample. RTI Connext uses this information to prioritize the sending of asynchronously published data; see **DDS\_AsynchronousPublisherQosPolicy** (p. 590).

### 9.92.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered duration* ≤ *requested duration* evaluates to 'TRUE'.

## 9.92.4 Member Data Documentation

### 9.92.4.1 duration

```
struct DDS_Duration_t DDS_LatencyBudgetQosPolicy::duration
```

Duration of the maximum acceptable delay.

**[default]** 0 (meaning minimize the delay)

## 9.93 DDS\_LifespanQosPolicy Struct Reference

Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.

### Public Attributes

- struct **DDS\_Duration\_t** **duration**  
*Maximum duration for the data's validity.*

### 9.93.1 Detailed Description

Specifies how long the data written by the **DDSDataWriter** (p. 1321) is considered valid.

Each data sample written by the **DDSDataWriter** (p. 1321) has an associated expiration time beyond which the data should not be delivered to any application. Once the sample expires, the data will be removed from the **DDSDataReader** (p. 1288) caches as well as from the transient and persistent information caches.

The expiration time of each sample from the **DDSDataWriter** (p. 1321)'s cache is computed by adding the duration specified by this QoS policy to the time when the sample is added to the **DDSDataWriter** (p. 1321)'s cache. This timestamp is not necessarily equal to the sample's source timestamp that can be provided by the user using the **FooDataWriter::write\_w\_timestamp** (p. 1687) or **FooDataWriter::write\_w\_params** (p. 1688) API.

The expiration time of each sample from the **DDSDataReader** (p. 1288)'s cache is computed by adding the duration to the reception timestamp.

See also

- FooDataWriter::write** (p. 1683)
- FooDataWriter::write\_w\_timestamp** (p. 1687)

Entity:

**DDSTopic** (p. 1617), **DDSDataWriter** (p. 1321)

Properties:

- RxO** (p. 360) = N/A
- Changeable** (p. 360) = **YES** (p. 360)

## 9.93.2 Usage

The Lifespan QoS policy can be used to control how much data is stored by RTI Connex. Even if it is configured to store "all" of the data sent or received for a topic (see **DDS\_HistoryQoSPolicy** (p. 919)), the total amount of data it stores may be limited by this QoS policy.

You may also use this QoS policy to ensure that applications do not receive or act on data, commands or messages that are too old and have 'expired.'

To avoid inconsistencies, multiple writers of the same instance should have the same lifespan.

See also

**DDS\_SampleInfo::source\_timestamp** (p. 1086)

**DDS\_SampleInfo::reception\_timestamp** (p. 1089)

## 9.93.3 Member Data Documentation

### 9.93.3.1 duration

```
struct DDS_Duration_t DDS_LifespanQoSPolicy::duration
```

Maximum duration for the data's validity.

[default] **DDS\_DURATION\_INFINITE** (p. 326)

[range] [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

## 9.94 DDS\_LivelinessChangedStatus Struct Reference

**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346)

### Public Attributes

- **DDS\_Long alive\_count**

*The total count of currently alive **DDSDataWriter** (p. 1321) entities that write the **DDSTopic** (p. 1617) that this **DDSDataReader** (p. 1288) reads.*

- **DDS\_Long not\_alive\_count**

*The total count of currently not\_alive **DDSDataWriter** (p. 1321) entities that write the **DDSTopic** (p. 1617) that this **DDSDataReader** (p. 1288) reads.*

- **DDS\_Long alive\_count\_change**

*The change in the alive\_count since the last time the listener was called or the status was read.*

- **DDS\_Long not\_alive\_count\_change**

*The change in the not\_alive\_count since the last time the listener was called or the status was read.*

- **DDS\_InstanceHandle\_t last\_publication\_handle**

*This InstanceHandle can be used to look up which remote **DDSDataWriter** (p. 1321) was the last to cause this **DataReader**'s status to change, using **DDSDataReader::get\_matched\_publication\_data** (p. 1300).*

## 9.94.1 Detailed Description

**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346)

The **DDSDataReaderListener::on\_liveliness\_changed** (p. 1316) callback may be invoked for the following reasons:

- The liveliness of any **DDSDataWriter** (p. 1321) matching this DataReader (as defined by the **DDS\_LivelinessQoSPolicyKind** (p. 409) setting) is lost.
- A DataWriter's liveliness is recovered after being lost.
- A new matching DataWriter has been discovered.
- A matching DataWriter has been deleted.
- A QoS Policy has changed such that a DataWriter that matched this DataReader before no longer matches (such as a change to the **DDS\_PartitionQoSPolicy** (p. 989)). In this case, RTI Connex will no longer keep track of the DataWriter's liveliness. Furthermore, consider two scenarios:
  - DataWriter was alive when it and DataReader stopped matching: **DDS\_LivelinessChangedStatus::alive\_count** (p.933) will decrease (since there's one less matching alive DataWriter) and **DDS\_LivelinessChangedStatus::not\_alive\_count** (p. 933) will remain the same (since the DataWriter is still alive).
  - DataWriter was not alive when it and DataReader stopped matching: **DDS\_LivelinessChangedStatus::alive\_count** (p. 933) will remain the same (since the matching DataWriter was not alive) and **DDS\_LivelinessChangedStatus::not\_alive\_count** (p. 933) will decrease (since there's one less not-alive matching DataWriter).

Note: There are several ways that a DataWriter and DataReader can become incompatible after the DataWriter has lost liveliness. For example, when the **DDS\_LivelinessQoSPolicyKind** (p. 409) is set to **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS**, it is possible that the DataWriter has not asserted its liveliness in a timely manner, and then a QoS change occurs on the DataWriter or DataReader that makes the entities incompatible.
- A QoS Policy (such as the **DDS\_PartitionQoSPolicy** (p.989)) has changed such that a DataWriter that was unmatched with the DataReader now matches.

## 9.94.2 Member Data Documentation

### 9.94.2.1 alive\_count

**DDS\_Long** DDS\_LivelinessChangedStatus::alive\_count

The total count of currently alive **DDSDataWriter** (p.1321) entities that write the **DDSTopic** (p.1617) that this **DDSDataReader** (p. 1288) reads.

### 9.94.2.2 not\_alive\_count

```
DDS_Long DDS_LivelinessChangedStatus::not_alive_count
```

The total count of currently not\_alive **DDSDataWriter** (p. 1321) entities that write the **DDSTopic** (p. 1617) that this **DDSDataReader** (p. 1288) reads.

### 9.94.2.3 alive\_count\_change

```
DDS_Long DDS_LivelinessChangedStatus::alive_count_change
```

The change in the alive\_count since the last time the listener was called or the status was read.

### 9.94.2.4 not\_alive\_count\_change

```
DDS_Long DDS_LivelinessChangedStatus::not_alive_count_change
```

The change in the not\_alive\_count since the last time the listener was called or the status was read.

Note that a positive not\_alive\_count\_change means one of the following:

- The DomainParticipant containing the matched DataWriter has lost liveliness or has been deleted.
- The matched DataWriter has lost liveliness or has been deleted.

### 9.94.2.5 last\_publication\_handle

```
DDS_InstanceHandle_t DDS_LivelinessChangedStatus::last_publication_handle
```

This InstanceHandle can be used to look up which remote **DDSDataWriter** (p. 1321) was the last to cause this DataReader's status to change, using **DDSDataReader::get\_matched\_publication\_data** (p. 1300).

It's possible that the DataWriter has been purged from the discovery database. (See the "Discovery Overview" section of the *User's Manual*.) If so, the **DDSDataReader::get\_matched\_publication\_data** (p. 1300) method will not be able to return information about the DataWriter. In this case, the only way to get information about the lost DataWriter is if you cached the information previously.

## 9.95 DDS\_LivelinessLostStatus Struct Reference

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 346)

## Public Attributes

- **DDS\_Long total\_count**

*Total cumulative number of times that a previously-alive **DDSDataWriter** (p. 1321) became not alive due to a failure to to actively signal its liveliness within the offered liveliness period.*

- **DDS\_Long total\_count\_change**

*The incremental changes in total\_count since the last time the listener was called or the status was read.*

### 9.95.1 Detailed Description

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 346)

Entity:

**DDSDataWriter** (p. 1321)

Listener:

**DDSDataWriterListener** (p. 1344)

The liveliness that the **DDSDataWriter** (p. 1321) has committed through its **DDS\_LivelinessQosPolicy** (p. 936) was not respected; thus **DDSDataReader** (p. 1288) entities will consider the **DDSDataWriter** (p. 1321) as no longer "alive/active".

### 9.95.2 Member Data Documentation

#### 9.95.2.1 total\_count

```
DDS_Long DDS_LivelinessLostStatus::total_count
```

Total cumulative number of times that a previously-alive **DDSDataWriter** (p. 1321) became not alive due to a failure to to actively signal its liveliness within the offered liveliness period.

This count does not change when an already not alive **DDSDataWriter** (p. 1321) simply remains not alive for another liveliness period.

#### 9.95.2.2 total\_count\_change

```
DDS_Long DDS_LivelinessLostStatus::total_count_change
```

The incremental changes in total\_count since the last time the listener was called or the status was read.

## 9.96 DDS\_LivelinessQosPolicy Struct Reference

Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead."

### Public Attributes

- **DDS\_LivelinessQosPolicyKind** `kind`  
*The kind of liveliness desired.*
- struct **DDS\_Duration\_t** `lease_duration`  
*The duration within which a **DDSDataWriter** (p. 1321) must be asserted, or else it is assumed to be not alive.*
- **DDS\_Long** `assertions_per_lease_duration`  
*The number of assertions a **DDSDataWriter** (p. 1321) will send during a its **DDS\_LivelinessQosPolicy::lease\_duration** (p. 938).*

### 9.96.1 Detailed Description

Specifies and configures the mechanism that allows **DDSDataReader** (p. 1288) entities to detect when **DDSDataWriter** (p. 1321) entities become disconnected or "dead."

The liveliness status of a **DDSDataWriter** (p. 1321) is used to maintain instance ownership in combination with the setting of the **OWNERSHIP** (p. 414) policy. The application is also informed via **DDSListener** (p. 1526) when an **DDSDataWriter** (p. 1321) is no longer alive.

A **DDSDataWriter** (p. 1321) commits to signalling its liveliness at intervals not to exceed the **DDS\_LivelinessQosPolicy::lease\_duration** (p. 938) configured on the **DDSDataWriter** (p. 1321). The rate at which the **DDSDataWriter** (p. 1321) will signal its liveliness is defined by **DDS\_LivelinessQosPolicy::assertions\_per\_lease\_duration** (p. 938).

The **DDSDataReader** (p. 1288) `lease_duration` specifies the maximum period at which matching DataWriters must have their liveliness asserted.

In addition, in the subscribing application Connex DDS uses an internal thread that wakes up at the period set by the DataReader's `lease_duration` to see if a DataWriter `lease_duration` has been violated.

**Important:** The DataReader `lease_duration` only configures how often a DataReader will check the liveliness of the matching DataWriters. The DataWriter `lease_duration` configures the period at which a DataWriter must assert its liveliness and is the value that the DataReader uses to determine if a matching DataWriter is alive or not.

Listeners are used to notify a **DDSDataReader** (p. 1288) of loss of liveliness and **DDSDataWriter** (p. 1321) of violations to the liveliness contract. The `on_liveliness_lost()` callback is only called *once*, after the first time the `lease_duration` is exceeded (when the **DDSDataWriter** (p. 1321) first loses liveliness).

This QoS policy can be used during system integration to ensure that applications have been coded to meet design specifications. It can also be used during runtime to detect when systems are performing outside of design specifications. Receiving applications can take appropriate actions in response to disconnected DataWriters.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 346), **DDS\_LivelinessLostStatus** (p. 934);  
**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346), **DDS\_LivelinessChangedStatus** (p. 932);  
**DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_↔  
STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

## 9.96.2 Usage

This policy controls the mechanism and parameters used by RTI Connext to ensure that particular DataWriters on the network are still alive. The liveliness can also affect the ownership of a particular instance, as determined by the **OWNERSHIP** (p. 414) policy.

This policy has several settings to support both data types that are updated periodically as well as those that are changed sporadically. It also allows customisation for different application requirements in terms of the kinds of failures that will be detected by the liveliness mechanism.

The **DDS\_AUTOMATIC\_LIVELINESS\_QOS** (p. 410) liveliness setting is most appropriate for applications that only need to detect failures at the process-level, but not application-logic failures within a process. RTI Connext takes responsibility for renewing the leases at the required rates and thus, as long as the local process where a **DDSDomain↔  
Participant** (p. 1351) is running and the link connecting it to remote participants remains connected, the entities within the **DDSDomainParticipant** (p. 1351) will be considered alive. This requires the lowest overhead.

The manual settings (**DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** (p. 410), **DDS\_MANUAL\_BY\_TOPIC↔  
\_LIVELINESS\_QOS** (p. 410)) require the application on the publishing side to periodically assert the liveliness before the lease expires to indicate the corresponding **DDSEntity** (p. 1463) is still alive. The action can be explicit by calling the **DDSDataWriter::assert\_liveliness** (p. 1329) operation or implicit by writing some data.

The two possible manual settings control the granularity at which the application must assert liveliness.

- The setting **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** (p. 410) requires only that one **DDSEntity** (p. 1463) within a participant is asserted to be alive to deduce all other **DDSEntity** (p. 1463) objects within the same **DDSDomainParticipant** (p. 1351) are also alive.
- The setting **DDS\_MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** (p. 410) requires that at least one instance within the **DDSDataWriter** (p. 1321) is asserted.

Changes in **LIVELINESS** (p. 409) must be detected by the Service with a time-granularity greater or equal to the **DDS↔  
\_LivelinessQosPolicy::lease\_duration** (p. 938). This ensures that the value of the **DDS\_LivelinessChangedStatus** (p. 932) is updated at least once during each lease\_duration and the related Listeners and **DDSWaitSet** (p. 1629) s are notified within a lease\_duration from the time the **LIVELINESS** (p. 409) changed.

### 9.96.3 Compatibility

The value offered is considered compatible with the value requested if and only if the following conditions are met:

- the inequality *offered kind*  $\geq$  *requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of **DDS\_LivelinessQosPolicyKind** (p. 409) kind are considered ordered such that: **DDS\_AUTOMATIC** ↔ **\_LIVELINESS\_QOS** (p. 410) < **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** (p. 410) < **DDS\_** ↔ **MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** (p. 410).
- the inequality *offered lease\_duration*  $\leq$  *requested lease\_duration* evaluates to **DDS\_BOOLEAN** ↔ **\_TRUE** (p. 317).

See also

**Relationship between registration, liveliness and ownership** (p. 975)

### 9.96.4 Member Data Documentation

#### 9.96.4.1 kind

```
DDS_LivelinessQosPolicyKind DDS_LivelinessQosPolicy::kind
```

The kind of liveliness desired.

**[default]** **DDS\_AUTOMATIC\_LIVELINESS\_QOS** (p. 410)

#### 9.96.4.2 lease\_duration

```
struct DDS_Duration_t DDS_LivelinessQosPolicy::lease_duration
```

The duration within which a **DDSDataWriter** (p. 1321) must be asserted, or else it is assumed to be not alive.

For a DataWriter, the *lease\_duration* specifies a timeout by which liveliness must be asserted for the DataWriter, or the DataWriter will be considered inactive or not alive.

For a DataReader, the *lease\_duration* specifies the maximum period at which the DataReader will check to see if the matching DataWriters are still alive according to the DataWriters *lease\_duration* value.

**Important:** The DataWriter *lease\_duration* is the value that the DataReader uses to determine if a matching DataWriter is alive or not.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326)

**[range]** [0,1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.96.4.3 assertions\_per\_lease\_duration

`DDS_Long DDS_LivelinessQosPolicy::assertions_per_lease_duration`

The number of assertions a `DDSDataWriter` (p. 1321) will send during a its `DDS_LivelinessQosPolicy::lease_↔duration` (p. 938).

This field only applies to a `DDSDataWriter` (p. 1321) and is not considered during QoS compatibility checks.

The default value is 3. A higher value will make the liveliness mechanism more robust against packet losses, but it will also increase the network traffic.

**[default]** 3

**[range]** [2, 100 million]

## 9.97 DDS\_Locator\_t Struct Reference

`<<extension>>` (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.

### Public Attributes

- **DDS\_Long kind**  
*The kind of locator.*
- **DDS\_UnsignedLong port**  
*the port number*
- **DDS\_Octet address [ DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX]**  
*A DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX (p. 305) octet field to hold the IP address.*

### 9.97.1 Detailed Description

`<<extension>>` (p. 237) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.

### 9.97.2 Member Data Documentation

### 9.97.2.1 kind

```
DDS_Long DDS_Locator_t::kind
```

The kind of locator.

If the Locator\_t kind is **DDS\_LOCATOR\_KIND\_UDPv4** (p. 311), the address contains an IPv4 address. In this case, the leading 12 octets of the **DDS\_Locator\_t::address** (p. 940) must be zero. The last 4 octets of **DDS\_Locator\_t::address** (p. 940) are used to store the IPv4 address.

If the Locator\_t kind is **DDS\_LOCATOR\_KIND\_UDPv6** (p. 311), the address contains an IPv6 address. IPv6 addresses typically use a shorthand hexadecimal notation that maps one-to-one to the 16 octets in the **DDS\_Locator\_t::address** (p. 940) field.

### 9.97.2.2 port

```
DDS_UnsignedLong DDS_Locator_t::port
```

the port number

### 9.97.2.3 address

```
DDS_Octet DDS_Locator_t::address[ DDS_LOCATOR_ADDRESS_LENGTH_MAX]
```

A **DDS\_LOCATOR\_ADDRESS\_LENGTH\_MAX** (p. 305) octet field to hold the IP address.

## 9.98 DDS\_LocatorFilter\_t Struct Reference

Specifies the configuration of an individual channel within a MultiChannel DataWriter.

### Public Attributes

- struct **DDS\_LocatorSeq locators**  
*Sequence containing from one to 16 **DDS\_Locator\_t** (p. 939), used to specify the multicast address locators of an individual channel within a MultiChannel DataWriter.*
- char \* **filter\_expression**  
*A logical expression used to determine the data that will be published in the channel.*

### 9.98.1 Detailed Description

Specifies the configuration of an individual channel within a MultiChannel DataWriter.

QoS:

**DDS\_LocatorFilterQosPolicy** (p. 941)

## 9.98.2 Member Data Documentation

### 9.98.2.1 locators

```
struct DDS_LocatorSeq DDS_LocatorFilter_t::locators
```

Sequence containing from one to 16 **DDS\_Locator\_t** (p.939), used to specify the multicast address locators of an individual channel within a MultiChannel DataWriter.

**[default]** Empty sequence.

### 9.98.2.2 filter\_expression

```
char* DDS_LocatorFilter_t::filter_expression
```

A logical expression used to determine the data that will be published in the channel.

If the expression evaluates to TRUE, a sample will be published on the channel.

An empty string always evaluates the expression to TRUE.

A NULL value is not allowed.

The syntax of the expression will depend on the value of **DDS\_LocatorFilterQosPolicy::filter\_name** (p.942)

*Important:* This value must be an allocated string with **DDS\_String\_alloc** (p.553) or **DDS\_String\_dup** (p.553). It should not be assigned to a string constant.

See also

**Queries and Filters Syntax** (p.179)

**[default]** NULL (invalid value)

## 9.99 DDS\_LocatorFilterQosPolicy Struct Reference

The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS\_PublicationBuiltin<->TopicData** (p.1010).

### Public Attributes

- struct **DDS\_LocatorFilterSeq locator\_filters**

*A sequence of **DDS\_LocatorFilter\_t** (p.940). Each **DDS\_LocatorFilter\_t** (p.940) reports the configuration of a single channel of a MultiChannel DataWriter.*

- char \* **filter\_name**

*Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.*

### 9.99.1 Detailed Description

The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS\_PublicationBuiltinTopicData** (p. 1010).

Entity:

**DDS\_PublicationBuiltinTopicData** (p. 1010)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.99.2 Member Data Documentation

#### 9.99.2.1 locator\_filters

```
struct DDS_LocatorFilterSeq DDS_LocatorFilterQosPolicy::locator_filters
```

A sequence of **DDS\_LocatorFilter\_t** (p. 940). Each **DDS\_LocatorFilter\_t** (p. 940) reports the configuration of a single channel of a MultiChannel DataWriter.

A sequence length of zero indicates the **DDS\_MultiChannelQosPolicy** (p. 964) is not in use.

**[default]** Empty sequence.

#### 9.99.2.2 filter\_name

```
char* DDS_LocatorFilterQosPolicy::filter_name
```

Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

The following builtin filters are supported: **DDS\_SQLFILTER\_NAME** (p. 59) and **DDS\_STRINGMATCHFILTER\_NAME** (p. 59).

Warning

This value must be assigned to either one of the predefined values (**DDS\_SQLFILTER\_NAME** (p. 59) or **DDS\_STRINGMATCHFILTER\_NAME** (p. 59)), or to an allocated string with **DDS\_String\_alloc** (p. 553) or **DDS\_String\_dup** (p. 553). It should not be assigned to a string constant.

**[default]** **DDS\_STRINGMATCHFILTER\_NAME** (p. 59)

## 9.100 DDS\_LocatorFilterSeq Struct Reference

Declares IDL `sequence< DDS_LocatorFilter_t (p. 940) >`.

### 9.100.1 Detailed Description

Declares IDL `sequence< DDS_LocatorFilter_t (p. 940) >`.

A sequence of **DDS\_LocatorFilter\_t** (p. 940) used to report the channels' properties. If the length of the sequence is zero, the **DDS\_MultiChannelQosPolicy** (p. 964) is not in use.

Instantiates:

`<<generic>>` (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_LocatorFilter\_t** (p. 940)

## 9.101 DDS\_LocatorSeq Struct Reference

Declares IDL `sequence < DDS_Locator_t (p. 939) >`

### 9.101.1 Detailed Description

Declares IDL `sequence < DDS_Locator_t (p. 939) >`

See also

**DDS\_Locator\_t** (p. 939)

## 9.102 DDS\_LoggingQosPolicy Struct Reference

Configures the RTI Connext logging facility.

## Public Attributes

- **NDDS\_Config\_LogVerbosity verbosity**  
*The verbosity at which RTI Connex diagnostic information is logged.*
- **NDDS\_Config\_LogCategory category**  
*Categories of logged messages.*
- **NDDS\_Config\_LogPrintFormat print\_format**  
*The format used to output RTI Connex diagnostic information.*
- char \* **output\_file**  
*Specifies the file to which log messages will be redirected to.*
- char \* **output\_file\_suffix**  
*Sets the file suffix when logging to a set of files.*
- **DDS\_Long max\_bytes\_per\_file**  
*Specifies the maximum number of bytes a single file can contain.*
- **DDS\_Long max\_files**  
*Specifies the maximum number of files to create before overwriting the previous ones.*

### 9.102.1 Detailed Description

Configures the RTI Connex logging facility.

All the properties associated with RTI Connex logging can be configured using this QoS policy. This allows you to configure logging using XML QoS Profiles. See the "Troubleshooting" chapter in the `User's Manual` for details.

Entity:

**DDSDomainParticipantFactory** (p. 1426)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **Changeable** (p. 360)

### 9.102.2 Member Data Documentation

#### 9.102.2.1 verbosity

**NDDS\_Config\_LogVerbosity** `DDS_LoggingQosPolicy::verbosity`

The verbosity at which RTI Connex diagnostic information is logged.

[default] **NDDS\_CONFIG\_LOG\_VERBOSITY\_ERROR** (p. 525)

### 9.102.2.2 category

`NDDS_Config_LogCategory` `DDS_LoggingQosPolicy::category`

Categories of logged messages.

**[default]** Logging will be enabled for all the categories.

### 9.102.2.3 print\_format

`NDDS_Config_LogPrintFormat` `DDS_LoggingQosPolicy::print_format`

The format used to output RTI Connex diagnostic information.

**[default]** `NDDS_CONFIG_LOG_PRINT_FORMAT_DEFAULT` (p. 527).

### 9.102.2.4 output\_file

`char*` `DDS_LoggingQosPolicy::output_file`

Specifies the file to which log messages will be redirected to.

If the value of `output_file` is set to `NULL`, log messages will sent to standard output.

If `DDS_LoggingQosPolicy::max_bytes_per_file` (p. 946) is not `DDS_LENGTH_UNLIMITED` (p. 438), this is used as the file name prefix for a set of numbered files.

*Important:* This value must be an allocated string with `DDS_String_alloc` (p. 553) or `DDS_String_dup` (p. 553). It should not be assigned to a string constant.

**[default]** `NULL`

See also

`NDDSSConfigLogger::set_output_file_set` (p. 1825)

### 9.102.2.5 output\_file\_suffix

```
char* DDS_LoggingQosPolicy::output_file_suffix
```

Sets the file suffix when logging to a set of files.

#### Note

This field only applies when `idref_LoggingQosPolicy_max_bytes_per_file` is different than **DDS\_LENGTH\_UNLIMITED** (p. 438).

It specifies the suffix to use for the set of files used to redirect the logging output. The prefix is **DDS\_LoggingQosPolicy::output\_file** (p. 945).

*Important:* This value must be an allocated string with **DDS\_String\_alloc** (p. 553) or **DDS\_String\_dup** (p. 553). It should not be assigned to a string constant.

**[default]** NULL

**[default]** No suffix

#### See also

**NDDSSConfigLogger::set\_output\_file\_set** (p. 1825)

### 9.102.2.6 max\_bytes\_per\_file

```
DDS_Long DDS_LoggingQosPolicy::max_bytes_per_file
```

Specifies the maximum number of bytes a single file can contain.

When this field is different than **DDS\_LENGTH\_UNLIMITED** (p. 438), it enables logging to separate files as they reach this size.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438) (a single file is used)

#### See also

**NDDSSConfigLogger::set\_output\_file\_set** (p. 1825)

### 9.102.2.7 max\_files

`DDS_Long DDS_LoggingQosPolicy::max_files`

Specifies the maximum number of files to create before overwriting the previous ones.

#### Note

This field only applies when `idref_LoggingQosPolicy_max_bytes_per_file` is different than `DDS_LENGTH_UNLIMITED` (p. 438).

When this field is different than `DDS_LENGTH_UNLIMITED` (p. 438), and the number of files reaches this number, future logging messages overwrite the previously created files.

[default] `DDS_LENGTH_UNLIMITED` (p. 438) (files aren't overwritten)

#### See also

`NDDConfigLogger::set_output_file_set` (p. 1825)

## 9.103 DDS\_LongDoubleSeq Struct Reference

Instantiates `FooSeq` (p. 1697) < `DDS_LongDouble` (p. 319) >

### 9.103.1 Detailed Description

Instantiates `FooSeq` (p. 1697) < `DDS_LongDouble` (p. 319) >

Instantiates:

## 9.106 DDS\_MonitoringDedicatedParticipantSettings Struct Reference

Configures the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.

### Public Attributes

- **DDS\_Boolean enable**  
*Enables the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.*
- int **domain\_id**  
*The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1351).*
- char \* **participant\_qos\_profile\_name**  
*The fully qualified name of the profile used to configure the **DDSDomainParticipant** (p. 1351) that will be used to distribute telemetry data.*
- struct **DDS\_StringSeq collector\_initial\_peers**  
*Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS\_MonitoringDistributionSettings::dedicated\_participant** (p. 951).*

### 9.106.1 Detailed Description

Configures the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.

### 9.106.2 Member Data Documentation

#### 9.106.2.1 enable

```
DDS_Boolean DDS_MonitoringDedicatedParticipantSettings::enable
```

Enables the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.

Setting this value to **DDS\_BOOLEAN\_FALSE** (p. 317) is not currently supported.

**[default]** **DDS\_BOOLEAN\_TRUE** (p. 317)

#### 9.106.2.2 domain\_id

```
int DDS_MonitoringDedicatedParticipantSettings::domain_id
```

The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1351).

**[default]** 2

#### 9.106.2.3 participant\_qos\_profile\_name

```
char* DDS_MonitoringDedicatedParticipantSettings::participant_qos_profile_name
```

The fully qualified name of the profile used to configure the **DDSDomainParticipant** (p. 1351) that will be used to distribute telemetry data.

If NULL (the default value) then RTI Monitoring Library 2.0 uses **DDS\_PROFILE\_GENERIC\_MONITORING2** (p. 497).

**[default]** NULL

### 9.106.2.4 collector\_initial\_peers

```
struct DDS_StringSeq DDS_MonitoringDedicatedParticipantSettings::collector_initial_peers
```

Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS\_MonitoringDistributionSettings::dedicated\_participant** (p. 951).

These initial peers should correspond with the RTI Observability Collector Service with which RTI Monitoring Library 2.0 has to communicate. The `collector_initial_peers` works the same as `initial_peers` for other `DomainParticipants`, except that it allows you to easily specify the initial peer(s) for the RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1351), which usually has different initial peer(s) than those used by your application.

If no `collector_initial_peers` are specified, or if it is explicitly set to an empty list, the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) list of **DDS\_MonitoringDedicatedParticipantSettings::participant\_qos\_profile\_name** (p. 949) will be used as the initial peers of **DDS\_MonitoringDistributionSettings::dedicated\_participant** (p. 951).

**[default]** An empty sequence.

See also

**DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) for further information about initial peers.

## 9.107 DDS\_MonitoringDistributionSettings Struct Reference

Configures the distribution of telemetry data.

### Public Attributes

- struct **DDS\_MonitoringDedicatedParticipantSettings** **dedicated\_participant**  
*Configures the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.*
- char \* **publisher\_qos\_profile\_name**  
*The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.*
- struct **DDS\_MonitoringEventDistributionSettings** **event\_settings**  
*Configures the distribution of event metrics.*
- struct **DDS\_MonitoringPeriodicDistributionSettings** **periodic\_settings**  
*Configures the distribution of periodic metrics.*
- struct **DDS\_MonitoringLoggingDistributionSettings** **logging\_settings**  
*Configures the distribution of logging messages.*

### 9.107.1 Detailed Description

Configures the distribution of telemetry data.

## 9.107.2 Member Data Documentation

### 9.107.2.1 dedicated\_participant

```
struct DDS_MonitoringDedicatedParticipantSettings DDS_MonitoringDistributionSettings::dedicated↔  
_participant
```

Configures the use of a dedicated **DDSDomainParticipant** (p. 1351) to distribute the RTI Connex application telemetry data.

### 9.107.2.2 publisher\_qos\_profile\_name

```
char* DDS_MonitoringDistributionSettings::publisher_qos_profile_name
```

The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

There is one Publisher for each telemetry data **DDSTopic** (p.1617): **RTI\_MONITORING\_PERIODIC\_TOPIC\_↔  
NAME** (p.521), **RTI\_MONITORING\_EVENT\_TOPIC\_NAME** (p.521), and **RTI\_MONITORING\_LOGGING\_TOPIC\_↔  
NAME** (p.522).

If NULL (the default value) then RTI Monitoring Library 2.0 uses **DDS\_PROFILE\_GENERIC\_MONITORING2** (p.497).

**[default]** NULL

### 9.107.2.3 event\_settings

```
struct DDS_MonitoringEventDistributionSettings DDS_MonitoringDistributionSettings::event_settings
```

Configures the distribution of event metrics.

### 9.107.2.4 periodic\_settings

```
struct DDS_MonitoringPeriodicDistributionSettings DDS_MonitoringDistributionSettings::periodic_↔  
settings
```

Configures the distribution of periodic metrics.

### 9.107.2.5 logging\_settings

```
struct DDS_MonitoringLoggingDistributionSettings DDS_MonitoringDistributionSettings::logging_↔
settings
```

Configures the distribution of logging messages.

## 9.108 DDS\_MonitoringEventDistributionSettings Struct Reference

Configures the distribution of event metrics.

### Public Attributes

- **DDS\_UnsignedLong concurrency\_level**  
*Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.*
- char \* **datawriter\_qos\_profile\_name**  
*The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1321) that distributes event metrics.*
- struct **DDS\_ThreadSettings\_t thread**  
*The settings of the event metric thread.*
- struct **DDS\_Duration\_t publication\_period**  
*Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.*

### 9.108.1 Detailed Description

Configures the distribution of event metrics.

Event metrics are provided to RTI Monitoring Library 2.0 when they change.

For example, if the liveliness of a **DDSDataWriter** (p. 1321) is lost, a matching **DDSDataReader** (p. 1288) will push the new value of **DDS\_LivelinessChangedStatus** (p. 932) to RTI Monitoring Library 2.0 so that the liveliness status change can be distributed.

There are three kinds of event metrics:

- **Configuration metrics:** Provided to RTI Monitoring Library 2.0 by pushing changes to QoS policies.
- **Status metrics:** Provided to RTI Monitoring Library 2.0 by pushing changes to the event statuses such as **DDS\_↔\_LivelinessChangedStatus** (p. 932).
- **Resource metrics:** Provided to RTI Monitoring Library 2.0 when a resource (such as **DDSDataWriter** (p. 1321)) is created or deleted.

The event metrics that will be distributed for an observable resource can be configured with **DDS\_Monitoring\_↔TelemetryData::metrics** (p. 964).

## 9.108.2 Member Data Documentation

### 9.108.2.1 concurrency\_level

```
DDS_UnsignedLong DDS_MonitoringEventDistributionSettings::concurrency_level
```

Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.

With a `concurrency_level` of one, all the event metrics pushed to RTI Monitoring Library 2.0 will be stored in a single queue protected by a single mutex.

With a `concurrency_level` of 'n', RTI Monitoring Library 2.0 will create 'n' queues for event metrics, each queue protected by its own mutex. Each resource (e.g, a **DDSDataReader** (p. 1288)) will be associated with one of the queues when the resource is registered with RTI Monitoring Library 2.0. Therefore, all the event metrics for a single resource always go to the same queue.

The event metrics for two resources associated with different event queues can be pushed in parallel. This is why a higher `concurrency_level` provides more concurrency.

The event metrics added to the event queues are processed by a single thread configured using **DDS\_MonitoringEventDistributionSettings::thread** (p. 953).

**[default]** 5

**[range]** [1, 100]

### 9.108.2.2 datawriter\_qos\_profile\_name

```
char* DDS_MonitoringEventDistributionSettings::datawriter_qos_profile_name
```

The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1321) that distributes event metrics.

The **DDSDataWriter** (p. 1321) Topic is **RTI\_MONITORING\_EVENT\_TOPIC\_NAME** (p. 521).
