RTI Connext C API

Version 7.7.0

1 RTI Connext **1**

1.1 Available Documentation. . . . 1

1.1.1 The documents for the Core Libraries and Utilities are: . . . 2

1.1.2 The API Reference HTML documentation contains: . . . 2

1.2 Feedback and Support for this Release. . . . 2

2 Module Index **3**

2.1 Modules . . . 3

3 Data Structure Index **9**

3.1 Data Structures . . . 9

4 File Index **23**

4.1 File List . . . 23

5 Module Documentation **25**

5.1 Clock Selection . . . 25

5.1.1 Available Clocks . . . 25

5.1.2 Clock Selection Strategy . . . 26

5.1.3 Configuring Clock Selection . . . 26

5.2 Domain Module . . . 26

5.2.1 Detailed Description . . . 27

5.3 DomainParticipantFactory . . . 27

5.3.1 Detailed Description . . . 31

5.3.2 Macro Definition Documentation . . . 31

5.3.2.1 DDS_DomainParticipantFactoryQos_INITIALIZER . . . 31

5.3.2.2 DDS_TheParticipantFactory . . . 32

5.3.3 Typedef Documentation . . . 32

5.3.3.1 DDS_DomainParticipantFactory . . . 32

5.3.3.2 DDS_DomainParticipantFactory_RegisterTypeFunction . . . 33

5.3.4 Function Documentation . . . 33

5.3.4.1 DDS_DomainParticipantFactoryQos_equals() . . . 33

5.3.4.2 DDS_DomainParticipantFactoryQos_print() . . . 34

5.3.4.3 DDS_DomainParticipantFactoryQos_to_string() . . . 34

5.3.4.4 DDS_DomainParticipantFactoryQos_to_string_w_params() . . . 35

5.3.4.5 DDS_DomainParticipantFactoryQos_initialize() . . . 36

5.3.4.6 DDS_DomainParticipantFactoryQos_finalize() . . . 36

5.3.4.7 DDS_DomainParticipantFactoryQos_copy() . . . 37

5.3.4.8 DDS_DomainParticipantFactory_get_instance() . . . 38

5.3.4.9 DDS_DomainParticipantFactory_finalize_instance() . . . 38

5.3.4.10 DDS_DomainParticipantFactory_set_default_participant_qos() . . . 39

5.3.4.11 DDS_DomainParticipantFactory_set_default_participant_qos_with_profile() 39
5.3.4.12 DDS_DomainParticipantFactory_get_default_participant_qos() 40
5.3.4.13 DDS_DomainParticipantFactory_create_participant() 41
5.3.4.14 DDS_DomainParticipantFactory_create_participant_with_profile() 42
5.3.4.15 DDS_DomainParticipantFactory_delete_participant() 43
5.3.4.16 DDS_DomainParticipantFactory_lookup_participant() 44
5.3.4.17 DDS_DomainParticipantFactory_get_qos() 45
5.3.4.18 DDS_DomainParticipantFactory_set_qos() 45
5.3.4.19 DDS_DomainParticipantFactory_load_profiles() 46
5.3.4.20 DDS_DomainParticipantFactory_reload_profiles() 46
5.3.4.21 DDS_DomainParticipantFactory_unload_profiles() 47
5.3.4.22 DDS_DomainParticipantFactory_set_default_library() 47
5.3.4.23 DDS_DomainParticipantFactory_set_default_profile() 48
5.3.4.24 DDS_DomainParticipantFactory_get_default_library() 49
5.3.4.25 DDS_DomainParticipantFactory_get_default_profile() 49
5.3.4.26 DDS_DomainParticipantFactory_get_default_profile_library() 50
5.3.4.27 DDS_DomainParticipantFactory_get_participant_factory_qos_from_profile() 51
5.3.4.28 DDS_DomainParticipantFactory_get_participant_qos_from_profile() 51
5.3.4.29 DDS_DomainParticipantFactory_get_publisher_qos_from_profile() 52
5.3.4.30 DDS_DomainParticipantFactory_get_subscriber_qos_from_profile() 52
5.3.4.31 DDS_DomainParticipantFactory_get_datareader_qos_from_profile() 53
5.3.4.32 DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name() . . 54
5.3.4.33 DDS_DomainParticipantFactory_get_datawriter_qos_from_profile() 54
5.3.4.34 DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name() . . 55
5.3.4.35 DDS_DomainParticipantFactory_get_topic_qos_from_profile() 55
5.3.4.36 DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name() 56
5.3.4.37 DDS_DomainParticipantFactory_get_qos_profile_libraries() 57
5.3.4.38 DDS_DomainParticipantFactory_get_qos_profiles() 57
5.3.4.39 DDS_DomainParticipantFactory_unregister_thread() 57
5.3.4.40 DDS_DomainParticipantFactory_get_typecode_from_config() 58
5.3.4.41 DDS_DomainParticipantFactory_create_participant_from_config() 59
5.3.4.42 DDS_DomainParticipantFactory_create_participant_from_config_w_params() 60
5.3.4.43 DDS_DomainParticipantFactory_lookup_participant_by_name() 61
5.3.4.44 DDS_DomainParticipantFactory_register_type_support() 61
5.3.4.45 DDS_DomainParticipantFactory_get_participants() 62
5.3.4.46 DDS_DomainParticipantFactory_set_thread_factory() 63
5.3.5 Variable Documentation 64
5.3.5.1 DDS_PARTICIPANT_QOS_DEFAULT 64
5.3.5.2 DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT 65

5.4 DomainParticipants . . . 65
5.4.1 Detailed Description . . . 74
5.4.2 Macro Definition Documentation . . . 74
5.4.2.1 DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS_EXPIRATION_MESSAGE_INITIALIZER 74

5.90 Topic Use Cases . . . 980
5.90.1 Registering a user data type . . . 980
5.90.2 Setting up a topic . . . 980
5.90.3 Tearing down a topic . . . 980
5.91 FlowController Use Cases . . . 981
5.91.1 Creating a flow controller . . . 981
5.91.2 Flow controlling a data writer . . . 981
5.91.3 Using the built-in flow controllers . . . 982
5.91.4 Shaping the network traffic for a particular transport . . . 982
5.91.5 Coalescing multiple samples in a single network packet . . . 983
5.92 Publisher Use Cases . . . 983
5.92.1 Setting up a publisher . . . 983
5.92.2 Tearing down a publisher . . . 983
5.93 DataWriter Use Cases . . . 984
5.93.1 Setting up a data writer . . . 984
5.93.2 Managing instances . . . 984
5.93.3 Sending data . . . 985
5.93.4 Tearing down a data writer . . . 985
5.94 Subscriber Use Cases . . . 985
5.94.1 Setting up a subscriber . . . 985
5.94.2 Set up subscriber to access received data . . . 986
5.94.3 Access received data via a subscriber . . . 986
5.94.4 Access received data coherently and/or in order . . . 987

5.94.5 Tearing down a subscriber . . . 987
5.95 DataReader Use Cases . . . 987
5.95.1 Setting up a data reader . . . 988
5.95.2 Managing instances . . . 988
5.95.3 Set up reader to access received data . . . 988
5.95.4 Access received data via a reader . . . 989
5.95.5 Taking data . . . 989
5.95.6 Reading data . . . 990
5.95.7 Tearing down a data reader . . . 990
5.96 Entity Use Cases . . . 990
5.96.1 Enabling an entity . . . 990
5.96.2 Checking if a status changed on an entity. . . . 991
5.96.3 Changing the QoS for an entity . . . 991
5.96.4 Changing the listener and enabling/disabling statuses associated with it . . . 991
5.96.5 Enabling/Disabling statuses associated with a status condition . . . 992
5.97 Waitset Use Cases . . . 993
5.97.1 Setting up a wait-set . . . 993
5.97.2 Waiting for condition(s) to trigger . . . 993
5.97.3 Tearing down a wait-set . . . 994
5.98 Transport Use Cases . . . 994
5.98.1 Changing the automatically registered built-in transports . . . 994
5.98.2 Changing the properties of the automatically registered builtin transports . . . 995
5.98.3 Creating a transport . . . 995
5.98.4 Deleting a transport . . . 995
5.98.5 Registering a transport with a participant . . . 996
5.98.6 Adding receive routes for a transport . . . 997
5.98.7 Adding send routes for a transport . . . 997
5.99 Filter Use Cases . . . 997
5.99.1 Introduction . . . 997
5.99.1.1 Overview of ContentFilteredTopic . . . 998
5.99.1.2 Overview of QueryCondition . . . 998
5.99.2 Filtering with ContentFilteredTopic . . . 999
5.99.3 Filtering with Query Conditions . . . 999
5.99.4 Filtering Performance . . . 1000
5.100 Creating Custom Content Filters . . . 1000
5.100.1 Introduction . . . 1001
5.100.2 The Custom Content Filter API . . . 1001
5.100.2.1 The compile function . . . 1001
5.100.2.2 The evaluate function . . . 1001

5.100.2.3 The finalize function . . . 1002
5.100.3 Example Using C format strings . . . 1002
5.100.3.1 Writing the Compile Function . . . 1002
5.100.3.2 Writing the Evaluate Function . . . 1002
5.100.3.3 Writing the Finalize Function . . . 1003
5.100.3.4 Registering the Filter . . . 1003
5.100.3.5 Unregistering the Filter . . . 1003
5.101 Large Data Use Cases . . . 1003
5.101.1 Introduction
 . . . 1003
5.101.2 Writing Large Data . . . 1004
5.101.3 Receiving Large Data . . . 1004
5.102 Request-Reply Examples . . . 1004
5.102.1 Request-Reply Examples . . . 1004
5.102.2 Creating a Requester . . . 1006
5.102.3 Creating a Requester with optional parameters . . . 1006
5.102.4 Requester example . . . 1007
5.102.5 Taking loaned samples . . . 1007
5.102.6 Correlating requests and replies . . . 1008
5.102.7 Creating a Replier . . . 1009
5.102.8 Replier example . . . 1010
5.102.9 SimpleReplier example . . . 1011
5.102.10 Configuring Request-Reply QoS profiles . . . 1012
5.103 Documentation Roadmap . . . 1012
5.104 Conventions . . . 1013
5.104.1 Unsupported Features . . . 1013
5.104.2 API Naming Conventions . . . 1013
5.104.2.1 Structure & Class Names . . . 1013
5.104.3 API Documentation Terms . . . 1013
5.104.4 Stereotypes . . . 1014
5.104.4.1 Basic Qos . . . 1014
5.104.4.2 Extensions . . . 1014
5.104.4.3 Experimental . . . 1014
5.104.4.4 Types . . . 1015
5.104.4.5 Method Parameters . . . 1015
5.105 RTI Connext DDS API Reference . . . 1015
5.105.1 Detailed Description . . . 1016
5.105.2 Overview . . . 1017
5.105.3 Conceptual Model . . . 1017
5.105.4 Modules . . . 1019

5.106 Additional RTI Connext Communication Patterns . . . 1019
5.106.1 Detailed Description . . . 1019
5.107 Programming How-To's . . . 1020
5.107.1 Detailed Description . . . 1020
5.108 Interface . . . 1021
5.108.1 Detailed Description . . . 1021
5.108.2 Enumeration Type Documentation . . . 1021
5.108.2.1 NDDS_Transport_Interface_Status_t . . . 1021
5.109 Transport Plugins Configuration . . . 1022
5.109.1 Detailed Description . . . 1023
5.109.2 Macro Definition Documentation . . . 1024
5.109.2.1 NDDS_TRANSPORT_PORT_INVALID . . . 1024
5.109.2.2 NDDS_TRANSPORT_UUID_SIZE . . . 1024
5.109.2.3 NDDS_TRANSPORT_LENGTH_UNLIMITED . . . 1024
5.109.2.4 NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN . . . 1024
5.109.2.5 NDDS_TRANSPORT_UUID_UNKNOWN . . . 1024
5.109.2.6 NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED . . . 1025
5.109.2.7 NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC 1025
5.109.2.8 NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT . . . 1025
5.109.2.9 NDDS_TRANSPORT_CLASSID_INVALID . . . 1025
5.109.2.10 NDDS_TRANSPORT_CLASSID_UDPv4 . . . 1026
5.109.2.11 NDDS_TRANSPORT_CLASSID_SHMEM . . . 1026
5.109.2.12 NDDS_TRANSPORT_CLASSID_SHMEM_510 . . . 1026
5.109.2.13 NDDS_TRANSPORT_CLASSID_UDPv6 . . . 1026
5.109.2.14 NDDS_TRANSPORT_CLASSID_UDPv6_510 . . . 1026
5.109.2.15 NDDS_TRANSPORT_CLASSID_TCPV4_LAN . . . 1026
5.109.2.16 NDDS_TRANSPORT_CLASSID_TCPV4_WAN . . . 1027
5.109.2.17 NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN . . . 1027
5.109.2.18 NDDS_TRANSPORT_CLASSID_TLSV4_LAN . . . 1027
5.109.2.19 NDDS_TRANSPORT_CLASSID_TLSV4_WAN . . . 1027

6.65.2.1 data . . . 1785
6.65.2.2 serialization . . . 1785
6.66 DDS_DynamicDataTypeSerializationProperty_t Struct Reference . . . 1785
6.66.1 Detailed Description . . . 1785
6.66.2 Field Documentation . . . 1785
6.66.2.1 use_42e_compatible_alignment . . . 1786
6.66.2.2 max_size_serialized . . . 1786
6.66.2.3 min_size_serialized . . . 1786
6.66.2.4 trim_to_size . . . 1786
6.66.2.5 skip_deserialization . . . 1787
6.67 DDS_EndpointGroup_t Struct Reference . . . 1787
6.67.1 Detailed Description . . . 1787
6.67.2 Field Documentation . . . 1787
6.67.2.1 role_name . . . 1788
6.67.2.2 quorum_count . . . 1788
6.68 DDS_EndpointGroupSeq Struct Reference . . . 1788
6.68.1 Detailed Description . . . 1788
6.69 DDS_EndpointTrustAlgorithmInfo Struct Reference . . . 1789
6.69.1 Detailed Description . . . 1789
6.69.2 Field Documentation . . . 1789
6.69.2.1 interceptor . . . 1789
6.70 DDS_EndpointTrustInterceptorAlgorithmInfo Struct Reference . . . 1789
6.70.1 Detailed Description . . . 1789
6.70.2 Field Documentation . . . 1790
6.70.2.1 required_mask . . . 1790
6.70.2.2 supported_mask . . . 1790
6.71 DDS_EndpointTrustProtectionInfo Struct Reference . . . 1790
6.71.1 Detailed Description . . . 1790
6.71.2 Field Documentation . . . 1790
6.71.2.1 bitmask . . . 1791
6.71.2.2 plugin_bitmask . . . 1791
6.72 DDS_EntityFactoryQosPolicy Struct Reference . . . 1791
6.72.1 Detailed Description . . . 1791
6.72.2 Usage . . . 1792
6.72.3 Field Documentation . . . 1792
6.72.3.1 autoenable_created_entities . . . 1792
6.73 DDS_EntityNameQosPolicy Struct Reference . . . 1793
6.73.1 Detailed Description . . . 1793

6.73.2 Usage . . . 1793
6.73.3 Field Documentation . . . 1793
6.73.3.1 name . . . 1794
6.73.3.2 role_name . . . 1794
6.74 DDS_EnumMember Struct Reference . . . 1794
6.74.1 Detailed Description . . . 1795
6.74.2 Field Documentation . . . 1795
6.74.2.1 name . . . 1795
6.74.2.2 ordinal . . . 1795
6.75 DDS_EnumMemberSeq Struct Reference . . . 1795
6.75.1 Detailed Description . . . 1795
6.76 DDS_EventQosPolicy Struct Reference . . . 1796
6.76.1 Detailed Description . . . 1796
6.76.2 Field Documentation . . . 1796
6.76.2.1 thread . . . 1797
6.76.2.2 initial_count . . . 1797
6.76.2.3 max_count . . . 1798
6.77 DDS_ExpressionProperty Struct Reference . . . 1798
6.77.1 Detailed Description . . . 1798
6.77.2 Field Documentation . . . 1798
6.77.2.1 key_only_filter . . . 1798
6.77.2.2 writer_side_filter_optimization . . . 1799
6.78 DDS_FilterSampleInfo Struct Reference . . . 1799
6.78.1 Detailed Description . . . 1799
6.78.2 Field Documentation . . . 1799
6.78.2.1 related_sample_identity . . . 1800
6.78.2.2 related_source_guid . . . 1800
6.78.2.3 related_reader_guid . . . 1800
6.78.2.4 sample_identity . . . 1801
6.78.2.5 source_guid . . . 1801
6.79 DDS_FloatSeq Struct Reference . . . 1801
6.79.1 Detailed Description . . . 1801
6.80 DDS_FlowControllerProperty_t Struct Reference . . . 1802
6.80.1 Detailed Description . . . 1802
6.80.2 Field Documentation . . . 1802
6.80.2.1 scheduling_policy . . . 1803
6.80.2.2 token_bucket . . . 1803
6.81 DDS_FlowControllerTokenBucketProperty_t Struct Reference . . . 1803
6.81.1 Detailed Description . . . 1804

6.81.2 Field Documentation . . . 1804
6.81.2.1 max_tokens . . . 1804
6.81.2.2 tokens_added_per_period . . . 1805
6.81.2.3 tokens_leaked_per_period . . . 1805
6.81.2.4 period . . . 1805
6.81.2.5 bytes_per_token . . . 1806
6.82 DDS_GroupDataQosPolicy Struct Reference . . . 1806
6.82.1 Detailed Description . . . 1806
6.82.2 Usage . . . 1807
6.82.3 Field Documentation . . . 1807
6.82.3.1 value . . . 1807
6.83 DDS_GUID_t Struct Reference . . . 1807
6.83.1 Detailed Description . . . 1808
6.83.2 Field Documentation . . . 1808
6.83.2.1 value . . . 1808
6.84 DDS_HistoryQosPolicy Struct Reference . . . 1808
6.84.1 Detailed Description . . . 1809
6.84.2 Usage . . . 1809
6.84.3 Consistency . . . 1810
6.84.4 Field Documentation . . . 1810
6.84.4.1 kind . . . 1810
6.84.4.2 depth . . . 1811
6.85 DDS_InconsistentTopicStatus Struct Reference . . . 1811
6.85.1 Detailed Description . . . 1812
6.85.2 Field Documentation . . . 1812
6.85.2.1 total_count . . . 1812
6.85.2.2 total_count_change . . . 1812
6.86 DDS_InstanceHandleSeq Struct Reference . . . 1812
6.86.1 Detailed Description . . . 1813
6.87 DDS_Int8Seq Struct Reference . . . 1813
6.87.1 Detailed Description . . . 1813
6.88 DDS_InvalidLocalAdvanceNoticeStatus Struct Reference . . . 1813
6.88.1 Detailed Description . . . 1814
6.88.2 Field Documentation . . . 1814
6.88.2.1 expiration_time . . . 1814
6.88.2.2 expiration_code . . . 1814
6.88.2.3 expiration_message . . . 1814
6.89 DDS_KeyedOctets Struct Reference . . . 1814
6.89.1 Detailed Description . . . 1815

6.90 DDS_KeyedOctetsSeq Struct Reference . . . 1815
6.90.1 Detailed Description . . . 1815
6.91 DDS_KeyedOctetsTypeSupport Struct Reference . . . 1815
6.91.1 Detailed Description . . . 1815
6.92 DDS_KeyedString Struct Reference . . . 1815
6.92.1 Detailed Description . . . 1816
6.93 DDS_KeyedStringSeq Struct Reference . . . 1816
6.93.1 Detailed Description . . . 1816
6.94 DDS_KeyedStringTypeSupport Struct Reference . . . 1816
6.94.1 Detailed Description . . . 1816
6.95 DDS_LatencyBudgetQosPolicy Struct Reference . . . 1816
6.95.1 Detailed Description . . . 1817
6.95.2 Usage . . . 1817
6.95.3 Compatibility . . . 1817
6.95.4 Field Documentation . . . 1818
6.95.4.1 duration . . . 1818
6.96 DDS_LifespanQosPolicy Struct Reference . . . 1818
6.96.1 Detailed Description . . . 1818
6.96.2 Usage . . . 1819
6.96.3 Field Documentation . . . 1819
6.96.3.1 duration . . . 1819
6.97 DDS_Listener Struct Reference . . . 1819
6.97.1 Detailed Description . . . 1820
6.97.2 Access to Plain Communication Status . . . 1820
6.97.3 Access to Read Communication Status . . . 1821
6.97.4 Operations Allowed in Listener Callbacks . . . 1821
6.97.5 Best Practices with Listeners . . . 1821
6.97.6 Field Documentation . . . 1822
6.97.6.1 listener_data . . . 1822
6.98 DDS_LivelinessChangedStatus Struct Reference . . . 1823
6.98.1 Detailed Description . . . 1823
6.98.2 Field Documentation . . . 1824
6.98.2.1 alive_count . . . 1824
6.98.2.2 not_alive_count . . . 1824
6.98.2.3 alive_count_change . . . 1824

Chapter 1

RTI Connext

Core Libraries and Utilities

Real-Time Innovations, Inc.

RTI Connext is network middleware for real-time distributed applications. It provides the communications services that programmers need to distribute time-critical data between embedded and/or enterprise devices or nodes. RTI Connext uses the publish-subscribe communications model to make data distribution efficient and robust.

The RTI Connext Application Programming Interface (API) is based on the OMG's Data Distribution Service (DDS) specification, version 1.4. The most recent publication of this specification can be found in the Catalog of OMG Specifications under "Platform Categories".

1.1 Available Documentation.

The documentation for this release is provided in two forms: the API Reference HTML documentation and PDF documents. If you are new to RTI Connext, the **Documentation Roadmap** (p. 1012) will provide direction on how to learn about this product.

1.1.1 The documents for the Core Libraries and Utilities are:

- **What's New.** An overview of the new features in this release.
- **Release Notes.** System requirements, compatibility, what's fixed in this release, and known issues.
- **Platform Notes.** Specific details, such as compilation setting and libraries, related to building and using RTI Connext on the various supported platforms.
- **Getting Started Guide.** Core value and concepts behind the product, taking you step-by-step through the creation of a simple example application. Developers should read this document first.
- **Code Generator User's Manual.** Information about using rtiddsgen to generate code from data types.
- **User's Manual.** Introduction to RTI Connext, product tour and conceptual presentation of the functionality of RTI Connext.
- **QoS Reference Guide.** A compact summary of supported Quality of Service (QoS) policies.
- **XML-Based Application Creation Getting Started Guide.** Details on how to use XML-Based Application Creation.
- **Extensible Types Guide.** Additional information about extensible types.
- See more `documentation` on RTI Community.

1.1.2 The API Reference HTML documentation contains:

- **RTI Connext DDS API Reference** (p. 1015) - The RTI Connext API reference.
- **Additional RTI Connext Communication Patterns** (p. 1019) - RTI Connext APIs for additional communication patterns
- **Programming How-To's** (p. 1020) - Describes and shows the common tasks done using the API.

The API Reference HTML documentation can be accessed through the tree view in the left frame of the web browser window. The bulk of the documentation is found under the entry labeled "Modules".

1.2 Feedback and Support for this Release.

We welcome any input on how to improve RTI Connext to suit your needs. If you have questions or comments about this release, please visit the RTI Customer Portal at `https://support.rti.com`.

The Customer Portal provides access to RTI software, documentation, and support. It also allows you to log support cases. Furthermore, the portal provides detailed solutions and a free public knowledge base. To access the software, documentation or log support cases, the RTI Customer Portal requires a username and password. You will receive this in the email confirming your purchase. If you do not have this email, please contact `license@rti.com`. Resetting your login password can be done directly at the RTI Customer Portal.

Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

DDS_AcknowledgmentInfo
Information about an application-level acknowledged sample . . . 1535
DDS_AckResponseData_t
Data payload of an application-level acknowledgment . . . 1536
DDS_AllocationSettings_t
Resource allocation settings . . . 1537
DDS_AnnotationParameterValue
Annotation parameter value . . . 1538
DDS_AsynchronousPublisherQosPolicy
<<***extension***>> *(p. 796)* Configures the mechanism that sends user data in an external middleware thread . . . 1539
DDS_AsyncWaitSetListener
<<***interface***>> *(p. 1015)* Listener for receiving event notifications related to the thread pool of the **DDS_AsyncWaitSet** (p. 1072) . . . 1543
DDS_AsyncWaitSetProperty_t
Specifies the **DDS_AsyncWaitSet** (p. 1072) behavior . . . 1544
DDS_AvailabilityQosPolicy
<<***extension***>> *(p. 796)* Configures the availability of data . . . 1547
DDS_BatchQosPolicy
<<***extension***>> *(p. 796)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples . . . 1552
DDS_BooleanSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Boolean** (p. 1206) > . . . 1556
DDS_BuiltinTopicKey_t
The key type of the built-in topic types . . . 1556
DDS_BuiltinTopicReaderResourceLimits_t
<<***extension***>> *(p. 796)* Built-in topic reader's resource limits . . . 1557
DDS_ChannelSettings_t
<<***extension***>> *(p. 796)* Type used to configure the properties of a channel . . . 1564
DDS_ChannelSettingsSeq
Declares IDL sequence< **DDS_ChannelSettings_t** (p. 1564) > . . . 1566

DDS_CharSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Char** (p. 1203) > . . . 1566
DDS_CoherentSetInfo_t
<<***extension***>> *(p. 1014)* Type definition for a coherent set info . . . 1566
DDS_CompressionSettings_t
<<***extension***>> *(p. 796)* Settings related to compressing user data . . . 1568
DDS_ConditionHandler
<<***extension***>> *(p. 1014)* <<***interface***>> *(p. 1015)* Handler called by the **DDS_Condition_dispatch** (p. 1377) . . . 1570
DDS_ConditionSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Condition** (p. 1372) > . . . 1571
DDS_ContentFilter
<<***interface***>> *(p. 1015)* Interface to be used by a custom filter of a **DDS_ContentFilteredTopic** (p. 176) . . . 1571
DDS_ContentFilterProperty_t
<<***extension***>> *(p. 1014)* Type used to provide all the required information to enable content filtering . . . 1579
DDS_Cookie_t
<<***extension***>> *(p. 1014)* Sequence of bytes . . . 1580
DDS_CookieSeq
Declares IDL sequence < **DDS_Cookie_t** (p. 1580) > . . . 1581
DDS_DatabaseQosPolicy
<<***extension***>> *(p. 796)* Various threads and resource limits settings used by RTI Connext to control its internal database . . . 1581
DDS_DataReaderCacheStatus
<<***extension***>> *(p. 1014)* The status of the reader's cache . . . 1586
DDS_DataReaderListener
<<***interface***>> *(p. 1015)* **DDS_Listener** (p. 1819) for reader status . . . 1593
DDS_DataReaderProtocolQosPolicy
<<***extension***>> *(p. 796)* Along with **DDS_WireProtocolQosPolicy** (p. 2099) and **DDS_DataWriterProtocolQosPolicy** (p. 1649), this QoS policy configures the DDS on-the-network protocol (RTPS) . . . 1596
DDS_DataReaderProtocolStatus
<<***extension***>> *(p. 1014)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic . . . 1600
DDS_DataReaderQos
QoS policies supported by a **DDS_DataReader** (p. 618) entity . . . 1611
DDS_DataReaderResourceLimitsInstanceReplacementSettings
Instance replacement kind applied to each instance state . . . 1618
DDS_DataReaderResourceLimitsQosPolicy
<<***extension***>> *(p. 796)* Various settings that configure how a **DDS_DataReader** (p. 618) allocates and uses physical memory for internal resources . . . 1619
DDS_DataReaderSeq
Declares IDL sequence < **DDS_DataReader** (p. 618) > . . . 1638
DDS_DataRepresentationIdSeq
Declares IDL sequence < **DDS_DataRepresentationId_t** (p. 1259) > . . . 1638
DDS_DataRepresentationQosPolicy
<<***spec***>> *(p. 791)* This QoS policy contains a list of representation identifiers and compression settings used by **DDS_DataWriter** (p. 488) and **DDS_DataReader** (p. 618) entities to negotiate which data representation and compression settings to use . . . 1639
DDS_DataTags
Definition of **DDS_DataTagQosPolicy** (p. 1266) . . . 1641

DDS_DataWriterCacheStatus
<<***extension***>> *(p. 1014)* The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue 1642
DDS_DataWriterListener
<<***interface***>> *(p. 1015)* **DDS_Listener** (p. 1819) for writer status 1644
DDS_DataWriterProtocolQosPolicy
<<***extension***>> *(p. 796)* Protocol that applies only to **DDS_DataWriter** (p. 488) instances 1649
DDS_DataWriterProtocolStatus
<<***extension***>> *(p. 1014)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic 1654
DDS_DataWriterQos
QoS policies supported by a **DDS_DataWriter** (p. 488) entity 1666
DDS_DataWriterResourceLimitsQosPolicy
<<***extension***>> *(p. 796)* Various settings that configure how a **DDS_DataWriter** (p. 488) allocates and uses physical memory for internal resources 1674
DDS_DataWriterShmemRefTransferModeSettings
Settings related to transferring data using shared memory references 1683
DDS_DataWriterTransferModeQosPolicy
<<***extension***>> *(p. 796)* Qos related to transferring data 1684
DDS_DeadlineQosPolicy
<<***spec***>> *(p. 791)* Expresses the maximum duration (deadline) within which an instance is expected to be updated 1685
DDS_DestinationOrderQosPolicy
<<***spec***>> *(p. 791)* Controls how the middleware will deal with data sent by multiple **DDS_DataWriter** (p. 488) entities for the same instance of data (i.e., same **DDS_Topic** (p. 174) and key) . . . 1688
DDS_DiscoveryConfigQosPolicy
Settings for discovery configuration 1691
DDS_DiscoveryQosPolicy
<<***extension***>> *(p. 796)* Configures the mechanism used by the middleware to automatically discover and connect with new remote applications 1717
DDS_DomainParticipantConfigParams_t
<<***extension***>> *(p. 1014)* Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration 1721
DDS_DomainParticipantFactoryQos
QoS policies supported by a **DDS_DomainParticipantFactory** (p. 32) 1724
DDS_DomainParticipantListener
<<***interface***>> *(p. 1015)* Listener for participant status 1726
DDS_DomainParticipantProtocolStatus
<<***extension***>> *(p. 1014)* The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message 1728
DDS_DomainParticipantQos
QoS policies supported by a **DDS_DomainParticipant** (p. 76) entity 1729
DDS_DomainParticipantResourceLimitsQosPolicy
<<***extension***>> *(p. 796)* Various settings that configure how a **DDS_DomainParticipant** (p. 76) allocates and uses physical memory for internal resources, including the maximum sizes of various properties 1733
DDS_DomainParticipantSeq
Declares IDL `sequence` < **DDS_DomainParticipant** (p. 76) > 1761
DDS_DoubleSeq
Instantiates **`FooSeq`** (p. 2120) < **DDS_Double** (p. 1205) > 1762
DDS_DurabilityQosPolicy
<<***spec***>> *(p. 791)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDS_DataReader** (p. 618) entities that join the network later 1762

DDS_DurabilityServiceQosPolicy
<<***spec***>> *(p. 791)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **DDS_DurabilityQosPolicy** (p. 1762) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 1290) or **DDS_TRANSIENT_DURABILITY_QOS** (p. 1290) 1767
DDS_Duration_t
Type for *duration* representation 1770
DDS_DynamicData
A sample of any complex data type, which can be inspected and manipulated reflectively 1771
DDS_DynamicDataInfo
A descriptor for a **DDS_DynamicData** (p. 1771) object 1778
DDS_DynamicDataJsonParserProperties_t
A collection of attributes used to configure **DDS_DynamicData** (p. 1771) objects 1779
DDS_DynamicDataMemberInfo
A descriptor for a single member (i.e. field) of dynamically defined data type 1780
DDS_DynamicDataProperty_t
A collection of attributes used to configure **DDS_DynamicData** (p. 1771) objects 1782
DDS_DynamicDataSeq
An ordered collection of **DDS_DynamicData** (p. 1771) elements 1784
DDS_DynamicDataTypeProperty_t
A collection of attributes used to configure **DDS_DynamicDataTypeSupport** (p. 328) objects . . . 1784
DDS_DynamicDataTypeSerializationProperty_t
Properties that govern how data of a certain type will be serialized on the network 1785
DDS_EndpointGroup_t
Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum 1787
DDS_EndpointGroupSeq
A sequence of **DDS_EndpointGroup_t** (p. 1787) 1788
DDS_EndpointTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered endpoint 1789
DDS_EndpointTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered endpoint 1789
DDS_EndpointTrustProtectionInfo
Trust Plugins Protection information associated with the discovered endpoint 1790
DDS_EntityFactoryQosPolicy
<<***spec***>> *(p. 791)* A QoS policy for all **DDS_Entity** (p. 1362) types that can act as factories for one or more other **DDS_Entity** (p. 1362) types 1791
DDS_EntityNameQosPolicy
<<***extension***>> *(p. 796)* Assigns a name and a role name to a **DDS_DomainParticipant** (p. 76), **DDS_Publisher** (p. 446), **DDS_Subscriber** (p. 575), **DDS_DataWriter** (p. 488) or **DDS_DataReader** (p. 618). Except for **DDS_Publisher** (p. 446) and **DDS_Subscriber** (p. 575), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system . 1793
DDS_EnumMember
A description of a member of an enumeration 1794
DDS_EnumMemberSeq
Defines a sequence of enumerator members 1795
DDS_EventQosPolicy
<<***extension***>> *(p. 796)* Settings for event 1796
DDS_ExpressionProperty
Provides additional information about the filter expression passed to **DDS_ContentFilter::writer_compile** (p. 1573) 1798
DDS_FilterSampleInfo
Provides meta information associated with the sample 1799
DDS_FloatSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Float** (p. 1205) > 1801

DDS_FlowControllerProperty_t
Determines the flow control characteristics of the **DDS_FlowController** (p. 562) . . . 1802
DDS_FlowControllerTokenBucketProperty_t
DDS_FlowController (p. 562) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties . . . 1803
DDS_GroupDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 164) during discovery . . . 1806
DDS_GUID_t
Type for *GUID* (Global Unique Identifier) representation . . . 1807
DDS_HistoryQosPolicy
<<***spec***>> *(p. 791)* Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers . . . 1808
DDS_InconsistentTopicStatus
DDS_INCONSISTENT_TOPIC_STATUS (p. 1230) . . . 1811
DDS_InstanceHandleSeq
Instantiates **FooSeq** (p. 2120) < **DDS_InstanceHandle_t** (p. 213) > . . . 1812
DDS_Int8Seq
Instantiates **FooSeq** (p. 2120) < **DDS_Int8** (p. 1204) > . . . 1813
DDS_InvalidLocalAdvanceNoticeStatus
DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS (p. 1234) . . . 1813
DDS_KeyedOctets
Built-in type consisting of a variable-length array of opaque bytes and a string that is the key . . . 1814
DDS_KeyedOctetsSeq
Instantiates **FooSeq** (p. 2120) < **DDS_KeyedOctets** (p. 1814) > . . . 1815
DDS_KeyedOctetsTypeSupport
<<***interface***>> *(p. 1015)* **DDS_KeyedOctets** (p. 1814) type support . . . 1815
DDS_KeyedString
Keyed string built-in type . . . 1815
DDS_KeyedStringSeq
Instantiates **FooSeq** (p. 2120) < **DDS_KeyedString** (p. 1815) > . . . 1816
DDS_KeyedStringTypeSupport
<<***interface***>> *(p. 1015)* Keyed string type support . . . 1816
DDS_LatencyBudgetQosPolicy
<<***spec***>> *(p. 791)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications . . . 1816
DDS_LifespanQosPolicy
<<***spec***>> *(p. 791)* Specifies how long the data written by the **DDS_DataWriter** (p. 488) is considered valid . . . 1818
DDS_Listener
<<***interface***>> *(p. 1015)* Abstract base class for all Listener interfaces . . . 1819
DDS_LivelinessChangedStatus
DDS_LIVELINESS_CHANGED_STATUS (p. 1233) . . . 1823
DDS_LivelinessLostStatus
DDS_LIVELINESS_LOST_STATUS (p. 1233) . . . 1825
DDS_LivelinessQosPolicy
Specifies and configures the mechanism that allows **DDS_DataReader** (p. 618) entities to detect when **DDS_DataWriter** (p. 488) entities become disconnected or "dead." . . . 1826
DDS_Locator_t
<<***extension***>> *(p. 796)* Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports . . . 1830

DDS_LocatorFilter_t
<<***extension***>> *(p. 796)* Specifies the configuration of an individual channel within a MultiChannel DataWriter . . . 1831
DDS_LocatorFilterQosPolicy
<<***extension***>> *(p. 796)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS_PublicationBuiltinTopicData** (p. 1909) . . . 1832
DDS_LocatorFilterSeq
Declares IDL `sequence<` **DDS_LocatorFilter_t** (p. 1831) > . . . 1833
DDS_LocatorSeq
Declares IDL `sequence` < **DDS_Locator_t** (p. 1830) > . . . 1834
DDS_LoggingQosPolicy
<<***extension***>> *(p. 796)* Configures the RTI Connext logging facility . . . 1834
DDS_LongDoubleSeq
Instantiates **FooSeq** (p. 2120) < **DDS_LongDouble** (p. 1206) > . . . 1838
DDS_LongLongSeq
Instantiates **FooSeq** (p. 2120) < **DDS_LongLong** (p. 1205) > . . . 1838
DDS_LongSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Long** (p. 1205) > . . . 1838
DDS_MonitoringDedicatedParticipantSettings
<<***extension***>> *(p. 796)* Configures the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data . . . 1839
DDS_MonitoringDistributionSettings
<<***extension***>> *(p. 796)* Configures the distribution of telemetry data . . . 1841
DDS_MonitoringEventDistributionSettings
<<***extension***>> *(p. 796)* Configures the distribution of event metrics . . . 1843
DDS_MonitoringLoggingDistributionSettings
<<***extension***>> *(p. 796)* Configures the distribution of log messages . . . 1846
DDS_MonitoringLoggingForwardingSettings
<<***extension***>> *(p. 796)* Configures the forwarding levels of log messages for the different **NDDS_Config_LogFacility** (p. 1448) . . . 1850
DDS_MonitoringMetricSelection
<<***extension***>> *(p. 796)* This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources . . . 1852
DDS_MonitoringMetricSelectionSeq
Declares IDL `sequence` < **DDS_MonitoringMetricSelection** (p. 1852) > . . . 1854
DDS_MonitoringPeriodicDistributionSettings
<<***extension***>> *(p. 796)* Configures the distribution of periodic metrics . . . 1855
DDS_MonitoringQosPolicy
<<***extension***>> *(p. 796)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data . . . 1856
DDS_MonitoringTelemetryData
<<***extension***>> *(p. 796)* Configures the telemetry data that will be distributed . . . 1859
DDS_MultiChannelQosPolicy
<<***extension***>> *(p. 796)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data . . . 1860
DDS_Octets
Built-in type consisting of a variable-length array of opaque bytes . . . 1863
DDS_OctetSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Octet** (p. 1204) > . . . 1863
DDS_OctetsSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Octets** (p. 1863) > . . . 1863
DDS_OctetsTypeSupport
<<***interface***>> *(p. 1015)* **DDS_Octets** (p. 1863) type support . . . 1864

DDS_OfferedDeadlineMissedStatus
DDS_OFFERED_DEADLINE_MISSED_STATUS (p. 1230) . . . 1864
DDS_OfferedIncompatibleQosStatus
DDS_OFFERED_INCOMPATIBLE_QOS_STATUS (p. 1231) . . . 1865
DDS_OwnershipQosPolicy
<<***spec***>> *(p. 791)* Specifies whether it is allowed for multiple **DDS_DataWriter** (p. 488) (s) to write the same instance of the data and if so, how these modifications should be arbitrated . . . 1867
DDS_OwnershipStrengthQosPolicy
Specifies the value of the strength used to arbitrate among multiple **DDS_DataWriter** (p. 488) objects that attempt to modify the same instance of a data type (identified by **DDS_Topic** (p. 174) + key) . 1872
DDS_ParticipantBuiltinTopicData
Entry created when a DomainParticipant object is discovered . . . 1873
DDS_ParticipantBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 2120) < **DDS_ParticipantBuiltinTopicData** (p. 1873) > . . . 1879
DDS_ParticipantBuiltinTopicDataTypeSupport
Instantiates TypeSupport < **DDS_ParticipantBuiltinTopicData** (p. 1873) > . . . 1879
DDS_ParticipantTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered DomainParticipant . . . 1880
DDS_ParticipantTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered DomainParticipant 1881
DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo
Trust Plugins key establishment algorithm information associated with the discovered Domain↩ Participant . . . 1882
DDS_ParticipantTrustProtectionInfo
Trust Plugins Protection information associated with the discovered DomainParticipant . . . 1883
DDS_ParticipantTrustSignatureAlgorithmInfo
Trust Plugins signature algorithm information associated with the discovered DomainParticipant . . 1884
DDS_PartitionQosPolicy
<<***spec***>> *(p. 791)* Set of strings that introduces logical partitions in **DDS_DomainParticipant** (p. 76), **DDS_Publisher** (p. 446), or **DDS_Subscriber** (p. 575) entities . . . 1884
DDS_PersistentStorageSettings
Configures durable writer history and durable reader state . . . 1887
DDS_PresentationQosPolicy
<<***spec***>> *(p. 791)* Specifies how the samples representing changes to data instances are presented to a subscribing application . . . 1894
DDS_PrintFormatProperty
A collection of attributes used to configure how data samples will be formatted when converted to a string . . . 1898
DDS_ProductVersion_t
<<***extension***>> *(p. 1014)* Type used to represent the current version of RTI Connext . . . 1901
DDS_ProfileQosPolicy
<<***extension***>> *(p. 796)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext . . . 1902
DDS_Property_t
Properties are name/value pairs objects . . . 1904
DDS_PropertyQosPolicy
<<***extension***>> *(p. 796)* Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery . . . 1905
DDS_PropertySeq
Declares IDL sequence < **DDS_Property_t** (p. 1904) > . . . 1907
DDS_ProtocolVersion_t
<<***extension***>> *(p. 1014)* Type used to represent the version of the RTPS protocol . . . 1908

DDS_PublicationBuiltinTopicData
Entry created when a **DDS_DataWriter** (p. 488) is discovered in association with its Publisher . . . 1909
DDS_PublicationBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 2120) < **DDS_PublicationBuiltinTopicData** (p. 1909) > . . . 1918
DDS_PublicationBuiltinTopicDataTypeSupport
Instantiates TypeSupport < **DDS_PublicationBuiltinTopicData** (p. 1909) > . . . 1918
DDS_PublicationMatchedStatus
DDS_PUBLICATION_MATCHED_STATUS (p. 1234) . . . 1919
DDS_PublisherListener
<<***interface***>> *(p. 1015)* **DDS_Listener** (p. 1819) for **DDS_Publisher** (p. 446) status . . . 1921
DDS_PublisherQos
QoS policies supported by a **DDS_Publisher** (p. 446) entity . . . 1922
DDS_PublisherSeq
Declares IDL sequence < **DDS_Publisher** (p. 446) > . . . 1924
DDS_PublishModeQosPolicy
<<***extension***>> *(p. 796)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread . . . 1924
DDS_QosPolicyCount
Type to hold a counter for a **DDS_QosPolicyId_t** (p. 1248) . . . 1929
DDS_QosPolicyCountSeq
Declares IDL sequence < **DDS_QosPolicyCount** (p. 1929) > . . . 1929
DDS_QosPrintFormat
A collection of attributes used to configure how a QoS appears when printed . . . 1930
DDS_QueryConditionParams
<<***extension***>> *(p. 1014)* Input parameters for **DDS_DataReader_create_querycondition_w_params** (p. 674) . . . 1932
DDS_ReadConditionParams
<<***extension***>> *(p. 1014)* Input parameters for **DDS_DataReader_create_readcondition_w_params** (p. 673) . . . 1933
DDS_ReaderDataLifecycleQosPolicy
<<***spec***>> *(p. 791)* Controls how a DataReader manages the lifecycle of the data that it has received . . . 1934
DDS_ReceiverPoolQosPolicy
<<***extension***>> *(p. 796)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets) . . . 1938
DDS_ReliabilityQosPolicy
<<***extension***>> *(p. 796)* <<***spec***>> *(p. 791)* Indicates the level of reliability offered/requested by RTI Connext . . . 1940
DDS_ReliableReaderActivityChangedStatus
<<***extension***>> *(p. 1014)* Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer . . . 1945
DDS_ReliableWriterCacheChangedStatus
<<***extension***>> *(p. 1014)* A summary of the state of a data writer's cache of unacknowledged samples written . . . 1947
DDS_ReliableWriterCacheEventCount
<<***extension***>> *(p. 1014)* The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold . . . 1950
DDS_RequestedDeadlineMissedStatus
DDS_REQUESTED_DEADLINE_MISSED_STATUS (p. 1231) . . . 1951
DDS_RequestedIncompatibleQosStatus
DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS (p. 1231) . . . 1952

DDS_ResourceLimitsQosPolicy
<<***spec***>> *(p. 791)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics . . . 1953
DDS_RTPS_EntityId_t
From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers . . . 1958
DDS_RTPS_GUID_t
From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier . . . 1959
DDS_RtpsReliableReaderProtocol_t
<<***extension***>> *(p. 796)* Qos related to reliable reader protocol defined in RTPS . . . 1959
DDS_RtpsReliableWriterProtocol_t
<<***extension***>> *(p. 796)* QoS related to the reliable writer protocol defined in RTPS . . . 1965
DDS_RtpsWellKnownPorts_t
<<***extension***>> *(p. 796)* RTPS well-known port mapping configuration . . . 1983
DDS_SampleHandler
<<***experimental***>> *(p. 1014)* <<***extension***>> *(p. 1014)* <<***interface***>> *(p. 1015)* Handler called by a sample dispatcher, such as **DDS_SampleProcessor** (p. 1505) . . . 1988
DDS_SampleIdentity_t
Type definition for a Sample Identity . . . 1989
DDS_SampleInfo
Information that accompanies each sample that is `read` or `taken` . . . 1990
DDS_SampleInfoSeq
Declares IDL `sequence` < **DDS_SampleInfo** (p. 1990) > . . . 2001
DDS_SampleLostStatus
DDS_SAMPLE_LOST_STATUS (p. 1232) . . . 2001
DDS_SampleRejectedStatus
DDS_SAMPLE_REJECTED_STATUS (p. 1232) . . . 2002
DDS_SequenceNumber_t
Type for *sequence* number representation . . . 2004
DDS_ServiceQosPolicy
<<***extension***>> *(p. 796)* Service or tool associated with a DDS entity . . . 2005
DDS_ServiceRequest
A request coming from one of the built-in services . . . 2006
DDS_ServiceRequestAcceptedStatus
DDS_SERVICE_REQUEST_ACCEPTED_STATUS (p. 1235) . . . 2007
DDS_ServiceRequestSeq
Instantiates **FooSeq** (p. 2120) < **DDS_ServiceRequest** (p. 2006) > . . . 2009
DDS_ServiceRequestTypeSupport
Instantiates `TypeSupport` < **DDS_ServiceRequest** (p. 2006) > . . . 2009
DDS_ShortSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Short** (p. 1204) > . . . 2010
DDS_StringSeq
Instantiates **FooSeq** (p. 2120) < char* > with value type semantics . . . 2010
DDS_StringTypeSupport
<<***interface***>> *(p. 1015)* String type support . . . 2011
DDS_StructMember
A description of a member of a struct . . . 2012
DDS_StructMemberSeq
Defines a sequence of struct members . . . 2014
DDS_SubscriberListener
<<***interface***>> *(p. 1015)* **DDS_Listener** (p. 1819) for status about a subscriber . . . 2014
DDS_SubscriberQos
QoS policies supported by a **DDS_Subscriber** (p. 575) entity . . . 2016

DDS_SubscriberSeq
Declares IDL sequence < **DDS_Subscriber** (p. 575) > . . . 2017
DDS_SubscriptionBuiltinTopicData
Entry created when a **DDS_DataReader** (p. 618) is discovered in association with its Subscriber . 2018
DDS_SubscriptionBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 2120) < **DDS_SubscriptionBuiltinTopicData** (p. 2018) > . . . 2027
DDS_SubscriptionBuiltinTopicDataTypeSupport
Instantiates TypeSupport < **DDS_SubscriptionBuiltinTopicData** (p. 2018) > . . . 2027
DDS_SubscriptionMatchedStatus
DDS_SUBSCRIPTION_MATCHED_STATUS (p. 1234) . . . 2028
DDS_SystemResourceLimitsQosPolicy
<<***extension***>> *(p. 796)* Configures **DDS_DomainParticipant** (p. 76)-independent resources used by RTI Connext. Mainly used to change the maximum number of **DDS_DomainParticipant** (p. 76) entities that can be created within a single process (address space) . . . 2030
DDS_Tag
Tags are name/value pair objects . . . 2032
DDS_TagSeq
Declares IDL sequence < **DDS_Tag** (p. 2032) > . . . 2033
DDS_ThreadFactory
<<***extension***>> *(p. 1014)* <<***interface***>> *(p. 1015)* Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the **DDS_ThreadFactory_OnSpawnedFunction** (p. 1435) that specifies the operation to run in the new thread . . . 2033
DDS_ThreadSettings_t
The properties of a thread of execution . . . 2035
DDS_Time_t
Type for *time* representation . . . 2037
DDS_TimeBasedFilterQosPolicy
<<***spec***>> *(p. 791)* Filter that allows a **DDS_DataReader** (p. 618) to specify that it is interested only in (potentially) a subset of the values of the data . . . 2038
DDS_TopicBuiltinTopicData
Entry created when a Topic object discovered . . . 2040
DDS_TopicBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 2120) < **DDS_TopicBuiltinTopicData** (p. 2040) > . . . 2045
DDS_TopicBuiltinTopicDataTypeSupport
Instantiates TypeSupport < **DDS_TopicBuiltinTopicData** (p. 2040) > . . . 2045
DDS_TopicDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 164) during discovery . . . 2046
DDS_TopicListener
<<***interface***>> *(p. 1015)* **DDS_Listener** (p. 1819) for **DDS_Topic** (p. 174) entities . . . 2047
DDS_TopicQos
QoS policies supported by a **DDS_Topic** (p. 174) entity . . . 2048
DDS_TopicQueryData
<<***extension***>> *(p. 1014)* Provides information about a **DDS_TopicQuery** (p. 708) . . . 2052
DDS_TopicQueryDispatchQosPolicy
<<***extension***>> *(p. 796)* Configures the ability of a **DDS_DataWriter** (p. 488) to publish samples in response to a **DDS_TopicQuery** (p. 708) . . . 2053
DDS_TopicQuerySelection
<<***extension***>> *(p. 1014)* Specifies the data query that defines a **DDS_TopicQuery** (p. 708) . . 2055
DDS_TransportBuiltinQosPolicy
<<***extension***>> *(p. 796)* Specifies which built-in transports are used . . . 2057
DDS_TransportInfo_t
Contains the class_id and message_size_max of an installed transport . . . 2058

DDS_TransportInfoSeq
Instantiates **FooSeq** (p. 2120) < **DDS_TransportInfo_t** (p. 2058) > 2059
DDS_TransportMulticastMapping_t
<<***extension***>> *(p. 796)* Type representing a list of multicast mapping elements 2059
DDS_TransportMulticastMappingFunction_t
Type representing an external mapping function 2061
DDS_TransportMulticastMappingQosPolicy
<<***extension***>> *(p. 796)* Specifies a list of topic_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data 2062
DDS_TransportMulticastMappingSeq
Declares IDL sequence< **DDS_TransportMulticastMapping_t** (p. 2059) > 2064
DDS_TransportMulticastQosPolicy
<<***extension***>> *(p. 796)* Specifies the multicast address on which a **DDS_DataReader** (p. 618) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **DDS_DomainParticipant** (p. 76) level) transports with which to receive the multicast data 2064
DDS_TransportMulticastSettings_t
Type representing a list of multicast locators 2066
DDS_TransportMulticastSettingsSeq
Declares IDL sequence< **DDS_TransportMulticastSettings_t** (p. 2066) > 2068
DDS_TransportPriorityQosPolicy
<<***spec***>> *(p. 791)* This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities 2068
DDS_TransportSelectionQosPolicy
<<***extension***>> *(p. 796)* Specifies the physical transports a **DDS_DataWriter** (p. 488) or **DDS_↩ DataReader** (p. 618) may use to send or receive data 2070
DDS_TransportUnicastQosPolicy
<<***extension***>> *(p. 796)* Specifies a subset of transports and a port number that can be used by an Entity to receive data 2071
DDS_TransportUnicastSettings_t
Type representing a list of unicast locators 2073
DDS_TransportUnicastSettingsSeq
Declares IDL sequence< **DDS_TransportUnicastSettings_t** (p. 2073) > 2075
DDS_TrustAlgorithmRequirements
Type to describe Trust Plugins algorithm requirements for an entity 2075
DDS_TypeAllocationParams_t
Configures whether or not to allocate pointer and optional members 2076
DDS_TypeCode
The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the Code Generator User's Manual) or to modify types you define yourself at runtime 2077
DDS_TypeCodeFactory
A singleton factory for creating, copying, and deleting data type definitions dynamically 2077
DDS_TypeCodePrintFormatProperty
A collection of attributes used to configure how a TypeCode appears when converted to a string . . 2079
DDS_TypeConsistencyEnforcementQosPolicy
<<***spec***>> *(p. 791)* Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it 2082
DDS_TypeDeallocationParams_t
Configures whether to release or not pointer and optional members 2086
DDS_TypeSupportQosPolicy
[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Allows you to attach application-specific values to a **DDS_DataWriter** (p. 488) or **DDS_DataReader** (p. 618), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization 2087

DDS_UInt8Seq
Instantiates **FooSeq** (p. 2120) < **DDS_UInt8** (p. 1204) > . . . 2089
DDS_UnionMember
A description of a member of a union . . . 2089
DDS_UnionMemberSeq
Defines a sequence of union members . . . 2091
DDS_UnsignedLongLongSeq
Instantiates **FooSeq** (p. 2120) < **DDS_UnsignedLongLong** (p. 1205) > . . . 2091
DDS_UnsignedLongSeq
Instantiates **FooSeq** (p. 2120) < **DDS_UnsignedLong** (p. 1205) > . . . 2092
DDS_UnsignedShortSeq
Instantiates **FooSeq** (p. 2120) < **DDS_UnsignedShort** (p. 1204) > . . . 2092
DDS_UserDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 164) during discovery . . . 2092
DDS_ValueMember
A description of a member of a value type . . . 2094
DDS_ValueMemberSeq
Defines a sequence of value members . . . 2096
DDS_VendorId_t
<<***extension***>> *(p. 1014)* Type used to represent the vendor of the service implementing the RTPS protocol . . . 2097
DDS_VirtualWriterInfo
The structure that contains the information of a virtual writer . . . 2097
DDS_WaitSetProperty_t
<<***extension***>> *(p. 1014)* Specifies the **DDS_WaitSet** (p. 1373) behavior for multiple trigger events 2097
DDS_WcharSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Wchar** (p. 1204) > . . . 2099
DDS_WireProtocolQosPolicy
<<***extension***>> *(p. 796)* Specifies the wire-protocol-related attributes for the **DDS_DomainParticipant** (p. 76) . . . 2099
DDS_WriteParams_t
<<***extension***>> *(p. 1014)* Input parameters for writing with **FooDataWriter_write_w_params** (p. 504), **FooDataWriter_dispose_w_params** (p. 507), **FooDataWriter_register_instance_w_params** (p. 496), **FooDataWriter_unregister_instance_w_params** (p. 499) . . . 2107
DDS_WriterDataLifecycleQosPolicy
<<***spec***>> *(p. 791)* Controls how a **DDS_DataWriter** (p. 488) handles the lifecycle of the instances (keys) that it is registered to manage . . . 2112
DDS_WstringSeq
Instantiates **FooSeq** (p. 2120) < **DDS_Wchar** (p. 1204)* > . . . 2115
Foo
A representative user-defined data type . . . 2116
FooBarReplier
Allows receiving requests and sending replies . . . 2116
FooBarRequester
Allows sending requests and receiving replies . . . 2117
FooBarSimpleReplier
A callback-based replier . . . 2118
FooDataReader
<<***interface***>> *(p. 1015)* <<***generic***>> *(p. 1015)* User data type-specific data reader . . . 2119
FooDataWriter
<<***interface***>> *(p. 1015)* <<***generic***>> *(p. 1015)* User data type specific data writer . . . 2119

FooSeq
<<*interface*>> (p. *1015*) <<*generic*>> (p. *1015*) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **Foo** (p. 2116) 2120
FooTypeSupport
<<*interface*>> (p. *1015*) <<*generic*>> (p. *1015*) User data type specific interface 2121
NDDS_Config_LibraryVersion_t
The version of a single library shipped as part of an RTI Connext distribution 2121
NDDS_Config_Logger
<<*interface*>> (p. *1015*) The singleton type used to configure RTI Connext logging 2122
NDDS_Config_LoggerDevice
<<*interface*>> (p. *1015*) Logging device interface. Use for user-defined logging devices 2122
NDDS_Config_LogMessage
A log message's input parameter to a logging device, including the text and additional information . 2124
NDDS_Config_Version_t
<<*interface*>> (p. *1015*) The version of an RTI Connext distribution 2126
NDDS_Transport_Address_t
Addresses are stored individually as network-ordered bytes 2126
NDDS_Transport_Interface_t
Storage for the description of a network interface used by a Transport Plugin 2127
NDDS_Transport_Property_t
Base configuration structure that must be inherited by derived Transport Plugin classes 2128
NDDS_Transport_Shmem_Property_t
Subclass of **NDDS_Transport_Property_t** (p. 2128) allowing specification of parameters that are specific to the shared-memory transport 2136
NDDS_Transport_Support
<<*interface*>> (p. *1015*) The utility class used to configure RTI Connext pluggable transports . . 2139
NDDS_Transport_UDP_WAN_CommPortsMappingInfo
Type for storing UDP WAN communication ports 2139
NDDS_Transport_UDPv4_Property_t
Configurable IPv4/UDP Transport-Plugin properties 2140
NDDS_Transport_UDPv4_WAN_Property_t
Configurable IPv4/UDP WAN Transport-Plugin properties 2151
NDDS_Transport_UDPv6_Property_t
Configurable IPv6/UDP Transport-Plugin properties 2161
NDDS_Transport_UUID
Unequivocally identifies a transport plugin instance 2171
NDDS_Utility_HeapMonitoringParams_t
Input parameters for enabling heap monitoring. They will be used for configuring the format of the snapshot 2171
NDDS_Utility_NetworkCaptureParams_t
Input parameters for starting network capture 2172
RTI_Connext_Replier
The type-independent version of a Replier 2174
RTI_Connext_ReplierListener
Called when a **FooBarReplier** (p. 2116) has new available requests 2175
RTI_Connext_ReplierParams
Contains the parameters for creating a **FooBarReplier** (p. 2116) 2176
RTI_Connext_Requester
The type-independent version of a Requester 2180
RTI_Connext_RequesterParams
Contains the parameters for creating a **FooBarRequester** (p. 2117) 2180
RTI_Connext_SimpleReplierListener
The listener called by a SimpleReplier 2183

RTI_Connext_SimpleReplierParams
Contains the parameters for creating a **FooBarSimpleReplier** (p. 2118) 2184
TransportAllocationSettings_t
Allocation settings used by various internal buffers 2188

Chapter 4

File Index

4.1 File List

Here is a list of all documented files with brief descriptions:

howto_prototypes.h 2189
transport_common.h 2190
transport_common_user.h 2195
transport_interface_user.h 2204
transport_shmem.h 2207
transport_udp.h 2211
transport_udpv4.h 2224
transport_udpv6.h 2235

Chapter 5

Module Documentation

5.1 Clock Selection

APIs related to clock selection.

APIs related to clock selection.

RTI Connext uses clocks to measure time and generate timestamps.

RTI Connext uses three clocks, an "internal clock," an "external clock," and a "wall clock". The internal clock measures time internally. The external clock generates timestamps, such as the source timestamp and the reception timestamp, in addition to providing the current time given by the Domain Participant's API. The internal and external clocks can be configured via properties. The wall clock is not configurable and always shows the system time. It is used internally whenever a real-world time is necessary, such as for external document time verification.

5.1.1 Available Clocks

Two clock implementations are generally available, the monotonic clock and the realtime clock.

The monotonic clock provides times that are monotonic from a clock that is not adjustable. This clock is useful to use in order to not be subject to changes in the system or realtime clock, which may be adjusted by the user or via time synchronization protocols. However, this time generally starts from an arbitrary point in time, such as system startup. Note that this clock is not available for all architectures. Please see the `Platform Notes` for the architectures on which it is supported. For the purposes of clock selection, this clock can be referenced by the name "monotonic".

The realtime clock provides the real time of the system. This clock may generally be monotonic but may not be guaranteed to be so. It is adjustable and may be subject to small and large changes in time. The time obtained from this clock is generally a meaningful time in that it is the amount of time from a known epoch. For the purposes of clock selection, this clock can be referenced by the names "realtime" or "system".

5.1.2 Clock Selection Strategy

By default, the internal clock uses the monotonic clock and the external clocks uses the realtime clock. The default setup offers robustness to changes in the system time. Since the monotonic clock is not available on all platforms, by default, RTI Connext will attempt to use the monotonic clock, and will fall back to the realtime clock if the monotonic clock is not available.

If you want your application to be robust to changes in the system time, you are not relying on source timestamps, and you want to avoid obtaining times from both clocks, you may use the monotonic clock for both the internal and external clocks.

5.1.3 Configuring Clock Selection

To configure the clock selection, use the **PROPERTY** (p. 1308) QoS policy associated with the **DDS_DomainParticipant** (p. 76).

See also

DDS_PropertyQosPolicy (p. 1905)

The following table lists the supported clock selection properties.

Table 5.1 ***Clock Selection Properties***

Property	Description
dds.clock.external_clock	Comma-delimited list of clocks to use for the external clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"
dds.clock.internal_clock	Comma-delimited list of clocks to use for the internal clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "monotonic" if available, "realtime" if not

5.2 Domain Module

Contains the **DDS_DomainParticipant** (p. 76) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **DDS_DomainParticipant** (p. 76) also acts as a container for the other objects that make up RTI Connext.

Modules

- **DomainParticipantFactory**

  DDS_DomainParticipantFactory *(p. 32) entity and associated elements*
- **DomainParticipants**

  DDS_DomainParticipant *(p. 76) entity and associated elements*
- **Built-in Topics**

  Built-in objects created by RTI Connext but accessible to the application.

5.2.1 Detailed Description

Contains the **DDS_DomainParticipant** (p. 76) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **DDS_DomainParticipant** (p. 76) also acts as a container for the other objects that make up RTI Connext.

5.3 DomainParticipantFactory

DDS_DomainParticipantFactory (p. 32) entity and associated elements

Modules

- **DomainParticipantConfigParams**

  *<<**extension**>> (p. 1014)* ***DDS_DomainParticipantConfigParams_t*** *(p. 1721)*

Data Structures

- struct **DDS_DomainParticipantFactoryQos**

  QoS policies supported by a ***DDS_DomainParticipantFactory*** *(p. 32).*

Macros

- #define **DDS_DomainParticipantFactoryQos_INITIALIZER**

  Initializer for new QoS instances.
- #define **DDS_TheParticipantFactory** **DDS_DomainParticipantFactory_get_instance**()

  Can be used as an alias for the singleton factory returned by the operation ***DDS_DomainParticipantFactory_get_instance*** *(p. 38).*

Typedefs

- typedef struct DDS_DomainParticipantFactoryImpl **DDS_DomainParticipantFactory**

  *<<**singleton**>> (p. 1015) <<**interface**>> (p. 1015) Allows creation and destruction of* ***DDS_DomainParticipant*** *(p. 76) objects.*
- typedef **DDS_ReturnCode_t**(∗ **DDS_DomainParticipantFactory_RegisterTypeFunction**) (**DDS_DomainParticipant** ∗participant, const char ∗type_name)

  Prototype of a register type function.

Functions

- **DDS_Boolean DDS_DomainParticipantFactoryQos_equals** (const struct **DDS_DomainParticipantFactoryQos** *self, const struct **DDS_DomainParticipantFactoryQos** *other)

  *Compares two **DDS_DomainParticipantFactoryQos*** (p. *1724*) *for equality.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_print** (const struct **DDS_DomainParticipantFactoryQos** *self)

  *Prints this **DDS_DomainParticipantFactoryQos*** (p. *1724*) *to stdout.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string** (const struct **DDS_DomainParticipantFactoryQos** *self, char *string, **DDS_UnsignedLong** *string_size)

  *Obtains a string representation of this **DDS_DomainParticipantQos*** (p. *1729*).
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string_w_params** (const struct **DDS_DomainParticipantFactoryQos** *self, char *string, **DDS_UnsignedLong** *string_size, const struct **DDS_DomainParticipantFactoryQos** *base, const struct **DDS_QosPrintFormat** *format)

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos*** (p. *1724*).
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_initialize** (struct **DDS_DomainParticipantFactoryQos** *self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_finalize** (struct **DDS_DomainParticipantFactoryQos** *self)

  *Free any dynamic memory allocated by the policies in this **DDS_DomainParticipantFactoryQos*** (p. *1724*).
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_copy** (struct **DDS_DomainParticipantFactoryQos** *self, const struct **DDS_DomainParticipantFactoryQos** *source)

  Copy the contents of the given QoS into this QoS.
- **DDS_DomainParticipantFactory** * **DDS_DomainParticipantFactory_get_instance** (void)

  Gets the singleton instance of this class.
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_finalize_instance** (void)

  *<<**extension**>> (p. 1014) Destroys the singleton instance of this class.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos** (**DDS_DomainParticipantFactory** *self, const struct **DDS_DomainParticipantQos** *qos)

  *Sets the default **DDS_DomainParticipantQos*** (p. *1729*) *values for this domain participant factory.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos_with_profile** (**DDS_DomainParticipantFactory** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Sets the default **DDS_DomainParticipantQos*** (p. *1729*) *values for this domain participant factory based on the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_default_participant_qos** (**DDS_DomainParticipantFactory** *self, struct **DDS_DomainParticipantQos** *qos)

  *Initializes the **DDS_DomainParticipantQos*** (p. *1729*) *instance with default values.*
- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_create_participant** (**DDS_DomainParticipantFactory** *self, **DDS_DomainId_t** domainId, const struct **DDS_DomainParticipantQos** *qos, const struct **DDS_DomainParticipantListener** *listener, **DDS_StatusMask** mask)

  *Creates a new **DDS_DomainParticipant*** (p. *76*) *object.*
- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_create_participant_with_profile** (**DDS_DomainParticipantFactory** *self, **DDS_DomainId_t** domainId, const char *library_name, const char *profile_name, const struct **DDS_DomainParticipantListener** *listener, **DDS_StatusMask** mask)

  *<<**extension**>> (p. 1014) Creates a new **DDS_DomainParticipant*** (p. *76*) *object using the **DDS_DomainParticipantQos*** (p. *1729*) *associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_delete_participant** (**DDS_DomainParticipantFactory** *self, **DDS_DomainParticipant** *a_participant)

  *Deletes an existing **DDS_DomainParticipant*** (p. *76*).

- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_lookup_participant** (**DDS_DomainParticipantFactory** *self, **DDS_DomainId_t** domainId)

  *Locates an existing **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos** (**DDS_DomainParticipantFactory** *self, struct **DDS_DomainParticipantFactoryQos** *qos)

  Gets the value for participant factory QoS.
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_qos** (**DDS_DomainParticipantFactory** *self, const struct **DDS_DomainParticipantFactoryQos** *qos)

  Sets the value for a participant factory QoS.
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_load_profiles** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Loads the XML QoS profiles.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_reload_profiles** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Reloads the XML QoS profiles.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_unload_profiles** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Unloads the XML QoS profiles.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_library** (**DDS_DomainParticipantFactory** *self, const char *library_name)

  *<<**extension**>> (p. 1014) Sets the default XML library for a **DDS_DomainParticipantFactory** (p. 32).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_profile** (**DDS_DomainParticipantFactory** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Sets the default XML profile for a **DDS_DomainParticipantFactory** (p. 32).*
- const char * **DDS_DomainParticipantFactory_get_default_library** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Gets the default XML library associated with a **DDS_DomainParticipantFactory** (p. 32).*
- const char * **DDS_DomainParticipantFactory_get_default_profile** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Gets the default XML profile associated with a **DDS_DomainParticipantFactory** (p. 32).*
- const char * **DDS_DomainParticipantFactory_get_default_profile_library** (**DDS_DomainParticipantFactory** *self)

  *<<**extension**>> (p. 1014) Gets the library where the default XML profile is contained for a **DDS_DomainParticipantFactory** (p. 32).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_factory_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_DomainParticipantFactoryQos** *qos, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Gets the **DDS_DomainParticipantFactoryQos** (p. 1724) values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_DomainParticipantQos** *qos, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Gets the **DDS_DomainParticipantQos** (p. 1729) values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_publisher_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_PublisherQos** *qos, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Gets the **DDS_PublisherQos** (p. 1922) values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_subscriber_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_SubscriberQos** *qos, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Gets the **DDS_SubscriberQos** (p. 2016) values associated with the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_DataReaderQos** *qos, const char *library_name, const char *profile_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_DataReaderQos*** (p. *1611*) *values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name** (**DDS_DomainParticipantFactory** *self, struct **DDS_DataReaderQos** *qos, const char *library_name, const char *profile_name, const char *topic_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_DataReaderQos*** (p. *1611*) *values associated with the input XML QoS profile while applying topic filters to the input topic name.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_DataWriterQos** *qos, const char *library_name, const char *profile_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_DataWriterQos*** (p. *1666*) *values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name** (**DDS_DomainParticipantFactory** *self, struct **DDS_DataWriterQos** *qos, const char *library_name, const char *profile_name, const char *topic_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_DataWriterQos*** (p. *1666*) *values associated with the input XML QoS profile while applying topic filters to the input topic name.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile** (**DDS_DomainParticipantFactory** *self, struct **DDS_TopicQos** *qos, const char *library_name, const char *profile_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_TopicQos*** (p. *2048*) *values associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name** (**DDS_DomainParticipantFactory** *self, struct **DDS_TopicQos** *qos, const char *library_name, const char *profile_name, const char *topic_name)

  <<***extension***>> (p. *1014*) *Gets the* ***DDS_TopicQos*** (p. *2048*) *values associated with the input XML QoS profile while applying topic filters to the input topic name.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profile_libraries** (**DDS_DomainParticipantFactory** *self, struct **DDS_StringSeq** *library_names)

  <<***extension***>> (p. *1014*) *Gets the names of all XML QoS profile libraries associated with the* ***DDS_DomainParticipantFactory*** (p. *32*)
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profiles** (**DDS_DomainParticipantFactory** *self, struct **DDS_StringSeq** *profile_names, const char *library_name)

  <<***extension***>> (p. *1014*) *Gets the names of all XML QoS profiles associated with the input XML QoS profile library.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_unregister_thread** (**DDS_DomainParticipantFactory** *self)

  <<***extension***>> (p. *1014*) *Allows you to release thread-specific resources kept by RTI Connext on platforms that do not support automatic thread-specific storage (TSS) cleanup.*
- const **DDS_TypeCode** * **DDS_DomainParticipantFactory_get_typecode_from_config** (**DDS_DomainParticipantFactory** *self, const char *type_name)

  <<***extension***>> (p. *1014*) *Gets a* ***DDS_TypeCode*** (p. *2077*) *from a definition provided in an XML configuration file.*
- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_create_participant_from_config** (**DDS_DomainParticipantFactory** *self, const char *configuration_name)

  <<***extension***>> (p. *1014*) *Creates a* ***DDS_DomainParticipant*** (p. *76*) *given its configuration name from a description provided in an XML configuration file.*
- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_create_participant_from_config_w_params** (**DDS_DomainParticipantFactory** *self, const char *configuration_name, const struct **DDS_DomainParticipantConfigParams_t** *params)

  <<***extension***>> (p. *1014*) *Creates a* ***DDS_DomainParticipant*** (p. *76*) *given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.*
- **DDS_DomainParticipant** * **DDS_DomainParticipantFactory_lookup_participant_by_name** (**DDS_DomainParticipantFactory** *self, const char *participant_name)

<<**extension**>> (p. 1014) *Looks up a* ***DDS_DomainParticipant*** (p. 76) *by its entity name in the* ***DDS_DomainParticipantFactory*** (p. 32).

- **DDS_ReturnCode_t DDS_DomainParticipantFactory_register_type_support** (**DDS_DomainParticipantFactory** *self, **DDS_DomainParticipantFactory_RegisterTypeFunction** register_type_fcn, const char *type_name)

  <<**extension**>> (p. 1014) *Registers a* ***DDS_TypeSupport*** (p. 213) *with the* ***DDS_DomainParticipantFactory*** (p. 32) *to enable automatic registration if the corresponding type, should it be needed by a* ***DDS_DomainParticipant*** (p. 76).
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participants** (**DDS_DomainParticipantFactory** *self, struct **DDS_DomainParticipantSeq** *participants)

  <<**extension**>> (p. 1014) *Allows the application to access all the participants the DomainParticipantFactory has.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactory_set_thread_factory** (**DDS_DomainParticipantFactory** *self, const struct **DDS_ThreadFactory** *thread_factory)

  <<**extension**>> (p. 1014) *Sets a* ***DDS_ThreadFactory*** (p. 2033) *in the* ***DDS_DomainParticipantFactory*** (p. 32) *that will be used to create the internal threads of the DDS middleware.*

Variables

- const struct **DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT**

  Special value for creating a DomainParticipant with default QoS.
- const struct **DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT**

  Special value for creating a ***DDS_DomainParticipant*** (p. 76) *from configuration using default parameters.*

5.3.1 Detailed Description

DDS_DomainParticipantFactory (p. 32) entity and associated elements

5.3.2 Macro Definition Documentation

5.3.2.1 DDS_DomainParticipantFactoryQos_INITIALIZER

```
#define DDS_DomainParticipantFactoryQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_DomainParticipantFactoryQos** (p. 1724) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DomainParticipantFactoryQos myQos = DDS_DomainParticipantFactoryQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipantFactory_get_qos** (p. 45); that function should be called subsequently to setting the QoS. **DDS_DomainParticipantFactoryQos_finalize** (p. 36) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_DomainParticipantFactoryQos myQos = DDS_DomainParticipantFactoryQos_INITIALIZER;

DDS_DomainParticipantFactory_get_qos(myFactory, &myQos);

DDS_DomainParticipantFactory_set_qos(myFactory, &myQos);

DDS_DomainParticpiantFactoryQos_finalize(myFactory, &myQos);
```

See also

DDS_DomainParticipantFactory_get_qos (p. 45)

DDS_DomainParticipantFactoryQos_finalize (p. 36)

5.3.2.2 DDS_TheParticipantFactory

```
#define DDS_TheParticipantFactory  DDS_DomainParticipantFactory_get_instance()
```

Can be used as an alias for the singleton factory returned by the operation **DDS_DomainParticipantFactory_get_↩ instance** (p. 38).

See also

DDS_DomainParticipantFactory_get_instance (p. 38)

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.3.3 Typedef Documentation

5.3.3.1 DDS_DomainParticipantFactory

```
typedef struct DDS_DomainParticipantFactoryImpl  DDS_DomainParticipantFactory
```

*<<**singleton**>> (p. 1015) <<**interface**>> (p. 1015)* Allows creation and destruction of **DDS_DomainParticipant** (p. 76) objects.

The sole purpose of this class is to allow the creation and destruction of **DDS_DomainParticipant** (p. 76) objects. This class itself is a *<<**singleton**>> (p. 1015)*, and accessed via the get_instance() function, and destroyed with finalize↩ _instance() function.

A single application can participate in multiple domains by instantiating multiple **DDS_DomainParticipant** (p. 76) objects.

An application may even instantiate multiple participants in the same domain. Participants in the same domain exchange data in the same way regardless of whether they are in the same application or different applications or on the same node or different nodes; their location is transparent.

There are two important caveats:

- When there are multiple participants on the same node (in the same application or different applications) in the same domain, the application(s) must make sure that the participants do not try to bind to the same port numbers. You must disambiguate between the participants by setting a participant ID for each participant (**DDS_Wire↩ ProtocolQosPolicy::participant_id** (p. 2103)). The port numbers used by a participant are calculated based on both the participant index and the domain ID, so if all participants on the same node have different participant indexes, they can coexist in the same domain.
- You cannot mix entities from different participants. For example, you cannot delete a topic on a different participant than you created it from, and you cannot ask a subscriber to create a reader for a topic created from a participant different than the subscriber's own participant. (Note that it is permissable for an application built on top of RTI Connext to know about entities from different participants. For example, an application could keep references to a reader from one domain and a writer from another and then bridge the domains by writing the data received in the reader callback.)

See also

DDS_DomainParticipant (p. 76)

5.3.3.2 DDS_DomainParticipantFactory_RegisterTypeFunction

```
typedef DDS_ReturnCode_t(* DDS_DomainParticipantFactory_RegisterTypeFunction) ( DDS_Domain↩
Participant *participant, const char *type_name)
```

Prototype of a register type function.

Parameters

participant	<<***inout***>> *(*p. *1015)* **DDS_DomainParticipant** (p. 76) participant the type is registered with.
type_name	<<***in***>> *(*p. *1015)* Name the type is registered with.

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4 Function Documentation

5.3.4.1 DDS_DomainParticipantFactoryQos_equals()

```
DDS_Boolean DDS_DomainParticipantFactoryQos_equals (
            const struct  DDS_DomainParticipantFactoryQos * self,
            const struct  DDS_DomainParticipantFactoryQos * other )
```

Compares two **DDS_DomainParticipantFactoryQos** (p. 1724) for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This DomainParticipantFactoryQos.
other	<<***in***>> *(*p. *1015)* The other DomainParticipantFactoryQos to be compared with this DomainParticipantFactoryQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.3.4.2 DDS_DomainParticipantFactoryQos_print()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_print (
            const struct  DDS_DomainParticipantFactoryQos * self )
```

Prints this **DDS_DomainParticipantFactoryQos** (p. 1724) to stdout.

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 1724) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantFactoryQos_to_string_w_params** (p. 35). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.3.4.3 DDS_DomainParticipantFactoryQos_to_string()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string (
            const struct  DDS_DomainParticipantFactoryQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 1729).

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 1724) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DomainParticipantFactoryQos_to_string_w_params** (p. 35). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantFactoryQos** (p. 1724) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 1724). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_DomainParticipantFactoryQos_to_string_w_params (p. 35)

5.3.4.4 DDS_DomainParticipantFactoryQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string_w_params (
            const struct  DDS_DomainParticipantFactoryQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_DomainParticipantFactoryQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 1724).

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 1724) and the **DDS_DomainParticipant↩ FactoryQos** (p. 1724) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL** (p. 159) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantFactoryQos** (p. 1724) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 1724). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 1015)* The **DDS_DomainParticipantFactoryQos** (p. 1724) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.3.4.5 DDS_DomainParticipantFactoryQos_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_initialize (
            struct  DDS_DomainParticipantFactoryQos * self )
```

Initializer for new QoS instances.

New **DDS_DomainParticipantFactoryQos** (p. 1724) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_DomainParticipantFactory_get_qos** (p. 45); that function should be called subsequently to setting the QoS of an existing factory. **DDS_DomainParticipantFactoryQos_finalize** (p. 36) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DomainParticipantFactoryQos *myQos = malloc(sizeof(struct DDS_DomainParticipantFactoryQos));

DDS_DomainParticipantQos_initialize(myQos);

DDS_DomainParticipantFactory_get_qos(myFactory, myQos);

DDS_DomainParticipantFactory_set_qos(myFactory, myQos);

DDS_DomainParticipantFactoryQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactory_get_qos (p. 45)

DDS_DomainParticipantFactoryQos_finalize (p. 36)

5.3.4.6 DDS_DomainParticipantFactoryQos_finalize()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_finalize (
            struct  DDS_DomainParticipantFactoryQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_DomainParticipantFactoryQos** (p. 1724).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactoryQos_INITIALIZER (p. 31)

DDS_DomainParticipantFactoryQos_initialize (p. 36)

5.3.4.7 DDS_DomainParticipantFactoryQos_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_copy (
            struct  DDS_DomainParticipantFactoryQos * self,
            const struct  DDS_DomainParticipantFactoryQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_DomainParticipantFactoryQos (p. 1724) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. QoS to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactoryQos_INITIALIZER (p. 31)

DDS_DomainParticipantFactoryQos_initialize (p. 36)

DDS_DomainParticipantFactoryQos_finalize (p. 36)

5.3.4.8 DDS_DomainParticipantFactory_get_instance()

```
DDS_DomainParticipantFactory * DDS_DomainParticipantFactory_get_instance (
            void  )
```

Gets the singleton instance of this class.

DDS_TheParticipantFactory (p. 32) can be used as an alias for the singleton factory returned by this operation.

Returns

The singleton **DDS_DomainParticipantFactory** (p. 32) instance.

See also

DDS_TheParticipantFactory (p. 32)

5.3.4.9 DDS_DomainParticipantFactory_finalize_instance()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_finalize_instance (
            void  )
```

<<***extension***>> *(*p. *1014)* Destroys the singleton instance of this class.

Only necessary to explicitly reclaim resources used by the participant factory singleton. Note that on many OSs, these resources are automatically reclaimed by the OS when the program terminates. However, some memory-check tools still flag these as unreclaimed. So this function provides a way to clean up memory used by the participant factory.

Precondition

All participants created from the factory have been deleted.

Postcondition

All resources belonging to the factory have been reclaimed. Another call to **DDS_DomainParticipantFactory_get_instance** (p. 38) will return a new lifecycle of the singleton.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

See also

DDS_TheParticipantFactory (p. 32)

5.3.4.10 DDS_DomainParticipantFactory_set_default_participant_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos (
            DDS_DomainParticipantFactory * self,
           const struct  DDS_DomainParticipantQos * qos )
```

Sets the default **DDS_DomainParticipantQos** (p. 1729) values for this domain participant factory.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**inout**>> (p. 1015)* Qos to be filled up. The special value **DDS_PARTICIPANT_QOS_DEFAULT** (p. 64) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipantFactory_set_default_participant_qos** (p. 38) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PARTICIPANT_QOS_DEFAULT (p. 64)

DDS_DomainParticipantFactory_create_participant (p. 41)

5.3.4.11 DDS_DomainParticipantFactory_set_default_participant_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos_with_profile (
            DDS_DomainParticipantFactory * self,
           const char * library_name,
           const char * profile_name )
```

*<<**extension**>> (p. 1014)* Sets the default **DDS_DomainParticipantQos** (p. 1729) values for this domain participant factory based on the input XML QoS profile.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

This default value will be used for newly created **DDS_DomainParticipant** (p. 76) if **DDS_PARTICIPANT_QOS_↩ DEFAULT** (p. 64) is specified as the `qos` parameter when **DDS_DomainParticipantFactory_create_participant** (p. 41) is called.

Precondition

The **DDS_DomainParticipantQos** (p. 1729) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a domain participant factory while another thread may be simultaneously calling **DDS_DomainParticipantFactory_set_default_participant_qos** (p. 38)

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
library_name	*<<**in**>> (p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	*<<**in**>> (p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_PARTICIPANT_QOS_DEFAULT (p. 64)

DDS_DomainParticipantFactory_create_participant_with_profile (p. 42)

5.3.4.12 DDS_DomainParticipantFactory_get_default_participant_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_default_participant_qos (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DomainParticipantQos * qos )
```

Initializes the **DDS_DomainParticipantQos** (p. 1729) instance with default values.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant↩ Factory_set_default_participant_qos** (p. 38), or **DDS_DomainParticipantFactory_set_default_participant_qos↩ _with_profile** (p. 39), or else, if the call was never made, the default values listed in **DDS_DomainParticipantQos** (p. 1729).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**out**>> (p. 1015)* the domain participant's QoS Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PARTICIPANT_QOS_DEFAULT (p. 64)

DDS_DomainParticipantFactory_create_participant (p. 41)

5.3.4.13 DDS_DomainParticipantFactory_create_participant()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant (
            DDS_DomainParticipantFactory * self,
            DDS_DomainId_t domainId,
           const struct  DDS_DomainParticipantQos * qos,
           const struct  DDS_DomainParticipantListener * listener,
            DDS_StatusMask mask )
```

Creates a new **DDS_DomainParticipant** (p. 76) object.

Precondition

The specified QoS policies must be consistent or the operation will fail and no **DDS_DomainParticipant** (p. 76) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS_WireProtocolQosPolicy** (p. 2099)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

Precondition

If `listener` is specified, none of the listener callback functions can be NULL.

MT Safety:

UNSAFE. On VxWorks, when enabling the RTI Security Plugins, it is not safe for multiple threads to attempt to create a **DDS_DomainParticipant** (p. 76) when there are no other DomainParticipants in the **DDS_Domain↩ ParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
domain↩ Id	<<***in***>> *(p. 1015)* ID of the domain that the application intends to join. **[range]** [>=0], and does not violate guidelines stated in **DDS_RtpsWellKnownPorts_t** (p. 1983).
qos	<<***in***>> *(p. 1015)* the DomainParticipant's QoS. The special value **DDS_PARTICIPANT_QOS_DEFAULT** (p. 64) can be used to indicate that the **DDS_DomainParticipant** (p. 76) should be created with the default **DDS_DomainParticipantQos** (p. 1729) set in the **DDS_DomainParticipantFactory** (p. 32). Cannot be NULL.
listener	<<***in***>> *(p. 1015)* the domain participant's listener.
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

domain participant or NULL on failure

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_DomainParticipantFactory_get_default_participant_qos (p. 40)

DDS_DomainParticipant_set_listener (p. 153)

5.3.4.14 DDS_DomainParticipantFactory_create_participant_with_profile()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_with_profile (
            DDS_DomainParticipantFactory * self,
            DDS_DomainId_t domainId,
           const char * library_name,
           const char * profile_name,
           const struct  DDS_DomainParticipantListener * listener,
            DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a new **DDS_DomainParticipant** (p. 76) object using the **DDS_Domain↩ ParticipantQos** (p. 1729) associated with the input XML QoS profile.

Precondition

The **DDS_DomainParticipantQos** (p. 1729) in the input profile must be consistent, or the operation will fail and no **DDS_DomainParticipant** (p. 76) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS_WireProtocolQosPolicy** (p. 2099)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

Precondition

if `listener` is specified, none of the listener callback functions can be NULL.

MT Safety:

UNSAFE. On VxWorks, when enabling the RTI Security Plugins, it is not safe for multiple threads to attempt to create a **DDS_DomainParticipant** (p. 76) when there are no other DomainParticipants in the **DDS_Domain↩ ParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
domainId	<<***in***>> *(*p. *1015)* ID of the domain that the application intends to join. **[range]** [>=0], and does not violate guidelines stated in **DDS_RtpsWellKnownPorts_t** (p. 1983).
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).
listener	<<***in***>> *(*p. *1015)* the DomainParticipant's listener.
mask	<<***in***>> *(*p. *1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

domain participant or NULL on failure

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_DomainParticipantQos (p. 1729) for rules on consistency among QoS

DDS_PARTICIPANT_QOS_DEFAULT (p. 64)

NDDS_DISCOVERY_PEERS (p. 1354)

DDS_DomainParticipantFactory_create_participant() (p. 41)

DDS_DomainParticipantFactory_get_default_participant_qos() (p. 40)

DDS_DomainParticipant_set_listener() (p. 153)

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.3.4.15 DDS_DomainParticipantFactory_delete_participant()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_delete_participant (
            DDS_DomainParticipantFactory * self,
            DDS_DomainParticipant * a_participant )
```

Deletes an existing **DDS_DomainParticipant** (p. 76).

Precondition

All domain entities belonging to the participant must have already been deleted. Otherwise it fails with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_DomainParticipant** (p. 76) will not be called after this function returns successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity. On VxWorks, when enabling the RTI Security Plugins, if two threads attempt to delete the last two DomainParticipants of the **DDS_DomainParticipantFactory** (p. 32), it is possible for memory to be leaked.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
a_participant	<<***in***>> *(p. 1015)* **DDS_DomainParticipant** (p. 76) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.3.4.16 DDS_DomainParticipantFactory_lookup_participant()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_lookup_participant (
            DDS_DomainParticipantFactory * self,
            DDS_DomainId_t domainId )
```

Locates an existing **DDS_DomainParticipant** (p. 76).

If no such **DDS_DomainParticipant** (p. 76) exists, the operation will return NULL value.

If multiple **DDS_DomainParticipant** (p. 76) entities belonging to that domainId exist, then the operation will return one of them. It is not specified which one.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
domain↩ Id	<<***in***>> *(p. 1015)* ID of the domain participant to lookup.

Returns

domain participant if it exists, or NULL

5.3.4.17 DDS_DomainParticipantFactory_get_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos (
             DDS_DomainParticipantFactory * self,
            struct  DDS_DomainParticipantFactoryQos * qos )
```

Gets the value for participant factory QoS.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***inout***>> *(*p. *1015)* QoS to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.18 DDS_DomainParticipantFactory_set_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_qos (
             DDS_DomainParticipantFactory * self,
            const struct  DDS_DomainParticipantFactoryQos * qos )
```

Sets the value for a participant factory QoS.

The **DDS_DomainParticipantFactoryQos::entity_factory** (p. 1725) can be changed. The other policies are immutable.

Note that despite having QoS, the **DDS_DomainParticipantFactory** (p. 32) is not an **DDS_Entity** (p. 1362).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* Set of policies to be applied to **DDS_DomainParticipantFactory** (p. 32). Policies must be consistent. Immutable policies can only be changed before calling any other RTI Connext functions except for **DDS_DomainParticipantFactory_get_qos** (p. 45) Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) if immutable policy is changed, or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224) if policies are inconsistent

See also

DDS_DomainParticipantFactoryQos (p. 1724) for rules on consistency among QoS

5.3.4.19 DDS_DomainParticipantFactory_load_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_load_profiles (
            DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Loads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDS_DomainParticipant** (p. 76) is created or explicitly, after a call to this function.

This has the same effect as **DDS_DomainParticipantFactory_reload_profiles()** (p. 46).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ProfileQosPolicy (p. 1902)

5.3.4.20 DDS_DomainParticipantFactory_reload_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_reload_profiles (
            DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Reloads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDS_DomainParticipant** (p. 76) is created or explicitly, after a call to this function.

This has the same effect as **DDS_DomainParticipantFactory_load_profiles()** (p. 46).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ProfileQosPolicy (p. 1902)

5.3.4.21 DDS_DomainParticipantFactory_unload_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_unload_profiles (
            DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Unloads the XML QoS profiles.

The resources associated with the XML QoS profiles are freed. Any reference to the profiles after calling this function will fail with an error.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ProfileQosPolicy (p. 1902)

5.3.4.22 DDS_DomainParticipantFactory_set_default_library()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_library (
             DDS_DomainParticipantFactory * self,
            const char * library_name )
```

<<***extension***>> *(p. 1014)* Sets the default XML library for a **DDS_DomainParticipantFactory** (p. 32).

Any API requiring a library_name as a parameter can use NULL to refer to the default library set with this function.

Note: if the library set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS_DomainParticipantFactoryQos::profile** (p. 1725)) the default library will be set to the last library containing a profile with the attribute `is_default_qos=true` or NULL no such library exists.

See also

DDS_DomainParticipantFactory_set_default_profile (p. 48) for more information.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name. If library_name is NULL any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactory_get_default_library (p. 49)

5.3.4.23 DDS_DomainParticipantFactory_set_default_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_profile (
             DDS_DomainParticipantFactory * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Sets the default XML profile for a **DDS_DomainParticipantFactory** (p. 32).

This function specifies the profile that will be used as the default the next time a default DomainParticipantFactory profile is needed during a call to a DomainParticipantFactory function. When calling a **DDS_DomainParticipant↩ Factory** (p. 32) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

This function does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDS_↩ DomainParticipantFactory_set_default_participant_qos_with_profile** (p. 39) (you may pass in NULL after having called set_default_profile()).

Note: if the profile set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS_DomainParticipantFactoryQos::profile** (p. 1725)) the default profile will be set to the last one marked with the attribute `is_default_qos=true` or NULL no such profile exists.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* The library name containing the profile.
profile_name	<<***in***>> *(*p. *1015)* The profile name. If profile_name is NULL any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactory_get_default_profile (p. 49)

DDS_DomainParticipantFactory_get_default_profile_library (p. 50)

5.3.4.24 DDS_DomainParticipantFactory_get_default_library()

```
const char * DDS_DomainParticipantFactory_get_default_library (
        DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Gets the default XML library associated with a **DDS_DomainParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The returned library name is determined as follows:

- If it was previously set with **DDS_DomainParticipantFactory_set_default_library** (p. 47), this function returns that library name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the library where the last one is contained.
- Otherwise, this function returns NULL.

See also

DDS_DomainParticipantFactory_set_default_library (p. 47)

5.3.4.25 DDS_DomainParticipantFactory_get_default_profile()

```
const char * DDS_DomainParticipantFactory_get_default_profile (
        DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Gets the default XML profile associated with a **DDS_DomainParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The returned profile name is determined as follows:

- If it was previously set with **DDS_DomainParticipantFactory_set_default_profile** (p. 48), this function returns that profile name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the name of one of them
- Otherwise, this function returns NULL.

See also

DDS_DomainParticipantFactory_set_default_profile (p. 48)

5.3.4.26 DDS_DomainParticipantFactory_get_default_profile_library()

```
const char * DDS_DomainParticipantFactory_get_default_profile_library (
        DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(p. 1014)* Gets the library where the default XML profile is contained for a **DDS_DomainParticipantFactory** (p. 32).

The default profile library is automatically set when **DDS_DomainParticipantFactory_set_default_profile** (p. 48) is called.

This library can be different than the **DDS_DomainParticipantFactory** (p. 32) default library (see **DDS_DomainParticipantFactory_get_default_library** (p. 49)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default profile library for the profile returned by **DDS_DomainParticipantFactory_get_default_profile** (p. 49), or NULL if that profile is NULL.

See also

DDS_DomainParticipantFactory_get_default_profile (p. 49)

5.3.4.27 DDS_DomainParticipantFactory_get_participant_factory_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_factory_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DomainParticipantFactoryQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Gets the **DDS_DomainParticipantFactoryQos** (p. 1724) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***out***>> *(*p. *1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.28 DDS_DomainParticipantFactory_get_participant_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DomainParticipantQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Gets the **DDS_DomainParticipantQos** (p. 1729) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***out***>> *(*p. *1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.29 DDS_DomainParticipantFactory_get_publisher_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_publisher_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_PublisherQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_PublisherQos** (p. 1922) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.30 DDS_DomainParticipantFactory_get_subscriber_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_subscriber_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_SubscriberQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_SubscriberQos** (p. 2016) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.31 DDS_DomainParticipantFactory_get_datareader_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile (
             DDS_DomainParticipantFactory * self,
            struct  DDS_DataReaderQos * qos,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_DataReaderQos** (p. 1611) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.32 DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DataReaderQos * qos,
           const char * library_name,
           const char * profile_name,
           const char * topic_name )
```

<<***extension***>> *(*p. *1014)* Gets the **DDS_DataReaderQos** (p. 1611) values associated with the input XML QoS profile while applying topic filters to the input topic name.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***out***>> *(*p. *1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).
topic_name	<<***in***>> *(*p. *1015)* Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connext will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.33 DDS_DomainParticipantFactory_get_datawriter_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DataWriterQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Gets the **DDS_DataWriterQos** (p. 1666) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***out***>> *(*p. *1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.34 DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name (
            DDS_DomainParticipantFactory * self,
           struct  DDS_DataWriterQos * qos,
           const char * library_name,
           const char * profile_name,
           const char * topic_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_DataWriterQos** (p. 1666) values associated with the input XML QoS profile while applying topic filters to the input topic name.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).
topic_name	<<***in***>> *(p. 1015)* Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connext will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.35 DDS_DomainParticipantFactory_get_topic_qos_from_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile (
            DDS_DomainParticipantFactory * self,
           struct  DDS_TopicQos * qos,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_TopicQos** (p. 2048) values associated with the input XML QoS profile.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.36 DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name (
             DDS_DomainParticipantFactory * self,
            struct  DDS_TopicQos * qos,
            const char * library_name,
            const char * profile_name,
            const char * topic_name )
```

<<***extension***>> *(p. 1014)* Gets the **DDS_TopicQos** (p. 2048) values associated with the input XML QoS profile while applying topic filters to the input topic name.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***out***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).
topic_name	<<***in***>> *(p. 1015)* Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connext will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.37 DDS_DomainParticipantFactory_get_qos_profile_libraries()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profile_libraries (
            DDS_DomainParticipantFactory * self,
           struct  DDS_StringSeq * library_names )
```

<<***extension***>> *(p. 1014)* Gets the names of all XML QoS profile libraries associated with the **DDS_Domain↩ ParticipantFactory** (p. 32)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_names	<<***out***>> *(p. 1015)* **DDS_StringSeq** (p. 2010) to be filled with names of XML QoS profile libraries. Cannot be NULL.

5.3.4.38 DDS_DomainParticipantFactory_get_qos_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profiles (
            DDS_DomainParticipantFactory * self,
           struct  DDS_StringSeq * profile_names,
           const char * library_name )
```

<<***extension***>> *(p. 1014)* Gets the names of all XML QoS profiles associated with the input XML QoS profile library.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
profile_names	<<***out***>> *(p. 1015)* **DDS_StringSeq** (p. 2010) to be filled with names of XML QoS profiles. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).

5.3.4.39 DDS_DomainParticipantFactory_unregister_thread()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_unregister_thread (
            DDS_DomainParticipantFactory * self )
```

<<***extension***>> *(*p. *1014)* Allows you to release thread-specific resources kept by RTI Connext on platforms that do not support automatic thread-specific storage (TSS) cleanup.

Refer to the `Platform Notes` to see if your platform supports automatic TSS cleanup. It will be mentioned in the 'Thread Configuration' sub-section of the platform you are using.

On platforms that do not support automatic TSS cleanup, you should call this function right before exiting a thread where any DDS API was used. It is safe to call this function even if no DDS API was used, in cases where you are unsure if a DDS API was called or not. It is also safe, although unnecessary, to call this API on platforms that support automatic TSS cleanup.

RTI Connext stores some resources in TSS. For internal threads, these resources are cleaned up by the middleware when the threads exit. For user threads, calling this API will free all the resources related to the specific thread.

The best approach is to call the function during the thread deletion after all the DDS APIs have been called.

See `Unregistering Threads`, in the Core Libraries User's Manual, for the equivalent API call in each of the supported language bindings.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.3.4.40 DDS_DomainParticipantFactory_get_typecode_from_config()

```
const  DDS_TypeCode * DDS_DomainParticipantFactory_get_typecode_from_config (
             DDS_DomainParticipantFactory * self,
            const char * type_name )
```

<<***extension***>> *(*p. *1014)* Gets a **DDS_TypeCode** (p. 2077) from a definition provided in an XML configuration file.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
type_name	<<***in***>> *(*p. *1015)* Name of the type in the configuration file.

Returns

The **DDS_TypeCode** (p. 2077) or NULL if a type with that name doesn't exist or an error occurs.

5.3.4.41 DDS_DomainParticipantFactory_create_participant_from_config()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_from_config (
            DDS_DomainParticipantFactory * self,
           const char * configuration_name )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_DomainParticipant** (p. 76) given its configuration name from a description provided in an XML configuration file.

This operation creates a **DDS_DomainParticipant** (p. 76) registering all the necessary data types and creating all the contained entities (**DDS_Topic** (p. 174), **DDS_Publisher** (p. 446), **DDS_Subscriber** (p. 575), **DDS_DataWriter** (p. 488), **DDS_DataReader** (p. 618)) from a description given in an XML configuration file.

The configuration name is the fully qualified name of the XML participant object, consisting of the name of the participant library plus the name of participant configuration.

For example the name "MyParticipantLibrary::PublicationParticipant" can be used to create the domain participant from the description in an XML file with contents shown in the snippet below:

```
<participant_library name="MyParticipantLibrary">

    <domain_participant name="PublicationParticipant" domain_ref="MyDomainLibrary::HelloWorldDomain">

        <publisher name="MyPublisher">

            <data_writer name="HelloWorldWriter" topic_ref="HelloWorldTopic"/>

        </publisher>

    </domain_participant>

</participant_library>
```

The entities belonging to the newly created **DDS_DomainParticipant** (p. 76) can be retrieved with the help of lookup operations such as: **DDS_DomainParticipant_lookup_datareader_by_name** (p. 157).

This operation is equivalent to call **DDS_DomainParticipantFactory_create_participant_from_config_w_params** (p. 60) passing **DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT** (p. 64) as parameters.

MT Safety:

UNSAFE. On VxWorks, when enabling the RTI Security Plugins, it is not safe for multiple threads to attempt to create a **DDS_DomainParticipant** (p. 76) when there are no other DomainParticipants in the **DDS_Domain↩ ParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
configuration_name	<<***in***>> *(p. 1015)* Name of the participant configuration in the XML file.

Returns

The created **DDS_DomainParticipant** (p. 76) or NULL on error.

DDS_DomainParticipant_lookup_subscriber_by_name (p. 156)

DDS_DomainParticipant_lookup_datareader_by_name (p. 157)

DDS_DomainParticipant_lookup_datawriter_by_name (p. 156)

DDS_Publisher_lookup_datawriter_by_name (p. 472)

DDS_Subscriber_lookup_datareader_by_name (p. 601)

5.3.4.42 DDS_DomainParticipantFactory_create_participant_from_config_w_params()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_from_config_w_params (
            DDS_DomainParticipantFactory * self,
           const char * configuration_name,
           const struct  DDS_DomainParticipantConfigParams_t * params )
```

<<***extension***>> *(*p. *1014)* Creates a **DDS_DomainParticipant** (p. 76) given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.

The operation will create a **DDS_DomainParticipant** (p. 76) the same way specified in **DDS_DomainParticipant↩ Factory_create_participant_from_config** (p. 58).

In addition, this operation allows overriding the domain ID, participant name, and entities QoS specified in the configuration.

MT Safety:

UNSAFE. On VxWorks, when enabling the RTI Security Plugins, it is not safe for multiple threads to attempt to create a **DDS_DomainParticipant** (p. 76) when there are no other DomainParticipants in the **DDS_Domain↩ ParticipantFactory** (p. 32).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
configuration_name	<<***in***>> *(*p. *1015)* Name of the participant configuration in the XML file.
params	<<***in***>> *(*p. *1015)* input parameters that allow changing some properties of the configuration referred to by `configuration_name`.

Returns

The created **DDS_DomainParticipant** (p. 76) or NULL on error.

5.3.4.43 DDS_DomainParticipantFactory_lookup_participant_by_name()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_lookup_participant_by_name (
            DDS_DomainParticipantFactory * self,
            const char * participant_name )
```

<<***extension***>> *(*p. *1014)* Looks up a **DDS_DomainParticipant** (p. 76) by its entity name in the **DDS_Domain↩ ParticipantFactory** (p. 32).

Every **DDS_DomainParticipant** (p. 76) in the system has an entity name which is configured and stored in the Entity↩ Name policy, **ENTITY_NAME** (p. 1292).

This operation retrieves a **DDS_DomainParticipant** (p. 76) within the **DDS_DomainParticipantFactory** (p. 32) given the entity's name. If there are several **DDS_DomainParticipant** (p. 76) with the same name within the **DDS_Domain↩ ParticipantFactory** (p. 32) this function returns the first matching occurrence.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
participant_name	<<***in***>> *(*p. *1015)* Entity name of the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Returns

The first **DDS_DomainParticipant** (p. 76) found with the specified name or NULL if it is not found.

5.3.4.44 DDS_DomainParticipantFactory_register_type_support()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_register_type_support (
            DDS_DomainParticipantFactory * self,
            DDS_DomainParticipantFactory_RegisterTypeFunction register_type_fcn,
            const char * type_name )
```

<<***extension***>> *(*p. *1014)* Registers a **DDS_TypeSupport** (p. 213) with the **DDS_DomainParticipantFactory** (p. 32) to enable automatic registration if the corresponding type, should it be needed by a **DDS_DomainParticipant** (p. 76).

Types refered by the **DDS_Topic** (p. 174) entities within a **DDS_DomainParticipant** (p. 76) must be registered with the **DDS_DomainParticipant** (p. 76).

Type registration in a **DDS_DomainParticipant** (p. 76) is performed by a call to the **FooTypeSupport_register_type** (p. 220) operation. This can be done directly from the application code or indirectly by the RTI Connext infrastructure as a result of parsing an XML configuration file that refers to that type.

The **DDS_DomainParticipantFactory_register_type_support** (p. 61) operation provides the **DDS_Domain↩ ParticipantFactory** (p. 32) with the information it needs to automatically call the **FooTypeSupport_register_type** (p. 220) operation and register the corresponding type if the type is needed as a result of parsing an XML configuration file.

Automatic type registration while parsing XML files can also be done by the RTI Connext infrastructure based on the type description provided in the XML files. If the **DDS_TypeSupport** (p. 213) has been registered with the **DDS_↩ DomainParticipantFactory** (p. 32) this definition takes precedence over the description of the type given in the XML file.

The **DDS_DomainParticipantFactory_register_type_support** (p. 61) operation receives a **FooTypeSupport_↩ register_type** (p. 220) function as a parameter. This function is normally generated using rtiddsgen from a description of the corresponsing type in IDL, XML, or XSD.

The typical workflow when using this function is as follows: Define the data-type in IDL (or XML, or XSD) in a file. E.g. Foo.idl Run rtiddsgen in that file to generate the TypeSupport files, for the desired programming language. E.g. in C++ FooTypeSupport.h FooTypeSupport.cxx Include the proper header file (e.g. FooTypeSupport.h) in your program and call **DDS_DomainParticipantFactory_register_type_support** (p. 61) passing the function that was generated by rtiddsgen. E.g. FooTypeSupport::register_type Include the TypeSupport source file in your project such that it is compiled and linked. E.g. FooTypeSupport.cxx

You may refer to the `Getting Started Guide` for additional details in this process.

Note that only one register function is allowed per registered type name.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
register_type_fcn	*<<**in**>> (p. 1015)* **DDS_DomainParticipantFactory_RegisterTypeFunction** (p. 33) to be used for registering the type with a **DDS_DomainParticipant** (p. 76).
type_name	*<<**in**>> (p. 1015)* Name the type is registered with.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

TypeSupport

5.3.4.45 DDS_DomainParticipantFactory_get_participants()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participants (
            DDS_DomainParticipantFactory * self,
          struct  DDS_DomainParticipantSeq * participants )
```

*<<**extension**>> (p. 1014)* Allows the application to access all the participants the DomainParticipantFactory has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of participants, it will be filled up to its maximum, and fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

DomainParticipants are ordered in the output sequence from the most recently created to the oldest.

MT Safety:

Safe.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
participants	<<***inout***>> *(*p. *1015)* a DomainParticipantSeq object where the set or list of participants will be returned

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.3.4.46 DDS_DomainParticipantFactory_set_thread_factory()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_thread_factory (
            DDS_DomainParticipantFactory * self,
          const struct  DDS_ThreadFactory * thread_factory )
```

<<***extension***>> *(*p. *1014)* Sets a **DDS_ThreadFactory** (p. 2033) in the **DDS_DomainParticipantFactory** (p. 32) that will be used to create the internal threads of the DDS middleware.

DDS threads are managed by the **DDS_DomainParticipant** (p. 76), which is responsible for creating and deleting threads throughout its lifecycle. Some threads are created when the **DDS_DomainParticipant** (p. 76) gets enabled (i.e., database, event, etc.) and others when special features are enabled (i.e., asynchronous publication thread).

DDS threads have **DDS_DomainParticipant** (p. 76) scope. This means every DomainParticipant creates all the necessary threads to operate and each **DDS_DomainParticipant** (p. 76) will create its own independent set of threads.

Each **DDS_DomainParticipant** (p. 76) creates an independent set of DDS threads and will use the **DDS_Thread↩ Factory** (p. 2033) that is held by the **DDS_DomainParticipantFactory** (p. 32) at the time the DomainParticipant is created. A **DDS_ThreadFactory** (p. 2033) is immutable from a **DDS_DomainParticipant** (p. 76) point of view. This means that a **DDS_DomainParticipant** (p. 76) will use throughout its lifecycle the same **DDS_ThreadFactory** (p. 2033) that was set when it was created, even if a new **DDS_ThreadFactory** (p. 2033) is set in the **DDS_DomainParticipant↩ Factory** (p. 32) later. That is, if a new **DDS_ThreadFactory** (p. 2033) is set, a previously created **DDS_Domain↩ Participant** (p. 76) will not be affected.

ThreadFactory lifecycle: A **DDS_ThreadFactory** (p. 2033) instance must be alive while there are DomainParticipants using it. A **DDS_ThreadFactory** (p. 2033) instance can be deleted only after all DomainParticipants using it are deleted.

By default, the **DDS_DomainParticipantFactory** (p. 32) has an internal **DDS_ThreadFactory** (p. 2033) so threads are created automatically by the core product. These threads are usually created using the typical framework for the target platform (i.e., pthread for Linux systems).

MT Safety:

: Safe. Creation and deletion of a **DDS_DomainParticipant** (p. 76) can occur concurrently with setting a **DDS_↩ ThreadFactory** (p. 2033).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
thread_factory	<<***in***>> *(p. 1015)* Instance of a **DDS_ThreadFactory** (p. 2033) to be used for creating the DDS threads. If null is specified, the current **DDS_ThreadFactory** (p. 2033) is removed and the internal default will be used.

Returns

One of the **Standard Return Codes** (p. 1223)

DDS_ThreadFactory (p. 2033)

5.3.5 Variable Documentation

5.3.5.1 DDS_PARTICIPANT_QOS_DEFAULT

```
const struct DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT [extern]
```

Special value for creating a DomainParticipant with default QoS.

When used in **DDS_DomainParticipantFactory_create_participant** (p. 41), this special value is used to indicate that the **DDS_DomainParticipant** (p. 76) should be created with the default **DDS_DomainParticipant** (p. 76) QoS by means of the operation **DDS_DomainParticipantFactory_get_default_participant_qos()** (p. 40) and using the resulting QoS to create the **DDS_DomainParticipant** (p. 76).

When used in **DDS_DomainParticipantFactory_set_default_participant_qos** (p. 38), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_DomainParticipant↩ Factory_set_default_participant_qos** (p. 38) operation had never been called.

When used in **DDS_DomainParticipant_set_qos** (p. 151), this special value is used to indicate that the QoS of the **DDS_DomainParticipant** (p. 76) should be changed to match the current default QoS set in the **DDS_Domain↩ ParticipantFactory** (p. 32) that the **DDS_DomainParticipant** (p. 76) belongs to.

RTI Connext treats this special value as a constant.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values from the DomainParticipant factory; for this purpose, use **DDS_DomainParticipantFactory_get_default_↩ participant_qos** (p. 40).

5.3.5.2 DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT

```
const struct DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT [extern]
```

Special value for creating a **DDS_DomainParticipant** (p. 76) from configuration using default parameters.

This value can be used only in **DDS_DomainParticipantFactory_create_participant_from_config_w_params** (p. 60) and indicates that the **DDS_DomainParticipant** (p. 76) must be created applying the information defined in the participant configuration. That is, the domain ID, participant entity name, and QoS profiles for all the entities will be retrieved from the configuration.

RTI Connext treats this special value as a constant.

5.4 DomainParticipants

DDS_DomainParticipant (p. 76) entity and associated elements

Data Structures

- struct **DDS_InvalidLocalAdvanceNoticeStatus**

  DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS *(p. 1234)*
- struct **DDS_DomainParticipantListener**

  *<<**interface**>> (p. 1015) Listener for participant status.*
- struct **DDS_DomainParticipantQos**

  *QoS policies supported by a **DDS_DomainParticipant** (p. 76) entity.*
- struct **DDS_DomainParticipantProtocolStatus**

  *<<**extension**>> (p. 1014) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.*
- struct **DDS_DomainParticipantSeq**

  *Declares IDL `sequence` < **DDS_DomainParticipant** (p. 76) > .*

Macros

- #define **DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS_EXPIRATION_MESSAGE_INITIALIZER**

  *Initializer for new **DDS_InvalidLocalAdvanceNoticeStatus** (p. 1813).*
- #define **DDS_DomainParticipantListener_INITIALIZER**

  *Initializer for new **DDS_DomainParticipantListener** (p. 1726).*
- #define **DDS_DomainParticipantQos_INITIALIZER**

  Initializer for new QoS instances.
- #define **DDS_DomainParticipantProtocolStatus_INITIALIZER**

  Initializer for new status instances.

Typedefs

- typedef DDS_DOMAINID_TYPE_NATIVE **DDS_DomainId_t**

  *An integer that indicates in which domain a **DDS_DomainParticipant** (p. 76) communicates.*
- typedef void(∗ **DDS_DomainParticipantListener_InvalidLocalAdvanceNoticeStatusCallback**) (void ∗listener_data, **DDS_DomainParticipant** ∗participant, const struct **DDS_InvalidLocalAdvanceNoticeStatus** ∗invalid_local_advance_notice_status)

  *Notifies the user that the identity or permissions of the **DDS_DomainParticipant** (p. 76) is about to expire.*
- typedef struct DDS_DomainParticipantImpl **DDS_DomainParticipant**

  *<<**interface**>> (p. 1015) Container for all **DDS_DomainEntity** (p. 1365) objects.*

Functions

- **DDS_Boolean DDS_InvalidLocalAdvanceNoticeStatus_equals** (const struct **DDS_InvalidLocalAdvance↩ NoticeStatus** ∗left, const struct **DDS_InvalidLocalAdvanceNoticeStatus** ∗right)

  *Compares two **DDS_InvalidLocalAdvanceNoticeStatus** (p. 1813) for equality.*
- **DDS_Boolean DDS_DomainParticipantQos_equals** (const struct **DDS_DomainParticipantQos** ∗self, const struct **DDS_DomainParticipantQos** ∗other)

  *Compares two **DDS_DomainParticipantQos** (p. 1729) for equality.*
- **DDS_ReturnCode_t DDS_DomainParticipantQos_print** (const struct **DDS_DomainParticipantQos** ∗self)

  *Prints this **DDS_DomainParticipantQos** (p. 1729) to stdout.*
- **DDS_ReturnCode_t DDS_DomainParticipantQos_to_string** (const struct **DDS_DomainParticipantQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size)

  *Obtains a string representation of this **DDS_DomainParticipantQos** (p. 1729).*
- **DDS_ReturnCode_t DDS_DomainParticipantQos_to_string_w_params** (const struct **DDS_Domain↩ ParticipantQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size, const struct **DDS_DomainParticipant↩ Qos** ∗base, const struct **DDS_QosPrintFormat** ∗format)

  *Obtains a string representation of this **DDS_DomainParticipantQos** (p. 1729).*
- **DDS_ReturnCode_t DDS_DomainParticipantQos_initialize** (struct **DDS_DomainParticipantQos** ∗self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t DDS_DomainParticipantQos_finalize** (struct **DDS_DomainParticipantQos** ∗self)

  *Free any dynamic memory allocated by the policies in this **DDS_DomainParticipantQos** (p. 1729).*
- **DDS_ReturnCode_t DDS_DomainParticipantQos_copy** (struct **DDS_DomainParticipantQos** ∗self, const struct **DDS_DomainParticipantQos** ∗source)

  Copy the contents of the given QoS into this QoS.
- **DDS_Entity** ∗ **DDS_DomainParticipant_as_entity** (**DDS_DomainParticipant** ∗domain)

  *Access a **DDS_DomainParticipant** (p. 76)'s supertype instance.*
- **DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_initialize** (struct **DDS_DomainParticipant↩ ProtocolStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_copy** (struct **DDS_DomainParticipant↩ ProtocolStatus** ∗self, const struct **DDS_DomainParticipantProtocolStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_finalize** (struct **DDS_DomainParticipant↩ ProtocolStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_DomainParticipantProtocolStatus_equals** (const struct **DDS_DomainParticipant↩ ProtocolStatus** ∗left, const struct **DDS_DomainParticipantProtocolStatus** ∗right)

*Compares two **DDS_DomainParticipantProtocolStatus** (p. 1728) for equality.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_topic_qos** (**DDS_DomainParticipant** *self, struct **DDS_TopicQos** *qos)

  *Copies the default **DDS_TopicQos** (p. 2048) values for this domain participant into the given **DDS_TopicQos** (p. 2048) instance.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos** (**DDS_DomainParticipant** *self, const struct **DDS_TopicQos** *qos)

  *Set the default **DDS_TopicQos** (p. 2048) values for this domain participant.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos_with_profile** (**DDS_DomainParticipant** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_TopicQos** (p. 2048) values for this domain participant based on the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_publisher_qos** (**DDS_DomainParticipant** *self, struct **DDS_PublisherQos** *qos)

  *Copy the default **DDS_PublisherQos** (p. 1922) values into the provided **DDS_PublisherQos** (p. 1922) instance.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos** (**DDS_DomainParticipant** *self, const struct **DDS_PublisherQos** *qos)

  *Set the default **DDS_PublisherQos** (p. 1922) values for this DomainParticipant.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos_with_profile** (**DDS_DomainParticipant** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_PublisherQos** (p. 1922) values for this DomainParticipant based on the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_datawriter_qos** (**DDS_DomainParticipant** *self, struct **DDS_DataWriterQos** *qos)

  *<<**extension**>> (p. 1014) Copy the default **DDS_DataWriterQos** (p. 1666) values into the provided **DDS_DataWriterQos** (p. 1666) instance.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos** (**DDS_DomainParticipant** *self, const struct **DDS_DataWriterQos** *qos)

  *<<**extension**>> (p. 1014) Set the default DataWriterQos values for this DomainParticipant.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos_with_profile** (**DDS_DomainParticipant** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_DataWriterQos** (p. 1666) values for this domain participant based on the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_subscriber_qos** (**DDS_DomainParticipant** *self, struct **DDS_SubscriberQos** *qos)

  *Copy the default **DDS_SubscriberQos** (p. 2016) values into the provided **DDS_SubscriberQos** (p. 2016) instance.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos** (**DDS_DomainParticipant** *self, const struct **DDS_SubscriberQos** *qos)

  *Set the default **DDS_SubscriberQos** (p. 2016) values for this DomainParticipant.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos_with_profile** (**DDS_DomainParticipant** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_SubscriberQos** (p. 2016) values for this DomainParticipant based on the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_datareader_qos** (**DDS_DomainParticipant** *self, struct **DDS_DataReaderQos** *qos)

  *<<**extension**>> (p. 1014) Copy the default **DDS_DataReaderQos** (p. 1611) values into the provided **DDS_DataReaderQos** (p. 1611) instance.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos** (**DDS_DomainParticipant** *self, const struct **DDS_DataReaderQos** *qos)

  *<<**extension**>> (p. 1014) Set the default **DDS_DataReaderQos** (p. 1611) values for this domain participant.*

- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos_with_profile** (**DDS_Domain↩ Participant** ∗self, const char ∗library_name, const char ∗profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_DataReaderQos** (p. 1611) values for this DomainParticipant based on the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_default_flowcontroller_property** (**DDS_Domain↩ Participant** ∗self, struct **DDS_FlowControllerProperty_t** ∗prop)

  *<<**extension**>> (p. 1014) Copies the default **DDS_FlowControllerProperty_t** (p. 1802) values for this domain participant into the given **DDS_FlowControllerProperty_t** (p. 1802) instance.*
- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_flowcontroller_property** (**DDS_Domain↩ Participant** ∗self, const struct **DDS_FlowControllerProperty_t** ∗prop)

  *<<**extension**>> (p. 1014) Set the default **DDS_FlowControllerProperty_t** (p. 1802) values for this domain participant.*
- const char ∗ **DDS_DomainParticipant_get_default_library** (**DDS_DomainParticipant** ∗self)

  *<<**extension**>> (p. 1014) Gets the default XML library associated with a **DDS_DomainParticipant** (p. 76).*
- const char ∗ **DDS_DomainParticipant_get_default_profile** (**DDS_DomainParticipant** ∗self)

  *<<**extension**>> (p. 1014) Gets the default XML profile associated with a **DDS_DomainParticipant** (p. 76).*
- const char ∗ **DDS_DomainParticipant_get_default_profile_library** (**DDS_DomainParticipant** ∗self)

  *<<**extension**>> (p. 1014) Gets the library where the default XML QoS profile is contained for a **DDS_Domain↩ Participant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_library** (**DDS_DomainParticipant** ∗self, const char ∗library_name)

  *<<**extension**>> (p. 1014) Sets the default XML library for a **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_set_default_profile** (**DDS_DomainParticipant** ∗self, const char ∗library_name, const char ∗profile_name)

  *<<**extension**>> (p. 1014) Sets the default XML profile for a **DDS_DomainParticipant** (p. 76).*
- **DDS_Publisher** ∗ **DDS_DomainParticipant_create_publisher** (**DDS_DomainParticipant** ∗self, const struct **DDS_PublisherQos** ∗qos, const struct **DDS_PublisherListener** ∗listener, **DDS_StatusMask** mask)

  *Creates a **DDS_Publisher** (p. 446) with the desired QoS policies and attaches to it the specified **DDS_PublisherListener** (p. 1921).*
- **DDS_Publisher** ∗ **DDS_DomainParticipant_create_publisher_with_profile** (**DDS_DomainParticipant** ∗self, const char ∗library_name, const char ∗profile_name, const struct **DDS_PublisherListener** ∗listener, **DDS_↩ StatusMask** mask)

  *<<**extension**>> (p. 1014) Creates a new **DDS_Publisher** (p. 446) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipant_delete_publisher** (**DDS_DomainParticipant** ∗self, **DDS_↩ Publisher** ∗p)

  *Deletes an existing **DDS_Publisher** (p. 446).*
- **DDS_Subscriber** ∗ **DDS_DomainParticipant_create_subscriber** (**DDS_DomainParticipant** ∗self, const struct **DDS_SubscriberQos** ∗qos, const struct **DDS_SubscriberListener** ∗listener, **DDS_StatusMask** mask)

  *Creates a **DDS_Subscriber** (p. 575) with the desired QoS policies and attaches to it the specified **DDS_Subscriber↩ Listener** (p. 2014).*
- **DDS_Subscriber** ∗ **DDS_DomainParticipant_create_subscriber_with_profile** (**DDS_DomainParticipant** ∗self, const char ∗library_name, const char ∗profile_name, const struct **DDS_SubscriberListener** ∗listener, **DDS_StatusMask** mask)

  *<<**extension**>> (p. 1014) Creates a new **DDS_Subscriber** (p. 575) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipant_delete_subscriber** (**DDS_DomainParticipant** ∗self, **DDS↩ _Subscriber** ∗s)

  *Deletes an existing **DDS_Subscriber** (p. 575).*
- **DDS_DataWriter** ∗ **DDS_DomainParticipant_create_datawriter** (**DDS_DomainParticipant** ∗self, **DDS_↩ Topic** ∗topic, const struct **DDS_DataWriterQos** ∗qos, const struct **DDS_DataWriterListener** ∗listener, **DDS↩ _StatusMask** mask)

<<**extension**>> (p. 1014) Creates a **DDS_DataWriter** (p. 488) that will be attached and belong to the implicit **DDS_Publisher** (p. 446).

- **DDS_DataWriter** * **DDS_DomainParticipant_create_datawriter_with_profile** (**DDS_DomainParticipant** *self, **DDS_Topic** *topic, const char *library_name, const char *profile_name, const struct **DDS_DataWriterListener** *listener, **DDS_StatusMask** mask)

  <<**extension**>> (p. 1014) Creates a **DDS_DataWriter** (p. 488) using a XML QoS profile that will be attached and belong to the implicit **DDS_Publisher** (p. 446).

- **DDS_ReturnCode_t** **DDS_DomainParticipant_delete_datawriter** (**DDS_DomainParticipant** *self, **DDS_DataWriter** *a_datawriter)

  <<**extension**>> (p. 1014) Deletes a **DDS_DataWriter** (p. 488) that belongs to the implicit **DDS_Publisher** (p. 446).

- **DDS_DataReader** * **DDS_DomainParticipant_create_datareader** (**DDS_DomainParticipant** *self, **DDS_TopicDescription** *topic, const struct **DDS_DataReaderQos** *qos, const struct **DDS_DataReaderListener** *listener, **DDS_StatusMask** mask)

  <<**extension**>> (p. 1014) Creates a **DDS_DataReader** (p. 618) that will be attached and belong to the implicit **DDS_Subscriber** (p. 575).

- **DDS_DataReader** * **DDS_DomainParticipant_create_datareader_with_profile** (**DDS_DomainParticipant** *self, **DDS_TopicDescription** *topic, const char *library_name, const char *profile_name, const struct **DDS_DataReaderListener** *listener, **DDS_StatusMask** mask)

  <<**extension**>> (p. 1014) Creates a **DDS_DataReader** (p. 618) using a XML QoS profile that will be attached and belong to the implicit **DDS_Subscriber** (p. 575).

- **DDS_ReturnCode_t** **DDS_DomainParticipant_delete_datareader** (**DDS_DomainParticipant** *self, **DDS_DataReader** *a_datareader)

  <<**extension**>> (p. 1014) Deletes a **DDS_DataReader** (p. 618) that belongs to the implicit **DDS_Subscriber** (p. 575).

- **DDS_Topic** * **DDS_DomainParticipant_create_topic** (**DDS_DomainParticipant** *self, const char *topic_name, const char *type_name, const struct **DDS_TopicQos** *qos, const struct **DDS_TopicListener** *listener, **DDS_StatusMask** mask)

  Creates a **DDS_Topic** (p. 174) with the desired QoS policies and attaches to it the specified **DDS_TopicListener** (p. 2047).

- **DDS_Topic** * **DDS_DomainParticipant_create_topic_with_profile** (**DDS_DomainParticipant** *self, const char *topic_name, const char *type_name, const char *library_name, const char *profile_name, const struct **DDS_TopicListener** *listener, **DDS_StatusMask** mask)

  <<**extension**>> (p. 1014) Creates a new **DDS_Topic** (p. 174) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.

- **DDS_ReturnCode_t** **DDS_DomainParticipant_delete_topic** (**DDS_DomainParticipant** *self, **DDS_Topic** *topic)

  Deletes a **DDS_Topic** (p. 174).

- **DDS_ContentFilteredTopic** * **DDS_DomainParticipant_create_contentfilteredtopic** (**DDS_DomainParticipant** *self, const char *name, **DDS_Topic** *related_topic, const char *filter_expression, const struct **DDS_StringSeq** *expression_parameters)

  Creates a **DDS_ContentFilteredTopic** (p. 176), that can be used to do content-based subscriptions.

- **DDS_ContentFilteredTopic** * **DDS_DomainParticipant_create_contentfilteredtopic_with_filter** (**DDS_DomainParticipant** *self, const char *name, const **DDS_Topic** *related_topic, const char *filter_expression, const struct **DDS_StringSeq** *expression_parameters, const char *filter_name)

  <<**extension**>> (p. 1014) Creates a **DDS_ContentFilteredTopic** (p. 176) using the specified filter to do content-based subscriptions.

- **DDS_ReturnCode_t** **DDS_DomainParticipant_delete_contentfilteredtopic** (**DDS_DomainParticipant** *self, **DDS_ContentFilteredTopic** *a_contentfilteredtopic)

  Deletes a **DDS_ContentFilteredTopic** (p. 176).

- **DDS_ReturnCode_t** **DDS_DomainParticipant_register_contentfilter** (**DDS_DomainParticipant** *self, const char *filter_name, const struct **DDS_ContentFilter** *contentfilter)

  <<**extension**>> (p. 1014) Register a content filter which can be used to create a **DDS_ContentFilteredTopic** (p. 176).

- void * **DDS_DomainParticipant_lookup_contentfilter** (**DDS_DomainParticipant** *self, const char *filter_name)

  <<***extension***>> (p. *1014*) *Lookup a content filter previously registered with* ***DDS_DomainParticipant_register_contentfilter*** (p. *119*).

- **DDS_ReturnCode_t DDS_DomainParticipant_unregister_contentfilter** (**DDS_DomainParticipant** *self, const char *filter_name)

  <<***extension***>> (p. *1014*) *Unregister a content filter previously registered with* ***DDS_DomainParticipant_register_contentfilter*** (p. *119*).

- **DDS_MultiTopic** * **DDS_DomainParticipant_create_multitopic** (**DDS_DomainParticipant** *self, const char *name, const char *type_name, const char *subscription_expression, const struct **DDS_StringSeq** *expression_parameters)

  [Not supported (optional)] *Creates a MultiTopic that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.*

- **DDS_ReturnCode_t DDS_DomainParticipant_delete_multitopic** (**DDS_DomainParticipant** *self, **DDS_MultiTopic** *a_multitopic)

  [Not supported (optional)] *Deletes a* ***DDS_MultiTopic*** (p. *184*).

- **DDS_FlowController** * **DDS_DomainParticipant_create_flowcontroller** (**DDS_DomainParticipant** *self, const char *name, const struct **DDS_FlowControllerProperty_t** *prop)

  <<***extension***>> (p. *1014*) *Creates a* ***DDS_FlowController*** (p. *562*) *with the desired property.*

- **DDS_ReturnCode_t DDS_DomainParticipant_delete_flowcontroller** (**DDS_DomainParticipant** *self, **DDS_FlowController** *fc)

  <<***extension***>> (p. *1014*) *Deletes an existing* ***DDS_FlowController*** (p. *562*).

- const **DDS_TypeCode** * **DDS_DomainParticipant_get_typecode** (**DDS_DomainParticipant** *self, const char *type_name)

  <<***extension***>> (p. *1014*) *Retrieves the* ***DDS_TypeCode*** (p. *2077*) *of a type registered with the* ***DDS_DomainParticipant*** (p. *76*) *based on the registration name.*

- **DDS_Topic** * **DDS_DomainParticipant_find_topic** (**DDS_DomainParticipant** *self, const char *topic_name, const struct **DDS_Duration_t** *timeout)

  Finds an existing (or ready to exist) ***DDS_Topic*** (p. *174*), *based on its name.*

- **DDS_TopicDescription** * **DDS_DomainParticipant_lookup_topicdescription** (**DDS_DomainParticipant** *self, const char *topic_name)

  Looks up an existing, locally created ***DDS_TopicDescription*** (p. *174*), *based on its name.*

- **DDS_FlowController** * **DDS_DomainParticipant_lookup_flowcontroller** (**DDS_DomainParticipant** *self, const char *name)

  <<***extension***>> (p. *1014*) *Looks up an existing locally-created* ***DDS_FlowController*** (p. *562*), *based on its name.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_participant_protocol_status** (**DDS_DomainParticipant** *self, struct **DDS_DomainParticipantProtocolStatus** *status)

  <<***extension***>> (p. *1014*) *Get the domain participant protocol status for this participant.*

- **DDS_Subscriber** * **DDS_DomainParticipant_get_builtin_subscriber** (**DDS_DomainParticipant** *self)

  Accesses the ***built-in DDS_Subscriber*** (p. *575*).

- **DDS_Publisher** * **DDS_DomainParticipant_get_implicit_publisher** (**DDS_DomainParticipant** *self)

  <<***extension***>> (p. *1014*) *Returns the implicit* ***DDS_Publisher*** (p. *446*). *If an implicit Publisher does not already exist, this creates one.*

- **DDS_Subscriber** * **DDS_DomainParticipant_get_implicit_subscriber** (**DDS_DomainParticipant** *self)

  <<***extension***>> (p. *1014*) *Returns the implicit* ***DDS_Subscriber*** (p. *575*). *If an implicit Subscriber does not already exist, this creates one.*

- **DDS_ReturnCode_t DDS_DomainParticipant_ignore_participant** (**DDS_DomainParticipant** *self, const **DDS_InstanceHandle_t** *handle)

  Instructs RTI Connext to locally ignore a remote ***DDS_DomainParticipant*** (p. *76*).

- **DDS_ReturnCode_t DDS_DomainParticipant_ignore_topic** (**DDS_DomainParticipant** ∗self, const **DDS_InstanceHandle_t** ∗handle)

  *Instructs RTI Connext to locally ignore a **DDS_Topic** (p. 174).*
- **DDS_ReturnCode_t DDS_DomainParticipant_ignore_publication** (**DDS_DomainParticipant** ∗self, const **DDS_InstanceHandle_t** ∗handle)

  Instructs RTI Connext to locally ignore a publication.
- **DDS_ReturnCode_t DDS_DomainParticipant_ignore_subscription** (**DDS_DomainParticipant** ∗self, const **DDS_InstanceHandle_t** ∗handle)

  Instructs RTI Connext to locally ignore a subscription.
- **DDS_ReturnCode_t DDS_DomainParticipant_banish_ignored_participants** (**DDS_DomainParticipant** ∗self)

  *<<**extension**>> (p. 1014) Prevents ignored remote DomainParticipants from receiving traffic from the local **DDS_DomainParticipant** (p. 76).*
- **DDS_DomainId_t DDS_DomainParticipant_get_domain_id** (**DDS_DomainParticipant** ∗self)

  Get the unique domain identifier.
- **DDS_ReturnCode_t DDS_DomainParticipant_delete_contained_entities** (**DDS_DomainParticipant** ∗self)

  *Delete all the entities that were created by means of the "create" operations on the **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_assert_liveliness** (**DDS_DomainParticipant** ∗self)

  *Manually asserts the liveliness of this **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_publishers** (**DDS_DomainParticipant** ∗self, struct **DDS_PublisherSeq** ∗publishers)

  *<<**extension**>> (p. 1014) Allows the application to access all the publishers the participant has.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_subscribers** (**DDS_DomainParticipant** ∗self, struct **DDS_SubscriberSeq** ∗subscribers)

  *<<**extension**>> (p. 1014) Allows the application to access all the subscribers the participant has.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_current_time** (**DDS_DomainParticipant** ∗self, struct **DDS_Time_t** ∗current_time)

  Returns the current value of the time.
- **DDS_ReturnCode_t DDS_DomainParticipant_get_time_until_license_expiration** (**DDS_DomainParticipant** ∗self, **DDS_LongLong** ∗remaining_seconds)

  *<<**extension**>> (p. 1014) Retrieves the remaining time in seconds until the RTI Connext license validated by the **DDS_DomainParticipant** (p. 76) expires.*
- **DDS_Boolean DDS_DomainParticipant_contains_entity** (**DDS_DomainParticipant** ∗self, const **DDS_InstanceHandle_t** ∗a_handle)

  *Completes successfully with **DDS_BOOLEAN_TRUE** (p. 1203) if the referenced **DDS_Entity** (p. 1362) is contained by the **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_register_durable_subscription** (**DDS_DomainParticipant** ∗self, const struct **DDS_EndpointGroup_t** ∗group, const char ∗topic_name)

  *<<**extension**>> (p. 1014) Registers a Durable Subscription on the specified **DDS_Topic** (p. 174) on all Persistence Services.*
- **DDS_ReturnCode_t DDS_DomainParticipant_delete_durable_subscription** (**DDS_DomainParticipant** ∗self, const struct **DDS_EndpointGroup_t** ∗group)

  *<<**extension**>> (p. 1014) Deletes an existing Durable Subscription on all Persistence Services.*
- **DDS_ReturnCode_t DDS_DomainParticipant_resume_endpoint_discovery** (**DDS_DomainParticipant** ∗self, const **DDS_InstanceHandle_t** ∗remote_participant_handle)

  *<<**extension**>> (p. 1014) Initiates endpoint discovery with the specified remote **DDS_DomainParticipant** (p. 76).*
- **DDS_ReturnCode_t DDS_DomainParticipant_set_dns_tracker_polling_period** (**DDS_DomainParticipant** ∗self, const struct **DDS_Duration_t** ∗polling_period)

  *<<**extension**>> (p. 1014) Configures the frequency in which the DNS tracker queries the DNS service.*

- **DDS_ReturnCode_t DDS_DomainParticipant_get_dns_tracker_polling_period** (**DDS_DomainParticipant** ∗self, struct **DDS_Duration_t** ∗polling_period)

  <<***extension***>> (p. *1014*) *Retrieves the frequency used by the DNS tracker thread to query the DNS service.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants** (**DDS_DomainParticipant** ∗self, struct **DDS_InstanceHandleSeq** ∗participant_handles)

  Returns a list of discovered ***DDS_DomainParticipant*** (p. *76*) *entities.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants_from_subject_name** (**DDS_DomainParticipant** ∗self, struct **DDS_InstanceHandleSeq** ∗participant_handles, const char ∗subject_name)

  <<***extension***>> (p. *1014*) *Returns a list of discovered* ***DDS_DomainParticipant*** (p. *76*) *entities that have the given* ***DDS_EntityNameQosPolicy::name*** (p. *1793*).
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_data** (**DDS_DomainParticipant** ∗self, struct **DDS_ParticipantBuiltinTopicData** ∗participant_data, const **DDS_InstanceHandle_t** ∗participant_handle)

  Returns ***DDS_ParticipantBuiltinTopicData*** (p. *1873*) *for the specified* ***DDS_DomainParticipant*** (p. *76*).
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_subject_name** (**DDS_DomainParticipant** ∗self, char ∗subject_name, **DDS_UnsignedLong** ∗subject_name_size, const **DDS_InstanceHandle_t** ∗participant_handle)

  <<***extension***>> (p. *1014*) *Returns* ***DDS_EntityNameQosPolicy::name*** (p. *1793*) *for the specified* ***DDS_DomainParticipant*** (p. *76*).
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topics** (**DDS_DomainParticipant** ∗self, struct **DDS_InstanceHandleSeq** ∗topic_handles)

  Returns list of discovered ***DDS_Topic*** (p. *174*) *objects.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topic_data** (**DDS_DomainParticipant** ∗self, struct **DDS_TopicBuiltinTopicData** ∗topic_data, const **DDS_InstanceHandle_t** ∗topic_handle)

  Returns ***DDS_TopicBuiltinTopicData*** (p. *2040*) *for the specified* ***DDS_Topic*** (p. *174*).
- **DDS_ReturnCode_t DDS_DomainParticipant_take_discovery_snapshot** (**DDS_DomainParticipant** ∗self, const char ∗file_name)

  Take a snapshot of the remote participants discovered by a local one.
- **DDS_ReturnCode_t DDS_DomainParticipant_add_peer** (**DDS_DomainParticipant** ∗self, const char ∗peer_desc_string)

  <<***extension***>> (p. *1014*) *Attempt to contact one or more additional peer participants.*
- **DDS_ReturnCode_t DDS_DomainParticipant_remove_peer** (**DDS_DomainParticipant** ∗self, const char ∗peer_desc_string)

  <<***extension***>> (p. *1014*) *Remove one or more peer participants from the list of peers with which this* ***DDS_DomainParticipant*** (p. *76*) *will try to communicate.*
- **DDS_ReturnCode_t DDS_DomainParticipant_set_qos** (**DDS_DomainParticipant** ∗self, const struct **DDS_DomainParticipantQos** ∗qos)

  Change the QoS of this DomainParticipant.
- **DDS_ReturnCode_t DDS_DomainParticipant_set_qos_with_profile** (**DDS_DomainParticipant** ∗self, const char ∗library_name, const char ∗profile_name)

  <<***extension***>> (p. *1014*) *Change the QoS of this domain participant using the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DomainParticipant_get_qos** (**DDS_DomainParticipant** ∗self, struct **DDS_DomainParticipantQos** ∗qos)

  Get the participant QoS.
- **DDS_ReturnCode_t DDS_DomainParticipant_set_property** (**DDS_DomainParticipant** ∗self, const char ∗property_name, const char ∗value, **DDS_Boolean** propagate)

  Set the value for a property that applies to a DomainParticipant.
- **DDS_ReturnCode_t DDS_DomainParticipant_set_listener** (**DDS_DomainParticipant** ∗self, const struct **DDS_DomainParticipantListener** ∗l, **DDS_StatusMask** mask)

  Sets the participant listener.

- struct **DDS_DomainParticipantListener** **DDS_DomainParticipant_get_listener** (**DDS_DomainParticipant** *self)

  Get the participant listener.
- **DDS_ReturnCode_t** **DDS_DomainParticipant_get_listenerX** (**DDS_DomainParticipant** *self, struct **DDS_DomainParticipantListener** *listener)

  <<***extension***>> (p. *1014) Get the participant listener.*
- **DDS_Publisher** * **DDS_DomainParticipant_lookup_publisher_by_name** (**DDS_DomainParticipant** *self, const char *publisher_name)

  <<***extension***>> (p. *1014) Looks up a* ***DDS_Publisher*** (p. *446) by its entity name within this* ***DDS_DomainParticipant*** *(p. 76).*
- **DDS_Subscriber** * **DDS_DomainParticipant_lookup_subscriber_by_name** (**DDS_DomainParticipant** *self, const char *subscriber_name)

  <<***extension***>> (p. *1014) Retrieves a* ***DDS_Subscriber*** (p. *575) by its entity name within this* ***DDS_DomainParticipant*** *(p. 76).*
- **DDS_DataWriter** * **DDS_DomainParticipant_lookup_datawriter_by_name** (**DDS_DomainParticipant** *self, const char *datawriter_full_name)

  <<***extension***>> (p. *1014) Looks up a* ***DDS_DataWriter*** (p. *488) by its entity name within this* ***DDS_DomainParticipant*** *(p. 76).*
- **DDS_DataReader** * **DDS_DomainParticipant_lookup_datareader_by_name** (**DDS_DomainParticipant** *self, const char *datareader_full_name)

  <<***extension***>> (p. *1014) Retrieves up a* ***DDS_DataReader*** (p. *618) by its entity name in this* ***DDS_DomainParticipant*** *(p. 76).*

Variables

- const struct **DDS_DomainParticipantFactoryQos** * **DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL**

  Special value which can be supplied to ***DDS_DomainParticipantFactoryQos_to_string_w_params*** *(p. 35) indicating that all of the QoS should be printed.*
- const struct **DDS_DomainParticipantQos** * **DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL**

  Special value which can be supplied to ***DDS_DomainParticipantQos_to_string_w_params*** *(p. 80) indicating that all of the QoS should be printed.*
- const struct **DDS_TopicQos** **DDS_TOPIC_QOS_DEFAULT**

  Special value for creating a ***DDS_Topic*** *(p. 174) with default QoS.*
- const struct **DDS_PublisherQos** **DDS_PUBLISHER_QOS_DEFAULT**

  Special value for creating a ***DDS_Publisher*** *(p. 446) with default QoS.*
- const struct **DDS_SubscriberQos** **DDS_SUBSCRIBER_QOS_DEFAULT**

  Special value for creating a ***DDS_Subscriber*** *(p. 575) with default QoS.*
- const struct **DDS_FlowControllerProperty_t** **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT**

  <<***extension***>> (p. *1014) Special value for creating a* ***DDS_FlowController*** *(p. 562) with default property.*
- const struct **DDS_PublisherQos** * **DDS_PUBLISHER_QOS_PRINT_ALL**

  Special value which can be supplied to ***DDS_PublisherQos_to_string_w_params*** *(p. 449) indicating that all of the QoS should be printed.*
- const char *const **DDS_SQLFILTER_NAME**

  <<***extension***>> (p. *1014) The name of the built-in SQL filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.*
- const char *const **DDS_STRINGMATCHFILTER_NAME**

  <<***extension***>> (p. *1014) The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.*

- const struct **DDS_SubscriberQos** * **DDS_SUBSCRIBER_QOS_PRINT_ALL**

  *Special value which can be supplied to **DDS_SubscriberQos_to_string_w_params*** (p. *579*) *indicating that all of the QoS should be printed.*
- const struct **DDS_TopicQos** * **DDS_TOPIC_QOS_PRINT_ALL**

  *Special value which can be supplied to **DDS_TopicQos_to_string_w_params*** (p. *189*) *indicating that all of the QoS should be printed.*

5.4.1 Detailed Description

DDS_DomainParticipant (p. 76) entity and associated elements

5.4.2 Macro Definition Documentation

5.4.2.1 DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS_EXPIRATION_MESSAGE_INITIALIZER

```
#define DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS_EXPIRATION_MESSAGE_INITIALIZER
```

Initializer for new **DDS_InvalidLocalAdvanceNoticeStatus** (p. 1813).

5.4.2.2 DDS_DomainParticipantListener_INITIALIZER

```
#define DDS_DomainParticipantListener_INITIALIZER
```

Initializer for new **DDS_DomainParticipantListener** (p. 1726).

No memory is allocated. New **DDS_DomainParticipantListener** (p. 1726) instances stored in the stack should be initialized with this value before they are passed to any functions.

```
struct DDS_DomainParticipantListener listener = DDS_DomainParticipantListener_INITIALIZER;

/* initialize listener functions */

listener.as_subscriberlistener.as_datareaderlistener.on_data_available = ....;

DDS_DomainParticipant_set_listener(myParticipant, &listener, mask);
```

See also

DDS_DomainParticipant_set_listener (p. 153)

DDS_DomainParticipantListener (p. 1726)

5.4.2.3 DDS_DomainParticipantQos_INITIALIZER

```
#define DDS_DomainParticipantQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_DomainParticipantQos** (p. 1729) instances stored on the stack should be initialized with this value before they are passed to any functions. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DomainParticipantQos myQos = DDS_DomainParticipantQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipant_get_qos** (p. 152) or **DDS_DomainParticipantFactory_get_default_participant_qos** (p. 40); one of those functions should be called subsequently to setting the QoS of any new or existing entity. **DDS_DomainParticipantQos_finalize** (p. 81) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_DomainParticipantQos myQos = DDS_DomainParticipantQos_INITIALIZER;

DDS_DomainParticipantFactory_get_default_participant_qos(myFactory, &myQos);

DDS_DomainParticipant_set_qos(myParticipant, &myQos);

DDS_DomainParticipantQos_finalize(&myQos);
```

See also

DDS_DomainParticipantFactory_get_default_participant_qos (p. 40)

DDS_DomainParticipantQos_finalize (p. 81)

5.4.2.4 DDS_DomainParticipantProtocolStatus_INITIALIZER

```
#define DDS_DomainParticipantProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_DomainParticipantProtocolStatus** (p. 1728) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_DomainParticipantProtocolStatus_finalize** (p. 84) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DomainParticipantProtocolStatus myStatus = DDS_DomainParticipantProtocolStatus_INITIALIZER;

DDS_DomainParticipant_get_participant_protocol_status(myParticipant, &myStatus);

DDS_DomainParticipantProtocolStatus_finalize(&myStatus);
```

See also

DDS_DomainParticipant_get_participant_protocol_status (p. 127)

DDS_DomainParticipantProtocolStatus_finalize (p. 84)

5.4.3 Typedef Documentation

5.4.3.1 DDS_DomainId_t

```
typedef DDS_DOMAINID_TYPE_NATIVE  DDS_DomainId_t
```

An integer that indicates in which domain a **DDS_DomainParticipant** (p. 76) communicates.

Participants with the same **DDS_DomainId_t** (p. 76) are said to be in the same domain, and can thus communicate with one another.

The lower limit for a domain ID is 0. The upper limit for a domain ID is determined by the guidelines stated in **DDS_RtpsWellKnownPorts_t** (p. 1983) (specifically **DDS_RtpsWellKnownPorts_t::domain_id_gain** (p. 1986))

5.4.3.2 DDS_DomainParticipantListener_InvalidLocalAdvanceNoticeStatusCallback

```
typedef void(* DDS_DomainParticipantListener_InvalidLocalAdvanceNoticeStatusCallback) (void *listener_data,  DDS_DomainParticipant *participant, const struct  DDS_InvalidLocalAdvanceNoticeStatus *invalid_local_advance_notice_status)
```

Notifies the user that the identity or permissions of the **DDS_DomainParticipant** (p. 76) is about to expire.

5.4.3.3 DDS_DomainParticipant

```
typedef struct DDS_DomainParticipantImpl  DDS_DomainParticipant
```

<<***interface***>> *(*p. *1015)* Container for all **DDS_DomainEntity** (p. 1365) objects.

The DomainParticipant object plays several roles:

- It acts as a container for all other **DDS_Entity** (p. 1362) objects.
- It acts as a *factory* for the **DDS_Publisher** (p. 446), **DDS_Subscriber** (p. 575), **DDS_Topic** (p. 174) and **DDS_MultiTopic** (p. 184) **DDS_Entity** (p. 1362) objects.
- It represents the participation of the application on a communication plane that isolates applications running on the same set of physical computers from each other. A domain establishes a virtual network linking all applications that share the same `domainId` and isolating them from applications running on different domains. In this way, several independent distributed applications can coexist in the same physical network without interfering, or even being aware of each other.

- It provides administration services in the domain, offering operations that allow the application to ignore locally any information about a given participant (**DDS_DomainParticipant_ignore_participant** (p. 130)), publication (**DDS_DomainParticipant_ignore_publication** (p. 131)), subscription (**DDS_DomainParticipant_ignore_subscription()** (p. 132)) or topic (**DDS_DomainParticipant_ignore_topic()** (p. 131)).

The following operations may be called even if the **DDS_DomainParticipant** (p. 76) is not enabled. Operations NOT in this list will fail with **DDS_RETCODE_NOT_ENABLED** (p. 1224) \ if called on a disabled DomainParticipant.

- **DDS_Entity_enable** (p. 1365),
- **DDS_DomainParticipant_set_qos** (p. 151), **DDS_DomainParticipant_set_qos_with_profile** (p. 151), **DDS_DomainParticipant_get_qos** (p. 152),
- **DDS_DomainParticipant_set_listener** (p. 153), **DDS_DomainParticipant_get_listener** (p. 154),
- Factory operations: **DDS_DomainParticipant_create_flowcontroller** (p. 123), **DDS_DomainParticipant_create_topic** (p. 114), **DDS_DomainParticipant_create_topic_with_profile** (p. 115), **DDS_DomainParticipant_create_publisher** (p. 102), **DDS_DomainParticipant_create_publisher_with_profile** (p. 103), **DDS_DomainParticipant_create_subscriber** (p. 105), **DDS_DomainParticipant_create_subscriber_with_profile** (p. 106), **DDS_DomainParticipant_delete_flowcontroller** (p. 123), **DDS_DomainParticipant_delete_topic** (p. 116), **DDS_DomainParticipant_delete_publisher** (p. 104), **DDS_DomainParticipant_delete_subscriber** (p. 107), **DDS_DomainParticipant_set_default_topic_qos** (p. 86), **DDS_DomainParticipant_set_default_topic_qos_with_profile** (p. 87), **DDS_DomainParticipant_get_default_topic_qos** (p. 85), **DDS_DomainParticipant_set_default_publisher_qos** (p. 88), **DDS_DomainParticipant_set_default_publisher_qos_with_profile** (p. 89), **DDS_DomainParticipant_get_default_publisher_qos** (p. 88), **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93), **DDS_DomainParticipant_set_default_subscriber_qos_with_profile** (p. 94), **DDS_DomainParticipant_get_default_subscriber_qos** (p. 93), **DDS_DomainParticipant_delete_contained_entities** (p. 134), **DDS_DomainParticipant_set_default_datareader_qos** (p. 96), **DDS_DomainParticipant_set_default_datareader_qos_with_profile** (p. 96), **DDS_DomainParticipant_get_default_datareader_qos** (p. 95), **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91), **DDS_DomainParticipant_set_default_datawriter_qos_with_profile** (p. 92), **DDS_DomainParticipant_get_default_datawriter_qos** (p. 90), **DDS_DomainParticipant_set_default_library** (p. 100), **DDS_DomainParticipant_set_default_profile** (p. 101) **DDS_DomainParticipant_set_default_flowcontroller_property** (p. 98), **DDS_DomainParticipant_get_default_flowcontroller_property** (p. 97), ;
- Operations for looking up topics: **DDS_DomainParticipant_lookup_topicdescription** (p. 126);
- Operations that access status: **DDS_Entity_get_statuscondition** (p. 1367), **DDS_Entity_get_status_changes** (p. 1367).

QoS:

5.4.4 Function Documentation

5.4.4.1 DDS_InvalidLocalAdvanceNoticeStatus_equals()

```
DDS_Boolean DDS_InvalidLocalAdvanceNoticeStatus_equals (
            const struct  DDS_InvalidLocalAdvanceNoticeStatus * left,
            const struct  DDS_InvalidLocalAdvanceNoticeStatus * right )
```

Compares two **DDS_InvalidLocalAdvanceNoticeStatus** (p. 1813) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This InvalidLocalAdvanceNoticeStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other InvalidLocalAdvanceNoticeStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two InvalidLocalAdvanceNoticeStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.4.4.2 DDS_DomainParticipantQos_equals()

```
DDS_Boolean DDS_DomainParticipantQos_equals (
            const struct  DDS_DomainParticipantQos * self,
            const struct  DDS_DomainParticipantQos * other )
```

Compares two **DDS_DomainParticipantQos** (p. 1729) for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This DomainParticipantQos.
other	<<***in***>> *(*p. *1015)* The other DomainParticipantQos to be compared with this DomainParticipantQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.4.4.3 DDS_DomainParticipantQos_print()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_print (
            const struct  DDS_DomainParticipantQos * self )
```

Prints this **DDS_DomainParticipantQos** (p. 1729) to stdout.

Only the differences between this **DDS_DomainParticipantQos** (p. 1729) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantQos_to_string_w_params** (p. 80). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.4.4.4 DDS_DomainParticipantQos_to_string()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_to_string (
            const struct  DDS_DomainParticipantQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 1729).

Only the differences between this **DDS_DomainParticipantQos** (p. 1729) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantQos_to_string_w_params** (p. 80). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantQos** (p. 1729) is written to the buffer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
string	<<***out***>> *(p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 1729). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_DomainParticipantQos_to_string_w_params (p. 80)

5.4.4.5 DDS_DomainParticipantQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_to_string_w_params (
            const struct  DDS_DomainParticipantQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_DomainParticipantQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 1729).

Only the differences between this **DDS_DomainParticipantQos** (p. 1729) and the **DDS_DomainParticipantQos** (p. 1729) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL** (p. 159) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantQos** (p. 1729) is written to the buffer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
string	<<***out***>> *(p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 1729). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 1015)* The **DDS_DomainParticipantQos** (p. 1729) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	<<***in***>> *(p. 1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.4.4.6 DDS_DomainParticipantQos_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_initialize (
            struct  DDS_DomainParticipantQos * self )
```

Initializer for new QoS instances.

New **DDS_DomainParticipantQos** (p. 1729) instances on heap should be initialized with this function before they are passed to any functions. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_DomainParticipant_get_qos** (p. 152) or **DDS_Domain↩ ParticipantFactory_get_default_participant_qos** (p. 40); one of those functions should be called subsequently to setting the QoS of any new or existing entity. **DDS_DomainParticipantQos_finalize** (p. 81) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DomainParticipantQos *myQos = malloc(sizeof(struct DDS_DomainParticipantQos));

DDS_DomainParticipantQos_initialize(myQos);

DDS_DomainParticipantFactory_get_default_participant_qos(myFactory, myQos);

DDS_DomainParticipant_set_qos(myParticipant, myQos);

DDS_DomainParticipantQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantFactory_get_default_participant_qos (p. 40)

DDS_DomainParticipantQos_finalize (p. 81)

5.4.4.7 DDS_DomainParticipantQos_finalize()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_finalize (
            struct  DDS_DomainParticipantQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_DomainParticipantQos** (p. 1729).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to finalize a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantQos_INITIALIZER (p. 74)

DDS_DomainParticipantQos_initialize (p. 80)

5.4.4.8 DDS_DomainParticipantQos_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_copy (
            struct  DDS_DomainParticipantQos * self,
            const struct  DDS_DomainParticipantQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_DomainParticipantQos (p. 1729) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. QoS to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantQos_INITIALIZER (p. 74)

DDS_DomainParticipantQos_initialize (p. 80)

DDS_DomainParticipantQos_finalize (p. 81)

5.4.4.9 DDS_DomainParticipant_as_entity()

```
DDS_Entity * DDS_DomainParticipant_as_entity (
             DDS_DomainParticipant * domain )
```

Access a **DDS_DomainParticipant** (p. 76)'s supertype instance.

Parameters

domain	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_DomainParticipant (p. 76)'s supertype **DDS_Entity** (p. 1362) instance

5.4.4.10 DDS_DomainParticipantProtocolStatus_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_initialize (
            struct  DDS_DomainParticipantProtocolStatus * self )
```

Initializer for new status instances.

New **DDS_DomainParticipantProtocolStatus** (p. 1728) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_DomainParticipantProtocolStatus_finalize (p. 84) should be called to free the contained fields that use dynamic memory:

```
DDS_DomainParticipantProtocolStatus *myStatus = malloc(sizeof(struct DDS_DomainParticipantProtocolStatus));

DDS_DomainParticipantProtocolStatus_initialize(myStatus);

DDS_DomainParticipant_get_participant_protocol_status(myParticipant, myStatus);

DDS_DomainParticipantProtocolStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_get_participant_protocol_status (p. 127)

DDS_DomainParticipantProtocolStatus_finalize (p. 84)

5.4.4.11 DDS_DomainParticipantProtocolStatus_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_copy (
            struct  DDS_DomainParticipantProtocolStatus * self,
            const struct  DDS_DomainParticipantProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantProtocolStatus_INITIALIZER (p. 75)

DDS_DomainParticipantProtocolStatus_initialize (p. 83)

DDS_DomainParticipantProtocolStatus_finalize (p. 84)

5.4.4.12 DDS_DomainParticipantProtocolStatus_finalize()

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_finalize (
            struct  DDS_DomainParticipantProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

Some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipantProtocolStatus_INITIALIZER (p. 75)

DDS_DomainParticipantProtocolStatus_initialize (p. 83)

5.4.4.13 DDS_DomainParticipantProtocolStatus_equals()

```
DDS_Boolean DDS_DomainParticipantProtocolStatus_equals (
            const struct  DDS_DomainParticipantProtocolStatus * left,
            const struct  DDS_DomainParticipantProtocolStatus * right )
```

Compares two **DDS_DomainParticipantProtocolStatus** (p. 1728) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This DomainParticipantProtocolStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other DomainParticipantProtocolStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two DomainParticipantProtocolStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.4.4.14 DDS_DomainParticipant_get_default_topic_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_topic_qos (
             DDS_DomainParticipant * self,
            struct  DDS_TopicQos * qos )
```

Copies the default **DDS_TopicQos** (p. 2048) values for this domain participant into the given **DDS_TopicQos** (p. 2048) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant_set↩ _default_topic_qos** (p. 86), or **DDS_DomainParticipant_set_default_topic_qos_with_profile** (p. 87) or else, if the call was never made, the default values listed in **DDS_TopicQos** (p. 2048).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default Topic QoS from a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_topic_qos** (p. 86)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* Default qos to be retrieved. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_TOPIC_QOS_DEFAULT (p. 159)

DDS_DomainParticipant_create_topic (p. 114)

5.4.4.15 DDS_DomainParticipant_set_default_topic_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos (
            DDS_DomainParticipant * self,
           const struct  DDS_TopicQos * qos )
```

Set the default **DDS_TopicQos** (p. 2048) values for this domain participant.

This default value will be used for newly created **DDS_Topic** (p. 174) if **DDS_TOPIC_QOS_DEFAULT** (p. 159) is specified as the `qos` parameter when **DDS_DomainParticipant_create_topic** (p. 114) is called.

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_topic_qos** (p. 86), **DDS_DomainParticipant_get↩ _default_topic_qos** (p. 85) or calling **DDS_DomainParticipant_create_topic** (p. 114) with **DDS_TOPIC_QOS↩ _DEFAULT** (p. 159) as the `qos` parameter.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* Default qos to be set. The special value **DDS_TOPIC_QOS_DEFAULT** (p. 159) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipant_set_default_topic_qos** (p. 86) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_TOPIC_QOS_DEFAULT (p. 159)

DDS_DomainParticipant_create_topic (p. 114)

5.4.4.16 DDS_DomainParticipant_set_default_topic_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos_with_profile (
            DDS_DomainParticipant * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Set the default **DDS_TopicQos** (p. 2048) values for this domain participant based on the input XML QoS profile.

This default value will be used for newly created **DDS_Topic** (p. 174) if **DDS_TOPIC_QOS_DEFAULT** (p. 159) is specified as the `qos` parameter when **DDS_DomainParticipant_create_topic** (p. 114) is called.

Precondition

The **DDS_TopicQos** (p. 2048) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_topic_qos** (p. 86), **DDS_DomainParticipant_get↩_default_topic_qos** (p. 85) or calling **DDS_DomainParticipant_create_topic** (p. 114) with **DDS_TOPIC_QOS↩_DEFAULT** (p. 159) as the `qos` parameter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

If the input profile cannot be found the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_TOPIC_QOS_DEFAULT (p. 159)

DDS_DomainParticipant_create_topic_with_profile (p. 115)

5.4.4.17 DDS_DomainParticipant_get_default_publisher_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_publisher_qos (
             DDS_DomainParticipant * self,
            struct  DDS_PublisherQos * qos )
```

Copy the default **DDS_PublisherQos** (p. 1922) values into the provided **DDS_PublisherQos** (p. 1922) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant_set_default_publisher_qos** (p. 88), or **DDS_DomainParticipant_set_default_publisher_qos_with_profile** (p. 89), or else, if the call was never made, the default values listed in **DDS_PublisherQos** (p. 1922).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

If **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) is specified as the `qos` parameter when **DDS_DomainParticipant_create_topic** (p. 114) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling **DDS_DomainParticipant_get_default_publisher_qos** (p. 88), will be used to create the **DDS_Publisher** (p. 446).

MT Safety:

UNSAFE. It is not safe to retrieve the default publisher QoS from a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_publisher_qos** (p. 88)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PUBLISHER_QOS_DEFAULT (p. 160)

DDS_DomainParticipant_create_publisher (p. 102)

5.4.4.18 DDS_DomainParticipant_set_default_publisher_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos (
            DDS_DomainParticipant * self,
          const struct  DDS_PublisherQos * qos )
```

Set the default **DDS_PublisherQos** (p. 1922) values for this DomainParticipant.

This set of default values will be used for a newly created **DDS_Publisher** (p. 446) if **DDS_PUBLISHER_QOS_↩ DEFAULT** (p. 160) is specified as the `qos` parameter when **DDS_DomainParticipant_create_publisher** (p. 102) is called.

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_publisher_qos** (p. 88), **DDS_DomainParticipant↩ _get_default_publisher_qos** (p. 88) or calling **DDS_DomainParticipant_create_publisher** (p. 102) with **DDS↩ _PUBLISHER_QOS_DEFAULT** (p. 160) as the `qos` parameter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* Default qos to be set. The special value **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipant_set_default_publisher_qos** (p. 88) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos_with_profile (
            DDS_DomainParticipant * self,
```

```
const char * library_name,
const char * profile_name )
```

<<***extension***>> *(p. 1014)* Set the default **DDS_PublisherQos** (p. 1922) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDS_Publisher** (p. 446) if **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) is specified as the `qos` parameter when **DDS_DomainParticipant_create_publisher** (p. 102) is called.

Precondition

The **DDS_PublisherQos** (p. 1922) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_publisher_qos** (p. 88), **DDS_DomainParticipant_get_default_publisher_qos** (p. 88) or calling **DDS_DomainParticipant_create_publisher** (p. 102) with **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) as the `qos` parameter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_datawriter_qos (
            DDS_DomainParticipant * self,
           struct  DDS_DataWriterQos * qos )
```

<<***extension***>> *(p. 1014)* Copy the default **DDS_DataWriterQos** (p. 1666) values into the provided **DDS_Data↩WriterQos** (p. 1666) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant_set↩_default_datawriter_qos** (p. 91), or **DDS_DomainParticipant_set_default_datawriter_qos_with_profile** (p. 92), or else, if the call was never made, the default values listed in **DDS_DataWriterQos** (p. 1666).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default DataWriterQoS from a DomainPartipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.21 DDS_DomainParticipant_set_default_datawriter_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos (
            DDS_DomainParticipant * self,
           const struct  DDS_DataWriterQos * qos )
```

<<***extension***>> *(p. 1014)* Set the default DataWriterQos values for this DomainParticipant.

This set of default values will be inherited for a newly created **DDS_Publisher** (p. 446).

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_↩RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91) or **DDS_Domain↩Participant_get_default_datawriter_qos** (p. 90) or calling **DDS_DomainParticipant_create_datawriter** (p. 107) with **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) as the `qos` parameter.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* Default qos to be set. The special value **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.22 DDS_DomainParticipant_set_default_datawriter_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos_with_profile (
            DDS_DomainParticipant * self,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Set the default **DDS_DataWriterQos** (p. 1666) values for this domain participant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDS_Publisher** (p. 446).

Precondition

The **DDS_DataWriterQos** (p. 1666) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91) or **DDS_Domain↩ Participant_get_default_datawriter_qos** (p. 90)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.23 DDS_DomainParticipant_get_default_subscriber_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_subscriber_qos (
            DDS_DomainParticipant * self,
           struct  DDS_SubscriberQos * qos )
```

Copy the default **DDS_SubscriberQos** (p. 2016) values into the provided **DDS_SubscriberQos** (p. 2016) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93), or **DDS_DomainParticipant_set_default_subscriber_qos_with_profile** (p. 94), or else, if the call was never made, the default values listed in **DDS_SubscriberQos** (p. 2016).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

If **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) is specified as the `qos` parameter when **DDS_DomainParticipant_create_subscriber** (p. 105) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling **DDS_DomainParticipant_get_default_subscriber_qos** (p. 93), will be used to create the **DDS_Subscriber** (p. 575).

MT Safety:

UNSAFE. It is not safe to retrieve the default Subscriber QoS from a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* Qos to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

5.4.4.24 DDS_DomainParticipant_set_default_subscriber_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos (
            DDS_DomainParticipant * self,
            const struct  DDS_SubscriberQos * qos )
```

Set the default **DDS_SubscriberQos** (p. 2016) values for this DomainParticipant.

This set of default values will be used for a newly created **DDS_Subscriber** (p. 575) if **DDS_SUBSCRIBER_QOS_↩ DEFAULT** (p. 161) is specified as the `qos` parameter when **DDS_DomainParticipant_create_subscriber** (p. 105) is called.

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93), **DDS_Domain↩ Participant_get_default_subscriber_qos** (p. 93) or calling **DDS_DomainParticipant_create_subscriber** (p. 105) with **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) as the `qos` parameter.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**in**>> (p. 1015)* Default qos to be set. The special value **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.25 DDS_DomainParticipant_set_default_subscriber_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos_with_profile (
            DDS_DomainParticipant * self,
            const char * library_name,
            const char * profile_name )
```

*<<**extension**>> (p. 1014)* Set the default **DDS_SubscriberQos** (p. 2016) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDS_Subscriber** (p. 575) if **DDS_SUBSCRIBER_QOS_↩ DEFAULT** (p. 161) is specified as the `qos` parameter when **DDS_DomainParticipant_create_subscriber** (p. 105) is called.

Precondition

The **DDS_SubscriberQos** (p. 2016) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93), **DDS_Domain↩ Participant_get_default_subscriber_qos** (p. 93) or calling **DDS_DomainParticipant_create_subscriber** (p. 105) with **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) as the `qos` parameter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_SUBSCRIBER_QOS_DEFAULT (p. 161)

DDS_DomainParticipant_create_subscriber_with_profile (p. 106)

5.4.4.26 DDS_DomainParticipant_get_default_datareader_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_datareader_qos (
             DDS_DomainParticipant * self,
            struct  DDS_DataReaderQos * qos )
```

<<***extension***>> *(p. 1014)* Copy the default **DDS_DataReaderQos** (p. 1611) values into the provided **DDS_Data↩ ReaderQos** (p. 1611) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_DomainParticipant_set↩ _default_datareader_qos** (p. 96), or **DDS_DomainParticipant_set_default_datareader_qos_with_profile** (p. 96), or else, if the call was never made, the default values listed in **DDS_DataReaderQos** (p. 1611).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default DataReader QoS from a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datareader_qos** (p. 96).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***inout***>> *(*p. *1015)* Qos to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.27 DDS_DomainParticipant_set_default_datareader_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos (
            DDS_DomainParticipant * self,
           const struct  DDS_DataReaderQos * qos )
```

<<***extension***>> *(*p. *1014)* Set the default **DDS_DataReaderQos** (p. 1611) values for this domain participant.

This set of default values will be inherited for a newly created **DDS_Subscriber** (p. 575).

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_↩RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datareader_qos** (p. 96) or **DDS_Domain↩Participant_get_default_datareader_qos** (p. 95).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* Default qos to be set. The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_DomainParticipant_set_default_datareader_qos** (p. 96) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.28 DDS_DomainParticipant_set_default_datareader_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos_with_profile (
            DDS_DomainParticipant * self,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(p. 1014)* Set the default **DDS_DataReaderQos** (p. 1611) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDS_Subscriber** (p. 575).

Precondition

The **DDS_DataReaderQos** (p. 1611) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datareader_qos** (p. 96) or **DDS_Domain↩ Participant_get_default_datareader_qos** (p. 95).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.29 DDS_DomainParticipant_get_default_flowcontroller_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_flowcontroller_property (
            DDS_DomainParticipant * self,
           struct  DDS_FlowControllerProperty_t * prop )
```

<<***extension***>> *(p. 1014)* Copies the default **DDS_FlowControllerProperty_t** (p. 1802) values for this domain participant into the given **DDS_FlowControllerProperty_t** (p. 1802) instance.

The retrieved `property` will match the set of values specified on the last successful call to **DDS_DomainParticipant↩ _set_default_flowcontroller_property** (p. 98), or else, if the call was never made, the default values listed in **DDS_↩ FlowControllerProperty_t** (p. 1802).

MT Safety:

UNSAFE. It is not safe to retrieve the default flow controller properties from a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_flowcontroller_property** (p. 98)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
prop	<<***in***>> *(p. 1015)* Default property to be retrieved. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT (p. 161)

DDS_DomainParticipant_create_flowcontroller (p. 123)

5.4.4.30 DDS_DomainParticipant_set_default_flowcontroller_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_flowcontroller_property (
            DDS_DomainParticipant * self,
           const struct  DDS_FlowControllerProperty_t * prop )
```

<<***extension***>> *(p. 1014)* Set the default **DDS_FlowControllerProperty_t** (p. 1802) values for this domain participant.

This default value will be used for newly created **DDS_FlowController** (p. 562) if **DDS_FLOW_CONTROLLER_↩ PROPERTY_DEFAULT** (p. 161) is specified as the `property` parameter when **DDS_DomainParticipant_create↩ _flowcontroller** (p. 123) is called.

Precondition

The specified property values must be consistent, or else the operation will have no effect and fail with **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default flow controller properties for a DomainParticipant while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_flowcontroller_property** (p. 98) , **DDS_↩ DomainParticipant_get_default_flowcontroller_property** (p. 97) or calling **DDS_DomainParticipant_create↩ _flowcontroller** (p. 123) with **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT** (p. 161) as the `qos` parameter.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
prop	*<<**in**>> (p. 1015)* Default property to be set. The special value **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT** (p. 161) may be passed as `property` to indicate that the default property should be reset to the default values the factory would use if **DDS_DomainParticipant_set_default_flowcontroller_property** (p. 98) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.4.4.31 DDS_DomainParticipant_get_default_library()

```
const char * DDS_DomainParticipant_get_default_library (
               DDS_DomainParticipant * self )
```

*<<**extension**>> (p. 1014)* Gets the default XML library associated with a **DDS_DomainParticipant** (p. 76).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

The default library or null if the default library was not set.

See also

DDS_DomainParticipant_set_default_library (p. 100)

5.4.4.32 DDS_DomainParticipant_get_default_profile()

```
const char * DDS_DomainParticipant_get_default_profile (
               DDS_DomainParticipant * self )
```

*<<**extension**>> (p. 1014)* Gets the default XML profile associated with a **DDS_DomainParticipant** (p. 76).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default profile or null if the default profile was not set.

See also

DDS_DomainParticipant_set_default_profile (p. 101)

5.4.4.33 DDS_DomainParticipant_get_default_profile_library()

```
const char * DDS_DomainParticipant_get_default_profile_library (
            DDS_DomainParticipant * self )
```

<<***extension***>> *(p. 1014)* Gets the library where the default XML QoS profile is contained for a **DDS_DomainParticipant** (p. 76).

The default profile library is automatically set when **DDS_DomainParticipant_set_default_profile** (p. 101) is called.

This library can be different than the **DDS_DomainParticipant** (p. 76) default library (see **DDS_DomainParticipant_get_default_library** (p. 99)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default profile library or null if the default profile was not set.

See also

DDS_DomainParticipant_set_default_profile (p. 101)

5.4.4.34 DDS_DomainParticipant_set_default_library()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_library (
            DDS_DomainParticipant * self,
           const char * library_name )
```

<<***extension***>> *(*p. *1014)* Sets the default XML library for a **DDS_DomainParticipant** (p. 76).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this DomainParticipant's operations.

Any API requiring a library_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS_DomainParticipant** (p. 76) inherits the default from the **DDS_Domain↩ ParticipantFactory** (p. 32) (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name. If library_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_get_default_library (p. 99)

5.4.4.35 DDS_DomainParticipant_set_default_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_profile (
             DDS_DomainParticipant * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Sets the default XML profile for a **DDS_DomainParticipant** (p. 76).

This function specifies the profile that will be used as the default the next time a default DomainParticipant profile is needed during a call to one of this DomainParticipant's operations. When calling a **DDS_DomainParticipant** (p. 76) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS_DomainParticipant** (p. 76) inherits the default from the **DDS_Domain↩ ParticipantFactory** (p. 32) (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

This function does not set the default QoS for entities created by the **DDS_DomainParticipant** (p. 76); for this functionality, use the functions set_default_<entity>_qos_with_profile (you may pass in NULL after having called set_default↩ _profile()).

This function does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDS_↩ DomainParticipantFactory_set_default_participant_qos_with_profile** (p. 39).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
library_name	*<<**in**>> (p. 1015)* The library name containing the profile.
profile_name	*<<**in**>> (p. 1015)* The profile name. If profile_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_get_default_profile (p. 99)

DDS_DomainParticipant_get_default_profile_library (p. 100)

5.4.4.36 DDS_DomainParticipant_create_publisher()

```
DDS_Publisher * DDS_DomainParticipant_create_publisher (
             DDS_DomainParticipant * self,
            const struct  DDS_PublisherQos * qos,
            const struct  DDS_PublisherListener * listener,
             DDS_StatusMask mask )
```

Creates a **DDS_Publisher** (p. 446) with the desired QoS policies and attaches to it the specified **DDS_Publisher↩ Listener** (p. 1921).

Precondition

The specified QoS policies must be consistent, or the operation will fail and no **DDS_Publisher** (p. 446) will be created.

if `listener` is specified, none of the listener callback functions can be NULL.

MT Safety:

UNSAFE. If **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) is used for `qos`, it is not safe to create the publisher while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_publisher_qos** (p. 88).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**in**>> (p. 1015)* QoS to be used for creating the new **DDS_Publisher** (p. 446). The special value **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) can be used to indicate that the **DDS_Publisher** (p. 446) should be created with the default **DDS_PublisherQos** (p. 1922) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.
listener	*<<**in**>> (p. 1015)*. Listener to be attached to the newly created **DDS_Publisher** (p. 446).
mask	*<<**in**>> (p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Generated by Doxygen

Returns

newly created publisher object or NULL on failure.

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_DomainParticipant_create_publisher_with_profile (p. 103)

DDS_DomainParticipant_get_default_publisher_qos (p. 88)

DDS_Publisher_set_listener (p. 469)

Examples

HelloWorld_publisher.c.

5.4.4.37 DDS_DomainParticipant_create_publisher_with_profile()

```
DDS_Publisher * DDS_DomainParticipant_create_publisher_with_profile (
             DDS_DomainParticipant * self,
            const char * library_name,
            const char * profile_name,
            const struct  DDS_PublisherListener * listener,
             DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a new **DDS_Publisher** (p. 446) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.

Precondition

The **DDS_PublisherQos** (p. 1922) in the input profile must be consistent, or the operation will fail and no **DDS_↩ Publisher** (p. 446) will be created.

if `listener` is specified, none of the listener callback functions can be NULL.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).
listener	<<***in***>> *(p. 1015)*. Listener to be attached to the newly created **DDS_Publisher** (p. 446).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

newly created publisher object or NULL on failure.

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_Publisher_set_listener (p. 469)

5.4.4.38 DDS_DomainParticipant_delete_publisher()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_publisher (
            DDS_DomainParticipant * self,
            DDS_Publisher * p )
```

Deletes an existing **DDS_Publisher** (p. 446).

Precondition

The **DDS_Publisher** (p. 446) must not have any attached **DDS_DataWriter** (p. 488) objects. If there are existing **DDS_DataWriter** (p. 488) objects, it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

DDS_Publisher (p. 446) must have been created by this **DDS_DomainParticipant** (p. 76), or else it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_Publisher** (p. 446) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
p	<<***in***>> *(p. 1015)* **DDS_Publisher** (p. 446) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.4.4.39 DDS_DomainParticipant_create_subscriber()

```
DDS_Subscriber * DDS_DomainParticipant_create_subscriber (
             DDS_DomainParticipant * self,
            const struct  DDS_SubscriberQos * qos,
            const struct  DDS_SubscriberListener * listener,
             DDS_StatusMask mask )
```

Creates a **DDS_Subscriber** (p. 575) with the desired QoS policies and attaches to it the specified **DDS_Subscriber↩ Listener** (p. 2014).

Precondition

The specified QoS policies must be consistent, or the operation will fail and no **DDS_Subscriber** (p. 575) will be created.

if `listener` is specified, none of the listener callback functions can be NULL.

MT Safety:

UNSAFE. If **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) is used for `qos`, it is not safe to create the subscriber while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_subscriber↩ _qos** (p. 93).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* QoS to be used for creating the new **DDS_Subscriber** (p. 575). The special value **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) can be used to indicate that the **DDS_Subscriber** (p. 575) should be created with the default **DDS_SubscriberQos** (p. 2016) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.
listener	<<***in***>> *(p. 1015)*. Listener to be attached to the newly created **DDS_Subscriber** (p. 575).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

newly created subscriber object or NULL on failure.

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_SubscriberQos (p. 2016) for rules on consistency among QoS

DDS_SUBSCRIBER_QOS_DEFAULT (p. 161)

DDS_DomainParticipant_create_subscriber_with_profile (p. 106)

DDS_DomainParticipant_get_default_subscriber_qos (p. 93)

DDS_Subscriber_set_listener (p. 600)

Examples

HelloWorld_subscriber.c.

5.4.4.40 DDS_DomainParticipant_create_subscriber_with_profile()

```
DDS_Subscriber * DDS_DomainParticipant_create_subscriber_with_profile (
             DDS_DomainParticipant * self,
            const char * library_name,
            const char * profile_name,
            const struct  DDS_SubscriberListener * listener,
             DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a new **DDS_Subscriber** (p. 575) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.

Precondition

The **DDS_SubscriberQos** (p. 2016) in the input profile must be consistent, or the operation will fail and no **DDS_Subscriber** (p. 575) will be created.

if `listener` is specified, none of the listener callback functions can be NULL.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).
listener	<<***in***>> *(p. 1015)*. Listener to be attached to the newly created **DDS_Subscriber** (p. 575).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

newly created subscriber object or NULL on failure.

See also

DDS_DomainParticipant_get_default_subscriber_qos (p. 93)

DDS_Subscriber_set_listener (p. 600)

5.4.4.41 DDS_DomainParticipant_delete_subscriber()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_subscriber (
            DDS_DomainParticipant * self,
            DDS_Subscriber * s )
```

Deletes an existing **DDS_Subscriber** (p. 575).

Precondition

The **DDS_Subscriber** (p. 575) must not have any attached **DDS_DataReader** (p. 618) objects. If there are existing **DDS_DataReader** (p. 618) objects, it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

The **DDS_Subscriber** (p. 575) must have been created by this **DDS_DomainParticipant** (p. 76), or else it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

A Listener installed on the **DDS_Subscriber** (p. 575) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
s	<<***in***>> *(p. 1015)* **DDS_Subscriber** (p. 575) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.4.4.42 DDS_DomainParticipant_create_datawriter()

```
DDS_DataWriter * DDS_DomainParticipant_create_datawriter (
            DDS_DomainParticipant * self,
            DDS_Topic * topic,
           const struct  DDS_DataWriterQos * qos,
           const struct  DDS_DataWriterListener * listener,
            DDS_StatusMask mask )
```

<<***extension***>> *(*p. *1014)* Creates a **DDS_DataWriter** (p. 488) that will be attached and belong to the implicit **DDS_Publisher** (p. 446).

Precondition

The given **DDS_Topic** (p. 174) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this function will fail.

The **DDS_DataWriter** (p. 488) created using this function will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) when the following functions are called: **DDS_DomainParticipant_create_datawriter** (p. 107), **DDS_DomainParticipant_create_datawriter_with_profile** (p. 109), or **DDS_DomainParticipant_get_implicit_publisher** (p. 128).

MT Safety:

UNSAFE. If **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) is used for the `qos` parameter, it is not safe to create the DataWriter while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datawriter_qos** (p. 91).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
topic	<<***in***>> *(*p. *1015)* The **DDS_Topic** (p. 174) that the **DDS_DataWriter** (p. 488) will be associated with. Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* QoS to be used for creating the new **DDS_DataWriter** (p. 488). The special value **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) can be used to indicate that the **DDS_DataWriter** (p. 488) should be created with the default **DDS_DataWriterQos** (p. 1666) set in the implicit **DDS_Publisher** (p. 446). The special value **DDS_DATAWRITER_QOS_USE_TOPIC_QOS** (p. 473) can be used to indicate that the **DDS_DataWriter** (p. 488) should be created with the combination of the default **DDS_DataWriterQos** (p. 1666) set on the **DDS_Publisher** (p. 446) and the **DDS_TopicQos** (p. 2048) of the **DDS_Topic** (p. 174). Cannot be NULL.
listener	<<***in***>> *(*p. *1015)* The listener of the **DDS_DataWriter** (p. 488).
mask	<<***in***>> *(*p. *1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataWriter** (p. 488) of a derived class specific to the data type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_Topic_set_qos (p. 196)

DDS_DataWriter_set_listener (p. 556)

5.4.4.43 DDS_DomainParticipant_create_datawriter_with_profile()

```
DDS_DataWriter * DDS_DomainParticipant_create_datawriter_with_profile (
             DDS_DomainParticipant * self,
             DDS_Topic * topic,
            const char * library_name,
            const char * profile_name,
            const struct  DDS_DataWriterListener * listener,
             DDS_StatusMask mask )
```

<<***extension***>> *(*p. *1014)* Creates a **DDS_DataWriter** (p. 488) using a XML QoS profile that will be attached and belong to the implicit **DDS_Publisher** (p. 446).

Precondition

The given **DDS_Topic** (p. 174) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS_DataWriter** (p. 488) created using this function will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) when the following functions are called: **DDS_DomainParticipant_create_datawriter** (p. 107), **DDS_DomainParticipant_create_↩ datawriter_with_profile** (p. 109), or **DDS_DomainParticipant_get_implicit_publisher** (p. 128)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
topic	<<***in***>> *(*p. *1015)* The **DDS_Topic** (p. 174) that the **DDS_DataWriter** (p. 488) will be associated with. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).
listener	<<***in***>> *(*p. *1015)* The listener of the **DDS_DataWriter** (p. 488).
mask	<<***in***>> *(*p. *1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataWriter** (p. 488) of a derived class specific to the data type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_DomainParticipant_get_implicit_publisher (p. 128)

DDS_Topic_set_qos (p. 196)

DDS_DataWriter_set_listener (p. 556)

5.4.4.44 DDS_DomainParticipant_delete_datawriter()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_datawriter (
            DDS_DomainParticipant * self,
            DDS_DataWriter * a_datawriter )
```

<<***extension***>> *(*p. *1014)* Deletes a **DDS_DataWriter** (p. 488) that belongs to the implicit **DDS_Publisher** (p. 446).

The deletion of the **DDS_DataWriter** (p. 488) will automatically unregister all instances.

Precondition

If the **DDS_DataWriter** (p. 488) does not belong to the implicit **DDS_Publisher** (p. 446), the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_DataWriter** (p. 488) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_datawriter	<<***in***>> *(*p. *1015)* The **DDS_DataWriter** (p. 488) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

DDS_DomainParticipant_get_implicit_publisher (p. 128)

5.4.4.45 DDS_DomainParticipant_create_datareader()

```
DDS_DataReader * DDS_DomainParticipant_create_datareader (
            DDS_DomainParticipant * self,
            DDS_TopicDescription * topic,
           const struct  DDS_DataReaderQos * qos,
           const struct  DDS_DataReaderListener * listener,
            DDS_StatusMask mask )
```

<<***extension***>> *(*p. *1014)* Creates a **DDS_DataReader** (p. 618) that will be attached and belong to the implicit **DDS_Subscriber** (p. 575).

Precondition

The given **DDS_TopicDescription** (p. 174) must have been created from the same DomainParticipant as the implicit Subscriber. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS_DataReader** (p. 618) created using this function will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) when the following functions are called: **DDS_DomainParticipant_create_datareader** (p. 111), **DDS_DomainParticipant_create_datareader_with_profile** (p. 112), or **DDS_DomainParticipant_get_implicit_subscriber** (p. 129).

MT Safety:

UNSAFE. If **DDS_DATAREADER_QOS_DEFAULT** (p. 603) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_datareader_qos** (p. 96).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
topic	<<***in***>> *(*p. *1015)* The **DDS_TopicDescription** (p. 174) that the **DDS_DataReader** (p. 618) will be associated with. Cannot be NULL.
qos	<<***in***>> *(*p. *1015)* The qos of the **DDS_DataReader** (p. 618). The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) can be used to indicate that the **DDS_DataReader** (p. 618) should be created with the default **DDS_DataReaderQos** (p. 1611) set in the implicit **DDS_Subscriber** (p. 575). If **DDS_TopicDescription** (p. 174) is of type **DDS_Topic** (p. 174) or **DDS_ContentFilteredTopic** (p. 176), the special value **DDS_DATAREADER_QOS_USE_TOPIC_QOS** (p. 604) can be used to indicate that the **DDS_DataReader** (p. 618) should be created with the combination of the default **DDS_DataReaderQos** (p. 1611) set on the implicit **DDS_Subscriber** (p. 575) and the **DDS_TopicQos** (p. 2048) (in the case of a **DDS_ContentFilteredTopic** (p. 176), the **DDS_TopicQos** (p. 2048) of the related **DDS_Topic** (p. 174)). if **DDS_DATAREADER_QOS_USE_TOPIC_QOS** (p. 604) is used, `topic` cannot be a **DDS_MultiTopic** (p. 184). Cannot be NULL.
listener	<<***in***>> *(*p. *1015)* The listener of the **DDS_DataReader** (p. 618).

Returns

A **DDS_DataReader** (p. 618) of a derived class specific to the data-type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

5.4.4.46 DDS_DomainParticipant_create_datareader_with_profile()

```
DDS_DataReader * DDS_DomainParticipant_create_datareader_with_profile (
            DDS_DomainParticipant * self,
            DDS_TopicDescription * topic,
           const char * library_name,
           const char * profile_name,
           const struct  DDS_DataReaderListener * listener,
            DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_DataReader** (p. 618) using a XML QoS profile that will be attached and belong to the implicit **DDS_Subscriber** (p. 575).

Precondition

The given **DDS_TopicDescription** (p. 174) must have been created from the same DomainParticipant as the implicit subscriber. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS_DataReader** (p. 618) created using this function will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) when the following functions are called: **DDS_DomainParticipant_create_datareader** (p. 111), **DDS_DomainParticipant_↩ create_datareader_with_profile** (p. 112), or **DDS_DomainParticipant_get_implicit_subscriber** (p. 129)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic	<<***in***>> *(p. 1015)* The **DDS_TopicDescription** (p. 174) that the **DDS_DataReader** (p. 618) will be associated with. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).
listener	<<***in***>> *(p. 1015)* The listener of the **DDS_DataReader** (p. 618).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataReader** (p. 618) of a derived class specific to the data-type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_DataReader_set_listener (p. 691)

5.4.4.47 DDS_DomainParticipant_delete_datareader()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_datareader (
            DDS_DomainParticipant * self,
            DDS_DataReader * a_datareader )
```

<<***extension***>> *(*p. *1014)* Deletes a **DDS_DataReader** (p. 618) that belongs to the implicit **DDS_Subscriber** (p. 575).

Precondition

If the **DDS_DataReader** (p. 618) does not belong to the implicit **DDS_Subscriber** (p. 575), or if ther are any existing **DDS_ReadCondition** (p. 695) or **DDS_QueryCondition** (p. 700) objects that are attached to the **DDS_DataReader** (p. 618), or if there are outstanding loans on samples (as a result of a call to read(), take(), or one of the variants thereof), the operation fails with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_DataReader** (p. 618) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_datareader	<<***in***>> *(*p. *1015)* The **DDS_DataReader** (p. 618) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

DDS_DomainParticipant_get_implicit_subscriber (p. 129)

5.4.4.48 DDS_DomainParticipant_create_topic()

```
DDS_Topic * DDS_DomainParticipant_create_topic (
             DDS_DomainParticipant * self,
            const char * topic_name,
            const char * type_name,
            const struct  DDS_TopicQos * qos,
            const struct  DDS_TopicListener * listener,
             DDS_StatusMask mask )
```

Creates a **DDS_Topic** (p. 174) with the desired QoS policies and attaches to it the specified **DDS_TopicListener** (p. 2047).

Precondition

The application is not allowed to create two **DDS_Topic** (p. 174) objects with the same `topic_name` attached to the same **DDS_DomainParticipant** (p. 76). If the application attempts this, this function will fail and return a NULL topic.

The specified QoS policies must be consistent, or the operation will fail and no **DDS_Topic** (p. 174) will be created.

Prior to creating a **DDS_Topic** (p. 174), the type must have been registered with RTI Connext. This is done using the **FooTypeSupport_register_type** (p. 220) operation on a derived class of the **DDS_TypeSupport** (p. 213) interface.

MT Safety:

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDS_DomainParticipant_lookup_topicdescription** (p. 126).

MT Safety:

UNSAFE. If **DDS_TOPIC_QOS_DEFAULT** (p. 159) is used for `qos`, it is not safe to create the topic while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_topic_qos** (p. 86).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name for the new topic, must not exceed 255 characters. Cannot be NULL.
type_name	<<***in***>> *(p. 1015)* The type to which the new **DDS_Topic** (p. 174) will be bound. Cannot be NULL.
qos	<<***in***>> *(p. 1015)* QoS to be used for creating the new **DDS_Topic** (p. 174). The special value **DDS_TOPIC_QOS_DEFAULT** (p. 159) can be used to indicate that the **DDS_Topic** (p. 174) should be created with the default **DDS_TopicQos** (p. 2048) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.
listener	<<***in***>> *(p. 1015)* Listener to be attached to the newly created **DDS_Topic** (p. 174).

Returns

newly created topic, or NULL on failure

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_TopicQos (p. 2048) for rules on consistency among QoS

DDS_TOPIC_QOS_DEFAULT (p. 159)

DDS_DomainParticipant_create_topic_with_profile (p. 115)

DDS_DomainParticipant_get_default_topic_qos (p. 85)

DDS_Topic_set_listener (p. 198)

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.4.4.49 DDS_DomainParticipant_create_topic_with_profile()

```
DDS_Topic * DDS_DomainParticipant_create_topic_with_profile (
             DDS_DomainParticipant * self,
            const char * topic_name,
            const char * type_name,
            const char * library_name,
            const char * profile_name,
            const struct  DDS_TopicListener * listener,
             DDS_StatusMask mask )
```

<<***extension***>> *(*p. *1014)* Creates a new **DDS_Topic** (p. 174) object using the **DDS_PublisherQos** (p. 1922) associated with the input XML QoS profile.

Precondition

The application is not allowed to create two **DDS_TopicDescription** (p. 174) objects with the same `topic_name` attached to the same **DDS_DomainParticipant** (p. 76). If the application attempts this, this function will fail and return a NULL topic.

The **DDS_TopicQos** (p. 2048) in the input profile must be consistent, or the operation will fail and no **DDS_Topic** (p. 174) will be created.

Prior to creating a **DDS_Topic** (p. 174), the type must have been registered with RTI Connext. This is done using the **FooTypeSupport_register_type** (p. 220) operation on a derived class of the **DDS_TypeSupport** (p. 213) interface.

MT Safety:

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDS_DomainParticipant_lookup_topicdescription** (p. 126).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name for the new topic, must not exceed 255 characters. Cannot be NULL.
type_name	<<***in***>> *(p. 1015)* The type to which the new **DDS_Topic** (p. 174) will be bound. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).
listener	<<***in***>> *(p. 1015)*. Listener to be attached to the newly created **DDS_Topic** (p. 174).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

newly created topic, or NULL on failure

See also

Specifying QoS on entities (p. 1246) for information on setting QoS before entity creation

DDS_TopicQos (p. 2048) for rules on consistency among QoS

DDS_DomainParticipant_create_topic (p. 114)

DDS_DomainParticipant_get_default_topic_qos (p. 85)

DDS_Topic_set_listener (p. 198)

5.4.4.50 DDS_DomainParticipant_delete_topic()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_topic (
            DDS_DomainParticipant * self,
            DDS_Topic * topic )
```

Deletes a **DDS_Topic** (p. 174).

Precondition

If the **DDS_Topic** (p. 174) does not belong to the application's **DDS_DomainParticipant** (p. 76), this operation fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Make sure no objects are using the topic. More specifically, there must be no existing **DDS_DataReader** (p. 618), **DDS_DataWriter** (p. 488), **DDS_ContentFilteredTopic** (p. 176), or **DDS_MultiTopic** (p. 184) objects belonging to the same **DDS_DomainParticipant** (p. 76) that are using the **DDS_Topic** (p. 174). If delete_topic is called on a **DDS_Topic** (p. 174) with any of these existing objects attached to it, it will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_Topic** (p. 174) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic	<<***in***>> *(p. 1015)* **DDS_Topic** (p. 174) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

5.4.4.51 DDS_DomainParticipant_create_contentfilteredtopic()

```
DDS_ContentFilteredTopic * DDS_DomainParticipant_create_contentfilteredtopic (
             DDS_DomainParticipant * self,
            const char * name,
             DDS_Topic * related_topic,
            const char * filter_expression,
            const struct  DDS_StringSeq * expression_parameters )
```

Creates a **DDS_ContentFilteredTopic** (p. 176), that can be used to do content-based subscriptions.

The **DDS_ContentFilteredTopic** (p. 176) only relates to samples published under that **DDS_Topic** (p. 174), filtered according to their content. The filtering is done by means of evaluating a logical expression that involves the values of some of the data-fields in the sample. The logical expression derived from the `filter_expression` and `expression_parameters` arguments.

Queries and Filters Syntax (p. 739) describes the syntax of `filter_expression` and `expression_parameters`.

Precondition

The application is not allowed to create two **DDS_ContentFilteredTopic** (p. 176) objects with the same `topic_name` attached to the same **DDS_DomainParticipant** (p. 76). If the application attempts this, this function will fail and returns NULL.

If `related_topic` does not belong to this **DDS_DomainParticipant** (p. 76), this operation returns NULL.

This function will create a content filter using the builtin SQL filter which implements a superset of the DDS specification. This filter **requires** that all IDL types have been compiled with typecodes. If this precondition is not met, this operation returns NULL.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name for the new content filtered topic, must not exceed 255 characters. Cannot be NULL.
related_topic	<<***in***>> *(p. 1015)* **DDS_Topic** (p. 174) to be filtered. Cannot be NULL.
filter_expression	<<***in***>> *(p. 1015)* Cannot be NULL
expression_parameters	<<***in***>> *(p. 1015)* Cannot be NULL. An empty sequence **must** be used if the filter expression does not contain any parameters. Length of sequence cannot be greater than
Generated by Doxygen	100.

Returns

newly created **DDS_ContentFilteredTopic** (p. 176), or NULL on failure

5.4.4.52 DDS_DomainParticipant_create_contentfilteredtopic_with_filter()

```
DDS_ContentFilteredTopic * DDS_DomainParticipant_create_contentfilteredtopic_with_filter (
            DDS_DomainParticipant * self,
            const char * name,
            const  DDS_Topic * related_topic,
            const char * filter_expression,
            const struct  DDS_StringSeq * expression_parameters,
            const char * filter_name )
```

*<<**extension**>> (p. 1014)* Creates a **DDS_ContentFilteredTopic** (p. 176) using the specified filter to do content-based subscriptions.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
name	*<<**in**>> (p. 1015)* Name for the new content filtered topic. Cannot exceed 255 characters. Cannot be NULL.
related_topic	*<<**in**>> (p. 1015)* **DDS_Topic** (p. 174) to be filtered. Cannot be NULL.
filter_expression	*<<**in**>> (p. 1015)* Cannot be NULL.
expression_parameters	*<<**in**>> (p. 1015)* Cannot be NULL. . An empty sequence **must** be used if the filter expression does not contain any parameters. Length of the sequence cannot be greater than 100.
filter_name	*<<**in**>> (p. 1015)* Name of content filter to use. Must previously have been registered with **DDS_DomainParticipant_register_contentfilter** (p. 119) on the same **DDS_DomainParticipant** (p. 76). Cannot be NULL. Builtin filter names are **DDS_SQLFILTER_NAME** (p. 162) and **DDS_STRINGMATCHFILTER_NAME** (p. 163)

Returns

newly created **DDS_ContentFilteredTopic** (p. 176), or NULL on failure

5.4.4.53 DDS_DomainParticipant_delete_contentfilteredtopic()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_contentfilteredtopic (
            DDS_DomainParticipant * self,
            DDS_ContentFilteredTopic * a_contentfilteredtopic )
```

Deletes a **DDS_ContentFilteredTopic** (p. 176).

Precondition

The deletion of a **DDS_ContentFilteredTopic** (p. 176) is not allowed if there are any existing **DDS_DataReader** (p. 618) objects that are using the **DDS_ContentFilteredTopic** (p. 176). If the operation is called on a **DDS_ContentFilteredTopic** (p. 176) with existing **DDS_DataReader** (p. 618) objects attached to it, it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

The **DDS_ContentFilteredTopic** (p. 176) must be created by this **DDS_DomainParticipant** (p. 76), or else this operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_contentfilteredtopic	<<***in***>> *(*p. *1015)*

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

5.4.4.54 DDS_DomainParticipant_register_contentfilter()

```
DDS_ReturnCode_t DDS_DomainParticipant_register_contentfilter (
             DDS_DomainParticipant * self,
            const char * filter_name,
            const struct  DDS_ContentFilter * contentfilter )
```

<<***extension***>> *(*p. *1014)* Register a content filter which can be used to create a **DDS_ContentFilteredTopic** (p. 176).

DDS specifies a SQL-like content filter for use by content filtered topics. If this filter does not meet your filtering requirements, you can register a custom filter.

To use a custom filter, it must be registered in the following places:

- In any application that uses the custom filter to create a **DDS_ContentFilteredTopic** (p. 176) and the corresponding **DDS_DataReader** (p. 618).
- In each application that writes the data to the applications mentioned above.

For example, suppose Application A on the subscription side creates a Topic named X and a ContentFilteredTopic named filteredX (and a corresponding DataReader), using a previously registered content filter, myFilter. With only that, you will have filtering at the subscription side. If you also want to perform filtering in any application that publishes Topic X, then you also need to register the same definition of the ContentFilter myFilter in that application.

Each `filter_name` can only be used to registered a content filter once with a **DDS_DomainParticipant** (p. 76).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
filter_name	<<***in***>> *(*p. *1015)* Name of the filter. The name must be unique within the **DDS_DomainParticipant** (p. 76) and must not exceed 255 characters. Cannot be NULL.
contentfilter	<<***in***>> *(*p. *1015)* Content filter to be registered. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_unregister_contentfilter (p. 120)

5.4.4.55 DDS_DomainParticipant_lookup_contentfilter()

```
void * DDS_DomainParticipant_lookup_contentfilter (
            DDS_DomainParticipant * self,
           const char * filter_name )
```

<<***extension***>> *(*p. *1014)* Lookup a content filter previously registered with **DDS_DomainParticipant_register_↩ contentfilter** (p. 119).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
filter_name	<<***in***>> *(*p. *1015)* Name of the filter. Cannot be NULL.

Returns

NULL if the given filter_name has not been previously registered to the **DDS_DomainParticipant** (p. 76) with **DDS_DomainParticipant_register_contentfilter** (p. 119). Otherwise, return the filter_data that has been previously registered with the given filter_name.

See also

DDS_DomainParticipant_register_contentfilter (p. 119)

5.4.4.56 DDS_DomainParticipant_unregister_contentfilter()

```
DDS_ReturnCode_t DDS_DomainParticipant_unregister_contentfilter (
             DDS_DomainParticipant * self,
            const char * filter_name )
```

<<***extension***>> *(p. 1014)* Unregister a content filter previously registered with **DDS_DomainParticipant_register_contentfilter** (p. 119).

A `filter_name` can be unregistered only if it has been previously registered to the **DDS_DomainParticipant** (p. 76) with **DDS_DomainParticipant_register_contentfilter** (p. 119).

The unregistration of filter is not allowed if there are any existing **DDS_ContentFilteredTopic** (p. 176) objects that are using the filter. If the operation is called on a filter with existing **DDS_ContentFilteredTopic** (p. 176) objects attached to it, this operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

If there are still existing discovered **DDS_DataReader** (p. 618) s with the same `filter_name` and the filter's compile method of the filter have previously been called on the discovered **DDS_DataReader** (p. 618) s, finalize method of the filter will be called on those discovered **DDS_DataReader** (p. 618) s before the content filter is unregistered. This means filtering will now be performed on the application that is creating the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
filter_name	<<***in***>> *(p. 1015)* Name of the filter. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

See also

DDS_DomainParticipant_register_contentfilter (p. 119)

5.4.4.57 DDS_DomainParticipant_create_multitopic()

```
DDS_MultiTopic * DDS_DomainParticipant_create_multitopic (
             DDS_DomainParticipant * self,
            const char * name,
            const char * type_name,
            const char * subscription_expression,
            const struct  DDS_StringSeq * expression_parameters )
```

[Not supported (optional)] Creates a MultiTopic that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.

The resulting type is specified by the `type_name` argument. The list of topics and the logic used to combine, filter, and rearrange the information from each **DDS_Topic** (p. 174) are specified using the `subscription_expression` and `expression_parameters` arguments.

Queries and Filters Syntax (p. 739) describes the syntax of `subscription_expression` and `expression_parameters`.

Precondition

The application is not allowed to create two **DDS_TopicDescription** (p. 174) objects with the same `name` attached to the same **DDS_DomainParticipant** (p. 76). If the application attempts this, this function will fail and return NULL.

Prior to creating a **DDS_MultiTopic** (p. 184), the type must have been registered with RTI Connext. This is done using the **FooTypeSupport_register_type** (p. 220) operation on a derived class of the **DDS_TypeSupport** (p. 213) interface. Otherwise, this function will return NULL.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
name	*<<**in**>> (p. 1015)* Name of the newly create **DDS_MultiTopic** (p. 184). Cannot be NULL.
type_name	*<<**in**>> (p. 1015)* Cannot be NULL.
subscription_expression	*<<**in**>> (p. 1015)* Cannot be NULL.
expression_parameters	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

NULL

5.4.4.58 DDS_DomainParticipant_delete_multitopic()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_multitopic (
            DDS_DomainParticipant * self,
            DDS_MultiTopic * a_multitopic )
```

[Not supported (optional)] Deletes a **DDS_MultiTopic** (p. 184).

Precondition

The deletion of a **DDS_MultiTopic** (p. 184) is not allowed if there are any existing **DDS_DataReader** (p. 618) objects that are using the **DDS_MultiTopic** (p. 184). If the delete_multitopic operation is called on a **DDS_Multi↩ Topic** (p. 184) with existing **DDS_DataReader** (p. 618) objects attached to it, it will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224).

The **DDS_MultiTopic** (p. 184) must be created by this **DDS_DomainParticipant** (p. 76), or else this operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
a_multitopic	*<<**in**>> (p. 1015)*

5.4.4.59 DDS_DomainParticipant_create_flowcontroller()

```
DDS_FlowController * DDS_DomainParticipant_create_flowcontroller (
            DDS_DomainParticipant * self,
           const char * name,
           const struct  DDS_FlowControllerProperty_t * prop )
```

<<***extension***>> *(*p. *1014)* Creates a **DDS_FlowController** (p. 562) with the desired property.

The created **DDS_FlowController** (p. 562) is associated with a **DDS_DataWriter** (p. 488) via **DDS_PublishModeQos**↩**Policy::flow_controller_name** (p. 1926). A single FlowController may service multiple DataWriters instances, even if they belong to a different **DDS_Publisher** (p. 446). The `property` determines how the FlowController shapes the network traffic.

Precondition

The specified `property` must be consistent, or the operation will fail and no **DDS_FlowController** (p. 562) will be created.

MT Safety:

UNSAFE. If **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT** (p. 161) is used for `property`, it is not safe to create the flow controller while another thread may be simultaneously calling **DDS_DomainParticipant_set**↩**_default_flowcontroller_property** (p. 98) or trying to lookup that flow controller with **DDS_DomainParticipant**↩**_lookup_flowcontroller** (p. 127).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
name	<<***in***>> *(*p. *1015)* name of the **DDS_FlowController** (p. 562) to create. A **DDS_DataWriter** (p. 488) is associated with a **DDS_FlowController** (p. 562) by name. Limited to 255 characters.
prop	<<***in***>> *(*p. *1015)* property to be used for creating the new **DDS_FlowController** (p. 562). The special value **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT** (p. 161) can be used to indicate that the **DDS_FlowController** (p. 562) should be created with the default **DDS_FlowControllerProperty_t** (p. 1802) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Returns

Newly created flow controller object or NULL on failure.

See also

DDS_FlowControllerProperty_t (p. 1802) for rules on consistency among property

DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT (p. 161)

DDS_DomainParticipant_get_default_flowcontroller_property (p. 97)

5.4.4.60 DDS_DomainParticipant_delete_flowcontroller()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_flowcontroller (
            DDS_DomainParticipant * self,
            DDS_FlowController * fc )
```

<<***extension***>> *(*p. *1014)* Deletes an existing **DDS_FlowController** (p. 562).

Precondition

The **DDS_FlowController** (p. 562) must not have any attached **DDS_DataWriter** (p. 488) objects. If there are any attached **DDS_DataWriter** (p. 488) objects, it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

The **DDS_FlowController** (p. 562) must have been created by this **DDS_DomainParticipant** (p. 76), or else it will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

The **DDS_FlowController** (p. 562) is deleted if this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
fc	<<***in***>> *(*p. *1015)* The **DDS_FlowController** (p. 562) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.4.4.61 DDS_DomainParticipant_get_typecode()

```
const  DDS_TypeCode * DDS_DomainParticipant_get_typecode (
            DDS_DomainParticipant * self,
           const char * type_name )
```

<<***extension***>> *(*p. *1014)* Retrieves the **DDS_TypeCode** (p. 2077) of a type registered with the **DDS_Domain↩ Participant** (p. 76) based on the registration name.

Every data type used in a **DDS_DomainParticipant** (p. 76) has a registered type name which is the name specified at the time the type is registered with the **DDS_DomainParticipant** (p. 76).

This operation retrieves the **DDS_TypeCode** (p. 2077) for the type given the registared type name. The `type_name` argument must correspond to a name used to register a type with the **DDS_DomainParticipant** (p. 76). Otherwise, this method will return NULL.

Type registration in a **DDS_DomainParticipant** (p. 76) is performed by a call to the **FooTypeSupport_register_type** (p. 220) operation on a derived class of the **DDS_TypeSupport** (p. 213) interface.

Type registration might occur directly via an application call to the **FooTypeSupport_register_type** (p. 220) operation, or indirectly by the RTI Connext infrastructure as a result of parsing an XML configuration file that refers to that type.

If a type is registered by the RTI Connext infrastructure as a result of parsing an XML configuration file, the **DDS_↩ TypeSupport** (p. 213) can be created either from a type description found in the XML files, or else by calling the **Foo↩ TypeSupport_register_type** (p. 220) operation on a **DDS_TypeSupport** (p. 213) that has been registered with **DDS_↩ DomainParticipantFactory** (p. 32). If a **DDS_TypeSupport** (p. 213) is registered with the **DDS_DomainParticipant↩ Factory** (p. 32) this mechanism takes precedence over the creation of a **DDS_TypeSupport** (p. 213) from a type decription in the XML file.

To register a **DDS_TypeSupport** (p. 213) with the **DDS_DomainParticipantFactory** (p. 32) use the operation **DDS_↩ DomainParticipantFactory_register_type_support** (p. 61).

If the **DDS_TypeSupport** (p. 213) is created from a type description found in the XML files, the resulting type support will be a **DDS_DynamicDataTypeSupport** (p. 328). In this case the **DDS_DataWriter** (p. 488) and **DDS_DataReader** (p. 618) uses to write and read data of that type will be the **DDS_DynamicDataWriter** (p. 327) and **DDS_Dynamic↩ DataReader** (p. 328), respectively.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
type_name	<<***in***>> *(*p. *1015)* Name of the type whose TypeCode is retrieved.

Returns

The TypeCode of a registered type with the **DDS_DomainParticipant** (p. 76) or NULL if no type was registered with the participant under that name.

5.4.4.62 DDS_DomainParticipant_find_topic()

```
DDS_Topic * DDS_DomainParticipant_find_topic (
              DDS_DomainParticipant * self,
             const char * topic_name,
             const struct  DDS_Duration_t * timeout )
```

Finds an existing (or ready to exist) **DDS_Topic** (p. 174), based on its name.

This call can be used to block for a specified duration to wait for the **DDS_Topic** (p. 174) to be created.

If the requested **DDS_Topic** (p. 174) already exists, it is returned. Otherwise, find_topic() waits until another thread creates it or else returns when the specified timeout occurs.

find_topic() is useful when multiple threads are concurrently creating and looking up topics. In that case, one thread can call find_topic() and, if another thread has not yet created the topic being looked up, it can wait for some period of time for it to do so. In almost all other cases, it is more straightforward to call **DDS_DomainParticipant_lookup_↩ topicdescription** (p. 126).

The **DDS_DomainParticipant** (p. 76) must already be enabled.

Note: *Each* **DDS_Topic** (p. 174) obtained by **DDS_DomainParticipant_find_topic** (p. 125) must also be deleted by means of **DDS_DomainParticipant_delete_topic** (p. 116). If **DDS_Topic** (p. 174) is obtained multiple times by means of **DDS_DomainParticipant_find_topic** (p. 125) or **DDS_DomainParticipant_create_topic** (p. 114), it must also be deleted that same number of times using **DDS_DomainParticipant_delete_topic** (p. 116).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name of the **DDS_Topic** (p. 174) to search for. Cannot be NULL.
timeout	<<***in***>> *(p. 1015)* The time to wait if the **DDS_Topic** (p. 174) does not exist already. Cannot be NULL.

Returns

the topic, if it exists, or NULL

5.4.4.63 DDS_DomainParticipant_lookup_topicdescription()

```
DDS_TopicDescription * DDS_DomainParticipant_lookup_topicdescription (
            DDS_DomainParticipant * self,
           const char * topic_name )
```

Looks up an existing, locally created **DDS_TopicDescription** (p. 174), based on its name.

DDS_TopicDescription (p. 174) is the base class for **DDS_Topic** (p. 174), **DDS_MultiTopic** (p. 184) and **DDS_↩ ContentFilteredTopic** (p. 176). So you can narrow the **DDS_TopicDescription** (p. 174) returned from this operation to a **DDS_Topic** (p. 174) or **DDS_ContentFilteredTopic** (p. 176) as appropriate.

Unlike **DDS_DomainParticipant_find_topic** (p. 125), which logically returns a new **DDS_Topic** (p. 174) object that must be independently deleted, *this* operation returns a reference to the original local object.

The **DDS_DomainParticipant** (p. 76) does not have to be enabled when you call lookup_topicdescription().

The returned topic may be either enabled or disabled.

MT Safety:

UNSAFE. It is not safe to lookup a topic description while another thread is creating that topic.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name of **DDS_TopicDescription** (p. 174) to search for. This string must be no more than 255 characters; it cannot be NULL.

Returns

The topic description, if it has already been created locally, otherwise it returns NULL.

5.4.4.64 DDS_DomainParticipant_lookup_flowcontroller()

```
DDS_FlowController * DDS_DomainParticipant_lookup_flowcontroller (
            DDS_DomainParticipant * self,
           const char * name )
```

<<***extension***>> *(p. 1014)* Looks up an existing locally-created **DDS_FlowController** (p. 562), based on its name.

Looks up a previously created **DDS_FlowController** (p. 562), including the built-in ones. Once a **DDS_FlowController** (p. 562) has been deleted, subsequent lookups will fail.

MT Safety:

UNSAFE. It is not safe to lookup a flow controller description while another thread is creating that flow controller.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of **DDS_FlowController** (p. 562) to search for. Limited to 255 characters. Cannot be NULL.

Returns

The flow controller if it has already been created locally, or NULL otherwise.

5.4.4.65 DDS_DomainParticipant_get_participant_protocol_status()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_participant_protocol_status (
            DDS_DomainParticipant * self,
           struct  DDS_DomainParticipantProtocolStatus * status )
```

<<***extension***>> *(p. 1014)* Get the domain participant protocol status for this participant.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_DomainParticipantProtocolStatus** (p. 1728) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.4.4.66 DDS_DomainParticipant_get_builtin_subscriber()

```
DDS_Subscriber * DDS_DomainParticipant_get_builtin_subscriber (
            DDS_DomainParticipant * self )
```

Accesses the **built-in DDS_Subscriber** (p. 575).

Each **DDS_DomainParticipant** (p. 76) contains several built-in **DDS_Topic** (p. 174) objects as well as corresponding **DDS_DataReader** (p. 618) objects to access them. All of these **DDS_DataReader** (p. 618) objects belong to a single built-in **DDS_Subscriber** (p. 575).

The built-in Topics are used to communicate information about other **DDS_DomainParticipant** (p. 76), **DDS_Topic** (p. 174), **DDS_DataReader** (p. 618), and **DDS_DataWriter** (p. 488) objects.

The built-in subscriber is created when this operation is called for the first time. The built-in subscriber is deleted automatically when the **DDS_DomainParticipant** (p. 76) is deleted.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

The built-in **DDS_Subscriber** (p. 575) singleton.

See also

DDS_SubscriptionBuiltinTopicData (p. 2018)

DDS_PublicationBuiltinTopicData (p. 1909)

DDS_ParticipantBuiltinTopicData (p. 1873)

5.4.4.67 DDS_DomainParticipant_get_implicit_publisher()

```
DDS_Publisher * DDS_DomainParticipant_get_implicit_publisher (
            DDS_DomainParticipant * self )
```

<<***extension***>> *(*p. *1014)* Returns the implicit **DDS_Publisher** (p. 446). If an implicit Publisher does not already exist, this creates one.

There can only be one implicit Publisher per DomainParticipant.

The implicit Publisher is created with **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) and no Listener.

This implicit Publisher will be deleted automatically when the following functions are called: **DDS_DomainParticipant_delete_contained_entities** (p. 134), or **DDS_DomainParticipant_delete_publisher** (p. 104) with the implicit publisher as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataWriters that belong to the implicit Publisher, the implicit Publisher will be implicitly deleted.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

The implicit publisher

See also

DDS_PUBLISHER_QOS_DEFAULT (p. 160)

DDS_DomainParticipant_create_publisher (p. 102)

5.4.4.68 DDS_DomainParticipant_get_implicit_subscriber()

```
DDS_Subscriber * DDS_DomainParticipant_get_implicit_subscriber (
            DDS_DomainParticipant * self )
```

<<***extension***>> *(*p. *1014)* Returns the implicit **DDS_Subscriber** (p. 575). If an implicit Subscriber does not already exist, this creates one.

There can only be one implicit Subscriber per DomainParticipant.

The implicit Subscriber is created with **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) and no Listener.

This implicit Subscriber will be deleted automatically when the following functions are called: **DDS_DomainParticipant_delete_contained_entities** (p. 134), or **DDS_DomainParticipant_delete_subscriber** (p. 107) with the subscriber as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataReaders that belong to the implicit Subscriber, the implicit Subscriber will be implicitly deleted.

MT Safety:

UNSAFE. it is not safe to create the implicit subscriber while another thread may be simultaneously calling **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The implicit subscriber

See also

DDS_SUBSCRIBER_QOS_DEFAULT (p. 161)

DDS_DomainParticipant_create_subscriber (p. 105)

5.4.4.69 DDS_DomainParticipant_ignore_participant()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_participant (
            DDS_DomainParticipant * self,
          const  DDS_InstanceHandle_t * handle )
```

Instructs RTI Connext to locally ignore a remote **DDS_DomainParticipant** (p. 76).

From the time of this call onwards, RTI Connext will locally behave as if the remote participant did not exist. This means it will ignore any topic, publication, or subscription that originates on that **DDS_DomainParticipant** (p. 76).

There is no way to reverse this operation.

This operation can be used in conjunction with the discovery of remote participants offered by means of the **DDS_↩ ParticipantBuiltinTopicData** (p. 1873) to provide access control.

Application data can be associated with a **DDS_DomainParticipant** (p. 76) by means of the **USER_DATA** (p. 1345) policy. This application data is propagated as a field in the built-in topic and can be used by an application to implement its own access control policy.

The **DDS_DomainParticipant** (p. 76) to ignore is identified by the handle argument. This `handle` is the one that appears in the **DDS_SampleInfo** (p. 1990) retrieved when reading the data-samples available for the built-in **DDS_↩ DataReader** (p. 618) to the **DDS_DomainParticipant** (p. 76) topic. The built-in **DDS_DataReader** (p. 618) is read with the same **FooDataReader_read** (p. 628) and **FooDataReader_take** (p. 629) operations used for any **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
handle	<<***in***>> *(p. 1015)* **DDS_InstanceHandle_t** (p. 213) of the **DDS_DomainParticipant** (p. 76) to be ignored. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224), **DDS_↩ RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_ParticipantBuiltinTopicData (p. 1873)

DDS_PARTICIPANT_TOPIC_NAME (p. 1094)

5.4.4.70 DDS_DomainParticipant_ignore_topic()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_topic (
            DDS_DomainParticipant * self,
          const  DDS_InstanceHandle_t * handle )
```

Instructs RTI Connext to locally ignore a **DDS_Topic** (p. 174).

This means it will locally ignore any publication, or subscription to the **DDS_Topic** (p. 174).

There is no way to reverse this operation.

This operation can be used to save local resources when the application knows that it will never publish or subscribe to data under certain topics.

The **DDS_Topic** (p. 174) to ignore is identified by the `handle` argument. This is the handle of a **DDS_Topic** (p. 174) that appears in the **DDS_SampleInfo** (p. 1990) retrieved when reading data samples from the built-in **DDS_DataReader** (p. 618) for the **DDS_Topic** (p. 174).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
handle	<<***in***>> *(p. 1015)* Handle of the **DDS_Topic** (p. 174) to be ignored. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) or **DDS_↩ RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_TopicBuiltinTopicData (p. 2040)

DDS_TOPIC_TOPIC_NAME (p. 1096)

DDS_DomainParticipant_get_builtin_subscriber (p. 128)

5.4.4.71 DDS_DomainParticipant_ignore_publication()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_publication (
             DDS_DomainParticipant * self,
            const  DDS_InstanceHandle_t * handle )
```

Instructs RTI Connext to locally ignore a publication.

A publication is defined by the association of a topic name, user data, and partition set on the **DDS_Publisher** (p. 446) (see **DDS_PublicationBuiltinTopicData** (p. 1909)). After this call, any data written by that publication's **DDS_Data↩ Writer** (p. 488) will be ignored.

This operation can be used to ignore local *and* remote DataWriters.

The publication (DataWriter) to ignore is identified by the `handle` argument.

- To ignore a *remote* DataWriter, the `handle` can be obtained from the **DDS_SampleInfo** (p. 1990) retrieved when reading data samples from the built-in **DDS_DataReader** (p. 618) for the publication topic.

- To ignore a *local* DataWriter, the `handle` can be obtained by calling **DDS_Entity_get_instance_handle** (p. 1368) for the local DataWriter.

There is no way to reverse this operation.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
handle	<<***in***>> *(p. 1015)* Handle of the **DDS_DataWriter** (p. 488) to be ignored. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) or **DDS_↩ RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_PublicationBuiltinTopicData (p. 1909)

DDS_PUBLICATION_TOPIC_NAME (p. 1098)

DDS_DomainParticipant_get_builtin_subscriber (p. 128)

5.4.4.72 DDS_DomainParticipant_ignore_subscription()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_subscription (
             DDS_DomainParticipant * self,
            const  DDS_InstanceHandle_t * handle )
```

Instructs RTI Connext to locally ignore a subscription.

A subscription is defined by the association of a topic name, user data, and partition set on the **DDS_Subscriber** (p. 575) (see **DDS_SubscriptionBuiltinTopicData** (p. 2018)). After this call, any data received related to that subscription's **DDS_DataReader** (p. 618) will be ignored.

This operation can be used to ignore local *and* remote DataReaders.

The subscription to ignore is identified by the `handle` argument.

- To ignore a *remote* DataReader, the `handle` can be obtained from the **DDS_SampleInfo** (p. 1990) retrieved when reading data samples from the built-in **DDS_DataReader** (p. 618) for the subscription topic.

- To ignore a *local* DataReader, the `handle` can be obtained by calling **DDS_Entity_get_instance_handle** (p. 1368) for the local DataReader.

There is no way to reverse this operation.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
handle	<<***in***>> *(*p. *1015)* Handle of the **DDS_DataReader** (p. 618) to be ignored. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) or **DDS_↩ RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_SubscriptionBuiltinTopicData (p. 2018)

DDS_SUBSCRIPTION_TOPIC_NAME (p. 1100)

DDS_DomainParticipant_get_builtin_subscriber (p. 128)

5.4.4.73 DDS_DomainParticipant_banish_ignored_participants()

```
DDS_ReturnCode_t DDS_DomainParticipant_banish_ignored_participants (
            DDS_DomainParticipant * self )
```

<<***extension***>> *(*p. *1014)* Prevents ignored remote DomainParticipants from receiving traffic from the local **DDS_↩ DomainParticipant** (p. 76).

This method complements **DDS_DomainParticipant_ignore_participant** (p. 130): ignore_participant prevents the local **DDS_DomainParticipant** (p. 76) from processing traffic from the remote DomainParticipant, while this method prevents already ignored remote DomainParticipants from processing traffic from the local DomainParticipant.

Note: this method is currently only supported when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information.

MT Safety:

Safe.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_DomainParticipant_ignore_participant (p. 130)

5.4.4.74 DDS_DomainParticipant_get_domain_id()

```
DDS_DomainId_t DDS_DomainParticipant_get_domain_id (
            DDS_DomainParticipant * self )
```

Get the unique domain identifier.

This operation retrieves the domain id used to create the **DDS_DomainParticipant** (p. 76). The domain id identifies the DDS domain to which the **DDS_DomainParticipant** (p. 76) belongs. Each DDS domain represents a separate data 'communication plane' isolated from other domains.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

the unique `domainId` that was used to create the domain

See also

DDS_DomainParticipantFactory_create_participant (p. 41)

DDS_DomainParticipantFactory_create_participant_with_profile (p. 42)

5.4.4.75 DDS_DomainParticipant_delete_contained_entities()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_contained_entities (
            DDS_DomainParticipant * self )
```

Delete all the entities that were created by means of the "create" operations on the **DDS_DomainParticipant** (p. 76).

This operation deletes all contained **DDS_Publisher** (p. 446) (including an implicit Publisher, if one exists), **DDS_Subscriber** (p. 575) (including implicit Subscriber), **DDS_Topic** (p. 174), **DDS_ContentFilteredTopic** (p. 176), and **DDS_MultiTopic** (p. 184) objects.

Prior to deleting each contained entity, this operation will recursively call the corresponding `delete_contained_entities()` operation on each contained entity (if applicable). This pattern is applied recursively. In this manner the operation `delete_contained_entities()` on the **DDS_DomainParticipant** (p. 76) will end up recursively deleting all the entities contained in the **DDS_DomainParticipant** (p. 76), including the **DDS_DataWriter** (p. 488), **DDS_DataReader** (p. 618), as well as the **DDS_QueryCondition** (p. 700), **DDS_ReadCondition** (p. 695), and **DDS_TopicQuery** (p. 708) objects belonging to the contained **DDS_DataReader** (p. 618).

The operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if any of the contained entities is in a state where it cannot be deleted .

If delete_contained_entities() completes successfully, the application may delete the **DDS_DomainParticipant** (p. 76).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.4.4.76 DDS_DomainParticipant_assert_liveliness()

```
DDS_ReturnCode_t DDS_DomainParticipant_assert_liveliness (
            DDS_DomainParticipant * self )
```

Manually asserts the liveliness of this **DDS_DomainParticipant** (p. 76).

This is used in combination with the **DDS_LivelinessQosPolicy** (p. 1826) to indicate to RTI Connext that the entity remains active.

You need to use this operation if the **DDS_DomainParticipant** (p. 76) contains **DDS_DataWriter** (p. 488) entities with the **DDS_LivelinessQosPolicy::kind** (p. 1828) set to **DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_QOS** (p. 1299) and it only affects the liveliness of those **DDS_DataWriter** (p. 488) entities. Otherwise, it has no effect.

Note: writing data via the **FooDataWriter_write** (p. 499) or **FooDataWriter_write_w_timestamp** (p. 503) operation asserts liveliness on the **DDS_DataWriter** (p. 488) itself and its **DDS_DomainParticipant** (p. 76). Consequently the use of assert_liveliness() is only needed if the application is not writing data regularly.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_LivelinessQosPolicy (p. 1826)

5.4.4.77 DDS_DomainParticipant_get_publishers()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_publishers (
             DDS_DomainParticipant * self,
            struct  DDS_PublisherSeq * publishers )
```

*<<**extension**>> (p. 1014)* Allows the application to access all the publishers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of publishers, it will be filled up to its maximum, and fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

MT Safety:

Safe.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
publishers	*<<**inout**>> (p. 1015)* a PublisherSeq object where the set or list of publishers will be returned

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.4.4.78 DDS_DomainParticipant_get_subscribers()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_subscribers (
            DDS_DomainParticipant * self,
           struct  DDS_SubscriberSeq * subscribers )
```

<<***extension***>> *(p. 1014)* Allows the application to access all the subscribers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of subscribers, it will be filled up to its maximum, and fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

MT Safety:

Safe.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
subscribers	<<***inout***>> *(p. 1015)* a SubscriberSeq object where the set or list of subscribers will be returned

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.4.4.79 DDS_DomainParticipant_get_current_time()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_current_time (
            DDS_DomainParticipant * self,
           struct  DDS_Time_t * current_time )
```

Returns the current value of the time.

The current value of the time that RTI Connext uses to time-stamp **DDS_DataWriter** (p. 488) and to set the reception-timestamp for the data updates that it receives.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
current_time	<<***inout***>> *(p. 1015)* Current time to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.80 DDS_DomainParticipant_get_time_until_license_expiration()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_time_until_license_expiration (
            DDS_DomainParticipant * self,
            DDS_LongLong * remaining_seconds )
```

<<***extension***>> *(p. 1014)* Retrieves the remaining time in seconds until the RTI Connext license validated by the **DDS_DomainParticipant** (p. 76) expires.

This operation reports, with seconds precision, the remaining time until the license validated for this **DDS_Domain↩ Participant** (p. 76) expires. If the license does not expire, the reported value is RTI_INT64_MAX . If the license is already expired, the reported value is zero.

Note: This operation is only available in license-managed RTI Connext distributions.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
remaining_seconds	<<***out***>> *(p. 1015)* Remaining time until license expiration, expressed in whole seconds. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.81 DDS_DomainParticipant_contains_entity()

```
DDS_Boolean DDS_DomainParticipant_contains_entity (
             DDS_DomainParticipant * self,
            const  DDS_InstanceHandle_t * a_handle )
```

Completes successfully with **DDS_BOOLEAN_TRUE** (p. 1203) if the referenced **DDS_Entity** (p. 1362) is contained by the **DDS_DomainParticipant** (p. 76).

This operation checks whether or not the given `a_handle` represents an **DDS_Entity** (p. 1362) that was created from the **DDS_DomainParticipant** (p. 76). The containment applies recursively. That is, it applies both to entities (**DDS_↩ TopicDescription** (p. 174), **DDS_Publisher** (p. 446), or **DDS_Subscriber** (p. 575)) created directly using the **DDS_↩ DomainParticipant** (p. 76) as well as entities created using a contained **DDS_Publisher** (p. 446), or **DDS_Subscriber** (p. 575) as the factory, and so forth.

The `instance` handle for an **DDS_Entity** (p. 1362) may be obtained from built-in topic data, from various statuses, or from the operation **DDS_Entity_get_instance_handle** (p. 1368).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_handle	<<***in***>> *(*p. *1015)* **DDS_InstanceHandle_t** (p. 213) of the **DDS_Entity** (p. 1362) to be checked.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if **DDS_Entity** (p. 1362) is contained by the **DDS_DomainParticipant** (p. 76), or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.4.4.82 DDS_DomainParticipant_register_durable_subscription()

```
DDS_ReturnCode_t DDS_DomainParticipant_register_durable_subscription (
            DDS_DomainParticipant * self,
           const struct  DDS_EndpointGroup_t * group,
           const char * topic_name )
```

<<***extension***>> *(*p. *1014)* Registers a Durable Subscription on the specified **DDS_Topic** (p. 174) on all Persistence Services.

If you need to receive all samples published on a **DDS_Topic** (p. 174), including the ones published while a **DDS_↩ DataReader** (p. 618) is inactive or before it may be created, create a Durable Subscription using this method.

In this way, the Persistence Service will ensure that all the samples on that **DDS_Topic** (p. 174) are retained until they are acknowledged by at least *N* DataReaders belonging to the Durable Subscription where *N* is the quorum count.

If the same Durable Subscription is created on a different **DDS_Topic** (p. 174), the Persistence Service will implicitly delete the previous Durable Subscription and create a new one on the new **DDS_Topic** (p. 174).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
group	<<***in***>> *(*p. *1015)* **DDS_EndpointGroup_t** (p. 1787) The Durable Subscription name and quorum.
topic_name	<<***in***>> *(*p. *1015)* The topic name for which the Durable Subscription is created.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.83 DDS_DomainParticipant_delete_durable_subscription()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_durable_subscription (
            DDS_DomainParticipant * self,
           const struct  DDS_EndpointGroup_t * group )
```

<<***extension***>> *(p. 1014)* Deletes an existing Durable Subscription on all Persistence Services.

The Persistence Service will delete the Durable Subscription and the quorum of the existing samples will be considered satisfied.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
group	<<***in***>> *(p. 1015)* **DDS_EndpointGroup_t** (p. 1787) specifying the Durable Subscription name. Quorum is not required for this operation.

Returns

One of the **Standard Return Codes** (p. 1223)

5.4.4.84 DDS_DomainParticipant_resume_endpoint_discovery()

```
DDS_ReturnCode_t DDS_DomainParticipant_resume_endpoint_discovery (
            DDS_DomainParticipant * self,
           const  DDS_InstanceHandle_t * remote_participant_handle )
```

<<***extension***>> *(p. 1014)* Initiates endpoint discovery with the specified remote **DDS_DomainParticipant** (p. 76).

If the operation returns **DDS_RETCODE_OK** (p. 1224), the **DDS_DomainParticipant** (p. 76) will initiate endpoint discovery with the remote **DDS_DomainParticipant** (p. 76) provided as a parameter.

When **DDS_DiscoveryQosPolicy::enable_endpoint_discovery** (p. 1721) is set to **DDS_BOOLEAN_FALSE** (p. 1203), this operation allows the RTI Connext application to select for which remote DomainParticipants endpoint discovery is performed. By disabling endpoint discovery, the DomainParticipant will not store any state about remote endpoints and will not send local endpoint information to remote DomainParticipants.

If **DDS_DiscoveryQosPolicy::enable_endpoint_discovery** (p. 1721) is set to **DDS_BOOLEAN_TRUE** (p. 1203), endpoint discovery will automatically occur for every discovered **DDS_DomainParticipant** (p. 76). In this case, invoking this operation will have no effect and will return **DDS_RETCODE_OK** (p. 1224).

When **DDS_DiscoveryQosPolicy::enable_endpoint_discovery** (p. 1721) is set to **DDS_BOOLEAN_FALSE** (p. 1203), you have two options after a remote **DDS_DomainParticipant** (p. 76) is discovered:

- Call this operation to enable endpoint discovery. After invoking this operation, the **DDS_DomainParticipant** (p. 76) will start to exchange endpoint information so that matching and communication can occur with the remote **DDS_DomainParticipant** (p. 76).
- Call the **DDS_DomainParticipant_ignore_participant** (p. 130) operation to permanently ignore endpoint discovery with the remote **DDS_DomainParticipant** (p. 76).

Setting **DDS_DiscoveryQosPolicy::enable_endpoint_discovery** (p. 1721) to **DDS_BOOLEAN_FALSE** (p. 1203) enables application-level authentication use cases, in which a **DDS_DomainParticipant** (p. 76) will initiate endpoint discovery with a remote **DDS_DomainParticipant** (p. 76) after successful authentication at the application level.

The `remote_participant_handle` paremeter is the one that appears in the **DDS_SampleInfo** (p. 1990) retrieved when reading the data samples available for the built-in **DDS_ParticipantBuiltinTopicDataDataReader** (p. 1094).

If the specified remote **DDS_DomainParticipant** (p. 76) is not in the database of discovered DomainParticipants or has been previously ignored, this operation will fail with **DDS_RETCODE_ERROR** (p. 1224).

This operation can be called multiple times on the same remote participant. If endpoint discovery has already been resumed, successive calls will have no effect and will return **DDS_RETCODE_OK** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
remote_participant_handle	<<***in***>> *(*p. *1015)* Handle of a discovered **DDS_DomainParticipant** (p. 76) for which endpoint discovery is to be resumed. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223),or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_DiscoveryQosPolicy (p. 1717)

5.4.4.85 DDS_DomainParticipant_set_dns_tracker_polling_period()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_dns_tracker_polling_period (
            DDS_DomainParticipant * self,
          const struct  DDS_Duration_t * polling_period )
```

<<***extension***>> *(*p. *1014)* Configures the frequency in which the DNS tracker queries the DNS service.

This API allows you to change the frequency of the polling period for the DNS tracker. The range of accepted values, in seconds, goes from 1 second to 1 year. **DDS_DURATION_INFINITE** (p. 1210) is also accepted as a valid value. If the duration is set to **DDS_DURATION_INFINITE** (p. 1210), the DNS tracker is disabled.

Modifying the DNS tracker polling period through this has no effect on the **DDS_DiscoveryConfigQosPolicy::dns_↩ tracker_polling_period** (p. 1713) when it is retrieved with **DDS_DomainParticipant_get_qos()** (p. 152).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
polling_period	<<***in***>> *(*p. *1015)* Duration that is set as the polling period for the DNS tracker.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DiscoveryConfigQosPolicy::dns_tracker_polling_period (p. 1713)

DDS_DomainParticipant_add_peer (p. 148)

5.4.4.86 DDS_DomainParticipant_get_dns_tracker_polling_period()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_dns_tracker_polling_period (
            DDS_DomainParticipant * self,
           struct  DDS_Duration_t * polling_period )
```

<<***extension***>> *(p. 1014)* Retrieves the frequency used by the DNS tracker thread to query the DNS service.

The DNS tracker queries the DNS for hostnames specified in the initial peers of a DomainParticipant. The frequency of these queries is defined by **DDS_DiscoveryConfigQosPolicy::dns_tracker_polling_period** (p. 1713). If the value returned is **DDS_DURATION_INFINITE** (p. 1210), the DNS tracker is disabled.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
polling_period	<<***out***>> *(p. 1015)* Duration that the API populates with the period of the DNS tracker.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DiscoveryConfigQosPolicy::dns_tracker_polling_period (p. 1713)

5.4.4.87 DDS_DomainParticipant_get_discovered_participants()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants (
            DDS_DomainParticipant * self,
           struct  DDS_InstanceHandleSeq * participant_handles )
```

Returns a list of discovered **DDS_DomainParticipant** (p. 76) entities.

This operation retrieves the list of **DDS_DomainParticipant** (p. 76) entities that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDS_DomainParticipant_ignore_↩ participant** (p. 130) operation. When using **DDS_DISCOVERYCONFIG_BUILTIN_SPDP2** (p. 1283), this list only includes **DDS_DomainParticipant** (p. 76) entities that the application has received configuration information from.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
participant_handles	<<***inout***>> *(p. 1015)* **DDS_InstanceHandleSeq** (p. 1812) to be filled with handles of the discovered **DDS_DomainParticipant** (p. 76) entities.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.4.4.88 DDS_DomainParticipant_get_discovered_participants_from_subject_name()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants_from_subject_name (
            DDS_DomainParticipant * self,
            struct  DDS_InstanceHandleSeq * participant_handles,
            const char * subject_name )
```

<<***extension***>> (p. *1014)* Returns a list of discovered **DDS_DomainParticipant** (p. 76) entities that have the given **DDS_EntityNameQosPolicy::name** (p. 1793).

This operation retrieves the same list as **DDS_DomainParticipant_get_discovered_participants** (p. 143), except this list contains only the participants that have the given **DDS_EntityNameQosPolicy::name** (p. 1793).

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information.

MT Safety:

Safe.

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
participant_handles	<<***inout***>> (p. *1015)* **DDS_InstanceHandleSeq** (p. 1812) to be filled with handles of the discovered **DDS_DomainParticipant** (p. 76) entities.
subject_name	<<***in***>> (p. *1015)* The **DDS_EntityNameQosPolicy::name** (p. 1793) by which to filter the list.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.4.4.89 DDS_DomainParticipant_get_discovered_participant_data()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_data (
            DDS_DomainParticipant * self,
            struct  DDS_ParticipantBuiltinTopicData * participant_data,
            const  DDS_InstanceHandle_t * participant_handle )
```

Returns **DDS_ParticipantBuiltinTopicData** (p. 1873) for the specified **DDS_DomainParticipant** (p. 76).

This operation retrieves information on a **DDS_DomainParticipant** (p. 76) that has been discovered on the network. The participant must be in the same domain as the participant on which this operation is invoked and must not have been "ignored" by means of the **DDS_DomainParticipant_ignore_participant** (p. 130) operation.

The `participant_handle` must correspond to such a DomainParticipant. Otherwise, the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Use the operation **DDS_DomainParticipant_get_discovered_participants** (p. 143) to find the **DDS_Domain↩ Participant** (p. 76) entities that are currently discovered.

MT Safety:

Safe.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
participant_data	<<***inout***>> *(*p. *1015)* **DDS_ParticipantBuiltinTopicData** (p. 1873) to be filled in with the data for the specified **DDS_DomainParticipant** (p. 76).
participant_handle	<<***in***>> *(*p. *1015)* **DDS_InstanceHandle_t** (p. 213) of **DDS_DomainParticipant** (p. 76).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS↩ _RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_ParticipantBuiltinTopicData (p. 1873)

DDS_DomainParticipant_get_discovered_participants (p. 143)

5.4.4.90 DDS_DomainParticipant_get_discovered_participant_subject_name()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_subject_name (
             DDS_DomainParticipant * self,
            char * subject_name,
             DDS_UnsignedLong * subject_name_size,
            const  DDS_InstanceHandle_t * participant_handle )
```

<<***extension***>> *(*p. *1014)* Returns **DDS_EntityNameQosPolicy::name** (p. 1793) for the specified **DDS_Domain↩ Participant** (p. 76).

This operation retrieves the **DDS_EntityNameQosPolicy::name** (p. 1793) of a **DDS_DomainParticipant** (p. 76) that has been discovered on the network. The participant must be in the same domain as the participant on which this

operation is invoked and must not have been "ignored" by means of the **DDS_DomainParticipant_ignore_participant** (p. 130) operation.

The `participant_handle` must correspond to such a DomainParticipant. If the `participant_handle` is **DDS_HANDLE_NIL** (p. 227) or is not a valid **DDS_InstanceHandle_t** (p. 213) for a DomainParticipant, then the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). If the `participant_handle` corresponds to a DomainParticipant that has not been discovered, then the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Use the operation **DDS_DomainParticipant_get_discovered_participants** (p. 143) to find the **DDS_DomainParticipant** (p. 76) entities that are currently discovered.

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information.

MT Safety:

Safe.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
subject_name	*<<**out**>> (p. 1015)* The char buffer that will be used to store the **DDS_EntityNameQosPolicy::name** (p. 1793) of the discovered **DDS_DomainParticipant** (p. 76). If NULL, this function will return the required length of this buffer through the subject_name_size parameter.
subject_name_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied char buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer, which includes space for the NUL terminator. If the supplied buffer is not NULL but this value is not large enough, then this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). If the **DDS_EntityNameQosPolicy::name** (p. 1793) is NULL, then this value will be set to 0.
participant_handle	*<<**in**>> (p. 1015)* **DDS_InstanceHandle_t** (p. 213) of **DDS_DomainParticipant** (p. 76).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_EntityNameQosPolicy::name (p. 1793)

DDS_DomainParticipant_get_discovered_participants (p. 143)

5.4.4.91 DDS_DomainParticipant_get_discovered_topics()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topics (
            DDS_DomainParticipant * self,
           struct  DDS_InstanceHandleSeq * topic_handles )
```

Returns list of discovered **DDS_Topic** (p. 174) objects.

This operation retrieves the list of **DDS_Topic** (p. 174) s that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDS_DomainParticipant_ignore_topic** (p. 131) operation.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
topic_handles	*<<**inout**>> (p. 1015)* **DDS_InstanceHandleSeq** (p. 1812) to be filled with handles of the discovered **DDS_Topic** (p. 174) objects

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.4.4.92 DDS_DomainParticipant_get_discovered_topic_data()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topic_data (
            DDS_DomainParticipant * self,
           struct  DDS_TopicBuiltinTopicData * topic_data,
           const  DDS_InstanceHandle_t * topic_handle )
```

Returns **DDS_TopicBuiltinTopicData** (p. 2040) for the specified **DDS_Topic** (p. 174).

This operation retrieves information on a **DDS_Topic** (p. 174) that has been discovered by the local Participant and must not have been "ignored" by means of the **DDS_DomainParticipant_ignore_topic** (p. 131) operation.

The `topic_handle` must correspond to such a topic. Otherwise, the operation will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224).

This call is not supported for remote topics. If a remote `topic_handle` is used, the operation will fail with **DDS_↩ RETCODE_UNSUPPORTED** (p. 1224).

Use the operation **DDS_DomainParticipant_get_discovered_topics** (p. 146) to find the topics that are currently discovered.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
topic_data	*<<**inout**>> (p. 1015)* **DDS_TopicBuiltinTopicData** (p. 2040) to be filled with the specified **DDS_Topic** (p. 174)'s data.
topic_handle	*<<**in**>> (p. 1015)* **DDS_InstanceHandle_t** (p. 213) of **DDS_Topic** (p. 174).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_TopicBuiltinTopicData (p. 2040)

DDS_DomainParticipant_get_discovered_topics (p. 146)

5.4.4.93 DDS_DomainParticipant_take_discovery_snapshot()

```
DDS_ReturnCode_t DDS_DomainParticipant_take_discovery_snapshot (
            DDS_DomainParticipant * self,
           const char * file_name )
```

Take a snapshot of the remote participants discovered by a local one.

A possible output may be the following:

```
Remote participants that match the local participant domain=0

name="participantTestName" role="participantTestRole" id="1"

guid_prefix="0x0101D8D1,0x20B83C0D,0x4495246E"

---------------------------------------------------------------------------

1. 0x0101542A,0x2C59B595,0xA1693BDF name="participantTestName"

role="participantTestRole"

unicastLocators="udpv4://192.168.1.170:7411"

---------------------------------------------------------------------------
```

Precondition

self is not NULL.

Parameters

self	<<***in***>> *(*p. *1015)* The local participant.
file_name	<<***in***>> *(*p. *1015)* Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through **NDDS_Config_Logger** (p. 2122). Otherwise, the snapshot will be printed in the file specified by file_name.

Returns

One of the **Standard Return Codes** (p. 1223).

5.4.4.94 DDS_DomainParticipant_add_peer()

```
DDS_ReturnCode_t DDS_DomainParticipant_add_peer (
             DDS_DomainParticipant * self,
            const char * peer_desc_string )
```

<<***extension***>> *(p. 1014)* Attempt to contact one or more additional peer participants.

Add the given peer description to the list of peers with which this **DDS_DomainParticipant** (p. 76) will try to communicate.

This function may be called at any time after this **DDS_DomainParticipant** (p. 76) has been created (before or after it has been enabled).

If this function is called after **DDS_Entity_enable** (p. 1365), an attempt will be made to contact the new peer(s) immediately.

If this function is called *before* the DomainParticipant is enabled, the peer description will simply be added to the list that was populated by **DDS_DiscoveryQosPolicy::initial_peers** (p. 1719); the first attempted contact will take place after this **DDS_DomainParticipant** (p. 76) is enabled.

Any peers added with the add_peer operation are equivalent to entries in the initial_peers list. Therefore, the participant will only discover remote participants using the newly added peer descriptor if a remote participant exists at that location and is configured to accept new peers (i.e., **DDS_DiscoveryQosPolicy::accept_unknown_peers** (p. 1720) is set to **DDS_BOOLEAN_TRUE** (p. 1203)). If multiple remote participants exist at that location (for example, if add_peer is called with a multicast address), the participant may discover multiple remote participants.

To be informed of the exact remote participants that are discovered, regardless of which peers this **DDS_Domain↩ Participant** (p. 76) *attempts* to discover, use the built-in participant topic: **DDS_PARTICIPANT_TOPIC_NAME** (p. 1094).

To remove specific peer locators, you may use **DDS_DomainParticipant_remove_peer** (p. 150). If a peer is removed, the add_peer operation will add it back to the list of peers.

To stop communicating with a peer **DDS_DomainParticipant** (p. 76) that has been discovered, use **DDS_Domain↩ Participant_ignore_participant** (p. 130).

Adding a peer description with this function has no effect on the **DDS_DiscoveryQosPolicy::initial_peers** (p. 1719) that may be subsequently retrieved with **DDS_DomainParticipant_get_qos()** (p. 152) (because **DDS_DiscoveryQosPolicy** (p. 1717) is immutable).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
peer_desc_string	<<***in***>> *(p. 1015)* New peer descriptor to be added. The format is specified in **Peer Descriptor Format** (p. 1355). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

Peer Descriptor Format (p. 1355)

DDS_DiscoveryQosPolicy::initial_peers (p. 1719)

DDS_PARTICIPANT_TOPIC_NAME (p. 1094)

DDS_DomainParticipant_get_builtin_subscriber (p. 128)

5.4.4.95 DDS_DomainParticipant_remove_peer()

```
DDS_ReturnCode_t DDS_DomainParticipant_remove_peer (
            DDS_DomainParticipant * self,
           const char * peer_desc_string )
```

*<<**extension**>> (p. 1014)* Remove one or more peer participants from the list of peers with which this **DDS_Domain↩ Participant** (p. 76) will try to communicate.

This function may be called any time after this **DDS_DomainParticipant** (p. 76) has been enabled

Calling this function has the following effects:

- If a **DDS_DomainParticipant** (p. 76) was already discovered, it will be locally removed along with all its entities.
- Any further requests coming from a **DDS_DomainParticipant** (p. 76) located on any of the removed peers will be ignored.
- All the locators contained in the peer description will be removed from the peer list. The local **DDS_Domain↩ Participant** (p. 76) will stop sending announcement to those locators.

If remote participants located on a peer that was previously removed are discovered, they will be ignored untill the related peer is added back by using **DDS_DomainParticipant_add_peer** (p. 148).

Removing a peer description with this function has no effect on the **DDS_DiscoveryQosPolicy::initial_peers** (p. 1719) that may be subsequently retrieved with **DDS_DomainParticipant_get_qos()** (p. 152) (because **DDS_Discovery↩ QosPolicy** (p. 1717) is immutable).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
peer_desc_string	*<<**in**>> (p. 1015)* Peer descriptor to be removed. The format is specified in **Peer Descriptor Format** (p. 1355). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

Peer Descriptor Format (p. 1355)

DDS_DiscoveryQosPolicy::initial_peers (p. 1719)

DDS_DomainParticipant_add_peer (p. 148)

5.4.4.96 DDS_DomainParticipant_set_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_qos (
            DDS_DomainParticipant * self,
           const struct  DDS_DomainParticipantQos * qos )
```

Change the QoS of this DomainParticipant.

The **DDS_DomainParticipantQos::user_data** (p. 1730) and **DDS_DomainParticipantQos::entity_factory** (p. 1730) can be changed. The other policies are immutable.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**in**>> (p. 1015)* Set of policies to be applied to **DDS_DomainParticipant** (p. 76). Policies must be consistent. Immutable policies cannot be changed after **DDS_DomainParticipant** (p. 76) is enabled. The special value **DDS_PARTICIPANT_QOS_DEFAULT** (p. 64) can be used to indicate that the QoS of the **DDS_DomainParticipant** (p. 76) should be changed to match the current default **DDS_DomainParticipantQos** (p. 1729) set in the **DDS_DomainParticipantFactory** (p. 32). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) if an immutable policy is changed, **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224) if policies are inconsistent, or **DDS_↩ RETCODE_NOT_ALLOWED_BY_SECURITY** (p. 1224) if policies are not allowed by the Security Plugins

DDS_DomainParticipantQos (p. 1729) for rules on consistency among QoS policies

set_qos (abstract) (p. 1363)

5.4.4.97 DDS_DomainParticipant_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_qos_with_profile (
            DDS_DomainParticipant * self,
```

```
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Change the QoS of this domain participant using the input XML QoS profile.

The **DDS_DomainParticipantQos::user_data** (p. 1730) and **DDS_DomainParticipantQos::entity_factory** (p. 1730) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipantFactory_set_default_library** (p. 47)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipantFactory_set_default_profile** (p. 48)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) if immutable policy is changed, or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224) if policies are inconsistent

See also

DDS_DomainParticipantQos (p. 1729) for rules on consistency among QoS

5.4.4.98 DDS_DomainParticipant_get_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_qos (
             DDS_DomainParticipant * self,
            struct  DDS_DomainParticipantQos * qos )
```

Get the participant QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* QoS to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.4.4.99 DDS_DomainParticipant_set_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_property (
            DDS_DomainParticipant * self,
           const char * property_name,
           const char * value,
            DDS_Boolean propagate )
```

Set the value for a property that applies to a DomainParticipant.

Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS_↩ DomainParticipant_set_qos** (p. 151) instead.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
property_name	<<***in***>> *(p. 1015)*. Name of the property that you want to set.
value	<<***in***>> *(p. 1015)*. New value for the property.
propagate	<<***in***>> *(p. 1015)*. Indicates if the property will be propagated or not.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_set_property (p. 555)

DDS_DataReader_set_property (p. 690)

DDS_DomainParticipant_set_qos (p. 151)

5.4.4.100 DDS_DomainParticipant_set_listener()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_listener (
            DDS_DomainParticipant * self,
           const struct  DDS_DomainParticipantListener * l,
            DDS_StatusMask mask )
```

Sets the participant listener.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
l	<<***in***>> *(*p. *1015)* Listener to be installed on the entity.
mask	<<***in***>> *(*p. *1015)* Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

MT Safety:

Unsafe. This function is not synchronized with the listener callbacks, so it is possible to set a new listener on a participant when the old listener is in a callback.

Once a participant has been enabled, it is therefore important that the listener not be changed unless some application-specific means are available of ensuring that the old listener cannot be concurrently in use. If this contract is violated, it is possible for the **DDS_Listener::listener_data** (p. 1822) field to have been changed without the callback function pointers having been changed (or vica versa); callback functions may therefore be passed an incorrect **DDS_Listener↩ ::listener_data** (p. 1822) value.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.4.4.101 DDS_DomainParticipant_get_listener()

```
struct  DDS_DomainParticipantListener DDS_DomainParticipant_get_listener (
              DDS_DomainParticipant * self )
```

Get the participant listener.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

Existing listener attached to the **DDS_DomainParticipant** (p. 76).

See also

DDS_DomainParticipant_get_listenerX (p. 155)

get_listener (abstract) (p. 1365)

5.4.4.102 DDS_DomainParticipant_get_listenerX()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_listenerX (
            DDS_DomainParticipant * self,
           struct  DDS_DomainParticipantListener * listener )
```

*<<**extension**>> (p. 1014)* Get the participant listener.

An alternative form of **DDS_DomainParticipant_get_listener** (p. 154) that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
listener	*<<**inout**>> (p. 1015)* Listener structure to be filled up. Cannnot be NULL.

See also

DDS_DomainParticipant_get_listener (p. 154)

get_listener (abstract) (p. 1365)

5.4.4.103 DDS_DomainParticipant_lookup_publisher_by_name()

```
DDS_Publisher * DDS_DomainParticipant_lookup_publisher_by_name (
            DDS_DomainParticipant * self,
           const char * publisher_name )
```

*<<**extension**>> (p. 1014)* Looks up a **DDS_Publisher** (p. 446) by its entity name within this **DDS_DomainParticipant** (p. 76).

Every **DDS_Publisher** (p. 446) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY_NAME** (p. 1292).

This operation retrieves a **DDS_Publisher** (p. 446) within the **DDS_DomainParticipant** (p. 76) given the entity's name. If there are several **DDS_Publisher** (p. 446) with the same name within the **DDS_DomainParticipant** (p. 76), this function returns the first matching occurrence.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
publisher_name	<<***in***>> *(p. 1015)* Entity name of the **DDS_Publisher** (p. 446).

Returns

The first **DDS_Publisher** (p. 446) found with the specified name or NULL if it is not found.

See also

DDS_DomainParticipant_lookup_datawriter_by_name (p. 156)

5.4.4.104 DDS_DomainParticipant_lookup_subscriber_by_name()

```
DDS_Subscriber * DDS_DomainParticipant_lookup_subscriber_by_name (
            DDS_DomainParticipant * self,
           const char * subscriber_name )
```

<<***extension***>> *(p. 1014)* Retrieves a **DDS_Subscriber** (p. 575) by its entity name within this **DDS_Domain↩ Participant** (p. 76).

Every **DDS_Subscriber** (p. 575) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY_NAME** (p. 1292).

This operation retrieves a **DDS_Subscriber** (p. 575) within the **DDS_DomainParticipant** (p. 76) given the entity's name. If there are several **DDS_Subscriber** (p. 575) with the same name within the **DDS_DomainParticipant** (p. 76), this function returns the first matching occurrence.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
subscriber_name	<<***in***>> *(p. 1015)* Entity name of the **DDS_Subscriber** (p. 575).

Returns

The first **DDS_Subscriber** (p. 575) found with the specified name or NULL if it is not found.

See also

DDS_DomainParticipant_lookup_datareader_by_name (p. 157)

5.4.4.105 DDS_DomainParticipant_lookup_datawriter_by_name()

```
DDS_DataWriter * DDS_DomainParticipant_lookup_datawriter_by_name (
            DDS_DomainParticipant * self,
           const char * datawriter_full_name )
```

<<***extension***>> *(p. 1014)* Looks up a **DDS_DataWriter** (p. 488) by its entity name within this **DDS_DomainParticipant** (p. 76).

Every **DDS_DataWriter** (p. 488) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY_NAME** (p. 1292).

Every **DDS_Publisher** (p. 446) in the system has an entity name which is also configured and stored in the EntityName policy.

This operation retrieves a **DDS_DataWriter** (p. 488) within a **DDS_Publisher** (p. 446) given the specified name which encodes both to the **DDS_DataWriter** (p. 488) and the **DDS_Publisher** (p. 446) name.

If there are several **DDS_DataWriter** (p. 488) with the same name within the corresponding **DDS_Publisher** (p. 446) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDS_Publisher** (p. 446) to which the **DDS_DataWriter** (p. 488) belongs and the entity name of of the **DDS_DataWriter** (p. 488) itself, separated by a double colon "::". For example: MyPublisherName::MyDataWriterName

The plain name contains the **DDS_DataWriter** (p. 488) name only. In this situation it is implied that the **DDS_DataWriter** (p. 488) belongs to the implicit **DDS_Publisher** (p. 446) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDS_Publisher** (p. 446) name part being "implicit". For example: the plain name "MyDataWriterName" is equivalent to specifiying the fully qualified name "implicit::MyDataWriterName"

The **DDS_DataWriter** (p. 488) is only looked up within the **DDS_Publisher** (p. 446) specified in the fully qualified name, or within the implicit **DDS_Publisher** (p. 446) if the name was not fully qualified.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
datawriter_full_name	<<***in***>> *(p. 1015)* Entity name or fully-qualified entity name of the **DDS_DataWriter** (p. 488).

Returns

The first **DDS_DataWriter** (p. 488) found with the specified name or NULL if it is not found.

DDS_DomainParticipant_lookup_publisher_by_name (p. 155)

5.4.4.106 DDS_DomainParticipant_lookup_datareader_by_name()

```
DDS_DataReader * DDS_DomainParticipant_lookup_datareader_by_name (
            DDS_DomainParticipant * self,
           const char * datareader_full_name )
```

<<***extension***>> *(p. 1014)* Retrieves up a **DDS_DataReader** (p. 618) by its entity name in this **DDS_Domain↩ Participant** (p. 76).

Every **DDS_DataReader** (p. 618) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY_NAME** (p. 1292).

Every **DDS_Subscriber** (p. 575) in the system has an entity name which is also configured and stored in the EntityName policy, **ENTITY_NAME** (p. 1292).

This operation retrieves a **DDS_DataReader** (p. 618) within a **DDS_Subscriber** (p. 575) given the specified name which encodes both to the **DDS_DataReader** (p. 618) and the **DDS_Subscriber** (p. 575) name.

If there are several **DDS_DataReader** (p. 618) with the same name within the corresponding **DDS_Subscriber** (p. 575) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDS_Subscriber** (p. 575) to which the **DDS_DataReader** (p. 618) belongs and the entity name of of the **DDS_DataReader** (p. 618) itself, separated by a double colon "::". For example: MySubscriberName::MyDataReaderName

The plain name contains the **DDS_DataReader** (p. 618) name only. In this situation it is implied that the **DDS_Data↩ Reader** (p. 618) belongs to the implicit **DDS_Subscriber** (p. 575) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDS_Subscriber** (p. 575) name part being "implicit". For example: the plain name "MyDataReaderName" is equivalent to specifiying the fully qualified name "implicit::MyDataReaderName"

The **DDS_DataReader** (p. 618) is only looked up within the **DDS_Subscriber** (p. 575) specified in the fully qualified name, or within the implicit **DDS_Subscriber** (p. 575) if the name was not fully qualified.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
datareader_full_name	<<***in***>> *(p. 1015)* Full entity name of the **DDS_DataReader** (p. 618).

Returns

The first **DDS_DataReader** (p. 618) found with the specified name or NULL if it is not found.

5.4.5 Variable Documentation

5.4.5.1 DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL

```
const struct DDS_DomainParticipantFactoryQos* DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_DomainParticipantFactoryQos_to_string_w_params** (p. 35) indicating that all of the QoS should be printed.

The **DDS_DomainParticipantFactoryQos_to_string_w_params** (p. 35) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL** (p. 159) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_↩ DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL** (p. 159) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrintFormat** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_DomainParticipantFactoryQos_to_string_w_↩ params** (p. 35) API.

5.4.5.2 DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL

```
const struct DDS_DomainParticipantQos* DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_DomainParticipantQos_to_string_w_params** (p. 80) indicating that all of the QoS should be printed.

The **DDS_DomainParticipantQos_to_string_w_params** (p. 80) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL** (p. 159) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_↩ DOMAINPARTICIPANT_QOS_PRINT_ALL** (p. 159) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_Qos↩ PrintFormat** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_DomainParticipantQos_to_string_w_params** (p. 80) API.

5.4.5.3 DDS_TOPIC_QOS_DEFAULT

```
const struct DDS_TopicQos DDS_TOPIC_QOS_DEFAULT [extern]
```

Special value for creating a **DDS_Topic** (p. 174) with default QoS.

When used in **DDS_DomainParticipant_create_topic** (p. 114), this special value is used to indicate that the **DDS_Topic** (p. 174) should be created with the default **DDS_Topic** (p. 174) QoS by means of the operation get_default_topic_qos and using the resulting QoS to create the **DDS_Topic** (p. 174).

When used in **DDS_DomainParticipant_set_default_topic_qos** (p. 86), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_DomainParticipant_set_default_topic_qos** (p. 86) operation had never been called.

When used in **DDS_Topic_set_qos** (p. 196), this special value is used to indicate that the QoS of the **DDS_Topic** (p. 174) should be changed to match the current default QoS set in the **DDS_DomainParticipant** (p. 76) that the **DDS_Topic** (p. 174) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Topic; for this purpose, use **DDS_DomainParticipant_get_default_topic_qos** (p. 85).

See also

Examples

HelloWorld_publisher.c, and **HelloWorld_subscriber.c**.

5.4.5.4 DDS_PUBLISHER_QOS_DEFAULT

```
const struct DDS_PublisherQos DDS_PUBLISHER_QOS_DEFAULT [extern]
```

Special value for creating a **DDS_Publisher** (p. 446) with default QoS.

When used in **DDS_DomainParticipant_create_publisher** (p. 102), this special value is used to indicate that the **DDS_Publisher** (p. 446) should be created with the default **DDS_Publisher** (p. 446) QoS by means of the operation get_default_publisher_qos and using the resulting QoS to create the **DDS_Publisher** (p. 446).

When used in **DDS_DomainParticipant_set_default_publisher_qos** (p. 88), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_DomainParticipant_set_default_publisher_qos** (p. 88) operation had never been called.

When used in **DDS_Publisher_set_qos** (p. 465), this special value is used to indicate that the QoS of the **DDS_Publisher** (p. 446) should be changed to match the current default QoS set in the **DDS_DomainParticipant** (p. 76) that the **DDS_Publisher** (p. 446) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Publisher; for this purpose, use **DDS_DomainParticipant_get_default_publisher_qos** (p. 88).

5.4.5.5 DDS_SUBSCRIBER_QOS_DEFAULT

```
const struct DDS_SubscriberQos DDS_SUBSCRIBER_QOS_DEFAULT [extern]
```

Special value for creating a **DDS_Subscriber** (p. 575) with default QoS.

When used in **DDS_DomainParticipant_create_subscriber** (p. 105), this special value is used to indicate that the **DDS_Subscriber** (p. 575) should be created with the default **DDS_Subscriber** (p. 575) QoS by means of the operation get_default_subscriber_qos and using the resulting QoS to create the **DDS_Subscriber** (p. 575).

When used in **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_DomainParticipant_set_default_subscriber_qos** (p. 93) operation had never been called.

When used in **DDS_Subscriber_set_qos** (p. 595), this special value is used to indicate that the QoS of the **DDS_Subscriber** (p. 575) should be changed to match the current default QoS set in the **DDS_DomainParticipant** (p. 76) that the **DDS_Subscriber** (p. 575) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Subscriber; for this purpose, use **DDS_DomainParticipant_get_default_subscriber_qos** (p. 93).

See also

DDS_DomainParticipant_create_subscriber (p. 105)

5.4.5.6 DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT

```
const struct DDS_FlowControllerProperty_t DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT [extern]
```

<<***extension***>> *(*p. *1014)* Special value for creating a **DDS_FlowController** (p. 562) with default property.

When used in **DDS_DomainParticipant_create_flowcontroller** (p. 123) and **DDS_FlowController_set_property** (p. 565), this special value represents the set of values specified on the last successful call to **DDS_Domain↩ Participant_set_default_flowcontroller_property** (p. 98), or else, if the call was never made, the default values listed in **DDS_FlowControllerProperty_t** (p. 1802).

When used in **DDS_DomainParticipant_set_default_flowcontroller_property** (p. 98), this special value indicates that the default QoS should be reset back to the initial value that would be used if the **DDS_DomainParticipant_set_↩ default_flowcontroller_property** (p. 98) operation had never been called.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default properties for a FlowController; for this purpose, use **DDS_DomainParticipant_get_default_flowcontroller_property** (p. 97).

See also

DDS_DomainParticipant_create_flowcontroller (p. 123)

DDS_DomainParticipant_set_default_flowcontroller_property (p. 98)

DDS_FlowController_set_property (p. 565)

5.4.5.7 DDS_PUBLISHER_QOS_PRINT_ALL

```
const struct DDS_PublisherQos* DDS_PUBLISHER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_PublisherQos_to_string_w_params** (p. 449) indicating that all of the QoS should be printed.

The **DDS_PublisherQos_to_string_w_params** (p. 449) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_↩ PUBLISHER_QOS_PRINT_ALL** (p. 162) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_PUBLISHER↩ _QOS_PRINT_ALL** (p. 162) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrintFormat** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_PublisherQos_to_string_w_params** (p. 449) API.

5.4.5.8 DDS_SQLFILTER_NAME

```
const char* const DDS_SQLFILTER_NAME
```

<<***extension***>> *(p. 1014)* The name of the built-in SQL filter that can be used with ContentFilteredTopics and Multi↩ Channel DataWriters.

See also

Queries and Filters Syntax (p. 739)

5.4.5.9 DDS_STRINGMATCHFILTER_NAME

```
const char* const DDS_STRINGMATCHFILTER_NAME
```

<<***extension***>> *(p. 1014)* The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

The StringMatch Filter is a subset of the SQL filter; it only supports the MATCH relational operator on a single string field.

See also

Queries and Filters Syntax (p. 739)

5.4.5.10 DDS_SUBSCRIBER_QOS_PRINT_ALL

```
const struct DDS_SubscriberQos* DDS_SUBSCRIBER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_SubscriberQos_to_string_w_params** (p. 579) indicating that all of the QoS should be printed.

The **DDS_SubscriberQos_to_string_w_params** (p. 579) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_↩ SUBSCRIBER_QOS_PRINT_ALL** (p. 163) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_↩ SUBSCRIBER_QOS_PRINT_ALL** (p. 163) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrint↩ Format** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_SubscriberQos_to_string_w_params** (p. 579) API.

5.4.5.11 DDS_TOPIC_QOS_PRINT_ALL

```
const struct DDS_TopicQos* DDS_TOPIC_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_TopicQos_to_string_w_params** (p. 189) indicating that all of the QoS should be printed.

The **DDS_TopicQos_to_string_w_params** (p. 189) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_TOPIC_QOS_PRINT_ALL** (p. 163) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_TOPIC_QOS_PRINT_ALL** (p. 163) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrintFormat** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_TopicQos_to_string_w_params** (p. 189) API.

5.5 Built-in Topics

Built-in objects created by RTI Connext but accessible to the application.

Modules

- **Participant Built-in Topics**

  Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.
- **Topic Built-in Topics**
- **Publication Built-in Topics**

  Builtin topic for accessing information about the Publications discovered by RTI Connext.
- **Subscription Built-in Topics**

  Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.
- **ServiceRequest Built-in Topic**

  Builtin topic for accessing requests from different services within RTI Connext.
- **Common types and functions**

  Types and functions related to the built-in topics.

5.5.1 Detailed Description

Built-in objects created by RTI Connext but accessible to the application.

RTI Connext must discover and keep track of the remote entities, such as new participants in the domain. This information may also be important to the application, which may want to react to this discovery, or else access it on demand.

A set of built-in topics and corresponding **DDS_DataReader** (p. 618) objects are introduced to be used by the application to access this discovery information.

The information can be accessed as if it were normal application data. This allows the application to know when there are any changes in those values by means of the **DDS_Listener** (p. 1819) or the **DDS_Condition** (p. 1372) mechanisms.

The built-in data-readers all belong to a built-in **DDS_Subscriber** (p. 575), which can be retrieved by using the function **DDS_DomainParticipant_get_builtin_subscriber** (p. 128). The built-in **DDS_DataReader** (p. 618) objects can be retrieved by using the operation **DDS_Subscriber_lookup_datareader** (p. 589), with the topic name as a parameter.

Built-in entities have default listener settings as well. The built-in **DDS_Subscriber** (p. 575) and all of its built-in topics have 'nil' listeners with all statuses appearing in their listener masks (acting as a NO-OP listener that does not reset communication status). The built-in DataReaders have null listeners with no statuses in their masks.

The information that is accessible about the remote entities by means of the built-in topics includes all the QoS policies that apply to the corresponding remote Entity. These QoS policies appear as normal 'data' fields inside the data read by means of the built-in Topic. Additional information is provided to identify the Entity and facilitate the application logic.

The built-in **DDS_DataReader** (p. 618) will not provide data pertaining to entities created from the same **DDS_Domain↩ Participant** (p. 76) under the assumption that such entities are already known to the application that created them.

The discovery information provided by each built-in reader won't be received until it is first looked up. And if the Domain↩ Participant was created in a disabled state (see **DDS_EntityFactoryQosPolicy** (p. 1791)), the built-in subscriber and readers will need to be enabled explicitly (by the **DDS_Entity_enable** (p. 1365) operation).

Refer to **DDS_ParticipantBuiltinTopicData** (p. 1873), **DDS_TopicBuiltinTopicData** (p. 2040), **DDS_Subscription↩ BuiltinTopicData** (p. 2018) and **DDS_PublicationBuiltinTopicData** (p. 1909) for a description of all the built-in topics and their contents.

The QoS of the built-in **DDS_Subscriber** (p. 575) and **DDS_DataReader** (p. 618) objects is given by the following table:

Table 5.151 ***QoS of built-in DDS_Subscriber (*** p. ***575) and DDS_DataReader (*** p. ***618)***

QoS	Value
DDS_UserDataQosPolicy (p. 2092)	0-length sequence
DDS_TopicDataQosPolicy (p. 2046)	0-length sequence
DDS_GroupDataQosPolicy (p. 1806)	0-length sequence
DDS_DurabilityQosPolicy (p. 1762)	**DDS_TRANSIENT_LOCAL_DURABILITY_QOS** (p. 1290)
DDS_DurabilityServiceQosPolicy (p. 1767)	Does not apply as **DDS_DurabilityQosPolicyKind** (p. 1289) is **DDS_TRANSIENT_LOCAL_DURABILITY_QOS** (p. 1290)
DDS_PresentationQosPolicy (p. 1894)	access_scope = **DDS_TOPIC_PRESENTATION_QOS** (p. 1307) coherent_access = **DDS_BOOLEAN_FALSE** (p. 1203) ordered_access = **DDS_BOOLEAN_FALSE** (p. 1203)

QoS	Value
DDS_DeadlineQosPolicy (p. 1685)	Period = infinite
DDS_LatencyBudgetQosPolicy (p. 1816)	duration = 0
DDS_OwnershipQosPolicy (p. 1867)	**DDS_SHARED_OWNERSHIP_QOS** (p. 1304)
DDS_OwnershipStrengthQosPolicy (p. 1872)	value = 0
DDS_LivelinessQosPolicy (p. 1826)	kind = **DDS_AUTOMATIC_LIVELINESS_QOS** (p. 1299) lease_duration = 0
DDS_TimeBasedFilterQosPolicy (p. 2038)	minimum_separation = 0
DDS_PartitionQosPolicy (p. 1884)	0-length sequence
DDS_ReliabilityQosPolicy (p. 1940)	kind = **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) max_blocking_time = 100 milliseconds
DDS_DestinationOrderQosPolicy (p. 1688)	**DDS_BY_RECEPTION_TIMESTAMP_↩ DESTINATIONORDER_QOS** (p. 1276)
DDS_HistoryQosPolicy (p. 1808)	kind = **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295) depth = 1
DDS_ResourceLimitsQosPolicy (p. 1953)	max_samples = **DDS_LENGTH_UNLIMITED** (p. 1328) max_instances = **DDS_LENGTH_UNLIMITED** (p. 1328) max_samples_per_instance = **DDS_LENGTH_UNLIMITED** (p. 1328)
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	autopurge_nowriter_samples_delay = infinite autopurge_disposed_samples_delay = infinite
DDS_EntityFactoryQosPolicy (p. 1791)	autoenable_created_entities = **DDS_BOOLEAN_TRUE** (p. 1203)

5.6 Topic Module

Contains the **DDS_Topic** (p. 174), **DDS_ContentFilteredTopic** (p. 176), and **DDS_MultiTopic** (p. 184) classes, the **DDS_TopicListener** (p. 2047) interface, and more generally, all that is needed by an application to define **DDS_Topic** (p. 174) objects and attach QoS policies to them.

Modules

- **Topics**

  DDS_Topic *(p. 174) entity and associated elements*
- **FlatData Topic-Types**

  *<<**extension**>> (p. 1014) FlatData Language Binding for IDL topic-types*
- **Zero Copy Transfer Over Shared Memory**

  *<<**extension**>> (p. 1014) Zero Copy transfer over shared memory*
- **User Data Type Support**

  Defines generic classes and macros to support user data types.
- **Type Code Support**

*<<**extension**>> (p. 1014) A **DDS_TypeCode** (p. 2077) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 315) capability or to inspect the type information you receive from remote readers and writers.*

- **Built-in Types**

  RTI Connext provides a set of very simple data types for you to use with the topics in your application.

- **Built-in Topic's Trust Types**

  *Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1873), **DDS_PublicationBuiltinTopicData** (p. 1909), **DDS_SubscriptionBuiltinTopicData** (p. 2018) to describe Trust Plugins configuration.*

- **Dynamic Data**

  *<<**extension**>> (p. 1014) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.*

- **DDS-Specific Primitive Types**

  Basic DDS value types for use in user data types.

5.6.1 Detailed Description

Contains the **DDS_Topic** (p. 174), **DDS_ContentFilteredTopic** (p. 176), and **DDS_MultiTopic** (p. 184) classes, the **DDS_TopicListener** (p. 2047) interface, and more generally, all that is needed by an application to define **DDS_Topic** (p. 174) objects and attach QoS policies to them.

5.7 Topics

DDS_Topic (p. 174) entity and associated elements

Data Structures

- struct **DDS_PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.

- struct **DDS_InconsistentTopicStatus**

  ***DDS_INCONSISTENT_TOPIC_STATUS** (p. 1230)*

- struct **DDS_TopicQos**

  *QoS policies supported by a **DDS_Topic** (p. 174) entity.*

- struct **DDS_TopicListener**

  *<<**interface**>> (p. 1015) **DDS_Listener** (p. 1819) for **DDS_Topic** (p. 174) entities.*

- struct **DDS_ContentFilter**

  *<<**interface**>> (p. 1015) Interface to be used by a custom filter of a **DDS_ContentFilteredTopic** (p. 176)*

- struct **DDS_ExpressionProperty**

  *Provides additional information about the filter expression passed to **DDS_ContentFilter::writer_compile** (p. 1573).*

- struct **DDS_FilterSampleInfo**

  Provides meta information associated with the sample.

Macros

- #define **DDS_PrintFormatProperty_INITIALIZER**

  *Static initializer for **DDS_PrintFormatProperty** (p. 1898) objects.*
- #define **DDS_InconsistentTopicStatus_INITIALIZER**

  Initializer for new status instances.
- #define **DDS_TopicQos_INITIALIZER**

  Initializer for new QoS instances.
- #define **DDS_TopicListener_INITIALIZER**

  *Initializer for new **DDS_TopicListener** (p. 2047).*
- #define **DDS_ContentFilter_INITIALIZER**

  *Initializer for new **DDS_ContentFilter** (p. 1571).*

Typedefs

- typedef struct **DDS_PrintFormatProperty** **DDS_PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.
- typedef struct DDS_TopicDescriptionImpl **DDS_TopicDescription**

  *<<**interface**>> (p. 1015) Base class for **DDS_Topic** (p. 174), **DDS_ContentFilteredTopic** (p. 176), and **DDS_MultiTopic** (p. 184).*
- typedef struct DDS_TopicWrapperI **DDS_Topic**

Enumerations

- enum **DDS_PrintFormatKind** {
  DDS_DEFAULT_PRINT_FORMAT ,
  DDS_XML_PRINT_FORMAT ,
  DDS_JSON_PRINT_FORMAT }

  Format kinds available when converting data samples to string representations.

Functions

- **DDS_ReturnCode_t** **DDS_InconsistentTopicStatus_initialize** (struct **DDS_InconsistentTopicStatus** *self)

  Initializer for new status instances.
- **DDS_ReturnCode_t** **DDS_InconsistentTopicStatus_copy** (struct **DDS_InconsistentTopicStatus** *self, const struct **DDS_InconsistentTopicStatus** *source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t** **DDS_InconsistentTopicStatus_finalize** (struct **DDS_InconsistentTopicStatus** *self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean** **DDS_InconsistentTopicStatus_equals** (const struct **DDS_InconsistentTopicStatus** *left, const struct **DDS_InconsistentTopicStatus** *right)

  *Compares two **DDS_InconsistentTopicStatus*** (p. *1811*) *for equality.*
- **DDS_Boolean** **DDS_TopicQos_equals** (const struct **DDS_TopicQos** *self, const struct **DDS_TopicQos** *other)

  *Compares two **DDS_TopicQos*** (p. *2048*) *for equality.*
- **DDS_ReturnCode_t** **DDS_TopicQos_print** (const struct **DDS_TopicQos** *self)

  *Prints this **DDS_TopicQos*** (p. *2048*) *to stdout.*
- **DDS_ReturnCode_t** **DDS_TopicQos_to_string** (const struct **DDS_TopicQos** *self, char *string, **DDS_UnsignedLong** *string_size)

  *Obtains a string representation of this **DDS_TopicQos*** (p. *2048*).
- **DDS_ReturnCode_t** **DDS_TopicQos_to_string_w_params** (const struct **DDS_TopicQos** *self, char *string, **DDS_UnsignedLong** *string_size, const struct **DDS_TopicQos** *base, const struct **DDS_QosPrintFormat** *format)

  *Obtains a string representation of this **DDS_TopicQos*** (p. *2048*).
- **DDS_ReturnCode_t** **DDS_TopicQos_initialize** (struct **DDS_TopicQos** *self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t** **DDS_TopicQos_finalize** (struct **DDS_TopicQos** *self)

  *Free any dynamic memory allocated by the policies in this **DDS_TopicQos*** (p. *2048*).

- **DDS_ReturnCode_t DDS_TopicQos_copy** (struct **DDS_TopicQos** *self, const struct **DDS_TopicQos** *source)

  Copy the contents of the given QoS into this QoS.
- const char * **DDS_TopicDescription_get_type_name** (**DDS_TopicDescription** *self)

  Get the associated `type_name`*.*
- const char * **DDS_TopicDescription_get_name** (**DDS_TopicDescription** *self)

  *Get the name used to create this **DDS_TopicDescription*** (p. *174*) *.*
- **DDS_DomainParticipant** * **DDS_TopicDescription_get_participant** (**DDS_TopicDescription** *self)

  *Get the **DDS_DomainParticipant*** (p. *76*) *to which the **DDS_TopicDescription*** (p. *174*) *belongs.*
- **DDS_Entity** * **DDS_Topic_as_entity** (**DDS_Topic** *topic)

  *Access a **DDS_Topic*** (p. *174*)*'s **DDS_Entity*** (p. *1362*) *supertype instance.*
- **DDS_TopicDescription** * **DDS_Topic_as_topicdescription** (**DDS_Topic** *topic)

  *Access a **DDS_Topic*** (p. *174*)*'s **DDS_TopicDescription*** (p. *174*) *supertype instance.*
- **DDS_Topic** * **DDS_Topic_narrow** (**DDS_TopicDescription** *self)

  *Narrow the given **DDS_TopicDescription*** (p. *174*) *pointer to a **DDS_Topic*** (p. *174*) *pointer.*
- **DDS_Topic** * **DDS_Topic_narrow_from_entity** (**DDS_Entity** *self)

  *Narrow the given **DDS_Entity*** (p. *1362*) *pointer to a **DDS_Topic*** (p. *174*) *pointer.*
- **DDS_ReturnCode_t DDS_Topic_get_inconsistent_topic_status** (**DDS_Topic** *self, struct **DDS_InconsistentTopicStatus** *status)

  *Allows the application to retrieve the **DDS_INCONSISTENT_TOPIC_STATUS*** (p. *1230*) *status of a **DDS_Topic*** (p. *174*)*.*
- **DDS_ReturnCode_t DDS_Topic_set_qos** (**DDS_Topic** *self, const struct **DDS_TopicQos** *qos)

  Set the topic QoS.
- **DDS_ReturnCode_t DDS_Topic_set_qos_with_profile** (**DDS_Topic** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Change the QoS of this topic using the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_Topic_get_qos** (**DDS_Topic** *self, struct **DDS_TopicQos** *qos)

  Get the topic QoS.
- **DDS_ReturnCode_t DDS_Topic_set_listener** (**DDS_Topic** *self, const struct **DDS_TopicListener** *l, **DDS_StatusMask** mask)

  Set the topic listener.
- struct **DDS_TopicListener DDS_Topic_get_listener** (**DDS_Topic** *self)

  Get the topic listener.
- **DDS_ReturnCode_t DDS_Topic_get_listenerX** (**DDS_Topic** *self, struct **DDS_TopicListener** *listener)

  *<<**extension**>> (p. 1014) Get the topic listener.*
- **DDS_TopicDescription** * **DDS_ContentFilteredTopic_as_topicdescription** (**DDS_ContentFilteredTopic** *contentFilteredTopic)

  *Access a **DDS_ContentFilteredTopic*** (p. *176*)*'s supertype instance.*
- **DDS_ContentFilteredTopic** * **DDS_ContentFilteredTopic_narrow** (**DDS_TopicDescription** *self)

  *Narrow the given **DDS_TopicDescription*** (p. *174*) *pointer to a **DDS_ContentFilteredTopic*** (p. *176*) *pointer.*
- const char * **DDS_ContentFilteredTopic_get_filter_expression** (**DDS_ContentFilteredTopic** *self)

  Get the `filter_expression`*.*
- **DDS_ReturnCode_t DDS_ContentFilteredTopic_get_expression_parameters** (**DDS_ContentFilteredTopic** *self, struct **DDS_StringSeq** *parameters)

  Get the `expression_parameters`*.*
- **DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression_parameters** (**DDS_ContentFilteredTopic** *self, const struct **DDS_StringSeq** *parameters)

  Set the `expression_parameters`*.*

- **DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression** (**DDS_ContentFilteredTopic** ∗self, const char ∗expression, const struct **DDS_StringSeq** ∗parameters)

  Set the `filter_expression` *and* `expression_parameters`*.*
- **DDS_ReturnCode_t DDS_ContentFilteredTopic_append_to_expression_parameter** (**DDS_Content↩ FilteredTopic** ∗self, const **DDS_Long** index, const char ∗val)

  *<<**extension**>> (*p. *1014) Appends a string term to the specified parameter string.*
- **DDS_ReturnCode_t DDS_ContentFilteredTopic_remove_from_expression_parameter** (**DDS_Content↩ FilteredTopic** ∗self, const **DDS_Long** index, const char ∗val)

  *<<**extension**>> (*p. *1014) Removes a string term from the specified parameter string.*
- **DDS_Topic** ∗ **DDS_ContentFilteredTopic_get_related_topic** (**DDS_ContentFilteredTopic** ∗self)

  Get the `related_topic`*.*
- **DDS_TopicDescription** ∗ **DDS_MultiTopic_as_topicdescription** (**DDS_MultiTopic** ∗multiTopic)

  *Access a **DDS_MultiTopic** (*p. *184)'s supertype instance.*
- **DDS_MultiTopic** ∗ **DDS_MultiTopic_narrow** (**DDS_TopicDescription** ∗self)

  *Narrow the given **DDS_TopicDescription** (*p. *174) pointer to a **DDS_MultiTopic** (*p. *184) pointer.*
- const char ∗ **DDS_MultiTopic_get_subscription_expression** (**DDS_MultiTopic** ∗self)

  *Get the expression for this **DDS_MultiTopic** (*p. *184).*
- **DDS_ReturnCode_t DDS_MultiTopic_get_expression_parameters** (**DDS_MultiTopic** ∗self, struct **DDS_↩ StringSeq** ∗parameters)

  Get the expression parameters.
- **DDS_ReturnCode_t DDS_MultiTopic_set_expression_parameters** (**DDS_MultiTopic** ∗self, const struct **DDS_StringSeq** ∗parameters)

  Set the `expression_parameters`*.*

Variables

- const struct **DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_PrintFormatProperty** (*p. *1898).*
- const struct **DDS_FilterSampleInfo DDS_FILTERSAMPLEINFO_DEFAULT**

  *Initializer for new **DDS_FilterSampleInfo** (*p. *1799).*

5.7.1 Detailed Description

DDS_Topic (p. 174) entity and associated elements

5.7.2 Macro Definition Documentation

5.7.2.1 DDS_PrintFormatProperty_INITIALIZER

```
#define DDS_PrintFormatProperty_INITIALIZER
```

Static initializer for **DDS_PrintFormatProperty** (p. 1898) objects.

Use this initializer to ensure that new property objects don't have uninitialized contents.
```
struct DDS_PrintFormatProperty props = DDS_PrintFormatProperty_INITIALIZER;
```

See also

DDS_PrintFormatProperty (p. 1898)

5.7.2.2 DDS_InconsistentTopicStatus_INITIALIZER

```
#define DDS_InconsistentTopicStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_InconsistentTopicStatus** (p. 1811) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Inconsistent↩ TopicStatus_finalize** (p. 187) should be called to free the contained fields that use dynamic memory:
```
struct DDS_InconsistentTopicStatus myStatus = DDS_InconsistentTopicStatus_INITIALIZER;

DDS_Topic_get_inconsistent_topic(myTopic, &myStatus);

DDS_InconsistentTopicStatus_finalize(&myStatus);
```

See also

DDS_InconsistentTopicStatus_initialize (p. 185)

DDS_Topic_get_inconsistent_topic_status (p. 195)

DDS_InconsistentTopicStatus_finalize (p. 187)

5.7.2.3 DDS_TopicQos_INITIALIZER

```
#define DDS_TopicQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_TopicQos** (p. 2048) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_TopicQos myQos = DDS_TopicQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipant_get_default_topic_qos** (p. 85) or **DDS_Topic_get_qos** (p. 198); one of those should be called subsequently to setting the QoS of a new or existing entity. **DDS_TopicQos_finalize** (p. 191) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_TopicQos myQos = DDS_TopicQos_INITIALIZER;

DDS_DomainParticipant_get_default_topic_qos(myParticipant, &myQos);

DDS_Topic_set_qos(myTopic, &myQos);

DDS_TopicQos_finalize(&myQos);
```

See also

DDS_DomainParticipant_get_default_topic_qos (p. 85)

DDS_TopicQos_finalize (p. 191)

5.7.2.4 DDS_TopicListener_INITIALIZER

```
#define DDS_TopicListener_INITIALIZER
```

Initializer for new **DDS_TopicListener** (p. 2047).

All the new **DDS_TopicListener** (p. 2047) instances allocated in the stack should be initialized to this value.No memory is allocated.

```
struct DDS_TopicListener listener = DDS_TopicListener_INITIALIZER;

/* initialize listener functions */

listener.on_inconsistent_topic = ....;

DDS_Topic_set_listener(myTopic, &listener, mask);
```

See also

DDS_Topic_set_listener (p. 198)

DDS_TopicListener (p. 2047)

5.7.2.5 DDS_ContentFilter_INITIALIZER

```
#define DDS_ContentFilter_INITIALIZER
```

Initializer for new **DDS_ContentFilter** (p. 1571).

All the new **DDS_ContentFilter** (p. 1571) instances allocated in the stack should be initialized to this value. No memory is allocated.

See also

DDS_ContentFilter (p. 1571)

DDS_DomainParticipant_create_contentfilteredtopic_with_filter (p. 118)

5.7.3 Typedef Documentation

5.7.3.1 DDS_PrintFormatProperty

```
typedef struct DDS_PrintFormatProperty DDS_PrintFormatProperty
```

A collection of attributes used to configure how data samples will be formatted when converted to a string.

To ensure that new objects are initialized to known values, assign them with the static initializer **DDS_PrintFormat↩ Property_INITIALIZER** (p. 171).

See also

DDS_PrintFormatProperty_INITIALIZER (p. 171)

5.7.3.2 DDS_TopicDescription

```
typedef struct DDS_TopicDescriptionImpl DDS_TopicDescription
```

<<***interface***>> *(*p. *1015)* Base class for **DDS_Topic** (p. 174), **DDS_ContentFilteredTopic** (p. 176), and **DDS_Multi↩ Topic** (p. 184).

DDS_TopicDescription (p. 174) represents the fact that both publications and subscriptions are tied to a single data-type. Its attribute `type_name` defines a unique resulting type for the publication or the subscription and therefore creates an implicit association with a **DDS_TypeSupport** (p. 213).

DDS_TopicDescription (p. 174) has also a `name` that allows it to be retrieved locally.

See also

DDS_TypeSupport (p. 213), **FooTypeSupport** (p. 2121)

5.7.3.3 DDS_Topic

```
typedef struct DDS_TopicWrapperI DDS_Topic
```

<<***interface***>> *(*p. *1015)* The most basic description of the data to be published and subscribed.

QoS:

DDS_TopicQos (p. 2048)

Status:

DDS_INCONSISTENT_TOPIC_STATUS (p. 1230), **DDS_InconsistentTopicStatus** (p. 1811)

Listener:

DDS_TopicListener (p. 2047)

A **DDS_Topic** (p. 174) is identified by its name, which must be unique in the whole domain. In addition (by virtue of extending **DDS_TopicDescription** (p. 174)) it fully specifies the type of the data that can be communicated when publishing or subscribing to the **DDS_Topic** (p. 174).

DDS_Topic (p. 174) is the only **DDS_TopicDescription** (p. 174) that can be used for publications and therefore associated with a **DDS_DataWriter** (p. 488).

The following operations may be called even if the **DDS_Topic** (p. 174) is not enabled. Other operations will fail with the value **DDS_RETCODE_NOT_ENABLED** (p. 1224) if called on a disabled **DDS_Topic** (p. 174):

- **DDS_Entity_enable** (p. 1365)
- **DDS_Topic_set_qos** (p. 196), **DDS_Topic_get_qos** (p. 198)
- **DDS_Topic_set_qos_with_profile** (p. 197)
- **DDS_Topic_set_listener** (p. 198), **DDS_Topic_get_listener** (p. 199)
- **DDS_Entity_get_statuscondition** (p. 1367), **DDS_Entity_get_status_changes** (p. 1367)
- **DDS_Topic_get_inconsistent_topic_status** (p. 195)

See also

Operations Allowed in Listener Callbacks (p. 1821)

5.7.3.4 DDS_TopicListener_InconsistentTopicCallback

```
typedef void(* DDS_TopicListener_InconsistentTopicCallback) (void *listener_data, DDS_Topic *topic,
const struct DDS_InconsistentTopicStatus *status)
```

Prototype of **DDS_TopicListener::on_inconsistent_topic** (p. 2048).

Parameters

listener_data	<<***out***>> *(p. 1015)* Data associated with the listener when the listener is set
topic	<<***out***>> *(p. 1015)* Locally created **DDS_Topic** (p. 174) that triggers the listener callback
status	<<***out***>> *(p. 1015)* Current inconsistent status of the locally created **DDS_Topic** (p. 174)

5.7.3.5 DDS_ContentFilteredTopic

```
typedef struct DDS_ContentFilteredTopicWrapperI DDS_ContentFilteredTopic
```

<<***interface***>> *(p. 1015)* Specialization of **DDS_TopicDescription** (p. 174) that allows for content-based subscriptions.

It describes a more sophisticated subscription that indicates a **DDS_DataReader** (p. 618) does not want to necessarily see all values of each instance published under the **DDS_Topic** (p. 174). Rather, it wants to see only the values whose contents satisfy certain criteria. This class therefore can be used to request content-based subscriptions.

The selection of the content is done using the `filter_expression` with parameters `expression_parameters`.

- The `filter_expression` attribute is a string that specifies the criteria to select the data samples of interest. It is similar to the WHERE part of an SQL clause.

- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `filter_expression`. The number of supplied parameters must fit with the requested values in the `filter_expression` (i.e. the number of n tokens).

Queries and Filters Syntax (p. 739) describes the syntax of `filter_expression` and `expression_parameters`.

5.7.3.6 DDS_ContentFilterCompileFunction

```
typedef DDS_ReturnCode_t(* DDS_ContentFilterCompileFunction) (void *filter_data, void **new_compile_data, const char *expression, const struct DDS_StringSeq *parameters, const struct DDS_TypeCode *type_code, const char *type_class_name, void *old_compile_data)
```

Prototype of **DDS_ContentFilter::compile** (p. 1572).

Compile an instance of the content filter according to the filter expression and parameters of the given data type.

This function is called when an instance of the locally registered content filter is created or when the expression parameter for the locally registered content filter instance is changed.

An instance of the locally registered content filter is created every time a local **DDS_ContentFilteredTopic** (p. 176) with the matching filter name is created, or when a **DDS_DataReader** (p. 618) with a matching filter name is discovered.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL. When a custom filter is registered, it is registered with a **filter_data**. This filter_data is user defined, e.g., it could be a reference to a program context. This is useful if the content filter functions are registered with different filter names. For instance, each filter name could have its own context and the **DDS_ContentFilter::compile** (p. 1572) function can access this context.

Parameters

new_compile_data	*<<**out**>> (p. 1015)* User specified opaque pointer of this instance of the content filter. This value is then passed to the **DDS_ContentFilter::evaluate** (p. 1574) and **DDS_ContentFilter::finalize** (p. 1576) functions for this instance of the content filter. Can be set to NULL .
expression	*<<**in**>> (p. 1015)* An ASCIIZ string with the filter expression. The memory used by this string is owned by RTI Connext and **must** not be freed. If you want to manipulate this string, you **must** first make a copy of it.
parameters	*<<**in**>> (p. 1015)* A string sequence with the expression parameters the **DDS_ContentFilteredTopic** (p. 176) was created with. The string sequence is **equal** (but **not** identical) to the string sequence passed to **DDS_DomainParticipant_create_contentfilteredtopic** (p. 117). Note that the sequence passed to the compile function is **owned** by RTI Connext and **must not** be referenced outside the compile function.
type_code	*<<**in**>> (p. 1015)* A pointer to the type code for the related **DDS_Topic** (p. 174) of the **DDS_ContentFilteredTopic** (p. 176). A type_code is a description of a type in terms of which types it contains (int32, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
type_class_name	*<<**in**>> (p. 1015)* Fully qualified class name of the related **DDS_Topic** (p. 174).
old_compile_data	*<<**in**>> (p. 1015)* The previous new_compile_data value from a previous call to this instance of a content filter. If the compile function is called more than once for an instance of a **DDS_ContentFilteredTopic** (p. 176), e.g., if the expression parameters are changed, then the new_compile_data value returned by the previous invocation is passed in the old_compile_data parameter (which can be NULL). If this is a new instance of the filter, NULL is passed. This parameter is useful for freeing or reusing previously allocated resources.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.3.7 DDS_ContentFilterEvaluateFunction

```
typedef DDS_Boolean(* DDS_ContentFilterEvaluateFunction) (void *filter_data, void *compile_data,
const void *sample, const struct DDS_FilterSampleInfo *meta_data)
```

Prototype of **DDS_ContentFilter::evaluate** (p. 1574).

Evaluate whether the sample is passing the filter or not according to the sample content.

This function is called when a sample for a locally created **DDS_DataReader** (p. 618) associated with the filter is received, or when a sample for a discovered **DDS_DataReader** (p. 618) assocated with the filter needs to be sent.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

Parameters

filter_data	<<***in***>> *(*p. *1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

compile_data	<<***in***>> *(*p. *1015)* The last return value of the **DDS_ContentFilter::compile** (p. 1572) function for this instance of the content filter. Can be NULL .
sample	<<***in***>> *(*p. *1015)* Pointer to a deserialized sample to be filtered
meta_data	<<***in***>> *(*p. *1015)* Pointer to meta data associated with the sample.

Returns

The function must return 0 if the sample should be filtered out, non zero otherwise

5.7.3.8 DDS_ContentFilterFinalizeFunction

```
typedef void(* DDS_ContentFilterFinalizeFunction) (void *filter_data, void *compile_data)
```

Prototype of **DDS_ContentFilter::finalize** (p. 1576).

A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.

This function is called when an instance of the locally registered content filter is deleted.

An instance of the locally registered content filter is deleted every time a local **DDS_ContentFilteredTopic** (p. 176) with the matching filter name is deleted, or when a **DDS_DataReader** (p. 618) with a matching filter name is removed due to discovery.

This function is also called on all instances of the discovered **DDS_DataReader** (p. 618) with a matching filter name if the filter is unregistered with **DDS_DomainParticipant_unregister_contentfilter** (p. 120).

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

compile_data	*<<**in**>> (p. 1015)* The last return value of the **DDS_ContentFilter::compile** (p. 1572) function for this instance of the content filter. Can be NULL

5.7.3.9 DDS_ContentFilterWriterFinalizeFunction

```
typedef void(* DDS_ContentFilterWriterFinalizeFunction) (void *filter_data, void *writer_filter_↩
data, const struct  DDS_Cookie_t *cookie)
```

Prototype of **DDS_ContentFilter::writer_finalize** (p. 1577).

A writer-side filtering API to clean up a previously compiled instance of the content filter.

This function is called to notify the filter implementation that the **DDS_DataWriter** (p. 488) is no longer matching with a **DDS_DataReader** (p. 618) for which it was previously performing writer-side filtering. This will allow the filter to purge any state it was maintaining for the **DDS_DataReader** (p. 618).

It is possible for multiple threads to be calling into this function at the same time.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	*<<**in**>> (p. 1015)* A pointer to the state created using **DDS_ContentFilter::writer_attach** (p. 1577).
cookie	**DDS_Cookie_t** (p. 1580) to uniquely identify **DDS_DataReader** (p. 618) for which **DDS_ContentFilter::writer_finalize** (p. 1577) was called.

5.7.3.10 DDS_ContentFilterWriterAttachFunction

```
typedef  DDS_ReturnCode_t(* DDS_ContentFilterWriterAttachFunction) (void *filter_data, void **writer↩
_filter_data, void *reserved)
```

Prototype of **DDS_ContentFilter::writer_attach** (p. 1577).

A writer-side filtering API to create some state that can facilitate filtering on the writer side.

This function is called to create some state required to perform filtering on the writer side using writer-side filtering APIs. This function will be called for every **DDS_DataWriter** (p. 488); it will be called only the first time the **DDS_DataWriter** (p. 488) matches a **DDS_DataReader** (p. 618) using the specified filter. This function will not be called for any subsequent DataReaders that match the DataWriter and are using the same filter.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	*<<**out**>> (p. 1015)* A user-specified opaque pointer to some state created on the **DDS_DataWriter** (p. 488) that will help perform writer-side filtering efficiently.

Parameters

reserved	Reserved.

5.7.3.11 DDS_ContentFilterWriterDetachFunction

```
typedef void(* DDS_ContentFilterWriterDetachFunction) (void *filter_data, void *writer_filter_↩
data)
```

Prototype of **DDS_ContentFilter::writer_detach** (p. 1578).

A writer-side filtering API to clean up a previously created state using **DDS_ContentFilter::writer_attach** (p. 1577).

This function is called to delete any state created using the **DDS_ContentFilter::writer_attach** (p. 1577) function. This function will be called when the **DDS_DataWriter** (p. 488) is deleted.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	*<<**in**>> (p. 1015)* A pointer to the state created using **DDS_ContentFilter::writer_attach** (p. 1577).

5.7.3.12 DDS_ContentFilterWriterCompileFunction

```
typedef DDS_ReturnCode_t(* DDS_ContentFilterWriterCompileFunction) (void *filter_data, void *writer↩
_filter_data, struct DDS_ExpressionProperty *prop, const char *expression, const struct DDS_↩
StringSeq *parameters, const struct DDS_TypeCode *type_code, const char *type_class_name, const
struct DDS_Cookie_t *cookie)
```

Prototype of **DDS_ContentFilter::writer_compile** (p. 1573).

A writer-side filtering API to compile an instance of the content filter according to the filter expression and parameters specified by a matching **DDS_DataReader** (p. 618).

This function is called when the **DDS_DataWriter** (p. 488) discovers a **DDS_DataReader** (p. 618) with a **DDS_↩ ContentFilteredTopic** (p. 176) or when a **DDS_DataWriter** (p. 488) is notified of a change in a DataReader's filter parameter for the locally registered content filter instance.

It is possible for multiple threads to be calling into this function at the same time.

Parameters

filter_data	*<<**in**>> (p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	*<<**in**>> (p. 1015)* A pointer to the state created using **DDS_ContentFilter::writer_attach** (p. 1577) .
prop	*<<**out**>> (p. 1015)* A pointer to **DDS_ExpressionProperty** (p. 1798) that allows you to indicate to RTI Connext if a filter expression can be optimized.
expression	*<<**in**>> (p. 1015)* An ASCIIZ string with the filter expression. The memory used by this string is owned by RTI Connext and **must** not be freed. If you want to manipulate this string, you **must** first make a copy of it.
parameters	*<<**in**>> (p. 1015)* A string sequence with the expression parameters with which the **DDS_ContentFilteredTopic** (p. 176) was created. The string sequence is **equal** (but **not** identical) to the string sequence passed to **DDS_DomainParticipant_create_contentfilteredtopic** (p. 117). Note that the sequence passed to the compile function is **owned** by RTI Connext and **must not** be referenced outside the compile function.
type_code	*<<**in**>> (p. 1015)* A pointer to the type code for the related **DDS_Topic** (p. 174) of the **DDS_ContentFilteredTopic** (p. 176). A type_code is a description of a type in terms of which types it contains (int32, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
type_class_name	*<<**in**>> (p. 1015)* Fully qualified class name of the related **DDS_Topic** (p. 174).
cookie	*<<**in**>> (p. 1015)* **DDS_Cookie_t** (p. 1580) to uniquely identify **DDS_DataReader** (p. 618) for which **DDS_ContentFilter::writer_compile** (p. 1573) was called.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.3.13 DDS_ContentFilterWriterEvaluateFunction

```
typedef struct DDS_CookieSeq *(* DDS_ContentFilterWriterEvaluateFunction) (void *filter_data,
void *writer_filter_data, const void *sample, const struct DDS_FilterSampleInfo *meta_data)
```

Prototype of **DDS_ContentFilter::writer_evaluate** (p. 1576).

A writer-side filtering API to retrieve a list of DataReaders whose content filters pass the sample.

This function is called every time a **DDS_DataWriter** (p. 488) writes a new sample. Its purpose is to evaluate the sample for all the readers for which the **DDS_DataWriter** (p. 488) is performing writer-side filtering and return the list of **DDS_Cookie_t** (p. 1580) structures associated with the DataReaders whose filters pass the sample.

It is possible for multiple threads to be calling into this function at the same time

Parameters

filter_data	<<***in***>> *(p. 1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	<<***in***>> *(p. 1015)* A pointer to the state created using **DDS_ContentFilter::writer_attach** (p. 1577) .
sample	<<***in***>> *(p. 1015)* Pointer to a deserialized sample to be filtered.
meta_data	<<***in***>> *(p. 1015)* Pointer to meta data associated with the sample.

Returns

The function returns **DDS_CookieSeq** (p. 1581) which identifies the set of DataReaders whose filters pass the sample.

5.7.3.14 DDS_ContentFilterWriterReturnLoanFunction

```
typedef void(* DDS_ContentFilterWriterReturnLoanFunction) (void *filter_data, void *writer_↩
filter_data, struct DDS_CookieSeq *cookies)
```

Prototype of **DDS_ContentFilter::writer_return_loan** (p. 1578).

A writer-side filtering API to return the loan on the list of DataReaders returned by **DDS_ContentFilter::writer_evaluate** (p. 1576).

This function is called to return the loan on **DDS_CookieSeq** (p. 1581) returned by **DDS_ContentFilter::writer_return_loan** (p. 1578). It is possible for multiple threads to be calling into this function at the same time.

Parameters

filter_data	<<***in***>> *(*p. *1015)* The opaque pointer that the content filter was registered with in **DDS_DomainParticipant_register_contentfilter** (p. 119). Can be NULL.

Parameters

writer_filter_data	<<***in***>> *(*p. *1015)* A pointer to the state created using **DDS_ContentFilter::writer_attach** (p. 1577).
cookies	<<***in***>> *(*p. *1015)* **DDS_CookieSeq** (p. 1581) for which the **DDS_ContentFilter::writer_return_loan** (p. 1578) was invoked.

5.7.3.15 DDS_MultiTopic

`typedef struct DDS_MultiTopicImpl` **`DDS_MultiTopic`**

[Not supported (optional)] <<***interface***>> *(*p. *1015)* A specialization of **DDS_TopicDescription** (p. 174) that allows subscriptions that combine/filter/rearrange data coming from several topics.

DDS_MultiTopic (p. 184) allows a more sophisticated subscription that can select and combine data received from multiple topics into a single resulting type (specified by the inherited `type_name`). The data will then be filtered (selection) and possibly re-arranged (aggregation/projection) according to a `subscription_expression` with parameters `expression_parameters`.

- The `subscription_expression` is a string that identifies the selection and re-arrangement of data from the associated topics. It is similar to an SQL statement where the SELECT part provides the fields to be kept, the FROM part provides the names of the topics that are searched for those fields, and the WHERE clause gives the content filter. The Topics combined may have different types but they are restricted in that the type of the fields used for the NATURAL JOIN operation must be the same.

- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.↩ e. "%n" tokens) in the `subscription_expression`. The number of supplied parameters must fit with the requested values in the `subscription_expression` (i.e. the number of n tokens).

- **DDS_DataReader** (p. 618) entities associated with a **DDS_MultiTopic** (p. 184) are alerted of data modifications by the usual **DDS_Listener** (p. 1819) or **DDS_WaitSet** (p. 1373) / **DDS_Condition** (p. 1372) mechanisms whenever modifications occur to the data associated with any of the topics relevant to the **DDS_MultiTopic** (p. 184).

Note that the source for data may not be restricted to a single topic.

DDS_DataReader (p. 618) entities associated with a **DDS_MultiTopic** (p. 184) may access instances that are "constructed" at the **DDS_DataReader** (p. 618) side from the instances written by multiple **DDS_DataWriter** (p. 488) entities. The **DDS_MultiTopic** (p. 184) access instance will begin to exist as soon as all the constituting **DDS_Topic** (p. 174) instances are in existence. The `view_state` and `instance_state` is computed from the corresponding states of the constituting instances:

- The `view_state` of the **DDS_MultiTopic** (p. 184) instance is **DDS_NEW_VIEW_STATE** (p. 714) if at least one of the constituting instances has `view_state` = **DDS_NEW_VIEW_STATE** (p. 714). Otherwise, it will be **DDS_NOT_NEW_VIEW_STATE** (p. 714).

- The `instance_state` of the **DDS_MultiTopic** (p. 184) instance is **DDS_ALIVE_INSTANCE_STATE** (p. 716) if the `instance_state` of all the constituting **DDS_Topic** (p. 174) instances is **DDS_ALIVE_INSTANCE_↩ STATE** (p. 716). It is **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) if at least one of the constituting **DDS_Topic** (p. 174) instances is **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716). Otherwise, it is **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716).

Queries and Filters Syntax (p. 739) describes the syntax of `subscription_expression` and `expression↩ _parameters`.

5.7.4 Enumeration Type Documentation

5.7.4.1 DDS_PrintFormatKind

`enum` **DDS_PrintFormatKind**

Format kinds available when converting data samples to string representations.

Enumerator

DDS_DEFAULT_PRINT_FORMAT	Use a default format specific to RTI Connext to represent the data when converting to a string.
DDS_XML_PRINT_FORMAT	Use an XML format to represent the data when converting to a string.
DDS_JSON_PRINT_FORMAT	Use a JSON format to represent the data when converting to a string.

5.7.5 Function Documentation

5.7.5.1 DDS_InconsistentTopicStatus_initialize()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_initialize (
            struct  DDS_InconsistentTopicStatus * self )
```

Initializer for new status instances.

New **DDS_InconsistentTopicStatus** (p. 1811) instances stored in heap memory should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_InconsistentTopicStatus_finalize (p. 187) should be called to free the contained fields that use dynamic memory:

```
DDS_InconsistentTopicStatus *myStatus = malloc(sizeof(struct DDS_InconsistentTopicStatus));

DDS_InconsistentTopicStatus_initialize(myStatus);

DDS_Topic_get_inconsistent_topic_status(myTopic, myStatus);

DDS_InconsistentTopicStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_InconsistentTopicStatus_INITIALIZER (p. 172)

DDS_Topic_get_inconsistent_topic_status (p. 195)

DDS_InconsistentTopicStatus_finalize (p. 187)

5.7.5.2 DDS_InconsistentTopicStatus_copy()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_copy (
            struct  DDS_InconsistentTopicStatus * self,
            const struct  DDS_InconsistentTopicStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_InconsistentTopicStatus_INITIALIZER (p. 172)

DDS_InconsistentTopicStatus_initialize (p. 185)

DDS_InconsistentTopicStatus_finalize (p. 187)

5.7.5.3 DDS_InconsistentTopicStatus_finalize()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_finalize (
            struct  DDS_InconsistentTopicStatus * self )
```

Free any dynamic memory allocated by status instances.

Some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_InconsistentTopicStatus_INITIALIZER (p. 172)

DDS_InconsistentTopicStatus_initialize (p. 185)

5.7.5.4 DDS_InconsistentTopicStatus_equals()

```
DDS_Boolean DDS_InconsistentTopicStatus_equals (
            const struct  DDS_InconsistentTopicStatus * left,
            const struct  DDS_InconsistentTopicStatus * right )
```

Compares two **DDS_InconsistentTopicStatus** (p. 1811) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This InconsistentTopicStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other InconsistentTopicStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two InconsistentTopicStatus have equal values, or **DDS_BOOLEAN_↩ FALSE** (p. 1203) otherwise.

5.7.5.5 DDS_TopicQos_equals()

```
DDS_Boolean DDS_TopicQos_equals (
            const struct  DDS_TopicQos * self,
            const struct  DDS_TopicQos * other )
```

Compares two **DDS_TopicQos** (p. 2048) for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This TopicQos.
other	<<***in***>> *(*p. *1015)* The other TopicQos to be compared with this TopicQos

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.7.5.6 DDS_TopicQos_print()

```
DDS_ReturnCode_t DDS_TopicQos_print (
            const struct  DDS_TopicQos * self )
```

Prints this **DDS_TopicQos** (p. 2048) to stdout.

Only the differences between this **DDS_TopicQos** (p. 2048) and the documented default are printed. If you wish to print everything regardless, see **DDS_TopicQos_to_string_w_params** (p. 189). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.7.5.7 DDS_TopicQos_to_string()

```
DDS_ReturnCode_t DDS_TopicQos_to_string (
            const struct  DDS_TopicQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_TopicQos** (p. 2048).

Only the differences between this **DDS_TopicQos** (p. 2048) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_TopicQos_to_string_w_params** (p. 189). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_TopicQos** (p. 2048) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 2048). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_TopicQos_to_string_w_params (p. 189)

5.7.5.8 DDS_TopicQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_TopicQos_to_string_w_params (
            const struct  DDS_TopicQos * self,
```

```
char * string,
 DDS_UnsignedLong * string_size,
const struct  DDS_TopicQos * base,
const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_TopicQos** (p. 2048).

Only the differences between this **DDS_TopicQos** (p. 2048) and the **DDS_TopicQos** (p. 2048) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_TOPIC_QOS_PRINT_ALL** (p. 163) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_TopicQos** (p. 2048) is written to the buffer.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
string	<<***out***>> *(*p. *1015)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 2048). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(*p. *1015)* The **DDS_TopicQos** (p. 2048) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	<<***in***>> *(*p. *1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.7.5.9 DDS_TopicQos_initialize()

```
DDS_ReturnCode_t DDS_TopicQos_initialize (
            struct  DDS_TopicQos * self )
```

Initializer for new QoS instances.

New **DDS_TopicQos** (p. 2048) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_Topic_get_qos** (p. 198) or **DDS_DomainParticipant_get_default_topic_qos** (p. 85); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS_TopicQos_finalize** (p. 191) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_TopicQos *myQos = malloc(sizeof(struct DDS_TopicQos));
DDS_TopicQos_initialize(myQos);
DDS_DomainParticipantFactory_get_default_topic_qos(myFactory, myQos);
DDS_Topic_set_qos(myTopic, myQos);
DDS_TopicQos_finalize(myQos);
free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_TopicQos_INITIALIZER (p. 172)

DDS_DomainParticipant_get_default_topic_qos (p. 85)

DDS_TopicQos_finalize (p. 191)

5.7.5.10 DDS_TopicQos_finalize()

```
DDS_ReturnCode_t DDS_TopicQos_finalize (
            struct  DDS_TopicQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_TopicQos** (p. 2048).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_TopicQos_INITIALIZER (p. 172)

DDS_TopicQos_initialize (p. 190)

5.7.5.11 DDS_TopicQos_copy()

```
DDS_ReturnCode_t DDS_TopicQos_copy (
            struct  DDS_TopicQos * self,
            const struct  DDS_TopicQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_TopicQos (p. 2048) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015).* QoS to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_TopicQos_INITIALIZER (p. 172)

DDS_TopicQos_initialize (p. 190)

DDS_TopicQos_finalize (p. 191)

5.7.5.12 DDS_TopicDescription_get_type_name()

```
const char * DDS_TopicDescription_get_type_name (
             DDS_TopicDescription * self )
```

Get the associated `type_name`.

The type name defines a locally unique type for the publication or the subscription.

The `type_name` corresponds to a unique string used to register a type via the **FooTypeSupport_register_type** (p. 220) function.

Thus, the `type_name` implies an association with a corresponding **DDS_TypeSupport** (p. 213) and this **DDS_Topic↩ Description** (p. 174).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

the type name. The returned type name is valid until the **DDS_TopicDescription** (p. 174) is deleted.

Postcondition

The result is non-NULL.

See also

DDS_TypeSupport (p. 213), **FooTypeSupport** (p. 2121)

5.7.5.13 DDS_TopicDescription_get_name()

```
const char * DDS_TopicDescription_get_name (
             DDS_TopicDescription * self )
```

Get the name used to create this **DDS_TopicDescription** (p. 174) .

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

the name used to create this **DDS_TopicDescription** (p. 174). The returned topic name is valid until the **DDS_↩ TopicDescription** (p. 174) is deleted.

Postcondition

The result is non-NULL.

5.7.5.14 DDS_TopicDescription_get_participant()

```
DDS_DomainParticipant * DDS_TopicDescription_get_participant (
            DDS_TopicDescription * self )
```

Get the **DDS_DomainParticipant** (p. 76) to which the **DDS_TopicDescription** (p. 174) belongs.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The **DDS_DomainParticipant** (p. 76) to which the **DDS_TopicDescription** (p. 174) belongs.

Postcondition

The result is non-NULL.

5.7.5.15 DDS_Topic_as_entity()

```
DDS_Entity * DDS_Topic_as_entity (
            DDS_Topic * topic )
```

Access a **DDS_Topic** (p. 174)'s **DDS_Entity** (p. 1362) supertype instance.

Returns

DDS_Topic (p. 174)'s supertype **DDS_Entity** (p. 1362) instance

5.7.5.16 DDS_Topic_as_topicdescription()

```
DDS_TopicDescription * DDS_Topic_as_topicdescription (
            DDS_Topic * topic )
```

Access a **DDS_Topic** (p. 174)'s **DDS_TopicDescription** (p. 174) supertype instance.

Returns

DDS_Topic (p. 174)'s supertype **DDS_TopicDescription** (p. 174) instance

Examples

HelloWorld_subscriber.c.

5.7.5.17 DDS_Topic_narrow()

```
DDS_Topic * DDS_Topic_narrow (
            DDS_TopicDescription * self )
```

Narrow the given **DDS_TopicDescription** (p. 174) pointer to a **DDS_Topic** (p. 174) pointer.

Returns

DDS_Topic (p. 174) if this **DDS_TopicDescription** (p. 174) is a **DDS_Topic** (p. 174). Otherwise, return NULL.

5.7.5.18 DDS_Topic_narrow_from_entity()

```
DDS_Topic * DDS_Topic_narrow_from_entity (
            DDS_Entity * self )
```

Narrow the given **DDS_Entity** (p. 1362) pointer to a **DDS_Topic** (p. 174) pointer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

DDS_Topic (p. 174) if this **DDS_Entity** (p. 1362) is a **DDS_Topic** (p. 174). Otherwise, return NULL.

5.7.5.19 DDS_Topic_get_inconsistent_topic_status()

```
DDS_ReturnCode_t DDS_Topic_get_inconsistent_topic_status (
            DDS_Topic * self,
           struct  DDS_InconsistentTopicStatus * status )
```

Allows the application to retrieve the **DDS_INCONSISTENT_TOPIC_STATUS** (p. 1230) status of a **DDS_Topic** (p. 174).

Retrieve the current **DDS_InconsistentTopicStatus** (p. 1811)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
status	<<***inout***>> *(*p. *1015)* Status to be retrieved. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_InconsistentTopicStatus (p. 1811)

5.7.5.20 DDS_Topic_set_qos()

```
DDS_ReturnCode_t DDS_Topic_set_qos (
            DDS_Topic * self,
           const struct  DDS_TopicQos * qos )
```

Set the topic QoS.

The **DDS_TopicQos::topic_data** (p. 2049) and **DDS_TopicQos::deadline** (p. 2050), **DDS_TopicQos::latency_budget** (p. 2050), **DDS_TopicQos::transport_priority** (p. 2051) and **DDS_TopicQos::lifespan** (p. 2051) can be changed. The other policies are immutable.

Parameters

qos	<<***in***>> *(*p. *1015)* Set of policies to be applied to **DDS_Topic** (p. 174).

Policies must be consistent. Immutable policies cannot be changed after **DDS_Topic** (p. 174) is enabled. The special value **DDS_TOPIC_QOS_DEFAULT** (p. 159) can be used to indicate that the QoS of the **DDS_Topic** (p. 174) should be changed to match the current default **DDS_TopicQos** (p. 2048) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) if immutable policy is changed, or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224) if policies are inconsistent

See also

DDS_TopicQos (p. 2048) for rules on consistency among QoS

set_qos (abstract) (p. 1363)

Operations Allowed in Listener Callbacks (p. 1821)

5.7.5.21 DDS_Topic_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_Topic_set_qos_with_profile (
             DDS_Topic * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Change the QoS of this topic using the input XML QoS profile.

The **DDS_TopicQos::topic_data** (p. 2049) and **DDS_TopicQos::deadline** (p. 2050), **DDS_TopicQos::latency_budget** (p. 2050), **DDS_TopicQos::transport_priority** (p. 2051) and **DDS_TopicQos::lifespan** (p. 2051) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_DomainParticipant_set_default_library** (p. 100)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) if immutable policy is changed, or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224) if policies are inconsistent

See also

DDS_TopicQos (p. 2048) for rules on consistency among QoS

Operations Allowed in Listener Callbacks (p. 1821)

5.7.5.22 DDS_Topic_get_qos()

```
DDS_ReturnCode_t DDS_Topic_get_qos (
            DDS_Topic * self,
           struct  DDS_TopicQos * qos )
```

Get the topic QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* QoS to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.7.5.23 DDS_Topic_set_listener()

```
DDS_ReturnCode_t DDS_Topic_set_listener (
            DDS_Topic * self,
           const struct  DDS_TopicListener * l,
            DDS_StatusMask mask )
```

Set the topic listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
l	<<***in***>> *(p. 1015)* Listener to be installed on entity.
mask	<<***in***>> *(p. 1015)* Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228). The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.7.5.24 DDS_Topic_get_listener()

```
struct  DDS_TopicListener DDS_Topic_get_listener (
              DDS_Topic * self )
```

Get the topic listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

Existing listener attached to the **DDS_Topic** (p. 174).

See also

DDS_Topic_get_listenerX (p. 199)

get_listener (abstract) (p. 1365)

5.7.5.25 DDS_Topic_get_listenerX()

```
DDS_ReturnCode_t DDS_Topic_get_listenerX (
             DDS_Topic * self,
            struct  DDS_TopicListener * listener )
```

<<***extension***>> *(p. 1014)* Get the topic listener.

An alternative form of get_listener that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
listener	<<***inout***>> *(p. 1015)* Listener structure to be filled up. Cannnot be NULL.

See also

DDS_Topic_get_listener (p. 199)

get_listener (abstract) (p. 1365)

5.7.5.26 DDS_ContentFilteredTopic_as_topicdescription()

```
DDS_TopicDescription * DDS_ContentFilteredTopic_as_topicdescription (
            DDS_ContentFilteredTopic * contentFilteredTopic )
```

Access a **DDS_ContentFilteredTopic** (p. 176)'s supertype instance.

Parameters

contentFilteredTopic	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_ContentFilteredTopic (p. 176)'s supertype **DDS_TopicDescription** (p. 174) instance

5.7.5.27 DDS_ContentFilteredTopic_narrow()

```
DDS_ContentFilteredTopic * DDS_ContentFilteredTopic_narrow (
            DDS_TopicDescription * self )
```

Narrow the given **DDS_TopicDescription** (p. 174) pointer to a **DDS_ContentFilteredTopic** (p. 176) pointer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_ContentFilteredTopic (p. 176) if this **DDS_TopicDescription** (p. 174) is a **DDS_ContentFilteredTopic** (p. 176). Otherwise, return NULL.

5.7.5.28 DDS_ContentFilteredTopic_get_filter_expression()

```
const char * DDS_ContentFilteredTopic_get_filter_expression (
            DDS_ContentFilteredTopic * self )
```

Get the filter_expression.

Return the filter_expression associated with the **DDS_ContentFilteredTopic** (p. 176). filter_↩ expression is either specified on the last successful call to **DDS_ContentFilteredTopic_set_expression** (p. 202) or, if that function is never called, the expression specified when the **DDS_ContentFilteredTopic** (p. 176) was created.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

the filter_expression.

5.7.5.29 DDS_ContentFilteredTopic_get_expression_parameters()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_get_expression_parameters (
            DDS_ContentFilteredTopic * self,
           struct  DDS_StringSeq * parameters )
```

Get the expression_parameters.

Return the expression_parameters associated with the **DDS_ContentFilteredTopic** (p. 176). expression↩ _parameters is either specified on the last successful call to **DDS_ContentFilteredTopic_set_expression_↩ parameters** (p. 201), **DDS_ContentFilteredTopic_set_expression** (p. 202) or, if that function is never called, the parameters specified when the **DDS_ContentFilteredTopic** (p. 176) was created.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
parameters	<<***inout***>> *(p. 1015)* the filter expression parameters. Cannot be NULL. The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 1527). In particular, be careful to avoid a situation in which RTI Connext allocates a string on your behalf and you then reuse that string in such a way that RTI Connext believes it to have more memory allocated to it than it actually does.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_create_contentfilteredtopic (p. 117)

DDS_ContentFilteredTopic_set_expression_parameters (p. 201)

5.7.5.30 DDS_ContentFilteredTopic_set_expression_parameters()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression_parameters (
             DDS_ContentFilteredTopic * self,
            const struct  DDS_StringSeq * parameters )
```

Set the `expression_parameters`.

Change the `expression_parameters` associated with the **DDS_ContentFilteredTopic** (p. 176).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
parameters	<<***in***>> *(p. 1015)* the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.5.31 DDS_ContentFilteredTopic_set_expression()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression (
             DDS_ContentFilteredTopic * self,
            const char * expression,
            const struct  DDS_StringSeq * parameters )
```

Set the `filter_expression` and `expression_parameters`.

Changes the `filter_expression` and `expression_parameters` associated with the **DDS_Content↩ FilteredTopic** (p. 176).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
expression	<<***in***>> *(p. 1015)* the filter expression. Cannot be NULL.
parameters	<<***in***>> *(p. 1015)* the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.5.32 DDS_ContentFilteredTopic_append_to_expression_parameter()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_append_to_expression_parameter (
             DDS_ContentFilteredTopic * self,
            const  DDS_Long index,
            const char * val )
```

<<***extension***>> *(p. 1014)* Appends a string term to the specified parameter string.

Appends the input string to the end of the specified parameter string, separated by a comma. If the original parameter string is enclosed in quotation marks (''), the resultant string will also be enclosed in quotation marks.

This function can be used in expression parameters associated with MATCH operators in order to add a pattern to the match pattern list. For example, if the filter expression parameter value is:

'IBM'

Then append_to_expression_parameter(0, "MSFT") would generate the new value:

'IBM,MSFT'

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* The index of the parameter string to be modified. The first index is index 0. When using the **DDS_STRINGMATCHFILTER_NAME** (p. 163) filter, `index` *must* be 0.
val	<<***in***>> *(p. 1015)* The string term to be appended to the parameter string.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.5.33 DDS_ContentFilteredTopic_remove_from_expression_parameter()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_remove_from_expression_parameter (
             DDS_ContentFilteredTopic * self,
            const  DDS_Long index,
            const char * val )
```

<<***extension***>> *(p. 1014)* Removes a string term from the specified parameter string.

Removes the input string from the specified parameter string. To be found and removed, the input string must exist as a complete term, bounded by comma separators or the strong boundary. If the original parameter string is enclosed in quotation marks (''), the resultant string will also be enclosed in quotation marks. If the removed term was the last entry in the string, the result will be a string of empty quotation marks.

This function can be used in expression parameters associated with MATCH operators in order to remove a pattern from the match pattern list. For example, if the filter expression paremeter value is:

'IBM,MSFT'

Then remove_from_expression_parameter(0, "IBM") would generate the expression:

'MSFT'

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* The index of the parameter string to be modified. The first index is index 0. When using the **DDS_STRINGMATCHFILTER_NAME** (p. 163) filter, `index` *must* be 0.
val	<<***in***>> *(*p. *1015)* The string term to be removed from the parameter string.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.5.34 DDS_ContentFilteredTopic_get_related_topic()

```
DDS_Topic * DDS_ContentFilteredTopic_get_related_topic (
            DDS_ContentFilteredTopic * self )
```

Get the `related_topic`.

Return the **DDS_Topic** (p. 174) specified when the **DDS_ContentFilteredTopic** (p. 176) was created.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

The **DDS_Topic** (p. 174) assocated with the **DDS_ContentFilteredTopic** (p. 176).

5.7.5.35 DDS_MultiTopic_as_topicdescription()

```
DDS_TopicDescription * DDS_MultiTopic_as_topicdescription (
            DDS_MultiTopic * multiTopic )
```

Access a **DDS_MultiTopic** (p. 184)'s supertype instance.

Parameters

multiTopic	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_MultiTopic (p. 184)'s supertype **DDS_TopicDescription** (p. 174) instance

5.7.5.36 DDS_MultiTopic_narrow()

```
DDS_MultiTopic * DDS_MultiTopic_narrow (
            DDS_TopicDescription * self )
```

Narrow the given **DDS_TopicDescription** (p. 174) pointer to a **DDS_MultiTopic** (p. 184) pointer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_MultiTopic (p. 184) if this **DDS_TopicDescription** (p. 174) is a **DDS_MultiTopic** (p. 184). Otherwise, return NULL.

5.7.5.37 DDS_MultiTopic_get_subscription_expression()

```
const char * DDS_MultiTopic_get_subscription_expression (
            DDS_MultiTopic * self )
```

Get the expression for this **DDS_MultiTopic** (p. 184).

The expressions syntax is described in the DDS specification. It is specified when the **DDS_MultiTopic** (p. 184) is created.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

`subscription_expression` of the **DDS_MultiTopic** (p. 184).

5.7.5.38 DDS_MultiTopic_get_expression_parameters()

```
DDS_ReturnCode_t DDS_MultiTopic_get_expression_parameters (
             DDS_MultiTopic * self,
            struct  DDS_StringSeq * parameters )
```

Get the expression parameters.

The expressions syntax is described in the DDS specification.

The `parameters` is either specified on the last successful call to **DDS_MultiTopic_set_expression_parameters** (p. 207), or if **DDS_MultiTopic_set_expression_parameters** (p. 207) was never called, the `parameters` specified when the **DDS_MultiTopic** (p. 184) was created.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
parameters	*<<**inout**>> (p. 1015)* Fill in this sequence with the expression parameters. Cannot be NULL. The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 1527). In particular, be careful to avoid a situation in which RTI Connext allocates a string on your behalf and you then reuse that string in such a way that RTI Connext believes it to have more memory allocated to it than it actually does.

Returns

One of the **Standard Return Codes** (p. 1223)

5.7.5.39 DDS_MultiTopic_set_expression_parameters()

```
DDS_ReturnCode_t DDS_MultiTopic_set_expression_parameters (
             DDS_MultiTopic * self,
            const struct  DDS_StringSeq * parameters )
```

Set the `expression_parameters`.

Changes the `expression_parameters` associated with the **DDS_MultiTopic** (p. 184).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
parameters	*<<**in**>> (p. 1015)* the filter expression parameters

Returns

One of the **Standard Return Codes** (p. 1223).

5.7.6 Variable Documentation

5.7.6.1 DDS_PRINT_FORMAT_PROPERTY_DEFAULT

```
const struct DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT
```

Sentinel constant indicating default values for **DDS_PrintFormatProperty** (p. 1898).

Pass this object instead of your own **DDS_PrintFormatProperty** (p. 1898) object to use the default property values:

```
retCode = FooTypeSupport_data_to_string(
    sample,
    &DDS_PRINT_FORMAT_PROPERTY_DEFAULT);
```

See also

DDS_PrintFormatProperty (p. 1898)

5.7.6.2 DDS_FILTERSAMPLEINFO_DEFAULT

```
const struct DDS_FilterSampleInfo DDS_FILTERSAMPLEINFO_DEFAULT [extern]
```

Initializer for new **DDS_FilterSampleInfo** (p. 1799).

All new **DDS_FilterSampleInfo** (p. 1799) instances allocated on the stack should be initialized to this value. No memory is allocated.

See also

DDS_FilterSampleInfo (p. 1799)

5.8 FlatData Topic-Types

<<***extension***>> *(*p. *1014)* FlatData Language Binding for IDL topic-types

<<***extension***>> *(*p. *1014)* FlatData Language Binding for IDL topic-types

Warning

The FlatData language binding is available in the Traditional C++ API and in the Modern C++ API. It is not available in this API.

FlatData is a language binding for IDL types in which the in-memory
representation of a sample matches the wire representation. Therefore, the cost of serialization/deserialization is zero.

Note

For a complete description of the FlatData language binding and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

5.9 Zero Copy Transfer Over Shared Memory

<<***extension***>> *(*p. *1014)* Zero Copy transfer over shared memory

<<***extension***>> *(*p. *1014)* Zero Copy transfer over shared memory

Note

For a description of Zero Copy transfer over shared memory and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

Zero Copy transfer over shared memory is available in the C API, in the Traditional C++ API, and in the Modern C++ API.

5.10 User Data Type Support

Defines generic classes and macros to support user data types.

Data Structures

- struct **DDS_TypeAllocationParams_t**

  Configures whether or not to allocate pointer and optional members.
- struct **DDS_TypeDeallocationParams_t**

  Configures whether to release or not pointer and optional members.
- struct **Foo**

  A representative user-defined data type.
- struct **FooTypeSupport**

  <<***interface***>> *(*p. *1015)* <<***generic***>> *(*p. *1015) User data type specific interface.*
- struct **DDS_InstanceHandleSeq**

  Instantiates ***FooSeq*** *(*p. *2120)* *<* ***DDS_InstanceHandle_t*** *(*p. *213)* *>* *.*

Macros

- #define **DDS_TYPESUPPORT_C**(TTypeSupport, TData)

  Declares the interface required to support a user data type.
- #define **DDS_DATAWRITER_C**(TDataWriter, TData)

  Declares the interface required to support a user data type specific data writer.
- #define **DDS_DATAREADER_C**(TDataReader, TDataSeq, TData)

  Declares the interface required to support a user data type-specific data reader.

Typedefs

- typedef DDS_HANDLE_TYPE_NATIVE **DDS_InstanceHandle_t**

  Type definition for an instance handle.
- typedef struct DDS_TypeSupportImpl **DDS_TypeSupport**

  *<<**interface**>> (p. 1015) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

Functions

- **Foo** * **FooTypeSupport_create_data** (void)

  *<<**extension**>> (p. 1014) Create a data type and initialize it.*
- **Foo** * **FooTypeSupport_create_data_ex** (**DDS_Boolean** allocatePointers)

  *<<**extension**>> (p. 1014) Create a data type and initialize it.*
- **Foo** * **FooTypeSupport_create_data_w_params** (const struct **DDS_TypeAllocationParams_t** *alloc_↩ params)

  *<<**extension**>> (p. 1014) Create a data type and initialize it.*
- **DDS_ReturnCode_t** **FooTypeSupport_copy_data** (**Foo** *dst_data, const **Foo** *src_data)

  *<<**extension**>> (p. 1014) Copy data type.*
- **DDS_ReturnCode_t** **FooTypeSupport_delete_data** (**Foo** *a_data)

  *<<**extension**>> (p. 1014) Destroy a user data type instance.*
- **DDS_ReturnCode_t** **FooTypeSupport_delete_data_ex** (**Foo** *a_data, **DDS_Boolean** deletePointers)

  *<<**extension**>> (p. 1014) Destroy a user data type instance.*
- **DDS_ReturnCode_t** **FooTypeSupport_delete_data_w_params** (**Foo** *a_data, const struct **DDS_Type↩ DeallocationParams_t** *dealloc_params)

  *<<**extension**>> (p. 1014) Destroy a user data type instance.*
- **DDS_ReturnCode_t** **FooTypeSupport_initialize_data** (**Foo** *a_data)

  *<<**extension**>> (p. 1014) Initialize data type.*
- **DDS_ReturnCode_t** **FooTypeSupport_initialize_data_ex** (**Foo** *a_data, **DDS_Boolean** allocatePointers)

  *<<**extension**>> (p. 1014) Initialize data type.*
- **DDS_ReturnCode_t** **FooTypeSupport_finalize_data** (**Foo** *a_data)

  *<<**extension**>> (p. 1014) Finalize data type.*
- **DDS_ReturnCode_t** **FooTypeSupport_finalize_data_ex** (**Foo** *a_data, **DDS_Boolean** deletePointers)

  *<<**extension**>> (p. 1014) Finalize data type.*
- const char * **FooTypeSupport_get_type_name** (void)

  Get the default name for this type.
- **DDS_ReturnCode_t** **FooTypeSupport_register_type** (**DDS_DomainParticipant** *participant, const char *type_name)

  Allows an application to communicate to RTI Connext the existence of a data type.
- **DDS_ReturnCode_t** **FooTypeSupport_unregister_type** (**DDS_DomainParticipant** *participant, const char *type_name)

  *<<**extension**>> (p. 1014) Allows an application to unregister a data type from RTI Connext. After calling unregister_↩ type, no further communication using that type is possible.*
- void **FooTypeSupport_print_data** (**Foo** *a_data)

  *<<**extension**>> (p. 1014) Print value of data type to standard out.*

  <<***extension***>> (p. *1014) Retrieves the TypeCode for the Type.*
- **DDS_Boolean DDS_InstanceHandle_equals** (const **DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Compares this instance handle with another handle for equality.
- int **DDS_InstanceHandle_compare** (const **DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Compares this instance handle with another handle.
- void **DDS_InstanceHandle_copy** (**DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Copies this instance handle into another handle.
- **DDS_Boolean DDS_InstanceHandle_is_nil** (const **DDS_InstanceHandle_t** *self)

  *Compare this handle to **DDS_HANDLE_NIL** (p. 227).*

Variables

- const **DDS_InstanceHandle_t DDS_HANDLE_NIL**

  The NIL instance handle.

5.10.1 Detailed Description

Defines generic classes and macros to support user data types.

DDS specifies strongly typed interfaces to read and write user data. For each data class defined by the application, there is a number of specialised classes that are required to facilitate the type-safe interaction of the application with RTI Connext.

RTI Connext provides an automatic means to generate all these type-specific classes with the rtiddsgen utility. The complete set of automatic classes created for a hypothetical user data type named **Foo** (p. 2116) are shown below.

an application data type named **Foo** (p. 2116) "

The macros defined here declare the strongly typed APIs needed to support an arbitrary user defined data of type **Foo** (p. 2116).

the Code Generator User's Manual

5.10.2 Macro Definition Documentation

5.10.2.1 DDS_TYPESUPPORT_C

```
#define DDS_TYPESUPPORT_C(
              TTypeSupport,
              TData )
```

Declares the interface required to support a user data type.

Defines:

FooTypeSupport *(*p. *2121)* TypeSupport of type **Foo** (p. 2116), i.e. **FooTypeSupport** (p. 2121)

Examples

HelloWorldSupport.c.

5.10.2.2 DDS_DATAWRITER_C

```
#define DDS_DATAWRITER_C(
              TDataWriter,
              TData )
```

Declares the interface required to support a user data type specific data writer.

Uses:

FooTypeSupport *(*p. *2121)* user data type, **Foo** (p. 2116)

Defines:

FooDataWriter *(*p. *2119)* **DDS_DataWriter** (p. 488) of type **Foo** (p. 2116), i.e. **FooDataWriter** (p. 2119)

5.10.2.3 DDS_DATAREADER_C

```
#define DDS_DATAREADER_C(
              TDataReader,
              TDataSeq,
              TData )
```

Declares the interface required to support a user data type-specific data reader.

Uses:

FooTypeSupport *(*p. *2121)* user data type, **Foo** (p. 2116)
FooSeq (p. 2120) sequence of user data type, sequence<::Foo>

Defines:

FooDataReader *(*p. *2119)* **DDS_DataReader** (p. 618) of type **Foo** (p. 2116), i.e. **FooDataReader** (p. 2119)

See also

FooSeq (p. 2120)

Examples

HelloWorldSupport.c.

5.10.3 Typedef Documentation

5.10.3.1 DDS_InstanceHandle_t

```
typedef DDS_HANDLE_TYPE_NATIVE  DDS_InstanceHandle_t
```

Type definition for an instance handle.

Handle to identify different instances of the same **DDS_Topic** (p. 174) of a certain type.

See also

FooDataWriter_register_instance (p. 494)

DDS_SampleInfo::instance_handle (p. 1995)

5.10.3.2 DDS_TypeSupport

```
typedef struct DDS_TypeSupportImpl  DDS_TypeSupport
```

<<***interface***>> *(*p. *1015)* An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application.

The implementation provides an automatic means to generate a type-specific class, **FooTypeSupport** (p. 2121), from a description of the type in IDL.

A **DDS_TypeSupport** (p. 213) must be registered using the **FooTypeSupport_register_type** (p. 220) operation on this type-specific class before it can be used to create **DDS_Topic** (p. 174) objects.

5.10.4 Function Documentation

5.10.4.1 FooTypeSupport_create_data()

```
Foo * FooTypeSupport_create_data (
            void  )
```

<<***extension***>> *(*p. *1014)* Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

By default all memory for the type is deeply allocated, except for optional members.

Returns

Newly created data type, or NULL on failure.

See also

FooTypeSupport_delete_data (p. 216)

5.10.4.2 FooTypeSupport_create_data_ex()

```
Foo * FooTypeSupport_create_data_ex (
            DDS_Boolean allocatePointers )
```

<<***extension***>> *(*p. *1014)* Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

When `allocatePointers` is **DDS_BOOLEAN_TRUE** (p. 1203), all the references (pointers) in the type are recursively allocated.

Parameters

allocatePointers	<<***in***>> *(*p. *1015)* Whether or not to recursively allocate pointers.

Returns

Newly created data type, or NULL on failure.

See also

FooTypeSupport_delete_data_ex (p. 216)

5.10.4.3 FooTypeSupport_create_data_w_params()

```
Foo * FooTypeSupport_create_data_w_params (
            const struct  DDS_TypeAllocationParams_t * alloc_params )
```

<<***extension***>> *(*p. *1014)* Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

By default all memory for the type is deeply allocated, except for optional members.

Parameters

alloc_params	<<***in***>> *(*p. *1015)* Whether or not to recursively allocate pointers and/or optional members

Returns

Newly created data type, or NULL on failure.

See also

FooTypeSupport_delete_data_ex (p. 216)

5.10.4.4 FooTypeSupport_copy_data()

```
DDS_ReturnCode_t FooTypeSupport_copy_data (
             Foo * dst_data,
            const  Foo * src_data )
```

<<***extension***>> *(*p. *1014)* Copy data type.

The *generated* implementation of the operation knows how to copy value of a data type.

Parameters

dst_data	<<***inout***>> *(*p. *1015)* Data type to copy value to. Cannot be NULL.
src_data	<<***in***>> *(*p. *1015)* Data type to copy value from. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.10.4.5 FooTypeSupport_delete_data()

```
DDS_ReturnCode_t FooTypeSupport_delete_data (
            Foo * a_data )
```

<<***extension***>> *(*p. *1014)* Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

Parameters

a_data	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_create_data (p. 214)

5.10.4.6 FooTypeSupport_delete_data_ex()

```
DDS_ReturnCode_t FooTypeSupport_delete_data_ex (
            Foo * a_data,
            DDS_Boolean deletePointers )
```

<<***extension***>> *(*p. *1014)* Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

When `deletePointers` is **DDS_BOOLEAN_TRUE** (p. 1203), all the references (pointers) are destroyed as well.

Parameters

a_data	<<***in***>> *(*p. *1015)* Cannot be NULL.
deletePointers	<<***in***>> *(*p. *1015)* Whether or not to destroy pointers.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_create_data_ex (p. 214)

5.10.4.7 FooTypeSupport_delete_data_w_params()

```
DDS_ReturnCode_t FooTypeSupport_delete_data_w_params (
            Foo * a_data,
           const struct  DDS_TypeDeallocationParams_t * dealloc_params )
```

<<***extension***>> *(*p. *1014)* Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

By default, all non-NULL pointers and optional members are deleted.

Parameters

a_data	<<***in***>> *(*p. *1015)* Cannot be NULL.
dealloc_params	<<***in***>> *(*p. *1015)* Whether or not to destroy pointers and/or optional members.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_create_data_ex (p. 214)

5.10.4.8 FooTypeSupport_initialize_data()

```
DDS_ReturnCode_t FooTypeSupport_initialize_data (
            Foo * a_data )
```

<<***extension***>> *(*p. *1014)* Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This function is typically called to initialize a data type that is allocated on the stack. Calling this function more than once will cause a memory leak.

Parameters

a_data	<<***inout***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_finalize_data (p. 219)

5.10.4.9 FooTypeSupport_initialize_data_ex()

```
DDS_ReturnCode_t FooTypeSupport_initialize_data_ex (
            Foo * a_data,
            DDS_Boolean allocatePointers )
```

<<***extension***>> *(*p. *1014)* Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This function is typically called to initialize a data type that is allocated on the stack. Calling this function more than once will cause a memory leak.

When `allocatePointers` is **DDS_BOOLEAN_TRUE** (p. 1203), all the references (pointers) in the type are recursively allocated.

Parameters

a_data	<<***inout***>> *(*p. *1015)* Cannot be NULL.
allocatePointers	<<***in***>> *(*p. *1015)* Whether or not to recursively allocate pointers.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_finalize_data_ex (p. 219)

5.10.4.10 FooTypeSupport_finalize_data()

```
DDS_ReturnCode_t FooTypeSupport_finalize_data (
            Foo * a_data )
```

<<***extension***>> *(p. 1014)* Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This function is typically called to finalize a data type that has previouslly been initialized.

Parameters

a_data	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_initialize_data (p. 217)

5.10.4.11 FooTypeSupport_finalize_data_ex()

```
DDS_ReturnCode_t FooTypeSupport_finalize_data_ex (
            Foo * a_data,
            DDS_Boolean deletePointers )
```

<<***extension***>> *(p. 1014)* Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This function is typically called to finalize a data type that has previouslly been initialized.

When `deletePointers` is **DDS_BOOLEAN_TRUE** (p. 1203), the memory required by the references (pointers) associated to the type is freed.

Parameters

a_data	<<***in***>> *(p. 1015)* Cannot be NULL.
deletePointers	<<***in***>> *(p. 1015)* Whether or not to free memory allocated by the pointers.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooTypeSupport_initialize_data_ex (p. 218)

5.10.4.12 FooTypeSupport_get_type_name()

```
const char * FooTypeSupport_get_type_name (
             void  )
```

Get the default name for this type.

Can be used for calling **FooTypeSupport_register_type** (p. 220) or creating **DDS_Topic** (p. 174)

Returns

default name for this type

See also

FooTypeSupport_register_type (p. 220)

DDS_DomainParticipant_create_topic (p. 114)

5.10.4.13 FooTypeSupport_register_type()

```
DDS_ReturnCode_t FooTypeSupport_register_type (
              DDS_DomainParticipant * participant,
             const char * type_name )
```

Allows an application to communicate to RTI Connext the existence of a data type.

The *generated* implementation of the operation embeds all the knowledge that has to be communicated to the middleware in order to make it able to manage the contents of data of that type. This includes in particular the key definition that will allow RTI Connext to distinguish different instances of the same type.

The same **DDS_TypeSupport** (p. 213) can be registered multiple times with a **DDS_DomainParticipant** (p. 76) using the same or different values for the `type_name`. If `register_type` is called multiple times on the same **DDS_TypeSupport** (p. 213) with the same **DDS_DomainParticipant** (p. 76) and `type_name`, the second (and subsequent) registrations are ignored but the operation returns **DDS_RETCODE_OK** (p. 1224).

Precondition

Cannot use the same `type_name` to register two different **DDS_TypeSupport** (p. 213) with the same **DDS_DomainParticipant** (p. 76), or else the operation will fail and **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) will be returned.

Parameters

participant	<<***in***>> *(*p. *1015)* the **DDS_DomainParticipant** (p. 76) to register the data type **Foo** (p. 2116) with. Cannot be NULL.
type_name	<<***in***>> *(*p. *1015)* the type name under with the data type **Foo** (p. 2116) is registered with the participant; this type name is used when creating a new **DDS_Topic** (p. 174). (See **DDS_DomainParticipant_create_topic** (p. 114).) The name may not be NULL or longer than 255 characters.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

See also

DDS_DomainParticipant_create_topic (p. 114)

5.10.4.14 FooTypeSupport_unregister_type()

```
DDS_ReturnCode_t FooTypeSupport_unregister_type (
             DDS_DomainParticipant * participant,
            const char * type_name )
```

<<***extension***>> *(*p. *1014)* Allows an application to unregister a data type from RTI Connext. After calling unregister_type, no further communication using that type is possible.

The *generated* implementation of the operation removes all the information about a type from RTI Connext. No further communication using that type is possible.

Precondition

A type with `type_name` is registered with the participant and all **DDS_Topic** (p. 174) objects referencing the type have been destroyed. If any **DDS_Topic** (p. 174) is associated with the type, the operation will fail with **DDS_RETCODE_ERROR** (p. 1224).

Postcondition

All information about the type is removed from RTI Connext. No further communication using this type is possible.

Parameters

participant	<<***in***>> *(p. 1015)* the **DDS_DomainParticipant** (p. 76) to unregister the data type **Foo** (p. 2116) from. Cannot be NULL.
type_name	<<***in***>> *(p. 1015)* the type name under with the data type **Foo** (p. 2116) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_BAD_PARAMETER** (p. 1224) or **DDS_RETCODE_ERROR** (p. 1224)

MT Safety:

SAFE.

See also

FooTypeSupport_register_type (p. 220)

5.10.4.15 FooTypeSupport_print_data()

```
void FooTypeSupport_print_data (
                Foo * a_data )
```

<<***extension***>> *(p. 1014)* Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

Parameters

a_data	<<***in***>> *(p. 1015)* Data type to be printed.

5.10.4.16 FooTypeSupport_serialize_data_to_cdr_buffer()

```
DDS_ReturnCode_t FooTypeSupport_serialize_data_to_cdr_buffer (
            char * buffer,
            unsigned int * length,
            const  Foo * a_data )
```

<<***extension***>> *(*p. *1014)* Serializes the input sample into a CDR buffer of octets.

This function serializes a sample into a buffer of octets using Common Data Representation (CDR). Calling this function is equivalent to calling **FooTypeSupport_serialize_data_to_cdr_buffer_ex** (p. 223) with **DDS_AUTO_DATA_↩REPRESENTATION** (p. 1260) as the representation.

The input buffer must be big enough to store the serialized representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input buffer, the user must call this method with the buffer set to NULL.

For more information about CDR in Connext, see `Data Representation` in the Core Libraries Extensible Types Guide.

Parameters

a_data	<<***in***>> *(*p. *1015)*. Input sample. Cannot be NULL.
buffer	<<***out***>> *(*p. *1015)*. Serialization buffer.
length	<<***inout***>> *(*p. *1015)*. When `buffer` is set to NULL, after the function executes, `length` will contain a buffer size big enough to hold the serialized data. When `buffer` is not NULL, `length` must contain the size of the input buffer when the function is invoked. After the function executes, `length` will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when `buffer` is set to NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.10.4.17 FooTypeSupport_serialize_data_to_cdr_buffer_ex()

```
DDS_ReturnCode_t FooTypeSupport_serialize_data_to_cdr_buffer_ex (
            char * buffer,
            unsigned int * length,
            const  Foo * a_data,
             DDS_DataRepresentationId_t representation )
```

<<***extension***>> *(*p. *1014)* Serializes the input sample into a buffer of octets.

This function serializes a sample into a buffer of octets using the input data representation. See **FooTypeSupport_↩serialize_data_to_cdr_buffer** (p. 222) for details.

Parameters

a_data	<<***in***>> *(*p. *1015)*. Input sample. Cannot be NULL.
buffer	<<***out***>> *(*p. *1015)*. Serialization buffer.
length	<<***inout***>> *(*p. *1015)*. Serialization buffer length.
representation	<<***in***>> *(*p. *1015)*. Representation used to serialize the data.

Returns

One of the **Standard Return Codes** (p. 1223)

5.10.4.18 FooTypeSupport_deserialize_data_from_cdr_buffer()

```
DDS_ReturnCode_t FooTypeSupport_deserialize_data_from_cdr_buffer (
            Foo * sample,
           const char * buffer,
           unsigned int length )
```

<<***extension***>> *(p. 1014)* Deserializes a sample from a buffer of octets.

This function deserializes a sample from a CDR buffer of octets.

The content of the buffer generated by the function **FooTypeSupport_serialize_data_to_cdr_buffer** (p. 222) can be provided to this function to get the sample back.

Parameters

sample	<<***in***>> *(p. 1015)*. Output sample. Cannot be NULL.
buffer	<<***in***>> *(p. 1015)*. Deserialization buffer. Cannot be NULL.
length	<<***in***>> *(p. 1015)*. Length of the serialized representation of the sample in the buffer.

Returns

One of the **Standard Return Codes** (p. 1223)

5.10.4.19 FooTypeSupport_data_to_string()

```
DDS_ReturnCode_t FooTypeSupport_data_to_string (
            Foo * sample,
           char * str,
            DDS_UnsignedLong * str_size,
           const  DDS_PrintFormatProperty * property )
```

<<***extension***>> *(p. 1014)* Transforms a data sample into a human-readable string representation.

This function takes a data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS_↩ RETCODE_OUT_OF_RESOURCES** (p. 1224).

This method is only provided for types that were generated with typecodes.

Parameters

sample	<<***in***>> *(*p. *1015)*. The sample to get the string representation for. Cannot be NULL.
str	<<***out***>> *(*p. *1015)*. Output string representing the data sample.
str_size	<<***inout***>> *(*p. *1015)*. When `str` is set to NULL, after the function executes, `str_size` will contain a buffer size big enough to hold the string representation of the data. When `str` is not NULL, `str_size` must contain the size of the input buffer when the function is invoked. If the size of the input buffer is too small, after the function executes, `str_size` will be updated to contain the required size of the string content and the function will return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).
property	<<***in***>> *(*p. *1015)*. Properties describing what the format of the output string should be.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.10.4.20 FooTypeSupport_get_typecode()

```
DDS_TypeCode * FooTypeSupport_get_typecode (
            void  )
```

<<***extension***>> *(*p. *1014)* Retrieves the TypeCode for the Type.

This function retrieves the **DDS_TypeCode** (p. 2077) for the Type. A **DDS_TypeCode** (p. 2077) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. A **DDS_↩ TypeCode** (p. 2077) value consists of a type code *kind* (represented by the **DDS_TCKind** (p. 242) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS_TypeCode** (p. 2077), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

Returns

The TypeCode for this type

5.10.4.21 DDS_InstanceHandle_equals()

```
DDS_Boolean DDS_InstanceHandle_equals (
            const  DDS_InstanceHandle_t * self,
            const  DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This handle. Cannot be NULL.
other	<<***in***>> *(*p. *1015)* The other handle to be compared with this handle. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two handles have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

See also

DDS_InstanceHandle_is_nil (p. 227)

5.10.4.22 DDS_InstanceHandle_compare()

```
int DDS_InstanceHandle_compare (
             const  DDS_InstanceHandle_t * self,
             const  DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle.

Parameters

self	<<***in***>> *(p. 1015)* This handle. Cannot be NULL.
other	<<***in***>> *(p. 1015)* The other handle to be compared with this handle. Cannot be NULL.

Returns

If the two handles are equal, the function returns 0. If self is greater than other the function returns a positive number; otherwise, it returns a negative number.

See also

DDS_InstanceHandle_is_nil (p. 227)

5.10.4.23 DDS_InstanceHandle_copy()

```
void DDS_InstanceHandle_copy (
              DDS_InstanceHandle_t * self,
             const  DDS_InstanceHandle_t * other )
```

Copies this instance handle into another handle.

Parameters

self	<<***in***>> *(p. 1015)* The source handle. Cannot be NULL.
other	<<***in***>> *(p. 1015)* The destination handle to be copied into. Cannot be NULL.

5.10.4.24 DDS_InstanceHandle_is_nil()

```
DDS_Boolean DDS_InstanceHandle_is_nil (
            const  DDS_InstanceHandle_t * self )
```

Compare this handle to **DDS_HANDLE_NIL** (p. 227).

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the given instance handle is equal to **DDS_HANDLE_NIL** (p. 227) or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

See also

DDS_InstanceHandle_equals (p. 225)

5.10.5 Variable Documentation

5.10.5.1 DDS_HANDLE_NIL

```
const  DDS_InstanceHandle_t DDS_HANDLE_NIL  [extern]
```

The NIL instance handle.

Special **DDS_InstanceHandle_t** (p. 213) value

5.11 Type Code Support

*<<**extension**>> (p. 1014)* A ***DDS_TypeCode*** *(p. 2077)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 315) capability or to inspect the type information you receive from remote readers and writers.

Data Structures

- struct **DDS_TypeCodePrintFormatProperty**

  A collection of attributes used to configure how a TypeCode appears when converted to a string.
- struct **DDS_TypeCode**

  The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the `Code Generator User's Manual`) or to modify types you define yourself at runtime.
- struct **DDS_StructMember**

  A description of a member of a struct.
- struct **DDS_StructMemberSeq**

  Defines a sequence of struct members.
- struct **DDS_UnionMember**

  A description of a member of a union.
- struct **DDS_UnionMemberSeq**

  Defines a sequence of union members.
- struct **DDS_EnumMember**

  A description of a member of an enumeration.
- struct **DDS_EnumMemberSeq**

  Defines a sequence of enumerator members.
- struct **DDS_ValueMember**

  A description of a member of a value type.
- struct **DDS_ValueMemberSeq**

  Defines a sequence of value members.
- struct **DDS_TypeCodeFactory**

  A singleton factory for creating, copying, and deleting data type definitions dynamically.

Macros

- #define **DDS_TYPECODE_MEMBER_ID_INVALID**

  *A sentinel indicating an invalid **DDS_TypeCode** (p. 2077) member ID.*
- #define **DDS_TYPECODE_INDEX_INVALID**

  *A sentinel indicating an invalid **DDS_TypeCode** (p. 2077) member index.*
- #define **DDS_TYPECODE_NOT_BITFIELD**

  Indicates that a member of a type is not a bitfield.
- #define **DDS_VM_NONE**

  Constant used to indicate that a value type has no modifiers.
- #define **DDS_VM_CUSTOM**

  Constant used to indicate that a value type has the `custom` modifier.
- #define **DDS_VM_ABSTRACT**

  Constant used to indicate that a value type has the `abstract` modifier.
- #define **DDS_VM_TRUNCATABLE**

  Constant used to indicate that a value type has the `truncatable` modifier.
- #define **DDS_PRIVATE_MEMBER**

  Constant used to indicate that a value type member is private.
- #define **DDS_PUBLIC_MEMBER**

  Constant used to indicate that a value type member is public.

- #define **DDS_TYPECODE_NONKEY_MEMBER**

  A flag indicating that a type member is optional and not part of the key.
- #define **DDS_TYPECODE_KEY_MEMBER**

  A flag indicating that a type member is part of the key for that type, and therefore required.
- #define **DDS_TYPECODE_NONKEY_REQUIRED_MEMBER**

  A flag indicating that a type member is not part of the key but is nevertheless required.
- #define **DDS_TypeCode_PrintFormat_INITIALIZER**

  *Static initializer for **DDS_TypeCodePrintFormatProperty** (p. 2079).*

Typedefs

- typedef short **DDS_ValueModifier**

  Modifier type for a value type.
- typedef short **DDS_Visibility**

  Type to indicate the visibility of a value type member.

Enumerations

- enum **DDS_TypeCodePrintFormatKind** {
  DDS_TYPE_CODE_PRINT_KIND_IDL ,
  DDS_TYPE_CODE_PRINT_KIND_XML ,
  DDS_TYPE_CODE_PRINT_KIND_JSON_SCHEMA }

  *The different formats to print a **DDS_TypeCode** (p. 2077).*
- enum **DDS_TCKind** {
  DDS_TK_NULL ,
  DDS_TK_SHORT ,
  DDS_TK_LONG ,
  DDS_TK_USHORT ,
  DDS_TK_ULONG ,
  DDS_TK_FLOAT ,
  DDS_TK_DOUBLE ,
  DDS_TK_BOOLEAN ,
  DDS_TK_CHAR ,
  DDS_TK_OCTET ,
  DDS_TK_STRUCT ,
  DDS_TK_UNION ,
  DDS_TK_ENUM ,
  DDS_TK_STRING ,
  DDS_TK_SEQUENCE ,
  DDS_TK_ARRAY ,
  DDS_TK_ALIAS ,
  DDS_TK_LONGLONG ,
  DDS_TK_ULONGLONG ,
  DDS_TK_LONGDOUBLE ,
  DDS_TK_WCHAR ,
  DDS_TK_WSTRING ,
  DDS_TK_VALUE ,
  DDS_TK_INT8 ,
  DDS_TK_UINT8 ,

DDS_TK_RAW_BYTES = 0x7e ,
DDS_TK_RAW_BYTES_KEYED = 0x7f ,
DDS_TK_FINAL_EXTENSIBILITY = 0x4000 ,
DDS_TK_MUTABLE_EXTENSIBILITY = 0x2000 ,
DDS_TK_FLAT_DATA_LANGUAGE_BINDING = RTI_XCDR_TK_FLAGS_IS_FLAT_DATA ,
DDS_TK_SHMEM_REF_TRANSFER_MODE = RTI_XCDR_TK_FLAGS_IS_SHMEM_REF }

*Enumeration type for **DDS_TypeCode** (p. 2077) kinds.*

- enum **DDS_ExtensibilityKind** {
DDS_FINAL_EXTENSIBILITY ,
DDS_EXTENSIBLE_EXTENSIBILITY ,
DDS_MUTABLE_EXTENSIBILITY }

  Type to indicate the extensibility of a type.

Functions

- **DDS_TCKind DDS_TypeCode_kind** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Gets the **DDS_TCKind** (p. 242) value of a type code.*
- **DDS_ExtensibilityKind DDS_TypeCode_extensibility_kind** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Gets the **DDS_ExtensibilityKind** (p. 243) value of a type code.*
- **DDS_Boolean DDS_TypeCode_equal** (const **DDS_TypeCode** *self, const **DDS_TypeCode** *tc, **DDS_ExceptionCode_t** *ex)

  *Compares two **DDS_TypeCode** (p. 2077) objects for equality.*
- **DDS_Boolean DDS_TypeCode_is_assignable_from** (const **DDS_TypeCode** *self, const **DDS_TypeCode** *from, **DDS_ExceptionCode_t** *ex)

  Check if this type is assignable from another type.
- const char * **DDS_TypeCode_name** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Retrieves the simple name identifying this **DDS_TypeCode** (p. 2077) object within its enclosing scope.*
- const DDS_TypeCode_Annotation * **DDS_TypeCode_default_annotation** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  ***[DEPRECATED]** Given a **DDS_TypeCode** (p. 2077) object, retrieves its **[default]** annotation value as a DDS_TypeCode_Annotation*
- const DDS_TypeCode_Annotation * **DDS_TypeCode_member_default_annotation** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  ***[DEPRECATED]** Returns the **[default]** annotation of a type code member identified by the given index.*
- const DDS_TypeCode_Annotation * **DDS_TypeCode_min_annotation** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  ***[DEPRECATED]** Given a **DDS_TypeCode** (p. 2077) object, retrieves its @min annotation value as a DDS_TypeCode_Annotation*
- const DDS_TypeCode_Annotation * **DDS_TypeCode_max_annotation** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  ***[DEPRECATED]** Given a **DDS_TypeCode** (p. 2077) object, retrieves its @max annotation value as a DDS_TypeCode_Annotation*
- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_default_value** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Returns the default annotation for this **DDS_TypeCode** (p. 2077).*
- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_min_value** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Returns the min annotation for this **DDS_TypeCode** (p. 2077).*

- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_max_value** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Returns the max annotation for this **DDS_TypeCode** (p. 2077).*
- const char * **DDS_TypeCode_unit** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Returns the unit annotation for this **DDS_TypeCode** (p. 2077).*
- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_member_default_value** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  *Returns the member default annotation for this **DDS_TypeCode** (p. 2077).*
- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_member_min_value** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  *Returns the member min annotation for this **DDS_TypeCode** (p. 2077).*
- const **DDS_AnnotationParameterValue** * **DDS_TypeCode_member_max_value** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  *Returns the member max annotation for this **DDS_TypeCode** (p. 2077).*
- const char * **DDS_TypeCode_member_unit** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  *Returns the unit annotation for a member of this **DDS_TypeCode** (p. 2077).*
- **DDS_UnsignedLong** **DDS_TypeCode_member_count** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  Returns the number of members of the type code.
- const char * **DDS_TypeCode_member_name** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Returns the name of a type code member identified by the given index.
- **DDS_UnsignedLong** **DDS_TypeCode_find_member_by_name** (const **DDS_TypeCode** *self, const char *name, **DDS_ExceptionCode_t** *ex)

  Get the index of the member of the given name.
- **DDS_TypeCode** * **DDS_TypeCode_member_type** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  *Retrieves the **DDS_TypeCode** (p. 2077) object describing the type of the member identified by the given index.*
- **DDS_UnsignedLong** **DDS_TypeCode_member_label_count** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Returns the number of labels associated to the index-th union member.
- **DDS_Long** **DDS_TypeCode_member_label** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** member_index, **DDS_UnsignedLong** label_index, **DDS_ExceptionCode_t** *ex)

  Return the label_index-th label associated to the member_index-th member.
- **DDS_Long** **DDS_TypeCode_member_ordinal** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Returns the ordinal that corresponds to the index-th enum value.
- **DDS_Boolean** **DDS_TypeCode_is_member_key** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Function that tells if a member is a key or not.
- **DDS_Boolean** **DDS_TypeCode_is_member_required** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Indicates whether a given member of a type is required to be present in every sample of that type.
- **DDS_Boolean** **DDS_TypeCode_is_member_pointer** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Function that tells if a member is a pointer or not.
- **DDS_Boolean** **DDS_TypeCode_is_member_bitfield** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

Function that tells if a member is a bitfield or not.

- **DDS_Short DDS_TypeCode_member_bitfield_bits** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Returns the number of bits of a bitfield member.

- **DDS_Visibility DDS_TypeCode_member_visibility** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS_ExceptionCode_t** *ex)

  Returns the constant that indicates the visibility of the index-th member.

- **DDS_TypeCode** * **DDS_TypeCode_discriminator_type** (const **DDS_TypeCode** *self, **DDS_Exception↩ Code_t** *ex)

  Returns the discriminator type code.

- **DDS_UnsignedLong DDS_TypeCode_length** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  Returns the number of elements in the type described by this type code.

- **DDS_UnsignedLong DDS_TypeCode_array_dimension_count** (const **DDS_TypeCode** *self, **DDS_↩ ExceptionCode_t** *ex)

  This function returns the number of dimensions of an array type code.

- **DDS_UnsignedLong DDS_TypeCode_array_dimension** (const **DDS_TypeCode** *self, **DDS_Unsigned↩ Long** index, **DDS_ExceptionCode_t** *ex)

  This function returns the index-th dimension of an array type code.

- **DDS_UnsignedLong DDS_TypeCode_element_count** (const **DDS_TypeCode** *self, **DDS_Exception↩ Code_t** *ex)

  The number of elements in an array.

- **DDS_TypeCode** * **DDS_TypeCode_content_type** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Returns the **DDS_TypeCode** (p. 2077) object representing the type for the members of the object described by this **DDS↩ _TypeCode** (p. 2077) object.*

- **DDS_Boolean DDS_TypeCode_is_alias_pointer** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  Function that tells if an alias is a pointer or not.

- **DDS_Long DDS_TypeCode_default_index** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  Returns the index of the default member, or -1 if there is no default member.

- **DDS_TypeCode** * **DDS_TypeCode_concrete_base_type** (const **DDS_TypeCode** *self, **DDS_Exception↩ Code_t** *ex)

  *Returns the **DDS_TypeCode** (p. 2077) that describes the concrete base type of the value type that this **DDS_TypeCode** (p. 2077) object describes.*

- **DDS_ValueModifier DDS_TypeCode_type_modifier** (const **DDS_TypeCode** *self, **DDS_ExceptionCode↩ _t** *ex)

  *Returns a constant indicating the modifier of the value type that this **DDS_TypeCode** (p. 2077) object describes.*

- **DDS_UnsignedLong DDS_TypeCode_find_member_by_id** (const **DDS_TypeCode** *self, **DDS_Long** id, **DDS_ExceptionCode_t** *ex)

  Get the index of the member of the given ID.

- **DDS_Long DDS_TypeCode_member_id** (const **DDS_TypeCode** *self, **DDS_UnsignedLong** index, **DDS↩ _ExceptionCode_t** *ex)

  Returns the ID of the TypeCode member identified by the given index.

- **DDS_UnsignedLong DDS_TypeCode_get_type_object_serialized_size** (const **DDS_TypeCode** *self, **DDS_ExceptionCode_t** *ex)

  *Gets the serialized size of the TypeObject v1 created from this **DDS_TypeCode** (p. 2077).*

- **DDS_UnsignedLong DDS_TypeCode_add_member_to_enum** (**DDS_TypeCode** *self, const char *name, **DDS_Long** ordinal, **DDS_ExceptionCode_t** *ex)

  *Add a new enumerated constant to this enum **DDS_TypeCode** (p. 2077).*

- **DDS_UnsignedLong DDS_TypeCode_add_member_to_union** (**DDS_TypeCode** ∗self, const char ∗name, **DDS_Long** id, const struct **DDS_LongSeq** ∗labels, const **DDS_TypeCode** ∗tc, **DDS_Boolean** is_pointer, **DDS_ExceptionCode_t** ∗ex)

  *Add a new member to a union **DDS_TypeCode** (p. 2077).*
- **DDS_UnsignedLong DDS_TypeCode_add_member** (**DDS_TypeCode** ∗self, const char ∗name, **DDS_Long** id, const **DDS_TypeCode** ∗tc, **DDS_Octet** member_flags, **DDS_ExceptionCode_t** ∗ex)

  *Add a new member to this **DDS_TypeCode** (p. 2077).*
- **DDS_UnsignedLong DDS_TypeCode_add_member_ex** (**DDS_TypeCode** ∗self, const char ∗name, **DDS_Long** id, const **DDS_TypeCode** ∗tc, **DDS_Octet** member_flags, **DDS_Visibility** visibility, **DDS_Boolean** is_pointer, **DDS_Short** bits, **DDS_Boolean** is_must_understand, **DDS_ExceptionCode_t** ∗ex)

  *Add a new member to this **DDS_TypeCode** (p. 2077).*
- void **DDS_TypeCode_print_IDL** (const **DDS_TypeCode** ∗self, **DDS_UnsignedLong** indent, **DDS_ExceptionCode_t** ∗ex)

  *Prints a **DDS_TypeCode** (p. 2077) in IDL notation.*
- void **DDS_TypeCode_print** (const **DDS_TypeCode** ∗self, const **DDS_TypeCodePrintFormatProperty** ∗format, **DDS_ExceptionCode_t** ∗ex)

  *Prints a **DDS_TypeCode** (p. 2077).*
- void **DDS_TypeCode_to_string** (const **DDS_TypeCode** ∗self, char ∗str, **DDS_UnsignedLong** ∗str_size, **DDS_ExceptionCode_t** ∗ex)

  *Get a string representation of this **DDS_TypeCode** (p. 2077) object using the default values for **DDS_TypeCodePrintFormatProperty** (p. 2079).*
- void **DDS_TypeCode_to_string_w_format** (const **DDS_TypeCode** ∗self, char ∗str, **DDS_UnsignedLong** ∗str_size, const **DDS_TypeCodePrintFormatProperty** ∗format, **DDS_ExceptionCode_t** ∗ex)

  *Get a string representation of this **DDS_TypeCode** (p. 2077) object using the format described by **DDS_TypeCodePrintFormatProperty** (p. 2079).*
- **DDS_UnsignedLong DDS_TypeCode_get_cdr_serialized_sample_max_size** (const **DDS_TypeCode** ∗self, **DDS_DataRepresentationId_t** representation_id, **DDS_ExceptionCode_t** ∗ex)

  ***[DEPRECATED]** Gets the maximum serialized size of samples of this type*
- **DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_max_size** (const **DDS_TypeCode** ∗self, **DDS_DataRepresentationId_t** representation_id, **DDS_ExceptionCode_t** ∗ex)

  Gets the maximum serialized size of samples of this type.
- **DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_min_size** (const **DDS_TypeCode** ∗self, **DDS_DataRepresentationId_t** representation_id, **DDS_ExceptionCode_t** ∗ex)

  Gets the minimum serialized size of samples of this type.
- **DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_key_max_size** (const **DDS_TypeCode** ∗self, **DDS_DataRepresentationId_t** representation_id, **DDS_ExceptionCode_t** ∗ex)

  Gets the maximum serialized size of sample keys of this type.
- **DDS_TypeCodeFactory** ∗ **DDS_TypeCodeFactory_get_instance** (void)

  Gets the singleton instance of this class.
- **DDS_ReturnCode_t DDS_TypeCodeFactory_finalize_instance** (void)

  *If there are no DDS_DomainParticipantFactory instances left in the system, it will finalize the **DDS_TypeCodeFactory** (p. 2077). If there is at least one DDS_DomainParticipantFactory instance left in the system, this is a noop.*
- **DDS_TypeCode** ∗ **DDS_TypeCodeFactory_clone_tc** (**DDS_TypeCodeFactory** ∗self, const **DDS_TypeCode** ∗tc, **DDS_ExceptionCode_t** ∗ex)

  *Creates and returns a copy of the input **DDS_TypeCode** (p. 2077).*
- void **DDS_TypeCodeFactory_delete_tc** (**DDS_TypeCodeFactory** ∗self, **DDS_TypeCode** ∗tc, **DDS_ExceptionCode_t** ∗ex)

  *Deletes the input **DDS_TypeCode** (p. 2077).*
- const **DDS_TypeCode** ∗ **DDS_TypeCodeFactory_get_primitive_tc** (**DDS_TypeCodeFactory** ∗self, **DDS_TCKind** tc_kind)

*Get the **DDS_TypeCode** (p. 2077) for a primitive type (integers, floating point values, etc.) identified by the given **DDS_TCKind** (p. 242).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_struct_tc** (**DDS_TypeCodeFactory** *self, const char *name, const struct **DDS_StructMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_STRUCT** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_struct_tc_ex** (**DDS_TypeCodeFactory** *self, const char *name, **DDS_ExtensibilityKind** extensibility_kind, const struct **DDS_StructMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_STRUCT** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_value_tc** (**DDS_TypeCodeFactory** *self, const char *name, **DDS_ValueModifier** type_modifier, const **DDS_TypeCode** *concrete_base, const struct **DDS_ValueMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_VALUE** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_value_tc_ex** (**DDS_TypeCodeFactory** *self, const char *name, **DDS_ExtensibilityKind** extensibility_kind, **DDS_ValueModifier** type_modifier, const **DDS_TypeCode** *concrete_base, const struct **DDS_ValueMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_VALUE** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_union_tc** (**DDS_TypeCodeFactory** *self, const char *name, const **DDS_TypeCode** *discriminator_type, **DDS_Long** default_index, const struct **DDS_UnionMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_UNION** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_union_tc_ex** (**DDS_TypeCodeFactory** *self, const char *name, **DDS_ExtensibilityKind** extensibility_kind, const **DDS_TypeCode** *discriminator_type, **DDS_Long** default_index, const struct **DDS_UnionMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_UNION** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_enum_tc** (**DDS_TypeCodeFactory** *self, const char *name, const struct **DDS_EnumMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_ENUM** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_enum_tc_ex** (**DDS_TypeCodeFactory** *self, const char *name, **DDS_ExtensibilityKind** extensibility_kind, const struct **DDS_EnumMemberSeq** *members, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_ENUM** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_alias_tc** (**DDS_TypeCodeFactory** *self, const char *name, const **DDS_TypeCode** *original_type, **DDS_Boolean** is_pointer, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_ALIAS** (p. 242) (typedef) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_string_tc** (**DDS_TypeCodeFactory** *self, **DDS_UnsignedLong** bound, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_STRING** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_wstring_tc** (**DDS_TypeCodeFactory** *self, **DDS_UnsignedLong** bound, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_WSTRING** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_sequence_tc** (**DDS_TypeCodeFactory** *self, **DDS_UnsignedLong** bound, const **DDS_TypeCode** *element_type, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_SEQUENCE** (p. 242) **DDS_TypeCode** (p. 2077).*

- **DDS_TypeCode** * **DDS_TypeCodeFactory_create_array_tc** (**DDS_TypeCodeFactory** *self, const struct **DDS_UnsignedLongSeq** *dimensions, const **DDS_TypeCode** *element_type, **DDS_ExceptionCode_t** *ex)

  *Constructs a **DDS_TK_ARRAY** (p. 242) **DDS_TypeCode** (p. 2077).*

Variables

- **DDS_TypeCode DDS_g_tc_null**
  Basic NULL type.
- **DDS_TypeCode DDS_g_tc_short**
  Basic 16-bit signed integer type.
- **DDS_TypeCode DDS_g_tc_long**
  Basic 32-bit signed integer type.
- **DDS_TypeCode DDS_g_tc_ushort**
  Basic unsigned 16-bit integer type.
- **DDS_TypeCode DDS_g_tc_ulong**
  Basic unsigned 32-bit integer type.
- **DDS_TypeCode DDS_g_tc_float**
  Basic 32-bit floating point type.
- **DDS_TypeCode DDS_g_tc_double**
  Basic 64-bit floating point type.
- **DDS_TypeCode DDS_g_tc_boolean**
  Basic Boolean type.
- **DDS_TypeCode DDS_g_tc_char**
  Basic single-byte character type.
- **DDS_TypeCode DDS_g_tc_octet**
  Basic octet/byte type.
- **DDS_TypeCode DDS_g_tc_int8**
  Basic signed 8-bit int type.
- **DDS_TypeCode DDS_g_tc_uint8**
  Basic unsigned 8-bit int type.
- **DDS_TypeCode DDS_g_tc_longlong**
  Basic 64-bit integer type.
- **DDS_TypeCode DDS_g_tc_ulonglong**
  Basic unsigned 64-bit integer type.
- **DDS_TypeCode DDS_g_tc_longdouble**
  Basic 128-bit floating point type.
- **DDS_TypeCode DDS_g_tc_wchar**
  Basic four-byte character type.

5.11.1 Detailed Description

<<***extension***>> *(*p. *1014)* A ***DDS_TypeCode*** *(*p. *2077)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 315) capability or to inspect the type information you receive from remote readers and writers.

Type codes are values that are used to describe arbitrarily complex types at runtime. Type code values are manipulated via the **DDS_TypeCode** (p. 2077) class, which has an analogue in CORBA.

A **DDS_TypeCode** (p. 2077) value consists of a type code *kind* (represented by the **DDS_TCKind** (p. 242) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS_TypeCode** (p. 2077), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

There are a number of uses for type codes. The type code mechanism can be used to unambiguously match type representations. The **DDS_TypeCode_equal** (p. 246) function is a more reliable test than comparing the string type names, requiring equivalent definitions of the types.

5.11.2 Accessing a Local ::DDS_TypeCode

When generating types with rtiddsgen, type codes are always enabled. For these types, a **DDS_TypeCode** (p. 2077) may be accessed by calling the `Foo_get_typecode` function for a type "Foo", which returns a **DDS_TypeCode** (p. 2077) pointer. via the **FooTypeCode.VALUE** member. This API also includes support for dynamic creation of **DDS_TypeCode** (p. 2077) values, typically for use with the **Dynamic Data** (p. 315) API. You can create a **DDS_Type↩ Code** (p. 2077) using the **DDS_TypeCodeFactory** (p. 2077) class. You will construct the **DDS_TypeCode** (p. 2077) recursively, from the outside in: start with the type codes for primitive types, then compose them into complex types like arrays, structures, and so on. You will find the following methods helpful:

- **DDS_TypeCodeFactory_get_primitive_tc** (p. 292), which provides the **DDS_TypeCode** (p. 2077) instances corresponding to the primitive types (e.g. **DDS_TK_LONG** (p. 242), **DDS_TK_SHORT** (p. 242), and so on).
- **DDS_TypeCodeFactory_create_string_tc** (p. 299) and **DDS_TypeCodeFactory_create_wstring_tc** (p. 300) create a **DDS_TypeCode** (p. 2077) representing a text string with a certain *bound* (i.e. maximum length).
- **DDS_TypeCodeFactory_create_array_tc** (p. 301) and **DDS_TypeCodeFactory_create_sequence_tc** (p. 300) create a **DDS_TypeCode** (p. 2077) for a collection based on the **DDS_TypeCode** (p. 2077) for its elements.
- **DDS_TypeCodeFactory_create_struct_tc** (p. 292) and **DDS_TypeCodeFactory_create_value_tc** (p. 294) create a **DDS_TypeCode** (p. 2077) for a structured type.

5.11.3 Accessing a Remote ::DDS_TypeCode

In addition to being used locally, RTI Connext can transmit **DDS_TypeCode** (p. 2077) on the network between participants. This information can be used to access information about types used remotely at runtime, for example to be able to publish or subscribe to topics of arbitrarily types (see **Dynamic Data** (p. 315)). This functionality is useful for a generic system monitoring tool like `rtiddsspy`.

Remote **DDS_TypeCode** (p. 2077) information is shared during discovery over the publication and subscription built-in topics and can be accessed using the built-in readers for these topics; see **Built-in Topics** (p. 164). Discovered **DDS_TypeCode** (p. 2077) values are not cached by RTI Connext upon receipt and are therefore not available from the built-in topic data returned by **DDS_DataWriter_get_matched_subscription_data** (p. 543) or **DDS_DataReader_↩ get_matched_publication_data** (p. 680).

The space available locally to deserialize a discovered remote **DDS_TypeCode** (p. 2077) is specified by the **DDS↩ _DomainParticipant** (p. 76)'s **DDS_DomainParticipantResourceLimitsQosPolicy::type_code_max_serialized_↩ length** (p. 1751) QoS parameter. To support especially complex type codes, it may be necessary for you to increase the value of this parameter.

5.11.4 Macro Definition Documentation

5.11.4.1 DDS_TYPECODE_MEMBER_ID_INVALID

```
#define DDS_TYPECODE_MEMBER_ID_INVALID
```

A sentinel indicating an invalid **DDS_TypeCode** (p. 2077) member ID.

5.11.4.2 DDS_TYPECODE_INDEX_INVALID

```
#define DDS_TYPECODE_INDEX_INVALID
```

A sentinel indicating an invalid **DDS_TypeCode** (p. 2077) member index.

5.11.4.3 DDS_TYPECODE_NOT_BITFIELD

```
#define DDS_TYPECODE_NOT_BITFIELD
```

Indicates that a member of a type is not a bitfield.

5.11.4.4 DDS_VM_NONE

```
#define DDS_VM_NONE
```

Constant used to indicate that a value type has no modifiers.

See also

DDS_ValueModifier (p. 241)

Examples

HelloWorld.c.

5.11.4.5 DDS_VM_CUSTOM

```
#define DDS_VM_CUSTOM
```

Constant used to indicate that a value type has the `custom` modifier.

This modifier is used to specify whether the value type uses custom marshaling.

See also

DDS_ValueModifier (p. 241)

5.11.4.6 DDS_VM_ABSTRACT

```
#define DDS_VM_ABSTRACT
```

Constant used to indicate that a value type has the `abstract` modifier.

An abstract value type may not be instantiated.

See also

DDS_ValueModifier (p. 241)

5.11.4.7 DDS_VM_TRUNCATABLE

```
#define DDS_VM_TRUNCATABLE
```

Constant used to indicate that a value type has the `truncatable` modifier.

A value with a state that derives from another value with a state can be declared as truncatable. A truncatable type means the object can be truncated to the base type.

See also

DDS_ValueModifier (p. 241)

5.11.4.8 DDS_PRIVATE_MEMBER

```
#define DDS_PRIVATE_MEMBER
```

Constant used to indicate that a value type member is private.

See also

DDS_Visibility (p. 241)

DDS_PUBLIC_MEMBER (p. 239)

5.11.4.9 DDS_PUBLIC_MEMBER

```
#define DDS_PUBLIC_MEMBER
```

Constant used to indicate that a value type member is public.

See also

DDS_Visibility (p. 241)

DDS_PRIVATE_MEMBER (p. 238)

Examples

HelloWorld.c.

5.11.4.10 DDS_TYPECODE_NONKEY_MEMBER

```
#define DDS_TYPECODE_NONKEY_MEMBER
```

A flag indicating that a type member is optional and not part of the key.

If a type is used with the **Dynamic Data** (p. 315) facility, a **DDS_DynamicData** (p. 1771) sample of the type will only contain a value for a **DDS_TYPECODE_NONKEY_MEMBER** (p. 239) field if one has been explicitly set (see, for example, **DDS_DynamicData_set_long** (p. 396)). The middleware will *not* assume any default value.

See also

DDS_TYPECODE_KEY_MEMBER (p. 239)

DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 240)

DDS_TYPECODE_KEY_MEMBER (p. 239)

DDS_TypeCode_add_member (p. 281)

DDS_TypeCode_add_member_ex (p. 283)

DDS_TypeCode_is_member_key (p. 262)

DDS_TypeCode_is_member_required (p. 263)

DDS_StructMember::is_key (p. 2013)

DDS_ValueMember::is_key (p. 2095)

5.11.4.11 DDS_TYPECODE_KEY_MEMBER

```
#define DDS_TYPECODE_KEY_MEMBER
```

A flag indicating that a type member is part of the key for that type, and therefore required.

If a type is used with the **Dynamic Data** (p. 315) facility, all **DDS_DynamicData** (p. 1771) samples of the type will contain a value for all **DDS_TYPECODE_KEY_MEMBER** (p. 239) fields. If you do not set a value of the member explicitly (see, for example, **DDS_DynamicData_set_long** (p. 396)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

DDS_TypeCode_is_member_key (p. 262)
DDS_TypeCode_is_member_required (p. 263)
DDS_StructMember::is_key (p. 2013)
DDS_ValueMember::is_key (p. 2095)

5.11.4.12 DDS_TYPECODE_NONKEY_REQUIRED_MEMBER

```
#define DDS_TYPECODE_NONKEY_REQUIRED_MEMBER
```

A flag indicating that a type member is not part of the key but is nevertheless required.

This is the most common kind of member.

If a type is used with the **Dynamic Data** (p. 315) facility, all **DDS_DynamicData** (p. 1771) samples of the type will contain a value for all **DDS_TYPECODE_NONKEY_REQUIRED_MEMBER** (p. 240) fields. If you do not set a value of the member explicitly (see, for example, **DDS_DynamicData_set_long** (p. 396)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

DDS_ValueMember::is_key (p. 2095)

5.11.4.13 DDS_TypeCode_PrintFormat_INITIALIZER

```
#define DDS_TypeCode_PrintFormat_INITIALIZER
```

Static initializer for **DDS_TypeCodePrintFormatProperty** (p. 2079).

Use this initializer to ensure that new objects don't have uninitialized contents.
```
struct DDS_TypeCodePrintFormatProperty property = DDS_TypeCodePrintFormatProperty;
```

5.11.5 Typedef Documentation

5.11.5.1 DDS_ValueModifier

```
typedef short  DDS_ValueModifier
```

Modifier type for a value type.

See also

DDS_VM_NONE (p. 237)

DDS_VM_ABSTRACT (p. 238)
DDS_VM_TRUNCATABLE (p. 238)

5.11.5.2 DDS_Visibility

```
typedef short  DDS_Visibility
```

Type to indicate the visibility of a value type member.

See also

DDS_PRIVATE_MEMBER (p. 238)
DDS_PUBLIC_MEMBER (p. 239)

5.11.6 Enumeration Type Documentation

5.11.6.1 DDS_TypeCodePrintFormatKind

```
enum  DDS_TypeCodePrintFormatKind
```

The different formats to print a **DDS_TypeCode** (p. 2077).

Enumerator

DDS_TYPE_CODE_PRINT_KIND_IDL	Indicates that a **DDS_TypeCode** (p. 2077) is to be printed in IDL format.
DDS_TYPE_CODE_PRINT_KIND_XML	Indicates that a **DDS_TypeCode** (p. 2077) is to be printed in XML format.
DDS_TYPE_CODE_PRINT_KIND_JSON_SCHEMA	Indicates that a **DDS_TypeCode** (p. 2077) is printed in JSON Schema format.

5.11.6.2 DDS_TCKind

enum **DDS_TCKind**

Enumeration type for **DDS_TypeCode** (p. 2077) kinds.

Type code kinds are modeled as values of this type.

Enumerator

DDS_TK_NULL	Indicates that a type code does not describe anything.
DDS_TK_SHORT	short type.
DDS_TK_LONG	long type.
DDS_TK_USHORT	unsigned short type.
DDS_TK_ULONG	unsigned long type.
DDS_TK_FLOAT	float type.
DDS_TK_DOUBLE	double type.
DDS_TK_BOOLEAN	boolean type.
DDS_TK_CHAR	char type.
DDS_TK_OCTET	octet type.
DDS_TK_STRUCT	struct type.
DDS_TK_UNION	union type.
DDS_TK_ENUM	enumerated type.
DDS_TK_STRING	string type.
DDS_TK_SEQUENCE	sequence type.
DDS_TK_ARRAY	array type.
DDS_TK_ALIAS	alias (typedef) type.
DDS_TK_LONGLONG	long long type.
DDS_TK_ULONGLONG	unsigned long long type.
DDS_TK_LONGDOUBLE	long double type.
DDS_TK_WCHAR	wide char type.
DDS_TK_WSTRING	wide string type.
DDS_TK_VALUE	value type.
DDS_TK_INT8	8-bit signed integer type.
DDS_TK_UINT8	8-bit unsigned integer type.

5.11.6.3 DDS_ExtensibilityKind

enum **DDS_ExtensibilityKind**

Type to indicate the extensibility of a type.

Enumerator

DDS_FINAL_EXTENSIBILITY	Specifies that a type has FINAL extensibility. A type may be final, indicating that the range of its possible values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability. The following types are always final: • **DDS_TK_ARRAY** (p. 242) • All primitive types
DDS_EXTENSIBLE_EXTENSIBILITY	Specifies that a type has EXTENSIBLE extensibility. A type may be appendable (formerly called extensible), indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.
DDS_MUTABLE_EXTENSIBILITY	Specifies that a type has MUTABLE extensibility. A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable. The following types are always mutable: • **DDS_TK_SEQUENCE** (p. 242) • **DDS_TK_STRING** (p. 242) • **DDS_TK_WSTRING** (p. 242)

5.11.7 Function Documentation

5.11.7.1 DDS_TypeCode_kind()

```
DDS_TCKind DDS_TypeCode_kind (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Gets the **DDS_TCKind** (p. 242) value of a type code.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that it can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Retrieves the kind of this **DDS_TypeCode** (p. 2077) object. The kind of a type code determines which **DDS_TypeCode** (p. 2077) functions may legally be invoked on it.

MT Safety:

SAFE.

Returns

The type code kind.

5.11.7.2 DDS_TypeCode_extensibility_kind()

```
DDS_ExtensibilityKind DDS_TypeCode_extensibility_kind (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Gets the **DDS_ExtensibilityKind** (p. 243) value of a type code.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that it can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Retrieves the extensibility kind of this **DDS_TypeCode** (p. 2077) object.

In some cases, it is desirable for types to evolve without breaking interoperability with deployed components already using those types. For example:

- A new set of applications to be integrated into an existing system may want to introduce additional fields into a structure. These new fields can be safely ignored by already deployed applications, but applications that do understand the new fields can benefit from their presence.
- A new set of applications to be integrated into an existing system may want to increase the maximum size of some sequence or string in a Type. Existing applications can receive data samples from these new applications as long as the actual number of elements (or length of the strings) in the received data sample does not exceed what the receiving applications expects. If a received data sample exceeds the limits expected by the receiving application, then the sample can be safely ignored (filtered out) by the receiver.

In order to support use cases such as these, the type system introduces the concept of appendable and mutable types.

- A type may be final, indicating that the range of its possible data values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.
- A type may be appendable, indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.
- A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.

The extensibility of **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242), **DDS_TK_VALUE** (p. 242), and **DDS_TK↩_ENUM** (p. 242) can be change using the built-in "Extensibility" annotation when the type is declared.

IDL examples:

```
@final

struct MyType {

    long member_1;

}
@appendable

struct MyType {

    long member_1;

}
@mutable

struct MyType {

    long member_1;

}
```

XML example:

```
<struct name="MyType" extensibility="final">

    <member name="member_1" type="long"/>

</struct>
<struct name="MyType" extensibility="appendable">

    <member name="member_1" type="long"/>

</struct>
<struct name="MyType" extensibility="mutable">

    <member name="member_1" type="long"/>

</struct>
```

XSD example:

```
<xsd:complexType name="MyType">

    <xsd:sequence>

        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>

    </xsd:sequence>

</xsd:complexType>

<!-- @struct true -->

<!-- @extensibility FINAL_EXTENSIBILITY -->
<xsd:complexType name="MyType">

    <xsd:sequence>

        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>

    </xsd:sequence>

</xsd:complexType>

<!-- @struct true -->

<!-- @extensibility EXTENSIBLE_EXTENSIBILITY -->
<xsd:complexType name="MyType">

    <xsd:sequence>

        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>

    </xsd:sequence>

</xsd:complexType>

<!-- @struct true -->

<!-- @extensibility MUTABLE_EXTENSIBILITY -->
```

For TypeCodes built at run-time using the **DDS_TypeCodeFactory** (p. 2077) API, the extensibility can be provided as a parameter of the following APIs:

- **DDS_TypeCodeFactory_create_struct_tc_ex** (p. 293)
- **DDS_TypeCodeFactory_create_value_tc_ex** (p. 295)
- **DDS_TypeCodeFactory_create_union_tc_ex** (p. 296)
- **DDS_TypeCodeFactory_create_enum_tc_ex** (p. 298)

See also

DDS_ExtensibilityKind (p. 243)

MT Safety:

SAFE.

Returns

The type code extensibility kind.

5.11.7.3 DDS_TypeCode_equal()

```
DDS_Boolean DDS_TypeCode_equal (
            const  DDS_TypeCode * self,
            const  DDS_TypeCode * tc,
             DDS_ExceptionCode_t * ex )
```

Compares two **DDS_TypeCode** (p. 2077) objects for equality.

MT Safety:

SAFE.

For equality and assignability purposes, **DDS_TK_STRUCT** (p. 242) and **DDS_TK_VALUE** (p. 242) are considered equivalent.

The **DDS_TypeCode** (p. 2077) of structs inheriting from other structs has a **DDS_TK_VALUE** (p. 242) kind.

For example:

```
struct MyStruct: MyBaseStruct {

    long member_1;

};
```

The code generation for the previous type will generate a **DDS_TypeCode** (p. 2077) with **DDS_TK_VALUE** (p. 242) kind.

Additionally, for equality and assignability purposes, **DDS_TK_OCTET** (p. 242), **DDS_TK_INT8** (p. 242), and **DDS_↩ TK_UINT8** (p. 242) are considered equivalent.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
tc	<<***in***>> *(p. 1015)* Type code that will be compared with this **DDS_TypeCode** (p. 2077).
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the type codes are equal. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.4 DDS_TypeCode_is_assignable_from()

```
DDS_Boolean DDS_TypeCode_is_assignable_from (
            const  DDS_TypeCode * self,
            const  DDS_TypeCode * from,
             DDS_ExceptionCode_t * ex )
```

Check if this type is assignable from another type.

If this type is assignable from the `from` type, it means that it is possible, in a structural way, to set the contents of an object of this type to the contents of an object of type `from` (or a subset of those contents) without leading to incorrect interpretations of that information.

For additional information on type assignability, refer to the `OMG Extensible and Dynamic Topic Types for DDS Specification`.

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
from	<<***in***>> *(*p. *1015)* The type to check assignability from.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if this type is assignable from `from`. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.5 DDS_TypeCode_name()

```
const char * DDS_TypeCode_name (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Retrieves the simple name identifying this **DDS_TypeCode** (p. 2077) object within its enclosing scope.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242), **DDS_TK_ENUM** (p. 242), **DDS_TK_VALUE** (p. 242), or **DDS_TK_ALIAS** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

Name of the type code if no errors.

5.11.7.6 DDS_TypeCode_default_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_default_annotation (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

[DEPRECATED] Given a **DDS_TypeCode** (p. 2077) object, retrieves its **[default]** annotation value as a DDS_Type↩ Code_Annotation

DEPRECATED: use **DDS_TypeCode_default_value** (p. 250)

5.11.7.7 DDS_TypeCode_member_default_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_member_default_annotation (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

[DEPRECATED] Returns the **[default]** annotation of a type code member identified by the given index.

DEPRECATED: use **DDS_TypeCode_member_default_value** (p. 253)

5.11.7.8 DDS_TypeCode_min_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_min_annotation (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

[DEPRECATED] Given a **DDS_TypeCode** (p. 2077) object, retrieves its @min annotation value as a DDS_TypeCode↩ _Annotation

DEPRECATED: use **DDS_TypeCode_min_value** (p. 250)

5.11.7.9 DDS_TypeCode_max_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_max_annotation (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

[DEPRECATED] Given a **DDS_TypeCode** (p. 2077) object, retrieves its @max annotation value as a DDS_TypeCode↩ _Annotation

DEPRECATED: use **DDS_TypeCode_max_value** (p. 251)

5.11.7.10 DDS_TypeCode_default_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_default_value (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the default annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_ENUM** (p. 242), or **DDS_TK_ALIAS** (p. 242).

MT Safety:

SAFE

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

the default annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.11 DDS_TypeCode_min_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_min_value (
             const  DDS_TypeCode * self,
              DDS_ExceptionCode_t * ex )
```

Returns the min annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_ENUM** (p. 242), or **DDS_TK_ALIAS** (p. 242) of a numerical kind.

MT Safety:

SAFE

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

the min annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.12 DDS_TypeCode_max_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_max_value (
             const  DDS_TypeCode * self,
              DDS_ExceptionCode_t * ex )
```

Returns the max annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_ENUM** (p. 242), or **DDS_TK_ALIAS** (p. 242) of a numerical kind.

MT Safety:

SAFE

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

the max annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.13 DDS_TypeCode_unit()

```
const char * DDS_TypeCode_unit (
             const  DDS_TypeCode * self,
              DDS_ExceptionCode_t * ex )
```

Returns the unit annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_ALIAS** (p. 242).

MT Safety:

SAFE

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

the unit annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.14 DDS_TypeCode_member_default_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_member_default_value (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the member default annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), or **DDS_TK_UNION** (p. 242).

MT Safety:

SAFE

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	index of the target member
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

the member default annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.15 DDS_TypeCode_member_min_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_member_min_value (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the member min annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), or **DDS_TK_UNION** (p. 242).

member pointed to by index of a numerical kind.

MT Safety:

SAFE

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	index of the target member
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

the member min annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.16 DDS_TypeCode_member_max_value()

```
const  DDS_AnnotationParameterValue * DDS_TypeCode_member_max_value (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the member max annotation for this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), or **DDS_TK_UNION** (p. 242).

member pointed to by index of a numerical kind.

MT Safety:

SAFE

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	index of the target member
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

the member max annotation for this **DDS_TypeCode** (p. 2077)

5.11.7.17 DDS_TypeCode_member_unit()

```
const char * DDS_TypeCode_member_unit (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the unit annotation for a member of this **DDS_TypeCode** (p. 2077).

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), or **DDS_TK_UNION** (p. 242).

member pointed to by index of a numerical kind.

MT Safety:

SAFE

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
index	index of the target member
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

the unit annotation for the specified member of this **DDS_TypeCode** (p. 2077)

5.11.7.18 DDS_TypeCode_member_count()

```
DDS_UnsignedLong DDS_TypeCode_member_count (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the number of members of the type code.

The function member_count can be invoked on structure, union, and enumeration **DDS_TypeCode** (p. 2077) objects.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242), **DDS_TK_ENUM** (p. 242) or **DDS_TK_VALUE** (p. 242).

MT Safety:

SAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

The number of members constituting the type described by this **DDS_TypeCode** (p. 2077) object if no errors.

5.11.7.19 DDS_TypeCode_member_name()

```
const char * DDS_TypeCode_member_name (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the name of a type code member identified by the given index.

The function member_name can be invoked on structure, union, and enumeration **DDS_TypeCode** (p. 2077) objects.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242), **DDS_TK_ENUM** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

Name of the member if no errors.

5.11.7.20 DDS_TypeCode_find_member_by_name()

```
DDS_UnsignedLong DDS_TypeCode_find_member_by_name (
            const  DDS_TypeCode * self,
            const char * name,
             DDS_ExceptionCode_t * ex )
```

Get the index of the member of the given name.

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing structs (**DDS_TK_STRUCT** (p. 242)) and union (**DDS_TK_UNION** (p. 242)) types.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
name	*<<**in**>> (p. 1015)* The member name.
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

The index of the member of the given name or **DDS_TYPECODE_INDEX_INVALID** (p. 237) if the member is not found.

MT Safety:

SAFE.

5.11.7.21 DDS_TypeCode_member_type()

```
DDS_TypeCode * DDS_TypeCode_member_type (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Retrieves the **DDS_TypeCode** (p. 2077) object describing the type of the member identified by the given index.

The function member_type can be invoked on structure and union type codes.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

The **DDS_TypeCode** (p. 2077) object describing the member at the given index if no errors.

5.11.7.22 DDS_TypeCode_member_label_count()

```
DDS_UnsignedLong DDS_TypeCode_member_label_count (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Returns the number of labels associated to the index-th union member.

The function can be invoked on union **DDS_TypeCode** (p. 2077) objects.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_UNION** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

Number of labels if no errors.

5.11.7.23 DDS_TypeCode_member_label()

```
DDS_Long DDS_TypeCode_member_label (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong member_index,
             DDS_UnsignedLong label_index,
             DDS_ExceptionCode_t * ex )
```

Return the label_index-th label associated to the member_index-th member.

This function has been modified for RTI Connext from the CORBA Type code Specification.

Example:
case 1: Label index 0
case 2: Label index 1
short short_member;

The function can be invoked on union **DDS_TypeCode** (p. 2077) objects.

Precondition

self kind is **DDS_TK_UNION** (p. 242).
The member_index param must be in the interval [0,(member count-1)].
The label_index param must be in the interval [0,(member labels count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_index	<<***in***>> *(*p. *1015)* Member index.
label_index	<<***in***>> *(*p. *1015)* Label index.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

The evaluated value of the label if no errors.

5.11.7.24 DDS_TypeCode_member_ordinal()

```
DDS_Long DDS_TypeCode_member_ordinal (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Returns the ordinal that corresponds to the index-th enum value.

The function can be invoked on enum **DDS_TypeCode** (p. 2077) objects.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_ENUM** (p. 242).
Member index in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

Ordinal that corresponds to the index-th enumerator if no errors.

5.11.7.25 DDS_TypeCode_is_member_key()

```
DDS_Boolean DDS_TypeCode_is_member_key (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Function that tells if a member is a key or not.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Member index in the interval [0,(member count-1)].

Parameters

ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the member is a key. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.26 DDS_TypeCode_is_member_required()

```
DDS_Boolean DDS_TypeCode_is_member_required (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Indicates whether a given member of a type is required to be present in every sample of that type.

A non-key member is required if it has not been marked as optional. All key members are required.

See also

DDS_TYPECODE_NONKEY_MEMBER (p. 239)
DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 240)

MT Safety:

SAFE.

5.11.7.27 DDS_TypeCode_is_member_pointer()

```
DDS_Boolean DDS_TypeCode_is_member_pointer (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Function that tells if a member is a pointer or not.

The function is_member_pointer can be invoked on union and structs type objects

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Index of the member for which type information is begin requested.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the member is a pointer. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.28 DDS_TypeCode_is_member_bitfield()

```
DDS_Boolean DDS_TypeCode_is_member_bitfield (
            const  DDS_TypeCode * self,
```

```
                DDS_UnsignedLong index,
                DDS_ExceptionCode_t * ex )
```

Function that tells if a member is a bitfield or not.

The function can be invoked on struct type objects.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the member is a bitfield. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.29 DDS_TypeCode_member_bitfield_bits()

```
DDS_Short DDS_TypeCode_member_bitfield_bits (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Returns the number of bits of a bitfield member.

The function can be invoked on struct type objects.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_STRUCT** (p. 242) or **DDS_TK_VALUE** (p. 242).
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

The number of bits of the bitfield or **DDS_TYPECODE_NOT_BITFIELD** (p. 237) if the member is not a bitfield.

5.11.7.30 DDS_TypeCode_member_visibility()

```
DDS_Visibility DDS_TypeCode_member_visibility (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong index,
             DDS_ExceptionCode_t * ex )
```

Returns the constant that indicates the visibility of the index-th member.

Precondition

self kind is **DDS_TK_VALUE** (p. 242) or **DDS_TK_STRUCT** (p. 242). The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

For **DDS_TK_STRUCT** (p. 242), this function always returns **DDS_PUBLIC_MEMBER** (p. 239).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* Member index in the interval [0,(member count-1)].
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

One of the following constants: **DDS_PRIVATE_MEMBER** (p. 238) or **DDS_PUBLIC_MEMBER** (p. 239).

5.11.7.31 DDS_TypeCode_discriminator_type()

```
DDS_TypeCode * DDS_TypeCode_discriminator_type (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the discriminator type code.

The function discriminator_type can be invoked only on union **DDS_TypeCode** (p. 2077) objects.

Precondition

self kind is **DDS_TK_UNION** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_TypeCode (p. 2077) object describing the discriminator of the union type if no errors.

5.11.7.32 DDS_TypeCode_length()

```
DDS_UnsignedLong DDS_TypeCode_length (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the number of elements in the type described by this type code.

Length is:

- The maximum length of the string for string type codes.
- The maximum length of the sequence for sequence type codes.
- The first dimension of the array for array type codes.

Precondition

self kind is **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRING** (p. 242) or **DDS_TK↩_WSTRING** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

The bound for strings and sequences, or the number of elements for arrays if no errors.

5.11.7.33 DDS_TypeCode_array_dimension_count()

```
DDS_UnsignedLong DDS_TypeCode_array_dimension_count (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

This function returns the number of dimensions of an array type code.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_ARRAY** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

Number of dimensions if no errors.

5.11.7.34 DDS_TypeCode_array_dimension()

```
DDS_UnsignedLong DDS_TypeCode_array_dimension (
            const  DDS_TypeCode * self,
```

```
                DDS_UnsignedLong index,
                DDS_ExceptionCode_t * ex )
```

This function returns the index-th dimension of an array type code.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_ARRAY** (p. 242).
Dimension index in the interval [0,(dimensions count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
index	<<***in***>> *(*p. *1015)* Dimension index in the interval [0,(dimensions count-1)].
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

Requested dimension if no errors.

5.11.7.35 DDS_TypeCode_element_count()

```
DDS_UnsignedLong DDS_TypeCode_element_count (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

The number of elements in an array.

This operation isn't relevant for other kinds of types.

MT Safety:

SAFE.

5.11.7.36 DDS_TypeCode_content_type()

```
DDS_TypeCode * DDS_TypeCode_content_type (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the **DDS_TypeCode** (p. 2077) object representing the type for the members of the object described by this **DDS_TypeCode** (p. 2077) object.

For sequences and arrays, it returns the element type. For aliases, it returns the original type.

Precondition

self kind is **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242) or **DDS_TK_ALIAS** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

A **DDS_TypeCode** (p. 2077) object representing the element type for sequences and arrays, and the original type for aliases.

5.11.7.37 DDS_TypeCode_is_alias_pointer()

```
DDS_Boolean DDS_TypeCode_is_alias_pointer (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Function that tells if an alias is a pointer or not.

This function is an RTI Connext extension to the CORBA Type Code Specification.

Precondition

self kind is **DDS_TK_ALIAS** (p. 242).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_BOOLEAN_TRUE (p. 1203) if an alias is a pointer to the aliased type. Otherwise, **DDS_BOOLEAN_FALSE** (p. 1203).

5.11.7.38 DDS_TypeCode_default_index()

```
DDS_Long DDS_TypeCode_default_index (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the index of the default member, or -1 if there is no default member.

The function default_index can be invoked only on union **DDS_TypeCode** (p. 2077) objects.

Precondition

self kind is **DDS_TK_UNION** (p. 242)

MT Safety:

SAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

The index of the default member, or -1 if there is no default member.

5.11.7.39 DDS_TypeCode_concrete_base_type()

```
DDS_TypeCode * DDS_TypeCode_concrete_base_type (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns the **DDS_TypeCode** (p. 2077) that describes the concrete base type of the value type that this **DDS_TypeCode** (p. 2077) object describes.

Precondition

self kind is **DDS_TK_VALUE** (p. 242) or **DDS_TK_STRUCT** (p. 242).

MT Safety:

SAFE.

For **DDS_TK_STRUCT** (p. 242), this function always returns **DDS_TK_NULL** (p. 242).

The **DDS_TypeCode** (p. 2077) of structs inheriting from other structs has a **DDS_TK_VALUE** (p. 242) kind.

For example:

```
struct MyStruct: MyBaseStruct {

    long member_1;

};
```

The code generation for the previous type will generate a **DDS_TypeCode** (p. 2077) with **DDS_TK_VALUE** (p. 242) kind.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

DDS_TypeCode (p. 2077) that describes the concrete base type or NULL if there is no a concrete base type.

5.11.7.40 DDS_TypeCode_type_modifier()

```
DDS_ValueModifier DDS_TypeCode_type_modifier (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Returns a constant indicating the modifier of the value type that this **DDS_TypeCode** (p. 2077) object describes.

Precondition

self kind is **DDS_TK_VALUE** (p. 242) or **DDS_TK_STRUCT** (p. 242).

For **DDS_TK_STRUCT** (p. 242), this function always returns **DDS_VM_NONE** (p. 237).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

One of the following type modifiers: **DDS_VM_NONE** (p. 237), **DDS_VM_ABSTRACT** (p. 238), **DDS_VM_↩ CUSTOM** (p. 237) or **DDS_VM_TRUNCATABLE** (p. 238).

5.11.7.41 DDS_TypeCode_find_member_by_id()

```
DDS_UnsignedLong DDS_TypeCode_find_member_by_id (
            const  DDS_TypeCode * self,
             DDS_Long id,
             DDS_ExceptionCode_t * ex )
```

Get the index of the member of the given ID.

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing structs (**DDS_TK_STRUCT** (p. 242)) and union (**DDS_TK_UNION** (p. 242)) types.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
id	<<***in***>> *(*p. *1015)* The member ID.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)

Returns

The index of the member of the given ID or **DDS_TYPECODE_INDEX_INVALID** (p. 237) if the member is not found.

MT Safety:

SAFE.

5.11.7.42 DDS_TypeCode_member_id()

```
DDS_Long DDS_TypeCode_member_id (
             const  DDS_TypeCode * self,
              DDS_UnsignedLong index,
              DDS_ExceptionCode_t * ex )
```

Returns the ID of the TypeCode member identified by the given index.

This function is an RTI Connext extension to the CORBA Type Code Specification.

The function can be invoked on aggregation **DDS_TypeCode** (p. 2077) objects.

All members of aggregated types have an integral member ID that uniquely identifies them within their defining type.

In IDL, you can specify the member ID using the built-in annotation ID. For example:

```
struct MyType {

    long member_1; //@ID 200

} //@Extensibility MUTABLE_EXTENSIBILITY
```

In XML, you can specify the member ID using the attribute 'id':

```
<struct name="MyType" extensibility="mutable" id="200">

    <member name="member_1" type="long"/>

</struct>
```

In XSD, you can specify the member ID using the built-in annotation ID

```
<xsd:complexType name="MyType">

    <xsd:sequence>

        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>

        <!-- @id 200 -->

    </xsd:sequence>

</xsd:complexType>

<!-- @extensibility MUTABLE_EXTENSIBILITY -->
```

Precondition

self kind is **DDS_TK_STRUCT** (p. 242), **DDS_TK_VALUE** (p. 242), or **DDS_TK_UNION** (p. 242)
Member index in the interval [0,(member count-1)].

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
index	<<***in***>> *(p. 1015)* Member index in the interval [0,(member count-1)].

Parameters

ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BOUNDS_USER_EXCEPTION_CODE** (p. 1222)

Returns

ID of the member if no errors.

5.11.7.43 DDS_TypeCode_get_type_object_serialized_size()

```
DDS_UnsignedLong DDS_TypeCode_get_type_object_serialized_size (
            const  DDS_TypeCode * self,
             DDS_ExceptionCode_t * ex )
```

Gets the serialized size of the TypeObject v1 created from this **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that it can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_SYSTEM_EXCEPTION_CODE** (p. 1221)

The default buffer size used for storing a TypeObject v1 is 8192 bytes. For a large TypeObject v1, this API can be used to determine the size that needs to be set in **DDS_DomainParticipantResourceLimitsQosPolicy::type_object_max↩_serialized_length** (p. 1751)

MT Safety:

SAFE.

Returns

The TypeObject v1 serialized size.

5.11.7.44 DDS_TypeCode_add_member_to_enum()

```
DDS_UnsignedLong DDS_TypeCode_add_member_to_enum (
             DDS_TypeCode * self,
            const char * name,
             DDS_Long ordinal,
             DDS_ExceptionCode_t * ex )
```

Add a new enumerated constant to this enum **DDS_TypeCode** (p. 2077).

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing enumerations (**DDS_TK_ENUM** (p. 242)). To add a field to a structured type, see **DDS_TypeCode_add_member_to_enum** (p. 279).

Modifying a **DDS_TypeCode** (p. 2077) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 315) APIs.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* The name of the new member. This string must be unique within this type and must not be NULL.
ordinal	<<***in***>> *(p. 1015)* The relative order of the new member in this enum or a custom integer value. The value must be unique within the type.
ex	<<***out***>> *(p. 1015)* If this method fails, this argument will contain information about the failure. Possible values include: • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE** (p. 1222)

Returns

The zero-based index of the new member relative to any other members that previously existed.

DDS_TypeCode_add_member (p. 281)

DDS_TypeCode_add_member_ex (p. 283)

DDS_TypeCodeFactory (p. 2077)

5.11.7.45 DDS_TypeCode_add_member_to_union()

```
DDS_UnsignedLong DDS_TypeCode_add_member_to_union (
             DDS_TypeCode * self,
            const char * name,
             DDS_Long id,
            const struct  DDS_LongSeq * labels,
            const  DDS_TypeCode * tc,
             DDS_Boolean is_pointer,
             DDS_ExceptionCode_t * ex )
```

Add a new member to a union **DDS_TypeCode** (p. 2077).

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing unions (**DDS_TK_UNION** (p. 242)).

Modifying a **DDS_TypeCode** (p. 2077) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 315) APIs.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* The name of the new member.
id	<<***in***>> *(p. 1015)* The member ID. For automatic assignment of the member ID specify **DDS_TYPECODE_MEMBER_ID_INVALID** (p. 236).
labels	<<***in***>> *(p. 1015)* A sequence of labels or case values associated with the member .
tc	<<***in***>> *(p. 1015)* The type of the new member. You can get or create this **DDS_TypeCode** (p. 2077) with the **DDS_TypeCodeFactory** (p. 2077).
is_pointer	<<***in***>> *(p. 1015)* Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.
ex	<<***out***>> *(p. 1015)* If this method fails, this argument will contain information about the failure.

Possible values include:

- **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222)
- **DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE** (p. 1222)

- **DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE** (p. 1222)

Returns

The zero-based index of the new member relative to any other members that previously existed.

DDS_TypeCode_add_member_to_enum (p. 279)
DDS_TypeCode_add_member_to_union (p. 280)
DDS_TypeCodeFactory (p. 2077)
DDS_TYPECODE_NONKEY_MEMBER (p. 239)
DDS_TYPECODE_KEY_MEMBER (p. 239)
DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 240)

5.11.7.46 DDS_TypeCode_add_member()

```
DDS_UnsignedLong DDS_TypeCode_add_member (
             DDS_TypeCode * self,
            const char * name,
             DDS_Long id,
            const  DDS_TypeCode * tc,
             DDS_Octet member_flags,
             DDS_ExceptionCode_t * ex )
```

Add a new member to this **DDS_TypeCode** (p. 2077).

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing structures (**DDS_TK_STRUCT** (p. 242)), value types (**DDS_TK_VALUE** (p. 242)), and unions (**DDS_TK_UNION** (p. 242)). To add a constant to an enumeration, see **DDS_TypeCode_add_member_to_enum** (p. 279).

Calling this method clones the type code passed as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call **DDS_TypeCodeFactory_delete_tc** (p. 291).

The ability to modify a **DDS_TypeCode** (p. 2077) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 315) APIs.

Here's a simple code example that adds two fields to a data type, one an integer and another a sequence of integers.

```
// Integer:

DDS_TypeCode_add_member(

    myTypeCode,

    "myFieldName",

    DDS_TYPECODE_MEMBER_ID_INVALID,
```

```
    DDS_TypeCodeFactory_get_primitive_tc(DDS_TheTypeCodeFactory, DDS_TK_LONG),
    // New field is a required non-key member:
    DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);

// Sequence of 10 or fewer integers:
DDS_TypeCode_add_member(
    myTypeCode,
    "myFieldName",
    DDS_TYPECODE_MEMBER_ID_INVALID,
    DDS_TypeCodeFactory_create_sequence_tc(
        DDS_TheTypeCodeFactory,
        10,
        DDS_TypeCodeFactory_get_primitive_tc(DDS_TheTypeCodeFactory, DDS_TK_LONG)),
    // New field is a required non-key member:
    DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);
```

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
name	<<***in***>> *(*p. *1015)* The name of the new member.
id	<<***in***>> *(*p. *1015)* Member ID or case value. • For **DDS_TK_STRUCT** (p. 242), and **DDS_TK_VALUE** (p. 242), this parameter is used to provide the member ID. For automatic assignment of the member ID specify **DDS_TYPECODE_MEMBER_ID_INVALID** (p. 236). • For **DDS_TK_UNION** (p. 242), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API **DDS_TypeCode_add_member_to_union** (p. 280).
tc	<<***in***>> *(*p. *1015)* The type of the new member. You can get or create this **DDS_TypeCode** (p. 2077) with the **DDS_TypeCodeFactory** (p. 2077).
member_flags	<<***in***>> *(*p. *1015)* Indicates whether the member is part of the key and whether it is required.
ex	<<***out***>> *(*p. *1015)* If this method fails, this argument will contain information about the failure. Possible values include: • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE** (p. 1222)

Returns

The zero-based index of the new member relative to any other members that previously existed.

DDS_TYPECODE_KEY_MEMBER (p. 239)

DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 240)

5.11.7.47 DDS_TypeCode_add_member_ex()

```
DDS_UnsignedLong DDS_TypeCode_add_member_ex (
             DDS_TypeCode * self,
            const char * name,
             DDS_Long id,
            const  DDS_TypeCode * tc,
             DDS_Octet member_flags,
             DDS_Visibility visibility,
             DDS_Boolean is_pointer,
             DDS_Short bits,
             DDS_Boolean is_must_understand,
             DDS_ExceptionCode_t * ex )
```

Add a new member to this **DDS_TypeCode** (p. 2077).

This method is applicable to **DDS_TypeCode** (p. 2077) objects representing structures (**DDS_TK_STRUCT** (p. 242)), value types (**DDS_TK_VALUE** (p. 242)), and unions (**DDS_TK_UNION** (p. 242)). To add a constant to an enumeration, see **DDS_TypeCode_add_member_to_enum** (p. 279).

Calling this method clones the type code passed in as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call **DDS_TypeCodeFactory_delete_tc** (p. 291).

The ability to modify a **DDS_TypeCode** (p. 2077) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 315) APIs.

Parameters

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (*p. *1015)* Cannot be NULL.
name	*<<**in**>> (*p. *1015)* The name of the new member.
id	*<<**in**>> (*p. *1015)* Member ID or case value. • For **DDS_TK_STRUCT** (p. 242) and **DDS_TK_VALUE** (p. 242), this parameter is used to provide the member ID. • For **DDS_TK_STRUCT** (p. 242) and **DDS_TK_VALUE** (p. 242) only: For automatic assignment of the member ID, specify **DDS_TYPECODE_MEMBER_ID_INVALID** (p. 236). • For **DDS_TK_UNION** (p. 242), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API **DDS_TypeCode_add_member_to_union** (p. 280).
tc	*<<**in**>> (*p. *1015)* The type of the new member. You can get or create this **DDS_TypeCode** (p. 2077) with the **DDS_TypeCodeFactory** (p. 2077).
member_flags	*<<**in**>> (*p. *1015)* Indicates whether the member is part of the key and whether it is required.
visibility	*<<**in**>> (*p. *1015)* Whether the new member is public or private. Non-public members are only relevant for types of kind **DDS_TK_VALUE** (p. 242). Possible values include: • **DDS_PRIVATE_MEMBER** (p. 238) • **DDS_PUBLIC_MEMBER** (p. 239)
is_pointer	*<<**in**>> (*p. *1015)* Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.
bits	*<<**in**>> (*p. *1015)* The number of bits, if this new member is a bit field, or **DDS_TYPECODE_NOT_BITFIELD** (p. 237).
is_must_understand	*<<**in**>> (*p. *1015)* Whether the data member should be marked as "must understand" or not. This value will be ignored and assumed to be true if member_flags indicates that the member is part of the key.
ex	*<<**out**>> (*p. *1015)* If this method fails, this argument will contain information about the failure. Possible values include: • **DDS_BADKIND_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE** (p. 1222)

Returns

The zero-based index of the new member relative to any other members that previously existed.

5.11.7.48 DDS_TypeCode_print_IDL()

```
void DDS_TypeCode_print_IDL (
            const  DDS_TypeCode * self,
             DDS_UnsignedLong indent,
             DDS_ExceptionCode_t * ex )
```

Prints a **DDS_TypeCode** (p. 2077) in IDL notation.

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
indent	<<***in***>> *(p. 1015)* Indent.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

5.11.7.49 DDS_TypeCode_print()

```
void DDS_TypeCode_print (
            const  DDS_TypeCode * self,
            const  DDS_TypeCodePrintFormatProperty * format,
             DDS_ExceptionCode_t * ex )
```

Prints a **DDS_TypeCode** (p. 2077).

MT Safety:

SAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
format	<<***in***>> *(p. 1015)* Format.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

5.11.7.50 DDS_TypeCode_to_string()

```
void DDS_TypeCode_to_string (
            const  DDS_TypeCode * self,
            char * str,
             DDS_UnsignedLong * str_size,
             DDS_ExceptionCode_t * ex )
```

Get a string representation of this **DDS_TypeCode** (p. 2077) object using the default values for **DDS_TypeCodePrint↩FormatProperty** (p. 2079).

This function obtains a string representation of a **DDS_TypeCode** (p. 2077) object, it creates this string using the default values of **DDS_TypeCodePrintFormatProperty** (p. 2079).

In order to calculate the required length of the string, the user can call this function with the parameter str set to NULL. In this mode, the required length of the string will be stored into the value pointed to by the parameter str_size.

If the parameter str is not equal to NULL, the string representation of the **DDS_TypeCode** (p. 2077) will be stored into the parameter str. In this mode, if the size of the string is insufficient to hold the result, the parameter ∗ex will be set to **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) and the parameter str_size will be updated to hold the required size of the string. All string lengths include the trailing NUL byte.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
str	<<***out***>> *(*p. *1015)* The char buffer that will be used to store the string representation of the **DDS_TypeCode** (p. 2077). If NULL then this function will store the required length of the buffer into the value pointed to by the str_size parameter.
str_size	<<***inout***>> *(*p. *1015)* Cannot be NULL. The length of the char buffer. If the supplied buffer is NULL or insufficiently long, the value pointed to by this parameter will be updated to contain the required length.
ex	<<***out***>> *(*p. *1015)* Parameter used for error indications.

DDS_TypeCode_print (p. 285)

DDS_TypeCode_to_string_w_format (p. 287)

5.11.7.51 DDS_TypeCode_to_string_w_format()

```
void DDS_TypeCode_to_string_w_format (
             const  DDS_TypeCode * self,
             char * str,
              DDS_UnsignedLong * str_size,
             const  DDS_TypeCodePrintFormatProperty * format,
              DDS_ExceptionCode_t * ex )
```

Get a string representation of this **DDS_TypeCode** (p. 2077) object using the format described by **DDS_TypeCode↩ PrintFormatProperty** (p. 2079).

This function behaves in the same way as **DDS_TypeCode_to_string** (p. 286) but allows the user to specify the format of the string using **DDS_TypeCodePrintFormatProperty** (p. 2079).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
str	<<***out***>> *(*p. *1015)* The char buffer which will hold the string representation of the **DDS_TypeCode** (p. 2077).
str_size	<<***inout***>> *(*p. *1015)* Cannot be NULL. The length of the char buffer pointed to by the str parameter. If the str parameter is NULL, or too small, this parameter will be updated to hold the required length of the buffer.
format	<<***in***>> *(*p. *1015)* The **DDS_TypeCodePrintFormatProperty** (p. 2079) used to define the format of the string representation of the **DDS_TypeCode** (p. 2077).
ex	<<***out***>> *(*p. *1015)* Parameter used for error indications.

DDS_TypeCode_print (p. 285)

DDS_TypeCode_to_string (p. 286)

5.11.7.52 DDS_TypeCode_get_cdr_serialized_sample_max_size()

```
DDS_UnsignedLong DDS_TypeCode_get_cdr_serialized_sample_max_size (
            const  DDS_TypeCode * self,
             DDS_DataRepresentationId_t representation_id,
             DDS_ExceptionCode_t * ex )
```

[DEPRECATED] Gets the maximum serialized size of samples of this type

DEPRECATED: use **DDS_TypeCode_cdr_serialized_sample_max_size** (p. 288) instead.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

Precondition

The type is an aggregation type (struct, union)

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
representation↩ _id	The serialized data representation for which we calculate the maximum size.
ex	<<***out***>> (p. *1015)* Parameter for error indications.

Returns

The maximum size

5.11.7.53 DDS_TypeCode_cdr_serialized_sample_max_size()

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_max_size (
            const  DDS_TypeCode * self,
             DDS_DataRepresentationId_t representation_id,
             DDS_ExceptionCode_t * ex )
```

Gets the maximum serialized size of samples of this type.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

Precondition

The type is an aggregation type (struct, union)

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
representation↩ _id	The serialized data representation for which we calculate the maximum size.
ex	<<***out***>> (p. *1015)* Parameter for error indications.

Returns

The maximum size

5.11.7.54 DDS_TypeCode_cdr_serialized_sample_min_size()

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_min_size (
            const  DDS_TypeCode * self,
             DDS_DataRepresentationId_t representation_id,
             DDS_ExceptionCode_t * ex )
```

Gets the minimum serialized size of samples of this type.

Obtains the minimum possible size in bytes of any serialized data sample of this type.

Precondition

The type is an aggregation type (struct, union)

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
representation↩ _id	The serialized data representation for which we calculate the minimum size.
ex	<<***out***>> (p. *1015)* Parameter for error indications.

Returns

The minimum size

5.11.7.55 DDS_TypeCode_cdr_serialized_sample_key_max_size()

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_key_max_size (
            const  DDS_TypeCode * self,
             DDS_DataRepresentationId_t representation_id,
             DDS_ExceptionCode_t * ex )
```

Gets the maximum serialized size of sample keys of this type.

Obtains the maximum possible size in bytes of the serialized keys of any data sample of this type

Precondition

The type is an aggregation type (struct, union)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
representation↩ _id	The serialized data representation for which we calculate the maximum key size.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications.

Returns

The maximum key size

5.11.7.56 DDS_TypeCodeFactory_get_instance()

```
DDS_TypeCodeFactory * DDS_TypeCodeFactory_get_instance (
            void  )
```

Gets the singleton instance of this class.

Returns

The **DDS_TypeCodeFactory** (p. 2077) instance if no errors. Otherwise, NULL.

Examples

HelloWorldPlugin.c.

5.11.7.57 DDS_TypeCodeFactory_finalize_instance()

```
DDS_ReturnCode_t DDS_TypeCodeFactory_finalize_instance (
            void  )
```

If there are no DDS_DomainParticipantFactory instances left in the system, it will finalize the **DDS_TypeCodeFactory** (p. 2077). If there is at least one DDS_DomainParticipantFactory instance left in the system, this is a noop.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if finalized.

5.11.7.58 DDS_TypeCodeFactory_clone_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_clone_tc (
             DDS_TypeCodeFactory * self,
            const  DDS_TypeCode * tc,
             DDS_ExceptionCode_t * ex )
```

Creates and returns a copy of the input **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
tc	<<***in***>> *(p. 1015)* Type code that will be copied. Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A clone of tc.

5.11.7.59 DDS_TypeCodeFactory_delete_tc()

```
void DDS_TypeCodeFactory_delete_tc (
             DDS_TypeCodeFactory * self,
```

```
DDS_TypeCode * tc,
DDS_ExceptionCode_t * ex )
```

Deletes the input **DDS_TypeCode** (p. 2077).

All the type codes created through the **DDS_TypeCodeFactory** (p. 2077) must be deleted using this function.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
tc	<<***inout***>> *(p. 1015)* Type code that will be deleted. Cannot be NULL.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222)

Destroys a passed typecode.

5.11.7.60 DDS_TypeCodeFactory_get_primitive_tc()

```
const  DDS_TypeCode * DDS_TypeCodeFactory_get_primitive_tc (
               DDS_TypeCodeFactory * self,
               DDS_TCKind tc_kind )
```

Get the **DDS_TypeCode** (p. 2077) for a primitive type (integers, floating point values, etc.) identified by the given **DDS_TCKind** (p. 242).

This method is equivalent to, and replaces, the `DDS_g_tc_*` constants.

5.11.7.61 DDS_TypeCodeFactory_create_struct_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_struct_tc (
             DDS_TypeCodeFactory * self,
            const char * name,
            const struct  DDS_StructMemberSeq * members,
             DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_STRUCT** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the struct type. Cannot be NULL.
members	<<***in***>> *(p. 1015)* Initial members of the structure. This list may be empty (that is, **FooSeq_get_length** (p. 1515) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a struct.

5.11.7.62 DDS_TypeCodeFactory_create_struct_tc_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_struct_tc_ex (
             DDS_TypeCodeFactory * self,
            const char * name,
             DDS_ExtensibilityKind extensibility_kind,
            const struct  DDS_StructMemberSeq * members,
             DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_STRUCT** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the struct type. Cannot be NULL.

Parameters

extensibility_kind	*<<**in**>> (p. 1015)* Type extensibility.
members	*<<**in**>> (p. 1015)* Initial members of the structure. This list may be empty (that is, **FooSeq_get_length** (p. 1515) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
ex	*<<**out**>> (p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a struct.

5.11.7.63 DDS_TypeCodeFactory_create_value_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_value_tc (
             DDS_TypeCodeFactory * self,
            const char * name,
             DDS_ValueModifier type_modifier,
            const  DDS_TypeCode * concrete_base,
            const struct  DDS_ValueMemberSeq * members,
             DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_VALUE** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
name	*<<**in**>> (p. 1015)* Name of the value type. Cannot be NULL.
type_modifier	*<<**in**>> (p. 1015)* One of the value type modifier constants: **DDS_VM_NONE** (p. 237), **DDS_VM_CUSTOM** (p. 237), **DDS_VM_ABSTRACT** (p. 238) or **DDS_VM_TRUNCATABLE** (p. 238).
concrete_base	*<<**in**>> (p. 1015)* **DDS_TypeCode** (p. 2077) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.
members	*<<**in**>> (p. 1015)* Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)

Parameters

ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a value.

5.11.7.64 DDS_TypeCodeFactory_create_value_tc_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_value_tc_ex (
              DDS_TypeCodeFactory * self,
             const char * name,
              DDS_ExtensibilityKind extensibility_kind,
              DDS_ValueModifier type_modifier,
             const  DDS_TypeCode * concrete_base,
             const struct  DDS_ValueMemberSeq * members,
              DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_VALUE** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
name	<<***in***>> *(*p. *1015)* Name of the value type. Cannot be NULL.
extensibility_kind	<<***in***>> *(*p. *1015)* Type extensibility.
type_modifier	<<***in***>> *(*p. *1015)* One of the value type modifier constants: **DDS_VM_NONE** (p. 237), **DDS_VM_CUSTOM** (p. 237), **DDS_VM_ABSTRACT** (p. 238) or **DDS_VM_TRUNCATABLE** (p. 238).
concrete_base	<<***in***>> *(*p. *1015)* **DDS_TypeCode** (p. 2077) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.
members	<<***in***>> *(*p. *1015)* Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a value.

5.11.7.65 DDS_TypeCodeFactory_create_union_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_union_tc (
            DDS_TypeCodeFactory * self,
           const char * name,
           const  DDS_TypeCode * discriminator_type,
            DDS_Long default_index,
           const struct  DDS_UnionMemberSeq * members,
            DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_UNION** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the union type. Cannot be NULL.
discriminator_type	<<***in***>> *(p. 1015)* Discriminator Type Code. Cannot be NULL.
default_index	<<***in***>> *(p. 1015)* Index of the default member, or -1 if there is no default member.
members	<<***in***>> *(p. 1015)* Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a union.

5.11.7.66 DDS_TypeCodeFactory_create_union_tc_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_union_tc_ex (
            DDS_TypeCodeFactory * self,
```

```
const char * name,
 DDS_ExtensibilityKind extensibility_kind,
const  DDS_TypeCode * discriminator_type,
 DDS_Long default_index,
const struct  DDS_UnionMemberSeq * members,
 DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_UNION** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the union type. Cannot be NULL.
extensibility_kind	<<***in***>> *(p. 1015)* Type extensibility.
discriminator_type	<<***in***>> *(p. 1015)* Discriminator Type Code. Cannot be NULL.
default_index	<<***in***>> *(p. 1015)* Index of the default member, or -1 if there is no default member.
members	<<***in***>> *(p. 1015)* Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a union.

5.11.7.67 DDS_TypeCodeFactory_create_enum_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_enum_tc (
             DDS_TypeCodeFactory * self,
            const char * name,
            const struct  DDS_EnumMemberSeq * members,
             DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_ENUM** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the enum type. Cannot be NULL.

Parameters

members	<<***in***>> *(*p. *1015)* Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with **DDS_TypeCode_add_member_to_enum** (p. 279).
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing an enumeration.

5.11.7.68 DDS_TypeCodeFactory_create_enum_tc_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_enum_tc_ex (
              DDS_TypeCodeFactory * self,
             const char * name,
              DDS_ExtensibilityKind extensibility_kind,
             const struct  DDS_EnumMemberSeq * members,
              DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_ENUM** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
name	<<***in***>> *(*p. *1015)* Name of the enum type. Cannot be NULL.
extensibility_kind	<<***in***>> *(*p. *1015)* Type extensibility.
members	<<***in***>> *(*p. *1015)* Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with **DDS_TypeCode_add_member_to_enum** (p. 279).
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing an enumeration.

5.11.7.69 DDS_TypeCodeFactory_create_alias_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_alias_tc (
            DDS_TypeCodeFactory * self,
           const char * name,
           const  DDS_TypeCode * original_type,
            DDS_Boolean is_pointer,
            DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_ALIAS** (p. 242) (typedef) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
name	<<***in***>> *(p. 1015)* Name of the alias. Cannot be NULL.
original_type	<<***in***>> *(p. 1015)* Aliased type code. Cannot be NULL.
is_pointer	<<***in***>> *(p. 1015)* Indicates if the alias is a pointer to the aliased type code.
ex	<<***out***>> *(p. 1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing an alias.

5.11.7.70 DDS_TypeCodeFactory_create_string_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_string_tc (
            DDS_TypeCodeFactory * self,
            DDS_UnsignedLong bound,
            DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_STRING** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
bound	<<***in***>> *(*p. *1015)* Maximum length of the string.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a string.

5.11.7.71 DDS_TypeCodeFactory_create_wstring_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_wstring_tc (
            DDS_TypeCodeFactory * self,
            DDS_UnsignedLong bound,
            DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_WSTRING** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
bound	<<***in***>> *(*p. *1015)* Maximum length of the wide string.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a wide string.

5.11.7.72 DDS_TypeCodeFactory_create_sequence_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_sequence_tc (
               DDS_TypeCodeFactory * self,
               DDS_UnsignedLong bound,
              const  DDS_TypeCode * element_type,
               DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_SEQUENCE** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
bound	<<***in***>> *(*p. *1015)* The bound for the sequence (> 0).
element_type	<<***in***>> *(*p. *1015)* **DDS_TypeCode** (p. 2077) object describing the sequence elements.
ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a sequence.

5.11.7.73 DDS_TypeCodeFactory_create_array_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_array_tc (
               DDS_TypeCodeFactory * self,
              const struct  DDS_UnsignedLongSeq * dimensions,
              const  DDS_TypeCode * element_type,
               DDS_ExceptionCode_t * ex )
```

Constructs a **DDS_TK_ARRAY** (p. 242) **DDS_TypeCode** (p. 2077).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
dimensions	<<***in***>> *(*p. *1015)* Dimensions of the array. Each dimension has to be greater than 0.
element_type	<<***in***>> *(*p. *1015)* **DDS_TypeCode** (p. 2077) describing the array elements. Cannot be NULL.

Parameters

ex	<<***out***>> *(*p. *1015)* Parameter for error indications. The values that can take are: • **DDS_NO_EXCEPTION_CODE** (p. 1221) • **DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE** (p. 1222) • **DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE** (p. 1222)

Returns

A newly-created **DDS_TypeCode** (p. 2077) object describing a sequence.

5.11.8 Variable Documentation

5.11.8.1 DDS_g_tc_null

```
DDS_TypeCode DDS_g_tc_null
```

Basic NULL type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

5.11.8.2 DDS_g_tc_short

```
DDS_TypeCode DDS_g_tc_short
```

Basic 16-bit signed integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_Short (p. 1204)

5.11.8.3 DDS_g_tc_long

```
DDS_TypeCode DDS_g_tc_long
```

Basic 32-bit signed integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_Long (p. 1205)

5.11.8.4 DDS_g_tc_ushort

```
DDS_TypeCode DDS_g_tc_ushort
```

Basic unsigned 16-bit integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_UnsignedShort (p. 1204)

5.11.8.5 DDS_g_tc_ulong

```
DDS_TypeCode DDS_g_tc_ulong
```

Basic unsigned 32-bit integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_UnsignedLong (p. 1205)

5.11.8.6 DDS_g_tc_float

```
DDS_TypeCode DDS_g_tc_float
```

Basic 32-bit floating point type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_Float (p. 1205)

5.11.8.7 DDS_g_tc_double

```
DDS_TypeCode DDS_g_tc_double
```

Basic 64-bit floating point type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_Double (p. 1205)

5.11.8.8 DDS_g_tc_boolean

```
DDS_TypeCode DDS_g_tc_boolean
```

Basic Boolean type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_Boolean (p. 1206)

5.11.8.9 DDS_g_tc_char

```
DDS_TypeCode DDS_g_tc_char
```

Basic single-byte character type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_Char (p. 1203)

5.11.8.10 DDS_g_tc_octet

```
DDS_TypeCode DDS_g_tc_octet
```

Basic octet/byte type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_Octet (p. 1204)

5.11.8.11 DDS_g_tc_int8

```
DDS_TypeCode DDS_g_tc_int8
```

Basic signed 8-bit int type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_Int8 (p. 1204)

5.11.8.12 DDS_g_tc_uint8

```
DDS_TypeCode DDS_g_tc_uint8
```

Basic unsigned 8-bit int type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_UInt8 (p. 1204)

5.11.8.13 DDS_g_tc_longlong

```
DDS_TypeCode DDS_g_tc_longlong
```

Basic 64-bit integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_LongLong (p. 1205)

5.11.8.14 DDS_g_tc_ulonglong

```
DDS_TypeCode DDS_g_tc_ulonglong
```

Basic unsigned 64-bit integer type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)
DDS_UnsignedLongLong (p. 1205)

5.11.8.15 DDS_g_tc_longdouble

```
DDS_TypeCode DDS_g_tc_longdouble
```

Basic 128-bit floating point type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_LongDouble (p. 1206)

5.11.8.16 DDS_g_tc_wchar

```
DDS_TypeCode DDS_g_tc_wchar
```

Basic four-byte character type.

For new code, **DDS_TypeCodeFactory_get_primitive_tc** (p. 292) is preferred to using this global variable.

See also

DDS_TypeCodeFactory_get_primitive_tc (p. 292)

DDS_Wchar (p. 1204)

5.12 Built-in Types

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

Modules

- **String Built-in Type**

  Built-in type consisting of a single character string.
- **KeyedString Built-in Type**

  Built-in type consisting of a string payload and a second string that is the key.
- **Octets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes.
- **KeyedOctets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

5.12.1 Detailed Description

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

The middleware provides four built-in types:

- String: A payload consisting of a single string of characters. This type has no key.
- **DDS_KeyedString** (p. 1815): A payload consisting of a single string of characters and a second string, the key, that identifies the instance to which the sample belongs.
- **DDS_Octets** (p. 1863): A payload consisting of an opaque variable-length array of bytes. This type has no key.
- **DDS_KeyedOctets** (p. 1814): A payload consisting of an opaque variable-length array of bytes and a string, the key, that identifies the instance to which the sample belongs.

The String and **DDS_KeyedString** (p. 1815) types are appropriate for simple text-based applications. The **DDS_Octets** (p. 1863) and **DDS_KeyedOctets** (p. 1814) types are appropriate for applications that perform their own custom data serialization, such as legacy applications still in the process of migrating to RTI Connext. In most cases, string-based or structured data is preferable to opaque data, because the latter cannot be easily visualized in tools or used with content-based filters (see **DDS_ContentFilteredTopic** (p. 176)).

The built-in types are very simple in order to get you up and running as quickly as possible. If you need a structured data type you can define your own type with exactly the fields you need in one of two ways:

- At compile time, by generating code from an IDL or XML file using the rtiddsgen utility
- At runtime, by using the **Dynamic Data** (p. 315) API

5.12.2 Managing Memory for Builtin Types

When a sample is written, the DataWriter serializes it and stores the result in a buffer obtained from a pool of preallocated buffers. In the same way, when a sample is received, the DataReader deserializes it and stores the result in a sample coming from a pool of preallocated samples.

For builtin types, the maximum size of the buffers/samples and depends on the nature of the application using the builtin type.

You can configure the maximum size of the builtin types on a per-DataWriter and per-DataReader basis using the **DDS_PropertyQosPolicy** (p. 1905) in DataWriters, DataReaders or Participants.

The following table lists the supported builtin type properties to configure memory allocation. When the properties are defined in the DomainParticipant, they are applicable to all DataWriters and DataReaders belonging to the Domain↩ Participant unless they are overwrittem in the DataWriters and DataReaders.

Table 5.297 ***Builtin Types Allocation Properties***

Property	Description
dds.builtin_type.string.alloc_size	Maximum size of the strings published by the **DDS_StringData↩ Writer** (p. 1116) or received the **DDS_StringDataReader** (p. 1116) (includes the NULL-terminated character). Default: dds.builtin_type.string.max_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_key_size	Maximum size of the keys used by the **DDS_KeyedStringData↩ Writer** (p. 1131) or **DDS_KeyedStringDataReader** (p. 1131) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_size	Maximum size of the strings published by the **DDS_KeyedString↩ DataWriter** (p. 1131) or received by the **DDS_KeyedStringData↩ Reader** (p. 1131) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_size if defined. Otherwise, 1024.
dds.builtin_type.octets.alloc_size	Maximum size of the octet sequences published the **DDS_Octets↩ DataWriter** (p. 1156) or received by the **DDS_OctetsDataReader** (p. 1156). Default: dds.builtin_type.octets.max_size if defined. Otherwise, 2048.
dds.builtin_type.keyed_octets.alloc_key_size	Maximum size of the key published by the **DDS_KeyedOctets↩ DataWriter** (p. 1177) or received by the **DDS_KeyedOctetsData↩ Reader** (p. 1177) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_octets.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_octets.alloc_size	Maximum size of the octets sequences published by a **DDS_↩ KeyedOctetsDataWriter** (p. 1177) or received by a **DDS_Keyed↩ OctetsDataReader** (p. 1177). Default: dds.builtin_type.keyed_octets.max_size if defined. Otherwise, 2048.

The previous properties must be set consistently with respect to the corresponding $*$.max_size properties that set the maximum size of the builtin types in the typecode.

5.12.3 Typecodes for Builtin Types

The typecodes associated with the builtin types are generated from the following IDL type definitions:

```
module DDS {

    struct String {

        string value;

    };

    struct KeyedString {

        string key;
```

```
        string value;
    };

    struct Octets {
        sequence<octet> value;
    };

    struct KeyedOctets {
        string key;
        sequence<octet> value;
    };
};
```

The maximum size of the strings and sequences that will be included in the type code definitions can be configured on a per-DomainParticipant-basis by using the properties in following table.

Table 5.298 ***Properties for Allocating Size of Builtin Types, per DomainParticipant***

Property	Description
dds.builtin_type.string.max_size	Maximum size of the strings published by the StringDataWriters and received by the StringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_key_size	Maximum size of the keys used by the KeyedStringDataWriters and KeyedStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_size	Maximum size of the strings published by the KeyedStringDataWriters and received by the KeyedStringDataReaders belonging to a DomainParticipant using the builtin type (includes the NULL-terminated character). Default: 1024
dds.builtin_type.octets.max_size	Maximum size of the octet sequences published by the OctetsDataWriters and received by the OctetsDataReader belonging to a DomainParticipant. Default: 2048
dds.builtin_type.keyed_octets.max_key_size	Maximum size of the keys used by the KeyedOctetsStringDataWriters and KeyedOctetsStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_octets.max_size	Maximum size of the octet sequences published by the KeyedOctetsDataWriters and received by the KeyedOctetsDataReaders belonging to a DomainParticipant. Default: 2048

For more information about the built-in types, including how to control memory usage and maximum lengths, please see the "Data Types and DDS Data Samples" chapter in the `User's Manual`.

5.13 Built-in Topic's Trust Types

Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1873), **DDS_PublicationBuiltinTopicData** (p. 1909), **DDS_SubscriptionBuiltinTopicData** (p. 2018) to describe Trust Plugins configuration.

Data Structures

- struct **DDS_ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- struct **DDS_EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- struct **DDS_TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.
- struct **DDS_ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- struct **DDS_EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- struct **DDS_EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.

Typedefs

- typedef **DDS_UnsignedLong** **DDS_ParticipantTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_PluginParticipantTrustAttributesMask**
- typedef struct **DDS_ParticipantTrustProtectionInfo** **DDS_ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- typedef **DDS_UnsignedLong** **DDS_EndpointTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_PluginEndpointTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_VendorEndpointTrustAttributesMask**
- typedef struct **DDS_EndpointTrustProtectionInfo** **DDS_EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- typedef **DDS_UnsignedLong** **DDS_TrustAlgorithmBit**
- typedef **DDS_UnsignedLong** **DDS_TrustAlgorithmSet**
- typedef struct **DDS_TrustAlgorithmRequirements** **DDS_TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.
- typedef struct **DDS_ParticipantTrustSignatureAlgorithmInfo** **DDS_ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo** **DDS_ParticipantTrustKey↩ EstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

- typedef struct **DDS_ParticipantTrustInterceptorAlgorithmInfo** **DDS_ParticipantTrustInterceptor↩ AlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_ParticipantTrustAlgorithmInfo** **DDS_ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_EndpointTrustInterceptorAlgorithmInfo** **DDS_EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- typedef struct **DDS_EndpointTrustAlgorithmInfo** **DDS_EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.

5.13.1 Detailed Description

Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1873), **DDS_PublicationBuiltinTopicData** (p. 1909), **DDS_SubscriptionBuiltinTopicData** (p. 2018) to describe Trust Plugins configuration.

These types are used to describe how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins.

The meaning of the contents of these types may vary depending on what Trust Plugins the DomainParticipant is using. For information about how these types interact with the RTI Security Plugins, please refer to the `RTI Security Plugins User's Manual`.

5.13.2 Typedef Documentation

5.13.2.1 DDS_ParticipantTrustAttributesMask

`typedef` **`DDS_UnsignedLong DDS_ParticipantTrustAttributesMask`**

5.13.2.2 DDS_PluginParticipantTrustAttributesMask

`typedef` **`DDS_UnsignedLong DDS_PluginParticipantTrustAttributesMask`**

5.13.2.3 DDS_ParticipantTrustProtectionInfo

`typedef struct` **`DDS_ParticipantTrustProtectionInfo DDS_ParticipantTrustProtectionInfo`**

Trust Plugins Protection information associated with the discovered DomainParticipant.

5.13.2.4 DDS_EndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_EndpointTrustAttributesMask
```

5.13.2.5 DDS_PluginEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginEndpointTrustAttributesMask
```

5.13.2.6 DDS_VendorEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_VendorEndpointTrustAttributesMask
```

5.13.2.7 DDS_EndpointTrustProtectionInfo

```
typedef struct DDS_EndpointTrustProtectionInfo DDS_EndpointTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered endpoint.

5.13.2.8 DDS_TrustAlgorithmBit

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmBit
```

5.13.2.9 DDS_TrustAlgorithmSet

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmSet
```

5.13.2.10 DDS_TrustAlgorithmRequirements

```
typedef struct DDS_TrustAlgorithmRequirements DDS_TrustAlgorithmRequirements
```

Type to describe Trust Plugins algorithm requirements for an entity.

5.13.2.11 DDS_ParticipantTrustSignatureAlgorithmInfo

typedef struct **DDS_ParticipantTrustSignatureAlgorithmInfo** **DDS_ParticipantTrustSignatureAlgorithmInfo**

Trust Plugins signature algorithm information associated with the discovered DomainParticipant.

5.13.2.12 DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo

typedef struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo** **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo**

Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

5.13.2.13 DDS_ParticipantTrustInterceptorAlgorithmInfo

typedef struct **DDS_ParticipantTrustInterceptorAlgorithmInfo** **DDS_ParticipantTrustInterceptorAlgorithmInfo**

Trust Plugins interception algorithm information associated with the discovered DomainParticipant.

5.13.2.14 DDS_ParticipantTrustAlgorithmInfo

typedef struct **DDS_ParticipantTrustAlgorithmInfo** **DDS_ParticipantTrustAlgorithmInfo**

Trust Plugins algorithm information associated with the discovered DomainParticipant.

5.13.2.15 DDS_EndpointTrustInterceptorAlgorithmInfo

typedef struct **DDS_EndpointTrustInterceptorAlgorithmInfo** **DDS_EndpointTrustInterceptorAlgorithmInfo**

Trust Plugins interception algorithm information associated with the discovered endpoint.

5.13.2.16 DDS_EndpointTrustAlgorithmInfo

```
typedef struct DDS_EndpointTrustAlgorithmInfo DDS_EndpointTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered endpoint.

5.14 Dynamic Data

<<***extension***>> *(*p. *1014)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

Data Structures

- struct **DDS_DynamicDataProperty_t**

  A collection of attributes used to configure ***DDS_DynamicData*** *(*p. *1771) objects.*
- struct **DDS_DynamicDataTypeSerializationProperty_t**

  Properties that govern how data of a certain type will be serialized on the network.
- struct **DDS_DynamicDataInfo**

  A descriptor for a ***DDS_DynamicData*** *(*p. *1771) object.*
- struct **DDS_DynamicDataMemberInfo**

  A descriptor for a single member (i.e. field) of dynamically defined data type.
- struct **DDS_DynamicData**

  A sample of any complex data type, which can be inspected and manipulated reflectively.
- struct **DDS_DynamicDataSeq**

  An ordered collection of ***DDS_DynamicData*** *(*p. *1771) elements.*
- struct **DDS_DynamicDataTypeProperty_t**

  A collection of attributes used to configure ***DDS_DynamicDataTypeSupport*** *(*p. *328) objects.*
- struct **DDS_DynamicDataJsonParserProperties_t**

  A collection of attributes used to configure ***DDS_DynamicData*** *(*p. *1771) objects.*

Macros

- #define **DDS_DynamicDataProperty_t_INITIALIZER**

  Static initializer for ***DDS_DynamicDataProperty_t*** *(*p. *1782) objects.*
- #define **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED**

  A sentinel value that indicates that no member ID is needed in order to perform some operation.
- #define **DDS_DynamicDataTypeProperty_t_INITIALIZER**

  Static initializer for ***DDS_DynamicDataTypeProperty_t*** *(*p. *1784) objects.*

Typedefs

- typedef **DDS_Long DDS_DynamicDataMemberId**

  An integer that uniquely identifies some member of a data type within that type.
- typedef struct **DDS_DynamicDataWriter DDS_DynamicDataWriter**

  *Writes (publishes) objects of type **DDS_DynamicData** (p. 1771).*
- typedef struct **DDS_DynamicDataReader DDS_DynamicDataReader**

  *Reads (subscribes to) objects of type **DDS_DynamicData** (p. 1771).*
- typedef struct DDS_DynamicDataTypeSupport **DDS_DynamicDataTypeSupport**

  *A factory for registering a dynamically defined type and creating **DDS_DynamicData** (p. 1771) objects.*

Functions

- **DDS_Boolean DDS_DynamicData_initialize** (**DDS_DynamicData** *self, const **DDS_TypeCode** *type, const struct **DDS_DynamicDataProperty_t** *property)

  *Initialize a **DDS_DynamicData** (p. 1771) object to a valid empty state.*
- **DDS_DynamicData** * **DDS_DynamicData_new** (const **DDS_TypeCode** *type, const struct **DDS_DynamicDataProperty_t** *property)

  *The constructor for new **DDS_DynamicData** (p. 1771) objects.*
- void **DDS_DynamicData_finalize** (**DDS_DynamicData** *self)

  Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.
- void **DDS_DynamicData_delete** (**DDS_DynamicData** *self)

  *Finalize and deallocate this **DDS_DynamicData** (p. 1771) sample.*
- **DDS_ReturnCode_t DDS_DynamicData_copy** (**DDS_DynamicData** *self, const **DDS_DynamicData** *src)

  Deeply copy from the given object to this object.
- **DDS_Boolean DDS_DynamicData_equal** (const **DDS_DynamicData** *self, const **DDS_DynamicData** *other)

  *Indicate whether the contents of another **DDS_DynamicData** (p. 1771) sample are the same as those of this one.*
- **DDS_ReturnCode_t DDS_DynamicData_clear_all_members** (**DDS_DynamicData** *self)

  Clear the contents of all data members of this object.
- **DDS_ReturnCode_t DDS_DynamicData_clear_optional_member** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Clear the contents of a single optional data member of this object.
- **DDS_ReturnCode_t DDS_DynamicData_clear_member** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Clear the contents of a single data member of this object.
- **DDS_ReturnCode_t DDS_DynamicData_set_cdr_buffer** (**DDS_DynamicData** *self, const char *buffer, **DDS_UnsignedLong** length)

  Associate a CDR buffer with a DynamicData object.
- const char * **DDS_DynamicData_get_cdr_buffer** (const **DDS_DynamicData** *self, **DDS_UnsignedLong** *length)

  Get the CDR buffer associated with a DynamicData object.
- **DDS_Boolean DDS_DynamicData_is_cdr** (const **DDS_DynamicData** *self)

  Determine if a DynamicData object is using CDR as its data representation.
- **DDS_ReturnCode_t DDS_DynamicData_set_discriminator** (**DDS_DynamicData** *self, **DDS_Long** discriminator)

  Set the value of the union discriminator (UnionType only)

- **DDS_ReturnCode_t DDS_DynamicData_get_discriminator** (const **DDS_DynamicData** *self, **DDS_Long** *discriminator)

  Get the current value of the union discriminator.
- **DDS_ReturnCode_t DDS_DynamicData_print** (const **DDS_DynamicData** *self, FILE *fp, int indent)

  Output a textual representation of this object and its contents to the given file.
- **DDS_ReturnCode_t DDS_DynamicData_from_cdr_buffer** (**DDS_DynamicData** *self, const char *buffer, unsigned int length)

  Deserializes a DynamicData object from a buffer of octets.
- **DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer_ex** (**DDS_DynamicData** *self, char *buffer, unsigned int *length, **DDS_DataRepresentationId_t** representation)

  Serializes a DynamicData object into a buffer of octets.
- **DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer** (**DDS_DynamicData** *self, char *buffer, unsigned int *length)

  Serializes a DynamicData object into a CDR buffer of octets.
- **DDS_ReturnCode_t DDS_DynamicData_to_string** (**DDS_DynamicData** *self, char *str, **DDS_Unsigned↩ Long** *str_size, const struct **DDS_PrintFormatProperty** *property)

  Get a string representation of a DynamicData object.
- **DDS_ReturnCode_t DDS_DynamicData_from_string** (**DDS_DynamicData** *self, const char *str, **DDS_↩ PrintFormatKind** format_kind)

  Populates a DynamicData object from a JSON string representation.
- void **DDS_DynamicData_get_info** (const **DDS_DynamicData** *self, struct **DDS_DynamicDataInfo** *info_out)

  *Fill in the given descriptor with information about this **DDS_DynamicData*** (p. *1771).*
- **DDS_ReturnCode_t DDS_DynamicData_bind_type** (**DDS_DynamicData** *self, const **DDS_TypeCode** *type)

  *If this **DDS_DynamicData*** (p. *1771) object is not yet associated with a data type, set that type now to the given **DDS_↩ TypeCode*** (p. *2077).*
- **DDS_ReturnCode_t DDS_DynamicData_unbind_type** (**DDS_DynamicData** *self)

  *Dissociate this **DDS_DynamicData*** (p. *1771) object from any particular data type.*
- **DDS_ReturnCode_t DDS_DynamicData_bind_complex_member** (**DDS_DynamicData** *self, **DDS_↩ DynamicData** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Use another **DDS_DynamicData*** (p. *1771) object to provide access to a complex field of this **DDS_DynamicData*** (p. *1771) object.*
- **DDS_ReturnCode_t DDS_DynamicData_unbind_complex_member** (**DDS_DynamicData** *self, **DDS_↩ DynamicData** *value)

  *Tear down the association created by a **DDS_DynamicData_bind_complex_member*** (p. *344) operation, committing any changes to the outer object since then.*
- const **DDS_TypeCode** * **DDS_DynamicData_get_type** (const **DDS_DynamicData** *self)

  *Get the data type, of which this **DDS_DynamicData*** (p. *1771) represents an instance.*
- **DDS_TCKind DDS_DynamicData_get_type_kind** (const **DDS_DynamicData** *self)

  Get the kind of this object's data type.
- **DDS_UnsignedLong DDS_DynamicData_get_member_count** (const **DDS_DynamicData** *self)

  Get the number of members in the type.
- **DDS_Boolean DDS_DynamicData_member_exists** (const **DDS_DynamicData** *self, const char *member↩ _name, **DDS_DynamicDataMemberId** member_id)

  Indicates whether a member exists in this sample.
- **DDS_Boolean DDS_DynamicData_member_exists_in_type** (const **DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Indicates whether a member of a particular name/ID exists in this data sample's type.

- **DDS_ReturnCode_t DDS_DynamicData_get_member_info** (const **DDS_DynamicData** *self, struct **DDS_DynamicDataMemberInfo** *info, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Fill in the given descriptor with information about the identified member of this **DDS_DynamicData** (p. 1771) sample.*
- **DDS_ReturnCode_t DDS_DynamicData_get_member_info_by_index** (const **DDS_DynamicData** *self, struct **DDS_DynamicDataMemberInfo** *info, **DDS_UnsignedLong** index)

  *Fill in the given descriptor with information about the identified member of this **DDS_DynamicData** (p. 1771) sample.*
- **DDS_ReturnCode_t DDS_DynamicData_get_member_type** (const **DDS_DynamicData** *self, const **DDS_TypeCode** **type_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get the type of the given member of this sample.
- **DDS_ReturnCode_t DDS_DynamicData_is_member_key** (const **DDS_DynamicData** *self, **DDS_Boolean** *is_key_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Indicates whether a given member forms part of the key of this sample's data type.
- **DDS_ReturnCode_t DDS_DynamicData_get_long** (const **DDS_DynamicData** *self, **DDS_Long** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Long** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), or **DDS_Enum** (p. 1206)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_short** (const **DDS_DynamicData** *self, **DDS_Short** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Short** (p. 1204) or another type implicitly convertible to it (**DDS_Octet** (p. 1204) or **DDS_Char** (p. 1203)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_ulong** (const **DDS_DynamicData** *self, **DDS_UnsignedLong** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_UnsignedLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), or **DDS_Enum** (p. 1206)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_ushort** (const **DDS_DynamicData** *self, **DDS_UnsignedShort** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_UnsignedShort** (p. 1204) or another type implicitly convertible to it (**DDS_Octet** (p. 1204) or **DDS_Char** (p. 1203)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_float** (const **DDS_DynamicData** *self, **DDS_Float** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Float** (p. 1205).*
- **DDS_ReturnCode_t DDS_DynamicData_get_double** (const **DDS_DynamicData** *self, **DDS_Double** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Double** (p. 1205) or another type implicitly convertible to it (**DDS_Float** (p. 1205)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_boolean** (const **DDS_DynamicData** *self, **DDS_Boolean** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Boolean** (p. 1206).*
- **DDS_ReturnCode_t DDS_DynamicData_get_char** (const **DDS_DynamicData** *self, **DDS_Char** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Char** (p. 1203).*
- **DDS_ReturnCode_t DDS_DynamicData_get_octet** (const **DDS_DynamicData** *self, **DDS_Octet** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Octet** (p. 1204).*
- **DDS_ReturnCode_t DDS_DynamicData_get_longlong** (const **DDS_DynamicData** *self, **DDS_LongLong** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_LongLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), **DDS_Long** (p. 1205), **DDS_UnsignedLong** (p. 1205), or **DDS_Enum** (p. 1206)).*

- **DDS_ReturnCode_t DDS_DynamicData_get_ulonglong** (const **DDS_DynamicData** *self, **DDS_UnsignedLongLong** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_UnsignedLongLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), **DDS_Long** (p. 1205), **DDS_UnsignedLong** (p. 1205), or **DDS_Enum** (p. 1206)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_longdouble** (const **DDS_DynamicData** *self, **DDS_LongDouble** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_LongDouble** (p. 1206) or another type implicitly convertible to it (**DDS_Float** (p. 1205) or **DDS_Double** (p. 1205)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_wchar** (const **DDS_DynamicData** *self, **DDS_Wchar** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Wchar** (p. 1204) or another type implicitly convertible to it (**DDS_Char** (p. 1203)).*
- **DDS_ReturnCode_t DDS_DynamicData_get_int8** (const **DDS_DynamicData** *self, **DDS_Int8** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Int8** (p. 1204).*
- **DDS_ReturnCode_t DDS_DynamicData_get_uint8** (const **DDS_DynamicData** *self, **DDS_UInt8** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_UInt8** (p. 1204).*
- **DDS_ReturnCode_t DDS_DynamicData_get_string** (const **DDS_DynamicData** *self, char **value, **DDS_UnsignedLong** *size, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get the value of the given field, which is of type char.*
- **DDS_ReturnCode_t DDS_DynamicData_get_wstring** (const **DDS_DynamicData** *self, **DDS_Wchar** **value, **DDS_UnsignedLong** *size, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get the value of the given field, which is of type **DDS_Wchar** (p. 1204)*.*
- **DDS_ReturnCode_t DDS_DynamicData_get_complex_member** (const **DDS_DynamicData** *self, **DDS_DynamicData** *value_out, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the value of the given field, which is of some composed type.
- **DDS_ReturnCode_t DDS_DynamicData_get_long_array** (const **DDS_DynamicData** *self, **DDS_Long** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get a copy of the given array member. The array may contain members of type **DDS_Long** (p. 1205) or **DDS_Enum** (p. 1206).*
- **DDS_ReturnCode_t DDS_DynamicData_get_short_array** (const **DDS_DynamicData** *self, **DDS_Short** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_ulong_array** (const **DDS_DynamicData** *self, **DDS_UnsignedLong** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  *Get a copy of the given array member. The array may contain members of type **DDS_UnsignedLong** (p. 1205) or **DDS_Enum** (p. 1206).*
- **DDS_ReturnCode_t DDS_DynamicData_get_ushort_array** (const **DDS_DynamicData** *self, **DDS_UnsignedShort** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_float_array** (const **DDS_DynamicData** *self, **DDS_Float** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_double_array** (const **DDS_DynamicData** *self, **DDS_Double** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

Get a copy of the given array member.

- **DDS_ReturnCode_t DDS_DynamicData_get_boolean_array** (const **DDS_DynamicData** *self, **DDS_Boolean** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_char_array** (const **DDS_DynamicData** *self, **DDS_Char** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_octet_array** (const **DDS_DynamicData** *self, **DDS_Octet** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_longlong_array** (const **DDS_DynamicData** *self, **DDS_LongLong** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_ulonglong_array** (const **DDS_DynamicData** *self, **DDS_UnsignedLongLong** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_longdouble_array** (const **DDS_DynamicData** *self, **DDS_LongDouble** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_wchar_array** (const **DDS_DynamicData** *self, **DDS_Wchar** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_int8_array** (const **DDS_DynamicData** *self, **DDS_Int8** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_uint8_array** (const **DDS_DynamicData** *self, **DDS_UInt8** *array, **DDS_UnsignedLong** *length, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_get_long_seq** (const **DDS_DynamicData** *self, struct **DDS_LongSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_get_short_seq** (const **DDS_DynamicData** *self, struct **DDS_ShortSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_get_ulong_seq** (const **DDS_DynamicData** *self, struct **DDS_UnsignedLongSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_get_ushort_seq** (const **DDS_DynamicData** *self, struct **DDS_UnsignedShortSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_get_float_seq** (const **DDS_DynamicData** *self, struct **DDS_FloatSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_get_double_seq** (const **DDS_DynamicData** *self, struct **DDS_DoubleSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_boolean_seq** (const **DDS_DynamicData** *self, struct **DDS_BooleanSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_char_seq** (const **DDS_DynamicData** *self, struct **DDS_CharSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_octet_seq** (const **DDS_DynamicData** *self, struct **DDS_OctetSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_longlong_seq** (const **DDS_DynamicData** *self, struct **DDS_LongLongSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_ulonglong_seq** (const **DDS_DynamicData** *self, struct **DDS_UnsignedLongLongSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_longdouble_seq** (const **DDS_DynamicData** *self, struct **DDS_LongDoubleSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_wchar_seq** (const **DDS_DynamicData** *self, struct **DDS_WcharSeq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_int8_seq** (const **DDS_DynamicData** *self, struct **DDS_Int8Seq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_get_uint8_seq** (const **DDS_DynamicData** *self, struct **DDS_UInt8Seq** *seq, const char *member_name, **DDS_DynamicDataMemberId** member_id)

  Get a copy of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_long** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Long** value)

  *Set the value of the given field, which is of type **DDS_Long** (p. 1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_short** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Short** value)

  *Set the value of the given field, which is of type **DDS_Short** (p. 1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_ulong** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** value)

  *Set the value of the given field, which is of type **DDS_UnsignedLong** (p. 1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_ushort** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedShort** value)

  *Set the value of the given field, which is of type **DDS_UnsignedShort** (p. 1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_float** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Float** value)

  *Set the value of the given field, which is of type **DDS_Float** (p. 1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_double** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Double** value)

  *Set the value of the given field, which is of type **DDS_Double** (p. 1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_boolean** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Boolean** value)

  *Set the value of the given field, which is of type **DDS_Boolean** (p. 1206).*

- **DDS_ReturnCode_t DDS_DynamicData_set_char** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Char** value)

  *Set the value of the given field, which is of type **DDS_Char** (*p. *1203).*

- **DDS_ReturnCode_t DDS_DynamicData_set_octet** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Octet** value)

  *Set the value of the given field, which is of type **DDS_Octet** (*p. *1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_longlong** (**DDS_DynamicData** ∗self, const char ∗member_↩ name, **DDS_DynamicDataMemberId** member_id, **DDS_LongLong** value)

  *Set the value of the given field, which is of type **DDS_LongLong** (*p. *1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_ulonglong** (**DDS_DynamicData** ∗self, const char ∗member↩ _name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLongLong** value)

  *Set the value of the given field, which is of type **DDS_UnsignedLongLong** (*p. *1205).*

- **DDS_ReturnCode_t DDS_DynamicData_set_longdouble** (**DDS_DynamicData** ∗self, const char ∗member↩ _name, **DDS_DynamicDataMemberId** member_id, **DDS_LongDouble** value)

  *Set the value of the given field, which is of type **DDS_LongDouble** (*p. *1206).*

- **DDS_ReturnCode_t DDS_DynamicData_set_wchar** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Wchar** value)

  *Set the value of the given field, which is of type **DDS_Wchar** (*p. *1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_int8** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_Int8** value)

  *Set the value of the given field, which is of type **DDS_Int8** (*p. *1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_uint8** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UInt8** value)

  *Set the value of the given field, which is of type **DDS_UInt8** (*p. *1204).*

- **DDS_ReturnCode_t DDS_DynamicData_set_string** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, const char ∗value)

  Set the value of the given field of type char∗.

- **DDS_ReturnCode_t DDS_DynamicData_set_wstring** (**DDS_DynamicData** ∗self, const char ∗member_↩ name, **DDS_DynamicDataMemberId** member_id, const **DDS_Wchar** ∗value)

  *Set the value of the given field of type **DDS_Wchar** (*p. *1204)∗.*

- **DDS_ReturnCode_t DDS_DynamicData_set_complex_member** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, const **DDS_DynamicData** ∗value)

  *Copy the state of the given **DDS_DynamicData** (*p. *1771) object into a member of this object.*

- **DDS_ReturnCode_t DDS_DynamicData_set_long_array** (**DDS_DynamicData** ∗self, const char ∗member↩ _name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Long** ∗array)

  *Set the contents of the given array member. The array may contain members of type **DDS_Long** (*p. *1205) or **DDS_Enum** (*p. *1206).*

- **DDS_ReturnCode_t DDS_DynamicData_set_short_array** (**DDS_DynamicData** ∗self, const char ∗member↩ _name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Short** ∗array)

  Set the contents of the given array member.

- **DDS_ReturnCode_t DDS_DynamicData_set_ulong_array** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_↩ UnsignedLong** ∗array)

  *Set the contents of the given array member. The array may contain members of type **DDS_UnsignedLong** (*p. *1205) or **DDS_Enum** (*p. *1206).*

- **DDS_ReturnCode_t DDS_DynamicData_set_ushort_array** (**DDS_DynamicData** ∗self, const char ∗member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_↩ UnsignedShort** ∗array)

  Set the contents of the given array member.

- **DDS_ReturnCode_t DDS_DynamicData_set_float_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Float** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_double_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Double** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_boolean_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Boolean** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_char_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Char** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_octet_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Octet** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_longlong_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_LongLong** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_ulonglong_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_UnsignedLongLong** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_longdouble_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_LongDouble** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_wchar_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Wchar** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_int8_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_Int8** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_uint8_array** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, **DDS_UnsignedLong** length, const **DDS_UInt8** *array)

  Set the contents of the given array member.
- **DDS_ReturnCode_t DDS_DynamicData_set_long_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_LongSeq** *value)

  Set the contents of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_set_short_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_ShortSeq** *value)

  Set the contents of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_set_ulong_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_UnsignedLongSeq** *value)

  Set the contents of the given sequence member.
- **DDS_ReturnCode_t DDS_DynamicData_set_ushort_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_UnsignedShortSeq** *value)

Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_float_seq** (**DDS_DynamicData** *self, const char *member_↩ name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_FloatSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_double_seq** (**DDS_DynamicData** *self, const char *member↩ _name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_DoubleSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_boolean_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_BooleanSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_char_seq** (**DDS_DynamicData** *self, const char *member_↩ name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_CharSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_octet_seq** (**DDS_DynamicData** *self, const char *member_↩ name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_OctetSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_longlong_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_LongLongSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_ulonglong_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_UnsignedLongLongSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_longdouble_seq** (**DDS_DynamicData** *self, const char *member_name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_LongDoubleSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_wchar_seq** (**DDS_DynamicData** *self, const char *member↩ _name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_WcharSeq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_int8_seq** (**DDS_DynamicData** *self, const char *member_↩ name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_Int8Seq** *value)

  Set the contents of the given sequence member.

- **DDS_ReturnCode_t DDS_DynamicData_set_uint8_seq** (**DDS_DynamicData** *self, const char *member_↩ name, **DDS_DynamicDataMemberId** member_id, const struct **DDS_UInt8Seq** *value)

  Set the contents of the given sequence member.

- struct **DDS_DynamicDataTypeSupport** * **DDS_DynamicDataTypeSupport_new** (const **DDS_TypeCode** *type, const struct **DDS_DynamicDataTypeProperty_t** *props)

  *Construct a new **DDS_DynamicDataTypeSupport** (p. 328) object.*

- void **DDS_DynamicDataTypeSupport_delete** (struct **DDS_DynamicDataTypeSupport** *self)

  *Delete a **DDS_DynamicDataTypeSupport** (p. 328) object.*

- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_register_type** (struct **DDS_DynamicDataType↩ Support** *self, **DDS_DomainParticipant** *participant, const char *type_name)

  *Associate the **DDS_TypeCode** (p. 2077) with the given **DDS_DomainParticipant** (p. 76) under the given logical name.*

- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_unregister_type** (struct **DDS_DynamicDataType↩ Support** *self, **DDS_DomainParticipant** *participant, const char *type_name)

  *Remove the definition of this type from the **DDS_DomainParticipant** (p. 76).*

- const char * **DDS_DynamicDataTypeSupport_get_type_name** (const struct **DDS_DynamicDataType↩ Support** *self)

  Get the default name of this type.

- const struct **DDS_TypeCode** * **DDS_DynamicDataTypeSupport_get_data_type** (const struct **DDS_DynamicDataTypeSupport** *self)

  *Get the **DDS_TypeCode** (p. 2077) wrapped by this **DDS_DynamicDataTypeSupport** (p. 328).*
- **DDS_DynamicData** * **DDS_DynamicDataTypeSupport_create_data** (struct **DDS_DynamicDataTypeSupport** *self)

  *Create a new **DDS_DynamicData** (p. 1771) sample initialized with the **DDS_TypeCode** (p. 2077) and properties of this **DDS_DynamicDataTypeSupport** (p. 328).*
- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_delete_data** (struct **DDS_DynamicDataTypeSupport** *self, **DDS_DynamicData** *a_data)

  *Finalize and deallocate the **DDS_DynamicData** (p. 1771) sample.*
- void **DDS_DynamicDataTypeSupport_print_data** (const struct **DDS_DynamicDataTypeSupport** *self, const **DDS_DynamicData** *a_data)

  Print a string representation of the given sample to the given file.
- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_copy_data** (const struct **DDS_DynamicDataTypeSupport** *self, **DDS_DynamicData** *dest, const **DDS_DynamicData** *source)

  Deeply copy the given data samples.
- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_initialize_data** (const struct **DDS_DynamicDataTypeSupport** *self, **DDS_DynamicData** *a_data)

  *Initialize a **DDS_DynamicData** (p. 1771) object to a valid empty state.*
- **DDS_ReturnCode_t DDS_DynamicDataTypeSupport_finalize_data** (const struct **DDS_DynamicDataTypeSupport** *self, **DDS_DynamicData** *a_data)

  Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.

Variables

- const struct **DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1782).*
- const struct **DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataTypeProperty_t** (p. 1784).*
- struct **DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1782).*

5.14.1 Detailed Description

*<<**extension**>> (p. 1014)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

1. Obtain a DDS_TypeCode (p. 2077) (see Type Code Support (p. 227)) that defines the type definition you want to use.
A **DDS_TypeCode** (p. 2077) includes a type's *kind* (**DDS_TCKind** (p. 242)), *name*, and *members* (that is, fields). You can create your own **DDS_TypeCode** (p. 2077) using the **DDS_TypeCodeFactory** (p. 2077) class – see, for example, the **DDS_TypeCodeFactory_create_struct_tc** (p. 292) method. Alternatively, you can use a remote **DDS_TypeCode** (p. 2077) that you discovered on the network (see **Built-in Topics** (p. 164)) or one generated by rtiddsgen (see the `Code Generator User's Manual`). If you are relying on discovering TypeCodes on the network and are using

TypeObject v2 (TypeObject v2 is the default behavior, see **DDS_DISCOVERYCONFIG_TYPE_LOOKUP_SERVICE_↩ CHANNEL** (p. 1283)), you must set **DDS_DiscoveryConfigQosPolicy::request_types_filter** (p. 1716) to a string filter containing all of the topic names for which you want to dynamically discover types ("∗" to request all types). Otherwise, types will only be discovered if a local endpoint is already created on the topic and the local endpoint matches the remote endpoint.

2. Wrap the DDS_TypeCode (p. 2077) in a DDS_DynamicDataTypeSupport (p. 328) object.
See the constructor **DDS_DynamicDataTypeSupport_new** (p. 435). This object lets you connect the type definition to a **DDS_DomainParticipant** (p. 76) and manage data samples (of type **DDS_DynamicData** (p. 1771)).

3. Register the DDS_DynamicDataTypeSupport (p. 328) with one or more domain participants.
See **DDS_DynamicDataTypeSupport_register_type** (p. 436). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

4. Create a DDS_Topic (p. 174) from the DDS_DomainParticipant (p. 76).
Use the name under which you registered your data type – see **DDS_DomainParticipant_create_topic** (p. 114). This **DDS_Topic** (p. 174) is what you will use to produce and consume data.

5. Create a DDS_DynamicDataWriter (p. 327) and/or DDS_DynamicDataReader (p. 328).
These objects will produce and/or consume data (of type **DDS_DynamicData** (p. 1771)) on the **DDS_Topic** (p. 174). You can create these objects directly from the **DDS_DomainParticipant** (p. 76) – see **DDS_DomainParticipant_create_↩ datawriter** (p. 107) and **DDS_DomainParticipant_create_datareader** (p. 111) – or by first creating intermediate **DDS↩ _Publisher** (p. 446) and **DDS_Subscriber** (p. 575) objects – see **DDS_DomainParticipant_create_publisher** (p. 102) and **DDS_DomainParticipant_create_subscriber** (p. 105).

6. Write and/or read the data of interest.

7. Tear down the objects described above.
You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **DDS_DomainParticipant** (p. 76) is optional; all types are automatically unregistered when the **DDS_Domain↩ Participant** (p. 76) itself is deleted.

5.14.2 Macro Definition Documentation

5.14.2.1 DDS_DynamicDataProperty_t_INITIALIZER

```
#define DDS_DynamicDataProperty_t_INITIALIZER
```

Static initializer for **DDS_DynamicDataProperty_t** (p. 1782) objects.

Use this initializer to ensure that new properties objects don't have uninitialized contents.
```
struct DDS_DynamicDataProperty_t props = DDS_DynamicDataProperty_t_INITIALIZER;
```

See also

DDS_DynamicDataProperty_t (p. 1782)

5.14.2.2 DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED

```
#define DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED
```

A sentinel value that indicates that no member ID is needed in order to perform some operation.

Most commonly, this constant will be used in "get" operations to indicate that a lookup should be performed based on a name, not on an ID.

See also

DDS_DynamicDataMemberId (p. 327)

5.14.2.3 DDS_DynamicDataTypeProperty_t_INITIALIZER

```
#define DDS_DynamicDataTypeProperty_t_INITIALIZER
```

Static initializer for **DDS_DynamicDataTypeProperty_t** (p. 1784) objects.

Use this initializer to ensure that new properties objects don't have uninitialized contents.

```
struct DDS_DynamicDataTypeProperty_t props =

    DDS_DynamicDataTypeProperty_t_INITIALIZER;
```

See also

DDS_DynamicDataTypeProperty_t (p. 1784)

5.14.3 Typedef Documentation

5.14.3.1 DDS_DynamicDataMemberId

```
typedef DDS_Long DDS_DynamicDataMemberId
```

An integer that uniquely identifies some member of a data type within that type.

The range of a member ID is the range of an unsigned short integer, except for the value 0, which is reserved.

See also

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.3.2 DDS_DynamicDataWriter

```
typedef struct DDS_DynamicDataWriter DDS_DynamicDataWriter
```

Writes (publishes) objects of type **DDS_DynamicData** (p. 1771).

Instantiates **DDS_DataWriter** (p. 488) < **DDS_DynamicData** (p. 1771) > .

See also

DDS_DataWriter (p. 488)
FooDataWriter (p. 2119)
DDS_DynamicData (p. 1771)

5.14.3.3 DDS_DynamicDataReader

```
typedef struct DDS_DynamicDataReader DDS_DynamicDataReader
```

Reads (subscribes to) objects of type **DDS_DynamicData** (p. 1771).

Instantiates **DDS_DataReader** (p. 618) < **DDS_DynamicData** (p. 1771) > .

See also

DDS_DataReader (p. 618)
FooDataReader (p. 2119)
DDS_DynamicData (p. 1771)

5.14.3.4 DDS_DynamicDataTypeSupport

```
typedef struct DDS_DynamicDataTypeSupport DDS_DynamicDataTypeSupport
```

A factory for registering a dynamically defined type and creating **DDS_DynamicData** (p. 1771) objects.

A **DDS_DynamicDataTypeSupport** (p. 328) has three roles:

1. It associates a **DDS_TypeCode** (p. 2077) with policies for managing objects of that type. See the constructor, **DDS_DynamicDataTypeSupport_new** (p. 435).
2. It registers its type under logical names with a **DDS_DomainParticipant** (p. 76). See **DDS_DynamicDataTypeSupport_register_type** (p. 436).
3. It creates **DDS_DynamicData** (p. 1771) samples pre-initialized with the type and properties of the type support itself. See **DDS_DynamicDataTypeSupport_create_data** (p. 438).

5.14.4 Function Documentation

5.14.4.1 DDS_DynamicData_initialize()

```
DDS_Boolean DDS_DynamicData_initialize (
             DDS_DynamicData * self,
            const  DDS_TypeCode * type,
            const struct  DDS_DynamicDataProperty_t * property )
```

Initialize a **DDS_DynamicData** (p. 1771) object to a valid empty state.

Use the constructor, **DDS_DynamicData_new** (p. 329), to allocate a new **DDS_DynamicData** (p. 1771) object on the heap. Use this method to initialize a **DDS_DynamicData** (p. 1771) object that is stored deeply, either within another object or on the stack.

When you're finished with the object, dispose of it with **DDS_DynamicData_finalize** (p. 330).

```
struct DDS_DynamicData sample;

DDS_Boolean succeeded = DDS_DynamicData_initialize(

    &sample, myType, myProperties);

/* Handle failure... */

/* Do something... */

DDS_DynamicData_finalize(&sample);
```

MT Safety:

UNSAFE.

See also

DDS_DynamicData_finalize (p. 330)

DDS_DynamicData_new (p. 329)

5.14.4.2 DDS_DynamicData_new()

```
DDS_DynamicData * DDS_DynamicData_new (
            const  DDS_TypeCode * type,
            const struct  DDS_DynamicDataProperty_t * property )
```

The constructor for new **DDS_DynamicData** (p. 1771) objects.

This method returns a fully initialized object. It is *not* necessary to subsequently call **DDS_DynamicData_initialize** (p. 329).

If initialization fails, this method returns NULL.

The type parameter may be NULL. In that case, this **DDS_DynamicData** (p. 1771) must be *bound* with **DDS_Dynamic↩ Data_bind_type** (p. 342) or **DDS_DynamicData_bind_complex_member** (p. 344) before it can be used.

If the **DDS_TypeCode** (p. 2077) is not NULL, the newly constructed **DDS_DynamicData** (p. 1771) object will retain a reference to it. It is *not* safe to delete the **DDS_TypeCode** (p. 2077) until all samples that use it have themselves been deleted.

In most cases, it is not necessary to call this constructor explicitly. Instead, use **DDS_DynamicDataTypeSupport↩ _create_data** (p. 438), and the **DDS_TypeCode** (p. 2077) and properties will be specified for you. Using the factory method also ensures that the memory management contract documented above is followed correctly, because the **DDS_DynamicDataTypeSupport** (p. 328) object maintains the **DDS_TypeCode** (p. 2077) used by the samples it creates.

However you create a **DDS_DynamicData** (p. 1771) object, you must delete it when you are finished with it. If you choose to use this constructor, delete the object with the destructor: **DDS_DynamicData_delete** (p. 331).

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(

    myType, myProperties);

/* Failure indicated by NULL return result. */

/* Do something... */

DDS_DynamicData_delete(sample);
```

Parameters

type	<<***in***>> *(*p. *1015)* The type of which the new object will represent an object.
property	<<***in***>> *(*p. *1015)* Properties that configure the behavior of the new object. Most users can simply use **DDS_DYNAMIC_DATA_PROPERTY_DEFAULT** (p. 440).

See also

DDS_DynamicData_initialize (p. 329)

DDS_DynamicData_delete (p. 331)

DDS_DynamicDataTypeSupport_create_data (p. 438)

Examples

HelloWorldPlugin.c.

5.14.4.3 DDS_DynamicData_finalize()

```
void DDS_DynamicData_finalize (
             DDS_DynamicData * self )
```

Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.

Use **DDS_DynamicData_delete** (p. 331) to clean up a **DDS_DynamicData** (p. 1771) object on the heap. Use this method to clean up a **DDS_DynamicData** (p. 1771) object that is stored deeply, either within another object or on the stack.

MT Safety:

UNSAFE.

See also

DDS_DynamicData_delete (p. 331)
DDS_DynamicData_initialize (p. 329)

5.14.4.4 DDS_DynamicData_delete()

```
void DDS_DynamicData_delete (
              DDS_DynamicData * self )
```

Finalize and deallocate this **DDS_DynamicData** (p. 1771) sample.

This method fully finalizes the object. It is *not* necessary to previously call **DDS_DynamicData_finalize** (p. 330).

MT Safety:

UNSAFE.

See also

DDS_DynamicData_finalize (p. 330)
DDS_DynamicData_new (p. 329)

Examples

HelloWorldPlugin.c.

5.14.4.5 DDS_DynamicData_copy()

```
DDS_ReturnCode_t DDS_DynamicData_copy (
             DDS_DynamicData * self,
            const  DDS_DynamicData * src )
```

Deeply copy from the given object to this object.

MT Safety:

UNSAFE.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

5.14.4.6 DDS_DynamicData_equal()

```
DDS_Boolean DDS_DynamicData_equal (
            const  DDS_DynamicData * self,
            const  DDS_DynamicData * other )
```

Indicate whether the contents of another **DDS_DynamicData** (p. 1771) sample are the same as those of this one.

This operation compares the data and type of existing members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_BOOLEAN_FALSE** (p. 1203). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

5.14.4.7 DDS_DynamicData_clear_all_members()

```
DDS_ReturnCode_t DDS_DynamicData_clear_all_members (
             DDS_DynamicData * self )
```

Clear the contents of all data members of this object.

MT Safety:

UNSAFE.

Returns

One of the **Standard Return Codes** (p. 1223)

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

See also

DDS_DynamicData_clear_optional_member (p. 332)

5.14.4.8 DDS_DynamicData_clear_optional_member()

```
DDS_ReturnCode_t DDS_DynamicData_clear_optional_member (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single optional data member of this object.

This method is only applicable to optional members. Members of unions, sequences, and arrays are not considered optional.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member (to look up the member by name), or NULL (to look up the member by its ID).
member_id	<<***in***>> *(p. 1015)* The ID of the member (to look up the member by its ID), or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) (to look up the member by name). See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_clear_all_members (p. 332)

Clear an optional field

5.14.4.9 DDS_DynamicData_clear_member()

```
DDS_ReturnCode_t DDS_DynamicData_clear_member (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single data member of this object.

This method can be used to clear both optional and non-optional members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member to clear or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member to clear or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_clear_all_members (p. 332)

Clear a field

5.14.4.10 DDS_DynamicData_set_cdr_buffer()

```
DDS_ReturnCode_t DDS_DynamicData_set_cdr_buffer (
            DDS_DynamicData * self,
           const char * buffer,
            DDS_UnsignedLong length )
```

Associate a CDR buffer with a DynamicData object.

This function associates a CDR buffer with a DynamicData object.

In this context, 'associates' means that the DynamicData object will use the input buffer to store its value. Additionally, if the buffer is loaned, the application is responsible for keeping it alive.

If the DynamicData is owned by the reader, this function will return an error.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
buffer	<<***in***>> *(*p. *1015)* CDR buffer.
length	<<***in***>> *(*p. *1015)* CDR buffer length.

Returns

One of the **Standard Return Codes** (p. 1223)

5.14.4.11 DDS_DynamicData_get_cdr_buffer()

```
const char * DDS_DynamicData_get_cdr_buffer (
            const  DDS_DynamicData * self,
             DDS_UnsignedLong * length )
```

Get the CDR buffer associated with a DynamicData object.

This function returns the CDR buffer associated with a DynamicData object.

If the DynamicData object is not using CDR as its data representation, this function will return NULL and log an error.

To configure a DynamicData DataReader to not deserialize the incoming samples and keep the data in CDR format, you must set the configuration option **DDS_DynamicDataTypeSerializationProperty_t::skip_deserialization** (p. 1786) to **DDS_BOOLEAN_TRUE** (p. 1203).

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
length	<<***out***>> *(p. 1015)* CDR buffer length.

Returns

One of the **Standard Return Codes** (p. 1223)

5.14.4.12 DDS_DynamicData_is_cdr()

```
DDS_Boolean DDS_DynamicData_is_cdr (
            const  DDS_DynamicData * self )
```

Determine if a DynamicData object is using CDR as its data representation.

This function returns **DDS_BOOLEAN_TRUE** (p. 1203) if the DynamicData object is using CDR as its data representation, and **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

When the DynamicData object is using CDR as its data representation, many of the DynamicData APIs cannot be used. The DynamicData object will use CDR as its data representation when **DDS_DynamicDataTypeSerialization↩ Property_t::skip_deserialization** (p. 1786) has been set to **DDS_BOOLEAN_TRUE** (p. 1203) or **DDS_Dynamic↩ Data_set_cdr_buffer** (p. 334) has been used to associate a CDR buffer with the DynamicData object. See each functions's documentation for whether or not the function is supported for DynamicData objects in CDR format.

See also

DDS_DynamicData_get_cdr_buffer (p. 334)

DDS_DynamicData_set_cdr_buffer (p. 334)

DDS_DynamicDataTypeSerializationProperty_t::skip_deserialization (p. 1786)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.14.4.13 DDS_DynamicData_set_discriminator()

```
DDS_ReturnCode_t DDS_DynamicData_set_discriminator (
            DDS_DynamicData * self,
            DDS_Long discriminator )
```

Set the value of the union discriminator (UnionType only)

This operation is valid only for objects of **DDS_TCKind** (p. 242) **DDS_TK_UNION** (p. 242).

If the discriminator value identifies the same member in the union, the previously set value for the member is preserved and only the discriminator value is updated.

If the discriminator value identifies a different member in the union, the previously set member in the union will be finalized and the identified member will be initialized to its default value.

If the discriminator doesn't identify any member in the union, then the previously set member will be finalized and the discriminator will be set to the provided value.

For example, given the following IDL Union:

```
union Foo switch (short) {
case 1:
    long x;
case 2:
case 3:
    string y;
};
```

We can set the active member to "y" as follows (all code omits error checking for brevity):

```
// Set the discriminator to 2 and select member "y"
DDS_DynamicData_set_discriminator(sample, 2);

DDS_DynamicData_get_string(
        sample,
        &outString,
        size,
        "y",
        DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
assert(outString == "");

DDS_DynamicData_set_string(
        sample,
        "y",
        DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED,
        "hello");
```

Setting the discriminator to 3 also selects "y" and preserves the previous value of "hello".

```
DDS_DynamicData_set_discriminator(sample, 3);

DDS_DynamicData_get_string(
        sample,
        &outString,
        size,
        "y",
        DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
assert(outString == "hello");
```

Setting the discriminator to a new value that selects a different member, "x", finalizes the previous member's value and initializes the new member to its default.

```
DDS_DynamicData_set_discriminator(sample, 1);

DDS_DynamicData_get_long(
        sample,
        &outLong,
        "x",
        DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
assert(outLong == 0);

retCode = DDS_DynamicData_get_string(
        sample,
        &outString,
        size,
        "y",
        DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);
assert(retCode == DDS_RETCODE_NO_DATA);
```

The discriminator can also be set to a value that does not select any member.

```
DDS_DynamicData_set_discriminator(sample, 100);
DDS_DynamicData_get_discriminator(sample, &discValue);
assert(discValue == 100);
assert(DDS_DynamicData_get_member_count(sample) == 0);
```

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
discriminator	<<***in***>> (p. *1015)* The discriminator value to set

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_get_discriminator (p. 337)

Getting and Setting Union Discriminator Values (p. 1772)

DDS_DynamicData_get_member_count (p. 347)

5.14.4.14 DDS_DynamicData_get_discriminator()

```
DDS_ReturnCode_t DDS_DynamicData_get_discriminator (
            const  DDS_DynamicData * self,
             DDS_Long * discriminator )
```

Get the current value of the union discriminator.

This operation is valid only for objects of **DDS_TCKind** (p. 242) **DDS_TK_UNION** (p. 242).

This API should be used instead of **DDS_DynamicData_get_member_info_by_index** (p. 350), which provides the discriminator value for unions when passing in 0 for the index value. That functionality has been deprecated in favor of this API.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
discriminator	<<***out***>> *(p. 1015)* The current value of the union discriminator.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_set_discriminator (p. 336)

Getting and Setting Union Discriminator Values (p. 1772)

5.14.4.15 DDS_DynamicData_print()

```
DDS_ReturnCode_t DDS_DynamicData_print (
            const  DDS_DynamicData * self,
            FILE * fp,
            int indent )
```

Output a textual representation of this object and its contents to the given file.

This method is equivalent to **DDS_DynamicDataTypeSupport_print_data** (p. 438).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

Precondition

The type must be an aggregation or collection. That is, its **DDS_TCKind** (p. 242) must be one of: **DDS_TK_↩ STRUCT** (p. 242), **DDS_TK_VALUE** (p. 242), **DDS_TK_UNION** (p. 242), **DDS_TK_SEQUENCE** (p. 242) or **DDS↩ _TK_ARRAY** (p. 242), otherwise this function fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
fp	<<***in***>> *(*p. *1015)* The file into which the object should be printed (to print to standard output, provide the stream pointer 'stdout')
indent	<<***in***>> *(*p. *1015)* The output of this method will be pretty-printed. This argument indicates the amount of initial indentation of the output.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicDataTypeSupport_print_data (p. 438)

5.14.4.16 DDS_DynamicData_from_cdr_buffer()

```
DDS_ReturnCode_t DDS_DynamicData_from_cdr_buffer (
            DDS_DynamicData * self,
            const char * buffer,
            unsigned int length )
```

Deserializes a DynamicData object from a buffer of octets.

This function deserializes a DynamicData object from a CDR buffer of octets.

The content of the buffer generated by the function **DDS_DynamicData_to_cdr_buffer** (p. 340) can be provided to this function to get the DynamicData object back.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
buffer	<<***in***>> *(*p. *1015).* Deserialization buffer.
length	<<***in***>> *(*p. *1015).* Length of the serialized representation of the DynamicData object in the buffer.

Returns

One of the **Standard Return Codes** (p. 1223)

Examples

HelloWorldPlugin.c.

5.14.4.17 DDS_DynamicData_to_cdr_buffer_ex()

```
DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer_ex (
            DDS_DynamicData * self,
            char * buffer,
            unsigned int * length,
            DDS_DataRepresentationId_t representation )
```

Serializes a DynamicData object into a buffer of octets.

This function serializes a DynamicData object into a buffer of octets using the input data representation. See **DDS_↩ DynamicData_to_cdr_buffer** (p. 340) for details.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
buffer	*<<**out**>> (p. 1015).* Serialization buffer.
length	*<<**inout**>> (p. 1015).* Serialization buffer length.
representation	*<<**in**>> (p. 1015).* Representation used to serialize the data

5.14.4.18 DDS_DynamicData_to_cdr_buffer()

```
DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer (
            DDS_DynamicData * self,
            char * buffer,
            unsigned int * length )
```

Serializes a DynamicData object into a CDR buffer of octets.

This function serializes a DynamicData object into a buffer of octets, using CDR as the data representation. Calling this function is equivalent to calling **DDS_DynamicData_to_cdr_buffer_ex** (p. 340) with **DDS_AUTO_DATA_↩ REPRESENTATION** (p. 1260) as the representation.

The input buffer must be large enough to store the serialized representation of the DynamicData object. Otherwise, the function will return an error code.

To determine the minimum size of the input buffer, you must call this method with the buffer set to NULL.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
buffer	*<<**out**>> (p. 1015).* Serialization buffer.
length	*<<**inout**>> (p. 1015).* When the buffer is set to NULL, after the function executes, length will contain the required size for the serialization buffer. When buffer is not NULL, length must contain the size of the input buffer when the function is invoked. After the function executes, length will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when `buffer` is set to NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.14.4.19 DDS_DynamicData_to_string()

```
DDS_ReturnCode_t DDS_DynamicData_to_string (
             DDS_DynamicData * self,
            char * str,
             DDS_UnsignedLong * str_size,
            const struct  DDS_PrintFormatProperty * property )
```

Get a string representation of a DynamicData object.

This function takes a dynamic data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
str	<<***out***>> *(p. 1015)*. Output string representing the dynamic data sample.
str_size	<<***inout***>> *(p. 1015)*. When `str` is set to NULL, after the function executes, `str_size` will contain a buffer size big enough to hold the string representation of the data. When `str` is not NULL, `str_size` must contain the size of the input buffer when the function is invoked. If the size of the input buffer is too small, after the function executes, `str_size` will be updated to contain the required size of the string content and the function will return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).
property	<<***in***>> *(p. 1015)*. Properties describing what the format of the output string should be. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.14.4.20 DDS_DynamicData_from_string()

```
DDS_ReturnCode_t DDS_DynamicData_from_string (
            DDS_DynamicData * self,
           const char * str,
            DDS_PrintFormatKind format_kind )
```

Populates a DynamicData object from a JSON string representation.

This function takes a JSON string representing a data sample of this type, and uses it to populate this DynamicData.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
str	<<***in***>> *(*p. *1015)*. The JSON string representation
format_kind	<<***in***>> *(*p. *1015)*. Must be set to **DDS_JSON_PRINT_FORMAT** (p. 185), the only currently supported format.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.14.4.21 DDS_DynamicData_get_info()

```
void DDS_DynamicData_get_info (
            const  DDS_DynamicData * self,
            struct  DDS_DynamicDataInfo * info_out )
```

Fill in the given descriptor with information about this **DDS_DynamicData** (p. 1771).

This API is not supported when the DynamicData object is in CDR format and will print an error log. See **DDS_↩ DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
info_out	<<***out***>> *(*p. *1015)* The descriptor object whose contents will be overwritten by this operation.

5.14.4.22 DDS_DynamicData_bind_type()

```
DDS_ReturnCode_t DDS_DynamicData_bind_type (
              DDS_DynamicData * self,
            const  DDS_TypeCode * type )
```

If this **DDS_DynamicData** (p. 1771) object is not yet associated with a data type, set that type now to the given **DDS_TypeCode** (p. 2077).

This advanced operation allows you to reuse a single **DDS_DynamicData** (p. 1771) object with multiple data types.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

```
struct DDS_DynamicData* myData = DDS_DynamicData_new(NULL, myProperties);

DDS_TypeCode* myType = ...;

DDS_DynamicData_bind_type(myData, myType);

/* Do something... */

DDS_DynamicData_unbind_type(myData);

DDS_DynamicData_delete(myData);
```

Note that the **DDS_DynamicData** (p. 1771) object will retain a reference to the **DDS_TypeCode** (p. 2077) object you provide. It is *not* safe to delete the **DDS_TypeCode** (p. 2077) until after it is unbound.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
type	<<***in***>> *(p. 1015)* The type to associate with this **DDS_DynamicData** (p. 1771) object.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_unbind_type (p. 343)

5.14.4.23 DDS_DynamicData_unbind_type()

```
DDS_ReturnCode_t DDS_DynamicData_unbind_type (
              DDS_DynamicData * self )
```

Dissociate this **DDS_DynamicData** (p. 1771) object from any particular data type.

This step is necessary before the object can be associated with a new data type.

This operation clears all members as a side effect.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_bind_type (p. 342)

DDS_DynamicData_clear_all_members (p. 332)

5.14.4.24 DDS_DynamicData_bind_complex_member()

```
DDS_ReturnCode_t DDS_DynamicData_bind_complex_member (
              DDS_DynamicData * self,
              DDS_DynamicData * value_out,
             const char * member_name,
              DDS_DynamicDataMemberId member_id )
```

Use another **DDS_DynamicData** (p. 1771) object to provide access to a complex field of this **DDS_DynamicData** (p. 1771) object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

For example, consider the following data types:

```
struct MyFieldType {

    float theFloat;

};

struct MyOuterType {

    MyFieldType complexMember;

};
```

Suppose you have an instance of `MyOuterType`, and you would like to examine the contents of its member `complexMember`. To do this, you must *bind* another **DDS_DynamicData** (p. 1771) object to that member. This operation will bind the type code of the member to the provided **DDS_DynamicData** (p. 1771) object and perform additional initialization.

The following example demonstrates the usage pattern. Note that error handling has been omitted for brevity.

```
struct DDS_DynamicData* outer = ...;

float theFloatValue = 0;

struct DDS_DynamicData* toBeBound = DDS_DynamicData_new(NULL, myProperties);

DDS_DynamicData_bind_complex_member(

    outer,

    toBeBound,

    "complexMember",

    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

DDS_DynamicData_get_float(

    toBeBound,

    &theFloat,

    "theFloat"

    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

DDS_DynamicData_unbind_complex_member(outer, toBeBound);
```

This operation is only permitted when the object toBeBound (named as in the example above) is not currently associated with any type, including already being bound to another member. You can see in the example that this object is created directly with the constructer and is not provided with a **DDS_TypeCode** (p. 2077).

Only a single member of a given **DDS_DynamicData** (p. 1771) object may be bound at one time – however, members *of* members may be recursively bound to any depth. Furthermore, while the outer object has a bound member, it may only be modified through that bound member. That is, after calling this member, all "set" operations on the outer object will be disabled until **DDS_DynamicData_unbind_complex_member** (p. 346) has been called. Furthermore, any bound member must be unbound before a sample can be written or deleted.

This method is logically related to **DDS_DynamicData_get_complex_member** (p. 367) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a view into an outer object, such that any change made to the inner object will be reflected in the outer. But the **DDS_DynamicData_get_complex_member** (p. 367) operation *copies* the state of the nested object; changes to it will not be reflected in the source object.

Note that you can bind to a member of a sequence at an index that is past the current length of that sequence. In that case, this method behaves like a "set" method: it automatically lengthens the sequence (filling in default elements) to allow the bind to take place. See **Getters and Setters** (p. 1774).

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* The object that you wish to bind to the field.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_unbind_complex_member (p. 346)

DDS_DynamicData_get_complex_member (p. 367)

5.14.4.25 DDS_DynamicData_unbind_complex_member()

```
DDS_ReturnCode_t DDS_DynamicData_unbind_complex_member (
            DDS_DynamicData * self,
            DDS_DynamicData * value )
```

Tear down the association created by a **DDS_DynamicData_bind_complex_member** (p. 344) operation, committing any changes to the outer object since then.

Some changes to the outer object will not be observable until after you have performed this operation.

If you have called **DDS_DynamicData_bind_complex_member** (p. 344) on a data sample, you must unbind before writing or deleting the sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value	<<***in***>> *(p. 1015)* The same object you passed to **DDS_DynamicData_bind_complex_member** (p. 344). This argument is used for error checking purposes.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_bind_complex_member (p. 344)

5.14.4.26 DDS_DynamicData_get_type()

```
const  DDS_TypeCode * DDS_DynamicData_get_type (
             const  DDS_DynamicData * self )
```

Get the data type, of which this **DDS_DynamicData** (p. 1771) represents an instance.

MT Safety:

UNSAFE.

5.14.4.27 DDS_DynamicData_get_type_kind()

```
DDS_TCKind DDS_DynamicData_get_type_kind (
             const  DDS_DynamicData * self )
```

Get the kind of this object's data type.

This is a convenience method. It's equivalent to calling **DDS_DynamicData_get_type** (p. 346) followed by **DDS_TypeCode_kind** (p. 243).

MT Safety:

UNSAFE.

5.14.4.28 DDS_DynamicData_get_member_count()

```
DDS_UnsignedLong DDS_DynamicData_get_member_count (
             const  DDS_DynamicData * self )
```

Get the number of members in the type.

For objects of type kind **DDS_TK_ARRAY** (p. 242) or **DDS_TK_SEQUENCE** (p. 242), this method returns the number of elements in the collection.

For objects of type kind **DDS_TK_STRUCT** (p. 242) or **DDS_TK_VALUE** (p. 242), it returns the number of fields in the type.

For objects of type kind **DDS_TK_UNION** (p. 242), it returns 1 if the current discriminator selects a member in the union, and 0 if it does not.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

See also

DDS_DynamicData_get_member_info_by_index (p. 350)

5.14.4.29 DDS_DynamicData_member_exists()

```
DDS_Boolean DDS_DynamicData_member_exists (
            const  DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Indicates whether a member exists in this sample.

You only need to specify the name OR the ID (not both).

If the member doesn't exist in the type, this function returns false. In all other cases, it provides the same result as **DDS_DynamicDataMemberInfo::member_exists** (p. 1781), which is retrieved with **DDS_DynamicData_get_member_info** (p. 349).

For union types, if a member can be selected with multiple discriminator values, looking up if a member exists using any of the values that select the member will return the same result.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_BOOLEAN_FALSE** (p. 1203). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

See also

DDS_DynamicData_member_exists_in_type (p. 348)

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.4.30 DDS_DynamicData_member_exists_in_type()

```
DDS_Boolean DDS_DynamicData_member_exists_in_type (
            const  DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Indicates whether a member of a particular name/ID exists in this data sample's type.

You only need to specify the name OR the ID (not both).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_BOOLEAN_FALSE** (p. 1203). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

See also

DDS_DynamicData_member_exists (p. 347)

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.4.31 DDS_DynamicData_get_member_info()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_info (
            const  DDS_DynamicData * self,
            struct  DDS_DynamicDataMemberInfo * info,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Fill in the given descriptor with information about the identified member of this **DDS_DynamicData** (p. 1771) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

This operation is valid for objects of **DDS_TCKind** (p. 242) **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRUCT** (p. 242), **DDS_TK_UNION** (p. 242), and **DDS_TK_VALUE** (p. 242).

MT Safety:

UNSAFE.

When this sample represents a struct, a value type, or a union:

- If the specified member is not defined in the type, this function fails with **DDS_RETCODE_NO_DATA** (p. 1224). This includes cases when a union discriminator does not select a member in the union.
- If the specified member is defined in the type but doesn't exist in this data sample, this function returns an object with **DDS_DynamicDataMemberInfo::member_exists** (p. 1781) set to false.
- If the specified member is defined in the type and exists in this data sample, **DDS_DynamicDataMemberInfo↩ ::member_exists** (p. 1781) is true.

When this sample represents a sequence and `member_id` is the 1-based element index:

- If `member_id` is greater than the sequence's maximum length, this function fails with **DDS_RETCODE_NO_DATA** (p. 1224).
- If `member_id` is greater than the sequence's current length but smaller than or equal to its maximum length, this function returns an object with **DDS_DynamicDataMemberInfo::member_exists** (p. 1781) set to false.
- If `member_id` is smaller than or equal to the current length, **DDS_DynamicDataMemberInfo::member_exists** (p. 1781) is true.

When this sample represents an array, this function either fails with with **DDS_RETCODE_NO_DATA** (p. 1224) when the index is out of bounds or else returns an object with **DDS_DynamicDataMemberInfo::member_exists** (p. 1781) set to true.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
info	<<***out***>> *(p. 1015)* The descriptor object whose contents will be overwritten by this operations.
member_name	<<***in***>> *(p. 1015)* The name of the member for which to get the info or NULL to look up the member by its ID. Only one of the name and the ID may be unspecified.
member_id	<<***in***>> *(p. 1015)* The ID of the member for which to get the info, or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

The **DDS_DynamicDataMemberInfo** (p. 1780) returned will contain information about the identified member, including its type, whether it exists in this sample, and other metadata.

The bounds for strings and collections are not provided in the returned **DDS_DynamicDataMemberInfo** (p. 1780). To access that information you must query the **DDS_TypeCode** (p. 2077) of the member's type. See **DDS_TypeCode_length** (p. 268), **DDS_TypeCode_array_dimension_count** (p. 269), and **DDS_TypeCode_array_dimension** (p. 269).

The **DDS_TypeCode** (p. 2077) of a DynamicData object can be accessed using **DDS_DynamicData_get_type** (p. 346). You must iterate through the TypeCode to locate the members TypeCode. Once obtained, you can query the bounds using the TypeCode APIs mentioned above.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_get_member_info_by_index (p. 350)

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.4.32 DDS_DynamicData_get_member_info_by_index()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_info_by_index (
            const  DDS_DynamicData * self,
            struct  DDS_DynamicDataMemberInfo * info,
             DDS_UnsignedLong index )
```

Fill in the given descriptor with information about the identified member of this **DDS_DynamicData** (p. 1771) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

This operation is valid for objects of **DDS_TCKind** (p. 242) **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRUCT** (p. 242), **DDS_TK_VALUE** (p. 242), and **DDS_TK_UNION** (p. 242).

Using this API to retrieve the discriminator value of a union by passing in index 0 has been deprecated. You should use the **DDS_DynamicData_get_discriminator** (p. 337) API instead. This API can still retrieve the discriminator value as long as the discriminator selects a member in the union. However, if the current discriminator value does not select a member in the union, this API will return **DDS_RETCODE_NO_DATA** (p. 1224).

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
info	<<***out***>> *(*p. *1015)* The descriptor object whose contents will be overwritten by this operations.
index	<<***in***>> *(*p. *1015)* The zero-base of the member for which to get the info.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_get_member_info (p. 349)

DDS_DynamicData_get_member_count (p. 347)

DDS_DynamicData_get_discriminator (p. 337)

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.4.33 DDS_DynamicData_get_member_type()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_type (
            const  DDS_DynamicData * self,
            const  DDS_TypeCode ** type_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the type of the given member of this sample.

The member can be looked up either by name or by ID.

This operation is valid for objects of **DDS_TCKind** (p. 242) **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRUCT** (p. 242), and **DDS_TK_VALUE** (p. 242). For type kinds **DDS_TK_ARRAY** (p. 242) and **DDS_TK↩_SEQUENCE** (p. 242), the index into the collection is taken to be one less than the ID, if specified. If this index is valid, this operation will return the content type of this collection.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
type_out	<<***out***>> *(p. 1015)* If this method returned success, this argument refers to the found member's type. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DynamicData_get_member_info (p. 349)

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 326)

5.14.4.34 DDS_DynamicData_is_member_key()

```
DDS_ReturnCode_t DDS_DynamicData_is_member_key (
            const  DDS_DynamicData * self,
             DDS_Boolean * is_key_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Indicates whether a given member forms part of the key of this sample's data type.

This operation is only valid for samples of types of kind **DDS_TK_STRUCT** (p. 242) or **DDS_TK_VALUE** (p. 242).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
is_key_out	<<***out***>> *(p. 1015)* If this method returned success, this argument indicates whether the indicated member is part of the key. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223)

5.14.4.35 DDS_DynamicData_get_long()

```
DDS_ReturnCode_t DDS_DynamicData_get_long (
            const  DDS_DynamicData * self,
             DDS_Long * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Long** (p. 1205) or another type implicitly convertible to it (**DDS_↩ Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), or **DDS_Enum** (p. 1206)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_long (p. 396)

5.14.4.36 DDS_DynamicData_get_short()

```
DDS_ReturnCode_t DDS_DynamicData_get_short (
            const  DDS_DynamicData * self,
             DDS_Short * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Short** (p. 1204) or another type implicitly convertible to it (**DDS_Octet** (p. 1204) or **DDS_Char** (p. 1203)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member**

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_short (p. 397)

5.14.4.37 DDS_DynamicData_get_ulong()

```
DDS_ReturnCode_t DDS_DynamicData_get_ulong (
            const  DDS_DynamicData * self,
             DDS_UnsignedLong * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_UnsignedLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), or **DDS_Enum** (p. 1206)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_ulong (p. 398)

5.14.4.38 DDS_DynamicData_get_ushort()

```
DDS_ReturnCode_t DDS_DynamicData_get_ushort (
            const  DDS_DynamicData * self,
             DDS_UnsignedShort * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_UnsignedShort** (p. 1204) or another type implicitly convertible to it (**DDS_Octet** (p. 1204) or **DDS_Char** (p. 1203)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_ushort (p. 399)

5.14.4.39 DDS_DynamicData_get_float()

```
DDS_ReturnCode_t DDS_DynamicData_get_float (
            const  DDS_DynamicData * self,
             DDS_Float * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Float** (p. 1205).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
value_out	<<***out***>> *(*p. *1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_float (p. 399)

5.14.4.40 DDS_DynamicData_get_double()

```
DDS_ReturnCode_t DDS_DynamicData_get_double (
            const  DDS_DynamicData * self,
             DDS_Double * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Double** (p. 1205) or another type implicitly convertible to it (**DDS_Float** (p. 1205)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_double (p. 400)

5.14.4.41 DDS_DynamicData_get_boolean()

```
DDS_ReturnCode_t DDS_DynamicData_get_boolean (
            const  DDS_DynamicData * self,
             DDS_Boolean * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Boolean** (p. 1206).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
value_out	<<***out***>> *(*p. *1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_boolean (p. 401)

5.14.4.42 DDS_DynamicData_get_char()

```
DDS_ReturnCode_t DDS_DynamicData_get_char (
            const  DDS_DynamicData * self,
             DDS_Char * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Char** (p. 1203).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
value_out	<<***out***>> *(*p. *1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_char (p. 401)

5.14.4.43 DDS_DynamicData_get_octet()

```
DDS_ReturnCode_t DDS_DynamicData_get_octet (
            const  DDS_DynamicData * self,
             DDS_Octet * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Octet** (p. 1204).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_octet (p. 402)

5.14.4.44 DDS_DynamicData_get_longlong()

```
DDS_ReturnCode_t DDS_DynamicData_get_longlong (
            const  DDS_DynamicData * self,
             DDS_LongLong * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_LongLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), **DDS_Long** (p. 1205), **DDS_UnsignedLong** (p. 1205), or **DDS_Enum** (p. 1206)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_longlong (p. 403)

5.14.4.45 DDS_DynamicData_get_ulonglong()

```
DDS_ReturnCode_t DDS_DynamicData_get_ulonglong (
            const  DDS_DynamicData * self,
             DDS_UnsignedLongLong * value_out,
```

```
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_UnsignedLongLong** (p. 1205) or another type implicitly convertible to it (**DDS_Octet** (p. 1204), **DDS_Char** (p. 1203), **DDS_Short** (p. 1204), **DDS_UnsignedShort** (p. 1204), **DDS_Long** (p. 1205), **DDS_UnsignedLong** (p. 1205), or **DDS_Enum** (p. 1206)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_ulonglong (p. 404)

5.14.4.46 DDS_DynamicData_get_longdouble()

```
DDS_ReturnCode_t DDS_DynamicData_get_longdouble (
            const  DDS_DynamicData * self,
             DDS_LongDouble * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_LongDouble** (p. 1206) or another type implicitly convertible to it (**DDS_Float** (p. 1205) or **DDS_Double** (p. 1205)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_longdouble (p. 404)

5.14.4.47 DDS_DynamicData_get_wchar()

```
DDS_ReturnCode_t DDS_DynamicData_get_wchar (
            const  DDS_DynamicData * self,
             DDS_Wchar * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Wchar** (p. 1204) or another type implicitly convertible to it (**DDS_Char** (p. 1203)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
value_out	*<<**out**>> (p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member**

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_wchar (p. 405)

5.14.4.48 DDS_DynamicData_get_int8()

```
DDS_ReturnCode_t DDS_DynamicData_get_int8 (
            const  DDS_DynamicData * self,
             DDS_Int8 * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Int8** (p. 1204).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_int8 (p. 406)

5.14.4.49 DDS_DynamicData_get_uint8()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8 (
            const  DDS_DynamicData * self,
             DDS_UInt8 * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_UInt8** (p. 1204).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_uint8 (p. 407)

5.14.4.50 DDS_DynamicData_get_string()

```
DDS_ReturnCode_t DDS_DynamicData_get_string (
            const  DDS_DynamicData * self,
            char ** value,
             DDS_UnsignedLong * size,
```

```
const char * member_name,
DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type char∗.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
value	<<***out***>> *(*p. *1015)* The string into which the middleware should copy the string member. The allocated size of this string is indicated by `size` argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If `value` is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will *not* free your string; instead, this operation will fail and `size` will contain the minimum required size.
size	<<***inout***>> *(*p. *1015)* As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

See also

DDS_String_alloc (p. 1528)

DDS_String_free (p. 1529)

DDS_DynamicData_set_string (p. 407)

5.14.4.51 DDS_DynamicData_get_wstring()

```
DDS_ReturnCode_t DDS_DynamicData_get_wstring (
            const  DDS_DynamicData * self,
             DDS_Wchar ** value,
             DDS_UnsignedLong * size,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS_Wchar** (p. 1204)*.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value	<<***out***>> *(p. 1015)* The string into which the middleware should copy the string member. The allocated size of this string is indicated by `size` argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If `value` is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will *not* free your string; instead, this operation will fail and `size` will contain the minimum required size.
size	<<***inout***>> *(p. 1015)* As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

See also

DDS_String_alloc (p. 1528)

DDS_String_free (p. 1529)

DDS_DynamicData_set_wstring (p. 408)

5.14.4.52 DDS_DynamicData_get_complex_member()

```
DDS_ReturnCode_t DDS_DynamicData_get_complex_member (
            const  DDS_DynamicData * self,
             DDS_DynamicData * value_out,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the value of the given field, which is of some composed type.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

The member may be of type kind **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRUCT** (p. 242), **DDS_TK_VALUE** (p. 242), or **DDS_TK_UNION** (p. 242). It may be specified by name or by ID.

This method is logically related to **DDS_DynamicData_bind_complex_member** (p. 344) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a *copy* of the data; changes to it will not be reflected in the source object.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
value_out	<<***out***>> *(p. 1015)* The **DDS_DynamicData** (p. 1771) sample whose contents will be overwritten by this operation. This object must *not* be a bound member of another **DDS_DynamicData** (p. 1771) sample.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

See also

DDS_DynamicData_set_complex_member (p. 409)

DDS_DynamicData_bind_complex_member (p. 344)

5.14.4.53 DDS_DynamicData_get_long_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_long_array (
            const  DDS_DynamicData * self,
             DDS_Long * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member. The array may contain members of type **DDS_Long** (p. 1205) or **DDS_Enum** (p. 1206).

This method will perform an automatic conversion from **DDS_LongSeq** (p. 1838).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
array	*<<**out**>> (p. 1015)* An already-allocated array, into which the elements will be copied.
length	*<<**inout**>> (p. 1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_long_array (p. 410)

DDS_DynamicData_get_long_seq (p. 383)

5.14.4.54 DDS_DynamicData_get_short_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_short_array (
            const  DDS_DynamicData * self,
             DDS_Short * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_ShortSeq** (p. 2010).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_short_array (p. 411)

```
DDS_ReturnCode_t DDS_DynamicData_get_ulong_array (
            const  DDS_DynamicData * self,
             DDS_UnsignedLong * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member. The array may contain members of type **DDS_UnsignedLong** (p. 1205) or **DDS_Enum** (p. 1206).

This method will perform an automatic conversion from **DDS_UnsignedLongSeq** (p. 2092).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
array	<<***out***>> *(p. 1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(p. 1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_UnsignedShortSeq** (p. 2092).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_FloatSeq** (p. 1801).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_DoubleSeq** (p. 1762).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_double_array (p. 415)

             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_BooleanSeq** (p. 1556).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_boolean_array (p. 416)

```
DDS_ReturnCode_t DDS_DynamicData_get_char_array (
            const  DDS_DynamicData * self,
             DDS_Char * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_CharSeq** (p. 1566).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_OctetSeq** (p. 1863).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_octet_array (p. 418)

```
DDS_ReturnCode_t DDS_DynamicData_get_longlong_array (
            const  DDS_DynamicData * self,
             DDS_LongLong * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_LongLongSeq** (p. 1838).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_longlong_array (p. 418)

```
DDS_ReturnCode_t DDS_DynamicData_get_ulonglong_array (
            const  DDS_DynamicData * self,
             DDS_UnsignedLongLong * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_UnsignedLongLongSeq** (p. 2091).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

```
DDS_ReturnCode_t DDS_DynamicData_get_longdouble_array (
            const  DDS_DynamicData * self,
             DDS_LongDouble * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_LongDoubleSeq** (p. 1838).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

```
DDS_ReturnCode_t DDS_DynamicData_get_wchar_array (
            const  DDS_DynamicData * self,
             DDS_Wchar * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_WcharSeq** (p. 2099).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_wchar_array (p. 421)

DDS_DynamicData_get_wchar_seq (p. 394)

5.14.4.66 DDS_DynamicData_get_int8_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_int8_array (
            const  DDS_DynamicData * self,
             DDS_Int8 * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_Int8Seq** (p. 1813).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_int8_array (p. 422)

DDS_DynamicData_get_int8_seq (p. 395)

5.14.4.67 DDS_DynamicData_get_uint8_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8_array (
            const  DDS_DynamicData * self,
             DDS_UInt8 * array,
             DDS_UnsignedLong * length,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS_UInt8Seq** (p. 2089).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
array	<<***out***>> *(*p. *1015)* An already-allocated array, into which the elements will be copied.
length	<<***inout***>> *(*p. *1015)* As an input, the allocated length of `array`. As an output, the number of elements that were copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224)

See also

DDS_DynamicData_set_uint8_array (p. 423)

DDS_DynamicData_get_uint8_seq (p. 395)

5.14.4.68 DDS_DynamicData_get_long_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_long_seq (
            const  DDS_DynamicData * self,
            struct  DDS_LongSeq * seq,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_Long** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
seq	<<***out***>> *(p. 1015)* A sequence, into which the elements will be copied.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_Short** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
seq	<<***out***>> *(p. 1015)* A sequence, into which the elements will be copied.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_UnsignedLong** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
seq	*<<**out**>> (p. 1015)* A sequence, into which the elements will be copied.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_LongDouble** (p. 1206).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
seq	<<***out***>> *(*p. *1015)* A sequence, into which the elements will be copied.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_Int8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
seq	<<***out***>> *(p. 1015)* A sequence, into which the elements will be copied.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

DDS_DynamicData_get_int8_array (p. 381)

5.14.4.82 DDS_DynamicData_get_uint8_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8_seq (
            const  DDS_DynamicData * self,
            struct  DDS_UInt8Seq * seq,
            const char * member_name,
             DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS_UInt8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
seq	<<***out***>> *(p. 1015)* A sequence, into which the elements will be copied.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).

Returns

One of the **Standard Return Codes** (p. 1223). If the member is optional and not set, this operation will return **DDS_RETCODE_NO_DATA** (p. 1224). This operation may also return **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

DDS_DynamicData_get_uint8_array (p. 382)

5.14.4.83 DDS_DynamicData_set_long()

```
DDS_ReturnCode_t DDS_DynamicData_set_long (
            DDS_DynamicData * self,
```

```
const char * member_name,
 DDS_DynamicDataMemberId member_id,
 DDS_Long value )
```

Set the value of the given field, which is of type **DDS_Long** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_long (p. 353)

5.14.4.84 DDS_DynamicData_set_short()

```
DDS_ReturnCode_t DDS_DynamicData_set_short (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_Short value )
```

Set the value of the given field, which is of type **DDS_Short** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_short (p. 354)

5.14.4.85 DDS_DynamicData_set_ulong()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulong (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong value )
```

Set the value of the given field, which is of type **DDS_UnsignedLong** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

See also

DDS_DynamicData_get_ulong (p. 355)

5.14.4.86 DDS_DynamicData_set_ushort()

```
DDS_ReturnCode_t DDS_DynamicData_set_ushort (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_UnsignedShort value )
```

Set the value of the given field, which is of type **DDS_UnsignedShort** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

See also

DDS_DynamicData_get_ushort (p. 356)

5.14.4.87 DDS_DynamicData_set_float()

```
DDS_ReturnCode_t DDS_DynamicData_set_float (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_Float value )
```

Set the value of the given field, which is of type **DDS_Float** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_float (p. 356)

5.14.4.88 DDS_DynamicData_set_double()

```
DDS_ReturnCode_t DDS_DynamicData_set_double (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_Double value )
```

Set the value of the given field, which is of type **DDS_Double** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_double (p. 357)

5.14.4.89 DDS_DynamicData_set_boolean()

```
DDS_ReturnCode_t DDS_DynamicData_set_boolean (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_Boolean value )
```

Set the value of the given field, which is of type **DDS_Boolean** (p. 1206).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_boolean (p. 358)

5.14.4.90 DDS_DynamicData_set_char()

```
DDS_ReturnCode_t DDS_DynamicData_set_char (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_Char value )
```

Set the value of the given field, which is of type **DDS_Char** (p. 1203).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_char (p. 359)

5.14.4.91 DDS_DynamicData_set_octet()

```
DDS_ReturnCode_t DDS_DynamicData_set_octet (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_Octet value )
```

Set the value of the given field, which is of type **DDS_Octet** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(*p. *1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_octet (p. 360)

5.14.4.92 DDS_DynamicData_set_longlong()

```
DDS_ReturnCode_t DDS_DynamicData_set_longlong (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_LongLong value )
```

Set the value of the given field, which is of type **DDS_LongLong** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(*p. *1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_longlong (p. 360)

5.14.4.93 DDS_DynamicData_set_ulonglong()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulonglong (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_UnsignedLongLong value )
```

Set the value of the given field, which is of type **DDS_UnsignedLongLong** (p. 1205).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

See also

DDS_DynamicData_get_ulonglong (p. 361)

5.14.4.94 DDS_DynamicData_set_longdouble()

```
DDS_ReturnCode_t DDS_DynamicData_set_longdouble (
            DDS_DynamicData * self,
```

```
const char * member_name,
 DDS_DynamicDataMemberId member_id,
 DDS_LongDouble value )
```

Set the value of the given field, which is of type **DDS_LongDouble** (p. 1206).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_longdouble (p. 362)

5.14.4.95 DDS_DynamicData_set_wchar()

```
DDS_ReturnCode_t DDS_DynamicData_set_wchar (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_Wchar value )
```

Set the value of the given field, which is of type **DDS_Wchar** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_char (p. 359)

5.14.4.96 DDS_DynamicData_set_int8()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8 (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_Int8 value )
```

Set the value of the given field, which is of type **DDS_Int8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	*<<**in**>> (p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_int8 (p. 364)

5.14.4.97 DDS_DynamicData_set_uint8()

```
DDS_ReturnCode_t DDS_DynamicData_set_uint8 (
            DDS_DynamicData * self,
           const char * member_name,
            DDS_DynamicDataMemberId member_id,
            DDS_UInt8 value )
```

Set the value of the given field, which is of type **DDS_UInt8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

See also

DDS_DynamicData_get_uint8 (p. 364)

5.14.4.98 DDS_DynamicData_set_string()

```
DDS_ReturnCode_t DDS_DynamicData_set_string (
            DDS_DynamicData * self,
```

```
const char * member_name,
 DDS_DynamicDataMemberId member_id,
const char * value )
```

Set the value of the given field of type char∗.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_string (p. 365)

5.14.4.99 DDS_DynamicData_set_wstring()

```
DDS_ReturnCode_t DDS_DynamicData_set_wstring (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
            const  DDS_Wchar * value )
```

Set the value of the given field of type **DDS_Wchar** (p. 1204)∗.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(*p. *1015)* The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_wstring (p. 366)

5.14.4.100 DDS_DynamicData_set_complex_member()

```
DDS_ReturnCode_t DDS_DynamicData_set_complex_member (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
            const  DDS_DynamicData * value )
```

Copy the state of the given **DDS_DynamicData** (p. 1771) object into a member of this object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

The member may be of type kind **DDS_TK_ARRAY** (p. 242), **DDS_TK_SEQUENCE** (p. 242), **DDS_TK_STRUCT** (p. 242), **DDS_TK_VALUE** (p. 242), or **DDS_TK_UNION** (p. 242). It may be specified by name or by ID.

Example: Copying Data

This method can be used with **DDS_DynamicData_bind_complex_member** (p. 344) to copy from one **DDS_↩ DynamicData** (p. 1771) object to another efficiently. Suppose the following data structure:

```
struct Bar {

    short theShort;

};

struct Foo {

    Bar theBar;

};
```

Suppose we have two instances of **Foo** (p. 2116), foo_dst and foo_src, and we want to replace the contents of foo_dst.theBar with the contents of foo_src.theBar. The following example shows how to do this (error handling has been omitted for the sake of brevity).

```
struct DDS_DynamicData* foo_dst = ...;

struct DDS_DynamicData* foo_src = ...;

struct DDS_DynamicData* bar = DDS_DynamicData_new(NULL, myProperties);

/* Point to the source of the copy: */
DDS_DynamicData_bind_complex_member(
    foo_src,
    bar,
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

/* Just one copy: */
DDS_DynamicData_set_complex_member(
    foo_dst,
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED,
    bar);

/* Tear down: */
DDS_DynamicData_unbind_complex_member(foo_src, bar);

free(bar);
```

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* The source **DDS_DynamicData** (p. 1771) object whose contents will be copied.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_complex_member (p. 367)

DDS_DynamicData_bind_complex_member (p. 344)

5.14.4.101 DDS_DynamicData_set_long_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_long_array (
              DDS_DynamicData * self,
             const char * member_name,
              DDS_DynamicDataMemberId member_id,
              DDS_UnsignedLong length,
             const  DDS_Long * array )
```

Set the contents of the given array member. The array may contain members of type **DDS_Long** (p. 1205) or **DDS_Enum** (p. 1206).

This method will perform an automatic conversion to **DDS_LongSeq** (p. 1838).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_long_array (p. 368)

DDS_DynamicData_set_long_seq (p. 424)

5.14.4.102 DDS_DynamicData_set_short_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_short_array (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong length,
            const  DDS_Short * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_ShortSeq** (p. 2010).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_short_array (p. 369)

DDS_DynamicData_set_short_seq (p. 424)

5.14.4.103 DDS_DynamicData_set_ulong_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulong_array (
             DDS_DynamicData * self,
```

```
const char * member_name,
 DDS_DynamicDataMemberId member_id,
 DDS_UnsignedLong length,
const  DDS_UnsignedLong * array )
```

Set the contents of the given array member. The array may contain members of type **DDS_UnsignedLong** (p. 1205) or **DDS_Enum** (p. 1206).

This method will perform an automatic conversion to **DDS_UnsignedLongSeq** (p. 2092).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_ulong_array (p. 370)

5.14.4.104 DDS_DynamicData_set_ushort_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_ushort_array (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
```

```
 DDS_UnsignedLong length,
const  DDS_UnsignedShort * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_UnsignedShortSeq** (p. 2092).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_ushort_array (p. 371)

DDS_DynamicData_set_ushort_seq (p. 426)

5.14.4.105 DDS_DynamicData_set_float_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_float_array (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong length,
            const  DDS_Float * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_FloatSeq** (p. 1801).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(*p. *1015)* The length of `array`.
array	<<***in***>> *(*p. *1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

```
DDS_ReturnCode_t DDS_DynamicData_set_double_array (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong length,
            const  DDS_Double * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_DoubleSeq** (p. 1762).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
member_name	*<<**in**>> (p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	*<<**in**>> (p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	*<<**in**>> (p. 1015)* The length of `array`.
array	*<<**in**>> (p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong length,
            const  DDS_Wchar * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_WcharSeq** (p. 2099).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_wchar_array (p. 380)

DDS_DynamicData_set_wchar_seq (p. 433)

5.14.4.114 DDS_DynamicData_set_int8_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8_array (
             DDS_DynamicData * self,
            const char * member_name,
             DDS_DynamicDataMemberId member_id,
             DDS_UnsignedLong length,
            const  DDS_Int8 * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS_Int8Seq** (p. 1813).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
length	<<***in***>> *(p. 1015)* The length of `array`.
array	<<***in***>> *(p. 1015)* The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

5.14.4.129 DDS_DynamicData_set_int8_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8_seq (
            DDS_DynamicData * self,
            const char * member_name,
            DDS_DynamicDataMemberId member_id,
            const struct  DDS_Int8Seq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS_Int8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
member_name	<<***in***>> *(p. 1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(p. 1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(p. 1015)* A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_int8_seq (p. 395)

DDS_DynamicData_set_int8_array (p. 422)

5.14.4.130 DDS_DynamicData_set_uint8_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_uint8_seq (
            DDS_DynamicData * self,
            const char * member_name,
            DDS_DynamicDataMemberId member_id,
            const struct  DDS_UInt8Seq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS_UInt8** (p. 1204).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS_RETCODE_↩ PRECONDITION_NOT_MET** (p. 1224). See **DDS_DynamicData_is_cdr** (p. 335) for more information.

MT Safety:

UNSAFE.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
member_name	<<***in***>> *(*p. *1015)* The name of the member or NULL to look up the member by its ID.
member_id	<<***in***>> *(*p. *1015)* The ID of the member or **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED** (p. 326) to look up by name. See **Member Names and IDs** (p. 1772).
value	<<***in***>> *(*p. *1015)* A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224)

See also

DDS_DynamicData_get_uint8_seq (p. 395)

DDS_DynamicData_set_uint8_array (p. 423)

5.14.4.131 DDS_DynamicDataTypeSupport_new()

```
struct  DDS_DynamicDataTypeSupport * DDS_DynamicDataTypeSupport_new (
             const  DDS_TypeCode * type,
             const struct  DDS_DynamicDataTypeProperty_t * props )
```

Construct a new **DDS_DynamicDataTypeSupport** (p. 328) object.

This step is usually followed by type registration.

The **DDS_TypeCode** (p. 2077) object that is passed to this constructor is cloned and stored internally; no pointer is retained to the object passed in. It is therefore safe to delete the **DDS_TypeCode** (p. 2077) after this method returns.

Parameters

type	The **DDS_TypeCode** (p. 2077) that describes the members of this type. The new object will contain a *copy* of this **DDS_TypeCode** (p. 2077); you may delete the argument after this constructor returns.
props	Policies that describe how to manage the memory and other properties of the data samples created by this factory. In most cases, the default values will be appropriate; see **DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT** (p. 440).

See also

DDS_DynamicDataTypeSupport_register_type (p. 436)

DDS_DynamicDataTypeSupport_delete (p. 436)

Returns

One of the **Standard Return Codes** (p. 1223)

5.14.4.132 DDS_DynamicDataTypeSupport_delete()

```
void DDS_DynamicDataTypeSupport_delete (
            struct  DDS_DynamicDataTypeSupport * self )
```

Delete a **DDS_DynamicDataTypeSupport** (p. 328) object.

A **DDS_DynamicDataTypeSupport** (p. 328) cannot be deleted while it is still in use. For each **DDS_DomainParticipant** (p. 76) with which the **DDS_DynamicDataTypeSupport** (p. 328) is registered, either the type must be unregistered or the participant must be deleted.

See also

DDS_DynamicDataTypeSupport_unregister_type (p. 436)

DDS_DynamicDataTypeSupport_new (p. 435)

5.14.4.133 DDS_DynamicDataTypeSupport_register_type()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_register_type (
            struct  DDS_DynamicDataTypeSupport * self,
             DDS_DomainParticipant * participant,
            const char * type_name )
```

Associate the **DDS_TypeCode** (p. 2077) with the given **DDS_DomainParticipant** (p. 76) under the given logical name.

Once a type has been registered, it can be referenced by name when creating a topic. Statically and dynamically defined types behave the same way in this respect.

If the type cannot be registered, this function will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).

See also

FooTypeSupport_register_type (p. 220)

DDS_DomainParticipant_create_topic (p. 114)

DDS_DynamicDataTypeSupport_unregister_type (p. 436)

5.14.4.134 DDS_DynamicDataTypeSupport_unregister_type()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_unregister_type (
            struct  DDS_DynamicDataTypeSupport * self,
             DDS_DomainParticipant * participant,
            const char * type_name )
```

Remove the definition of this type from the **DDS_DomainParticipant** (p. 76).

This operation is optional; all types are automatically unregistered when a **DDS_DomainParticipant** (p. 76) is deleted. Most application will not need to manually unregister types.

A type cannot be unregistered while it is still in use; that is, while any **DDS_Topic** (p. 174) is still referring to it.

If the type cannot be unregistered, this function will fail with **DDS_RETCODE_ERROR** (p. 1224) or **DDS_RETCODE↩ _BAD_PARAMETER** (p. 1224).

See also

FooTypeSupport_unregister_type (p. 221)

DDS_DynamicDataTypeSupport_register_type (p. 436)

5.14.4.135 DDS_DynamicDataTypeSupport_get_type_name()

```
const char * DDS_DynamicDataTypeSupport_get_type_name (
            const struct  DDS_DynamicDataTypeSupport * self )
```

Get the default name of this type.

The **DDS_TypeCode** (p. 2077) that is wrapped by this **DDS_DynamicDataTypeSupport** (p. 328) includes a name; this operation returns that name.

This operation is useful when registering a type, because in most cases it is not necessary for the physical and logical names of the type to be different.

```
DDS_DynamicDataTypeSupport_register_type(

    myTypeSupport,

    myParticipant,

    DDS_DynamicDataTypeSupport_get_type_name(myTypeSupport));
```

See also

FooTypeSupport_get_type_name (p. 220)

5.14.4.136 DDS_DynamicDataTypeSupport_get_data_type()

```
const struct  DDS_TypeCode * DDS_DynamicDataTypeSupport_get_data_type (
            const struct  DDS_DynamicDataTypeSupport * self )
```

Get the **DDS_TypeCode** (p. 2077) wrapped by this **DDS_DynamicDataTypeSupport** (p. 328).

5.14.4.137 DDS_DynamicDataTypeSupport_create_data()

```
DDS_DynamicData * DDS_DynamicDataTypeSupport_create_data (
            struct  DDS_DynamicDataTypeSupport * self )
```

Create a new **DDS_DynamicData** (p. 1771) sample initialized with the **DDS_TypeCode** (p. 2077) and properties of this **DDS_DynamicDataTypeSupport** (p. 328).

This method returns a fully initialized object. It is *not* necessary to subsequently call **DDS_DynamicDataTypeSupport_initialize_data** (p. 439).

If initialization fails, this method returns NULL.

You must delete your **DDS_DynamicData** (p. 1771) object when you are finished with it.

```
struct DDS_DynamicData* sample = DDS_DynamicDataTypeSupport_create_data(
    myTypeSupport);
/* Failure indicated by NULL return result. */
/* Do something... */
DDS_DynamicDataTypeSupport_delete_data(myTypeSupport, sample);
```

See also

DDS_DynamicDataTypeSupport_initialize_data (p. 439)

DDS_DynamicDataTypeSupport_delete_data (p. 438)

FooTypeSupport_create_data (p. 214)

DDS_DynamicData_new (p. 329)

DDS_DynamicDataTypeProperty_t::data (p. 1784)

5.14.4.138 DDS_DynamicDataTypeSupport_delete_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_delete_data (
            struct  DDS_DynamicDataTypeSupport * self,
             DDS_DynamicData * a_data )
```

Finalize and deallocate the **DDS_DynamicData** (p. 1771) sample.

This method fully finalizes the object. It is *not* necessary to previously call **DDS_DynamicDataTypeSupport_finalize_data** (p. 439).

See also

DDS_DynamicDataTypeSupport_finalize_data (p. 439)

FooTypeSupport_delete_data (p. 216)

DDS_DynamicDataTypeSupport_create_data (p. 438)

5.14.4.139 DDS_DynamicDataTypeSupport_print_data()

```
void DDS_DynamicDataTypeSupport_print_data (
            const struct  DDS_DynamicDataTypeSupport * self,
            const  DDS_DynamicData * a_data )
```

Print a string representation of the given sample to the given file.

This method is equivalent to **DDS_DynamicData_print** (p. 338).

See also

DDS_DynamicData_print (p. 338)

5.14.4.140 DDS_DynamicDataTypeSupport_copy_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_copy_data (
            const struct  DDS_DynamicDataTypeSupport * self,
             DDS_DynamicData * dest,
            const  DDS_DynamicData * source )
```

Deeply copy the given data samples.

5.14.4.141 DDS_DynamicDataTypeSupport_initialize_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_initialize_data (
            const struct  DDS_DynamicDataTypeSupport * self,
             DDS_DynamicData * a_data )
```

Initialize a **DDS_DynamicData** (p. 1771) object to a valid empty state.

Use **DDS_DynamicDataTypeSupport_create_data** (p. 438) to allocate a new **DDS_DynamicData** (p. 1771) object on the heap. Use this method to initialize a **DDS_DynamicData** (p. 1771) object that is stored deeply, either within another object or on the stack.

When you're finished with the object, dispose of it with **DDS_DynamicDataTypeSupport_finalize_data** (p. 439).

```
struct DDS_DynamicData sample;

DDS_Boolean succeeded = DDS_DynamicDataTypeSupport_initialize_data(

    myTypeSupport, &sample);

/* Handle failure... */

/* Do something... */

DDS_DynamicDataTypeSupport_finalize_data(myTypeSupport, &sample);
```

See also

FooTypeSupport_initialize_data (p. 217)

DDS_DynamicDataTypeSupport_finalize_data (p. 439)

DDS_DynamicDataTypeSupport_create_data (p. 438)

5.14.4.142 DDS_DynamicDataTypeSupport_finalize_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_finalize_data (
            const struct  DDS_DynamicDataTypeSupport * self,
             DDS_DynamicData * a_data )
```

Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.

Use **DDS_DynamicDataTypeSupport_delete_data** (p. 438) to clean up a **DDS_DynamicData** (p. 1771) object on the heap. Use this method to clean up a **DDS_DynamicData** (p. 1771) object that is stored deeply, either within another object or on the stack.

5.14.5 Variable Documentation

5.14.5.1 DDS_DYNAMIC_DATA_PROPERTY_DEFAULT

```
const struct  DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT  [extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1782).

Pass this object instead of your own **DDS_DynamicDataProperty_t** (p. 1782) object to use the default property values:

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(

    myTypeCode,

    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

DDS_DynamicDataProperty_t (p. 1782)

Examples

HelloWorldPlugin.c.

5.14.5.2 DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT

```
const struct DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataTypeProperty_t** (p. 1784).

Pass this object instead of your own **DDS_DynamicDataTypeProperty_t** (p. 1784) object to use the default property values:

```
struct DDS_DynamicDataTypeSupport* support = DDS_DynamicDataTypeSupport_new(

    myTypeCode,

    &DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT);
```

See also

DDS_DynamicDataTypeProperty_t (p. 1784)

5.14.5.3 DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT

```
struct DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT
[extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1782).

Pass this object instead of your own **DDS_DynamicDataProperty_t** (p. 1782) object to use the default property values:

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(

    myTypeCode,

    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

5.15 Publication Module

Contains the **DDS_FlowController** (p. 562), **DDS_Publisher** (p. 446), and **DDS_DataWriter** (p. 488) classes as well as the **DDS_PublisherListener** (p. 1921) and **DDS_DataWriterListener** (p. 1644) interfaces, and more generally, all that is needed on the publication side.

Modules

- **Publishers**

  DDS_Publisher *(p. 446) entity and associated elements*
- **Data Writers**

  DDS_DataWriter *(p. 488) entity and associated elements*
- **Flow Controllers**

  *<<**extension**>> (p. 1014)* ***DDS_FlowController*** *(p. 562) and associated elements*
- **Multi-channel DataWriters**

  APIs related to Multi-channel DataWriters.

5.15.1 Detailed Description

Contains the **DDS_FlowController** (p. 562), **DDS_Publisher** (p. 446), and **DDS_DataWriter** (p. 488) classes as well as the **DDS_PublisherListener** (p. 1921) and **DDS_DataWriterListener** (p. 1644) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

5.16 Publishers

DDS_Publisher (p. 446) entity and associated elements

Data Structures

- struct **DDS_PublisherSeq**

  Declares IDL `sequence` *<* ***DDS_Publisher*** *(p. 446) > .*
- struct **DDS_PublisherQos**

  QoS policies supported by a ***DDS_Publisher*** *(p. 446) entity.*
- struct **DDS_PublisherListener**

  *<<****interface****>> (p. 1015)* ***DDS_Listener*** *(p. 1819) for* ***DDS_Publisher*** *(p. 446) status.*

Macros

- #define **DDS_PublisherQos_INITIALIZER**

  Initializer for new QoS instances.
- #define **DDS_PublisherListener_INITIALIZER**

  Initializer for new ***DDS_PublisherListener*** *(p. 1921).*

Typedefs

- typedef struct DDS_PublisherImpl **DDS_Publisher**

  *<<****interface****>> (p. 1015) A publisher is the object responsible for the actual dissemination of publications.*

Functions

- **DDS_Boolean DDS_PublisherQos_equals** (const struct **DDS_PublisherQos** *self, const struct **DDS_PublisherQos** *other)

  *Compares two **DDS_PublisherQos** (p. 1922) for equality.*
- **DDS_ReturnCode_t DDS_PublisherQos_print** (const struct **DDS_PublisherQos** *self)

  *Prints this **DDS_PublisherQos** (p. 1922) to stdout.*
- **DDS_ReturnCode_t DDS_PublisherQos_to_string** (const struct **DDS_PublisherQos** *self, char *string, **DDS_UnsignedLong** *string_size)

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1922).*
- **DDS_ReturnCode_t DDS_PublisherQos_to_string_w_params** (const struct **DDS_PublisherQos** *self, char *string, **DDS_UnsignedLong** *string_size, const struct **DDS_PublisherQos** *base, const struct **DDS_QosPrintFormat** *format)

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1922).*
- **DDS_ReturnCode_t DDS_PublisherQos_initialize** (struct **DDS_PublisherQos** *self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t DDS_PublisherQos_finalize** (struct **DDS_PublisherQos** *self)

  *Free any dynamic memory allocated by the policies in this **DDS_PublisherQos** (p. 1922).*
- **DDS_ReturnCode_t DDS_PublisherQos_copy** (struct **DDS_PublisherQos** *self, const struct **DDS_PublisherQos** *source)

  Copy the contents of the given QoS into this QoS.
- **DDS_Entity** * **DDS_Publisher_as_entity** (**DDS_Publisher** *publisher)

  *Access a **DDS_Publisher** (p. 446)'s supertype instance.*
- **DDS_ReturnCode_t DDS_Publisher_get_default_datawriter_qos** (**DDS_Publisher** *self, struct **DDS_DataWriterQos** *qos)

  *Copies the default **DDS_DataWriterQos** (p. 1666) values into the provided **DDS_DataWriterQos** (p. 1666) instance.*
- **DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos** (**DDS_Publisher** *self, const struct **DDS_DataWriterQos** *qos)

  *Sets the default **DDS_DataWriterQos** (p. 1666) values for this publisher.*
- **DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos_with_profile** (**DDS_Publisher** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Set the default **DDS_DataWriterQos** (p. 1666) values for this publisher based on the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_Publisher_set_default_profile** (**DDS_Publisher** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Sets the default XML profile for a **DDS_Publisher** (p. 446).*
- **DDS_ReturnCode_t DDS_Publisher_set_default_library** (**DDS_Publisher** *self, const char *library_name)

  *<<**extension**>> (p. 1014) Sets the default XML library for a **DDS_Publisher** (p. 446).*
- **DDS_DataWriter** * **DDS_Publisher_create_datawriter** (**DDS_Publisher** *self, **DDS_Topic** *topic, const struct **DDS_DataWriterQos** *qos, const struct **DDS_DataWriterListener** *listener, **DDS_StatusMask** mask)

  *Creates a **DDS_DataWriter** (p. 488) that will be attached and belong to the **DDS_Publisher** (p. 446).*
- **DDS_DataWriter** * **DDS_Publisher_create_datawriter_with_profile** (**DDS_Publisher** *self, **DDS_Topic** *topic, const char *library_name, const char *profile_name, const struct **DDS_DataWriterListener** *listener, **DDS_StatusMask** mask)

  *<<**extension**>> (p. 1014) Creates a **DDS_DataWriter** (p. 488) object using the **DDS_DataWriterQos** (p. 1666) associated with the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_Publisher_delete_datawriter** (**DDS_Publisher** *self, **DDS_DataWriter** *a_datawriter)

  *Deletes a **DDS_DataWriter** (p. 488) that belongs to the **DDS_Publisher** (p. 446).*

- **DDS_DataWriter** * **DDS_Publisher_lookup_datawriter** (**DDS_Publisher** *self, const char *topic_name)

  *Retrieves the **DDS_DataWriter*** (p. *488*) *for a specific **DDS_Topic*** (p. *174*).
- **DDS_ReturnCode_t DDS_Publisher_suspend_publications** (**DDS_Publisher** *self)

  *Indicates to RTI Connext that the application is about to make multiple modifications using **DDS_DataWriter*** (p. *488*) *objects belonging to the **DDS_Publisher*** (p. *446*).
- **DDS_ReturnCode_t DDS_Publisher_resume_publications** (**DDS_Publisher** *self)

  *Indicates to RTI Connext that the application has completed the multiple changes initiated by the previous **DDS_Publisher_suspend_publications*** (p. *460*).
- **DDS_ReturnCode_t DDS_Publisher_begin_coherent_changes** (**DDS_Publisher** *self)

  *Indicates that the application will begin a coherent set of modifications using **DDS_DataWriter*** (p. *488*) *objects attached to the **DDS_Publisher*** (p. *446*).
- **DDS_ReturnCode_t DDS_Publisher_end_coherent_changes** (**DDS_Publisher** *self)

  *Terminates the coherent set initiated by the matching call to **DDS_Publisher_begin_coherent_changes*** (p. *462*).
- **DDS_ReturnCode_t DDS_Publisher_get_all_datawriters** (**DDS_Publisher** *self, struct DDS_DataWriterSeq *writers)

  Retrieve all the DataWriters created from this Publisher.
- **DDS_DomainParticipant** * **DDS_Publisher_get_participant** (**DDS_Publisher** *self)

  *Returns the **DDS_DomainParticipant*** (p. *76*) *to which the **DDS_Publisher*** (p. *446*) *belongs.*
- **DDS_ReturnCode_t DDS_Publisher_delete_contained_entities** (**DDS_Publisher** *self)

  *Deletes all the entities that were created by means of the "create" operation on the **DDS_Publisher*** (p. *446*).
- **DDS_ReturnCode_t DDS_Publisher_copy_from_topic_qos** (**DDS_Publisher** *self, struct **DDS_DataWriterQos** *a_datawriter_qos, const struct **DDS_TopicQos** *a_topic_qos)

  *Copies the policies in the **DDS_TopicQos*** (p. *2048*) *to the corresponding policies in the **DDS_DataWriterQos*** (p. *1666*).
- **DDS_ReturnCode_t DDS_Publisher_set_qos** (**DDS_Publisher** *self, const struct **DDS_PublisherQos** *qos)

  Sets the publisher QoS.
- **DDS_ReturnCode_t DDS_Publisher_set_qos_with_profile** (**DDS_Publisher** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Change the QoS of this publisher using the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_Publisher_get_qos** (**DDS_Publisher** *self, struct **DDS_PublisherQos** *qos)

  Gets the publisher QoS.
- const char * **DDS_Publisher_get_default_library** (**DDS_Publisher** *self)

  *<<**extension**>> (p. 1014) Gets the default XML library associated with a **DDS_Publisher*** (p. *446*).
- const char * **DDS_Publisher_get_default_profile** (**DDS_Publisher** *self)

  *<<**extension**>> (p. 1014) Gets the default XML profile associated with a **DDS_Publisher*** (p. *446*).
- const char * **DDS_Publisher_get_default_profile_library** (**DDS_Publisher** *self)

  *<<**extension**>> (p. 1014) Gets the library where the default XML QoS profile is contained for a **DDS_Publisher*** (p. *446*).
- **DDS_ReturnCode_t DDS_Publisher_set_listener** (**DDS_Publisher** *self, const struct **DDS_PublisherListener** *l, **DDS_StatusMask** mask)

  Sets the publisher listener.
- struct **DDS_PublisherListener DDS_Publisher_get_listener** (**DDS_Publisher** *self)

  Get the publisher listener.
- **DDS_ReturnCode_t DDS_Publisher_get_listenerX** (**DDS_Publisher** *self, struct **DDS_PublisherListener** *listener)

  *<<**extension**>> (p. 1014) Get the publisher listener.*
- **DDS_ReturnCode_t DDS_Publisher_wait_for_acknowledgments** (**DDS_Publisher** *self, const struct **DDS_Duration_t** *max_wait)

  Blocks the calling thread until all data written by the Publisher's reliable DataWriters is acknowledged, or until timeout expires.

- **DDS_ReturnCode_t DDS_Publisher_wait_for_asynchronous_publishing** (**DDS_Publisher** *self, const struct **DDS_Duration_t** *max_wait)

  <<***extension***>> (p. *1014) Blocks the calling thread until asynchronous sending is complete.*
- **DDS_DataWriter * DDS_Publisher_lookup_datawriter_by_name** (**DDS_Publisher** *self, const char *datawriter_name)

  <<***extension***>> (p. *1014) Retrieves a **DDS_DataWriter** (p. 488) contained within the **DDS_Publisher** (p. 446) the **DDS_DataWriter** (p. 488) entity name.*

Variables

- const struct **DDS_DataWriterQos** * **DDS_DATAWRITER_QOS_PRINT_ALL**

  *Special value which can be supplied to **DDS_DataWriterQos_to_string_w_params** (p. 537) indicating that all of the QoS should be printed.*
- const struct **DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT**

  *Special value for creating **DDS_DataWriter** (p. 488) with default QoS.*
- const struct **DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS**

  *Special value for creating **DDS_DataWriter** (p. 488) with a combination of the default **DDS_DataWriterQos** (p. 1666) and the **DDS_TopicQos** (p. 2048).*

5.16.1 Detailed Description

DDS_Publisher (p. 446) entity and associated elements

5.16.2 Macro Definition Documentation

5.16.2.1 DDS_PublisherQos_INITIALIZER

```
#define DDS_PublisherQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_PublisherQos** (p. 1922) instance stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_PublisherQos myQos = DDS_PublisherQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipant_get_default_publisher_qos** (p. 88) or **DDS_Publisher_get_qos** (p. 467); one of those should be called subsequently to setting the QoS of a new or existing entity:

```
struct DDS_PublisherQos myQos = DDS_PublisherQos_INITIALIZER;

DDS_DomainParticipant_get_default_publisher_qos(myParticipant, &myQos);

DDS_Publisher_set_qos(myPub, &myQos);

DDS_PublisherQos_finalize(&myQos);
```

See also

DDS_DomainParticipant_get_default_publisher_qos (p. 88)

DDS_PublisherQos_finalize (p. 450)

5.16.2.2 DDS_PublisherListener_INITIALIZER

```
#define DDS_PublisherListener_INITIALIZER
```

Initializer for new **DDS_PublisherListener** (p. 1921).

All the new **DDS_PublisherListener** (p. 1921) instances allocated in the stack should be initialized to this value.No memory is allocated.

```
struct DDS_PublisherListener listener = DDS_PublisherListener_INITIALIZER;

/* initialize listener functions */

listener.as_datawriterlistener.on_offered_deadline_missed = ....;

DDS_Publisher_set_listener(myPublisher, &listener, mask);
```

See also

DDS_Publisher_set_listener (p. 469)

DDS_PublisherListener (p. 1921)

Operations Allowed in Listener Callbacks (p. 1821)

5.16.3 Typedef Documentation

5.16.3.1 DDS_Publisher

```
typedef struct DDS_PublisherImpl  DDS_Publisher
```

<<***interface***>> *(p. 1015)* A publisher is the object responsible for the actual dissemination of publications.

QoS:

DDS_PublisherQos (p. 1922)

Listener:

DDS_PublisherListener (p. 1921)

A publisher acts on the behalf of one or several **DDS_DataWriter** (p. 488) objects that belong to it. When it is informed of a change to the data associated with one of its **DDS_DataWriter** (p. 488) objects, it decides when it is appropriate to actually send the data-update message. In making this decision, it considers any extra information that goes with the data (timestamp, writer, etc.) as well as the QoS of the **DDS_Publisher** (p. 446) and the **DDS_DataWriter** (p. 488).

The following operations may be called even if the **DDS_Publisher** (p. 446) is not enabled. Other operations will fail with the value **DDS_RETCODE_NOT_ENABLED** (p. 1224) if called on a disabled **DDS_Publisher** (p. 446):

- **DDS_Entity_enable** (p. 1365),

- **DDS_Publisher_set_qos** (p. 465), **DDS_Publisher_get_qos** (p. 467) , **DDS_Publisher_set_qos_with_profile** (p. 466)
- **DDS_Publisher_set_listener** (p. 469), **DDS_Publisher_get_listener** (p. 469),
- **DDS_Entity_get_statuscondition** (p. 1367), **DDS_Entity_get_status_changes** (p. 1367)
- **DDS_Publisher_create_datawriter** (p. 456), **DDS_Publisher_create_datawriter_with_profile** (p. 457), **DDS_Publisher_delete_contained_entities** (p. 464), **DDS_Publisher_delete_datawriter** (p. 459),
- **DDS_Publisher_set_default_datawriter_qos** (p. 453), **DDS_Publisher_set_default_datawriter_qos_with_profile** (p. 453), **DDS_Publisher_get_default_datawriter_qos** (p. 452), **DDS_Publisher_wait_for_acknowledgments** (p. 470), **DDS_Publisher_set_default_library** (p. 455), **DDS_Publisher_set_default_profile** (p. 454),

See also

Operations Allowed in Listener Callbacks (p. 1821)

5.16.4 Function Documentation

5.16.4.1 DDS_PublisherQos_equals()

```
DDS_Boolean DDS_PublisherQos_equals (
            const struct  DDS_PublisherQos * self,
            const struct  DDS_PublisherQos * other )
```

Compares two **DDS_PublisherQos** (p. 1922) for equality.

Parameters

self	<<***in***>> *(p. 1015)* This PublisherQos.
other	<<***in***>> *(p. 1015)* The other PublisherQos to be compared with this PublisherQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.16.4.2 DDS_PublisherQos_print()

```
DDS_ReturnCode_t DDS_PublisherQos_print (
            const struct  DDS_PublisherQos * self )
```

Prints this **DDS_PublisherQos** (p. 1922) to stdout.

Only the differences between this **DDS_PublisherQos** (p. 1922) and the documented default are printed. If you wish to print everything regardless, see **DDS_PublisherQos_to_string_w_params** (p. 449). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.16.4.3 DDS_PublisherQos_to_string()

```
DDS_ReturnCode_t DDS_PublisherQos_to_string (
            const struct  DDS_PublisherQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1922).

Only the differences between this **DDS_PublisherQos** (p. 1922) and the documented default are printed to idref↩ _PublisherQose string. If you wish to print everything regardless, see **DDS_PublisherQos_to_string_w_params** (p. 449). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_PublisherQos** (p. 1922) is written to the buffer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
string	<<***out***>> *(p. 1015)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1922). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_PublisherQos_to_string_w_params (p. 449)

5.16.4.4 DDS_PublisherQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_PublisherQos_to_string_w_params (
            const struct  DDS_PublisherQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_PublisherQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1922).

Only the differences between this **DDS_PublisherQos** (p. 1922) and the **DDS_PublisherQos** (p. 1922) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_PUBLISHER_QOS_PRINT_ALL** (p. 162) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_PublisherQos** (p. 1922) is written to the buffer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
string	<<***out***>> *(p. 1015)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1922). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 1015)* The **DDS_PublisherQos** (p. 1922) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	<<***in***>> *(p. 1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.16.4.5 DDS_PublisherQos_initialize()

```
DDS_ReturnCode_t DDS_PublisherQos_initialize (
            struct  DDS_PublisherQos * self )
```

Initializer for new QoS instances.

New **DDS_PublisherQos** (p. 1922) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_Publisher_get_qos** (p. 467) or **DDS_DomainParticipant_get_default_publisher_qos** (p. 88); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS_PublisherQos_finalize** (p. 450) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_PublisherQos *myQos = malloc(sizeof(struct DDS_PublisherQos));

DDS_PublisherQos_initialize(myQos);

DDS_Publisher_get_default_datawriter_qos(myFactory, myQos);

DDS_Publisher_set_qos(myPublisher, myQos);

DDS_PublisherQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_get_default_publisher_qos (p. 88)

DDS_PublisherQos_finalize (p. 450)

5.16.4.6 DDS_PublisherQos_finalize()

```
DDS_ReturnCode_t DDS_PublisherQos_finalize (
            struct  DDS_PublisherQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_PublisherQos** (p. 1922).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PublisherQos_INITIALIZER (p. 445)

DDS_PublisherQos_initialize (p. 449)

5.16.4.7 DDS_PublisherQos_copy()

```
DDS_ReturnCode_t DDS_PublisherQos_copy (
            struct  DDS_PublisherQos * self,
            const struct  DDS_PublisherQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_PublisherQos (p. 1922) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)* The **DDS_PublisherQos** (p. 1922) to copy from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PublisherQos_INITIALIZER (p. 445)

DDS_PublisherQos_initialize (p. 449)

DDS_PublisherQos_finalize (p. 450)

5.16.4.8 DDS_Publisher_as_entity()

```
DDS_Entity * DDS_Publisher_as_entity (
             DDS_Publisher * publisher )
```

Access a **DDS_Publisher** (p. 446)'s supertype instance.

Parameters

publisher	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The **DDS_Entity** (p. 1362) that is supertype instance of the publisher.

5.16.4.9 DDS_Publisher_get_default_datawriter_qos()

```
DDS_ReturnCode_t DDS_Publisher_get_default_datawriter_qos (
             DDS_Publisher * self,
            struct  DDS_DataWriterQos * qos )
```

Copies the default **DDS_DataWriterQos** (p. 1666) values into the provided **DDS_DataWriterQos** (p. 1666) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_Publisher_set_default_datawriter_qos** (p. 453) or **DDS_Publisher_set_default_datawriter_qos_with_profile** (p. 453), or else, if the call was never made, the default values from its owning **DDS_DomainParticipant** (p. 76).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a **DDS_Publisher** (p. 446) while another thread may be simultaneously calling **DDS_Publisher_set_default_datawriter_qos** (p. 453).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* **DDS_DataWriterQos** (p. 1666) to be filled-up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DATAWRITER_QOS_DEFAULT (p. 473)

DDS_Publisher_create_datawriter (p. 456)

5.16.4.10 DDS_Publisher_set_default_datawriter_qos()

```
DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos (
            DDS_Publisher * self,
           const struct  DDS_DataWriterQos * qos )
```

Sets the default **DDS_DataWriterQos** (p. 1666) values for this publisher.

This call causes the default values inherited from the owning **DDS_DomainParticipant** (p. 76) to be overridden.

This default value will be used for newly created **DDS_DataWriter** (p. 488) if **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) is specified as the `qos` parameter when **DDS_Publisher_create_datawriter** (p. 456) is called.

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS_Publisher** (p. 446) while another thread may be simultaneously calling **DDS_Publisher_set_default_datawriter_qos** (p. 453), **DDS_Publisher_get_default_datawriter_qos** (p. 452) or calling **DDS_Publisher_create_datawriter** (p. 456) with **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) as the `qos` parameter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* Default qos to be set. The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_Publisher_set_default_datawriter_qos** (p. 453) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.16.4.11 DDS_Publisher_set_default_datawriter_qos_with_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos_with_profile (
            DDS_Publisher * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Set the default **DDS_DataWriterQos** (p. 1666) values for this publisher based on the input XML QoS profile.

This default value will be used for newly created **DDS_DataWriter** (p. 488) if **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) is specified as the `qos` parameter when **DDS_Publisher_create_datawriter** (p. 456) is called.

Precondition

The **DDS_DataWriterQos** (p. 1666) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS_Publisher** (p. 446) while another thread may be simultaneously calling **DDS_Publisher_set_default_datawriter_qos** (p. 453), **DDS_Publisher_get_default_↩ datawriter_qos** (p. 452) or calling **DDS_Publisher_create_datawriter** (p. 456) with **DDS_DATAWRITER_QOS↩ _DEFAULT** (p. 473) as the `qos` parameter.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Publisher_set_default_library** (p. 455)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Publisher_set_default_profile** (p. 454)).

If the input profile cannot be found, the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_DATAWRITER_QOS_DEFAULT (p. 473)

DDS_Publisher_create_datawriter_with_profile (p. 457)

5.16.4.12 DDS_Publisher_set_default_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_default_profile (
             DDS_Publisher * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Sets the default XML profile for a **DDS_Publisher** (p. 446).

This function specifies the profile that will be used as the default the next time a default Publisher profile is needed during a call to one of this Publisher's operations. When calling a **DDS_Publisher** (p. 446) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS_Publisher** (p. 446) inherits the default from the **DDS_DomainParticipant** (p. 76) (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

This function does not set the default QoS for **DDS_DataWriter** (p. 488) objects created by the **DDS_Publisher** (p. 446); for this functionality, use **DDS_Publisher_set_default_datawriter_qos_with_profile** (p. 453) (you may pass in NULL after having called set_default_profile()).

This function does not set the default QoS for newly created Publishers; for this functionality, use **DDS_Domain↩ Participant_set_default_publisher_qos_with_profile** (p. 89).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* The library name containing the profile.
profile_name	<<***in***>> *(*p. *1015)* The profile name. If profile_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Publisher_get_default_profile (p. 468)

DDS_Publisher_get_default_profile_library (p. 468)

5.16.4.13 DDS_Publisher_set_default_library()

```
DDS_ReturnCode_t DDS_Publisher_set_default_library (
             DDS_Publisher * self,
            const char * library_name )
```

<<***extension***>> *(*p. *1014)* Sets the default XML library for a **DDS_Publisher** (p. 446).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this Publisher's operations.

Any API requiring a library_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS_Publisher** (p. 446) inherits the default from the **DDS_DomainParticipant** (p. 76) (see **DDS_DomainParticipant_set_default_library** (p. 100)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name. If library_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Publisher_get_default_library (p. 467)

5.16.4.14 DDS_Publisher_create_datawriter()

```
DDS_DataWriter * DDS_Publisher_create_datawriter (
            DDS_Publisher * self,
            DDS_Topic * topic,
            const struct  DDS_DataWriterQos * qos,
            const struct  DDS_DataWriterListener * listener,
            DDS_StatusMask mask )
```

Creates a **DDS_DataWriter** (p. 488) that will be attached and belong to the **DDS_Publisher** (p. 446).

For each application-defined type, **Foo** (p. 2116), there is an implied, auto-generated class **FooDataWriter** (p. 2119) that extends **DDS_DataWriter** (p. 488) and contains the operations to write data of type **Foo** (p. 2116).

Note that a common application pattern to construct the QoS for the **DDS_DataWriter** (p. 488) is to:

- Retrieve the QoS policies on the associated **DDS_Topic** (p. 174) by means of the **DDS_Topic_get_qos** (p. 198) operation.
- Retrieve the default **DDS_DataWriter** (p. 488) qos by means of the **DDS_Publisher_get_default_datawriter_↩qos** (p. 452) operation.
- Combine those two QoS policies (for example, using **DDS_Publisher_copy_from_topic_qos** (p. 465)) and selectively modify policies as desired.

When a **DDS_DataWriter** (p. 488) is created, only those transports already registered are available to the **DDS_Data↩Writer** (p. 488). See **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered.

Precondition

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDS_DataWriter** (p. 488) will be created.

The given **DDS_Topic** (p. 174) must have been created from the same participant as this publisher. If it was created from a different participant, this function will fail.

MT Safety:

UNSAFE. If **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) is used for the `qos` parameter, it is not safe to create the datawriter while another thread may be simultaneously calling **DDS_Publisher_set_default_datawriter_qos** (p. 453).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
topic	*<<**in**>> (p. 1015)* The **DDS_Topic** (p. 174) that the **DDS_DataWriter** (p. 488) will be associated with. Cannot be NULL.
qos	*<<**in**>> (p. 1015)* QoS to be used for creating the new **DDS_DataWriter** (p. 488). The special value **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) can be used to indicate that the **DDS_DataWriter** (p. 488) should be created with the default **DDS_DataWriterQos** (p. 1666) set in the **DDS_Publisher** (p. 446). The special value **DDS_DATAWRITER_QOS_USE_TOPIC_QOS** (p. 473) can be used to indicate that the **DDS_DataWriter** (p. 488) should be created with the combination of the default **DDS_DataWriterQos** (p. 1666) set on the **DDS_Publisher** (p. 446) and the **DDS_TopicQos** (p. 2048) of the **DDS_Topic** (p. 174). Cannot be NULL.
listener	*<<**in**>> (p. 1015)* The listener of the **DDS_DataWriter** (p. 488).
mask	*<<**in**>> (p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataWriter** (p. 488) of a derived class specific to the data type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

5.16.4.15 DDS_Publisher_create_datawriter_with_profile()

```
DDS_DataWriter * DDS_Publisher_create_datawriter_with_profile (
             DDS_Publisher * self,
             DDS_Topic * topic,
            const char * library_name,
            const char * profile_name,
            const struct  DDS_DataWriterListener * listener,
             DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_DataWriter** (p. 488) object using the **DDS_DataWriterQos** (p. 1666) associated with the input XML QoS profile.

The **DDS_DataWriter** (p. 488) will be attached and belong to the **DDS_Publisher** (p. 446).

For each application-defined type, **Foo** (p. 2116), there is an implied, auto-generated class **FooDataWriter** (p. 2119) that extends **DDS_DataWriter** (p. 488) and contains the operations to write data of type **Foo** (p. 2116).

When a **DDS_DataWriter** (p. 488) is created, only those transports already registered are available to the **DDS_Data↩ Writer** (p. 488). See **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered.

Precondition

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDS_DataWriter** (p. 488) will be created.

The given **DDS_Topic** (p. 174) must have been created from the same participant as this publisher. If it was created from a different participant, this function will return NULL.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic	<<***in***>> *(p. 1015)* The **DDS_Topic** (p. 174) that the **DDS_DataWriter** (p. 488) will be associated with. Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Publisher_set_default_library** (p. 455)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Publisher_set_default_profile** (p. 454)).
listener	<<***in***>> *(p. 1015)* The listener of the **DDS_DataWriter** (p. 488).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataWriter** (p. 488) of a derived class specific to the data type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_Publisher_copy_from_topic_qos (p. 465)

DDS_DataWriter_set_listener (p. 556)

Examples

HelloWorld_publisher.c.

5.16.4.16 DDS_Publisher_delete_datawriter()

```
DDS_ReturnCode_t DDS_Publisher_delete_datawriter (
            DDS_Publisher * self,
            DDS_DataWriter * a_datawriter )
```

Deletes a **DDS_DataWriter** (p. 488) that belongs to the **DDS_Publisher** (p. 446).

The deletion of the **DDS_DataWriter** (p. 488) will automatically unregister all instances.

Precondition

If the **DDS_DataWriter** (p. 488) does not belong to the **DDS_Publisher** (p. 446), the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_DataWriter** (p. 488) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
a_datawriter	<<***in***>> *(p. 1015)* The **DDS_DataWriter** (p. 488) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.16.4.17 DDS_Publisher_lookup_datawriter()

```
DDS_DataWriter * DDS_Publisher_lookup_datawriter (
            DDS_Publisher * self,
           const char * topic_name )
```

Retrieves the **DDS_DataWriter** (p. 488) for a specific **DDS_Topic** (p. 174).

This returned **DDS_DataWriter** (p. 488) is either enabled or disabled.

If more than one **DDS_DataWriter** (p. 488) is attached to the **DDS_Publisher** (p. 446) with the same `topic_name`, then this operation may return any one of them.

MT Safety:

UNSAFE. It is not safe to lookup a **DDS_DataWriter** (p. 488) in one thread while another thread is simultaneously creating or destroying that **DDS_DataWriter** (p. 488).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name of the **DDS_Topic** (p. 174) associated with the **DDS_DataWriter** (p. 488) that is to be looked up. Cannot be NULL.

Returns

A **DDS_DataWriter** (p. 488) that belongs to the **DDS_Publisher** (p. 446) attached to the **DDS_Topic** (p. 174) with `topic_name`. If no such **DDS_DataWriter** (p. 488) exists, this operation returns NULL.

5.16.4.18 DDS_Publisher_suspend_publications()

```
DDS_ReturnCode_t DDS_Publisher_suspend_publications (
            DDS_Publisher * self )
```

Indicates to RTI Connext that the application is about to make multiple modifications using **DDS_DataWriter** (p. 488) objects belonging to the **DDS_Publisher** (p. 446).

It is a **hint** to RTI Connext so it can optimize its performance by e.g., holding the dissemination of the modifications and then batching them.

The use of this operation must be matched by a corresponding call to **DDS_Publisher_resume_publications** (p. 461) indicating that the set of modifications has completed.

If the **DDS_Publisher** (p. 446) is deleted before **DDS_Publisher_resume_publications** (p. 461) is called, any suspended updates yet to be published will be discarded.

RTI Connext is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDS_FlowController** (p. 562), **DDS_ASYNCHRONOUS↩ _PUBLISH_MODE_QOS** (p. 1321) **DDS_DataWriter** (p. 488) instances allow the user even finer control of traffic shaping and sample coalescing.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

DDS_FlowController (p. 562)

DDS_FlowController_trigger_flow (p. 566)

DDS_ON_DEMAND_FLOW_CONTROLLER_NAME (p. 568)

DDS_PublishModeQosPolicy (p. 1924)

5.16.4.19 DDS_Publisher_resume_publications()

```
DDS_ReturnCode_t DDS_Publisher_resume_publications (
            DDS_Publisher * self )
```

Indicates to RTI Connext that the application has completed the multiple changes initiated by the previous **DDS_↩ Publisher_suspend_publications** (p. 460).

This is a **hint** to RTI Connext that can be used for example, to batch all the modifications made since the **DDS_↩ Publisher_suspend_publications** (p. 460).

RTI Connext is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDS_FlowController** (p. 562), **DDS_ASYNCHRONOUS↩ _PUBLISH_MODE_QOS** (p. 1321) **DDS_DataWriter** (p. 488) instances allow the user even finer control of traffic shaping and sample coalescing.

Precondition

A call to **DDS_Publisher_resume_publications** (p. 461) must match a previous call to **DDS_Publisher_↩ suspend_publications** (p. 460). Otherwise the operation will fail with **DDS_RETCODE_PRECONDITION_NOT↩ _MET** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

DDS_FlowController (p. 562)

DDS_FlowController_trigger_flow (p. 566)

DDS_ON_DEMAND_FLOW_CONTROLLER_NAME (p. 568)

DDS_PublishModeQosPolicy (p. 1924)

5.16.4.20 DDS_Publisher_begin_coherent_changes()

```
DDS_ReturnCode_t DDS_Publisher_begin_coherent_changes (
            DDS_Publisher * self )
```

Indicates that the application will begin a coherent set of modifications using **DDS_DataWriter** (p. 488) objects attached to the **DDS_Publisher** (p. 446).

A 'coherent set' is a set of modifications that must be propagated in such a way that they are interpreted at the receiver's side as a consistent set of modifications; that is, the receiver will only be able to access the data after all the modifications in the set are available at the receiver end.

A connectivity change may occur in the middle of a set of coherent changes; for example, the set of partitions used by the **DDS_Publisher** (p. 446) or one of its subscribers (**DDS_Subscriber** (p. 575)) may change, a late-joining **DDS_↩ DataReader** (p. 618) may appear on the network, or a communication failure may occur. In the event that such a change prevents an entity from receiving the entire set of coherent changes, that entity must behave as if it had received none of the set.

These calls can be nested. In that case, the coherent set terminates only with the last call to **DDS_Publisher_end↩ _coherent_changes** (p. 463). Publisher's samples (samples published by any of the DataWriters within the Publisher) that are not published within a begin_coherent_changes/end_coherent_changes block will not be provided to the Data↩ Readers as a set.

The support for coherent changes enables a publishing application to change the value of several data-instances that could belong to the same or different topics and have those changes be seen *atomically* by the readers. This is useful in cases where the values are inter-related (for example, if there are two data-instances representing the altitude and velocity vector of the same aircraft and both are changed, it may be useful to communicate those values in a way the reader can see both together; otherwise, it may, e.g., erroneously interpret that the aircraft is on a collision course).

Note

Coherent sets don't apply to Topic Queries. If a **DDS_TopicQuery** (p. 708) selects only a subset of samples that was published as a coherent set, the subscribing application will receive them regardless of their membership to the coherent set.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

DDS_PresentationQosPolicy (p. 1894)

5.16.4.21 DDS_Publisher_end_coherent_changes()

```
DDS_ReturnCode_t DDS_Publisher_end_coherent_changes (
            DDS_Publisher * self )
```

Terminates the coherent set initiated by the matching call to **DDS_Publisher_begin_coherent_changes** (p. 462).

Precondition

If there is no matching call to **DDS_Publisher_begin_coherent_changes** (p. 462) the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.16.4.22 DDS_Publisher_get_all_datawriters()

```
DDS_ReturnCode_t DDS_Publisher_get_all_datawriters (
             DDS_Publisher * self,
            struct DDS_DataWriterSeq * writers )
```

Retrieve all the DataWriters created from this Publisher.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
writers	*<<**inout**>> (p. 1015)* Sequence where the DataWriters will be added

Returns

One of the **Standard Return Codes** (p. 1223)

5.16.4.23 DDS_Publisher_get_participant()

```
DDS_DomainParticipant * DDS_Publisher_get_participant (
            DDS_Publisher * self )
```

Returns the **DDS_DomainParticipant** (p. 76) to which the **DDS_Publisher** (p. 446) belongs.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

the **DDS_DomainParticipant** (p. 76) to which the **DDS_Publisher** (p. 446) belongs.

5.16.4.24 DDS_Publisher_delete_contained_entities()

```
DDS_ReturnCode_t DDS_Publisher_delete_contained_entities (
            DDS_Publisher * self )
```

Deletes all the entities that were created by means of the "create" operation on the **DDS_Publisher** (p. 446).

Deletes all contained **DDS_DataWriter** (p. 488) objects. Once **DDS_Publisher_delete_contained_entities** (p. 464) completes successfully, the application may delete the **DDS_Publisher** (p. 446), knowing that it has no contained **DDS_DataWriter** (p. 488) objects.

The operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if any of the contained entities is in a state where it cannot be deleted.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.16.4.25 DDS_Publisher_copy_from_topic_qos()

```
DDS_ReturnCode_t DDS_Publisher_copy_from_topic_qos (
            DDS_Publisher * self,
           struct  DDS_DataWriterQos * a_datawriter_qos,
           const struct  DDS_TopicQos * a_topic_qos )
```

Copies the policies in the **DDS_TopicQos** (p. 2048) to the corresponding policies in the **DDS_DataWriterQos** (p. 1666).

Copies the policies in the **DDS_TopicQos** (p. 2048) to the corresponding policies in the **DDS_DataWriterQos** (p. 1666) (replacing values in the **DDS_DataWriterQos** (p. 1666), if present).

This is a "convenience" operation most useful in combination with the operations **DDS_Publisher_get_default_↩ datawriter_qos** (p. 452) and **DDS_Topic_get_qos** (p. 198). The operation **DDS_Publisher_copy_from_topic_qos** (p. 465) can be used to merge the **DDS_DataWriter** (p. 488) default QoS policies with the corresponding ones on the **DDS_Topic** (p. 174). The resulting QoS can then be used to create a new **DDS_DataWriter** (p. 488), or set its QoS.

This operation does not check the resulting **DDS_DataWriterQos** (p. 1666) for consistency. This is because the 'merged' **DDS_DataWriterQos** (p. 1666) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDS_DataWriter** (p. 488).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_datawriter_qos	<<***inout***>> *(*p. *1015)* **DDS_DataWriterQos** (p. 1666) to be filled-up. Cannot be NULL.
a_topic_qos	<<***in***>> *(*p. *1015)* **DDS_TopicQos** (p. 2048) to be merged with **DDS_DataWriterQos** (p. 1666). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.16.4.26 DDS_Publisher_set_qos()

```
DDS_ReturnCode_t DDS_Publisher_set_qos (
            DDS_Publisher * self,
           const struct  DDS_PublisherQos * qos )
```

Sets the publisher QoS.

This operation modifies the QoS of the **DDS_Publisher** (p. 446).

The **DDS_PublisherQos::group_data** (p. 1923), **DDS_PublisherQos::partition** (p. 1923) and **DDS_PublisherQos↩ ::entity_factory** (p. 1923) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* **DDS_PublisherQos** (p. 1922) to be set to. Policies must be consistent. Immutable policies cannot be changed after **DDS_Publisher** (p. 446) is enabled. The special value **DDS_PUBLISHER_QOS_DEFAULT** (p. 160) can be used to indicate that the QoS of the **DDS_Publisher** (p. 446) should be changed to match the current default **DDS_PublisherQos** (p. 1922) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

Operations Allowed in Listener Callbacks (p. 1821)

5.16.4.27 DDS_Publisher_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_qos_with_profile (
             DDS_Publisher * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Change the QoS of this publisher using the input XML QoS profile.

This operation modifies the QoS of the **DDS_Publisher** (p. 446).

The **DDS_PublisherQos::group_data** (p. 1923), **DDS_PublisherQos::partition** (p. 1923) and **DDS_PublisherQos↩ ::entity_factory** (p. 1923) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Publisher_set_default_library** (p. 455)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Publisher_set_default_profile** (p. 454)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

See also

DDS_PublisherQos (p. 1922) for rules on consistency among QoS

Operations Allowed in Listener Callbacks (p. 1821)

5.16.4.28 DDS_Publisher_get_qos()

```
DDS_ReturnCode_t DDS_Publisher_get_qos (
            DDS_Publisher * self,
           struct  DDS_PublisherQos * qos )
```

Gets the publisher QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* **DDS_PublisherQos** (p. 1922) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.16.4.29 DDS_Publisher_get_default_library()

```
const char * DDS_Publisher_get_default_library (
            DDS_Publisher * self )
```

<<***extension***>> *(p. 1014)* Gets the default XML library associated with a **DDS_Publisher** (p. 446).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

The default library or null if the default library was not set.

See also

DDS_Publisher_set_default_library (p. 455)

5.16.4.30 DDS_Publisher_get_default_profile()

```
const char * DDS_Publisher_get_default_profile (
             DDS_Publisher * self )
```

<<***extension***>> *(*p. *1014)* Gets the default XML profile associated with a **DDS_Publisher** (p. 446).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

The default profile or null if the default profile was not set.

See also

DDS_Publisher_set_default_profile (p. 454)

5.16.4.31 DDS_Publisher_get_default_profile_library()

```
const char * DDS_Publisher_get_default_profile_library (
             DDS_Publisher * self )
```

<<***extension***>> *(*p. *1014)* Gets the library where the default XML QoS profile is contained for a **DDS_Publisher** (p. 446).

The default profile library is automatically set when **DDS_Publisher_set_default_profile** (p. 454) is called.

This library can be different than the **DDS_Publisher** (p. 446) default library (see **DDS_Publisher_get_default_library** (p. 467)).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

The default profile library or null if the default profile was not set.

See also

DDS_Publisher_set_default_profile (p. 454)

5.16.4.32 DDS_Publisher_set_listener()

```
DDS_ReturnCode_t DDS_Publisher_set_listener (
              DDS_Publisher * self,
             const struct  DDS_PublisherListener * l,
              DDS_StatusMask mask )
```

Sets the publisher listener.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
l	<<***in***>> *(*p. *1015)* **DDS_PublisherListener** (p. 1921) to set to.
mask	<<***in***>> *(*p. *1015)* **DDS_StatusMask** (p. 1228) associated with the **DDS_PublisherListener** (p. 1921). The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.16.4.33 DDS_Publisher_get_listener()

```
struct  DDS_PublisherListener DDS_Publisher_get_listener (
              DDS_Publisher * self )
```

Get the publisher listener.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_PublisherListener (p. 1921) of the **DDS_Publisher** (p. 446).

See also

DDS_Publisher_get_listenerX (p. 470)

get_listener (abstract) (p. 1365)

5.16.4.34 DDS_Publisher_get_listenerX()

```
DDS_ReturnCode_t DDS_Publisher_get_listenerX (
            DDS_Publisher * self,
           struct  DDS_PublisherListener * listener )
```

<<***extension***>> *(*p. *1014)* Get the publisher listener.

An alternative form of get_listener that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
listener	<<***inout***>> *(*p. *1015)* **DDS_PublisherListener** (p. 1921) structure to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Publisher_get_listener (p. 469)

get_listener (abstract) (p. 1365)

5.16.4.35 DDS_Publisher_wait_for_acknowledgments()

```
DDS_ReturnCode_t DDS_Publisher_wait_for_acknowledgments (
              DDS_Publisher * self,
             const struct  DDS_Duration_t * max_wait )
```

Blocks the calling thread until all data written by the Publisher's reliable DataWriters is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable DataWriters entities is acknowledged by (a) all reliable **DDS_DataReader** (p. 618) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged; a timeout indicates that max_wait elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to this operation on a **DDS_Publisher** (p. 446) and a different thread writes new samples on any of the reliable DataWriters that belong to this Publisher, the new samples must be acknowledged before unblocking the thread that is waiting on this operation.

If none of the **DDS_DataWriter** (p. 488) instances have **DDS_ReliabilityQosPolicy** (p. 1940) kind set to RELIABLE, the operation will complete successfully.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
max_wait	<<***in***>> *(p. 1015)* Specifies maximum time to wait for acknowledgements **DDS_Duration_t** (p. 1770) .

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NOT_ENABLED** (p. 1224), **DDS_RETCODE_TIMEOUT** (p. 1224)

5.16.4.36 DDS_Publisher_wait_for_asynchronous_publishing()

```
DDS_ReturnCode_t DDS_Publisher_wait_for_asynchronous_publishing (
              DDS_Publisher * self,
             const struct  DDS_Duration_t * max_wait )
```

<<***extension***>> *(p. 1014)* Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDS_DataWriter** (p. 488) entities is sent and acknowledged (if reliable) by all matched **DDS_DataReader** (p. 618) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; if it times out, this indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDS_DataReader** (p. 618) is complete in addition to what **DDS_Publisher_wait_for_acknowledgments** (p. 470) provides.

If none of the **DDS_DataWriter** (p. 488) instances have **DDS_PublishModeQosPolicy::kind** (p. 1926) set to **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 1321), the operation will complete immediately , with **DDS_RETCODE_OK** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
max_wait	<<***in***>> *(p. 1015)* Specifies maximum time to wait for acknowledgements **DDS_Duration_t** (p. 1770).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NOT_ENABLED** (p. 1224), **DDS_RETCODE_TIMEOUT** (p. 1224)

5.16.4.37 DDS_Publisher_lookup_datawriter_by_name()

```
DDS_DataWriter * DDS_Publisher_lookup_datawriter_by_name (
            DDS_Publisher * self,
           const char * datawriter_name )
```

<<***extension***>> *(p. 1014)* Retrieves a **DDS_DataWriter** (p. 488) contained within the **DDS_Publisher** (p. 446) the **DDS_DataWriter** (p. 488) entity name.

Every **DDS_DataWriter** (p. 488) in the system has an entity name which is configured and stored in the <<***extension***>> *(p. 1014)* EntityName policy, **ENTITY_NAME** (p. 1292).

This operation retrieves the **DDS_DataWriter** (p. 488) within the **DDS_Publisher** (p. 446) whose name matches the one specified. If there are several **DDS_DataWriter** (p. 488) with the same name within the **DDS_Publisher** (p. 446), the operation returns the first matching occurrence.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
datawriter_name	<<***in***>> *(p. 1015)* Entity name of the **DDS_DataWriter** (p. 488).

Returns

The first **DDS_DataWriter** (p. 488) found with the specified name or NULL if it is not found.

DDS_DomainParticipant_lookup_datawriter_by_name (p. 156)

5.16.5 Variable Documentation

5.16.5.1 DDS_DATAWRITER_QOS_PRINT_ALL

```
const struct DDS_DataWriterQos* DDS_DATAWRITER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_DataWriterQos_to_string_w_params** (p. 537) indicating that all of the QoS should be printed.

The **DDS_DataWriterQos_to_string_w_params** (p. 537) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_DATAWRITER_QOS_PRINT_ALL** (p. 472) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_DATAWRITER_QOS_PRINT_ALL** (p. 472) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrintFormat** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_DataWriterQos_to_string_w_params** (p. 537) API.

5.16.5.2 DDS_DATAWRITER_QOS_DEFAULT

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT [extern]
```

Special value for creating **DDS_DataWriter** (p. 488) with default QoS.

When used in **DDS_Publisher_create_datawriter** (p. 456), this special value is used to indicate that the **DDS_DataWriter** (p. 488) should be created with the default **DDS_DataWriter** (p. 488) QoS by means of the operation get_default_datawriter_qos and using the resulting QoS to create the **DDS_DataWriter** (p. 488).

When used in **DDS_Publisher_set_default_datawriter_qos** (p. 453), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_Publisher_set_default_datawriter_qos** (p. 453) operation had never been called.

When used in **DDS_DataWriter_set_qos** (p. 553), this special value is used to indicate that the QoS of the **DDS_DataWriter** (p. 488) should be changed to match the current defualt QoS set in the **DDS_Publisher** (p. 446) that the **DDS_DataWriter** (p. 488) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataWriter; for this purpose, use **DDS_DomainParticipant_get_default_datawriter_qos** (p. 90).

DDS_Publisher_set_default_datawriter_qos (p. 453)

DDS_DataWriter_set_qos (p. 553)

5.16.5.3 DDS_DATAWRITER_QOS_USE_TOPIC_QOS

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDS_DataWriter** (p. 488) with a combination of the default **DDS_DataWriterQos** (p. 1666) and the **DDS_TopicQos** (p. 2048).

The use of this value is equivalent to the application obtaining the default **DDS_DataWriterQos** (p. 1666) and the **DDS_TopicQos** (p. 2048) (by means of the operation **DDS_Topic_get_qos** (p. 198)) and then combining these two QoS using the operation **DDS_Publisher_copy_from_topic_qos** (p. 465) whereby any policy that is set on the **DDS_TopicQos** (p. 2048) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDS_DataWriter** (p. 488).

This value should only be used in **DDS_Publisher_create_datawriter** (p. 456).

5.17 Data Writers

DDS_DataWriter (p. 488) entity and associated elements

Data Structures

- struct **FooDataWriter**

  *<<**interface**>> (p. 1015) <<**generic**>> (p. 1015) User data type specific data writer.*
- struct **DDS_OfferedDeadlineMissedStatus**

  ***DDS_OFFERED_DEADLINE_MISSED_STATUS** (p. 1230)*
- struct **DDS_LivelinessLostStatus**

  ***DDS_LIVELINESS_LOST_STATUS** (p. 1233)*
- struct **DDS_OfferedIncompatibleQosStatus**

  ***DDS_OFFERED_INCOMPATIBLE_QOS_STATUS** (p. 1231)*
- struct **DDS_PublicationMatchedStatus**

  ***DDS_PUBLICATION_MATCHED_STATUS** (p. 1234)*
- struct **DDS_ServiceRequestAcceptedStatus**

  ***DDS_SERVICE_REQUEST_ACCEPTED_STATUS** (p. 1235)*
- struct **DDS_ReliableWriterCacheEventCount**

  *<<**extension**>> (p. 1014) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.*
- struct **DDS_ReliableWriterCacheChangedStatus**

  *<<**extension**>> (p. 1014) A summary of the state of a data writer's cache of unacknowledged samples written.*
- struct **DDS_ReliableReaderActivityChangedStatus**

*<<**extension**>> (p. 1014) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.*

- struct **DDS_DataWriterCacheStatus**

  *<<**extension**>> (p. 1014) The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.*

- struct **DDS_DataWriterProtocolStatus**

  *<<**extension**>> (p. 1014) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.*

- struct **DDS_AcknowledgmentInfo**

  Information about an application-level acknowledged sample.

- struct **DDS_DataWriterQos**

  *QoS policies supported by a **DDS_DataWriter** (p. 488) entity.*

- struct **DDS_DataWriterListener**

  *<<**interface**>> (p. 1015) **DDS_Listener** (p. 1819) for writer status.*

Macros

- #define **DDS_OfferedDeadlineMissedStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_LivelinessLostStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_OfferedIncompatibleQosStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_PublicationMatchedStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_ServiceRequestAcceptedStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_ReliableWriterCacheChangedStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_ReliableReaderActivityChangedStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_DataWriterCacheStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_DataWriterProtocolStatus_INITIALIZER**

  Initializer for new status instances.

- #define **DDS_DataWriterQos_INITIALIZER**

  Initializer for new QoS instances.

- #define **DDS_DataWriterListener_INITIALIZER**

  *Initializer for new **DDS_DataWriterListener** (p. 1644).*

Typedefs

- typedef struct DDS_DataWriterImpl **DDS_DataWriter**

  <<***interface***>> *(p. 1015) Allows an application to set the value of the data to be published under a given **DDS_Topic** (p. 174).*
- typedef void(∗ **DDS_DataWriterListener_OfferedDeadlineMissedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_OfferedDeadlineMissedStatus** ∗status)

  *Prototype of a **DDS_DataWriterListener** (p. 1644) on_offered_deadline_missed function.*
- typedef void(∗ **DDS_DataWriterListener_LivelinessLostCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_LivelinessLostStatus** ∗status)

  *Prototype of a **DDS_DataWriterListener** (p. 1644) on_liveliness_lost function.*
- typedef void(∗ **DDS_DataWriterListener_OfferedIncompatibleQosCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_OfferedIncompatibleQosStatus** ∗status)

  *Prototype of a **DDS_DataWriterListener** (p. 1644) on_offered_incompatible_qos function.*
- typedef void(∗ **DDS_DataWriterListener_PublicationMatchedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_PublicationMatchedStatus** ∗status)

  *Prototype of a **DDS_DataWriterListener** (p. 1644) on_publication_matched function.*
- typedef void(∗ **DDS_DataWriterListener_ReliableWriterCacheChangedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_ReliableWriterCacheChangedStatus** ∗status)

  <<***extension***>> *(p. 1014) A change has occurred in the writer's cache.*
- typedef void(∗ **DDS_DataWriterListener_ReliableReaderActivityChangedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_ReliableReaderActivityChangedStatus** ∗status)

  <<***extension***>> *(p. 1014) A matched reliable reader has become active or become inactive.*
- typedef void(∗ **DDS_DataWriterListener_SampleRemovedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_Cookie_t** ∗cookie)

  <<***extension***>> *(p. 1014) A sample has been removed from the DataWriter's queue.*
- typedef void(∗ **DDS_DataWriterListener_InstanceReplacedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const **DDS_InstanceHandle_t** ∗handle)

  <<***extension***>> *(p. 1014) An instance previously registered with the writer has been replaced*
- typedef void(∗ **DDS_DataWriterListener_OnApplicationAcknowledgmentCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_AcknowledgmentInfo** ∗info)

  <<***extension***>> *(p. 1014) An application-level acknowledgment has been received for a sample*
- typedef void(∗ **DDS_DataWriterListener_ServiceRequestAcceptedCallback**) (void ∗listener_data, **DDS_DataWriter** ∗writer, const struct **DDS_ServiceRequestAcceptedStatus** ∗status)

  <<***extension***>> *(p. 1014) a **DDS_ServiceRequest** (p. 2006) for the **DDS_TopicQuery** (p. 708) service is dispatched to this **DDS_DataWriter** (p. 488).*

Functions

- **FooDataWriter** ∗ **FooDataWriter_narrow** (**DDS_DataWriter** ∗writer)

  *Narrow the given **DDS_DataWriter** (p. 488) pointer to a **FooDataWriter** (p. 2119) pointer.*
- **DDS_DataWriter** ∗ **FooDataWriter_as_datawriter** (**FooDataWriter** ∗writer)

  *Widen the given **FooDataWriter** (p. 2119) pointer to a **DDS_DataWriter** (p. 488) pointer.*
- **DDS_InstanceHandle_t** **FooDataWriter_register_instance** (**FooDataWriter** ∗self, const **Foo** ∗instance_data)

  Informs RTI Connext that the application will be modifying a particular instance.
- **DDS_InstanceHandle_t** **FooDataWriter_register_instance_w_timestamp** (**FooDataWriter** ∗self, const **Foo** ∗instance_data, const struct **DDS_Time_t** ∗source_timestamp)

Performs the same functions as register_instance except that the application provides the value for the `source_timestamp`.

- **DDS_InstanceHandle_t FooDataWriter_register_instance_w_params** (**FooDataWriter** *self, const **Foo** *instance_data, struct **DDS_WriteParams_t** *params)

  Performs the same function as ***FooDataWriter_register_instance*** *(*p. *494) and* ***FooDataWriter_register_instance_w_timestamp*** *(*p. *495) except that it also provides the values contained in* `params`.

- **DDS_ReturnCode_t FooDataWriter_unregister_instance** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *handle)

  Reverses the action of ***FooDataWriter_register_instance*** *(*p. *494).*

- **DDS_ReturnCode_t FooDataWriter_unregister_instance_w_timestamp** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *handle, const struct **DDS_Time_t** *source_timestamp)

  Performs the same function as ***FooDataWriter_unregister_instance*** *(*p. *496) except that it also provides the value for the* `source_timestamp`.

- **DDS_ReturnCode_t FooDataWriter_unregister_instance_w_params** (**FooDataWriter** *self, const **Foo** *instance_data, struct **DDS_WriteParams_t** *params)

  Performs the same function as ***FooDataWriter_unregister_instance*** *(*p. *496) and* ***FooDataWriter_unregister_instance_w_timestamp*** *(*p. *498) except that it also provides the values contained in* `params`.

- **DDS_ReturnCode_t FooDataWriter_write** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *handle)

  Modifies the value of a data instance.

- **DDS_ReturnCode_t FooDataWriter_write_w_timestamp** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *handle, const struct **DDS_Time_t** *source_timestamp)

  Performs the same function as ***FooDataWriter_write*** *(*p. *499) except that it also provides the value for the* `source_timestamp`.

- **DDS_ReturnCode_t FooDataWriter_write_w_params** (**FooDataWriter** *self, const **Foo** *instance_data, struct **DDS_WriteParams_t** *params)

  Performs the same function as ***FooDataWriter_write*** *(*p. *499) and* ***FooDataWriter_write_w_timestamp*** *(*p. *503) except that it also provides the values contained in* `params`.

- **DDS_ReturnCode_t FooDataWriter_dispose** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *instance_handle)

  Requests the middleware to delete the instance.

- **DDS_ReturnCode_t FooDataWriter_dispose_w_timestamp** (**FooDataWriter** *self, const **Foo** *instance_data, const **DDS_InstanceHandle_t** *instance_handle, const struct **DDS_Time_t** *source_timestamp)

  Performs the same functions as dispose except that the application provides the value for the `source_timestamp` *that is made available to* ***DDS_DataReader*** *(*p. *618) objects by means of the* `source_timestamp` *attribute inside the* ***DDS_SampleInfo*** *(*p. *1990).*

- **DDS_ReturnCode_t FooDataWriter_dispose_w_params** (**FooDataWriter** *self, const **Foo** *instance_data, struct **DDS_WriteParams_t** *params)

  Performs the same function as ***FooDataWriter_dispose*** *(*p. *505) and* ***FooDataWriter_dispose_w_timestamp*** *(*p. *506) except that it also provides the values contained in* `params`.

- **DDS_ReturnCode_t FooDataWriter_get_key_value** (**FooDataWriter** *self, **Foo** *key_holder, const **DDS_InstanceHandle_t** *handle)

  Retrieve the instance `key` *that corresponds to an instance* `handle`.

- **DDS_InstanceHandle_t FooDataWriter_lookup_instance** (**FooDataWriter** *self, const **Foo** *key_holder)

  Retrieve the instance `handle` *that corresponds to an instance* `key_holder`.

- void * **FooDataWriter_create_data** (**FooDataWriter** *self)

  Creates a data sample and initializes it.

- void * **FooDataWriter_create_data_w_params** (**FooDataWriter** *self, const struct **DDS_TypeAllocationParams_t** *alloc_params)

  Creates a data sample and initializes it.

- **DDS_Boolean FooDataWriter_delete_data** (**FooDataWriter** ∗self, **Foo** ∗sample)

  Destroys a user data type instance.
- void ∗ **FooDataWriter_delete_data_w_params** (**FooDataWriter** ∗self, **Foo** ∗sample, const struct **DDS_↩ TypeDeallocationParams_t** ∗dealloc_params)

  Destroys a user data type instance.
- **DDS_ReturnCode_t FooDataWriter_get_loan** (**FooDataWriter** ∗self, **Foo** ∗∗sample)

  Gets a sample managed by the DataWriter.
- **DDS_ReturnCode_t FooDataWriter_discard_loan** (**FooDataWriter** ∗self, **Foo** ∗sample)

  Returns a loaned sample back to the DataWriter.
- **DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_initialize** (struct **DDS_OfferedDeadlineMissed↩ Status** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_copy** (struct **DDS_OfferedDeadlineMissed↩ Status** ∗self, const struct **DDS_OfferedDeadlineMissedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_finalize** (struct **DDS_OfferedDeadlineMissed↩ Status** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_OfferedDeadlineMissedStatus_equals** (const struct **DDS_OfferedDeadlineMissed↩ Status** ∗left, const struct **DDS_OfferedDeadlineMissedStatus** ∗right)

  *Compares two **DDS_OfferedDeadlineMissedStatus** (p. 1864) for equality.*
- **DDS_ReturnCode_t DDS_LivelinessLostStatus_initialize** (struct **DDS_LivelinessLostStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_LivelinessLostStatus_copy** (struct **DDS_LivelinessLostStatus** ∗self, const struct **DDS_LivelinessLostStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_LivelinessLostStatus_finalize** (struct **DDS_LivelinessLostStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_LivelinessLostStatus_equals** (const struct **DDS_LivelinessLostStatus** ∗left, const struct **DDS_LivelinessLostStatus** ∗right)

  *Compares two **DDS_LivelinessLostStatus** (p. 1825) for equality.*
- **DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_initialize** (struct **DDS_OfferedIncompatible↩ QosStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_copy** (struct **DDS_OfferedIncompatibleQos↩ Status** ∗self, const struct **DDS_OfferedIncompatibleQosStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_finalize** (struct **DDS_OfferedIncompatible↩ QosStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_OfferedIncompatibleQosStatus_equals** (const struct **DDS_OfferedIncompatible↩ QosStatus** ∗left, const struct **DDS_OfferedIncompatibleQosStatus** ∗right)

  *Compares two **DDS_OfferedIncompatibleQosStatus** (p. 1865) for equality.*
- **DDS_ReturnCode_t DDS_PublicationMatchedStatus_initialize** (struct **DDS_PublicationMatchedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_PublicationMatchedStatus_copy** (struct **DDS_PublicationMatchedStatus** ∗self, const struct **DDS_PublicationMatchedStatus** ∗source)

  Copy the contents of the given status into this status.

- **DDS_ReturnCode_t DDS_PublicationMatchedStatus_finalize** (struct **DDS_PublicationMatchedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_PublicationMatchedStatus_equals** (const struct **DDS_PublicationMatchedStatus** ∗left, const struct **DDS_PublicationMatchedStatus** ∗right)

  *Compares two **DDS_PublicationMatchedStatus*** (p. *1919) for equality.*
- **DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_initialize** (struct **DDS_ServiceRequest↩ AcceptedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_copy** (struct **DDS_ServiceRequestAccepted↩ Status** ∗self, const struct **DDS_ServiceRequestAcceptedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_finalize** (struct **DDS_ServiceRequest↩ AcceptedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_ServiceRequestAcceptedStatus_equals** (const struct **DDS_ServiceRequest↩ AcceptedStatus** ∗left, const struct **DDS_ServiceRequestAcceptedStatus** ∗right)

  *Compares two **DDS_ServiceRequestAcceptedStatus*** (p. *2007) for equality.*
- **DDS_Boolean DDS_ReliableWriterCacheEventCount_equals** (const struct **DDS_ReliableWriterCache↩ EventCount** ∗left, const struct **DDS_ReliableWriterCacheEventCount** ∗right)

  *Compares two **DDS_ReliableWriterCacheEventCount*** (p. *1950) for equality.*
- **DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_initialize** (struct **DDS_ReliableWriter↩ CacheChangedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_copy** (struct **DDS_ReliableWriterCache↩ ChangedStatus** ∗self, const struct **DDS_ReliableWriterCacheChangedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_finalize** (struct **DDS_ReliableWriter↩ CacheChangedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_ReliableWriterCacheChangedStatus_equals** (const struct **DDS_ReliableWriter↩ CacheChangedStatus** ∗left, const struct **DDS_ReliableWriterCacheChangedStatus** ∗right)

  *Compares two **DDS_ReliableWriterCacheChangedStatus*** (p. *1947) for equality.*
- **DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_initialize** (struct **DDS_ReliableReader↩ ActivityChangedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_copy** (struct **DDS_ReliableReader↩ ActivityChangedStatus** ∗self, const struct **DDS_ReliableReaderActivityChangedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_finalize** (struct **DDS_ReliableReader↩ ActivityChangedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_ReliableReaderActivityChangedStatus_equals** (const struct **DDS_ReliableReader↩ ActivityChangedStatus** ∗left, const struct **DDS_ReliableReaderActivityChangedStatus** ∗right)

  *Compares two **DDS_ReliableReaderActivityChangedStatus*** (p. *1945) for equality.*
- **DDS_ReturnCode_t DDS_DataWriterCacheStatus_initialize** (struct **DDS_DataWriterCacheStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_DataWriterCacheStatus_copy** (struct **DDS_DataWriterCacheStatus** ∗self, const struct **DDS_DataWriterCacheStatus** ∗source)

Copy the contents of the given status into this status.

- **DDS_ReturnCode_t DDS_DataWriterCacheStatus_finalize** (struct **DDS_DataWriterCacheStatus** ∗self)

  Free any dynamic memory allocated by status instances.

- **DDS_Boolean DDS_DataWriterCacheStatus_equals** (const struct **DDS_DataWriterCacheStatus** ∗left, const struct **DDS_DataWriterCacheStatus** ∗right)

  *Compares two **DDS_DataWriterCacheStatus*** (p. *1642*) *for equality.*

- **DDS_ReturnCode_t DDS_DataWriterProtocolStatus_initialize** (struct **DDS_DataWriterProtocolStatus** ∗self)

  Initializer for new status instances.

- **DDS_ReturnCode_t DDS_DataWriterProtocolStatus_copy** (struct **DDS_DataWriterProtocolStatus** ∗self, const struct **DDS_DataWriterProtocolStatus** ∗source)

  Copy the contents of the given status into this status.

- **DDS_ReturnCode_t DDS_DataWriterProtocolStatus_finalize** (struct **DDS_DataWriterProtocolStatus** ∗self)

  Free any dynamic memory allocated by status instances.

- **DDS_Boolean DDS_DataWriterProtocolStatus_equals** (const struct **DDS_DataWriterProtocolStatus** ∗left, const struct **DDS_DataWriterProtocolStatus** ∗right)

  *Compares two **DDS_DataWriterProtocolStatus*** (p. *1654*) *for equality.*

- **DDS_Boolean DDS_DataWriterQos_equals** (const struct **DDS_DataWriterQos** ∗self, const struct **DDS_↩ DataWriterQos** ∗other)

  *Compares two **DDS_DataWriterQos*** (p. *1666*) *for equality.*

- **DDS_ReturnCode_t DDS_DataWriterQos_print** (const struct **DDS_DataWriterQos** ∗self)

  *Prints this **DDS_DataWriterQos*** (p. *1666*) *to stdout.*

- **DDS_ReturnCode_t DDS_DataWriterQos_to_string** (const struct **DDS_DataWriterQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size)

  *Obtains a string representation of this **DDS_DataWriterQos*** (p. *1666*).

- **DDS_ReturnCode_t DDS_DataWriterQos_to_string_w_params** (const struct **DDS_DataWriterQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size, const struct **DDS_DataWriterQos** ∗base, const struct **DDS↩ _QosPrintFormat** ∗format)

  *Obtains a string representation of this **DDS_DataWriterQos*** (p. *1666*).

- **DDS_ReturnCode_t DDS_DataWriterQos_initialize** (struct **DDS_DataWriterQos** ∗self)

  Initializer for new QoS instances.

- **DDS_ReturnCode_t DDS_DataWriterQos_finalize** (struct **DDS_DataWriterQos** ∗self)

  *Free any dynamic memory allocated by the policies in this **DDS_DataWriterQos*** (p. *1666*).

- **DDS_ReturnCode_t DDS_DataWriterQos_copy** (struct **DDS_DataWriterQos** ∗self, const struct **DDS_↩ DataWriterQos** ∗source)

  Copy the contents of the given QoS into this QoS.

- **DDS_Entity** ∗ **DDS_DataWriter_as_entity** (**DDS_DataWriter** ∗dataWriter)

  *Access a **DDS_DataWriter*** (p. *488*)*'s supertype instance.*

- **DDS_ReturnCode_t DDS_DataWriter_assert_liveliness** (**DDS_DataWriter** ∗self)

  *This operation manually asserts the liveliness of this **DDS_DataWriter*** (p. *488*).

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_locators** (**DDS_DataWriter** ∗self, struct **DDS_LocatorSeq** ∗locators)

  <<***extension***>> (p. *1014*) *Retrieve the list of locators for subscriptions currently "associated" with this **DDS_DataWriter*** (p. *488*).

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscriptions** (**DDS_DataWriter** ∗self, struct **DDS↩ _InstanceHandleSeq** ∗subscription_handles)

  *Retrieve the list of subscriptions currently "associated" with this **DDS_DataWriter*** (p. *488*).

- **DDS_ReturnCode_t DDS_DataWriter_is_matched_subscription_active** (**DDS_DataWriter** ∗self, **DDS_↩ Boolean** ∗is_active, const **DDS_InstanceHandle_t** ∗subscription_handle)

Check if a subscription currently matched with a DataWriter is active.

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_data** (**DDS_DataWriter** *self, struct **DDS_SubscriptionBuiltinTopicData** *subscription_data, const **DDS_InstanceHandle_t** *subscription_handle)

  *This operation retrieves the information on a subscription that is currently "associated" with the **DDS_DataWriter** (p. 488).*

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_participant_data** (**DDS_DataWriter** *self, struct **DDS_ParticipantBuiltinTopicData** *participant_data, const **DDS_InstanceHandle_t** *subscription_handle)

  *This operation retrieves the information on the discovered **DDS_DomainParticipant** (p. 76) associated with the subscription that is currently matching with the **DDS_DataWriter** (p. 488).*

- **DDS_Topic** * **DDS_DataWriter_get_topic** (**DDS_DataWriter** *self)

  *This operation returns the **DDS_Topic** (p. 174) associated with the **DDS_DataWriter** (p. 488).*

- **DDS_Publisher** * **DDS_DataWriter_get_publisher** (**DDS_DataWriter** *self)

  *This operation returns the **DDS_Publisher** (p. 446) to which the **DDS_DataWriter** (p. 488) belongs.*

- **DDS_ReturnCode_t DDS_DataWriter_wait_for_acknowledgments** (**DDS_DataWriter** *self, const struct **DDS_Duration_t** *max_wait)

  *Blocks the calling thread until all data written by reliable **DDS_DataWriter** (p. 488) entity is acknowledged, or until timeout expires.*

- **DDS_ReturnCode_t DDS_DataWriter_is_sample_app_acknowledged** (**DDS_DataWriter** *self, **DDS_Boolean** *is_app_ack, const struct **DDS_SampleIdentity_t** *identity)

  This function can be used to see if a sample has been application acknowledged.

- **DDS_ReturnCode_t DDS_DataWriter_wait_for_asynchronous_publishing** (**DDS_DataWriter** *self, const struct **DDS_Duration_t** *max_wait)

  *<<**extension**>> (p. 1014) Blocks the calling thread until asynchronous sending is complete.*

- **DDS_ReturnCode_t DDS_DataWriter_get_liveliness_lost_status** (**DDS_DataWriter** *self, struct **DDS_LivelinessLostStatus** *status)

  *Accesses the **DDS_LIVELINESS_LOST_STATUS** (p. 1233) communication status.*

- **DDS_ReturnCode_t DDS_DataWriter_get_offered_deadline_missed_status** (**DDS_DataWriter** *self, struct **DDS_OfferedDeadlineMissedStatus** *status)

  *Accesses the **DDS_OFFERED_DEADLINE_MISSED_STATUS** (p. 1230) communication status.*

- **DDS_ReturnCode_t DDS_DataWriter_get_offered_incompatible_qos_status** (**DDS_DataWriter** *self, struct **DDS_OfferedIncompatibleQosStatus** *status)

  *Accesses the **DDS_OFFERED_INCOMPATIBLE_QOS_STATUS** (p. 1231) communication status.*

- **DDS_ReturnCode_t DDS_DataWriter_get_publication_matched_status** (**DDS_DataWriter** *self, struct **DDS_PublicationMatchedStatus** *status)

  *Accesses the **DDS_PUBLICATION_MATCHED_STATUS** (p. 1234) communication status.*

- **DDS_ReturnCode_t DDS_DataWriter_get_reliable_writer_cache_changed_status** (**DDS_DataWriter** *self, struct **DDS_ReliableWriterCacheChangedStatus** *status)

  *<<**extension**>> (p. 1014) Get the reliable cache status for this writer.*

- **DDS_ReturnCode_t DDS_DataWriter_get_reliable_reader_activity_changed_status** (**DDS_DataWriter** *self, struct **DDS_ReliableReaderActivityChangedStatus** *status)

  *<<**extension**>> (p. 1014) Get the reliable reader activity changed status for this writer.*

- **DDS_ReturnCode_t DDS_DataWriter_get_datawriter_cache_status** (**DDS_DataWriter** *self, struct **DDS_DataWriterCacheStatus** *status)

  *<<**extension**>> (p. 1014) Get the datawriter cache status for this writer.*

- **DDS_ReturnCode_t DDS_DataWriter_get_datawriter_protocol_status** (**DDS_DataWriter** *self, struct **DDS_DataWriterProtocolStatus** *status)

  *<<**extension**>> (p. 1014) Get the datawriter protocol status for this writer.*

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status** (**DDS_DataWriter** *self, struct **DDS_DataWriterProtocolStatus** *status, const **DDS_InstanceHandle_t** *subscription_handle)

*<<**extension**>> (p. 1014) Get the datawriter protocol status for this writer, per matched subscription identified by the subscription_handle.*

- **DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status_by_locator** (**DDS_DataWriter** *self, struct **DDS_DataWriterProtocolStatus** *status, const struct **DDS_Locator_t** *locator)

  *<<**extension**>> (p. 1014) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.*
- **DDS_ReturnCode_t DDS_DataWriter_get_service_request_accepted_status** (**DDS_DataWriter** *self, struct **DDS_ServiceRequestAcceptedStatus** *status)

  *Accesses the **DDS_SERVICE_REQUEST_ACCEPTED_STATUS** (p. 1235) communication status.*
- **DDS_ReturnCode_t DDS_DataWriter_set_qos** (**DDS_DataWriter** *self, const struct **DDS_DataWriterQos** *qos)

  Sets the writer QoS.
- **DDS_ReturnCode_t DDS_DataWriter_set_qos_with_profile** (**DDS_DataWriter** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Change the QoS of this writer using the input XML QoS profile.*
- **DDS_ReturnCode_t DDS_DataWriter_get_qos** (**DDS_DataWriter** *self, struct **DDS_DataWriterQos** *qos)

  Gets the writer QoS.
- **DDS_ReturnCode_t DDS_DataWriter_set_property** (**DDS_DataWriter** *self, const char *property_name, const char *value, **DDS_Boolean** propagate)

  Set the value for a property that applies to a DataWriter.
- **DDS_ReturnCode_t DDS_DataWriter_set_listener** (**DDS_DataWriter** *self, const struct **DDS_DataWriterListener** *l, **DDS_StatusMask** mask)

  Sets the writer listener.
- struct **DDS_DataWriterListener DDS_DataWriter_get_listener** (**DDS_DataWriter** *self)

  Get the writer listener.
- **DDS_ReturnCode_t DDS_DataWriter_get_listenerX** (**DDS_DataWriter** *self, struct **DDS_DataWriterListener** *listener)

  *<<**extension**>> (p. 1014) Get the writer listener.*
- **DDS_ReturnCode_t DDS_DataWriter_flush** (**DDS_DataWriter** *self)

  *<<**extension**>> (p. 1014) Flushes the batch in progress in the context of the calling thread.*
- **DDS_ReturnCode_t DDS_DataWriter_take_discovery_snapshot** (**DDS_DataWriter** *self, const char *file_name)

  Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

5.17.1 Detailed Description

DDS_DataWriter (p. 488) entity and associated elements

5.17.2 Macro Definition Documentation

5.17.2.1 DDS_OfferedDeadlineMissedStatus_INITIALIZER

```
#define DDS_OfferedDeadlineMissedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_OfferedDeadlineMissedStatus** (p. 1864) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Offered↩ DeadlineMissedStatus_finalize** (p. 515) should be called to free the contained fields that use dynamic memory:

```
struct DDS_OfferedDeadlineMissedStatus myStatus = DDS_OfferedDeadlineMissedStatus_INITIALIZER;

DDS_DataWriter_get_offered_deadline_missed_status(myDataWriter, &myStatus);

DDS_OfferedDeadlineMissedStatus_finalize(&myStatus);
```

See also

DDS_OfferedDeadlineMissedStatus_initialize (p. 513)

DDS_DataWriter_get_offered_deadline_missed_status (p. 549)

DDS_OfferedDeadlineMissedStatus_finalize (p. 515)

5.17.2.2 DDS_LivelinessLostStatus_INITIALIZER

```
#define DDS_LivelinessLostStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_LivelinessLostStatus** (p. 1825) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Liveliness↩ LostStatus_finalize** (p. 517) should be called to free the contained fields that use dynamic memory:

```
struct DDS_LivelinessLostStatus myStatus = DDS_LivelinessLostStatus_INITIALIZER;

DDS_DataWriter_get_liveliness_lost_status(myDataWriter, &myStatus);

DDS_LivelinessLostStatus_finalize(&myStatus);
```

See also

DDS_LivelinessLostStatus_initialize (p. 516)

DDS_DataWriter_get_liveliness_lost_status (p. 548)

DDS_LivelinessLostStatus_finalize (p. 517)

5.17.2.3 DDS_OfferedIncompatibleQosStatus_INITIALIZER

```
#define DDS_OfferedIncompatibleQosStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_OfferedIncompatibleQosStatus** (p. 1865) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Offered↩ IncompatibleQosStatus_finalize** (p. 519) should be called to free the contained fields that use dynamic memory:

```
struct DDS_OfferedIncompatibleQosStatus myStatus = DDS_OfferedIncompatibleQosStatus_INITIALIZER;

DDS_DataWriter_get_offered_incompatible_qos_status(myDataWriter, &myStatus);

DDS_OfferedIncompatibleQosStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_offered_incompatible_qos_status (p. 549)

DDS_OfferedIncompatibleQosStatus_finalize (p. 519)

5.17.2.4 DDS_PublicationMatchedStatus_INITIALIZER

```
#define DDS_PublicationMatchedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_PublicationMatchedStatus** (p. 1919) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Publication↩ MatchedStatus_finalize** (p. 522) should be called to free the contained fields that use dynamic memory:

```
struct DDS_PublicationMatchedStatus myStatus = DDS_PublicationMatchedStatus_INITIALIZER;

DDS_DataWriter_get_publication_matched_status(myDataWriter, &myStatus);

DDS_PublicationMatchedStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_publication_matched_status (p. 549)

DDS_PublicationMatchedStatus_finalize (p. 522)

5.17.2.5 DDS_ServiceRequestAcceptedStatus_INITIALIZER

```
#define DDS_ServiceRequestAcceptedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_ServiceRequestAcceptedStatus** (p. 2007) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Service↩ RequestAcceptedStatus_finalize** (p. 524) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ServiceRequestAcceptedStatus myStatus = DDS_ServiceRequestAcceptedStatus_INITIALIZER;

DDS_DataWriter_get_service_request_accepted_status(myDataWriter, &myStatus);

DDS_ServiceRequestAcceptedStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_service_request_accepted_status (p. 553)

DDS_ServiceRequestAcceptedStatus_finalize (p. 524)

5.17.2.6 DDS_ReliableWriterCacheChangedStatus_INITIALIZER

```
#define DDS_ReliableWriterCacheChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_ReliableWriterCacheChangedStatus** (p. 1947) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Reliable↩ WriterCacheChangedStatus_finalize** (p. 527) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ReliableWriterCacheChangedStatus myStatus = DDS_ReliableWriterCacheChangedStatus_INITIALIZER;

DDS_DataWriter_get_reliable_writer_cache_changed_status(myDataWriter, &myStatus);

DDS_ReliableWriterCacheChangedStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_reliable_writer_cache_changed_status (p. 550)

DDS_ReliableWriterCacheChangedStatus_finalize (p. 527)

5.17.2.7 DDS_ReliableReaderActivityChangedStatus_INITIALIZER

```
#define DDS_ReliableReaderActivityChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_ReliableReaderActivityChangedStatus** (p. 1945) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_↩ ReliableReaderActivityChangedStatus_finalize** (p. 529) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ReliableReaderActivityChangedStatus myStatus = DDS_ReliableReaderActivityChangedStatus_INITIALIZER;

DDS_DataWriter_get_reliable_reader_activity_changed_status(myDataWriter, &myStatus);

DDS_ReliableReaderActivityChangedStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_reliable_reader_activity_changed_status (p. 550)

DDS_ReliableReaderActivityChangedStatus_finalize (p. 529)

5.17.2.8 DDS_DataWriterCacheStatus_INITIALIZER

```
#define DDS_DataWriterCacheStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_DataWriterCacheStatus** (p. 1642) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_DataWriter↩ CacheStatus_finalize** (p. 532) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataWriterCacheStatus myStatus = DDS_DataWriterCacheStatus_INITIALIZER;

DDS_DataWriter_get_datawriter_cache_status(myDataWriter, &myStatus);

DDS_DataWriterCacheStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_datawriter_cache_status (p. 551)

DDS_DataWriterCacheStatus_finalize (p. 532)

5.17.2.9 DDS_DataWriterProtocolStatus_INITIALIZER

```
#define DDS_DataWriterProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_DataWriterProtocolStatus** (p. 1654) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_DataWriter↩ ProtocolStatus_finalize** (p. 535) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataWriterProtocolStatus myStatus = DDS_DataWriterProtocolStatus_INITIALIZER;

DDS_DataWriter_get_datawriter_protocol_status(myDataWriter, &myStatus);

DDS_DataWriterProtocolStatus_finalize(&myStatus);
```

See also

DDS_DataWriter_get_datawriter_protocol_status (p. 551)

DDS_DataWriterProtocolStatus_finalize (p. 535)

5.17.2.10 DDS_DataWriterQos_INITIALIZER

```
#define DDS_DataWriterQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_DataWriterQos** (p. 1666) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DataWriterQos myQos = DDS_DataWriterQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_Publisher_get_default_datawriter_qos** (p. 452) or **DDS_DataWriter_get_qos** (p. 555); one of those should be called subsequently to setting the QoS of a new or existing entity. **DDS_DataWriterQos_finalize** (p. 539) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_DataWriterQos myQos = DDS_DataWriterQos_INITIALIZER;

DDS_Publisher_get_default_datawriter_qos(myPub, &myQos);

DDS_DataWriter_set_qos(myDataWriter, &myQos);

DDS_DataWriterQos_finalize(&myQos);
```

See also

DDS_Publisher_get_default_datawriter_qos (p. 452)

DDS_DataWriterQos_finalize (p. 539)

5.17.2.11 DDS_DataWriterListener_INITIALIZER

```
#define DDS_DataWriterListener_INITIALIZER
```

Initializer for new **DDS_DataWriterListener** (p. 1644).

All the new **DDS_DataWriterListener** (p. 1644) instances allocated in the stack should be initialized to this value.No memory is allocated.

```
struct DDS_DataWriterListener listener = DDS_DataWriterListener_INITIALIZER;

/* initialize listener functions */

listener.on_offered_deadline_missed = ....;

DDS_DataWriter_set_listener(myDataWriter, &listener, mask);
```

See also

DDS_DataWriter_set_listener (p. 556)

DDS_DataWriterListener (p. 1644)

5.17.3 Typedef Documentation

5.17.3.1 DDS_DataWriter

```
typedef struct DDS_DataWriterImpl  DDS_DataWriter
```

<<***interface***>> *(p. 1015)* Allows an application to set the value of the data to be published under a given **DDS_Topic** (p. 174).

QoS:

DDS_DataWriterQos (p. 1666)

Status:

DDS_LIVELINESS_LOST_STATUS (p. 1233), **DDS_LivelinessLostStatus** (p. 1825);
DDS_OFFERED_DEADLINE_MISSED_STATUS (p. 1230), **DDS_OfferedDeadlineMissedStatus** (p. 1864);
DDS_OFFERED_INCOMPATIBLE_QOS_STATUS (p. 1231), **DDS_OfferedIncompatibleQosStatus** (p. 1865);
DDS_PUBLICATION_MATCHED_STATUS (p. 1234), **DDS_PublicationMatchedStatus** (p. 1919);
DDS_RELIABLE_READER_ACTIVITY_CHANGED_STATUS (p. 1236), **DDS_ReliableReaderActivityChangedStatus** (p. 1945);
DDS_RELIABLE_WRITER_CACHE_CHANGED_STATUS (p. 1236), **DDS_ReliableWriterCacheChangedStatus** (p. 1947).

Listener:

DDS_DataWriterListener (p. 1644)

A **DDS_DataWriter** (p. 488) is attached to exactly one **DDS_Publisher** (p. 446), that acts as a factory for it.

A **DDS_DataWriter** (p. 488) is bound to exactly one **DDS_Topic** (p. 174) and therefore to exactly one data type. The **DDS_Topic** (p. 174) must exist prior to the **DDS_DataWriter** (p. 488)'s creation.

DDS_DataWriter (p. 488) is an abstract class. It must be specialized for each particular application data-type (see **USER_DATA** (p. 1345)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 2116) are specified in the example type **DDS_DataWriter** (p. 488).

The following operations may be called even if the **DDS_DataWriter** (p. 488) is not enabled. Other operations will fail with **DDS_RETCODE_NOT_ENABLED** (p. 1224) if called on a disabled **DDS_DataWriter** (p. 488):

- The base-class operations **DDS_DataWriter_set_qos** (p. 553), **DDS_DataWriter_get_qos** (p. 555), **DDS_DataWriter_set_listener** (p. 556), **DDS_DataWriter_get_listener** (p. 557), **DDS_Entity_enable** (p. 1365), **DDS_Entity_get_statuscondition** (p. 1367) and **DDS_Entity_get_status_changes** (p. 1367)
- **DDS_DataWriter_get_liveliness_lost_status** (p. 548), **DDS_DataWriter_get_offered_deadline_missed_status** (p. 549), **DDS_DataWriter_get_offered_incompatible_qos_status** (p. 549), **DDS_DataWriter_get_publication_matched_status** (p. 549), **DDS_DataWriter_get_reliable_writer_cache_changed_status** (p. 550), **DDS_DataWriter_get_reliable_reader_activity_changed_status** (p. 550) **DDS_DataWriter_get_service_request_accepted_status** (p. 553)

Several **DDS_DataWriter** (p. 488) may operate in different threads. If they share the same **DDS_Publisher** (p. 446), the middleware guarantees that its operations are thread-safe.

See also

FooDataWriter (p. 2119)

Operations Allowed in Listener Callbacks (p. 1821)

5.17.3.2 DDS_DataWriterListener_OfferedDeadlineMissedCallback

```
typedef void(* DDS_DataWriterListener_OfferedDeadlineMissedCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_OfferedDeadlineMissedStatus *status)
```

Prototype of a **DDS_DataWriterListener** (p. 1644) on_offered_deadline_missed function.

5.17.3.3 DDS_DataWriterListener_LivelinessLostCallback

```
typedef void(* DDS_DataWriterListener_LivelinessLostCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_LivelinessLostStatus *status)
```

Prototype of a **DDS_DataWriterListener** (p. 1644) on_liveliness_lost function.

Parameters

listener_data	<<***out***>> (p. *1015)* Data associated with the listener when the listener is set
writer	<<***out***>> (p. *1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
status	<<***out***>> (p. *1015)* Current liveliness lost status of the locally created **DDS_DataWriter** (p. 488)

5.17.3.4 DDS_DataWriterListener_OfferedIncompatibleQosCallback

```
typedef void(* DDS_DataWriterListener_OfferedIncompatibleQosCallback) (void *listener_data, DDS↩
_DataWriter *writer, const struct DDS_OfferedIncompatibleQosStatus *status)
```

Prototype of a **DDS_DataWriterListener** (p. 1644) on_offered_incompatible_qos function.

Parameters

listener_data	<<***out***>> (p. *1015)* Data associated with the listener when the listener is set
writer	<<***out***>> (p. *1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
status	<<***out***>> (p. *1015)* Current offered incompatible qos status of the locally created **DDS_DataWriter** (p. 488)

5.17.3.5 DDS_DataWriterListener_PublicationMatchedCallback

```
typedef void(* DDS_DataWriterListener_PublicationMatchedCallback) (void *listener_data, DDS_↩
DataWriter *writer, const struct DDS_PublicationMatchedStatus *status)
```

Prototype of a **DDS_DataWriterListener** (p. 1644) on_publication_matched function.

5.17.3.6 DDS_DataWriterListener_ReliableWriterCacheChangedCallback

```
typedef void(* DDS_DataWriterListener_ReliableWriterCacheChangedCallback) (void *listener_data,
DDS_DataWriter *writer, const struct DDS_ReliableWriterCacheChangedStatus *status)
```

<<***extension***>> (p. *1014)* A change has occurred in the writer's cache.

This callback is triggered when the cache becomes empty or full, or when the number of unacknowledged samples reaches a high or low watermark.

Parameters

listener_data	<<***out***>> *(p. 1015)* Data associated with the listener when the listener is set
writer	<<***out***>> *(p. 1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
status	<<***out***>> *(p. 1015)* Current reliable writer cache changed status of the locally created **DDS_DataWriter** (p. 488)

5.17.3.7 DDS_DataWriterListener_ReliableReaderActivityChangedCallback

```
typedef void(* DDS_DataWriterListener_ReliableReaderActivityChangedCallback) (void *listener_data,
DDS_DataWriter *writer, const struct  DDS_ReliableReaderActivityChangedStatus *status)
```

<<***extension***>> *(p. 1014)* A matched reliable reader has become active or become inactive.

Parameters

listener_data	<<***out***>> *(p. 1015)* Data associated with the listener when the listener is set
writer	<<***out***>> *(p. 1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
status	<<***out***>> *(p. 1015)* Current reliable reader activity changed status of the locally created **DDS_DataWriter** (p. 488)

5.17.3.8 DDS_DataWriterListener_SampleRemovedCallback

```
typedef void(* DDS_DataWriterListener_SampleRemovedCallback) (void *listener_data,  DDS_DataWriter
*writer, const struct  DDS_Cookie_t *cookie)
```

<<***extension***>> *(p. 1014)* A sample has been removed from the DataWriter's queue.

Parameters

listener_data	<<***out***>> *(p. 1015)* Data associated with the listener when the listener is set
writer	<<***out***>> *(p. 1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
cookie	<<***out***>> *(p. 1015)* • If this sample was written with **FooDataWriter_write_w_params** (p. 504), this field contains a copy of the cookie set in **DDS_WriteParams_t** (p. 2107). • If this writer uses **Zero Copy Transfer Over Shared Memory** (p. 209) "Zero Copy transfer over shared memory", this field contains the absolute address of the sample that is removed. The address of the sample can be obtained by using **DDS_Cookie_to_pointer** (p. 1387).

FooDataWriter_get_loan (p. 511)

5.17.3.9 DDS_DataWriterListener_InstanceReplacedCallback

```
typedef void(* DDS_DataWriterListener_InstanceReplacedCallback) (void *listener_data, DDS_Data↩
Writer *writer, const DDS_InstanceHandle_t *handle)
```

<<***extension***>> (p. *1014)* An instance previously registered with the writer has been replaced

Parameters

listener_data	<<***out***>> (p. *1015)* Data associated with the listener when the listener is set
writer	<<***out***>> (p. *1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
handle	<<***out***>> (p. *1015)* Handle of the replaced instance

5.17.3.10 DDS_DataWriterListener_OnApplicationAcknowledgmentCallback

```
typedef void(* DDS_DataWriterListener_OnApplicationAcknowledgmentCallback) (void *listener_data,
DDS_DataWriter *writer, const struct DDS_AcknowledgmentInfo *info)
```

<<***extension***>> (p. *1014)* An application-level acknowledgment has been received for a sample

Parameters

listener_data	<<***out***>> (p. *1015)* Data associated with the listener when the listener is set
writer	<<***out***>> (p. *1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
info	<<***out***>> (p. *1015)* **DDS_AcknowledgmentInfo** (p. 1535) of the acknowledged sample

5.17.3.11 DDS_DataWriterListener_ServiceRequestAcceptedCallback

```
typedef void(* DDS_DataWriterListener_ServiceRequestAcceptedCallback) (void *listener_data, DDS↩
_DataWriter *writer, const struct DDS_ServiceRequestAcceptedStatus *status)
```

<<***extension***>> (p. *1014)* a **DDS_ServiceRequest** (p. 2006) for the **DDS_TopicQuery** (p. 708) service is dispatched to this **DDS_DataWriter** (p. 488).

Parameters

listener_data	<<***out***>> *(*p. *1015)* Data associated with the listener when the listener is set
writer	<<***out***>> *(*p. *1015)* Locally created **DDS_DataWriter** (p. 488) that triggers the listener callback
status	<<***out***>> *(*p. *1015)* Current service request accepted status of locally created **DDS_DataWriter** (p. 488)

Topic Queries (p. 704)

5.17.4 Function Documentation

5.17.4.1 FooDataWriter_narrow()

```
FooDataWriter * FooDataWriter_narrow (
            DDS_DataWriter * writer )
```

Narrow the given **DDS_DataWriter** (p. 488) pointer to a **FooDataWriter** (p. 2119) pointer.

Check if the given `writer` is of type **FooDataWriter** (p. 2119).

Parameters

writer	<<***in***>> *(*p. *1015)* Base-class **DDS_DataWriter** (p. 488) to be converted to the auto-generated class **FooDataWriter** (p. 2119) that extends **DDS_DataWriter** (p. 488). Cannot be NULL.

Returns

FooDataWriter (p. 2119) if `writer` is of type **Foo** (p. 2116). Return NULL otherwise.

5.17.4.2 FooDataWriter_as_datawriter()

```
DDS_DataWriter * FooDataWriter_as_datawriter (
            FooDataWriter * writer )
```

Widen the given **FooDataWriter** (p. 2119) pointer to a **DDS_DataWriter** (p. 488) pointer.

Parameters

writer	<<***in***>> *(p. 1015)* auto-generated **FooDataWriter** (p. 2119) to be converted to the Base-class **DDS_DataWriter** (p. 488). Cannot be NULL.

Returns

DDS_DataWriter (p. 488).

5.17.4.3 FooDataWriter_register_instance()

```
DDS_InstanceHandle_t FooDataWriter_register_instance (
            FooDataWriter * self,
           const  Foo * instance_data )
```

Informs RTI Connext that the application will be modifying a particular instance.

This operation is only useful for keyed data types. Using it for non-keyed types causes no effect and returns **DDS_HANDLE_NIL** (p. 227). The operation takes as a parameter an instance (of which only the key value is examined) and returns a `handle` that can be used in successive write() or dispose() operations.

The operation gives RTI Connext an opportunity to pre-configure itself to improve performance.

The use of this operation by an application is optional even for keyed types. If an instance has not been pre-registered, the application can use the special value **DDS_HANDLE_NIL** (p. 227) as the **DDS_InstanceHandle_t** (p. 213) parameter to the write or dispose operation and RTI Connext will auto-register the instance.

For best performance, the operation should be invoked prior to calling any operation that modifies the instance, such as **FooDataWriter_write** (p. 499), **FooDataWriter_write_w_timestamp** (p. 503), **FooDataWriter_dispose** (p. 505) and **FooDataWriter_dispose_w_timestamp** (p. 506) and the handle used in conjunction with the data for those calls.

When this operation is used, RTI Connext will automatically supply the value of the `source_timestamp` that is used.

This operation may fail and return **DDS_HANDLE_NIL** (p. 227) if **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956) limit has been exceeded.

The operation is **idempotent**. If it is called for an already registered instance, it just returns the already allocated handle. This may be used to lookup and retrieve the handle allocated to a given instance.

This operation can only be called after **DDS_DataWriter** (p. 488) has been enabled. Otherwise, **DDS_HANDLE_NIL** (p. 227) will be returned.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function. Cannot be NULL.

Returns

For keyed data type, a handle that can be used in the calls that take a **DDS_InstanceHandle_t** (p. 213), such as write, dispose, unregister_instance, or return **DDS_HANDLE_NIL** (p. 227) on failure. If the instance_data is of a data type that has no keys, this function always returns **DDS_HANDLE_NIL** (p. 227).

See also

FooDataWriter_unregister_instance (p. 496), **FooDataWriter_get_key_value** (p. 508), **Relationship between registration, liveliness and ownership** (p. 1869)

5.17.4.4 FooDataWriter_register_instance_w_timestamp()

```
DDS_InstanceHandle_t FooDataWriter_register_instance_w_timestamp (
             FooDataWriter * self,
            const  Foo * instance_data,
            const struct  DDS_Time_t * source_timestamp )
```

Performs the same functions as register_instance except that the application provides the value for the `source_timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION_ORDER** (p. 1275) QoS policy for details.

This operation may fail and return **DDS_HANDLE_NIL** (p. 227) if **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956) limit has been exceeded.

This operation can only be called after **DDS_DataWriter** (p. 488) has been enabled. Otherwise, **DDS_HANDLE_NIL** (p. 227) will be returned.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function. Cannot be NULL.
source_timestamp	<<***in***>> *(p. 1015)* The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a *register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. Cannot be NULL.

Returns

For keyed data type, return a handle that can be used in the calls that take a **DDS_InstanceHandle_t** (p. 213), such as write, dispose, unregister_instance, or return **DDS_HANDLE_NIL** (p. 227) on failure. If the instance_data is of a data type that has no keys, this function always return **DDS_HANDLE_NIL** (p. 227).

See also

FooDataWriter_unregister_instance (p. 496), **FooDataWriter_get_key_value** (p. 508)

5.17.4.5 FooDataWriter_register_instance_w_params()

```
DDS_InstanceHandle_t FooDataWriter_register_instance_w_params (
            FooDataWriter * self,
           const  Foo * instance_data,
           struct  DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter_register_instance** (p. 494) and **FooDataWriter_register_instance_↩ w_timestamp** (p. 495) except that it also provides the values contained in `params`.

See also

FooDataWriter_write_w_params (p. 504)

5.17.4.6 FooDataWriter_unregister_instance()

```
DDS_ReturnCode_t FooDataWriter_unregister_instance (
            FooDataWriter * self,
           const  Foo * instance_data,
           const  DDS_InstanceHandle_t * handle )
```

Reverses the action of **FooDataWriter_register_instance** (p. 494).

This operation is useful only for keyed data types. Using it for non-keyed types causes no effect and reports no error. The operation takes as a parameter an instance (of which only the key value is examined) and a handle.

This operation should only be called on an instance that is currently registered. This includes instances that have been auto-registered by calling operations such as write or dispose as described in **FooDataWriter_register_instance** (p. 494). Otherwise, this operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

This only need be called just once per instance, regardless of how many times register_instance was called for that instance.

When this operation is used, RTI Connext will automatically supply the value of the `source_timestamp` that is used.

This operation informs RTI Connext that the **DDS_DataWriter** (p. 488) is no longer going to provide any information about the instance. This operation also indicates that RTI Connext can locally remove all information regarding that instance. The application should not attempt to use the `handle` previously allocated to that instance after calling this function.

The special value **DDS_HANDLE_NIL** (p. 227) can be used for the parameter `handle`. This indicates that the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If handle is any value other than **DDS_HANDLE_NIL** (p. 227), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

RTI Connext will not detect the error when the handle is any value other than **DDS_HANDLE_NIL** (p. 227), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the instance_data (by means of the key). RTI Connext will treat as if the unregister_instance() operation is for the instance as indicated by the handle.

If, after a **FooDataWriter_unregister_instance** (p. 496), the application wants to modify (**FooDataWriter_write** (p. 499) or **FooDataWriter_dispose** (p. 505)) an instance, it has to register it again, or else use the special handle value **DDS_HANDLE_NIL** (p. 227).

This operation does not indicate that the instance is deleted (that is the purpose of **FooDataWriter_dispose** (p. 505)). The operation **FooDataWriter_unregister_instance** (p. 496) just indicates that the **DDS_DataWriter** (p. 488) no longer has anything to say about the instance. **DDS_DataReader** (p. 618) entities that are reading the instance may receive a sample with **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716) for the instance, unless there are other **DDS_DataWriter** (p. 488) objects writing that same instance.

DDS_WriterDataLifecycleQosPolicy::autodispose_unregistered_instances (p. 2113) controls whether instances are automatically disposed when they are unregistered.

This operation can affect the ownership of the data instance (see **OWNERSHIP** (p. 1303)). If the **DDS_DataWriter** (p. 488) was the exclusive owner of the instance, then calling unregister_instance() will relinquish that ownership.

If **DDS_ReliabilityQosPolicy::kind** (p. 1943) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) and the unregistration would overflow the resource limits of this writer or of a reader, this operation may block for up to **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943); if this writer is still unable to unregister after that period, this function will fail with **DDS_RETCODE_TIMEOUT** (p. 1224).

Parameters

instance_data	<<***in***>> *(p. 1015)* The instance that should be unregistered. If **Foo** (p. 2116) *has* a key and instance_handle is **DDS_HANDLE_NIL** (p. 227), only the fields that represent the key are examined by the function. Otherwise, instance_data is not used. If instance_data is used, it must represent an instance that has been registerd. Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) . If **Foo** (p. 2116) *has* a key, instance_data can be NULL only if handle is not **DDS_HANDLE_NIL** (p. 227). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
handle	<<***in***>> *(p. 1015)* represents the instance to be unregistered. If **Foo** (p. 2116) *has* a key and handle is **DDS_HANDLE_NIL** (p. 227), handle is not used and instance is deduced from instance_data. If **Foo** (p. 2116) has no key, handle is not used. If handle is used, it must represent an instance that has been registered. Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if handle is NULL. If **Foo** (p. 2116) *has* a key, handle cannot be **DDS_HANDLE_NIL** (p. 227) if instance_data is NULL. Otherwise, this function will report the error **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

FooDataWriter_register_instance (p. 494)

FooDataWriter_unregister_instance_w_timestamp (p. 498)

FooDataWriter_get_key_value (p. 508)

Relationship between registration, liveliness and ownership (p. 1869)

5.17.4.7 FooDataWriter_unregister_instance_w_timestamp()

```
DDS_ReturnCode_t FooDataWriter_unregister_instance_w_timestamp (
             FooDataWriter * self,
            const  Foo * instance_data,
            const  DDS_InstanceHandle_t * handle,
            const struct  DDS_Time_t * source_timestamp )
```

Performs the same function as **FooDataWriter_unregister_instance** (p. 496) except that it also provides the value for the `source_timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION_ORDER** (p. 1275) QoS policy for details.

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter_unregister_instance** (p. 496) operation.

This operation may block and may time out (**DDS_RETCODE_TIMEOUT** (p. 1224)) under the same circumtances described for the unregister_instance operation.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The instance that should be unregistered. If **Foo** (p. 2116) *has* a key and `instance_handle` is **DDS_HANDLE_NIL** (p. 227), only the fields that represent the key are examined by the function. Otherwise, `instance_data` is not used. If `instance_data` is used, it must represent an instance that has been registerd. Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). If **Foo** (p. 2116) *has* a key, `instance_data` can be NULL only if `handle` is not **DDS_HANDLE_NIL** (p. 227). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
handle	<<***in***>> *(p. 1015)* represents the `instance` to be unregistered. If **Foo** (p. 2116) *has* a key and `handle` is **DDS_HANDLE_NIL** (p. 227), `handle` is not used and `instance` is deduced from `instance_data`. If **Foo** (p. 2116) has no key, `handle` is not used. If `handle` is used, it must represent an instance that has been registered. Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL. If **Foo** (p. 2116) *has* a key, `handle` cannot be **DDS_HANDLE_NIL** (p. 227) if `instance_data` is NULL. Otherwise, this function will report the error **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
source_timestamp	<<***in***>> *(p. 1015)* The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a *register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224) or **DDS_RETCODE_NOT↩ _ENABLED** (p. 1224).

See also

FooDataWriter_register_instance (p. 494)

FooDataWriter_unregister_instance (p. 496)

FooDataWriter_get_key_value (p. 508)

5.17.4.8 FooDataWriter_unregister_instance_w_params()

```
DDS_ReturnCode_t FooDataWriter_unregister_instance_w_params (
             FooDataWriter * self,
            const  Foo * instance_data,
            struct  DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter_unregister_instance** (p. 496) and **FooDataWriter_unregister_↩ instance_w_timestamp** (p. 498) except that it also provides the values contained in `params`.

See also

FooDataWriter_write_w_params (p. 504)

FooDataWriter_dispose_w_params (p. 507)

5.17.4.9 FooDataWriter_write()

```
DDS_ReturnCode_t FooDataWriter_write (
             FooDataWriter * self,
            const  Foo * instance_data,
            const  DDS_InstanceHandle_t * handle )
```

Modifies the value of a data instance.

When this operation is used, RTI Connext will automatically supply the value of the `source_timestamp` that is made available to **DDS_DataReader** (p. 618) objects by means of the `source_timestamp` attribute inside the **DDS↩ _SampleInfo** (p. 1990). (Refer to **DDS_SampleInfo** (p. 1990) and **DESTINATION_ORDER** (p. 1275) QoS policy for details).

As a side effect, this operation asserts liveliness on the **DDS_DataWriter** (p. 488) itself, the **DDS_Publisher** (p. 446) and the **DDS_DomainParticipant** (p. 76).

Note that the special value **DDS_HANDLE_NIL** (p. 227) can be used for the parameter `handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `handle` is any value other than **DDS_HANDLE_NIL** (p. 227), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

RTI Connext will not detect the error when the handle is any value other than **DDS_HANDLE_NIL** (p. 227), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). RTI Connext will treat as if the write() operation is for the instance as indicated by the `handle`.

This operation may block if the **RELIABILITY** (p. 1323) `kind` is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) and the modification would cause data to be lost or else cause one of the limits specified in the **RESOURCE_LIMITS** (p. 1327) to be exceeded.

This operation will not block when using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325). If you are using BEST↩ _EFFORT Reliability in combination with **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 1321), then instead of being blocked, samples that are queued to be sent by the asynchronous publishing thread will be overwritten when the number of DDS samples that are currently queued has reached the `depth` QoS value in the **DDS_HistoryQosPolicy** (p. 1808).

If **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943) elapses before the **DDS_DataWriter** (p. 488) can store the modification without exceeding the limits, the operation will fail and return **DDS_RETCODE_TIMEOUT** (p. 1224) for KEEP_ALL configurations.

Here is how the write operation behaves when **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295) and **DDS_RELIABLE_↩ RELIABILITY_QOS** (p. 1325) are used:

- The send window size is determined by the **DDS_RtpsReliableWriterProtocol_t::max_send_window_size** (p. 1978) and **DDS_RtpsReliableWriterProtocol_t::min_send_window_size** (p. 1978) fields in the **DDS_↩ DataWriterProtocolQosPolicy** (p. 1649). If a send window is specified (max_send_window_size is not UNLIMITED) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943) expires.
- Then, the **DDS_DataWriter** (p. 488) will try to add the new sample to the writer history.
- If the instance associated with the sample is present in the writer history and there are `depth` (in the **HISTORY** (p. 1294)) samples in the instance, the DataWriter will replace the oldest sample of that instance independently of that sample's acknowledged status, and the write operation will return **DDS_RETCODE_OK** (p. 1224). Otherwise, no sample will be replaced and the write operation will continue.
- If the instance associated with the sample is not present in the writer history and **DDS_ResourceLimitsQos↩ Policy::max_instances** (p. 1956) is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS_DataWriterResourceLimitsQosPolicy::instance_replacement** (p. 1678) (see **DDS_DataWriterResourceLimitsInstanceReplacementKind** (p. 1271)).
  - If no instance can be replaced, the write operation returns **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).
- If **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) is exceeded, the DataWriter will try to drop a sample from a different instance as follows:
  - The DataWriter will try first to remove a fully ACKed (2) sample from a different instance 'I' as long as that sample is not the last remaining sample for the instance 'I'. To find this sample, the DataWriter starts iterating from the oldest sample in the writer history to the newest sample.

  - If no such sample is found, the DataWriter will replace the oldest sample in the writer history.

- The sample is added to the writer history, and the write operation returns **DDS_RETCODE_OK** (p. 1224).

Here is how the write operation behaves when **DDS_KEEP_ALL_HISTORY_QOS** (p. 1295) and **DDS_RELIABLE_↩ RELIABILITY_QOS** (p. 1325) are used:

- The send window size is determined by the **DDS_RtpsReliableWriterProtocol_t::max_send_window_size** (p. 1978) and **DDS_RtpsReliableWriterProtocol_t::min_send_window_size** (p. 1978) fields in the **DATA_↩ WRITER_PROTOCOL** (p. 1270). If a send window is specified (max_send_window_size is not UNLIMITED) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943) expires.
  - If the max_blocking_time expires, the write operation returns **DDS_RETCODE_TIMEOUT** (p. 1224).
- When a sample is protocol-ACKed (1) before max_blocking_time expires, the DataWriter will try to add the sample to the writer history as follows:
  - If the instance associated with the sample is not present in the writer history and max_instances is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS_DataWriterResourceLimitsQosPolicy::instance_replacement** (p. 1678) (see **DDS_DataWriter↩ ResourceLimitsInstanceReplacementKind** (p. 1271)).
    - If no instance can be replaced, the write operation returns **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224).
  - If **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) is exceeded, the DataWriter will go through the samples in the order in which they were added, and it will replace the first sample that is fully ACKed (2).
    - If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943) expires. If the max_blocking↩ _time expires, the write operation will return **DDS_RETCODE_TIMEOUT** (p. 1224).
  - If **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956) is exceeded, the DataWriter will go through the samples of the instance in the order in which they were added, and it will replace the first sample that is fully ACKed.
    - If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or the max_blocking_time expires. If the max_blocking_time expires, the write operation will return **DDS_RETCODE_TIMEOUT** (p. 1224).
  - The sample is added to the writer history, and the write operation returns **DDS_RETCODE_OK** (p. 1224).

If there are no instance resources left, this operation may fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Calling **FooDataWriter_unregister_instance** (p. 496) may help freeing up some resources.

This operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if the timestamp is less than the timestamp used in the last writer operation (*register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application-provided timestamp).

If an instance obtained from **FooDataWriter_get_loan** (p. 511) is modified with this operation, then all instances modified thereafter should be from **FooDataWriter_get_loan** (p. 511).

See **DDS_ReliabilityQosPolicyAcknowledgmentModeKind** (p. 1325) for more information on the following notes:

(1) A sample in the writer history is considered "protocol ACKed" when the sample has been individually ACKed at the RTPS protocol level by each one of the DataReaders that matched the DataWriter at the moment the sample was added to the writer queue.

- Late joiners do not change the protocol ACK state of a sample. If a sample is marked as protocol ACKed because it has been acknowledged by all the matching DataReaders and a DataReader joins later on, the historical sample is still considered protocol ACKed even if it has not been received by the late joiner.
- If a sample 'S1' is protocol ACKed and a TopicQuery is received, triggering the publication of 'S1', the sample is still considered protocol ACKed. If a sample 'S1' is not ACKed and a TopicQuery is received triggering the publication of 'S1', the DataWriter will require that both the matching DataReaders on the live RTPS channel and the DataReader on the TopicQuery channel individually protocol ACK the sample in order to consider the sample protocol ACKed.

(2) A sample in the writer history is considered "fully ACKed" when all of the following conditions are met:

- The sample is protocol-ACKed.
- The sample has been "application-level ACKed" by all the DataReaders matching the DataWriter that have their **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) set to **DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1326) or **DDS_APPLICATION_AUTO_ACKNOWLEDGMENT_MODE** (p. 1325). Once the sample is application-level ACKed, it cannot change its status to not ACked after new DataReaders are matched. (Application-level ACK occurs when the application acknowledges receipt of a sample.)
- If required subscriptions are enabled (see **DDS_AvailabilityQosPolicy** (p. 1547)), the sample must also be ACKed by all the required subscriptions configured on the DataWriter.

(3) It is possible within a single call to the write operation for a DataWriter to block both when the send window is full and then again when **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) or **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956) is exceeded. This can happen because blocking on the send window only considers protocol-ACKed samples, while blocking based on resource limits considers fully-ACKed samples. In any case, the total max blocking time of a single call to the write operation will not exceed **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1943).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The data to write.

This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `instance_data` is NULL.

Parameters

handle	<<***in***>> *(p. 1015)* Either the handle returned by a previous call to **FooDataWriter_register_instance** (p. 494), or else the special value **DDS_HANDLE_NIL** (p. 227). If **Foo** (p. 2116) *has* a key and `handle` is not **DDS_HANDLE_NIL** (p. 227), `handle` must represent a registered instance of type **Foo** (p. 2116). Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224), or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

MT Safety:

It is UNSAFE to modify `instance_data` before the operation has finished. The operation is otherwise SAFE.

DDS_DataReader (p. 618)

FooDataWriter_write_w_timestamp (p. 503)

DESTINATION_ORDER (p. 1275)

5.17.4.10 FooDataWriter_write_w_timestamp()

```
DDS_ReturnCode_t FooDataWriter_write_w_timestamp (
             FooDataWriter * self,
            const  Foo * instance_data,
            const  DDS_InstanceHandle_t * handle,
            const struct  DDS_Time_t * source_timestamp )
```

Performs the same function as **FooDataWriter_write** (p. 499) except that it also provides the value for the `source_timestamp`.

Explicitly provides the timestamp that will be available to the **DDS_DataReader** (p. 618) objects by means of the `source_timestamp` attribute inside the **DDS_SampleInfo** (p. 1990). (Refer to **DDS_SampleInfo** (p. 1990) and **DESTINATION_ORDER** (p. 1275) QoS policy for details)

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter_write** (p. 499) operation.

This operation may block and time out (**DDS_RETCODE_TIMEOUT** (p. 1224)) under the same circumtances described for **FooDataWriter_write** (p. 499).

If there are no instance resources left, this operation may fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Calling **FooDataWriter_unregister_instance** (p. 496) may help free up some resources.

This operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) under the same circumstances described for the write operation.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The data to write. This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `instance_data` is NULL.
handle	<<***in***>> *(p. 1015)* Either the handle returned by a previous call to **FooDataWriter_register_instance** (p. 494), or else the special value **DDS_HANDLE_NIL** (p. 227). If **Foo** (p. 2116) *has* a key and `handle` is not **DDS_HANDLE_NIL** (p. 227), `handle` must represent a registered instance of type **Foo** (p. 2116). Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL.

Parameters

source_timestamp	<<***in***>> *(*p. *1015)* When using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 1276) the timestamp value must be greater than or equal to the timestamp value used in the last writer operation (*register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application-provided timestamp) However, if it is less than the timestamp of the previous operation but the difference is less than the **DDS_DestinationOrderQosPolicy::source_timestamp_tolerance** (p. 1690), the timestamp of the previous operation will be used as the source timestamp of this sample. Otherwise, if the difference is greater than **DDS_DestinationOrderQosPolicy::source_timestamp_tolerance** (p. 1690), the function will return **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_OUT_↩ OF_RESOURCES** (p. 1224), or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

FooDataWriter_write (p. 499)

DDS_DataReader (p. 618)

DESTINATION_ORDER (p. 1275)

5.17.4.11 FooDataWriter_write_w_params()

```
DDS_ReturnCode_t FooDataWriter_write_w_params (
             FooDataWriter * self,
            const  Foo * instance_data,
            struct  DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter_write** (p. 499) and **FooDataWriter_write_w_timestamp** (p. 503) except that it also provides the values contained in `params`.

Allows provision of the sample identity, related sample identity, source timestamp, instance handle, and publication priority contained in `params`.

This operation may block and time out (**DDS_RETCODE_TIMEOUT** (p. 1224)) under the same circumstances described for **FooDataWriter_write** (p. 499).

If there are no instance resources left, this operation may fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Calling **FooDataWriter_unregister_instance_w_params** (p. 499) may help free up some resources.

This operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) under the same circumstances described for the **FooDataWriter_write** (p. 499).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
instance_data	*<<**in**>> (p. 1015)* The data to write. This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `instance_data` is NULL.
params	*<<**inout**>> (p. 1015)* The write parameters. Note that this is an inout parameter if you activate **DDS_WriteParams_t::replace_auto** (p. 2108); otherwise it won't be modified. This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `params` is NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_OUT_↩ OF_RESOURCES** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataWriter_write (p. 499)

DDS_DataReader (p. 618)

5.17.4.12 FooDataWriter_dispose()

```
DDS_ReturnCode_t FooDataWriter_dispose (
             FooDataWriter * self,
            const  Foo * instance_data,
            const  DDS_InstanceHandle_t * instance_handle )
```

Requests the middleware to delete the instance.

This operation is useful only for keyed data types. Using it for non-keyed types has no effect and reports no error.

When an instance is disposed, the **DDS_DataWriter** (p. 488) communicates this state change to **DDS_DataReader** (p. 618) objects by propagating a dispose sample. When the instance changes to a disposed state, you can see the state change on the DataReader by looking at **DDS_SampleInfo::instance_state** (p. 1994). Disposed instances have the value **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716).

The resources allocated to dispose instances on the DataWriter are not removed by default. The removal of the resources allocated to a dispose instance on the DataWriter queue can be controlled by using the QoS **DDS_Writer↩ DataLifecycleQosPolicy::autopurge_disposed_instances_delay** (p. 2114).

Likewise, on the DataReader, the removal of the resources associated with an instance in the dispose state can be controlled by using the QoS **DDS_ReaderDataLifecycleQosPolicy::autopurge_disposed_instances_delay** (p. 1936).

This operation does not modify the value of the instance. The `instance_data` parameter is passed just for the purposes of identifying the instance.

When this operation is used, RTI Connext will automatically supply the value of the `source_timestamp` that is made available to **DDS_DataReader** (p. 618) objects by means of the source_timestamp attribute inside the **DDS_Sample↩ Info** (p. 1990).

The constraints on the values of the handle parameter and the corresponding error behavior are the same specified for the **FooDataWriter_unregister_instance** (p. 496) operation.

The special value **DDS_HANDLE_NIL** (p. 227) can be used for the parameter `instance_handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `instance_handle` is any value other than **DDS_HANDLE_NIL** (p. 227), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

RTI Connext will not detect the error when the `instance_handle` is any value other than **DDS_HANDLE_NIL** (p. 227), and the `instance_handle` corresponds to an instance that has been registered but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). In this case, the instance that will be disposed is the instance corresponding to the `instance_handle`, not to the `instance_data`.

This operation may block and time out (**DDS_RETCODE_TIMEOUT** (p. 1224)) under the same circumstances described for **FooDataWriter_write** (p. 499).

If there are no instance resources left, this operation may fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Calling **FooDataWriter_unregister_instance** (p. 496) may help free up some resources.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
instance_data	<<***in***>> *(*p. *1015)* The data to dispose. If **Foo** (p. 2116) *has* a key and `instance_handle` is **DDS_HANDLE_NIL** (p. 227), only the fields that represent the key are examined by the function. Otherwise, `instance_data` is not used. If **Foo** (p. 2116) *has* a key, `instance_data` can be NULL only if `instance_handle` is not **DDS_HANDLE_NIL** (p. 227). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
instance_handle	<<***in***>> *(*p. *1015)* Either the handle returned by a previous call to **FooDataWriter_register_instance** (p. 494), or else the special value **DDS_HANDLE_NIL** (p. 227). If **Foo** (p. 2116) *has* a key and `instance_handle` is **DDS_HANDLE_NIL** (p. 227), `instance_handle` is not used and it is deduced from `instance_data`. If **Foo** (p. 2116) has no key, `instance_handle` is not used. If `instance_handle` is used, it must represent an instance of type **Foo** (p. 2116) that has been written or registered with this writer. Otherwise, this function fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `instance_handle` is NULL. If **Foo** (p. 2116) *has* a key, `instance_handle` cannot be **DDS_HANDLE_NIL** (p. 227) if `instance_data` is NULL. Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_OUT_↩ OF_RESOURCES** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataWriter_dispose_w_timestamp (p. 506)

Relationship between registration, liveliness and ownership (p. 1869)

5.17.4.13 FooDataWriter_dispose_w_timestamp()

```
DDS_ReturnCode_t FooDataWriter_dispose_w_timestamp (
             FooDataWriter * self,
            const  Foo * instance_data,
            const  DDS_InstanceHandle_t * instance_handle,
            const struct  DDS_Time_t * source_timestamp )
```

Performs the same functions as dispose except that the application provides the value for the `source_timestamp` that is made available to **DDS_DataReader** (p. 618) objects by means of the `source_timestamp` attribute inside the **DDS_SampleInfo** (p. 1990).

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter_dispose** (p. 505) operation.

This operation may block and time out (**DDS_RETCODE_TIMEOUT** (p. 1224)) under the same circumtances described for **FooDataWriter_write** (p. 499).

If there are no instance resources left, this operation may fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Calling **FooDataWriter_unregister_instance** (p. 496) may help freeing up some resources.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
instance_data	<<***in***>> *(p. 1015)* The data to dispose. If **Foo** (p. 2116) *has* a key and `instance_handle` is **DDS_HANDLE_NIL** (p. 227), only the fields that represent the key are examined by the function. Otherwise, `instance_data` is not used. If **Foo** (p. 2116) *has* a key, `instance_data` can be NULL only if `instance_handle` is not **DDS_HANDLE_NIL** (p. 227). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).
instance_handle	<<***in***>> *(p. 1015)* Either the handle returned by a previous call to **FooDataWriter_register_instance** (p. 494), or else the special value **DDS_HANDLE_NIL** (p. 227). If **Foo** (p. 2116) *has* a key and `handle` is not **DDS_HANDLE_NIL** (p. 227), `handle` must represent a registered instance of type **Foo** (p. 2116). Otherwise, this function may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL.
source_timestamp	<<***in***>> *(p. 1015)* The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a *register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. This timestamp will be available to the **DDS_DataReader** (p. 618) objects by means of the `source_timestamp` attribute inside the **DDS_SampleInfo** (p. 1990). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_OUT_↩ OF_RESOURCES** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

FooDataWriter_dispose (p. 505)

5.17.4.14 FooDataWriter_dispose_w_params()

```
DDS_ReturnCode_t FooDataWriter_dispose_w_params (
             FooDataWriter * self,
            const  Foo * instance_data,
            struct  DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter_dispose** (p. 505) and **FooDataWriter_dispose_w_timestamp** (p. 506) except that it also provides the values contained in `params`.

See also

FooDataWriter_write_w_params (p. 504)

5.17.4.15 FooDataWriter_get_key_value()

```
DDS_ReturnCode_t FooDataWriter_get_key_value (
             FooDataWriter * self,
             Foo * key_holder,
            const  DDS_InstanceHandle_t * handle )
```

Retrieve the instance `key` that corresponds to an instance `handle`.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this function has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the `handle` does not correspond to an existing data-object known to the **DDS_DataWriter** (p. 488).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
key_holder	<<***inout***>> *(*p. *1015)* a user data type specific key holder, whose `key` fields are filled by this operation. If **Foo** (p. 2116) has no key, this function has no effect.

This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `key_holder` is NULL.

Parameters

handle	<<***in***>> *(*p. *1015)* the `instance` whose key is to be retrieved. If **Foo** (p. 2116) *has* a key, `handle` must represent a registered instance of type **Foo** (p. 2116). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). If **Foo** (p. 2116) *has* a key and `handle` is **DDS_HANDLE_NIL** (p. 227), this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_get_key_value (p. 650)

5.17.4.16 FooDataWriter_lookup_instance()

```
DDS_InstanceHandle_t FooDataWriter_lookup_instance (
            FooDataWriter * self,
           const  Foo * key_holder )
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. This operation does not register the instance in question. If the instance has not been previously registered, or if for any other reason RTI Connext is unable to provide an instance handle, RTI Connext will return the special value HANDLE_NIL.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
key_holder	<<***in***>> *(*p. *1015)* a user data type specific key holder.

Returns

the instance handle associated with this instance. If **Foo** (p. 2116) has no key, this function has no effect and returns **DDS_HANDLE_NIL** (p. 227)

5.17.4.17 FooDataWriter_create_data()

```
void * FooDataWriter_create_data (
            FooDataWriter * self )
```

Creates a data sample and initializes it.

The behavior of this API is identical to **FooTypeSupport_create_data** (p. 214).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

Newly created data type, or NULL on failure.

See also

FooDataWriter_delete_data (p. 510)

5.17.4.18 FooDataWriter_create_data_w_params()

```
void * FooDataWriter_create_data_w_params (
            FooDataWriter * self,
           const struct  DDS_TypeAllocationParams_t * alloc_params )
```

Creates a data sample and initializes it.

The behavior of this API is identical to **FooTypeSupport_create_data_w_params** (p. 215).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
alloc_params	<<***in***>> *(*p. *1015)* Whether or not to recursively allocate pointers and/or optional members

Returns

Newly created data type, or NULL on failure.

See also

FooDataWriter_delete_data_w_params (p. 511)

5.17.4.19 FooDataWriter_delete_data()

```
DDS_Boolean FooDataWriter_delete_data (
            FooDataWriter * self,
            Foo * sample )
```

Destroys a user data type instance.

The behavior of this API is identical to **FooTypeSupport_delete_data** (p. 216).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
sample	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) on success.

See also

FooDataWriter_create_data (p. 509)

5.17.4.20 FooDataWriter_delete_data_w_params()

```
void * FooDataWriter_delete_data_w_params (
            FooDataWriter * self,
            Foo * sample,
           const struct  DDS_TypeDeallocationParams_t * dealloc_params )
```

Destroys a user data type instance.

The behavior of this API is identical to **FooTypeSupport_delete_data_w_params** (p. 217).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
sample	<<***in***>> *(*p. *1015)* Cannot be NULL.
dealloc_params	<<***in***>> *(*p. *1015)* Whether or not to destroy pointers and/or optional members.

Returns

DDS_BOOLEAN_TRUE (p. 1203) on success.

See also

FooDataWriter_create_data_w_params (p. 510)

5.17.4.21 FooDataWriter_get_loan()

```
DDS_ReturnCode_t FooDataWriter_get_loan (
            FooDataWriter * self,
            Foo ** sample )
```

Gets a sample managed by the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 209) over shared memory" or \ref RTIFlatDataModule "FlatData language binding".

The loaned sample is obtained from a DataWriter-managed sample pool and is uninitialized by default. An initialized sample can be obtained by setting **DDS_DataWriterResourceLimitsQosPolicy::initialize_writer_loaned_sample** (p. 1682) to **DDS_BOOLEAN_TRUE** (p. 1203). The **DDS_DataWriterResourceLimitsQosPolicy::writer_loaned_sample_allocation** (p. 1682) settings can be used to configure the DataWriter-managed sample pool.

FooDataWriter_get_loan (p. 511) fails with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) if **DDS_AllocationSettings_t::max_count** (p. 1538) samples have been loaned, and none of those samples has been written with **FooDataWriter_write** (p. 499) or discarded via **FooDataWriter_discard_loan** (p. 513).

Samples returned from **FooDataWriter_get_loan** (p. 511) have an associated state. Due to the optimized nature of the write operation while using Zero Copy transfer over shared memory or FlatData language binding, this sample state is used to control when a sample is available for reuse after the write operation. The possible sample states are free, allocated, removed or serialized. A sample that has never been allocated is "free". **FooDataWriter_get_loan** (p. 511) takes a "free" or "removed" sample and makes it "allocated". When a sample is written, its state transitions from "allocated" to "serialized", and the DataWriter takes responsibility for returning the sample back to its sample pool. The sample remains in the "serialized" state until it is removed from the DataWriter queue. For a reliable DataWriter, the sample is removed from the DataWriter's queue when the sample is acknowledged by all DataReaders. For a best-effort DataWriter, the sample is removed from the queue immediately after the write operation. After the sample is removed from the DataWriter queue, the sample is put back into the sample pool, and its state transitions from "serialized" to "removed". At this time, a new call to **FooDataWriter_get_loan** (p. 511) may return the same sample.

A loaned sample should not be reused to write a new value after the first write operation. Instead, a new sample from **FooDataWriter_get_loan** (p. 511) should be used to write the new value. A loaned sample that has not been written can be returned to the DataWriter's sample pool by using **FooDataWriter_discard_loan** (p. 513). If the write operation fails, then the sample can be used again with a write or discard_loan operation. Disposing or unregistering an instance with loaned samples follows the same pattern. A loaned sample used successfully with a dispose or unregister operation cannot be used again. But if the dispose or unregister operation fails, the sample is available for reuse.

A DataWriter cannot write managed samples (created with get_loan) and unmanaged samples (created in any other way) at the same time. The first call to get_loan automatically prepares this DataWriter to work with managed samples. Calls to get_loan will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if an unmanaged sample was written with this DataWriter earlier. Similarly, **FooDataWriter_write** (p. 499) will fail to write an unmanaged sample if get_loan was called.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
sample	*<<**inout**>> (p. 1015)* address of a user data type pointer. The loaned sample is returned via this sample.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) or **DDS_↩ RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

FooDataWriter_discard_loan (p. 513)

5.17.4.22 FooDataWriter_discard_loan()

```
DDS_ReturnCode_t FooDataWriter_discard_loan (
            FooDataWriter * self,
            Foo * sample )
```

Returns a loaned sample back to the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 209) over shared memory" or the **FlatData language binding** (p. 208).

A loaned sample that hasn't been written can be returned to the DataWriter with this operation.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
sample	<<***in***>> *(p. 1015)* loaned sample to be discarded.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataWriter_get_loan (p. 511)

5.17.4.23 DDS_OfferedDeadlineMissedStatus_initialize()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_initialize (
            struct  DDS_OfferedDeadlineMissedStatus * self )
```

Initializer for new status instances.

New **DDS_OfferedDeadlineMissedStatus** (p. 1864) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_OfferedDeadlineMissedStatus_finalize (p. 515) should be called to free the contained fields that use dynamic memory:

```
DDS_OfferedDeadlineMissedStatus *myStatus = malloc(sizeof(struct DDS_OfferedDeadlineMissedStatus));

DDS_OfferedDeadlineMissedStatus_initialize(myStatus);

DDS_DataWriter_get_offered_deadline_missed_status(myDataWriter, myStatus);

DDS_OfferedDeadlineMissedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_offered_deadline_missed_status (p. 549)

DDS_OfferedDeadlineMissedStatus_finalize (p. 515)

5.17.4.24 DDS_OfferedDeadlineMissedStatus_copy()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_copy (
            struct  DDS_OfferedDeadlineMissedStatus * self,
            const struct  DDS_OfferedDeadlineMissedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
source	*<<**in**>> (p. 1015).* Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_OfferedDeadlineMissedStatus_INITIALIZER (p. 482)

DDS_OfferedDeadlineMissedStatus_initialize (p. 513)

DDS_OfferedDeadlineMissedStatus_finalize (p. 515)

5.17.4.25 DDS_OfferedDeadlineMissedStatus_finalize()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_finalize (
            struct  DDS_OfferedDeadlineMissedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_OfferedDeadlineMissedStatus_INITIALIZER (p. 482)

DDS_OfferedDeadlineMissedStatus_initialize (p. 513)

5.17.4.26 DDS_OfferedDeadlineMissedStatus_equals()

```
DDS_Boolean DDS_OfferedDeadlineMissedStatus_equals (
            const struct  DDS_OfferedDeadlineMissedStatus * left,
            const struct  DDS_OfferedDeadlineMissedStatus * right )
```

Compares two **DDS_OfferedDeadlineMissedStatus** (p. 1864) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This OfferedDeadlineMissedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other OfferedDeadlineMissedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two OfferedDeadlineMissedStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.27 DDS_LivelinessLostStatus_initialize()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_initialize (
            struct  DDS_LivelinessLostStatus * self )
```

Initializer for new status instances.

New **DDS_LivelinessLostStatus** (p. 1825) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_LivelinessLostStatus_finalize (p. 517) should be called to free the contained fields that use dynamic memory:

```
DDS_LivelinessLostStatus *myStatus = malloc(sizeof(struct DDS_LivelinessLostStatus));

DDS_LivelinessLostStatus_initialize(myStatus);

DDS_DataWriter_get_liveliness_lost_status(myDataWriter, myStatus);

DDS_LivelinessLostStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_liveliness_lost_status (p. 548)

DDS_LivelinessLostStatus_finalize (p. 517)

5.17.4.28 DDS_LivelinessLostStatus_copy()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_copy (
            struct  DDS_LivelinessLostStatus * self,
            const struct  DDS_LivelinessLostStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	*<<**in**>> (*p. *1015)* Cannot be NULL.
source	*<<**in**>> (*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_LivelinessLostStatus_INITIALIZER (p. 483)

DDS_LivelinessLostStatus_initialize (p. 516)

DDS_LivelinessLostStatus_finalize (p. 517)

5.17.4.29 DDS_LivelinessLostStatus_finalize()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_finalize (
            struct  DDS_LivelinessLostStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	*<<**in**>> (*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_LivelinessLostStatus_INITIALIZER (p. 483)

DDS_LivelinessLostStatus_initialize (p. 516)

5.17.4.30 DDS_LivelinessLostStatus_equals()

```
DDS_Boolean DDS_LivelinessLostStatus_equals (
            const struct  DDS_LivelinessLostStatus * left,
            const struct  DDS_LivelinessLostStatus * right )
```

Compares two **DDS_LivelinessLostStatus** (p. 1825) for equality.

Parameters

left	<<***in***>> *(p. 1015)* This LivelinessLostStatus. Can be NULL.
right	<<***in***>> *(p. 1015)* The other LivelinessLostStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two LivelinessLostStatus have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.31 DDS_OfferedIncompatibleQosStatus_initialize()

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_initialize (
            struct  DDS_OfferedIncompatibleQosStatus * self )
```

Initializer for new status instances.

New **DDS_OfferedIncompatibleQosStatus** (p. 1865) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_OfferedIncompatibleQosStatus_finalize (p. 519) should be called to free the contained fields that use dynamic memory:

```
DDS_OfferedIncompatibleQosStatus *myStatus = malloc(sizeof(struct DDS_OfferedIncompatibleQosStatus));

DDS_OfferedIncompatibleQosStatus_initialize(myStatus);

DDS_DataWriter_get_offered_incompatible_qos_status(myDataWriter, myStatus);

DDS_OfferedIncompatibleQosStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_offered_incompatible_qos_status (p. 549)

DDS_OfferedIncompatibleQosStatus_finalize (p. 519)

5.17.4.32 DDS_OfferedIncompatibleQosStatus_copy()

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_copy (
            struct  DDS_OfferedIncompatibleQosStatus * self,
            const struct  DDS_OfferedIncompatibleQosStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_OfferedIncompatibleQosStatus_INITIALIZER (p. 483)

DDS_OfferedIncompatibleQosStatus_initialize (p. 518)

DDS_OfferedIncompatibleQosStatus_finalize (p. 519)

5.17.4.33 DDS_OfferedIncompatibleQosStatus_finalize()

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_finalize (
            struct  DDS_OfferedIncompatibleQosStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_OfferedIncompatibleQosStatus_INITIALIZER (p. 483)

DDS_OfferedIncompatibleQosStatus_initialize (p. 518)

5.17.4.34 DDS_OfferedIncompatibleQosStatus_equals()

```
DDS_Boolean DDS_OfferedIncompatibleQosStatus_equals (
            const struct  DDS_OfferedIncompatibleQosStatus * left,
            const struct  DDS_OfferedIncompatibleQosStatus * right )
```

Compares two **DDS_OfferedIncompatibleQosStatus** (p. 1865) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This OfferedIncompatibleQosStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other OfferedIncompatibleQosStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two OfferedIncompatibleQosStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.35 DDS_PublicationMatchedStatus_initialize()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_initialize (
            struct  DDS_PublicationMatchedStatus * self )
```

Initializer for new status instances.

New **DDS_PublicationMatchedStatus** (p. 1919) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_PublicationMatchedStatus_finalize (p. 522) should be called to free the contained fields that use dynamic memory:

```
DDS_PublicationMatchedStatus *myStatus = malloc(sizeof(struct DDS_PublicationMatchedStatus));

DDS_PublicationMatchedStatus_initialize(myStatus);

DDS_DataWriter_get_publication_matched_status(myDataWriter, myStatus);

DDS_PublicationMatchedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_publication_matched_status (p. 549)

DDS_PublicationMatchedStatus_finalize (p. 522)

5.17.4.36 DDS_PublicationMatchedStatus_copy()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_copy (
            struct  DDS_PublicationMatchedStatus * self,
            const struct  DDS_PublicationMatchedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
source	*<<**in**>> (p. 1015).* Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PublicationMatchedStatus_INITIALIZER (p. 484)

DDS_PublicationMatchedStatus_initialize (p. 521)

DDS_PublicationMatchedStatus_finalize (p. 522)

5.17.4.37 DDS_PublicationMatchedStatus_finalize()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_finalize (
            struct  DDS_PublicationMatchedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_PublicationMatchedStatus_INITIALIZER (p. 484)

DDS_PublicationMatchedStatus_initialize (p. 521)

5.17.4.38 DDS_PublicationMatchedStatus_equals()

```
DDS_Boolean DDS_PublicationMatchedStatus_equals (
            const struct  DDS_PublicationMatchedStatus * left,
            const struct  DDS_PublicationMatchedStatus * right )
```

Compares two **DDS_PublicationMatchedStatus** (p. 1919) for equality.

Parameters

left	<<***in***>> *(p. 1015)* This PublicationMatchedStatus. Can be NULL.
right	<<***in***>> *(p. 1015)* The other PublicationMatchedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two PublicationMatchedStatus have equal values, or **DDS_BOOLEAN↩_FALSE** (p. 1203) otherwise.

5.17.4.39 DDS_ServiceRequestAcceptedStatus_initialize()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_initialize (
            struct  DDS_ServiceRequestAcceptedStatus * self )
```

Initializer for new status instances.

New **DDS_ServiceRequestAcceptedStatus** (p. 2007) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_ServiceRequestAcceptedStatus_finalize (p. 524) should be called to free the contained fields that use dynamic memory:

```
DDS_ServiceRequestAcceptedStatus *myStatus = malloc(sizeof(struct DDS_ServiceRequestAcceptedStatus));

DDS_ServiceRequestAcceptedStatus_initialize(myStatus);

DDS_DataWriter_get_service_request_accepted_status(myDataWriter, myStatus);

DDS_ServiceRequestAcceptedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_service_request_accepted_status (p. 553)

DDS_ServiceRequestAcceptedStatus_finalize (p. 524)

5.17.4.40 DDS_ServiceRequestAcceptedStatus_copy()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_copy (
            struct  DDS_ServiceRequestAcceptedStatus * self,
            const struct  DDS_ServiceRequestAcceptedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ServiceRequestAcceptedStatus_INITIALIZER (p. 484)

DDS_ServiceRequestAcceptedStatus_finalize (p. 524)

5.17.4.41 DDS_ServiceRequestAcceptedStatus_finalize()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_finalize (
            struct  DDS_ServiceRequestAcceptedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ServiceRequestAcceptedStatus_INITIALIZER (p. 484)

DDS_ServiceRequestAcceptedStatus_initialize (p. 523)

5.17.4.42 DDS_ServiceRequestAcceptedStatus_equals()

```
DDS_Boolean DDS_ServiceRequestAcceptedStatus_equals (
            const struct  DDS_ServiceRequestAcceptedStatus * left,
            const struct  DDS_ServiceRequestAcceptedStatus * right )
```

Compares two **DDS_ServiceRequestAcceptedStatus** (p. 2007) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This ServiceRequestAcceptedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other ServiceRequestAcceptedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two ServiceRequestAcceptedStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.43 DDS_ReliableWriterCacheEventCount_equals()

```
DDS_Boolean DDS_ReliableWriterCacheEventCount_equals (
            const struct  DDS_ReliableWriterCacheEventCount * left,
            const struct  DDS_ReliableWriterCacheEventCount * right )
```

Compares two **DDS_ReliableWriterCacheEventCount** (p. 1950) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This ReliableWriterCacheEventCount. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other ReliableWriterCacheEventCount to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two ReliableWriterCacheEventCount have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.44 DDS_ReliableWriterCacheChangedStatus_initialize()

```
DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_initialize (
            struct  DDS_ReliableWriterCacheChangedStatus * self )
```

Initializer for new status instances.

New **DDS_ReliableWriterCacheChangedStatus** (p. 1947) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_ReliableWriterCacheChangedStatus_finalize (p. 527) should be called to free the contained fields that use dynamic memory:

```
DDS_ReliableWriterCacheChangedStatus *myStatus = malloc(sizeof(struct DDS_ReliableWriterCacheChangedStatus));

DDS_ReliableWriterCacheChangedStatus_initialize(myStatus);

DDS_DataWriter_get_reliable_writer_cache_changed_status(myDataWriter, myStatus);

DDS_ReliableWriterCacheChangedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_reliable_writer_cache_changed_status (p. 550)

DDS_ReliableWriterCacheChangedStatus_finalize (p. 527)

5.17.4.45 DDS_ReliableWriterCacheChangedStatus_copy()

```
DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_copy (
            struct  DDS_ReliableWriterCacheChangedStatus * self,
            const struct  DDS_ReliableWriterCacheChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015).* Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ReliableWriterCacheChangedStatus_INITIALIZER (p. 485)

5.17.4.47 DDS_ReliableWriterCacheChangedStatus_equals()

```
DDS_Boolean DDS_ReliableWriterCacheChangedStatus_equals (
            const struct  DDS_ReliableWriterCacheChangedStatus * left,
            const struct  DDS_ReliableWriterCacheChangedStatus * right )
```

Compares two **DDS_ReliableWriterCacheChangedStatus** (p. 1947) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This ReliableWriterCacheChangedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other ReliableWriterCacheChangedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two ReliableWriterCacheChangedStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.48 DDS_ReliableReaderActivityChangedStatus_initialize()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_initialize (
            struct  DDS_ReliableReaderActivityChangedStatus * self )
```

Initializer for new status instances.

New **DDS_ReliableReaderActivityChangedStatus** (p. 1945) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_ReliableReaderActivityChangedStatus_finalize (p. 529) should be called to free the contained fields that use dynamic memory:

```
DDS_ReliableReaderActivityChangedStatus *myStatus = malloc(sizeof(struct
       DDS_ReliableReaderActivityChangedStatus));

DDS_ReliableReaderActivityChangedStatus_initialize(myStatus);

DDS_DataWriter_get_reliable_reader_activity_changed_status(myDataWriter, myStatus);

DDS_ReliableReaderActivityChangedStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_reliable_reader_activity_changed_status (p. 550)

DDS_ReliableReaderActivityChangedStatus_finalize (p. 529)

5.17.4.49 DDS_ReliableReaderActivityChangedStatus_copy()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_copy (
            struct  DDS_ReliableReaderActivityChangedStatus * self,
            const struct  DDS_ReliableReaderActivityChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ReliableReaderActivityChangedStatus_INITIALIZER (p. 485)

DDS_ReliableReaderActivityChangedStatus_initialize (p. 528)

DDS_ReliableReaderActivityChangedStatus_finalize (p. 529)

5.17.4.50 DDS_ReliableReaderActivityChangedStatus_finalize()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_finalize (
            struct  DDS_ReliableReaderActivityChangedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_ReliableReaderActivityChangedStatus_INITIALIZER (p. 485)

DDS_ReliableReaderActivityChangedStatus_initialize (p. 528)

5.17.4.51 DDS_ReliableReaderActivityChangedStatus_equals()

```
DDS_Boolean DDS_ReliableReaderActivityChangedStatus_equals (
            const struct  DDS_ReliableReaderActivityChangedStatus * left,
            const struct  DDS_ReliableReaderActivityChangedStatus * right )
```

Compares two **DDS_ReliableReaderActivityChangedStatus** (p. 1945) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This ReliableReaderActivityChangedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other ReliableReaderActivityChangedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two ReliableReaderActivityChangedStatus have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.52 DDS_DataWriterCacheStatus_initialize()

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_initialize (
            struct  DDS_DataWriterCacheStatus * self )
```

Initializer for new status instances.

New **DDS_DataWriterCacheStatus** (p. 1642) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_DataWriterCacheStatus_finalize (p. 532) should be called to free the contained fields that use dynamic memory:

```
DDS_DataWriterCacheStatus *myStatus = malloc(sizeof(struct DDS_DataWriterCacheStatus));

DDS_DataWriterCacheStatus_initialize(myStatus);

DDS_DataWriter_get_datawriter_cache_status(myDataWriter, myStatus);

DDS_DataWriterCacheStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_datawriter_cache_status (p. 551)

DDS_DataWriterCacheStatus_finalize (p. 532)

5.17.4.53 DDS_DataWriterCacheStatus_copy()

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_copy (
            struct  DDS_DataWriterCacheStatus * self,
            const struct  DDS_DataWriterCacheStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterCacheStatus_INITIALIZER (p. 486)

DDS_DataWriterCacheStatus_initialize (p. 531)

DDS_DataWriterCacheStatus_finalize (p. 532)

5.17.4.54 DDS_DataWriterCacheStatus_finalize()

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_finalize (
            struct  DDS_DataWriterCacheStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterCacheStatus_INITIALIZER (p. 486)

DDS_DataWriterCacheStatus_initialize (p. 531)

5.17.4.55 DDS_DataWriterCacheStatus_equals()

```
DDS_Boolean DDS_DataWriterCacheStatus_equals (
            const struct  DDS_DataWriterCacheStatus * left,
            const struct  DDS_DataWriterCacheStatus * right )
```

Compares two **DDS_DataWriterCacheStatus** (p. 1642) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This DataWriterCacheStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other DataWriterCacheStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two DataWriterCacheStatus have equal values, or **DDS_BOOLEAN_↩ FALSE** (p. 1203) otherwise.

5.17.4.56 DDS_DataWriterProtocolStatus_initialize()

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_initialize (
            struct  DDS_DataWriterProtocolStatus * self )
```

Initializer for new status instances.

New **DDS_DataWriterProtocolStatus** (p. 1654) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_DataWriterProtocolStatus_finalize (p. 535) should be called to free the contained fields that use dynamic memory:

```
DDS_DataWriterProtocolStatus *myStatus = malloc(sizeof(struct DDS_DataWriterProtocolStatus));

DDS_DataWriterProtocolStatus_initialize(myStatus);

DDS_DataWriter_get_datawriter_protocol_status(myDataWriter, myStatus);

DDS_DataWriterProtocolStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_datawriter_protocol_status (p. 551)

DDS_DataWriterProtocolStatus_finalize (p. 535)

5.17.4.57 DDS_DataWriterProtocolStatus_copy()

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_copy (
            struct  DDS_DataWriterProtocolStatus * self,
            const struct  DDS_DataWriterProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterProtocolStatus_INITIALIZER (p. 486)

DDS_DataWriterProtocolStatus_initialize (p. 534)

DDS_DataWriterProtocolStatus_finalize (p. 535)

5.17.4.58 DDS_DataWriterProtocolStatus_finalize()

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_finalize (
            struct  DDS_DataWriterProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterProtocolStatus_INITIALIZER (p. 486)

DDS_DataWriterProtocolStatus_initialize (p. 534)

5.17.4.59 DDS_DataWriterProtocolStatus_equals()

```
DDS_Boolean DDS_DataWriterProtocolStatus_equals (
            const struct  DDS_DataWriterProtocolStatus * left,
            const struct  DDS_DataWriterProtocolStatus * right )
```

Compares two **DDS_DataWriterProtocolStatus** (p. 1654) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This DataWriterProtocolStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other DataWriterProtocolStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two DataWriterProtocolStatus have equal values, or **DDS_BOOLEAN_↩ FALSE** (p. 1203) otherwise.

5.17.4.60 DDS_DataWriterQos_equals()

```
DDS_Boolean DDS_DataWriterQos_equals (
            const struct  DDS_DataWriterQos * self,
            const struct  DDS_DataWriterQos * other )
```

Compares two **DDS_DataWriterQos** (p. 1666) for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This DataWriterQos.
other	<<***in***>> *(*p. *1015)* The other DataWriterQos to be compared with this DataWriterQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.17.4.61 DDS_DataWriterQos_print()

```
DDS_ReturnCode_t DDS_DataWriterQos_print (
            const struct  DDS_DataWriterQos * self )
```

Prints this **DDS_DataWriterQos** (p. 1666) to stdout.

Only the differences between this **DDS_DataWriterQos** (p. 1666) and the documented default are printed. If you wish to print everything regardless, see **DDS_DataWriterQos_to_string_w_params** (p. 537). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.17.4.62 DDS_DataWriterQos_to_string()

```
DDS_ReturnCode_t DDS_DataWriterQos_to_string (
            const struct  DDS_DataWriterQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 1666).

Only the differences between this **DDS_DataWriterQos** (p. 1666) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DataWriterQos_to_string_w_params** (p. 537). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataWriterQos** (p. 1666) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 1666). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_DataWriterQos_to_string_w_params (p. 537)

5.17.4.63 DDS_DataWriterQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_DataWriterQos_to_string_w_params (
            const struct  DDS_DataWriterQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_DataWriterQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 1666).

Only the differences between this **DDS_DataWriterQos** (p. 1666) and the **DDS_DataWriterQos** (p. 1666) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_DATAWRITER_QOS_PRINT_ALL** (p. 472) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataWriterQos** (p. 1666) is written to the buffer.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
string	<<***out***>> *(*p. *1015)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 1666). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(*p. *1015)* The **DDS_DataWriterQos** (p. 1666) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	<<***in***>> *(*p. *1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.17.4.64 DDS_DataWriterQos_initialize()

```
DDS_ReturnCode_t DDS_DataWriterQos_initialize (
            struct  DDS_DataWriterQos * self )
```

Initializer for new QoS instances.

New **DDS_DataWriterQos** (p. 1666) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_DataWriter_get_qos** (p. 555) or **DDS_Publisher_get_default_datawriter_qos** (p. 452); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS_DataWriterQos_finalize** (p. 539) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DataWriterQos *myQos = malloc(sizeof(struct DDS_DataWriterQos));

DDS_DataWriterQos_initialize(myQos);

DDS_Publisher_get_default_datawriter_qos(myFactory, myQos);

DDS_DataWriter_set_qos(myDataWriter, myQos);

DDS_DataWriterQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Publisher_get_default_datawriter_qos (p. 452)

DDS_DataWriterQos_finalize (p. 539)

5.17.4.65 DDS_DataWriterQos_finalize()

```
DDS_ReturnCode_t DDS_DataWriterQos_finalize (
            struct  DDS_DataWriterQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_DataWriterQos** (p. 1666).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterQos_INITIALIZER (p. 487)

DDS_DataWriterQos_initialize (p. 538)

5.17.4.66 DDS_DataWriterQos_copy()

```
DDS_ReturnCode_t DDS_DataWriterQos_copy (
            struct  DDS_DataWriterQos * self,
            const struct  DDS_DataWriterQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_DataWriterQos (p. 1666) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)* The **DDS_DataWriterQos** (p. 1666) to copy from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriterQos_INITIALIZER (p. 487)

DDS_DataWriterQos_initialize (p. 538)

DDS_DataWriterQos_finalize (p. 539)

5.17.4.67 DDS_DataWriter_as_entity()

```
DDS_Entity * DDS_DataWriter_as_entity (
             DDS_DataWriter * dataWriter )
```

Access a **DDS_DataWriter** (p. 488)'s supertype instance.

Parameters

dataWriter	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The **DDS_Entity** (p. 1362) that is supertype instance of the datawriter.

5.17.4.68 DDS_DataWriter_assert_liveliness()

```
DDS_ReturnCode_t DDS_DataWriter_assert_liveliness (
            DDS_DataWriter * self )
```

This operation manually asserts the liveliness of this **DDS_DataWriter** (p. 488).

This is used in combination with the **LIVELINESS** (p. 1298) policy to indicate to RTI Connext that the **DDS_DataWriter** (p. 488) remains active.

You only need to use this operation if the **LIVELINESS** (p. 1298) setting is either **DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_QOS** (p. 1299) or **DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS** (p. 1299). Otherwise, it has no effect.

Note: writing data via the **FooDataWriter_write** (p. 499) or **FooDataWriter_write_w_timestamp** (p. 503) operation asserts liveliness on the **DDS_DataWriter** (p. 488) itself, and its **DDS_DomainParticipant** (p. 76). Consequently the use of assert_liveliness() is only needed if the application is not writing data regularly.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

See also

DDS_LivelinessQosPolicy (p. 1826)

5.17.4.69 DDS_DataWriter_get_matched_subscription_locators()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_locators (
             DDS_DataWriter * self,
           struct  DDS_LocatorSeq * locators )
```

<<***extension***>> *(p. 1014)* Retrieve the list of locators for subscriptions currently "associated" with this **DDS_DataWriter** (p. 488).

The locators returned in the `locators` list are the ones that are used by the DDS implementation to communicate with the corresponding matched **DDS_DataReader** (p. 618) entities.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
locators	<<***inout***>> *(p. 1015)*. Handles of all the matched subscription locators.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all the matches and the system can not resize the sequence, this function will fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). Cannot be NULL. .

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) if the sequence is too small and the system can not resize it, or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.17.4.70 DDS_DataWriter_get_matched_subscriptions()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscriptions (
            DDS_DataWriter * self,
           struct  DDS_InstanceHandleSeq * subscription_handles )
```

Retrieve the list of subscriptions currently "associated" with this **DDS_DataWriter** (p. 488).

A subscription is considered to be matching if all of the following criteria are true:

- The subscription is within the same domain as this publication.
- The subscription has a matching **DDS_Topic** (p. 174).
- The subscription has compatible QoS.
- If the applications are using partitions, the subscription shares a common partition with this publication.
- The **DDS_DomainParticipant** (p. 76) has not indicated that the subscription's **DDS_DomainParticipant** (p. 76) should be "ignored" by means of the **DDS_DomainParticipant_ignore_publication** (p. 131) API.
- If the publication is using the **DDS_MultiChannelQosPolicy** (p. 1860) and the subscription is using a **DDS_ContentFilteredTopic** (p. 176), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the writer has completed the key exchange with reader.

The handles returned in the `subscription_handles` list are the ones that RTI Connext uses to locally identify the corresponding matched **DDS_DataReader** (p. 618) entities. These handles match the ones that appear in the **DDS_SampleInfo::instance_handle** (p. 1995) field of the **DDS_SampleInfo** (p. 1990) when reading the **DDS_SUBSCRIPTION_TOPIC_NAME** (p. 1100) builtin topic.

This API may return the subscription handles of subscriptions that are inactive. **DDS_DataWriter_is_matched_subscription_active** (p. 543) can be used to check this.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
subscription_handles	<<***inout***>> *(*p. *1015)*. The handles of all the matched subscriptions.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this function will fail with **DDS_RETCODE_OUT_OF_↩ RESOURCES** (p. 1224).

The maximum number of matches possible is configured with **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 1733). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL. .

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) if the sequence is too small and the system cannot resize it, or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.17.4.71 DDS_DataWriter_is_matched_subscription_active()

```
DDS_ReturnCode_t DDS_DataWriter_is_matched_subscription_active (
             DDS_DataWriter * self,
             DDS_Boolean * is_active,
            const  DDS_InstanceHandle_t * subscription_handle )
```

Check if a subscription currently matched with a DataWriter is active.

This API is used for querying the endpoint liveliness of a matched subscription. A matched subscription will be marked as inactive when it becomes nonprogessing (e.g., not responding to a DataWriter's heartbeats, or letting its internal queue fill up without taking the available data). Note that if the participant associated with the matched subscription loses liveliness, the **DDS_InstanceHandle_t** (p. 213) will become invalid and this function will fail with **DDS_RETCODE_↩ BAD_PARAMETER** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
subscription_handle	<<***in***>> *(*p. *1015)* The **DDS_InstanceHandle_t** (p. 213) of the matched subscription. See **DDS_DataWriter_get_matched_subscriptions** (p. 542) for a description of what is considered a matched subscription.
is_active	<<***out***>> *(*p. *1015)* Indicates whether or not the matched subscription is active.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.72 DDS_DataWriter_get_matched_subscription_data()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_data (
             DDS_DataWriter * self,
            struct  DDS_SubscriptionBuiltinTopicData * subscription_data,
            const  DDS_InstanceHandle_t * subscription_handle )
```

This operation retrieves the information on a subscription that is currently "associated" with the **DDS_DataWriter** (p. 488).

The `subscription_handle` must correspond to a subscription currently associated with the **DDS_DataWriter** (p. 488). Otherwise, the operation will fail and fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). Use **DDS_↩ DataWriter_get_matched_subscriptions** (p. 542) to find the subscriptions that are currently matched with the **DDS↩ _DataWriter** (p. 488).

The above information is also available through **DDS_DataReaderListener::on_data_available()** (p. 1595) (if a reader listener is installed on the **DDS_SubscriptionBuiltinTopicDataDataReader** (p. 1099)).

When the subscription data is updated, for example when the content filter property changes, there is a small window of time in between when the DataWriter is made aware of these changes and when they actually take effect. Taking effect in this example means that the DataWriter will perform writer-side filtering using the new filter property values (filter expression and/or parameters).

When the DataWriter is made aware of the changes they will first be seen in the **DDS_DataReaderListener::on_↩ data_available()** (p. 1595) of the **DDS_SubscriptionBuiltinTopicDataDataReader** (p. 1099). When these changes are applied, they will be seen in the output of this API because this API blocks until the most recent changes known to the DataWriter have taken effect. This API will only block when called outside of a listener callback, in order to not block the internal threads from making progress.

If application behavior depends on being made aware of information about a subscription only after it has taken effect on the DataWriter, the recommended pattern for usage of this API is to wait for subscription data to be received either through polling this API or by installing a listener on the **DDS_SubscriptionBuiltinTopicDataDataReader** (p. 1099). When a new sample is received by the builtin DataReader, this API may be called in a separate thread and will return the expected matched subscription data once it has been applied to the DataWriter.

Because this API blocks, it is possible for this API to time out while waiting for the changes to be applied. A timeout may happen if the DataReader's subscription data is changing rapidly, preventing the DataWriter from returning valid information before newer data has been received, or if an application is performing a task in a listener callback, thereby preventing the middleware's threads from executing events in a timely manner.

Note: This operation does not retrieve the **DDS_SubscriptionBuiltinTopicData::type_code** (p. 2023). This information is available through **DDS_DataReaderListener::on_data_available()** (p. 1595) (if a reader listener is installed on the **DDS_SubscriptionBuiltinTopicDataDataReader** (p. 1099)).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
subscription_data	*<<**inout**>> (p. 1015)*. The information to be filled in on the associated subscription. Cannot be NULL.
subscription_handle	*<<**in**>> (p. 1015)*. Handle to a specific subscription associated with the **DDS_DataReader** (p. 618). Must correspond to a subscription currently associated with the **DDS_DataWriter** (p. 488). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NOT_ENABLED** (p. 1224), or **DDS_RETCODE_TIMEOUT** (p. 1224)

5.17.4.73 DDS_DataWriter_get_matched_subscription_participant_data()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_participant_data (
            DDS_DataWriter * self,
           struct  DDS_ParticipantBuiltinTopicData * participant_data,
           const  DDS_InstanceHandle_t * subscription_handle )
```

This operation retrieves the information on the discovered **DDS_DomainParticipant** (p. 76) associated with the subscription that is currently matching with the **DDS_DataWriter** (p. 488).

The `subscription_handle` must correspond to a subscription currently associated with the **DDS_DataWriter** (p. 488). Otherwise, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). The operation may also fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if the subscription corresponds to the same **DDS_DomainParticipant** (p. 76) that the DataWriter belongs to. Use **DDS_DataWriter_get_matched_subscriptions** (p. 542) to find the subscriptions that are currently matched with the **DDS_DataWriter** (p. 488).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
participant_data	*<<**inout**>> (p. 1015).* The information to be filled in on the associated participant Cannot be NULL.
subscription_handle	*<<**in**>> (p. 1015).* Handle to a specific subscription associated with the **DDS_DataReader** (p. 618). Must correspond to a subscription currently associated with the **DDS_DataWriter** (p. 488).

Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.17.4.74 DDS_DataWriter_get_topic()

```
DDS_Topic * DDS_DataWriter_get_topic (
            DDS_DataWriter * self )
```

This operation returns the **DDS_Topic** (p. 174) associated with the **DDS_DataWriter** (p. 488).

This is the same **DDS_Topic** (p. 174) that was used to create the **DDS_DataWriter** (p. 488).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_Topic (p. 174) that was used to create the **DDS_DataWriter** (p. 488).

5.17.4.75 DDS_DataWriter_get_publisher()

```
DDS_Publisher * DDS_DataWriter_get_publisher (
            DDS_DataWriter * self )
```

This operation returns the **DDS_Publisher** (p. 446) to which the **DDS_DataWriter** (p. 488) belongs.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_Publisher (p. 446) to which the **DDS_DataWriter** (p. 488) belongs.

5.17.4.76 DDS_DataWriter_wait_for_acknowledgments()

```
DDS_ReturnCode_t DDS_DataWriter_wait_for_acknowledgments (
            DDS_DataWriter * self,
           const struct  DDS_Duration_t * max_wait )
```

Blocks the calling thread until all data written by reliable **DDS_DataWriter** (p. 488) entity is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable **DDS_DataWriter** (p. 488) entity is acknowledged by (a) all reliable **DDS_DataReader** (p. 618) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged by all reliable matched data readers and by all required subscriptions; a timeout indicates that max_wait elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to wait_for_acknowledgments on a DataWriter and a different thread writes new samples on the same DataWriter, the new samples must be acknowledged before unblocking the thread waiting on wait_for_acknowledgments.

If the **DDS_DataWriter** (p. 488) does not have **DDS_ReliabilityQosPolicy** (p. 1940) kind set to RELIABLE, this operation will succeed immediately.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
max_wait	<<***in***>> *(*p. *1015)* Specifies maximum time to wait for acknowledgements **DDS_Duration_t** (p. 1770) .

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NOT_ENABLED** (p. 1224), **DDS_RETCODE↩ _TIMEOUT** (p. 1224)

5.17.4.77 DDS_DataWriter_is_sample_app_acknowledged()

```
DDS_ReturnCode_t DDS_DataWriter_is_sample_app_acknowledged (
            DDS_DataWriter * self,
            DDS_Boolean * is_app_ack,
           const struct  DDS_SampleIdentity_t * identity )
```

This function can be used to see if a sample has been application acknowledged.

This function can be used to see if a sample has been application acknowledged by all the matching DataReaders that were alive when the sample was written.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
is_app_ack	<<***out***>> *(*p. *1015)* Cannot be NULL. This value will be set to **DDS_BOOLEAN_TRUE** (p. 1203) when the sample has been acknowledged.
identity	<<***in***>> *(*p. *1015)* Cannot be NULL. Sample identity.

Returns

One of the **Standard Return Codes** (p. 1223)

Note

If the DataWriter does not match with any DataReader that enables application acknowledgments (that is, a DataReader with **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) set to a value other than **DDS↩ _PROTOCOL_ACKNOWLEDGMENT_MODE** (p. 1325)), the value of `is_app_ack` is set to **DDS_BOOLEAN↩ _FALSE** (p. 1203).

5.17.4.78 DDS_DataWriter_wait_for_asynchronous_publishing()

```
DDS_ReturnCode_t DDS_DataWriter_wait_for_asynchronous_publishing (
            DDS_DataWriter * self,
           const struct  DDS_Duration_t * max_wait )
```

<<***extension***>> *(*p. *1014)* Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDS_DataWriter** (p. 488) is sent and acknowledged (if reliable) by all matched **DDS_DataReader** (p. 618) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; a time out indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDS_DataReader** (p. 618) is complete in addition to what **DDS_DataWriter_wait_for_acknowledgments** (p. 546) provides.

If the **DDS_DataWriter** (p. 488) does not have **DDS_PublishModeQosPolicy** (p. 1924) kind set to **DDS_↩ ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 1321) the operation will complete immediately , with **DDS_↩ RETCODE_OK** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
max_wait	<<***in***>> *(*p. *1015)* Specifies maximum time to wait for acknowledgements.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NOT_ENABLED** (p. 1224), **DDS_RETCODE↩ _TIMEOUT** (p. 1224)

5.17.4.79 DDS_DataWriter_get_liveliness_lost_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_liveliness_lost_status (
            DDS_DataWriter * self,
           struct  DDS_LivelinessLostStatus * status )
```

Accesses the **DDS_LIVELINESS_LOST_STATUS** (p. 1233) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
status	<<***inout***>> *(*p. *1015)* **DDS_LivelinessLostStatus** (p. 1825) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.80 DDS_DataWriter_get_offered_deadline_missed_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_offered_deadline_missed_status (
            DDS_DataWriter * self,
           struct  DDS_OfferedDeadlineMissedStatus * status )
```

Accesses the **DDS_OFFERED_DEADLINE_MISSED_STATUS** (p. 1230) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_OfferedDeadlineMissedStatus** (p. 1864) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.81 DDS_DataWriter_get_offered_incompatible_qos_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_offered_incompatible_qos_status (
            DDS_DataWriter * self,
           struct  DDS_OfferedIncompatibleQosStatus * status )
```

Accesses the **DDS_OFFERED_INCOMPATIBLE_QOS_STATUS** (p. 1231) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_OfferedIncompatibleQosStatus** (p. 1865) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.82 DDS_DataWriter_get_publication_matched_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_publication_matched_status (
            DDS_DataWriter * self,
           struct  DDS_PublicationMatchedStatus * status )
```

Accesses the **DDS_PUBLICATION_MATCHED_STATUS** (p. 1234) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_PublicationMatchedStatus** (p. 1919) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.83 DDS_DataWriter_get_reliable_writer_cache_changed_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_reliable_writer_cache_changed_status (
            DDS_DataWriter * self,
           struct  DDS_ReliableWriterCacheChangedStatus * status )
```

<<***extension***>> *(p. 1014)* Get the reliable cache status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_ReliableWriterCacheChangedStatus** (p. 1947) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.84 DDS_DataWriter_get_reliable_reader_activity_changed_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_reliable_reader_activity_changed_status (
            DDS_DataWriter * self,
           struct  DDS_ReliableReaderActivityChangedStatus * status )
```

<<***extension***>> *(p. 1014)* Get the reliable reader activity changed status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_ReliableReaderActivityChangedStatus** (p. 1945) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.85 DDS_DataWriter_get_datawriter_cache_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_datawriter_cache_status (
            DDS_DataWriter * self,
           struct  DDS_DataWriterCacheStatus * status )
```

<<***extension***>> *(p. 1014)* Get the datawriter cache status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_DataWriterCacheStatus** (p. 1642) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.17.4.86 DDS_DataWriter_get_datawriter_protocol_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_datawriter_protocol_status (
            DDS_DataWriter * self,
           struct  DDS_DataWriterProtocolStatus * status )
```

<<***extension***>> *(p. 1014)* Get the datawriter protocol status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_DataWriterProtocolStatus** (p. 1654) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.17.4.87 DDS_DataWriter_get_matched_subscription_datawriter_protocol_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status (
             DDS_DataWriter * self,
            struct  DDS_DataWriterProtocolStatus * status,
            const  DDS_InstanceHandle_t * subscription_handle )
```

*<<**extension**>> (p. 1014)* Get the datawriter protocol status for this writer, per matched subscription identified by the subscription_handle.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_DataWriterProtocolStatus** (p. 1654) to be filled in. Cannot be NULL.
subscription_handle	*<<**in**>> (p. 1015)* Handle to a specific subscription associated with the **DDS_DataReader** (p. 618). Cannot be NULL. Must correspond to a subscription currently associated with the **DDS_DataWriter** (p. 488).

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.17.4.88 DDS_DataWriter_get_matched_subscription_datawriter_protocol_status_by_locator()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status_by_locator (
             DDS_DataWriter * self,
```

```
struct  DDS_DataWriterProtocolStatus * status,
const struct  DDS_Locator_t * locator )
```

<<***extension***>> *(p. 1014)* Get the datawriter protocol status for this writer, per matched subscription identified by the locator.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_DataWriterProtocolStatus** (p. 1654) to be filled in Cannot be NULL.
locator	<<***in***>> *(p. 1015)* Locator to a specific locator associated with the **DDS_DataReader** (p. 618). Cannot be NULL. Must correspond to a locator of one or more subscriptions currently associated with the **DDS_DataWriter** (p. 488).

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.17.4.89 DDS_DataWriter_get_service_request_accepted_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_service_request_accepted_status (
             DDS_DataWriter * self,
            struct  DDS_ServiceRequestAcceptedStatus * status )
```

Accesses the **DDS_SERVICE_REQUEST_ACCEPTED_STATUS** (p. 1235) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_ServiceRequestAcceptedStatus** (p. 2007) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.17.4.90 DDS_DataWriter_set_qos()

```
DDS_ReturnCode_t DDS_DataWriter_set_qos (
            DDS_DataWriter * self,
            const struct  DDS_DataWriterQos * qos )
```

Sets the writer QoS.

This operation modifies the QoS of the **DDS_DataWriter** (p. 488).

The **DDS_DataWriterQos::user_data** (p. 1670), **DDS_DataWriterQos::deadline** (p. 1669), **DDS_DataWriterQos::latency_budget** (p. 1669), **DDS_DataWriterQos::ownership_strength** (p. 1670), **DDS_DataWriterQos::transport_priority** (p. 1670), **DDS_DataWriterQos::lifespan** (p. 1670) and **DDS_DataWriterQos::writer_data_lifecycle** (p. 1671) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* The **DDS_DataWriterQos** (p. 1666) to be set to. Policies must be consistent. Immutable policies cannot be changed after **DDS_DataWriter** (p. 488) is enabled. The special value **DDS_DATAWRITER_QOS_DEFAULT** (p. 473) can be used to indicate that the QoS of the **DDS_DataWriter** (p. 488) should be changed to match the current default **DDS_DataWriterQos** (p. 1666) set in the **DDS_Publisher** (p. 446). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

set_qos (abstract) (p. 1363)

Operations Allowed in Listener Callbacks (p. 1821)

5.17.4.91 DDS_DataWriter_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_DataWriter_set_qos_with_profile (
            DDS_DataWriter * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Change the QoS of this writer using the input XML QoS profile.

This operation modifies the QoS of the **DDS_DataWriter** (p. 488).

The **DDS_DataWriterQos::user_data** (p. 1670), **DDS_DataWriterQos::deadline** (p. 1669), **DDS_DataWriterQos::latency_budget** (p. 1669), **DDS_DataWriterQos::ownership_strength** (p. 1670), **DDS_DataWriterQos::transport_priority** (p. 1670), **DDS_DataWriterQos::lifespan** (p. 1670) and **DDS_DataWriterQos::writer_data_lifecycle** (p. 1671) can be changed. The other policies are immutable.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
library_name	*<<**in**>> (p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Publisher_set_default_library** (p. 455)).
profile_name	*<<**in**>> (p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Publisher_set_default_profile** (p. 454)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224) or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_DataWriterQos (p. 1666) for rules on consistency among QoS

Operations Allowed in Listener Callbacks (p. 1821)

5.17.4.92 DDS_DataWriter_get_qos()

```
DDS_ReturnCode_t DDS_DataWriter_get_qos (
             DDS_DataWriter * self,
            struct  DDS_DataWriterQos * qos )
```

Gets the writer QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**inout**>> (p. 1015)* The **DDS_DataWriterQos** (p. 1666) to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.17.4.93 DDS_DataWriter_set_property()

```
DDS_ReturnCode_t DDS_DataWriter_set_property (
             DDS_DataWriter * self,
            const char * property_name,
            const char * value,
             DDS_Boolean propagate )
```

Set the value for a property that applies to a DataWriter.

Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS_↩ DataWriter_set_qos** (p. 553) instead.

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
property_name	<<***in***>> (p. *1015)*. Name of the property that you want to set.
value	<<***in***>> (p. *1015)*. New value for the property.
propagate	<<***in***>> (p. *1015)*. Indicates if the property will be propagated or not.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

5.17.4.94 DDS_DataWriter_set_listener()

```
DDS_ReturnCode_t DDS_DataWriter_set_listener (
             DDS_DataWriter * self,
            const struct  DDS_DataWriterListener * l,
             DDS_StatusMask mask )
```

Sets the writer listener.

Parameters

self	<<***in***>> (p. *1015)* Cannot be NULL.
l	<<***in***>> (p. *1015)* **DDS_DataWriterListener** (p. 1644) to set to
mask	<<***in***>> (p. *1015)* **DDS_StatusMask** (p. 1228) associated with the **DDS_DataWriterListener** (p. 1644) The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.17.4.95 DDS_DataWriter_get_listener()

```
struct  DDS_DataWriterListener DDS_DataWriter_get_listener (
              DDS_DataWriter * self )
```

Get the writer listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_DataWriterListener (p. 1644) of the **DDS_DataWriter** (p. 488).

See also

DDS_DataWriter_get_listenerX (p. 557)

get_listener (abstract) (p. 1365)

5.17.4.96 DDS_DataWriter_get_listenerX()

```
DDS_ReturnCode_t DDS_DataWriter_get_listenerX (
             DDS_DataWriter * self,
            struct  DDS_DataWriterListener * listener )
```

<<***extension***>> *(p. 1014)* Get the writer listener.

An alternative form of get_listener that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
listener	<<***inout***>> *(p. 1015)* **DDS_DataWriterListener** (p. 1644) structure to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataWriter_get_listener (p. 557)

get_listener (abstract) (p. 1365)

5.17.4.97 DDS_DataWriter_flush()

```
DDS_ReturnCode_t DDS_DataWriter_flush (
            DDS_DataWriter * self )
```

<<***extension***>> *(p. 1014)* Flushes the batch in progress in the context of the calling thread.

After being flushed, the batch is available to be sent on the network.

If the **DDS_DataWriter** (p. 488) does not have **DDS_PublishModeQosPolicy** (p. 1924) kind set to **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 1321), the batch will be sent on the network immediately (in the context of the calling thread).

If the **DDS_DataWriter** (p. 488) does have **DDS_PublishModeQosPolicy** (p. 1924) kind set to **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 1321), the batch will be sent in the context of the asynchronous publishing thread.

This operation may block in the same conditions as **FooDataWriter_write** (p. 499).

If this operation does block, the RELIABILITY max_blocking_time configures the maximum time the write operation may block (waiting for space to become available). If max_blocking_time elapses before the DDS_DataWriter is able to store the modification without exceeding the limits, the operation will fail with DDS_RETCODE_TIMEOUT.

MT Safety:

flush() is only thread-safe with batching if **DDS_BatchQosPolicy::thread_safe_write** (p. 1555) is TRUE.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.17.4.98 DDS_DataWriter_take_discovery_snapshot()

```
DDS_ReturnCode_t DDS_DataWriter_take_discovery_snapshot (
              DDS_DataWriter * self,
             const char * file_name )
```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

A possible output may be the following:

```
Remote readers that match the local writer domain=0 name="writerTestName"

guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"

topic="FooTopic" type="FooType"

------------------------------------------------------------------------

Compatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

Incompatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"

------------------------------------------------------------------------
```

Precondition

self is not NULL.

Parameters

self	<<***in***>> *(*p. *1015)* The local writer.
file_name	<<***in***>> *(*p. *1015)* Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through **NDDS_Config_Logger** (p. 2122). Otherwise, the snapshot will be printed in the file specified by file_name.

Returns

One of the **Standard Return Codes** (p. 1223).

5.18 Flow Controllers

<<***extension***>> *(*p. *1014)* **DDS_FlowController** (p. 562) and associated elements

Data Structures

- struct **DDS_FlowControllerTokenBucketProperty_t**

  DDS_FlowController *(p. 562) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.*
- struct **DDS_FlowControllerProperty_t**

  Determines the flow control characteristics of the ***DDS_FlowController*** *(p. 562).*

Macros

- #define **DDS_FlowControllerTokenBucketProperty_t_INITIALIZER**

  Initializer for new property instances.

Typedefs

- typedef struct DDS_FlowControllerImpl **DDS_FlowController**

  *<<**interface**>> (p. 1015) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous* ***DDS_DataWriter*** *(p. 488) instances are allowed to write data.*

Enumerations

- enum **DDS_FlowControllerSchedulingPolicy** {
  DDS_RR_FLOW_CONTROLLER_SCHED_POLICY ,
  DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY ,
  DDS_HPF_FLOW_CONTROLLER_SCHED_POLICY }

  Kinds of flow controller scheduling policy.

Functions

- const char * **DDS_FlowController_get_name** (**DDS_FlowController** *self)

  Returns the name of the ***DDS_FlowController*** *(p. 562).*
- **DDS_DomainParticipant** * **DDS_FlowController_get_participant** (**DDS_FlowController** *self)

  Returns the ***DDS_DomainParticipant*** *(p. 76) to which the* ***DDS_FlowController*** *(p. 562) belongs.*
- **DDS_ReturnCode_t** **DDS_FlowController_set_property** (**DDS_FlowController** *self, const struct **DDS_↩FlowControllerProperty_t** *prop)

  Sets the ***DDS_FlowController*** *(p. 562) property.*
- **DDS_ReturnCode_t** **DDS_FlowController_get_property** (**DDS_FlowController** *self, struct **DDS_Flow↩ControllerProperty_t** *prop)

  Gets the ***DDS_FlowController*** *(p. 562) property.*
- **DDS_ReturnCode_t** **DDS_FlowController_trigger_flow** (**DDS_FlowController** *self)

  Provides an external trigger to the ***DDS_FlowController*** *(p. 562).*

Variables

- char * **DDS_DEFAULT_FLOW_CONTROLLER_NAME**

  [default] *Special value of* ***DDS_PublishModeQosPolicy::flow_controller_name*** *(p. 1926) that refers to the built-in default flow controller.*
- char * **DDS_FIXED_RATE_FLOW_CONTROLLER_NAME**

  Special value of ***DDS_PublishModeQosPolicy::flow_controller_name*** *(p. 1926) that refers to the built-in fixed-rate flow controller.*
- char * **DDS_ON_DEMAND_FLOW_CONTROLLER_NAME**

  Special value of ***DDS_PublishModeQosPolicy::flow_controller_name*** *(p. 1926) that refers to the built-in on-demand flow controller.*

5.18.1 Detailed Description

<<***extension***>> *(p. 1014)* **DDS_FlowController** (p. 562) and associated elements

DDS_FlowController (p. 562) provides the network traffic shaping capability to asynchronous **DDS_DataWriter** (p. 488) instances. For use cases and advantages of publishing asnychronously, please refer to **DDS_PublishModeQosPolicy** (p. 1924) of **DDS_DataWriterQos** (p. 1666).

See also

DDS_PublishModeQosPolicy (p. 1924)

DDS_DataWriterQos::publish_mode (p. 1672)

DDS_AsynchronousPublisherQosPolicy (p. 1539)

5.18.2 Macro Definition Documentation

5.18.2.1 DDS_FlowControllerTokenBucketProperty_t_INITIALIZER

```
#define DDS_FlowControllerTokenBucketProperty_t_INITIALIZER
```

Initializer for new property instances.

New **DDS_FlowControllerProperty_t** (p. 1802) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that the contained property values are properly initialized. This does not allocate memory.

The simplest way to create a new property structure is to initialize it on the stack at the time of its creation:
```
struct DDS_FlowControllerProperty_t myProperty = DDS_FlowControllerProperty_t_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipant_get_default_flowcontroller_property** (p. 97).

See also

DDS_DomainParticipant_get_default_flowcontroller_property (p. 97)

5.18.3 Typedef Documentation

5.18.3.1 DDS_FlowController

```
typedef struct DDS_FlowControllerImpl  DDS_FlowController
```

<<***interface***>> *(p. 1015)* A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDS_DataWriter** (p. 488) instances are allowed to write data.

QoS:

DDS_FlowControllerProperty_t (p. 1802)

5.18.4 Enumeration Type Documentation

5.18.4.1 DDS_FlowControllerSchedulingPolicy

```
enum  DDS_FlowControllerSchedulingPolicy
```

Kinds of flow controller scheduling policy.

Samples written by an asynchronous **DDS_DataWriter** (p. 488) are not sent in the context of the **FooDataWriter_write** (p. 499) call. Instead, the middleware puts the samples in a queue for future processing. The **DDS_FlowController** (p. 562) associated with each asynchronous DataWriter instance determines when the samples are actually sent.

Each **DDS_FlowController** (p. 562) maintains a separate FIFO queue for each unique destination (remote application). Samples written by asynchronous **DDS_DataWriter** (p. 488) instances associated with the flow controller, are placed in the queues that correspond to the intended destinations of the sample.

When tokens become available, a flow controller must decide which queue(s) to grant tokens first. This is determined by the flow controller's scheduling policy. Once a queue has been granted tokens, it is serviced by the asynchronous publishing thread. The queued up samples will be coalesced and sent to the corresponding destination. The number of samples sent depends on the data size and the number of tokens granted.

QoS:

DDS_FlowControllerProperty_t (p. 1802)

Enumerator

DDS_RR_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in a round-robin fashion. Whenever tokens become available, the flow controller distributes the tokens uniformly across all of its (non-empty) destination queues. No destinations are prioritized. Instead, all destinations are treated equally and are serviced in a round-robin fashion.
DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in an earliest-deadline-first fashion. A sample's deadline is determined by the time it was written plus the latency budget of the DataWriter at the time of the write call (as specified in the **DDS_LatencyBudgetQosPolicy** (p. 1816)). The relative priority of a flow controller's destination queue is determined by the earliest deadline across all samples it contains. When tokens become available, the **DDS_FlowController** (p. 562) distributes tokens to the destination queues in order of their deadline priority. In other words, the queue containing the sample with the earliest deadline is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal deadline value, the corresponding destination queues are serviced in a round-robin fashion. Hence, under the default **DDS_LatencyBudgetQosPolicy::duration** (p. 1818) setting, an `EDF_FLOW_CONTROLLER_SCHED_POLICY` **DDS_FlowController** (p. 562) preserves the order in which the user calls **FooDataWriter_write** (p. 499) across the DataWriters associated with the flow controller. Since the **DDS_LatencyBudgetQosPolicy** (p. 1816) is mutable, a sample written second may contain an earlier deadline than the sample written first if the **DDS_LatencyBudgetQosPolicy::duration** (p. 1818) value is sufficiently decreased in between writing the two samples. In that case, if the first sample is not yet written (still in queue waiting for its turn), it inherits the priority corresponding to the (earlier) deadline from the second sample. In other words, the priority of a destination queue is always determined by the earliest deadline among all samples contained in the queue. This priority inheritance approach is required in order to both honor the updated **DDS_LatencyBudgetQosPolicy::duration** (p. 1818) and adhere to the **DDS_DataWriter** (p. 488) in-order data delivery guarantee. **[default]** for **DDS_DataWriter** (p. 488)

Enumerator

DDS_HPF_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in a highest-priority-first fashion. Determines the next destination queue to service as determined by the publication priority of the **DDS_DataWriter** (p. 488), channel of multi-channel DataWriter, or individual sample. The relative priority of a flow controller's destination queue is determined by the highest publication priority of all samples it contains. When tokens become available, the **DDS_FlowController** (p. 562) distributes tokens to the destination queues in order of their publication priority. In other words, the queue containing the sample with the highest publication priority is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal publication priority, the corresponding destination queues are serviced in a round-robin fashion. This priority inheritance approach is required in order to both honor the designated publication priority and adhere to the **DDS_DataWriter** (p. 488) in-order data delivery guarantee.

5.18.5 Function Documentation

5.18.5.1 DDS_FlowController_get_name()

```
const char * DDS_FlowController_get_name (
              DDS_FlowController * self )
```

Returns the name of the **DDS_FlowController** (p. 562).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The name of the **DDS_FlowController** (p. 562).

5.18.5.2 DDS_FlowController_get_participant()

```
DDS_DomainParticipant * DDS_FlowController_get_participant (
            DDS_FlowController * self )
```

Returns the **DDS_DomainParticipant** (p. 76) to which the **DDS_FlowController** (p. 562) belongs.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

The **DDS_DomainParticipant** (p. 76) to which the **DDS_FlowController** (p. 562) belongs.

5.18.5.3 DDS_FlowController_set_property()

```
DDS_ReturnCode_t DDS_FlowController_set_property (
            DDS_FlowController * self,
           const struct  DDS_FlowControllerProperty_t * prop )
```

Sets the **DDS_FlowController** (p. 562) property.

This operation modifies the property of the **DDS_FlowController** (p. 562).

Once a **DDS_FlowController** (p. 562) has been instantiated, only the **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) can be changed. The **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1802) is immutable.

A new **DDS_FlowControllerTokenBucketProperty_t::period** (p. 1805) only takes effect at the next scheduled token distribution time (as determined by its previous value).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
prop	*<<**in**>> (p. 1015)* The new **DDS_FlowControllerProperty_t** (p. 1802). Property must be consistent. Immutable fields cannot be changed after **DDS_FlowController** (p. 562) has been created. The special value **DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT** (p. 161) can be used to indicate that the property of the **DDS_FlowController** (p. 562) should be changed to match the current default **DDS_FlowControllerProperty_t** (p. 1802) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

See also

DDS_FlowControllerProperty_t (p. 1802) for rules on consistency among property values.

5.18.5.4 DDS_FlowController_get_property()

```
DDS_ReturnCode_t DDS_FlowController_get_property (
            DDS_FlowController * self,
           struct  DDS_FlowControllerProperty_t * prop )
```

Gets the **DDS_FlowController** (p. 562) property.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
prop	<<***in***>> *(*p. *1015)* **DDS_FlowController** (p. 562) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.18.5.5 DDS_FlowController_trigger_flow()

```
DDS_ReturnCode_t DDS_FlowController_trigger_flow (
            DDS_FlowController * self )
```

Provides an external trigger to the **DDS_FlowController** (p. 562).

Typically, a **DDS_FlowController** (p. 562) uses an internal trigger to periodically replenish its tokens. The period by which this trigger is called is determined by the **DDS_FlowControllerTokenBucketProperty_t::period** (p. 1805) property setting.

This function provides an additional, external trigger to the **DDS_FlowController** (p. 562). This trigger adds **DDS_FlowControllerTokenBucketProperty_t::tokens_added_per_period** (p. 1804) tokens each time it is called (subject to the other property settings of the **DDS_FlowController** (p. 562)).

An *on-demand* **DDS_FlowController** (p. 562) can be created with a **DDS_DURATION_INFINITE** (p. 1210) as **DDS_FlowControllerTokenBucketProperty_t::period** (p. 1805), in which case the only trigger source is external (i.e. the FlowController is solely triggered by the user on demand).

DDS_FlowController_trigger_flow (p. 566) can be called on both strict *on-demand* FlowController and hybrid FlowController (internally and externally triggered).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.18.6 Variable Documentation

5.18.6.1 DDS_DEFAULT_FLOW_CONTROLLER_NAME

```
char* DDS_DEFAULT_FLOW_CONTROLLER_NAME  [extern]
```

[default] Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1926) that refers to the built-in default flow controller.

RTI Connext provides several built-in **DDS_FlowController** (p. 562) for use with an asynchronous **DDS_DataWriter** (p. 488). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

By default, flow control is disabled. That is, the built-in **DDS_DEFAULT_FLOW_CONTROLLER_NAME** (p. 567) flow controller does not apply any flow control. Instead, it allows data to be sent asynchronously as soon as it is written by the **DDS_DataWriter** (p. 488).

Essentially, this is equivalent to a user-created **DDS_FlowController** (p. 562) with the following **DDS_FlowController↩ Property_t** (p. 1802) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1802) = **DDS_EDF_FLOW_CONTROLLER_↩ SCHED_POLICY** (p. 563)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_added_per_period` = **DDS_↩ LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_leaked_per_period` = 0
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `period` = 60 seconds
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `bytes_per_token` = **DDS_LENGTH_↩ UNLIMITED** (p. 1328)

See also

DDS_Publisher_create_datawriter (p. 456)

DDS_DomainParticipant_lookup_flowcontroller (p. 127)

DDS_FlowController_set_property (p. 565)

DDS_PublishModeQosPolicy (p. 1924)

DDS_AsynchronousPublisherQosPolicy (p. 1539)

5.18.6.2 DDS_FIXED_RATE_FLOW_CONTROLLER_NAME

```
char* DDS_FIXED_RATE_FLOW_CONTROLLER_NAME  [extern]
```

Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1926) that refers to the built-in fixed-rate flow controller.

RTI Connext provides several builtin **DDS_FlowController** (p. 562) for use with an asynchronous **DDS_DataWriter** (p. 488). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS_FIXED_RATE_FLOW_CONTROLLER_NAME** (p. 567) flow controller shapes the network traffic by allowing data to be sent only once every second. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

Essentially, this is equivalent to a user-created **DDS_FlowController** (p. 562) with the following **DDS_FlowController↩ Property_t** (p. 1802) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1802) = **DDS_EDF_FLOW_CONTROLLER_↩ SCHED_POLICY** (p. 563)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_added_per_period` = **DDS_↩ LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_leaked_per_period` = **DDS_↩ LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `period` = 1 second
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `bytes_per_token` = **DDS_LENGTH_↩ UNLIMITED** (p. 1328)

See also

DDS_Publisher_create_datawriter (p. 456)

DDS_DomainParticipant_lookup_flowcontroller (p. 127)

DDS_FlowController_set_property (p. 565)

DDS_PublishModeQosPolicy (p. 1924)

DDS_AsynchronousPublisherQosPolicy (p. 1539)

5.18.6.3 DDS_ON_DEMAND_FLOW_CONTROLLER_NAME

```
char* DDS_ON_DEMAND_FLOW_CONTROLLER_NAME  [extern]
```

Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1926) that refers to the built-in on-demand flow controller.

RTI Connext provides several builtin **DDS_FlowController** (p. 562) for use with an asynchronous **DDS_DataWriter** (p. 488). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS_ON_DEMAND_FLOW_CONTROLLER_NAME** (p. 568) allows data to be sent only when the user calls **DDS_FlowController_trigger_flow** (p. 566). With each trigger, all accumulated data since the previous trigger is sent (across all **DDS_Publisher** (p. 446) or **DDS_DataWriter** (p. 488) instances). In other words, the network traffic shape is fully controlled by the user. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

This external trigger source is ideal for users who want to implement some form of closed-loop flow control or who want to only put data on the wire every so many samples (e.g. with the number of samples based on **NDDS_Transport_↩ Property_t::gather_send_buffer_count_max** (p. 2131)).

Essentially, this is equivalent to a user-created **DDS_FlowController** (p. 562) with the following **DDS_FlowController↩ Property_t** (p. 1802) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1802) = **DDS_EDF_FLOW_CONTROLLER_↩ SCHED_POLICY** (p. 563)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_added_per_period` = **DDS_↩ LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `tokens_leaked_per_period` = **DDS_↩ LENGTH_UNLIMITED** (p. 1328)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `period` = **DDS_DURATION_INFINITE** (p. 1210)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1803) `bytes_per_token` = **DDS_LENGTH_↩ UNLIMITED** (p. 1328)

Contains the **DDS_Subscriber** (p. 575), **DDS_DataReader** (p. 618), **DDS_ReadCondition** (p. 695), **DDS_Query↩ Condition** (p. 700), and **DDS_TopicQuery** (p. 708) classes, as well as the **DDS_SubscriberListener** (p. 2014) and **DDS_DataReaderListener** (p. 1593) interfaces, and more generally, all that is needed on the subscription side.

"DCPS Subscription package"

5.19.2 Access to data samples

Data is made available to the application by the following operations on **DDS_DataReader** (p. 618) objects: **Foo↩ DataReader_read** (p. 628), **FooDataReader_read_w_condition** (p. 633), **FooDataReader_take** (p. 629), **FooData↩ Reader_take_w_condition** (p. 635), and the other variants of read() and take().

The general semantics of the `read()` operation is that the application only gets access to the corresponding data (i.e. a precise instance value); the data remains the responsibility of RTI Connext and can be read again.

The semantics of the `take()` operations is that the application takes full responsibility for the data; that data will no longer be available locally to RTI Connext. Consequently, it is possible to access the same information multiple times only if all previous accesses were read() operations, not take().

Each of these operations returns a collection of `Data` values and associated **DDS_SampleInfo** (p. 1990) objects. Each data value represents an atom of data information (i.e., a value for one instance). This collection may contain samples related to the same or different instances (identified by the key). Multiple samples can refer to the same instance if the settings of the **HISTORY** (p. 1294) QoS allow for it.

These operations reset the read communication statuses; see **Changes in read communication status** (p. 1227).

To return the memory back to the middleware, every read() or take() that retrieves a sequence of samples must be followed with a call to FooDataReader_return_loan (p. 649).

See also

Interpretation of the SampleInfo (p. 1991)

5.19.2.1 Data access patterns

The application accesses data by means of the operations `read` or `take` on the **DDS_DataReader** (p. 618). These operations return an ordered collection of `DataSamples` consisting of a **DDS_SampleInfo** (p. 1990) part and a `Data` part.

The way RTI Connext builds the collection depends on QoS policies set on the **DDS_DataReader** (p. 618) and **DDS_Subscriber** (p. 575), as well as the `source_timestamp` of the samples, and the parameters passed to the `read()` / `take()` operations, namely:

- the desired sample states (any combination of **DDS_SampleStateKind** (p. 711))
- the desired view states (any combination of **DDS_ViewStateKind** (p. 713))
- the desired instance states (any combination of **DDS_InstanceStateKind** (p. 715))

The `read()` and `take()` operations are non-blocking and just deliver what is currently available that matches the specified states.

The `read_w_condition()` and `take_w_condition()` operations take a **DDS_ReadCondition** (p. 695) object as a parameter instead of sample, view or instance states. The behaviour is that the samples returned will only be those for which the condition is **DDS_BOOLEAN_TRUE** (p. 1203). These operations, in conjunction with **DDS_ReadCondition** (p. 695) objects and a **DDS_WaitSet** (p. 1373), allow performing waiting reads.

Once the data samples are available to the data readers, they can be read or taken by the application. The basic rule is that the application may do this in any order it wishes. This approach is very flexible and allows the application ultimate control.

To access data coherently, or in order, the **PRESENTATION** (p. 1306) QoS must be set properly.

5.20 Subscribers

DDS_Subscriber (p. 575) entity and associated elements

Data Structures

- struct **DDS_SubscriberSeq**

  *Declares IDL `sequence` < **DDS_Subscriber** (p. 575) > .*
- struct **DDS_SubscriberQos**

  *QoS policies supported by a **DDS_Subscriber** (p. 575) entity.*
- struct **DDS_SubscriberListener**

  *<<**interface**>> (p. 1015) **DDS_Listener** (p. 1819) for status about a subscriber.*

Macros

- #define **DDS_SubscriberQos_INITIALIZER**

  Initializer for new QoS instances.
- #define **DDS_SubscriberListener_INITIALIZER**

  *<<**extension**>> (p. 1014) Initializer for new **DDS_SubscriberListener** (p. 2014).*

Typedefs

- typedef struct DDS_SubscriberImpl **DDS_Subscriber**

  <<***interface***>> *(*p. *1015) A subscriber is the object responsible for actually receiving data from a subscription.*
- typedef void(∗ **DDS_SubscriberListener_DataOnReadersCallback**) (void ∗listener_data, **DDS_Subscriber** ∗sub)

  Prototype of a ***DDS_SubscriberListener*** *(*p. *2014) data_on_readers function.*

Functions

- **DDS_Boolean DDS_SubscriberQos_equals** (const struct **DDS_SubscriberQos** ∗self, const struct **DDS_SubscriberQos** ∗other)

  Compares two ***DDS_SubscriberQos*** *(*p. *2016) for equality.*
- **DDS_ReturnCode_t DDS_SubscriberQos_print** (const struct **DDS_SubscriberQos** ∗self)

  Prints this ***DDS_SubscriberQos*** *(*p. *2016) to stdout.*
- **DDS_ReturnCode_t DDS_SubscriberQos_to_string** (const struct **DDS_SubscriberQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size)

  Obtains a string representation of this ***DDS_SubscriberQos*** *(*p. *2016).*
- **DDS_ReturnCode_t DDS_SubscriberQos_to_string_w_params** (const struct **DDS_SubscriberQos** ∗self, char ∗string, **DDS_UnsignedLong** ∗string_size, const struct **DDS_SubscriberQos** ∗base, const struct **DDS_QosPrintFormat** ∗format)

  Obtains a string representation of this ***DDS_SubscriberQos*** *(*p. *2016).*
- **DDS_ReturnCode_t DDS_SubscriberQos_initialize** (struct **DDS_SubscriberQos** ∗self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t DDS_SubscriberQos_finalize** (struct **DDS_SubscriberQos** ∗self)

  Free any dynamic memory allocated by the policies in this ***DDS_SubscriberQos*** *(*p. *2016).*
- **DDS_ReturnCode_t DDS_SubscriberQos_copy** (struct **DDS_SubscriberQos** ∗self, const struct **DDS_SubscriberQos** ∗source)

  Copy the contents of the given QoS into this QoS.
- **DDS_Entity** ∗ **DDS_Subscriber_as_entity** (**DDS_Subscriber** ∗subscriber)

  Access a ***DDS_Subscriber*** *(*p. *575)'s supertype instance.*
- **DDS_ReturnCode_t DDS_Subscriber_get_default_datareader_qos** (**DDS_Subscriber** ∗self, struct **DDS_DataReaderQos** ∗qos)

  Copies the default ***DDS_DataReaderQos*** *(*p. *1611) values into the provided* ***DDS_DataReaderQos*** *(*p. *1611) instance.*
- **DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos** (**DDS_Subscriber** ∗self, const struct **DDS_DataReaderQos** ∗qos)

  Sets the default ***DDS_DataReaderQos*** *(*p. *1611) values for this subscriber.*
- **DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos_with_profile** (**DDS_Subscriber** ∗self, const char ∗library_name, const char ∗profile_name)

  <<***extension***>> *(*p. *1014) Set the default* ***DDS_DataReaderQos*** *(*p. *1611) values for this subscriber based on the input XML QoS profile.*
- **DDS_DataReader** ∗ **DDS_Subscriber_create_datareader** (**DDS_Subscriber** ∗self, **DDS_TopicDescription** ∗topic, const struct **DDS_DataReaderQos** ∗qos, const struct **DDS_DataReaderListener** ∗listener, **DDS_StatusMask** mask)

  Creates a ***DDS_DataReader*** *(*p. *618) that will be attached and belong to the* ***DDS_Subscriber*** *(*p. *575).*
- **DDS_DataReader** ∗ **DDS_Subscriber_create_datareader_with_profile** (**DDS_Subscriber** ∗self, **DDS_TopicDescription** ∗topic, const char ∗library_name, const char ∗profile_name, const struct **DDS_DataReaderListener** ∗listener, **DDS_StatusMask** mask)

*<<**extension**>> (p. 1014) Creates a **DDS_DataReader** (p. 618) object using the **DDS_DataReaderQos** (p. 1611) associated with the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_Subscriber_delete_datareader** (**DDS_Subscriber** *self, **DDS_DataReader** *a_datareader)

  *Deletes a **DDS_DataReader** (p. 618) that belongs to the **DDS_Subscriber** (p. 575).*

- **DDS_ReturnCode_t DDS_Subscriber_delete_contained_entities** (**DDS_Subscriber** *self)

  *Deletes all the entities that were created by means of the "create" operation on the **DDS_Subscriber** (p. 575).*

- **DDS_DataReader** * **DDS_Subscriber_lookup_datareader** (**DDS_Subscriber** *self, const char *topic_name)

  *Retrieves an existing **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t DDS_Subscriber_begin_access** (**DDS_Subscriber** *self)

  *Indicates that the application is about to access the data samples in any of the **DDS_DataReader** (p. 618) objects attached to the **DDS_Subscriber** (p. 575).*

- **DDS_ReturnCode_t DDS_Subscriber_end_access** (**DDS_Subscriber** *self)

  *Indicates that the application has finished accessing the data samples in **DDS_DataReader** (p. 618) objects managed by the **DDS_Subscriber** (p. 575).*

- **DDS_ReturnCode_t DDS_Subscriber_get_datareaders** (**DDS_Subscriber** *self, struct **DDS_DataReaderSeq** *readers, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Allows the application to access the **DDS_DataReader** (p. 618) objects that contain samples with the specified `sample_states`, `view_states` and `instance_states`.*

- **DDS_ReturnCode_t DDS_Subscriber_get_all_datareaders** (**DDS_Subscriber** *self, struct **DDS_DataReaderSeq** *readers)

  Retrieve all the DataReaders created from this Subscriber.

- **DDS_ReturnCode_t DDS_Subscriber_notify_datareaders** (**DDS_Subscriber** *self)

  *Invokes the operation **DDS_DataReaderListener::on_data_available()** (p. 1595) on the **DDS_DataReaderListener** (p. 1593) objects attached to contained **DDS_DataReader** (p. 618) entities with **DDS_DATA_AVAILABLE_STATUS** (p. 1232) that is considered changed as described in **Changes in read communication status** (p. 1227).*

- **DDS_DomainParticipant** * **DDS_Subscriber_get_participant** (**DDS_Subscriber** *self)

  *Returns the **DDS_DomainParticipant** (p. 76) to which the **DDS_Subscriber** (p. 575) belongs.*

- **DDS_ReturnCode_t DDS_Subscriber_copy_from_topic_qos** (**DDS_Subscriber** *self, struct **DDS_DataReaderQos** *datareader_qos, const struct **DDS_TopicQos** *topic_qos)

  *Copies the policies in the **DDS_TopicQos** (p. 2048) to the corresponding policies in the **DDS_DataReaderQos** (p. 1611).*

- **DDS_ReturnCode_t DDS_Subscriber_set_qos** (**DDS_Subscriber** *self, const struct **DDS_SubscriberQos** *qos)

  Sets the subscriber QoS.

- **DDS_ReturnCode_t DDS_Subscriber_set_qos_with_profile** (**DDS_Subscriber** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Change the QoS of this subscriber using the input XML QoS profile.*

- **DDS_ReturnCode_t DDS_Subscriber_get_qos** (**DDS_Subscriber** *self, struct **DDS_SubscriberQos** *qos)

  Gets the subscriber QoS.

- **DDS_ReturnCode_t DDS_Subscriber_set_default_profile** (**DDS_Subscriber** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Sets the default XML profile for a **DDS_Subscriber** (p. 575).*

- const char * **DDS_Subscriber_get_default_profile** (**DDS_Subscriber** *self)

  *<<**extension**>> (p. 1014) Gets the default XML profile associated with a **DDS_Subscriber** (p. 575).*

- const char * **DDS_Subscriber_get_default_profile_library** (**DDS_Subscriber** *self)

  *<<**extension**>> (p. 1014) Gets the library where the default XML QoS profile is contained for a **DDS_Subscriber** (p. 575).*

- **DDS_ReturnCode_t DDS_Subscriber_set_default_library** (**DDS_Subscriber** *self, const char *library_name)

<<***extension***>> (p. *1014*) *Sets the default XML library for a* ***DDS_Subscriber*** (p. *575*).

- const char * **DDS_Subscriber_get_default_library** (**DDS_Subscriber** *self)

  <<***extension***>> (p. *1014*) *Gets the default XML library associated with a* ***DDS_Subscriber*** (p. *575*).

- **DDS_ReturnCode_t DDS_Subscriber_set_listener** (**DDS_Subscriber** *self, const struct **DDS_SubscriberListener** *l, **DDS_StatusMask** mask)

  Sets the subscriber listener.

- struct **DDS_SubscriberListener DDS_Subscriber_get_listener** (**DDS_Subscriber** *self)

  Get the subscriber listener.

- **DDS_ReturnCode_t DDS_Subscriber_get_listenerX** (**DDS_Subscriber** *self, struct **DDS_SubscriberListener** *listener)

  <<***extension***>> (p. *1014*) *Get the subscriber listener.*

- **DDS_DataReader** * **DDS_Subscriber_lookup_datareader_by_name** (**DDS_Subscriber** *self, const char *datareader_name)

  <<***extension***>> (p. *1014*) *Retrieves a* ***DDS_DataReader*** (p. *618*) *contained within the* ***DDS_Subscriber*** (p. *575*) *the* ***DDS_DataReader*** (p. *618*) *entity name.*

Variables

- const struct **DDS_DataReaderQos** * **DDS_DATAREADER_QOS_PRINT_ALL**

  Special value which can be supplied to ***DDS_DataReaderQos_to_string_w_params*** (p. *670*) *indicating that all of the QoS should be printed.*

- const struct **DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT**

  Special value for creating data reader with default QoS.

- const struct **DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS**

  Special value for creating ***DDS_DataReader*** (p. *618*) *with a combination of the default* ***DDS_DataReaderQos*** (p. *1611*) *and the* ***DDS_TopicQos*** (p. *2048*).

5.20.1 Detailed Description

DDS_Subscriber (p. 575) entity and associated elements

5.20.2 Macro Definition Documentation

5.20.2.1 DDS_SubscriberQos_INITIALIZER

```
#define DDS_SubscriberQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_SubscriberQos** (p. 2016) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:
```
struct DDS_SubscriberQos myQos = DDS_SubscriberQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_DomainParticipant_get_default_subscriber_qos** (p. 93) or **DDS_Subscriber_get_qos** (p. 596); one of those should be called subsequently to setting the QoS of a new or existing entity. **DDS_SubscriberQos_finalize** (p. 580) should be called to free the contained QoS policies that use dynamic memory:
```
struct DDS_SubscriberQos myQos = DDS_SubscriberQos_INITIALIZER;

DDS_DomainParticipant_get_default_Subscriber_qos(myParticipant, &myQos);

DDS_Subscriber_set_qos(mySubscriber, &myQos);

DDS_SubscriberQos_finalize(&myQos);
```

See also

DDS_SubscriberQos_initialize (p. 580)

DDS_DomainParticipant_get_default_subscriber_qos (p. 93)

DDS_SubscriberQos_finalize (p. 580)

5.20.2.2 DDS_SubscriberListener_INITIALIZER

```
#define DDS_SubscriberListener_INITIALIZER
```

<<***extension***>> *(p. 1014)* Initializer for new **DDS_SubscriberListener** (p. 2014).

All the new instances allocated in the stack should be initialized to this value.No memory is allocated.

5.20.3 Typedef Documentation

5.20.3.1 DDS_Subscriber

```
typedef struct DDS_SubscriberImpl  DDS_Subscriber
```

<<***interface***>> *(p. 1015)* A subscriber is the object responsible for actually receiving data from a subscription.

QoS:

DDS_SubscriberQos (p. 2016)

Status:

DDS_DATA_ON_READERS_STATUS (p. 1232)

Listener:

DDS_SubscriberListener (p. 2014)

A subscriber acts on the behalf of one or several **DDS_DataReader** (p. 618) objects that are related to it. When it receives data (from the other parts of the system), it builds the list of concerned **DDS_DataReader** (p. 618) objects and then indicates to the application that data is available through its listener or by enabling related conditions.

The application can access the list of concerned **DDS_DataReader** (p. 618) objects through the operation **DDS_Subscriber_get_datareaders** (p. 591) and then access the data available through operations on the **DDS_DataReader** (p. 618).

The following operations may be called even if the **DDS_Subscriber** (p. 575) is not enabled. Other operations will the value **DDS_RETCODE_NOT_ENABLED** (p. 1224) if called on a disabled **DDS_Subscriber** (p. 575):

- **DDS_Entity_enable** (p. 1365),
- **DDS_Subscriber_set_qos** (p. 595), **DDS_Subscriber_get_qos** (p. 596) , idref_Subscriber_set_qos_with_profile
- **DDS_Subscriber_set_listener** (p. 600), **DDS_Subscriber_get_listener** (p. 600),
- **DDS_Entity_get_statuscondition** (p. 1367), **DDS_Entity_get_status_changes** (p. 1367)
- **DDS_Subscriber_create_datareader** (p. 584), **DDS_Subscriber_create_datareader_with_profile** (p. 586), **DDS_Subscriber_delete_contained_entities** (p. 588), **DDS_Subscriber_delete_datareader** (p. 587),
- **DDS_Subscriber_set_default_datareader_qos** (p. 583), **DDS_Subscriber_set_default_datareader_qos_with_profile** (p. 583), **DDS_Subscriber_get_default_datareader_qos** (p. 582), **DDS_Subscriber_set_default_library** (p. 598), **DDS_Subscriber_set_default_profile** (p. 597)

All operations except for **DDS_Subscriber_set_qos** (p. 595), **DDS_Subscriber_set_qos_with_profile** (p. 595), **DDS_Subscriber_get_qos** (p. 596), **DDS_Subscriber_set_listener** (p. 600), **DDS_Subscriber_get_listener** (p. 600), **DDS_Entity_enable** (p. 1365) and **DDS_Subscriber_create_datareader** (p. 584) may fail with **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

Operations Allowed in Listener Callbacks (p. 1821)

5.20.3.2 DDS_SubscriberListener_DataOnReadersCallback

```
typedef void(* DDS_SubscriberListener_DataOnReadersCallback) (void *listener_data, DDS_Subscriber
*sub)
```

Prototype of a **DDS_SubscriberListener** (p. 2014) data_on_readers function.

5.20.4 Function Documentation

5.20.4.1 DDS_SubscriberQos_equals()

```
DDS_Boolean DDS_SubscriberQos_equals (
            const struct  DDS_SubscriberQos * self,
            const struct  DDS_SubscriberQos * other )
```

Compares two **DDS_SubscriberQos** (p. 2016) for equality.

Parameters

self	<<***in***>> *(*p. *1015)* This SubscriberQos.
other	<<***in***>> *(*p. *1015)* The other SubscriberQos to be compared with this SubscriberQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.20.4.2 DDS_SubscriberQos_print()

```
DDS_ReturnCode_t DDS_SubscriberQos_print (
            const struct  DDS_SubscriberQos * self )
```

Prints this **DDS_SubscriberQos** (p. 2016) to stdout.

Only the differences between this **DDS_SubscriberQos** (p. 2016) and the documented default are printed. If you wish to print everything regardless, see **DDS_SubscriberQos_to_string_w_params** (p. 579). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.20.4.3 DDS_SubscriberQos_to_string()

```
DDS_ReturnCode_t DDS_SubscriberQos_to_string (
            const struct  DDS_SubscriberQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 2016).

Only the differences between this **DDS_SubscriberQos** (p. 2016) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_SubscriberQos_to_string_w_params** (p. 579). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_SubscriberQos** (p. 2016) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 2016). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_SubscriberQos_to_string_w_params (p. 579)

5.20.4.4 DDS_SubscriberQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_SubscriberQos_to_string_w_params (
            const struct  DDS_SubscriberQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_SubscriberQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 2016).

Only the differences between this **DDS_SubscriberQos** (p. 2016) and the **DDS_SubscriberQos** (p. 2016) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_SUBSCRIBER_QOS_PRINT_ALL** (p. 163) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_SubscriberQos** (p. 2016) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 2016). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 1015)* The **DDS_SubscriberQos** (p. 2016) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.20.4.5 DDS_SubscriberQos_initialize()

```
DDS_ReturnCode_t DDS_SubscriberQos_initialize (
            struct  DDS_SubscriberQos * self )
```

Initializer for new QoS instances.

New **DDS_SubscriberQos** (p. 2016) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_Subscriber_get_qos** (p. 596) or **DDS_DomainParticipant_get_default_subscriber_qos** (p. 93); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS_SubscriberQos_finalize** (p. 580) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_SubscriberQos *myQos = malloc(sizeof(struct DDS_SubscriberQos));

DDS_SubscriberQos_initialize(myQos);

DDS_DomainParticipantFactory_get_default_subscriber_qos(myFactory, myQos);

DDS_Subscriber_set_qos(mySubscriber, myQos);

DDS_SubscriberQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_SubscriberQos_INITIALIZER (p. 574)

DDS_DomainParticipant_get_default_subscriber_qos (p. 93)

DDS_SubscriberQos_finalize (p. 580)

5.20.4.6 DDS_SubscriberQos_finalize()

```
DDS_ReturnCode_t DDS_SubscriberQos_finalize (
            struct  DDS_SubscriberQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_SubscriberQos** (p. 2016).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.20.4.7 DDS_SubscriberQos_copy()

```
DDS_ReturnCode_t DDS_SubscriberQos_copy (
            struct  DDS_SubscriberQos * self,
            const struct  DDS_SubscriberQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_SubscriberQos (p. 2016) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)* The **DDS_PublisherQos** (p. 1922) to copy from.

Returns

One of the **Standard Return Codes** (p. 1223)

5.20.4.8 DDS_Subscriber_as_entity()

```
DDS_Entity * DDS_Subscriber_as_entity (
             DDS_Subscriber * subscriber )
```

Access a **DDS_Subscriber** (p. 575)'s supertype instance.

Parameters

subscriber	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The **DDS_Entity** (p. 1362) that is supertype instance of the subscriber.

5.20.4.9 DDS_Subscriber_get_default_datareader_qos()

```
DDS_ReturnCode_t DDS_Subscriber_get_default_datareader_qos (
             DDS_Subscriber * self,
            struct  DDS_DataReaderQos * qos )
```

Copies the default **DDS_DataReaderQos** (p. 1611) values into the provided **DDS_DataReaderQos** (p. 1611) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS_Subscriber_set_default_↩ datareader_qos** (p. 583), or **DDS_Subscriber_set_default_datareader_qos_with_profile** (p. 583), or else, if the call was never made, the default values from is owning **DDS_DomainParticipant** (p. 76).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a subscriber while another thread may be simultaneously calling **DDS_Subscriber_set_default_datareader_qos** (p. 583)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***inout***>> *(p. 1015)* **DDS_DataReaderQos** (p. 1611) to be filled-up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DATAREADER_QOS_DEFAULT (p. 603)

DDS_Subscriber_create_datareader (p. 584)

5.20.4.10 DDS_Subscriber_set_default_datareader_qos()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos (
              DDS_Subscriber * self,
             const struct  DDS_DataReaderQos * qos )
```

Sets the default **DDS_DataReaderQos** (p. 1611) values for this subscriber.

This call causes the default values inherited from the owning **DDS_DomainParticipant** (p. 76) to be overridden.

This default value will be used for newly created **DDS_DataReader** (p. 618) if **DDS_DATAREADER_QOS_DEFAULT** (p. 603) is specified as the `qos` parameter when **DDS_Subscriber_create_datareader** (p. 584) is called.

Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default QoS value from a subscriber while another thread may be simultaneously calling **DDS_Subscriber_set_default_datareader_qos** (p. 583), **DDS_Subscriber_get_default_datareader_qos** (p. 582) or calling **DDS_Subscriber_create_datareader** (p. 584) with **DDS_DATAREADER_QOS_DEFAULT** (p. 603) as the `qos` parameter.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**in**>> (p. 1015)* The default **DDS_DataReaderQos** (p. 1611) to be set to. The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) may be passed as `qos` to indicate that the default QoS should be reset back to the initial values the factory would used if **DDS_Subscriber_set_default_datareader_qos** (p. 583) had never been called. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

5.20.4.11 DDS_Subscriber_set_default_datareader_qos_with_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos_with_profile (
            DDS_Subscriber * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Set the default **DDS_DataReaderQos** (p. 1611) values for this subscriber based on the input XML QoS profile.

This default value will be used for newly created **DDS_DataReader** (p. 618) if **DDS_DATAREADER_QOS_DEFAULT** (p. 603) is specified as the `qos` parameter when **DDS_Subscriber_create_datareader** (p. 584) is called.

Precondition

The **DDS_DataReaderQos** (p. 1611) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS_Subscriber** (p. 575) while another thread may be simultaneously calling **DDS_Subscriber_set_default_datareader_qos** (p. 583), **DDS_Subscriber_↩ get_default_datareader_qos** (p. 582) or calling **DDS_Subscriber_create_datareader** (p. 584) with **DDS_↩ DATAREADER_QOS_DEFAULT** (p. 603) as the `qos` parameter.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Subscriber_set_default_library** (p. 598)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Subscriber_set_default_profile** (p. 597)).

If the input profile cannot be found the function fails with **DDS_RETCODE_ERROR** (p. 1224).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224)

See also

DDS_DATAREADER_QOS_DEFAULT (p. 603)

DDS_Subscriber_create_datareader_with_profile (p. 586)

5.20.4.12 DDS_Subscriber_create_datareader()

```
DDS_DataReader * DDS_Subscriber_create_datareader (
              DDS_Subscriber * self,
              DDS_TopicDescription * topic,
             const struct  DDS_DataReaderQos * qos,
             const struct  DDS_DataReaderListener * listener,
              DDS_StatusMask mask )
```

Creates a **DDS_DataReader** (p. 618) that will be attached and belong to the **DDS_Subscriber** (p. 575).

For each application-defined type **Foo** (p. 2116), there is an implied, auto-generated class **FooDataReader** (p. 2119) (an incarnation of **FooDataReader** (p. 2119)) that extends **DDS_DataReader** (p. 618) and contains the operations to read data of type **Foo** (p. 2116).

Note that a common application pattern to construct the QoS for the **DDS_DataReader** (p. 618) is to:

- Retrieve the QoS policies on the associated **DDS_Topic** (p. 174) by means of the **DDS_Topic_get_qos** (p. 198) operation.
- Retrieve the default **DDS_DataReader** (p. 618) qos by means of the **DDS_Subscriber_get_default_↩ datareader_qos** (p. 582) operation.
- Combine those two QoS policies (for example, using **DDS_Subscriber_copy_from_topic_qos** (p. 594)) and selectively modify policies as desired
- Use the resulting QoS policies to construct the **DDS_DataReader** (p. 618).

When a **DDS_DataReader** (p. 618) is created, only those transports already registered are available to the **DDS_↩ DataReader** (p. 618). See **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered.

MT Safety:

UNSAFE. If **DDS_DATAREADER_QOS_DEFAULT** (p. 603) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDS_Subscriber_set_default_datareader↩ _qos** (p. 583).

Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDS_DataReader** (p. 618) will be created.

The given **DDS_TopicDescription** (p. 174) must have been created from the same participant as this subscriber. If it was created from a different participant, this function will return NULL.

If `qos` is **DDS_DATAREADER_QOS_USE_TOPIC_QOS** (p. 604), `topic` cannot be **DDS_MultiTopic** (p. 184), or else this function will return NULL.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
topic	*<<**in**>> (p. 1015)* The **DDS_TopicDescription** (p. 174) that the **DDS_DataReader** (p. 618) will be associated with. Cannot be NULL.

Parameters

qos	<<***in***>> *(p. 1015)* The qos of the **DDS_DataReader** (p. 618). The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) can be used to indicate that the **DDS_DataReader** (p. 618) should be created with the default **DDS_DataReaderQos** (p. 1611) set in the **DDS_Subscriber** (p. 575). If **DDS_TopicDescription** (p. 174) is of type **DDS_Topic** (p. 174) or **DDS_ContentFilteredTopic** (p. 176), the special value **DDS_DATAREADER_QOS_USE_TOPIC_QOS** (p. 604) can be used to indicate that the **DDS_DataReader** (p. 618) should be created with the combination of the default **DDS_DataReaderQos** (p. 1611) set on the **DDS_Subscriber** (p. 575) and the **DDS_TopicQos** (p. 2048) (in the case of a **DDS_ContentFilteredTopic** (p. 176), the **DDS_TopicQos** (p. 2048) of the related **DDS_Topic** (p. 174)). if **DDS_DATAREADER_QOS_USE_TOPIC_QOS** (p. 604) is used, `topic` cannot be a **DDS_MultiTopic** (p. 184). Cannot be NULL.
listener	<<***in***>> *(p. 1015)* The listener of the **DDS_DataReader** (p. 618).
mask	<<***in***>> *(p. 1015)*. Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataReader** (p. 618) of a derived class specific to the data-type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_Subscriber_get_default_datareader_qos (p. 582)

DDS_Topic_set_qos (p. 196)

DDS_Subscriber_copy_from_topic_qos (p. 594)

DDS_DataReader_set_listener (p. 691)

5.20.4.13 DDS_Subscriber_create_datareader_with_profile()

```
DDS_DataReader * DDS_Subscriber_create_datareader_with_profile (
            DDS_Subscriber * self,
            DDS_TopicDescription * topic,
           const char * library_name,
           const char * profile_name,
           const struct  DDS_DataReaderListener * listener,
            DDS_StatusMask mask )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_DataReader** (p. 618) object using the **DDS_DataReaderQos** (p. 1611) associated with the input XML QoS profile.

The **DDS_DataReader** (p. 618) will be attached and belong to the **DDS_Subscriber** (p. 575).

For each application-defined type **Foo** (p. 2116), there is an implied, auto-generated class **FooDataReader** (p. 2119) (an incarnation of **FooDataReader** (p. 2119)) that extends **DDS_DataReader** (p. 618) and contains the operations to read data of type **Foo** (p. 2116).

When a **DDS_DataReader** (p. 618) is created, only those transports already registered are available to the **DDS_DataReader** (p. 618). See **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered.

Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDS_DataReader** (p. 618) will be created.

The given **DDS_TopicDescription** (p. 174) must have been created from the same participant as this subscriber. If it was created from a different participant, this function will return NULL.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
topic	<<***in***>> *(*p. *1015)* The **DDS_TopicDescription** (p. 174) that the **DDS_DataReader** (p. 618) will be associated with. Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Subscriber_set_default_library** (p. 598)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Subscriber_set_default_profile** (p. 597)).
listener	<<***in***>> *(*p. *1015)* The listener of the **DDS_DataReader** (p. 618).
mask	<<***in***>> *(*p. *1015).* Changes of communication status to be invoked on the listener. See **DDS_StatusMask** (p. 1228).

Returns

A **DDS_DataReader** (p. 618) of a derived class specific to the data-type associated with the **DDS_Topic** (p. 174) or NULL if an error occurred.

DDS_Subscriber_get_default_datareader_qos (p. 582)

DDS_Topic_set_qos (p. 196)

DDS_Subscriber_copy_from_topic_qos (p. 594)

DDS_DataReader_set_listener (p. 691)

Examples

HelloWorld_subscriber.c.

5.20.4.14 DDS_Subscriber_delete_datareader()

```
DDS_ReturnCode_t DDS_Subscriber_delete_datareader (
            DDS_Subscriber * self,
            DDS_DataReader * a_datareader )
```

Deletes a **DDS_DataReader** (p. 618) that belongs to the **DDS_Subscriber** (p. 575).

Precondition

If the **DDS_DataReader** (p. 618) does not belong to the **DDS_Subscriber** (p. 575), or if ther are any existing **DDS_ReadCondition** (p. 695) or **DDS_QueryCondition** (p. 700) objects that are attached to the **DDS_Data↩ Reader** (p. 618), or if there are outstanding loans on samples (as a result of a call to read(), take(), or one of the variants thereof), the operation fails with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Postcondition

Listener installed on the **DDS_DataReader** (p. 618) will not be called after this function completes successfully.

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
a_datareader	<<***in***>> *(*p. *1015)* The **DDS_DataReader** (p. 618) to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.20.4.15 DDS_Subscriber_delete_contained_entities()

```
DDS_ReturnCode_t DDS_Subscriber_delete_contained_entities (
            DDS_Subscriber * self )
```

Deletes all the entities that were created by means of the "create" operation on the **DDS_Subscriber** (p. 575).

Deletes all contained **DDS_DataReader** (p. 618) objects. This pattern is applied recursively. In this manner, the operation **DDS_Subscriber_delete_contained_entities** (p. 588) on the **DDS_Subscriber** (p. 575) will end up deleting all the entities recursively contained in the **DDS_Subscriber** (p. 575), including the **DDS_QueryCondition** (p. 700), **DDS_↩ ReadCondition** (p. 695), and **DDS_TopicQuery** (p. 708) objects belonging to the contained **DDS_DataReader** (p. 618).

The operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if any of the contained entities is in a state where it cannot be deleted. This will occur, for example, if a contained **DDS_DataReader** (p. 618) cannot be deleted because the application has called a **FooDataReader_read** (p. 628) or **FooDataReader_take** (p. 629) operation and has not called the corresponding **FooDataReader_return_loan** (p. 649) operation to return the loaned samples.

Once **DDS_Subscriber_delete_contained_entities** (p. 588) completes successfully, the application may delete the **DDS_Subscriber** (p. 575).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

5.20.4.16 DDS_Subscriber_lookup_datareader()

```
DDS_DataReader * DDS_Subscriber_lookup_datareader (
             DDS_Subscriber * self,
            const char * topic_name )
```

Retrieves an existing **DDS_DataReader** (p. 618).

Use this operation on the built-in **DDS_Subscriber** (p. 575) (**Built-in Topics** (p. 164)) to access the built-in **DDS_Data↩ Reader** (p. 618) entities for the built-in topics.

The built-in **DDS_DataReader** (p. 618) is created when this operation is called on a built-in topic for the first time. The built-in **DDS_DataReader** (p. 618) is deleted automatically when the **DDS_DomainParticipant** (p. 76) is deleted.

To ensure that builtin **DDS_DataReader** (p. 618) entities receive all the discovery traffic, it is suggested that you lookup the builtin **DDS_DataReader** (p. 618) before the **DDS_DomainParticipant** (p. 76) is enabled. Looking up builtin **DDS_↩ DataReader** (p. 618) may implicitly register builtin transports due to creation of **DDS_DataReader** (p. 618) (see **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered). Therefore, if you are want to modify builtin transport properties, do so *before* using this operation.

Therefore the suggested sequence when looking up builtin DataReaders is:

- Create a disabled **DDS_DomainParticipant** (p. 76).
- (optional) Modify builtin transport properties
- Call **DDS_DomainParticipant_get_builtin_subscriber()** (p. 128).
- Call **DDS_Subscriber_lookup_datareader()** (p. 589).
- Call enable() on the DomainParticipant.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
topic_name	<<***in***>> *(p. 1015)* Name of the **DDS_TopicDescription** (p. 174) that the retrieved **DDS_DataReader** (p. 618) is attached to. Cannot be NULL.

Returns

A **DDS_DataReader** (p. 618) that belongs to the **DDS_Subscriber** (p. 575) attached to the **DDS_Topic↩ Description** (p. 174) with `topic_name`. If no such **DDS_DataReader** (p. 618) exists, this operation returns NULL.

The returned **DDS_DataReader** (p. 618) may be enabled or disabled.

If more than one **DDS_DataReader** (p. 618) is attached to the **DDS_Subscriber** (p. 575), this operation may return any one of them.

MT Safety:

UNSAFE. It is not safe to lookup a **DDS_DataReader** (p. 618) in one thread while another thread is simultaneously creating or destroying that **DDS_DataReader** (p. 618).

5.20.4.17 DDS_Subscriber_begin_access()

```
DDS_ReturnCode_t DDS_Subscriber_begin_access (
            DDS_Subscriber * self )
```

Indicates that the application is about to access the data samples in any of the **DDS_DataReader** (p. 618) objects attached to the **DDS_Subscriber** (p. 575).

If the **DDS_PresentationQosPolicy::access_scope** (p. 1897) of the **DDS_Subscriber** (p. 575) is **DDS_GROUP↩ _PRESENTATION_QOS** (p. 1307) or **DDS_HIGHEST_OFFERED_PRESENTATION_QOS** (p. 1307) and **DDS_↩ PresentationQosPolicy::ordered_access** (p. 1897) is **DDS_BOOLEAN_TRUE** (p. 1203), the application is required to use this operation to access the samples in order across DataWriters of the same group (**DDS_Publisher** (p. 446) with **DDS_PresentationQosPolicy::access_scope** (p. 1897) set to **DDS_GROUP_PRESENTATION_QOS** (p. 1307)).

In the above case, this operation must be called prior to calling any of the sample-accessing operations, **DDS_↩ Subscriber_get_datareaders** (p. 591) on the **DDS_Subscriber** (p. 575), and **FooDataReader_read** (p. 628), **Foo↩ DataReader_take** (p. 629), **FooDataReader_read_w_condition** (p. 633), and **FooDataReader_take_w_condition** (p. 635) on any **DDS_DataReader** (p. 618).

Once the application has finished accessing the data samples, it must call **DDS_Subscriber_end_access** (p. 591)

The application is not required to call **DDS_Subscriber_begin_access** (p. 590) / **DDS_Subscriber_end_access** (p. 591) to access the samples in order if the **PRESENTATION** (p. 1306) policy in the **DDS_Publisher** (p. 446) has **DDS↩ _PresentationQosPolicy::access_scope** (p. 1897) set to something other than **DDS_GROUP_PRESENTATION_↩ QOS** (p. 1307). In this case, calling **DDS_Subscriber_begin_access** (p. 590) / **DDS_Subscriber_end_access** (p. 591) is not considered an error and has no effect.

Calls to **DDS_Subscriber_begin_access** (p. 590) / **DDS_Subscriber_end_access** (p. 591) may be nested and must be balanced.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

Access to data samples (p. 570)

DDS_Subscriber_get_datareaders (p. 591)

PRESENTATION (p. 1306)

5.20.4.18 DDS_Subscriber_end_access()

```
DDS_ReturnCode_t DDS_Subscriber_end_access (
            DDS_Subscriber * self )
```

Indicates that the application has finished accessing the data samples in **DDS_DataReader** (p. 618) objects managed by the **DDS_Subscriber** (p. 575).

This operation must be used to close a corresponding begin_access().

This call must close a previous call to **DDS_Subscriber_begin_access()** (p. 590), otherwise the operation will fail with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.20.4.19 DDS_Subscriber_get_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_get_datareaders (
            DDS_Subscriber * self,
```

```
struct  DDS_DataReaderSeq * readers,
 DDS_SampleStateMask sample_states,
 DDS_ViewStateMask view_states,
 DDS_InstanceStateMask instance_states )
```

Allows the application to access the **DDS_DataReader** (p. 618) objects that contain samples with the specified `sample_states`, `view_states` and `instance_states`.

If the application is outside a begin_access()/end_access() block, or if the **DDS_PresentationQosPolicy::access_scope** (p. 1897) of the **DDS_Subscriber** (p. 575) is **DDS_INSTANCE_PRESENTATION_QOS** (p. 1307) or **DDS_TOPIC_PRESENTATION_QOS** (p. 1307), or if the **DDS_PresentationQosPolicy::ordered_access** (p. 1897) of the **DDS_Subscriber** (p. 575) is **DDS_BOOLEAN_FALSE** (p. 1203), the returned collection is a 'set' containing each **DDS_DataReader** (p. 618) at most once, in no specified order.

If the application is within a begin_access()/end_access() block, and the **PRESENTATION** (p. 1306) policy of the **DDS_Subscriber** (p. 575) is **DDS_GROUP_PRESENTATION_QOS** (p. 1307) or **DDS_HIGHEST_OFFERED_PRESENTATION_QOS** (p. 1307), and **DDS_PresentationQosPolicy::ordered_access** (p. 1897) in the **DDS_Subscriber** (p. 575) is **DDS_BOOLEAN_TRUE** (p. 1203), the returned collection is a 'list' of DataReaders where a DataReader may appear more than one time.

To retrieve the samples in the order they were published across DataWriters of the same group (**DDS_Publisher** (p. 446) configured with **DDS_GROUP_PRESENTATION_QOS** (p. 1307)), the application should read()/take() from each DataReader in the same order as it appears in the output sequence. The application will move to the next DataReader when the read()/take() operation fails with **DDS_RETCODE_NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
readers	<<***inout***>> *(p. 1015)* a **DDS_DataReaderSeq** (p. 1638) object where the set or list of readers will be returned. Cannot be NULL.
sample_states	<<***in***>> *(p. 1015)* the returned DataReader must contain samples that have one of these `sample_states`.
view_states	<<***in***>> *(p. 1015)* the returned DataReader must contain samples that have one of these `view_states`.
instance_states	<<***in***>> *(p. 1015)* the returned DataReader must contain samples that have one of these `instance_states`.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

DDS_Subscriber_end_access (p. 591)

PRESENTATION (p. 1306)

5.20.4.20 DDS_Subscriber_get_all_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_get_all_datareaders (
            DDS_Subscriber * self,
           struct  DDS_DataReaderSeq * readers )
```

Retrieve all the DataReaders created from this Subscriber.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
readers	<<***inout***>> *(p. 1015)* Sequence where the DataReaders will be added

Returns

One of the **Standard Return Codes** (p. 1223)

5.20.4.21 DDS_Subscriber_notify_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_notify_datareaders (
            DDS_Subscriber * self )
```

Invokes the operation **DDS_DataReaderListener::on_data_available()** (p. 1595) on the **DDS_DataReaderListener** (p. 1593) objects attached to contained **DDS_DataReader** (p. 618) entities with **DDS_DATA_AVAILABLE_STATUS** (p. 1232) that is considered changed as described in **Changes in read communication status** (p. 1227).

This operation is typically invoked from the **DDS_SubscriberListener::on_data_on_readers** (p. 2015) operation in the **DDS_SubscriberListener** (p. 2014). That way the **DDS_SubscriberListener** (p. 2014) can delegate to the **DDS_↩ DataReaderListener** (p. 1593) objects the handling of the data.

The operation will notify the data readers that have a `sample_state` of **DDS_NOT_READ_SAMPLE_STATE** (p. 712), `view_state` of **DDS_ANY_SAMPLE_STATE** (p. 712) and `instance_state` of **DDS_ANY_INSTANCE_STATE** (p. 716).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.20.4.22 DDS_Subscriber_get_participant()

```
DDS_DomainParticipant * DDS_Subscriber_get_participant (
            DDS_Subscriber * self )
```

Returns the **DDS_DomainParticipant** (p. 76) to which the **DDS_Subscriber** (p. 575) belongs.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

the **DDS_DomainParticipant** (p. 76) to which the **DDS_Subscriber** (p. 575) belongs.

5.20.4.23 DDS_Subscriber_copy_from_topic_qos()

```
DDS_ReturnCode_t DDS_Subscriber_copy_from_topic_qos (
             DDS_Subscriber * self,
            struct  DDS_DataReaderQos * datareader_qos,
            const struct  DDS_TopicQos * topic_qos )
```

Copies the policies in the **DDS_TopicQos** (p. 2048) to the corresponding policies in the **DDS_DataReaderQos** (p. 1611).

Copies the policies in the **DDS_TopicQos** (p. 2048) to the corresponding policies in the **DDS_DataReaderQos** (p. 1611) (replacing values in the **DDS_DataReaderQos** (p. 1611), if present).

This is a "convenience" operation most useful in combination with the operations **DDS_Subscriber_get_default_↩ datareader_qos** (p. 582) and **DDS_Topic_get_qos** (p. 198). The operation **DDS_Subscriber_copy_from_topic_qos** (p. 594) can be used to merge the **DDS_DataReader** (p. 618) default QoS policies with the corresponding ones on the **DDS_Topic** (p. 174). The resulting QoS can then be used to create a new **DDS_DataReader** (p. 618), or set its QoS.

This operation does not check the resulting **DDS_DataReaderQos** (p. 1611) for consistency. This is because the 'merged' **DDS_DataReaderQos** (p. 1611) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
datareader_qos	<<***inout***>> *(p. 1015)* **DDS_DataReaderQos** (p. 1611) to be filled-up. Cannot be NULL.
topic_qos	<<***in***>> *(p. 1015)* **DDS_TopicQos** (p. 2048) to be merged with **DDS_DataReaderQos** (p. 1611). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.20.4.24 DDS_Subscriber_set_qos()

```
DDS_ReturnCode_t DDS_Subscriber_set_qos (
            DDS_Subscriber * self,
           const struct  DDS_SubscriberQos * qos )
```

Sets the subscriber QoS.

This operation modifies the QoS of the **DDS_Subscriber** (p. 575).

The **DDS_SubscriberQos::group_data** (p. 2017), **DDS_SubscriberQos::partition** (p. 2016) and **DDS_Subscriber↩ Qos::entity_factory** (p. 2017) can be changed. The other policies are immutable.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**in**>> (p. 1015)* **DDS_SubscriberQos** (p. 2016) to be set to. Policies must be consistent. Immutable policies cannot be changed after **DDS_Subscriber** (p. 575) is enabled. The special value **DDS_SUBSCRIBER_QOS_DEFAULT** (p. 161) can be used to indicate that the QoS of the **DDS_Subscriber** (p. 575) should be changed to match the current default **DDS_SubscriberQos** (p. 2016) set in the **DDS_DomainParticipant** (p. 76). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

set_qos (abstract) (p. 1363)

Operations Allowed in Listener Callbacks (p. 1821)

5.20.4.25 DDS_Subscriber_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_qos_with_profile (
            DDS_Subscriber * self,
```

```
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(p. 1014)* Change the QoS of this subscriber using the input XML QoS profile.

This operation modifies the QoS of the **DDS_Subscriber** (p. 575).

The **DDS_SubscriberQos::group_data** (p. 2017), **DDS_SubscriberQos::partition** (p. 2016) and **DDS_Subscriber↩ Qos::entity_factory** (p. 2017) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Subscriber_set_default_library** (p. 598)).
profile_name	<<***in***>> *(p. 1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Subscriber_set_default_profile** (p. 597)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

See also

DDS_SubscriberQos (p. 2016) for rules on consistency among QoS

Operations Allowed in Listener Callbacks (p. 1821)

5.20.4.26 DDS_Subscriber_get_qos()

```
DDS_ReturnCode_t DDS_Subscriber_get_qos (
             DDS_Subscriber * self,
            struct  DDS_SubscriberQos * qos )
```

Gets the subscriber QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* **DDS_SubscriberQos** (p. 2016) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.20.4.27 DDS_Subscriber_set_default_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_profile (
            DDS_Subscriber * self,
           const char * library_name,
           const char * profile_name )
```

<<***extension***>> *(p. 1014)* Sets the default XML profile for a **DDS_Subscriber** (p. 575).

This function specifies the profile that will be used as the default the next time a default Subscriber profile is needed during a call to one of this Subscriber's operations. When calling a **DDS_Subscriber** (p. 575) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS_Subscriber** (p. 575) inherits the default from the **DDS_DomainParticipant** (p. 76) (see **DDS_DomainParticipant_set_default_profile** (p. 101)).

This function does not set the default QoS for **DDS_DataReader** (p. 618) objects created by this **DDS_Subscriber** (p. 575); for this functionality, use **DDS_Subscriber_set_default_datareader_qos_with_profile** (p. 583) (you may pass in NULL after having called set_default_profile()).

This function does not set the default QoS for newly created Subscribers; for this functionality, use **DDS_Domain↩ Participant_set_default_subscriber_qos_with_profile** (p. 94).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* The library name containing the profile.
profile_name	<<***in***>> *(p. 1015)* The profile name. If profile_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Subscriber_get_default_profile (p. 597)

DDS_Subscriber_get_default_profile_library (p. 598)

5.20.4.28 DDS_Subscriber_get_default_profile()

```
const char * DDS_Subscriber_get_default_profile (
        DDS_Subscriber * self )
```

<<***extension***>> *(p. 1014)* Gets the default XML profile associated with a **DDS_Subscriber** (p. 575).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default profile or null if the default profile was not set.

See also

DDS_Subscriber_set_default_profile (p. 597)

5.20.4.29 DDS_Subscriber_get_default_profile_library()

```
const char * DDS_Subscriber_get_default_profile_library (
        DDS_Subscriber * self )
```

<<***extension***>> *(p. 1014)* Gets the library where the default XML QoS profile is contained for a **DDS_Subscriber** (p. 575).

The default profile library is automatically set when **DDS_Subscriber_set_default_profile** (p. 597) is called.

This library can be different than the **DDS_Subscriber** (p. 575) default library (see **DDS_Subscriber_get_default_↩ library** (p. 599)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default profile library or null if the default profile was not set.

See also

DDS_Subscriber_set_default_profile (p. 597)

5.20.4.30 DDS_Subscriber_set_default_library()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_library (
              DDS_Subscriber * self,
             const char * library_name )
```

<<***extension***>> *(p. 1014)* Sets the default XML library for a **DDS_Subscriber** (p. 575).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this Subscriber's operations.

Any API requiring a library_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS_Subscriber** (p. 575) inherits the default from the **DDS_DomainParticipant** (p. 76) (see **DDS_DomainParticipant_set_default_library** (p. 100)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
library_name	<<***in***>> *(p. 1015)* Library name. If library_name is null any previous default is unset.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Subscriber_get_default_library (p. 599)

5.20.4.31 DDS_Subscriber_get_default_library()

```
const char * DDS_Subscriber_get_default_library (
              DDS_Subscriber * self )
```

<<***extension***>> *(p. 1014)* Gets the default XML library associated with a **DDS_Subscriber** (p. 575).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

The default library or null if the default library was not set.

See also

DDS_Subscriber_set_default_library (p. 598)

5.20.4.32 DDS_Subscriber_set_listener()

```
DDS_ReturnCode_t DDS_Subscriber_set_listener (
              DDS_Subscriber * self,
             const struct  DDS_SubscriberListener * l,
              DDS_StatusMask mask )
```

Sets the subscriber listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
l	<<***in***>> *(p. 1015)* **DDS_SubscriberListener** (p. 2014) to set to.
mask	<<***in***>> *(p. 1015)* **DDS_StatusMask** (p. 1228) associated with the **DDS_SubscriberListener** (p. 2014). The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.20.4.33 DDS_Subscriber_get_listener()

```
struct  DDS_SubscriberListener DDS_Subscriber_get_listener (
              DDS_Subscriber * self )
```

Get the subscriber listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_SubscriberListener (p. 2014) of the **DDS_Subscriber** (p. 575).

See also

DDS_Subscriber_get_listenerX (p. 601)

get_listener (abstract) (p. 1365)

5.20.4.34 DDS_Subscriber_get_listenerX()

```
DDS_ReturnCode_t DDS_Subscriber_get_listenerX (
            DDS_Subscriber * self,
           struct  DDS_SubscriberListener * listener )
```

<<***extension***>> *(*p. *1014)* Get the subscriber listener.

An alternative form of get_listener that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
listener	<<***inout***>> *(*p. *1015)* **DDS_SubscriberListener** (p. 2014) structure to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_Subscriber_get_listener (p. 600)

get_listener (abstract) (p. 1365)

5.20.4.35 DDS_Subscriber_lookup_datareader_by_name()

```
DDS_DataReader * DDS_Subscriber_lookup_datareader_by_name (
            DDS_Subscriber * self,
           const char * datareader_name )
```

<<***extension***>> *(*p. *1014)* Retrieves a **DDS_DataReader** (p. 618) contained within the **DDS_Subscriber** (p. 575) the **DDS_DataReader** (p. 618) entity name.

Every **DDS_DataReader** (p. 618) in the system has an entity name which is configured and stored in the <<***extension***>> *(p. 1014)* EntityName policy, **ENTITY_NAME** (p. 1292).

This operation retrieves the **DDS_DataReader** (p. 618) within the **DDS_Subscriber** (p. 575) whose name matches the one specified. If there are several **DDS_DataReader** (p. 618) with the same name within the **DDS_Subscriber** (p. 575), the operation returns the first matching occurrence.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
datareader_name	<<***in***>> *(*p. *1015)* Entity name of the **DDS_DataReader** (p. 618).

Returns

The first **DDS_DataReader** (p. 618) found with the specified name or NULL if it is not found.

See also

DDS_DomainParticipant_lookup_datareader_by_name (p. 157)

5.20.5 Variable Documentation

5.20.5.1 DDS_DATAREADER_QOS_PRINT_ALL

```
const struct DDS_DataReaderQos* DDS_DATAREADER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS_DataReaderQos_to_string_w_params** (p. 670) indicating that all of the QoS should be printed.

The **DDS_DataReaderQos_to_string_w_params** (p. 670) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS_↩ DATAREADER_QOS_PRINT_ALL** (p. 603) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS_↩ DATAREADER_QOS_PRINT_ALL** (p. 603) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **DDS_QosPrint↩ Format** (p. 1930) structure.

This value should only be used as the base parameter to the **DDS_DataReaderQos_to_string_w_params** (p. 670) API.

5.20.5.2 DDS_DATAREADER_QOS_DEFAULT

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT [extern]
```

Special value for creating data reader with default QoS.

When used in **DDS_Subscriber_create_datareader** (p. 584), this special value is used to indicate that the **DDS_↩ DataReader** (p. 618) should be created with the default **DDS_DataReader** (p. 618) QoS by means of the operation get_default_datareader_qos and using the resulting QoS to create the **DDS_DataReader** (p. 618).

When used in **DDS_Subscriber_set_default_datareader_qos** (p. 583), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS_Subscriber_set_default↩ _datareader_qos** (p. 583) operation had never been called.

When used in **DDS_DataReader_set_qos** (p. 688), this special value is used to indicate that the QoS of the **DDS_↩ DataReader** (p. 618) should be changed to match the current default QoS set in the **DDS_Subscriber** (p. 575) that the **DDS_DataReader** (p. 618) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataReader; for this purpose, use **DDS_DomainParticipant_get_default_datareader_qos** (p. 95).

See also

DDS_Subscriber_create_datareader (p. 584)

DDS_Subscriber_set_default_datareader_qos (p. 583)

DDS_DataReader_set_qos (p. 688)

5.20.5.3 DDS_DATAREADER_QOS_USE_TOPIC_QOS

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDS_DataReader** (p. 618) with a combination of the default **DDS_DataReaderQos** (p. 1611) and the **DDS_TopicQos** (p. 2048).

The use of this value is equivalent to the application obtaining the default **DDS_DataReaderQos** (p. 1611) and the **DDS_TopicQos** (p. 2048) (by means of the operation **DDS_Topic_get_qos** (p. 198)) and then combining these two QoS using the operation **DDS_Subscriber_copy_from_topic_qos** (p. 594) whereby any policy that is set on the **DDS_↩ TopicQos** (p. 2048) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDS_DataReader** (p. 618).

This value should only be used in **DDS_Subscriber_create_datareader** (p. 584).

- typedef void(∗ **DDS_DataReaderListener_SubscriptionMatchedCallback**) (void ∗listener_data, **DDS_DataReader** ∗reader, const struct **DDS_SubscriptionMatchedStatus** ∗status)

  Prototype of a ***DDS_DataReaderListener*** *(p. 1593) subscription_match function.*
- typedef void(∗ **DDS_DataReaderListener_SampleLostCallback**) (void ∗listener_data, **DDS_DataReader** ∗reader, const struct **DDS_SampleLostStatus** ∗status)

  Prototype of a ***DDS_DataReaderListener*** *(p. 1593) subscription_lost function.*

Enumerations

- enum **DDS_SampleLostStatusKind** {
  DDS_NOT_LOST = 0 ,
  DDS_LOST_BY_WRITER = 1 ,
  DDS_LOST_BY_INSTANCES_LIMIT = 2 ,
  DDS_LOST_BY_REMOTE_WRITERS_PER_INSTANCE_LIMIT = 3 ,
  DDS_LOST_BY_INCOMPLETE_COHERENT_SET = 4 ,
  DDS_LOST_BY_LARGE_COHERENT_SET = 5 ,
  DDS_LOST_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT = 6 ,
  DDS_LOST_BY_VIRTUAL_WRITERS_LIMIT = 7 ,
  DDS_LOST_BY_REMOTE_WRITERS_PER_SAMPLE_LIMIT = 8 ,
  DDS_LOST_BY_AVAILABILITY_WAITING_TIME = 9 ,
  DDS_LOST_BY_REMOTE_WRITER_SAMPLES_PER_VIRTUAL_QUEUE_LIMIT = 10 ,
  DDS_LOST_BY_OUT_OF_MEMORY = 11 ,
  DDS_LOST_BY_UNKNOWN_INSTANCE = 12 ,
  DDS_LOST_BY_DESERIALIZATION_FAILURE = 13 ,
  DDS_LOST_BY_DECODE_FAILURE = 14 ,
  DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT = 15 ,
  DDS_LOST_BY_SAMPLES_LIMIT = 16 }

  <<***extension***>> (p. *1014) Kinds of reasons why a sample was lost.*

- enum **DDS_SampleRejectedStatusKind** {
  DDS_NOT_REJECTED = 0 ,
  DDS_REJECTED_BY_INSTANCES_LIMIT = 1 ,
  DDS_REJECTED_BY_SAMPLES_LIMIT = 2 ,
  DDS_REJECTED_BY_SAMPLES_PER_INSTANCE_LIMIT = 3 ,
  DDS_REJECTED_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT = 6 ,
  DDS_REJECTED_BY_REMOTE_WRITER_SAMPLES_PER_VIRTUAL_QUEUE_LIMIT = 9 ,
  DDS_REJECTED_BY_DECODE_FAILURE = 10 }

  Kinds of reasons for rejecting a sample.

Functions

- **FooDataReader** ∗ **FooDataReader_narrow** (**DDS_DataReader** ∗reader)

  *Narrow the given **DDS_DataReader** (p. 618) pointer to a **FooDataReader** (p. 2119) pointer.*
- **DDS_DataReader** ∗ **FooDataReader_as_datareader** (**FooDataReader** ∗reader)

  *Widen the given **FooDataReader** (p. 2119) pointer to a **DDS_DataReader** (p. 618) pointer.*
- **DDS_ReturnCode_t** **FooDataReader_read** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data samples from the **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t** **FooDataReader_take** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data-samples from the **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t** **FooDataReader_read_w_condition** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, **DDS_ReadCondition** ∗condition)

  *Accesses via **FooDataReader_read** (p. 628) the samples that match the criteria specified in the **DDS_ReadCondition** (p. 695).*
- **DDS_ReturnCode_t** **FooDataReader_take_w_condition** (**FooDataReader** ∗self, **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, **DDS_ReadCondition** ∗condition)

  *Analogous to **FooDataReader_read_w_condition** (p. 633) except it accesses samples via the **FooDataReader_take** (p. 629) operation.*
- **DDS_ReturnCode_t** **FooDataReader_read_next_sample** (**FooDataReader** ∗self, struct **Foo** ∗received_data, struct **DDS_SampleInfo** ∗sample_info)

  *Copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t** **FooDataReader_take_next_sample** (**FooDataReader** ∗self, struct **Foo** ∗received_data, struct **DDS_SampleInfo** ∗sample_info)

  *Copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t** **FooDataReader_read_instance** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_InstanceHandle_t** ∗a_handle, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data samples from the **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t** **FooDataReader_take_instance** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_InstanceHandle_t** ∗a_handle, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data samples from the **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t FooDataReader_read_instance_w_condition** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_Instance↩ Handle_t** ∗a_handle, **DDS_ReadCondition** ∗condition)

  *<<**extension**>> (*p. *1014) Accesses via **FooDataReader_read_instance** (*p. *638) the samples that match the criteria specified in the **DDS_ReadCondition** (*p. *695).*
- **DDS_ReturnCode_t FooDataReader_take_instance_w_condition** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_Instance↩ Handle_t** ∗a_handle, **DDS_ReadCondition** ∗condition)

  *<<**extension**>> (*p. *1014) Accesses via **FooDataReader_take_instance** (*p. *639) the samples that match the criteria specified in the **DDS_ReadCondition** (*p. *695).*
- **DDS_ReturnCode_t FooDataReader_read_next_instance** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_Instance↩ Handle_t** ∗previous_handle, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data samples from the **DDS_DataReader** (*p. *618).*
- **DDS_ReturnCode_t FooDataReader_take_next_instance** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_Instance↩ Handle_t** ∗previous_handle, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Access a collection of data samples from the **DDS_DataReader** (*p. *618).*
- **DDS_ReturnCode_t FooDataReader_read_next_instance_w_condition** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_↩ InstanceHandle_t** ∗previous_handle, **DDS_ReadCondition** ∗condition)

  *Accesses via **FooDataReader_read_next_instance** (*p. *643) the samples that match the criteria specified in the **DDS↩ _ReadCondition** (*p. *695).*
- **DDS_ReturnCode_t FooDataReader_take_next_instance_w_condition** (**FooDataReader** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_samples, const **DDS_↩ InstanceHandle_t** ∗previous_handle, **DDS_ReadCondition** ∗condition)

  *Accesses via **FooDataReader_take_next_instance** (*p. *645) the samples that match the criteria specified in the **DDS_↩ ReadCondition** (*p. *695).*
- **DDS_ReturnCode_t FooDataReader_return_loan** (**FooDataReader** ∗self, **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq)

  *Indicates to the **DDS_DataReader** (*p. *618) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of read or take on the **DDS_DataReader** (*p. *618).*
- **DDS_ReturnCode_t FooDataReader_get_key_value** (**FooDataReader** ∗self, **Foo** ∗key_holder, const **DDS↩ _InstanceHandle_t** ∗handle)

  Retrieve the instance `key` that corresponds to an instance `handle`.
- **DDS_InstanceHandle_t FooDataReader_lookup_instance** (**FooDataReader** ∗self, const **Foo** ∗key_holder)

  Retrieves the instance `handle` that corresponds to an instance `key_holder`.
- **DDS_ReturnCode_t FooDataReader_is_data_consistent** (**FooDataReader** ∗self, **DDS_Boolean** ∗is_↩ data_consistent, const **Foo** ∗sample, const struct **DDS_SampleInfo** ∗sample_info)

  When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the DataWriter.
- **DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_initialize** (struct **DDS_RequestedDeadline↩ MissedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_copy** (struct **DDS_RequestedDeadline↩ MissedStatus** ∗self, const struct **DDS_RequestedDeadlineMissedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_finalize** (struct **DDS_RequestedDeadline↩ MissedStatus** ∗self)

  Free any dynamic memory allocated by status instances.

- **DDS_Boolean DDS_RequestedDeadlineMissedStatus_equals** (const struct **DDS_RequestedDeadline↩ MissedStatus** ∗left, const struct **DDS_RequestedDeadlineMissedStatus** ∗right)

  *Compares two **DDS_RequestedDeadlineMissedStatus** (*p. *1951) for equality.*
- **DDS_ReturnCode_t DDS_LivelinessChangedStatus_initialize** (struct **DDS_LivelinessChangedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_LivelinessChangedStatus_copy** (struct **DDS_LivelinessChangedStatus** ∗self, const struct **DDS_LivelinessChangedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_LivelinessChangedStatus_finalize** (struct **DDS_LivelinessChangedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_LivelinessChangedStatus_equals** (const struct **DDS_LivelinessChangedStatus** ∗left, const struct **DDS_LivelinessChangedStatus** ∗right)

  *Compares two **DDS_LivelinessChangedStatus** (*p. *1823) for equality.*
- **DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_initialize** (struct **DDS_Requested↩ IncompatibleQosStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_copy** (struct **DDS_RequestedIncompatible↩ QosStatus** ∗self, const struct **DDS_RequestedIncompatibleQosStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_finalize** (struct **DDS_Requested↩ IncompatibleQosStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_RequestedIncompatibleQosStatus_equals** (const struct **DDS_Requested↩ IncompatibleQosStatus** ∗left, const struct **DDS_RequestedIncompatibleQosStatus** ∗right)

  *Compares two **DDS_RequestedIncompatibleQosStatus** (*p. *1952) for equality.*
- **DDS_ReturnCode_t DDS_SampleLostStatus_initialize** (struct **DDS_SampleLostStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_SampleLostStatus_copy** (struct **DDS_SampleLostStatus** ∗self, const struct **DDS_SampleLostStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_SampleLostStatus_finalize** (struct **DDS_SampleLostStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_SampleLostStatus_equals** (const struct **DDS_SampleLostStatus** ∗left, const struct **DDS_SampleLostStatus** ∗right)

  *Compares two **DDS_SampleLostStatus** (*p. *2001) for equality.*
- **DDS_ReturnCode_t DDS_SampleRejectedStatus_initialize** (struct **DDS_SampleRejectedStatus** ∗self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_SampleRejectedStatus_copy** (struct **DDS_SampleRejectedStatus** ∗self, const struct **DDS_SampleRejectedStatus** ∗source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_SampleRejectedStatus_finalize** (struct **DDS_SampleRejectedStatus** ∗self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_SampleRejectedStatus_equals** (const struct **DDS_SampleRejectedStatus** ∗left, const struct **DDS_SampleRejectedStatus** ∗right)

  *Compares two **DDS_SampleRejectedStatus** (*p. *2002) for equality.*
- **DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_initialize** (struct **DDS_SubscriptionMatchedStatus** ∗self)

  Initializer for new status instances.

- **DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_copy** (struct **DDS_SubscriptionMatchedStatus** *self, const struct **DDS_SubscriptionMatchedStatus** *source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_finalize** (struct **DDS_SubscriptionMatchedStatus** *self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_SubscriptionMatchedStatus_equals** (const struct **DDS_SubscriptionMatchedStatus** *left, const struct **DDS_SubscriptionMatchedStatus** *right)

  *Compares two **DDS_SubscriptionMatchedStatus*** (p. *2028) for equality.*
- **DDS_ReturnCode_t DDS_DataReaderCacheStatus_initialize** (struct **DDS_DataReaderCacheStatus** *self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_DataReaderCacheStatus_copy** (struct **DDS_DataReaderCacheStatus** *self, const struct **DDS_DataReaderCacheStatus** *source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_DataReaderCacheStatus_finalize** (struct **DDS_DataReaderCacheStatus** *self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_DataReaderCacheStatus_equals** (const struct **DDS_DataReaderCacheStatus** *left, const struct **DDS_DataReaderCacheStatus** *right)

  *Compares two **DDS_DataReaderCacheStatus*** (p. *1586) for equality.*
- **DDS_ReturnCode_t DDS_DataReaderProtocolStatus_initialize** (struct **DDS_DataReaderProtocolStatus** *self)

  Initializer for new status instances.
- **DDS_ReturnCode_t DDS_DataReaderProtocolStatus_copy** (struct **DDS_DataReaderProtocolStatus** *self, const struct **DDS_DataReaderProtocolStatus** *source)

  Copy the contents of the given status into this status.
- **DDS_ReturnCode_t DDS_DataReaderProtocolStatus_finalize** (struct **DDS_DataReaderProtocolStatus** *self)

  Free any dynamic memory allocated by status instances.
- **DDS_Boolean DDS_DataReaderProtocolStatus_equals** (const struct **DDS_DataReaderProtocolStatus** *left, const struct **DDS_DataReaderProtocolStatus** *right)

  *Compares two **DDS_DataReaderProtocolStatus*** (p. *1600) for equality.*
- **DDS_Boolean DDS_DataReaderQos_equals** (const struct **DDS_DataReaderQos** *self, const struct **DDS_DataReaderQos** *other)

  *Compares two **DDS_DataReaderQos*** (p. *1611) for equality.*
- **DDS_ReturnCode_t DDS_DataReaderQos_print** (const struct **DDS_DataReaderQos** *self)

  *Prints this **DDS_DataReaderQos*** (p. *1611) to stdout.*
- **DDS_ReturnCode_t DDS_DataReaderQos_to_string** (const struct **DDS_DataReaderQos** *self, char *string, **DDS_UnsignedLong** *string_size)

  *Obtains a string representation of this **DDS_DataReaderQos*** (p. *1611).*
- **DDS_ReturnCode_t DDS_DataReaderQos_to_string_w_params** (const struct **DDS_DataReaderQos** *self, char *string, **DDS_UnsignedLong** *string_size, const struct **DDS_DataReaderQos** *base, const struct **DDS_QosPrintFormat** *format)

  *Obtains a string representation of this **DDS_DataReaderQos*** (p. *1611).*
- **DDS_ReturnCode_t DDS_DataReaderQos_initialize** (struct **DDS_DataReaderQos** *self)

  Initializer for new QoS instances.
- **DDS_ReturnCode_t DDS_DataReaderQos_copy** (struct **DDS_DataReaderQos** *self, const struct **DDS_DataReaderQos** *source)

  Copy the contents of the given QoS into this QoS.
- **DDS_ReturnCode_t DDS_DataReaderQos_finalize** (struct **DDS_DataReaderQos** *self)

*Free any dynamic memory allocated by the policies in this **DDS_DataReaderQos** (p. 1611).*

- **DDS_Entity** * **DDS_DataReader_as_entity** (**DDS_DataReader** *dataReader)

  *Accesses the **DDS_DataReader** (p. 618)'s supertype instance.*

- **DDS_ReadCondition** * **DDS_DataReader_create_readcondition** (**DDS_DataReader** *self, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states)

  *Creates a **DDS_ReadCondition** (p. 695).*

- **DDS_ReadCondition** * **DDS_DataReader_create_readcondition_w_params** (**DDS_DataReader** *self, const struct **DDS_ReadConditionParams** *params)

  *<<**extension**>> (p. 1014) Creates a **DDS_ReadCondition** (p. 695) with parameters.*

- **DDS_QueryCondition** * **DDS_DataReader_create_querycondition** (**DDS_DataReader** *self, **DDS_SampleStateMask** sample_states, **DDS_ViewStateMask** view_states, **DDS_InstanceStateMask** instance_states, const char *query_expression, const struct **DDS_StringSeq** *query_parameters)

  *Creates a **DDS_QueryCondition** (p. 700).*

- **DDS_QueryCondition** * **DDS_DataReader_create_querycondition_w_params** (**DDS_DataReader** *self, const struct **DDS_QueryConditionParams** *params)

  *<<**extension**>> (p. 1014) Creates a **DDS_QueryCondition** (p. 700) with parameters.*

- **DDS_ReturnCode_t** **DDS_DataReader_delete_readcondition** (**DDS_DataReader** *self, **DDS_ReadCondition** *condition)

  *Deletes a **DDS_ReadCondition** (p. 695) or **DDS_QueryCondition** (p. 700) attached to the **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t** **DDS_DataReader_delete_contained_entities** (**DDS_DataReader** *self)

  *Deletes all the entities that were created by means of the "create" operations on the **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t** **DDS_DataReader_wait_for_historical_data** (**DDS_DataReader** *self, const struct **DDS_Duration_t** *max_wait)

  *Waits until all "historical" data is received for **DDS_DataReader** (p. 618) entities that have a non-VOLATILE Durability Qos kind.*

- **DDS_ReturnCode_t** **DDS_DataReader_acknowledge_sample_w_response** (**DDS_DataReader** *self, const struct **DDS_SampleInfo** *sample_info, const struct **DDS_AckResponseData_t** *response_data)

  *<<**extension**>> (p. 1014) Acknowledges a single sample explicitly.*

- **DDS_ReturnCode_t** **DDS_DataReader_acknowledge_all_w_response** (**DDS_DataReader** *self, const struct **DDS_AckResponseData_t** *response_data)

  *<<**extension**>> (p. 1014) Acknowledges all previously accessed samples.*

- **DDS_ReturnCode_t** **DDS_DataReader_acknowledge_sample** (**DDS_DataReader** *self, const struct **DDS_SampleInfo** *sample_info)

  *<<**extension**>> (p. 1014) Acknowledges a single sample explicitly.*

- **DDS_ReturnCode_t** **DDS_DataReader_acknowledge_all** (**DDS_DataReader** *self)

  *<<**extension**>> (p. 1014) Acknowledges all previously accessed samples.*

- **DDS_ReturnCode_t** **DDS_DataReader_get_matched_publications** (**DDS_DataReader** *self, struct **DDS_InstanceHandleSeq** *publication_handles)

  *Retrieves the list of publications currently "associated" with this **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t** **DDS_DataReader_is_matched_publication_alive** (**DDS_DataReader** *self, **DDS_Boolean** *is_alive, const **DDS_InstanceHandle_t** *publication_handle)

  Check if a publication currently matched with a DataReader is alive.

- **DDS_ReturnCode_t** **DDS_DataReader_get_matched_publication_data** (**DDS_DataReader** *self, struct **DDS_PublicationBuiltinTopicData** *publication_data, const **DDS_InstanceHandle_t** *publication_handle)

  *Retrieves the information on a publication that is currently "associated" with the **DDS_DataReader** (p. 618).*

- **DDS_ReturnCode_t** **DDS_DataReader_get_matched_publication_participant_data** (**DDS_DataReader** *self, struct **DDS_ParticipantBuiltinTopicData** *participant_data, const **DDS_InstanceHandle_t** *publication_handle)

  *<<**extension**>> (p. 1014) Retrieves the information on the discovered **DDS_DomainParticipant** (p. 76) associated with the publication that is currently matching with the **DDS_DataReader** (p. 618).*

- **DDS_TopicDescription** * **DDS_DataReader_get_topicdescription** (**DDS_DataReader** *self)

  *Returns the **DDS_TopicDescription** (p. 174) associated with the **DDS_DataReader** (p. 618).*
- **DDS_Subscriber** * **DDS_DataReader_get_subscriber** (**DDS_DataReader** *self)

  *Returns the **DDS_Subscriber** (p. 575) to which the **DDS_DataReader** (p. 618) belongs.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_sample_rejected_status** (**DDS_DataReader** *self, struct **DDS_SampleRejectedStatus** *status)

  *Accesses the **DDS_SAMPLE_REJECTED_STATUS** (p. 1232) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_liveliness_changed_status** (**DDS_DataReader** *self, struct **DDS_LivelinessChangedStatus** *status)

  *Accesses the **DDS_LIVELINESS_CHANGED_STATUS** (p. 1233) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_requested_deadline_missed_status** (**DDS_DataReader** *self, struct **DDS_RequestedDeadlineMissedStatus** *status)

  *Accesses the **DDS_REQUESTED_DEADLINE_MISSED_STATUS** (p. 1231) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_requested_incompatible_qos_status** (**DDS_DataReader** *self, struct **DDS_RequestedIncompatibleQosStatus** *status)

  *Accesses the **DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS** (p. 1231) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_subscription_matched_status** (**DDS_DataReader** *self, struct **DDS_SubscriptionMatchedStatus** *status)

  *Accesses the **DDS_SUBSCRIPTION_MATCHED_STATUS** (p. 1234) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_sample_lost_status** (**DDS_DataReader** *self, struct **DDS_SampleLostStatus** *status)

  *Accesses the **DDS_SAMPLE_LOST_STATUS** (p. 1232) communication status.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_datareader_cache_status** (**DDS_DataReader** *self, struct **DDS_DataReaderCacheStatus** *status)

  *<<**extension**>> (p. 1014) Gets the datareader cache status for this reader.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_datareader_protocol_status** (**DDS_DataReader** *self, struct **DDS_DataReaderProtocolStatus** *status)

  *<<**extension**>> (p. 1014) Gets the datareader protocol status for this reader.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_matched_publication_datareader_protocol_status** (**DDS_DataReader** *self, struct **DDS_DataReaderProtocolStatus** *status, const **DDS_InstanceHandle_t** *publication_handle)

  *<<**extension**>> (p. 1014) Gets the datareader protocol status for this reader, per matched publication identified by the publication_handle.*
- **DDS_ReturnCode_t** **DDS_DataReader_set_qos** (**DDS_DataReader** *self, const struct **DDS_DataReaderQos** *qos)

  Sets the reader QoS.
- **DDS_ReturnCode_t** **DDS_DataReader_set_qos_with_profile** (**DDS_DataReader** *self, const char *library_name, const char *profile_name)

  *<<**extension**>> (p. 1014) Changes the QoS of this reader using the input XML QoS profile.*
- **DDS_ReturnCode_t** **DDS_DataReader_get_qos** (**DDS_DataReader** *self, struct **DDS_DataReaderQos** *qos)

  Gets the reader QoS.
- **DDS_ReturnCode_t** **DDS_DataReader_set_property** (**DDS_DataReader** *self, const char *property_name, const char *value, **DDS_Boolean** propagate)

  Set the value for a property that applies to a DataReader.
- **DDS_ReturnCode_t** **DDS_DataReader_set_listener** (**DDS_DataReader** *self, const struct **DDS_DataReaderListener** *l, **DDS_StatusMask** mask)

  Sets the reader listener.
- struct **DDS_DataReaderListener** **DDS_DataReader_get_listener** (**DDS_DataReader** *self)

Gets the reader listener.

- **DDS_ReturnCode_t DDS_DataReader_get_listenerX** (**DDS_DataReader** ∗self, struct **DDS_DataReader↩ Listener** ∗listener)

  *<<**extension**>> (p. 1014) Gets the reader listener.*

- **DDS_TopicQuery** ∗ **DDS_DataReader_create_topic_query** (**DDS_DataReader** ∗self, const struct **DDS_↩ TopicQuerySelection** ∗selection)

  *Creates a **DDS_TopicQuery** (p. 708).*

- **DDS_ReturnCode_t DDS_DataReader_delete_topic_query** (**DDS_DataReader** ∗self, **DDS_TopicQuery** ∗query)

  *Deletes a **DDS_TopicQuery** (p. 708).*

- **DDS_TopicQuery** ∗ **DDS_DataReader_lookup_topic_query** (**DDS_DataReader** ∗self, const struct **DDS_↩ GUID_t** ∗guid)

  *Retrieves an existing **DDS_TopicQuery** (p. 708).*

- **DDS_ReturnCode_t DDS_DataReader_take_discovery_snapshot** (**DDS_DataReader** ∗self, const char ∗file_name)

  Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

5.21.1 Detailed Description

DDS_DataReader (p. 618) entity and associated elements

5.21.2 Macro Definition Documentation

5.21.2.1 DDS_RequestedDeadlineMissedStatus_INITIALIZER

```
#define DDS_RequestedDeadlineMissedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_RequestedDeadlineMissedStatus** (p. 1951) instances that are stored on the stack should be initialized with this value before they are passed to any methods. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Inconsistent↩ TopicStatus_finalize** (p. 187) should be called to free the contained fields that use dynamic memory:

```
struct DDS_RequestedDeadlineMissedStatus myStatus = DDS_RequestedDeadlineMissedStatus_INITIALIZER;

...

DDS_RequestedDeadlineMissedStatus_finalize(&myStatus);
```

See also

DDS_RequestedDeadlineMissedStatus_initialize (p. 652)

DDS_RequestedDeadlineMissedStatus_finalize (p. 653)

5.21.2.2 DDS_LivelinessChangedStatus_INITIALIZER

```
#define DDS_LivelinessChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_LivelinessChangedStatus** (p. 1823) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Liveliness↩ ChangedStatus_finalize** (p. 655) should be called to free the contained fields that use dynamic memory:

```
struct DDS_LivelinessChangedStatus myStatus = DDS_LivelinessChangedStatus_INITIALIZER;

...

DDS_LivelinessChangedStatuss_finalize(&myStatus);
```

See also

DDS_LivelinessChangedStatus_initialize (p. 654)

DDS_LivelinessChangedStatus_finalize (p. 655)

5.21.2.3 DDS_RequestedIncompatibleQosStatus_INITIALIZER

```
#define DDS_RequestedIncompatibleQosStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_RequestedIncompatibleQosStatus** (p. 1952) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Requested↩ IncompatibleQosStatus_finalize** (p. 657) should be called to free the contained fields that use dynamic memory:

```
struct DDS_RequestedIncompatibleQosStatus myStatus = DDS_RequestedIncompatibleQosStatus_INITIALIZER;

...

DDS_RequestedIncompatibleQosStatus_finalize(&myStatus);
```

See also

DDS_RequestedIncompatibleQosStatus_initialize (p. 656)

DDS_RequestedIncompatibleQosStatus_finalize (p. 657)

5.21.2.4 DDS_SampleLostStatus_INITIALIZER

```
#define DDS_SampleLostStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_SampleLostStatus** (p. 2001) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_SampleLostStatus_finalize** (p. 659) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SampleLostStatus myStatus = DDS_SampleLostStatus_INITIALIZER;

...

DDS_SampleLostStatus_finalize(&myStatus);
```

See also

DDS_SampleLostStatus_initialize (p. 658)

DDS_SampleLostStatus_finalize (p. 659)

5.21.2.5 DDS_SampleRejectedStatus_INITIALIZER

```
#define DDS_SampleRejectedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_SampleRejectedStatus** (p. 2002) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_SampleRejectedStatus_finalize** (p. 661) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SampleRejectedStatus myStatus = DDS_SampleRejectedStatus_INITIALIZER;

...

DDS_SampleRejectedStatus_finalize(&myStatus);
```

See also

DDS_SampleRejectedStatus_initialize (p. 660)

DDS_SampleRejectedStatus_finalize (p. 661)

5.21.2.6 DDS_SubscriptionMatchedStatus_INITIALIZER

```
#define DDS_SubscriptionMatchedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_SubscriptionMatchedStatus** (p. 2028) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_Subscription↩ MatchedStatus_finalize** (p. 663) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SubscriptionMatchedStatus myStatus = DDS_SubscriptionMatchedStatus_INITIALIZER;

...

DDS_SubscriptionMatchedStatus_finalize(&myStatus);
```

See also

DDS_SubscriptionMatchedStatus_initialize (p. 662)

DDS_SubscriptionMatchedStatus_finalize (p. 663)

5.21.2.7 DDS_DataReaderCacheStatus_INITIALIZER

```
#define DDS_DataReaderCacheStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_DataReaderCacheStatus** (p. 1586) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_DataReader↩ CacheStatus_finalize** (p. 665) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataReaderCacheStatus myStatus = DDS_DataReaderCacheStatus_INITIALIZER;

DDS_DataReader_get_datareader_cache_status(myDataReader, &myStatus);

DDS_DataReaderCacheStatus_finalize(&myStatus);
```

See also

DDS_DataReader_get_datareader_cache_status (p. 686)

DDS_DataReaderCacheStatus_finalize (p. 665)

5.21.2.8 DDS_DataReaderProtocolStatus_INITIALIZER

```
#define DDS_DataReaderProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS_DataReaderProtocolStatus** (p. 1600) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS_DataReader↩ ProtocolStatus_finalize** (p. 667) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataReaderProtocolStatus myStatus = DDS_DataReaderProtocolStatus_INITIALIZER;

DDS_DataReader_get_datareader_protocol_status(myDataReader, &myStatus);

DDS_DataReaderProtocolStatus_finalize(&myStatus);
```

See also

DDS_DataReader_get_datareader_protocol_status (p. 687)

DDS_DataReaderProtocolStatus_finalize (p. 667)

5.21.2.9 DDS_DataReaderQos_INITIALIZER

```
#define DDS_DataReaderQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS_DataReaderQos** (p. 1611) instances that are stored in the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DataReaderQos myQos = DDS_DataReaderQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS_Subscriber_get_default_datareader_qos** (p. 582) or **DDS_DataReader_get_qos** (p. 689); one of those should be called subsequently to setting the QoS of a new or existing entity:

```
struct DDS_DataReaderQos myQos = DDS_DataReaderQos_INITIALIZER;

DDS_Subscriber_get_default_datareader_qos(mySub, &myQos);

DDS_DataReader_get_qos(myReader, &myQos);
```

See also

DDS_DataReaderQos_initialize (p. 670)

DDS_Subscriber_get_default_datareader_qos (p. 582)

DDS_DataReaderQos_finalize (p. 672)

5.21.2.10 DDS_DataReaderListener_INITIALIZER

```
#define DDS_DataReaderListener_INITIALIZER
```

Initializer for new **DDS_DataReaderListener** (p. 1593).

All the new instances allocated in the stack should be initialized to this value.No memory is allocated.

Examples

HelloWorld_subscriber.c.

5.21.3 Typedef Documentation

5.21.3.1 DDS_DataReader

```
typedef struct DDS_DataReaderImpl  DDS_DataReader
```

<<***interface***>> *(*p. *1015)* Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **DDS_Subscriber** (p. 575).

QoS:

DDS_DataReaderQos (p. 1611)

Status:

DDS_DATA_AVAILABLE_STATUS (p. 1232);
DDS_LIVELINESS_CHANGED_STATUS (p. 1233), **DDS_LivelinessChangedStatus** (p. 1823);
DDS_REQUESTED_DEADLINE_MISSED_STATUS (p. 1231), **DDS_RequestedDeadlineMissedStatus** (p. 1951);
DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS (p. 1231), **DDS_RequestedIncompatibleQosStatus** (p. 1952);
DDS_SAMPLE_LOST_STATUS (p. 1232), **DDS_SampleLostStatus** (p. 2001);
DDS_SAMPLE_REJECTED_STATUS (p. 1232), **DDS_SampleRejectedStatus** (p. 2002);
DDS_SUBSCRIPTION_MATCHED_STATUS (p. 1234), **DDS_SubscriptionMatchedStatus** (p. 2028);

Listener:

DDS_DataReaderListener (p. 1593)

A **DDS_DataReader** (p. 618) refers to exactly one **DDS_TopicDescription** (p. 174) (either a **DDS_Topic** (p. 174), a **DDS_ContentFilteredTopic** (p. 176) or a **DDS_MultiTopic** (p. 184)) that identifies the data to be read.

The subscription has a unique resulting type. The data-reader may give access to several instances of the resulting type, which can be distinguished from each other by their `key`.

DDS_DataReader (p. 618) is an abstract class. It must be specialised for each particular application data-type (see **USER_DATA** (p. 1345)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 2116) are specified in the generic type **FooDataReader** (p. 2119).

The following operations may be called even if the **DDS_DataReader** (p. 618) is not enabled. Other operations will fail with the value **DDS_RETCODE_NOT_ENABLED** (p. 1224) if called on a disabled **DDS_DataReader** (p. 618):

- The base-class operations **DDS_DataReader_set_qos** (p. 688), **DDS_DataReader_get_qos** (p. 689), **DDS_DataReader_set_listener** (p. 691), **DDS_DataReader_get_listener** (p. 691), **DDS_Entity_enable** (p. 1365), **DDS_Entity_get_statuscondition** (p. 1367), **DDS_Entity_get_status_changes** (p. 1367),
- **DDS_DataReader_get_liveliness_changed_status** (p. 683), **DDS_DataReader_get_requested_deadline_missed_status** (p. 683), **DDS_DataReader_get_requested_incompatible_qos_status** (p. 684), **DDS_DataReader_get_sample_lost_status** (p. 686), **DDS_DataReader_get_sample_rejected_status** (p. 683), **DDS_DataReader_get_subscription_matched_status** (p. 684)

All sample-accessing operations, namely: **FooDataReader_read** (p. 628), **FooDataReader_take** (p. 629), **FooDataReader_read_w_condition** (p. 633), and **FooDataReader_take_w_condition** (p. 635) may fail with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) as described in **DDS_Subscriber_begin_access** (p. 590).

Operations Allowed in Listener Callbacks (p. 1821)

Access to data samples (p. 570)

5.21.3.2 DDS_DataReaderListener_RequestedDeadlineMissedCallback

```
typedef void(* DDS_DataReaderListener_RequestedDeadlineMissedCallback) (void *listener_data, DDS_DataReader *reader, const struct DDS_RequestedDeadlineMissedStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) requested_deadline_missed function.

5.21.3.3 DDS_DataReaderListener_LivelinessChangedCallback

```
typedef void(* DDS_DataReaderListener_LivelinessChangedCallback) (void *listener_data, DDS_Data↩
Reader *reader, const struct DDS_LivelinessChangedStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) liveliness_changed function.

5.21.3.4 DDS_DataReaderListener_RequestedIncompatibleQosCallback

```
typedef void(* DDS_DataReaderListener_RequestedIncompatibleQosCallback) (void *listener_data,
DDS_DataReader *reader, const struct DDS_RequestedIncompatibleQosStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) requested_incompatible_QoS function.

5.21.3.5 DDS_DataReaderListener_SampleRejectedCallback

```
typedef void(* DDS_DataReaderListener_SampleRejectedCallback) (void *listener_data, DDS_Data↩
Reader *reader, const struct DDS_SampleRejectedStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) sample_rejected function.

5.21.3.6 DDS_DataReaderListener_DataAvailableCallback

```
typedef void(* DDS_DataReaderListener_DataAvailableCallback) (void *listener_data, DDS_DataReader
*reader)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) data_available function.

5.21.3.7 DDS_DataReaderListener_SubscriptionMatchedCallback

```
typedef void(* DDS_DataReaderListener_SubscriptionMatchedCallback) (void *listener_data, DDS_↩
DataReader *reader, const struct DDS_SubscriptionMatchedStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) subscription_match function.

5.21.3.8 DDS_DataReaderListener_SampleLostCallback

```
typedef void(* DDS_DataReaderListener_SampleLostCallback) (void *listener_data, DDS_DataReader
*reader, const struct DDS_SampleLostStatus *status)
```

Prototype of a **DDS_DataReaderListener** (p. 1593) subscription_lost function.

5.21.4 Enumeration Type Documentation

5.21.4.1 DDS_SampleLostStatusKind

```
enum DDS_SampleLostStatusKind
```

<<***extension***>> *(p. 1014)* Kinds of reasons why a sample was lost.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

Enumerator

DDS_NOT_LOST	The sample was not lost. This constant is an extension to the DDS standard.
DDS_LOST_BY_WRITER	A **DDS_DataWriter** (p. 488) removed the sample before being received by the **DDS_DataReader** (p. 618). This constant is an extension to the DDS standard.
DDS_LOST_BY_INSTANCES_LIMIT	A resource limit on the number of instances (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1953)
DDS_LOST_BY_REMOTE_WRITERS_PER_↩ INSTANCE_LIMIT	A resource limit on the number of remote writers for a single instance from which a **DDS_DataReader** (p. 618) may read (**DDS_DataReaderResourceLimitsQos**↩ **Policy::max_remote_writers_per_instance** (p. 1622)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)

Enumerator

DDS_LOST_BY_INCOMPLETE_COHERENT_SET	A sample is lost because it is part of an incomplete coherent set. An incomplete coherent set is a coherent set for which some of the samples are missing. For example, consider a **DDS_DataWriter** (p. 488) using **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295) with a depth of 1. The DataWriter publishes two samples of the same instance as part of a coherent set 'CS1'; the first sample of 'CS1' is replaced by a new sample before it can be successfully delivered to the **DDS_DataReader** (p. 618). In this case, the coherent set containing the two samples is considered incomplete. The new sample, by default, will not be provided to the application, and will be reported as LOST_BY_INCOMPLETE_COHERENT_SET. (You can change this default behavior by setting **DDS_PresentationQosPolicy::drop_incomplete_coherent_set** (p. 1898) to FALSE. If you do, the new sample will be provided to the application, but it will be marked as part of an incomplete coherent set in the **DDS_SampleInfo** (p. 1990) structure.) This constant is an extension to the DDS standard.
DDS_LOST_BY_LARGE_COHERENT_SET	A sample is lost because it is part of a large coherent set. A large coherent set is a coherent set that cannot fit all at once into the **DDS_DataReader** (p. 618) queue because resource limits are exceeded. For example, if **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956) on the DataReader is 10 and the coherent set has 15 samples for a given instance, the coherent set is a large coherent set that will be considered incomplete. The resource limits that can lead to large coherent sets are: **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956), **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956), **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956), and **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 1622). This constant is an extension to the DDS standard.

Enumerator

DDS_LOST_BY_SAMPLES_PER_REMOTE_↩ WRITER_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325): a resource limit on the number of samples from a given remote writer that a **DDS_DataReader** (p. 618) may store (**DDS_DataReaderResourceLimitsQosPolicy↩ ::max_samples_per_remote_writer** (p. 1622)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325), reaching **DDS_DataReaderResourceLimitsQos↩ Policy::max_samples_per_remote_writer** (p. 1622) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_SAMPLES_PER_REMOTE_↩ WRITER_LIMIT** (p. 626). This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_LOST_BY_VIRTUAL_WRITERS_LIMIT	A resource limit on the number of virtual writers from which a **DDS_DataReader** (p. 618) may read (**DDS_DataReaderResourceLimitsQosPolicy::max↩ _remote_virtual_writers** (p. 1630)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_LOST_BY_REMOTE_WRITERS_PER_↩ SAMPLE_LIMIT	A resource limit on the number of remote writers per sample (**DDS_DataReaderResourceLimitsQos↩ Policy::max_remote_writers_per_sample** (p. 1632)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_LOST_BY_AVAILABILITY_WAITING_TIME	**DDS_AvailabilityQosPolicy::max_data_availability↩ _waiting_time** (p. 1550) expired. This constant is an extension to the DDS standard. **See also** **DDS_AvailabilityQosPolicy** (p. 1547)

Enumerator

DDS_LOST_BY_REMOTE_WRITER_SAMPLES_↩ PER_VIRTUAL_QUEUE_LIMIT	A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a **DDS_DataReader** (p. 618) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_LOST_BY_OUT_OF_MEMORY	A sample was lost because there was not enough memory to store the sample. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_LOST_BY_UNKNOWN_INSTANCE	A received sample was lost because it doesn't contain enough information for the reader to know what instance it is associated with. This constant is an extension to the DDS standard.
DDS_LOST_BY_DESERIALIZATION_FAILURE	A received sample was lost because it could not be deserialized. This constant is an extension to the DDS standard.
DDS_LOST_BY_DECODE_FAILURE	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325): A received sample was lost because it could not be decoded. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325), the sample will be rejected, not lost, with reason **DDS_REJECTED_BY_DECODE_FAILURE** (p. 627). This constant is an extension to the DDS standard.
DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325): A resource limit on the number of samples per instance (**DDS_ResourceLimitsQosPolicy::max_samples_↩ per_instance** (p. 1956)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325), reaching **DDS_ResourceLimitsQosPolicy::max_↩ samples_per_instance** (p. 1956) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_↩ SAMPLES_PER_INSTANCE_LIMIT** (p. 626). This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1953)

Enumerator

DDS_LOST_BY_SAMPLES_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325): A resource limit on the number of samples (**DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325), reaching **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_SAMPLES_LIMIT** (p. 625). This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1953)

5.21.4.2 DDS_SampleRejectedStatusKind

enum **DDS_SampleRejectedStatusKind**

Kinds of reasons for rejecting a sample.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

Enumerator

DDS_NOT_REJECTED	The sample was not rejected.
DDS_REJECTED_BY_INSTANCES_LIMIT	Connext DDS does not reject samples based on instance limits (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956)), so this value will never be used. **See also** **DDS_LOST_BY_INSTANCES_LIMIT** (p. 621) This value is not currently used by our middleware, but has been kept because it is part of the DDS specification.
DDS_REJECTED_BY_SAMPLES_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325): A resource limit on the number of samples (**DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325), reaching **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_LIMIT** (p. 625). **See also**
Generated by Doxygen	**DDS_ResourceLimitsQosPolicy** (p. 1953)

Enumerator

DDS_REJECTED_BY_SAMPLES_PER_INSTANCE_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325): A resource limit on the number of samples per instance (**DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325), reaching **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1956) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT** (p. 624). **See also** ResourceLimitsQosPolicy
DDS_REJECTED_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325): a resource limit on the number of samples from a given remote writer that a **DDS_DataReader** (p. 618) may store (**DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 1622)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325), reaching **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 1622) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT** (p. 623). This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)
DDS_REJECTED_BY_REMOTE_WRITER_SAMPLES_PER_VIRTUAL_QUEUE_LIMIT	A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a **DDS_DataReader** (p. 618) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619)

Enumerator

DDS_REJECTED_BY_DECODE_FAILURE	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325): A received sample was rejected because it could not be decoded. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 1325), the sample will be lost, not rejected, with reason **DDS_LOST_BY_DECODE_FAILURE** (p. 624). If a sample was rejected for this reason and the **DDS_DataWriter** (p. 488) set **DDS_DataWriter↩ ProtocolQosPolicy::disable_inline_keyhash** (p. 1652) to **DDS_BOOLEAN_TRUE** (p. 1203), then **DDS_SampleRejectedStatus::last_instance_handle** (p. 2003) may not be correct if the sample was encrypted. This constant is an extension to the DDS standard.

5.21.5 Function Documentation

5.21.5.1 FooDataReader_narrow()

```
FooDataReader * FooDataReader_narrow (
            DDS_DataReader * reader )
```

Narrow the given **DDS_DataReader** (p. 618) pointer to a **FooDataReader** (p. 2119) pointer.

Parameters

reader	<<***in***>> *(p. 1015)* Cannot be NULL.

5.21.5.2 FooDataReader_as_datareader()

```
DDS_DataReader * FooDataReader_as_datareader (
            FooDataReader * reader )
```

Widen the given **FooDataReader** (p. 2119) pointer to a **DDS_DataReader** (p. 618) pointer.

Parameters

reader	<<***in***>> *(p. 1015)* Cannot be NULL.

5.21.5.3 FooDataReader_read()

```
DDS_ReturnCode_t FooDataReader_read (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS_DataReader** (p. 618).

This operation offers the same functionality and API as **FooDataReader_take** (p. 629) except that the samples returned remain in the **DDS_DataReader** (p. 618) such that they can be retrieved again by means of a read or take operation.

Please refer to the documentation of **FooDataReader_take()** (p. 629) for details on the number of samples returned within the received_data and info_seq as well as the order in which the samples appear in these sequences.

The act of reading a sample changes its `sample_state` to **DDS_READ_SAMPLE_STATE** (p. 712). If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the instance to be **DDS_NOT_NEW_VIEW_STATE** (p. 714). It will not affect the `instance_state` of the instance.

Once the application completes its use of the samples, it must 'return the loan' to the **DDS_DataReader** (p. 618) by calling the **FooDataReader_return_loan** (p. 649) operation.

Important: When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS_SampleInfo** (p. 1990) objects after the call to **FooDataReader_return_loan** (p. 649). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

Note: While the loan must be returned at some point, you do *not* have to do so before the next **FooDataReader_take** (p. 629) call. However, failure to return the loan will eventually deplete the **DDS_DataReader** (p. 618) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDS_DataReader** (p. 618) is specified by the **DDS_ResourceLimitsQosPolicy** (p. 1953) and the **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619).

Important: If the samples "returned" by this function are loaned from RTI Connext (see **FooDataReader_take** (p. 629) for more information on memory loaning), it is important that their contents not be changed. Because the memory in which the data is stored belongs to the middleware, any modifications made to the data will be seen the next time the same samples are read or taken; the samples will no longer reflect the state that was received from the network.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* User data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* A **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value
	DDS_LENGTH_UNLIMITED (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
sample_states	*<<**in**>> (p. 1015)* Data samples matching one of these `sample_states` are returned.
view_states	*<<**in**>> (p. 1015)* Data samples matching one of these `view_state` are returned.

Generated by Doxygen

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.21.5.4 FooDataReader_take()

```
DDS_ReturnCode_t FooDataReader_take (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data-samples from the **DDS_DataReader** (p. 618).

The operation will return the list of samples received by the **DDS_DataReader** (p. 618) since the last **FooDataReader_take** (p. 629) operation that matches the specified **DDS_SampleStateMask** (p. 711), **DDS_ViewStateMask** (p. 713) and **DDS_InstanceStateMask** (p. 715).

This operation may fail with **DDS_RETCODE_ERROR** (p. 1224) if the **DDS_DataReaderResourceLimitsQosPolicy::max_outstanding_reads** (p. 1625) limit has been exceeded.

The actual number of samples returned depends on the information that has been received by the middleware as well as the **DDS_HistoryQosPolicy** (p. 1808), **DDS_ResourceLimitsQosPolicy** (p. 1953), **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619) and the characteristics of the data-type that is associated with the **DDS_DataReader** (p. 618):

- In the case where the **DDS_HistoryQosPolicy::kind** (p. 1810) is **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295), the call will return at most **DDS_HistoryQosPolicy::depth** (p. 1810) samples for each ALIVE instance and (**DDS_HistoryQosPolicy::depth** (p. 1810) +1) samples for each NOT_ALIVE instance. The extra sample is an invalid sample (**DDS_SampleInfo::valid_data** (p. 1997) is FALSE) that is used to indicate the instance state transition from ALIVE to NOT_ALIVE.

- The maximum number of samples returned is limited by **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956), and by **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_read** (p. 1625).

- For multiple instances, the number of samples returned is additionally limited by the product (**DDS_Resource↩ LimitsQosPolicy::max_samples_per_instance** (p. 1956)
  - **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956))

- If **DDS_DataReaderResourceLimitsQosPolicy::max_infos** (p. 1623) is limited, the number of samples returned may also be limited if insufficient **DDS_SampleInfo** (p. 1990) resources are available.

If the read or take succeeds and the number of samples returned has been limited (by means of a maximum limit, as listed above, or insufficient **DDS_SampleInfo** (p. 1990) resources), the call will complete successfully and provide those samples the reader is able to return. The user may need to make additional calls, or return outstanding loaned buffers in the case of insufficient resources, in order to access remaining samples.

Note that in the case where the **DDS_Topic** (p. 174) associated with the **DDS_DataReader** (p. 618) is bound to a data-type that has no key definition, then there will be at most one instance in the **DDS_DataReader** (p. 618). So the per-sample limits will apply.

The act of *taking* a sample removes it from RTI Connext so it cannot be read or taken again. If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the sample's instance to **DDS_NOT_↩ NEW_VIEW_STATE** (p. 714). It will not affect the `instance_state` of the sample's instance.

After **FooDataReader_take** (p. 629) completes, `received_data` and `info_seq` will be of the same length and contain the received data.

If the sequences are empty (maximum size equals 0) when the **FooDataReader_take** (p. 629) is called, the samples returned in the `received_data` and the corresponding `info_seq` are 'loaned' to the application from buffers provided by the **DDS_DataReader** (p. 618). The application can use them as desired and has guaranteed exclusive access to them.

Once the application completes its use of the samples it must 'return the loan' to the **DDS_DataReader** (p. 618) by calling the **FooDataReader_return_loan** (p. 649) operation.

Important: When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS_SampleInfo** (p. 1990) objects after the call to **FooDataReader_return_loan** (p. 649). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

Note: While you must call **FooDataReader_return_loan** (p. 649) at some point, you do *not* have to do so before the next **FooDataReader_take** (p. 629) call. However, failure to return the loan will eventually deplete the **DDS_DataReader** (p. 618) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDS_DataReader** (p. 618) is specified by the **DDS_ResourceLimitsQosPolicy** (p. 1953) and the **DDS_DataReaderResourceLimitsQosPolicy** (p. 1619).

If the sequences are not empty (maximum size not equal to 0 and length not equal to 0) when **FooDataReader_take** (p. 629) is called, samples are copied to received_data and info_seq. The application will not need to call **FooData↩ Reader_return_loan** (p. 649).

The order of the samples returned to the caller depends on the **DDS_PresentationQosPolicy** (p. 1894).

- If **DDS_PresentationQosPolicy::access_scope** (p. 1897) is **DDS_INSTANCE_PRESENTATION_QOS** (p. 1307), the returned collection is a list where samples belonging to the same data instance are consecutive.

- If **DDS_PresentationQosPolicy::access_scope** (p. 1897) is **DDS_TOPIC_PRESENTATION_QOS** (p. 1307) and **DDS_PresentationQosPolicy::ordered_access** (p. 1897) is set to **DDS_BOOLEAN_FALSE** (p. 1203), then the returned collection is a list where samples belonging to the same data instance are consecutive.

- If **DDS_PresentationQosPolicy::access_scope** (p. 1897) is **DDS_TOPIC_PRESENTATION_QOS** (p. 1307) and **DDS_PresentationQosPolicy::ordered_access** (p. 1897) is set to **DDS_BOOLEAN_TRUE** (p. 1203), then the returned collection is a list where the relative order of samples as they were written by a DataWriter is preserved also across different instances. In other words, changes made by a single DataWriter are made available to subscribers in the same order in which they occur. Samples belonging to the same instance may or may not be consecutive. This is because, to preserve order within a single DataWriter, it may be necessary to mix samples from different instances.

- If **DDS_PresentationQosPolicy::access_scope** (p. 1897) is **DDS_GROUP_PRESENTATION_QOS** (p. 1307) and **DDS_PresentationQosPolicy::ordered_access** (p. 1897) is set to **DDS_BOOLEAN_FALSE** (p. 1203), then the returned collection is a list where samples belonging to the same data instance are consecutive.

- If **DDS_PresentationQosPolicy::access_scope** (p. 1897) is **DDS_GROUP_PRESENTATION_QOS** (p. 1307) and **DDS_PresentationQosPolicy::ordered_access** (p. 1897) is set to **DDS_BOOLEAN_TRUE** (p. 1203), then changes made to instances by a set of DataWriters attached to a common Publisher are made available in the order in which they were written. For this to happen, the application must take the samples using the Subscriber's **DDS_Subscriber_begin_access** (p. 590) and **DDS_Subscriber_end_access** (p. 591) operations.

See the "Ordered Access" section in the "PRESENTATION QosPolicy" section of the Core Libraries User's Manual for more information.

In all of the above cases, the relative order between the samples of one instance is consistent with the **DESTINATION_ORDER** (p. 1275) policy:

- If **DDS_DestinationOrderQosPolicy::kind** (p. 1690) is **DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS** (p. 1276), samples belonging to the same instances will appear in the relative order in which there were received (FIFO, earlier samples ahead of the later samples).

- If **DDS_DestinationOrderQosPolicy::kind** (p. 1690) is **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 1276), samples belonging to the same instances will appear in the relative order implied by the `source_timestamp` (FIFO, smaller values of `source_timestamp` ahead of the larger values).

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

In addition to the collection of samples, the read and take operations also use a collection of **DDS_SampleInfo** (p. 1990) structures.

The initial (input) properties of the `received_data` and `info_seq` collections will determine the precise behavior of the read or take operation. For the purposes of this description, the collections are modeled as having these properties:

- whether the collection container owns the memory of the elements within (`owns`, see **FooSeq_has_ownership** (p. 1524))
- the current-length (`len`, see **FooSeq_get_length** (p. 1515))

- the maximum length (max_len, see **FooSeq_get_maximum** (p. 1514))

The initial values of the owns, len and max_len properties for the received_data and info_seq collections govern the behavior of the read and take operations as specified by the following rules:

1. The values of owns, len and max_len properties for the two collections must be identical. Otherwise read/take will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).
2. On successful output, the values of owns, len and max_len will be the same for both collections.
3. If the initial max_len==0, then the received_data and info_seq collections will be filled with elements that are loaned by the **DDS_DataReader** (p. 618). On output, owns will be FALSE, len will be set to the number of values returned, and max_len will be set to a value verifying max_len >= len. The use of this variant allows for Zero Copy access to the data and the application will need to return the loan to the **DDS_DataWriter** (p. 488) using **FooDataReader_return_loan** (p. 649).
4. If the initial max_len>0 and owns==FALSE, then the read or take operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). This avoids the potential hard-to-detect memory leaks caused by an application forgetting to return the loan.
5. If initial max_len>0 and owns==TRUE, then the read or take operation will copy the received_data values and **DDS_SampleInfo** (p. 1990) values into the elements already inside the collections. On output, owns will be TRUE, len will be set to the number of values copied and max_len will remain unchanged. The use of this variant forces a copy but the application can control where the copy is placed and the application will not need to return the loan. The number of samples copied depends on the relative values of max_len and max_samples:
   - If max_samples == LENGTH_UNLIMITED, then at most max_len values will be copied. The use of this variant lets the application limit the number of samples returned to what the sequence can accommodate.
   - If max_samples <= max_len, then at most max_samples values will be copied. The use of this variant lets the application limit the number of samples returned to fewer that what the sequence can accommodate.
   - If max_samples > max_len, then the read or take operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224). This avoids the potential confusion where the application expects to be able to access up to max_samples, but that number can never be returned, even if they are available in the **DDS_DataReader** (p. 618), because the output sequence cannot accommodate them.

As described above, upon completion, the received_data and info_seq collections may contain elements loaned from the **DDS_DataReader** (p. 618). If this is the case, the application will need to use **FooDataReader_return_loan** (p. 649) to return the loan once it is no longer using the received_data in the collection. When **FooDataReader_return_loan** (p. 649) completes, the collection will have owns=FALSE and max_len=0. The application can determine whether it is necessary to return the loan or not based on how the state of the collections when the read/take operation was called or by accessing the owns property. However, in many cases it may be simpler to always call **FooDataReader_return_loan** (p. 649), as this operation is harmless (i.e., it leaves all elements unchanged) if the collection does not have a loan. To avoid potential memory leaks, the implementation of the **Foo** (p. 2116) and **DDS_SampleInfo** (p. 1990) collections should disallow changing the length of a collection for which owns==FALSE. Furthermore, deleting a collection for which owns==FALSE should be considered an error.

On output, the collection of **Foo** (p. 2116) values and the collection of **DDS_SampleInfo** (p. 1990) structures are of the same length and are in a one-to-one correspondence. Each **DDS_SampleInfo** (p. 1990) provides information, such as the source_timestamp, the sample_state, view_state, and instance_state, etc., about the corresponding sample. Some elements in the returned collection may not have valid data. If the instance_state in the **DDS_SampleInfo** (p. 1990)

is **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) or **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_↩ STATE** (p. 716), then the last sample for that instance in the collection (that is, the one whose **DDS_SampleInfo** (p. 1990) has sample_rank==0) does not contain valid data.

Samples that contain no data do not count towards the limits imposed by the **DDS_ResourceLimitsQosPolicy** (p. 1953). The act of reading/taking a sample sets its sample_state to **DDS_READ_SAMPLE_STATE** (p. 712).

If the sample belongs to the most recent generation of the instance, it will also set the view_state of the instance to **DDS_NOT_NEW_VIEW_STATE** (p. 714). It will not affect the instance_state of the instance.

This operation must be provided on the specialized class that is generated for the particular application data-type that is being read (**Foo** (p. 2116)).

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the operations fails with **DDS_RETCODE↩ _NO_DATA** (p. 1224). For an example on how `take` can be used, please refer to the **Access received data via a reader** (p. 989) "receive example".

Parameters

received_data	<<***inout***>> *(p. 1015)* User data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
self	<<***in***>> *(p. 1015)* Cannot be NULL.
info_seq	<<***inout***>> *(p. 1015)* A **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	<<***in***>> *(p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described above.
sample_states	<<***in***>> *(p. 1015)* Data samples matching one of these `sample_states` are returned.
view_states	<<***in***>> *(p. 1015)* Data samples matching one of these `view_state` are returned.
instance_states	<<***in***>> *(p. 1015)* Data samples matching one of these `instance_state` are returned.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS↩ _RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

FooDataReader_read (p. 628)

FooDataReader_read_w_condition (p. 633), **FooDataReader_take_w_condition** (p. 635)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.5 FooDataReader_read_w_condition()

```
DDS_ReturnCode_t FooDataReader_read_w_condition (
              FooDataReader * self,
             struct  FooSeq * received_data,
             struct  DDS_SampleInfoSeq * info_seq,
              DDS_Long max_samples,
              DDS_ReadCondition * condition )
```

Accesses via **FooDataReader_read** (p. 628) the samples that match the criteria specified in the **DDS_ReadCondition** (p. 695).

This operation is especially useful in combination with **DDS_QueryCondition** (p. 700) to filter data samples based on the content.

The specified **DDS_ReadCondition** (p. 695) must be attached to the **DDS_DataReader** (p. 618); otherwise the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

In case the **DDS_ReadCondition** (p. 695) is a plain **DDS_ReadCondition** (p. 695) and not the specialized **DDS_QueryCondition** (p. 700), the operation is equivalent to calling **FooDataReader_read** (p. 628) and passing as `sample_states`, `view_states` and `instance_states` the value of the corresponding attributes in the `read_condition`. Using this operation, the application can avoid repeating the same parameters specified when creating the **DDS_ReadCondition** (p. 695).

The samples are accessed with the same semantics as **FooDataReader_read** (p. 628).

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the operation will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
condition	*<<**in**>> (p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.6 FooDataReader_take_w_condition()

```
DDS_ReturnCode_t FooDataReader_take_w_condition (
              FooDataReader * self,
              FooSeq * received_data,
             struct  DDS_SampleInfoSeq * info_seq,
              DDS_Long max_samples,
              DDS_ReadCondition * condition )
```

Analogous to **FooDataReader_read_w_condition** (p. 633) except it accesses samples via the **FooDataReader_take** (p. 629) operation.

This operation is analogous to **FooDataReader_read_w_condition** (p. 633) except that it accesses samples via the **FooDataReader_take** (p. 629) operation.

The specified **DDS_ReadCondition** (p. 695) must be attached to the **DDS_DataReader** (p. 618); otherwise the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

The samples are accessed with the same semantics as **FooDataReader_take** (p. 629).

This operation is especially useful in combination with **DDS_QueryCondition** (p. 700) to filter data samples based on the content.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
condition	*<<**in**>> (p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_read_w_condition (p. 633), **FooDataReader_read** (p. 628)

FooDataReader_take (p. 629)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.7 FooDataReader_read_next_sample()

```
DDS_ReturnCode_t FooDataReader_read_next_sample (
             FooDataReader * self,
            struct  Foo * received_data,
            struct  DDS_SampleInfo * sample_info )
```

Copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618).

This operation copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618). This operation also copies the corresponding **DDS_SampleInfo** (p. 1990). The implied order among the samples stored in the **DDS_DataReader** (p. 618) is the same as for the **FooDataReader_read** (p. 628) operation.

The **FooDataReader_read_next_sample** (p. 636) operation is semantically equivalent to the **FooDataReader_read** (p. 628) operation, where the input data sequences has max_len=1, the sample_states=NOT_READ, the view_states=ANY_VIEW_STATE, and the instance_states=ANY_INSTANCE_STATE.

The **FooDataReader_read_next_sample** (p. 636) operation provides a simplified API to 'read' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDS_DataReader** (p. 618), the operation will fail with **DDS_RETCODE_NO_DATA** (p. 1224) and nothing is copied.

Note

Calling **FooDataReader_read_next_sample** (p. 636) from the **DDS_DataReaderListener::on_data_available()** (p. 1595) callback reads only one sample of potentially many samples in the reader queue, because **DDS_DataReaderListener::on_data_available()** (p. 1595) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader_read_next_sample** (p. 636) in a loop within the on_data_available callback until **FooDataReader_read_next_sample** (p. 636) returns **DDS_RETCODE_NO_DATA** (p. 1224) . This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use **FooDataReader_read** (p. 628) rather than **FooDataReader_read_next_sample** (p. 636) in order to read more than one sample at a time.)

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **Foo** (p. 2116) object where the next received data sample will be returned. The received_data must have been fully allocated. Otherwise, this operation may fail. Must be a valid non-NULL **Foo** (p. 2116). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
sample_info	*<<**inout**>> (p. 1015)* a **DDS_SampleInfo** (p. 1990) object where the next received sample info

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT↩ _ENABLED** (p. 1224).

See also

FooDataReader_read (p. 628)

5.21.5.8 FooDataReader_take_next_sample()

```
DDS_ReturnCode_t FooDataReader_take_next_sample (
             FooDataReader * self,
            struct  Foo * received_data,
            struct  DDS_SampleInfo * sample_info )
```

Copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618).

This operation copies the next not-previously-accessed data value from the **DDS_DataReader** (p. 618) and 'removes' it from the **DDS_DataReader** (p. 618) so that it is no longer accessible. This operation also copies the corresponding **DDS_SampleInfo** (p. 1990). This operation is analogous to the **FooDataReader_read_next_sample** (p. 636) except for the fact that the sample is removed from the **DDS_DataReader** (p. 618).

The **FooDataReader_take_next_sample** (p. 637) operation is semantically equivalent to the **FooDataReader_take** (p. 629) operation, where the input data sequences has max_len=1, the sample_states=NOT_READ, the view_↩ states=ANY_VIEW_STATE, and the instance_states=ANY_INSTANCE_STATE.

The **FooDataReader_take_next_sample** (p. 637) operation provides a simplified API to 'take' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDS_DataReader** (p. 618), the operation will fail with **DDS_RETCODE_NO_DATA** (p. 1224) and nothing is copied.

Note

Calling **FooDataReader_take_next_sample** (p. 637) from the **DDS_DataReaderListener::on_data_available()** (p. 1595) callback retrieves only one sample of potentially many samples in the reader queue, because **DDS↩ _DataReaderListener::on_data_available()** (p. 1595) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader_take_next_sample** (p. 637) in a loop within the on_data_available callback until **FooDataReader_take_next_sample** (p. 637) returns **DDS_RETCODE_NO↩ _DATA** (p. 1224) . This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use the **FooDataReader_take** (p. 629) rather than **FooDataReader_take_next_sample** (p. 637) in order to take more than one sample at a time.)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
received_data	<<***inout***>> *(p. 1015)* user data type-specific **Foo** (p. 2116) object where the next received data sample will be returned. The received_data must have been fully allocated. Otherwise, this operation may fail. Must be a valid non-NULL **Foo** (p. 2116). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
sample_info	<<***inout***>> *(p. 1015)* a **DDS_SampleInfo** (p. 1990) object where the next received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfo** (p. 1990). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.

Returns

One of the **Standard Return Codes** (p. 1223),

DDS_RETCODE_NO_DATA (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_take (p. 629)

5.21.5.9 FooDataReader_read_instance()

```
DDS_ReturnCode_t FooDataReader_read_instance (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * a_handle,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS_DataReader** (p. 618).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618). The behavior is identical to **FooDataReader_read** (p. 628), except that all samples returned belong to the single specified instance whose handle is `a_handle`.

Upon successful completion, the data collection will contain samples all belonging to the same instance. The corresponding **DDS_SampleInfo** (p. 1990) verifies **DDS_SampleInfo::instance_handle** (p. 1995) == `a_handle`.

The **FooDataReader_read_instance** (p. 638) operation is semantically equivalent to the **FooDataReader_read** (p. 628) operation, except in building the collection, the **DDS_DataReader** (p. 618) will check that the sample belongs to the specified instance and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader_read_instance** (p. 638) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_read_instance** (p. 638) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

This operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the **DDS_InstanceHandle_t** (p. 213) `a_handle` does not correspond to an existing data-object known to the **DDS_DataReader** (p. 618).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
a_handle	*<<**in**>> (p. 1015)* The specified instance to return samples for. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the `handle` does not correspond to an existing data-object known to the **DDS_DataReader** (p. 618).
sample_states	*<<**in**>> (p. 1015)* data samples matching ones of these `sample_states` are returned.
view_states	*<<**in**>> (p. 1015)* data samples matching ones of these `view_state` are returned.
instance_states	*<<**in**>> (p. 1015)* data samples matching ones of these `instance_state` are returned.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.10 FooDataReader_take_instance()

```
DDS_ReturnCode_t FooDataReader_take_instance (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * a_handle,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS_DataReader** (p. 618).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618). The behavior is identical to **FooDataReader_take** (p. 629), except for that all samples returned belong to the single specified instance whose handle is `a_handle`.

The semantics are the same for the **FooDataReader_take** (p. 629) operation, except in building the collection, the **DDS_DataReader** (p. 618) will check that the sample belongs to the specified instance, and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader_take_instance** (p. 639) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_take_instance** (p. 639) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function fails with **DDS_RETCODE_NO_DATA** (p. 1224).

This operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the **DDS_InstanceHandle_t** (p. 213) `a_handle` does not correspond to an existing data-object known to the **DDS_DataReader** (p. 618).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
a_handle	*<<**in**>> (p. 1015)* The specified instance to return samples for. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL. The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the `handle` does not correspond to an existing data-object known to the **DDS_DataReader** (p. 618).
sample_states	*<<**in**>> (p. 1015)* data samples matching ones of these `sample_states` are returned.
view_states	*<<**in**>> (p. 1015)* data samples matching ones of these `view_state` are returned.
instance_states	*<<**in**>> (p. 1015)* data samples matching ones of these `instance_state` are returned.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS_RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.21.5.11 FooDataReader_read_instance_w_condition()

```
DDS_ReturnCode_t FooDataReader_read_instance_w_condition (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * a_handle,
             DDS_ReadCondition * condition )
```

<<***extension***>> *(p. 1014)* Accesses via **FooDataReader_read_instance** (p. 638) the samples that match the criteria specified in the **DDS_ReadCondition** (p. 695).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618). The behavior is identical to **FooDataReader_read_instance** (p. 638), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is `a_handle`, and for which the specified **DDS_ReadCondition** (p. 695) evaluates to TRUE.

The behavior of the **FooDataReader_read_instance_w_condition** (p. 641) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_read_instance_w_condition** (p. 641) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
received_data	<<***inout***>> *(p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	<<***inout***>> *(p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	<<***in***>> *(p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
a_handle	<<***in***>> *(p. 1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
condition	<<***in***>> *(p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) **DDS_↩ RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.12 FooDataReader_take_instance_w_condition()

```
DDS_ReturnCode_t FooDataReader_take_instance_w_condition (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * a_handle,
             DDS_ReadCondition * condition )
```

<<***extension***>> *(*p. *1014)* Accesses via **FooDataReader_take_instance** (p. 639) the samples that match the criteria specified in the **DDS_ReadCondition** (p. 695).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618) and 'removes' them from the **DDS_DataReader** (p. 618). The behavior is identical to **FooDataReader_take_instance** (p. 639), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is `a_handle`, and for which the specified **DDS_ReadCondition** (p. 695) evaluates to TRUE.

The operation has the same behavior as **FooDataReader_read_instance_w_condition** (p. 641), except that the samples are 'taken' from the **DDS_DataReader** (p. 618) such that they are no longer accessible via subsequent 'read' or 'take' operations.

The behavior of the **FooDataReader_take_instance_w_condition** (p. 642) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_take_instance_w_condition** (p. 642) operation may 'loan' elements to the output collections, which must then be returned by means of **FooData↩ Reader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE↩ _NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Parameters

received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
a_handle	*<<**in**>> (p. 1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
condition	*<<**in**>> (p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), or **DDS_RETCODE_NO_DATA** (p. 1224), **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_take_next_instance (p. 645)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.13 FooDataReader_read_next_instance()

```
DDS_ReturnCode_t FooDataReader_read_next_instance (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * previous_handle,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS_DataReader** (p. 618).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618) where all the samples belong to a single instance. The behavior is similar to **FooDataReader_read_instance** (p. 638), except that the actual instance is not directly specified. Rather, the samples will all belong to the 'next' instance with `instance_handle` 'greater' than the specified 'previous_handle' that has available samples.

This operation implies the existence of a total order 'greater-than' relationship between the instance handles. The specifics of this relationship are not all important and are implementation specific. The important thing is that, according to the middleware, all instances are ordered relative to each other. This ordering is between the instance handles; It should not depend on the state of the instance (e.g. whether it has data or not) and must be defined even for instance handles that do not correspond to instances currently managed by the **DDS_DataReader** (p. 618). For the purposes of the ordering, it should be 'as if' each instance handle was represented as unique integer.

The behavior of **FooDataReader_read_next_instance** (p. 643) is 'as if' the **DDS_DataReader** (p. 618) invoked **Foo↩ DataReader_read_instance** (p. 638), passing the smallest instance_handle among all the ones that: (a) are greater than `previous_handle`, and (b) have available samples (i.e. samples that meet the constraints imposed by the specified states).

The special value **DDS_HANDLE_NIL** (p. 227) is guaranteed to be 'less than' any valid `instance_handle`. So the use of the parameter value `previous_handle` == **DDS_HANDLE_NIL** (p. 227) will return the samples for the instance which has the smallest `instance_handle` among all the instances that contain available samples.

Note

The operation **FooDataReader_read_next_instance** (p. 643) is intended to be used in an application-driven iteration, where the application starts by passing `previous_handle` == **DDS_HANDLE_NIL** (p. 227), examines the samples returned, and then uses the `instance_handle` returned in the **DDS_SampleInfo** (p. 1990) as the value of the `previous_handle` argument to the next call to **FooDataReader_read_next_instance** (p. 643). The iteration continues until **FooDataReader_read_next_instance** (p. 643) fails with **DDS_RETCODE_NO_DATA** (p. 1224). This application-driven iteration is required to ensure that all samples on the reader queue are read.

Note that it is possible to call the **FooDataReader_read_next_instance** (p. 643) operation with a `previous_handle` that does not correspond to an instance currently managed by the **DDS_DataReader** (p. 618). This is because as stated earlier the 'greater-than' relationship is defined even for handles not managed by the **DDS_DataReader** (p. 618). One practical situation where this may occur is when an application is iterating though all the instances, takes all the samples of a **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716) instance, returns the loan (at which point the instance information may be removed, and thus the handle becomes invalid), and tries to read the next instance. The behavior of the **FooDataReader_read_next_instance** (p. 643) operation follows the same rules as the **Foo↩ DataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_read_instance** (p. 638) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE↩ _NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
received_data	<<***inout***>> *(p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	<<***inout***>> *(p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.

Parameters

max_samples	<<***in***>> *(*p. *1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
previous_handle	<<***in***>> *(*p. *1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
sample_states	<<***in***>> *(*p. *1015)* data samples matching ones of these `sample_states` are returned. See the valid values for this parameter here: **DDS_SampleStateKind** (p. 711).
view_states	<<***in***>> *(*p. *1015)* data samples matching ones of these `view_state` are returned. See the valid values for this parameter here: **DDS_ViewStateKind** (p. 713).
instance_states	<<***in***>> *(*p. *1015)* data samples matching ones of these `instance_state` are returned. See the valid values for this parameter here: **DDS_InstanceStateKind** (p. 715).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) **DDS_↩ RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

FooDataReader_read (p. 628)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.14 FooDataReader_take_next_instance()

```
DDS_ReturnCode_t FooDataReader_take_next_instance (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * previous_handle,
             DDS_SampleStateMask sample_states,
             DDS_ViewStateMask view_states,
             DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS_DataReader** (p. 618).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618) and 'removes' them from the **DDS_DataReader** (p. 618).

This operation has the same behavior as **FooDataReader_read_next_instance** (p. 643), except that the samples are 'taken' from the **DDS_DataReader** (p. 618) such that they are no longer accessible via subsequent 'read' or 'take' operations.

Note

Like **FooDataReader_read_next_instance** (p. 643), this operation is intended to be used in an application-driven iteration until all samples on the reader queue are taken. The iteration continues until **FooDataReader_take_↩ next_instance** (p. 645) fails with the value **DDS_RETCODE_NO_DATA** (p. 1224) .

Similar to the operation **FooDataReader_read_next_instance** (p. 643), it is possible to call **FooDataReader_take_↩ next_instance** (p. 645) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS_DataReader** (p. 618).

The behavior of the **FooDataReader_take_next_instance** (p. 645) operation follows the same rules as the **Foo↩ DataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_take_next_instance** (p. 645) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_↩ return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE↩ _NO_DATA** (p. 1224).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
received_data	*<<**inout**>> (p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	*<<**inout**>> (p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	*<<**in**>> (p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
previous_handle	*<<**in**>> (p. 1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
sample_states	*<<**in**>> (p. 1015)* data samples matching ones of these `sample_states` are returned.
view_states	*<<**in**>> (p. 1015)* data samples matching ones of these `view_state` are returned.
instance_states	*<<**in**>> (p. 1015)* data samples matching ones of these `instance_state` are returned.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), **DDS↩ _RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_take (p. 629)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.15 FooDataReader_read_next_instance_w_condition()

```
DDS_ReturnCode_t FooDataReader_read_next_instance_w_condition (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * previous_handle,
             DDS_ReadCondition * condition )
```

Accesses via **FooDataReader_read_next_instance** (p. 643) the samples that match the criteria specified in the **DDS_ReadCondition** (p. 695).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618). The behavior is identical to **FooDataReader_read_next_instance** (p. 643), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to the same instance, and the instance is the instance with 'smallest' `instance_handle` among the ones that verify: (a) `instance_handle` >= `previous_handle`, and (b) have samples for which the specified **DDS_ReadCondition** (p. 695) evaluates to TRUE.

Similar to the operation **FooDataReader_read_next_instance** (p. 643), it is possible to call **FooDataReader_read_next_instance_w_condition** (p. 646) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS_DataReader** (p. 618).

The behavior of the **FooDataReader_read_next_instance_w_condition** (p. 646) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader_read** (p. 628), the **FooDataReader_read_next_instance_w_condition** (p. 646) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE_NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
received_data	<<***inout***>> *(p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	<<***inout***>> *(p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	<<***in***>> *(p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
previous_handle	<<***in***>> *(p. 1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
condition	<<***in***>> *(p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) **DDS_↩ RETCODE_NO_DATA** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_read_next_instance (p. 643)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.16 FooDataReader_take_next_instance_w_condition()

```
DDS_ReturnCode_t FooDataReader_take_next_instance_w_condition (
             FooDataReader * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_samples,
            const  DDS_InstanceHandle_t * previous_handle,
             DDS_ReadCondition * condition )
```

Accesses via **FooDataReader_take_next_instance** (p. 645) the samples that match the criteria specified in the **DDS↩ _ReadCondition** (p. 695).

This operation accesses a collection of data values from the **DDS_DataReader** (p. 618) and 'removes' them from the **DDS_DataReader** (p. 618).

The operation has the same behavior as **FooDataReader_read_next_instance_w_condition** (p. 646), except that the samples are 'taken' from the **DDS_DataReader** (p. 618) such that they are no longer accessible via subsequent 'read' or 'take' operations.

Similar to the operation **FooDataReader_read_next_instance** (p. 643), it is possible to call **FooDataReader_take_↩ next_instance_w_condition** (p. 648) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS_DataReader** (p. 618).

The behavior of the **FooDataReader_take_next_instance_w_condition** (p. 648) operation follows the same rules as the **FooDataReader_read** (p. 628) operation regarding the pre-conditions and post-conditions for the `received_↩ data` and `sample_info`. Similar to **FooDataReader_read** (p. 628), the **FooDataReader_take_next_instance_↩ w_condition** (p. 648) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader_return_loan** (p. 649).

Similar to the **FooDataReader_read** (p. 628), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS_DataReader** (p. 618) has no samples that meet the constraints, the function will fail with **DDS_RETCODE↩ _NO_DATA** (p. 1224).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Parameters

received_data	<<***inout***>> *(p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples will be returned. Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
info_seq	<<***inout***>> *(p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info will be returned. Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
max_samples	<<***in***>> *(p. 1015)* The maximum number of samples to be returned. If the special value **DDS_LENGTH_UNLIMITED** (p. 1328) is provided, as many samples will be returned as are available, up to the limits described in the documentation for **FooDataReader_take()** (p. 629).
previous_handle	<<***in***>> *(p. 1015)* The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL **DDS_InstanceHandle_t** (p. 213). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
condition	<<***in***>> *(p. 1015)* the **DDS_ReadCondition** (p. 695) to select samples of interest. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224), or **DDS_RETCODE_NO_DATA** (p. 1224), **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataReader_take_next_instance (p. 645)

DDS_LENGTH_UNLIMITED (p. 1328)

5.21.5.17 FooDataReader_return_loan()

```
DDS_ReturnCode_t FooDataReader_return_loan (
            FooDataReader * self,
            FooSeq * received_data,
          struct  DDS_SampleInfoSeq * info_seq )
```

Indicates to the **DDS_DataReader** (p. 618) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of read or take on the **DDS_DataReader** (p. 618).

The `received_data` and `info_seq` must belong to a single related "pair"; that is, they should correspond to a pair returned from a single call to read or take. The `received_data` and `info_seq` must also have been obtained from the same **DDS_DataReader** (p. 618) to which they are returned. If either of these conditions is not met, the operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

The operation **FooDataReader_return_loan** (p. 649) allows implementations of the read and take operations to "loan" buffers from the **DDS_DataReader** (p. 618) to the application and in this manner provide "zerocopy" access to the data. During the loan, the **DDS_DataReader** (p. 618) will guarantee that the data and sample-information are not modified.

It is not necessary for an application to return the loans immediately after the read or take calls. However, as these buffers correspond to internal resources inside the **DDS_DataReader** (p. 618), the application should not retain them indefinitely.

The use of **FooDataReader_return_loan** (p. 649) is only necessary if the read or take calls "loaned" buffers to the application. This only occurs if the `received_data` and `info_Seq` collections had `max_len=0` at the time read or take was called.

The application may also examine the "owns" property of the collection to determine where there is an outstanding loan. However, calling **FooDataReader_return_loan** (p. 649) on a collection that does not have a loan is safe and has no side effects.

If the collections had a loan, upon completion of **FooDataReader_return_loan** (p. 649), the collections will have `max_len=0`.

Similar to read, this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

Parameters

received_data	<<***in***>> *(p. 1015)* user data type-specific **FooSeq** (p. 2120) object where the received data samples was obtained from earlier invocation of read or take on the **DDS_DataReader** (p. 618). Must be a valid non-NULL **FooSeq** (p. 2120). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
self	<<***in***>> *(p. 1015)* Cannot be NULL.
info_seq	<<***in***>> *(p. 1015)* a **DDS_SampleInfoSeq** (p. 2001) object where the received sample info was obtained from earlier invocation of read or take on the **DDS_DataReader** (p. 618). Must be a valid non-NULL **DDS_SampleInfoSeq** (p. 2001). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.21.5.18 FooDataReader_get_key_value()

```
DDS_ReturnCode_t FooDataReader_get_key_value (
             FooDataReader * self,
             Foo * key_holder,
            const  DDS_InstanceHandle_t * handle )
```

Retrieve the instance `key` that corresponds to an instance `handle`.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this function has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if the `handle` does not correspond to an existing data-object known to the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
key_holder	<<***inout***>> *(*p. *1015)* a user data type specific key holder, whose `key` fields are filled by this operation. If **Foo** (p. 2116) has no key, this function has no effect. This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `key_holder` is NULL.
handle	<<***in***>> *(*p. *1015)* the `instance` whose key is to be retrieved. If **Foo** (p. 2116) *has* a key, `handle` must represent an existing instance of type **Foo** (p. 2116) known to the **DDS_DataReader** (p. 618). Otherwise, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

If **Foo** (p. 2116) *has* a key and `handle` is **DDS_HANDLE_NIL** (p. 227), this function will fail with **DDS_RETCODE_↩ BAD_PARAMETER** (p. 1224).

If **Foo** (p. 2116) has a key and `handle` represents an instance of another type or an instance of type **Foo** (p. 2116) that has been unregistered, this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). If **Foo** (p. 2116) has no key, this function has no effect.

This function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if `handle` is NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

See also

FooDataWriter_get_key_value (p. 508)

5.21.5.19 FooDataReader_lookup_instance()

```
DDS_InstanceHandle_t FooDataReader_lookup_instance (
            FooDataReader * self,
           const  Foo * key_holder )
```

Retrieves the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. If the instance is unknown to the DataReader, or if for any other reason the Service is unable to provide an instance handle, the Service will return the special value **DDS_HANDLE_NIL** (p. 227).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
key_holder	<<***in***>> *(*p. *1015)* a user data type specific key holder.

Returns

the instance handle associated with this instance. If **Foo** (p. 2116) has no key, this function has no effect and returns **DDS_HANDLE_NIL** (p. 227)

5.21.5.20 FooDataReader_is_data_consistent()

```
DDS_ReturnCode_t FooDataReader_is_data_consistent (
            FooDataReader * self,
            DDS_Boolean * is_data_consistent,
           const  Foo * sample,
           const struct  DDS_SampleInfo * sample_info )
```

When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the DataWriter.

When a sample is received via **Zero Copy transfer over shared memory** (p. 209), the sample can be reused by the DataWriter once it is removed from the DataWriter's send queue. Since there is no synchronization between the DataReader and the DataWriter, the sample could be overwritten by the DataWriter before it is processed by the DataReader. The **FooDataReader_is_data_consistent** (p. 652) operation can be used after processing the sample to check if it was overwritten by the DataWriter.

A precondition for using this operation is to set **DDS_DataWriterShmemRefTransferModeSettings::enable_data_consistency_check** (p. 1684) to true.

Warning

This operation cannot be used when the data type is annotated with `@language_binding(FLAT_DATA)`. Reading a FlatData sample delivered with Zero Copy transfer over shared memory while the DataWriter is overwriting it is undefined behavior. An application-level synchronization mechanism is required in this case.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
is_data_consistent	*<<**inout**>> (p. 1015)* Set to true if the sample is consistent (i.e., the sample has not been overwritten by the DataWriter)
sample	*<<**in**>> (p. 1015)* Sample to be validated
sample_info	*<<**in**>> (p. 1015)* **DDS_SampleInfo** (p. 1990) object received with the sample

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

5.21.5.21 DDS_RequestedDeadlineMissedStatus_initialize()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_initialize (
            struct  DDS_RequestedDeadlineMissedStatus * self )
```

Initializer for new status instances.

New **DDS_RequestedDeadlineMissedStatus** (p. 1951) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_RequestedDeadlineMissedStatus_finalize (p. 653) should be called to free the contained fields that use dynamic memory:

```
DDS_RequestedDeadlineMissedStatus *myStatus = malloc(sizeof(struct DDS_RequestedDeadlineMissedStatus));

DDS_RequestedDeadlineMissedStatus_initialize(myStatus);

...

DDS_RequestedDeadlineMissedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_RequestedDeadlineMissedStatus_INITIALIZER (p. 613)

DDS_RequestedDeadlineMissedStatus_finalize (p. 653)

5.21.5.22 DDS_RequestedDeadlineMissedStatus_copy()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_copy (
            struct  DDS_RequestedDeadlineMissedStatus * self,
            const struct  DDS_RequestedDeadlineMissedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

5.21.5.23 DDS_RequestedDeadlineMissedStatus_finalize()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_finalize (
            struct  DDS_RequestedDeadlineMissedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.21.5.24 DDS_RequestedDeadlineMissedStatus_equals()

```
DDS_Boolean DDS_RequestedDeadlineMissedStatus_equals (
            const struct  DDS_RequestedDeadlineMissedStatus * left,
            const struct  DDS_RequestedDeadlineMissedStatus * right )
```

Compares two **DDS_RequestedDeadlineMissedStatus** (p. 1951) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This RequestedDeadlineMissedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other RequestedDeadlineMissedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two RequestedDeadlineMissedStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.21.5.25 DDS_LivelinessChangedStatus_initialize()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_initialize (
            struct  DDS_LivelinessChangedStatus * self )
```

Initializer for new status instances.

New **DDS_LivelinessChangedStatus** (p. 1823) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_LivelinessChangedStatus_finalize (p. 655) should be called to free the contained fields that use dynamic memory:

```
DDS_LivelinessChangedStatus *myStatus = malloc(sizeof(struct DDS_LivelinessChangedStatus));

DDS_LivelinessChangedStatus_initialize(myStatus);

...

DDS_LivelinessChangedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_LivelinessChangedStatus_INITIALIZER (p. 613)

DDS_LivelinessChangedStatus_finalize (p. 655)

5.21.5.26 DDS_LivelinessChangedStatus_copy()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_copy (
            struct  DDS_LivelinessChangedStatus * self,
            const struct  DDS_LivelinessChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

5.21.5.27 DDS_LivelinessChangedStatus_finalize()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_finalize (
            struct  DDS_LivelinessChangedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.21.5.28 DDS_LivelinessChangedStatus_equals()

```
DDS_Boolean DDS_LivelinessChangedStatus_equals (
            const struct  DDS_LivelinessChangedStatus * left,
            const struct  DDS_LivelinessChangedStatus * right )
```

Compares two **DDS_LivelinessChangedStatus** (p. 1823) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This LivelinessChangedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other LivelinessChangedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two LivelinessChangedStatus have equal values, or **DDS_BOOLEAN_**↩**FALSE** (p. 1203) otherwise.

5.21.5.29 DDS_RequestedIncompatibleQosStatus_initialize()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_initialize (
            struct  DDS_RequestedIncompatibleQosStatus * self )
```

Initializer for new status instances.

New **DDS_RequestedIncompatibleQosStatus** (p. 1952) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_RequestedIncompatibleQosStatus_finalize (p. 657) should be called to free the contained fields that use dynamic memory:

```
DDS_RequestedIncompatibleQosStatus *myStatus = malloc(sizeof(struct DDS_RequestedIncompatibleQosStatus));

DDS_RequestedIncompatibleQosStatus_initialize(myStatus);

...

DDS_RequestedIncompatibleQosStatus_finalize(myStatus);

free(myStatus);
```

See also

DDS_RequestedIncompatibleQosStatus_INITIALIZER (p. 614)

DDS_RequestedIncompatibleQosStatus_finalize (p. 657)

5.21.5.30 DDS_RequestedIncompatibleQosStatus_copy()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_copy (
            struct  DDS_RequestedIncompatibleQosStatus * self,
            const struct  DDS_RequestedIncompatibleQosStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015).* Status to be copied from.

5.21.5.31 DDS_RequestedIncompatibleQosStatus_finalize()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_finalize (
            struct  DDS_RequestedIncompatibleQosStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.21.5.32 DDS_RequestedIncompatibleQosStatus_equals()

```
DDS_Boolean DDS_RequestedIncompatibleQosStatus_equals (
            const struct  DDS_RequestedIncompatibleQosStatus * left,
            const struct  DDS_RequestedIncompatibleQosStatus * right )
```

Compares two **DDS_RequestedIncompatibleQosStatus** (p. 1952) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This RequestedIncompatibleQosStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other RequestedIncompatibleQosStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two RequestedIncompatibleQosStatus have equal values, or **DDS_↩ BOOLEAN_FALSE** (p. 1203) otherwise.

5.21.5.33 DDS_SampleLostStatus_initialize()

```
DDS_ReturnCode_t DDS_SampleLostStatus_initialize (
            struct  DDS_SampleLostStatus * self )
```

Initializer for new status instances.

New **DDS_SampleLostStatus** (p. 2001) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_RequestedIncompatibleQosStatus_finalize (p. 657) should be called to free the contained fields that use dynamic memory:

```
DDS_SampleLostStatus *myStatus = malloc(sizeof(struct DDS_SampleLostStatus));

DDS_SampleLostStatus_initialize(myStatus);

...

DDS_SampleLostStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

See also

DDS_SampleLostStatus_INITIALIZER (p. 614)

DDS_SampleLostStatus_finalize (p. 659)

5.21.5.34 DDS_SampleLostStatus_copy()

```
DDS_ReturnCode_t DDS_SampleLostStatus_copy (
            struct  DDS_SampleLostStatus * self,
            const struct  DDS_SampleLostStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

5.21.5.35 DDS_SampleLostStatus_finalize()

```
DDS_ReturnCode_t DDS_SampleLostStatus_finalize (
            struct  DDS_SampleLostStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.21.5.36 DDS_SampleLostStatus_equals()

```
DDS_Boolean DDS_SampleLostStatus_equals (
            const struct  DDS_SampleLostStatus * left,
            const struct  DDS_SampleLostStatus * right )
```

Compares two **DDS_SampleLostStatus** (p. 2001) for equality.

Parameters

left	<<***in***>> *(p. 1015)* This SampleLostStatus. Can be NULL.
right	<<***in***>> *(p. 1015)* The other SampleLostStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two SampleLostStatus have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.21.5.37 DDS_SampleRejectedStatus_initialize()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_initialize (
            struct  DDS_SampleRejectedStatus * self )
```

Initializer for new status instances.

New **DDS_SampleRejectedStatus** (p. 2002) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_RequestedIncompatibleQosStatus_finalize (p. 657) should be called to free the contained fields that use dynamic memory:

```
DDS_SampleRejectedStatus *myStatus = malloc(sizeof(struct DDS_SampleRejectedStatus));

DDS_SampleRejectedStatus_initialize(myStatus);

...

DDS_SampleRejectedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_SampleRejectedStatus_INITIALIZER (p. 615)

DDS_SampleRejectedStatus_finalize (p. 661)

5.21.5.38 DDS_SampleRejectedStatus_copy()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_copy (
            struct  DDS_SampleRejectedStatus * self,
            const struct  DDS_SampleRejectedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
source	<<***in***>> *(p. 1015)*. Status to be copied from.

5.21.5.39 DDS_SampleRejectedStatus_finalize()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_finalize (
            struct  DDS_SampleRejectedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.21.5.40 DDS_SampleRejectedStatus_equals()

```
DDS_Boolean DDS_SampleRejectedStatus_equals (
            const struct  DDS_SampleRejectedStatus * left,
            const struct  DDS_SampleRejectedStatus * right )
```

Compares two **DDS_SampleRejectedStatus** (p. 2002) for equality.

Parameters

left	<<***in***>> *(p. 1015)* This SampleRejectedStatus. Can be NULL.
right	<<***in***>> *(p. 1015)* The other SampleRejectedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two SampleRejectedStatus have equal values, or **DDS_BOOLEAN_↩ FALSE** (p. 1203) otherwise.

5.21.5.41 DDS_SubscriptionMatchedStatus_initialize()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_initialize (
            struct  DDS_SubscriptionMatchedStatus * self )
```

Initializer for new status instances.

New **DDS_SubscriptionMatchedStatus** (p. 2028) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_RequestedIncompatibleQosStatus_finalize (p. 657) should be called to free the contained fields that use dynamic memory:

```
DDS_SubscriptionMatchedStatus *myStatus = malloc(sizeof(struct DDS_SubscriptionMatchedStatus));

DDS_SubscriptionMatchedStatus_initialize(myStatus);

...

DDS_SubscriptionMatchedStatus_finalize(myStatus);

free(myStatus);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_SubscriptionMatchedStatus_INITIALIZER (p. 615)

DDS_SubscriptionMatchedStatus_finalize (p. 663)

5.21.5.42 DDS_SubscriptionMatchedStatus_copy()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_copy (
            struct  DDS_SubscriptionMatchedStatus * self,
            const struct  DDS_SubscriptionMatchedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

5.21.5.43 DDS_SubscriptionMatchedStatus_finalize()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_finalize (
            struct  DDS_SubscriptionMatchedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.21.5.44 DDS_SubscriptionMatchedStatus_equals()

```
DDS_Boolean DDS_SubscriptionMatchedStatus_equals (
            const struct  DDS_SubscriptionMatchedStatus * left,
            const struct  DDS_SubscriptionMatchedStatus * right )
```

Compares two **DDS_SubscriptionMatchedStatus** (p. 2028) for equality.

Parameters

left	<<***in***>> *(*p. *1015)* This SubscriptionMatchedStatus. Can be NULL.
right	<<***in***>> *(*p. *1015)* The other SubscriptionMatchedStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two SubscriptionMatchedStatus have equal values, or **DDS_BOOLEAN↩_FALSE** (p. 1203) otherwise.

5.21.5.45 DDS_DataReaderCacheStatus_initialize()

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_initialize (
            struct  DDS_DataReaderCacheStatus * self )
```

Initializer for new status instances.

New **DDS_DataReaderCacheStatus** (p. 1586) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_DataReaderCacheStatus_finalize (p. 665) should be called to free the contained fields that use dynamic memory:

```
DDS_DataReaderCacheStatus *myStatus = malloc(sizeof(struct DDS_DataReaderCacheStatus));

DDS_DataReaderCacheStatus_initialize(myStatus);

DDS_DataReader_get_datareader_cache_status(myDataReader, myStatus);

DDS_DataReaderCacheStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReader_get_datareader_cache_status (p. 686)

DDS_DataReaderCacheStatus_finalize (p. 665)

5.21.5.46 DDS_DataReaderCacheStatus_copy()

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_copy (
            struct  DDS_DataReaderCacheStatus * self,
            const struct  DDS_DataReaderCacheStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReaderCacheStatus_INITIALIZER (p. 616)

DDS_DataReaderCacheStatus_initialize (p. 664)

DDS_DataReaderCacheStatus_finalize (p. 665)

5.21.5.47 DDS_DataReaderCacheStatus_finalize()

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_finalize (
            struct  DDS_DataReaderCacheStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReaderCacheStatus_INITIALIZER (p. 616)

DDS_DataReaderCacheStatus_initialize (p. 664)

5.21.5.48 DDS_DataReaderCacheStatus_equals()

```
DDS_Boolean DDS_DataReaderCacheStatus_equals (
            const struct  DDS_DataReaderCacheStatus * left,
            const struct  DDS_DataReaderCacheStatus * right )
```

Compares two **DDS_DataReaderCacheStatus** (p. 1586) for equality.

Parameters

left	<<***in***>> *(p. 1015)* This DataReaderCacheStatus. Can be NULL.
right	<<***in***>> *(p. 1015)* The other DataReaderCacheStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two DataReaderCacheStatus have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.21.5.49 DDS_DataReaderProtocolStatus_initialize()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_initialize (
            struct  DDS_DataReaderProtocolStatus * self )
```

Initializer for new status instances.

New **DDS_DataReaderProtocolStatus** (p. 1600) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

DDS_DataReaderProtocolStatus_finalize (p. 667) should be called to free the contained fields that use dynamic memory:

```
DDS_DataReaderProtocolStatus *myStatus = malloc(sizeof(struct DDS_DataReaderProtocolStatus));

DDS_DataReaderProtocolStatus_initialize(myStatus);

DDS_DataReader_get_datareader_protocol_status(myDataReader, myStatus);

DDS_DataReaderProtocolStatus_finalize(myStatus);

free(myStatus);
```

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReader_get_datareader_protocol_status (p. 687)

DDS_DataReaderProtocolStatus_finalize (p. 667)

5.21.5.50 DDS_DataReaderProtocolStatus_copy()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_copy (
            struct  DDS_DataReaderProtocolStatus * self,
            const struct  DDS_DataReaderProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
source	<<***in***>> *(*p. *1015)*. Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReaderProtocolStatus_INITIALIZER (p. 616)

DDS_DataReaderProtocolStatus_initialize (p. 666)

DDS_DataReaderProtocolStatus_finalize (p. 667)

5.21.5.51 DDS_DataReaderProtocolStatus_finalize()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_finalize (
            struct  DDS_DataReaderProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReaderProtocolStatus_INITIALIZER (p. 616)

DDS_DataReaderProtocolStatus_initialize (p. 666)

5.21.5.52 DDS_DataReaderProtocolStatus_equals()

```
DDS_Boolean DDS_DataReaderProtocolStatus_equals (
            const struct  DDS_DataReaderProtocolStatus * left,
            const struct  DDS_DataReaderProtocolStatus * right )
```

Compares two **DDS_DataReaderProtocolStatus** (p. 1600) for equality.

Parameters

left	<<**in**>> *(p. 1015)* This DataReaderProtocolStatus. Can be NULL.
right	<<**in**>> *(p. 1015)* The other DataReaderProtocolStatus to be compared with this status instance. Can be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two DataReaderProtocolStatus have equal values, or **DDS_BOOLEAN↩_FALSE** (p. 1203) otherwise.

5.21.5.53 DDS_DataReaderQos_equals()

```
DDS_Boolean DDS_DataReaderQos_equals (
            const struct  DDS_DataReaderQos * self,
            const struct  DDS_DataReaderQos * other )
```

Compares two **DDS_DataReaderQos** (p. 1611) for equality.

Parameters

self	<<**in**>> *(p. 1015)* This DataReaderQos.
other	<<**in**>> *(p. 1015)* The other DataReaderQos to be compared with this DataReaderQos.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.21.5.54 DDS_DataReaderQos_print()

```
DDS_ReturnCode_t DDS_DataReaderQos_print (
            const struct  DDS_DataReaderQos * self )
```

Prints this **DDS_DataReaderQos** (p. 1611) to stdout.

Only the differences between this **DDS_DataReaderQos** (p. 1611) and the documented default are printed. If you wish to print everything regardless, see **DDS_DataReaderQos_to_string_w_params** (p. 670). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.21.5.55 DDS_DataReaderQos_to_string()

```
DDS_ReturnCode_t DDS_DataReaderQos_to_string (
            const struct  DDS_DataReaderQos * self,
            char * string,
             DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 1611).

Only the differences between this **DDS_DataReaderQos** (p. 1611) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DataReaderQos_to_string_w_params** (p. 670). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1930).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataReaderQos** (p. 1611) is written to the buffer.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
string	<<***out***>> *(p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 1611). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

See also

DDS_DataReaderQos_to_string_w_params (p. 670)

5.21.5.56 DDS_DataReaderQos_to_string_w_params()

```
DDS_ReturnCode_t DDS_DataReaderQos_to_string_w_params (
            const struct  DDS_DataReaderQos * self,
            char * string,
             DDS_UnsignedLong * string_size,
            const struct  DDS_DataReaderQos * base,
            const struct  DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 1611).

Only the differences between this **DDS_DataReaderQos** (p. 1611) and the **DDS_DataReaderQos** (p. 1611) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS_DATAREADER_QOS_PRINT_ALL** (p. 603) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataReaderQos** (p. 1611) is written to the buffer.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
string	*<<**out**>> (p. 1015)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 1611). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 1015)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 1015)* The **DDS_DataReaderQos** (p. 1611) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 1015)* The **DDS_QosPrintFormat** (p. 1930) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 1224) if no error was encountered.

5.21.5.57 DDS_DataReaderQos_initialize()

```
DDS_ReturnCode_t DDS_DataReaderQos_initialize (
            struct  DDS_DataReaderQos * self )
```

Initializer for new QoS instances.

New **DDS_DataReaderQos** (p. 1611) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS_DataReader_get_qos** (p. 689) or **DDS_DomainParticipant_get_default_datareader_qos** (p. 95); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS_DataReaderQos_finalize** (p. 672) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DataReaderQos *myQos = malloc(sizeof(struct DDS_DataReaderQos));

DDS_DataReaderQos_initialize(myQos);

DDS_DomainParticipantFactory_get_default_datareader_qos(myFactory, myQos);

DDS_DataReaderQos_set_qos(myDataReader, myQos);

DDS_DataReaderQos_finalize(myQos);

free(myQos);
```

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_DataReaderQos_INITIALIZER (p. 617)

DDS_DomainParticipant_get_default_datareader_qos (p. 95)

DDS_DataReaderQos_finalize (p. 672)

5.21.5.58 DDS_DataReaderQos_copy()

```
DDS_ReturnCode_t DDS_DataReaderQos_copy (
            struct  DDS_DataReaderQos * self,
            const struct  DDS_DataReaderQos * source )
```

Copy the contents of the given QoS into this QoS.

DDS_DataReaderQos (p. 1611) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
source	*<<**in**>> (p. 1015).* Status to be copied from.

5.21.5.59 DDS_DataReaderQos_finalize()

```
DDS_ReturnCode_t DDS_DataReaderQos_finalize (
            struct  DDS_DataReaderQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS_DataReaderQos** (p. 1611).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissable to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

5.21.5.60 DDS_DataReader_as_entity()

```
DDS_Entity * DDS_DataReader_as_entity (
             DDS_DataReader * dataReader )
```

Accesses the **DDS_DataReader** (p. 618)'s supertype instance.

Parameters

dataReader	*<<**in**>> (p. 1015)* Cannot be NULL.

5.21.5.61 DDS_DataReader_create_readcondition()

```
DDS_ReadCondition * DDS_DataReader_create_readcondition (
```

```
            DDS_DataReader * self,
            DDS_SampleStateMask sample_states,
            DDS_ViewStateMask view_states,
            DDS_InstanceStateMask instance_states )
```

Creates a **DDS_ReadCondition** (p. 695).

The returned **DDS_ReadCondition** (p. 695) will be attached and belong to the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
sample_states	<<***in***>> *(p. 1015)* sample state of the data samples that are of interest
view_states	<<***in***>> *(p. 1015)* view state of the data samples that are of interest
instance_states	<<***in***>> *(p. 1015)* instance state of the data samples that are of interest

Returns

return **DDS_ReadCondition** (p. 695) created. Returns NULL in case of failure.

5.21.5.62 DDS_DataReader_create_readcondition_w_params()

```
DDS_ReadCondition * DDS_DataReader_create_readcondition_w_params (
            DDS_DataReader * self,
           const struct  DDS_ReadConditionParams * params )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_ReadCondition** (p. 695) with parameters.

The returned **DDS_ReadCondition** (p. 695) will be attached and belong to the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
params	<<***in***>> *(p. 1015)* creation parameters.

Returns

return **DDS_ReadCondition** (p. 695) created. Returns NULL in case of failure.

5.21.5.63 DDS_DataReader_create_querycondition()

```
DDS_QueryCondition * DDS_DataReader_create_querycondition (
            DDS_DataReader * self,
```

```
 DDS_SampleStateMask sample_states,
 DDS_ViewStateMask view_states,
 DDS_InstanceStateMask instance_states,
const char * query_expression,
const struct  DDS_StringSeq * query_parameters )
```

Creates a **DDS_QueryCondition** (p. 700).

The returned **DDS_QueryCondition** (p. 700) will be attached and belong to the **DDS_DataReader** (p. 618).

Queries and Filters Syntax (p. 739) describes the syntax of `query_expression` and `query_parameters`.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
sample_states	<<***in***>> *(p. 1015)* sample state of the data samples that are of interest
view_states	<<***in***>> *(p. 1015)* view state of the data samples that are of interest
instance_states	<<***in***>> *(p. 1015)* instance state of the data samples that are of interest
query_expression	<<***in***>> *(p. 1015)* Expression for the query. Cannot be NULL.
query_parameters	<<***in***>> *(p. 1015)* Parameters for the query expression. Cannot be NULL.

Returns

return **DDS_QueryCondition** (p. 700) created. Returns NULL in case of failure.

5.21.5.64 DDS_DataReader_create_querycondition_w_params()

```
DDS_QueryCondition * DDS_DataReader_create_querycondition_w_params (
             DDS_DataReader * self,
            const struct  DDS_QueryConditionParams * params )
```

<<***extension***>> *(p. 1014)* Creates a **DDS_QueryCondition** (p. 700) with parameters.

The returned **DDS_QueryCondition** (p. 700) will be attached and belong to the **DDS_DataReader** (p. 618).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
params	<<***in***>> *(p. 1015)* creation parameters.

Returns

return **DDS_QueryCondition** (p. 700) created. Returns NULL in case of failure.

5.21.5.65 DDS_DataReader_delete_readcondition()

```
DDS_ReturnCode_t DDS_DataReader_delete_readcondition (
            DDS_DataReader * self,
            DDS_ReadCondition * condition )
```

Deletes a **DDS_ReadCondition** (p. 695) or **DDS_QueryCondition** (p. 700) attached to the **DDS_DataReader** (p. 618).

Since **DDS_QueryCondition** (p. 700) specializes **DDS_ReadCondition** (p. 695), it can also be used to delete a **DDS_QueryCondition** (p. 700).

Precondition

The **DDS_ReadCondition** (p. 695) must be attached to the **DDS_DataReader** (p. 618), or the operation will fail with the error **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
condition	<<***in***>> *(p. 1015)* Condition to be deleted.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

5.21.5.66 DDS_DataReader_delete_contained_entities()

```
DDS_ReturnCode_t DDS_DataReader_delete_contained_entities (
            DDS_DataReader * self )
```

Deletes all the entities that were created by means of the "create" operations on the **DDS_DataReader** (p. 618).

Deletes all contained **DDS_ReadCondition** (p. 695), **DDS_QueryCondition** (p. 700), and **DDS_TopicQuery** (p. 708) objects.

The operation will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if the any of the contained entities is in a state where it cannot be deleted.

Once **DDS_DataReader_delete_contained_entities** (p. 675) completes successfully, the application may delete the **DDS_DataReader** (p. 618).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224)

5.21.5.67 DDS_DataReader_wait_for_historical_data()

```
DDS_ReturnCode_t DDS_DataReader_wait_for_historical_data (
            DDS_DataReader * self,
           const struct  DDS_Duration_t * max_wait )
```

Waits until all "historical" data is received for **DDS_DataReader** (p. 618) entities that have a non-VOLATILE Durability Qos kind.

This operation is intended only for **DDS_DataReader** (p. 618) entities that have a non-VOLATILE Durability QoS kind.

As soon as an application enables a non-VOLATILE **DDS_DataReader** (p. 618), it will start receiving both "historical" data (i.e., the data that was written prior to the time the **DDS_DataReader** (p. 618) joined the domain) as well as any new data written by the **DDS_DataWriter** (p. 488) entities. There are situations where the application logic may require the application to wait until all "historical" data is received. This is the purpose of the **DDS_DataReader_wait_for_↩ historical_data** (p. 676) operations.

DDS_DataReader_wait_for_historical_data() (p. 676) blocks the calling thread until either all "historical" data is received, or until the duration specified by the max_wait parameter elapses, whichever happens first. It will return immediately if no DataWriters have been discovered at the time the operation is called; therefore it is advisable to make sure at least one **DDS_DataWriter** (p. 488) has been discovered before calling this operation. (One way to do this is by using **DDS_DataReader_get_subscription_matched_status** (p. 684).)

A successful completion indicates that all the "historical" data was "received"; timing out indicates that max_wait elapsed before all the data was received.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
max_wait	<<***in***>> *(*p. *1015)* Timeout value. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_TIMEOUT** (p. 1224) or **DDS_RETCODE_NOT↩ _ENABLED** (p. 1224).

5.21.5.68 DDS_DataReader_acknowledge_sample_w_response()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_sample_w_response (
             DDS_DataReader * self,
            const struct  DDS_SampleInfo * sample_info,
            const struct  DDS_AckResponseData_t * response_data )
```

<<***extension***>> *(*p. *1014)* Acknowledges a single sample explicitly.

Applicable only when **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) = **DDS_APPLICATION_↩ EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1326)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS_Rtps↩ ReliableReaderProtocol_t::samples_per_app_ack** (p. 1964) and **DDS_RtpsReliableReaderProtocol_t::app_ack↩ _period** (p. 1963).

The maximum length of the response is configured using **DDS_DataReaderResourceLimitsQosPolicy::max_app_↩ ack_response_length** (p. 1633)

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
sample_info	<<***in***>> *(*p. *1015)* **DDS_SampleInfo** (p. 1990) identifying the sample being acknowledged.
response_data	<<***in***>> *(*p. *1015)* Response data sent to **DDS_DataWriter** (p. 488) upon acknowledgment (via **DDS_DataWriterListener::on_application_acknowledgment** (p. 1648))

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.69 DDS_DataReader_acknowledge_all_w_response()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_all_w_response (
             DDS_DataReader * self,
            const struct  DDS_AckResponseData_t * response_data )
```

<<***extension***>> *(*p. *1014)* Acknowledges all previously accessed samples.

Applicable only when **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) = **DDS_APPLICATION_↩ EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1326)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS_Rtps↩ ReliableReaderProtocol_t::samples_per_app_ack** (p. 1964) and **DDS_RtpsReliableReaderProtocol_t::app_ack↩ _period** (p. 1963).

The maximum length of the response is configured using **DDS_DataReaderResourceLimitsQosPolicy::max_app_↩ ack_response_length** (p. 1633).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
response_data	<<***in***>> *(*p. *1015)* Response data sent to **DDS_DataWriter** (p. 488) upon acknowledgment

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.70 DDS_DataReader_acknowledge_sample()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_sample (
            DDS_DataReader * self,
          const struct  DDS_SampleInfo * sample_info )
```

<<***extension***>> *(*p. *1014)* Acknowledges a single sample explicitly.

Applicable only when **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) = **DDS_APPLICATION_↩ EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1326)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS_Rtps↩ ReliableReaderProtocol_t::samples_per_app_ack** (p. 1964) and **DDS_RtpsReliableReaderProtocol_t::app_ack↩ _period** (p. 1963).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
sample_info	<<***in***>> *(*p. *1015)* **DDS_SampleInfo** (p. 1990) identifying the sample being acknowledged.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.71 DDS_DataReader_acknowledge_all()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_all (
            DDS_DataReader * self )
```

<<***extension***>> *(*p. *1014)* Acknowledges all previously accessed samples.

Applicable only when **DDS_ReliabilityQosPolicy::acknowledgment_kind** (p. 1943) = **DDS_APPLICATION_↩ EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1326)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS_Rtps↩ ReliableReaderProtocol_t::samples_per_app_ack** (p. 1964) and **DDS_RtpsReliableReaderProtocol_t::app_ack↩ _period** (p. 1963).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.72 DDS_DataReader_get_matched_publications()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publications (
            DDS_DataReader * self,
           struct  DDS_InstanceHandleSeq * publication_handles )
```

Retrieves the list of publications currently "associated" with this **DDS_DataReader** (p. 618).

A publication is considered to be matching if all of the following criteria are true:

- The publication is within the same domain as this subscription.
- The publication has a matching **DDS_Topic** (p. 174).
- The publication has compatible QoS.
- If the applications are using partitions, the publication shares a common partition with this subscription.
- The **DDS_DomainParticipant** (p. 76) has not indicated that the publication's **DDS_DomainParticipant** (p. 76) should be "ignored" by means of the **DDS_DomainParticipant_ignore_publication** (p. 131) API.
- If the subscription is using a **DDS_ContentFilteredTopic** (p. 176) and the publication is using the **DDS_Multi↩ ChannelQosPolicy** (p. 1860), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the reader has completed the key exchange with the writer.

The handles returned in the `publication_handles` list are the ones that are used by the RTI Connext implementation to locally identify the corresponding matched **DDS_DataWriter** (p. 488) entities. These handles match the ones that appear in the `instance_handle` field of the **DDS_SampleInfo** (p. 1990) when reading the **DDS_PUBLICATION↩ _TOPIC_NAME** (p. 1098) builtin topic.

This API may return the publication handles of publications that are not alive. **DDS_DataReader_is_matched_↩ publication_alive** (p. 680) can be used to check the liveliness of the remote publication.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
publication_handles	*<<**inout**>> (p. 1015)*. The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this function will fail with **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224). The maximum number of matches possible is configured with **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 1733). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 1224) if the sequence is too small and the system cannot resize it, or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.21.5.73 DDS_DataReader_is_matched_publication_alive()

```
DDS_ReturnCode_t DDS_DataReader_is_matched_publication_alive (
            DDS_DataReader * self,
            DDS_Boolean * is_alive,
          const  DDS_InstanceHandle_t * publication_handle )
```

Check if a publication currently matched with a DataReader is alive.

This API is used for querying the endpoint liveliness of a matched publication. A matched publication will be marked as not alive if the liveliness that it committed to through its **LIVELINESS** (p. 1298) QoS policy was not respected. Note that if the participant associated with the matched publication loses liveliness, the **DDS_InstanceHandle_t** (p. 213) will become invalid and this function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
publication_handle	*<<**in**>> (p. 1015)* The **DDS_InstanceHandle_t** (p. 213) of the matched publication. See **DDS_DataReader_get_matched_publications** (p. 679) for a description of what is considered a matched publication.
is_alive	*<<**out**>> (p. 1015)* Indicates whether or not the matched publication is alive.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.74 DDS_DataReader_get_matched_publication_data()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_data (
             DDS_DataReader * self,
            struct  DDS_PublicationBuiltinTopicData * publication_data,
            const  DDS_InstanceHandle_t * publication_handle )
```

Retrieves the information on a publication that is currently "associated" with the **DDS_DataReader** (p. 618).

The publication_handle must correspond to a publication currently associated with the **DDS_DataReader** (p. 618). Otherwise, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). Use the operation **DDS_DataReader_get_matched_publications** (p. 679) to find the publications that are currently matched with the **DDS_DataReader** (p. 618).

Note: This operation does not retrieve the **DDS_PublicationBuiltinTopicData::type_code** (p. 1914). This information is available through **DDS_DataReaderListener::on_data_available()** (p. 1595) (if a reader listener is installed on the **DDS_PublicationBuiltinTopicDataDataReader** (p. 1097)).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
publication_data	<<***inout***>> *(p. 1015)*. The information to be filled in on the associated publication. Cannot be NULL.
publication_handle	<<***in***>> *(p. 1015)*. Handle to a specific publication associated with the **DDS_DataWriter** (p. 488). Must correspond to a publication currently associated with the **DDS_DataReader** (p. 618). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.21.5.75 DDS_DataReader_get_matched_publication_participant_data()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_participant_data (
             DDS_DataReader * self,
            struct  DDS_ParticipantBuiltinTopicData * participant_data,
            const  DDS_InstanceHandle_t * publication_handle )
```

<<***extension***>> *(p. 1014)* Retrieves the information on the discovered **DDS_DomainParticipant** (p. 76) associated with the publication that is currently matching with the **DDS_DataReader** (p. 618).

The publication_handle must correspond to a publication currently associated with the **DDS_DataReader** (p. 618). Otherwise, the operation will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224). The operation may also fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224) if the publication corresponds to the same **DDS_↩ DomainParticipant** (p. 76) that the DataReader belongs to. Use the operation **DDS_DataReader_get_matched_↩ publications** (p. 679) to find the publications that are currently matched with the **DDS_DataReader** (p. 618).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
participant_data	*<<**inout**>> (p. 1015)*. The information to be filled in on the associated participant. Cannot be NULL.
publication_handle	*<<**in**>> (p. 1015)*. Handle to a specific publication associated with a **DDS_DataWriter** (p. 488). Must correspond to a publication currently associated with the **DDS_DataReader** (p. 618). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.21.5.76 DDS_DataReader_get_topicdescription()

```
DDS_TopicDescription * DDS_DataReader_get_topicdescription (
            DDS_DataReader * self )
```

Returns the **DDS_TopicDescription** (p. 174) associated with the **DDS_DataReader** (p. 618).

Returns that same **DDS_TopicDescription** (p. 174) that was used to create the **DDS_DataReader** (p. 618).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

DDS_TopicDescription (p. 174) associated with the **DDS_DataReader** (p. 618).

5.21.5.77 DDS_DataReader_get_subscriber()

```
DDS_Subscriber * DDS_DataReader_get_subscriber (
            DDS_DataReader * self )
```

Returns the **DDS_Subscriber** (p. 575) to which the **DDS_DataReader** (p. 618) belongs.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.

Returns

DDS_Subscriber (p. 575) to which the **DDS_DataReader** (p. 618) belongs.

5.21.5.78 DDS_DataReader_get_sample_rejected_status()

```
DDS_ReturnCode_t DDS_DataReader_get_sample_rejected_status (
            DDS_DataReader * self,
           struct  DDS_SampleRejectedStatus * status )
```

Accesses the **DDS_SAMPLE_REJECTED_STATUS** (p. 1232) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
status	<<***inout***>> *(*p. *1015)* **DDS_SampleRejectedStatus** (p. 2002) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.79 DDS_DataReader_get_liveliness_changed_status()

```
DDS_ReturnCode_t DDS_DataReader_get_liveliness_changed_status (
            DDS_DataReader * self,
           struct  DDS_LivelinessChangedStatus * status )
```

Accesses the **DDS_LIVELINESS_CHANGED_STATUS** (p. 1233) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
status	<<***inout***>> *(*p. *1015)* **DDS_LivelinessChangedStatus** (p. 1823) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.80 DDS_DataReader_get_requested_deadline_missed_status()

```
DDS_ReturnCode_t DDS_DataReader_get_requested_deadline_missed_status (
            DDS_DataReader * self,
           struct  DDS_RequestedDeadlineMissedStatus * status )
```

Accesses the **DDS_REQUESTED_DEADLINE_MISSED_STATUS** (p. 1231) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_RequestedDeadlineMissedStatus** (p. 1951) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.81 DDS_DataReader_get_requested_incompatible_qos_status()

```
DDS_ReturnCode_t DDS_DataReader_get_requested_incompatible_qos_status (
            DDS_DataReader * self,
           struct  DDS_RequestedIncompatibleQosStatus * status )
```

Accesses the **DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS** (p. 1231) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_RequestedIncompatibleQosStatus** (p. 1952) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.82 DDS_DataReader_get_subscription_matched_status()

```
DDS_ReturnCode_t DDS_DataReader_get_subscription_matched_status (
            DDS_DataReader * self,
           struct  DDS_SubscriptionMatchedStatus * status )
```

Accesses the **DDS_SUBSCRIPTION_MATCHED_STATUS** (p. 1234) communication status.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_SubscriptionMatchedStatus** (p. 2028) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.83 DDS_DataReader_get_sample_lost_status()

```
DDS_ReturnCode_t DDS_DataReader_get_sample_lost_status (
             DDS_DataReader * self,
            struct  DDS_SampleLostStatus * status )
```

Accesses the **DDS_SAMPLE_LOST_STATUS** (p. 1232) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_SampleLostStatus** (p. 2001) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.84 DDS_DataReader_get_datareader_cache_status()

```
DDS_ReturnCode_t DDS_DataReader_get_datareader_cache_status (
             DDS_DataReader * self,
            struct  DDS_DataReaderCacheStatus * status )
```

*<<**extension**>> (p. 1014)* Gets the datareader cache status for this reader.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
status	*<<**inout**>> (p. 1015)* **DDS_DataReaderCacheStatus** (p. 1586) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.21.5.85 DDS_DataReader_get_datareader_protocol_status()

```
DDS_ReturnCode_t DDS_DataReader_get_datareader_protocol_status (
            DDS_DataReader * self,
           struct  DDS_DataReaderProtocolStatus * status )
```

<<***extension***>> *(p. 1014)* Gets the datareader protocol status for this reader.

This also resets the status so that it is no longer considered changed.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015)* **DDS_DataReaderProtocolStatus** (p. 1600) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224).

5.21.5.86 DDS_DataReader_get_matched_publication_datareader_protocol_status()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_datareader_protocol_status (
            DDS_DataReader * self,
           struct  DDS_DataReaderProtocolStatus * status,
           const  DDS_InstanceHandle_t * publication_handle )
```

<<***extension***>> *(p. 1014)* Gets the datareader protocol status for this reader, per matched publication identified by the publication_handle.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
status	<<***inout***>> *(p. 1015).* The information to be filled in on the associated publication. Cannot be NULL.
publication_handle	<<***in***>> *(p. 1015).* Handle to a specific publication associated with the **DDS_DataWriter** (p. 488). Cannot be NULL. . Must correspond to a publication currently associated with the
Generated by Doxygen	**DDS_DataReader** (p. 618).

Returns

One of the **Standard Return Codes** (p. 1223) or **DDS_RETCODE_NOT_ENABLED** (p. 1224)

5.21.5.87 DDS_DataReader_set_qos()

```
DDS_ReturnCode_t DDS_DataReader_set_qos (
            DDS_DataReader * self,
           const struct  DDS_DataReaderQos * qos )
```

Sets the reader QoS.

Modifies the QoS of the **DDS_DataReader** (p. 618).

The **DDS_DataReaderQos::user_data** (p. 1614), **DDS_DataReaderQos::deadline** (p. 1613), **DDS_DataReaderQos::latency_budget** (p. 1613), **DDS_DataReaderQos::time_based_filter** (p. 1615), **DDS_DataReaderQos::reader_data_lifecycle** (p. 1615) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
qos	<<***in***>> *(p. 1015)* The **DDS_DataReaderQos** (p. 1611) to be set to. Policies must be consistent. Immutable policies cannot be changed after **DDS_DataReader** (p. 618) is enabled. The special value **DDS_DATAREADER_QOS_DEFAULT** (p. 603) can be used to indicate that the QoS of the **DDS_DataReader** (p. 618) should be changed to match the current default **DDS_DataReaderQos** (p. 1611) set in the **DDS_Subscriber** (p. 575). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_RETCODE_INCONSISTENT_POLICY** (p. 1224).

See also

set_qos (abstract) (p. 1363)

DDS_DataReader_set_qos (p. 688)

Operations Allowed in Listener Callbacks (p. 1821)

5.21.5.88 DDS_DataReader_set_qos_with_profile()

```
DDS_ReturnCode_t DDS_DataReader_set_qos_with_profile (
             DDS_DataReader * self,
            const char * library_name,
            const char * profile_name )
```

<<***extension***>> *(*p. *1014)* Changes the QoS of this reader using the input XML QoS profile.

This operation modifies the QoS of the **DDS_DataReader** (p. 618).

The **DDS_DataReaderQos::user_data** (p. 1614), **DDS_DataReaderQos::deadline** (p. 1613), **DDS_DataReader↩ Qos::latency_budget** (p. 1613), **DDS_DataReaderQos::time_based_filter** (p. 1615), **DDS_DataReaderQos↩ ::reader_data_lifecycle** (p. 1615) can be changed. The other policies are immutable.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
library_name	<<***in***>> *(*p. *1015)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **DDS_Subscriber_set_default_library** (p. 598)).
profile_name	<<***in***>> *(*p. *1015)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **DDS_Subscriber_set_default_profile** (p. 597)).

Returns

One of the **Standard Return Codes** (p. 1223), **DDS_RETCODE_IMMUTABLE_POLICY** (p. 1224), or **DDS_↩ RETCODE_INCONSISTENT_POLICY** (p. 1224).

See also

DDS_DataReaderQos (p. 1611) for rules on consistency among QoS

DDS_DataReader_set_qos (p. 688)

Operations Allowed in Listener Callbacks (p. 1821)

5.21.5.89 DDS_DataReader_get_qos()

```
DDS_ReturnCode_t DDS_DataReader_get_qos (
             DDS_DataReader * self,
            struct  DDS_DataReaderQos * qos )
```

Gets the reader QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
qos	*<<**inout**>> (p. 1015)* The **DDS_DataReaderQos** (p. 1611) to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

get_qos (abstract) (p. 1364)

5.21.5.90 DDS_DataReader_set_property()

```
DDS_ReturnCode_t DDS_DataReader_set_property (
             DDS_DataReader * self,
            const char * property_name,
            const char * value,
             DDS_Boolean propagate )
```

Set the value for a property that applies to a DataReader.

Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS_↩ DataReader_set_qos** (p. 688) instead.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
property_name	*<<**in**>> (p. 1015)*. Name of the property that you want to set.
value	*<<**in**>> (p. 1015)*. New value for the property.
propagate	*<<**in**>> (p. 1015)*. Indicates if the property will be propagated or not.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DomainParticipant_set_property (p. 153)

DDS_DataReader_set_qos (p. 688)

5.21.5.91 DDS_DataReader_set_listener()

```
DDS_ReturnCode_t DDS_DataReader_set_listener (
              DDS_DataReader * self,
             const struct  DDS_DataReaderListener * l,
              DDS_StatusMask mask )
```

Sets the reader listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
l	<<***in***>> *(p. 1015)* **DDS_DataReaderListener** (p. 1593) to set to
mask	<<***in***>> *(p. 1015)* **DDS_StatusMask** (p. 1228) associated with the **DDS_DataReaderListener** (p. 1593). The callback function on the listener cannot be NULL if the corresponding status is turned on in the `mask`.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

set_listener (abstract) (p. 1364)

5.21.5.92 DDS_DataReader_get_listener()

```
struct  DDS_DataReaderListener DDS_DataReader_get_listener (
              DDS_DataReader * self )
```

Gets the reader listener.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

Returns

DDS_DataReaderListener (p. 1593) of the **DDS_DataReader** (p. 618).

See also

DDS_DataReader_get_listenerX (p. 692)

get_listener (abstract) (p. 1365)

5.21.5.93 DDS_DataReader_get_listenerX()

```
DDS_ReturnCode_t DDS_DataReader_get_listenerX (
            DDS_DataReader * self,
           struct  DDS_DataReaderListener * listener )
```

<<***extension***>> *(p. 1014)* Gets the reader listener.

An alternative form of get_listener that fills in an existing listener structure rather than returning one on the stack.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
listener	<<***inout***>> *(p. 1015)* **DDS_DataReaderListener** (p. 1593) structure to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

DDS_DataReader_get_listener (p. 691)

get_listener (abstract) (p. 1365)

5.21.5.94 DDS_DataReader_create_topic_query()

```
DDS_TopicQuery * DDS_DataReader_create_topic_query (
            DDS_DataReader * self,
           const struct  DDS_TopicQuerySelection * selection )
```

Creates a **DDS_TopicQuery** (p. 708).

The returned **DDS_TopicQuery** (p. 708) will have been issued if the **DDS_DataReader** (p. 618) is enabled. Otherwise, the **DDS_TopicQuery** (p. 708) will be issued once the **DDS_DataReader** (p. 618) is enabled

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
selection	*<<**in**>> (p. 1015)* The selection with which to create the **DDS_TopicQuery** (p. 708). The special values **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 710) and **DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER** (p. 710) can be used. The expression can start with the special condition "@instance_state = ALIVE AND" followed by the rest of the expression. This restricts the selection to samples of alive instances. Cannot be NULL.

Returns

return Created **DDS_TopicQuery** (p. 708). Returns NULL in case of failure.

5.21.5.95 DDS_DataReader_delete_topic_query()

```
DDS_ReturnCode_t DDS_DataReader_delete_topic_query (
            DDS_DataReader * self,
            DDS_TopicQuery * query )
```

Deletes a **DDS_TopicQuery** (p. 708).

Cancels an active **DDS_TopicQuery** (p. 708). After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
query	*<<**in**>> (p. 1015)* The **DDS_TopicQuery** (p. 708) to delete. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.21.5.96 DDS_DataReader_lookup_topic_query()

```
DDS_TopicQuery * DDS_DataReader_lookup_topic_query (
            DDS_DataReader * self,
           const struct  DDS_GUID_t * guid )
```

Retrieves an existing **DDS_TopicQuery** (p. 708).

Retrieves the **DDS_TopicQuery** (p. 708) that corresponds to the input **DDS_GUID_t** (p. 1807).

If no TopicQuery is found for the specified GUID or the TopicQuery is marked for deletion, this returns NULL.

To get the **DDS_GUID_t** (p. 1807) associated with a **DDS_TopicQuery** (p. 708), use the function **DDS_TopicQuery_↩ get_guid** (p. 709).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
guid	<<***in***>> *(*p. *1015)* The **DDS_TopicQuery** (p. 708) GUID. Cannot be NULL.

5.21.5.97 DDS_DataReader_take_discovery_snapshot()

```
DDS_ReturnCode_t DDS_DataReader_take_discovery_snapshot (
            DDS_DataReader * self,
           const char * file_name )
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"

guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"

topic="FooTopic" type="FooType"

------------------------------------------------------------------------

Compatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

Incompatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"

------------------------------------------------------------------------
```

Precondition

self is not NULL.

Parameters

self	<<***in***>> *(*p. *1015)* The local reader.
file_name	<<***in***>> *(*p. *1015)* Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through **NDDS_Config_Logger** (p. 2122). Otherwise, the snapshot will be printed in the file specified by file_name.

Returns

One of the **Standard Return Codes** (p. 1223).

5.22 Read Conditions

DDS_ReadCondition (p. 695) and associated elements

Data Structures

- struct **DDS_ReadConditionParams**

  <<***extension***>> *(p. 1014) Input parameters for* ***DDS_DataReader_create_readcondition_w_params*** *(p. 673)*

Typedefs

- typedef struct DDS_ReadConditionImpl **DDS_ReadCondition**

  <<***interface***>> *(p. 1015) Conditions specifically dedicated to read operations and attached to one* ***DDS_DataReader*** *(p. 618).*

Functions

- **DDS_Condition** * **DDS_ReadCondition_as_condition** (**DDS_ReadCondition** *read_condition)

  Accesses a ***DDS_ReadCondition*** *(p. 695)'s supertype instance.*
- **DDS_SampleStateMask DDS_ReadCondition_get_sample_state_mask** (**DDS_ReadCondition** *self)

  Retrieves the set of `sample_states` *for the condition.*
- **DDS_ViewStateMask DDS_ReadCondition_get_view_state_mask** (**DDS_ReadCondition** *self)

  Retrieves the set of `view_states` *for the condition.*
- **DDS_InstanceStateMask DDS_ReadCondition_get_instance_state_mask** (**DDS_ReadCondition** *self)

  Retrieves the set of `instance_states` *for the condition.*
- **DDS_StreamKindMask DDS_ReadCondition_get_stream_kind_mask** (**DDS_ReadCondition** *self)

  Retrieves the set of stream kind mask for the condition.
- **DDS_DataReader** * **DDS_ReadCondition_get_datareader** (**DDS_ReadCondition** *self)

  Returns the ***DDS_DataReader*** *(p. 618) associated with the* ***DDS_ReadCondition*** *(p. 695).*

5.22.1 Detailed Description

DDS_ReadCondition (p. 695) and associated elements

5.22.2 Typedef Documentation

5.22.2.1 DDS_ReadCondition

```
typedef struct DDS_ReadConditionImpl  DDS_ReadCondition
```

<<***interface***>> *(p. 1015)* Conditions specifically dedicated to read operations and attached to one **DDS_DataReader** (p. 618).

DDS_ReadCondition (p. 695) objects allow an application to specify the data samples it is interested in (by specifying the desired `sample_states`, `view_states` as well as `instance_states` in **FooDataReader_read** (p. 628) and **FooDataReader_take** (p. 629) variants.

This allows RTI Connext to enable the condition only when suitable information is available. They are to be used in conjunction with a WaitSet as normal conditions.

More than one **DDS_ReadCondition** (p. 695) may be attached to the same **DDS_DataReader** (p. 618).

5.22.3 Function Documentation

5.22.3.1 DDS_ReadCondition_as_condition()

```
DDS_Condition * DDS_ReadCondition_as_condition (
            DDS_ReadCondition * read_condition )
```

Accesses a **DDS_ReadCondition** (p. 695)'s supertype instance.

Parameters

read_condition	<<***in***>> *(p. 1015)* Cannot be NULL.

5.22.3.2 DDS_ReadCondition_get_sample_state_mask()

```
DDS_SampleStateMask DDS_ReadCondition_get_sample_state_mask (
            DDS_ReadCondition * self )
```

Retrieves the set of `sample_states` for the condition.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.22.3.3 DDS_ReadCondition_get_view_state_mask()

```
DDS_ViewStateMask DDS_ReadCondition_get_view_state_mask (
            DDS_ReadCondition * self )
```

Retrieves the set of `view_states` for the condition.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.22.3.4 DDS_ReadCondition_get_instance_state_mask()

```
DDS_InstanceStateMask DDS_ReadCondition_get_instance_state_mask (
            DDS_ReadCondition * self )
```

Retrieves the set of `instance_states` for the condition.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.22.3.5 DDS_ReadCondition_get_stream_kind_mask()

```
DDS_StreamKindMask DDS_ReadCondition_get_stream_kind_mask (
            DDS_ReadCondition * self )
```

Retrieves the set of stream kind mask for the condition.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.22.3.6 DDS_ReadCondition_get_datareader()

```
DDS_DataReader * DDS_ReadCondition_get_datareader (
            DDS_ReadCondition * self )
```

Returns the **DDS_DataReader** (p. 618) associated with the **DDS_ReadCondition** (p. 695).

There is exactly one **DDS_DataReader** (p. 618) assicated with each **DDS_ReadCondition** (p. 695).

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.

Returns

DDS_DataReader (p. 618) associated with the **DDS_ReadCondition** (p. 695).

5.23 Query Conditions

DDS_QueryCondition (p. 700) and associated elements

Data Structures

- struct **DDS_QueryConditionParams**

  <<***extension***>> *(*p. *1014) Input parameters for **DDS_DataReader_create_querycondition_w_params** (*p. *674)*

Typedefs

- typedef struct DDS_QueryConditionImpl **DDS_QueryCondition**

  <<***interface***>> *(*p. *1015) These are specialised **DDS_ReadCondition** (*p. *695) objects that allow the application to also specify a filter on the locally available data.*

Functions

- **DDS_ReadCondition** ∗ **DDS_QueryCondition_as_readcondition** (**DDS_QueryCondition** ∗query_condition)

  *Access a **DDS_QueryCondition** (*p. *700)'s supertype instance.*
- const char ∗ **DDS_QueryCondition_get_query_expression** (**DDS_QueryCondition** ∗self)

  Retrieves the query expression.
- **DDS_ReturnCode_t** **DDS_QueryCondition_get_query_parameters** (**DDS_QueryCondition** ∗self, struct **DDS_StringSeq** ∗query_parameters)

  Retrieves the query parameters.
- **DDS_ReturnCode_t** **DDS_QueryCondition_set_query_parameters** (**DDS_QueryCondition** ∗self, const struct **DDS_StringSeq** ∗query_parameters)

  Sets the query parameters.

5.23.1 Detailed Description

DDS_QueryCondition (p. 700) and associated elements

5.23.2 Typedef Documentation

5.23.2.1 DDS_QueryCondition

```
typedef struct DDS_QueryConditionImpl  DDS_QueryCondition
```

<<***interface***>> *(*p. *1015)* These are specialised **DDS_ReadCondition** (p. 695) objects that allow the application to also specify a filter on the locally available data.

Each query condition filter is composed of a **DDS_ReadCondition** (p. 695) state filter and a content filter expressed as a `query_expression` and `query_parameters`.

The query (`query_expression`) is similar to an SQL WHERE clause and can be parameterised by arguments that are dynamically changeable by the set_query_parameters() operation.

Two query conditions that have the same `query_expression` will require unique query condition content filters if their `query_paramters` differ. Query conditions that differ only in their state masks will share the same query condition content filter.

Queries and Filters Syntax (p. 739) describes the syntax of `query_expression` and `query_parameters`.

5.23.3 Function Documentation

5.23.3.1 DDS_QueryCondition_as_readcondition()

```
DDS_ReadCondition * DDS_QueryCondition_as_readcondition (
            DDS_QueryCondition * query_condition )
```

Access a **DDS_QueryCondition** (p. 700)'s supertype instance.

Parameters

query_condition	<<***in***>> *(*p. *1015)* Cannot be NULL.

5.23.3.2 DDS_QueryCondition_get_query_expression()

```
const char * DDS_QueryCondition_get_query_expression (
            DDS_QueryCondition * self )
```

Retrieves the query expression.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.23.3.3 DDS_QueryCondition_get_query_parameters()

```
DDS_ReturnCode_t DDS_QueryCondition_get_query_parameters (
             DDS_QueryCondition * self,
            struct  DDS_StringSeq * query_parameters )
```

Retrieves the query parameters.

Parameters

query_parameters	<<***inout***>> *(p. 1015)* the query parameters are returned here. The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 1527). In particular, be careful to avoid a situation in which RTI Connext allocates a string on your behalf and you then reuse that string in such a way that RTI Connext believes it to have more memory allocated to it than it actually does.
self	<<***in***>> *(p. 1015)* Cannot be NULL.

5.23.3.4 DDS_QueryCondition_set_query_parameters()

```
DDS_ReturnCode_t DDS_QueryCondition_set_query_parameters (
             DDS_QueryCondition * self,
            const struct  DDS_StringSeq * query_parameters )
```

Sets the query parameters.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
query_parameters	<<***in***>> *(p. 1015)* the new query parameters

5.24 Data Samples

DDS_SampleInfo (p. 1990), **DDS_SampleStateKind** (p. 711), **DDS_ViewStateKind** (p. 713), **DDS_InstanceStateKind** (p. 715) and associated elements

Modules

- **Sample States**

  DDS_SampleStateKind *(p. 711) and associated elements*
- **View States**

  DDS_ViewStateKind *(p. 713) and associated elements*
- **Instance States**

  DDS_InstanceStateKind *(p. 715) and associated elements*
- **Stream Kinds**

  DDS_StreamKind *(p. 717) and associated elements*

Data Structures

- struct **DDS_CoherentSetInfo_t**

  *<<**extension**>> (p. 1014) Type definition for a coherent set info.*
- struct **DDS_SampleInfo**

  Information that accompanies each sample that is `read` *or* `taken`*.*
- struct **DDS_SampleInfoSeq**

  Declares IDL `sequence` *<* ***DDS_SampleInfo*** *(p. 1990) > .*

Functions

- **DDS_Boolean** **DDS_CoherentSetInfo_equals** (const struct **DDS_CoherentSetInfo_t** *self, const struct **DDS_CoherentSetInfo_t** *other)

  Compares this CoherentSetInfo with another CoherentSetInfo for equality.
- void **DDS_CoherentSetInfo_copy** (struct **DDS_CoherentSetInfo_t** *self, const struct **DDS_CoherentSetInfo_t** *other)

  Copies another CoherentSetInfo into this CoherentSetInfo.
- void **DDS_SampleInfo_get_sample_identity** (const struct **DDS_SampleInfo** *self, struct **DDS_SampleIdentity_t** *identity)

  *<<**extension**>> (p. 1014) Retrieves the identity of the sample*
- void **DDS_SampleInfo_get_related_sample_identity** (const struct **DDS_SampleInfo** *self, struct **DDS_SampleIdentity_t** *related_identity)

  *<<**extension**>> (p. 1014) Retrieves the identity of a sample related to this one*

5.24.1 Detailed Description

DDS_SampleInfo (p. 1990), **DDS_SampleStateKind** (p. 711), **DDS_ViewStateKind** (p. 713), **DDS_InstanceStateKind** (p. 715) and associated elements

5.24.2 Function Documentation

5.24.2.1 DDS_CoherentSetInfo_equals()

```
DDS_Boolean DDS_CoherentSetInfo_equals (
            const struct  DDS_CoherentSetInfo_t * self,
            const struct  DDS_CoherentSetInfo_t * other )
```

Compares this CoherentSetInfo with another CoherentSetInfo for equality.

Parameters

self	<<***in***>> *(p. 1015)* This CoherentSetInfo. Cannot be NULL.
other	<<***in***>> *(p. 1015)* The other CoherentSetInfo to be compared with this GUID. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the two CoherentSetInfos have equal values, or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.24.2.2 DDS_CoherentSetInfo_copy()

```
void DDS_CoherentSetInfo_copy (
            struct  DDS_CoherentSetInfo_t * self,
            const struct  DDS_CoherentSetInfo_t * other )
```

Copies another CoherentSetInfo into this CoherentSetInfo.

Parameters

self	<<***in***>> *(p. 1015)* This CoherentSetInfo. Cannot be NULL.
other	<<***in***>> *(p. 1015)* The other CoherentSetInfo to be copied.

5.24.2.3 DDS_SampleInfo_get_sample_identity()

```
void DDS_SampleInfo_get_sample_identity (
            const struct  DDS_SampleInfo * self,
            struct  DDS_SampleIdentity_t * identity )
```

<<***extension***>> *(p. 1014)* Retrieves the identity of the sample

The identity is composed of the **DDS_SampleInfo::original_publication_virtual_guid** (p. 1998) and the **DDS_SampleInfo::original_publication_virtual_sequence_number** (p. 1998)

See also

DDS_SampleInfo_get_related_sample_identity (p. 703)

5.24.2.4 DDS_SampleInfo_get_related_sample_identity()

```
void DDS_SampleInfo_get_related_sample_identity (
            const struct  DDS_SampleInfo * self,
            struct  DDS_SampleIdentity_t * related_identity )
```

<<***extension***>> *(*p. *1014)* Retrieves the identity of a sample related to this one

A sample can be logically related to another sample, when the **DDS_DataWriter** (p. 488) wrote it using **DDS_Write↩ Params_t::related_sample_identity** (p. 2108). By default, a sample does not have a related sample, and this operation returns **DDS_UNKNOWN_SAMPLE_IDENTITY** (p. 1393).

The related identity is composed of the **DDS_SampleInfo::related_original_publication_virtual_guid** (p. 1998) and the **DDS_SampleInfo::related_original_publication_virtual_sequence_number** (p. 1999)

  DDS_TOPIC_QUERY_SELECTION_KIND_CONTINUOUS }
  Kinds of TopicQuerySelection.

Functions

- **DDS_Boolean DDS_TopicQueryHelper_topic_query_data_from_service_request** (struct **DDS_TopicQueryData** *topic_query_data, const struct **DDS_ServiceRequest** *service_request)

  *Retrieves the **DDS_TopicQueryData** (p. 2052) data contained in the specified **DDS_ServiceRequest** (p. 2006).*
- **DDS_ReturnCode_t DDS_TopicQuery_get_guid** (**DDS_TopicQuery** *self, **DDS_GUID_t** *guid)

  Get the TopicQuery's GUID.

Variables

- const struct **DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER**

  *Special value for creating a **DDS_TopicQuery** (p. 708) that applies the same filter as the DataReader's **DDS_ContentFilteredTopic** (p. 176).*
- const struct **DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_SELECT_ALL**

  *Special value for creating a **DDS_TopicQuery** (p. 708) that selects all the samples in a **DDS_DataWriter** (p. 488) cache.*

5.25.1 Detailed Description

DDS_TopicQuery (p. 708) and associated elements.

TopicQueries allow a **DDS_DataReader** (p. 618) to query the sample cache of its matching **DDS_DataWriter** (p. 488). A user can create a **DDS_TopicQuery** (p. 708) with the **DDS_DataReader_create_topic_query** (p. 692) API. When a DataReader
creates a TopicQuery, DDS will propagate it to other DomainParticipants and their DataWriters. When a DataWriter matching with the DataReader that created the TopicQuery receives it, it will send the cached samples that pass the TopicQuery's filter.

To configure how to dispatch a TopicQuery, the **DDS_DataWriterQos** (p. 1666) includes the **DDS_TopicQueryDispatchQosPolicy** (p. 2053) policy. By default, a DataWriter ignores TopicQueries unless they are explicitly enabled using this policy.

The delivery of TopicQuery samples occurs in a separate RTPS channel. This allows DataReaders to receive TopicQuery samples and live samples in parallel. This is a key difference with respect to the Durability QoS policy.

Late-joining DataWriters will also discover existing TopicQueries. To delete a TopicQuery you must use **DDS_DataReader_delete_topic_query** (p. 693).

After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

By default, a TopicQuery queries the samples that were in the DataWriter's queue at the time the DataWriter received the TopicQuery. These TopicQueries are snapshot TopicQueries. However, a TopicQuery can be created in "continuous" mode; in this case, a DataWriter will continue delivering samples that pass a continuous TopicQuery filter until the DataReader application explicitly deletes it. These TopicQueries are continuous TopicQueries.

The samples received in response to a TopicQuery are stored in the associated DataReader's cache. Any of the read/take operations can retrieve TopicQuery samples. The field **DDS_SampleInfo::topic_query_guid** (p. 2000) associates each sample to its TopicQuery. If the read sample is not in response to a TopicQuery then this field will be **DDS_GUID_UNKNOWN** (p. 1215). Note that the same data may be received several times, depending on how many TopicQueries the DataReader creates and their TopicQuerySelection.

You can choose to read or take only TopicQuery samples, only live samples, or both. To support this ReadConditions and QueryConditions provide the **DDS_DataReader_create_querycondition_w_params** (p. 674) and **DDS_DataReader_create_readcondition_w_params** (p. 673) APIs.

Each TopicQuery is identified by a GUID that can be accessed using the **DDS_TopicQuery_get_guid** (p. 709) method.

5.25.2 Snapshot TopicQueries

A snapshot TopicQuery queries the samples that are in a DataWriter's queue when the DataWriter receives the TopicQuery.

When a DataWriter receives a snapshot TopicQuery, it registers the last sequence number available in the DataWriter queue (known as the cut-off SN). Then, the DataWriter applies the TopicQuery expression to all the samples up to the cut-off SN. If a sample with a SN smaller than or equal to the cut-off SN passes the filter expression, it will be included in the TopicQuery response.

When a DataWriter responds to a snapshot TopicQuery, it doesn't create any copies of the samples that are part of the response. As a result, a sample that passes the TopicQuery expression and should have been included in the response may be removed from the DataWriter queue before it reaches the DataReader that issued the TopicQuery. This can result in incomplete TopicQueries, which may or may not be necessary for your application to detect.

For instance, your application may issue a TopicQuery on a keyed topic using a filter on key-only fields and expect to receive the latest value for an instance that passes the filter. However, if the latest value for the instance is replaced with a newer value before the sample is delivered to the DataReader, it is important to detect this situation and re-issue the TopicQuery.

On the other hand, some applications may not care about which samples are returned in response to a TopicQuery, and are only interested in a snapshot of the DataWriter's queue. In such cases, the concept of incomplete TopicQueries can be ignored.

The application can detect incomplete TopicQueries by checking the **DDS_INCOMPLETE_SNAPSHOT_TOPIC_QUERY** (p. 1389) bit in the **DDS_SampleInfo::flag** (p. 1999) field of the last sample received for a snapshot TopicQuery.

To reduce the probability of receiving incomplete responses, DataWriters configured with **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295) recalculate the cut-off SN for a snapshot TopicQuery if a sample is replaced in the DataWriter queue due to KEEP_LAST replacement before the complete TopicQuery response is published.

Snapshot TopicQueries are not automatically deleted once the DataWriters that respond to the TopicQuery have finished delivering the samples included in the response. It is the responsibility of the user to delete the TopicQuery when it is no longer needed. To detect the end of a snapshot TopicQuery response, check for the **DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE** (p. 1389) flag in the **DDS_SampleInfo::flag** (p. 1999) field of the samples included in the response. For more information on how to use this flag, see **Reading TopicQuery Samples** (p. 706).

5.25.3 Reading TopicQuery Samples

A TopicQuery response is the set of samples published by a DataWriter in response to a TopicQuery. Because multiple DataWriters may respond to a TopicQuery, a DataReader may receive multiple responses for a single TopicQuery.

Responses can be proxied by Routing Service DataWriters by setting <topic_query_proxy>/<mode> to PROPAGATION. These DataWriters forward a TopicQuery response, but they are not considered to be responding to the TopicQuery.

Samples that a DataReader receives in response to a TopicQuery have a value for **DDS_SampleInfo::topic_query_guid** (p. 2000) different than **DDS_GUID_UNKNOWN** (p. 1215).

In addition, the virtual GUID of the DataWriter(s) that responded to a TopicQuery is set in **DDS_SampleInfo::source_guid** (p. 1999).

Intermediate samples, not the final sample, have the flag **DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE** (p. 1389) set in **DDS_SampleInfo::flag** (p. 1999) for a given response to a snapshot TopicQuery.

If two DataWriters respond to a snapshot TopicQuery, you should expect two final samples, one per unique **DDS_SampleInfo::source_guid** (p. 1999) responding to the TopicQuery, assuming that at least one sample passes the TopicQuery filter for each DataWriter.

The **DDS_SampleInfo::flag** (p. 1999) field of the last sample received for a snapshot TopicQuery may have the **DDS_INCOMPLETE_SNAPSHOT_TOPIC_QUERY** (p. 1389) bit set if the TopicQuery response is incomplete, which may or may not be necessary for your application to detect. See **Snapshot TopicQueries** (p. 706) for more information.

5.25.4 Debugging Topic Queries

There are a number of ways in which to gain more insight into what is happening in an application that is creating Topic Queries.

5.25.4.1 The Built-in ServiceRequest DataReader

TopicQueries are communicated to publishing applications through a built-in **DDS_ServiceRequest** (p. 2006) channel. The ServiceRequest channel is designed to be generic so that it can be used for many different purposes, one of which is TopicQueries.

When a DataReader creates a TopicQuery, a **DDS_ServiceRequest** (p. 2006) message is sent containing the Topic↩ Query information. Just as there are built-in DataReaders for **DDS_ParticipantBuiltinTopicData** (p. 1873), **DDS_↩ SubscriptionBuiltinTopicData** (p. 2018), and **DDS_PublicationBuiltinTopicData** (p. 1909), there is a fourth built-in DataReader for ServiceRequests.

The new built-in DataReader can be retrieved using the built-in subscriber and **DDS_Subscriber_lookup_datareader** (p. 589). The topic name is **DDS_SERVICE_REQUEST_TOPIC_NAME** (p. 1103). Installing a listener with the **DDS_↩ DataReaderListener::on_data_available** (p. 1595) callback implemented will allow a publishing application to be notified whenever a TopicQuery has been received from a subscribing application.

The **DDS_ServiceRequest::service_id** (p. 2006) of a **DDS_ServiceRequest** (p. 2006) corresponding to a **DDS↩ _TopicQuery** (p. 708) will be **DDS_TOPIC_QUERY_SERVICE_REQUEST_ID** (p. 1103) and the **DDS_Service↩ Request::instance_id** (p. 2006) will be equal to the GUID of the **DDS_TopicQuery** (p. 708) (see **DDS_TopicQuery_↩ get_guid** (p. 709)).

The **DDS_ServiceRequest::request_body** (p. 2007) is a sequence of bytes containing more information about the TopcQuery. This information can be retrieved using the **DDS_TopicQueryHelper_topic_query_data_from_service↩ _request** (p. 709) function. The resulting **DDS_TopicQueryData** (p. 2052) contains the **DDS_TopicQuerySelection** (p. 2055) that the **DDS_TopicQuery** (p. 708) was created with, the GUID of the original DataReader that created the TopicQuery, and the topic name of that DataReader. Note: When TopicQueries are propagated through one or more Routing Services, the last DataReader that issued the TopicQuery will be a Routing Service DataReader. The **DDS_↩ TopicQueryData::original_related_reader_guid** (p. 2053), however, will be that of the first DataReader to have created the TopicQuery.

5.25.4.2 The on_service_request_accepted DataWriter Listener Callback

It is possible that a **DDS_ServiceRequest** (p. 2006) for a **DDS_TopicQuery** (p. 708) is received but is not immediately dispatched to a DataWriter. This can happen, for example, if a DataWriter was not matching with a DataReader at the time that the TopicQuery was received by the publishing application. The **DDS_DataWriterListener::on_service_↩ request_accepted** (p. 1648) callback notifies a DataWriter when a ServiceRequest has been dispatched to that Data↩ Writer. The **DDS_ServiceRequestAcceptedStatus** (p. 2007) provides information about how many ServiceRequests have been accepted by the DataWriter since the last time that the status was read. The status also includes the **DDS↩ _ServiceRequestAcceptedStatus::last_request_handle** (p. 2008), which is the **DDS_InstanceHandle_t** (p. 213) of the last ServiceRequest that was accepted. This instance handle can be used to read samples per instance from the built-in ServiceRequest DataReader and correlate which ServiceRequests have been dispatched to which DataWriters.

5.25.5 Typedef Documentation

5.25.5.1 DDS_TopicQuerySelection

```
typedef struct DDS_TopicQuerySelection DDS_TopicQuerySelection
```

<<***extension***>> *(p. 1014)* Specifies the data query that defines a **DDS_TopicQuery** (p. 708)

The query format is similar to the expression and parameters of a **DDS_QueryCondition** (p. 700) or a **DDS_ContentFilteredTopic** (p. 176), as described in **DDS_DomainParticipant_create_contentfilteredtopic_with_filter** (p. 118).

There are two special queries:

- **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 710)
- **DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER** (p. 710)

See also

Queries and Filters Syntax (p. 739)

5.25.5.2 DDS_TopicQuery

```
typedef struct DDS_TopicQueryImpl DDS_TopicQuery
```

<<***extension***>> *(p. 1014)* Allows a **DDS_DataReader** (p. 618) to query the sample cache of its matching **DDS_DataWriter** (p. 488).

5.25.5.3 DDS_TopicQueryData

```
typedef struct DDS_TopicQueryData DDS_TopicQueryData
```

<<***extension***>> *(p. 1014)* Provides information about a **DDS_TopicQuery** (p. 708)

Contains the information about a TopicQuery that can be retrieved using **DDS_TopicQueryHelper_topic_query_data_from_service_request** (p. 709).

See also

DDS_TopicQueryHelper_topic_query_data_from_service_request (p. 709)

5.25.6 Enumeration Type Documentation

5.25.6.1 DDS_TopicQuerySelectionKind

```
enum DDS_TopicQuerySelectionKind
```

Kinds of TopicQuerySelection.

See also

DDS_TopicQuerySelection (p. 2055)

Enumerator

DDS_TOPIC_QUERY_SELECTION_KIND_↩ HISTORY_SNAPSHOT	Indicates that the **DDS_TopicQuery** (p. 708) may only select samples that were in the DataWriter cache upon reception. **[default]**
DDS_TOPIC_QUERY_SELECTION_KIND_↩ CONTINUOUS	Indicates that the **DDS_TopicQuery** (p. 708) may continue selecting samples published after its reception. The subscribing application must explicitly delete the TopicQuery (see **DDS_DataReader_delete_topic_query** (p. 693)) to signal the DataWriters to stop publishing samples for it.

5.25.7 Function Documentation

5.25.7.1 DDS_TopicQueryHelper_topic_query_data_from_service_request()

```
DDS_Boolean DDS_TopicQueryHelper_topic_query_data_from_service_request (
            struct  DDS_TopicQueryData * topic_query_data,
            const struct  DDS_ServiceRequest * service_request )
```

Retrieves the **DDS_TopicQueryData** (p. 2052) data contained in the specified **DDS_ServiceRequest** (p. 2006).

This operation will extract the content from the request body of the **DDS_ServiceRequest** (p. 2006) and place it into the specified **DDS_TopicQueryData** (p. 2052) object.

The specified **DDS_ServiceRequest** (p. 2006) must be a valid sample associated with the service id **DDS_TOPIC_↩ QUERY_SERVICE_REQUEST_ID** (p. 1103). Otherwise this operation will return **DDS_BOOLEAN_FALSE** (p. 1203).

This operation can be called within the context of a **DDS_DataWriterListener::on_service_request_accepted** (p. 1648) to retrieve the **DDS_TopicQueryData** (p. 2052) of a **DDS_ServiceRequest** (p. 2006) that has been received with service id **DDS_TOPIC_QUERY_SERVICE_REQUEST_ID** (p. 1103)

Parameters

topic_query_data	*<<**inout**>> (p. 1015)* A **DDS_TopicQueryData** (p. 2052) object where the content from the service request is extracted. Cannot be NULL.
service_request	*<<**in**>> (p. 1015)* Input **DDS_ServiceRequest** (p. 2006) that contains the **DDS_TopicQueryData** (p. 2052) as part of its request body. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 1203) on success.

5.25.7.2 DDS_TopicQuery_get_guid()

```
DDS_ReturnCode_t DDS_TopicQuery_get_guid (
            DDS_TopicQuery * self,
            DDS_GUID_t * guid )
```

Get the TopicQuery's GUID.

Parameters

self	<<***in***>> *(*p. *1015)* Cannot be NULL.
guid	<<***out***>> *(*p. *1015)* The GUID of the **DDS_TopicQuery** (p. 708). Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1223)

5.25.8 Variable Documentation

5.25.8.1 DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER [extern]
```

Special value for creating a **DDS_TopicQuery** (p. 708) that applies the same filter as the DataReader's **DDS_Content↩ FilteredTopic** (p. 176).

If the **DDS_DataReader** (p. 618) that creates the **DDS_TopicQuery** (p. 708) uses a **DDS_ContentFilteredTopic** (p. 176), this **DDS_TopicQuerySelection** (p. 2055) value indicates that the TopicQuery should use the same filter.

Otherwise it behaves as **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 710).

5.25.8.2 DDS_TOPIC_QUERY_SELECTION_SELECT_ALL

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_SELECT_ALL [extern]
```

Special value for creating a **DDS_TopicQuery** (p. 708) that selects all the samples in a **DDS_DataWriter** (p. 488) cache.

5.26 Sample States

DDS_SampleStateKind (p. 711) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_SampleStateMask**
  A bit-mask (list) of sample states, i.e. ***DDS_SampleStateKind*** *(p. 711).*

Enumerations

- enum **DDS_SampleStateKind** {
  DDS_READ_SAMPLE_STATE = 0x0001 << 0 ,
  DDS_NOT_READ_SAMPLE_STATE = 0x0001 << 1 }
  Indicates whether or not a sample has ever been read.

Variables

- const **DDS_SampleStateMask DDS_ANY_SAMPLE_STATE**
  Any sample state ***DDS_READ_SAMPLE_STATE*** *(p. 712) |* ***DDS_NOT_READ_SAMPLE_STATE*** *(p. 712).*

5.26.1 Detailed Description

DDS_SampleStateKind (p. 711) and associated elements

5.26.2 Typedef Documentation

5.26.2.1 DDS_SampleStateMask

`typedef` **`DDS_UnsignedLong DDS_SampleStateMask`**

A bit-mask (list) of sample states, i.e. **DDS_SampleStateKind** (p. 711).

5.26.3 Enumeration Type Documentation

5.26.3.1 DDS_SampleStateKind

`enum` **`DDS_SampleStateKind`**

Indicates whether or not a sample has ever been read.

For each sample received, the middleware internally maintains a sample_state relative to each **DDS_DataReader** (p. 618). The sample state can be either:

- **DDS_READ_SAMPLE_STATE** (p. 712) indicates that the **DDS_DataReader** (p. 618) has already accessed that sample by means of a read or take operation.
- **DDS_NOT_READ_SAMPLE_STATE** (p. 712) indicates that the **DDS_DataReader** (p. 618) has not accessed that sample before.

The sample state will, in general, be different for each sample in the collection returned by read or take.

Enumerator

DDS_READ_SAMPLE_STATE	Sample has been read.
DDS_NOT_READ_SAMPLE_STATE	Sample has not been read.

5.26.4 Variable Documentation

5.26.4.1 DDS_ANY_SAMPLE_STATE

```
const DDS_SampleStateMask DDS_ANY_SAMPLE_STATE [extern]
```

Any sample state **DDS_READ_SAMPLE_STATE** (p. 712) | **DDS_NOT_READ_SAMPLE_STATE** (p. 712).

Examples

HelloWorld_subscriber.c.

5.27 View States

DDS_ViewStateKind (p. 713) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_ViewStateMask**
  *A bit-mask (list) of view states, i.e. **DDS_ViewStateKind** (p. 713).*

Enumerations

- enum **DDS_ViewStateKind** {
  DDS_NEW_VIEW_STATE = 0x0001 << 0 ,
  DDS_NOT_NEW_VIEW_STATE = 0x0001 << 1 }
  Indicates whether or not an instance is new.

Variables

- const **DDS_ViewStateMask DDS_ANY_VIEW_STATE**
  *Any view state **DDS_NEW_VIEW_STATE** (p. 714) | **DDS_NOT_NEW_VIEW_STATE** (p. 714).*

5.27.1 Detailed Description

DDS_ViewStateKind (p. 713) and associated elements

5.27.2 Typedef Documentation

5.27.2.1 DDS_ViewStateMask

```
typedef DDS_UnsignedLong DDS_ViewStateMask
```

A bit-mask (list) of view states, i.e. **DDS_ViewStateKind** (p. 713).

5.27.3 Enumeration Type Documentation

5.27.3.1 DDS_ViewStateKind

```
enum DDS_ViewStateKind
```

Indicates whether or not an instance is new.

For each instance (identified by the key), the middleware internally maintains a view state relative to each **DDS_DataReader** (p. 618). The view state can be either:

- **DDS_NEW_VIEW_STATE** (p. 714) indicates that either this is the first time that the **DDS_DataReader** (p. 618) has ever accessed samples of that instance, or else that the **DDS_DataReader** (p. 618) has accessed previous samples of the instance, but the instance has since been reborn (i.e. become not-alive and then alive again). These two cases are distinguished by examining the **DDS_SampleInfo::disposed_generation_count** (p. 1995) and the **DDS_SampleInfo::no_writers_generation_count** (p. 1995).

- **DDS_NOT_NEW_VIEW_STATE** (p. 714) indicates that the **DDS_DataReader** (p. 618) has already accessed samples of the same instance and that the instance has not been reborn since.

The view_state available in the **DDS_SampleInfo** (p. 1990) is a snapshot of the view state of the instance relative to the **DDS_DataReader** (p. 618) used to access the samples at the time the collection was obtained (i.e. at the time read or take was called). The view_state is therefore the same for all samples in the returned collection that refer to the same instance.

Once an instance has been detected as not having any "live" writers and all the samples associated with the instance are "taken" from the **DDS_DataReader** (p. 618), the middleware can reclaim all local resources regarding the instance. Future samples will be treated as "never seen."

Enumerator

DDS_NEW_VIEW_STATE	New instance. This latest generation of the instance has not previously been accessed.
DDS_NOT_NEW_VIEW_STATE	Not a new instance. This latest generation of the instance has previously been accessed.

5.27.4 Variable Documentation

5.27.4.1 DDS_ANY_VIEW_STATE

```
const DDS_ViewStateMask DDS_ANY_VIEW_STATE [extern]
```

Any view state **DDS_NEW_VIEW_STATE** (p. 714) | **DDS_NOT_NEW_VIEW_STATE** (p. 714).

Examples

HelloWorld_subscriber.c.

5.28 Instance States

DDS_InstanceStateKind (p. 715) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_InstanceStateMask**
  A bit-mask (list) of instance states, i.e. ***DDS_InstanceStateKind*** *(p. 715).*

Enumerations

- enum **DDS_InstanceStateKind** {
  DDS_ALIVE_INSTANCE_STATE = 0x0001 << 0 ,
  DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE = 0x0001 << 1 ,
  DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE = 0x0001 << 2 }
  Indicates if the samples are from a live ***DDS_DataWriter*** *(p. 488) or not.*

Variables

- const **DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE**
  Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.
- const **DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE**
  Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_STATE.

5.28.1 Detailed Description

DDS_InstanceStateKind (p. 715) and associated elements

5.28.2 Typedef Documentation

5.28.2.1 DDS_InstanceStateMask

`typedef` **`DDS_UnsignedLong DDS_InstanceStateMask`**

A bit-mask (list) of instance states, i.e. **DDS_InstanceStateKind** (p. 715).

5.28.3 Enumeration Type Documentation

5.28.3.1 DDS_InstanceStateKind

`enum` **`DDS_InstanceStateKind`**

Indicates if the samples are from a live **DDS_DataWriter** (p. 488) or not.

For each instance, the middleware internally maintains an instance state. The instance state can be:

- **DDS_ALIVE_INSTANCE_STATE** (p. 716) indicates that (a) samples have been received for the instance, (b) there are live **DDS_DataWriter** (p. 488) entities writing the instance, and (c) the instance has not been explicitly disposed (or else more samples have been received after it was disposed).
- **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) indicates the instance was explicitly disposed by a **DDS_DataWriter** (p. 488) by means of the dispose operation.
- **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716) indicates the instance has been declared as not-alive by the **DDS_DataReader** (p. 618) because it detected that there are no live **DDS_DataWriter** (p. 488) entities writing that instance.

The precise behavior events that cause the instance state to change depends on the setting of the OWNERSHIP QoS:

- If **OWNERSHIP** (p. 1303) is set to **DDS_EXCLUSIVE_OWNERSHIP_QOS** (p. 1304), then the instance state becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) only if the **DDS_DataWriter** (p. 488) that "owns" the instance explicitly disposes it. The instance state becomes **DDS_ALIVE_INSTANCE_STATE** (p. 716) again only if the **DDS_DataWriter** (p. 488) that owns the instance writes it.
- If **OWNERSHIP** (p. 1303) is set to **DDS_SHARED_OWNERSHIP_QOS** (p. 1304), then the instance state becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) if any **DDS_DataWriter** (p. 488) explicitly disposes the instance. The instance state becomes **DDS_ALIVE_INSTANCE_STATE** (p. 716) as soon as any **DDS_DataWriter** (p. 488) writes the instance again.

The instance state available in the **DDS_SampleInfo** (p. 1990) is a snapshot of the instance state of the instance at the time the collection was obtained (i.e. at the time read or take was called). The instance state is therefore the same for all samples in the returned collection that refer to the same instance.

Enumerator

DDS_ALIVE_INSTANCE_STATE	Instance is currently in existence.
DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE	Not alive disposed instance. The instance has been disposed by a DataWriter.
DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE	Not alive no writers for instance. None of the **DDS_DataWriter** (p. 488) objects that are currently alive (according to the **LIVELINESS** (p. 1298)) are writing the instance.

5.28.4 Variable Documentation

5.28.4.1 DDS_ANY_INSTANCE_STATE

```
const DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE [extern]
```

Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.

Examples

HelloWorld_subscriber.c.

5.28.4.2 DDS_NOT_ALIVE_INSTANCE_STATE

```
const DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE [extern]
```

Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_↩ STATE.

5.29 Stream Kinds

DDS_StreamKind (p. 717) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_StreamKindMask**

  A bit-mask (list) of stream kinds, i.e. ***DDS_StreamKind*** *(p. 717).*

Enumerations

- enum **DDS_StreamKind** {
  DDS_LIVE_STREAM = 0x0001 << 0 ,
  DDS_TOPIC_QUERY_STREAM = 0x0001 << 1 }
  Indicates if the samples are TopicQuery samples or not.

5.29.1 Detailed Description

DDS_StreamKind (p. 717) and associated elements

5.29.2 Typedef Documentation

5.29.2.1 DDS_StreamKindMask

`typedef` **`DDS_UnsignedLong DDS_StreamKindMask`**

A bit-mask (list) of stream kinds, i.e. **DDS_StreamKind** (p. 717).

5.29.3 Enumeration Type Documentation

5.29.3.1 DDS_StreamKind

`enum` **`DDS_StreamKind`**

Indicates if the samples are TopicQuery samples or not.

Enumerator

DDS_LIVE_STREAM	Sample is a live data sample.
DDS_TOPIC_QUERY_STREAM	Sample is a TopicQuery sample.

5.30 Infrastructure Module

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

Modules

- **Clock Selection**

  APIs related to clock selection.
- **Time Support**

  Time and duration types and defines.
- **GUID Support**

  *<<**extension**>> (p. 1014) GUID type and defines.*
- **Sequence Number Support**

  *<<**extension**>> (p. 1014) Sequence number type and defines.*
- **Exception Codes**

  *<<**extension**>> (p. 1014) Exception codes.*
- **Return Codes**

  Types of return codes.
- **Status Kinds**

  Kinds of communication status.
- **QoS**

  Quality of Service (QoS) policies.
- **Entity Support**

  ***DDS_Entity** (p. 1362), **DDS_Listener** (p. 1819) and related items.*
- **Conditions and WaitSets**

  ***DDS_Condition** (p. 1372) and **DDS_WaitSet** (p. 1373) and related items.*
- **Cookie**

  *<<**extension**>> (p. 1014) Unique identifier for a written data sample*
- **Sample Flags**

  *<<**extension**>> (p. 1014) Flags for samples.*
- **WriteParams**

  Instantiates ***FooSeq*** *(p. 2120) < **DDS_Wchar** (p. 1204)* >*

5.31.1 Detailed Description

Defines sequences of primitive data type. .

5.32 Multi-channel DataWriters

APIs related to Multi-channel DataWriters.

APIs related to Multi-channel DataWriters.

5.32.1 What is a Multi-channel DataWriter?

A Multi-channel **DDS_DataWriter** (p. 488) is a **DDS_DataWriter** (p. 488) that is configured to send data over multiple multicast addresses, according to some filtering criteria applied to the data.

To determine which multicast addresses will be used to send the data, the middleware evaluates a set of filters that are configured for the **DDS_DataWriter** (p. 488). Each filter "guards" a channel (a set of multicast addresses). Each time a multi-channel **DDS_DataWriter** (p. 488) writes data, the filters are applied. If a filter evaluates to true, the data is sent over that filter's associated channel (set of multicast addresses). We refer to this type of filter as a Channel Guard filter.

5.32.2 Configuration on the Writer Side

To configure a multi-channel **DDS_DataWriter** (p. 488), simply define a list of all its channels in the **DDS_Multi↩ ChannelQosPolicy** (p. 1860).

The **DDS_MultiChannelQosPolicy** (p. 1860) is propagated along with discovery traffic. The value of this policy is available in **DDS_PublicationBuiltinTopicData::locator_filter** (p. 1916).

5.32.3 Configuration on the Reader Side

No special changes are required in a subscribing application to get data from a multichannel **DDS_DataWriter** (p. 488). If you want the **DDS_DataReader** (p. 618) to subscribe to only a subset of the channels, use a **DDS_ContentFiltered↩ Topic** (p. 176).

For more information on Multi-channel DataWriters, refer to the `User's Manual`.

5.32.4 Reliability with Multi-Channel DataWriters

5.32.4.1 Reliable Delivery

Reliable delivery is only guaranteed when the **DDS_PresentationQosPolicy::access_scope** (p. 1897) is set to **DDS_↩ INSTANCE_PRESENTATION_QOS** (p. 1307) and the filters in **DDS_MultiChannelQosPolicy** (p. 1860) are keyed-only based.

If any of the guard filters are based on non-key fields, RTI Connext only guarantees reception of the most recent data from the MultiChannel DataWriter.

5.32.4.2 Reliable Protocol Considerations

Reliability is maintained on a per-channel basis. Each channel has its own reliability channel send queue. The size of that queue is limited by **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1956) and/or **DDS_DataWriter↩ ResourceLimitsQosPolicy::max_batches** (p. 1677).

The protocol parameters described in **DDS_DataWriterProtocolQosPolicy** (p. 1649) are applied per channel, with the following exceptions:

DDS_RtpsReliableWriterProtocol_t::low_watermark (p. 1966) and **DDS_RtpsReliableWriterProtocol_t::high_↩ watermark** (p. 1967): The low watermark and high watermark control the queue levels (in number of samples) that determine when to switch between regular and fast heartbeat rates. With MultiChannel DataWriters, high_watermark and low_watermark refer to the DataWriter's queue (not the reliability channel queue). Therefore, periodic heartbeating cannot be controlled on a per-channel basis.

Important: With MultiChannel DataWriters, low_watermark and high_watermark refer to application samples even if batching is enabled. This behavior differs from the one without MultiChannel DataWriters (where low_watermark and high_watermark refer to batches).

DDS_RtpsReliableWriterProtocol_t::heartbeats_per_max_samples (p. 1972): This field defines the number of heartbeats per send queue. For MultiChannel DataWriters, the value is applied per channel. However, the send queue size that is used to calculate the a piggyback heartbeat rate is defined per DataWriter (see **DDS_ResourceLimits↩ QosPolicy::max_samples** (p. 1956))

Important: With MultiChannel DataWriters, heartbeats_per_max_samples refers to samples even if batching is enabled. This behavior differs from the one without MultiChannels DataWriters (where heartbeats_per_max_samples refers to batches).

With batching and MultiChannel DataWriters, the size of the DataWriter's send queue should be configured using **DDS↩ _ResourceLimitsQosPolicy::max_samples** (p. 1956) instead of max_batches **DDS_DataWriterResourceLimitsQosPolicy::max_batches** (p. 1677) in order to take advantage of heartbeats_per↩ _max_samples.

5.33 Transports

APIs related to RTI Connext pluggable transports.

Modules

- **Installing Transport Plugins**

  Installing and configuring transports used by RTI Connext.
- **Built-in Transport Plugins**

  Transport plugins delivered with RTI Connext.
- **Creating New Transport Plugins**

  Developing new transport plugins for RTI Connext.
- **Transport Plugins Configuration**

  Transport plugins configuration with RTI Connext.
- **Transport Address**

  Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

5.33.1 Detailed Description

APIs related to RTI Connext pluggable transports.

5.33.2 Overview

RTI Connext has a pluggable transports architecture. The core of RTI Connext is transport agnostic; it does not make any assumptions about the actual transports used to send and receive messages. Instead, the RTI Connext core uses an abstract "transport API" to interact with the **transport plugins** which implement that API.

A transport plugin implements the abstract transport API and performs the actual work of sending and receiving messages over a physical transport. A collection of **builtin plugins** (see **Built-in Transport Plugins** (p. 737)) is delivered with RTI Connext for commonly used transports. New transport plugins can easily be created, thus enabling RTI Connext applications to run over transports that may not even be conceived yet. This is a powerful capability and that distinguishes RTI Connext from competing middleware approaches.

RTI Connext also provides a set of APIs for installing and configuring transport plugins to be used in an application. So that RTI Connext applications work out of the box, a subset of the builtin transport plugins is preconfigured by default (see **DDS_TransportBuiltinQosPolicy** (p. 2057)). You can "turn-off" some or all of the builtin transport plugins. In addition, you can configure other transport plugins for use by the application.

5.33.3 Transport Aliases

In order to use a transport plugin instance in an RTI Connext application, it must be registered with a **DDS_DomainParticipant** (p. 76). When you register a transport, you specify a sequence of "alias" strings to symbolically refer to the transport plugin. The same alias strings can be used to register more than one transport plugin.

You can register multiple transport plugins with a **DDS_DomainParticipant** (p. 76). An **alias** symbolically refers to one or more transport plugins registered with the **DDS_DomainParticipant** (p. 76). Builtin transport plugin instances can be referred to using preconfigured aliases (see **TRANSPORT_BUILTIN** (p. 1333)).

A transport plugin's class name is automatically used as an implicit alias. It can be used to refer to all the transport plugin instances of that class.

You can use aliases to refer to transport plugins, in order to specify:

- the transport plugins to use for **discovery** (see **DDS_DiscoveryQosPolicy::enabled_transports** (p. 1718)), and for **DDS_DataWriter** (p. 488) and **DDS_DataReader** (p. 618) entities (see **DDS_TransportSelectionQosPolicy** (p. 2070)).

- the **multicast** addresses on which to receive discovery messages (see **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 1719)), and the multicast addresses and ports on which to receive user data (see **DDS_DataReaderQos::multicast** (p. 1616)).

- the **unicast ports** used for user data (see **DDS_TransportUnicastQosPolicy** (p. 2071)) on both **DDS_DataWriter** (p. 488) and **DDS_DataReader** (p. 618) entities.

- the transport plugins used to parse an address string in a locator (**Locator Format** (p. 1355) and **NDDS_DISCOVERY_PEERS** (p. 1354)).

A **DDS_DomainParticipant** (p. 76) (and contained its entities) start using a transport plugin after the **DDS_DomainParticipant** (p. 76) is enabled (see **DDS_Entity_enable** (p. 1365)). An entity will use *all* the transport plugins that match the specified transport QoS policy. All transport plugins are treated uniformly, regardless of how they were created or registered; there is no notion of some transports being more "special" that others.

5.33.4 Transport Lifecycle

A transport plugin is owned by whomever creates it. Thus, if you create and register a transport plugin with a **DDS_↩ DomainParticipant** (p. 76), you are responsible for deleting it by calling its destructor. Note that builtin transport plugins (**TRANSPORT_BUILTIN** (p. 1333)) and transport plugins that are loaded through the **PROPERTY** (p. 1308) QoS policy (see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 728)) are automatically managed by RTI Connext.

A user-created transport plugin must not be deleted while it is still in use by a **DDS_DomainParticipant** (p. 76). This generally means that a user-created transport plugin instance can only be deleted after the **DDS_DomainParticipant** (p. 76) with which it was registered is deleted (see **DDS_DomainParticipantFactory_delete_participant** (p. 43)). Note that a transport plugin *cannot* be "unregistered" from a **DDS_DomainParticipant** (p. 76).

A transport plugin instance cannot be registered with more than one **DDS_DomainParticipant** (p. 76) at a time. This requirement is necessary to guarantee the multi-threaded safety of the transport API.

If the same physical transport resources are to be used with more than one **DDS_DomainParticipant** (p. 76) in the same address space, the transport plugin should be written in such a way so that it can be instantiated multiple times—once for each **DDS_DomainParticipant** (p. 76) in the address space. Note that it is always possible to write the transport plugin so that multiple transport plugin instances share the same underlying resources; however the burden (if any) of guaranteeing multi-threaded safety to access shared resource shifts to the transport plugin developer.

5.33.5 Transport Class Attributes

A transport plugin instance is associated with two kinds of attributes:

- the *class* attributes that are decided by the plugin writer; these are invariant across all instances of the transport plugin class, and
- the *instance* attributes that can be set on a per instance basis by the transport plugin user.

Every transport plugin must specify the following class attributes.

transport class id (see NDDS_Transport_Property_t::classid (p. 2129)) Identifies a transport plugin implementation class. It denotes a unique "class" to which the transport plugin instance belongs. The class is used to distinguish between different transport plugin implementations. Thus, a transport plugin vendor should ensure that its transport plugin implementation has a unique class.

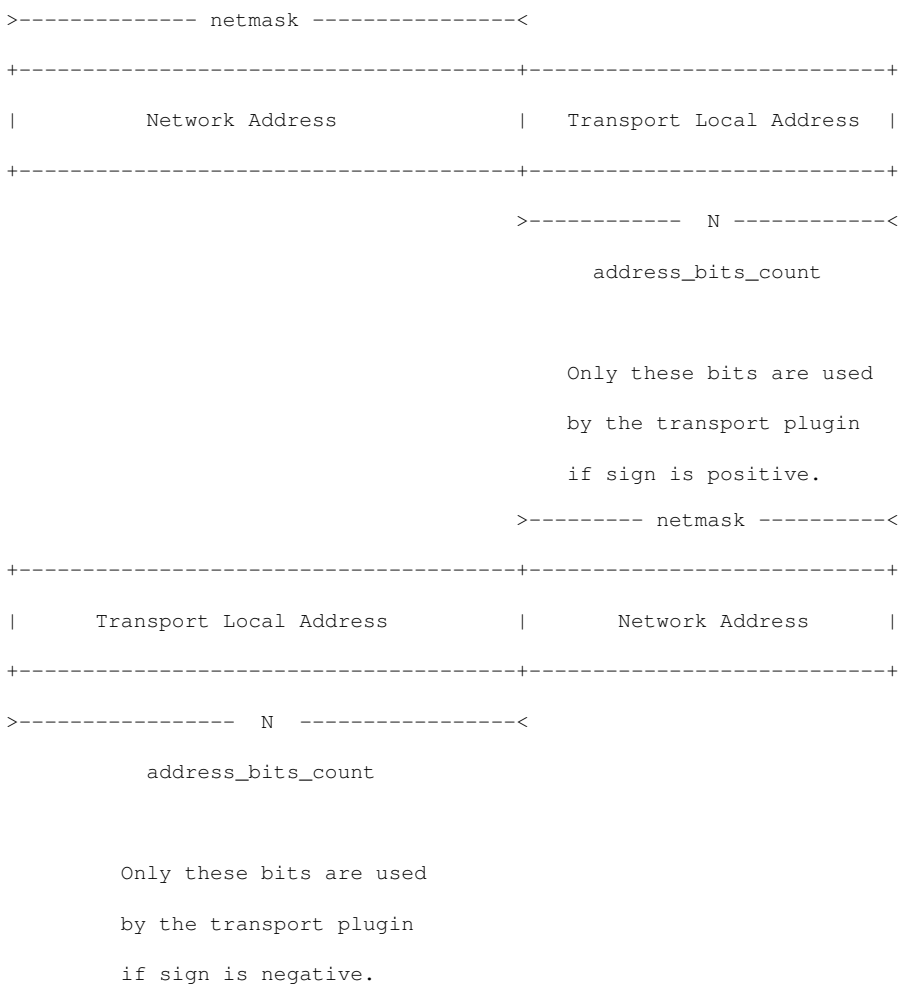
Two transport plugin instances report the same class *iff* they have compatible implementations. Transport plugin instances with mismatching classes are not allowed (by the RTI Connext Core) to communicate with one another.

Multiple implementations (possibly from different vendors) for a physical transport mechanism can co-exist in an RTI Connext application, provided they use different transport class IDs.

The class ID can also be used to distinguish between different transport protocols over the same physical transport network (e.g., UDP vs. TCP over the IP routing infrastructure).

transport significant address bit count (see NDDS_Transport_Property_t::address_bit_count (p. 2130)) RTI Connext's addressing is modeled after the IPv6 and uses 128-bit addresses (**Transport Address** (p. 1029)) to route messages.

A transport plugin is expected to map the transport's internal addressing scheme to 128-bit addresses. Depending on the sign of this attribute, this mapping uses only N least significant bits (LSB) if positive or N most significant bits (MSB) if negative; these bits are specified by this attribute.



The remaining bits of an address using the 128 - abs(bit address) representation will be considered as part of the "network address" (see **Transport Network Address** (p. 725)) and thus ignored by the transport plugin's internal addressing scheme.

For *unicast* addresses, the transport plugin is expected to ignore the higher (128 - **NDDS_Transport_Property_↩ t::address_bit_count** (p. 2130)) bits. RTI Connext is free to manipulate those bits freely in the addresses passed in/out to the transport plugin APIs.

Theoretically, the significant address bits count, N is related to the size of the underlying transport network as follows:

$$address_bits_count >= ceil(log_2(total_addressable_transport_unicast_interfaces))$$

The equality holds when the most compact (theoretical) internal address mapping scheme is used. A practical address mapping scheme may waste some bits.

5.33.6 Transport Instance Attributes

The *per instance* attributes to configure the plugin instance are generally passed in to the plugin constructor. These are defined by the transport plugin writer, and can be used to:

- customize the behavior of an instance of a transport plugin, including the send and the receiver buffer sizes, the maximum message size, various transport level classes of service (CoS), and so on.

- specify the resource values, network interfaces to use, various transport level policies, and so on.

RTI Connext requires that every transport plugin instance must specify the **NDDS_Transport_Property_t::message_size_max** (p. 2131) and **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2131).

It is up to the transport plugin developer to make these available for configuration to transport plugin user.

Note that it is important that the instance attributes are "compatible" between the sending side and the receiving side of communicating applications using different instances of a transport plugin class. For example, if one side is configured to send messages larger than can be received by the other side, then communications via the plugin may fail.

5.33.7 Transport Network Address

The address bits not used by the transport plugin for its internal addressing constitute its network address bits.

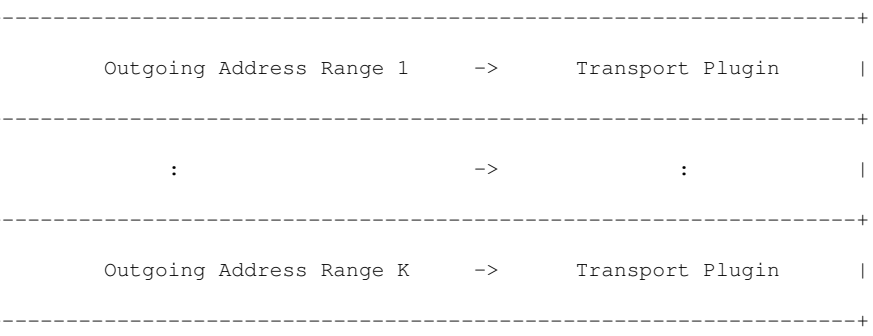
In order for RTI Connext to properly route the messages, each unicast interface in the RTI Connext *domain* must have a unique address. RTI Connext allows the user to specify the value of the network address when installing a transport plugin via the **NDDS_Transport_Support_register_transport()** (p. 731) API.

The network address for a transport plugin should be chosen such that the resulting fully qualified 128-bit address will be unique in the RTI Connext domain. Thus, if two instances of a transport plugin are registered with a **DDS_DomainParticipant** (p. 76), they will be at different network addresses in order for their unicast interfaces to have unique fully qualified 128-bit addresses. It is also possible to create multiple transports with the same network address, as it can be useful for certain use cases; note that this will require special entity configuration for most transports to avoid clashes in resource use (e.g. sockets for UDPv4 transport).

5.33.8 Transport Send Route

By default, a transport plugin is configured to send outgoing messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of outgoing messages via the **NDDS_Transport_Support_add_send_route()** (p. 733) API, so that a transport plugin will be used to send messages only to certain ranges of destination addresses. The function can be called multiple times for a transport plugin, with different address ranges.

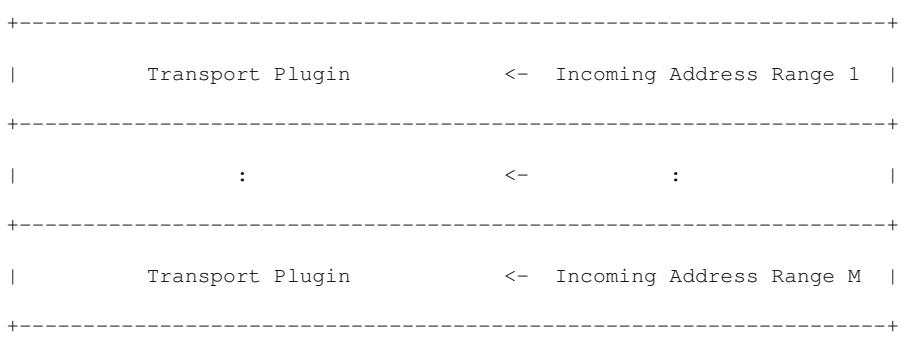


The user can set up a routing table to restrict the use of a transport plugin to send messages to selected addresses ranges.

5.33.9 Transport Receive Route

By default, a transport plugin is configured to receive incoming messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of incoming messages via the **NDDS_Transport_Support_add_receive_route()** (p. 734) API, so that a transport plugin will be used to receive messages only on certain ranges of addresses. The function can be called multiple times for a transport plugin, with different address ranges.



The user can set up a routing table to restrict the use of a transport plugin to receive messages from selected ranges. For example, the user may restrict a transport plugin to

- receive messages from a certain multicast address range.
- receive messages only on certain unicast interfaces (when multiple unicast interfaces are available on the transport plugin).

5.34 Installing Transport Plugins

Installing and configuring transports used by RTI Connext.

Data Structures

- struct **NDDS_Transport_Support**

  <<***interface***>> *(p. 1015) The utility class used to configure RTI Connext pluggable transports.*

Typedefs

- typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE **NDDS_Transport_Handle_t**

  *An opaque type representing the handle to a transport plugin registered with a **DDS_DomainParticipant** (p. 76).*
- typedef NDDS_Transport_Plugin *(* **NDDS_Transport_create_plugin**) (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in)

- **DDS_ReturnCode_t NDDS_Transport_Support_add_send_route** (const **NDDS_Transport_Handle_t** *transport_handle_in, const **NDDS_Transport_Address_t** *address_range_in, **DDS_Long** address_range_bit_count_in)

  Add a route for outgoing messages.
- **DDS_ReturnCode_t NDDS_Transport_Support_add_receive_route** (const **NDDS_Transport_Handle_t** *transport_handle_in, const **NDDS_Transport_Address_t** *address_range_in, **DDS_Long** address_range_bit_count_in)

  Add a route for incoming messages.
- **DDS_ReturnCode_t NDDS_Transport_Support_get_builtin_transport_property** (**DDS_DomainParticipant** *participant_in, **DDS_TransportBuiltinKind** builtin_transport_kind_in, struct **NDDS_Transport_Property_t** *builtin_transport_property_inout)

  Get the properties used to create a builtin transport plugin.
- **DDS_ReturnCode_t NDDS_Transport_Support_set_builtin_transport_property** (**DDS_DomainParticipant** *participant_in, **DDS_TransportBuiltinKind** builtin_transport_kind_in, const struct **NDDS_Transport_Property_t** *builtin_transport_property_in)

  Set the properties used to create a builtin transport plugin.
- NDDS_Transport_Plugin * **NDDS_Transport_Support_get_transport_plugin** (**DDS_DomainParticipant** *participant_in, const char *alias_in)

  *Retrieve a transport plugin registered in a **DDS_DomainParticipant** (p. 76) by its alias.*

Variables

- const **NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL**

  The NIL transport handle.

5.34.1 Detailed Description

Installing and configuring transports used by RTI Connext.

There is more than one way to install a transport plugin for use with RTI Connext:

- If it is a builtin transport plugin, by specifying a bitmask in **DDS_TransportBuiltinQosPolicy** (p. 2057) (see **Built-in Transport Plugins** (p. 737))

- For all other non-builtin transport plugins, by dynamically loading the plugin through **PROPERTY** (p. 1308) QoS policy settings of **DDS_DomainParticipant** (p. 76) (only supported on architectures that support dynamic libraries, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 728))
- By explicitly creating a transport plugin and registering the plugin with a **DDS_DomainParticipant** (p. 76) through **NDDS_Transport_Support_register_transport** (p. 731) (for both builtin and non-builtin plugins)

In the first two cases, the lifecycle of the transport plugin is automatically managed by RTI Connext. In the last case, user is responsible for deleting the transport plugin after the **DDS_DomainParticipant** (p. 76) is deleted. See **Transport Lifecycle** (p. 723) for details.

5.34.2 Loading Transport Plugins through Property QoS Policy of Domain Participant

On architectures that support dynamic libraries, a non-builtin transport plugin written in C/C++ and built as a dynamic-link library (∗.dll/∗.so) can be loaded by RTI Connext through the **PROPERTY** (p. 1308) QoS policy settings of the **DDS_DomainParticipant** (p. 76).

Dynamic libraries are supported on all architectures except INTEGRITY and certain VxWorks platforms. For VxWorks, dynamic libraries are only supported for architectures that are on Pentium/Arm CPUs AND use kernel mode.

The dynamic-link library (and all the dependent libraries) need to be in the library search path during runtime (in the **LD_LIBRARY_PATH** environment variable on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).

To allow dynamic loading of the transport plugin, the transport plugin must implement the RTI Connext abstract transport API and must provide a function with the signature **NDDS_Transport_create_plugin** (p. 730) that can be called by RTI Connext to create an instance of the transport plugin. The name of the dynamic library that contains the transport plugin implementation, the name of the function and properties that can be used to create the plugin, and the aliases and network address that are used to register the plugin can all be specified through the **PROPERTY** (p. 1308) QoS policy of the **DDS_DomainParticipant** (p. 76).

The following table lists the property names that are used to load the transport plugins dynamically:

Table 5.715 ***Properties for dynamically loading and registering transport plugins***

Property Name	Description	Required?
dds.transport.load_plugins	Comma-separated strings indicating the prefix names of all plugins that will be loaded by RTI Connext. Up to 8 plugins may be specified. For example, "dds.transport.TCPv4.tcp1, dds.↩ transport.TCPv4.tcp2", In the following examples, <TRANSPORT_↩ PREFIX> is used to indicate one element of this string that is used as a prefix in the property names for all the settings that are related to the plugin. <TRANSPORT_PREFIX> must begin with "dds.transport." (such as "dds.transport.↩ mytransport").	**YES**

Property Name	Description	Required?
<TRANSPORT_PREFIX>.library	Should be set to the name of the dynamic library (*.so for Linux systems, *.dylib for macOS systems, and *.dll for Windows systems) that contains the transport plugin implementation. This library (and all the other dependent dynamic libraries) needs to be in the library search path used by RTI Connext during run time (pointed to by the environment variable **LD_LIBRARY_PATH** on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).	**YES**
<TRANSPORT_PREFIX>.create_function	Should be set to the name of the function with the prototype of **NDDS_Transport_create_plugin** (p. 730) that can be called by RTI Connext to create an instance of the plugin. The resulting transport plugin will then be registered by RTI Connext through **NDDS_Transport_Support_register_transport** (p. 731)	**YES**
<TRANSPORT_PREFIX>.aliases	Used to register the transport plugin returned by **NDDS_Transport_create_plugin** (p. 730) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **DDS_DomainParticipant** (p. 76). Refer to **aliases_in** parameter in **NDDS_Transport_Support_register_transport** (p. 731) for details. Aliases should be specified as a comma-separated string, with each comma delimiting an alias. If it is not specified, <TRANSPORT_PREFIX> –without the leading "dds.transport" – is used as the default alias for the plugin.	NO
<TRANSPORT_PREFIX>.network_address	Used to register the transport plugin returned by **NDDS_Transport_create_plugin** (p. 730) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **DDS_DomainParticipant** (p. 76). Refer to **network_address_in** parameter in **NDDS_Transport_Support_register_transport** (p. 731) for details. If it is not specified, the **network_address_out** output parameter from **NDDS_Transport_create_plugin** (p. 730) is used. The default value is a zeroed out network address.	NO

Property Name	Description	Required?
<TRANSPORT_PREFIX>.<property_name>	Property that is passed into **NDDS_Transport_create_plugin** (p. 730) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) for creating the transport plugin. This property name-value pair will be passed to **NDDS_Transport_create_plugin** (p. 730) after stripping out <TRANSPORT_PREFIX> from the property name. The parsing of this property and configuring the transport using this property should be handled by the implementation of each transport plugin. Multiple <TRANSPORT_PREFIX>.<property_name> can be specified. Note: "library", "create_function", "aliases" and "network_address" cannot be used as the <property_name> due to conflicts with other builtin property names.	NO

A transport plugin is dynamically created and registered to the **DDS_DomainParticipant** (p. 76) by RTI Connext when:

- the **DDS_DomainParticipant** (p. 76) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDS_Subscriber_lookup_datareader** (p. 589)),

whichever happens first.

Any changes to the transport plugin related properties in the **PROPERTY** (p. 1308) QoS policy after the transport plugin has been registered with the **DDS_DomainParticipant** (p. 76) will have no effect.

See also

Transport Use Cases (p. 994)

5.34.3 Typedef Documentation

5.34.3.1 NDDS_Transport_Handle_t

```
typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE  NDDS_Transport_Handle_t
```

An opaque type representing the handle to a transport plugin registered with a **DDS_DomainParticipant** (p. 76).

A transport handle represents the association between a **DDS_DomainParticipant** (p. 76) and a transport plugin.

5.34.3.2 NDDS_Transport_create_plugin

```
typedef NDDS_Transport_Plugin *(* NDDS_Transport_create_plugin) ( NDDS_Transport_Address_t *default↩
_network_address_out, const struct  DDS_PropertyQosPolicy *property_in)
```

Function prototype for creating plugin through **DDS_PropertyQosPolicy** (p. 1905).

By specifying some predefined property names in **DDS_PropertyQosPolicy** (p. 1905), RTI Connext can call a function from a dynamic library to create a transport plugin and register the returned plugin with a **DDS_DomainParticipant** (p. 76).

This is the function prototype of the function as specified in "<TRANSPORT_PREFIX>.create_function" of **DDS_↩ PropertyQosPolicy** (p. 1905) QoS policy that will be called by RTI Connext to create the transport plugin. See **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 728) for details.

Parameters

default_network_address_out	<<***out***>> *(p. 1015)* Optional output parameter. If the network address is not specified in "<TRANSPORT_PREFIX>.network_address" in **DDS_PropertyQosPolicy** (p. 1905), this is the default network address that is used to register the returned transport plugin using **NDDS_Transport_Support_register_transport** (p. 731) . This parameter will never be null. The default value is a zeroed-out network address.
property_in	<<***in***>> *(p. 1015)* **property_in** contains all the name-value pair properties that matches the format "<TRANSPORT_PREFIX>.<property_name>" in **DDS_PropertyQosPolicy** (p. 1905) that can be used to create the transport plugin. Only <property_name> is passed in - the plugin prefix will be stripped out in the property name. Note: predefined <TRANSPORT_PREFIX> properties "library", "create_function", "aliases" and "network_address" will not be passed to this function. This parameter will never be null.

Returns

Upon success, a valid non-NIL transport plugin. NIL upon failure.

5.34.4 Function Documentation

5.34.4.1 NDDS_Transport_Handle_is_nil()

```
DDS_Boolean NDDS_Transport_Handle_is_nil (
            const  NDDS_Transport_Handle_t * self )
```

Is the given transport handle the NIL transport handle?

Returns

DDS_BOOLEAN_TRUE (p. 1203) if the given transport handle is equal to **NDDS_TRANSPORT_HANDLE_NIL** (p. 737) or **DDS_BOOLEAN_FALSE** (p. 1203) otherwise.

5.34.4.2 NDDS_Transport_Support_register_transport()

```
* NDDS_Transport_Handle_t NDDS_Transport_Support_register_transport (
               DDS_DomainParticipant * participant_in,
              NDDS_Transport_Plugin * transport_in,
              const struct  DDS_StringSeq * aliases_in,
              const  NDDS_Transport_Address_t * network_address_in )
```

Register a transport plugin for use with a **DDS_DomainParticipant** (p. 76), assigning it a network_address.

A transport plugin instance can be used by exactly one **DDS_DomainParticipant** (p. 76) at a time.

When a DataWriter/DataReader is created, only those transports already registered to the corresponding **DDS_↩ DomainParticipant** (p. 76) are available to the DataWriter/DataReader.

Builtin transports can be automatically registered by RTI Connext as a convenience to the user. See **Built-in Transport Plugins** (p. 737) for details on how to control the builtin transports that are automatically registered.

Precondition

A disabled **DDS_DomainParticipant** (p. 76) and a transport plugin that will be registered exclusively with it.

Parameters

participant_in	<<***in***>> *(p. 1015)* A non-null, disabled **DDS_DomainParticipant** (p. 76).
transport_in	<<***in***>> *(p. 1015)* A non-null transport plugin that is currently not registered with another **DDS_DomainParticipant** (p. 76).
aliases_in	<<***in***>> *(p. 1015)* A non-null sequence of strings used as aliases to symbolically refer to the transport plugins. The transport plugin will be "available for use" by a **DDS_Entity** (p. 1362) in the **DDS_DomainParticipant** (p. 76) if the transport alias list associated with the **DDS_Entity** (p. 1362) contains one of these transport aliases. An empty alias list represents a wildcard and matches all aliases. Alias names for the builtin transports are defined in **TRANSPORT_BUILTIN** (p. 1333).
network_address↩ _in	<<***in***>> *(p. 1015)* The network address at which to register this transport plugin. The bits indicated by `transport_in.property.address_bit_count` will be truncated. The remaining bits are the network address of the transport plugin. (see **Transport Class Attributes** (p. 723)).

Returns

Upon success, a valid non-NIL transport handle, representing the association between the **DDS_Domain↩ Participant** (p. 76) and the transport plugin; a **NDDS_TRANSPORT_HANDLE_NIL** (p. 737) upon failure.

Note that a transport plugin's class name is automatically registered as an implicit alias for the plugin. Thus, a class name can be used to refer to all the transport plugin instance of that class.

Transport Class Attributes (p. 723)

Transport Network Address (p. 725)

Locator Format (p. 1355)

NDDS_DISCOVERY_PEERS (p. 1354)

5.34.4.3 NDDS_Transport_Support_lookup_transport()

```
NDDS_Transport_Handle_t NDDS_Transport_Support_lookup_transport (
            DDS_DomainParticipant * participant_in,
           struct  DDS_StringSeq * aliases_out,
            NDDS_Transport_Address_t * network_address_out,
           const NDDS_Transport_Plugin * transport_in )
```

Look up a transport plugin within a **DDS_DomainParticipant** (p. 76).

The transport plugin should have already been registered with the **DDS_DomainParticipant** (p. 76).

Parameters

participant_in	<<***in***>> *(*p. *1015)* A non-null **DDS_DomainParticipant** (p. 76).
aliases_out	<<***inout***>> *(*p. *1015)* A sequence of string where the aliases used to refer to the transport plugin symbolically will be returned. null if not interested.
network_address_out	<<***inout***>> *(*p. *1015)* The network address at which to register the transport plugin will be returned here. null if not interested.
transport_in	<<***in***>> *(*p. *1015)* A non-null transport plugin that is already registered with the **DDS_DomainParticipant** (p. 76).

Returns

Upon success, a valid non-NIL transport handle, representating the association between the **DDS_Domain↩ Participant** (p. 76) and the transport plugin; a **NDDS_TRANSPORT_HANDLE_NIL** (p. 737) upon failure.

Transport Class Attributes (p. 723)

Transport Network Address (p. 725)

5.34.4.4 NDDS_Transport_Support_add_send_route()

```
DDS_ReturnCode_t NDDS_Transport_Support_add_send_route (
            const  NDDS_Transport_Handle_t * transport_handle_in,
            const  NDDS_Transport_Address_t * address_range_in,
             DDS_Long address_range_bit_count_in )
```

Add a route for outgoing messages.

This function can be used to narrow the range of addresses to which outgoing messages can be sent.

Precondition

A disabled **DDS_DomainParticipant** (p. 76).

Parameters

transport_handle_in	*<<**in**>> (p. 1015)* A valid non-NIL transport handle as a result of a call to **NDDS_Transport_Support_register_transport()** (p. 731).
address_range_in	*<<**in**>> (p. 1015)* The outgoing address range for which to use this transport plugin.
address_range_bit_count_in	*<<**in**>> (p. 1015)* The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive **NDDS_Transport_Property_t::address_bit_count** (p. 2130).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

Transport Send Route (p. 725)

5.34.4.5 NDDS_Transport_Support_add_receive_route()

```
DDS_ReturnCode_t NDDS_Transport_Support_add_receive_route (
            const  NDDS_Transport_Handle_t * transport_handle_in,
            const  NDDS_Transport_Address_t * address_range_in,
             DDS_Long address_range_bit_count_in )
```

Add a route for incoming messages.

This function can be used to narrow the range of addresses at which to receive incoming messages.

Precondition

A disabled **DDS_DomainParticipant** (p. 76).

Parameters

transport_handle_in	<<***in***>> *(p. 1015)* A valid non-NIL transport handle as a result of a call to **NDDS_Transport_Support_register_transport()** (p. 731).
address_range_in	<<***in***>> *(p. 1015)* The incoming address range for which to use this transport plugin.
address_range_bit_count_in	<<***in***>> *(p. 1015)* The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive **NDDS_Transport_Property_t::address_bit_count** (p. 2130).

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

Transport Receive Route (p. 726)

5.34.4.6 NDDS_Transport_Support_get_builtin_transport_property()

```
DDS_ReturnCode_t NDDS_Transport_Support_get_builtin_transport_property (
             DDS_DomainParticipant * participant_in,
             DDS_TransportBuiltinKind builtin_transport_kind_in,
            struct  NDDS_Transport_Property_t * builtin_transport_property_inout )
```

Get the properties used to create a builtin transport plugin.

Retrieves the properties that will be used to create a builtin transport plugin.

Precondition

The `builtin_transport_property_inout` parameter must be of the type specified by the `builtin_transport_kind_in`.

Parameters

participant_in	<<***in***>> *(p. 1015)* A valid non-null **DDS_DomainParticipant** (p. 76)
builtin_transport_kind_in	<<***in***>> *(p. 1015)* The builtin transport kind for which to retrieve the properties.
builtin_transport_property_inout	<<***inout***>> *(p. 1015)* The storage area where the retrieved property will be output. The specific type required by the `builtin_transport_kind_in` must be used.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

NDDS_Transport_Support_set_builtin_transport_property() (p. 736)

5.34.4.7 NDDS_Transport_Support_set_builtin_transport_property()

```
DDS_ReturnCode_t NDDS_Transport_Support_set_builtin_transport_property (
            DDS_DomainParticipant * participant_in,
            DDS_TransportBuiltinKind builtin_transport_kind_in,
           const struct  NDDS_Transport_Property_t * builtin_transport_property_in )
```

Set the properties used to create a builtin transport plugin.

Specifies the properties that will be used to create a builtin transport plugin.

If the builtin transport is already registered when this operation is called, these property changes will *not* have any effect. Builtin transport properties should always be set before the transport is registered. See **Built-in Transport Plugins** (p. 737) for details on when a builtin transport is registered.

Precondition

A disabled **DDS_DomainParticipant** (p. 76). The `builtin_transport_property_inout` parameter must be of the type specified by the `builtin_transport_kind_in`.

Parameters

participant_in	<<***in***>> *(p. 1015)* A valid non-null **DDS_DomainParticipant** (p. 76) that has not been enabled.
builtin_transport_kind_in	<<***in***>> *(p. 1015)* The builtin transport kind for which to specificy the properties.
builtin_transport_property_in	<<***inout***>> *(p. 1015)* The new transport property that will be used to the create the builtin transport plugin. The specific type required by the `builtin_transport_kind_in` must be used.

Returns

One of the **Standard Return Codes** (p. 1223), or **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 1224).

See also

NDDS_Transport_Support_get_builtin_transport_property() (p. 735)

5.34.4.8 NDDS_Transport_Support_get_transport_plugin()

```
NDDS_Transport_Plugin * NDDS_Transport_Support_get_transport_plugin (
              DDS_DomainParticipant * participant_in,
             const char * alias_in )
```

Retrieve a transport plugin registered in a **DDS_DomainParticipant** (p. 76) by its alias.

This method can be used to get a pointer to a transport Plugin that has been registered into the **DDS_Domain↩ Participant** (p. 76).

Parameters

participant↩ _in	<<***in***>> *(p. 1015)* A non-null **DDS_DomainParticipant** (p. 76).
alias_in	<<***in***>> *(p. 1015)* A non-null string used to symbolically refer to the transport plugins.

Returns

Upon success, a valid non-null pointer to a registered plugin; a null pointer if a plugin with that alias is not registered/found in that participant.

5.34.5 Variable Documentation

5.34.5.1 NDDS_TRANSPORT_HANDLE_NIL

```
const  NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL  [extern]
```

The NIL transport handle.

5.35 Built-in Transport Plugins

Transport plugins delivered with RTI Connext.

Modules

- **UDP Transport Plugin definitions**

  UDP Transport Plugin definitions.
- **Shared Memory Transport**

  *Built-in transport plug-in for inter-process communications using shared memory (**NDDS_TRANSPORT_CLASSID_↩ SHMEM** (p. 1026)) .*
- **UDPv4 Transport**

  *Transport plug-in using UDP/IPv4 (**NDDS_TRANSPORT_CLASSID_UDPv4** (p. 1025)) .*
- **Real-Time WAN Transport**

  *Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS_TRANSPORT_CLASSID_UDPv4_WAN** (p. 1027)) .*
- **UDPv6 Transport**

  *Transport plug-in using UDP/IPv6 (**NDDS_TRANSPORT_CLASSID_UDPv6** (p. 1026)) .*

5.35.1 Detailed Description

Transport plugins delivered with RTI Connext.

The **TRANSPORT_BUILTIN** (p. 1333) specifies the collection of transport plugins that can be automatically configured and managed by RTI Connext as a convenience to the user.

These transport plugins can simply be turned "on" or "off" by a specifying a bitmask in **DDS_TransportBuiltinQos↩ Policy** (p. 2057), thus bypassing the steps for setting up a transport plugin. RTI Connext preconfigures the transport plugin properties, the network address, and the aliases to "factory defined" values.

If a builtin transport plugin is turned "on" in **DDS_TransportBuiltinQosPolicy** (p. 2057), the plugin is implicitly created and registered to the corresponding **DDS_DomainParticipant** (p. 76) by RTI Connext when:

- the **DDS_DomainParticipant** (p. 76) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDS_Subscriber_lookup_datareader** (p. 589)),

whichever happens first.

Each builtin transport contains its own set of properties. For example, the ::**UDPv4 Transport** (p. 1043) allows the application to specify whether or not multicast is supported, the maximum size of the message, and provides a mechanism for the application to filter out network interfaces.

The builtin transport plugin properties can be changed by the function **NDDS_Transport_Support_set_builtin_↩ transport_property()** (p. 736) or by using the **PROPERTY** (p. 1308) QoS policy associated with the **DDS_Domain↩ Participant** (p. 76). Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1905) always overwrite the ones specified through **NDDS_Transport_Support_set_builtin_transport_property()** (p. 736). Refer to the specific builtin transport for the list of property names that can be specified through **PROPERTY** (p. 1308) QoS policy.

Any changes to the builtin transport properties after the builtin transports have been registered with will have no effect.

See also

NDDS_Transport_Support_set_builtin_transport_property() (p. 736) **DDS_PropertyQosPolicy** (p. 1905)

The built-in transport plugins can also be instantiated and registered by the user, following the steps for **Registering a transport with a participant** (p. 996). This is useful when the application needs different values for the network addresses.

5.36 Creating New Transport Plugins

Developing new transport plugins for RTI Connext.

Developing new transport plugins for RTI Connext.

RTI Connext provides an abstract "C" language API for creating new transport plugins. If you are interested in creating a new transport plugin for RTI Connext, please contact your RTI representative or email `sales@rti.com`.

5.37 Queries and Filters Syntax

5.37.1 Syntax for DDS Queries and Filters

A subset of the WHERE clause in SQL is used in several parts of the specification:

- The `filter_expression` in the **DDS_ContentFilteredTopic** (p. 176)
- The `query_expression` in the **DDS_QueryCondition** (p. 700)
- <<***extension***>> *(p. 1014)* The `filter_expression` in the **DDS_TopicQuerySelection** (p. 2055)
- <<***extension***>> *(p. 1014)* The `filter_expression` in the **DDS_ChannelSettings_t** (p. 1564)

Those expressions may use a subset of SQL, extended with the possibility to use program variables in the SQL expression. The allowed SQL expressions are defined with the BNF-grammar below.

The following notational conventions are made:

- *NonTerminals* are typeset in italics.
- `'Terminals'` are quoted and typeset in a fixed width font. They are written in upper case in most cases in the BNF-grammar below, but should be case insensitive.
- **TOKENS** are typeset in bold.
- The notation (*element* // ',') represents a non-empty comma-separated list of *elements*.

5.37.2 SQL grammar in BNF

```
FilterExpression ::=  Condition
Condition   ::=  Predicate
           |    Condition  'AND'  Condition
           |    Condition  'OR'  Condition
           |    'NOT'  Condition
           |    '('  Condition  ')'
Predicate   ::=  ComparisonPredicate
           |    BetweenPredicate
ComparisonPredicate ::=  ComparisonTerm  RelOp  ComparisonTerm
ComparisonTerm      ::= FieldIdentifier
                   |  Parameter
BetweenPredicate    ::=  FieldIdentifier  'BETWEEN'  Range
                   |    FieldIdentifier  'NOT BETWEEN'  Range
FieldIdentifier      ::= FIELDNAME
                   | IDENTIFIER
RelOp     ::=  '=' |  '>' |  '>=' |  '<' |  '<=' |  '<>' |  'LIKE' |  'MATCH'
Range     ::=  Parameter  'AND'  Parameter
Parameter ::= INTEGERVALUE
         |   CHARVALUE
         |   FLOATVALUE
         |   STRING
         |   ENUMERATEDVALUE
         |   BOOLEANVALUE
         |   NULLVALUE
         |   PARAMETER
```

5.37.3 Token expression

The syntax and meaning of the tokens used in the SQL grammar is described as follows:

- **IDENTIFIER** - An identifier for a FIELDNAME, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '_' but may not start with a digit.

Formal notation:

```
IDENTIFIER:  LETTER ( PART_LETTER)*
where  LETTER: [ "A"-"Z","_","a"-"z" ]
       PART_LETTER: [ "A"-"Z","_","a"-"z","0"-"9" ]
```

- **FIELDNAME** - A fieldname is a reference to a field in the data structure. The dot '.' is used to navigate through nested structures. The number of dots that may be used in a FIELDNAME is unlimited. The FIELDNAME can refer to fields at any depth in the data structure. The names of the field are those specified in the IDL definition of the corresponding structure, which may or may not match the fieldnames that appear on the language-specific (e.g., C/C++, Java) mapping of the structure. To reference to the *n*+1 element in an array or sequence, use the notation '[*n*]', where *n* is a natural number (zero included). FIELDNAME must resolve to a primitive IDL type; that is either boolean, octet, (unsigned) short, (unsigned) long, (unsigned) long long, float double, char, wchar, string, wstring, or enum.

Formal notation:

```
FIELDNAME:  FieldNamePart ( "."  FieldNamePart )*
where  FieldNamePart : IDENTIFIER ( "["  Index "]" )*
       Index> : (["0"-"9"])+
              | ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+
```

Primitive IDL types referenced by FIELDNAME are treated as different types in *Predicate* according to the following table:

Predicate Data Type	IDL Type
BOOLEANVALUE	boolean
INTEGERVALUE	octet, (unsigned) short, (unsigned) long, (unsigned) long long
FLOATVALUE	float, double
CHARVALUE	char, wchar
STRING	string, wstring
ENUMERATEDVALUE	enum

- **INTEGERVALUE** - Any series of digits, optionally preceded by a plus or minus sign, representing a decimal integer value within the range of the system. 64-bit integers (int64 and uint64) must be followed by either l or L, otherwise the value is treated as a 32-bit integer. A hexadecimal number is preceded by 0x and must be a valid hexadecimal expression.

Formal notation:

```
INTEGERVALUE : (["+","-"])? (["0"-"9"])+ [("L","l")]?
             | (["+","-"])? ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+ [("L","l")]?
```

- **CHARVALUE** - A single character enclosed between single quotes.

Formal notation:

```
CHARVALUE : "'" (~["'"])? "'"
```

- **FLOATVALUE** - Any series of digits, optionally preceded by a plus or minus sign and optionally including a floating point ('.'). A power-of-ten expression may be postfixed, which has the syntax e*n* or E*n*, where *n* is a number, optionally preceded by a plus or minus sign.

Formal notation:

```
FLOATVALUE : (["+","-"])? (["0"-"9"])* (".")? (["0"-"9"])+ ( EXPONENT)?
where  EXPONENT: ["e","E"] (["+","-"])? (["0"-"9"])+
```

- **STRING** - Any series of characters encapsulated in single quotes, except the single quote itself.

Formal notation:

```
STRING : "'" (~["'"])* "'"
```

- **ENUMERATEDVALUE** - An enumerated value is a reference to a value declared within an enumeration. Enumerated values consist of the name of the enumeration label enclosed in single quotes. The name used for the enumeration label must correspond to the label names specified in the IDL definition of the enumeration.

Formal notation:

```
ENUMERATEDVALUE : "'" ["A" - "Z", "a" - "z"] ["A" - "Z", "a" - "z", "_", "0" - "9"]* "'"
```

- **BOOLEANVALUE** - Can either be 'TRUE' or 'FALSE', case insensitive.

Formal notation (case insensitive):

```
BOOLEANVALUE : ["TRUE","FALSE"]
```

- **NULLVALUE** - Can be null, and is case insensitive.

Formal notation (case insensitive):

```
NULLVALUE : "null"
```

- **PARAMETER** - A parameter is of the form %*n*, where *n* represents a natural number (zero included) smaller than 100. It refers to the n + 1 th argument in the given context. Argument can only in primitive type value format. It cannot be a FIELDNAME.

Formal notation:

```
PARAMETER : "%" (["0"-"9"])+
```

5.37.4 String Parameters

Strings used as parameter values must contain the enclosing quotation marks (') within the parameter value, and not place the quotation marks within the expression statement. For example, the following expression is legal:

```
" symbol MATCH %0 " with parameter 0 = " 'IBM' "
```

whereas the following expression will not compile:

```
" symbol MATCH '%0' " with parameter 0 = " IBM "
```

5.37.5 Type compatability in Predicate

Only certain combination of type comparisons are valid in *Predicate*. The following table marked all the compatible pairs with 'YES':

	BOOLEANVALUE	INTEGERVALUE	FLOATVALUE	CHARVALUE	STRING	ENUMERATEDVALUE
BOOLEAN	YES					
INTEGERVALUE		YES	YES			
FLOATVALUE		YES	YES			
CHARVALUE				YES	YES	YES
STRING				YES	YES(∗1)	YES
ENUMERATEDVALUE		YES		YES(∗2)	YES(∗2)	YES(∗3)

- (∗1) See **SQL Extension: Regular Expression Matching** (p. 742)
- (∗2) Because the formal notation of the Enumeration values, they are compatible with string and char literals, but they are not compatible with string or char variables, i.e., "MyEnum='EnumValue'" would be correct, but "My↩ Enum=MyString" is not allowed.
- (∗3) Only for same type Enums.

5.37.6 SQL Extension: Regular Expression Matching

The relational operator MATCH may only be used with string fields. The right-hand operator is a string *pattern*. A string pattern specifies a template that the left-hand field value must match. The characters ,/\?∗[]-^!% have special meanings unless they are escaped by the escape character '\'.

MATCH is case-sensitive.

The pattern allows limited "wild card" matching under the following rules:

Character	Meaning
,	"," separates a list of alternate patterns. The field string is matched if it matches one or more of the patterns.
/	"/" in the pattern string matches a / in the field string. This character is used to separate a sequence of mandatory substrings.
?	"?" in the pattern string matches any single *non-special* characters in the field string.
*	"*" in the pattern string matches 0 or more *non-special* characters in field string.
[*charlist*]	Matches any one of the characters from the list of characters in *charlist*.
[*s-e*]	Matches any character any character from *s* to *e*, inclusive.
%	"%" is used to designate filter expressions parameters.
[!*charlist*] or [^*charlist*]	Matches any characters not in *charlist* (not supported).
[!*s-e*] or [^*s-e*]	Matches any characters not in the interval [s-e] (not supported).
\	Escape character for special characters.

The syntax is similar to the POSIX fnmatch syntax (1003.2-1992 section B.6). The MATCH syntax is also similar to the 'subject' strings of TIBCO Rendezvous.

Note: To use special characters as regular characters in regular expressions, you must escape them using the character '\'. For example, 'A[' is considered a malformed expression and the result is undefined.

5.37.7 Character Encoding

The default encoding for IDL strings is UTF-8. RTI Connext offers ISO 8859-1 as an alternative encoding for IDL strings.

In order to configure ISO 8859-1 as the encoding for filtering of IDL strings, you can set the DomainParticipant property **dds.domain_participant.filtering_character_encoding** to ISO-8859:

The possible values for **dds.domain_participant.filtering_character_encoding** are:

- **UTF-8** (default value)
- **ISO-8859-1**

5.37.8 Unicode Normalization

Unicode supports multiple ways to encode some characters, most notably accented characters. A composed character in Unicode can often have a number of different ways of representing the character. For example:

- Precomposed is represented by \u1e3c
- Composed = L + ^ is represented by \u004c + \u032d

The lexical comparison of the two characters above will return false. In order to do the correct comparison the characters need to be normalized, that is, reduced to the same character composition.

When the character encoding for filtering of IDL strings is UTF-8, the Unicode normalization behavior can be controlled using a DomainParticipant property called **dds.domain_participant.filtering_unicode_normalization**.

The possible values of the normalization property are:

- **OFF**: Disables normalization
- **NFD**: Canonical Decomposition
- **NFC (default value)**: Canonical Decomposition, followed by Canonical Composition
- **NFK**: Compatibility Decomposition, followed by Canonical Composition
- **NFKC_Casefold**: Casefold followed by NFKC normalization

Because normalization may affect performance, and it is enabled by default, the property allows disabling the normalization process per DomainParticipant using the value OFF. However, you should be aware that doing this may lead to unexpected behavior.

5.37.9 Examples

Assuming Topic "Location" has as an associated type a structure with fields "flight_id, x, y, z", and Topic "FlightPlan" has as fields "flight_id, source, destination". The following are examples of using these expressions.

Example of a **filter_expression** (for **DDS_ContentFilteredTopic** (p. 176)) or a **query_expression** (for **DDS_Query↩ Condition** (p. 700)):

- `"z < 1000 AND x < 23"`

Examples of a **filter_expression** using **MATCH** (for **DDS_ContentFilteredTopic** (p. 176)) operator:

- `"symbol MATCH 'NASDAQ/GOOG'"`
- `"symbol MATCH 'NASDAQ/[A-M]*'"`

5.38 Logging and Version

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

Modules

- **Version**

  Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.
- **Logging**

  Configure how much debugging information is reported during runtime and where it is logged.

5.38.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

5.39 General Utilities and Compliance Configuration

API of general utilities used in the RTI Connext distribution.

Modules

- **Compliance Configuration**

  APIs to configure compliance with certain standard specifications.
- **Heap Monitoring**

  Monitor memory allocations done by the middleware on the native heap.
- **Network Capture**

  Save network traffic into a capture file for further analysis.
- **Other Utilities**

  Other Utilities, such as ***NDDS_Utility_spin*** *(*p. *1499)**.*

5.39.1 Detailed Description

API of general utilities used in the RTI Connext distribution.

5.40 Observability Framework

RTI Connext Observability Framework modules and APIs.

Modules

- **Monitoring Library 2.0**

  RTI Monitoring Library 2.0 public API.

5.40.1 Detailed Description

RTI Connext Observability Framework modules and APIs.

RTI Connext Observability Framework is a holistic solution that uses telemetry data to provide deep visibility into the current and past states of your RTI Connext applications.

5.41 Request-Reply Pattern

Support for the request-reply communication pattern.

Modules

- **Requester**

  FooBarRequester *(p. 2117) and associated elements*
- **Replier**

  FooBarReplier *(p. 2116),* ***FooBarSimpleReplier*** *(p. 2118) and associated elements*

5.41.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- **FooBarRequester** (p. 2117)
- **FooBarReplier** (p. 2116) (and a simpler version **FooBarSimpleReplier** (p. 2118))

This functionality is built on top of RTI Connext.

A Requester publishes a request topic and subscribes to a reply topic. A Replier subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

See also

Request-Reply Examples (p. 1004).

5.42 Requester

FooBarRequester (p. 2117) and associated elements

Data Structures

- struct **RTI_Connext_Requester**

  The type-independent version of a Requester.
- struct **RTI_Connext_RequesterParams**

  Contains the parameters for creating a ***FooBarRequester*** *(p. 2117).*
- struct **FooBarRequester**

  Allows sending requests and receiving replies.

Macros

- #define **RTI_CONNEXT_REQUESTER_DECL**(TReq, TRep, TRequester)

  Instantiates the declaration of a typed requester and its operations.

Typedefs

- typedef struct **RTI_Connext_RequesterParams** **RTI_Connext_RequesterParams**

  *Contains the parameters for creating a **FooBarRequester** (p. 2117).*
- typedef struct **FooBarRequester** **FooBarRequester**

  Allows sending requests and receiving replies.

Functions

- **DDS_ReturnCode_t** **RTI_Connext_Requester_delete** (**RTI_Connext_Requester** ∗self)

  Releases the internal entities created by this object.
- **DDS_ReturnCode_t** **RTI_Connext_Requester_wait_for_replies** (**RTI_Connext_Requester** ∗self, **DDS_Long** min_count, const struct **DDS_Duration_t** ∗max_wait)

  Waits for replies to any request.
- **DDS_ReturnCode_t** **RTI_Connext_Requester_wait_for_replies_for_related_request** (**RTI_Connext_Requester** ∗self, **DDS_Long** min_count, const struct **DDS_Duration_t** ∗max_wait, const struct **DDS_SampleIdentity_t** ∗related_request_id)

  Waits for replies to a specific request.
- **FooBarRequester** ∗ **FooBarRequester_create** (**DDS_DomainParticipant** ∗participant, const char ∗service_name)

  Creates a Requester with the minimum set of parameters.
- **FooBarRequester** ∗ **FooBarRequester_create_w_params** (const **RTI_Connext_RequesterParams** ∗params)

  Creates a Requester with parameters.
- **DDS_ReturnCode_t** **FooBarRequester_send_request** (**FooBarRequester** ∗self, const **Foo** ∗request)

  Sends a request.
- **DDS_ReturnCode_t** **FooBarRequester_send_request_w_params** (**FooBarRequester** ∗self, const **Foo** ∗request, struct **DDS_WriteParams_t** ∗request_info)

  Sends a request and gets back information about it that allows correlation with future replies.
- **DDS_ReturnCode_t** **FooBarRequester_receive_reply** (**FooBarRequester** ∗self, Bar ∗reply, struct **DDS_SampleInfo** ∗sample_info, const struct **DDS_Duration_t** ∗max_wait)

  Waits for a reply and copies its contents into a Sample.
- **DDS_ReturnCode_t** **FooBarRequester_receive_replies** (**FooBarRequester** ∗self, struct BarSeq ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** min_count, **DDS_Long** max_count, const struct **DDS_Duration_t** ∗max_wait)

  Waits for multiple replies and provides a loaned sequence to access them.
- **DDS_ReturnCode_t** **FooBarRequester_take_reply** (**FooBarRequester** ∗self, Bar ∗reply, struct **DDS_SampleInfo** ∗sample_info)

  Copies the contents of a reply into a Sample.
- **DDS_ReturnCode_t** **FooBarRequester_take_replies** (**FooBarRequester** ∗self, struct BarSeq ∗reply_seq, struct **DDS_SampleInfoSeq** ∗sample_info_seq, **DDS_Long** max_count)

  Provides a loaned sequence to access the existing replies.

- **DDS_ReturnCode_t FooBarRequester_take_reply_for_related_request** (**FooBarRequester** *self, Bar *reply, struct **DDS_SampleInfo** *sample_info, const struct **DDS_SampleIdentity_t** *related_request_id)

  Copies the contents of a reply for a specific request.
- **DDS_ReturnCode_t FooBarRequester_take_replies_for_related_request** (**FooBarRequester** *self, struct BarSeq *reply_seq, struct **DDS_SampleInfoSeq** *sample_info_seq, **DDS_Long** max_count, const struct **DDS_SampleIdentity_t** *related_request_id)

  Provides a loaned sequence to access the existing replies for a specific request.
- **DDS_ReturnCode_t FooBarRequester_read_reply** (**FooBarRequester** *self, Bar *reply, struct **DDS_SampleInfo** *sample_info)

  Copies the contents of a reply into a Sample.
- **DDS_ReturnCode_t FooBarRequester_read_replies** (**FooBarRequester** *self, struct BarSeq *reply_seq, struct **DDS_SampleInfoSeq** *sample_info_seq, **DDS_Long** max_count)

  Provides a loaned sequence to access the existing replies.
- **DDS_ReturnCode_t FooBarRequester_read_reply_for_related_request** (**FooBarRequester** *self, Bar *reply, struct **DDS_SampleInfo** *sample_info, const struct **DDS_SampleIdentity_t** *related_request_id)

  Copies the contents of a reply for a specific request.
- **DDS_ReturnCode_t FooBarRequester_read_replies_for_related_request** (**FooBarRequester** *self, struct BarSeq *reply_seq, struct **DDS_SampleInfoSeq** *sample_info_seq, **DDS_Long** max_count, const struct **DDS_SampleIdentity_t** *related_request_id)

  Provides a loaned sequence to access the existing replies for a specific request.
- **FooDataWriter** * **FooBarRequester_get_request_datawriter** (**FooBarRequester** *self)

  *Retrieves the underlying **DDS_DataWriter** (p. 488).*
- BarDataReader * **FooBarRequester_get_reply_datareader** (**FooBarRequester** *self)

  *Retrieves the underlying **DDS_DataReader** (p. 618).*
- **DDS_ReturnCode_t FooBarRequester_return_loan** (**FooBarRequester** *self, struct BarSeq *received_data, struct **DDS_SampleInfoSeq** *info_seq)

  Returns samples previously received from the middleware.

5.42.1 Detailed Description

FooBarRequester (p. 2117) and associated elements

5.42.2 Macro Definition Documentation

5.42.2.1 RTI_CONNEXT_REQUESTER_DECL

```
#define RTI_CONNEXT_REQUESTER_DECL(
              TReq,
              TRep,
              TRequester )
```

Instantiates the declaration of a typed requester and its operations.

Parameters

TReq	The request type name
TRep	The reply type name
TRequester	The type name for the typed requester and the prefix for all the operations.

See also

Creating a Requester (p. 1006)

5.42.3 Typedef Documentation

5.42.3.1 RTI_Connext_RequesterParams

`typedef struct` **`RTI_Connext_RequesterParams`** **`RTI_Connext_RequesterParams`**

Contains the parameters for creating a **FooBarRequester** (p. 2117).

The following parameters are required to create a Requester:

- A **DDS_DomainParticipant** (p. 76) (**RTI_Connext_RequesterParams::participant** (p. 2181)), and
- Either a service name (**RTI_Connext_RequesterParams::service_name** (p. 2181))
- Or custom topic names (**RTI_Connext_RequesterParams::request_topic_name** (p. 2181) and **RTI_Connext↩ _RequesterParams::reply_topic_name** (p. 2182))

The rest of the parameters that can be set in a RequesterParams object are optional.

See also

Creating a Requester with optional parameters (p. 1006)

5.42.3.2 FooBarRequester

`typedef struct` **FooBarRequester FooBarRequester**

Allows sending requests and receiving replies.

A requester is an entity with two associated **topics** (p. 166): a request topic and a reply topic. It can send requests by publishing samples of the request topic and receive replies to those requests by subscribing to the reply topic.

Valid types for these topics (`TReq` and `TRep`) are: those generated by rtiddsgen, the **DDS built-in types** (p. 307), and **DDS_DynamicData** (p. 1771). **Note:** At this moment, in the C version of this API, only rtiddsgen-generated types are supported.

To create a Requester for two types, a request type `TReq`=**Foo** (p. 2116) and a reply type `TRep`=`Bar`, your application needs to instantiate the data structure **FooBarRequester** (p. 2117) and the specific operations that can publish and subscribe to those types. In this documentation we refer to the type-dependent operations as `FooBar↩Requester_` (for example, **FooBarRequester_take_replies** (p. 757)). Some operations are type-independent and their name always begins with `RTI_Connext_Requester_` (for example, **RTI_Connext_Requester_wait_for_↩replies** (p. 751)).

See **Creating a Requester** (p. 1006) to see how to instantiate a **FooBarRequester** (p. 2117).

A Replier and a Requester communicate when they use the same topics for requests and replies (see **RTI_Connext↩_RequesterParams::service_name** (p. 2181)) on the same **domain** (p. 76).

A Requester can send requests and receive one or multiple replies. It does that using the following operations:

- Sending requests (i.e. publishing request samples on the request topic)
- Waiting for replies to be received by the middleware (for any request or for a specific request)
- Getting those replies from the middleware. There are two ways to do this: take (the data samples are removed from the middleware), read (the data samples remain in the middleware and can be read or taken again).
- A convenience operation, receive (which is a combination of wait and take).

In all cases, the middleware guarantees that a requester only receives reply samples that are associated with those requests that it sends.

For multi-reply scenarios, in which a Requester receives multiple replies from a Replier for a given request, the Requester can check if a reply is the last reply of a sequence of replies. To do so, see if the bit **DDS_INTERMEDIATE_REPLY↩_SEQUENCE_SAMPLE** (p. 1389) is set in **DDS_SampleInfo::flag** (p. 1999) after receiving each reply. This indicates it is NOT the last reply.

A requester has an associated **DDS_DomainParticipant** (p. 76), which can be shared with other requesters or RTI Connext routines. All the other RTI Connext entities required for the request-reply interaction, including a **DDS_Data↩Writer** (p. 488) for writing requests and a **DDS_DataReader** (p. 618) for reading replies, are automatically created when the requester is constructed.

Quality of Service for the underlying DataWriter and DataReader can be configured (see **RTI_Connext_Requester↩Params::qos_profile_name** (p. 2182)). By default, they are created with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325). The exact default configuration is described here: **Configuring Request-Reply QoS profiles** (p. 1012)

FooBarReplier (p. 2116)

Request-Reply Examples (p. 1004)

Requester example (p. 1007)

5.42.4 Function Documentation

5.42.4.1 RTI_Connext_Requester_delete()

```
DDS_ReturnCode_t RTI_Connext_Requester_delete (
            RTI_Connext_Requester * self )
```

Releases the internal entities created by this object.

Among other internal resources, it deletes the underlying DataReader and DataWriter.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.

See also

DDS_Subscriber_delete_datareader (p. 587)

DDS_Publisher_delete_datawriter (p. 459)

5.42.4.2 RTI_Connext_Requester_wait_for_replies()

```
DDS_ReturnCode_t RTI_Connext_Requester_wait_for_replies (
             RTI_Connext_Requester * self,
             DDS_Long min_count,
            const struct  DDS_Duration_t * max_wait )
```

Waits for replies to any request.

This operation waits for min_count requests to be available for up to max_wait .

If this operation is called several times but the available replies are not taken (with **FooBarRequester_take_replies** (p. 757)), this operation may return immediately and will not wait for new replies. New replies may replace existing ones if they are not taken, depending on the **DDS_HistoryQosPolicy** (p. 1808) used to configure this Requester.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
min_count	Minimum number of replies that need to be available for this operation to unblock.
max_wait	Maximum waiting time after which this operation unblocks, regardless of how many replies are available.

If at least min_count replies were available before max_wait elapsed, it returns **DDS_RETCODE_OK** (p. 1224), otherwise it returns **DDS_RETCODE_TIMEOUT** (p. 1224). Another **Standard Return Codes** (p. 1223) may be returned in case of error.

MT Safety:

Concurrent calls to this operation on the same object are not allowed. However, waiting for replies for specific requests in parallel is supported (see **RTI_Connext_Requester_wait_for_replies_for_related_request** (p. 752)).

See also

FooBarRequester_take_replies (p. 757)

5.42.4.3 RTI_Connext_Requester_wait_for_replies_for_related_request()

```
DDS_ReturnCode_t RTI_Connext_Requester_wait_for_replies_for_related_request (
             RTI_Connext_Requester * self,
             DDS_Long min_count,
            const struct  DDS_Duration_t * max_wait,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Waits for replies to a specific request.

This operation is analogous to **RTI_Connext_Requester_wait_for_replies** (p. 751) except this operation waits for replies for a specific request.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
min_count	Minimum number of replies for the related request that need to be available for this operation to unblock.
max_wait	Maximum wait time after which this operation unblocks, regardless of how many replies are available.
related_request_id	The identity of a request previously sent by this Requester

Returns

true if at least min_count replies for the related request were available before max_wait elapsed, or false otherwise.

One of the **Standard Return Codes** (p. 1223)

MT Safety:

SAFE

RTI_Connext_Requester_wait_for_replies (p. 751)

5.42.4.4 FooBarRequester_create()

```
FooBarRequester * FooBarRequester_create (
            DDS_DomainParticipant * participant,
           const char * service_name )
```

Creates a Requester with the minimum set of parameters.

Parameters

participant	The DomainParticipant this requester uses to join a DDS domain
service_name	The service name. See **RTI_Connext_RequesterParams::service_name** (p. 2181)

Returns

One of the **Standard Return Codes** (p. 1223)

5.42.4.5 FooBarRequester_create_w_params()

```
FooBarRequester * FooBarRequester_create_w_params (
           const  RTI_Connext_RequesterParams * params )
```

Creates a Requester with parameters.

Parameters

params	All the parameters that configure this requester. See **RTI_Connext_RequesterParams** (p. 2180) for the list of mandatory parameters.

Returns

One of the **Standard Return Codes** (p. 1223)

See also

RTI_Connext_RequesterParams (p. 2180)

Creating a Requester (p. 1006)

5.42.4.6 FooBarRequester_send_request()

```
DDS_ReturnCode_t FooBarRequester_send_request (
            FooBarRequester * self,
           const  Foo * request )
```

Sends a request.

If a future reply needs to be correlated to exactly this request, use **FooBarRequester_send_request_w_params** (p. 754).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
request	The request to be sent

Returns

One of the **Standard Return Codes** (p. 1223)

MT Safety:

SAFE

See also

FooBarRequester_send_request_w_params (p. 754)

5.42.4.7 FooBarRequester_send_request_w_params()

```
DDS_ReturnCode_t FooBarRequester_send_request_w_params (
            FooBarRequester * self,
           const  Foo * request,
           struct  DDS_WriteParams_t * request_info )
```

Sends a request and gets back information about it that allows correlation with future replies.

After calling this operation, the sample contains a valid identity that can be used for correlation with future replies.

See example code in **Correlating requests and replies** (p. 1008).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
request	*<<**inout**>> (p. 1015)* The request data
request_info	*<<**inout**>> (p. 1015)* Optional write parameters. When this call ends succesfully,
	DDS_WriteParams_t::identity (p. 2108) contains a valid identity that can be used for correlation with future replies.

Returns

One of the **Standard Return Codes** (p. 1223) ; **DDS_RETCODE_TIMEOUT** (p. 1224) may be reported in the same conditions as in **FooDataWriter_write** (p. 499).

MT Safety:

SAFE

FooBarRequester_take_replies_for_related_request (p. 758)

Correlating requests and replies (p. 1008)

5.42.4.8 FooBarRequester_receive_reply()

```
DDS_ReturnCode_t FooBarRequester_receive_reply (
             FooBarRequester * self,
            Bar * reply,
            struct  DDS_SampleInfo * sample_info,
            const struct  DDS_Duration_t * max_wait )
```

Waits for a reply and copies its contents into a Sample.

This operation is equivalent to using **RTI_Connext_Requester_wait_for_replies** (p. 751) and **FooBarRequester_take_reply** (p. 756).

MT Safety:

Same restrictions as **RTI_Connext_Requester_wait_for_replies** (p. 751)

See also

RTI_Connext_Requester_wait_for_replies (p. 751)

FooBarRequester_take_reply (p. 756)

Requester example (p. 1007)

5.42.4.9 FooBarRequester_receive_replies()

```
DDS_ReturnCode_t FooBarRequester_receive_replies (
             FooBarRequester * self,
            struct BarSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long min_count,
             DDS_Long max_count,
            const struct  DDS_Duration_t * max_wait )
```

Waits for multiple replies and provides a loaned sequence to access them.

This operation is equivalent to using **RTI_Connext_Requester_wait_for_replies** (p. 751) and **FooBarRequester_↩ take_replies** (p. 757).

MT Safety:

See **RTI_Connext_Requester_wait_for_replies** (p. 751)

Returns

One of the **Standard Return Codes** (p. 1223)

See also

RTI_Connext_Requester_wait_for_replies (p. 751)

FooBarRequester_take_replies (p. 757)

5.42.4.10 FooBarRequester_take_reply()

```
DDS_ReturnCode_t FooBarRequester_take_reply (
             FooBarRequester * self,
            Bar * reply,
            struct  DDS_SampleInfo * sample_info )
```

Copies the contents of a reply into a Sample.

Takes a reply sample from the Requester and makes a copy.

This operation may be used after a call to **RTI_Connext_Requester_wait_for_replies** (p. 751).

To avoid copies, you can use **FooBarRequester_take_replies** (p. 757).

Parameters

self	*<<**in**>> (p. 1015)* Cannot be NULL.
reply	*<<**inout**>> (p. 1015)* user data type-specific **Foo** (p. 2116) object where the next received reply sample will be returned. The received_data must have been fully allocated. Otherwise, this operation may fail.
sample_info	*<<**inout**>> (p. 1015)* a **DDS_SampleInfo** (p. 1990) object where the info associated to the received reply will be returned. Must be a valid non-NULL **DDS_SampleInfo** (p. 1990). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.

Returns

One of the **Standard Return Codes** (p. 1223) , **DDS_RETCODE_NO_DATA** (p. 1224)

MT Safety:

SAFE

See also

RTI_Connext_Requester_wait_for_replies (p. 751)

5.42.4.11 FooBarRequester_take_replies()

```
DDS_ReturnCode_t FooBarRequester_take_replies (
             FooBarRequester * self,
            struct BarSeq * reply_seq,
            struct  DDS_SampleInfoSeq * sample_info_seq,
             DDS_Long max_count )
```

Provides a loaned sequence to access the existing replies.

Takes all the existing replies up to `max_count` and provides a loaned sequence to access them.

This operation does not make a copy of the data. It is similar to **FooDataReader_take** (p. 629).

The loan is returned with **FooBarRequester_return_loan** (p. 761)

This operation may be used after a call to **RTI_Connext_Requester_wait_for_replies** (p. 751)

See an **example** here: **Taking loaned samples** (p. 1007)

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
reply_seq	The data sequence
sample_info_seq	The associated sample info sequence
max_count	The maximum number of samples that are taken at a time. The special value **DDS_LENGTH_UNLIMITED** (p. 1328) may be used. This value will read up to the limit specified by **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_read** (p. 1625)

Returns

One of the **Standard Return Codes** (p. 1223) , **DDS_RETCODE_NO_DATA** (p. 1224)

MT Safety:

SAFE

See also

RTI_Connext_Requester_wait_for_replies (p. 751)

FooDataReader_take (p. 629) (for a more detailed description on how QoS and other parameters affect the underlying DataReader)

5.42.4.12 FooBarRequester_take_reply_for_related_request()

```
DDS_ReturnCode_t FooBarRequester_take_reply_for_related_request (
             FooBarRequester * self,
            Bar * reply,
            struct  DDS_SampleInfo * sample_info,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Copies the contents of a reply for a specific request.

This operation is analogous to **FooBarRequester_take_reply** (p. 756) except the reply corresponds to a specific request.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
reply	The sample where a reply is copied into
sample_info	<<***inout***>> *(p. 1015)* a **DDS_SampleInfo** (p. 1990) object where the info associated to the received reply will be returned. Must be a valid non-NULL **DDS_SampleInfo** (p. 1990). The function will fail with **DDS_RETCODE_BAD_PARAMETER** (p. 1224) if it is NULL.
related_request_id	The identity of a request previously sent by this Requester

MT Safety:

SAFE

5.42.4.13 FooBarRequester_take_replies_for_related_request()

```
DDS_ReturnCode_t FooBarRequester_take_replies_for_related_request (
             FooBarRequester * self,
            struct BarSeq * reply_seq,
            struct  DDS_SampleInfoSeq * sample_info_seq,
             DDS_Long max_count,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Provides a loaned sequence to access the existing replies for a specific request.

This operation is analogous to **FooBarRequester_take_replies** (p. 757) except the replies this operation provides correspond to a specific request.

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
reply_seq	The data sequence
sample_info_seq	The associated sample info sequence
max_count	The maximum number of samples that are taken at a time. The special value **DDS_LENGTH_UNLIMITED** (p. 1328) may be used.
related_request_id	The identity of a request previously sent by this Requester

MT Safety:

SAFE

5.42.4.14 FooBarRequester_read_reply()

```
DDS_ReturnCode_t FooBarRequester_read_reply (
             FooBarRequester * self,
            Bar * reply,
            struct  DDS_SampleInfo * sample_info )
```

Copies the contents of a reply into a Sample.

This operation is equivalent to **FooBarRequester_take_reply** (p. 756) except the reply remains in the Requester and can be read or taken again.

5.42.4.15 FooBarRequester_read_replies()

```
DDS_ReturnCode_t FooBarRequester_read_replies (
             FooBarRequester * self,
            struct BarSeq * reply_seq,
            struct  DDS_SampleInfoSeq * sample_info_seq,
             DDS_Long max_count )
```

Provides a loaned sequence to access the existing replies.

This operation is equivalent to **FooBarRequester_take_replies** (p. 757) except the replies remain in the Requester and can be read or taken again.

5.42.4.16 FooBarRequester_read_reply_for_related_request()

```
DDS_ReturnCode_t FooBarRequester_read_reply_for_related_request (
             FooBarRequester * self,
            Bar * reply,
            struct  DDS_SampleInfo * sample_info,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Copies the contents of a reply for a specific request.

This operation is equivalent to **FooBarRequester_take_reply_for_related_request** (p. 758) except the reply remains in the Requester and can be read or taken again.

5.42.4.17 FooBarRequester_read_replies_for_related_request()

```
DDS_ReturnCode_t FooBarRequester_read_replies_for_related_request (
             FooBarRequester * self,
            struct BarSeq * reply_seq,
            struct  DDS_SampleInfoSeq * sample_info_seq,
             DDS_Long max_count,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Provides a loaned sequence to access the existing replies for a specific request.

This operation is equivalent to **FooBarRequester_take_replies_for_related_request** (p. 758) except the replies remain in the Requester and can be read or taken again.

5.42.4.18 FooBarRequester_get_request_datawriter()

```
FooDataWriter * FooBarRequester_get_request_datawriter (
            FooBarRequester * self )
```

Retrieves the underlying **DDS_DataWriter** (p. 488).

Accessing the request DataWriter may be useful for a number of advanced use cases, such as:

- Finding matching subscriptions (e.g., Repliers)
- Setting a DataWriter listener
- Getting DataWriter protocol or cache statuses

MT Safety:

SAFE

5.42.4.19 FooBarRequester_get_reply_datareader()

```
BarDataReader * FooBarRequester_get_reply_datareader (
            FooBarRequester * self )
```

Retrieves the underlying **DDS_DataReader** (p. 618).

Accessing the reply DataReader may be useful for a number of advanced use cases, such as:

- Finding matching publications (e.g., Repliers)
- Setting a DataReader listener
- Getting DataReader protocol or cache statuses

MT Safety:

SAFE

5.42.4.20 FooBarRequester_return_loan()

```
DDS_ReturnCode_t FooBarRequester_return_loan (
             FooBarRequester * self,
            struct BarSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq )
```

Returns samples previously received from the middleware.

This operation needs to be called at some point after:

- **FooBarRequester_take_replies** (p. 757)
- **FooBarRequester_take_replies_for_related_request** (p. 758)
- **FooBarRequester_receive_replies** (p. 755)

See also

FooDataReader_return_loan (p. 649), for more information on how the middleware loans data to the application.

5.43 Replier

FooBarReplier (p. 2116), **FooBarSimpleReplier** (p. 2118) and associated elements

Data Structures

- struct **RTI_Connext_ReplierListener**

  *Called when a **FooBarReplier** (p. 2116) has new available requests.*
- struct **RTI_Connext_SimpleReplierListener**

  The listener called by a SimpleReplier.
- struct **RTI_Connext_Replier**

  The type-independent version of a Replier.
- struct **RTI_Connext_ReplierParams**

  *Contains the parameters for creating a **FooBarReplier** (p. 2116).*
- struct **FooBarReplier**

  Allows receiving requests and sending replies.
- struct **RTI_Connext_SimpleReplierParams**

  *Contains the parameters for creating a **FooBarSimpleReplier** (p. 2118).*
- struct **FooBarSimpleReplier**

  A callback-based replier.

Macros

- #define **RTI_Connext_ReplierListener_INITIALIZER** {NULL, NULL}

  *Intializes an **RTI_Connext_ReplierListener*** (p. *2175*).
- #define **RTI_Connext_ReplierParams_INITIALIZER**

  *Initializes a **RTI_Connext_ReplierParams*** (p. *2176*) *instance.*
- #define **RTI_CONNEXT_REPLIER_DECL**(TReq, TRep, TReplier)

  Instantiates the declaration of a typed replier and its operations.
- #define **RTI_Connext_RequesterParams_INITIALIZER**

  *Initializes a **RTI_Connext_RequesterParams*** (p. *2180*) *instance.*
- #define **RTI_Connext_SimpleReplierParams_INITIALIZER**

  *Initializes a **RTI_Connext_SimpleReplierParams*** (p. *2184*) *instance.*
- #define **RTI_CONNEXT_SIMPLEREPLIER_DECL**(TReq, TRep, TSimpleReplier)

  Instantiates the declaration of a typed SimpleReplier and its operations.

Typedefs

- typedef void(∗ **RTI_Connext_ReplierListener_OnRequestAvailableCallback**) (struct **RTI_Connext_↩ ReplierListener** ∗self, **RTI_Connext_Replier** ∗replier)

  *The type of **RTI_Connext_ReplierListener::on_request_available*** (p. *775*).
- typedef void ∗(∗ **RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback**) (**RTI_Connext_↩ SimpleReplierListener** ∗self, const void ∗request, const struct **DDS_SampleInfo** ∗info)

  *The type of **RTI_Connext_SimpleReplierListener::on_request_available*** (p. *776*).
- typedef void(∗ **RTI_Connext_SimpleReplierListener_OnReturnLoanCallback**) (**RTI_Connext_Simple↩ ReplierListener** ∗self, void ∗reply)

  *The type of **RTI_Connext_SimpleReplierListener::return_loan*** (p. *776*).
- typedef struct **RTI_Connext_ReplierParams** **RTI_Connext_ReplierParams**

  *Contains the parameters for creating a **FooBarReplier*** (p. *2116*).
- typedef struct **FooBarReplier** **FooBarReplier**

  Allows receiving requests and sending replies.
- typedef struct **RTI_Connext_SimpleReplierParams** **RTI_Connext_SimpleReplierParams**

  *Contains the parameters for creating a **FooBarSimpleReplier*** (p. *2118*).
- typedef struct **FooBarSimpleReplier** **FooBarSimpleReplier**

  A callback-based replier.

Functions

- **DDS_ReturnCode_t** **RTI_Connext_Replier_delete** (**RTI_Connext_Replier** ∗self)

  Releases the internal entities created by this Replier.
- **DDS_ReturnCode_t** **RTI_Connext_Replier_wait_for_requests** (**RTI_Connext_Replier** ∗self, int min_count, const struct **DDS_Duration_t** ∗max_wait)

  Waits for requests.
- **FooBarReplier** ∗ **FooBarReplier_create** (**DDS_DomainParticipant** ∗participant, char ∗service_name)

  Creates a Replier with the minimum set of parameters.
- **FooBarReplier** ∗ **FooBarReplier_create_w_params** (const **RTI_Connext_ReplierParams** ∗params)

  Creates a Replier with parameters.

- **DDS_ReturnCode_t FooBarReplier_receive_request** (**FooBarReplier** ∗self, **Foo** ∗request, struct **DDS_SampleInfo** ∗sample_info, const struct **DDS_Duration_t** ∗max_wait)

  Waits for a request and copies its contents into a Sample.
- **DDS_ReturnCode_t FooBarReplier_receive_requests** (**FooBarReplier** ∗self, struct **FooSeq** ∗received_data, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** min_reply_count, **DDS_Long** max_reply_count, const struct **DDS_Duration_t** ∗max_wait)

  Waits for multiple requests and provides a loaned sequence to access them.
- **DDS_ReturnCode_t FooBarReplier_take_request** (**FooBarReplier** ∗self, **Foo** ∗request, struct **DDS_SampleInfo** ∗sample_info)

  Copies the contents of a request into a Sample.
- **DDS_ReturnCode_t FooBarReplier_take_requests** (**FooBarReplier** ∗self, struct **FooSeq** ∗request_seq, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_count)

  Provides a loaned sequence to access the existing requests.
- **DDS_ReturnCode_t FooBarReplier_read_request** (**FooBarReplier** ∗self, **Foo** ∗request, struct **DDS_SampleInfo** ∗sample_info)

  Copies the contents of a request into a Sample.
- **DDS_ReturnCode_t FooBarReplier_read_requests** (**FooBarReplier** ∗self, struct **FooSeq** ∗request_seq, struct **DDS_SampleInfoSeq** ∗info_seq, **DDS_Long** max_count)

  Provides a loaned sequence to access the existing requests.
- **DDS_ReturnCode_t FooBarReplier_send_reply** (**FooBarReplier** ∗self, Bar ∗reply, const struct **DDS_SampleIdentity_t** ∗related_request_id)

  Sends a reply for a previous request.
- **FooDataReader** ∗ **FooBarReplier_get_request_datareader** (**FooBarReplier** ∗self)

  *Retrieves the underlying **DDS_DataReader** (p. 618).*
- BarDataWriter ∗ **FooBarReplier_get_reply_datawriter** (**FooBarReplier** ∗self)

  *Retrieves the underlying **DDS_DataWriter** (p. 488).*
- **DDS_ReturnCode_t FooBarReplier_return_loan** (**FooBarReplier** ∗self, struct **FooSeq** ∗replies, struct **DDS_SampleInfoSeq** ∗info_seq)

  Returns samples previously received from the middleware.
- **FooBarSimpleReplier** ∗ **FooBarSimpleReplier_create** (**DDS_DomainParticipant** ∗participant, char ∗service_name, **RTI_Connext_SimpleReplierListener** ∗listener)

  Creates a new SimpleReplier.
- **FooBarSimpleReplier** ∗ **FooBarSimpleReplier_create_w_params** (**RTI_Connext_SimpleReplierParams** ∗params)

  Creates a new SimpleReplier.
- **DDS_ReturnCode_t FooBarSimpleReplier_delete** (**FooBarSimpleReplier** ∗self)

  Releases the resources created by this SimpleReplier.

Variables

- **RTI_Connext_ReplierListener_OnRequestAvailableCallback RTI_Connext_ReplierListener::on_request_available**

  User callback.
- **RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback RTI_Connext_SimpleReplierListener::on_request_available**

  User callback that receives a request and provides a reply.
- **RTI_Connext_SimpleReplierListener_OnReturnLoanCallback RTI_Connext_SimpleReplierListener::return_loan**

  Returns a previously generated reply to the user.

5.43.1 Detailed Description

FooBarReplier (p. 2116), **FooBarSimpleReplier** (p. 2118) and associated elements

5.43.2 Macro Definition Documentation

5.43.2.1 RTI_Connext_ReplierListener_INITIALIZER

```
#define RTI_Connext_ReplierListener_INITIALIZER {NULL, NULL}
```

Intializes an **RTI_Connext_ReplierListener** (p. 2175).

5.43.2.2 RTI_Connext_ReplierParams_INITIALIZER

```
#define RTI_Connext_ReplierParams_INITIALIZER
```

Initializes a **RTI_Connext_ReplierParams** (p. 2176) instance.

5.43.2.3 RTI_CONNEXT_REPLIER_DECL

```
#define RTI_CONNEXT_REPLIER_DECL(
              TReq,
              TRep,
              TReplier )
```

Instantiates the declaration of a typed replier and its operations.

Parameters

TReq	The request type name
TRep	The reply type name
TReplier	The type name for the typed replier and the prefix for all the operations.

See also

Creating a Replier (p. 1009)

5.43.2.4 RTI_Connext_RequesterParams_INITIALIZER

```
#define RTI_Connext_RequesterParams_INITIALIZER
```

Initializes a **RTI_Connext_RequesterParams** (p. 2180) instance.

5.43.2.5 RTI_Connext_SimpleReplierParams_INITIALIZER

```
#define RTI_Connext_SimpleReplierParams_INITIALIZER
```

Initializes a **RTI_Connext_SimpleReplierParams** (p. 2184) instance.

5.43.2.6 RTI_CONNEXT_SIMPLEREPLIER_DECL

```
#define RTI_CONNEXT_SIMPLEREPLIER_DECL(
              TReq,
              TRep,
              TSimpleReplier )
```

Instantiates the declaration of a typed SimpleReplier and its operations.

Parameters

TReq	The request type name
TRep	The reply type name
TSimpleReplier	The type name for the typed SimpleReplier and the prefix for all the operations.

See also

SimpleReplier example (p. 1011)

5.43.3 Typedef Documentation

5.43.3.1 RTI_Connext_ReplierListener_OnRequestAvailableCallback

```
typedef void(* RTI_Connext_ReplierListener_OnRequestAvailableCallback) (struct RTI_Connext_↩
ReplierListener *self, RTI_Connext_Replier *replier)
```

The type of **RTI_Connext_ReplierListener::on_request_available** (p. 775).

5.43.3.2 RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback

```
typedef void *(* RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback) ( RTI_Connext_↩
SimpleReplierListener *self, const void *request, const struct  DDS_SampleInfo *info)
```

The type of **RTI_Connext_SimpleReplierListener::on_request_available** (p. 776).

5.43.3.3 RTI_Connext_SimpleReplierListener_OnReturnLoanCallback

```
typedef void(* RTI_Connext_SimpleReplierListener_OnReturnLoanCallback) ( RTI_Connext_Simple↩
ReplierListener *self, void *reply)
```

The type of **RTI_Connext_SimpleReplierListener::return_loan** (p. 776).

5.43.3.4 RTI_Connext_ReplierParams

```
typedef struct  RTI_Connext_ReplierParams  RTI_Connext_ReplierParams
```

Contains the parameters for creating a **FooBarReplier** (p. 2116).

See also

RTI_Connext_RequesterParams (p. 2180)

5.43.3.5 FooBarReplier

```
typedef struct  FooBarReplier  FooBarReplier
```

Allows receiving requests and sending replies.

A Replier is an entity with two associated **topics** (p. 166): a request topic and a reply topic. It can receive requests by subscribing to the request topic and can send replies to those requests by publishing the reply topic.

Valid types for these topics (`TReq` and `TRep`) are: those generated by rtiddsgen, the **DDS built-in types** (p. 307), and **DDS_DynamicData** (p. 1771). **Note:** At this moment, in the C version of this API, only rtiddsgen-generated types are supported.

To create a Replier for two types, a request type `TReq=`**`Foo`** `(p. 2116)` and a reply type `TRep=Bar`, your application needs to instantiate the data structure **`FooBarReplier`** `(p. 2116)` and the specific operations that can publish and subscribe to those types. In this documentation we refer to the type-dependent operations as `FooBarReplier_` (for example, **FooBarReplier_take_requests** (p. 772)). Some operations are type-independent and their names always begin with `RTI_Connext_Replier_` (for example, **RTI_Connext_Replier_wait_for_requests** (p. 769)). See **Creating a Replier** (p. 1009).

A Replier has four main types of operations:

- Waiting for requests to be received from the middleware
- Getting those requests
- Receiving requests (a convenience operation that is a combination of waiting and getting in a single operation)
- Sending a reply for a previously received request (i.e., publishing a reply sample on the reply topic with special meta-data so that the orignal Requester can identify it)

For multi-reply scenarios in which a **FooBarReplier** (p. 2116) generates more than one reply for a request, the **FooBar↩ Replier** (p. 2116) should mark all the intermediate replies (all but the last) using the **DDS_INTERMEDIATE_REPLY_↩ SEQUENCE_SAMPLE** (p. 1389) flag in **DDS_WriteParams_t::flag** (p. 2110).

Much like a Requester, a Replier has an associated **DDS_DomainParticipant** (p. 76), which can be shared with other Repliers or RTI Connext routines. All the other entities required for the request-reply interaction, including a **DDS_↩ DataWriter** (p. 488) for writing replies and a **DDS_DataReader** (p. 618) for reading requests, are automatically created when the Replier is constructed.

Quality of Service for the underlying DataWriter and DataReader can be configured (see **RTI_Connext_Requester↩ Params::qos_profile_name** (p. 2182)). By default, they are created with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325). The exact default configuration is described here: **Configuring Request-Reply QoS profiles** (p. 1012)

There are several ways to use a Replier:

- A thread **receives** (p. 771) requests and then dispatches them. If the computation of a reply is a simple operation, consider using a **FooBarSimpleReplier** (p. 2118) instead of a Replier.
- Polling without waiting, using **FooBarReplier_take_requests** (p. 772) directly.
- Using a **RTI_Connext_ReplierListener** (p. 2175) to get notified and **get** (p. 772) the requests within the callback.

Request-Reply Examples (p. 1004)

Replier example (p. 1010)

5.43.3.6 RTI_Connext_SimpleReplierParams

`typedef struct` **RTI_Connext_SimpleReplierParams** **RTI_Connext_SimpleReplierParams**

Contains the parameters for creating a **FooBarSimpleReplier** (p. 2118).

The parameters for a SimpleReplier are identical to those of the Replier, except for the SimpleReplierListener, which is required and has a different user callback.

See also

RTI_Connext_ReplierParams (p. 2176)

5.43.3.7 FooBarSimpleReplier

```
typedef struct  FooBarSimpleReplier  FooBarSimpleReplier
```

A callback-based replier.

A SimpleReplier is based on a **RTI_Connext_SimpleReplierListener** (p. 2183) that users provide . Requests are passed to the callback, which returns a reply. The reply is directed only to the Requester that sent the request.

SimpleRepliers are useful for simple use cases where a single reply for a request can be generated quickly, for example, looking up a table.

When more than one reply for a request can be generated or the processing is complex or needs to happen asynchronously, use a **FooBarReplier** (p. 2116) instead.

FooBarReplier (p. 2116)

RTI_Connext_SimpleReplierListener (p. 2183)

SimpleReplier example (p. 1011)

5.43.4 Function Documentation

5.43.4.1 RTI_Connext_Replier_delete()

```
DDS_ReturnCode_t RTI_Connext_Replier_delete (
            RTI_Connext_Replier * self )
```

Releases the internal entities created by this Replier.

Among other internal resources, it deletes the Replier's underlying DataReader and DataWriter.

See also

DDS_Subscriber_delete_datareader (p. 587)

DDS_Publisher_delete_datawriter (p. 459)

5.43.4.2 RTI_Connext_Replier_wait_for_requests()

```
DDS_ReturnCode_t RTI_Connext_Replier_wait_for_requests (
             RTI_Connext_Replier * self,
            int min_count,
            const struct  DDS_Duration_t * max_wait )
```

Waits for requests.

This operation waits for min_count requests to be available. It will wait up to max_wait .

This operation is similar to **RTI_Connext_Requester_wait_for_replies** (p. 751).

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
min_count	Minimum number of requests that need to be available for this operation to unblock.
max_wait	Maximum waiting time after which this operation unblocks regardless of how many requests are available.

Returns

true if at least min_count requests were available before max_wait elapsed, or false otherwise.

See also

FooBarReplier_take_requests (p. 772)

RTI_Connext_Requester_wait_for_replies (p. 751)

5.43.4.3 FooBarReplier_create()

```
FooBarReplier * FooBarReplier_create (
             DDS_DomainParticipant * participant,
            char * service_name )
```

Creates a Replier with the minimum set of parameters.

Parameters

participant	The DomainParticipant that this Replier uses to join a domain.
service_name	The service name. See **RTI_Connext_ReplierParams::service_name** (p. 2177)

Returns

One of the **Standard Return Codes** (p. 1223)

5.43.4.4 FooBarReplier_create_w_params()

```
FooBarReplier * FooBarReplier_create_w_params (
            const  RTI_Connext_ReplierParams * params )
```

Creates a Replier with parameters.

Parameters

params	All the parameters that configure this Replier

Returns

One of the **Standard Return Codes** (p. 1223)

See also

RTI_Connext_ReplierParams (p. 2176)

Creating a Replier (p. 1009)

5.43.4.5 FooBarReplier_receive_request()

```
DDS_ReturnCode_t FooBarReplier_receive_request (
             FooBarReplier * self,
             Foo * request,
            struct  DDS_SampleInfo * sample_info,
            const struct  DDS_Duration_t * max_wait )
```

Waits for a request and copies its contents into a Sample.

Equivalent to using **RTI_Connext_Replier_wait_for_requests** (p. 769) and **FooBarReplier_take_request** (p. 771)

See also

RTI_Connext_Replier_wait_for_requests (p. 769)

FooBarReplier_take_request (p. 771)

Replier example (p. 1010)

5.43.4.6 FooBarReplier_receive_requests()

```
DDS_ReturnCode_t FooBarReplier_receive_requests (
             FooBarReplier * self,
            struct  FooSeq * received_data,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long min_reply_count,
             DDS_Long max_reply_count,
            const struct  DDS_Duration_t * max_wait )
```

Waits for multiple requests and provides a loaned sequence to access them.

Equivalent to using **RTI_Connext_Replier_wait_for_requests** (p. 769) and **FooBarReplier_take_requests** (p. 772)

See also

RTI_Connext_Replier_wait_for_requests (p. 769)

FooBarReplier_take_requests (p. 772)

5.43.4.7 FooBarReplier_take_request()

```
DDS_ReturnCode_t FooBarReplier_take_request (
             FooBarReplier * self,
             Foo * request,
            struct  DDS_SampleInfo * sample_info )
```

Copies the contents of a request into a Sample.

See also

FooBarRequester_take_reply (p. 756)

5.43.4.8 FooBarReplier_take_requests()

```
DDS_ReturnCode_t FooBarReplier_take_requests (
             FooBarReplier * self,
            struct  FooSeq * request_seq,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_count )
```

Provides a loaned sequence to access the existing requests.

See also

FooBarRequester_take_replies (p. 757)

5.43.4.9 FooBarReplier_read_request()

```
DDS_ReturnCode_t FooBarReplier_read_request (
             FooBarReplier * self,
             Foo * request,
            struct  DDS_SampleInfo * sample_info )
```

Copies the contents of a request into a Sample.

This operation is equivalent to **FooBarReplier_take_request** (p. 771) except the request remains in the Replier and can be read or taken again.

5.43.4.10 FooBarReplier_read_requests()

```
DDS_ReturnCode_t FooBarReplier_read_requests (
             FooBarReplier * self,
            struct  FooSeq * request_seq,
            struct  DDS_SampleInfoSeq * info_seq,
             DDS_Long max_count )
```

Provides a loaned sequence to access the existing requests.

This operation is equivalent to **FooBarReplier_take_requests** (p. 772) except the requests remain in the Replier and can be read or taken again.

5.43.4.11 FooBarReplier_send_reply()

```
DDS_ReturnCode_t FooBarReplier_send_reply (
             FooBarReplier * self,
            Bar * reply,
            const struct  DDS_SampleIdentity_t * related_request_id )
```

Sends a reply for a previous request.

The related request identity can be retrieved from the sample info (**DDS_SampleInfo_get_sample_identity** (p. 703))

Parameters

self	<<***in***>> *(p. 1015)* Cannot be NULL.
reply	The reply to be sent.
related_request↩ _id	The identity of a previously received request

Returns

One of the **Standard Return Codes** (p. 1223)

See also

FooBarReplier_receive_request (p. 771)

FooBarReplier_receive_requests (p. 771)

FooBarReplier_take_request (p. 771)

FooBarReplier_take_requests (p. 772)

Replier example (p. 1010)

5.43.4.12 FooBarReplier_get_request_datareader()

```
FooDataReader * FooBarReplier_get_request_datareader (
            FooBarReplier * self )
```

Retrieves the underlying **DDS_DataReader** (p. 618).

See also

FooBarRequester_get_reply_datareader (p. 761)

5.43.4.13 FooBarReplier_get_reply_datawriter()

```
BarDataWriter * FooBarReplier_get_reply_datawriter (
            FooBarReplier * self )
```

Retrieves the underlying **DDS_DataWriter** (p. 488).

See also

FooBarRequester_get_request_datawriter (p. 760)

5.43.4.14 FooBarReplier_return_loan()

```
DDS_ReturnCode_t FooBarReplier_return_loan (
            FooBarReplier * self,
           struct  FooSeq * replies,
           struct  DDS_SampleInfoSeq * info_seq )
```

Returns samples previously received from the middleware.

This operation needs to be called at some point after:

- **FooBarReplier_take_requests** (p. 772)
- **FooBarReplier_receive_requests** (p. 771)

See also

FooDataReader_return_loan (p. 649), for more information on how the middleware loans data to the application.

5.43.4.15 FooBarSimpleReplier_create()

```
FooBarSimpleReplier * FooBarSimpleReplier_create (
            DDS_DomainParticipant * participant,
           char * service_name,
            RTI_Connext_SimpleReplierListener * listener )
```

Creates a new SimpleReplier.

See also

RTI_Connext_SimpleReplierParams (p. 2184)

RTI_Connext_SimpleReplierListener (p. 2183)

5.43.4.16 FooBarSimpleReplier_create_w_params()

```
FooBarSimpleReplier * FooBarSimpleReplier_create_w_params (
            RTI_Connext_SimpleReplierParams * params )
```

Creates a new SimpleReplier.

See also

RTI_Connext_SimpleReplierParams (p. 2184)

RTI_Connext_SimpleReplierListener (p. 2183)

5.43.4.17 FooBarSimpleReplier_delete()

```
DDS_ReturnCode_t FooBarSimpleReplier_delete (
            FooBarSimpleReplier * self )
```

Releases the resources created by this SimpleReplier.

See also

RTI_Connext_Replier_delete (p. 769)

5.43.5 Variable Documentation

5.43.5.1 on_request_available [1/2]

RTI_Connext_ReplierListener_OnRequestAvailableCallback RTI_Connext_ReplierListener::on_request_↩
available

User callback.

See also

DDS_DataReaderListener::on_data_available (p. 1595)

5.43.5.2 on_request_available [2/2]

RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback RTI_Connext_SimpleReplierListener↩
::on_request_available

User callback that receives a request and provides a reply.

This operation gets called when a request is available and expects a reply that is automatically sent. Immediately after that, **RTI_Connext_SimpleReplierListener::return_loan** (p. 776) is called.

Parameters

request	The received request

Returns

A reply for that request

5.43.5.3 return_loan

RTI_Connext_SimpleReplierListener_OnReturnLoanCallback RTI_Connext_SimpleReplierListener::return↩
_loan

Returns a previously generated reply to the user.

This operation is always called right after sending the reply created by **RTI_Connext_SimpleReplierListener::on_↩ request_available** (p. 776). It can be used to release any resources from the reply creation. If there are no resources to release, the implementation body can be empty.

Parameters

reply	The reply previously provided in **RTI_Connext_SimpleReplierListener::on_request_available** (p. 776)

5.44 Utilities

Utilities for the RTI Connext Messaging module.

Typedefs

- typedef struct **DDS_ProductVersion_t RTI_Connext_Messaging_LibraryVersion**
  This struct represents the library version.

Functions

- const **RTI_Connext_Messaging_LibraryVersion** * **RTI_Connext_Messaging_get_api_version** (void)
  Get the API version number.
- const char * **RTI_Connext_Messaging_Library_get_api_version_string** (void)
  Get the API version strings.
- const char * **RTI_Connext_Messaging_get_api_build_number_string** (void)
  Get the build number string.

5.44.1 Detailed Description

Utilities for the RTI Connext Messaging module.

Connext Messaging Utilities

5.44.2 Typedef Documentation

5.44.2.1 RTI_Connext_Messaging_LibraryVersion

```
typedef struct DDS_ProductVersion_t RTI_Connext_Messaging_LibraryVersion
```

This struct represents the library version.

5.44.3 Function Documentation

5.44.3.1 RTI_Connext_Messaging_get_api_version()

```
const  RTI_Connext_Messaging_LibraryVersion * RTI_Connext_Messaging_get_api_version (
            void  )
```

Get the API version number.

5.44.3.2 RTI_Connext_Messaging_Library_get_api_version_string()

```
const char * RTI_Connext_Messaging_Library_get_api_version_string (
            void  )
```

Get the API version strings.

5.44.3.3 RTI_Connext_Messaging_get_api_build_number_string()

```
const char * RTI_Connext_Messaging_get_api_build_number_string (
            void  )
```

Get the build number string.

5.45 Durability and Persistence

APIs related to RTI Connext Durability and Persistence.

APIs related to RTI Connext Durability and Persistence.

RTI Connext offers the following mechanisms for achieving durability and persistence:

- **Durable Writer History** (p. 779)
- **Durable Reader State** (p. 779)
- **Data Durability** (p. 779)

To use the first two features, you need a relational database, which is not included with RTI Connext. Supported databases are listed in the `Release Notes`.

The third feature, provided by RTI Persistence Service, can use the filesystem or a relational database to persist information.

These three features can be used separately or in combination.

5.45.1 Durable Writer History

This feature allows a **DDS_DataWriter** (p. 488) to locally persist its local history cache so that it can survive shutdowns, crashes and restarts. When an application restarts, each **DDS_DataWriter** (p. 488) that has been configured to have durable writer history automatically loads all the data in its history cache from disk and can carry on sending data as if it had never stopped executing. To the rest of the system, it will appear as if the **DDS_DataWriter** (p. 488) had been temporarily disconnected from the network and then reappeared.

See also

Configuring Durable Writer History (p. 780)

5.45.2 Durable Reader State

This feature allows a **DDS_DataReader** (p. 618) to locally persists its state and remember the sequence numbers it has already received. When an application restarts, each **DDS_DataReader** (p. 618) that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the **DDS_DataReader** (p. 618) before the restart will will not be provided to the application again.

See also

Configuring Durable Reader State (p. 782)

5.45.3 Data Durability

This feature is a full implementation of the OMG DDS Persistence Profile. The **DURABILITY** (p. 1287) QoS lets an application configure a **DDS_DataWriter** (p. 488) such that the information written by the **DDS_DataWriter** (p. 488) survives beyond the lifetime of the **DDS_DataWriter** (p. 488). In this manner, a late-joining **DDS_DataReader** (p. 618) can subscribe and receive the information even after the **DDS_DataWriter** (p. 488) application is no longer executing. To use this feature, you need RTI Persistence Service – an optional product that can be purchased separately.

5.45.4 Durability and Persistence Based on Virtual GUID

Every modification to the global dataspace made by a **DDS_DataWriter** (p. 488) is identified by a pair (virtual GUID, sequence number).

- The virtual GUID (Global Unique Identifier) is a 16-byte character identifier associated with a **DDS_DataWriter** (p. 488) or **DDS_DataReader** (p. 618); it is used to uniquely identify this entity in the global data space.
- The sequence number is a 64-bit identifier that identifies changes published by a specific **DDS_DataWriter** (p. 488).

Several **DDS_DataWriter** (p. 488) entities can be configured with the same virtual GUID. If each of these **DDS_Data↩ Writer** (p. 488) entities publishes a sample with sequence number '0', the sample will only be received once by the **DDS_DataReader** (p. 618) entities subscribing to the content published by the **DDS_DataWriter** (p. 488) entities.

RTI Connext also uses the virtual GUID (Global Unique Identifier) to associate a persisted state (state in permanent storage) to the corresponding DDS entity.

For example, the history of a **DDS_DataWriter** (p. 488) will be persisted in a database table with a name generated from the virtual GUID of the **DDS_DataWriter** (p. 488). If the **DDS_DataWriter** (p. 488) is restarted, it must have associated the same virtual GUID to restore its previous history.

Likewise, the state of a **DDS_DataReader** (p. 618) will be persisted in a database table whose name is generated from the **DDS_DataReader** (p. 618) virtual GUID

A **DDS_DataWriter** (p. 488)'s virtual GUID can be configured using **DDS_DataWriterProtocolQosPolicy::virtual_guid** (p. 1650). Similarly, a **DDS_DataReader** (p. 618)'s virtual GUID can be configured using **DDS_DataReaderProtocol↩ QosPolicy::virtual_guid** (p. 1597).

The **DDS_PublicationBuiltinTopicData** (p. 1909) and **DDS_SubscriptionBuiltinTopicData** (p. 2018) structures include the virtual GUID associated with the discovered publication or subscription.

Refer to the `User's Manual` for additional use cases.

See also

DDS_DataWriterProtocolQosPolicy::virtual_guid (p. 1650) **DDS_DataReaderProtocolQosPolicy::virtual_↩ guid** (p. 1597).

5.45.5 Configuring Durable Writer History

To configure a **DDS_DataWriter** (p. 488) to have durable writer history, use the **PROPERTY** (p. 1308) QoS policy associated with the **DDS_DataWriter** (p. 488) or the **DDS_DomainParticipant** (p. 76).

Properties defined for the **DDS_DomainParticipant** (p. 76) will be applied to all the **DDS_DataWriter** (p. 488) objects belonging to the **DDS_DomainParticipant** (p. 76), unless the property is overwritten by the **DDS_DataWriter** (p. 488).

See also

DDS_PropertyQosPolicy (p. 1905)

The following table lists the supported durable writer history properties.

Table 5.747 ***Durable Writer History Properties***

Property	Description
dds.data_writer.history.plugin_name	Must be set to "dds.data_writer.history.odbc_plugin.builtin" to enable durable writer history in the DataWriter. This property is required.
dds.data_writer.history.odbc_plugin.builtin.dsn	The ODBC DSN (Data Source Name) associated with the database where the writer history must be persisted. This property is required.
dds.data_writer.history.odbc_plugin.builtin.driver	This property tells RTI Connext which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library: UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems.
dds.data_writer.history.odbc_plugin.builtin.username	Configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.password	Configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.shared	If set to 1, RTI Connext creates a single connection per DSN that will be shared across DataWriters within the same Publisher. If set to 0 (the default), a **DDS_DataWriter** (p. 488) will create its own database connection. Default: 0
dds.data_writer.history.odbc_plugin.builtin.instance_cache_max_size	These properties configure the resource limits associated with the ODBC writer history caches. To minimize the number of accesses to the database, RTI Connext uses two caches, one for samples and one for instances. The initial and maximum sizes of these caches are configured using these properties. The resource limits initial_instances, max_instances, initial_samples, max_samples and max_samples_per_instance in the **DDS_ResourceLimitsQosPolicy** (p. 1953) are used to configure the maximum number of samples and instances that can be stored in the relational database. Default: **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956)
dds.data_writer.history.odbc_plugin.builtin.instance_cache_init_size	See description above. Default: **DDS_ResourceLimitsQosPolicy::initial_instances** (p. 1957)
dds.data_writer.history.odbc_plugin.builtin.sample_cache_max_size	See description above. Default: 32 (the minimum)
dds.data_writer.history.odbc_plugin.builtin.sample_cache_init_size	See description above. Default: 32
dds.data_writer.history.odbc_plugin.builtin.restore	This property indicates whether or not the persisted writer history must be restored once the **DDS_DataWriter** (p. 488) is restarted. If the value is 0, the content of the database associated with the **DDS_DataWriter** (p. 488) being restarted will be deleted. If the value is 1, the **DDS_DataWriter** (p. 488) will restore its previous state from the database content. Default: 1

Property	Description
dds.data_writer.history.odbc_plugin.builtin.in_memory↩ _state	This property determines how much state will be kept in memory by the ODBC writer history in order to avoid accessing the database. When in_memory_state is equal to 1, instance_↩ cache_max_size is always equal to **DDS_Resource↩ LimitsQosPolicy::max_instances** (p. 1956) (it cannot be changed). In addition, the ODBC writer history will keep in memory a fixed state overhead of 24 bytes per sample. In this operating mode, the ODBC writer history provides the best performance. However, the restore operation will be slower and the maximum number of samples that the writer history can manage will be limited by the available physical memory. If in_memory_state is equal to 0, all the state will be kept in the underlying database. In this operating mode, the maximum number of samples in the writer history will not be limited by the physical memory available unless the underlying database is an in-memory database (Times↩ Ten). Default: 1

5.45.6 Configuring Durable Reader State

To configure a **DDS_DataReader** (p. 618) with durable reader state, use the **PROPERTY** (p. 1308) QoS policy associated with the **DDS_DataReader** (p. 618) or **DDS_DomainParticipant** (p. 76).

A property defined in the **DDS_DomainParticipant** (p. 76) will be applicable to all the **DDS_DataReader** (p. 618) belonging to the **DDS_DomainParticipant** (p. 76) unless it is overwritten by the **DDS_DataReader** (p. 618).

See also

DDS_PropertyQosPolicy (p. 1905)

The following table lists the supported durable reader state properties.

Table 5.748 ***Durable Reader State Properties***

Property	Description
dds.data_reader.state.odbc.dsn	The ODBC DSN (Data Source Name) associated with the database where the **DDS_DataReader** (p. 618) state must be persisted. This property is required.
dds.data_reader.state.filter_redundant_samples	To enable durable reader state, this property must be set to 1. Otherwise, the reader state will not be kept and/or persisted. When the reader state is not maintained, RTI Connext does not filter duplicate samples that may be coming from the same virtual writer. By default, this property is set to 1.

Property	Description
dds.data_reader.state.odbc.driver	This property is used to indicate which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library↩ : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems).
dds.data_reader.state.odbc.username	This property configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.odbc.password	This property configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.restore	This property indicates if the persisted **DDS_Data↩ Reader** (p. 618) state must be restored or not once the **DDS_DataReader** (p. 618) is restarted. If this property is 0, the previous state will be deleted from the database. If it is 1, the **DDS_DataReader** (p. 618) will restore its previous state from the database content. Default: 1
dds.data_reader.state.checkpoint_frequency	This property controls how often the reader state is stored in the database. A value of N means to store the state once every N samples. A high value will provide better performance. However, if the reader is restarted it may receive some duplicate samples. These samples will be filtered by the middleware and they will not be propagated to the application. Default: 1
dds.data_reader.state.persistence_service.request_↩ depth	This property indicates the number of most recent historical samples that the persisted **DDS_DataReader** (p. 618) wants to receive when it starts up. Default: 0

5.45.7 Configuring Data Durability

RTI Connext implements **DDS_TRANSIENT_DURABILITY_QOS** (p. 1290) and **DDS_PERSISTENT_DURABILITY_↩ QOS** (p. 1290) durability using RTI Persistence Service, available for purchase as a separate RTI product.

For more information on RTI Persistence Service, refer to the `User's Manual`, or the RTI Persistence Service API Reference HTML documentation.

DURABILITY (p. 1287)

5.46 Basic QoS

QoS that are considered basic and fundamental to RTI Connext.

QoS that are considered basic and fundamental to RTI Connext.

This page lists all QoS that are considered Basic. Basic QoS are applicable to many different use cases, are widely applicable to almost any customer, and should be relatively easy to understand and set.

These are QoS policies and fields that you should be aware of even if you are not setting them today. These QoS are fundamental to DDS and to RTI Connext, and showcase RTI Connext capabilities and features.

All other Qos are applicable to a smaller subset of use cases and customers, or are finer-grained controls for a Basic QoS.

DDS_DurabilityQosPolicy (p. 1762)	**kind** (p. 1765)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1762)	**writer_depth** (p. 1765)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Indicates the number of samples per instance that a durable **DDS_DataWriter** (p. 488) will send to a late-joining **DDS_DataReader** (p. 618).
DDS_DataRepresentationQosPolicy (p. 1639)	**compression_settings** (p. 1640)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Structure that contains the compression settings.
DDS_DeadlineQosPolicy (p. 1685)	**period** (p. 1687)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1867)	**kind** (p. 1871)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1872)	**value** (p. 1873)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The strength value used to arbitrate among multiple writers.
DDS_LivelinessQosPolicy (p. 1826)	**kind** (p. 1828)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1826)	**lease_duration** (p. 1828)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The duration within which a **DDS_DataWriter** (p. 488) must be asserted, or else it is assumed to be not alive.

DDS_LivelinessQosPolicy (p. 1826)	**assertions_per_lease_duration** (p. 1829)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of assertions a **DDS_DataWriter** (p. 488) will send during a its **DDS_LivelinessQosPolicy::lease_duration** (p. 1828).
DDS_TimeBasedFilterQosPolicy (p. 2038)	**minimum_separation** (p. 2040)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1884)	**name** (p. 1886)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1940)	**kind** (p. 1943)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1940)	**max_blocking_time** (p. 1943)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 1688)	**kind** (p. 1690)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies the desired kind of destination order.
DDS_HistoryQosPolicy (p. 1808)	**kind** (p. 1810)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1808)	**depth** (p. 1810)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295)
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_samples** (p. 1957)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Represents the initial samples the middleware will store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).

DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_instances** (p. 1957)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Represents the initial number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) will manage.
DDS_EntityFactoryQosPolicy (p. 1791)	**autoenable_created_entities** (p. 1792)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
DDS_LifespanQosPolicy (p. 1818)	**duration** (p. 1819)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Maximum duration for the data's validity.
DDS_PublishModeQosPolicy (p. 1924)	**kind** (p. 1926)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Publishing mode
DDS_WireProtocolQosPolicy (p. 2099)	**participant_id** (p. 2103)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_TransportBuiltinQosPolicy (p. 2057)	**mask** (p. 2058)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the built-in transports that are registered automatically when the **DDS_DomainParticipant** (p. 76) is enabled.
DDS_TransportMulticastQosPolicy (p. 2064)	**value** (p. 2065)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 1717)	**initial_peers** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 1717)	**multicast_receive_addresses** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the DomainParticipant.
DDS_DiscoveryQosPolicy (p. 1717)	**accept_unknown_peers** (p. 1720)

	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_lease_duration** (p. 1694)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_assert_period** (p. 1694)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_announcement_period** (p. 1694)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**initial_participant_announcements** (p. 1696)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**new_remote_participant_announcements** (p. 1696)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The number of participant announcements sent when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**min_initial_participant_announcement_period** (p. 1697)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_initial_participant_announcement_period** (p. 1697)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**heartbeat_period** (p. 1968)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**fast_heartbeat_period** (p. 1968)
	<<***basic***>> (p. *784*) <<***extension***>> (p. *796*) An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.

DDS_RtpsReliableWriterProtocol_t (p. 1965)	**late_joiner_heartbeat_period** (p. 1969)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_send_window_size** (p. 1978)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_send_window_size** (p. 1978)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Maximum size of send window of unacknowledged samples
DDS_PropertyQosPolicy (p. 1905)	**value** (p. 1907)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sequence of properties.
DDS_EntityNameQosPolicy (p. 1793)	**name** (p. 1793)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The name of the entity.
DDS_BatchQosPolicy (p. 1552)	**enable** (p. 1552)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 1552)	**max_data_bytes** (p. 1553)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 1552)	**max_samples** (p. 1553)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The maximum number of samples in a batch.
DDS_ProfileQosPolicy (p. 1902)	**string_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1902)	**url_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sequence of **URL groups** (p. 975) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1902)	**ignore_user_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.

DDS_ProfileQosPolicy (p. 1902)	**ignore_environment_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 976).
DDS_ProfileQosPolicy (p. 1902)	**ignore_resource_profile** (p. 1904)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_LoggingQosPolicy (p. 1834)	**verbosity** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1834)	**category** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1834)	**output_file** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1834)	**output_file_suffix** (p. 1836)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sets the file suffix when logging to a set of files
DDS_MonitoringEventDistributionSettings (p. 1843)	**publication_period** (p. 1846)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**polling_period** (p. 1856)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**max_historical_logs** (p. 1848)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**publication_period** (p. 1849)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Period at which the logging thread publishes log messages.

DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**enable** (p. 1839)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Enables the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**domain_id** (p. 1840)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDS_DomainParticipant** (p. 76).
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**collector_initial_peers** (p. 1840)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings**↩ **::dedicated_participant** (p. 1842).
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**middleware_forwarding_level** (p. 1850)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_**↩ **MIDDLEWARE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**security_event_forwarding_level** (p. 1850)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_**↩ **SECURITY_EVENT** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**service_forwarding_level** (p. 1851)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_**↩ **SERVICE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**user_forwarding_level** (p. 1851)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_**↩ **USER** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

DDS_MonitoringTelemetryData (p. 1859)	**metrics** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of **DDS_MonitoringMetricSelection** (p. 1852) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1859)	**logs** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* **DDS_MonitoringLoggingForwardingSettings** (p. 1850) containing the **NDDS_Config_Syslog↩ Verbosity** (p. 1449) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 1448).
DDS_MonitoringQosPolicy (p. 1856)	**enable** (p. 1857)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1856)	**application_name** (p. 1857)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The name of the resource that represents this RTI Connext application.
DDS_TopicQueryDispatchQosPolicy (p. 2053)	**publication_period** (p. 2054)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sets the periodic interval at which samples are published.

5.47 DDS Specification QoS

QoS that are defined in one of the OMG DDS Specifications.

QoS that are defined in one of the OMG DDS Specifications.

This page lists the QoS that are included in an OMG DDS specification. The standards are listed here: `https↩ ://www.omg.org/spec/category/omg-data-distribution-service/`.

DDS_UserDataQosPolicy (p. 2092)	**value** (p. 2093)
	<<***spec***>> *(p. 791)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1806)	**value** (p. 1807)
	<<***spec***>> *(p. 791)* a sequence of octets
DDS_DurabilityQosPolicy (p. 1762)	**kind** (p. 1765)

	<<***basic***>> *(*p. *784)* <<***spec***>> *(*p. *791)* The kind of durability.
DDS_DurabilityServiceQosPolicy (p. 1767)	**service_cleanup_delay** (p. 1768)
	<<***spec***>> *(*p. *791)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_kind** (p. 1768)
	<<***spec***>> *(*p. *791)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_depth** (p. 1768)
	<<***spec***>> *(*p. *791)* Setting to use for the **DDS_↩ DurabilityQosPolicy::writer_depth** (p. 1765) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples** (p. 1769)
	<<***spec***>> *(*p. *791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(*p. *791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(*p. *791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DataRepresentationQosPolicy (p. 1639)	**value** (p. 1640)
	<<***spec***>> *(*p. *791)* Sequence of representation identifiers.
DDS_PresentationQosPolicy (p. 1894)	**access_scope** (p. 1897)
	<<***spec***>> *(*p. *791)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1894)	**coherent_access** (p. 1897)
	<<***spec***>> *(*p. *791)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1894)	**ordered_access** (p. 1897)
	<<***spec***>> *(*p. *791)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_DeadlineQosPolicy (p. 1685)	**period** (p. 1687)

	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* Duration of the deadline period.
DDS_LatencyBudgetQosPolicy (p. 1816)	**duration** (p. 1818)
	*<<**spec**>>* (p. *791)* Duration of the maximum acceptable delay.
DDS_OwnershipQosPolicy (p. 1867)	**kind** (p. 1871)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1872)	**value** (p. 1873)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The strength value used to arbitrate among multiple writers.
DDS_LivelinessQosPolicy (p. 1826)	**kind** (p. 1828)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1826)	**lease_duration** (p. 1828)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The duration within which a **DDS_DataWriter** (p. 488) must be asserted, or else it is assumed to be not alive.
DDS_TimeBasedFilterQosPolicy (p. 2038)	**minimum_separation** (p. 2040)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1884)	**name** (p. 1886)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1940)	**kind** (p. 1943)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1940)	**max_blocking_time** (p. 1943)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 1688)	**kind** (p. 1690)
	*<<**basic**>>* (p. *784)* *<<**spec**>>* (p. *791)* Specifies the desired kind of destination order.
DDS_DestinationOrderQosPolicy (p. 1688)	**scope** (p. 1690)
	*<<**spec**>>* (p. *791)* Specifies the desired scope of the source destination order.
DDS_HistoryQosPolicy (p. 1808)	**kind** (p. 1810)

	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1808)	**depth** (p. 1810)
	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295)
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> (p. *791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_EntityFactoryQosPolicy (p. 1791)	**autoenable_created_entities** (p. 1792)
	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
DDS_TransportPriorityQosPolicy (p. 2068)	**value** (p. 2070)
	<<***spec***>> (p. *791)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_LifespanQosPolicy (p. 1818)	**duration** (p. 1819)
	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Maximum duration for the data's validity.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autodispose_unregistered_instances** (p. 2113)
	<<***spec***>> (p. *791)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDS_DataWriter** (p. 488) unregisters from the instance by means of the unregister operations.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_samples_delay** (p. 1936)
	<<***spec***>> (p. *791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716).

DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716).
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**kind** (p. 2083)
	<<***spec***>> *(p. 791)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**ignore_sequence_bounds** (p. 2083)
	<<***spec***>> *(p. 791)* Controls whether sequence bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**ignore_string_bounds** (p. 2084)
	<<***spec***>> *(p. 791)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**ignore_member_names** (p. 2084)
	<<***spec***>> *(p. 791)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**prevent_type_widening** (p. 2084)
	<<***spec***>> *(p. 791)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**force_type_validation** (p. 2085)
	<<***spec***>> *(p. 791)* Controls whether type information must be available in order to complete matching between a **DDS_DataWriter** (p. 488) and a **DDS_DataReader** (p. 618).
DDS_TypeConsistencyEnforcementQosPolicy (p. 2082)	**ignore_enum_literal_names** (p. 2085)
	<<***spec***>> *(p. 791)* Controls whether enumeration constant names are taken into consideration for type assignability.
DDS_DataTags (p. 1641)	**tags** (p. 1642)
	<<***spec***>> *(p. 791)* Sequence of data tags.

5.48 DDS Extension QoS

QoS that are RTI extensions to the DDS standard.

QoS that are RTI extensions to the DDS standard.

This page lists all of the QoS that are RTI extensions of the DDS Standard. The extension QoS complement the standard QoS specified by the OMG DDS specifications. They are provided to improve product usability and enable access to product-specific features.

DDS_AvailabilityQosPolicy (p. 1547)	**enable_required_subscriptions** (p. 1550)
	<<***extension***>> *(p. 796)* Enables support for required subscriptions in a **DDS_DataWriter** (p. 488)
DDS_AvailabilityQosPolicy (p. 1547)	**max_data_availability_waiting_time** (p. 1550)
	<<***extension***>> *(p. 796)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 1547)	**max_endpoint_availability_waiting_time** (p. 1550)
	<<***extension***>> *(p. 796)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 1547)	**required_matched_endpoint_groups** (p. 1551)
	<<***extension***>> *(p. 796)* A sequence of endpoint groups.
DDS_DurabilityQosPolicy (p. 1762)	**direct_communication** (p. 1765)
	<<***extension***>> *(p. 796)* Indicates whether or not a TRANSIENT or PERSISTENT **DDS_DataReader** (p. 618) should receive samples directly from a TRANSIENT or PERSISTENT **DDS_DataWriter** (p. 488)
DDS_DurabilityQosPolicy (p. 1762)	**writer_depth** (p. 1765)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Indicates the number of samples per instance that a durable **DDS_DataWriter** (p. 488) will send to a late-joining **DDS_DataReader** (p. 618).
DDS_DurabilityQosPolicy (p. 1762)	**storage_settings** (p. 1766)
	<<***extension***>> *(p. 796)* Configures durable writer history and durable reader state.
DDS_PersistentStorageSettings (p. 1887)	**enable** (p. 1889)
	<<***extension***>> *(p. 796)* Enables durable writer history in a **DDS_DataWriter** (p. 488) and durable reader state in a **DDS_DataReader** (p. 618).

DDS_PersistentStorageSettings (p. 1887)	**file_name** (p. 1889)
	<<***extension***>> *(p. 796)* The file name where the durable writer history or durable reader state will be stored.
DDS_PersistentStorageSettings (p. 1887)	**trace_file_name** (p. 1889)
	<<***extension***>> *(p. 796)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
DDS_PersistentStorageSettings (p. 1887)	**journal_kind** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the journal mode of the persistent storage.
DDS_PersistentStorageSettings (p. 1887)	**synchronization_kind** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the level of synchronization with the physical disk.
DDS_PersistentStorageSettings (p. 1887)	**vacuum** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the auto-vacuum status of the storage.
DDS_PersistentStorageSettings (p. 1887)	**restore** (p. 1891)
	<<***extension***>> *(p. 796)* Indicates if the persisted writer history or reader state must be restored.
DDS_PersistentStorageSettings (p. 1887)	**writer_instance_cache_allocation** (p. 1891)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1887)	**writer_sample_cache_allocation** (p. 1892)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the sample durable writer history cache.
DDS_PersistentStorageSettings (p. 1887)	**writer_memory_state** (p. 1893)
	<<***extension***>> *(p. 796)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_PersistentStorageSettings (p. 1887)	**reader_checkpoint_frequency** (p. 1893)
	<<***extension***>> *(p. 796)* Controls how often the reader state is stored into the database.
DDS_CompressionSettings_t (p. 1568)	**compression_ids** (p. 1568)
	<<***extension***>> *(p. 796)* Mask that represents the compression algorithms enabled.
DDS_CompressionSettings_t (p. 1568)	**writer_compression_level** (p. 1569)

	<<***extension***>> *(*p. *796)* The level of compression to use when compressing data.
DDS_CompressionSettings_t (p. 1568)	**writer_compression_threshold** (p. 1569)
	<<***extension***>> *(*p. *796)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
DDS_DataRepresentationQosPolicy (p. 1639)	**compression_settings** (p. 1640)
	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* Structure that contains the compression settings.
DDS_PresentationQosPolicy (p. 1894)	**drop_incomplete_coherent_set** (p. 1898)
	<<***extension***>> *(*p. *796)* Indicates whether or not a **DDS_DataReader** (p. 618) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_LivelinessQosPolicy (p. 1826)	**assertions_per_lease_duration** (p. 1829)
	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* The number of assertions a **DDS_DataWriter** (p. 488) will send during a its **DDS_LivelinessQosPolicy::lease_duration** (p. 1828).
DDS_ReliabilityQosPolicy (p. 1940)	**acknowledgment_kind** (p. 1943)
	<<***extension***>> *(*p. *796)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1940)	**instance_state_consistency_kind** (p. 1944)
	<<***extension***>> *(*p. *796)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1940)	**exact_reliability_kind_match** (p. 1944)
	<<***extension***>> *(*p. *796)* Whether an exact reliability kind match is required for endpoint matching.
DDS_DestinationOrderQosPolicy (p. 1688)	**source_timestamp_tolerance** (p. 1690)
	<<***extension***>> *(*p. *796)* Allowed tolerance between source timestamps of consecutive samples.
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_samples** (p. 1957)
	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* Represents the initial samples the middleware will store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_instances** (p. 1957)

	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Represents the initial number of instances a **DDS_Data↩ Writer** (p. 488) (or **DDS_DataReader** (p. 618)) will manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**instance_hash_buckets** (p. 1958)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Number of hash buckets for instances.
DDS_TypeSupportQosPolicy (p. 2087)	**plugin_data** (p. 2088)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Value to pass into the type plugin's de-/serialization function
DDS_TypeSupportQosPolicy (p. 2087)	**cdr_padding_kind** (p. 2088)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_PublishModeQosPolicy (p. 1924)	**kind** (p. 1926)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Publishing mode
DDS_PublishModeQosPolicy (p. 1924)	**flow_controller_name** (p. 1926)
	<<***extension***>> (p. *796)* Name of the associated flow controller
DDS_PublishModeQosPolicy (p. 1924)	**priority** (p. 1928)
	<<***extension***>> (p. *796)* Publication priority
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_write** (p. 1540)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**thread** (p. 1540)
	<<***extension***>> (p. *796)* Settings of the publishing thread.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_batch** (p. 1541)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**asynchronous_batch_thread** (p. 1541)
	<<***extension***>> (p. *796)* Settings of the batch flushing thread.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_topic_query_publication** (p. 1542)
	[DEPRECATED] (p. **968)** <<***extension***>> (p. *796)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**topic_query_publication_thread** (p. 1542)

	<<***extension***>> *(p. 796)* Settings of the **DDS_Topic↩ Query** (p. 708) publication thread.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_unregistered_instances_delay** (p. 2113)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_disposed_instances_delay** (p. 2114)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_instances_delay** (p. 1936)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_instances_delay** (p. 1937)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_↩ state` becomes **DDS_NOT_ALIVE_NO_WRITERS↩ _INSTANCE_STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_WireProtocolQosPolicy (p. 2099)	**participant_id** (p. 2103)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_host_id** (p. 2103)
	<<***extension***>> *(p. 796)* The RTPS Host ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_app_id** (p. 2104)
	<<***extension***>> *(p. 796)* The RTPS App ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_instance_id** (p. 2104)
	<<***extension***>> *(p. 796)* The RTPS Instance ID of the **DDS_DomainParticipant** (p. 76).
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_well_known_ports** (p. 2105)
	<<***extension***>> *(p. 796)* Configures the RTPS well-known port mappings.

DDS_WireProtocolQosPolicy (p. 2099)	**rtps_reserved_port_mask** (p. 2105)
	<<***extension***>> *(p. 796)* Specifies which well-known ports to reserve when enabling the participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_auto_id_kind** (p. 2106)
	<<***extension***>> *(p. 796)* Kind of auto mechanism used to calculate the GUID prefix.
DDS_WireProtocolQosPolicy (p. 2099)	**compute_crc** (p. 2106)
	<<***extension***>> *(p. 796)* Adds RTPS CRC submessage to every message when this field is set to **DDS_BOOLEAN_TRUE** (p. 1203).
DDS_WireProtocolQosPolicy (p. 2099)	**check_crc** (p. 2106)
	<<***extension***>> *(p. 796)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS_BOOLEAN_TRUE** (p. 1203).
DDS_TransportSelectionQosPolicy (p. 2070)	**enabled_transports** (p. 2071)
	<<***extension***>> *(p. 796)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
DDS_TransportBuiltinQosPolicy (p. 2057)	**mask** (p. 2058)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Specifies the built-in transports that are registered automatically when the **DDS_DomainParticipant** (p. 76) is enabled.
DDS_TransportUnicastQosPolicy (p. 2071)	**value** (p. 2073)
	<<***extension***>> *(p. 796)* A sequence of unicast communication settings.
DDS_TransportMulticastMappingQosPolicy (p. 2062)	**value** (p. 2064)
	<<***extension***>> *(p. 796)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 2064)	**value** (p. 2065)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* A sequence of multicast communications settings.
DDS_TransportMulticastQosPolicy (p. 2064)	**kind** (p. 2065)
	<<***extension***>> *(p. 796)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DiscoveryQosPolicy (p. 1717)	**enabled_transports** (p. 1718)
	<<***extension***>> *(p. 796)* The transports available for use by the Discovery mechanism.

DDS_DiscoveryQosPolicy (p. 1717)	**initial_peers** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 1717)	**multicast_receive_addresses** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
DDS_DiscoveryQosPolicy (p. 1717)	**metatraffic_transport_priority** (p. 1720)
	*<<**extension**>> (p. 796)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 1717)	**accept_unknown_peers** (p. 1720)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryQosPolicy (p. 1717)	**enable_endpoint_discovery** (p. 1721)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers** (p. 1621)
	*<<**extension**>> (p. 796)* The maximum number of remote writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers_per_instance** (p. 1622)
	*<<**extension**>> (p. 796)* The maximum number of remote writers from which a **DDS_DataReader** (p. 618) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_samples_per_remote_writer** (p. 1622)
	*<<**extension**>> (p. 796)* The maximum number of out-of-order samples from a given remote **DDS_DataWriter** (p. 488) that a **DDS_DataReader** (p. 618) may store when maintaining a reliable connection to the **DDS_↩ DataWriter** (p. 488).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_infos** (p. 1623)
	*<<**extension**>> (p. 796)* The maximum number of info units that a **DDS_DataReader** (p. 618) can use to store **DDS_SampleInfo** (p. 1990).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_writers** (p. 1623)

	<<***extension***>> *(p. 796)* The initial number of remote writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_writers_per_instance** (p. 1624)
	<<***extension***>> *(p. 796)* The initial number of remote writers from which a **DDS_DataReader** (p. 618) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_infos** (p. 1624)
	<<***extension***>> *(p. 796)* The initial number of info units that a **DDS_DataReader** (p. 618) can have, which are used to store **DDS_SampleInfo** (p. 1990).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_outstanding_reads** (p. 1625)
	<<***extension***>> *(p. 796)* The initial number of outstanding calls to read/take (or one of their variants) on the same **DDS_DataReader** (p. 618) for which memory has not been returned by calling **FooDataReader_return_loan** (p. 649).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_outstanding_reads** (p. 1625)
	<<***extension***>> *(p. 796)* The maximum number of outstanding read/take calls (or one of their variants) on the same **DDS_DataReader** (p. 618) for which memory has not been returned by calling **FooDataReader_return_loan** (p. 649).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_samples_per_read** (p. 1625)
	<<***extension***>> *(p. 796)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader_read** (p. 628) or **FooDataReader_take** (p. 629). If more data exists in the middleware, the application will need to issue multiple read/take calls.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**disable_fragmentation_support** (p. 1626)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples** (p. 1626)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_fragmented_samples** (p. 1627)
	<<***extension***>> *(p. 796)* The initial number of samples for which a **DDS_DataReader** (p. 618) may store fragments.

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples_per_remote_writer** (p. 1627)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragments_per_sample** (p. 1628)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**dynamically_allocate_fragmented_samples** (p. 1628)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_total_instances** (p. 1629)
	<<***extension***>> *(p. 796)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_virtual_writers** (p. 1630)
	<<***extension***>> *(p. 796)* The maximum number of remote virtual writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_virtual_writers** (p. 1630)
	<<***extension***>> *(p. 796)* The initial number of remote virtual writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_virtual_writers_per_instance** (p. 1631)
	<<***extension***>> *(p. 796)* The maximum number of virtual remote writers that can be associated with an instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_virtual_writers_per_instance** (p. 1631)
	<<***extension***>> *(p. 796)* The initial number of virtual remote writers per instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers_per_sample** (p. 1632)
	<<***extension***>> *(p. 796)* The maximum number of remote writers allowed to write the same sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_query_condition_filters** (p. 1632)
	<<***extension***>> *(p. 796)* The maximum number of query condition filters a reader is allowed.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_app_ack_response_length** (p. 1633)
	<<***extension***>> *(p. 796)* Maximum length of application-level acknowledgment response data

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**keep_minimum_state_for_instances** (p. 1633)
	<<***extension***>> *(p. 796)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 1629).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_topic_queries** (p. 1634)
	<<***extension***>> *(p. 796)* The initial number of Topic↩ Queries allocated by a **DDS_DataReader** (p. 618).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_topic_queries** (p. 1634)
	<<***extension***>> *(p. 796)* The maximum number of active TopicQueries that a **DDS_DataReader** (p. 618) can create.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 1635)
	<<***extension***>> *(p. 796)* Allocation resource for the shared memory segments attached by the **DDS_Data↩ Reader** (p. 618).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**instance_replacement** (p. 1635)
	<<***extension***>> *(p. 796)* Sets the kind of instances allowed to be replaced for each instance state (**DDS↩ _InstanceStateKind** (p. 715)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_↩ instances** (p. 1956).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**autopurge_remote_not_alive_writer_delay** (p. 1636)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataReader** (p. 618) will maintain information regarding a **DDS_DataWriter** (p. 488) once the **DDS_↩ DataWriter** (p. 488) has become not alive.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**lazily_allocate_batch_resources** (p. 1637)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_concurrent_blocking_threads** (p. 1675)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The initial number of threads that are allowed to concurrently block on write call on the same **DDS_DataWriter** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_concurrent_blocking_threads** (p. 1676)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDS_Data↩ Writer** (p. 488).

DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_remote_reader_filters** (p. 1676)
	<<***extension***>> *(p. 796)* The maximum number of remote DataReaders for which the **DDS_DataWriter** (p. 488) will perform content-based filtering.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_batches** (p. 1677)
	<<***extension***>> *(p. 796)* Represents the initial number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_batches** (p. 1677)
	<<***extension***>> *(p. 796)* Represents the maximum number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**instance_replacement** (p. 1678)
	<<***extension***>> *(p. 796)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**replace_empty_instances** (p. 1678)
	<<***extension***>> *(p. 796)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**autoregister_instances** (p. 1679)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Whether or not to automatically register new instances
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_virtual_writers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of virtual writers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_virtual_writers** (p. 1679)
	<<***extension***>> *(p. 796)* The initial number of virtual writers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_remote_readers** (p. 1683)
	<<***extension***>> *(p. 796)* Controls the initial memory allocation for the matched remote readers of a **DDS_DataWriter** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of remote readers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_app_ack_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of application-level acknowledging remote readers supported by a **DDS_DataWriter** (p. 488)

DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the initial number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the maximum number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**writer_loaned_sample_allocation** (p. 1682)
	<<***extension***>> *(p. 796)* Represents the allocation settings of loaned samples managed by a **DDS_Data↩ Writer** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initialize_writer_loaned_sample** (p. 1682)
	<<***extension***>> *(p. 796)* Whether or not to initialize loaned samples returned by a **DDS_DataWriter** (p. 488)
DDS_DataWriterTransferModeQosPolicy (p. 1684)	**shmem_ref_settings** (p. 1685)
	<<***extension***>> *(p. 796)* Settings related to transferring data using shared memory references.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**virtual_guid** (p. 1597)
	<<***extension***>> *(p. 796)* The virtual GUID (Global Unique Identifier).
DDS_DataReaderProtocolQosPolicy (p. 1596)	**rtps_object_id** (p. 1597)
	<<***extension***>> *(p. 796)* The RTPS Object ID.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**rtps_reliable_reader** (p. 1599)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDS_DataReader** (p. 618). This parameter only has effect if the reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS↩ _ReliabilityQosPolicyKind** (p. 1324).
DDS_DataReaderProtocolQosPolicy (p. 1596)	**expects_inline_qos** (p. 1597)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Specifies whether this DataReader expects inline QoS with every sample.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**disable_positive_acks** (p. 1598)
	<<***extension***>> *(p. 796)* Whether the reader sends positive acknowledgements to writers.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**propagate_dispose_of_unregistered_instances** (p. 1598)

	<<***extension***>> *(*p. *796)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 716) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 716) state.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**propagate_unregister_of_disposed_instances** (p. 1599)
	<<***extension***>> *(*p. *796)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO↩ _WRITERS_INSTANCE_STATE** (p. 716) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 716).
DDS_DataWriterProtocolQosPolicy (p. 1649)	**virtual_guid** (p. 1650)
	<<***extension***>> *(*p. *796)* The virtual GUID (Global Unique Identifier).
DDS_DataWriterProtocolQosPolicy (p. 1649)	**rtps_object_id** (p. 1650)
	<<***extension***>> *(*p. *796)* The RTPS Object ID.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**push_on_write** (p. 1651)
	<<***extension***>> *(*p. *796)* Whether to push sample out when write is called.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**disable_positive_acks** (p. 1651)
	<<***extension***>> *(*p. *796)* Controls whether or not the writer expects positive acknowledgements from matching readers.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**disable_inline_keyhash** (p. 1652)
	<<***extension***>> *(*p. *796)* Controls whether or not a keyhash is propagated on the wire with each sample.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**serialize_key_with_dispose** (p. 1652)
	<<***extension***>> *(*p. *796)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**propagate_app_ack_with_no_response** (p. 1653)
	<<***extension***>> *(*p. *796)* Controls whether or not a **DDS_DataWriter** (p. 488) receives **DDS_DataWriter↩ Listener::on_application_acknowledgment** (p. 1648) notifications with an empty or invalid response.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**rtps_reliable_writer** (p. 1653)

	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDS_DataWriter** (p. 488). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQosPolicyKind** (p. 1324).
DDS_DataWriterProtocolQosPolicy (p. 1649)	**initial_virtual_sequence_number** (p. 1654)
	<<***extension***>> *(p. 796)* Determines, the initial virtual sequence number for this DataWriter.
DDS_SystemResourceLimitsQosPolicy (p. 2030)	**max_objects_per_thread** (p. 2031)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* The maximum number of objects that can be stored per thread for a **DDS_DomainParticipantFactory** (p. 32).
DDS_SystemResourceLimitsQosPolicy (p. 2030)	**initial_objects_per_thread** (p. 2031)
	<<***extension***>> *(p. 796)* The number of objects per thread for a **DDS_DomainParticipantFactory** (p. 32) for which infrastructure will initially be allocated.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_writer_allocation** (p. 1737)
	<<***extension***>> *(p. 796)* Allocation settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_reader_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_publisher_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_subscriber_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_topic_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_writer_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote DataWriters.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_reader_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_participant_allocation** (p. 1740)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_writer_reader_pair_allocation** (p. 1740)
	<<***extension***>> *(p. 796)* Allocation settings applied to matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_reader_writer_pair_allocation** (p. 1740)
	<<***extension***>> *(p. 796)* Allocation settings applied to matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**read_condition_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to read condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**query_condition_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**outstanding_asynchronous_sample_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to the maximum number of samples (from all **DDS_Data↩ Writer** (p. 488)) waiting to be asynchronously written.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_allocation** (p. 1743)
	<<***extension***>> *(p. 796)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_writer_hash_buckets** (p. 1743)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_reader_hash_buckets** (p. 1743)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_publisher_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_subscriber_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_topic_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_writer_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_reader_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_participant_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_writer_reader_pair_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for matching local writer and remote/local reader pairs.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_reader_writer_pair_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_gather_destinations** (p. 1748)
	<<***extension***>> (p. *796*) Maximum number of destinations per RTI Connext send.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_user_data_max_length** (p. 1748)
	<<***extension***>> (p. *796*) Maximum length of user data in **DDS_DomainParticipantQos** (p. 1729) and **DDS_ParticipantBuiltinTopicData** (p. 1873)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**topic_data_max_length** (p. 1748)
	<<***extension***>> (p. *796*) Maximum length of topic data in **DDS_TopicQos** (p. 2048), **DDS_TopicBuiltinTopicData** (p. 2040), **DDS_PublicationBuiltinTopicData** (p. 1909) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**publisher_group_data_max_length** (p. 1749)
	<<***extension***>> (p. *796*) Maximum length of group data in **DDS_PublisherQos** (p. 1922) and **DDS_PublicationBuiltinTopicData** (p. 1909)

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**subscriber_group_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of group data in **DDS_SubscriberQos** (p. 2016) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_user_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataWriterQos** (p. 1666) and **DDS_↩ PublicationBuiltinTopicData** (p. 1909)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_user_data_max_length** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataReaderQos** (p. 1611) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partitions** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1884).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partition_cumulative_characters** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1884).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_code_max_serialized_length** (p. 1751)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_object_max_serialized_length** (p. 1751)
	<<***extension***>> *(p. 796)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_object_max_deserialized_length** (p. 1753)
	<<***extension***>> *(p. 796)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**deserialized_type_object_dynamic_allocation_↩ threshold** (p. 1753)

	<<***extension***>> *(p. 796)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**serialized_type_object_dynamic_allocation_threshold** (p. 1752)
	<<***extension***>> *(p. 796)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**contentfilter_property_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_seq_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* Maximum number of channels that can be specified in **DDS_MultiChannelQosPolicy** (p. 1860) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_filter_expression_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 1564) in a MultiChannel DataWriter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_list_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_string_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_list_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_string_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_list_max_length** (p. 1756)

	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_string_max_length** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_endpoint_groups** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum number of **DDS_EndpointGroup_t** (p. 1787) allowable in a **DDS_AvailabilityQosPolicy** (p. 1547).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_endpoint_group_cumulative_characters** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum number of combined role_name characters allowed in all **DDS_EndpointGroup_t** (p. 1787) in a **DDS_AvailabilityQosPolicy** (p. 1547).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**transport_info_list_max_length** (p. 1758)
	<<***extension***>> *(p. 796)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1877).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_replacement_kind** (p. 1758)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_allocation** (p. 1741) are reached.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_allocation** (p. 1758)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_hash_buckets** (p. 1759)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_data_tag_list_max_length** (p. 1759)
	<<***extension***>> *(p. 796)* Maximum number of data tags associated with a **DDS_DataWriter** (p. 488).

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_data_tag_string_max_length** (p. 1760)
	*<<**extension**>> (p. 796)* Maximum string length of the data tags associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_data_tag_list_max_length** (p. 1760)
	*<<**extension**>> (p. 796)* Maximum number of data tags associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_data_tag_string_max_length** (p. 1760)
	*<<**extension**>> (p. 796)* Maximum string length of the data tags associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**shmem_ref_transfer_mode_max_segments** (p. 1761)
	*<<**extension**>> (p. 796)* Maximum number of segments created by all DataWriters belonging to a **DDS_DomainParticipant** (p. 76).
DDS_EventQosPolicy (p. 1796)	**thread** (p. 1796)
	*<<**extension**>> (p. 796)* Event thread QoS.
DDS_EventQosPolicy (p. 1796)	**initial_count** (p. 1797)
	*<<**extension**>> (p. 796)* The initial number of events.
DDS_EventQosPolicy (p. 1796)	**max_count** (p. 1797)
	*<<**extension**>> (p. 796)* The maximum number of events.
DDS_DatabaseQosPolicy (p. 1581)	**thread** (p. 1582)
	*<<**extension**>> (p. 796)* Database thread settings.
DDS_DatabaseQosPolicy (p. 1581)	**shutdown_timeout** (p. 1583)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* The maximum wait time during a shutdown.
DDS_DatabaseQosPolicy (p. 1581)	**cleanup_period** (p. 1583)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* The period at which the database thread wakes up to remove deleted records.
DDS_DatabaseQosPolicy (p. 1581)	**shutdown_cleanup_period** (p. 1583)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* The clean-up period used during database shut-down.
DDS_DatabaseQosPolicy (p. 1581)	**initial_records** (p. 1584)

	<<***extension***>> *(p. 796)* The initial number of total records.
DDS_DatabaseQosPolicy (p. 1581)	**max_skiplist_level** (p. 1584)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum level of the skiplist.
DDS_DatabaseQosPolicy (p. 1581)	**initial_weak_references** (p. 1585)
	<<***extension***>> *(p. 796)* The initial number of weak references.
DDS_DatabaseQosPolicy (p. 1581)	**max_weak_references** (p. 1584)
	<<***extension***>> *(p. 796)* The maximum number of weak references.
DDS_ReceiverPoolQosPolicy (p. 1938)	**thread** (p. 1939)
	<<***extension***>> *(p. 796)* Receiver pool thread(s).
DDS_ReceiverPoolQosPolicy (p. 1938)	**buffer_size** (p. 1939)
	<<***extension***>> *(p. 796)* The receive buffer size in bytes.
DDS_ReceiverPoolQosPolicy (p. 1938)	**buffer_alignment** (p. 1940)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_lease_duration** (p. 1694)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_assert_period** (p. 1694)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_announcement_period** (p. 1694)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**remote_participant_purge_kind** (p. 1695)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_liveliness_loss_detection_period** (p. 1695)

	[DEPRECATED] (p. **968**) *<<**extension**>> (p. 796)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**initial_participant_announcements** (p. 1696)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**new_remote_participant_announcements** (p. 1696)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of participant announcements sent when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**min_initial_participant_announcement_period** (p. 1697)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_initial_participant_announcement_period** (p. 1697)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_reader_resource_limits** (p. 1698)
	*<<**extension**>> (p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader** (p. 1698)
	*<<**extension**>> (p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader_resource_limits** (p. 1699)
	*<<**extension**>> (p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader** (p. 1699)
	*<<**extension**>> (p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader_resource_limits** (p. 1700)
	*<<**extension**>> (p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_writer** (p. 1704)

	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE↩ _RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQos↩ PolicyKind** (p. 1324).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_publish_mode** (p. 1705)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_publish_mode** (p. 1706)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**asynchronous_publisher** (p. 1706)
	<<***extension***>> *(p. 796)* Asynchronous publishing settings for the discovery **DDS_Publisher** (p. 446) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**default_domain_announcement_period** (p. 1706)
	<<***extension***>> *(p. 796)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**ignore_default_domain_announcements** (p. 1707)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader_reliability_kind** (p. 1703)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_↩ message_reader_reliability_kind** (p. 1703) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer** (p. 1700)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_data_lifecycle** (p. 1701)

	<<***extension***>> *(*p. *796)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer** (p. 1702)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_data_lifecycle** (p. 1702)
	<<***extension***>> *(*p. *796)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**builtin_discovery_plugins** (p. 1703)
	<<***extension***>> *(*p. *796)* Mask of built-in discovery plugin kinds.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**enabled_builtin_channels** (p. 1703)
	<<***extension***>> *(*p. *796)* The mask specifying which built-in channels should be enabled.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer** (p. 1707)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_data_lifecycle** (p. 1708)
	<<***extension***>> *(*p. *796)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_publish_mode** (p. 1708)
	<<***extension***>> *(*p. *796)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_reader** (p. 1709)
	<<***extension***>> *(*p. *796)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 2006) reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**locator_reachability_lease_duration** (p. 1710)
	<<***extension***>> *(*p. *796)* The time period after which other DomainParticipants can consider one of their locators as "unreachable" if they do not receive a REACHABILITY PING from this DomainParticipant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**locator_reachability_assert_period** (p. 1709)
	<<***extension***>> *(*p. *796)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**locator_reachability_change_detection_period** (p. 1710)
	<<***extension***>> *(p. 796)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer** (p. 1711)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer_publish_mode** (p. 1712)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_reader** (p. 1712)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**endpoint_type_object_lb_serialization_threshold** (p. 1713)
	<<***extension***>> *(p. 796)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**dns_tracker_polling_period** (p. 1713)
	<<***extension***>> *(p. 796)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader** (p. 1716)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader_resource_limits** (p. 1716)
	<<***extension***>> *(p. 796)* Resource limits for the built-in topic participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_publish_mode** (p. 1714)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer** (p. 1714)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_data_lifecycle** (p. 1715)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**request_types_filter** (p. 1716)
	<<***extension***>> *(p. 796)* Topic name pattern for requesting all types via Type Lookup Service.
DDS_RtpsWellKnownPorts_t (p. 1983)	**port_base** (p. 1985)
	<<***extension***>> *(p. 796)* The base port offset.
DDS_RtpsWellKnownPorts_t (p. 1983)	**domain_id_gain** (p. 1986)
	<<***extension***>> *(p. 796)* Tunable domain gain parameter.
DDS_RtpsWellKnownPorts_t (p. 1983)	**participant_id_gain** (p. 1987)
	<<***extension***>> *(p. 796)* Tunable participant gain parameter.
DDS_RtpsWellKnownPorts_t (p. 1983)	**builtin_multicast_port_offset** (p. 1987)
	<<***extension***>> *(p. 796)* Additional offset for **metatraffic** multicast port.
DDS_RtpsWellKnownPorts_t (p. 1983)	**builtin_unicast_port_offset** (p. 1987)
	<<***extension***>> *(p. 796)* Additional offset for **metatraffic** unicast port.
DDS_RtpsWellKnownPorts_t (p. 1983)	**user_multicast_port_offset** (p. 1988)
	<<***extension***>> *(p. 796)* Additional offset for **usertraffic** multicast port.
DDS_RtpsWellKnownPorts_t (p. 1983)	**user_unicast_port_offset** (p. 1988)
	<<***extension***>> *(p. 796)* Additional offset for **usertraffic** unicast port.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**min_heartbeat_response_delay** (p. 1960)
	<<***extension***>> *(p. 796)* The minimum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**max_heartbeat_response_delay** (p. 1960)
	<<***extension***>> *(p. 796)* The maximum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**heartbeat_suppression_duration** (p. 1961)
	<<***extension***>> *(p. 796)* The duration a reader ignores consecutively received heartbeats
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**nack_period** (p. 1961)

	<<***extension***>> *(*p. *796)* The period at which to send NACKs
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**receive_window_size** (p. 1962)
	<<***extension***>> *(*p. *796)* The number of received out-of-order samples a reader can keep at a time
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**round_trip_time** (p. 1962)
	<<***extension***>> *(*p. *796)* The duration from sending a NACK to receiving a repair of a sample
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**app_ack_period** (p. 1963)
	<<***extension***>> *(*p. *796)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**min_app_ack_response_keep_duration** (p. 1963)
	<<***extension***>> *(*p. *796)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**samples_per_app_ack** (p. 1964)
	<<***extension***>> *(*p. *796)* The minimum number of samples acknowledged by one application-level acknowledgment message
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**low_watermark** (p. 1966)
	<<***extension***>> *(*p. *796)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 1236) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**high_watermark** (p. 1967)
	<<***extension***>> *(*p. *796)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 1236) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**heartbeat_period** (p. 1968)
	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**fast_heartbeat_period** (p. 1968)
	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**late_joiner_heartbeat_period** (p. 1969)

	<<***basic***>> *(*p. *784)* <<***extension***>> *(*p. *796)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**virtual_heartbeat_period** (p. 1970)
	<<***extension***>> *(*p. *796)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**samples_per_virtual_heartbeat** (p. 1970)
	<<***extension***>> *(*p. *796)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_heartbeat_retries** (p. 1971)
	<<***extension***>> *(*p. *796)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**inactivate_nonprogressing_readers** (p. 1971)
	<<***extension***>> *(*p. *796)* Whether to treat remote readers as inactive when their NACKs do not progress
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**heartbeats_per_max_samples** (p. 1972)
	<<***extension***>> *(*p. *796)* The number of piggyback heartbeats sent per max send window.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_nack_response_delay** (p. 1973)
	<<***extension***>> *(*p. *796)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_nack_response_delay** (p. 1973)
	<<***extension***>> *(*p. *796)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**nack_suppression_duration** (p. 1974)
	<<***extension***>> *(*p. *796)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_bytes_per_nack_response** (p. 1974)
	<<***extension***>> *(*p. *796)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_enable_adaptive_sample_↩ keep_duration** (p. 1976)

	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_min_sample_keep_duration** (p. 1975)
	<<***extension***>> *(p. 796)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_max_sample_keep_duration** (p. 1976)
	<<***extension***>> *(p. 796)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1977)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_increase_sample_keep_duration_factor** (p. 1977)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Controls rate of growth of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Maximum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_update_period** (p. 1979)
	<<***extension***>> *(p. 796)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_increase_factor** (p. 1980)
	<<***extension***>> *(p. 796)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_decrease_factor** (p. 1981)
	<<***extension***>> *(p. 796)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**enable_multicast_periodic_heartbeat** (p. 1982)
	<<***extension***>> *(p. 796)* Whether periodic heartbeat messages are sent over multicast

DDS_RtpsReliableWriterProtocol_t (p. 1965)	**multicast_resend_threshold** (p. 1982)
	<<***extension***>> *(p. 796)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_repair_piggyback_heartbeat** (p. 1983)
	<<***extension***>> *(p. 796)* Prevents piggyback heartbeats from being sent with repair samples
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Maximum number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_infos** (p. 1559)
	<<***extension***>> *(p. 796)* Initial number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_infos** (p. 1559)
	<<***extension***>> *(p. 796)* Maximum number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_outstanding_reads** (p. 1559)
	<<***extension***>> *(p. 796)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_outstanding_reads** (p. 1560)
	<<***extension***>> *(p. 796)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples_per_read** (p. 1560)
	<<***extension***>> *(p. 796)* Maximum number of samples that can be read/taken on a same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**disable_fragmentation_support** (p. 1560)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the built-in topic **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_fragmented_samples** (p. 1561)

	<<***extension***>> *(p. 796)* The initial number of samples for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples_per_remote_writer** (p. 1562)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragments_per_sample** (p. 1562)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**dynamically_allocate_fragmented_samples** (p. 1563)
	<<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_TransportUnicastSettings_t (p. 2073)	**transports** (p. 2074)
	<<***extension***>> *(p. 796)* A sequence of transport aliases that specifies the unicast interfaces on which to receive *unicast* traffic for the entity.
DDS_TransportUnicastSettings_t (p. 2073)	**receive_port** (p. 2074)
	<<***extension***>> *(p. 796)* The unicast port on which the entity can receive data.
DDS_TransportMulticastSettings_t (p. 2066)	**transports** (p. 2067)
	<<***extension***>> *(p. 796)* A sequence of transport aliases that specifies the transports on which to receive *multicast* traffic for the entity.
DDS_TransportMulticastSettings_t (p. 2066)	**receive_address** (p. 2067)
	<<***extension***>> *(p. 796)* The multicast group address on which the entity can receive data.
DDS_TransportMulticastSettings_t (p. 2066)	**receive_port** (p. 2067)
	<<***extension***>> *(p. 796)* The multicast port on which the entity can receive data.
DDS_TransportMulticastMapping_t (p. 2059)	**addresses** (p. 2060)
	<<***extension***>> *(p. 796)* A string containing a comma-separated list of IP addresses or IP address ranges to be used to receive *multicast* traffic for the entity with a topic that matches the **DDS_TransportMulticastMapping_↩ t::topic_expression** (p. 2060).
DDS_TransportMulticastMapping_t (p. 2059)	**topic_expression** (p. 2060)

	<<***extension***>> (p. *796)* A regular expression that will be used to map topic names to corresponding multicast receive addresses.
DDS_TransportMulticastMapping_t (p. 2059)	**mapping_function** (p. 2061)
	<<***extension***>> (p. *796)* Specifies a function that will define the mapping between a topic name and a specific multicast address from a list of addresses.
DDS_PropertyQosPolicy (p. 1905)	**value** (p. 1907)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Sequence of properties.
DDS_EntityNameQosPolicy (p. 1793)	**name** (p. 1793)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The name of the entity.
DDS_EntityNameQosPolicy (p. 1793)	**role_name** (p. 1794)
	<<***extension***>> (p. *796)* The entity role name.
DDS_ServiceQosPolicy (p. 2005)	**kind** (p. 2005)
	<<***extension***>> (p. *796)* The kind of service.
DDS_BatchQosPolicy (p. 1552)	**enable** (p. 1552)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 1552)	**max_data_bytes** (p. 1553)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 1552)	**max_samples** (p. 1553)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The maximum number of samples in a batch.
DDS_BatchQosPolicy (p. 1552)	**max_flush_delay** (p. 1554)
	<<***extension***>> (p. *796)* The maximum flush delay.
DDS_BatchQosPolicy (p. 1552)	**source_timestamp_resolution** (p. 1554)
	<<***extension***>> (p. *796)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 1552)	**thread_safe_write** (p. 1555)
	<<***extension***>> (p. *796)* Determines whether or not the write operation is thread safe.
DDS_ProfileQosPolicy (p. 1902)	**string_profile** (p. 1903)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Sequence of strings containing a XML document to load.

DDS_ProfileQosPolicy (p. 1902)	**url_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sequence of **URL groups** (p. 975) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1902)	**ignore_user_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
DDS_ProfileQosPolicy (p. 1902)	**ignore_environment_profile** (p. 1903)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 976).
DDS_ProfileQosPolicy (p. 1902)	**ignore_resource_profile** (p. 1904)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_LoggingQosPolicy (p. 1834)	**verbosity** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1834)	**category** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1834)	**print_format** (p. 1835)
	*<<**extension**>> (p. 796)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1834)	**output_file** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1834)	**output_file_suffix** (p. 1836)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sets the file suffix when logging to a set of files
DDS_LoggingQosPolicy (p. 1834)	**max_bytes_per_file** (p. 1836)
	*<<**extension**>> (p. 796)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1834)	**max_files** (p. 1837)
	*<<**extension**>> (p. 796)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringEventDistributionSettings (p. 1843)	**concurrency_level** (p. 1844)

	<<***extension***>> *(p. 796)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1843)	**datawriter_qos_profile_name** (p. 1845)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes event metrics.
DDS_MonitoringEventDistributionSettings (p. 1843)	**thread** (p. 1845)
	<<***extension***>> *(p. 796)* The settings of the event metric thread.
DDS_MonitoringEventDistributionSettings (p. 1843)	**publication_period** (p. 1846)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**datawriter_qos_profile_name** (p. 1855)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes periodic metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**thread** (p. 1855)
	<<***extension***>> *(p. 796)* The settings of the periodic metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**polling_period** (p. 1856)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**concurrency_level** (p. 1847)
	<<***extension***>> *(p. 796)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**max_historical_logs** (p. 1848)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**datawriter_qos_profile_name** (p. 1848)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes log messages.

DDS_MonitoringLoggingDistributionSettings (p. 1846)	**thread** (p. 1849)
	<<***extension***>> *(p. 796)* The settings of the logging thread.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**publication_period** (p. 1849)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**enable** (p. 1839)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Enables the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**domain_id** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDS_DomainParticipant** (p. 76).
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**participant_qos_profile_name** (p. 1840)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_Domain↩ Participant** (p. 76) that will be used to distribute telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**collector_initial_peers** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings↩ ::dedicated_participant** (p. 1842).
DDS_MonitoringDistributionSettings (p. 1841)	**dedicated_participant** (p. 1842)
	<<***extension***>> *(p. 796)* Configures the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1841)	**publisher_qos_profile_name** (p. 1842)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1841)	**event_settings** (p. 1842)

	<<***extension***>> *(p. 796)* Configures the distribution of event metrics.
DDS_MonitoringDistributionSettings (p. 1841)	**periodic_settings** (p. 1843)
	<<***extension***>> *(p. 796)* Configures the distribution of periodic metrics.
DDS_MonitoringDistributionSettings (p. 1841)	**logging_settings** (p. 1843)
	<<***extension***>> *(p. 796)* Configures the distribution of logging messages.
DDS_MonitoringMetricSelection (p. 1852)	**resource_selection** (p. 1852)
	<<***extension***>> *(p. 796)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS_MonitoringMetric↩ Selection::enabled_metrics_selection** (p. 1853) and **DDS_MonitoringMetricSelection::disabled_↩ metrics_selection** (p. 1853) are applied to this subset of resources.
DDS_MonitoringMetricSelection (p. 1852)	**enabled_metrics_selection** (p. 1853)
	<<***extension***>> *(p. 796)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1852).
DDS_MonitoringMetricSelection (p. 1852)	**disabled_metrics_selection** (p. 1853)
	<<***extension***>> *(p. 796)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1852).
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**middleware_forwarding_level** (p. 1850)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ MIDDLEWARE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**security_event_forwarding_level** (p. 1850)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**service_forwarding_level** (p. 1851)

	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SERVICE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**user_forwarding_level** (p. 1851)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ USER** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1859)	**metrics** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of **DDS_MonitoringMetricSelection** (p. 1852) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1859)	**logs** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* **DDS_MonitoringLoggingForwardingSettings** (p. 1850) containing the **NDDS_Config_Syslog↩ Verbosity** (p. 1449) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 1448).
DDS_MonitoringQosPolicy (p. 1856)	**enable** (p. 1857)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1856)	**application_name** (p. 1857)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The name of the resource that represents this RTI Connext application.
DDS_MonitoringQosPolicy (p. 1856)	**distribution_settings** (p. 1858)
	<<***extension***>> *(p. 796)* Configures the distribution of telemetry data.
DDS_MonitoringQosPolicy (p. 1856)	**telemetry_data** (p. 1858)
	<<***extension***>> *(p. 796)* Configures the telemetry data that will be distributed.
DDS_LocatorFilter_t (p. 1831)	**locators** (p. 1831)

	<<***extension***>> *(p. 796)* Sequence containing from one to 16 **DDS_Locator_t** (p. 1830), used to specify the multicast address locators of an individual channel within a MultiChannel DataWriter.
DDS_LocatorFilter_t (p. 1831)	**filter_expression** (p. 1831)
	<<***extension***>> *(p. 796)* A logical expression used to determine the data that will be published in the channel.
DDS_LocatorFilterQosPolicy (p. 1832)	**locator_filters** (p. 1833)
	<<***extension***>> *(p. 796)* A sequence of **DDS_LocatorFilter_t** (p. 1831). Each **DDS_LocatorFilter_t** (p. 1831) reports the configuration of a single channel of a MultiChannel DataWriter.
DDS_LocatorFilterQosPolicy (p. 1832)	**filter_name** (p. 1833)
	<<***extension***>> *(p. 796)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
DDS_ChannelSettings_t (p. 1564)	**multicast_settings** (p. 1564)
	<<***extension***>> *(p. 796)* A sequence of **DDS_TransportMulticastSettings_t** (p. 2066) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 1564)	**filter_expression** (p. 1564)
	<<***extension***>> *(p. 796)* A logical expression used to determine the data that will be published in the channel.
DDS_ChannelSettings_t (p. 1564)	**priority** (p. 1565)
	<<***extension***>> *(p. 796)* Publication priority
DDS_MultiChannelQosPolicy (p. 1860)	**channels** (p. 1861)
	<<***extension***>> *(p. 796)* A sequence of **DDS_ChannelSettings_t** (p. 1564) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1860)	**filter_name** (p. 1861)
	<<***extension***>> *(p. 796)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
DDS_TopicQueryDispatchQosPolicy (p. 2053)	**enable** (p. 2054)
	<<***extension***>> *(p. 796)* Allows this writer to dispatch TopicQueries
DDS_TopicQueryDispatchQosPolicy (p. 2053)	**publication_period** (p. 2054)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sets the periodic interval at which samples are published.

DDS_TopicQueryDispatchQosPolicy (p. 2053)	**samples_per_period** (p. 2055)
	<<***extension***>> *(p. 796)* Sets the maximum number of samples to publish in each publication_period.

5.49 Functional Categories

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 873), then looking at any QoS in that category will be helpful.

Modules

- **Application Acknowledgement**

  This page lists all QoS related to application acknowledgement.
- **Application-Defined Metadata**

  This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.
- **Application Startup**

  Use these QoS fields to configure entity creation and application startup settings.
- **Batching**

  Use these QoS fields to configure the batching feature.
- **Concurrency**

  Use these QoS fields to configure threads and concurrency settings in RTI Connext.
- **Content Filtering**

  Use these QoS fields if you are using content filtering on your data.
- **Data Availability**

  Use these QoS fields to configure how much data, which data, and when that data is available to an application.
- **Debuggability**

  Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.
- **Discovery**

  Use these QoS fields to configure how applications discover each other.
- **Discovery Isolation**

  Use these QoS fields to isolate applications from each other.
- **Durability**

  Use these QoS fields to configure how much and how long data remains retrievable in the system.
- **Flow Control**

  Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.
- **Fragmentation**

  QoS related to DDS-level data fragmentation.
- **Instance Lifecycle**

  QoS that control the lifecycle of instances.
- **Sending Large Data**

  Use these QoS fields to optimize the process of sending large data.
- **Liveliness**

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

- **Logging**

  Use these QoS fields to configure the RTI Connext logging infrastructure.
- **Middleware Memory Management**

  Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.
- **QoS Profile Management**

  Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.
- **Reliability QoS**

  Reliability related QoS.
- **Sample Memory Management QoS**

  Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.
- **Sample Ordering**

  Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.
- **Security**

  Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.
- **Throughput**

  Use these QoS fields to configure features which may be helpful to increase throughput.
- **Transports**

  Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.
- **Topic Queries**

  Use these QoS fields to configure the topic query feature.
- **Type System**

  Use these QoS fields to configure aspects of the type system.

5.49.1 Detailed Description

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 873), then looking at any QoS in that category will be helpful.

5.50 Application Acknowledgement

This page lists all QoS related to application acknowledgement.

This page lists all QoS related to application acknowledgement.

See `Application Acknowledgment`, in the *Core Libraries User's Manual*, for more information about this feature.

Advanced Settings

DDS_ReliabilityQosPolicy (p. 1940)	**acknowledgment_kind** (p. 1943)
	<<***extension***>> *(p. 796)* Kind of reliable acknowledgment
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_app_ack_response_length** (p. 1633)
	<<***extension***>> *(p. 796)* Maximum length of application-level acknowledgment response data
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_app_ack_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of application-level acknowledging remote readers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterProtocolQosPolicy (p. 1649)	**propagate_app_ack_with_no_response** (p. 1653)
	<<***extension***>> *(p. 796)* Controls whether or not a **DDS_DataWriter** (p. 488) receives **DDS_DataWriterListener::on_application_acknowledgment** (p. 1648) notifications with an empty or invalid response.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**app_ack_period** (p. 1963)
	<<***extension***>> *(p. 796)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**min_app_ack_response_keep_duration** (p. 1963)
	<<***extension***>> *(p. 796)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**samples_per_app_ack** (p. 1964)
	<<***extension***>> *(p. 796)* The minimum number of samples acknowledged by one application-level acknowledgment message

5.51 Application-Defined Metadata

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

There are also various resource limits related to these QoS which are also listed below.

Basic Settings

DDS_PropertyQosPolicy (p. 1905)	**value** (p. 1907)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of properties.

Advanced Settings

DDS_UserDataQosPolicy (p. 2092)	**value** (p. 2093)
	<<***spec***>> *(p. 791)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1806)	**value** (p. 1807)
	<<***spec***>> *(p. 791)* a sequence of octets
DDS_TypeSupportQosPolicy (p. 2087)	**plugin_data** (p. 2088)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Value to pass into the type plugin's de-/serialization function
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_user_data_max_length** (p. 1748)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DomainParticipantQos** (p. 1729) and **DDS_ParticipantBuiltinTopicData** (p. 1873)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**topic_data_max_length** (p. 1748)
	<<***extension***>> *(p. 796)* Maximum length of topic data in **DDS_TopicQos** (p. 2048), **DDS_TopicBuiltinTopicData** (p. 2040), **DDS_PublicationBuiltinTopicData** (p. 1909) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**publisher_group_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of group data in **DDS_PublisherQos** (p. 1922) and **DDS_PublicationBuiltinTopicData** (p. 1909)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**subscriber_group_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of group data in **DDS_SubscriberQos** (p. 2016) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_user_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataWriterQos** (p. 1666) and **DDS_PublicationBuiltinTopicData** (p. 1909)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_user_data_max_length** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataReaderQos** (p. 1611) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_list_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_string_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_list_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_string_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_list_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_string_max_length** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataReader** (p. 618).

5.52 Application Startup

Use these QoS fields to configure entity creation and application startup settings.

Use these QoS fields to configure entity creation and application startup settings.

Basic Settings

DDS_EntityFactoryQosPolicy (p. 1791)	**autoenable_created_entities** (p. 1792)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Specifies whether the entity acting as a factory automatically enables the instances it creates.

5.53 Batching

Use these QoS fields to configure the batching feature.

Use these QoS fields to configure the batching feature.

See `BATCH QosPolicy (DDS Extension)`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

DDS_BatchQosPolicy (p. 1552)	**enable** (p. 1552)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 1552)	**max_data_bytes** (p. 1553)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 1552)	**max_samples** (p. 1553)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The maximum number of samples in a batch.

Advanced Settings

DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_batch** (p. 1541)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**asynchronous_batch_thread** (p. 1541)
	*<<**extension**>> (p. 796)* Settings of the batch flushing thread.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_batches** (p. 1677)
	*<<**extension**>> (p. 796)* Represents the initial number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_batches** (p. 1677)
	*<<**extension**>> (p. 796)* Represents the maximum number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_BatchQosPolicy (p. 1552)	**max_flush_delay** (p. 1554)
	*<<**extension**>> (p. 796)* The maximum flush delay.
DDS_BatchQosPolicy (p. 1552)	**source_timestamp_resolution** (p. 1554)

	<<***extension***>> *(p. 796)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 1552)	**thread_safe_write** (p. 1555)
	<<***extension***>> *(p. 796)* Determines whether or not the write operation is thread safe.

5.54 Concurrency

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

See `Connext Threading Model`, in the *Core Libraries User's Manual*, for more information.

This community article gives a thorough overview of how and why to use many of the QoS listed below: `https://community.rti.com/kb/achieving-low-jitter-performance-connext-pro`.

Advanced Settings

DDS_TransportPriorityQosPolicy (p. 2068)	**value** (p. 2070)
	<<***spec***>> *(p. 791)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_write** (p. 1540)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**thread** (p. 1540)
	<<***extension***>> *(p. 796)* Settings of the publishing thread.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_batch** (p. 1541)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**asynchronous_batch_thread** (p. 1541)
	<<***extension***>> *(p. 796)* Settings of the batch flushing thread.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_topic_query_publication** (p. 1542)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**topic_query_publication_thread** (p. 1542)

	<<***extension***>> *(p. 796)* Settings of the **DDS_TopicQuery** (p. 708) publication thread.
DDS_DiscoveryQosPolicy (p. 1717)	**metatraffic_transport_priority** (p. 1720)
	<<***extension***>> *(p. 796)* The transport priority to use for the Discovery meta-traffic.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_concurrent_blocking_threads** (p. 1675)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The initial number of threads that are allowed to concurrently block on write call on the same **DDS_DataWriter** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_concurrent_blocking_threads** (p. 1676)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDS_DataWriter** (p. 488).
DDS_EventQosPolicy (p. 1796)	**thread** (p. 1796)
	<<***extension***>> *(p. 796)* Event thread QoS.
DDS_DatabaseQosPolicy (p. 1581)	**thread** (p. 1582)
	<<***extension***>> *(p. 796)* Database thread settings.
DDS_ReceiverPoolQosPolicy (p. 1938)	**thread** (p. 1939)
	<<***extension***>> *(p. 796)* Receiver pool thread(s).
DDS_BatchQosPolicy (p. 1552)	**thread_safe_write** (p. 1555)
	<<***extension***>> *(p. 796)* Determines whether or not the write operation is thread safe.
DDS_MonitoringEventDistributionSettings (p. 1843)	**concurrency_level** (p. 1844)
	<<***extension***>> *(p. 796)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1843)	**thread** (p. 1845)
	<<***extension***>> *(p. 796)* The settings of the event metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**thread** (p. 1855)
	<<***extension***>> *(p. 796)* The settings of the periodic metric thread.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**concurrency_level** (p. 1847)
	<<***extension***>> *(p. 796)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.

DDS_MonitoringLoggingDistributionSettings (p. 1846)	**thread** (p. 1849)
	<<***extension***>> *(p. 796)* The settings of the logging thread.

5.55 Content Filtering

Use these QoS fields if you are using content filtering on your data.

Use these QoS fields if you are using content filtering on your data.

Content filtering most commonly refers to using a **DDS_ContentFilteredTopic** (p. 176), but data can also be filtered using **DDS_TopicQuery** (p. 708) to run a new filter over the data in a DataWriter's cache, or **DDS_QueryCondition** (p. 700) to read a subset of the data that is currently stored in the DataReader's cache.

See also

Queries and Filters Syntax (p. 739).

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_query_condition_filters** (p. 1632)
	<<***extension***>> *(p. 796)* The maximum number of query condition filters a reader is allowed.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_remote_reader_filters** (p. 1676)
	<<***extension***>> *(p. 796)* The maximum number of remote DataReaders for which the **DDS_DataWriter** (p. 488) will perform content-based filtering.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**query_condition_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_hash_buckets** (p. 1747)

	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**contentfilter_property_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_seq_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* Maximum number of channels that can be specified in **DDS_MultiChannelQos↩ Policy** (p. 1860) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_filter_expression_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 1564) in a MultiChannel DataWriter.
DDS_ChannelSettings_t (p. 1564)	**multicast_settings** (p. 1564)
	<<***extension***>> *(p. 796)* A sequence of **DDS_↩ TransportMulticastSettings_t** (p. 2066) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 1564)	**filter_expression** (p. 1564)
	<<***extension***>> *(p. 796)* A logical expression used to determine the data that will be published in the channel.
DDS_MultiChannelQosPolicy (p. 1860)	**filter_name** (p. 1861)
	<<***extension***>> *(p. 796)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

5.56 Data Availability

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Data availability refers to configurations such as ownership and lifespan.

Basic Settings

DDS_DurabilityQosPolicy (p. 1762)	**kind** (p. 1765)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1762)	**writer_depth** (p. 1765)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Indicates the number of samples per instance that a durable **DDS_DataWriter** (p. 488) will send to a late-joining **DDS_DataReader** (p. 618).
DDS_DeadlineQosPolicy (p. 1685)	**period** (p. 1687)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1867)	**kind** (p. 1871)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1872)	**value** (p. 1873)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The strength value used to arbitrate among multiple writers.
DDS_TimeBasedFilterQosPolicy (p. 2038)	**minimum_separation** (p. 2040)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The minimum separation duration between subsequent samples.
DDS_HistoryQosPolicy (p. 1808)	**kind** (p. 1810)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1808)	**depth** (p. 1810)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 1295)
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_LifespanQosPolicy (p. 1818)	**duration** (p. 1819)

	<<***basic***>> (p. *784)* <<***spec***>> (p. *791)* Maximum duration for the data's validity.
DDS_MonitoringEventDistributionSettings (p. 1843)	**publication_period** (p. 1846)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**polling_period** (p. 1856)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**publication_period** (p. 1849)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Period at which the logging thread publishes log messages.

Advanced Settings

DDS_AvailabilityQosPolicy (p. 1547)	**enable_required_subscriptions** (p. 1550)
	<<***extension***>> (p. *796)* Enables support for required subscriptions in a **DDS_DataWriter** (p. 488)
DDS_AvailabilityQosPolicy (p. 1547)	**max_data_availability_waiting_time** (p. 1550)
	<<***extension***>> (p. *796)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 1547)	**max_endpoint_availability_waiting_time** (p. 1550)
	<<***extension***>> (p. *796)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 1547)	**required_matched_endpoint_groups** (p. 1551)
	<<***extension***>> (p. *796)* A sequence of endpoint groups.
DDS_DurabilityQosPolicy (p. 1762)	**direct_communication** (p. 1765)
	<<***extension***>> (p. *796)* Indicates whether or not a TRANSIENT or PERSISTENT **DDS_DataReader** (p. 618) should receive samples directly from a TRANSIENT or PERSISTENT **DDS_DataWriter** (p. 488)
DDS_DurabilityQosPolicy (p. 1762)	**storage_settings** (p. 1766)
	<<***extension***>> (p. *796)* Configures durable writer history and durable reader state.

DDS_DurabilityServiceQosPolicy (p. 1767)	**service_cleanup_delay** (p. 1768)
	<<***spec***>> *(p. 791)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_PresentationQosPolicy (p. 1894)	**access_scope** (p. 1897)
	<<***spec***>> *(p. 791)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1894)	**coherent_access** (p. 1897)
	<<***spec***>> *(p. 791)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1894)	**ordered_access** (p. 1897)
	<<***spec***>> *(p. 791)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1894)	**drop_incomplete_coherent_set** (p. 1898)
	<<***extension***>> *(p. 796)* Indicates whether or not a **DDS_DataReader** (p. 618) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_LatencyBudgetQosPolicy (p. 1816)	**duration** (p. 1818)
	<<***spec***>> *(p. 791)* Duration of the maximum acceptable delay.
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> *(p. 791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_samples_delay** (p. 1936)

	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_instances_delay** (p. 1936)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_instances_delay** (p. 1937)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_TransportMulticastMappingQosPolicy (p. 2062)	**value** (p. 2064)
	<<***extension***>> *(p. 796)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 2064)	**kind** (p. 2065)
	<<***extension***>> *(p. 796)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**virtual_guid** (p. 1650)
	<<***extension***>> *(p. 796)* The virtual GUID (Global Unique Identifier).
DDS_DataWriterProtocolQosPolicy (p. 1649)	**push_on_write** (p. 1651)
	<<***extension***>> *(p. 796)* Whether to push sample out when write is called.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_outstanding_reads** (p. 1559)
	<<***extension***>> *(p. 796)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).

DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_outstanding_reads** (p. 1560)
	<<***extension***>> *(p. 796)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples_per_read** (p. 1560)
	<<***extension***>> *(p. 796)* Maximum number of samples that can be read/taken on a same built-in topic **DDS_DataReader** (p. 618).
DDS_BatchQosPolicy (p. 1552)	**source_timestamp_resolution** (p. 1554)
	<<***extension***>> *(p. 796)* Batch source timestamp resolution.
DDS_ChannelSettings_t (p. 1564)	**priority** (p. 1565)
	<<***extension***>> *(p. 796)* Publication priority
DDS_MultiChannelQosPolicy (p. 1860)	**channels** (p. 1861)
	<<***extension***>> *(p. 796)* A sequence of **DDS_↩ ChannelSettings_t** (p. 1564) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1860)	**filter_name** (p. 1861)
	<<***extension***>> *(p. 796)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

5.57 Debuggability

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Basic Settings

DDS_EntityNameQosPolicy (p. 1793)	**name** (p. 1793)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The name of the entity.
DDS_LoggingQosPolicy (p. 1834)	**verbosity** (p. 1835)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1834)	**category** (p. 1835)

	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1834)	**output_file** (p. 1835)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1834)	**output_file_suffix** (p. 1836)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Sets the file suffix when logging to a set of files
DDS_MonitoringEventDistributionSettings (p. 1843)	**publication_period** (p. 1846)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**polling_period** (p. 1856)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**max_historical_logs** (p. 1848)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**publication_period** (p. 1849)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**enable** (p. 1839)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* Enables the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**domain_id** (p. 1840)
	*<<**basic**>>* (p. *784)* *<<**extension**>>* (p. *796)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDS_DomainParticipant** (p. 76).
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**collector_initial_peers** (p. 1840)

	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings::dedicated_participant** (p. 1842).
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**middleware_forwarding_level** (p. 1850)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**security_event_forwarding_level** (p. 1850)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**service_forwarding_level** (p. 1851)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**user_forwarding_level** (p. 1851)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_USER** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1859)	**metrics** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of **DDS_MonitoringMetricSelection** (p. 1852) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1859)	**logs** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* **DDS_MonitoringLoggingForwardingSettings** (p. 1850) containing the **NDDS_Config_Syslog_Verbosity** (p. 1449) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 1448).

DDS_MonitoringQosPolicy (p. 1856)	**enable** (p. 1857)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1856)	**application_name** (p. 1857)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The name of the resource that represents this RTI Connext application.

Advanced Settings

DDS_DiscoveryConfigQosPolicy (p. 1691)	**default_domain_announcement_period** (p. 1706)
	*<<**extension**>> (p. 796)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**ignore_default_domain_announcements** (p. 1707)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_EntityNameQosPolicy (p. 1793)	**role_name** (p. 1794)
	*<<**extension**>> (p. 796)* The entity role name.
DDS_ServiceQosPolicy (p. 2005)	**kind** (p. 2005)
	*<<**extension**>> (p. 796)* The kind of service.
DDS_LoggingQosPolicy (p. 1834)	**print_format** (p. 1835)
	*<<**extension**>> (p. 796)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1834)	**max_bytes_per_file** (p. 1836)
	*<<**extension**>> (p. 796)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1834)	**max_files** (p. 1837)
	*<<**extension**>> (p. 796)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringEventDistributionSettings (p. 1843)	**concurrency_level** (p. 1844)
	*<<**extension**>> (p. 796)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1843)	**datawriter_qos_profile_name** (p. 1845)

	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes event metrics.
DDS_MonitoringEventDistributionSettings (p. 1843)	**thread** (p. 1845)
	<<***extension***>> *(p. 796)* The settings of the event metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**datawriter_qos_profile_name** (p. 1855)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes periodic metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**thread** (p. 1855)
	<<***extension***>> *(p. 796)* The settings of the periodic metric thread.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**concurrency_level** (p. 1847)
	<<***extension***>> *(p. 796)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**datawriter_qos_profile_name** (p. 1848)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**thread** (p. 1849)
	<<***extension***>> *(p. 796)* The settings of the logging thread.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**participant_qos_profile_name** (p. 1840)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_Domain↩ Participant** (p. 76) that will be used to distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1841)	**dedicated_participant** (p. 1842)
	<<***extension***>> *(p. 796)* Configures the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1841)	**publisher_qos_profile_name** (p. 1842)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

DDS_MonitoringDistributionSettings (p. 1841)	**event_settings** (p. 1842)
	<<***extension***>> *(p. 796)* Configures the distribution of event metrics.
DDS_MonitoringDistributionSettings (p. 1841)	**periodic_settings** (p. 1843)
	<<***extension***>> *(p. 796)* Configures the distribution of periodic metrics.
DDS_MonitoringDistributionSettings (p. 1841)	**logging_settings** (p. 1843)
	<<***extension***>> *(p. 796)* Configures the distribution of logging messages.
DDS_MonitoringMetricSelection (p. 1852)	**resource_selection** (p. 1852)
	<<***extension***>> *(p. 796)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS_MonitoringMetric↩ Selection::enabled_metrics_selection** (p. 1853) and **DDS_MonitoringMetricSelection::disabled_↩ metrics_selection** (p. 1853) are applied to this subset of resources.
DDS_MonitoringMetricSelection (p. 1852)	**enabled_metrics_selection** (p. 1853)
	<<***extension***>> *(p. 796)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1852).
DDS_MonitoringMetricSelection (p. 1852)	**disabled_metrics_selection** (p. 1853)
	<<***extension***>> *(p. 796)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1852).
DDS_MonitoringQosPolicy (p. 1856)	**distribution_settings** (p. 1858)
	<<***extension***>> *(p. 796)* Configures the distribution of telemetry data.
DDS_MonitoringQosPolicy (p. 1856)	**telemetry_data** (p. 1858)
	<<***extension***>> *(p. 796)* Configures the telemetry data that will be distributed.

5.58 Discovery

Use these QoS fields to configure how applications discover each other.

Use these QoS fields to configure how applications discover each other.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

DDS_WireProtocolQosPolicy (p. 2099)	**participant_id** (p. 2103)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_DiscoveryQosPolicy (p. 1717)	**initial_peers** (p. 1719)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 1717)	**multicast_receive_addresses** (p. 1719)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
DDS_DiscoveryQosPolicy (p. 1717)	**accept_unknown_peers** (p. 1720)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_lease_duration** (p. 1694)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_assert_period** (p. 1694)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_announcement_period** (p. 1694)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**initial_participant_announcements** (p. 1696)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**new_remote_participant_announcements** (p. 1696)
	<<***basic***>> (p. *784)* <<***extension***>> (p. *796)* The number of participant announcements sent when a remote participant is newly discovered.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**min_initial_participant_announcement_period** (p. 1697)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_initial_participant_announcement_period** (p. 1697)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**domain_id** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDS_DomainParticipant** (p. 76).
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**collector_initial_peers** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings::dedicated_participant** (p. 1842).

Advanced Settings

DDS_WireProtocolQosPolicy (p. 2099)	**rtps_host_id** (p. 2103)
	<<***extension***>> *(p. 796)* The RTPS Host ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_app_id** (p. 2104)
	<<***extension***>> *(p. 796)* The RTPS App ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_instance_id** (p. 2104)
	<<***extension***>> *(p. 796)* The RTPS Instance ID of the **DDS_DomainParticipant** (p. 76).
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_well_known_ports** (p. 2105)
	<<***extension***>> *(p. 796)* Configures the RTPS well-known port mappings.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_reserved_port_mask** (p. 2105)

	<<***extension***>> *(*p. *796)* Specifies which well-known ports to reserve when enabling the participant.
DDS_WireProtocolQosPolicy (p. 2099)	**rtps_auto_id_kind** (p. 2106)
	<<***extension***>> *(*p. *796)* Kind of auto mechanism used to calculate the GUID prefix.
DDS_DiscoveryQosPolicy (p. 1717)	**enabled_transports** (p. 1718)
	<<***extension***>> *(*p. *796)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 1717)	**metatraffic_transport_priority** (p. 1720)
	<<***extension***>> *(*p. *796)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 1717)	**enable_endpoint_discovery** (p. 1721)
	[DEPRECATED] (p. **968)** <<***extension***>> *(*p. *796)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**remote_participant_purge_kind** (p. 1695)
	[DEPRECATED] (p. **968)** <<***extension***>> *(*p. *796)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_liveliness_loss_detection_period** (p. 1695)
	[DEPRECATED] (p. **968)** <<***extension***>> *(*p. *796)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_reader_resource_limits** (p. 1698)
	<<***extension***>> *(*p. *796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader** (p. 1698)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader_resource_limits** (p. 1699)
	<<***extension***>> *(*p. *796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader** (p. 1699)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader_resource_limits** (p. 1700)
	<<***extension***>> *(*p. *796)* Resource limits.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_writer** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQosPolicyKind** (p. 1324).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_publish_mode** (p. 1705)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_publish_mode** (p. 1706)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**asynchronous_publisher** (p. 1706)
	<<***extension***>> *(p. 796)* Asynchronous publishing settings for the discovery **DDS_Publisher** (p. 446) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**default_domain_announcement_period** (p. 1706)
	<<***extension***>> *(p. 796)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**ignore_default_domain_announcements** (p. 1707)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader_reliability_kind** (p. 1703)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind** (p. 1703) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer** (p. 1700)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_data_lifecycle** (p. 1701)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in publication writer.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer** (p. 1702)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_data_lifecycle** (p. 1702)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**builtin_discovery_plugins** (p. 1703)
	<<***extension***>> *(p. 796)* Mask of built-in discovery plugin kinds.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer** (p. 1707)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_data_lifecycle** (p. 1708)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_publish_mode** (p. 1708)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_reader** (p. 1709)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 2006) reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer** (p. 1711)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer_publish_mode** (p. 1712)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_reader** (p. 1712)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**endpoint_type_object_lb_serialization_threshold** (p. 1713)
	<<***extension***>> *(p. 796)* Controls when/if the TypeObject v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**dns_tracker_polling_period** (p. 1713)

	<<***extension***>> *(*p. *796)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader** (p. 1716)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader_resource_limits** (p. 1716)
	<<***extension***>> *(*p. *796)* Resource limits for the built-in topic participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_publish_mode** (p. 1714)
	<<***extension***>> *(*p. *796)* Publish mode policy for the built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer** (p. 1714)
	<<***extension***>> *(*p. *796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_data_lifecycle** (p. 1715)
	<<***extension***>> *(*p. *796)* Writer data lifecycle settings for a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**request_types_filter** (p. 1716)
	<<***extension***>> *(*p. *796)* Topic name pattern for requesting all types via Type Lookup Service.

5.59 Discovery Isolation

Use these QoS fields to isolate applications from each other.

Use these QoS fields to isolate applications from each other.

Applications can be isolated through mechanisms such as domain ids, domain tags, and partitions.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

DDS_PartitionQosPolicy (p. 1884)	**name** (p. 1886)
	<<***basic***>> *(*p. *784)* <<***spec***>> *(*p. *791)* A list of partition names
DDS_DiscoveryQosPolicy (p. 1717)	**initial_peers** (p. 1719)

	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 1717)	**accept_unknown_peers** (p. 1720)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Whether to accept a new participant that is not in the initial peers list.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**domain_id** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDS_DomainParticipant** (p. 76).
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**collector_initial_peers** (p. 1840)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings**↩ **::dedicated_participant** (p. 1842).

Advanced Settings

DDS_DiscoveryQosPolicy (p. 1717)	**enable_endpoint_discovery** (p. 1721)
	[DEPRECATED] (p. **968)** <<***extension***>> *(p. 796)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partitions** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1884).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partition_cumulative_characters** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1884).

5.60 Durability

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Basic Settings

DDS_DurabilityQosPolicy (p. 1762)	**kind** (p. 1765)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1762)	**writer_depth** (p. 1765)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Indicates the number of samples per instance that a durable **DDS_DataWriter** (p. 488) will send to a late-joining **DDS_DataReader** (p. 618).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_↩ DataReader** (p. 618)) can manage.
DDS_LifespanQosPolicy (p. 1818)	**duration** (p. 1819)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* Maximum duration for the data's validity.

Advanced Settings

DDS_AvailabilityQosPolicy (p. 1547)	**enable_required_subscriptions** (p. 1550)
	*<<**extension**>> (p. 796)* Enables support for required subscriptions in a **DDS_DataWriter** (p. 488)
DDS_AvailabilityQosPolicy (p. 1547)	**max_data_availability_waiting_time** (p. 1550)
	*<<**extension**>> (p. 796)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 1547)	**max_endpoint_availability_waiting_time** (p. 1550)
	*<<**extension**>> (p. 796)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 1547)	**required_matched_endpoint_groups** (p. 1551)
	*<<**extension**>> (p. 796)* A sequence of endpoint groups.
DDS_DurabilityQosPolicy (p. 1762)	**direct_communication** (p. 1765)

	<<***extension***>> *(p. 796)* Indicates whether or not a TRANSIENT or PERSISTENT **DDS_DataReader** (p. 618) should receive samples directly from a TRANSIENT or PERSISTENT **DDS_DataWriter** (p. 488)
DDS_DurabilityQosPolicy (p. 1762)	**storage_settings** (p. 1766)
	<<***extension***>> *(p. 796)* Configures durable writer history and durable reader state.
DDS_PersistentStorageSettings (p. 1887)	**enable** (p. 1889)
	<<***extension***>> *(p. 796)* Enables durable writer history in a **DDS_DataWriter** (p. 488) and durable reader state in a **DDS_DataReader** (p. 618).
DDS_PersistentStorageSettings (p. 1887)	**file_name** (p. 1889)
	<<***extension***>> *(p. 796)* The file name where the durable writer history or durable reader state will be stored.
DDS_PersistentStorageSettings (p. 1887)	**trace_file_name** (p. 1889)
	<<***extension***>> *(p. 796)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
DDS_PersistentStorageSettings (p. 1887)	**journal_kind** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the journal mode of the persistent storage.
DDS_PersistentStorageSettings (p. 1887)	**synchronization_kind** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the level of synchronization with the physical disk.
DDS_PersistentStorageSettings (p. 1887)	**vacuum** (p. 1890)
	<<***extension***>> *(p. 796)* Sets the auto-vacuum status of the storage.
DDS_PersistentStorageSettings (p. 1887)	**restore** (p. 1891)
	<<***extension***>> *(p. 796)* Indicates if the persisted writer history or reader state must be restored.
DDS_PersistentStorageSettings (p. 1887)	**writer_instance_cache_allocation** (p. 1891)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1887)	**writer_sample_cache_allocation** (p. 1892)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the sample durable writer history cache.

DDS_PersistentStorageSettings (p. 1887)	**writer_memory_state** (p. 1893)
	<<***extension***>> *(p. 796)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_PersistentStorageSettings (p. 1887)	**reader_checkpoint_frequency** (p. 1893)
	<<***extension***>> *(p. 796)* Controls how often the reader state is stored into the database.
DDS_DurabilityServiceQosPolicy (p. 1767)	**service_cleanup_delay** (p. 1768)
	<<***spec***>> *(p. 791)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_kind** (p. 1768)
	<<***spec***>> *(p. 791)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_depth** (p. 1768)
	<<***spec***>> *(p. 791)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1765) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> *(p. 791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**propagate_app_ack_with_no_response** (p. 1653)
	<<***extension***>> *(p. 796)* Controls whether or not a **DDS_DataWriter** (p. 488) receives **DDS_DataWriterListener::on_application_acknowledgment** (p. 1648) notifications with an empty or invalid response.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1976)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Enables dynamic adjustment of sample keep duration in response to congestion.

DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_min_sample_keep_duration** (p. 1975)
	<<***extension***>> *(p. 796)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_max_sample_keep_duration** (p. 1976)
	<<***extension***>> *(p. 796)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1977)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1977)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Controls rate of growth of dynamic sample keep duration.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Maximum number of samples.
DDS_EntityNameQosPolicy (p. 1793)	**role_name** (p. 1794)
	<<***extension***>> *(p. 796)* The entity role name.

5.61 Flow Control

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Basic Settings

DDS_ReliabilityQosPolicy (p. 1940)	**max_blocking_time** (p. 1943)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* The maximum time a DataWriter can block on a write() call.

DDS_PublishModeQosPolicy (p. 1924)	**kind** (p. 1926)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Publishing mode
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Maximum size of send window of unacknowledged samples

Advanced Settings

DDS_PublishModeQosPolicy (p. 1924)	**flow_controller_name** (p. 1926)
	<<***extension***>> *(p. 796)* Name of the associated flow controller
DDS_PublishModeQosPolicy (p. 1924)	**priority** (p. 1928)
	<<***extension***>> *(p. 796)* Publication priority
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_asynchronous_write** (p. 1540)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Disable asynchronous publishing.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**outstanding_asynchronous_sample_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to the maximum number of samples (from all **DDS_Data↩ Writer** (p. 488)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_allocation** (p. 1743)
	<<***extension***>> *(p. 796)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for flow controllers.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_publish_mode** (p. 1705)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_publish_mode** (p. 1706)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in subscription writer.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**asynchronous_publisher** (p. 1706)
	<<***extension***>> *(p. 796)* Asynchronous publishing settings for the discovery **DDS_Publisher** (p. 446) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_publish_mode** (p. 1708)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer_publish_mode** (p. 1712)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_publish_mode** (p. 1714)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in participant configuration writer.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_bytes_per_nack_response** (p. 1974)
	<<***extension***>> *(p. 796)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_update_period** (p. 1979)
	<<***extension***>> *(p. 796)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_increase_factor** (p. 1980)
	<<***extension***>> *(p. 796)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_decrease_factor** (p. 1981)
	<<***extension***>> *(p. 796)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_repair_piggyback_heartbeat** (p. 1983)
	<<***extension***>> *(p. 796)* Prevents piggyback heartbeats from being sent with repair samples

5.62 Fragmentation

QoS related to DDS-level data fragmentation.

QoS related to DDS-level data fragmentation.

See `Data Fragmentation`, in the *Core Libraries User's Manual*, for more information about DDS-level fragmentation.

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**disable_fragmentation_support** (p. 1626)
	[DEPRECATED] (p. **968)** *<<**extension**>> (p. 796)* Determines whether the **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples** (p. 1626)
	*<<**extension**>> (p. 796)* The maximum number of samples for which the **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_fragmented_samples** (p. 1627)
	*<<**extension**>> (p. 796)* The initial number of samples for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples_per_remote_writer** (p. 1627)
	*<<**extension**>> (p. 796)* The maximum number of samples per remote writer for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragments_per_sample** (p. 1628)
	*<<**extension**>> (p. 796)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**dynamically_allocate_fragmented_samples** (p. 1628)
	*<<**extension**>> (p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_nack_response_delay** (p. 1973)
	*<<**extension**>> (p. 796)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_nack_response_delay** (p. 1973)
	*<<**extension**>> (p. 796)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**nack_suppression_duration** (p. 1974)
	*<<**extension**>> (p. 796)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_bytes_per_nack_response** (p. 1974)

	<<***extension***>> *(p. 796)* The maximum total message size when resending rejected samples or data fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**disable_fragmentation_support** (p. 1560)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the built-in topic **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The initial number of samples for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples_per_remote_writer** (p. 1562)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragments_per_sample** (p. 1562)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**dynamically_allocate_fragmented_samples** (p. 1563)
	<<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.

5.63 Instance Lifecycle

QoS that control the lifecycle of instances.

QoS that control the lifecycle of instances.

Use these QoS fields to configure how RTI Connext manages instance lifecycles and resources in the DataReader and DataWriter queues.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_instances** (p. 1957)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Represents the initial number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) will manage.

Advanced Settings

DDS_DurabilityServiceQosPolicy (p. 1767)	**service_cleanup_delay** (p. 1768)
	<<***spec***>> *(p. 791)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ReliabilityQosPolicy (p. 1940)	**instance_state_consistency_kind** (p. 1944)
	<<***extension***>> *(p. 796)* Whether instance state consistency is enabled
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> *(p. 791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**instance_hash_buckets** (p. 1958)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for instances.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autodispose_unregistered_instances** (p. 2113)
	<<***spec***>> *(p. 791)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDS_DataWriter** (p. 488) unregisters from the instance by means of the unregister operations.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_unregistered_instances_delay** (p. 2113)

	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_disposed_instances_delay** (p. 2114)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_instances_delay** (p. 1936)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_instances_delay** (p. 1937)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_↩ state` becomes **DDS_NOT_ALIVE_NO_WRITERS↩ _INSTANCE_STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_total_instances** (p. 1629)
	<<***extension***>> *(p. 796)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**keep_minimum_state_for_instances** (p. 1633)
	<<***extension***>> *(p. 796)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 1629).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**instance_replacement** (p. 1635)

	<<***extension***>> *(p. 796)* Sets the kind of instances allowed to be replaced for each instance state (**DDS_InstanceStateKind** (p. 715)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1956).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**autopurge_remote_not_alive_writer_delay** (p. 1636)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataReader** (p. 618) will maintain information regarding a **DDS_DataWriter** (p. 488) once the **DDS_DataWriter** (p. 488) has become not alive.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**instance_replacement** (p. 1678)
	<<***extension***>> *(p. 796)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**replace_empty_instances** (p. 1678)
	<<***extension***>> *(p. 796)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**autoregister_instances** (p. 1679)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Whether or not to automatically register new instances
DDS_DataReaderProtocolQosPolicy (p. 1596)	**propagate_dispose_of_unregistered_instances** (p. 1598)
	<<***extension***>> *(p. 796)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 716) state.
DDS_DataReaderProtocolQosPolicy (p. 1596)	**propagate_unregister_of_disposed_instances** (p. 1599)
	<<***extension***>> *(p. 796)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 716).
DDS_DataWriterProtocolQosPolicy (p. 1649)	**disable_inline_keyhash** (p. 1652)
	<<***extension***>> *(p. 796)* Controls whether or not a keyhash is propagated on the wire with each sample.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**serialize_key_with_dispose** (p. 1652)
	<<***extension***>> *(p. 796)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer_data_lifecycle** (p. 1701)

	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer_data_lifecycle** (p. 1702)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer_data_lifecycle** (p. 1708)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer_data_lifecycle** (p. 1715)
	<<***extension***>> *(p. 796)* Writer data lifecycle settings for a built-in participant configuration writer.

5.64 Sending Large Data

Use these QoS fields to optimize the process of sending large data.

Use these QoS fields to optimize the process of sending large data.

This includes QoS which help to reduce the number of copies needed and manage fragmentation.

See `Sending Large Data`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

DDS_DataRepresentationQosPolicy (p. 1639)	**compression_settings** (p. 1640)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Structure that contains the compression settings.

Advanced Settings

DDS_CompressionSettings_t (p. 1568)	**compression_ids** (p. 1568)
	<<***extension***>> *(p. 796)* Mask that represents the compression algorithms enabled.
DDS_CompressionSettings_t (p. 1568)	**writer_compression_level** (p. 1569)
	<<***extension***>> *(p. 796)* The level of compression to use when compressing data.
DDS_CompressionSettings_t (p. 1568)	**writer_compression_threshold** (p. 1569)

	<<***extension***>> *(p. 796)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**disable_fragmentation_support** (p. 1626)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples** (p. 1626)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_fragmented_samples** (p. 1627)
	<<***extension***>> *(p. 796)* The initial number of samples for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples_per_remote_writer** (p. 1627)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragments_per_sample** (p. 1628)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**dynamically_allocate_fragmented_samples** (p. 1628)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 1635)
	<<***extension***>> *(p. 796)* Allocation resource for the shared memory segments attached by the **DDS_Data↩ Reader** (p. 618).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**writer_loaned_sample_allocation** (p. 1682)
	<<***extension***>> *(p. 796)* Represents the allocation settings of loaned samples managed by a **DDS_Data↩ Writer** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initialize_writer_loaned_sample** (p. 1682)
	<<***extension***>> *(p. 796)* Whether or not to initialize loaned samples returned by a **DDS_DataWriter** (p. 488)
DDS_DataWriterTransferModeQosPolicy (p. 1684)	**shmem_ref_settings** (p. 1685)

	<<***extension***>> *(p. 796)* Settings related to transferring data using shared memory references.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**shmem_ref_transfer_mode_max_segments** (p. 1761)
	<<***extension***>> *(p. 796)* Maximum number of segments created by all DataWriters belonging to a **DDS_DomainParticipant** (p. 76).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**endpoint_type_object_lb_serialization_threshold** (p. 1713)
	<<***extension***>> *(p. 796)* Controls when/if the TypeObject v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**disable_fragmentation_support** (p. 1560)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the built-in topic **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The initial number of samples for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples_per_remote_writer** (p. 1562)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragments_per_sample** (p. 1562)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**dynamically_allocate_fragmented_samples** (p. 1563)
	<<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.

5.65 Liveliness

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Basic Settings

DDS_LivelinessQosPolicy (p. 1826)	**kind** (p. 1828)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1826)	**lease_duration** (p. 1828)
	*<<**basic**>> (p. 784) <<**spec**>> (p. 791)* The duration within which a **DDS_DataWriter** (p. 488) must be asserted, or else it is assumed to be not alive.
DDS_LivelinessQosPolicy (p. 1826)	**assertions_per_lease_duration** (p. 1829)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of assertions a **DDS_DataWriter** (p. 488) will send during a its **DDS_↩ LivelinessQosPolicy::lease_duration** (p. 1828).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_lease_duration** (p. 1694)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_liveliness_assert_period** (p. 1694)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The period to assert liveliness for the participant.

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**autopurge_remote_not_alive_writer_delay** (p. 1636)
	*<<**extension**>> (p. 796)* Maximum duration for which the **DDS_DataReader** (p. 618) will maintain information regarding a **DDS_DataWriter** (p. 488) once the **DDS_↩ DataWriter** (p. 488) has become not alive.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**remote_participant_purge_kind** (p. 1695)
	[DEPRECATED] (p. 968) *<<**extension**>> (p. 796)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**max_liveliness_loss_detection_period** (p. 1695)

	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_writer** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQosPolicyKind** (p. 1324).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader_reliability_kind** (p. 1703)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind** (p. 1703) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325).
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_heartbeat_retries** (p. 1971)
	<<***extension***>> *(p. 796)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**inactivate_nonprogressing_readers** (p. 1971)
	<<***extension***>> *(p. 796)* Whether to treat remote readers as inactive when their NACKs do not progress

5.66 Logging

Use these QoS fields to configure the RTI Connext logging infrastructure.

Use these QoS fields to configure the RTI Connext logging infrastructure.

This includes settings for configuring the verbosity and directing the output.

See `Logging`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

DDS_LoggingQosPolicy (p. 1834)	**verbosity** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1834)	**category** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1834)	**output_file** (p. 1835)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1834)	**output_file_suffix** (p. 1836)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Sets the file suffix when logging to a set of files
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**max_historical_logs** (p. 1848)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**publication_period** (p. 1849)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Period at which the logging thread publishes log messages.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**middleware_forwarding_level** (p. 1850)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ MIDDLEWARE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**security_event_forwarding_level** (p. 1850)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**service_forwarding_level** (p. 1851)

	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1850)	**user_forwarding_level** (p. 1851)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_USER** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1859)	**logs** (p. 1859)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* **DDS_MonitoringLoggingForwardingSettings** (p. 1850) containing the **NDDS_Config_SyslogVerbosity** (p. 1449) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 1448).

Advanced Settings

DDS_LoggingQosPolicy (p. 1834)	**print_format** (p. 1835)
	<<***extension***>> *(p. 796)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1834)	**max_bytes_per_file** (p. 1836)
	<<***extension***>> *(p. 796)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1834)	**max_files** (p. 1837)
	<<***extension***>> *(p. 796)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**concurrency_level** (p. 1847)
	<<***extension***>> *(p. 796)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**datawriter_qos_profile_name** (p. 1848)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**thread** (p. 1849)

	<<***extension***>> *(p. 796)* The settings of the logging thread.
DDS_MonitoringDistributionSettings (p. 1841)	**logging_settings** (p. 1843)
	<<***extension***>> *(p. 796)* Configures the distribution of logging messages.

5.67 Middleware Memory Management

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_samples** (p. 1957)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Represents the initial samples the middleware will store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_instances** (p. 1957)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Represents the initial number of instances a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) will manage.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**max_historical_logs** (p. 1848)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.

Advanced Settings

DDS_PersistentStorageSettings (p. 1887)	**writer_memory_state** (p. 1893)
	<<***extension***>> *(p. 796)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> *(p. 791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers** (p. 1621)
	<<***extension***>> *(p. 796)* The maximum number of remote writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers_per_instance** (p. 1622)
	<<***extension***>> *(p. 796)* The maximum number of remote writers from which a **DDS_DataReader** (p. 618) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_samples_per_remote_writer** (p. 1622)
	<<***extension***>> *(p. 796)* The maximum number of out-of-order samples from a given remote **DDS_DataWriter** (p. 488) that a **DDS_DataReader** (p. 618) may store when maintaining a reliable connection to the **DDS_↩ DataWriter** (p. 488).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_infos** (p. 1623)
	<<***extension***>> *(p. 796)* The maximum number of info units that a **DDS_DataReader** (p. 618) can use to store **DDS_SampleInfo** (p. 1990).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_writers** (p. 1623)
	<<***extension***>> *(p. 796)* The initial number of remote writers from which a **DDS_DataReader** (p. 618) may read, including all instances.

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_writers_per_instance** (p. 1624)
	<<***extension***>> *(p. 796)* The initial number of remote writers from which a **DDS_DataReader** (p. 618) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_infos** (p. 1624)
	<<***extension***>> *(p. 796)* The initial number of info units that a **DDS_DataReader** (p. 618) can have, which are used to store **DDS_SampleInfo** (p. 1990).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_outstanding_reads** (p. 1625)
	<<***extension***>> *(p. 796)* The initial number of outstanding calls to read/take (or one of their variants) on the same **DDS_DataReader** (p. 618) for which memory has not been returned by calling **FooDataReader_return_loan** (p. 649).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_outstanding_reads** (p. 1625)
	<<***extension***>> *(p. 796)* The maximum number of outstanding read/take calls (or one of their variants) on the same **DDS_DataReader** (p. 618) for which memory has not been returned by calling **FooDataReader_return_loan** (p. 649).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_samples_per_read** (p. 1625)
	<<***extension***>> *(p. 796)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader_read** (p. 628) or **FooDataReader_take** (p. 629). If more data exists in the middleware, the application will need to issue multiple read/take calls.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples** (p. 1626)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_fragmented_samples** (p. 1627)
	<<***extension***>> *(p. 796)* The initial number of samples for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples_per_remote_writer** (p. 1627)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragments_per_sample** (p. 1628)

	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**dynamically_allocate_fragmented_samples** (p. 1628)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_total_instances** (p. 1629)
	<<***extension***>> *(p. 796)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_virtual_writers** (p. 1630)
	<<***extension***>> *(p. 796)* The maximum number of remote virtual writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_virtual_writers** (p. 1630)
	<<***extension***>> *(p. 796)* The initial number of remote virtual writers from which a **DDS_DataReader** (p. 618) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_virtual_writers_per_instance** (p. 1631)
	<<***extension***>> *(p. 796)* The maximum number of virtual remote writers that can be associated with an instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_remote_virtual_writers_per_instance** (p. 1631)
	<<***extension***>> *(p. 796)* The initial number of virtual remote writers per instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_remote_writers_per_sample** (p. 1632)
	<<***extension***>> *(p. 796)* The maximum number of remote writers allowed to write the same sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_query_condition_filters** (p. 1632)
	<<***extension***>> *(p. 796)* The maximum number of query condition filters a reader is allowed.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_app_ack_response_length** (p. 1633)
	<<***extension***>> *(p. 796)* Maximum length of application-level acknowledgment response data
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**keep_minimum_state_for_instances** (p. 1633)
	<<***extension***>> *(p. 796)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 1629).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_topic_queries** (p. 1634)

	<<***extension***>> *(p. 796)* The initial number of Topic↩ Queries allocated by a **DDS_DataReader** (p. 618).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_topic_queries** (p. 1634)
	<<***extension***>> *(p. 796)* The maximum number of active TopicQueries that a **DDS_DataReader** (p. 618) can create.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 1635)
	<<***extension***>> *(p. 796)* Allocation resource for the shared memory segments attached by the **DDS_Data↩ Reader** (p. 618).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**instance_replacement** (p. 1635)
	<<***extension***>> *(p. 796)* Sets the kind of instances allowed to be replaced for each instance state (**DDS↩ _InstanceStateKind** (p. 715)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_↩ instances** (p. 1956).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**autopurge_remote_not_alive_writer_delay** (p. 1636)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataReader** (p. 618) will maintain information regarding a **DDS_DataWriter** (p. 488) once the **DDS_↩ DataWriter** (p. 488) has become not alive.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**lazily_allocate_batch_resources** (p. 1637)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_concurrent_blocking_threads** (p. 1675)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The initial number of threads that are allowed to concurrently block on write call on the same **DDS_DataWriter** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_concurrent_blocking_threads** (p. 1676)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDS_Data↩ Writer** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_remote_reader_filters** (p. 1676)
	<<***extension***>> *(p. 796)* The maximum number of remote DataReaders for which the **DDS_DataWriter** (p. 488) will perform content-based filtering.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_batches** (p. 1677)

	<<***extension***>> *(p. 796)* Represents the initial number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_batches** (p. 1677)
	<<***extension***>> *(p. 796)* Represents the maximum number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**instance_replacement** (p. 1678)
	<<***extension***>> *(p. 796)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**replace_empty_instances** (p. 1678)
	<<***extension***>> *(p. 796)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_virtual_writers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of virtual writers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_virtual_writers** (p. 1679)
	<<***extension***>> *(p. 796)* The initial number of virtual writers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_remote_readers** (p. 1683)
	<<***extension***>> *(p. 796)* Controls the initial memory allocation for the matched remote readers of a **DDS_DataWriter** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of remote readers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_app_ack_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of application-level acknowledging remote readers supported by a **DDS_DataWriter** (p. 488)
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the initial number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the maximum number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**writer_loaned_sample_allocation** (p. 1682)

	<<***extension***>> *(p. 796)* Represents the allocation settings of loaned samples managed by a **DDS_Data↩ Writer** (p. 488).
DDS_SystemResourceLimitsQosPolicy (p. 2030)	**max_objects_per_thread** (p. 2031)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* The maximum number of objects that can be stored per thread for a **DDS_DomainParticipantFactory** (p. 32).
DDS_SystemResourceLimitsQosPolicy (p. 2030)	**initial_objects_per_thread** (p. 2031)
	<<***extension***>> *(p. 796)* The number of objects per thread for a **DDS_DomainParticipantFactory** (p. 32) for which infrastructure will initially be allocated.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_writer_allocation** (p. 1737)
	<<***extension***>> *(p. 796)* Allocation settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_reader_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_publisher_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_subscriber_allocation** (p. 1738)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_topic_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_writer_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_reader_allocation** (p. 1739)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_participant_allocation** (p. 1740)

	<<***extension***>> *(p. 796)* Allocation settings applied to remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_writer_reader_pair_allocation** (p. 1740)
	<<***extension***>> *(p. 796)* Allocation settings applied to matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_reader_writer_pair_allocation** (p. 1740)
	<<***extension***>> *(p. 796)* Allocation settings applied to matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_allocation** (p. 1741)
	<<***extension***>> *(p. 796)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**read_condition_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to read condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**query_condition_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**outstanding_asynchronous_sample_allocation** (p. 1742)
	<<***extension***>> *(p. 796)* Allocation settings applied to the maximum number of samples (from all **DDS_Data↩ Writer** (p. 488)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_allocation** (p. 1743)
	<<***extension***>> *(p. 796)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_writer_hash_buckets** (p. 1743)

	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_reader_hash_buckets** (p. 1743)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_publisher_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_subscriber_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**local_topic_hash_buckets** (p. 1744)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_writer_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_reader_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_participant_hash_buckets** (p. 1745)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_writer_reader_pair_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**matching_reader_writer_pair_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Number of hash buckets for matching local reader and remote/local writer pairs.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_hash_buckets** (p. 1746)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filtered_topic_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**content_filter_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**flow_controller_hash_buckets** (p. 1747)
	[DEPRECATED] (p. **968**) <<***extension***>> (p. *796*) Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_gather_destinations** (p. 1748)
	<<***extension***>> (p. *796*) Maximum number of destinations per RTI Connext send.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_user_data_max_length** (p. 1748)
	<<***extension***>> (p. *796*) Maximum length of user data in **DDS_DomainParticipantQos** (p. 1729) and **DDS_ParticipantBuiltinTopicData** (p. 1873)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**topic_data_max_length** (p. 1748)
	<<***extension***>> (p. *796*) Maximum length of topic data in **DDS_TopicQos** (p. 2048), **DDS_TopicBuiltinTopicData** (p. 2040), **DDS_PublicationBuiltinTopicData** (p. 1909) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**publisher_group_data_max_length** (p. 1749)
	<<***extension***>> (p. *796*) Maximum length of group data in **DDS_PublisherQos** (p. 1922) and **DDS_PublicationBuiltinTopicData** (p. 1909)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**subscriber_group_data_max_length** (p. 1749)
	<<***extension***>> (p. *796*) Maximum length of group data in **DDS_SubscriberQos** (p. 2016) and **DDS_SubscriptionBuiltinTopicData** (p. 2018)

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_user_data_max_length** (p. 1749)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataWriterQos** (p. 1666) and **DDS_↩ PublicationBuiltinTopicData** (p. 1909)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_user_data_max_length** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum length of user data in **DDS_DataReaderQos** (p. 1611) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 2018)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partitions** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1884).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_partition_cumulative_characters** (p. 1750)
	<<***extension***>> *(p. 796)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1884).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_code_max_serialized_length** (p. 1751)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_object_max_serialized_length** (p. 1751)
	<<***extension***>> *(p. 796)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**type_object_max_deserialized_length** (p. 1753)
	<<***extension***>> *(p. 796)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**deserialized_type_object_dynamic_allocation_↩ threshold** (p. 1753)
	<<***extension***>> *(p. 796)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**serialized_type_object_dynamic_allocation_↩ threshold** (p. 1752)
	<<***extension***>> *(p. 796)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**contentfilter_property_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_seq_max_length** (p. 1754)
	<<***extension***>> *(p. 796)* Maximum number of channels that can be specified in **DDS_MultiChannelQos↩ Policy** (p. 1860) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**channel_filter_expression_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 1564) in a MultiChannel DataWriter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_list_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**participant_property_string_max_length** (p. 1755)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with the **DDS_DomainParticipant** (p. 76).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_list_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_property_string_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_list_max_length** (p. 1756)
	<<***extension***>> *(p. 796)* Maximum number of properties associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_property_string_max_length** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum string length of the properties associated with a **DDS_DataReader** (p. 618).

DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_endpoint_groups** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum number of **DDS_EndpointGroup_t** (p. 1787) allowable in a **DDS_AvailabilityQosPolicy** (p. 1547).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**max_endpoint_group_cumulative_characters** (p. 1757)
	<<***extension***>> *(p. 796)* Maximum number of combined role_name characters allowed in all **DDS_EndpointGroup_t** (p. 1787) in a **DDS_AvailabilityQosPolicy** (p. 1547).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**transport_info_list_max_length** (p. 1758)
	<<***extension***>> *(p. 796)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1877).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**ignored_entity_replacement_kind** (p. 1758)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_allocation** (p. 1741) are reached.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_allocation** (p. 1758)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_hash_buckets** (p. 1759)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Number of hash buckets for remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_data_tag_list_max_length** (p. 1759)
	<<***extension***>> *(p. 796)* Maximum number of data tags associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**writer_data_tag_string_max_length** (p. 1760)
	<<***extension***>> *(p. 796)* Maximum string length of the data tags associated with a **DDS_DataWriter** (p. 488).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_data_tag_list_max_length** (p. 1760)

	<<***extension***>> *(p. 796)* Maximum number of data tags associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**reader_data_tag_string_max_length** (p. 1760)
	<<***extension***>> *(p. 796)* Maximum string length of the data tags associated with a **DDS_DataReader** (p. 618).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**shmem_ref_transfer_mode_max_segments** (p. 1761)
	<<***extension***>> *(p. 796)* Maximum number of segments created by all DataWriters belonging to a **DDS_DomainParticipant** (p. 76).
DDS_EventQosPolicy (p. 1796)	**initial_count** (p. 1797)
	<<***extension***>> *(p. 796)* The initial number of events.
DDS_EventQosPolicy (p. 1796)	**max_count** (p. 1797)
	<<***extension***>> *(p. 796)* The maximum number of events.
DDS_DatabaseQosPolicy (p. 1581)	**initial_records** (p. 1584)
	<<***extension***>> *(p. 796)* The initial number of total records.
DDS_DatabaseQosPolicy (p. 1581)	**max_skiplist_level** (p. 1584)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The maximum level of the skiplist.
DDS_DatabaseQosPolicy (p. 1581)	**initial_weak_references** (p. 1585)
	<<***extension***>> *(p. 796)* The initial number of weak references.
DDS_DatabaseQosPolicy (p. 1581)	**max_weak_references** (p. 1584)
	<<***extension***>> *(p. 796)* The maximum number of weak references.
DDS_ReceiverPoolQosPolicy (p. 1938)	**buffer_size** (p. 1939)
	<<***extension***>> *(p. 796)* The receive buffer size in bytes.
DDS_ReceiverPoolQosPolicy (p. 1938)	**buffer_alignment** (p. 1940)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_reader_resource_limits** (p. 1698)
	<<***extension***>> *(p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader_resource_limits** (p. 1699)
	<<***extension***>> *(p. 796)* Resource limits.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader_resource_limits** (p. 1700)
	<<***extension***>> *(p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader_resource_limits** (p. 1716)
	<<***extension***>> *(p. 796)* Resource limits for the built-in topic participant configuration reader.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Maximum number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_infos** (p. 1559)
	<<***extension***>> *(p. 796)* Initial number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_infos** (p. 1559)
	<<***extension***>> *(p. 796)* Maximum number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_outstanding_reads** (p. 1559)
	<<***extension***>> *(p. 796)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_outstanding_reads** (p. 1560)
	<<***extension***>> *(p. 796)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples_per_read** (p. 1560)
	<<***extension***>> *(p. 796)* Maximum number of samples that can be read/taken on a same built-in topic **DDS_DataReader** (p. 618).
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**disable_fragmentation_support** (p. 1560)
	[DEPRECATED] (p. **968**) <<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples** (p. 1561)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the built-in topic **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_fragmented_samples** (p. 1561)

	<<***extension***>> *(p. 796)* The initial number of samples for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragmented_samples_per_remote_writer** (p. 1562)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a built-in topic **DDS_DataReader** (p. 618) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_fragments_per_sample** (p. 1562)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**dynamically_allocate_fragmented_samples** (p. 1563)
	<<***extension***>> *(p. 796)* Determines whether the built-in topic **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_ThreadSettings_t (p. 2035)	**stack_size** (p. 2036)
	The thread stack-size.
DDS_LoggingQosPolicy (p. 1834)	**max_bytes_per_file** (p. 1836)
	<<***extension***>> *(p. 796)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1834)	**max_files** (p. 1837)
	<<***extension***>> *(p. 796)* Specifies the maximum number of files to create before overwritting the previous ones.

5.68 QoS Profile Management

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Basic Settings

DDS_ProfileQosPolicy (p. 1902)	**string_profile** (p. 1903)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1902)	**url_profile** (p. 1903)

	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sequence of **URL groups** (p. 975) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1902)	**ignore_user_profile** (p. 1903)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
DDS_ProfileQosPolicy (p. 1902)	**ignore_environment_profile** (p. 1903)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 976).
DDS_ProfileQosPolicy (p. 1902)	**ignore_resource_profile** (p. 1904)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**enable** (p. 1839)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Enables the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.

Advanced Settings

DDS_MonitoringEventDistributionSettings (p. 1843)	**datawriter_qos_profile_name** (p. 1845)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes event metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1855)	**datawriter_qos_profile_name** (p. 1855)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1846)	**datawriter_qos_profile_name** (p. 1848)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_DataWriter** (p. 488) that distributes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1839)	**participant_qos_profile_name** (p. 1840)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the **DDS_Domain↩ Participant** (p. 76) that will be used to distribute telemetry data.

DDS_MonitoringDistributionSettings (p. 1841)	**dedicated_participant** (p. 1842)
	<<***extension***>> *(p. 796)* Configures the use of a dedicated **DDS_DomainParticipant** (p. 76) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1841)	**publisher_qos_profile_name** (p. 1842)
	<<***extension***>> *(p. 796)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

5.69 Reliability QoS

Reliability related QoS.

Reliability related QoS.

Use these QoS fields to configure the reliable delivery of your application data – this includes those settings that configure the reliability protocol.

See `Reliable Delivery Model`, in the *Core Libraries User's Manual*, for more information about the DDS reliability protocol.

Basic Settings

DDS_ReliabilityQosPolicy (p. 1940)	**kind** (p. 1943)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1940)	**max_blocking_time** (p. 1943)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* The maximum time a DataWriter can block on a write() call.
DDS_HistoryQosPolicy (p. 1808)	**kind** (p. 1810)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1808)	**depth** (p. 1810)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_↩ KEEP_LAST_HISTORY_QOS** (p. 1295)
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**heartbeat_period** (p. 1968)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The period at which to send heartbeats.

DDS_RtpsReliableWriterProtocol_t (p. 1965)	**fast_heartbeat_period** (p. 1968)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**late_joiner_heartbeat_period** (p. 1969)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_send_window_size** (p. 1978)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Maximum size of send window of unacknowledged samples

Advanced Settings

DDS_AvailabilityQosPolicy (p. 1547)	**enable_required_subscriptions** (p. 1550)
	<<***extension***>> *(p. 796)* Enables support for required subscriptions in a **DDS_DataWriter** (p. 488)
DDS_AvailabilityQosPolicy (p. 1547)	**max_data_availability_waiting_time** (p. 1550)
	<<***extension***>> *(p. 796)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 1547)	**max_endpoint_availability_waiting_time** (p. 1550)
	<<***extension***>> *(p. 796)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 1547)	**required_matched_endpoint_groups** (p. 1551)
	<<***extension***>> *(p. 796)* A sequence of endpoint groups.
DDS_ReliabilityQosPolicy (p. 1940)	**acknowledgment_kind** (p. 1943)
	<<***extension***>> *(p. 796)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1940)	**instance_state_consistency_kind** (p. 1944)
	<<***extension***>> *(p. 796)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1940)	**exact_reliability_kind_match** (p. 1944)

	<<***extension***>> *(p. 796)* Whether an exact reliability kind match is required for endpoint matching.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_app_ack_response_length** (p. 1633)
	<<***extension***>> *(p. 796)* Maximum length of application-level acknowledgment response data
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_app_ack_remote_readers** (p. 1680)
	<<***extension***>> *(p. 796)* The maximum number of application-level acknowledging remote readers supported by a **DDS_DataWriter** (p. 488)
DDS_DataReaderProtocolQosPolicy (p. 1596)	**rtps_reliable_reader** (p. 1599)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDS_DataReader** (p. 618). This parameter only has effect if the reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQosPolicyKind** (p. 1324).
DDS_DataReaderProtocolQosPolicy (p. 1596)	**disable_positive_acks** (p. 1598)
	<<***extension***>> *(p. 796)* Whether the reader sends positive acknowledgements to writers.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**push_on_write** (p. 1651)
	<<***extension***>> *(p. 796)* Whether to push sample out when write is called.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**disable_positive_acks** (p. 1651)
	<<***extension***>> *(p. 796)* Controls whether or not the writer expects positive acknowledgements from matching readers.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**propagate_app_ack_with_no_response** (p. 1653)
	<<***extension***>> *(p. 796)* Controls whether or not a **DDS_DataWriter** (p. 488) receives **DDS_DataWriterListener::on_application_acknowledgment** (p. 1648) notifications with an empty or invalid response.
DDS_DataWriterProtocolQosPolicy (p. 1649)	**rtps_reliable_writer** (p. 1653)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDS_DataWriter** (p. 488). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQosPolicyKind** (p. 1324).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader** (p. 1698)

	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader** (p. 1699)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_writer** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE↩ _RELIABILITY_QOS** (p. 1325) **DDS_ReliabilityQos↩ PolicyKind** (p. 1324).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader_reliability_kind** (p. 1703)
	[DEPRECATED] (p. **968)** <<***extension***>> *(p. 796)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_message_reader** (p. 1704)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_↩ message_reader_reliability_kind** (p. 1703) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 1325).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_writer** (p. 1700)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_writer** (p. 1702)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_writer** (p. 1707)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 2006) writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**service_request_reader** (p. 1709)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 2006) reader.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer** (p. 1711)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_reader** (p. 1712)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader** (p. 1716)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_writer** (p. 1714)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**min_heartbeat_response_delay** (p. 1960)
	<<***extension***>> *(p. 796)* The minimum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**max_heartbeat_response_delay** (p. 1960)
	<<***extension***>> *(p. 796)* The maximum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**heartbeat_suppression_duration** (p. 1961)
	<<***extension***>> *(p. 796)* The duration a reader ignores consecutively received heartbeats
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**nack_period** (p. 1961)
	<<***extension***>> *(p. 796)* The period at which to send NACKs
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**receive_window_size** (p. 1962)
	<<***extension***>> *(p. 796)* The number of received out-of-order samples a reader can keep at a time
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**round_trip_time** (p. 1962)
	<<***extension***>> *(p. 796)* The duration from sending a NACK to receiving a repair of a sample
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**app_ack_period** (p. 1963)
	<<***extension***>> *(p. 796)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**min_app_ack_response_keep_duration** (p. 1963)

	<<***extension***>> *(*p. *796)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1959)	**samples_per_app_ack** (p. 1964)
	<<***extension***>> *(*p. *796)* The minimum number of samples acknowledged by one application-level acknowledgment message
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**low_watermark** (p. 1966)
	<<***extension***>> *(*p. *796)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 1236) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**high_watermark** (p. 1967)
	<<***extension***>> *(*p. *796)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 1236) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**virtual_heartbeat_period** (p. 1970)
	<<***extension***>> *(*p. *796)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**samples_per_virtual_heartbeat** (p. 1970)
	<<***extension***>> *(*p. *796)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_heartbeat_retries** (p. 1971)
	<<***extension***>> *(*p. *796)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**inactivate_nonprogressing_readers** (p. 1971)
	<<***extension***>> *(*p. *796)* Whether to treat remote readers as inactive when their NACKs do not progress
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**heartbeats_per_max_samples** (p. 1972)
	<<***extension***>> *(*p. *796)* The number of piggyback heartbeats sent per max send window.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**min_nack_response_delay** (p. 1973)
	<<***extension***>> *(*p. *796)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_nack_response_delay** (p. 1973)

	<<***extension***>> *(p. 796)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**nack_suppression_duration** (p. 1974)
	<<***extension***>> *(p. 796)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**max_bytes_per_nack_response** (p. 1974)
	<<***extension***>> *(p. 796)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1976)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_min_sample_keep_duration** (p. 1975)
	<<***extension***>> *(p. 796)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_max_sample_keep_duration** (p. 1976)
	<<***extension***>> *(p. 796)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1977)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_positive_acks_increase_sample_keep_duration_factor** (p. 1977)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Controls rate of growth of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_update_period** (p. 1979)
	<<***extension***>> *(p. 796)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_increase_factor** (p. 1980)
	<<***extension***>> *(p. 796)* Increases send window size by this percentage when reacting dynamically to network conditions

DDS_RtpsReliableWriterProtocol_t (p. 1965)	**send_window_decrease_factor** (p. 1981)
	<<***extension***>> *(p. 796)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**enable_multicast_periodic_heartbeat** (p. 1982)
	<<***extension***>> *(p. 796)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**multicast_resend_threshold** (p. 1982)
	<<***extension***>> *(p. 796)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**disable_repair_piggyback_heartbeat** (p. 1983)
	<<***extension***>> *(p. 796)* Prevents piggyback heartbeats from being sent with repair samples

5.70 Sample Memory Management QoS

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples** (p. 1956)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Represents the maximum samples the middleware can store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_instances** (p. 1956)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Represents the maximum number of instances a **DDS_DataWriter** (p. 488) (or **DDS_↩ DataReader** (p. 618)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_samples** (p. 1957)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Represents the initial samples the middleware will store for any one **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)).
DDS_ResourceLimitsQosPolicy (p. 1953)	**initial_instances** (p. 1957)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Represents the initial number of instances a **DDS_DataWriter** (p. 488) (or **DDS_Data↩ Reader** (p. 618)) will manage.

Advanced Settings

DDS_PersistentStorageSettings (p. 1887)	**writer_instance_cache_allocation** (p. 1891)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1887)	**writer_sample_cache_allocation** (p. 1892)
	<<***extension***>> *(p. 796)* Configures the resource limits associated with the sample durable writer history cache.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_kind** (p. 1768)
	<<***spec***>> *(p. 791)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**history_depth** (p. 1768)
	<<***spec***>> *(p. 791)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1765) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_instances** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1767)	**max_samples_per_instance** (p. 1769)
	<<***spec***>> *(p. 791)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1953)	**max_samples_per_instance** (p. 1956)
	<<***spec***>> *(p. 791)* Represents the maximum number of samples of any one instance a **DDS_DataWriter** (p. 488) (or **DDS_DataReader** (p. 618)) can manage.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autodispose_unregistered_instances** (p. 2113)
	<<***spec***>> *(p. 791)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDS_DataWriter** (p. 488) unregisters from the instance by means of the unregister operations.
DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_unregistered_instances_delay** (p. 2113)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has unregistered the instance.

DDS_WriterDataLifecycleQosPolicy (p. 2112)	**autopurge_disposed_instances_delay** (p. 2114)
	<<***extension***>> *(p. 796)* Maximum duration for which the **DDS_DataWriter** (p. 488) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_samples_delay** (p. 1936)
	<<***spec***>> *(p. 791)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 716).
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_disposed_instances_delay** (p. 1936)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1934)	**autopurge_nowriter_instances_delay** (p. 1937)
	<<***extension***>> *(p. 796)* Minimum duration for which the **DDS_DataReader** (p. 618) will maintain information about a received instance once its `instance_↩ state` becomes **DDS_NOT_ALIVE_NO_WRITERS↩ _INSTANCE_STATE** (p. 716) and there are no samples for the instance in the DataReader queue.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples** (p. 1626)
	<<***extension***>> *(p. 796)* The maximum number of samples for which the **DDS_DataReader** (p. 618) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_fragmented_samples** (p. 1627)
	<<***extension***>> *(p. 796)* The initial number of samples for which a **DDS_DataReader** (p. 618) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragmented_samples_per_remote_writer** (p. 1627)
	<<***extension***>> *(p. 796)* The maximum number of samples per remote writer for which a **DDS_DataReader** (p. 618) may store fragments.

DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_fragments_per_sample** (p. 1628)
	<<***extension***>> *(p. 796)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**dynamically_allocate_fragmented_samples** (p. 1628)
	<<***extension***>> *(p. 796)* Determines whether the **DDS_DataReader** (p. 618) pre-allocates storage for storing fragmented samples.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_batches** (p. 1677)
	<<***extension***>> *(p. 796)* Represents the initial number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_batches** (p. 1677)
	<<***extension***>> *(p. 796)* Represents the maximum number of batches a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**writer_loaned_sample_allocation** (p. 1682)
	<<***extension***>> *(p. 796)* Represents the allocation settings of loaned samples managed by a **DDS_Data↩ Writer** (p. 488).
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initialize_writer_loaned_sample** (p. 1682)
	<<***extension***>> *(p. 796)* Whether or not to initialize loaned samples returned by a **DDS_DataWriter** (p. 488)
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_reader_resource_limits** (p. 1698)
	<<***extension***>> *(p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**publication_reader_resource_limits** (p. 1699)
	<<***extension***>> *(p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**subscription_reader_resource_limits** (p. 1700)
	<<***extension***>> *(p. 796)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**participant_configuration_reader_resource_limits** (p. 1716)
	<<***extension***>> *(p. 796)* Resource limits for the built-in topic participant configuration reader.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**initial_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 1557)	**max_samples** (p. 1558)
	<<***extension***>> *(p. 796)* Maximum number of samples.

5.71 Sample Ordering

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Basic Settings

DDS_DestinationOrderQosPolicy (p. 1688)	**kind** (p. 1690)
	<<***basic***>> *(p. 784)* <<***spec***>> *(p. 791)* Specifies the desired kind of destination order.

Advanced Settings

DDS_PresentationQosPolicy (p. 1894)	**access_scope** (p. 1897)
	<<***spec***>> *(p. 791)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1894)	**coherent_access** (p. 1897)
	<<***spec***>> *(p. 791)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1894)	**ordered_access** (p. 1897)
	<<***spec***>> *(p. 791)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1894)	**drop_incomplete_coherent_set** (p. 1898)
	<<***extension***>> *(p. 796)* Indicates whether or not a **DDS_DataReader** (p. 618) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_DestinationOrderQosPolicy (p. 1688)	**scope** (p. 1690)
	<<***spec***>> *(p. 791)* Specifies the desired scope of the source destination order.
DDS_DestinationOrderQosPolicy (p. 1688)	**source_timestamp_tolerance** (p. 1690)
	<<***extension***>> *(p. 796)* Allowed tolerance between source timestamps of consecutive samples.

5.72 Security

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

For a complete security solution, you should use the Security Plugins. See the `RTI Security Plugins User's Manual` for more information.

The QoS listed on this page mostly relate to features that are enabled when the Security Plugins are being used.

Basic Settings

DDS_MonitoringLoggingForwardingSettings (p. 1850)	**security_event_forwarding_level** (p. 1850)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1449) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

Advanced Settings

DDS_TypeSupportQosPolicy (p. 2087)	**cdr_padding_kind** (p. 2088)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_WireProtocolQosPolicy (p. 2099)	**compute_crc** (p. 2106)
	<<***extension***>> *(p. 796)* Adds RTPS CRC submessage to every message when this field is set to **DDS_BOOLEAN_TRUE** (p. 1203).
DDS_WireProtocolQosPolicy (p. 2099)	**check_crc** (p. 2106)
	<<***extension***>> *(p. 796)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS_BOOLEAN_TRUE** (p. 1203).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer** (p. 1711)
	<<***extension***>> *(p. 796)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_writer_publish_mode** (p. 1712)
	<<***extension***>> *(p. 796)* Publish mode policy for the built-in secure volatile writer.

DDS_DiscoveryConfigQosPolicy (p. 1691)	**secure_volatile_reader** (p. 1712)
	<<***extension***>> *(p. 796)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DataTags (p. 1641)	**tags** (p. 1642)
	<<***spec***>> *(p. 791)* Sequence of data tags.

5.73 Throughput

Use these QoS fields to configure features which may be helpful to increase throughput.

Use these QoS fields to configure features which may be helpful to increase throughput.

Basic Settings

DDS_BatchQosPolicy (p. 1552)	**enable** (p. 1552)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 1552)	**max_data_bytes** (p. 1553)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 1552)	**max_samples** (p. 1553)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* The maximum number of samples in a batch.

Advanced Settings

DDS_BatchQosPolicy (p. 1552)	**max_flush_delay** (p. 1554)
	<<***extension***>> *(p. 796)* The maximum flush delay.
DDS_BatchQosPolicy (p. 1552)	**source_timestamp_resolution** (p. 1554)
	<<***extension***>> *(p. 796)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 1552)	**thread_safe_write** (p. 1555)
	<<***extension***>> *(p. 796)* Determines whether or not the write operation is thread safe.

5.74 Transports

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Basic Settings

DDS_TransportBuiltinQosPolicy (p. 2057)	**mask** (p. 2058)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the built-in transports that are registered automatically when the **DDS_DomainParticipant** (p. 76) is enabled.
DDS_TransportMulticastQosPolicy (p. 2064)	**value** (p. 2065)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 1717)	**initial_peers** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 1717)	**multicast_receive_addresses** (p. 1719)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Specifies the multicast group addresses on which discovery-related **metatraffic** can be received by the DomainParticipant.
DDS_DiscoveryQosPolicy (p. 1717)	**accept_unknown_peers** (p. 1720)
	*<<**basic**>> (p. 784) <<**extension**>> (p. 796)* Whether to accept a new participant that is not in the initial peers list.

Advanced Settings

DDS_TransportPriorityQosPolicy (p. 2068)	**value** (p. 2070)
	*<<**spec**>> (p. 791)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_TransportSelectionQosPolicy (p. 2070)	**enabled_transports** (p. 2071)
	*<<**extension**>> (p. 796)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
DDS_TransportUnicastQosPolicy (p. 2071)	**value** (p. 2073)
	*<<**extension**>> (p. 796)* A sequence of unicast communication settings.

DDS_TransportMulticastMappingQosPolicy (p. 2062)	**value** (p. 2064)
	<<***extension***>> *(p. 796)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 2064)	**kind** (p. 2065)
	<<***extension***>> *(p. 796)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DiscoveryQosPolicy (p. 1717)	**enabled_transports** (p. 1718)
	<<***extension***>> *(p. 796)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 1717)	**metatraffic_transport_priority** (p. 1720)
	<<***extension***>> *(p. 796)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 1717)	**enable_endpoint_discovery** (p. 1721)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**transport_info_list_max_length** (p. 1758)
	<<***extension***>> *(p. 796)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1877).
DDS_DiscoveryConfigQosPolicy (p. 1691)	**locator_reachability_assert_period** (p. 1709)
	<<***extension***>> *(p. 796)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**locator_reachability_change_detection_period** (p. 1710)
	<<***extension***>> *(p. 796)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 1691)	**dns_tracker_polling_period** (p. 1713)
	<<***extension***>> *(p. 796)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**enable_multicast_periodic_heartbeat** (p. 1982)
	<<***extension***>> *(p. 796)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1965)	**multicast_resend_threshold** (p. 1982)

	<<***extension***>> *(p. 796)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_ChannelSettings_t (p. 1564)	**multicast_settings** (p. 1564)
	<<***extension***>> *(p. 796)* A sequence of **DDS_TransportMulticastSettings_t** (p. 2066) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 1564)	**priority** (p. 1565)
	<<***extension***>> *(p. 796)* Publication priority

5.75 Topic Queries

Use these QoS fields to configure the topic query feature.

Use these QoS fields to configure the topic query feature.

See `Querying Data`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

DDS_TopicQueryDispatchQosPolicy (p. 2053)	**publication_period** (p. 2054)
	<<***basic***>> *(p. 784)* <<***extension***>> *(p. 796)* Sets the periodic interval at which samples are published.

Advanced Settings

DDS_AsynchronousPublisherQosPolicy (p. 1539)	**disable_topic_query_publication** (p. 1542)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 1539)	**topic_query_publication_thread** (p. 1542)
	<<***extension***>> *(p. 796)* Settings of the **DDS_TopicQuery** (p. 708) publication thread.
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**initial_topic_queries** (p. 1634)
	<<***extension***>> *(p. 796)* The initial number of TopicQueries allocated by a **DDS_DataReader** (p. 618).
DDS_DataReaderResourceLimitsQosPolicy (p. 1619)	**max_topic_queries** (p. 1634)
	<<***extension***>> *(p. 796)* The maximum number of active TopicQueries that a **DDS_DataReader** (p. 618) can create.

DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**initial_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the initial number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 1674)	**max_active_topic_queries** (p. 1681)
	<<***extension***>> *(p. 796)* Represents the maximum number of active topic queries a **DDS_DataWriter** (p. 488) will manage.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_allocation** (p. 1758)
	<<***extension***>> *(p. 796)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 1733)	**remote_topic_query_hash_buckets** (p. 1759)
	[DEPRECATED] (p. 968) <<***extension***>> *(p. 796)* Number of hash buckets for remote TopicQueries.
DDS_TopicQueryDispatchQosPolicy (p. 2053)	**enable** (p. 2054)
	<<***extension***>> *(p. 796)* Allows this writer to dispatch TopicQueries
DDS_TopicQueryDispatchQosPolicy (p. 2053)	**samples_per_period** (p. 2055)
	<<***extension***>> *(p. 796)* Sets the maximum number of samples to publish in each publication_period.

5.76 Type System

Use these QoS fields to configure aspects of the type system.
