4.48.1 A typical publication example	778
4.49 Subscription Example	779
4.49.1 A typical subscription example	779
4.50 Participant Use Cases	780
4.50.1 Turning off auto-enable of newly created participant(s)	780
4.50.2 Getting the factory	780
4.50.3 Setting up a participant	780

---

4.50.4 Tearing down a participant . . . . .	781
4.51 Topic Use Cases . . . . .	782
4.51.1 Registering a user data type . . . . .	782
4.51.2 Setting up a topic . . . . .	782
4.51.3 Tearing down a topic . . . . .	782
4.52 FlowController Use Cases . . . . .	783
4.52.1 Creating a flow controller . . . . .	783
4.52.2 Flow controlling a data writer . . . . .	783
4.52.3 Using the built-in flow controllers . . . . .	784
4.52.4 Shaping the network traffic for a particular transport . . . . .	784
4.52.5 Coalescing multiple samples in a single network packet . . . . .	785
4.53 Publisher Use Cases . . . . .	785
4.53.1 Setting up a publisher . . . . .	785
4.53.2 Tearing down a publisher . . . . .	785
4.54 DataWriter Use Cases . . . . .	786
4.54.1 Setting up a data writer . . . . .	786
4.54.2 Managing instances . . . . .	786
4.54.3 Sending data . . . . .	787
4.54.4 Tearing down a data writer . . . . .	787
4.55 Subscriber Use Cases . . . . .	787
4.55.1 Setting up a subscriber . . . . .	787
4.55.2 Set up subscriber to access received data . . . . .	788
4.55.3 Access received data via a subscriber . . . . .	788
4.55.4 Access received data coherently and/or in order . . . . .	789
4.55.5 Tearing down a subscriber . . . . .	789
4.56 DataReader Use Cases . . . . .	789
4.56.1 Setting up a data reader . . . . .	790
4.56.2 Managing instances . . . . .	790
4.56.3 Set up reader to access received data . . . . .	790
4.56.4 Access received data via a reader . . . . .	791
4.56.5 Taking data . . . . .	791
4.56.6 Reading data . . . . .	792
4.56.7 Tearing down a data reader . . . . .	792
4.57 Entity Use Cases . . . . .	792
4.57.1 Enabling an entity . . . . .	792
4.57.2 Checking if a status changed on an entity. . . . .	793
4.57.3 Changing the QoS for an entity . . . . .	793
4.57.4 Changing the listener and enabling/disabling statuses associated with it . . . . .	793
4.57.5 Enabling/Disabling statuses associated with a status condition . . . . .	794

---

4.58 Waitset Use Cases . . . . .	795
4.58.1 Setting up a wait-set . . . . .	795
4.58.2 Waiting for condition(s) to trigger . . . . .	795
4.58.3 Tearing down a wait-set . . . . .	796
4.59 Transport Use Cases . . . . .	796
4.59.1 Changing the automatically registered built-in transports . . . . .	796
4.59.2 Changing the properties of the automatically registered builtin transports . . . . .	797
4.59.3 Creating a transport . . . . .	797
4.59.4 Deleting a transport . . . . .	797
4.59.5 Registering a transport with a participant . . . . .	798
4.59.6 Adding receive routes for a transport . . . . .	799
4.59.7 Adding send routes for a transport . . . . .	799
4.60 Filter Use Cases . . . . .	799
4.60.1 Introduction   . . . . .	799
4.60.1.1 Overview of ContentFilteredTopic . . . . .	800
4.60.1.2 Overview of QueryCondition . . . . .	800
4.60.2 Filtering with ContentFilteredTopic . . . . .	801
4.60.3 Filtering with Query Conditions . . . . .	801
4.60.4 Filtering Performance . . . . .	802
4.61 Creating Custom Content Filters . . . . .	802
4.61.1 Introduction . . . . .	803
4.61.2 The Custom Content Filter API . . . . .	803
4.61.2.1 The compile function . . . . .	803
4.61.2.2 The evaluate function . . . . .	803
4.61.2.3 The finalize function . . . . .	804
4.61.3 Example Using C format strings . . . . .	804
4.61.3.1 Writing the Compile Function . . . . .	804
4.61.3.2 Writing the Evaluate Function . . . . .	804
4.61.3.3 Writing the Finalize Function . . . . .	805
4.61.3.4 Registering the Filter . . . . .	805
4.61.3.5 Unregistering the Filter . . . . .	805
4.62 Large Data Use Cases . . . . .	805
4.62.1 Introduction   . . . . .	805
4.62.2 Writing Large Data . . . . .	806
4.62.3 Receiving Large Data . . . . .	806
4.63 Request-Reply Examples . . . . .	806
4.63.1 Request-Reply Examples . . . . .	806
4.63.2 Creating a Requester . . . . .	808
4.63.3 Creating a Requester with optional parameters . . . . .	808

---

4.63.4 Requester example . . . . .	809
4.63.5 Taking loaned samples . . . . .	809
4.63.6 Correlating requests and replies . . . . .	810
4.63.7 Creating a Replier . . . . .	811
4.63.8 Replier example . . . . .	812
4.63.9 SimpleReplier example . . . . .	813
4.63.10 Configuring Request-Reply QoS profiles . . . . .	814
4.64 Documentation Roadmap . . . . .	816
4.65 Conventions . . . . .	816
4.65.1 Unsupported Features . . . . .	816
4.65.2 API Naming Conventions . . . . .	817
4.65.2.1 Structure & Class Names . . . . .	817
4.65.3 API Documentation Terms . . . . .	817
4.65.4 Stereotypes . . . . .	817

## RTI Connex

### Core Libraries and Utilities

Real-Time Innovations, Inc.

RTI Connex is network middleware for real-time distributed applications. It provides the communications services that programmers need to distribute time-critical data between embedded and/or enterprise devices or nodes. RTI Connex uses the publish-subscribe communications model to make data distribution efficient and robust.

The RTI Connex Application Programming Interface (API) is based on the OMG's Data Distribution Service (DDS) specification, version 1.4. The most recent publication of this specification can be found in the [Catalog of OMG Specifications](#) under "Platform Categories".

### 1.1 Available Documentation.

The documentation for this release is provided in two forms: the API Reference HTML documentation and PDF documents. If you are new to RTI Connex, the **Documentation Roadmap** (p. 816) will provide direction on how to learn about this product.

### 1.1.1 The documents for the Core Libraries and Utilities are:

- **What 's New.** An overview of the new features in this release.
- **Release Notes.** System requirements, compatibility, what's fixed in this release, and known issues.
- **Platform Notes.** Specific details, such as compilation setting and libraries, related to building and using RTI Connex on the various supported platforms.
- **Getting Started Guide.** Core value and concepts behind the product, taking you step-by-step through the creation of a simple example application. Developers should read this document first.
- **Code Generator User's Manual.** Information about using rttidsgen to generate code from data types.
- **User's Manual.** Introduction to RTI Connex, product tour and conceptual presentation of the functionality of RTI Connex.
- **QoS Reference Guide.** A compact summary of supported Quality of Service (QoS) policies.
- **XML-Based Application Creation Getting Started Guide.** Details on how to use XML-↔ Based Application Creation.
- **Extensible Types Guide.** Additional information about extensible types.
- See more `documentation` on RTI Community.

### 1.1.2 The API Reference HTML documentation contains:

- **RTI Connex DDS API Reference** (p. 818) - The RTI Connex API reference.
- **Additional RTI Connex Communication Patterns** (p. 822) - RTI Connex APIs for additional communication patterns
- **Programming How-To's** (p. 823) - Describes and shows the common tasks done using the API.

The API Reference HTML documentation can be accessed through the tree view in the left frame of the web browser window. The bulk of the documentation is found under the entry labeled "Modules".

## 1.2 Feedback and Support for this Release.

We welcome any input on how to improve RTI Connex to suit your needs. If you have questions or comments about this release, please visit the RTI Customer Portal at <https://support.rti.com>.

The Customer Portal provides access to RTI software, documentation, and support. It also allows you to log support cases. Furthermore, the portal provides detailed solutions and a free public knowledge base. To access the software, documentation or log support cases, the RTI Customer Portal requires a username and password. You will receive this in the email confirming your purchase. If you do not have this email, please contact `license@rti.com`. Resetting your login password can be done directly at the RTI Customer Portal.

Entity Support . . . . .	.1159
Conditions and WaitSets . . . . .	.1166
AsyncWaitSet . . . . .	.871
Cookie . . . . .	.1182
Sample Flags . . . . .	.1184
WriteParams . . . . .	.1186
Heap Support in C . . . . .	.1189
Builtin Qos Profiles . . . . .	.1191
User-managed Threads . . . . .	.1229
Octet Buffer Support . . . . .	.1286
Sequence Support . . . . .	.1296
Built-in Sequences . . . . .	.710
String Support . . . . .	.1311
Transports . . . . .	.712
Installing Transport Plugins . . . . .	.717
Built-in Transport Plugins . . . . .	.728
UDP Transport Plugin definitions . . . . .	.837
Shared Memory Transport . . . . .	.839
UDPv4 Transport . . . . .	.846
Real-Time WAN Transport . . . . .	.856

UDIPv6 Transport . . . . .	862
Creating New Transport Plugins . . . . .	729
Transport Plugins Configuration . . . . .	825
Transport Address . . . . .	832
Queries and Filters Syntax . . . . .	730
Logging and Version . . . . .	736
Version . . . . .	.1233
Logging . . . . .	.1235
Activity Context . . . . .	.1251
General Utilities and Compliance Configuration . . . . .	736
Compliance Configuration . . . . .	.1257
Heap Monitoring . . . . .	.1263
Network Capture . . . . .	.1269
Other Utilities . . . . .	.1284
Observability . . . . .	737
Observability Library . . . . .	.1231
Durability and Persistence . . . . .	769
System Properties . . . . .	775
Configuring QoS Profiles with XML . . . . .	776
Additional RTI Connex Communication Patterns . . . . .	822
Request-Reply Pattern . . . . .	737
Requester . . . . .	738
Replier . . . . .	753
Utilities . . . . .	768
Programming How-To's . . . . .	823
Publication Example . . . . .	778
Subscription Example . . . . .	779
Participant Use Cases . . . . .	780
Topic Use Cases . . . . .	782
FlowController Use Cases . . . . .	783
Publisher Use Cases . . . . .	785
DataWriter Use Cases . . . . .	786
Subscriber Use Cases . . . . .	787
DataReader Use Cases . . . . .	789

Interface . . . . .	824

## Chapter 3

# Data Structure Index

### 3.1 Data Structures

Here are the data structures with brief descriptions:

<b>DDS_AcknowledgmentInfo</b>	Information about an application-level acknowledged sample . . . . .	1319
<b>DDS_AckResponseData_t</b>	Data payload of an application-level acknowledgment . . . . .	1320
<b>DDS_AllocationSettings_t</b>	Resource allocation settings . . . . .	1321
<b>DDS_AnnotationParameterValue</b>	Annotation parameter value . . . . .	1322
<b>DDS_AsynchronousPublisherQosPolicy</b>	Configures the mechanism that sends user data in an external middleware thread . . . . .	1323
<b>DDS_AsyncWaitSetListener</b>	<< <i>interface</i> >> (p. 818) Listener for receiving event notifications related to the thread pool of the <b>DDS_AsyncWaitSet</b> (p. 874) . . . . .	1326
<b>DDS_AsyncWaitSetProperty_t</b>	Specifies the <b>DDS_AsyncWaitSet</b> (p. 874) behavior . . . . .	1327
<b>DDS_AvailabilityQosPolicy</b>	Configures the availability of data . . . . .	1330
<b>DDS_BatchQosPolicy</b>	Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples . . . . .	1334
<b>DDS_BooleanSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Boolean</b> (p. 1007) > . . . . .	1338
<b>DDS_BuiltinTopicKey_t</b>	The key type of the built-in topic types . . . . .	1338
<b>DDS_BuiltinTopicReaderResourceLimits_t</b>	Built-in topic reader's resource limits . . . . .	1339
<b>DDS_ChannelSettings_t</b>	Type used to configure the properties of a channel . . . . .	1344
<b>DDS_ChannelSettingsSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_ChannelSettings_t</b> (p. 1344) > . . . . .	1346
<b>DDS_CharSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Char</b> (p. 1004) > . . . . .	1347

<b>DDS_CoherentSetInfo_t</b>	
<<extension>> (p. 817) Type definition for a coherent set info	1347
<b>DDS_CompressionSettings_t</b>	
<<extension>> (p. 817) Settings related to compressing user data	1348
<b>DDS_ConditionHandler</b>	
<<extension>> (p. 817) <<interface>> (p. 818) Handler called by the <b>DDS_Condition</b> ↔	
<b>dispatch</b> (p. 1174)	1350
<b>DDS_ConditionSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Condition</b> (p. 1169) >	1351
<b>DDS_ContentFilter</b>	
<<interface>> (p. 818) Interface to be used by a custom filter of a <b>DDS_ContentFilteredTopic</b>	
(p. 173)	1352
<b>DDS_ContentFilterProperty_t</b>	
<<extension>> (p. 817) Type used to provide all the required information to enable content filtering	358
<b>DDS_Cookie_t</b>	
<<extension>> (p. 817) Sequence of bytes	1360
<b>DDS_CookieSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_Cookie_t</b> (p. 1360) >	1361
<b>DDS_DatabaseQosPolicy</b>	
Various threads and resource limits settings used by RTI Connex to control its internal database	1361
<b>DDS_DataReaderCacheStatus</b>	
<<extension>> (p. 817) The status of the reader's cache	1365
<b>DDS_DataReaderListener</b>	
<<interface>> (p. 818) <b>DDS_Listener</b> (p. 1569) for reader status	1372
<b>DDS_DataReaderProtocolQosPolicy</b>	
Along with <b>DDS_WireProtocolQosPolicy</b> (p. 1827) and <b>DDS_DataWriterProtocolQosPolicy</b>	
(p. 1422), this QoS policy configures the DDS on-the-network protocol (RTPS)	1375
<b>DDS_DataReaderProtocolStatus</b>	
<<extension>> (p. 817) The status of a reader's internal protocol related metrics, like the number	
of samples received, filtered, rejected; and status of wire protocol traffic	1379
<b>DDS_DataReaderQos</b>	
QoS policies supported by a <b>DDS_DataReader</b> (p. 608) entity	1390
<b>DDS_DataReaderResourceLimitsInstanceReplacementSettings</b>	
Instance replacement kind applied to each instance state	1396
<b>DDS_DataReaderResourceLimitsQosPolicy</b>	
Various settings that configure how a <b>DDS_DataReader</b> (p. 608) allocates and uses physical memory	
for internal resources	1398
<b>DDS_DataReaderSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_DataReader</b> (p. 608) >	1411
<b>DDS_DataRepresentationIdSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_DataRepresentationId_t</b> (p. 1058) >	1411
<b>DDS_DataRepresentationQosPolicy</b>	
This QoS policy contains a list of representation identifiers and compression settings used by <b>DDS</b> ↔	
<b>DataWriter</b> (p. 478) and <b>DDS_DataReader</b> (p. 608) entities to negotiate which data representation	
and compression settings to use	1412
<b>DDS_DataTags</b>	
Definition of <b>DDS_DataTagQosPolicy</b> (p. 1065)	1414
<b>DDS_DataWriterCacheStatus</b>	
<<extension>> (p. 817) The status of the DataWriter's cache. Provides information on cache	
related metrics such as the number of samples and instances in the DataWriter queue	1415
<b>DDS_DataWriterListener</b>	
<<interface>> (p. 818) <b>DDS_Listener</b> (p. 1569) for writer status	1417
<b>DDS_DataWriterProtocolQosPolicy</b>	
Protocol that applies only to <b>DDS_DataWriter</b> (p. 478) instances	1422

<b>DDS_DataWriterProtocolStatus</b>	
<<extension>> (p. 817) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic	1427
<b>DDS_DataWriterQos</b>	
QoS policies supported by a <b>DDS_DataWriter</b> (p. 478) entity	1438
<b>DDS_DataWriterResourceLimitsQosPolicy</b>	
Various settings that configure how a <b>DDS_DataWriter</b> (p. 478) allocates and uses physical memory for internal resources	1446
<b>DDS_DataWriterShmemRefTransferModeSettings</b>	
Settings related to transferring data using shared memory references	1453
<b>DDS_DataWriterTransferModeQosPolicy</b>	
<<extension>> (p. 817) Qos related to transferring data	1454
<b>DDS_DeadlineQosPolicy</b>	
Expresses the maximum duration (deadline) within which an instance is expected to be updated	1455
<b>DDS_DestinationOrderQosPolicy</b>	
Controls how the middleware will deal with data sent by multiple <b>DDS_DataWriter</b> (p. 478) entities for the same instance of data (i.e., same <b>DDS_Topic</b> (p. 172) and key)	1457
<b>DDS_DiscoveryConfigQosPolicy</b>	
Settings for discovery configuration	1460
<b>DDS_DiscoveryQosPolicy</b>	
<<extension>> (p. 817) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications	1479
<b>DDS_DomainParticipantConfigParams_t</b>	
<<extension>> (p. 817) Input parameters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration	1482
<b>DDS_DomainParticipantFactoryQos</b>	
QoS policies supported by a <b>DDS_DomainParticipantFactory</b> (p. 28)	1485
<b>DDS_DomainParticipantListener</b>	
<<interface>> (p. 818) Listener for participant status	1487
<b>DDS_DomainParticipantProtocolStatus</b>	
<<extension>> (p. 817) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message	1489
<b>DDS_DomainParticipantQos</b>	
QoS policies supported by a <b>DDS_DomainParticipant</b> (p. 72) entity	1490
<b>DDS_DomainParticipantResourceLimitsQosPolicy</b>	
Various settings that configure how a <b>DDS_DomainParticipant</b> (p. 72) allocates and uses physical memory for internal resources, including the maximum sizes of various properties	1494
<b>DDS_DomainParticipantSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_DomainParticipant</b> (p. 72) >	1515
<b>DDS_DoubleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Double</b> (p. 1006) >	1515
<b>DDS_DurabilityQosPolicy</b>	
This QoS policy specifies whether or not RTI Connex will store and deliver previously published data samples to new <b>DDS_DataReader</b> (p. 608) entities that join the network later	1516
<b>DDS_DurabilityServiceQosPolicy</b>	
Various settings to configure the external <i>RTI Persistence Service</i> used by RTI Connex for Data↔ Writers with a <b>DDS_DurabilityQosPolicy</b> (p. 1516) setting of <b>DDS_PERSISTENT_DURABILITY_↔_QOS</b> (p. 1089) or <b>DDS_TRANSIENT_DURABILITY_QOS</b> (p. 1089)	1519
<b>DDS_Duration_t</b>	
Type for <i>duration</i> representation	1522
<b>DDS_DynamicData</b>	
A sample of any complex data type, which can be inspected and manipulated reflectively	1523
<b>DDS_DynamicDataInfo</b>	
A descriptor for a <b>DDS_DynamicData</b> (p. 1523) object	1530

<b>DDS_DynamicDataJsonParserProperties_t</b>	
A collection of attributes used to configure <b>DDS_DynamicData</b> (p. 1523) objects . . . . .	1531
<b>DDS_DynamicDataMemberInfo</b>	
A descriptor for a single member (i.e. field) of dynamically defined data type . . . . .	1532
<b>DDS_DynamicDataProperty_t</b>	
A collection of attributes used to configure <b>DDS_DynamicData</b> (p. 1523) objects . . . . .	1534
<b>DDS_DynamicDataSeq</b>	
An ordered collection of <b>DDS_DynamicData</b> (p. 1523) elements . . . . .	1536
<b>DDS_DynamicDataTypeProperty_t</b>	
A collection of attributes used to configure <b>DDS_DynamicDataTypeSupport</b> (p. 321) objects . . .	1536
<b>DDS_DynamicDataTypeSerializationProperty_t</b>	
Properties that govern how data of a certain type will be serialized on the network . . . . .	1537
<b>DDS_EndpointGroup_t</b>	
Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum	1539
<b>DDS_EndpointGroupSeq</b>	
A sequence of <b>DDS_EndpointGroup_t</b> (p. 1539) . . . . .	1540
<b>DDS_EndpointTrustAlgorithmInfo</b>	
Trust Plugins algorithm information associated with the discovered endpoint . . . . .	1541
<b>DDS_EndpointTrustInterceptorAlgorithmInfo</b>	
Trust Plugins interception algorithm information associated with the discovered endpoint . . . . .	1541
<b>DDS_EndpointTrustProtectionInfo</b>	
Trust Plugins Protection information associated with the discovered endpoint . . . . .	1542
<b>DDS_EntityFactoryQosPolicy</b>	
A QoS policy for all <b>DDS_Entity</b> (p. 1160) types that can act as factories for one or more other <b>DDS_Entity</b> (p. 1160) types . . . . .	1543
<b>DDS_EntityNameQosPolicy</b>	
Assigns a name and a role name to a <b>DDS_DomainParticipant</b> (p. 72), <b>DDS_Publisher</b> (p. 436), <b>DDS_Subscriber</b> (p. 565), <b>DDS_DataWriter</b> (p. 478) or <b>DDS_DataReader</b> (p. 608). Except for <b>DDS_Publisher</b> (p. 436) and <b>DDS_Subscriber</b> (p. 565), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system . . . . .	1545
<b>DDS_EnumMember</b>	
A description of a member of an enumeration . . . . .	1546
<b>DDS_EnumMemberSeq</b>	
Defines a sequence of enumerator members . . . . .	1547
<b>DDS_EventQosPolicy</b>	
Settings for event . . . . .	1547
<b>DDS_ExpressionProperty</b>	
Provides additional information about the filter expression passed to <b>DDS_ContentFilter::writer_↔ compile</b> (p. 1354) . . . . .	1549
<b>DDS_FilterSampleInfo</b>	
Provides meta information associated with the sample . . . . .	1550
<b>DDS_FloatSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Float</b> (p. 1006) > . . . . .	1551
<b>DDS_FlowControllerProperty_t</b>	
Determines the flow control characteristics of the <b>DDS_FlowController</b> (p. 551) . . . . .	1552
<b>DDS_FlowControllerTokenBucketProperty_t</b>	
<b>DDS_FlowController</b> (p. 551) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties . . . . .	1553
<b>DDS_GroupDataQosPolicy</b>	
Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 162) during discovery . . . . .	1556
<b>DDS_GUID_t</b>	
Type for <i>GUID</i> (Global Unique Identifier) representation . . . . .	1557

<b>DDS_HistoryQosPolicy</b>	
Specifies the behavior of RTI Connex in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers . . . . .	1558
<b>DDS_InconsistentTopicStatus</b>	
<b>DDS_INCONSISTENT_TOPIC_STATUS</b> (p. 1031) . . . . .	1561
<b>DDS_InstanceHandleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_InstanceHandle_t</b> (p. 210) > . . . . .	1562
<b>DDS_Int8Seq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Int8</b> (p. 1005) > . . . . .	1562
<b>DDS_InvalidLocalIdentityAdvanceNoticeStatus</b>	
<b>DDS_INVALID_LOCAL_IDENTITY_ADVANCE_NOTICE_STATUS</b> (p. 1035) . . . . .	1563
<b>DDS_KeyedOctets</b>	
Built-in type consisting of a variable-length array of opaque bytes and a string that is the key . . . . .	1564
<b>DDS_KeyedOctetsSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_KeyedOctets</b> (p. 1564) > . . . . .	1564
<b>DDS_KeyedOctetsTypeSupport</b>	
<< <i>interface</i> >> (p. 818) <b>DDS_KeyedOctets</b> (p. 1564) type support . . . . .	1564
<b>DDS_KeyedString</b>	
Keyed string built-in type . . . . .	1565
<b>DDS_KeyedStringSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_KeyedString</b> (p. 1565) > . . . . .	1565
<b>DDS_KeyedStringTypeSupport</b>	
<< <i>interface</i> >> (p. 818) Keyed string type support . . . . .	1565
<b>DDS_LatencyBudgetQosPolicy</b>	
Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications . . . . .	1566
<b>DDS_LifespanQosPolicy</b>	
Specifies how long the data written by the <b>DDS_DataWriter</b> (p. 478) is considered valid . . . . .	1567
<b>DDS_Listener</b>	
<< <i>interface</i> >> (p. 818) Abstract base class for all Listener interfaces . . . . .	1569
<b>DDS_LivelinessChangedStatus</b>	
<b>DDS_LIVELINESS_CHANGED_STATUS</b> (p. 1034) . . . . .	1572
<b>DDS_LivelinessLostStatus</b>	
<b>DDS_LIVELINESS_LOST_STATUS</b> (p. 1034) . . . . .	1574
<b>DDS_LivelinessQosPolicy</b>	
Specifies and configures the mechanism that allows <b>DDS_DataReader</b> (p. 608) entities to detect when <b>DDS_DataWriter</b> (p. 478) entities become disconnected or "dead." . . . . .	1575
<b>DDS_Locator_t</b>	
<< <i>extension</i> >> (p. 817) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports . . . . .	1579
<b>DDS_LocatorFilter_t</b>	
Specifies the configuration of an individual channel within a MultiChannel DataWriter . . . . .	1580
<b>DDS_LocatorFilterQosPolicy</b>	
The QoS policy used to report the configuration of a MultiChannel DataWriter as part of <b>DDS_↔PublicationBuiltinTopicData</b> (p. 1648) . . . . .	1581
<b>DDS_LocatorFilterSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_LocatorFilter_t</b> (p. 1580) > . . . . .	1582
<b>DDS_LocatorSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_Locator_t</b> (p. 1579) > . . . . .	1583
<b>DDS_LoggingQosPolicy</b>	
Configures the RTI Connex logging facility . . . . .	1583
<b>DDS_LongDoubleSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_LongDouble</b> (p. 1007) > . . . . .	1586

<b>DDS_LongLongSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_LongLong</b> (p. 1006) > . . . . .	1586
<b>DDS_LongSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Long</b> (p. 1006) > . . . . .	1587
<b>DDS_MonitoringDedicatedParticipantSettings</b>	Configures the use of a dedicated <b>DDS_DomainParticipant</b> (p. 72) to distribute the RTI Connex application telemetry data . . . . .	1587
<b>DDS_MonitoringDistributionSettings</b>	Configures the distribution of telemetry data . . . . .	1589
<b>DDS_MonitoringEventDistributionSettings</b>	Configures the distribution of event metrics . . . . .	1591
<b>DDS_MonitoringLoggingDistributionSettings</b>	Configures the distribution of log messages . . . . .	1593
<b>DDS_MonitoringLoggingForwardingSettings</b>	Configures the forwarding levels of log messages for the different <b>NDDS_Config_LogFacility</b> (p. 1243) . . . . .	1595
<b>DDS_MonitoringMetricSelection</b>	This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources . . . . .	1597
<b>DDS_MonitoringMetricSelectionSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_MonitoringMetricSelection</b> (p. 1597) > . . . . .	1599
<b>DDS_MonitoringPeriodicDistributionSettings</b>	Configures the distribution of periodic metrics . . . . .	1599
<b>DDS_MonitoringQosPolicy</b>	Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connex telemetry data	1601
<b>DDS_MonitoringTelemetryData</b>	Configures the telemetry data that will be distributed . . . . .	1602
<b>DDS_MultiChannelQosPolicy</b>	Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data . . . . .	1603
<b>DDS_Octets</b>	Built-in type consisting of a variable-length array of opaque bytes . . . . .	1606
<b>DDS_OctetSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Octet</b> (p. 1005) > . . . . .	1606
<b>DDS_OctetsSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Octets</b> (p. 1606) > . . . . .	1607
<b>DDS_OctetsTypeSupport</b>	<< <i>interface</i> >> (p. 818) <b>DDS_Octets</b> (p. 1606) type support . . . . .	1607
<b>DDS_OfferedDeadlineMissedStatus</b>	<b>DDS_OFFERED_DEADLINE_MISSED_STATUS</b> (p. 1031) . . . . .	1607
<b>DDS_OfferedIncompatibleQosStatus</b>	<b>DDS_OFFERED_INCOMPATIBLE_QOS_STATUS</b> (p. 1032) . . . . .	1609
<b>DDS_OwnershipQosPolicy</b>	Specifies whether it is allowed for multiple <b>DDS_DataWriter</b> (p. 478) (s) to write the same instance of the data and if so, how these modifications should be arbitrated . . . . .	1610
<b>DDS_OwnershipStrengthQosPolicy</b>	Specifies the value of the strength used to arbitrate among multiple <b>DDS_DataWriter</b> (p. 478) objects that attempt to modify the same instance of a data type (identified by <b>DDS_Topic</b> (p. 172) + key) . . . . .	1615
<b>DDS_ParticipantBuiltinTopicData</b>	Entry created when a DomainParticipant object is discovered . . . . .	1616
<b>DDS_ParticipantBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_ParticipantBuiltinTopicData</b> (p. 1616) > . . . . .	1622
<b>DDS_ParticipantBuiltinTopicDataTypeSupport</b>	Instantiates <i>TypeSupport</i> < <b>DDS_ParticipantBuiltinTopicData</b> (p. 1616) > . . . . .	1622

<b>DDS_ParticipantTrustAlgorithmInfo</b>	Trust Plugins algorithm information associated with the discovered DomainParticipant . . . . .	1622
<b>DDS_ParticipantTrustInterceptorAlgorithmInfo</b>	Trust Plugins interception algorithm information associated with the discovered DomainParticipant . . . . .	1623
<b>DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo</b>	Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant . . . . .	1625
<b>DDS_ParticipantTrustProtectionInfo</b>	Trust Plugins Protection information associated with the discovered DomainParticipant . . . . .	1625
<b>DDS_ParticipantTrustSignatureAlgorithmInfo</b>	Trust Plugins signature algorithm information associated with the discovered DomainParticipant . . . . .	1626
<b>DDS_PartitionQosPolicy</b>	Set of strings that introduces logical partitions in <b>DDS_DomainParticipant</b> (p. 72), <b>DDS_Publisher</b> (p. 436), or <b>DDS_Subscriber</b> (p. 565) entities . . . . .	1627
<b>DDS_PersistentStorageSettings</b>	Configures durable writer history and durable reader state . . . . .	1629
<b>DDS_PresentationQosPolicy</b>	Specifies how the samples representing changes to data instances are presented to a subscribing application . . . . .	1634
<b>DDS_PrintFormatProperty</b>	A collection of attributes used to configure how data samples will be formatted when converted to a string . . . . .	1639
<b>DDS_ProductVersion_t</b>	<< <i>extension</i> >> (p. 817) Type used to represent the current version of RTI Connext . . . . .	1641
<b>DDS_ProfileQosPolicy</b>	Configures the way that XML documents containing QoS profiles are loaded by RTI Connext . . . . .	1642
<b>DDS_Property_t</b>	Properties are name/value pairs objects . . . . .	1644
<b>DDS_PropertyQosPolicy</b>	Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery . . . . .	1645
<b>DDS_PropertySeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Property_t</b> (p. 1644) > . . . . .	1647
<b>DDS_ProtocolVersion_t</b>	<< <i>extension</i> >> (p. 817) Type used to represent the version of the RTPS protocol . . . . .	1648
<b>DDS_PublicationBuiltinTopicData</b>	Entry created when a <b>DDS_DataWriter</b> (p. 478) is discovered in association with its Publisher . . . . .	1648
<b>DDS_PublicationBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_PublicationBuiltinTopicData</b> (p. 1648) > . . . . .	1657
<b>DDS_PublicationBuiltinTopicDataTypeSupport</b>	Instantiates <b>TypeSupport</b> < <b>DDS_PublicationBuiltinTopicData</b> (p. 1648) > . . . . .	1658
<b>DDS_PublicationMatchedStatus</b>	<b>DDS_PUBLICATION_MATCHED_STATUS</b> (p. 1035) . . . . .	1658
<b>DDS_PublisherListener</b>	<< <i>interface</i> >> (p. 818) <b>DDS_Listener</b> (p. 1569) for <b>DDS_Publisher</b> (p. 436) status . . . . .	1660
<b>DDS_PublisherQos</b>	QoS policies supported by a <b>DDS_Publisher</b> (p. 436) entity . . . . .	1661
<b>DDS_PublisherSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Publisher</b> (p. 436) > . . . . .	1663
<b>DDS_PublishModeQosPolicy</b>	Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its <i>own</i> thread to send data, instead of the user thread . . . . .	1664

<b>DDS_QosPolicyCount</b>	Type to hold a counter for a <b>DDS_QosPolicyId_t</b> (p. 1048) . . . . .	1667
<b>DDS_QosPolicyCountSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_QosPolicyCount</b> (p. 1667) > . . . . .	1668
<b>DDS_QosPrintFormat</b>	A collection of attributes used to configure how a QoS appears when printed . . . . .	1668
<b>DDS_QueryConditionParams</b>	<< <i>extension</i> >> (p. 817) Input parameters for <b>DDS_DataReader_create_querycondition_w_↔ params</b> (p. 665) . . . . .	1671
<b>DDS_ReadConditionParams</b>	<< <i>extension</i> >> (p. 817) Input parameters for <b>DDS_DataReader_create_readcondition_w_↔ params</b> (p. 664) . . . . .	1672
<b>DDS_ReaderDataLifecycleQosPolicy</b>	Controls how a DataReader manages the lifecycle of the data that it has received . . . . .	1673
<b>DDS_ReceiverPoolQosPolicy</b>	Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets) . . . . .	1676
<b>DDS_ReliabilityQosPolicy</b>	Indicates the level of reliability offered/requested by RTI Connext . . . . .	1678
<b>DDS_ReliableReaderActivityChangedStatus</b>	<< <i>extension</i> >> (p. 817) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer . . . . .	1682
<b>DDS_ReliableWriterCacheChangedStatus</b>	<< <i>extension</i> >> (p. 817) A summary of the state of a data writer's cache of unacknowledged sam- ples written . . . . .	1684
<b>DDS_ReliableWriterCacheEventCount</b>	<< <i>extension</i> >> (p. 817) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold . . . . .	1687
<b>DDS_RequestedDeadlineMissedStatus</b>	<b>DDS_REQUESTED_DEADLINE_MISSED_STATUS</b> (p. 1032) . . . . .	1688
<b>DDS_RequestedIncompatibleQosStatus</b>	<b>DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS</b> (p. 1032) . . . . .	1689
<b>DDS_ResourceLimitsQosPolicy</b>	Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are al- lowed, and how they occur. Also controls memory usage among different instance values for keyed topics . . . . .	1690
<b>DDS_RTPS_EntityId_t</b>	From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS- entity identifiers . . . . .	1694
<b>DDS_RTPS_GUID_t</b>	From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier . . . .	1695
<b>DDS_RtpsReliableReaderProtocol_t</b>	QoS related to reliable reader protocol defined in RTPS . . . . .	1695
<b>DDS_RtpsReliableWriterProtocol_t</b>	QoS related to the reliable writer protocol defined in RTPS . . . . .	1699
<b>DDS_RtpsWellKnownPorts_t</b>	RTPS well-known port mapping configuration . . . . .	1714
<b>DDS_SampleHandler</b>	<< <i>experimental</i> >> (p. 817) << <i>extension</i> >> (p. 817) << <i>interface</i> >> (p. 818) Handler called by a sample dispatcher, such as <b>DDS_SampleProcessor</b> (p. 1290) . . . . .	1719
<b>DDS_SampleIdentity_t</b>	Type definition for a Sample Identity . . . . .	1720
<b>DDS_SampleInfo</b>	Information that accompanies each sample that is <i>read</i> or <i>taken</i> . . . . .	1720

<b>DDS_SampleInfoSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_SampleInfo</b> (p. 1720) > . . . . .	1732
<b>DDS_SampleLostStatus</b>	<b>DDS_SAMPLE_LOST_STATUS</b> (p. 1033) . . . . .	1732
<b>DDS_SampleRejectedStatus</b>	<b>DDS_SAMPLE_REJECTED_STATUS</b> (p. 1033) . . . . .	1733
<b>DDS_SequenceNumber_t</b>	Type for <i>sequence</i> number representation . . . . .	1735
<b>DDS_ServiceQosPolicy</b>	Service associated with a DDS entity . . . . .	1736
<b>DDS_ServiceRequest</b>	A request coming from one of the built-in services . . . . .	1736
<b>DDS_ServiceRequestAcceptedStatus</b>	<b>DDS_SERVICE_REQUEST_ACCEPTED_STATUS</b> (p. 1036) . . . . .	1738
<b>DDS_ServiceRequestSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_ServiceRequest</b> (p. 1736) > . . . . .	1740
<b>DDS_ServiceRequestTypeSupport</b>	Instantiates <i>TypeSupport</i> < <b>DDS_ServiceRequest</b> (p. 1736) > . . . . .	1740
<b>DDS_ShortSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Short</b> (p. 1005) > . . . . .	1741
<b>DDS_StringSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <i>char*</i> > with value type semantics . . . . .	1741
<b>DDS_StringTypeSupport</b>	<< <i>interface</i> >> (p. 818) String type support . . . . .	1742
<b>DDS_StructMember</b>	A description of a member of a struct . . . . .	1742
<b>DDS_StructMemberSeq</b>	Defines a sequence of struct members . . . . .	1744
<b>DDS_SubscriberListener</b>	<< <i>interface</i> >> (p. 818) <b>DDS_Listener</b> (p. 1569) for status about a subscriber . . . . .	1744
<b>DDS_SubscriberQos</b>	QoS policies supported by a <b>DDS_Subscriber</b> (p. 565) entity . . . . .	1746
<b>DDS_SubscriberSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Subscriber</b> (p. 565) > . . . . .	1747
<b>DDS_SubscriptionBuiltinTopicData</b>	Entry created when a <b>DDS_DataReader</b> (p. 608) is discovered in association with its Subscriber . . . . .	1748
<b>DDS_SubscriptionBuiltinTopicDataSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_SubscriptionBuiltinTopicData</b> (p. 1748) > . . . . .	1757
<b>DDS_SubscriptionBuiltinTopicDataTypeSupport</b>	Instantiates <i>TypeSupport</i> < <b>DDS_SubscriptionBuiltinTopicData</b> (p. 1748) > . . . . .	1757
<b>DDS_SubscriptionMatchedStatus</b>	<b>DDS_SUBSCRIPTION_MATCHED_STATUS</b> (p. 1035) . . . . .	1758
<b>DDS_SystemResourceLimitsQosPolicy</b>	<< <i>extension</i> >> (p. 817) Configures <b>DDS_DomainParticipant</b> (p. 72)-independent resources used by RTI Connext. Mainly used to change the maximum number of <b>DDS_DomainParticipant</b> (p. 72) entities that can be created within a single process (address space) . . . . .	1760
<b>DDS_Tag</b>	Tags are name/value pair objects . . . . .	1762
<b>DDS_TagSeq</b>	Declares IDL <i>sequence</i> < <b>DDS_Tag</b> (p. 1762) > . . . . .	1762

<b>DDS_ThreadFactory</b>	
<< <i>extension</i> >> (p. 817) << <i>interface</i> >> (p. 818) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the <b>DDS_ThreadFactory_OnSpawnedFunction</b> (p. 1230) that specifies the operation to run in the new thread . . . . .	1763
<b>DDS_ThreadSettings_t</b>	
The properties of a thread of execution . . . . .	1764
<b>DDS_Time_t</b>	
Type for <i>time</i> representation . . . . .	1767
<b>DDS_TimeBasedFilterQosPolicy</b>	
Filter that allows a <b>DDS_DataReader</b> (p. 608) to specify that it is interested only in (potentially) a subset of the values of the data . . . . .	1767
<b>DDS_TopicBuiltinTopicData</b>	
Entry created when a Topic object discovered . . . . .	1770
<b>DDS_TopicBuiltinTopicDataSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_TopicBuiltinTopicData</b> (p. 1770) > . . . . .	1775
<b>DDS_TopicBuiltinTopicDataTypeSupport</b>	
Instantiates <b>TypeSupport</b> < <b>DDS_TopicBuiltinTopicData</b> (p. 1770) > . . . . .	1775
<b>DDS_TopicDataQosPolicy</b>	
Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 162) during discovery . . . . .	1775
<b>DDS_TopicListener</b>	
<< <i>interface</i> >> (p. 818) <b>DDS_Listener</b> (p. 1569) for <b>DDS_Topic</b> (p. 172) entities . . . . .	1777
<b>DDS_TopicQos</b>	
QoS policies supported by a <b>DDS_Topic</b> (p. 172) entity . . . . .	1778
<b>DDS_TopicQueryData</b>	
<< <i>extension</i> >> (p. 817) Provides information about a <b>DDS_TopicQuery</b> (p. 698) . . . . .	1781
<b>DDS_TopicQueryDispatchQosPolicy</b>	
Configures the ability of a <b>DDS_DataWriter</b> (p. 478) to publish samples in response to a <b>DDS_↔TopicQuery</b> (p. 698) . . . . .	1783
<b>DDS_TopicQuerySelection</b>	
<< <i>extension</i> >> (p. 817) Specifies the data query that defines a <b>DDS_TopicQuery</b> (p. 698) . . . . .	1785
<b>DDS_TransportBuiltinQosPolicy</b>	
Specifies which built-in transports are used . . . . .	1786
<b>DDS_TransportInfo_t</b>	
Contains the class_id and message_size_max of an installed transport . . . . .	1787
<b>DDS_TransportInfoSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_TransportInfo_t</b> (p. 1787) > . . . . .	1788
<b>DDS_TransportMulticastMapping_t</b>	
Type representing a list of multicast mapping elements . . . . .	1789
<b>DDS_TransportMulticastMappingFunction_t</b>	
Type representing an external mapping function . . . . .	1790
<b>DDS_TransportMulticastMappingQosPolicy</b>	
Specifies a list of topic_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data . . . . .	1791
<b>DDS_TransportMulticastMappingSeq</b>	
Declares IDL <i>sequence</i> < <b>DDS_TransportMulticastMapping_t</b> (p. 1789) > . . . . .	1793
<b>DDS_TransportMulticastQosPolicy</b>	
Specifies the multicast address on which a <b>DDS_DataReader</b> (p. 608) wants to receive its data. It can also specify a port number as well as a subset of the available (at the <b>DDS_DomainParticipant</b> (p. 72) level) transports with which to receive the multicast data . . . . .	1793
<b>DDS_TransportMulticastSettings_t</b>	
Type representing a list of multicast locators . . . . .	1795

<b>DDS_TransportMulticastSettingsSeq</b>	Declares IDL <code>sequence&lt; DDS_TransportMulticastSettings_t</code> (p. 1795) > . . . . .	1797
<b>DDS_TransportPriorityQosPolicy</b>	This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities . . . . .	1797
<b>DDS_TransportSelectionQosPolicy</b>	Specifies the physical transports a <b>DDS_DataWriter</b> (p. 478) or <b>DDS_DataReader</b> (p. 608) may use to send or receive data . . . . .	1799
<b>DDS_TransportUnicastQosPolicy</b>	Specifies a subset of transports and a port number that can be used by an Entity to receive data . . . . .	1800
<b>DDS_TransportUnicastSettings_t</b>	Type representing a list of unicast locators . . . . .	1802
<b>DDS_TransportUnicastSettingsSeq</b>	Declares IDL <code>sequence&lt; DDS_TransportUnicastSettings_t</code> (p. 1802) > . . . . .	1803
<b>DDS_TrustAlgorithmRequirements</b>	Type to describe Trust Plugins algorithm requirements for an entity . . . . .	1804
<b>DDS_TypeAllocationParams_t</b>	Configures whether or not to allocate pointer and optional members . . . . .	1805
<b>DDS_TypeCode</b>	The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with <code>rtdidsgen</code> (see the <code>Code Generator User's Manual</code> ) or to modify types you define yourself at runtime . . . . .	1806
<b>DDS_TypeCodeFactory</b>	A singleton factory for creating, copying, and deleting data type definitions dynamically . . . . .	1806
<b>DDS_TypeCodePrintFormatProperty</b>	A collection of attributes used to configure how a <code>TypeCode</code> appears when converted to a string . . . . .	1808
<b>DDS_TypeConsistencyEnforcementQosPolicy</b>	Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it . . . . .	1811
<b>DDS_TypeDeallocationParams_t</b>	Configures whether to release or not pointer and optional members . . . . .	1814
<b>DDS_TypeSupportQosPolicy</b>	Allows you to attach application-specific values to a <b>DDS_DataWriter</b> (p. 478) or <b>DDS_DataReader</b> (p. 608), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization . . . . .	1815
<b>DDS_UInt8Seq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_UInt8</b> (p. 1005) > . . . . .	1817
<b>DDS_UnionMember</b>	A description of a member of a union . . . . .	1817
<b>DDS_UnionMemberSeq</b>	Defines a sequence of union members . . . . .	1818
<b>DDS_UnsignedLongLongSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_UnsignedLongLong</b> (p. 1006) > . . . . .	1819
<b>DDS_UnsignedLongSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_UnsignedLong</b> (p. 1006) > . . . . .	1819
<b>DDS_UnsignedShortSeq</b>	Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_UnsignedShort</b> (p. 1005) > . . . . .	1820
<b>DDS_UserDataQosPolicy</b>	Attaches a buffer of opaque data that is distributed by means of <b>Built-in Topics</b> (p. 162) during discovery . . . . .	1820
<b>DDS_ValueMember</b>	A description of a member of a value type . . . . .	1821
<b>DDS_ValueMemberSeq</b>	Defines a sequence of value members . . . . .	1824

<b>DDS_VendorId_t</b>	
<< <i>extension</i> >> (p. 817) Type used to represent the vendor of the service implementing the RTPS protocol . . . . .	1824
<b>DDS_WaitSetProperty_t</b>	
<< <i>extension</i> >> (p. 817) Specifies the <b>DDS_WaitSet</b> (p. 1170) behavior for multiple trigger events	1825
<b>DDS_WcharSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Wchar</b> (p. 1005) > . . . . .	1826
<b>DDS_WireProtocolQosPolicy</b>	
Specifies the wire-protocol-related attributes for the <b>DDS_DomainParticipant</b> (p. 72) . . . . .	1827
<b>DDS_WriteParams_t</b>	
<< <i>extension</i> >> (p. 817) Input parameters for writing with <b>FooDataWriter_write_w_params</b> (p. 494), <b>FooDataWriter_dispose_w_params</b> (p. 497), <b>FooDataWriter_register_instance_w_params</b> (p. 486), <b>FooDataWriter_unregister_instance_w_params</b> (p. 489) . . . . .	1833
<b>DDS_WriterDataLifecycleQosPolicy</b>	
Controls how a <b>DDS_DataWriter</b> (p. 478) handles the lifecycle of the instances (keys) that it is registered to manage . . . . .	1838
<b>DDS_WstringSeq</b>	
Instantiates <b>FooSeq</b> (p. 1845) < <b>DDS_Wchar</b> (p. 1005)* > . . . . .	1841
<b>Foo</b>	
A representative user-defined data type . . . . .	1841
<b>FooBarReplier</b>	
Allows receiving requests and sending replies . . . . .	1842
<b>FooBarRequester</b>	
Allows sending requests and receiving replies . . . . .	1843
<b>FooBarSimpleReplier</b>	
A callback-based replier . . . . .	1844
<b>FooDataReader</b>	
<< <i>interface</i> >> (p. 818) << <i>generic</i> >> (p. 818) User data type-specific data reader . . . . .	1845
<b>FooDataWriter</b>	
<< <i>interface</i> >> (p. 818) << <i>generic</i> >> (p. 818) User data type specific data writer . . . . .	1845
<b>FooSeq</b>	
<< <i>interface</i> >> (p. 818) << <i>generic</i> >> (p. 818) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as <b>Foo</b> (p. 1841) . . . . .	1845
<b>FooTypeSupport</b>	
<< <i>interface</i> >> (p. 818) << <i>generic</i> >> (p. 818) User data type specific interface . . . . .	1846
<b>NDDS_Config_LibraryVersion_t</b>	
The version of a single library shipped as part of an RTI Connex distribution . . . . .	1847
<b>NDDS_Config_Logger</b>	
<< <i>interface</i> >> (p. 818) The singleton type used to configure RTI Connex logging . . . . .	1848
<b>NDDS_Config_LoggerDevice</b>	
<< <i>interface</i> >> (p. 818) Logging device interface. Use for user-defined logging devices . . . . .	1848
<b>NDDS_Config_LogMessage</b>	
Log message . . . . .	1850
<b>NDDS_Config_Version_t</b>	
<< <i>interface</i> >> (p. 818) The version of an RTI Connex distribution . . . . .	1851
<b>NDDS_Transport_Address_t</b>	
Addresses are stored individually as network-ordered bytes . . . . .	1852
<b>NDDS_Transport_Interface_t</b>	
Storage for the description of a network interface used by a Transport Plugin . . . . .	1853
<b>NDDS_Transport_Property_t</b>	
Base configuration structure that must be inherited by derived Transport Plugin classes . . . . .	1854
<b>NDDS_Transport_Shmem_Property_t</b>	
Subclass of <b>NDDS_Transport_Property_t</b> (p. 1854) allowing specification of parameters that are specific to the shared-memory transport . . . . .	1862

<b>NDDS_Transport_Support</b>	
<< <i>interface</i> >> (p. 818) The utility class used to configure RTI Connexnt pluggable transports	. . . 1865
<b>NDDS_Transport_UDP_WAN_CommPortsMappingInfo</b>	
Type for storing UDP WAN communication ports	. . . . . 1865
<b>NDDS_Transport_UDPv4_Property_t</b>	
Configurable IPv4/UDP Transport-Plugin properties	. . . . . 1866
<b>NDDS_Transport_UDPv4_WAN_Property_t</b>	
Configurable IPv4/UDP WAN Transport-Plugin properties	. . . . . 1877
<b>NDDS_Transport_UDPv6_Property_t</b>	
Configurable IPv6/UDP Transport-Plugin properties	. . . . . 1887
<b>NDDS_Transport_UUID</b>	
Univocally identifies a transport plugin instance	. . . . . 1896
<b>NDDS_Utility_HeapMonitoringParams_t</b>	
Input parameters for enabling heap monitoring. They will be used for configuring the format of the snapshot	. . . . . 1896
<b>NDDS_Utility_NetworkCaptureParams_t</b>	
Input parameters for starting network capture	. . . . . 1897
<b>RTI_Connext_Replier</b>	
The type-independent version of a Replier	. . . . . 1900
<b>RTI_Connext_ReplierListener</b>	
Called when a <b>FooBarReplier</b> (p. 1842) has new available requests	. . . . . 1900
<b>RTI_Connext_ReplierParams</b>	
Contains the parameters for creating a <b>FooBarReplier</b> (p. 1842)	. . . . . 1901
<b>RTI_Connext_Requester</b>	
The type-independent version of a Requester	. . . . . 1905
<b>RTI_Connext_RequesterParams</b>	
Contains the parameters for creating a <b>FooBarRequester</b> (p. 1843)	. . . . . 1905
<b>RTI_Connext_SimpleReplierListener</b>	
The listener called by a SimpleReplier	. . . . . 1908
<b>RTI_Connext_SimpleReplierParams</b>	
Contains the parameters for creating a <b>FooBarSimpleReplier</b> (p. 1844)	. . . . . 1909
<b>TransportAllocationSettings_t</b>	
Allocation settings used by various internal buffers	. . . . . 1913

# Chapter 4

## Module Documentation

### 4.1 Clock Selection

APIs related to clock selection.

APIs related to clock selection.

RTI Connext uses clocks to measure time and generate timestamps.

The middleware uses two clocks, an internal clock and an external clock. The internal clock is used to measure time and handles all timing in the middleware. The external clock is used solely to generate timestamps, such as the source timestamp and the reception timestamp, in addition to providing the time given by `DDS_DomainParticipant_get_↔current_time` (p. 135).

#### 4.1.1 Available Clocks

Two clock implementations are generally available, the monotonic clock and the realtime clock.

The monotonic clock provides times that are monotonic from a clock that is not adjustable. This clock is useful to use in order to not be subject to changes in the system or realtime clock, which may be adjusted by the user or via time synchronization protocols. However, this time generally starts from an arbitrary point in time, such as system startup. Note that this clock is not available for all architectures. Please see the `Platform Notes` for the architectures on which it is supported. For the purposes of clock selection, this clock can be referenced by the name "monotonic".

The realtime clock provides the realtime of the system. This clock may generally be monotonic but may not be guaranteed to be so. It is adjustable and may be subject to small and large changes in time. The time obtained from this clock is generally a meaningful time in that it is the amount of time from a known epoch. For the purposes of clock selection, this clock can be referenced by the names "realtime" or "system".

### 4.1.2 Clock Selection Strategy

By default, both the internal and external clocks use the real-time clock. If you want your application to be robust to changes in the system time, you may use the monotonic clock as the internal clock, and leave the system clock as the external clock. Note, however, that this may slightly diminish performance in that both the send and receive paths may need to obtain times from both clocks. Since the monotonic clock is not available on all architectures, you may want to specify "monotonic,realtime" for the `internal_clock` (see the table below). By doing so, the middleware will attempt to use the monotonic clock if available, and will fall back to the realtime clock if the monotonic clock is not available.

If you want your application to be robust to changes in the system time, you are not relying on source timestamps, and you want to avoid obtaining times from both clocks, you may use the monotonic clock for both the internal and external clocks.

### 4.1.3 Configuring Clock Selection

To configure the clock selection, use the **PROPERTY** (p. 1107) QoS policy associated with the **DDS\_DomainParticipant** (p. 72).

See also

**DDS\_PropertyQosPolicy** (p. 1645)

The following table lists the supported clock selection properties.

**Table 4.1 Clock Selection Properties**

Property	Description
<code>dds.clock.external_clock</code>	Comma-delimited list of clocks to use for the external clock, in the order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"
<code>dds.clock.internal_clock</code>	Comma-delimited list of clocks to use for the internal clock, in the order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"

## 4.2 Domain Module

Contains the **DDS\_DomainParticipant** (p. 72) class that acts as an entrypoint of RTI Connex and acts as a factory for many of the classes. The **DDS\_DomainParticipant** (p. 72) also acts as a container for the other objects that make up RTI Connex.

## Modules

- **DomainParticipantFactory**  
*DDS\_DomainParticipantFactory* (p. 28) entity and associated elements
- **DomainParticipants**  
*DDS\_DomainParticipant* (p. 72) entity and associated elements
- **Built-in Topics**  
*Built-in objects created by RTI Connex but accessible to the application.*

### 4.2.1 Detailed Description

Contains the **DDS\_DomainParticipant** (p. 72) class that acts as an entrypoint of RTI Connex and acts as a factory for many of the classes. The **DDS\_DomainParticipant** (p. 72) also acts as a container for the other objects that make up RTI Connex.

## 4.3 DomainParticipantFactory

**DDS\_DomainParticipantFactory** (p. 28) entity and associated elements

### Modules

- **DomainParticipantConfigParams**  
*<<extension>>* (p. 817) *DDS\_DomainParticipantConfigParams\_t* (p. 1482)

### Data Structures

- struct **DDS\_DomainParticipantFactoryQos**  
*QoS policies supported by a DDS\_DomainParticipantFactory* (p. 28).

### Macros

- #define **DDS\_DomainParticipantFactoryQos\_INITIALIZER**  
*Initializer for new QoS instances.*
- #define **DDS\_TheParticipantFactory DDS\_DomainParticipantFactory\_get\_instance()**  
*Can be used as an alias for the singleton factory returned by the operation DDS\_DomainParticipantFactory\_get\_instance* (p. 34).

### Typedefs

- typedef struct DDS\_DomainParticipantFactoryImpl **DDS\_DomainParticipantFactory**  
*<<singleton>>* (p. 818) *<<interface>>* (p. 818) *Allows creation and destruction of DDS\_DomainParticipant* (p. 72) *objects.*
- typedef **DDS\_ReturnCode\_t**(\* **DDS\_DomainParticipantFactory\_RegisterTypeFunction**) ( **DDS\_DomainParticipant** \*participant, const char \*type\_name)  
*Prototype of a register type function.*

## Functions

- **DDS\_Boolean DDS\_DomainParticipantFactoryQos\_equals** (const struct **DDS\_DomainParticipantFactoryQos** \*self, const struct **DDS\_DomainParticipantFactoryQos** \*other)  
*Compares two **DDS\_DomainParticipantFactoryQos** (p. 1485) for equality.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos\_print** (const struct **DDS\_DomainParticipantFactoryQos** \*self)  
*Prints this **DDS\_DomainParticipantFactoryQos** (p. 1485) to stdout.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos\_to\_string** (const struct **DDS\_DomainParticipantFactoryQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)  
*Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (const struct **DDS\_DomainParticipantFactoryQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_DomainParticipantFactoryQos** \*base, const struct **DDS\_QosPrintFormat** \*format)  
*Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 1485).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos\_initialize** (struct **DDS\_DomainParticipantFactoryQos** \*self)  
*Initializer for new QoS instances.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactoryQos\_finalize** (struct **DDS\_DomainParticipantFactoryQos** \*self)

*<<extension>> (p. 817) Gets the DDS\_DomainParticipantQos (p. 1490) values associated with the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_publisher\_qos\_from\_profile** ( **DDS\_DomainParticipantFactory** \*self, **struct DDS\_PublisherQos** \*qos, **const char** \*library\_name, **const char** \*profile\_name)  
*<<extension>> (p. 817) Gets the DDS\_PublisherQos (p. 1661) values associated with the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_subscriber\_qos\_from\_profile** ( **DDS\_DomainParticipantFactory** \*self, **struct DDS\_SubscriberQos** \*qos, **const char** \*library\_name, **const char** \*profile\_name)  
*<<extension>> (p. 817) Gets the DDS\_SubscriberQos (p. 1746) values associated with the input XML QoS profile.*

- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_datareader\_qos\_from\_profile** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_DataReaderQos** \*qos, const char \*library\_name, const char \*profile\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_DataReaderQos** (p. 1390) values associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_datareader\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_DataReaderQos** \*qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_DataReaderQos** (p. 1390) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_datawriter\_qos\_from\_profile** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_DataWriterQos** \*qos, const char \*library\_name, const char \*profile\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_DataWriterQos** (p. 1438) values associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_datawriter\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_DataWriterQos** \*qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_DataWriterQos** (p. 1438) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_topic\_qos\_from\_profile** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_TopicQos** \*qos, const char \*library\_name, const char \*profile\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_TopicQos** (p. 1778) values associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_topic\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_TopicQos** \*qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)
 

*<<extension>>* (p. 817) Gets the **DDS\_TopicQos** (p. 1778) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_qos\_profile\_libraries** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_StringSeq** \*library\_names)
 

*<<extension>>* (p. 817) Gets the names of all XML QoS profile libraries associated with the **DDS\_DomainParticipantFactory** (p. 28)
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_qos\_profiles** ( **DDS\_DomainParticipantFactory** \*self, struct **DDS\_StringSeq** \*profile\_names, const char \*library\_name)
 

*<<extension>>* (p. 817) Gets the names of all XML QoS profiles associated with the input XML QoS profile library.
- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_unregister\_thread** ( **DDS\_DomainParticipantFactory** \*self)
 

*<<extension>>* (p. 817) Allows the user to release thread specific resources kept by the middleware.
- **const DDS\_TypeCode \* DDS\_DomainParticipantFactory\_get\_typecode\_from\_config** ( **DDS\_DomainParticipantFactory** \*self, const char \*type\_name)
 

*<<extension>>* (p. 817) Gets a **DDS\_TypeCode** (p. 1806) from a definition provided in an XML configuration file.
- **DDS\_DomainParticipant \* DDS\_DomainParticipantFactory\_create\_participant\_from\_config** ( **DDS\_DomainParticipantFactory** \*self, const char \*configuration\_name)
 

*<<extension>>* (p. 817) Creates a **DDS\_DomainParticipant** (p. 72) given its configuration name from a description provided in an XML configuration file.
- **DDS\_DomainParticipant \* DDS\_DomainParticipantFactory\_create\_participant\_from\_config\_w\_params** ( **DDS\_DomainParticipantFactory** \*self, const char \*configuration\_name, const struct **DDS\_DomainParticipantConfigParams\_t** \*params)
 

*<<extension>>* (p. 817) Creates a **DDS\_DomainParticipant** (p. 72) given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.
- **DDS\_DomainParticipant \* DDS\_DomainParticipantFactory\_lookup\_participant\_by\_name** ( **DDS\_DomainParticipantFactory** \*self, const char \*participant\_name)

<<extension>> (p. 817) Looks up a **DDS\_DomainParticipant** (p. 72) by its entity name in the **DDS\_DomainParticipantFactory** (p. 28).

- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_register\_type\_support** (**DDS\_DomainParticipantFactory** \*self, **DDS\_DomainParticipantFactory\_RegisterTypeFunction** register\_type\_fcn, const char \*type\_name)

<<extension>> (p. 817) Registers a **DDS\_TypeSupport** (p. 210) with the **DDS\_DomainParticipantFactory** (p. 28) to enable automatic registration if the corresponding type, should it be needed by a **DDS\_DomainParticipant** (p. 72).

- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_get\_participants** (**DDS\_DomainParticipantFactory** \*self, struct **DDS\_DomainParticipantSeq** \*participants)

<<extension>> (p. 817) Allows the application to access all the participants the **DomainParticipantFactory** has.

- **DDS\_ReturnCode\_t DDS\_DomainParticipantFactory\_set\_thread\_factory** (**DDS\_DomainParticipantFactory** \*self, const struct **DDS\_ThreadFactory** \*thread\_factory)

<<extension>> (p. 817) Sets a **DDS\_ThreadFactory** (p. 1763) in the **DDS\_DomainParticipantFactory** (p. 28) that will be used to create the internal threads of the DDS middleware.

## Variables

- const struct **DDS\_DomainParticipantQos DDS\_PARTICIPANT\_QOS\_DEFAULT**  
Special value for creating a **DomainParticipant** with default QoS.
- const struct **DDS\_DomainParticipantConfigParams\_t DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT**  
Special value for creating a **DDS\_DomainParticipant** (p. 72) from configuration using default parameters.

### 4.3.1 Detailed Description

**DDS\_DomainParticipantFactory** (p. 28) entity and associated elements

### 4.3.2 Macro Definition Documentation

#### 4.3.2.1 DDS\_DomainParticipantFactoryQos\_INITIALIZER

```
#define DDS_DomainParticipantFactoryQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_DomainParticipantFactoryQos** (p. 1485) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DomainParticipantFactoryQos myQos = DDS_DomainParticipantFactoryQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipantFactory\_get\_qos** (p. 41); that function should be called subsequently to setting the QoS. **DDS\_DomainParticipantFactoryQos\_finalize** (p. 32) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_DomainParticipantFactoryQos myQos = DDS_DomainParticipantFactoryQos_INITIALIZER;
```

```
DDS_DomainParticipantFactory_get_qos(myFactory, &myQos);
```

```
DDS_DomainParticipantFactory_set_qos(myFactory, &myQos);
```

```
DDS_DomainParticipantFactory_finalize(myFactory, &myQos);
```

See also

**DDS\_DomainParticipantFactory\_get\_qos** (p. 41)

**DDS\_DomainParticipantFactoryQos\_finalize** (p. 32)

### 4.3.2.2 DDS\_TheParticipantFactory

```
#define DDS_TheParticipantFactory DDS_DomainParticipantFactory_get_instance()
```

Can be used as an alias for the singleton factory returned by the operation **DDS\_DomainParticipantFactory\_get\_instance** (p. 34).

See also

**DDS\_DomainParticipantFactory\_get\_instance** (p. 34)

Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

## 4.3.3 Typedef Documentation

### 4.3.3.1 DDS\_DomainParticipantFactory

```
typedef struct DDS_DomainParticipantFactoryImpl DDS_DomainParticipantFactory
```

<<**singleton**>> (p. 818) <<**interface**>> (p. 818) Allows creation and destruction of **DDS\_DomainParticipant** (p. 72) objects.

The sole purpose of this class is to allow the creation and destruction of **DDS\_DomainParticipant** (p. 72) objects. This class itself is a <<**singleton**>> (p. 818), and accessed via the `get_instance()` function, and destroyed with `finalize_instance()` function.

A single application can participate in multiple domains by instantiating multiple **DDS\_DomainParticipant** (p. 72) objects.

An application may even instantiate multiple participants in the same domain. Participants in the same domain exchange data in the same way regardless of whether they are in the same application or different applications or on the same node or different nodes; their location is transparent.

There are two important caveats:

- When there are multiple participants on the same node (in the same application or different applications) in the same domain, the application(s) must make sure that the participants do not try to bind to the same port numbers. You must disambiguate between the participants by setting a participant ID for each participant (**DDS\_WireProtocolQosPolicy::participant\_id** (p. 1830)). The port numbers used by a participant are calculated based on both the participant index and the domain ID, so if all participants on the same node have different participant indexes, they can coexist in the same domain.
- You cannot mix entities from different participants. For example, you cannot delete a topic on a different participant than you created it from, and you cannot ask a subscriber to create a reader for a topic created from a participant different than the subscriber's own participant. (Note that it is permissible for an application built on top of RTI Connext to know about entities from different participants. For example, an application could keep references to a reader from one domain and a writer from another and then bridge the domains by writing the data received in the reader callback.)

See also

**DDS\_DomainParticipant** (p. 72)

#### 4.3.3.2 DDS\_DomainParticipantFactory\_RegisterTypeFunction

```
typedef DDS_ReturnCode_t (* DDS_DomainParticipantFactory_RegisterTypeFunction) ( DDS_DomainParticipant *participant, const char *type_name)
```

Prototype of a register type function.

Parameters

<i>participant</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DomainParticipant</b> (p. 72) participant the type is registered with.
<i>type_name</i>	<< <i>in</i> >> (p. 818) Name the type is registered with.

Returns

One of the **Standard Return Codes** (p. 1024)

### 4.3.4 Function Documentation

#### 4.3.4.1 DDS\_DomainParticipantFactoryQos\_equals()

```
DDS_Boolean DDS_DomainParticipantFactoryQos_equals (
    const struct DDS_DomainParticipantFactoryQos * self,
    const struct DDS_DomainParticipantFactoryQos * other )
```

Compares two **DDS\_DomainParticipantFactoryQos** (p. 1485) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This DomainParticipantFactoryQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other DomainParticipantFactoryQos to be compared with this DomainParticipantFactoryQos.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.3.4.2 DDS\_DomainParticipantFactoryQos\_print()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_print (
    const struct DDS_DomainParticipantFactoryQos * self )
```

Prints this **DDS\_DomainParticipantFactoryQos** (p. 1485) to stdout.

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 1485) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (p. 31). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## 4.3.4.3 DDS\_DomainParticipantFactoryQos\_to\_string()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string (
    const struct DDS_DomainParticipantFactoryQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 1485) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (p. 31). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantFactoryQos** (p. 1485) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 1485). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## See also

**DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (p. 31)

## 4.3.4.4 DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_to_string_w_params (
    const struct DDS_DomainParticipantFactoryQos * self,
    char * string,
    DDS_UnsignedLong * string_size,
    const struct DDS_DomainParticipantFactoryQos * base,
    const struct DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS\_DomainParticipantFactoryQos** (p. 1485).

Only the differences between this **DDS\_DomainParticipantFactoryQos** (p. 1485) and the **DDS\_DomainParticipantFactoryQos** (p. 1485) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_DOMAINPARTICIPANTFACTORY\_QOS\_PRINT\_ALL** (p. 157) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantFactoryQos** (p. 1485) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantFactoryQos</b> (p. 1485). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DomainParticipantFactoryQos</b> (p. 1485) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.3.4.5 DDS\_DomainParticipantFactoryQos\_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_initialize (
    struct DDS_DomainParticipantFactoryQos * self )
```

Initializer for new QoS instances.

New **DDS\_DomainParticipantFactoryQos** (p. 1485) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_DomainParticipantFactory\_get\_qos** (p. 41); that function should be called subsequently to setting the QoS of an existing factory. **DDS\_DomainParticipantFactoryQos\_finalize** (p. 32) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DomainParticipantFactoryQos *myQos = malloc(sizeof(struct DDS_DomainParticipantFactoryQos));
DDS_DomainParticipantQos_initialize(myQos);
DDS_DomainParticipantFactory_get_qos(myFactory, myQos);
DDS_DomainParticipantFactory_set_qos(myFactory, myQos);
DDS_DomainParticipantFactoryQos_finalize(myQos);
free(myQos);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipantFactory\_get\_qos** (p. 41)

**DDS\_DomainParticipantFactoryQos\_finalize** (p. 32)

#### 4.3.4.6 DDS\_DomainParticipantFactoryQos\_finalize()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_finalize (
    struct DDS_DomainParticipantFactoryQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS\_DomainParticipantFactoryQos** (p. 1485).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DomainParticipantFactoryQos\_INITIALIZER** (p. 27)

**DDS\_DomainParticipantFactoryQos\_initialize** (p. 32)

#### 4.3.4.7 DDS\_DomainParticipantFactoryQos\_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos_copy (
    struct DDS_DomainParticipantFactoryQos * self,
    const struct DDS_DomainParticipantFactoryQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_DomainParticipantFactoryQos** (p. 1485) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). QoS to be copied from.

#### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DomainParticipantFactoryQos\_INITIALIZER** (p. 27)

**DDS\_DomainParticipantFactoryQos\_initialize** (p. 32)

**DDS\_DomainParticipantFactoryQos\_finalize** (p. 32)

#### 4.3.4.8 DDS\_DomainParticipantFactory\_get\_instance()

```
DDS_DomainParticipantFactory * DDS_DomainParticipantFactory_get_instance (
    void )
```

Gets the singleton instance of this class.

**DDS\_TheParticipantFactory** (p. 28) can be used as an alias for the singleton factory returned by this operation.

Returns

The singleton **DDS\_DomainParticipantFactory** (p. 28) instance.

MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this function while another thread may be simultaneously calling **DDS\_DomainParticipantFactory\_get\_instance** (p. 34), **DDS\_DomainParticipantFactory\_finalize\_instance** (p. 34), **DDS\_TypeCodeFactory\_get\_instance** (p. 285), **DDS\_GuardCondition\_new** (p. 1174), **DDS\_WaitSet\_new** (p. 1177), **DDS\_WaitSet\_new\_ex** (p. 1178), **DDS\_GuardCondition\_delete** (p. 1175), **DDS\_WaitSet\_delete** (p. 1178), **DDS\_TypeCodeFactory\_finalize\_instance** (p. 285), **NDDS\_Utility\_enable\_network\_capture**, or **NDDS\_Utility\_disable\_network\_capture**.

See also

**DDS\_TheParticipantFactory** (p. 28)

#### 4.3.4.9 DDS\_DomainParticipantFactory\_finalize\_instance()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_finalize_instance (
    void )
```

<<**extension**>> (p. 817) Destroys the singleton instance of this class.

Only necessary to explicitly reclaim resources used by the participant factory singleton. Note that on many OSs, these resources are automatically reclaimed by the OS when the program terminates. However, some memory-check tools still flag these as unreclaimed. So this function provides a way to clean up memory used by the participant factory.

**Precondition**

All participants created from the factory have been deleted.

**Postcondition**

All resources belonging to the factory have been reclaimed. Another call to **DDS\_DomainParticipantFactory\_↔get\_instance** (p. 34) will return a new lifecycle of the singleton.

**MT Safety:**

UNSAFE. In VxWorks, it is unsafe to call this function while another thread may be simultaneously calling **DDS\_DomainParticipantFactory\_get\_instance** (p. 34), **DDS\_DomainParticipantFactory\_finalize\_instance** (p. 34), **DDS\_TypeCodeFactory\_get\_instance** (p. 285), **DDS\_GuardCondition\_new** (p. 1174), **DDS\_WaitSet\_↔\_new** (p. 1177), **DDS\_WaitSet\_new\_ex** (p. 1178), **DDS\_GuardCondition\_delete** (p. 1175), **DDS\_WaitSet\_↔\_delete** (p. 1178), **DDS\_TypeCodeFactory\_finalize\_instance** (p. 285), **NDDS\_Utility\_enable\_network\_capture**, or **NDDS\_Utility\_disable\_network\_capture**.

**Returns**

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

**See also**

**DDS\_TheParticipantFactory** (p. 28)

**4.3.4.10 DDS\_DomainParticipantFactory\_set\_default\_participant\_qos()**

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos (
    DDS_DomainParticipantFactory * self,
    const struct DDS_DomainParticipantQos * qos )
```

Sets the default **DDS\_DomainParticipantQos** (p. 1490) values for this domain participant factory.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) Qos to be filled up. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 60) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipantFactory_set_default_participant_qos</b> (p. 35) had never been called. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60)

**DDS\_DomainParticipantFactory\_create\_participant** (p. 37)

#### 4.3.4.11 DDS\_DomainParticipantFactory\_set\_default\_participant\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_participant_qos_with_profile (
    DDS_DomainParticipantFactory * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Sets the default **DDS\_DomainParticipantQos** (p. 1490) values for this domain participant factory based on the input XML QoS profile.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

This default value will be used for newly created **DDS\_DomainParticipant** (p. 72) if **DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60) is specified as the `qos` parameter when **DDS\_DomainParticipantFactory\_create\_participant** (p. 37) is called.

## Precondition

The **DDS\_DomainParticipantQos** (p. 1490) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a domain participant factory while another thread may be simultaneously calling **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos** (p. 35)

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60)

**DDS\_DomainParticipantFactory\_create\_participant\_with\_profile** (p. 39)

## 4.3.4.12 DDS\_DomainParticipantFactory\_get\_default\_participant\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_default_participant_qos (
    DDS_DomainParticipantFactory * self,
    struct DDS_DomainParticipantQos * qos )
```

Initializes the **DDS\_DomainParticipantQos** (p. 1490) instance with default values.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos** (p. 35), or **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos\_with\_profile** (p. 36), or else, if the call was never made, the default values listed in **DDS\_DomainParticipantQos** (p. 1490).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>out</i> >> (p. 818) the domain participant's QoS Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60)

**DDS\_DomainParticipantFactory\_create\_participant** (p. 37)

## 4.3.4.13 DDS\_DomainParticipantFactory\_create\_participant()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant (
    DDS_DomainParticipantFactory * self,
```

```

    DDS_DomainId_t domainId,
    const struct DDS_DomainParticipantQos * qos,
    const struct DDS_DomainParticipantListener * listener,
    DDS_StatusMask mask )

```

Creates a new **DDS\_DomainParticipant** (p. 72) object.

#### Precondition

The specified QoS policies must be consistent or the operation will fail and no **DDS\_DomainParticipant** (p. 72) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS\_WireProtocolQoSPolicy** (p. 1827)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

#### Precondition

If `listener` is specified, none of the listener callback functions can be NULL.

#### MT Safety:

Safe.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>domainId</i>	<< <i>in</i> >> (p. 818) ID of the domain that the application intends to join. <b>[range]</b> [ $\geq 0$ ], and does not violate guidelines stated in <b>DDS_RtpsWellKnownPorts_t</b> (p. 1714).
<i>qos</i>	<< <i>in</i> >> (p. 818) the DomainParticipant's QoS. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 60) can be used to indicate that the <b>DDS_DomainParticipant</b> (p. 72) should be created with the default <b>DDS_DomainParticipantQos</b> (p. 1490) set in the <b>DDS_DomainParticipantFactory</b> (p. 28). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818) the domain participant's listener.
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

#### Returns

domain participant or NULL on failure

See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_DomainParticipantQos** (p. 1490) for rules on consistency among QoS

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60)

**NDDS\_DISCOVERY\_PEERS** (p. 1152)

**DDS\_DomainParticipantFactory\_create\_participant\_with\_profile** (p. 39)

**DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37)

**DDS\_DomainParticipant\_set\_listener** (p. 151)

Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

#### 4.3.4.14 DDS\_DomainParticipantFactory\_create\_participant\_with\_profile()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_with_profile (
    DDS_DomainParticipantFactory * self,
    DDS_DomainId_t domainId,
    const char * library_name,
    const char * profile_name,
    const struct DDS_DomainParticipantListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a new **DDS\_DomainParticipant** (p. 72) object using the **DDS\_DomainParticipantQos** (p. 1490) associated with the input XML QoS profile.

Precondition

The **DDS\_DomainParticipantQos** (p. 1490) in the input profile must be consistent, or the operation will fail and no **DDS\_DomainParticipant** (p. 72) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS\_WireProtocolQosPolicy** (p. 1827)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

Precondition

if *listener* is specified, none of the listener callback functions can be NULL.

MT Safety:

Safe.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>domainId</i>	<< <i>in</i> >> (p. 818) ID of the domain that the application intends to join. [ <b>range</b> ] [ $\geq 0$ ], and does not violate guidelines stated in <b>DDS_RtpsWellKnownPorts_t</b> (p. 1714).
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).
<i>listener</i>	<< <i>in</i> >> (p. 818) the DomainParticipant's listener.
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

domain participant or NULL on failure

## See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation  
**DDS\_DomainParticipantQos** (p. 1490) for rules on consistency among QoS  
**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60)  
**NDDS\_DISCOVERY\_PEERS** (p. 1152)  
**DDS\_DomainParticipantFactory\_create\_participant()** (p. 37)  
**DDS\_DomainParticipantFactory\_get\_default\_participant\_qos()** (p. 37)  
**DDS\_DomainParticipant\_set\_listener()** (p. 151)

4.3.4.15 **DDS\_DomainParticipantFactory\_delete\_participant()**

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_delete_participant (
    DDS_DomainParticipantFactory * self,
    DDS_DomainParticipant * a_participant )
```

Deletes an existing **DDS\_DomainParticipant** (p. 72).

## Precondition

All domain entities belonging to the participant must have already been deleted. Otherwise it fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Postcondition

Listener installed on the **DDS\_DomainParticipant** (p. 72) will not be called after this function returns successfully.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_participant</i>	<< <i>in</i> >> (p. 818) <b>DDS_DomainParticipant</b> (p. 72) to be deleted.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

## 4.3.4.16 DDS\_DomainParticipantFactory\_lookup\_participant()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_lookup_participant (
    DDS_DomainParticipantFactory * self,
    DDS_DomainId_t domainId )
```

Locates an existing **DDS\_DomainParticipant** (p. 72).

If no such **DDS\_DomainParticipant** (p. 72) exists, the operation will return NULL value.

If multiple **DDS\_DomainParticipant** (p. 72) entities belonging to that domainId exist, then the operation will return one of them. It is not specified which one.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>domainId</i>	<< <i>in</i> >> (p. 818) ID of the domain participant to lookup.

## Returns

domain participant if it exists, or NULL

## 4.3.4.17 DDS\_DomainParticipantFactory\_get\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos (
    DDS_DomainParticipantFactory * self,
    struct DDS_DomainParticipantFactoryQos * qos )
```

Gets the value for participant factory QoS.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) QoS to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.3.4.18 DDS\_DomainParticipantFactory\_set\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_qos (
    DDS_DomainParticipantFactory * self,
    const struct DDS_DomainParticipantFactoryQos * qos )
```

Sets the value for a participant factory QoS.

The **DDS\_DomainParticipantFactoryQos::entity\_factory** (p. 1486) can be changed. The other policies are immutable.

Note that despite having QoS, the **DDS\_DomainParticipantFactory** (p. 28) is not an **DDS\_Entity** (p. 1160).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Set of policies to be applied to <b>DDS_DomainParticipantFactory</b> (p. 28). Policies must be consistent. Immutable policies can only be changed before calling any other RTI Connex functions except for <b>DDS_DomainParticipantFactory_get_qos</b> (p. 41) Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) if immutable policy is changed, or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025) if policies are inconsistent

## See also

**DDS\_DomainParticipantFactoryQos** (p. 1485) for rules on consistency among QoS

## 4.3.4.19 DDS\_DomainParticipantFactory\_load\_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_load_profiles (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Loads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDS\_DomainParticipant** (p. 72) is created or explicitly, after a call to this function.

This has the same effect as **DDS\_DomainParticipantFactory\_reload\_profiles()** (p. 43).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_ProfileQosPolicy** (p. 1642)

#### 4.3.4.20 DDS\_DomainParticipantFactory\_reload\_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_reload_profiles (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Reloads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDS\_DomainParticipant** (p. 72) is created or explicitly, after a call to this function.

This has the same effect as **DDS\_DomainParticipantFactory\_load\_profiles()** (p. 42).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_ProfileQosPolicy** (p. 1642)

#### 4.3.4.21 DDS\_DomainParticipantFactory\_unload\_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_unload_profiles (
    DDS_DomainParticipantFactory * self )
```

<<**extension**>> (p. 817) Unloads the XML QoS profiles.

The resources associated with the XML QoS profiles are freed. Any reference to the profiles after calling this function will fail with an error.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_ProfileQosPolicy** (p. 1642)

#### 4.3.4.22 DDS\_DomainParticipantFactory\_set\_default\_library()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_library (
    DDS_DomainParticipantFactory * self,
    const char * library_name )
```

<<**extension**>> (p. 817) Sets the default XML library for a **DDS\_DomainParticipantFactory** (p. 28).

Any API requiring a `library_name` as a parameter can use NULL to refer to the default library set with this function.

Note: if the library set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS\_DomainParticipantFactoryQos::profile** (p. 1486)) the default library will be set to the last library containing a profile with the attribute `is_default_qos=true` or NULL no such library exists.

##### See also

**DDS\_DomainParticipantFactory\_set\_default\_profile** (p. 45) for more information.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name. If <code>library_name</code> is NULL any previous default is unset.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipantFactory\_get\_default\_library** (p. 45)

## 4.3.4.23 DDS\_DomainParticipantFactory\_set\_default\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_default_profile (
    DDS_DomainParticipantFactory * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Sets the default XML profile for a **DDS\_DomainParticipantFactory** (p. 28).

This function specifies the profile that will be used as the default the next time a default DomainParticipantFactory profile is needed during a call to a DomainParticipantFactory function. When calling a **DDS\_DomainParticipantFactory** (p. 28) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

This function does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos\_with\_profile** (p. 36) (you may pass in NULL after having called `set_default_profile()`).

Note: if the profile set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS\_DomainParticipantFactoryQos::profile** (p. 1486)) the default profile will be set to the last one marked with the attribute `is_default_qos=true` or NULL no such profile exists.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 818) The profile name. If <code>profile_name</code> is NULL any previous default is unset.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipantFactory\_get\_default\_profile** (p. 46)

**DDS\_DomainParticipantFactory\_get\_default\_profile\_library** (p. 47)

#### 4.3.4.24 DDS\_DomainParticipantFactory\_get\_default\_library()

```
const char * DDS_DomainParticipantFactory_get_default_library (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Gets the default XML library associated with a **DDS\_DomainParticipantFactory** (p. 28).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The returned library name is determined as follows:

- If it was previously set with **DDS\_DomainParticipantFactory\_set\_default\_library** (p. 44), this function returns that library name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the library where the last one is contained.
- Otherwise, this function returns NULL.

##### See also

**DDS\_DomainParticipantFactory\_set\_default\_library** (p. 44)

#### 4.3.4.25 DDS\_DomainParticipantFactory\_get\_default\_profile()

```
const char * DDS_DomainParticipantFactory_get_default_profile (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Gets the default XML profile associated with a **DDS\_DomainParticipantFactory** (p. 28).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The returned profile name is determined as follows:

- If it was previously set with **DDS\_DomainParticipantFactory\_set\_default\_profile** (p. 45), this function returns that profile name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the name of one of them
- Otherwise, this function returns NULL.

See also

**DDS\_DomainParticipantFactory\_set\_default\_profile** (p. 45)

#### 4.3.4.26 DDS\_DomainParticipantFactory\_get\_default\_profile\_library()

```
const char * DDS_DomainParticipantFactory_get_default_profile_library (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Gets the library where the default XML profile is contained for a **DDS\_DomainParticipantFactory** (p. 28).

The default profile library is automatically set when **DDS\_DomainParticipantFactory\_set\_default\_profile** (p. 45) is called.

This library can be different than the **DDS\_DomainParticipantFactory** (p. 28) default library (see **DDS\_DomainParticipantFactory\_get\_default\_library** (p. 45)).

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

Returns

The default profile library for the profile returned by **DDS\_DomainParticipantFactory\_get\_default\_profile** (p. 46), or NULL if that profile is NULL.

See also

**DDS\_DomainParticipantFactory\_get\_default\_profile** (p. 46)

#### 4.3.4.27 DDS\_DomainParticipantFactory\_get\_participant\_factory\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_factory_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_DomainParticipantFactoryQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Gets the **DDS\_DomainParticipantFactoryQos** (p. 1485) values associated with the input XML QoS profile.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024)

4.3.4.28 **DDS\_DomainParticipantFactory\_get\_participant\_qos\_from\_profile()**

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participant_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_DomainParticipantQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_DomainParticipantQos** (p. 1490) values associated with the input XML QoS profile.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.3.4.29 DDS\_DomainParticipantFactory\_get\_publisher\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_publisher_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_PublisherQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Gets the **DDS\_PublisherQos** (p. 1661) values associated with the input XML QoS profile.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>out</i> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.3.4.30 DDS\_DomainParticipantFactory\_get\_subscriber\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_subscriber_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_SubscriberQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Gets the **DDS\_SubscriberQos** (p. 1746) values associated with the input XML QoS profile.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>out</i> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.31 DDS\_DomainParticipantFactory\_get\_datareader\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_DataReaderQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_DataReaderQos** (p. 1390) values associated with the input XML QoS profile.

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.32 DDS\_DomainParticipantFactory\_get\_datareader\_qos\_from\_profile\_w\_topic\_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name (
    DDS_DomainParticipantFactory * self,
    struct DDS_DataReaderQos * qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_DataReaderQos** (p. 1390) values associated with the input XML QoS profile while applying topic filters to the input topic name.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>out</i> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connex will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.3.4.33 DDS\_DomainParticipantFactory\_get\_datawriter\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_DataWriterQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Gets the **DDS\_DataWriterQos** (p. 1438) values associated with the input XML QoS profile.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>out</i> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.34 DDS\_DomainParticipantFactory\_get\_datawriter\_qos\_from\_profile\_w\_topic\_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name (
    DDS_DomainParticipantFactory * self,
    struct DDS_DataWriterQos * qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_DataWriterQos** (p. 1438) values associated with the input XML QoS profile while applying topic filters to the input topic name.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).
<i>topic_name</i>	<< <b>in</b> >> (p. 818) Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connexnt will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.35 DDS\_DomainParticipantFactory\_get\_topic\_qos\_from\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile (
    DDS_DomainParticipantFactory * self,
    struct DDS_TopicQos * qos,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_TopicQos** (p. 1778) values associated with the input XML QoS profile.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.36 DDS\_DomainParticipantFactory\_get\_topic\_qos\_from\_profile\_w\_topic\_name()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name (
    DDS_DomainParticipantFactory * self,
    struct DDS_TopicQos * qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name )
```

<<**extension**>> (p. 817) Gets the **DDS\_TopicQos** (p. 1778) values associated with the input XML QoS profile while applying topic filters to the input topic name.

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>out</b> >> (p. 818) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).
<i>topic_name</i>	<< <b>in</b> >> (p. 818) Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connexx will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.3.4.37 DDS\_DomainParticipantFactory\_get\_qos\_profile\_libraries()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profile_libraries (
    DDS_DomainParticipantFactory * self,
    struct DDS_StringSeq * library_names )
```

<<**extension**>> (p. 817) Gets the names of all XML QoS profile libraries associated with the **DDS\_DomainParticipantFactory** (p. 28)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_names</i>	<< <i>out</i> >> (p. 818) <b>DDS_StringSeq</b> (p. 1741) to be filled with names of XML QoS profile libraries. Cannot be NULL.

## 4.3.4.38 DDS\_DomainParticipantFactory\_get\_qos\_profiles()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_qos_profiles (
    DDS_DomainParticipantFactory * self,
    struct DDS_StringSeq * profile_names,
    const char * library_name )
```

<<*extension*>> (p. 817) Gets the names of all XML QoS profiles associated with the input XML QoS profile library.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>profile_names</i>	<< <i>out</i> >> (p. 818) <b>DDS_StringSeq</b> (p. 1741) to be filled with names of XML QoS profiles. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexet will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).

## 4.3.4.39 DDS\_DomainParticipantFactory\_unregister\_thread()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_unregister_thread (
    DDS_DomainParticipantFactory * self )
```

<<*extension*>> (p. 817) Allows the user to release thread specific resources kept by the middleware.

This function should be called by the user right before exiting a thread where DDS API were used. In this way the middleware will be able to free all the resources related to this specific thread. The best approach is to call the function during the thread deletion after all the DDS related API have have been called.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.3.4.40 DDS\_DomainParticipantFactory\_get\_typecode\_from\_config()

```
const DDS_TypeCode * DDS_DomainParticipantFactory_get_typecode_from_config (
    DDS_DomainParticipantFactory * self,
    const char * type_name )
```

<<**extension**>> (p. 817) Gets a **DDS\_TypeCode** (p. 1806) from a definition provided in an XML configuration file.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>type_name</i>	<< <b>in</b> >> (p. 818) Name of the type in the configuration file.

## Returns

The **DDS\_TypeCode** (p. 1806) or NULL if a type with that name doesn't exist or an error occurs.

## 4.3.4.41 DDS\_DomainParticipantFactory\_create\_participant\_from\_config()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_from_config (
    DDS_DomainParticipantFactory * self,
    const char * configuration_name )
```

<<**extension**>> (p. 817) Creates a **DDS\_DomainParticipant** (p. 72) given its configuration name from a description provided in an XML configuration file.

This operation creates a **DDS\_DomainParticipant** (p. 72) registering all the necessary data types and creating all the contained entities (**DDS\_Topic** (p. 172), **DDS\_Publisher** (p. 436), **DDS\_Subscriber** (p. 565), **DDS\_DataWriter** (p. 478), **DDS\_DataReader** (p. 608)) from a description given in an XML configuration file.

The configuration name is the fully qualified name of the XML participant object, consisting of the name of the participant library plus the name of participant configuration.

For example the name "MyParticipantLibrary::PublicationParticipant" can be used to create the domain participant from the description in an XML file with contents shown in the snippet below:

```
<participant_library name="MyParticipantLibrary">
    <domain_participant name="PublicationParticipant" domain_ref="MyDomainLibrary::HelloWorldDomain">
        <publisher name="MyPublisher">
            <data_writer name="HelloWorldWriter" topic_ref="HelloWorldTopic"/>
        </publisher>
    </domain_participant>
</participant_library>
```

```

    </publisher>
</domain_participant>
</participant_library>

```

The entities belonging to the newly created **DDS\_DomainParticipant** (p. 72) can be retrieved with the help of lookup operations such as: **DDS\_DomainParticipant\_lookup\_datareader\_by\_name** (p. 156).

This operation is equivalent to call **DDS\_DomainParticipantFactory\_create\_participant\_from\_config\_w\_params** (p. 56) passing **DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT** (p. 61) as parameters.

#### MT Safety:

Safe.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>configuration_name</i>	<< <i>in</i> >> (p. 818) Name of the participant configuration in the XML file.

#### Returns

The created **DDS\_DomainParticipant** (p. 72) or NULL on error.

#### See also

**DDS\_DomainParticipantFactory\_lookup\_participant\_by\_name** (p. 57)  
**DDS\_DomainParticipant\_lookup\_topicdescription** (p. 124)  
**DDS\_DomainParticipant\_lookup\_publisher\_by\_name** (p. 153)  
**DDS\_DomainParticipant\_lookup\_subscriber\_by\_name** (p. 154)  
**DDS\_DomainParticipant\_lookup\_datareader\_by\_name** (p. 156)  
**DDS\_DomainParticipant\_lookup\_datawriter\_by\_name** (p. 155)  
**DDS\_Publisher\_lookup\_datawriter\_by\_name** (p. 462)  
**DDS\_Subscriber\_lookup\_datareader\_by\_name** (p. 591)

#### 4.3.4.42 DDS\_DomainParticipantFactory\_create\_participant\_from\_config\_w\_params()

```

DDS_DomainParticipant * DDS_DomainParticipantFactory_create_participant_from_config_w_params (
    DDS_DomainParticipantFactory * self,
    const char * configuration_name,
    const struct DDS_DomainParticipantConfigParams_t * params )

```

<<*extension*>> (p. 817) Creates a **DDS\_DomainParticipant** (p. 72) given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.

The operation will create a **DDS\_DomainParticipant** (p. 72) the same way specified in **DDS\_DomainParticipantFactory\_create\_participant\_from\_config** (p. 55).

In addition, this operation allows overriding the domain ID, participant name, and entities QoS specified in the configuration.

## MT Safety:

Safe.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>configuration_name</i>	<< <i>in</i> >> (p. 818) Name of the participant configuration in the XML file.
<i>params</i>	<< <i>in</i> >> (p. 818) input parameters that allow changing some properties of the configuration referred to by <i>configuration_name</i> .

## Returns

The created **DDS\_DomainParticipant** (p. 72) or NULL on error.

## 4.3.4.43 DDS\_DomainParticipantFactory\_lookup\_participant\_by\_name()

```
DDS_DomainParticipant * DDS_DomainParticipantFactory_lookup_participant_by_name (
    DDS_DomainParticipantFactory * self,
    const char * participant_name )
```

<<*extension*>> (p. 817) Looks up a **DDS\_DomainParticipant** (p. 72) by its entity name in the **DDS\_DomainParticipantFactory** (p. 28).

Every **DDS\_DomainParticipant** (p. 72) in the system has an entity name which is configured and stored in the Entity↔ Name policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves a **DDS\_DomainParticipant** (p. 72) within the **DDS\_DomainParticipantFactory** (p. 28) given the entity's name. If there are several **DDS\_DomainParticipant** (p. 72) with the same name within the **DDS\_DomainParticipantFactory** (p. 28) this function returns the first matching occurrence.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_name</i>	<< <i>in</i> >> (p. 818) Entity name of the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.

## Returns

The first **DDS\_DomainParticipant** (p. 72) found with the specified name or NULL if it is not found.

## 4.3.4.44 DDS\_DomainParticipantFactory\_register\_type\_support()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_register_type_support (
    DDS_DomainParticipantFactory * self,
```

```

DDS_DomainParticipantFactory_RegisterTypeFunction register_type_fcn,
const char * type_name )

```

<<*extension*>> (p. 817) Registers a **DDS\_TypeSupport** (p. 210) with the **DDS\_DomainParticipantFactory** (p. 28) to enable automatic registration if the corresponding type, should it be needed by a **DDS\_DomainParticipant** (p. 72).

Types referred by the **DDS\_Topic** (p. 172) entities within a **DDS\_DomainParticipant** (p. 72) must be registered with the **DDS\_DomainParticipant** (p. 72).

Type registration in a **DDS\_DomainParticipant** (p. 72) is performed by a call to the **FooTypeSupport\_register\_type** (p. 217) operation. This can be done directly from the application code or indirectly by the RTI Connex infrastructure as a result of parsing an XML configuration file that refers to that type.

The **DDS\_DomainParticipantFactory\_register\_type\_support** (p. 57) operation provides the **DDS\_DomainParticipantFactory** (p. 28) with the information it needs to automatically call the **FooTypeSupport\_register\_type** (p. 217) operation and register the corresponding type if the type is needed as a result of parsing an XML configuration file.

Automatic type registration while parsing XML files can also be done by the RTI Connex infrastructure based on the type description provided in the XML files. If the **DDS\_TypeSupport** (p. 210) has been registered with the **DDS\_DomainParticipantFactory** (p. 28) this definition takes precedence over the description of the type given in the XML file.

The **DDS\_DomainParticipantFactory\_register\_type\_support** (p. 57) operation receives a **FooTypeSupport\_register\_type** (p. 217) function as a parameter. This function is normally generated using `rtiddsgen` from a description of the corresponding type in IDL, XML, or XSD.

The typical workflow when using this function is as follows: Define the data-type in IDL (or XML, or XSD) in a file. E.g. `Foo.idl` Run `rtiddsgen` in that file to generate the TypeSupport files, for the desired programming language. E.g. in C++ `FooTypeSupport.h` `FooTypeSupport.cxx` Include the proper header file (e.g. `FooTypeSupport.h`) in your program and call **DDS\_DomainParticipantFactory\_register\_type\_support** (p. 57) passing the function that was generated by `rtiddsgen`. E.g. `FooTypeSupport::register_type` Include the TypeSupport source file in your project such that it is compiled and linked. E.g. `FooTypeSupport.cxx`

You may refer to the [Getting Started Guide](#) for additional details in this process.

Note that only one register function is allowed per registered type name.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>register_type_fcn</i>	<< <i>in</i> >> (p. 818) <b>DDS_DomainParticipantFactory_RegisterTypeFunction</b> (p. 29) to be used for registering the type with a <b>DDS_DomainParticipant</b> (p. 72).
<i>type_name</i>	<< <i>in</i> >> (p. 818) Name the type is registered with.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

TypeSupport

## 4.3.4.45 DDS\_DomainParticipantFactory\_get\_participants()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_get_participants (
    DDS_DomainParticipantFactory * self,
    struct DDS_DomainParticipantSeq * participants )
```

<<*extension*>> (p. 817) Allows the application to access all the participants the DomainParticipantFactory has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of participants, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

DomainParticipants are ordered in the output sequence from the most recently created to the oldest.

## MT Safety:

Safe.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participants</i>	<< <i>inout</i> >> (p. 818) a DomainParticipantSeq object where the set or list of participants will be returned

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## 4.3.4.46 DDS\_DomainParticipantFactory\_set\_thread\_factory()

```
DDS_ReturnCode_t DDS_DomainParticipantFactory_set_thread_factory (
    DDS_DomainParticipantFactory * self,
    const struct DDS_ThreadFactory * thread_factory )
```

<<*extension*>> (p. 817) Sets a **DDS\_ThreadFactory** (p. 1763) in the **DDS\_DomainParticipantFactory** (p. 28) that will be used to create the internal threads of the DDS middleware.

DDS threads are managed by the **DDS\_DomainParticipant** (p. 72), which is responsible for creating and deleting threads throughout its lifecycle. Some threads are created when the **DDS\_DomainParticipant** (p. 72) gets enabled (i.e., database, event, etc.) and others when special features are enabled (i.e., asynchronous publication thread).

DDS threads have **DDS\_DomainParticipant** (p. 72) scope. This means every DomainParticipant creates all the necessary threads to operate and each **DDS\_DomainParticipant** (p. 72) will create its own independent set of threads.

Each **DDS\_DomainParticipant** (p. 72) creates an independent set of DDS threads and will use the **DDS\_ThreadFactory** (p. 1763) that is held by the **DDS\_DomainParticipantFactory** (p. 28) at the time the DomainParticipant is created. A **DDS\_ThreadFactory** (p. 1763) is immutable from a **DDS\_DomainParticipant** (p. 72) point of view. This means that a **DDS\_DomainParticipant** (p. 72) will use throughout its lifecycle the same **DDS\_ThreadFactory** (p. 1763)

that was set when it was created, even if a new **DDS\_ThreadFactory** (p. 1763) is set in the **DDS\_DomainParticipantFactory** (p. 28) later. That is, if a new **DDS\_ThreadFactory** (p. 1763) is set, a previously created **DDS\_DomainParticipant** (p. 72) will not be affected.

ThreadFactory lifecycle: A **DDS\_ThreadFactory** (p. 1763) instance must be alive while there are DomainParticipants using it. A **DDS\_ThreadFactory** (p. 1763) instance can be deleted only after all DomainParticipants using it are deleted.

By default, the **DDS\_DomainParticipantFactory** (p. 28) has an internal **DDS\_ThreadFactory** (p. 1763) so threads are created automatically by the core product. These threads are usually created using the typical framework for the target platform (i.e., pthread for Linux systems).

#### MT Safety:

: Safe. Creation and deletion of a **DDS\_DomainParticipant** (p. 72) can occur concurrently with setting a **DDS\_ThreadFactory** (p. 1763).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>thread_factory</i>	<< <i>in</i> >> (p. 818) Instance of a <b>DDS_ThreadFactory</b> (p. 1763) to be used for creating the DDS threads. If null is specified, the current <b>DDS_ThreadFactory</b> (p. 1763) is removed and the internal default will be used.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_ThreadFactory** (p. 1763)

## 4.3.5 Variable Documentation

### 4.3.5.1 DDS\_PARTICIPANT\_QOS\_DEFAULT

```
const struct DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT [extern]
```

Special value for creating a DomainParticipant with default QoS.

When used in **DDS\_DomainParticipantFactory\_create\_participant** (p. 37), this special value is used to indicate that the **DDS\_DomainParticipant** (p. 72) should be created with the default **DDS\_DomainParticipant** (p. 72) QoS by means of the operation **DDS\_DomainParticipantFactory\_get\_default\_participant\_qos()** (p. 37) and using the resulting QoS to create the **DDS\_DomainParticipant** (p. 72).

When used in **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos** (p. 35), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos** (p. 35) operation had never been called.

When used in **DDS\_DomainParticipant\_set\_qos** (p. 148), this special value is used to indicate that the QoS of the **DDS\_DomainParticipant** (p. 72) should be changed to match the current default QoS set in the **DDS\_DomainParticipantFactory** (p. 28) that the **DDS\_DomainParticipant** (p. 72) belongs to.

RTI Connexx treats this special value as a constant.

### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values from the DomainParticipant factory; for this purpose, use **DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37).

### See also

**NDDS\_DISCOVERY\_PEERS** (p. 1152)

**DDS\_DomainParticipantFactory\_create\_participant()** (p. 37)

**DDS\_DomainParticipantFactory\_set\_default\_participant\_qos()** (p. 35)

**DDS\_DomainParticipant\_set\_qos()** (p. 148)

### Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

#### 4.3.5.2 DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT

```
const struct DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT [extern]
```

Special value for creating a **DDS\_DomainParticipant** (p. 72) from configuration using default parameters.

This value can be used only in **DDS\_DomainParticipantFactory\_create\_participant\_from\_config\_w\_params** (p. 56) and indicates that the **DDS\_DomainParticipant** (p. 72) must be created applying the information defined in the participant configuration. That is, the domain ID, participant entity name, and QoS profiles for all the entities will be retrieved from the configuration.

RTI Connext treats this special value as a constant.

## 4.4 DomainParticipants

**DDS\_DomainParticipant** (p. 72) entity and associated elements

## Data Structures

- struct **DDS\_InvalidLocalIdentityAdvanceNoticeStatus**  
*DDS\_INVALID\_LOCAL\_IDENTITY\_ADVANCE\_NOTICE\_STATUS* (p. 1035)
- struct **DDS\_DomainParticipantListener**  
<<*interface*>> (p. 818) *Listener for participant status.*
- struct **DDS\_DomainParticipantQos**  
*QoS policies supported by a DDS\_DomainParticipant* (p. 72) *entity.*
- struct **DDS\_DomainParticipantProtocolStatus**  
<<*extension*>> (p. 817) *The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.*
- struct **DDS\_DomainParticipantSeq**  
*Declares IDL sequence < DDS\_DomainParticipant* (p. 72) *> .*

## Macros

- #define **DDS\_InvalidLocalIdentityAdvanceNoticeStatus\_INITIALIZER**  
*Initializer for new DDS\_InvalidLocalIdentityAdvanceNoticeStatus* (p. 1563).
- #define **DDS\_DomainParticipantListener\_INITIALIZER**  
*Initializer for new DDS\_DomainParticipantListener* (p. 1487).
- #define **DDS\_DomainParticipantQos\_INITIALIZER**  
*Initializer for new QoS instances.*
- #define **DDS\_DomainParticipantProtocolStatus\_INITIALIZER**  
*Initializer for new status instances.*

## Typedefs

- typedef DDS\_DOMAINID\_TYPE\_NATIVE **DDS\_DomainId\_t**  
*An integer that indicates in which domain a DDS\_DomainParticipant* (p. 72) *communicates.*
- typedef void(\* **DDS\_DomainParticipantListener\_InvalidLocalIdentityAdvanceNoticeStatusCallback**) (void \*listener\_data, **DDS\_DomainParticipant** \*participant, const struct **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** \*invalid\_local\_identity\_advance\_notice\_status)  
*Notifies the user that the identity of the DDS\_DomainParticipant* (p. 72) *is about to expire.*
- typedef struct DDS\_DomainParticipantImpl **DDS\_DomainParticipant**  
<<*interface*>> (p. 818) *Container for all DDS\_DomainEntity* (p. 1162) *objects.*

## Functions

- **DDS\_Boolean DDS\_InvalidLocalIdentityAdvanceNoticeStatus\_equals** (const struct **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** \*left, const struct **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** \*right)  
*Compares two DDS\_InvalidLocalIdentityAdvanceNoticeStatus* (p. 1563) *for equality.*
- **DDS\_Boolean DDS\_DomainParticipantQos\_equals** (const struct **DDS\_DomainParticipantQos** \*self, const struct **DDS\_DomainParticipantQos** \*other)  
*Compares two DDS\_DomainParticipantQos* (p. 1490) *for equality.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_print** (const struct **DDS\_DomainParticipantQos** \*self)  
*Prints this DDS\_DomainParticipantQos* (p. 1490) *to stdout.*

- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_to\_string** (const struct **DDS\_DomainParticipantQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)  
*Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_to\_string\_w\_params** (const struct **DDS\_DomainParticipantQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_DomainParticipantQos** \*base, const struct **DDS\_QosPrintFormat** \*format)  
*Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_initialize** (struct **DDS\_DomainParticipantQos** \*self)  
*Initializer for new QoS instances.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_finalize** (struct **DDS\_DomainParticipantQos** \*self)  
*Free any dynamic memory allocated by the policies in this **DDS\_DomainParticipantQos** (p. 1490).*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantQos\_copy** (struct **DDS\_DomainParticipantQos** \*self, const struct **DDS\_DomainParticipantQos** \*source)  
*Copy the contents of the given QoS into this QoS.*
- **DDS\_Entity \* DDS\_DomainParticipant\_as\_entity** ( **DDS\_DomainParticipant** \*domain)  
*Access a **DDS\_DomainParticipant** (p. 72)'s supertype instance.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantProtocolStatus\_initialize** (struct **DDS\_DomainParticipantProtocolStatus** \*self)  
*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantProtocolStatus\_copy** (struct **DDS\_DomainParticipantProtocolStatus** \*self, const struct **DDS\_DomainParticipantProtocolStatus** \*source)  
*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipantProtocolStatus\_finalize** (struct **DDS\_DomainParticipantProtocolStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_DomainParticipantProtocolStatus\_equals** (const struct **DDS\_DomainParticipantProtocolStatus** \*left, const struct **DDS\_DomainParticipantProtocolStatus** \*right)  
*Compares two **DDS\_DomainParticipantProtocolStatus** (p. 1489) for equality.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_topic\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_TopicQos** \*qos)  
*Copies the default **DDS\_TopicQos** (p. 1778) values for this domain participant into the given **DDS\_TopicQos** (p. 1778) instance.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_topic\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_TopicQos** \*qos)  
*Set the default **DDS\_TopicQos** (p. 1778) values for this domain participant.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_topic\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Set the default **DDS\_TopicQos** (p. 1778) values for this domain participant based on the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_publisher\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_PublisherQos** \*qos)  
*Copy the default **DDS\_PublisherQos** (p. 1661) values into the provided **DDS\_PublisherQos** (p. 1661) instance.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_publisher\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_PublisherQos** \*qos)  
*Set the default **DDS\_PublisherQos** (p. 1661) values for this DomainParticipant.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_publisher\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Set the default **DDS\_PublisherQos** (p. 1661) values for this DomainParticipant based on the input XML QoS profile.*

- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_datawriter\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_DataWriterQos** \*qos)
 

<<extension>> (p. 817) Copy the default **DDS\_DataWriterQos** (p. 1438) values into the provided **DDS\_DataWriterQos** (p. 1438) instance.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_datawriter\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_DataWriterQos** \*qos)
 

<<extension>> (p. 817) Set the default **DataWriterQos** values for this **DomainParticipant**.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_datawriter\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)
 

<<extension>> (p. 817) Set the default **DDS\_DataWriterQos** (p. 1438) values for this domain participant based on the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_subscriber\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_SubscriberQos** \*qos)
 

Copy the default **DDS\_SubscriberQos** (p. 1746) values into the provided **DDS\_SubscriberQos** (p. 1746) instance.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_subscriber\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_SubscriberQos** \*qos)
 

Set the default **DDS\_SubscriberQos** (p. 1746) values for this **DomainParticipant**.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_subscriber\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)
 

<<extension>> (p. 817) Set the default **DDS\_SubscriberQos** (p. 1746) values for this **DomainParticipant** based on the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_datareader\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_DataReaderQos** \*qos)
 

<<extension>> (p. 817) Copy the default **DDS\_DataReaderQos** (p. 1390) values into the provided **DDS\_DataReaderQos** (p. 1390) instance.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_datareader\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_DataReaderQos** \*qos)
 

<<extension>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this domain participant.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_datareader\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)
 

<<extension>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this **DomainParticipant** based on the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** ( **DDS\_DomainParticipant** \*self, struct **DDS\_FlowControllerProperty\_t** \*prop)
 

<<extension>> (p. 817) Copies the default **DDS\_FlowControllerProperty\_t** (p. 1552) values for this domain participant into the given **DDS\_FlowControllerProperty\_t** (p. 1552) instance.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_FlowControllerProperty\_t** \*prop)
 

<<extension>> (p. 817) Set the default **DDS\_FlowControllerProperty\_t** (p. 1552) values for this domain participant.
- const char \* **DDS\_DomainParticipant\_get\_default\_library** ( **DDS\_DomainParticipant** \*self)
 

<<extension>> (p. 817) Gets the default XML library associated with a **DDS\_DomainParticipant** (p. 72).
- const char \* **DDS\_DomainParticipant\_get\_default\_profile** ( **DDS\_DomainParticipant** \*self)
 

<<extension>> (p. 817) Gets the default XML profile associated with a **DDS\_DomainParticipant** (p. 72).
- const char \* **DDS\_DomainParticipant\_get\_default\_profile\_library** ( **DDS\_DomainParticipant** \*self)
 

<<extension>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_library** ( **DDS\_DomainParticipant** \*self, const char \*library\_name)
 

<<extension>> (p. 817) Sets the default XML library for a **DDS\_DomainParticipant** (p. 72).

- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_default\_profile** ( DDS\_DomainParticipant \*self, const char \*library\_name, const char \*profile\_name)
 

*<<extension>>* (p. 817) Sets the default XML profile for a **DDS\_DomainParticipant** (p. 72).
- **DDS\_Publisher \* DDS\_DomainParticipant\_create\_publisher** ( DDS\_DomainParticipant \*self, const struct DDS\_PublisherQos \*qos, const struct DDS\_PublisherListener \*listener, DDS\_StatusMask mask)
 

*Creates a **DDS\_Publisher** (p. 436) with the desired QoS policies and attaches to it the specified **DDS\_PublisherListener** (p. 1660).*
- **DDS\_Publisher \* DDS\_DomainParticipant\_create\_publisher\_with\_profile** ( DDS\_DomainParticipant \*self, const char \*library\_name, const char \*profile\_name, const struct DDS\_PublisherListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a new **DDS\_Publisher** (p. 436) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_publisher** ( DDS\_DomainParticipant \*self, DDS\_Publisher \*p)
 

*Deletes an existing **DDS\_Publisher** (p. 436).*
- **DDS\_Subscriber \* DDS\_DomainParticipant\_create\_subscriber** ( DDS\_DomainParticipant \*self, const struct DDS\_SubscriberQos \*qos, const struct DDS\_SubscriberListener \*listener, DDS\_StatusMask mask)
 

*Creates a **DDS\_Subscriber** (p. 565) with the desired QoS policies and attaches to it the specified **DDS\_SubscriberListener** (p. 1744).*
- **DDS\_Subscriber \* DDS\_DomainParticipant\_create\_subscriber\_with\_profile** ( DDS\_DomainParticipant \*self, const char \*library\_name, const char \*profile\_name, const struct DDS\_SubscriberListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a new **DDS\_Subscriber** (p. 565) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_subscriber** ( DDS\_DomainParticipant \*self, DDS\_Subscriber \*s)
 

*Deletes an existing **DDS\_Subscriber** (p. 565).*
- **DDS\_DataWriter \* DDS\_DomainParticipant\_create\_datawriter** ( DDS\_DomainParticipant \*self, DDS\_Topic \*topic, const struct DDS\_DataWriterQos \*qos, const struct DDS\_DataWriterListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a **DDS\_DataWriter** (p. 478) that will be attached and belong to the implicit **DDS\_Publisher** (p. 436).
- **DDS\_DataWriter \* DDS\_DomainParticipant\_create\_datawriter\_with\_profile** ( DDS\_DomainParticipant \*self, DDS\_Topic \*topic, const char \*library\_name, const char \*profile\_name, const struct DDS\_DataWriterListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a **DDS\_DataWriter** (p. 478) using a XML QoS profile that will be attached and belong to the implicit **DDS\_Publisher** (p. 436).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_datawriter** ( DDS\_DomainParticipant \*self, DDS\_DataWriter \*a\_datawriter)
 

*<<extension>>* (p. 817) Deletes a **DDS\_DataWriter** (p. 478) that belongs to the implicit **DDS\_Publisher** (p. 436).
- **DDS\_DataReader \* DDS\_DomainParticipant\_create\_datareader** ( DDS\_DomainParticipant \*self, DDS\_TopicDescription \*topic, const struct DDS\_DataReaderQos \*qos, const struct DDS\_DataReaderListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a **DDS\_DataReader** (p. 608) that will be attached and belong to the implicit **DDS\_Subscriber** (p. 565).
- **DDS\_DataReader \* DDS\_DomainParticipant\_create\_datareader\_with\_profile** ( DDS\_DomainParticipant \*self, DDS\_TopicDescription \*topic, const char \*library\_name, const char \*profile\_name, const struct DDS\_DataReaderListener \*listener, DDS\_StatusMask mask)
 

*<<extension>>* (p. 817) Creates a **DDS\_DataReader** (p. 608) using a XML QoS profile that will be attached and belong to the implicit **DDS\_Subscriber** (p. 565).

- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_datareader** ( **DDS\_DomainParticipant** \*self, **DDS\_↵\_DataReader** \*a\_datareader)
 

*<<extension>>* (p. 817) Deletes a **DDS\_DataReader** (p. 608) that belongs to the implicit **DDS\_Subscriber** (p. 565).
- **DDS\_Topic \* DDS\_DomainParticipant\_create\_topic** ( **DDS\_DomainParticipant** \*self, const char \*topic\_↵name, const char \*type\_name, const struct **DDS\_TopicQos** \*qos, const struct **DDS\_TopicListener** \*listener, **DDS\_StatusMask** mask)
 

Creates a **DDS\_Topic** (p. 172) with the desired QoS policies and attaches to it the specified **DDS\_TopicListener** (p. 1777).
- **DDS\_Topic \* DDS\_DomainParticipant\_create\_topic\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*topic\_name, const char \*type\_name, const char \*library\_name, const char \*profile\_name, const struct **DDS\_TopicListener** \*listener, **DDS\_StatusMask** mask)
 

*<<extension>>* (p. 817) Creates a new **DDS\_Topic** (p. 172) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_topic** ( **DDS\_DomainParticipant** \*self, **DDS\_Topic** \*topic)
 

Deletes a **DDS\_Topic** (p. 172).
- **DDS\_ContentFilteredTopic \* DDS\_DomainParticipant\_create\_contentfilteredtopic** ( **DDS\_Domain↵Participant** \*self, const char \*name, **DDS\_Topic** \*related\_topic, const char \*filter\_expression, const struct **DDS\_StringSeq** \*expression\_parameters)
 

Creates a **DDS\_ContentFilteredTopic** (p. 173), that can be used to do content-based subscriptions.
- **DDS\_ContentFilteredTopic \* DDS\_DomainParticipant\_create\_contentfilteredtopic\_with\_filter** ( **DDS\_↵DomainParticipant** \*self, const char \*name, const **DDS\_Topic** \*related\_topic, const char \*filter\_expression, const struct **DDS\_StringSeq** \*expression\_parameters, const char \*filter\_name)
 

*<<extension>>* (p. 817) Creates a **DDS\_ContentFilteredTopic** (p. 173) using the specified filter to do content-based subscriptions.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_contentfilteredtopic** ( **DDS\_DomainParticipant** \*self, **DDS\_ContentFilteredTopic** \*a\_contentfilteredtopic)
 

Deletes a **DDS\_ContentFilteredTopic** (p. 173).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_register\_contentfilter** ( **DDS\_DomainParticipant** \*self, const char \*filter\_name, const struct **DDS\_ContentFilter** \*contentfilter)
 

*<<extension>>* (p. 817) Register a content filter which can be used to create a **DDS\_ContentFilteredTopic** (p. 173).
- **void \* DDS\_DomainParticipant\_lookup\_contentfilter** ( **DDS\_DomainParticipant** \*self, const char \*filter\_↵name)
 

*<<extension>>* (p. 817) Lookup a content filter previously registered with **DDS\_DomainParticipant\_register\_↵contentfilter** (p. 117).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_unregister\_contentfilter** ( **DDS\_DomainParticipant** \*self, const char \*filter\_name)
 

*<<extension>>* (p. 817) Unregister a content filter previously registered with **DDS\_DomainParticipant\_register\_↵contentfilter** (p. 117).
- **DDS\_MultiTopic \* DDS\_DomainParticipant\_create\_multitopic** ( **DDS\_DomainParticipant** \*self, const char \*name, const char \*type\_name, const char \*subscription\_expression, const struct **DDS\_StringSeq** \*expression\_parameters)
 

**[Not supported (optional)]** Creates a **MultiTopic** that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_multitopic** ( **DDS\_DomainParticipant** \*self, **DDS\_↵MultiTopic** \*a\_multitopic)
 

**[Not supported (optional)]** Deletes a **DDS\_MultiTopic** (p. 181).
- **DDS\_FlowController \* DDS\_DomainParticipant\_create\_flowcontroller** ( **DDS\_DomainParticipant** \*self, const char \*name, const struct **DDS\_FlowControllerProperty\_t** \*prop)
 

*<<extension>>* (p. 817) Creates a **DDS\_FlowController** (p. 551) with the desired property.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_flowcontroller** ( **DDS\_DomainParticipant** \*self, **DDS\_FlowController** \*fc)

- <<extension>> (p. 817) Deletes an existing **DDS\_FlowController** (p. 551).
- **const DDS\_TypeCode \* DDS\_DomainParticipant\_get\_typecode** ( **DDS\_DomainParticipant \*self**, **const char \*type\_name**)

<<extension>> (p. 817) Retrieves the **DDS\_TypeCode** (p. 1806) of a type registered with the **DDS\_DomainParticipant** (p. 72) based on the registration name.
- **DDS\_Topic \* DDS\_DomainParticipant\_find\_topic** ( **DDS\_DomainParticipant \*self**, **const char \*topic\_name**, **const struct DDS\_Duration\_t \*timeout**)

Finds an existing (or ready to exist) **DDS\_Topic** (p. 172), based on its name.
- **DDS\_TopicDescription \* DDS\_DomainParticipant\_lookup\_topicdescription** ( **DDS\_DomainParticipant \*self**, **const char \*topic\_name**)

Looks up an existing, locally created **DDS\_TopicDescription** (p. 171), based on its name.
- **DDS\_FlowController \* DDS\_DomainParticipant\_lookup\_flowcontroller** ( **DDS\_DomainParticipant \*self**, **const char \*name**)

<<extension>> (p. 817) Looks up an existing locally-created **DDS\_FlowController** (p. 551), based on its name.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_participant\_protocol\_status** ( **DDS\_DomainParticipant \*self**, **struct DDS\_DomainParticipantProtocolStatus \*status**)

<<extension>> (p. 817) Get the domain participant protocol status for this participant.
- **DDS\_Subscriber \* DDS\_DomainParticipant\_get\_builtin\_subscriber** ( **DDS\_DomainParticipant \*self**)

Accesses the **built-in DDS\_Subscriber** (p. 565).
- **DDS\_Publisher \* DDS\_DomainParticipant\_get\_implicit\_publisher** ( **DDS\_DomainParticipant \*self**)

<<extension>> (p. 817) Returns the implicit **DDS\_Publisher** (p. 436). If an implicit Publisher does not already exist, this creates one.
- **DDS\_Subscriber \* DDS\_DomainParticipant\_get\_implicit\_subscriber** ( **DDS\_DomainParticipant \*self**)

<<extension>> (p. 817) Returns the implicit **DDS\_Subscriber** (p. 565). If an implicit Subscriber does not already exist, this creates one.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_ignore\_participant** ( **DDS\_DomainParticipant \*self**, **const DDS\_InstanceHandle\_t \*handle**)

Instructs RTI Connex to locally ignore a remote **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_ignore\_topic** ( **DDS\_DomainParticipant \*self**, **const DDS\_InstanceHandle\_t \*handle**)

Instructs RTI Connex to locally ignore a **DDS\_Topic** (p. 172).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_ignore\_publication** ( **DDS\_DomainParticipant \*self**, **const DDS\_InstanceHandle\_t \*handle**)

Instructs RTI Connex to locally ignore a publication.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_ignore\_subscription** ( **DDS\_DomainParticipant \*self**, **const DDS\_InstanceHandle\_t \*handle**)

Instructs RTI Connex to locally ignore a subscription.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_banish\_ignored\_participants** ( **DDS\_DomainParticipant \*self**)

<<extension>> (p. 817) Prevents ignored remote DomainParticipants from receiving traffic from the local **DDS\_DomainParticipant** (p. 72).
- **DDS\_DomainId\_t DDS\_DomainParticipant\_get\_domain\_id** ( **DDS\_DomainParticipant \*self**)

Get the unique domain identifier.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_contained\_entities** ( **DDS\_DomainParticipant \*self**)

Delete all the entities that were created by means of the "create" operations on the **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_assert\_liveliness** ( **DDS\_DomainParticipant \*self**)

Manually asserts the liveliness of this **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_publishers** ( **DDS\_DomainParticipant \*self**, **struct DDS\_PublisherSeq \*publishers**)

- <<*extension*>> (p. 817) Allows the application to access all the publishers the participant has.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_subscribers** ( **DDS\_DomainParticipant** \*self, struct **DDS\_SubscriberSeq** \*subscribers)

<<*extension*>> (p. 817) Allows the application to access all the subscribers the participant has.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_current\_time** ( **DDS\_DomainParticipant** \*self, struct **DDS\_Time\_t** \*current\_time)

Returns the current value of the time.
- **DDS\_Boolean DDS\_DomainParticipant\_contains\_entity** ( **DDS\_DomainParticipant** \*self, const **DDS\_InstanceHandle\_t** \*a\_handle)

Completes successfully with **DDS\_BOOLEAN\_TRUE** (p. 1004) if the referenced **DDS\_Entity** (p. 1160) is contained by the **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_register\_durable\_subscription** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_EndpointGroup\_t** \*group, const char \*topic\_name)

<<*extension*>> (p. 817) Registers a Durable Subscription on the specified **DDS\_Topic** (p. 172) on all Persistence Services.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_delete\_durable\_subscription** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_EndpointGroup\_t** \*group)

<<*extension*>> (p. 817) Deletes an existing Durable Subscription on all Persistence Services.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_resume\_endpoint\_discovery** ( **DDS\_DomainParticipant** \*self, const **DDS\_InstanceHandle\_t** \*remote\_participant\_handle)

<<*extension*>> (p. 817) Initiates endpoint discovery with the specified remote **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_dns\_tracker\_polling\_period** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_Duration\_t** \*polling\_period)

<<*extension*>> (p. 817) Configures the frequency in which the DNS tracker queries the DNS service.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_dns\_tracker\_polling\_period** ( **DDS\_DomainParticipant** \*self, struct **DDS\_Duration\_t** \*polling\_period)

<<*extension*>> (p. 817) Retrieves the frequency used by the DNS tracker thread to query the DNS service.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_participants** ( **DDS\_DomainParticipant** \*self, struct **DDS\_InstanceHandleSeq** \*participant\_handles)

Returns a list of discovered **DDS\_DomainParticipant** (p. 72) entities.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_participants\_from\_subject\_name** ( **DDS\_DomainParticipant** \*self, struct **DDS\_InstanceHandleSeq** \*participant\_handles, const char \*subject\_name)

<<*extension*>> (p. 817) Returns a list of discovered **DDS\_DomainParticipant** (p. 72) entities that have the given **DDS\_EntityNameQosPolicy::name** (p. 1545).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_participant\_data** ( **DDS\_DomainParticipant** \*self, struct **DDS\_ParticipantBuiltinTopicData** \*participant\_data, const **DDS\_InstanceHandle\_t** \*participant\_handle)

Returns **DDS\_ParticipantBuiltinTopicData** (p. 1616) for the specified **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_participant\_subject\_name** ( **DDS\_DomainParticipant** \*self, char \*subject\_name, **DDS\_UnsignedLong** \*subject\_name\_size, const **DDS\_InstanceHandle\_t** \*participant\_handle)

<<*extension*>> (p. 817) Returns **DDS\_EntityNameQosPolicy::name** (p. 1545) for the specified **DDS\_DomainParticipant** (p. 72).
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_topics** ( **DDS\_DomainParticipant** \*self, struct **DDS\_InstanceHandleSeq** \*topic\_handles)

Returns list of discovered **DDS\_Topic** (p. 172) objects.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_discovered\_topic\_data** ( **DDS\_DomainParticipant** \*self, struct **DDS\_TopicBuiltinTopicData** \*topic\_data, const **DDS\_InstanceHandle\_t** \*topic\_handle)

Returns **DDS\_TopicBuiltinTopicData** (p. 1770) for the specified **DDS\_Topic** (p. 172).

- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_take\_discovery\_snapshot** ( **DDS\_DomainParticipant** \*self, const char \*file\_name)  
*Take a snapshot of the remote participants discovered by a local one.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_add\_peer** ( **DDS\_DomainParticipant** \*self, const char \*peer\_desc\_string)  
 <<extension>> (p. 817) Attempt to contact one or more additional peer participants.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_remove\_peer** ( **DDS\_DomainParticipant** \*self, const char \*peer\_desc\_string)  
 <<extension>> (p. 817) Remove one or more peer participants from the list of peers with which this **DDS\_DomainParticipant** (p. 72) will try to communicate.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_qos** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_DomainParticipantQos** \*qos)  
*Change the QoS of this DomainParticipant.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_qos\_with\_profile** ( **DDS\_DomainParticipant** \*self, const char \*library\_name, const char \*profile\_name)  
 <<extension>> (p. 817) Change the QoS of this domain participant using the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_qos** ( **DDS\_DomainParticipant** \*self, struct **DDS\_DomainParticipantQos** \*qos)  
*Get the participant QoS.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_property** ( **DDS\_DomainParticipant** \*self, const char \*property\_name, const char \*value, **DDS\_Boolean** propagate)  
*Set the value for a property that applies to a DomainParticipant.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_set\_listener** ( **DDS\_DomainParticipant** \*self, const struct **DDS\_DomainParticipantListener** \*l, **DDS\_StatusMask** mask)  
*Sets the participant listener.*
- struct **DDS\_DomainParticipantListener** **DDS\_DomainParticipant\_get\_listener** ( **DDS\_DomainParticipant** \*self)  
*Get the participant listener.*
- **DDS\_ReturnCode\_t DDS\_DomainParticipant\_get\_listenerX** ( **DDS\_DomainParticipant** \*self, struct **DDS\_DomainParticipantListener** \*listener)  
 <<extension>> (p. 817) Get the participant listener.
- **DDS\_Publisher \* DDS\_DomainParticipant\_lookup\_publisher\_by\_name** ( **DDS\_DomainParticipant** \*self, const char \*publisher\_name)  
 <<extension>> (p. 817) Looks up a **DDS\_Publisher** (p. 436) by its entity name within this **DDS\_DomainParticipant** (p. 72).
- **DDS\_Subscriber \* DDS\_DomainParticipant\_lookup\_subscriber\_by\_name** ( **DDS\_DomainParticipant** \*self, const char \*subscriber\_name)  
 <<extension>> (p. 817) Retrieves a **DDS\_Subscriber** (p. 565) by its entity name within this **DDS\_DomainParticipant** (p. 72).
- **DDS\_DataWriter \* DDS\_DomainParticipant\_lookup\_datawriter\_by\_name** ( **DDS\_DomainParticipant** \*self, const char \*datawriter\_full\_name)  
 <<extension>> (p. 817) Looks up a **DDS\_DataWriter** (p. 478) by its entity name within this **DDS\_DomainParticipant** (p. 72).
- **DDS\_DataReader \* DDS\_DomainParticipant\_lookup\_datareader\_by\_name** ( **DDS\_DomainParticipant** \*self, const char \*datareader\_full\_name)  
 <<extension>> (p. 817) Retrieves up a **DDS\_DataReader** (p. 608) by its entity name in this **DDS\_DomainParticipant** (p. 72).

## Variables

- const struct **DDS\_DomainParticipantFactoryQos \* DDS\_DOMAINPARTICIPANTFACTORY\_QOS\_PRINT\_↵  
\_ALL**  
*Special value which can be supplied to `DDS_DomainParticipantFactoryQos_to_string_w_params` (p. 31) indicating that all of the QoS should be printed.*
- const struct **DDS\_DomainParticipantQos \* DDS\_DOMAINPARTICIPANT\_QOS\_PRINT\_ALL**  
*Special value which can be supplied to `DDS_DomainParticipantQos_to_string_w_params` (p. 76) indicating that all of the QoS should be printed.*
- const struct **DDS\_TopicQos DDS\_TOPIC\_QOS\_DEFAULT**  
*Special value for creating a `DDS_Topic` (p. 172) with default QoS.*
- const struct **DDS\_PublisherQos DDS\_PUBLISHER\_QOS\_DEFAULT**  
*Special value for creating a `DDS_Publisher` (p. 436) with default QoS.*
- const struct **DDS\_SubscriberQos DDS\_SUBSCRIBER\_QOS\_DEFAULT**  
*Special value for creating a `DDS_Subscriber` (p. 565) with default QoS.*
- const struct **DDS\_FlowControllerProperty\_t DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT**  
*<<extension>> (p. 817) Special value for creating a `DDS_FlowController` (p. 551) with default property.*
- const struct **DDS\_PublisherQos \* DDS\_PUBLISHER\_QOS\_PRINT\_ALL**  
*Special value which can be supplied to `DDS_PublisherQos_to_string_w_params` (p. 439) indicating that all of the QoS should be printed.*
- const char \*const **DDS\_SQLFILTER\_NAME**  
*<<extension>> (p. 817) The name of the built-in SQL filter that can be used with `ContentFilteredTopics` and `Multi↵  
Channel DataWriters`.*
- const char \*const **DDS\_STRINGMATCHFILTER\_NAME**  
*<<extension>> (p. 817) The name of the built-in `StringMatch` filter that can be used with `ContentFilteredTopics` and `MultiChannel DataWriters`.*
- const struct **DDS\_SubscriberQos \* DDS\_SUBSCRIBER\_QOS\_PRINT\_ALL**  
*Special value which can be supplied to `DDS_SubscriberQos_to_string_w_params` (p. 569) indicating that all of the QoS should be printed.*
- const struct **DDS\_TopicQos \* DDS\_TOPIC\_QOS\_PRINT\_ALL**  
*Special value which can be supplied to `DDS_TopicQos_to_string_w_params` (p. 186) indicating that all of the QoS should be printed.*

### 4.4.1 Detailed Description

**DDS\_DomainParticipant** (p. 72) entity and associated elements

### 4.4.2 Macro Definition Documentation

#### 4.4.2.1 DDS\_InvalidLocalIdentityAdvanceNoticeStatus\_INITIALIZER

```
#define DDS_InvalidLocalIdentityAdvanceNoticeStatus_INITIALIZER
```

Initializer for new **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** (p. 1563).

#### 4.4.2.2 DDS\_DomainParticipantListener\_INITIALIZER

```
#define DDS_DomainParticipantListener_INITIALIZER
```

Initializer for new **DDS\_DomainParticipantListener** (p. 1487).

No memory is allocated. New **DDS\_DomainParticipantListener** (p. 1487) instances stored in the stack should be initialized with this value before they are passed to any functions.

```
struct DDS_DomainParticipantListener listener = DDS_DomainParticipantListener_INITIALIZER;

/* initialize listener functions */

listener.as_subscriberlistener.as_datareaderlistener.on_data_available = ....;

DDS_DomainParticipant_set_listener(myParticipant, &listener, mask);
```

See also

**DDS\_DomainParticipant\_set\_listener** (p. 151)

**DDS\_DomainParticipantListener** (p. 1487)

#### 4.4.2.3 DDS\_DomainParticipantQos\_INITIALIZER

```
#define DDS_DomainParticipantQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_DomainParticipantQos** (p. 1490) instances stored on the stack should be initialized with this value before they are passed to any functions. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DomainParticipantQos myQos = DDS_DomainParticipantQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipant\_get\_qos** (p. 149) or **DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37); one of those functions should be called subsequently to setting the QoS of any new or existing entity. **DDS\_DomainParticipantQos\_finalize** (p. 78) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_DomainParticipantQos myQos = DDS_DomainParticipantQos_INITIALIZER;

DDS_DomainParticipantFactory_get_default_participant_qos(myFactory, &myQos);

DDS_DomainParticipant_set_qos(myParticipant, &myQos);

DDS_DomainParticipantQos_finalize(&myQos);
```

See also

**DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37)

**DDS\_DomainParticipantQos\_finalize** (p. 78)

#### 4.4.2.4 DDS\_DomainParticipantProtocolStatus\_INITIALIZER

```
#define DDS_DomainParticipantProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_DomainParticipantProtocolStatus** (p. 1489) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_DomainParticipantProtocolStatus\_finalize** (p. 81) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DomainParticipantProtocolStatus myStatus = DDS_DomainParticipantProtocolStatus_INITIALIZER;
```

```
DDS_DomainParticipant_get_participant_protocol_status(myParticipant, &myStatus);
```

```
DDS_DomainParticipantProtocolStatus_finalize(&myStatus);
```

See also

**DDS\_DomainParticipant\_get\_participant\_protocol\_status** (p. 125)

**DDS\_DomainParticipantProtocolStatus\_finalize** (p. 81)

### 4.4.3 Typedef Documentation

#### 4.4.3.1 DDS\_DomainId\_t

```
typedef DDS_DOMAINID_TYPE_NATIVE DDS_DomainId_t
```

An integer that indicates in which domain a **DDS\_DomainParticipant** (p. 72) communicates.

Participants with the same **DDS\_DomainId\_t** (p. 72) are said to be in the same domain, and can thus communicate with one another.

The lower limit for a domain ID is 0. The upper limit for a domain ID is determined by the guidelines stated in **DDS\_RtpsWellKnownPorts\_t** (p. 1714) (specifically **DDS\_RtpsWellKnownPorts\_t::domain\_id\_gain** (p. 1716))

#### 4.4.3.2 DDS\_DomainParticipantListener\_InvalidLocalIdentityAdvanceNoticeStatusCallback

```
typedef void(* DDS_DomainParticipantListener_InvalidLocalIdentityAdvanceNoticeStatusCallback)
(void *listener_data, DDS_DomainParticipant *participant, const struct DDS_InvalidLocalIdentityAdvanceNoticeStatus *invalid_local_identity_advance_notice_status)
```

Notifies the user that the identity of the **DDS\_DomainParticipant** (p. 72) is about to expire.

### 4.4.3.3 DDS\_DomainParticipant

```
typedef struct DDS_DomainParticipantImpl DDS_DomainParticipant
```

<<*interface*>> (p. 818) Container for all **DDS\_DomainEntity** (p. 1162) objects.

The DomainParticipant object plays several roles:

- It acts as a container for all other **DDS\_Entity** (p. 1160) objects.
- It acts as a *factory* for the **DDS\_Publisher** (p. 436), **DDS\_Subscriber** (p. 565), **DDS\_Topic** (p. 172) and **DDS\_MultiTopic** (p. 181) **DDS\_Entity** (p. 1160) objects.
- It represents the participation of the application on a communication plane that isolates applications running on the same set of physical computers from each other. A domain establishes a virtual network linking all applications that share the same `domainId` and isolating them from applications running on different domains. In this way, several independent distributed applications can coexist in the same physical network without interfering, or even being aware of each other.
- It provides administration services in the domain, offering operations that allow the application to ignore locally any information about a given participant (**DDS\_DomainParticipant\_ignore\_participant** (p. 128)), publication (**DDS\_DomainParticipant\_ignore\_publication** (p. 129)), subscription (**DDS\_DomainParticipant\_ignore\_subscription()** (p. 130)) or topic (**DDS\_DomainParticipant\_ignore\_topic()** (p. 129)).

The following operations may be called even if the **DDS\_DomainParticipant** (p. 72) is not enabled. Operations NOT in this list will fail with **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) \ if called on a disabled DomainParticipant.

- **DDS\_Entity\_enable** (p. 1163),
- **DDS\_DomainParticipant\_set\_qos** (p. 148), **DDS\_DomainParticipant\_set\_qos\_with\_profile** (p. 149), **DDS\_DomainParticipant\_get\_qos** (p. 149),
- **DDS\_DomainParticipant\_set\_listener** (p. 151), **DDS\_DomainParticipant\_get\_listener** (p. 151),
- Factory operations: **DDS\_DomainParticipant\_create\_flowcontroller** (p. 121), **DDS\_DomainParticipant\_create\_topic** (p. 112), **DDS\_DomainParticipant\_create\_topic\_with\_profile** (p. 113), **DDS\_DomainParticipant\_create\_publisher** (p. 100), **DDS\_DomainParticipant\_create\_publisher\_with\_profile** (p. 101), **DDS\_DomainParticipant\_create\_subscriber** (p. 103), **DDS\_DomainParticipant\_create\_subscriber\_with\_profile** (p. 104), **DDS\_DomainParticipant\_delete\_flowcontroller** (p. 121), **DDS\_DomainParticipant\_delete\_topic** (p. 114), **DDS\_DomainParticipant\_delete\_publisher** (p. 102), **DDS\_DomainParticipant\_delete\_subscriber** (p. 105), **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82), **DDS\_DomainParticipant\_set\_default\_topic\_qos\_with\_profile** (p. 83), **DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82), **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85), **DDS\_DomainParticipant\_set\_default\_publisher\_qos\_with\_profile** (p. 86), **DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84), **DDS\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90), **DDS\_DomainParticipant\_set\_default\_subscriber\_qos\_with\_profile** (p. 92), **DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89), **DDS\_DomainParticipant\_delete\_contained\_entities** (p. 132), **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93), **DDS\_DomainParticipant\_set\_default\_datareader\_qos\_with\_profile** (p. 94), **DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93), **DDS\_DomainParticipant\_set\_default\_datawriter\_qos** (p. 88), **DDS\_DomainParticipant\_get\_default\_datawriter\_qos** (p. 87), **DDS\_DomainParticipant\_set\_default\_library** (p. 98), **DDS\_DomainParticipant\_set\_default\_profile** (p. 99) **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96), **DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** (p. 95), ;

- Operations for looking up topics: **DDS\_DomainParticipant\_lookup\_topicdescription** (p. 124);
- Operations that access status: **DDS\_Entity\_get\_statuscondition** (p. 1164), **DDS\_Entity\_get\_status\_changes** (p. 1164).

QoS:

**DDS\_DomainParticipantQos** (p. 1490)

Status:

**Status Kinds** (p. 1025)

Listener:

**DDS\_DomainParticipantListener** (p. 1487)

See also

**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.4.4 Function Documentation

### 4.4.4.1 DDS\_InvalidLocalIdentityAdvanceNoticeStatus\_equals()

```
DDS_Boolean DDS_InvalidLocalIdentityAdvanceNoticeStatus_equals (
    const struct DDS_InvalidLocalIdentityAdvanceNoticeStatus * left,
    const struct DDS_InvalidLocalIdentityAdvanceNoticeStatus * right )
```

Compares two **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** (p. 1563) for equality.

Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This InvalidLocalIdentityAdvanceNoticeStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other InvalidLocalIdentityAdvanceNoticeStatus to be compared with this status instance. Can be NULL.

Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two InvalidLocalIdentityAdvanceNoticeStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.4.4.2 DDS\_DomainParticipantQos\_equals()

```
DDS_Boolean DDS_DomainParticipantQos_equals (
    const struct DDS_DomainParticipantQos * self,
    const struct DDS_DomainParticipantQos * other )
```

Compares two **DDS\_DomainParticipantQos** (p. 1490) for equality.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This DomainParticipantQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other DomainParticipantQos to be compared with this DomainParticipantQos.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.4.4.3 DDS\_DomainParticipantQos\_print()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_print (
    const struct DDS_DomainParticipantQos * self )
```

Prints this **DDS\_DomainParticipantQos** (p. 1490) to stdout.

Only the differences between this **DDS\_DomainParticipantQos** (p. 1490) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.4.4.4 DDS\_DomainParticipantQos\_to\_string()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_to_string (
    const struct DDS_DomainParticipantQos * self,
```

```
char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).

Only the differences between this **DDS\_DomainParticipantQos** (p. 1490) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantQos** (p. 1490) is written to the buffer.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 1490). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### See also

**DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76)

#### 4.4.4.5 DDS\_DomainParticipantQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_to_string_w_params (
    const struct DDS_DomainParticipantQos * self,
    char * string,
    DDS_UnsignedLong * string_size,
    const struct DDS_DomainParticipantQos * base,
    const struct DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS\_DomainParticipantQos** (p. 1490).

Only the differences between this **DDS\_DomainParticipantQos** (p. 1490) and the **DDS\_DomainParticipantQos** (p. 1490) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_DOMAINPARTICIPANT\_QOS\_PRINT\_ALL** (p. 157) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DomainParticipantQos** (p. 1490) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DomainParticipantQos</b> (p. 1490). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DomainParticipantQos</b> (p. 1490) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## 4.4.4.6 DDS\_DomainParticipantQos\_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_initialize (
    struct DDS_DomainParticipantQos * self )
```

Initializer for new QoS instances.

New **DDS\_DomainParticipantQos** (p. 1490) instances on heap should be initialized with this function before they are passed to any functions. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_DomainParticipant\_get\_qos** (p. 149) or **DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37); one of those functions should be called subsequently to setting the QoS of any new or existing entity. **DDS\_DomainParticipantQos\_finalize** (p. 78) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DomainParticipantQos *myQos = malloc(sizeof(struct DDS_DomainParticipantQos));

DDS_DomainParticipantQos_initialize(myQos);

DDS_DomainParticipantFactory_get_default_participant_qos(myFactory, myQos);

DDS_DomainParticipant_set_qos(myParticipant, myQos);

DDS_DomainParticipantQos_finalize(myQos);

free(myQos);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DomainParticipantFactory\_get\_default\_participant\_qos** (p. 37)

**DDS\_DomainParticipantQos\_finalize** (p. 78)

**4.4.4.7 DDS\_DomainParticipantQos\_finalize()**

```
DDS_ReturnCode_t DDS_DomainParticipantQos_finalize (  
    struct DDS_DomainParticipantQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS\_DomainParticipantQos** (p. 1490).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to finalize a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DomainParticipantQos\_INITIALIZER** (p. 71)

**DDS\_DomainParticipantQos\_initialize** (p. 77)

#### 4.4.4.8 DDS\_DomainParticipantQos\_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantQos_copy (
    struct DDS_DomainParticipantQos * self,
    const struct DDS_DomainParticipantQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_DomainParticipantQos** (p. 1490) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). QoS to be copied from.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DomainParticipantQos\_INITIALIZER** (p. 71)

**DDS\_DomainParticipantQos\_initialize** (p. 77)

**DDS\_DomainParticipantQos\_finalize** (p. 78)

#### 4.4.4.9 DDS\_DomainParticipant\_as\_entity()

```
DDS_Entity * DDS_DomainParticipant_as_entity (
    DDS_DomainParticipant * domain )
```

Access a **DDS\_DomainParticipant** (p. 72)'s supertype instance.

##### Parameters

<i>domain</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
---------------	------------------------------------------

##### Returns

**DDS\_DomainParticipant** (p. 72)'s supertype **DDS\_Entity** (p. 1160) instance

#### 4.4.4.10 DDS\_DomainParticipantProtocolStatus\_initialize()

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_initialize (
    struct DDS_DomainParticipantProtocolStatus * self )
```

Initializer for new status instances.

New **DDS\_DomainParticipantProtocolStatus** (p. 1489) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_DomainParticipantProtocolStatus\_finalize** (p. 81) should be called to free the contained fields that use dynamic memory:

```
DDS_DomainParticipantProtocolStatus *myStatus = malloc(sizeof(struct DDS_DomainParticipantProtocolStatus));
DDS_DomainParticipantProtocolStatus_initialize(myStatus);
DDS_DomainParticipant_get_participant_protocol_status(myParticipant, myStatus);
DDS_DomainParticipantProtocolStatus_finalize(myStatus);
free(myStatus);
```

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DomainParticipant\_get\_participant\_protocol\_status** (p. 125)

**DDS\_DomainParticipantProtocolStatus\_finalize** (p. 81)

#### 4.4.4.11 DDS\_DomainParticipantProtocolStatus\_copy()

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_copy (
    struct DDS_DomainParticipantProtocolStatus * self,
    const struct DDS_DomainParticipantProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DomainParticipantProtocolStatus\_INITIALIZER** (p. 71)

**DDS\_DomainParticipantProtocolStatus\_initialize** (p. 79)

**DDS\_DomainParticipantProtocolStatus\_finalize** (p. 81)

**4.4.4.12 DDS\_DomainParticipantProtocolStatus\_finalize()**

```
DDS_ReturnCode_t DDS_DomainParticipantProtocolStatus_finalize (  
    struct DDS_DomainParticipantProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

Some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DomainParticipantProtocolStatus\_INITIALIZER** (p. 71)

**DDS\_DomainParticipantProtocolStatus\_initialize** (p. 79)

**4.4.4.13 DDS\_DomainParticipantProtocolStatus\_equals()**

```
DDS_Boolean DDS_DomainParticipantProtocolStatus_equals (  
    const struct DDS_DomainParticipantProtocolStatus * left,  
    const struct DDS_DomainParticipantProtocolStatus * right )
```

Compares two **DDS\_DomainParticipantProtocolStatus** (p. 1489) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This DomainParticipantProtocolStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other DomainParticipantProtocolStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two DomainParticipantProtocolStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.4.4.14 DDS\_DomainParticipant\_get\_default\_topic\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_topic_qos (
    DDS_DomainParticipant * self,
    struct DDS_TopicQos * qos )
```

Copies the default **DDS\_TopicQos** (p. 1778) values for this domain participant into the given **DDS\_TopicQos** (p. 1778) instance.

The retrieved *qos* will match the set of values specified on the last successful call to **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82), or **DDS\_DomainParticipant\_set\_default\_topic\_qos\_with\_profile** (p. 83) or else, if the call was never made, the default values listed in **DDS\_TopicQos** (p. 1778).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## MT Safety:

UNSAFE. It is not safe to retrieve the default Topic QoS from a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be retrieved. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 157)

**DDS\_DomainParticipant\_create\_topic** (p. 112)

#### 4.4.4.15 DDS\_DomainParticipant\_set\_default\_topic\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos (
    DDS_DomainParticipant * self,
    const struct DDS_TopicQos * qos )
```

Set the default **DDS\_TopicQos** (p. 1778) values for this domain participant.

This default value will be used for newly created **DDS\_Topic** (p. 172) if **DDS\_TOPIC\_QOS\_DEFAULT** (p. 157) is specified as the `qos` parameter when **DDS\_DomainParticipant\_create\_topic** (p. 112) is called.

##### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82), **DDS\_DomainParticipant\_get\_↔  
\_default\_topic\_qos** (p. 82) or calling **DDS\_DomainParticipant\_create\_topic** (p. 112) with **DDS\_TOPIC\_QOS\_↔  
\_DEFAULT** (p. 157) as the `qos` parameter.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be set. The special value <b>DDS_TOPIC_QOS_DEFAULT</b> (p. 157) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipant_set_default_topic_qos</b> (p. 82) had never been called. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 157)

**DDS\_DomainParticipant\_create\_topic** (p. 112)

#### 4.4.4.16 DDS\_DomainParticipant\_set\_default\_topic\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_topic_qos_with_profile (
    DDS_DomainParticipant * self,
```

```
const char * library_name,
const char * profile_name )
```

<<**extension**>> (p. 817) Set the default **DDS\_TopicQos** (p. 1778) values for this domain participant based on the input XML QoS profile.

This default value will be used for newly created **DDS\_Topic** (p. 172) if **DDS\_TOPIC\_QOS\_DEFAULT** (p. 157) is specified as the `qos` parameter when **DDS\_DomainParticipant\_create\_topic** (p. 112) is called.

#### Precondition

The **DDS\_TopicQos** (p. 1778) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82), **DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82) or calling **DDS\_DomainParticipant\_create\_topic** (p. 112) with **DDS\_TOPIC\_QOS\_DEFAULT** (p. 157) as the `qos` parameter.

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connexx will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If <code>profile_name</code> is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).

If the input profile cannot be found the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 157)

**DDS\_DomainParticipant\_create\_topic\_with\_profile** (p. 113)

#### 4.4.4.17 DDS\_DomainParticipant\_get\_default\_publisher\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_publisher_qos (
    DDS_DomainParticipant * self,
    struct DDS_PublisherQos * qos )
```

Copy the default **DDS\_PublisherQos** (p. 1661) values into the provided **DDS\_PublisherQos** (p. 1661) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS\_DomainParticipant\_↔\_set\_default\_publisher\_qos** (p. 85), or **DDS\_DomainParticipant\_set\_default\_publisher\_qos\_with\_profile** (p. 86), or else, if the call was never made, the default values listed in **DDS\_PublisherQos** (p. 1661).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

If **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158) is specified as the `qos` parameter when **DDS\_DomainParticipant\_↔\_create\_topic** (p. 112) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling **DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84), will be used to create the **DDS\_Publisher** (p. 436).

#### MT Safety:

UNSAFE. It is not safe to retrieve the default publisher QoS from a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85)

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) Qos to be filled up. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158)

**DDS\_DomainParticipant\_create\_publisher** (p. 100)

#### 4.4.4.18 DDS\_DomainParticipant\_set\_default\_publisher\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos (
    DDS_DomainParticipant * self,
    const struct DDS_PublisherQos * qos )
```

Set the default **DDS\_PublisherQos** (p. 1661) values for this DomainParticipant.

This set of default values will be used for a newly created **DDS\_Publisher** (p. 436) if **DDS\_PUBLISHER\_QOS\_↔\_DEFAULT** (p. 158) is specified as the `qos` parameter when **DDS\_DomainParticipant\_create\_publisher** (p. 100) is called.

**Precondition**

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

**MT Safety:**

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85), **DDS\_DomainParticipant\_↔  
\_get\_default\_publisher\_qos** (p. 84) or calling **DDS\_DomainParticipant\_create\_publisher** (p. 100) with **DDS\_↔  
\_PUBLISHER\_QOS\_DEFAULT** (p. 158) as the `qos` parameter.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be set. The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 158) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipant_set_default_publisher_qos</b> (p. 85) had never been called. Cannot be NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

**See also**

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158)

**DDS\_DomainParticipant\_create\_publisher** (p. 100)

**4.4.4.19 DDS\_DomainParticipant\_set\_default\_publisher\_qos\_with\_profile()**

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_publisher_qos_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Set the default **DDS\_PublisherQos** (p. 1661) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDS\_Publisher** (p. 436) if **DDS\_PUBLISHER\_QOS\_↔  
DEFAULT** (p. 158) is specified as the `qos` parameter when **DDS\_DomainParticipant\_create\_publisher** (p. 100) is called.

**Precondition**

The **DDS\_PublisherQos** (p. 1661) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

**MT Safety:**

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling `DDS_DomainParticipant_set_default_publisher_qos` (p. 85), `DDS_DomainParticipant_get_default_publisher_qos` (p. 84) or calling `DDS_DomainParticipant_create_publisher` (p. 100) with `DDS_PUBLISHER_QOS_DEFAULT` (p. 158) as the `qos` parameter.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <code>DDS_DomainParticipant_set_default_library</code> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <code>DDS_DomainParticipant_set_default_profile</code> (p. 99)).

If the input profile cannot be found, the function fails with `DDS_RETCODE_ERROR` (p. 1025).

**Returns**

One of the **Standard Return Codes** (p. 1024), or `DDS_RETCODE_INCONSISTENT_POLICY` (p. 1025)

**See also**

`DDS_PUBLISHER_QOS_DEFAULT` (p. 158)

`DDS_DomainParticipant_create_publisher_with_profile` (p. 101)

**4.4.4.20 DDS\_DomainParticipant\_get\_default\_datawriter\_qos()**

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_datawriter_qos (
    DDS_DomainParticipant * self,
    struct DDS_DataWriterQos * qos )
```

<<*extension*>> (p. 817) Copy the default `DDS_DataWriterQos` (p. 1438) values into the provided `DDS_DataWriterQos` (p. 1438) instance.

The retrieved `qos` will match the set of values specified on the last successful call to `DDS_DomainParticipant_set_default_datawriter_qos` (p. 88), or `DDS_DomainParticipant_set_default_datawriter_qos_with_profile` (p. 88), or else, if the call was never made, the default values listed in `DDS_DataWriterQos` (p. 1438).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

**MT Safety:**

UNSAFE. It is not safe to retrieve the default DataWriterQoS from a DomainParticipant while another thread may be simultaneously calling `DDS_DomainParticipant_set_default_datawriter_qos` (p. 88).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) Qos to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.4.4.21 DDS\_DomainParticipant\_set\_default\_datawriter\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos (
    DDS_DomainParticipant * self,
    const struct DDS_DataWriterQos * qos )
```

<<**extension**>> (p. 817) Set the default DataWriterQos values for this DomainParticipant.

This set of default values will be inherited for a newly created **DDS\_Publisher** (p. 436).

## Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datawriter\_qos** (p. 88) or **DDS\_Domain↔  
Participant\_get\_default\_datawriter\_qos** (p. 87) or calling **DDS\_DomainParticipant\_create\_datawriter** (p. 105) with **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) as the *qos* parameter.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be set. The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 463) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipant_set_default_datawriter_qos</b> (p. 88) had never been called. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### 4.4.4.22 DDS\_DomainParticipant\_set\_default\_datawriter\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datawriter_qos_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Set the default **DDS\_DataWriterQos** (p. 1438) values for this domain participant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDS\_Publisher** (p. 436).

##### Precondition

The **DDS\_DataWriterQos** (p. 1438) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datawriter\_qos** (p. 88) or **DDS\_DomainParticipant\_get\_default\_datawriter\_qos** (p. 87)

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### 4.4.4.23 DDS\_DomainParticipant\_get\_default\_subscriber\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_subscriber_qos (
    DDS_DomainParticipant * self,
    struct DDS_SubscriberQos * qos )
```

Copy the default **DDS\_SubscriberQos** (p. 1746) values into the provided **DDS\_SubscriberQos** (p. 1746) instance.

The retrieved `qos` will match the set of values specified on the last successful call to `DDS_DomainParticipant_set_default_subscriber_qos` (p. 90), or `DDS_DomainParticipant_set_default_subscriber_qos_with_profile` (p. 92), or else, if the call was never made, the default values listed in `DDS_SubscriberQos` (p. 1746).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

If `DDS_SUBSCRIBER_QOS_DEFAULT` (p. 159) is specified as the `qos` parameter when `DDS_DomainParticipant_create_subscriber` (p. 103) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling `DDS_DomainParticipant_get_default_subscriber_qos` (p. 89), will be used to create the `DDS_Subscriber` (p. 565).

#### MT Safety:

UNSAFE. It is not safe to retrieve the default Subscriber QoS from a DomainParticipant while another thread may be simultaneously calling `DDS_DomainParticipant_set_default_subscriber_qos` (p. 90).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) Qos to be filled up. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

`DDS_SUBSCRIBER_QOS_DEFAULT` (p. 159)

`DDS_DomainParticipant_create_subscriber` (p. 103)

#### 4.4.4.24 DDS\_DomainParticipant\_set\_default\_subscriber\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos (
    DDS_DomainParticipant * self,
    const struct DDS_SubscriberQos * qos )
```

Set the default `DDS_SubscriberQos` (p. 1746) values for this DomainParticipant.

This set of default values will be used for a newly created `DDS_Subscriber` (p. 565) if `DDS_SUBSCRIBER_QOS_DEFAULT` (p. 159) is specified as the `qos` parameter when `DDS_DomainParticipant_create_subscriber` (p. 103) is called.

#### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with `DDS_RETCODE_INCONSISTENT_POLICY` (p. 1025)

**MT Safety:**

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90), **DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89) or calling **DDS\_DomainParticipant\_create\_subscriber** (p. 103) with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) as the qos parameter.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be set. The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 159) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipant_set_default_subscriber_qos</b> (p. 90) had never been called. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

4.4.4.25 **DDS\_DomainParticipant\_set\_default\_subscriber\_qos\_with\_profile()**

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_subscriber_qos_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Set the default **DDS\_SubscriberQos** (p. 1746) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDS\_Subscriber** (p. 565) if **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) is specified as the *qos* parameter when **DDS\_DomainParticipant\_create\_subscriber** (p. 103) is called.

## Precondition

The **DDS\_SubscriberQos** (p. 1746) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## MT Safety:

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90), **DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89) or calling **DDS\_DomainParticipant\_create\_subscriber** (p. 103) with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) as the *qos* parameter.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connex will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connex will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### See also

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159)

**DDS\_DomainParticipant\_create\_subscriber\_with\_profile** (p. 104)

#### 4.4.4.26 DDS\_DomainParticipant\_get\_default\_datareader\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_datareader_qos (
    DDS_DomainParticipant * self,
    struct DDS_DataReaderQos * qos )
```

<<*extension*>> (p. 817) Copy the default **DDS\_DataReaderQos** (p. 1390) values into the provided **DDS\_DataReaderQos** (p. 1390) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93), or **DDS\_DomainParticipant\_set\_default\_datareader\_qos\_with\_profile** (p. 94), or else, if the call was never made, the default values listed in **DDS\_DataReaderQos** (p. 1390).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

#### MT Safety:

UNSAFE. It is not safe to retrieve the default DataReader QoS from a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) Qos to be filled up. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.4.4.27 DDS\_DomainParticipant\_set\_default\_datareader\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos (
    DDS_DomainParticipant * self,
    const struct DDS_DataReaderQos * qos )
```

<<**extension**>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this domain participant.

This set of default values will be inherited for a newly created **DDS\_Subscriber** (p. 565).

##### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93) or **DDS\_Domain↔  
Participant\_get\_default\_datareader\_qos** (p. 93).

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>in</b> >> (p. 818) Default qos to be set. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_DomainParticipant_set_default_datareader_qos</b> (p. 93) had never been called. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### 4.4.4.28 DDS\_DomainParticipant\_set\_default\_datareader\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_datareader_qos_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDS\_Subscriber** (p. 565).

## Precondition

The **DDS\_DataReaderQos** (p. 1390) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## MT Safety:

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93) or **DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## 4.4.4.29 DDS\_DomainParticipant\_get\_default\_flowcontroller\_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_default_flowcontroller_property (
    DDS_DomainParticipant * self,
    struct DDS_FlowControllerProperty_t * prop )
```

<<*extension*>> (p. 817) Copies the default **DDS\_FlowControllerProperty\_t** (p. 1552) values for this domain participant into the given **DDS\_FlowControllerProperty\_t** (p. 1552) instance.

The retrieved *property* will match the set of values specified on the last successful call to **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96), or else, if the call was never made, the default values listed in **DDS\_FlowControllerProperty\_t** (p. 1552).

## MT Safety:

UNSAFE. It is not safe to retrieve the default flow controller properties from a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>prop</i>	<< <i>in</i> >> (p. 818) Default property to be retrieved. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159)

**DDS\_DomainParticipant\_create\_flowcontroller** (p. 121)

#### 4.4.4.30 DDS\_DomainParticipant\_set\_default\_flowcontroller\_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_flowcontroller_property (
    DDS_DomainParticipant * self,
    const struct DDS_FlowControllerProperty_t * prop )
```

<<*extension*>> (p. 817) Set the default **DDS\_FlowControllerProperty\_t** (p. 1552) values for this domain participant.

This default value will be used for newly created **DDS\_FlowController** (p. 551) if **DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159) is specified as the `property` parameter when **DDS\_DomainParticipant\_create\_flowcontroller** (p. 121) is called.

## Precondition

The specified property values must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## MT Safety:

UNSAFE. It is not safe to set the default flow controller properties for a DomainParticipant while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96) , **DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** (p. 95) or calling **DDS\_DomainParticipant\_create\_flowcontroller** (p. 121) with **DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159) as the `qos` parameter.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>prop</i>	<< <i>in</i> >> (p. 818) Default property to be set. The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 159) may be passed as <code>property</code> to indicate that the default property should be reset to the default values the factory would use if <b>DDS_DomainParticipant_set_default_flowcontroller_property</b> (p. 96) had never been called. Cannot be NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

**See also**

**DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159)

**DDS\_DomainParticipant\_create\_flowcontroller** (p. 121)

**4.4.4.31 DDS\_DomainParticipant\_get\_default\_library()**

```
const char * DDS_DomainParticipant_get_default_library (
    DDS_DomainParticipant * self )
```

<<**extension**>> (p. 817) Gets the default XML library associated with a **DDS\_DomainParticipant** (p. 72).

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

The default library or null if the default library was not set.

**See also**

**DDS\_DomainParticipant\_set\_default\_library** (p. 98)

**4.4.4.32 DDS\_DomainParticipant\_get\_default\_profile()**

```
const char * DDS_DomainParticipant_get_default_profile (
    DDS_DomainParticipant * self )
```

<<**extension**>> (p. 817) Gets the default XML profile associated with a **DDS\_DomainParticipant** (p. 72).

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

The default profile or null if the default profile was not set.

**See also**

**DDS\_DomainParticipant\_set\_default\_profile** (p. 99)

**4.4.4.33 DDS\_DomainParticipant\_get\_default\_profile\_library()**

```
const char * DDS_DomainParticipant_get_default_profile_library (
    DDS_DomainParticipant * self )
```

<<**extension**>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_DomainParticipant** (p. 72).

The default profile library is automatically set when **DDS\_DomainParticipant\_set\_default\_profile** (p. 99) is called.

This library can be different than the **DDS\_DomainParticipant** (p. 72) default library (see **DDS\_DomainParticipant\_get\_default\_library** (p. 97)).

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

The default profile library or null if the default profile was not set.

**See also**

**DDS\_DomainParticipant\_set\_default\_profile** (p. 99)

**4.4.4.34 DDS\_DomainParticipant\_set\_default\_library()**

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_library (
    DDS_DomainParticipant * self,
    const char * library_name )
```

<<**extension**>> (p. 817) Sets the default XML library for a **DDS\_DomainParticipant** (p. 72).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this DomainParticipant's operations.

Any API requiring a library\_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS\_DomainParticipant** (p. 72) inherits the default from the **DDS\_DomainParticipantFactory** (p. 28) (see **DDS\_DomainParticipantFactory\_set\_default\_library** (p. 44)).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name. If library_name is null any previous default is unset.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipant\_get\_default\_library** (p. 97)

## 4.4.4.35 DDS\_DomainParticipant\_set\_default\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_default_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Sets the default XML profile for a **DDS\_DomainParticipant** (p. 72).

This function specifies the profile that will be used as the default the next time a default DomainParticipant profile is needed during a call to one of this DomainParticipant's operations. When calling a **DDS\_DomainParticipant** (p. 72) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS\_DomainParticipant** (p. 72) inherits the default from the **DDS\_DomainParticipantFactory** (p. 28) (see **DDS\_DomainParticipantFactory\_set\_default\_profile** (p. 45)).

This function does not set the default QoS for entities created by the **DDS\_DomainParticipant** (p. 72); for this functionality, use the functions `set_default_<entity>_qos_with_profile` (you may pass in NULL after having called `set_default_<entity>_profile()`).

This function does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDS\_DomainParticipantFactory\_set\_default\_participant\_qos\_with\_profile** (p. 36).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) The library name containing the profile.
<i>profile_name</i>	<< <i>in</i> >> (p. 818) The profile name. If profile_name is null any previous default is unset.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipant\_get\_default\_profile** (p. 97)

**DDS\_DomainParticipant\_get\_default\_profile\_library** (p. 98)

4.4.4.36 **DDS\_DomainParticipant\_create\_publisher()**

```
DDS_Publisher * DDS_DomainParticipant_create_publisher (
    DDS_DomainParticipant * self,
    const struct DDS_PublisherQos * qos,
    const struct DDS_PublisherListener * listener,
    DDS_StatusMask mask )
```

Creates a **DDS\_Publisher** (p. 436) with the desired QoS policies and attaches to it the specified **DDS\_PublisherListener** (p. 1660).

## Precondition

The specified QoS policies must be consistent, or the operation will fail and no **DDS\_Publisher** (p. 436) will be created.

if *listener* is specified, none of the listener callback functions can be NULL.

## MT Safety:

UNSAFE. If **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158) is used for *qos*, it is not safe to create the publisher while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) QoS to be used for creating the new <b>DDS_Publisher</b> (p. 436). The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 158) can be used to indicate that the <b>DDS_Publisher</b> (p. 436) should be created with the default <b>DDS_PublisherQos</b> (p. 1661) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Publisher</b> (p. 436).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

newly created publisher object or NULL on failure.

## See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_PublisherQos** (p. 1661) for rules on consistency among QoS

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158)

**DDS\_DomainParticipant\_create\_publisher\_with\_profile** (p. 101)

**DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84)

**DDS\_Publisher\_set\_listener** (p. 459)

## Examples

**HelloWorld\_publisher.c.**

## 4.4.4.37 DDS\_DomainParticipant\_create\_publisher\_with\_profile()

```
DDS_Publisher * DDS_DomainParticipant_create_publisher_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name,
    const struct DDS_PublisherListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a new **DDS\_Publisher** (p. 436) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.

## Precondition

The **DDS\_PublisherQos** (p. 1661) in the input profile must be consistent, or the operation will fail and no **DDS\_Publisher** (p. 436) will be created.

if *listener* is specified, none of the listener callback functions can be NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connex will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connex will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Publisher</b> (p. 436).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

**Returns**

newly created publisher object or NULL on failure.

**See also**

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_PublisherQos** (p. 1661) for rules on consistency among QoS

**DDS\_DomainParticipant\_create\_publisher** (p. 100)

**DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84)

**DDS\_Publisher\_set\_listener** (p. 459)

**4.4.4.38 DDS\_DomainParticipant\_delete\_publisher()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_publisher (
    DDS_DomainParticipant * self,
    DDS_Publisher * p )
```

Deletes an existing **DDS\_Publisher** (p. 436).

**Precondition**

The **DDS\_Publisher** (p. 436) must not have any attached **DDS\_DataWriter** (p. 478) objects. If there are existing **DDS\_DataWriter** (p. 478) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**DDS\_Publisher** (p. 436) must have been created by this **DDS\_DomainParticipant** (p. 72), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**Postcondition**

Listener installed on the **DDS\_Publisher** (p. 436) will not be called after this function completes successfully.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>p</i>	<< <i>in</i> >> (p. 818) <b>DDS_Publisher</b> (p. 436) to be deleted.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## 4.4.4.39 DDS\_DomainParticipant\_create\_subscriber()

```
DDS_Subscriber * DDS_DomainParticipant_create_subscriber (
    DDS_DomainParticipant * self,
    const struct DDS_SubscriberQos * qos,
    const struct DDS_SubscriberListener * listener,
    DDS_StatusMask mask )
```

Creates a **DDS\_Subscriber** (p. 565) with the desired QoS policies and attaches to it the specified **DDS\_Subscriber**↔  
**Listener** (p. 1744).

## Precondition

The specified QoS policies must be consistent, or the operation will fail and no **DDS\_Subscriber** (p. 565) will be created.

if *listener* is specified, none of the listener callback functions can be NULL.

## MT Safety:

UNSAFE. If **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) is used for *qos*, it is not safe to create the subscriber while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_subscriber**↔  
**\_qos** (p. 90).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) QoS to be used for creating the new <b>DDS_Subscriber</b> (p. 565). The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 159) can be used to indicate that the <b>DDS_Subscriber</b> (p. 565) should be created with the default <b>DDS_SubscriberQos</b> (p. 1746) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Subscriber</b> (p. 565).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

newly created subscriber object or NULL on failure.

See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_SubscriberQos** (p. 1746) for rules on consistency among QoS

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159)

**DDS\_DomainParticipant\_create\_subscriber\_with\_profile** (p. 104)

**DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89)

**DDS\_Subscriber\_set\_listener** (p. 590)

Examples

**HelloWorld\_subscriber.c.**

#### 4.4.4.40 DDS\_DomainParticipant\_create\_subscriber\_with\_profile()

```
DDS_Subscriber * DDS_DomainParticipant_create_subscriber_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name,
    const struct DDS_SubscriberListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a new **DDS\_Subscriber** (p. 565) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.

Precondition

The **DDS\_SubscriberQos** (p. 1746) in the input profile must be consistent, or the operation will fail and no **DDS\_Subscriber** (p. 565) will be created.

if *listener* is specified, none of the listener callback functions can be NULL.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Subscriber</b> (p. 565).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

Returns

newly created subscriber object or NULL on failure.

See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_SubscriberQos** (p. 1746) for rules on consistency among QoS

**DDS\_DomainParticipant\_create\_subscriber** (p. 103)

**DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89)

**DDS\_Subscriber\_set\_listener** (p. 590)

#### 4.4.4.41 DDS\_DomainParticipant\_delete\_subscriber()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_subscriber (
    DDS_DomainParticipant * self,
    DDS_Subscriber * s )
```

Deletes an existing **DDS\_Subscriber** (p. 565).

##### Precondition

The **DDS\_Subscriber** (p. 565) must not have any attached **DDS\_DataReader** (p. 608) objects. If there are existing **DDS\_DataReader** (p. 608) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

The **DDS\_Subscriber** (p. 565) must have been created by this **DDS\_DomainParticipant** (p. 72), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### Postcondition

A Listener installed on the **DDS\_Subscriber** (p. 565) will not be called after this function completes successfully.

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>s</i>	<< <i>in</i> >> (p. 818) <b>DDS_Subscriber</b> (p. 565) to be deleted.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

#### 4.4.4.42 DDS\_DomainParticipant\_create\_datawriter()

```
DDS_DataWriter * DDS_DomainParticipant_create_datawriter (
    DDS_DomainParticipant * self,
    DDS_Topic * topic,
    const struct DDS_DataWriterQos * qos,
    const struct DDS_DataWriterListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a **DDS\_DataWriter** (p. 478) that will be attached and belong to the implicit **DDS\_Publisher** (p. 436).

##### Precondition

The given **DDS\_Topic** (p. 172) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this function will fail.

The **DDS\_DataWriter** (p. 478) created using this function will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158) when the following functions are called: **DDS\_DomainParticipant\_create\_datawriter** (p. 105), **DDS\_DomainParticipant\_create\_datawriter\_with\_profile** (p. 107), or **DDS\_DomainParticipant\_get\_implicit\_publisher** (p. 126).

##### MT Safety:

UNSAFE. If **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) is used for the `qos` parameter, it is not safe to create the DataWriter while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datawriter\_qos** (p. 88).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) The <b>DDS_Topic</b> (p. 172) that the <b>DDS_DataWriter</b> (p. 478) will be associated with. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) QoS to be used for creating the new <b>DDS_DataWriter</b> (p. 478). The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 463) can be used to indicate that the <b>DDS_DataWriter</b> (p. 478) should be created with the default <b>DDS_DataWriterQos</b> (p. 1438) set in the implicit <b>DDS_Publisher</b> (p. 436). The special value <b>DDS_DATAWRITER_QOS_USE_TOPIC_QOS</b> (p. 463) can be used to indicate that the <b>DDS_DataWriter</b> (p. 478) should be created with the combination of the default <b>DDS_DataWriterQos</b> (p. 1438) set on the <b>DDS_Publisher</b> (p. 436) and the <b>DDS_TopicQos</b> (p. 1778) of the <b>DDS_Topic</b> (p. 172). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818) The listener of the <b>DDS_DataWriter</b> (p. 478).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

##### Returns

A **DDS\_DataWriter** (p. 478) of a derived class specific to the data type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

See also

**FooDataWriter** (p. 1845)

**DDS\_DataWriterQos** (p. 1438) for rules on consistency among QoS

**DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463)

**DDS\_DATAWRITER\_QOS\_USE\_TOPIC\_QOS** (p. 463)

**DDS\_DomainParticipant\_create\_datawriter\_with\_profile** (p. 107)

**DDS\_DomainParticipant\_get\_default\_datawriter\_qos** (p. 87)

**DDS\_DomainParticipant\_get\_implicit\_publisher** (p. 126)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_DataWriter\_set\_listener** (p. 546)

#### 4.4.4.43 DDS\_DomainParticipant\_create\_datawriter\_with\_profile()

```
DDS_DataWriter * DDS_DomainParticipant_create_datawriter_with_profile (
    DDS_DomainParticipant * self,
    DDS_Topic * topic,
    const char * library_name,
    const char * profile_name,
    const struct DDS_DataWriterListener * listener,
    DDS_StatusMask mask )
```

<<**extension**>> (p. 817) Creates a **DDS\_DataWriter** (p. 478) using a XML QoS profile that will be attached and belong to the implicit **DDS\_Publisher** (p. 436).

#### Precondition

The given **DDS\_Topic** (p. 172) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS\_DataWriter** (p. 478) created using this function will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158) when the following functions are called: **DDS\_DomainParticipant\_create\_datawriter** (p. 105), **DDS\_DomainParticipant\_create\_datawriter\_with\_profile** (p. 107), or **DDS\_DomainParticipant\_get\_implicit\_publisher** (p. 126)

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <b>in</b> >> (p. 818) The <b>DDS_Topic</b> (p. 172) that the <b>DDS_DataWriter</b> (p. 478) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).
<i>listener</i>	<< <b>in</b> >> (p. 818) The listener of the <b>DDS_DataWriter</b> (p. 478).
<i>mask</i>	<< <b>in</b> >> (p. 818). Changes of communication status to be invoked on the listener. See
Generated by Doxygen	<b>DDS_StatusMask</b> (p. 1030).

**Returns**

A **DDS\_DataWriter** (p. 478) of a derived class specific to the data type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

**See also**

**FooDataWriter** (p. 1845)

**DDS\_DataWriterQos** (p. 1438) for rules on consistency among QoS

**DDS\_DomainParticipant\_create\_datawriter** (p. 105)

**DDS\_DomainParticipant\_get\_default\_datawriter\_qos** (p. 87)

**DDS\_DomainParticipant\_get\_implicit\_publisher** (p. 126)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_DataWriter\_set\_listener** (p. 546)

**4.4.4.44 DDS\_DomainParticipant\_delete\_datawriter()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_datawriter (
    DDS_DomainParticipant * self,
    DDS_DataWriter * a_datawriter )
```

<<*extension*>> (p. 817) Deletes a **DDS\_DataWriter** (p. 478) that belongs to the implicit **DDS\_Publisher** (p. 436).

The deletion of the **DDS\_DataWriter** (p. 478) will automatically unregister all instances.

**Precondition**

If the **DDS\_DataWriter** (p. 478) does not belong to the implicit **DDS\_Publisher** (p. 436), the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**Postcondition**

Listener installed on the **DDS\_DataWriter** (p. 478) will not be called after this function completes successfully.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_datawriter</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataWriter</b> (p. 478) to be deleted.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## See also

**DDS\_DomainParticipant\_get\_implicit\_publisher** (p. 126)

## 4.4.4.45 DDS\_DomainParticipant\_create\_datareader()

```
DDS_DataReader * DDS_DomainParticipant_create_datareader (
    DDS_DomainParticipant * self,
    DDS_TopicDescription * topic,
    const struct DDS_DataReaderQos * qos,
    const struct DDS_DataReaderListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a **DDS\_DataReader** (p. 608) that will be attached and belong to the implicit **DDS\_Subscriber** (p. 565).

## Precondition

The given **DDS\_TopicDescription** (p. 171) must have been created from the same DomainParticipant as the implicit Subscriber. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS\_DataReader** (p. 608) created using this function will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) when the following functions are called: **DDS\_DomainParticipant\_create\_datareader** (p. 109), **DDS\_DomainParticipant\_create\_datareader\_with\_profile** (p. 110), or **DDS\_DomainParticipant\_get\_implicit\_subscriber** (p. 127).

## MT Safety:

UNSAFE. If **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_datareader\_qos** (p. 93).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicDescription</b> (p. 171) that the <b>DDS_DataReader</b> (p. 608) will be associated with. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) The qos of the <b>DDS_DataReader</b> (p. 608). The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) can be used to indicate that the <b>DDS_DataReader</b> (p. 608) should be created with the default <b>DDS_DataReaderQos</b> (p. 1390) set in the implicit <b>DDS_Subscriber</b> (p. 565). If <b>DDS_TopicDescription</b> (p. 171) is of type <b>DDS_Topic</b> (p. 172) or <b>DDS_ContentFilteredTopic</b> (p. 173), the special value <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 594) can be used to indicate that the <b>DDS_DataReader</b> (p. 608) should be created with the combination of the default <b>DDS_DataReaderQos</b> (p. 1390) set on the implicit <b>DDS_Subscriber</b> (p. 565) and the <b>DDS_TopicQos</b> (p. 1778) (in the case of a <b>DDS_ContentFilteredTopic</b> (p. 173), the <b>DDS_TopicQos</b> (p. 1778) of the related <b>DDS_Topic</b> (p. 172)). If <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 594) is used, <code>topic</code> cannot be a <b>DDS_MultiTopic</b> (p. 181). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818) The listener of the <b>DDS_DataReader</b> (p. 608).

## Returns

A **DDS\_DataReader** (p. 608) of a derived class specific to the data-type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

## See also

**FooDataReader** (p. 1845)

**DDS\_DomainParticipant\_create\_datareader\_with\_profile** (p. 110)

**DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93)

**DDS\_DomainParticipant\_get\_implicit\_subscriber** (p. 127)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_DataReader\_set\_listener** (p. 682)

## 4.4.4.46 DDS\_DomainParticipant\_create\_datareader\_with\_profile()

```
DDS_DataReader * DDS_DomainParticipant_create_datareader_with_profile (
    DDS_DomainParticipant * self,
    DDS_TopicDescription * topic,
    const char * library_name,
    const char * profile_name,
    const struct DDS_DataReaderListener * listener,
    DDS_StatusMask mask )
```

<<**extension**>> (p. 817) Creates a **DDS\_DataReader** (p. 608) using a XML QoS profile that will be attached and belong to the implicit **DDS\_Subscriber** (p. 565).

## Precondition

The given **DDS\_TopicDescription** (p. 171) must have been created from the same DomainParticipant as the implicit subscriber. If it was created from a different DomainParticipant, this function will return NULL.

The **DDS\_DataReader** (p. 608) created using this function will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) when the following functions are called: **DDS\_DomainParticipant\_create\_datareader** (p. 109), **DDS\_DomainParticipant\_create\_datareader\_with\_profile** (p. 110), or **DDS\_DomainParticipant\_get\_implicit\_subscriber** (p. 127)

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <b>in</b> >> (p. 818) The <b>DDS_TopicDescription</b> (p. 171) that the <b>DDS_DataReader</b> (p. 608) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).
<i>listener</i>	<< <b>in</b> >> (p. 818) The listener of the <b>DDS_DataReader</b> (p. 608).
<i>mask</i>	<< <b>in</b> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

A **DDS\_DataReader** (p. 608) of a derived class specific to the data-type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

## See also

**FooDataReader** (p. 1845)

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_DataReaderQoS** (p. 1390) for rules on consistency among QoS

**DDS\_DomainParticipant\_create\_datareader** (p. 109)

**DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93)

**DDS\_DomainParticipant\_get\_implicit\_subscriber** (p. 127)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_DataReader\_set\_listener** (p. 682)

## 4.4.4.47 DDS\_DomainParticipant\_delete\_datareader()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_datareader (
    DDS_DomainParticipant * self,
    DDS_DataReader * a_datareader )
```

<<*extension*>> (p. 817) Deletes a **DDS\_DataReader** (p. 608) that belongs to the implicit **DDS\_Subscriber** (p. 565).

## Precondition

If the **DDS\_DataReader** (p. 608) does not belong to the implicit **DDS\_Subscriber** (p. 565), or if there are any existing **DDS\_ReadCondition** (p. 686) or **DDS\_QueryCondition** (p. 691) objects that are attached to the **DDS\_DataReader** (p. 608), or if there are outstanding loans on samples (as a result of a call to read(), take(), or one of the variants thereof), the operation fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Postcondition

Listener installed on the **DDS\_DataReader** (p. 608) will not be called after this function completes successfully.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_datareader</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataReader</b> (p. 608) to be deleted.

**Returns**

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**See also**

**DDS\_DomainParticipant\_get\_implicit\_subscriber** (p. 127)

**4.4.4.48 DDS\_DomainParticipant\_create\_topic()**

```
DDS_Topic * DDS_DomainParticipant_create_topic (
    DDS_DomainParticipant * self,
    const char * topic_name,
    const char * type_name,
    const struct DDS_TopicQos * qos,
    const struct DDS_TopicListener * listener,
    DDS_StatusMask mask )
```

Creates a **DDS\_Topic** (p. 172) with the desired QoS policies and attaches to it the specified **DDS\_TopicListener** (p. 1777).

**Precondition**

The application is not allowed to create two **DDS\_Topic** (p. 172) objects with the same `topic_name` attached to the same **DDS\_DomainParticipant** (p. 72). If the application attempts this, this function will fail and return a NULL topic.

The specified QoS policies must be consistent, or the operation will fail and no **DDS\_Topic** (p. 172) will be created.

Prior to creating a **DDS\_Topic** (p. 172), the type must have been registered with RTI Connex. This is done using the **FooTypeSupport\_register\_type** (p. 217) operation on a derived class of the **DDS\_TypeSupport** (p. 210) interface.

**MT Safety:**

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDS\_DomainParticipant\_lookup\_topicdescription** (p. 124).

**MT Safety:**

UNSAFE. If **DDS\_TOPIC\_QOS\_DEFAULT** (p. 157) is used for `qos`, it is not safe to create the topic while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82).

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name for the new topic, must not exceed 255 characters. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 818) The type to which the new <b>DDS_Topic</b> (p. 172) will be bound. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) QoS to be used for creating the new <b>DDS_Topic</b> (p. 172). The special value <b>DDS_TOPIC_QOS_DEFAULT</b> (p. 157) can be used to indicate that the <b>DDS_Topic</b> (p. 172) should be created with the default <b>DDS_TopicQos</b> (p. 1778) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Topic</b> (p. 172).

**Returns**

newly created topic, or NULL on failure

**See also**

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_TopicQos** (p. 1778) for rules on consistency among QoS

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 157)

**DDS\_DomainParticipant\_create\_topic\_with\_profile** (p. 113)

**DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82)

**DDS\_Topic\_set\_listener** (p. 195)

**Examples**

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

**4.4.4.49 DDS\_DomainParticipant\_create\_topic\_with\_profile()**

```
DDS_Topic * DDS_DomainParticipant_create_topic_with_profile (
    DDS_DomainParticipant * self,
    const char * topic_name,
    const char * type_name,
    const char * library_name,
    const char * profile_name,
    const struct DDS_TopicListener * listener,
    DDS_StatusMask mask )
```

<<**extension**>> (p. 817) Creates a new **DDS\_Topic** (p. 172) object using the **DDS\_PublisherQos** (p. 1661) associated with the input XML QoS profile.

**Precondition**

The application is not allowed to create two **DDS\_TopicDescription** (p. 171) objects with the same `topic_name` attached to the same **DDS\_DomainParticipant** (p. 72). If the application attempts this, this function will fail and return a NULL topic.

The **DDS\_TopicQos** (p. 1778) in the input profile must be consistent, or the operation will fail and no **DDS\_Topic** (p. 172) will be created.

Prior to creating a **DDS\_Topic** (p. 172), the type must have been registered with RTI Connext. This is done using the **FooTypeSupport\_register\_type** (p. 217) operation on a derived class of the **DDS\_TypeSupport** (p. 210) interface.

**MT Safety:**

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDS\_DomainParticipant\_lookup\_topicdescription** (p. 124).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name for the new topic, must not exceed 255 characters. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 818) The type to which the new <b>DDS_Topic</b> (p. 172) will be bound. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connex will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connex will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).
<i>listener</i>	<< <i>in</i> >> (p. 818). Listener to be attached to the newly created <b>DDS_Topic</b> (p. 172).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

newly created topic, or NULL on failure

## See also

**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation

**DDS\_TopicQos** (p. 1778) for rules on consistency among QoS

**DDS\_DomainParticipant\_create\_topic** (p. 112)

**DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82)

**DDS\_Topic\_set\_listener** (p. 195)

4.4.4.50 **DDS\_DomainParticipant\_delete\_topic()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_topic (
    DDS_DomainParticipant * self,
    DDS_Topic * topic )
```

Deletes a **DDS\_Topic** (p. 172).

## Precondition

If the **DDS\_Topic** (p. 172) does not belong to the application's **DDS\_DomainParticipant** (p. 72), this operation fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

Make sure no objects are using the topic. More specifically, there must be no existing **DDS\_DataReader** (p. 608), **DDS\_DataWriter** (p. 478), **DDS\_ContentFilteredTopic** (p. 173), or **DDS\_MultiTopic** (p. 181) objects belonging to the same **DDS\_DomainParticipant** (p. 72) that are using the **DDS\_Topic** (p. 172). If `delete_topic` is called on a **DDS\_Topic** (p. 172) with any of these existing objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Postcondition

Listener installed on the **DDS\_Topic** (p. 172) will not be called after this function completes successfully.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) <b>DDS_Topic</b> (p. 172) to be deleted.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

4.4.4.51 **DDS\_DomainParticipant\_create\_contentfilteredtopic()**

```

DDS_ContentFilteredTopic * DDS_DomainParticipant_create_contentfilteredtopic (
    DDS_DomainParticipant * self,
    const char * name,
    DDS_Topic * related_topic,
    const char * filter_expression,
    const struct DDS_StringSeq * expression_parameters )

```

Creates a **DDS\_ContentFilteredTopic** (p. 173), that can be used to do content-based subscriptions.

The **DDS\_ContentFilteredTopic** (p. 173) only relates to samples published under that **DDS\_Topic** (p. 172), filtered according to their content. The filtering is done by means of evaluating a logical expression that involves the values of some of the data-fields in the sample. The logical expression derived from the *filter\_expression* and *expression\_parameters* arguments.

**Queries and Filters Syntax** (p.730) describes the syntax of *filter\_expression* and *expression\_←parameters*.

## Precondition

The application is not allowed to create two **DDS\_ContentFilteredTopic** (p. 173) objects with the same *topic\_←\_name* attached to the same **DDS\_DomainParticipant** (p. 72). If the application attempts this, this function will fail and returns NULL.

If *related\_topic* does not belong to this **DDS\_DomainParticipant** (p. 72), this operation returns NULL.

This function will create a content filter using the builtin SQL filter which implements a superset of the DDS specification. This filter **requires** that all IDL types have been compiled with typecodes. If this precondition is not met, this operation returns NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name for the new content filtered topic, must not exceed 255 characters. Cannot be NULL.
<i>related_topic</i>	<< <i>in</i> >> (p. 818) <b>DDS_Topic</b> (p. 172) to be filtered. Cannot be NULL.
<i>filter_expression</i>	<< <i>in</i> >> (p. 818) Cannot be NULL
<i>expression_parameters</i>	<< <i>in</i> >> (p. 818) Cannot be NULL. An empty sequence <b>must</b> be used if the filter expression does not contain any parameters. Length of sequence cannot be greater than
Generated by Doxygen	100.

## Returns

newly created **DDS\_ContentFilteredTopic** (p. 173), or NULL on failure

4.4.4.52 **DDS\_DomainParticipant\_create\_contentfilteredtopic\_with\_filter()**

```
DDS_ContentFilteredTopic * DDS_DomainParticipant_create_contentfilteredtopic_with_filter (
    DDS_DomainParticipant * self,
    const char * name,
    const DDS_Topic * related_topic,
    const char * filter_expression,
    const struct DDS_StringSeq * expression_parameters,
    const char * filter_name )
```

<<**extension**>> (p. 817) Creates a **DDS\_ContentFilteredTopic** (p. 173) using the specified filter to do content-based subscriptions.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <b>in</b> >> (p. 818) Name for the new content filtered topic. Cannot exceed 255 characters. Cannot be NULL.
<i>related_topic</i>	<< <b>in</b> >> (p. 818) <b>DDS_Topic</b> (p. 172) to be filtered. Cannot be NULL.
<i>filter_expression</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>expression_parameters</i>	<< <b>in</b> >> (p. 818) Cannot be NULL. . An empty sequence <b>must</b> be used if the filter expression does not contain any parameters. Length of the sequence cannot be greater than 100.
<i>filter_name</i>	<< <b>in</b> >> (p. 818) Name of content filter to use. Must previously have been registered with <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117) on the same <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL. Builtin filter names are <b>DDS_SQLFILTER_NAME</b> (p. 160) and <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 161)

## Returns

newly created **DDS\_ContentFilteredTopic** (p. 173), or NULL on failure

4.4.4.53 **DDS\_DomainParticipant\_delete\_contentfilteredtopic()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_contentfilteredtopic (
    DDS_DomainParticipant * self,
    DDS_ContentFilteredTopic * a_contentfilteredtopic )
```

Deletes a **DDS\_ContentFilteredTopic** (p. 173).

**Precondition**

The deletion of a **DDS\_ContentFilteredTopic** (p. 173) is not allowed if there are any existing **DDS\_DataReader** (p. 608) objects that are using the **DDS\_ContentFilteredTopic** (p. 173). If the operation is called on a **DDS\_ContentFilteredTopic** (p. 173) with existing **DDS\_DataReader** (p. 608) objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

The **DDS\_ContentFilteredTopic** (p. 173) must be created by this **DDS\_DomainParticipant** (p. 72), or else this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_contentfilteredtopic</i>	<< <i>in</i> >> (p. 818)

**Returns**

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

**4.4.4.54 DDS\_DomainParticipant\_register\_contentfilter()**

```
DDS_ReturnCode_t DDS_DomainParticipant_register_contentfilter (
    DDS_DomainParticipant * self,
    const char * filter_name,
    const struct DDS_ContentFilter * contentfilter )
```

<<**extension**>> (p. 817) Register a content filter which can be used to create a **DDS\_ContentFilteredTopic** (p. 173).

DDS specifies a SQL-like content filter for use by content filtered topics. If this filter does not meet your filtering requirements, you can register a custom filter.

To use a custom filter, it must be registered in the following places:

- In any application that uses the custom filter to create a **DDS\_ContentFilteredTopic** (p. 173) and the corresponding **DDS\_DataReader** (p. 608).
- In each application that writes the data to the applications mentioned above.

For example, suppose Application A on the subscription side creates a Topic named X and a ContentFilteredTopic named filteredX (and a corresponding DataReader), using a previously registered content filter, myFilter. With only that, you will have filtering at the subscription side. If you also want to perform filtering in any application that publishes Topic X, then you also need to register the same definition of the ContentFilter myFilter in that application.

Each *filter\_name* can only be used to registered a content filter once with a **DDS\_DomainParticipant** (p. 72).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>filter_name</i>	<< <i>in</i> >> (p. 818) Name of the filter. The name must be unique within the <b>DDS_DomainParticipant</b> (p. 72) and must not exceed 255 characters. Cannot be NULL.
<i>contentfilter</i>	<< <i>in</i> >> (p. 818) Content filter to be registered. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipant\_unregister\_contentfilter** (p. 118)

## 4.4.4.55 DDS\_DomainParticipant\_lookup\_contentfilter()

```
void * DDS_DomainParticipant_lookup_contentfilter (
    DDS_DomainParticipant * self,
    const char * filter_name )
```

<<*extension*>> (p. 817) Lookup a content filter previously registered with **DDS\_DomainParticipant\_register\_contentfilter** (p. 117).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>filter_name</i>	<< <i>in</i> >> (p. 818) Name of the filter. Cannot be NULL.

## Returns

NULL if the given filter\_name has not been previously registered to the **DDS\_DomainParticipant** (p. 72) with **DDS\_DomainParticipant\_register\_contentfilter** (p. 117). Otherwise, return the filter\_data that has been previously registered with the given filter\_name.

## See also

**DDS\_DomainParticipant\_register\_contentfilter** (p. 117)

## 4.4.4.56 DDS\_DomainParticipant\_unregister\_contentfilter()

```
DDS_ReturnCode_t DDS_DomainParticipant_unregister_contentfilter (
    DDS_DomainParticipant * self,
    const char * filter_name )
```

<<*extension*>> (p. 817) Unregister a content filter previously registered with **DDS\_DomainParticipant\_register\_contentfilter** (p. 117).

A *filter\_name* can be unregistered only if it has been previously registered to the **DDS\_DomainParticipant** (p. 72) with **DDS\_DomainParticipant\_register\_contentfilter** (p. 117).

The unregistration of filter is not allowed if there are any existing **DDS\_ContentFilteredTopic** (p. 173) objects that are using the filter. If the operation is called on a filter with existing **DDS\_ContentFilteredTopic** (p. 173) objects attached to it, this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

If there are still existing discovered **DDS\_DataReader** (p. 608) s with the same *filter\_name* and the filter's compile method of the filter have previously been called on the discovered **DDS\_DataReader** (p. 608) s, finalize method of the filter will be called on those discovered **DDS\_DataReader** (p. 608) s before the content filter is unregistered. This means filtering will now be performed on the application that is creating the **DDS\_DataReader** (p. 608).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>filter_name</i>	<< <i>in</i> >> (p. 818) Name of the filter. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

## See also

**DDS\_DomainParticipant\_register\_contentfilter** (p. 117)

## 4.4.4.57 DDS\_DomainParticipant\_create\_multitopic()

```
DDS_MultiTopic * DDS_DomainParticipant_create_multitopic (
    DDS_DomainParticipant * self,
    const char * name,
    const char * type_name,
    const char * subscription_expression,
    const struct DDS_StringSeq * expression_parameters )
```

**[Not supported (optional)]** Creates a MultiTopic that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.

The resulting type is specified by the *type\_name* argument. The list of topics and the logic used to combine, filter, and rearrange the information from each **DDS\_Topic** (p. 172) are specified using the *subscription\_expression* and *expression\_parameters* arguments.

**Queries and Filters Syntax** (p. 730) describes the syntax of *subscription\_expression* and *expression\_parameters*.

**Precondition**

The application is not allowed to create two **DDS\_TopicDescription** (p. 171) objects with the same `name` attached to the same **DDS\_DomainParticipant** (p. 72). If the application attempts this, this function will fail and return NULL.

Prior to creating a **DDS\_MultiTopic** (p. 181), the type must have been registered with RTI Connex. This is done using the **FooTypeSupport\_register\_type** (p. 217) operation on a derived class of the **DDS\_TypeSupport** (p. 210) interface. Otherwise, this function will return NULL.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the newly create <b>DDS_MultiTopic</b> (p. 181). Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subscription_expression</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>expression_parameters</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.

**Returns**

NULL

**4.4.4.58 DDS\_DomainParticipant\_delete\_multitopic()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_multitopic (
    DDS_DomainParticipant * self,
    DDS_MultiTopic * a_multitopic )
```

**[Not supported (optional)]** Deletes a **DDS\_MultiTopic** (p. 181).

**Precondition**

The deletion of a **DDS\_MultiTopic** (p. 181) is not allowed if there are any existing **DDS\_DataReader** (p. 608) objects that are using the **DDS\_MultiTopic** (p. 181). If the `delete_multitopic` operation is called on a **DDS\_MultiTopic** (p. 181) with existing **DDS\_DataReader** (p. 608) objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

The **DDS\_MultiTopic** (p. 181) must be created by this **DDS\_DomainParticipant** (p. 72), or else this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_multitopic</i>	<< <i>in</i> >> (p. 818)

#### 4.4.4.59 DDS\_DomainParticipant\_create\_flowcontroller()

```
DDS_FlowController * DDS_DomainParticipant_create_flowcontroller (
    DDS_DomainParticipant * self,
    const char * name,
    const struct DDS_FlowControllerProperty_t * prop )
```

<<*extension*>> (p. 817) Creates a **DDS\_FlowController** (p. 551) with the desired property.

The created **DDS\_FlowController** (p. 551) is associated with a **DDS\_DataWriter** (p. 478) via **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665). A single FlowController may service multiple DataWriters instances, even if they belong to a different **DDS\_Publisher** (p. 436). The `property` determines how the FlowController shapes the network traffic.

##### Precondition

The specified `property` must be consistent, or the operation will fail and no **DDS\_FlowController** (p. 551) will be created.

##### MT Safety:

UNSAFE. If **DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159) is used for `property`, it is not safe to create the flow controller while another thread may be simultaneously calling **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96) or trying to lookup that flow controller with **DDS\_DomainParticipant\_lookup\_flowcontroller** (p. 125).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) name of the <b>DDS_FlowController</b> (p. 551) to create. A <b>DDS_DataWriter</b> (p. 478) is associated with a <b>DDS_FlowController</b> (p. 551) by name. Limited to 255 characters.
<i>prop</i>	<< <i>in</i> >> (p. 818) property to be used for creating the new <b>DDS_FlowController</b> (p. 551). The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 159) can be used to indicate that the <b>DDS_FlowController</b> (p. 551) should be created with the default <b>DDS_FlowControllerProperty_t</b> (p. 1552) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.

##### Returns

Newly created flow controller object or NULL on failure.

##### See also

**DDS\_FlowControllerProperty\_t** (p. 1552) for rules on consistency among property  
**DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 159)  
**DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** (p. 95)

#### 4.4.4.60 DDS\_DomainParticipant\_delete\_flowcontroller()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_flowcontroller (
    DDS_DomainParticipant * self,
    DDS_FlowController * fc )
```

<<*extension*>> (p. 817) Deletes an existing **DDS\_FlowController** (p. 551).

##### Precondition

The **DDS\_FlowController** (p. 551) must not have any attached **DDS\_DataWriter** (p. 478) objects. If there are any attached **DDS\_DataWriter** (p. 478) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

The **DDS\_FlowController** (p. 551) must have been created by this **DDS\_DomainParticipant** (p. 72), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### Postcondition

The **DDS\_FlowController** (p. 551) is deleted if this function completes successfully.

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>fc</i>	<< <i>in</i> >> (p. 818) The <b>DDS_FlowController</b> (p. 551) to be deleted.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

#### 4.4.4.61 DDS\_DomainParticipant\_get\_typecode()

```
const DDS_TypeCode * DDS_DomainParticipant_get_typecode (
    DDS_DomainParticipant * self,
    const char * type_name )
```

<<*extension*>> (p. 817) Retrieves the **DDS\_TypeCode** (p. 1806) of a type registered with the **DDS\_DomainParticipant** (p. 72) based on the registration name.

Every data type used in a **DDS\_DomainParticipant** (p. 72) has a registered type name which is the name specified at the time the type is registered with the **DDS\_DomainParticipant** (p. 72).

This operation retrieves the **DDS\_TypeCode** (p. 1806) for the type given the registered type name. The `type_name` argument must correspond to a name used to register a type with the **DDS\_DomainParticipant** (p. 72). Otherwise, this method will return NULL.

Type registration in a **DDS\_DomainParticipant** (p. 72) is performed by a call to the **FooTypeSupport\_register\_type** (p. 217) operation on a derived class of the **DDS\_TypeSupport** (p. 210) interface.

Type registration might occur directly via an application call to the **FooTypeSupport\_register\_type** (p. 217) operation, or indirectly by the RTI Connext infrastructure as a result of parsing an XML configuration file that refers to that type.

If a type is registered by the RTI Connext infrastructure as a result of parsing an XML configuration file, the **DDS\_TypeSupport** (p. 210) can be created either from a type description found in the XML files, or else by calling the **FooTypeSupport\_register\_type** (p. 217) operation on a **DDS\_TypeSupport** (p. 210) that has been registered with **DDS\_DomainParticipantFactory** (p. 28). If a **DDS\_TypeSupport** (p. 210) is registered with the **DDS\_DomainParticipantFactory** (p. 28) this mechanism takes precedence over the creation of a **DDS\_TypeSupport** (p. 210) from a type description in the XML file.

To register a **DDS\_TypeSupport** (p. 210) with the **DDS\_DomainParticipantFactory** (p. 28) use the operation **DDS\_DomainParticipantFactory\_register\_type\_support** (p. 57).

If the **DDS\_TypeSupport** (p. 210) is created from a type description found in the XML files, the resulting type support will be a **DDS\_DynamicDataTypeSupport** (p. 321). In this case the **DDS\_DataWriter** (p. 478) and **DDS\_DataReader** (p. 608) uses to write and read data of that type will be the **DDS\_DynamicDataWriter** (p. 320) and **DDS\_DynamicDataReader** (p. 321), respectively.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 818) Name of the type whose TypeCode is retrieved.

#### Returns

The TypeCode of a registered type with the **DDS\_DomainParticipant** (p. 72) or NULL if no type was registered with the participant under that name.

#### 4.4.4.62 DDS\_DomainParticipant\_find\_topic()

```
DDS_Topic * DDS_DomainParticipant_find_topic (
    DDS_DomainParticipant * self,
    const char * topic_name,
    const struct DDS_Duration_t * timeout )
```

Finds an existing (or ready to exist) **DDS\_Topic** (p. 172), based on its name.

This call can be used to block for a specified duration to wait for the **DDS\_Topic** (p. 172) to be created.

If the requested **DDS\_Topic** (p. 172) already exists, it is returned. Otherwise, `find_topic()` waits until another thread creates it or else returns when the specified timeout occurs.

`find_topic()` is useful when multiple threads are concurrently creating and looking up topics. In that case, one thread can call `find_topic()` and, if another thread has not yet created the topic being looked up, it can wait for some period of time for it to do so. In almost all other cases, it is more straightforward to call `DDS_DomainParticipant_lookup_topicdescription` (p. 124).

The `DDS_DomainParticipant` (p. 72) must already be enabled.

**Note:** Each `DDS_Topic` (p. 172) obtained by `DDS_DomainParticipant_find_topic` (p. 123) must also be deleted by means of `DDS_DomainParticipant_delete_topic` (p. 114). If `DDS_Topic` (p. 172) is obtained multiple times by means of `DDS_DomainParticipant_find_topic` (p. 123) or `DDS_DomainParticipant_create_topic` (p. 112), it must also be deleted that same number of times using `DDS_DomainParticipant_delete_topic` (p. 114).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name of the <code>DDS_Topic</code> (p. 172) to search for. Cannot be NULL.
<i>timeout</i>	<< <i>in</i> >> (p. 818) The time to wait if the <code>DDS_Topic</code> (p. 172) does not exist already. Cannot be NULL.

#### Returns

the topic, if it exists, or NULL

#### 4.4.4.63 DDS\_DomainParticipant\_lookup\_topicdescription()

```
DDS_TopicDescription * DDS_DomainParticipant_lookup_topicdescription (
    DDS_DomainParticipant * self,
    const char * topic_name )
```

Looks up an existing, locally created `DDS_TopicDescription` (p. 171), based on its name.

`DDS_TopicDescription` (p. 171) is the base class for `DDS_Topic` (p. 172), `DDS_MultiTopic` (p. 181) and `DDS_ContentFilteredTopic` (p. 173). So you can narrow the `DDS_TopicDescription` (p. 171) returned from this operation to a `DDS_Topic` (p. 172) or `DDS_ContentFilteredTopic` (p. 173) as appropriate.

Unlike `DDS_DomainParticipant_find_topic` (p. 123), which logically returns a new `DDS_Topic` (p. 172) object that must be independently deleted, *this* operation returns a reference to the original local object.

The `DDS_DomainParticipant` (p. 72) does not have to be enabled when you call `lookup_topicdescription()`.

The returned topic may be either enabled or disabled.

#### MT Safety:

UNSAFE. It is not safe to lookup a topic description while another thread is creating that topic.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name of <b>DDS_TopicDescription</b> (p. 171) to search for. This string must be no more than 255 characters; it cannot be NULL.

## Returns

The topic description, if it has already been created locally, otherwise it returns NULL.

4.4.4.64 **DDS\_DomainParticipant\_lookup\_flowcontroller()**

```
DDS_FlowController * DDS_DomainParticipant_lookup_flowcontroller (
    DDS_DomainParticipant * self,
    const char * name )
```

<<*extension*>> (p. 817) Looks up an existing locally-created **DDS\_FlowController** (p. 551), based on its name.

Looks up a previously created **DDS\_FlowController** (p. 551), including the built-in ones. Once a **DDS\_FlowController** (p. 551) has been deleted, subsequent lookups will fail.

## MT Safety:

UNSAFE. It is not safe to lookup a flow controller description while another thread is creating that flow controller.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of <b>DDS_FlowController</b> (p. 551) to search for. Limited to 255 characters. Cannot be NULL.

## Returns

The flow controller if it has already been created locally, or NULL otherwise.

4.4.4.65 **DDS\_DomainParticipant\_get\_participant\_protocol\_status()**

```
DDS_ReturnCode_t DDS_DomainParticipant_get_participant_protocol_status (
    DDS_DomainParticipant * self,
    struct DDS_DomainParticipantProtocolStatus * status )
```

<<*extension*>> (p. 817) Get the domain participant protocol status for this participant.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DomainParticipantProtocolStatus</b> (p. 1489) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.4.4.66 **DDS\_DomainParticipant\_get\_builtin\_subscriber()**

```
DDS_Subscriber * DDS_DomainParticipant_get_builtin_subscriber (
    DDS_DomainParticipant * self )
```

Accesses the **built-in DDS\_Subscriber** (p. 565).

Each **DDS\_DomainParticipant** (p. 72) contains several built-in **DDS\_Topic** (p. 172) objects as well as corresponding **DDS\_DataReader** (p. 608) objects to access them. All of these **DDS\_DataReader** (p. 608) objects belong to a single built-in **DDS\_Subscriber** (p. 565).

The built-in Topics are used to communicate information about other **DDS\_DomainParticipant** (p. 72), **DDS\_Topic** (p. 172), **DDS\_DataReader** (p. 608), and **DDS\_DataWriter** (p. 478) objects.

The built-in subscriber is created when this operation is called for the first time. The built-in subscriber is deleted automatically when the **DDS\_DomainParticipant** (p. 72) is deleted.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The built-in **DDS\_Subscriber** (p. 565) singleton.

## See also

**DDS\_SubscriptionBuiltinTopicData** (p. 1748)

**DDS\_PublicationBuiltinTopicData** (p. 1648)

**DDS\_ParticipantBuiltinTopicData** (p. 1616)

**DDS\_TopicBuiltinTopicData** (p. 1770)

#### 4.4.4.67 DDS\_DomainParticipant\_get\_implicit\_publisher()

```
DDS_Publisher * DDS_DomainParticipant_get_implicit_publisher (
    DDS_DomainParticipant * self )
```

<<*extension*>> (p. 817) Returns the implicit **DDS\_Publisher** (p. 436). If an implicit Publisher does not already exist, this creates one.

There can only be one implicit Publisher per DomainParticipant.

The implicit Publisher is created with **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158) and no Listener.

This implicit Publisher will be deleted automatically when the following functions are called: **DDS\_DomainParticipant↔\_delete\_contained\_entities** (p. 132), or **DDS\_DomainParticipant\_delete\_publisher** (p. 102) with the implicit publisher as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataWriters that belong to the implicit Publisher, the implicit Publisher will be implicitly deleted.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The implicit publisher

##### See also

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 158)

**DDS\_DomainParticipant\_create\_publisher** (p. 100)

#### 4.4.4.68 DDS\_DomainParticipant\_get\_implicit\_subscriber()

```
DDS_Subscriber * DDS_DomainParticipant_get_implicit_subscriber (
    DDS_DomainParticipant * self )
```

<<*extension*>> (p. 817) Returns the implicit **DDS\_Subscriber** (p. 565). If an implicit Subscriber does not already exist, this creates one.

There can only be one implicit Subscriber per DomainParticipant.

The implicit Subscriber is created with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159) and no Listener.

This implicit Subscriber will be deleted automatically when the following functions are called: **DDS\_Domain↔Participant\_delete\_contained\_entities** (p. 132), or **DDS\_DomainParticipant\_delete\_subscriber** (p. 105) with the subscriber as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataReaders that belong to the implicit Subscriber, the implicit Subscriber will be implicitly deleted.

##### MT Safety:

UNSAFE. it is not safe to create the implicit subscriber while another thread may be simultaneously calling **DDS↔\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The implicit subscriber

## See also

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 159)

**DDS\_DomainParticipant\_create\_subscriber** (p. 103)

4.4.4.69 **DDS\_DomainParticipant\_ignore\_participant()**

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_participant (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * handle )
```

Instructs RTI Connex to locally ignore a remote **DDS\_DomainParticipant** (p. 72).

From the time of this call onwards, RTI Connex will locally behave as if the remote participant did not exist. This means it will ignore any topic, publication, or subscription that originates on that **DDS\_DomainParticipant** (p. 72).

There is no way to reverse this operation.

This operation can be used in conjunction with the discovery of remote participants offered by means of the **DDS\_↔ParticipantBuiltinTopicData** (p. 1616) to provide access control.

Application data can be associated with a **DDS\_DomainParticipant** (p. 72) by means of the **USER\_DATA** (p. 1143) policy. This application data is propagated as a field in the built-in topic and can be used by an application to implement its own access control policy.

The **DDS\_DomainParticipant** (p. 72) to ignore is identified by the `handle` argument. This `handle` is the one that appears in the **DDS\_SampleInfo** (p. 1720) retrieved when reading the data-samples available for the built-in **DDS\_↔DataReader** (p. 608) to the **DDS\_DomainParticipant** (p. 72) topic. The built-in **DDS\_DataReader** (p. 608) is read with the same **FooDataReader\_read** (p. 618) and **FooDataReader\_take** (p. 619) operations used for any **DDS\_DataReader** (p. 608).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) <b>DDS_InstanceHandle_t</b> (p. 210) of the <b>DDS_DomainParticipant</b> (p. 72) to be ignored. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025), **DDS\_↔RETCODE\_NOT\_ENABLED** (p. 1025)

## See also

**DDS\_ParticipantBuiltinTopicData** (p. 1616)

**DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 896)

**DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126)

4.4.4.70 **DDS\_DomainParticipant\_ignore\_topic()**

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_topic (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * handle )
```

Instructs RTI Connex to locally ignore a **DDS\_Topic** (p. 172).

This means it will locally ignore any publication, or subscription to the **DDS\_Topic** (p. 172).

There is no way to reverse this operation.

This operation can be used to save local resources when the application knows that it will never publish or subscribe to data under certain topics.

The **DDS\_Topic** (p. 172) to ignore is identified by the `handle` argument. This is the handle of a **DDS\_Topic** (p. 172) that appears in the **DDS\_SampleInfo** (p. 1720) retrieved when reading data samples from the built-in **DDS\_DataReader** (p. 608) for the **DDS\_Topic** (p. 172).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) Handle of the <b>DDS_Topic</b> (p. 172) to be ignored. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_↔RETCODE\_NOT\_ENABLED** (p. 1025)

## See also

**DDS\_TopicBuiltinTopicData** (p. 1770)

**DDS\_TOPIC\_TOPIC\_NAME** (p. 898)

**DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126)

#### 4.4.4.71 DDS\_DomainParticipant\_ignore\_publication()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_publication (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * handle )
```

Instructs RTI Connex to locally ignore a publication.

A publication is defined by the association of a topic name, user data, and partition set on the **DDS\_Publisher** (p. 436) (see **DDS\_PublicationBuiltinTopicData** (p. 1648)). After this call, any data written by that publication's **DDS\_DataWriter** (p. 478) will be ignored.

This operation can be used to ignore local *and* remote DataWriters.

The publication (DataWriter) to ignore is identified by the `handle` argument.

- To ignore a *remote* DataWriter, the `handle` can be obtained from the **DDS\_SampleInfo** (p. 1720) retrieved when reading data samples from the built-in **DDS\_DataReader** (p. 608) for the publication topic.
- To ignore a *local* DataWriter, the `handle` can be obtained by calling **DDS\_Entity\_get\_instance\_handle** (p. 1165) for the local DataWriter.

There is no way to reverse this operation.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) Handle of the <b>DDS_DataWriter</b> (p. 478) to be ignored. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

##### See also

**DDS\_PublicationBuiltinTopicData** (p. 1648)  
**DDS\_PUBLICATION\_TOPIC\_NAME** (p. 900)  
**DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126)

#### 4.4.4.72 DDS\_DomainParticipant\_ignore\_subscription()

```
DDS_ReturnCode_t DDS_DomainParticipant_ignore_subscription (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * handle )
```

Instructs RTI Connex to locally ignore a subscription.

A subscription is defined by the association of a topic name, user data, and partition set on the **DDS\_Subscriber** (p. 565) (see **DDS\_SubscriptionBuiltinTopicData** (p. 1748)). After this call, any data received related to that subscription's **DDS\_DataReader** (p. 608) will be ignored.

This operation can be used to ignore local *and* remote DataReaders.

The subscription to ignore is identified by the `handle` argument.

- To ignore a *remote* DataReader, the `handle` can be obtained from the **DDS\_SampleInfo** (p. 1720) retrieved when reading data samples from the built-in **DDS\_DataReader** (p. 608) for the subscription topic.
- To ignore a *local* DataReader, the `handle` can be obtained by calling **DDS\_Entity\_get\_instance\_handle** (p. 1165) for the local DataReader.

There is no way to reverse this operation.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) Handle of the <b>DDS_DataReader</b> (p. 608) to be ignored. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_↔RETCODE\_NOT\_ENABLED** (p. 1025)

#### See also

**DDS\_SubscriptionBuiltinTopicData** (p. 1748)  
**DDS\_SUBSCRIPTION\_TOPIC\_NAME** (p. 902)  
**DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126)

#### 4.4.4.73 DDS\_DomainParticipant\_banish\_ignored\_participants()

```
DDS_ReturnCode_t DDS_DomainParticipant_banish_ignored_participants (
    DDS_DomainParticipant * self )
```

<<*extension*>> (p. 817) Prevents ignored remote DomainParticipants from receiving traffic from the local **DDS\_↔DomainParticipant** (p. 72).

This method complements **DDS\_DomainParticipant\_ignore\_participant** (p. 128): `ignore_participant` prevents the local **DDS\_DomainParticipant** (p. 72) from processing traffic from the remote DomainParticipant, while this method prevents already ignored remote DomainParticipants from processing traffic from the local DomainParticipant.

Note: this method is currently only supported when enabling the RTI Security Plugins. Please refer to the **RTI Security Plugins User's Manual** for more information.

**MT Safety:**

Safe.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS←\_RETCODE\_NOT\_ENABLED** (p. 1025)

**See also**

**DDS\_DomainParticipant\_ignore\_participant** (p. 128)

**4.4.4.74 DDS\_DomainParticipant\_get\_domain\_id()**

```
DDS_DomainId_t DDS_DomainParticipant_get_domain_id (  
    DDS_DomainParticipant * self )
```

Get the unique domain identifier.

This operation retrieves the domain id used to create the **DDS\_DomainParticipant** (p. 72). The domain id identifies the DDS domain to which the **DDS\_DomainParticipant** (p. 72) belongs. Each DDS domain represents a separate data 'communication plane' isolated from other domains.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

the unique `domainId` that was used to create the domain

**See also**

**DDS\_DomainParticipantFactory\_create\_participant** (p. 37)

**DDS\_DomainParticipantFactory\_create\_participant\_with\_profile** (p. 39)

#### 4.4.4.75 DDS\_DomainParticipant\_delete\_contained\_entities()

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_contained_entities (
    DDS_DomainParticipant * self )
```

Delete all the entities that were created by means of the "create" operations on the **DDS\_DomainParticipant** (p. 72).

This operation deletes all contained **DDS\_Publisher** (p. 436) (including an implicit Publisher, if one exists), **DDS\_Subscriber** (p. 565) (including implicit Subscriber), **DDS\_Topic** (p. 172), **DDS\_ContentFilteredTopic** (p. 173), and **DDS\_MultiTopic** (p. 181) objects.

Prior to deleting each contained entity, this operation will recursively call the corresponding `delete_contained_entities()` operation on each contained entity (if applicable). This pattern is applied recursively. In this manner the operation `delete_contained_entities()` on the **DDS\_DomainParticipant** (p. 72) will end up recursively deleting all the entities contained in the **DDS\_DomainParticipant** (p. 72), including the **DDS\_DataWriter** (p. 478), **DDS\_DataReader** (p. 608), as well as the **DDS\_QueryCondition** (p. 691), **DDS\_ReadCondition** (p. 686), and **DDS\_TopicQuery** (p. 698) objects belonging to the contained **DDS\_DataReader** (p. 608).

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if any of the contained entities is in a state where it cannot be deleted .

If `delete_contained_entities()` completes successfully, the application may delete the **DDS\_DomainParticipant** (p. 72).

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

#### 4.4.4.76 DDS\_DomainParticipant\_assert\_liveliness()

```
DDS_ReturnCode_t DDS_DomainParticipant_assert_liveliness (
    DDS_DomainParticipant * self )
```

Manually asserts the liveliness of this **DDS\_DomainParticipant** (p. 72).

This is used in combination with the **DDS\_LivelinessQosPolicy** (p. 1575) to indicate to RTI Connexxt that the entity remains active.

You need to use this operation if the **DDS\_DomainParticipant** (p. 72) contains **DDS\_DataWriter** (p. 478) entities with the **DDS\_LivelinessQosPolicy::kind** (p. 1578) set to **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** (p. 1098) and it only affects the liveliness of those **DDS\_DataWriter** (p. 478) entities. Otherwise, it has no effect.

**Note:** writing data via the **FooDataWriter\_write** (p. 489) or **FooDataWriter\_write\_w\_timestamp** (p. 493) operation asserts liveliness on the **DDS\_DataWriter** (p. 478) itself and its **DDS\_DomainParticipant** (p. 72). Consequently the use of `assert_liveliness()` is only needed if the application is not writing data regularly.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

#### See also

**DDS\_LivelinessQosPolicy** (p. 1575)

#### 4.4.4.77 DDS\_DomainParticipant\_get\_publishers()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_publishers (
    DDS_DomainParticipant * self,
    struct DDS_PublisherSeq * publishers )
```

<<*extension*>> (p. 817) Allows the application to access all the publishers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of publishers, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

#### MT Safety:

Safe.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>publishers</i>	<< <i>inout</i> >> (p. 818) a PublisherSeq object where the set or list of publishers will be returned

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## 4.4.4.78 DDS\_DomainParticipant\_get\_subscribers()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_subscribers (
    DDS_DomainParticipant * self,
    struct DDS_SubscriberSeq * subscribers )
```

<<**extension**>> (p. 817) Allows the application to access all the subscribers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of subscribers, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## MT Safety:

Safe.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>subscribers</i>	<< <b>inout</b> >> (p. 818) a SubscriberSeq object where the set or list of subscribers will be returned

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## 4.4.4.79 DDS\_DomainParticipant\_get\_current\_time()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_current_time (
    DDS_DomainParticipant * self,
    struct DDS_Time_t * current_time )
```

Returns the current value of the time.

The current value of the time that RTI Connexx uses to time-stamp **DDS\_DataWriter** (p. 478) and to set the reception-timestamp for the data updates that it receives.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>current_time</i>	<< <b>inout</b> >> (p. 818) Current time to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.4.4.80 `DDS_DomainParticipant_contains_entity()`

```
DDS_Boolean DDS_DomainParticipant_contains_entity (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * a_handle )
```

Completes successfully with **DDS\_BOOLEAN\_TRUE** (p. 1004) if the referenced **DDS\_Entity** (p. 1160) is contained by the **DDS\_DomainParticipant** (p. 72).

This operation checks whether or not the given `a_handle` represents an **DDS\_Entity** (p. 1160) that was created from the **DDS\_DomainParticipant** (p. 72). The containment applies recursively. That is, it applies both to entities (**DDS\_↔TopicDescription** (p. 171), **DDS\_Publisher** (p. 436), or **DDS\_Subscriber** (p. 565)) created directly using the **DDS\_↔DomainParticipant** (p. 72) as well as entities created using a contained **DDS\_Publisher** (p. 436), or **DDS\_Subscriber** (p. 565) as the factory, and so forth.

The `instance` handle for an **DDS\_Entity** (p. 1160) may be obtained from built-in topic data, from various statuses, or from the operation **DDS\_Entity\_get\_instance\_handle** (p. 1165).

## Parameters

<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<code>a_handle</code>	<< <i>in</i> >> (p. 818) <b>DDS_InstanceHandle_t</b> (p. 210) of the <b>DDS_Entity</b> (p. 1160) to be checked.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if **DDS\_Entity** (p. 1160) is contained by the **DDS\_DomainParticipant** (p. 72), or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

4.4.4.81 `DDS_DomainParticipant_register_durable_subscription()`

```
DDS_ReturnCode_t DDS_DomainParticipant_register_durable_subscription (
    DDS_DomainParticipant * self,
    const struct DDS_EndpointGroup_t * group,
    const char * topic_name )
```

<<*extension*>> (p. 817) Registers a Durable Subscription on the specified **DDS\_Topic** (p. 172) on all Persistence Services.

If you need to receive all samples published on a **DDS\_Topic** (p. 172), including the ones published while a **DDS\_↔DataReader** (p. 608) is inactive or before it may be created, create a Durable Subscription using this method.

In this way, the Persistence Service will ensure that all the samples on that **DDS\_Topic** (p. 172) are retained until they are acknowledged by at least  $N$  DataReaders belonging to the Durable Subscription where  $N$  is the quorum count.

If the same Durable Subscription is created on a different **DDS\_Topic** (p. 172), the Persistence Service will implicitly delete the previous Durable Subscription and create a new one on the new **DDS\_Topic** (p. 172).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>group</i>	<< <i>in</i> >> (p. 818) <b>DDS_EndpointGroup_t</b> (p. 1539) The Durable Subscription name and quorum.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) The topic name for which the Durable Subscription is created.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.4.4.82 **DDS\_DomainParticipant\_delete\_durable\_subscription()**

```
DDS_ReturnCode_t DDS_DomainParticipant_delete_durable_subscription (
    DDS_DomainParticipant * self,
    const struct DDS_EndpointGroup_t * group )
```

<<**extension**>> (p. 817) Deletes an existing Durable Subscription on all Persistence Services.

The Persistence Service will delete the Durable Subscription and the quorum of the existing samples will be considered satisfied.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>group</i>	<< <i>in</i> >> (p. 818) <b>DDS_EndpointGroup_t</b> (p. 1539) specifying the Durable Subscription name. Quorum is not required for this operation.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.4.4.83 **DDS\_DomainParticipant\_resume\_endpoint\_discovery()**

```
DDS_ReturnCode_t DDS_DomainParticipant_resume_endpoint_discovery (
    DDS_DomainParticipant * self,
    const DDS_InstanceHandle_t * remote_participant_handle )
```

<<**extension**>> (p. 817) Initiates endpoint discovery with the specified remote **DDS\_DomainParticipant** (p. 72).

If the operation returns **DDS\_RETCODE\_OK** (p. 1025), the **DDS\_DomainParticipant** (p. 72) will initiate endpoint discovery with the remote **DDS\_DomainParticipant** (p. 72) provided as a parameter.

When **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p.1482) is set to **DDS\_BOOLEAN\_FALSE** (p.1004), this operation allows the RTI Connnext application to select for which remote DomainParticipants endpoint discovery is performed. By disabling endpoint discovery, the DomainParticipant will not store any state about remote endpoints and will not send local endpoint information to remote DomainParticipants.

If **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 1482) is set to **DDS\_BOOLEAN\_TRUE** (p. 1004), endpoint discovery will automatically occur for every discovered **DDS\_DomainParticipant** (p. 72). In this case, invoking this operation will have no effect and will return **DDS\_RETCODE\_OK** (p. 1025).

When **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p.1482) is set to **DDS\_BOOLEAN\_FALSE** (p. 1004), you have two options after a remote **DDS\_DomainParticipant** (p. 72) is discovered:

- Call this operation to enable endpoint discovery. After invoking this operation, the **DDS\_DomainParticipant** (p. 72) will start to exchange endpoint information so that matching and communication can occur with the remote **DDS\_DomainParticipant** (p. 72).
- Call the **DDS\_DomainParticipant\_ignore\_participant** (p. 128) operation to permanently ignore endpoint discovery with the remote **DDS\_DomainParticipant** (p. 72).

Setting **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 1482) to **DDS\_BOOLEAN\_FALSE** (p. 1004) enables application-level authentication use cases, in which a **DDS\_DomainParticipant** (p. 72) will initiate endpoint discovery with a remote **DDS\_DomainParticipant** (p. 72) after successful authentication at the application level.

The `remote_participant_handle` parameter is the one that appears in the **DDS\_SampleInfo** (p. 1720) retrieved when reading the data samples available for the built-in **DDS\_ParticipantBuiltinTopicDataReader** (p. 896).

If the specified remote **DDS\_DomainParticipant** (p. 72) is not in the database of discovered DomainParticipants or has been previously ignored, this operation will fail with **DDS\_RETCODE\_ERROR** (p. 1025).

This operation can be called multiple times on the same remote participant. If endpoint discovery has already been resumed, successive calls will have no effect and will return **DDS\_RETCODE\_OK** (p. 1025).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>remote_participant_handle</i>	<< <i>in</i> >> (p. 818) Handle of a discovered <b>DDS_DomainParticipant</b> (p. 72) for which endpoint discovery is to be resumed. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

#### See also

**DDS\_DiscoveryQosPolicy** (p. 1479)

#### 4.4.4.84 DDS\_DomainParticipant\_set\_dns\_tracker\_polling\_period()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_dns_tracker_polling_period (
    DDS_DomainParticipant * self,
    const struct DDS_Duration_t * polling_period )
```

<<**extension**>> (p. 817) Configures the frequency in which the DNS tracker queries the DNS service.

This API allows you to change the frequency of the polling period for the DNS tracker. The range of accepted values, in seconds, goes from 1 second to 1 year. **DDS\_DURATION\_INFINITE** (p. 1011) is also accepted as a valid value. If the duration is set to **DDS\_DURATION\_INFINITE** (p. 1011), the DNS tracker is disabled.

Modifying the DNS tracker polling period through this has no effect on the **DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 1476) when it is retrieved with **DDS\_DomainParticipant\_get\_qos()** (p. 149).

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>polling_period</i>	<< <b>in</b> >> (p. 818) Duration that is set as the polling period for the DNS tracker.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 1476)

**DDS\_DomainParticipant\_add\_peer** (p. 146)

#### 4.4.4.85 DDS\_DomainParticipant\_get\_dns\_tracker\_polling\_period()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_dns_tracker_polling_period (
    DDS_DomainParticipant * self,
    struct DDS_Duration_t * polling_period )
```

<<**extension**>> (p. 817) Retrieves the frequency used by the DNS tracker thread to query the DNS service.

The DNS tracker queries the DNS for hostnames specified in the initial peers of a DomainParticipant. The frequency of these queries is defined by **DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 1476). If the value returned is **DDS\_DURATION\_INFINITE** (p. 1011), the DNS tracker is disabled.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>polling_period</i>	<< <b>out</b> >> (p. 818) Duration that the API populates with the period of the DNS tracker.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 1476)

4.4.4.86 **DDS\_DomainParticipant\_get\_discovered\_participants()**

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants (
    DDS_DomainParticipant * self,
    struct DDS_InstanceHandleSeq * participant_handles )
```

Returns a list of discovered **DDS\_DomainParticipant** (p. 72) entities.

This operation retrieves the list of **DDS\_DomainParticipant** (p. 72) entities that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDS\_DomainParticipant\_ignore\_participant** (p. 128) operation. When using **DDS\_DISCOVERYCONFIG\_BUILTIN\_SPDP2** (p. 1082), this list only includes **DDS\_DomainParticipant** (p. 72) entities that the application has received configuration information from.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_handles</i>	<< <i>inout</i> >> (p. 818) <b>DDS_InstanceHandleSeq</b> (p. 1562) to be filled with handles of the discovered <b>DDS_DomainParticipant</b> (p. 72) entities.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

4.4.4.87 **DDS\_DomainParticipant\_get\_discovered\_participants\_from\_subject\_name()**

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participants_from_subject_name (
    DDS_DomainParticipant * self,
    struct DDS_InstanceHandleSeq * participant_handles,
    const char * subject_name )
```

<<*extension*>> (p. 817) Returns a list of discovered **DDS\_DomainParticipant** (p. 72) entities that have the given **DDS\_EntityNameQosPolicy::name** (p. 1545).

This operation retrieves the same list as **DDS\_DomainParticipant\_get\_discovered\_participants** (p. 141), except this list contains only the participants that have the given **DDS\_EntityNameQosPolicy::name** (p. 1545).

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the **RTI Security Plugins User's Manual** for more information.

**MT Safety:**

Safe.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_handles</i>	<< <i>inout</i> >> (p. 818) <b>DDS_InstanceHandleSeq</b> (p. 1562) to be filled with handles of the discovered <b>DDS_DomainParticipant</b> (p. 72) entities.
<i>subject_name</i>	<< <i>in</i> >> (p. 818) The <b>DDS_EntityNameQosPolicy::name</b> (p. 1545) by which to filter the list.

**Returns**

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

**4.4.4.88 DDS\_DomainParticipant\_get\_discovered\_participant\_data()**

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_data (
    DDS_DomainParticipant * self,
    struct DDS_ParticipantBuiltinTopicData * participant_data,
    const DDS_InstanceHandle_t * participant_handle )
```

Returns **DDS\_ParticipantBuiltinTopicData** (p. 1616) for the specified **DDS\_DomainParticipant** (p. 72).

This operation retrieves information on a **DDS\_DomainParticipant** (p. 72) that has been discovered on the network. The participant must be in the same domain as the participant on which this operation is invoked and must not have been "ignored" by means of the **DDS\_DomainParticipant\_ignore\_participant** (p. 128) operation.

The *participant\_handle* must correspond to such a DomainParticipant. Otherwise, the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

Use the operation **DDS\_DomainParticipant\_get\_discovered\_participants** (p. 141) to find the **DDS\_DomainParticipant** (p. 72) entities that are currently discovered.

**MT Safety:**

Safe.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_data</i>	<< <i>inout</i> >> (p. 818) <b>DDS_ParticipantBuiltinTopicData</b> (p. 1616) to be filled in with the data for the specified <b>DDS_DomainParticipant</b> (p. 72).
<i>participant_handle</i>	<< <i>in</i> >> (p. 818) <b>DDS_InstanceHandle_t</b> (p. 210) of <b>DDS_DomainParticipant</b> (p. 72).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## See also

**DDS\_ParticipantBuiltinTopicData** (p. 1616)

**DDS\_DomainParticipant\_get\_discovered\_participants** (p. 141)

## 4.4.4.89 DDS\_DomainParticipant\_get\_discovered\_participant\_subject\_name()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_participant_subject_name (
    DDS_DomainParticipant * self,
    char * subject_name,
    DDS_UnsignedLong * subject_name_size,
    const DDS_InstanceHandle_t * participant_handle )
```

<<*extension*>> (p. 817) Returns **DDS\_EntityNameQosPolicy::name** (p. 1545) for the specified **DDS\_DomainParticipant** (p. 72).

This operation retrieves the **DDS\_EntityNameQosPolicy::name** (p. 1545) of a **DDS\_DomainParticipant** (p. 72) that has been discovered on the network. The participant must be in the same domain as the participant on which this operation is invoked and must not have been "ignored" by means of the **DDS\_DomainParticipant\_ignore\_participant** (p. 128) operation.

The `participant_handle` must correspond to such a DomainParticipant. If the `participant_handle` is **DDS\_HANDLE\_NIL** (p. 224) or is not a valid **DDS\_InstanceHandle\_t** (p. 210) for a DomainParticipant, then the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025). If the `participant_handle` corresponds to a DomainParticipant that has not been discovered, then the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

Use the operation **DDS\_DomainParticipant\_get\_discovered\_participants** (p. 141) to find the **DDS\_DomainParticipant** (p. 72) entities that are currently discovered.

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the **RTI Security Plugins User's Manual** for more information.

## MT Safety:

Safe.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subject_name</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the <b>DDS_EntityNameQosPolicy::name</b> (p. 1545) of the discovered <b>DDS_DomainParticipant</b> (p. 72). If NULL, this function will return the required length of this buffer through the <code>subject_name_size</code> parameter.
<i>subject_name_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied char buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer, which includes space for the NUL terminator. If the supplied buffer is not NULL but this value is not large enough, then this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). If the <b>DDS_EntityNameQosPolicy::name</b>

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## See also

**DDS\_EntityNameQosPolicy::name** (p. 1545)

**DDS\_DomainParticipant\_get\_discovered\_participants** (p. 141)

#### 4.4.4.90 DDS\_DomainParticipant\_get\_discovered\_topics()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topics (
    DDS_DomainParticipant * self,
    struct DDS_InstanceHandleSeq * topic_handles )
```

Returns list of discovered **DDS\_Topic** (p. 172) objects.

This operation retrieves the list of **DDS\_Topic** (p. 172) s that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDS\_DomainParticipant\_ignore\_topic** (p. 129) operation.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_handles</i>	<< <i>inout</i> >> (p. 818) <b>DDS_InstanceHandleSeq</b> (p. 1562) to be filled with handles of the discovered <b>DDS_Topic</b> (p. 172) objects

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

#### 4.4.4.91 DDS\_DomainParticipant\_get\_discovered\_topic\_data()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_discovered_topic_data (
    DDS_DomainParticipant * self,
    struct DDS_TopicBuiltinTopicData * topic_data,
    const DDS_InstanceHandle_t * topic_handle )
```

Returns **DDS\_TopicBuiltinTopicData** (p. 1770) for the specified **DDS\_Topic** (p. 172).

This operation retrieves information on a **DDS\_Topic** (p. 172) that has been discovered by the local Participant and must not have been "ignored" by means of the **DDS\_DomainParticipant\_ignore\_topic** (p. 129) operation.

The `topic_handle` must correspond to such a topic. Otherwise, the operation will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025).

This call is not supported for remote topics. If a remote `topic_handle` is used, the operation will fail with **DDS\_↔RETCODE\_UNSUPPORTED** (p. 1025).

Use the operation **DDS\_DomainParticipant\_get\_discovered\_topics** (p. 144) to find the topics that are currently discovered.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_data</i>	<< <i>inout</i> >> (p. 818) <b>DDS_TopicBuiltinTopicData</b> (p. 1770) to be filled with the specified <b>DDS_Topic</b> (p. 172)'s data.
<i>topic_handle</i>	<< <i>in</i> >> (p. 818) <b>DDS_InstanceHandle_t</b> (p. 210) of <b>DDS_Topic</b> (p. 172).

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_↔RETCODE\_NOT\_ENABLED** (p. 1025)

#### See also

**DDS\_TopicBuiltinTopicData** (p. 1770)

**DDS\_DomainParticipant\_get\_discovered\_topics** (p. 144)

#### 4.4.4.92 DDS\_DomainParticipant\_take\_discovery\_snapshot()

```
DDS_ReturnCode_t DDS_DomainParticipant_take_discovery_snapshot (
    DDS_DomainParticipant * self,
    const char * file_name )
```

Take a snapshot of the remote participants discovered by a local one.

A possible output may be the following:

Remote participants that match the local participant domain=0

```
name="participantTestName" role="participantTestRole" id="1"
```

```
guid_prefix="0x0101D8D1,0x20B83C0D,0x4495246E"
```

```
-----
```

```
1. 0x0101542A,0x2C59B595,0xA1693BDF name="participantTestName"
```

```
role="participantTestRole"
```

```
unicastLocators="udp4://192.168.1.170:7411"
```

```
-----
```

#### Precondition

`self` is not NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) The local participant.
<i>file_name</i>	<< <i>in</i> >> (p. 818) Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through <b>NDDS_Config_Logger</b> (p. 1848). Otherwise, the snapshot will be printed in the file specified by <i>file_name</i> .

## Returns

One of the **Standard Return Codes** (p. 1024).

## 4.4.4.93 DDS\_DomainParticipant\_add\_peer()

```
DDS_ReturnCode_t DDS_DomainParticipant_add_peer (
    DDS_DomainParticipant * self,
    const char * peer_desc_string )
```

<<**extension**>> (p. 817) Attempt to contact one or more additional peer participants.

Add the given peer description to the list of peers with which this **DDS\_DomainParticipant** (p. 72) will try to communicate.

This function may be called at any time after this **DDS\_DomainParticipant** (p. 72) has been created (before or after it has been enabled).

If this function is called after **DDS\_Entity\_enable** (p. 1163), an attempt will be made to contact the new peer(s) immediately.

If this function is called *before* the DomainParticipant is enabled, the peer description will simply be added to the list that was populated by **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 1480); the first attempted contact will take place after this **DDS\_DomainParticipant** (p. 72) is enabled.

Adding a peer description with this function does not guarantee that any peer(s) discovered as a result will exactly correspond to those described:

- This **DDS\_DomainParticipant** (p. 72) will attempt to discover peer participants at the given locations but may not succeed if no such participants are available. In this case, this function will not wait for contact attempt(s) to be made and it will not report an error.
- If remote participants described by the given peer description *are* discovered, the distributed application is configured with asymmetric peer lists, and **DDS\_DiscoveryQosPolicy::accept\_unknown\_peers** (p. 1482) is set to **DDS\_BOOLEAN\_TRUE** (p. 1004). Thus, this **DDS\_DomainParticipant** (p. 72) may actually discover *more* peers than are described in the given peer description.

To be informed of the exact remote participants that are discovered, regardless of which peers this **DDS\_DomainParticipant** (p. 72) *attempts* to discover, use the built-in participant topic: **DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 896).

To remove specific peer locators, you may use **DDS\_DomainParticipant\_remove\_peer** (p. 147). If a peer is removed, the *add\_peer* operation will add it back to the list of peers.

To stop communicating with a peer **DDS\_DomainParticipant** (p. 72) that has been discovered, use **DDS\_DomainParticipant\_ignore\_participant** (p. 128).

Adding a peer description with this function has no effect on the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 1480) that may be subsequently retrieved with **DDS\_DomainParticipant\_get\_qos()** (p. 149) (because **DDS\_DiscoveryQosPolicy** (p. 1479) is immutable).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>peer_desc_string</i>	<< <i>in</i> >> (p. 818) New peer descriptor to be added. The format is specified in <b>Peer Descriptor Format</b> (p. 1153). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

- Peer Descriptor Format** (p. 1153)
- DDS\_DiscoveryQosPolicy::initial\_peers** (p. 1480)
- DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 896)
- DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126)

## 4.4.4.94 DDS\_DomainParticipant\_remove\_peer()

```
DDS_ReturnCode_t DDS_DomainParticipant_remove_peer (
    DDS_DomainParticipant * self,
    const char * peer_desc_string )
```

<<*extension*>> (p. 817) Remove one or more peer participants from the list of peers with which this **DDS\_DomainParticipant** (p. 72) will try to communicate.

This function may be called any time after this **DDS\_DomainParticipant** (p. 72) has been enabled

Calling this function has the following effects:

- If a **DDS\_DomainParticipant** (p. 72) was already discovered, it will be locally removed along with all its entities.
- Any further requests coming from a **DDS\_DomainParticipant** (p. 72) located on any of the removed peers will be ignored.
- All the locators contained in the peer description will be removed from the peer list. The local **DDS\_DomainParticipant** (p. 72) will stop sending announcement to those locators.

If remote participants located on a peer that was previously removed are discovered, they will be ignored until the related peer is added back by using **DDS\_DomainParticipant\_add\_peer** (p. 146).

Removing a peer description with this function has no effect on the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 1480) that may be subsequently retrieved with **DDS\_DomainParticipant\_get\_qos()** (p. 149) (because **DDS\_DiscoveryQosPolicy** (p. 1479) is immutable).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>peer_desc_string</i>	<< <i>in</i> >> (p. 818) Peer descriptor to be removed. The format is specified in <b>Peer Descriptor Format</b> (p. 1153). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**Peer Descriptor Format** (p. 1153)

**DDS\_DiscoveryQosPolicy::initial\_peers** (p. 1480)

**DDS\_DomainParticipant\_add\_peer** (p. 146)

4.4.4.95 **DDS\_DomainParticipant\_set\_qos()**

```
DDS_ReturnCode_t DDS_DomainParticipant_set_qos (
    DDS_DomainParticipant * self,
    const struct DDS_DomainParticipantQos * qos )
```

Change the QoS of this DomainParticipant.

The **DDS\_DomainParticipantQos::user\_data** (p. 1491) and **DDS\_DomainParticipantQos::entity\_factory** (p. 1491) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Set of policies to be applied to <b>DDS_DomainParticipant</b> (p. 72). Policies must be consistent. Immutable policies cannot be changed after <b>DDS_DomainParticipant</b> (p. 72) is enabled. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 60) can be used to indicate that the QoS of the <b>DDS_DomainParticipant</b> (p. 72) should be changed to match the current default <b>DDS_DomainParticipantQos</b> (p. 1490) set in the <b>DDS_DomainParticipantFactory</b> (p. 28). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) if an immutable policy is changed, or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025) if policies are inconsistent

See also

**DDS\_DomainParticipantQos** (p. 1490) for rules on consistency among QoS policies  
**set\_qos (abstract)** (p. 1161)

#### 4.4.4.96 DDS\_DomainParticipant\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_qos_with_profile (
    DDS_DomainParticipant * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Change the QoS of this domain participant using the input XML QoS profile.

The **DDS\_DomainParticipantQos::user\_data** (p. 1491) and **DDS\_DomainParticipantQos::entity\_factory** (p. 1491) can be changed. The other policies are immutable.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDS_DomainParticipantFactory_set_default_library</b> (p. 44)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipantFactory_set_default_profile</b> (p. 45)).

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) if immutable policy is changed, or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025) if policies are inconsistent

See also

**DDS\_DomainParticipantQos** (p. 1490) for rules on consistency among QoS

#### 4.4.4.97 DDS\_DomainParticipant\_get\_qos()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_qos (
    DDS_DomainParticipant * self,
    struct DDS_DomainParticipantQos * qos )
```

Get the participant QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) QoS to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**get\_qos (abstract)** (p. 1161)

## 4.4.4.98 DDS\_DomainParticipant\_set\_property()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_property (
    DDS_DomainParticipant * self,
    const char * property_name,
    const char * value,
    DDS_Boolean propagate )
```

Set the value for a property that applies to a DomainParticipant.

## Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS\_↔ DomainParticipant\_set\_qos** (p. 148) instead.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>property_name</i>	<< <i>in</i> >> (p. 818). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 818). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 818). Indicates if the property will be propagated or not.

## Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DataWriter\_set\_property** (p. 545)

**DDS\_DataReader\_set\_property** (p. 681)

**DDS\_DomainParticipant\_set\_qos** (p. 148)

#### 4.4.4.99 DDS\_DomainParticipant\_set\_listener()

```
DDS_ReturnCode_t DDS_DomainParticipant_set_listener (
    DDS_DomainParticipant * self,
    const struct DDS_DomainParticipantListener * l,
    DDS_StatusMask mask )
```

Sets the participant listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) Listener to be installed on the entity.
<i>mask</i>	<< <i>in</i> >> (p. 818) Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

The callback function on the listener cannot be NULL if the corresponding status is turned on in the *mask*.

MT Safety:

Unsafe. This function is not synchronized with the listener callbacks, so it is possible to set a new listener on a participant when the old listener is in a callback.

Once a participant has been enabled, it is therefore important that the listener not be changed unless some application-specific means are available of ensuring that the old listener cannot be concurrently in use. If this contract is violated, it is possible for the **DDS\_Listener::listener\_data** (p. 1572) field to have been changed without the callback function pointers having been changed (or vica versa); callback functions may therefore be passed an incorrect **DDS\_Listener←::listener\_data** (p. 1572) value.

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**set\_listener (abstract)** (p. 1162)

#### 4.4.4.100 DDS\_DomainParticipant\_get\_listener()

```
struct DDS_DomainParticipantListener DDS_DomainParticipant_get_listener (  
    DDS_DomainParticipant * self )
```

Get the participant listener.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

Existing listener attached to the **DDS\_DomainParticipant** (p. 72).

## See also

**DDS\_DomainParticipant\_get\_listenerX** (p. 153)

**get\_listener (abstract)** (p. 1162)

## 4.4.4.101 DDS\_DomainParticipant\_get\_listenerX()

```
DDS_ReturnCode_t DDS_DomainParticipant_get_listenerX (
    DDS_DomainParticipant * self,
    struct DDS_DomainParticipantListener * listener )
```

<<*extension*>> (p. 817) Get the participant listener.

An alternative form of **DDS\_DomainParticipant\_get\_listener** (p. 151) that fills in an existing listener structure rather than returning one on the stack.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <i>inout</i> >> (p. 818) Listener structure to be filled up. Cannot be NULL.

## See also

**DDS\_DomainParticipant\_get\_listener** (p. 151)

**get\_listener (abstract)** (p. 1162)

## 4.4.4.102 DDS\_DomainParticipant\_lookup\_publisher\_by\_name()

```
DDS_Publisher * DDS_DomainParticipant_lookup_publisher_by_name (
    DDS_DomainParticipant * self,
    const char * publisher_name )
```

<<*extension*>> (p. 817) Looks up a **DDS\_Publisher** (p. 436) by its entity name within this **DDS\_DomainParticipant** (p. 72).

Every **DDS\_Publisher** (p. 436) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves a **DDS\_Publisher** (p. 436) within the **DDS\_DomainParticipant** (p. 72) given the entity's name. If there are several **DDS\_Publisher** (p. 436) with the same name within the **DDS\_DomainParticipant** (p. 72), this function returns the first matching occurrence.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>publisher_name</i>	<< <i>in</i> >> (p. 818) Entity name of the <b>DDS_Publisher</b> (p. 436).

#### Returns

The first **DDS\_Publisher** (p. 436) found with the specified name or NULL if it is not found.

#### See also

**DDS\_DomainParticipant\_lookup\_datawriter\_by\_name** (p. 155)

#### 4.4.4.103 DDS\_DomainParticipant\_lookup\_subscriber\_by\_name()

```
DDS_Subscriber * DDS_DomainParticipant_lookup_subscriber_by_name (
    DDS_DomainParticipant * self,
    const char * subscriber_name )
```

<<*extension*>> (p. 817) Retrieves a **DDS\_Subscriber** (p. 565) by its entity name within this **DDS\_DomainParticipant** (p. 72).

Every **DDS\_Subscriber** (p. 565) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves a **DDS\_Subscriber** (p. 565) within the **DDS\_DomainParticipant** (p. 72) given the entity's name. If there are several **DDS\_Subscriber** (p. 565) with the same name within the **DDS\_DomainParticipant** (p. 72), this function returns the first matching occurrence.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subscriber_name</i>	<< <i>in</i> >> (p. 818) Entity name of the <b>DDS_Subscriber</b> (p. 565).

**Returns**

The first **DDS\_Subscriber** (p. 565) found with the specified name or NULL if it is not found.

**See also**

**DDS\_DomainParticipant\_lookup\_datareader\_by\_name** (p. 156)

**4.4.4.104 DDS\_DomainParticipant\_lookup\_datawriter\_by\_name()**

```
DDS_DataWriter * DDS_DomainParticipant_lookup_datawriter_by_name (
    DDS_DomainParticipant * self,
    const char * datawriter_full_name )
```

<<*extension*>> (p. 817) Looks up a **DDS\_DataWriter** (p. 478) by its entity name within this **DDS\_DomainParticipant** (p. 72).

Every **DDS\_DataWriter** (p. 478) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 1091).

Every **DDS\_Publisher** (p. 436) in the system has an entity name which is also configured and stored in the EntityName policy.

This operation retrieves a **DDS\_DataWriter** (p. 478) within a **DDS\_Publisher** (p. 436) given the specified name which encodes both to the **DDS\_DataWriter** (p. 478) and the **DDS\_Publisher** (p. 436) name.

If there are several **DDS\_DataWriter** (p. 478) with the same name within the corresponding **DDS\_Publisher** (p. 436) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDS\_Publisher** (p. 436) to which the **DDS\_DataWriter** (p. 478) belongs and the entity name of of the **DDS\_DataWriter** (p. 478) itself, separated by a double colon "::**MyPublisherName::MyDataWriterName**

The plain name contains the **DDS\_DataWriter** (p. 478) name only. In this situation it is implied that the **DDS\_DataWriter** (p. 478) belongs to the implicit **DDS\_Publisher** (p. 436) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDS\_Publisher** (p. 436) name part being "implicit". For example: the plain name "MyDataWriterName" is equivalent to specifying the fully qualified name "implicit::MyDataWriterName"

The **DDS\_DataWriter** (p. 478) is only looked up within the **DDS\_Publisher** (p. 436) specified in the fully qualified name, or within the implicit **DDS\_Publisher** (p. 436) if the name was not fully qualified.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>datawriter_full_name</i>	<< <i>in</i> >> (p. 818) Entity name or fully-qualified entity name of the <b>DDS_DataWriter</b> (p. 478).

**Returns**

The first **DDS\_DataWriter** (p. 478) found with the specified name or NULL if it is not found.

**See also**

**DDS\_Publisher\_lookup\_datawriter\_by\_name** (p. 462)

**DDS\_DomainParticipant\_lookup\_publisher\_by\_name** (p. 153)

**4.4.4.105 DDS\_DomainParticipant\_lookup\_datareader\_by\_name()**

```
DDS_DataReader * DDS_DomainParticipant_lookup_datareader_by_name (
    DDS_DomainParticipant * self,
    const char * datareader_full_name )
```

<<*extension*>> (p. 817) Retrieves up a **DDS\_DataReader** (p. 608) by its entity name in this **DDS\_DomainParticipant** (p. 72).

Every **DDS\_DataReader** (p. 608) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 1091).

Every **DDS\_Subscriber** (p. 565) in the system has an entity name which is also configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves a **DDS\_DataReader** (p. 608) within a **DDS\_Subscriber** (p. 565) given the specified name which encodes both to the **DDS\_DataReader** (p. 608) and the **DDS\_Subscriber** (p. 565) name.

If there are several **DDS\_DataReader** (p. 608) with the same name within the corresponding **DDS\_Subscriber** (p. 565) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDS\_Subscriber** (p. 565) to which the **DDS\_DataReader** (p. 608) belongs and the entity name of of the **DDS\_DataReader** (p. 608) itself, separated by a double colon "::". For example: MySubscriberName::MyDataReaderName

The plain name contains the **DDS\_DataReader** (p. 608) name only. In this situation it is implied that the **DDS\_DataReader** (p. 608) belongs to the implicit **DDS\_Subscriber** (p. 565) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDS\_Subscriber** (p. 565) name part being "implicit". For example: the plain name "MyDataReaderName" is equivalent to specifying the fully qualified name "implicit::MyDataReaderName"

The **DDS\_DataReader** (p. 608) is only looked up within the **DDS\_Subscriber** (p. 565) specified in the fully qualified name, or within the implicit **DDS\_Subscriber** (p. 565) if the name was not fully qualified.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>datareader_full_name</i>	<< <i>in</i> >> (p. 818) Full entity name of the <b>DDS_DataReader</b> (p. 608).

## Returns

The first **DDS\_DataReader** (p. 608) found with the specified name or NULL if it is not found.

## See also

**DDS\_Subscriber\_lookup\_datareader\_by\_name** (p. 591)

**DDS\_DomainParticipant\_lookup\_subscriber\_by\_name** (p. 154)

## 4.4.5 Variable Documentation

### 4.4.5.1 DDS\_DOMAINPARTICIPANTFACTORY\_QOS\_PRINT\_ALL

```
const struct DDS_DomainParticipantFactoryQos* DDS_DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (p. 31) indicating that all of the QoS should be printed.

The **DDS\_DomainParticipantFactoryQos\_to\_string\_w\_params** (p. 31) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_DOMAINPARTICIPANTFACTORY\_QOS\_PRINT\_ALL** (p. 157) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_↔  
DOMAINPARTICIPANTFACTORY\_QOS\_PRINT\_ALL** (p. 157) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the **DDS\_QosPrintFormat** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_DomainParticipantFactoryQos\_to\_string\_w\_↔  
params** (p. 31) API.

### 4.4.5.2 DDS\_DOMAINPARTICIPANT\_QOS\_PRINT\_ALL

```
const struct DDS_DomainParticipantQos* DDS_DOMAINPARTICIPANT_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76) indicating that all of the QoS should be printed.

The **DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_DOMAINPARTICIPANT\_QOS\_PRINT\_ALL** (p. 157) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_↔  
DOMAINPARTICIPANT\_QOS\_PRINT\_ALL** (p. 157) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the **DDS\_Qos\_↔  
PrintFormat** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_DomainParticipantQos\_to\_string\_w\_params** (p. 76) API.

#### 4.4.5.3 DDS\_TOPIC\_QOS\_DEFAULT

```
const struct DDS_TopicQos DDS_TOPIC_QOS_DEFAULT [extern]
```

Special value for creating a **DDS\_Topic** (p. 172) with default QoS.

When used in **DDS\_DomainParticipant\_create\_topic** (p. 112), this special value is used to indicate that the **DDS\_Topic** (p. 172) should be created with the default **DDS\_Topic** (p. 172) QoS by means of the operation `get_default_topic_qos` and using the resulting QoS to create the **DDS\_Topic** (p. 172).

When used in **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82) operation had never been called.

When used in **DDS\_Topic\_set\_qos** (p. 193), this special value is used to indicate that the QoS of the **DDS\_Topic** (p. 172) should be changed to match the current default QoS set in the **DDS\_DomainParticipant** (p. 72) that the **DDS\_Topic** (p. 172) belongs to.

#### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Topic; for this purpose, use **DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82).

#### See also

**DDS\_DomainParticipant\_create\_topic** (p. 112)

**DDS\_DomainParticipant\_set\_default\_topic\_qos** (p. 82)

**DDS\_Topic\_set\_qos** (p. 193)

#### Examples

**HelloWorld\_publisher.c**, and **HelloWorld\_subscriber.c**.

#### 4.4.5.4 DDS\_PUBLISHER\_QOS\_DEFAULT

```
const struct DDS_PublisherQos DDS_PUBLISHER_QOS_DEFAULT [extern]
```

Special value for creating a **DDS\_Publisher** (p. 436) with default QoS.

When used in **DDS\_DomainParticipant\_create\_publisher** (p. 100), this special value is used to indicate that the **DDS\_Publisher** (p. 436) should be created with the default **DDS\_Publisher** (p. 436) QoS by means of the operation `get_default_publisher_qos` and using the resulting QoS to create the **DDS\_Publisher** (p. 436).

When used in **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85) operation had never been called.

When used in **DDS\_Publisher\_set\_qos** (p. 455), this special value is used to indicate that the QoS of the **DDS\_Publisher** (p. 436) should be changed to match the current default QoS set in the **DDS\_DomainParticipant** (p. 72) that the **DDS\_Publisher** (p. 436) belongs to.

**Warning**

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Publisher; for this purpose, use **DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84).

**See also**

**DDS\_DomainParticipant\_create\_publisher** (p. 100)

**DDS\_DomainParticipant\_set\_default\_publisher\_qos** (p. 85)

**DDS\_Publisher\_set\_qos** (p. 455)

**Examples**

**HelloWorld\_publisher.c.**

**4.4.5.5 DDS\_SUBSCRIBER\_QOS\_DEFAULT**

```
const struct DDS_SubscriberQos DDS_SUBSCRIBER_QOS_DEFAULT [extern]
```

Special value for creating a **DDS\_Subscriber** (p. 565) with default QoS.

When used in **DDS\_DomainParticipant\_create\_subscriber** (p. 103), this special value is used to indicate that the **DDS\_Subscriber** (p. 565) should be created with the default **DDS\_Subscriber** (p. 565) QoS by means of the operation **get\_default\_subscriber\_qos** and using the resulting QoS to create the **DDS\_Subscriber** (p. 565).

When used in **DDS\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_DomainParticipant\_set\_default\_subscriber\_qos** (p. 90) operation had never been called.

When used in **DDS\_Subscriber\_set\_qos** (p. 585), this special value is used to indicate that the QoS of the **DDS\_Subscriber** (p. 565) should be changed to match the current default QoS set in the **DDS\_DomainParticipant** (p. 72) that the **DDS\_Subscriber** (p. 565) belongs to.

**Warning**

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Subscriber; for this purpose, use **DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89).

**See also**

**DDS\_DomainParticipant\_create\_subscriber** (p. 103)

**DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89)

**DDS\_Subscriber\_set\_qos** (p. 585)

**Examples**

**HelloWorld\_subscriber.c.**

#### 4.4.5.6 DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT

```
const struct DDS_FlowControllerProperty_t DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT [extern]
```

<<*extension*>> (p. 817) Special value for creating a **DDS\_FlowController** (p. 551) with default property.

When used in **DDS\_DomainParticipant\_create\_flowcontroller** (p. 121) and **DDS\_FlowController\_set\_property** (p. 555), this special value represents the set of values specified on the last successful call to **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96), or else, if the call was never made, the default values listed in **DDS\_FlowControllerProperty\_t** (p. 1552).

When used in **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96), this special value indicates that the default QoS should be reset back to the initial value that would be used if the **DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96) operation had never been called.

#### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default properties for a FlowController; for this purpose, use **DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** (p. 95).

#### See also

**DDS\_DomainParticipant\_create\_flowcontroller** (p. 121)

**DDS\_DomainParticipant\_set\_default\_flowcontroller\_property** (p. 96)

**DDS\_FlowController\_set\_property** (p. 555)

#### 4.4.5.7 DDS\_PUBLISHER\_QOS\_PRINT\_ALL

```
const struct DDS_PublisherQos* DDS_PUBLISHER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_PublisherQos\_to\_string\_w\_params** (p. 439) indicating that all of the QoS should be printed.

The **DDS\_PublisherQos\_to\_string\_w\_params** (p. 439) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_PUBLISHER\_QOS\_PRINT\_ALL** (p. 160) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_PUBLISHER\_QOS\_PRINT\_ALL** (p. 160) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the **DDS\_QosPrintFormat** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_PublisherQos\_to\_string\_w\_params** (p. 439) API.

#### 4.4.5.8 DDS\_SQLFILTER\_NAME

```
const char* const DDS_SQLFILTER_NAME
```

<<*extension*>> (p. 817) The name of the built-in SQL filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

See also

**Queries and Filters Syntax** (p. 730)

#### 4.4.5.9 DDS\_STRINGMATCHFILTER\_NAME

```
const char* const DDS_STRINGMATCHFILTER_NAME
```

<<*extension*>> (p. 817) The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

The StringMatch Filter is a subset of the SQL filter; it only supports the MATCH relational operator on a single string field.

See also

**Queries and Filters Syntax** (p. 730)

#### 4.4.5.10 DDS\_SUBSCRIBER\_QOS\_PRINT\_ALL

```
const struct DDS_SubscriberQos* DDS_SUBSCRIBER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569) indicating that all of the QoS should be printed.

The **DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_SUBSCRIBER\_QOS\_PRINT\_ALL** (p. 161) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_SUBSCRIBER\_QOS\_PRINT\_ALL** (p. 161) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the **DDS\_QosPrintFormat** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569) API.

#### 4.4.5.11 DDS\_TOPIC\_QOS\_PRINT\_ALL

```
const struct DDS_TopicQos* DDS_TOPIC_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to `DDS_TopicQos_to_string_w_params` (p. 186) indicating that all of the QoS should be printed.

The `DDS_TopicQos_to_string_w_params` (p. 186) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the `DDS_TOPIC_QOS_PRINT_ALL` (p. 161) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when `DDS_TOPIC_QOS_PRINT_ALL` (p. 161) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the `DDS_QosPrintFormat` (p. 1668) structure.

This value should only be used as the base parameter to the `DDS_TopicQos_to_string_w_params` (p. 186) API.

## 4.5 Built-in Topics

Built-in objects created by RTI Connex but accessible to the application.

### Modules

- **Participant Built-in Topics**

*Builtin topic for accessing information about the DomainParticipants discovered by RTI Connex.*

- **Topic Built-in Topics**

*Builtin topic for accessing information about the Topics discovered by RTI Connex.*

- **Publication Built-in Topics**

*Builtin topic for accessing information about the Publications discovered by RTI Connex.*

- **Subscription Built-in Topics**

*Builtin topic for accessing information about the Subscriptions discovered by RTI Connex.*

- **ServiceRequest Built-in Topic**

*Builtin topic for accessing requests from different services within RTI Connex.*

- **Common types and functions**

*Types and functions related to the built-in topics.*

### 4.5.1 Detailed Description

Built-in objects created by RTI Connex but accessible to the application.

RTI Connex must discover and keep track of the remote entities, such as new participants in the domain. This information may also be important to the application, which may want to react to this discovery, or else access it on demand.

A set of built-in topics and corresponding **DDS\_DataReader** (p. 608) objects are introduced to be used by the application to access this discovery information.

The information can be accessed as if it were normal application data. This allows the application to know when there are any changes in those values by means of the **DDS\_Listener** (p. 1569) or the **DDS\_Condition** (p. 1169) mechanisms.

The built-in data-readers all belong to a built-in **DDS\_Subscriber** (p. 565), which can be retrieved by using the function **DDS\_DomainParticipant\_get\_builtin\_subscriber** (p. 126). The built-in **DDS\_DataReader** (p. 608) objects can be retrieved by using the operation **DDS\_Subscriber\_lookup\_datareader** (p. 579), with the topic name as a parameter.

Built-in entities have default listener settings as well. The built-in **DDS\_Subscriber** (p. 565) and all of its built-in topics have 'nil' listeners with all statuses appearing in their listener masks (acting as a NO-OP listener that does not reset communication status). The built-in DataReaders have null listeners with no statuses in their masks.

The information that is accessible about the remote entities by means of the built-in topics includes all the QoS policies that apply to the corresponding remote Entity. These QoS policies appear as normal 'data' fields inside the data read by means of the built-in Topic. Additional information is provided to identify the Entity and facilitate the application logic.

The built-in **DDS\_DataReader** (p. 608) will not provide data pertaining to entities created from the same **DDS\_DomainParticipant** (p. 72) under the assumption that such entities are already known to the application that created them.

The discovery information provided by each built-in reader won't be received until it is first looked up. And if the DomainParticipant was created in a disabled state (see **DDS\_EntityFactoryQoSPolicy** (p. 1543)), the built-in subscriber and readers will need to be enabled explicitly (by the **DDS\_Entity\_enable** (p. 1163) operation).

Refer to **DDS\_ParticipantBuiltinTopicData** (p. 1616), **DDS\_TopicBuiltinTopicData** (p. 1770), **DDS\_SubscriptionBuiltinTopicData** (p. 1748) and **DDS\_PublicationBuiltinTopicData** (p. 1648) for a description of all the built-in topics and their contents.

The QoS of the built-in **DDS\_Subscriber** (p. 565) and **DDS\_DataReader** (p. 608) objects is given by the following table:

**Table 4.150 QoS of built-in DDS\_Subscriber (p. 565) and DDS\_DataReader (p. 608)**

QoS	Value
<b>DDS_UserDataQoSPolicy</b> (p. 1820)	0-length sequence
<b>DDS_TopicDataQoSPolicy</b> (p. 1775)	0-length sequence
<b>DDS_GroupDataQoSPolicy</b> (p. 1556)	0-length sequence
<b>DDS_DurabilityQoSPolicy</b> (p. 1516)	<b>DDS_TRANSIENT_LOCAL_DURABILITY_QOS</b> (p. 1089)
<b>DDS_DurabilityServiceQoSPolicy</b> (p. 1519)	Does not apply as <b>DDS_DurabilityQoSPolicyKind</b> (p. 1088) is <b>DDS_TRANSIENT_LOCAL_DURABILITY_QOS</b> (p. 1089)
<b>DDS_PresentationQoSPolicy</b> (p. 1634)	access_scope = <b>DDS_TOPIC_PRESENTATION_QOS</b> (p. 1106) coherent_access = <b>DDS_BOOLEAN_FALSE</b> (p. 1004) ordered_access = <b>DDS_BOOLEAN_FALSE</b> (p. 1004)

QoS	Value
<b>DDS_DeadlineQosPolicy</b> (p. 1455)	Period = infinite
<b>DDS_LatencyBudgetQosPolicy</b> (p. 1566)	duration = 0
<b>DDS_OwnershipQosPolicy</b> (p. 1610)	<b>DDS_SHARED_OWNERSHIP_QOS</b> (p. 1103)
<b>DDS_OwnershipStrengthQosPolicy</b> (p. 1615)	value = 0
<b>DDS_LivelinessQosPolicy</b> (p. 1575)	kind = <b>DDS_AUTOMATIC_LIVELINESS_QOS</b> (p. 1098) lease_duration = 0
<b>DDS_TimeBasedFilterQosPolicy</b> (p. 1767)	minimum_separation = 0
<b>DDS_PartitionQosPolicy</b> (p. 1627)	0-length sequence
<b>DDS_ReliabilityQosPolicy</b> (p. 1678)	kind = <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124) max_blocking_time = 100 milliseconds
<b>DDS_DestinationOrderQosPolicy</b> (p. 1457)	<b>DDS_BY_RECEPTION_TIMESTAMP_↔ DESTINATIONORDER_QOS</b> (p. 1075)
<b>DDS_HistoryQosPolicy</b> (p. 1558)	kind = <b>DDS_KEEP_LAST_HISTORY_QOS</b> (p. 1094) depth = 1
<b>DDS_ResourceLimitsQosPolicy</b> (p. 1690)	max_samples = <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) max_instances = <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) max_samples_per_instance = <b>DDS_LENGTH_UNLIMITED</b> (p. 1127)
<b>DDS_ReaderDataLifecycleQosPolicy</b> (p. 1673)	autopurge_nowriter_samples_delay = infinite autopurge_disposed_samples_delay = infinite
<b>DDS_EntityFactoryQosPolicy</b> (p. 1543)	autoenable_created_entities = <b>DDS_BOOLEAN_TRUE</b> (p. 1004)

## 4.6 Topic Module

Contains the **DDS\_Topic** (p. 172), **DDS\_ContentFilteredTopic** (p. 173), and **DDS\_MultiTopic** (p. 181) classes, the **DDS\_TopicListener** (p. 1777) interface, and more generally, all that is needed by an application to define **DDS\_Topic** (p. 172) objects and attach QoS policies to them.

### Modules

- **Topics**  
*DDS\_Topic* (p. 172) entity and associated elements
- **FlatData Topic-Types**  
<<extension>> (p. 817) FlatData Language Binding for IDL topic-types
- **Zero Copy Transfer Over Shared Memory**  
<<extension>> (p. 817) Zero Copy transfer over shared memory
- **User Data Type Support**  
*Defines generic classes and macros to support user data types.*
- **Type Code Support**

<<*extension*>> (p. 817) A **DDS\_TypeCode** (p. 1806) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 308) capability or to inspect the type information you receive from remote readers and writers.

- **Built-in Types**

*RTI Connext provides a set of very simple data types for you to use with the topics in your application.*

- **Built-in Topic's Trust Types**

*Types used as part of **DDS\_ParticipantBuiltinTopicData** (p. 1616), **DDS\_PublicationBuiltinTopicData** (p. 1648), **DDS\_SubscriptionBuiltinTopicData** (p. 1748) to describe Trust Plugins configuration.*

- **Dynamic Data**

<<*extension*>> (p. 817) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

- **DDS-Specific Primitive Types**

*Basic DDS value types for use in user data types.*

### 4.6.1 Detailed Description

Contains the **DDS\_Topic** (p. 172), **DDS\_ContentFilteredTopic** (p. 173), and **DDS\_MultiTopic** (p. 181) classes, the **DDS\_TopicListener** (p. 1777) interface, and more generally, all that is needed by an application to define **DDS\_Topic** (p. 172) objects and attach QoS policies to them.

## 4.7 Topics

**DDS\_Topic** (p. 172) entity and associated elements

### Data Structures

- struct **DDS\_PrintFormatProperty**

*A collection of attributes used to configure how data samples will be formatted when converted to a string.*

- struct **DDS\_InconsistentTopicStatus**

***DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 1031)*

- struct **DDS\_TopicQos**

*QoS policies supported by a **DDS\_Topic** (p. 172) entity.*

- struct **DDS\_TopicListener**

<<*interface*>> (p. 818) **DDS\_Listener** (p. 1569) for **DDS\_Topic** (p. 172) entities.

- struct **DDS\_ContentFilter**

<<*interface*>> (p. 818) Interface to be used by a custom filter of a **DDS\_ContentFilteredTopic** (p. 173)

- struct **DDS\_ExpressionProperty**

*Provides additional information about the filter expression passed to **DDS\_ContentFilter::writer\_compile** (p. 1354).*

- struct **DDS\_FilterSampleInfo**

*Provides meta information associated with the sample.*

## Macros

- **#define DDS\_PrintFormatProperty\_INITIALIZER**  
*Static initializer for `DDS_PrintFormatProperty` (p. 1639) objects.*
- **#define DDS\_InconsistentTopicStatus\_INITIALIZER**  
*Initializer for new status instances.*
- **#define DDS\_TopicQoS\_INITIALIZER**  
*Initializer for new QoS instances.*
- **#define DDS\_TopicListener\_INITIALIZER**  
*Initializer for new `DDS_TopicListener` (p. 1777).*
- **#define DDS\_ContentFilter\_INITIALIZER**  
*Initializer for new `DDS_ContentFilter` (p. 1352).*

## Typedefs

- **typedef struct DDS\_PrintFormatProperty DDS\_PrintFormatProperty**  
*A collection of attributes used to configure how data samples will be formatted when converted to a string.*
- **typedef struct DDS\_TopicDescriptionImpl DDS\_TopicDescription**  
*<<interface>> (p. 818) Base class for `DDS_Topic` (p. 172), `DDS_ContentFilteredTopic` (p. 173), and `DDS_MultiTopic` (p. 181).*
- **typedef struct DDS\_TopicWrapperI DDS\_Topic**  
*<<interface>> (p. 818) The most basic description of the data to be published and subscribed.*
- **typedef void(\* DDS\_TopicListener\_InconsistentTopicCallback)** (void \*listener\_data, **DDS\_Topic** \*topic, const struct **DDS\_InconsistentTopicStatus** \*status)  
*Prototype of `DDS_TopicListener::on_inconsistent_topic` (p. 1777).*
- **typedef struct DDS\_ContentFilteredTopicWrapperI DDS\_ContentFilteredTopic**  
*<<interface>> (p. 818) Specialization of `DDS_TopicDescription` (p. 171) that allows for content-based subscriptions.*
- **typedef DDS\_ReturnCode\_t(\* DDS\_ContentFilterCompileFunction)** (void \*filter\_data, void \*\*new\_compile\_data, const char \*expression, const struct **DDS\_StringSeq** \*parameters, const struct **DDS\_TypeCode** \*type\_code, const char \*type\_class\_name, void \*old\_compile\_data)  
*Prototype of `DDS_ContentFilter::compile` (p. 1353).*
- **typedef DDS\_Boolean(\* DDS\_ContentFilterEvaluateFunction)** (void \*filter\_data, void \*compile\_data, const void \*sample, const struct **DDS\_FilterSampleInfo** \*meta\_data)  
*Prototype of `DDS_ContentFilter::evaluate` (p. 1355).*
- **typedef void(\* DDS\_ContentFilterFinalizeFunction)** (void \*filter\_data, void \*compile\_data)  
*Prototype of `DDS_ContentFilter::finalize` (p. 1356).*
- **typedef void(\* DDS\_ContentFilterWriterFinalizeFunction)** (void \*filter\_data, void \*writer\_filter\_data, const struct **DDS\_Cookie\_t** \*cookie)  
*Prototype of `DDS_ContentFilter::writer_finalize` (p. 1357).*
- **typedef DDS\_ReturnCode\_t(\* DDS\_ContentFilterWriterAttachFunction)** (void \*filter\_data, void \*\*writer\_filter\_data, void \*reserved)  
*Prototype of `DDS_ContentFilter::writer_attach` (p. 1357).*
- **typedef void(\* DDS\_ContentFilterWriterDetachFunction)** (void \*filter\_data, void \*writer\_filter\_data)  
*Prototype of `DDS_ContentFilter::writer_detach` (p. 1357).*
- **typedef DDS\_ReturnCode\_t(\* DDS\_ContentFilterWriterCompileFunction)** (void \*filter\_data, void \*writer\_filter\_data, struct **DDS\_ExpressionProperty** \*prop, const char \*expression, const struct **DDS\_StringSeq** \*parameters, const struct **DDS\_TypeCode** \*type\_code, const char \*type\_class\_name, const struct **DDS\_Cookie\_t** \*cookie)

Prototype of `DDS_ContentFilter::writer_compile` (p. 1354).

- typedef struct `DDS_CookieSeq` `*(` `DDS_ContentFilterWriterEvaluateFunction``)` (void \*filter\_data, void \*writer\_filter\_data, const void \*sample, const struct `DDS_FilterSampleInfo` \*meta\_data)

Prototype of `DDS_ContentFilter::writer_evaluate` (p. 1355).

- typedef void( `DDS_ContentFilterWriterReturnLoanFunction`) (void \*filter\_data, void \*writer\_filter\_data, struct `DDS_CookieSeq` \*cookies)

Prototype of `DDS_ContentFilter::writer_return_loan` (p. 1358).

- typedef struct `DDS_MultiTopicImpl` `DDS_MultiTopic`

**[Not supported (optional)]** <<interface>> (p. 818) A specialization of `DDS_TopicDescription` (p. 171) that allows subscriptions that combine/filter/rearrange data coming from several topics.

## Enumerations

- enum `DDS_PrintFormatKind` {  
`DDS_DEFAULT_PRINT_FORMAT` ,  
`DDS_XML_PRINT_FORMAT` ,  
`DDS_JSON_PRINT_FORMAT` }

Format kinds available when converting data samples to string representations.

## Functions

- `DDS_ReturnCode_t` `DDS_InconsistentTopicStatus_initialize` (struct `DDS_InconsistentTopicStatus` \*self)  
*Initializer for new status instances.*
- `DDS_ReturnCode_t` `DDS_InconsistentTopicStatus_copy` (struct `DDS_InconsistentTopicStatus` \*self, const struct `DDS_InconsistentTopicStatus` \*source)  
*Copy the contents of the given status into this status.*
- `DDS_ReturnCode_t` `DDS_InconsistentTopicStatus_finalize` (struct `DDS_InconsistentTopicStatus` \*self)  
*Free any dynamic memory allocated by status instances.*
- `DDS_Boolean` `DDS_InconsistentTopicStatus_equals` (const struct `DDS_InconsistentTopicStatus` \*left, const struct `DDS_InconsistentTopicStatus` \*right)  
*Compares two `DDS_InconsistentTopicStatus` (p. 1561) for equality.*
- `DDS_Boolean` `DDS_TopicQos_equals` (const struct `DDS_TopicQos` \*self, const struct `DDS_TopicQos` \*other)  
*Compares two `DDS_TopicQos` (p. 1778) for equality.*
- `DDS_ReturnCode_t` `DDS_TopicQos_print` (const struct `DDS_TopicQos` \*self)  
*Prints this `DDS_TopicQos` (p. 1778) to stdout.*
- `DDS_ReturnCode_t` `DDS_TopicQos_to_string` (const struct `DDS_TopicQos` \*self, char \*string, `DDS_↔` `UnsignedLong` \*string\_size)  
*Obtains a string representation of this `DDS_TopicQos` (p. 1778).*
- `DDS_ReturnCode_t` `DDS_TopicQos_to_string_w_params` (const struct `DDS_TopicQos` \*self, char \*string, `DDS_UnsignedLong` \*string\_size, const struct `DDS_TopicQos` \*base, const struct `DDS_QosPrintFormat` \*format)  
*Obtains a string representation of this `DDS_TopicQos` (p. 1778).*
- `DDS_ReturnCode_t` `DDS_TopicQos_initialize` (struct `DDS_TopicQos` \*self)  
*Initializer for new QoS instances.*
- `DDS_ReturnCode_t` `DDS_TopicQos_finalize` (struct `DDS_TopicQos` \*self)  
*Free any dynamic memory allocated by the policies in this `DDS_TopicQos` (p. 1778).*

- **DDS\_ReturnCode\_t DDS\_TopicQos\_copy** (struct **DDS\_TopicQos** \*self, const struct **DDS\_TopicQos** \*source)  
*Copy the contents of the given QoS into this QoS.*
- const char \* **DDS\_TopicDescription\_get\_type\_name** ( **DDS\_TopicDescription** \*self)  
*Get the associated `type_name`.*
- const char \* **DDS\_TopicDescription\_get\_name** ( **DDS\_TopicDescription** \*self)  
*Get the name used to create this `DDS_TopicDescription` (p. 171) .*
- **DDS\_DomainParticipant \* DDS\_TopicDescription\_get\_participant** ( **DDS\_TopicDescription** \*self)  
*Get the `DDS_DomainParticipant` (p. 72) to which the `DDS_TopicDescription` (p. 171) belongs.*
- **DDS\_Entity \* DDS\_Topic\_as\_entity** ( **DDS\_Topic** \*topic)  
*Access a `DDS_Topic` (p. 172)'s `DDS_Entity` (p. 1160) supertype instance.*
- **DDS\_TopicDescription \* DDS\_Topic\_as\_topicdescription** ( **DDS\_Topic** \*topic)  
*Access a `DDS_Topic` (p. 172)'s `DDS_TopicDescription` (p. 171) supertype instance.*
- **DDS\_Topic \* DDS\_Topic\_narrow** ( **DDS\_TopicDescription** \*self)  
*Narrow the given `DDS_TopicDescription` (p. 171) pointer to a `DDS_Topic` (p. 172) pointer.*
- **DDS\_Topic \* DDS\_Topic\_narrow\_from\_entity** ( **DDS\_Entity** \*self)  
*Narrow the given `DDS_Entity` (p. 1160) pointer to a `DDS_Topic` (p. 172) pointer.*
- **DDS\_ReturnCode\_t DDS\_Topic\_get\_inconsistent\_topic\_status** ( **DDS\_Topic** \*self, struct **DDS\_InconsistentTopicStatus** \*status)  
*Allows the application to retrieve the `DDS_INCONSISTENT_TOPIC_STATUS` (p. 1031) status of a `DDS_Topic` (p. 172).*
- **DDS\_ReturnCode\_t DDS\_Topic\_set\_qos** ( **DDS\_Topic** \*self, const struct **DDS\_TopicQos** \*qos)  
*Set the topic QoS.*
- **DDS\_ReturnCode\_t DDS\_Topic\_set\_qos\_with\_profile** ( **DDS\_Topic** \*self, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Change the QoS of this topic using the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_Topic\_get\_qos** ( **DDS\_Topic** \*self, struct **DDS\_TopicQos** \*qos)  
*Get the topic QoS.*
- **DDS\_ReturnCode\_t DDS\_Topic\_set\_listener** ( **DDS\_Topic** \*self, const struct **DDS\_TopicListener** \*l, **DDS\_StatusMask** mask)  
*Set the topic listener.*
- struct **DDS\_TopicListener** **DDS\_Topic\_get\_listener** ( **DDS\_Topic** \*self)  
*Get the topic listener.*
- **DDS\_ReturnCode\_t DDS\_Topic\_get\_listenerX** ( **DDS\_Topic** \*self, struct **DDS\_TopicListener** \*listener)  
*<<extension>> (p. 817) Get the topic listener.*
- **DDS\_TopicDescription \* DDS\_ContentFilteredTopic\_as\_topicdescription** ( **DDS\_ContentFilteredTopic** \*contentFilteredTopic)  
*Access a `DDS_ContentFilteredTopic` (p. 173)'s supertype instance.*
- **DDS\_ContentFilteredTopic \* DDS\_ContentFilteredTopic\_narrow** ( **DDS\_TopicDescription** \*self)  
*Narrow the given `DDS_TopicDescription` (p. 171) pointer to a `DDS_ContentFilteredTopic` (p. 173) pointer.*
- const char \* **DDS\_ContentFilteredTopic\_get\_filter\_expression** ( **DDS\_ContentFilteredTopic** \*self)  
*Get the `filter_expression`.*
- **DDS\_ReturnCode\_t DDS\_ContentFilteredTopic\_get\_expression\_parameters** ( **DDS\_ContentFilteredTopic** \*self, struct **DDS\_StringSeq** \*parameters)  
*Get the `expression_parameters`.*
- **DDS\_ReturnCode\_t DDS\_ContentFilteredTopic\_set\_expression\_parameters** ( **DDS\_ContentFilteredTopic** \*self, const struct **DDS\_StringSeq** \*parameters)  
*Set the `expression_parameters`.*

- **DDS\_ReturnCode\_t DDS\_ContentFilteredTopic\_set\_expression** ( **DDS\_ContentFilteredTopic** \*self, const char \*expression, const struct **DDS\_StringSeq** \*parameters)  
*Set the filter\_expression and expression\_parameters.*
- **DDS\_ReturnCode\_t DDS\_ContentFilteredTopic\_append\_to\_expression\_parameter** ( **DDS\_ContentFilteredTopic** \*self, const **DDS\_Long** index, const char \*val)  
*<<extension>> (p. 817) Appends a string term to the specified parameter string.*
- **DDS\_ReturnCode\_t DDS\_ContentFilteredTopic\_remove\_from\_expression\_parameter** ( **DDS\_ContentFilteredTopic** \*self, const **DDS\_Long** index, const char \*val)  
*<<extension>> (p. 817) Removes a string term from the specified parameter string.*
- **DDS\_Topic \* DDS\_ContentFilteredTopic\_get\_related\_topic** ( **DDS\_ContentFilteredTopic** \*self)  
*Get the related\_topic.*
- **DDS\_TopicDescription \* DDS\_MultiTopic\_as\_topicdescription** ( **DDS\_MultiTopic** \*multiTopic)  
*Access a DDS\_MultiTopic (p. 181)'s supertype instance.*
- **DDS\_MultiTopic \* DDS\_MultiTopic\_narrow** ( **DDS\_TopicDescription** \*self)  
*Narrow the given DDS\_TopicDescription (p. 171) pointer to a DDS\_MultiTopic (p. 181) pointer.*
- const char \* **DDS\_MultiTopic\_get\_subscription\_expression** ( **DDS\_MultiTopic** \*self)  
*Get the expression for this DDS\_MultiTopic (p. 181).*
- **DDS\_ReturnCode\_t DDS\_MultiTopic\_get\_expression\_parameters** ( **DDS\_MultiTopic** \*self, struct **DDS\_StringSeq** \*parameters)  
*Get the expression parameters.*
- **DDS\_ReturnCode\_t DDS\_MultiTopic\_set\_expression\_parameters** ( **DDS\_MultiTopic** \*self, const struct **DDS\_StringSeq** \*parameters)  
*Set the expression\_parameters.*

## Variables

- const struct **DDS\_PrintFormatProperty DDS\_PRINT\_FORMAT\_PROPERTY\_DEFAULT**  
*Sentinel constant indicating default values for DDS\_PrintFormatProperty (p. 1639).*

### 4.7.1 Detailed Description

**DDS\_Topic** (p. 172) entity and associated elements

### 4.7.2 Macro Definition Documentation

#### 4.7.2.1 DDS\_PrintFormatProperty\_INITIALIZER

```
#define DDS_PrintFormatProperty_INITIALIZER
```

Static initializer for **DDS\_PrintFormatProperty** (p. 1639) objects.

Use this initializer to ensure that new property objects don't have uninitialized contents.

```
struct DDS_PrintFormatProperty props = DDS_PrintFormatProperty_INITIALIZER;
```

See also

**DDS\_PrintFormatProperty** (p. 1639)

#### 4.7.2.2 DDS\_InconsistentTopicStatus\_INITIALIZER

```
#define DDS_InconsistentTopicStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_InconsistentTopicStatus** (p. 1561) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_InconsistentTopicStatus\_finalize** (p. 184) should be called to free the contained fields that use dynamic memory:

```
struct DDS_InconsistentTopicStatus myStatus = DDS_InconsistentTopicStatus_INITIALIZER;
```

```
DDS_Topic_get_inconsistent_topic(myTopic, &myStatus);
```

```
DDS_InconsistentTopicStatus_finalize(&myStatus);
```

See also

**DDS\_InconsistentTopicStatus\_initialize** (p. 182)

**DDS\_Topic\_get\_inconsistent\_topic\_status** (p. 192)

**DDS\_InconsistentTopicStatus\_finalize** (p. 184)

#### 4.7.2.3 DDS\_TopicQos\_INITIALIZER

```
#define DDS_TopicQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_TopicQos** (p. 1778) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_TopicQos myQos = DDS_TopicQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82) or **DDS\_Topic\_get\_qos** (p. 195); one of those should be called subsequently to setting the QoS of a new or existing entity. **DDS\_TopicQos\_finalize** (p. 188) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_TopicQos myQos = DDS_TopicQos_INITIALIZER;
```

```
DDS_DomainParticipant_get_default_topic_qos(myParticipant, &myQos);
```

```
DDS_Topic_set_qos(myTopic, &myQos);
```

```
DDS_TopicQos_finalize(&myQos);
```

See also

**DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82)

**DDS\_TopicQos\_finalize** (p. 188)

#### 4.7.2.4 DDS\_TopicListener\_INITIALIZER

```
#define DDS_TopicListener_INITIALIZER
```

Initializer for new **DDS\_TopicListener** (p. 1777).

All the new **DDS\_TopicListener** (p. 1777) instances allocated in the stack should be initialized to this value. No memory is allocated.

```
struct DDS_TopicListener listener = DDS_TopicListener_INITIALIZER;
/* initialize listener functions */
listener.on_inconsistent_topic = ...;
DDS_Topic_set_listener(myTopic, &listener, mask);
```

See also

**DDS\_Topic\_set\_listener** (p. 195)

**DDS\_TopicListener** (p. 1777)

#### 4.7.2.5 DDS\_ContentFilter\_INITIALIZER

```
#define DDS_ContentFilter_INITIALIZER
```

Initializer for new **DDS\_ContentFilter** (p. 1352).

All the new **DDS\_ContentFilter** (p. 1352) instances allocated in the stack should be initialized to this value. No memory is allocated.

See also

**DDS\_ContentFilter** (p. 1352)

**DDS\_DomainParticipant\_create\_contentfilteredtopic\_with\_filter** (p. 116)

### 4.7.3 Typedef Documentation

#### 4.7.3.1 DDS\_PrintFormatProperty

```
typedef struct DDS_PrintFormatProperty DDS_PrintFormatProperty
```

A collection of attributes used to configure how data samples will be formatted when converted to a string.

To ensure that new objects are initialized to known values, assign them with the static initializer **DDS\_PrintFormatProperty\_INITIALIZER** (p. 169).

See also

**DDS\_PrintFormatProperty\_INITIALIZER** (p. 169)

### 4.7.3.2 DDS\_TopicDescription

```
typedef struct DDS_TopicDescriptionImpl DDS_TopicDescription
```

<<*interface*>> (p. 818) Base class for **DDS\_Topic** (p. 172), **DDS\_ContentFilteredTopic** (p. 173), and **DDS\_MultiTopic** (p. 181).

**DDS\_TopicDescription** (p. 171) represents the fact that both publications and subscriptions are tied to a single data-type. Its attribute `type_name` defines a unique resulting type for the publication or the subscription and therefore creates an implicit association with a **DDS\_TypeSupport** (p. 210).

**DDS\_TopicDescription** (p. 171) has also a `name` that allows it to be retrieved locally.

See also

**DDS\_TypeSupport** (p. 210), **FooTypeSupport** (p. 1846)

### 4.7.3.3 DDS\_Topic

```
typedef struct DDS_TopicWrapperI DDS_Topic
```

<<*interface*>> (p. 818) The most basic description of the data to be published and subscribed.

QoS:

**DDS\_TopicQos** (p. 1778)

Status:

**DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 1031), **DDS\_InconsistentTopicStatus** (p. 1561)

Listener:

**DDS\_TopicListener** (p. 1777)

A **DDS\_Topic** (p. 172) is identified by its name, which must be unique in the whole domain. In addition (by virtue of extending **DDS\_TopicDescription** (p. 171)) it fully specifies the type of the data that can be communicated when publishing or subscribing to the **DDS\_Topic** (p. 172).

**DDS\_Topic** (p. 172) is the only **DDS\_TopicDescription** (p. 171) that can be used for publications and therefore associated with a **DDS\_DataWriter** (p. 478).

The following operations may be called even if the **DDS\_Topic** (p. 172) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) if called on a disabled **DDS\_Topic** (p. 172):

- **DDS\_Entity\_enable** (p. 1163)
- **DDS\_Topic\_set\_qos** (p. 193), **DDS\_Topic\_get\_qos** (p. 195)
- **DDS\_Topic\_set\_qos\_with\_profile** (p. 194)
- **DDS\_Topic\_set\_listener** (p. 195), **DDS\_Topic\_get\_listener** (p. 196)
- **DDS\_Entity\_get\_statuscondition** (p. 1164), **DDS\_Entity\_get\_status\_changes** (p. 1164)
- **DDS\_Topic\_get\_inconsistent\_topic\_status** (p. 192)

See also

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.7.3.4 DDS\_TopicListener\_InconsistentTopicCallback

```
typedef void(* DDS_TopicListener_InconsistentTopicCallback) (void *listener_data, DDS_Topic *topic,
const struct DDS_InconsistentTopicStatus *status)
```

Prototype of `DDS_TopicListener::on_inconsistent_topic` (p. 1777).

##### Parameters

<i>listener_data</i>	<< <i>out</i> >> (p. 818) Data associated with the listener when the listener is set
<i>topic</i>	<< <i>out</i> >> (p. 818) Locally created <code>DDS_Topic</code> (p. 172) that triggers the listener callback
<i>status</i>	<< <i>out</i> >> (p. 818) Current inconsistent status of the locally created <code>DDS_Topic</code> (p. 172)

#### 4.7.3.5 DDS\_ContentFilteredTopic

```
typedef struct DDS_ContentFilteredTopicWrapperI DDS_ContentFilteredTopic
```

<<*interface*>> (p. 818) Specialization of `DDS_TopicDescription` (p. 171) that allows for content-based subscriptions.

It describes a more sophisticated subscription that indicates a `DDS_DataReader` (p. 608) does not want to necessarily see all values of each instance published under the `DDS_Topic` (p. 172). Rather, it wants to see only the values whose contents satisfy certain criteria. This class therefore can be used to request content-based subscriptions.

The selection of the content is done using the `filter_expression` with parameters `expression_← parameters`.

- The `filter_expression` attribute is a string that specifies the criteria to select the data samples of interest. It is similar to the WHERE part of an SQL clause.
- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `filter_expression`. The number of supplied parameters must fit with the requested values in the `filter_expression` (i.e. the number of n tokens).

**Queries and Filters Syntax** (p. 730) describes the syntax of `filter_expression` and `expression_← parameters`.

#### 4.7.3.6 DDS\_ContentFilterCompileFunction

```
typedef DDS_ReturnCode_t(* DDS_ContentFilterCompileFunction) (void *filter_data, void **new_←
compile_data, const char *expression, const struct DDS_StringSeq *parameters, const struct DDS_←
_TypeCode *type_code, const char *type_class_name, void *old_compile_data)
```

Prototype of `DDS_ContentFilter::compile` (p. 1353).

Compile an instance of the content filter according to the filter expression and parameters of the given data type.

This function is called when an instance of the locally registered content filter is created or when the expression parameter for the locally registered content filter instance is changed.

An instance of the locally registered content filter is created every time a local `DDS_ContentFilteredTopic` (p. 173) with the matching filter name is created, or when a `DDS_DataReader` (p. 608) with a matching filter name is discovered.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

## Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL. When a custom filter is registered, it is registered with a <b>filter_data</b> . This <b>filter_data</b> is user defined, e.g., it could be a reference to a program context. This is useful if the content filter functions are registered with different filter names. For instance, each filter name could have its own context and the <b>DDS_ContentFilter::compile</b> (p. 1353) function can access this context.
--------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Parameters

<i>new_compile_data</i>	<< <i>out</i> >> (p. 818) User specified opaque pointer of this instance of the content filter. This value is then passed to the <b>DDS_ContentFilter::evaluate</b> (p. 1355) and <b>DDS_ContentFilter::finalize</b> (p. 1356) functions for this instance of the content filter. Can be set to NULL .
<i>expression</i>	<< <i>in</i> >> (p. 818) An ASCIIZ string with the filter expression. The memory used by this string is owned by RTI Connex and <b>must</b> not be freed. If you want to manipulate this string, you <b>must</b> first make a copy of it.
<i>parameters</i>	<< <i>in</i> >> (p. 818) A string sequence with the expression parameters the <b>DDS_ContentFilteredTopic</b> (p. 173) was created with. The string sequence is <b>equal</b> (but <b>not</b> identical) to the string sequence passed to <b>DDS_DomainParticipant_create_contentfilteredtopic</b> (p. 115). Note that the sequence passed to the compile function is <b>owned</b> by RTI Connex and <b>must not</b> be referenced outside the compile function.
<i>type_code</i>	<< <i>in</i> >> (p. 818) A pointer to the type code for the related <b>DDS_Topic</b> (p. 172) of the <b>DDS_ContentFilteredTopic</b> (p. 173). A <b>type_code</b> is a description of a type in terms of which types it contains (such as long, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
<i>type_class_name</i>	<< <i>in</i> >> (p. 818) Fully qualified class name of the related <b>DDS_Topic</b> (p. 172).
<i>old_compile_data</i>	<< <i>in</i> >> (p. 818) The previous <b>new_compile_data</b> value from a previous call to this instance of a content filter. If the compile function is called more than once for an instance of a <b>DDS_ContentFilteredTopic</b> (p. 173), e.g., if the expression parameters are changed, then the <b>new_compile_data</b> value returned by the previous invocation is passed in the <b>old_compile_data</b> parameter (which can be NULL ). If this is a new instance of the filter, NULL is passed. This parameter is useful for freeing or reusing previously allocated resources.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.7.3.7 DDS\_ContentFilterEvaluateFunction

```
typedef DDS_Boolean(* DDS_ContentFilterEvaluateFunction) (void *filter_data, void *compile_data,
const void *sample, const struct DDS_FilterSampleInfo *meta_data)
```

Prototype of **DDS\_ContentFilter::evaluate** (p. 1355).

Evaluate whether the sample is passing the filter or not according to the sample content.

This function is called when a sample for a locally created **DDS\_DataReader** (p. 608) associated with the filter is received, or when a sample for a discovered **DDS\_DataReader** (p. 608) associated with the filter needs to be sent.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

#### Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Parameters

<i>compile_data</i>	<< <i>in</i> >> (p. 818) The last return value of the <b>DDS_ContentFilter::compile</b> (p. 1353) function for this instance of the content filter. Can be NULL .
<i>sample</i>	<< <i>in</i> >> (p. 818) Pointer to a deserialized sample to be filtered
<i>meta_data</i>	<< <i>in</i> >> (p. 818) Pointer to meta data associated with the sample.

#### Returns

The function must return 0 if the sample should be filtered out, non zero otherwise

#### 4.7.3.8 DDS\_ContentFilterFinalizeFunction

```
typedef void(* DDS_ContentFilterFinalizeFunction) (void *filter_data, void *compile_data)
```

Prototype of **DDS\_ContentFilter::finalize** (p. 1356).

A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.

This function is called when an instance of the locally registered content filter is deleted.

An instance of the locally registered content filter is deleted every time a local **DDS\_ContentFilteredTopic** (p. 173) with the matching filter name is deleted, or when a **DDS\_DataReader** (p. 608) with a matching filter name is removed due to discovery.

This function is also called on all instances of the discovered **DDS\_DataReader** (p. 608) with a matching filter name if the filter is unregistered with **DDS\_DomainParticipant\_unregister\_contentfilter** (p. 118).

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

## Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Parameters

<i>compile_data</i>	<< <i>in</i> >> (p. 818) The last return value of the <b>DDS_ContentFilter::compile</b> (p. 1353) function for this instance of the content filter. Can be NULL
---------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------

## 4.7.3.9 DDS\_ContentFilterWriterFinalizeFunction

```
typedef void(* DDS_ContentFilterWriterFinalizeFunction) (void *filter_data, void *writer_filter_↔
data, const struct DDS_Cookie_t *cookie)
```

Prototype of **DDS\_ContentFilter::writer\_finalize** (p. 1357).

A writer-side filtering API to clean up a previously compiled instance of the content filter.

This function is called to notify the filter implementation that the **DDS\_DataWriter** (p. 478) is no longer matching with a **DDS\_DataReader** (p. 608) for which it was previously performing writer-side filtering. This will allow the filter to purge any state it was maintaining for the **DDS\_DataReader** (p. 608).

It is possible for multiple threads to be calling into this function at the same time.

## Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 818) A pointer to the state created using <b>DDS_ContentFilter::writer_attach</b> (p. 1357).
<i>cookie</i>	<b>DDS_Cookie_t</b> (p. 1360) to uniquely identify <b>DDS_DataReader</b> (p. 608) for which <b>DDS_ContentFilter::writer_finalize</b> (p. 1357) was called.

## 4.7.3.10 DDS\_ContentFilterWriterAttachFunction

```
typedef DDS_ReturnCode_t(* DDS_ContentFilterWriterAttachFunction) (void *filter_data, void **writer_↔
_filter_data, void *reserved)
```

Prototype of **DDS\_ContentFilter::writer\_attach** (p. 1357).

A writer-side filtering API to create some state that can facilitate filtering on the writer side.

This function is called to create some state required to perform filtering on the writer side using writer-side filtering APIs. This function will be called for every **DDS\_DataWriter** (p. 478); it will be called only the first time the **DDS\_DataWriter** (p. 478) matches a **DDS\_DataReader** (p. 608) using the specified filter. This function will not be called for any subsequent DataReaders that match the DataWriter and are using the same filter.

#### Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Parameters

<i>writer_filter_data</i>	<< <i>out</i> >> (p. 818) A user-specified opaque pointer to some state created on the <b>DDS_DataWriter</b> (p. 478) that will help perform writer-side filtering efficiently.
---------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Parameters

<i>reserved</i>	Reserved.
-----------------	-----------

### 4.7.3.11 DDS\_ContentFilterWriterDetachFunction

```
typedef void(* DDS_ContentFilterWriterDetachFunction) (void *filter_data, void *writer_filter_data)
```

Prototype of **DDS\_ContentFilter::writer\_detach** (p. 1357).

A writer-side filtering API to clean up a previously created state using **DDS\_ContentFilter::writer\_attach** (p. 1357).

This function is called to delete any state created using the **DDS\_ContentFilter::writer\_attach** (p. 1357) function. This function will be called when the **DDS\_DataWriter** (p. 478) is deleted.

#### Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 818) A pointer to the state created using <b>DDS_ContentFilter::writer_attach</b> (p. 1357).
---------------------------	------------------------------------------------------------------------------------------------------------------

#### 4.7.3.12 DDS\_ContentFilterWriterCompileFunction

```
typedef DDS_ReturnCode_t (* DDS_ContentFilterWriterCompileFunction) (void *filter_data, void *writer←
_filter_data, struct DDS_ExpressionProperty *prop, const char *expression, const struct DDS_←
StringSeq *parameters, const struct DDS_TypeCode *type_code, const char *type_class_name, const
struct DDS_Cookie_t *cookie)
```

Prototype of `DDS_ContentFilter::writer_compile` (p. 1354).

A writer-side filtering API to compile an instance of the content filter according to the filter expression and parameters specified by a matching `DDS_DataReader` (p. 608).

This function is called when the `DDS_DataWriter` (p. 478) discovers a `DDS_DataReader` (p. 608) with a `DDS_←ContentFilteredTopic` (p. 173) or when a `DDS_DataWriter` (p. 478) is notified of a change in a DataReader's filter parameter for the locally registered content filter instance.

It is possible for multiple threads to be calling into this function at the same time.

##### Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <code>DDS_DomainParticipant_register_contentfilter</code> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------

##### Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 818) A pointer to the state created using <code>DDS_ContentFilter::writer_attach</code> (p. 1357) .
<i>prop</i>	<< <i>out</i> >> (p. 818) A pointer to <code>DDS_ExpressionProperty</code> (p. 1549) that allows you to indicate to RTI Connexx if a filter expression can be optimized.
<i>expression</i>	<< <i>in</i> >> (p. 818) An ASCII string with the filter expression. The memory used by this string is owned by RTI Connexx and <b>must</b> not be freed. If you want to manipulate this string, you <b>must</b> first make a copy of it.
<i>parameters</i>	<< <i>in</i> >> (p. 818) A string sequence with the expression parameters with which the <code>DDS_ContentFilteredTopic</code> (p. 173) was created. The string sequence is <b>equal</b> (but <b>not</b> identical) to the string sequence passed to <code>DDS_DomainParticipant_create_contentfilteredtopic</code> (p. 115). Note that the sequence passed to the compile function is <b>owned</b> by RTI Connexx and <b>must not</b> be referenced outside the compile function.
<i>type_code</i>	<< <i>in</i> >> (p. 818) A pointer to the type code for the related <code>DDS_Topic</code> (p. 172) of the <code>DDS_ContentFilteredTopic</code> (p. 173). A type_code is a description of a type in terms of which types it contains (such as long, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
<i>type_class_name</i>	<< <i>in</i> >> (p. 818) Fully qualified class name of the related <code>DDS_Topic</code> (p. 172).
<i>cookie</i>	<< <i>in</i> >> (p. 818) <code>DDS_Cookie_t</code> (p. 1360) to uniquely identify <code>DDS_DataReader</code> (p. 608) for which <code>DDS_ContentFilter::writer_compile</code> (p. 1354) was called.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.7.3.13 DDS\_ContentFilterWriterEvaluateFunction

```
typedef struct DDS_CookieSeq *(* DDS_ContentFilterWriterEvaluateFunction) (void *filter_data,
void *writer_filter_data, const void *sample, const struct DDS_FilterSampleInfo *meta_data)
```

Prototype of **DDS\_ContentFilter::writer\_evaluate** (p. 1355).

A writer-side filtering API to retrieve a list of DataReaders whose content filters pass the sample.

This function is called every time a **DDS\_DataWriter** (p. 478) writes a new sample. Its purpose is to evaluate the sample for all the readers for which the **DDS\_DataWriter** (p. 478) is performing writer-side filtering and return the list of **DDS\_Cookie\_t** (p. 1360) structures associated with the DataReaders whose filters pass the sample.

It is possible for multiple threads to be calling into this function at the same time

## Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 818) A pointer to the state created using <b>DDS_ContentFilter::writer_attach</b> (p. 1357).
<i>sample</i>	<< <i>in</i> >> (p. 818) Pointer to a deserialized sample to be filtered.
<i>meta_data</i>	<< <i>in</i> >> (p. 818) Pointer to meta data associated with the sample.

## Returns

The function returns **DDS\_CookieSeq** (p. 1361) which identifies the set of DataReaders whose filters pass the sample.

## 4.7.3.14 DDS\_ContentFilterWriterReturnLoanFunction

```
typedef void(* DDS_ContentFilterWriterReturnLoanFunction) (void *filter_data, void *writer_↔
filter_data, struct DDS_CookieSeq *cookies)
```

Prototype of **DDS\_ContentFilter::writer\_return\_loan** (p. 1358).

A writer-side filtering API to return the loan on the list of DataReaders returned by **DDS\_ContentFilter::writer\_evaluate** (p. 1355).

This function is called to return the loan on **DDS\_CookieSeq** (p. 1361) returned by **DDS\_ContentFilter::writer\_↔return\_loan** (p. 1358). It is possible for multiple threads to be calling into this function at the same time.

## Parameters

<i>filter_data</i>	<< <i>in</i> >> (p. 818) The opaque pointer that the content filter was registered with in <b>DDS_DomainParticipant_register_contentfilter</b> (p. 117). Can be NULL.
--------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 818) A pointer to the state created using <b>DDS_ContentFilter::writer_attach</b> (p. 1357).
<i>cookies</i>	<< <i>in</i> >> (p. 818) <b>DDS_CookieSeq</b> (p. 1361) for which the <b>DDS_ContentFilter::writer_return_loan</b> (p. 1358) was invoked.

## 4.7.3.15 DDS\_MultiTopic

```
typedef struct DDS_MultiTopicImpl DDS_MultiTopic
```

**[Not supported (optional)]** <<*interface*>> (p. 818) A specialization of **DDS\_TopicDescription** (p. 171) that allows subscriptions that combine/filter/rearrange data coming from several topics.

**DDS\_MultiTopic** (p. 181) allows a more sophisticated subscription that can select and combine data received from multiple topics into a single resulting type (specified by the inherited `type_name`). The data will then be filtered (selection) and possibly re-arranged (aggregation/projection) according to a `subscription_expression` with parameters `expression_parameters`.

- The `subscription_expression` is a string that identifies the selection and re-arrangement of data from the associated topics. It is similar to an SQL statement where the SELECT part provides the fields to be kept, the FROM part provides the names of the topics that are searched for those fields, and the WHERE clause gives the content filter. The Topics combined may have different types but they are restricted in that the type of the fields used for the NATURAL JOIN operation must be the same.
- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `subscription_expression`. The number of supplied parameters must fit with the requested values in the `subscription_expression` (i.e. the number of n tokens).
- **DDS\_DataReader** (p. 608) entities associated with a **DDS\_MultiTopic** (p. 181) are alerted of data modifications by the usual **DDS\_Listener** (p. 1569) or **DDS\_WaitSet** (p. 1170) / **DDS\_Condition** (p. 1169) mechanisms whenever modifications occur to the data associated with any of the topics relevant to the **DDS\_MultiTopic** (p. 181).

Note that the source for data may not be restricted to a single topic.

**DDS\_DataReader** (p. 608) entities associated with a **DDS\_MultiTopic** (p. 181) may access instances that are "constructed" at the **DDS\_DataReader** (p. 608) side from the instances written by multiple **DDS\_DataWriter** (p. 478) entities. The **DDS\_MultiTopic** (p. 181) access instance will begin to exist as soon as all the constituting **DDS\_Topic** (p. 172) instances are in existence. The `view_state` and `instance_state` is computed from the corresponding states of the constituting instances:

- The `view_state` of the **DDS\_MultiTopic** (p. 181) instance is **DDS\_NEW\_VIEW\_STATE** (p. 704) if at least one of the constituting instances has `view_state = DDS_NEW_VIEW_STATE` (p. 704). Otherwise, it will be **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704).
- The `instance_state` of the **DDS\_MultiTopic** (p. 181) instance is **DDS\_ALIVE\_INSTANCE\_STATE** (p. 707) if the `instance_state` of all the constituting **DDS\_Topic** (p. 172) instances is **DDS\_ALIVE\_INSTANCE\_STATE** (p. 707). It is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707) if at least one of the constituting **DDS\_Topic** (p. 172) instances is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707). Otherwise, it is **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 707).

**Queries and Filters Syntax** (p. 730) describes the syntax of `subscription_expression` and `expression_parameters`.

## 4.7.4 Enumeration Type Documentation

### 4.7.4.1 DDS\_PrintFormatKind

```
enum DDS_PrintFormatKind
```

Format kinds available when converting data samples to string representations.

Enumerator

DDS_DEFAULT_PRINT_FORMAT	Use a default format specific to RTI Connex to represent the data when converting to a string.
DDS_XML_PRINT_FORMAT	Use an XML format to represent the data when converting to a string.
DDS_JSON_PRINT_FORMAT	Use a JSON format to represent the data when converting to a string.

## 4.7.5 Function Documentation

### 4.7.5.1 DDS\_InconsistentTopicStatus\_initialize()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_initialize (
    struct DDS_InconsistentTopicStatus * self )
```

Initializer for new status instances.

New **DDS\_InconsistentTopicStatus** (p. 1561) instances stored in heap memory should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_InconsistentTopicStatus\_finalize** (p.184) should be called to free the contained fields that use dynamic memory:

```
DDS_InconsistentTopicStatus *myStatus = malloc(sizeof(struct DDS_InconsistentTopicStatus));

DDS_InconsistentTopicStatus_initialize(myStatus);

DDS_Topic_get_inconsistent_topic_status(myTopic, myStatus);

DDS_InconsistentTopicStatus_finalize(myStatus);

free(myStatus);
```

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_InconsistentTopicStatus\_INITIALIZER** (p. 169)

**DDS\_Topic\_get\_inconsistent\_topic\_status** (p. 192)

**DDS\_InconsistentTopicStatus\_finalize** (p. 184)

#### 4.7.5.2 DDS\_InconsistentTopicStatus\_copy()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_copy (
    struct DDS_InconsistentTopicStatus * self,
    const struct DDS_InconsistentTopicStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_InconsistentTopicStatus\_INITIALIZER** (p. 169)

**DDS\_InconsistentTopicStatus\_initialize** (p. 182)

**DDS\_InconsistentTopicStatus\_finalize** (p. 184)

#### 4.7.5.3 DDS\_InconsistentTopicStatus\_finalize()

```
DDS_ReturnCode_t DDS_InconsistentTopicStatus_finalize (
    struct DDS_InconsistentTopicStatus * self )
```

Free any dynamic memory allocated by status instances.

Some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_InconsistentTopicStatus\_INITIALIZER** (p. 169)

**DDS\_InconsistentTopicStatus\_initialize** (p. 182)

#### 4.7.5.4 DDS\_InconsistentTopicStatus\_equals()

```
DDS_Boolean DDS_InconsistentTopicStatus_equals (
    const struct DDS_InconsistentTopicStatus * left,
    const struct DDS_InconsistentTopicStatus * right )
```

Compares two **DDS\_InconsistentTopicStatus** (p. 1561) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This InconsistentTopicStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other InconsistentTopicStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two InconsistentTopicStatus have equal values, or **DDS\_BOOLEAN\_↔  
FALSE** (p. 1004) otherwise.

## 4.7.5.5 DDS\_TopicQos\_equals()

```
DDS_Boolean DDS_TopicQos_equals (
    const struct DDS_TopicQos * self,
    const struct DDS_TopicQos * other )
```

Compares two **DDS\_TopicQos** (p. 1778) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This TopicQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other TopicQos to be compared with this TopicQos

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.7.5.6 DDS\_TopicQos\_print()

```
DDS_ReturnCode_t DDS_TopicQos_print (
    const struct DDS_TopicQos * self )
```

Prints this **DDS\_TopicQos** (p. 1778) to stdout.

Only the differences between this **DDS\_TopicQos** (p. 1778) and the documented default are printed. If you wish to print everything regardless, see **DDS\_TopicQos\_to\_string\_w\_params** (p. 186). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## 4.7.5.7 DDS\_TopicQos\_to\_string()

```
DDS_ReturnCode_t DDS_TopicQos_to_string (
    const struct DDS_TopicQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_TopicQos** (p. 1778).

Only the differences between this **DDS\_TopicQos** (p. 1778) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_TopicQos\_to\_string\_w\_params** (p. 186). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_TopicQos** (p. 1778) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1778). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## See also

**DDS\_TopicQos\_to\_string\_w\_params** (p. 186)

## 4.7.5.8 DDS\_TopicQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_TopicQos_to_string_w_params (
    const struct DDS_TopicQos * self,
```

```

char * string,
    DDS_UnsignedLong * string_size,
const struct DDS_TopicQos * base,
const struct DDS_QosPrintFormat * format )

```

Obtains a string representation of this **DDS\_TopicQos** (p. 1778).

Only the differences between this **DDS\_TopicQos** (p. 1778) and the **DDS\_TopicQos** (p. 1778) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_TOPIC\_QOS\_PRINT\_ALL** (p. 161) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_TopicQos** (p. 1778) is written to the buffer.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_TopicQos</b> (p. 1778). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicQos</b> (p. 1778) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.7.5.9 DDS\_TopicQos\_initialize()

```

DDS_ReturnCode_t DDS_TopicQos_initialize (
    struct DDS_TopicQos * self )

```

Initializer for new QoS instances.

New **DDS\_TopicQos** (p. 1778) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_Topic\_get\_qos** (p. 195) or **DDS\_DomainParticipant\_get\_↔ default\_topic\_qos** (p. 82); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS\_TopicQos\_finalize** (p. 188) should be called to free the contained QoS policies that use dynamic memory:

```

DDS_TopicQos *myQos = malloc(sizeof(struct DDS_TopicQos));
DDS_TopicQos_initialize(myQos);
DDS_DomainParticipantFactory_get_default_topic_qos(myFactory, myQos);
DDS_Topic_set_qos(myTopic, myQos);
DDS_TopicQos_finalize(myQos);
free(myQos);

```

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_TopicQos\_INITIALIZER** (p. 170)

**DDS\_DomainParticipant\_get\_default\_topic\_qos** (p. 82)

**DDS\_TopicQos\_finalize** (p. 188)

#### 4.7.5.10 DDS\_TopicQos\_finalize()

```

DDS_ReturnCode_t DDS_TopicQos_finalize (
    struct DDS_TopicQos * self )

```

Free any dynamic memory allocated by the policies in this **DDS\_TopicQos** (p. 1778).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_TopicQos\_INITIALIZER** (p. 170)

**DDS\_TopicQos\_initialize** (p. 187)

**4.7.5.11 DDS\_TopicQos\_copy()**

```
DDS_ReturnCode_t DDS_TopicQos_copy (
    struct DDS_TopicQos * self,
    const struct DDS_TopicQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_TopicQos** (p. 1778) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). QoS to be copied from.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_TopicQos\_INITIALIZER** (p. 170)

**DDS\_TopicQos\_initialize** (p. 187)

**DDS\_TopicQos\_finalize** (p. 188)

**4.7.5.12 DDS\_TopicDescription\_get\_type\_name()**

```
const char * DDS_TopicDescription_get_type_name (
    DDS_TopicDescription * self )
```

Get the associated `type_name`.

The type name defines a locally unique type for the publication or the subscription.

The `type_name` corresponds to a unique string used to register a type via the **FooTypeSupport\_register\_type** (p. 217) function.

Thus, the `type_name` implies an association with a corresponding **DDS\_TypeSupport** (p. 210) and this **DDS\_TopicDescription** (p. 171).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

the type name. The returned type name is valid until the **DDS\_TopicDescription** (p. 171) is deleted.

#### Postcondition

The result is non-NULL.

#### See also

**DDS\_TypeSupport** (p. 210), **FooTypeSupport** (p. 1846)

#### 4.7.5.13 DDS\_TopicDescription\_get\_name()

```
const char * DDS_TopicDescription_get_name (
    DDS_TopicDescription * self )
```

Get the name used to create this **DDS\_TopicDescription** (p. 171) .

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

the name used to create this **DDS\_TopicDescription** (p. 171). The returned topic name is valid until the **DDS\_TopicDescription** (p. 171) is deleted.

**Postcondition**

The result is non-NULL.

**4.7.5.14 DDS\_TopicDescription\_get\_participant()**

```
DDS_DomainParticipant * DDS_TopicDescription_get_participant (
    DDS_TopicDescription * self )
```

Get the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_TopicDescription** (p. 171) belongs.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

The **DDS\_DomainParticipant** (p. 72) to which the **DDS\_TopicDescription** (p. 171) belongs.

**Postcondition**

The result is non-NULL.

**4.7.5.15 DDS\_Topic\_as\_entity()**

```
DDS_Entity * DDS_Topic_as_entity (
    DDS_Topic * topic )
```

Access a **DDS\_Topic** (p. 172)'s **DDS\_Entity** (p. 1160) supertype instance.

**Returns**

**DDS\_Topic** (p. 172)'s supertype **DDS\_Entity** (p. 1160) instance

#### 4.7.5.16 DDS\_Topic\_as\_topicdescription()

```
DDS_TopicDescription * DDS_Topic_as_topicdescription (
    DDS_Topic * topic )
```

Access a **DDS\_Topic** (p. 172)'s **DDS\_TopicDescription** (p. 171) supertype instance.

Returns

**DDS\_Topic** (p. 172)'s supertype **DDS\_TopicDescription** (p. 171) instance

Examples

**HelloWorld\_subscriber.c.**

#### 4.7.5.17 DDS\_Topic\_narrow()

```
DDS_Topic * DDS_Topic_narrow (
    DDS_TopicDescription * self )
```

Narrow the given **DDS\_TopicDescription** (p. 171) pointer to a **DDS\_Topic** (p. 172) pointer.

Returns

**DDS\_Topic** (p. 172) if this **DDS\_TopicDescription** (p. 171) is a **DDS\_Topic** (p. 172). Otherwise, return NULL.

#### 4.7.5.18 DDS\_Topic\_narrow\_from\_entity()

```
DDS_Topic * DDS_Topic_narrow_from_entity (
    DDS_Entity * self )
```

Narrow the given **DDS\_Entity** (p. 1160) pointer to a **DDS\_Topic** (p. 172) pointer.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

Returns

**DDS\_Topic** (p. 172) if this **DDS\_Entity** (p. 1160) is a **DDS\_Topic** (p. 172). Otherwise, return NULL.

#### 4.7.5.19 DDS\_Topic\_get\_inconsistent\_topic\_status()

```
DDS_ReturnCode_t DDS_Topic_get_inconsistent_topic_status (
    DDS_Topic * self,
    struct DDS_InconsistentTopicStatus * status )
```

Allows the application to retrieve the **DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 1031) status of a **DDS\_Topic** (p. 172).

Retrieve the current **DDS\_InconsistentTopicStatus** (p. 1561)

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) Status to be retrieved. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_InconsistentTopicStatus** (p. 1561)

#### 4.7.5.20 DDS\_Topic\_set\_qos()

```
DDS_ReturnCode_t DDS_Topic_set_qos (
    DDS_Topic * self,
    const struct DDS_TopicQos * qos )
```

Set the topic QoS.

The **DDS\_TopicQos::topic\_data** (p. 1779) and **DDS\_TopicQos::deadline** (p. 1779), **DDS\_TopicQos::latency**↔  
**\_budget** (p. 1780), **DDS\_TopicQos::transport\_priority** (p. 1781) and **DDS\_TopicQos::lifespan** (p. 1781) can be changed. The other policies are immutable.

##### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 818) Set of policies to be applied to <b>DDS_Topic</b> (p. 172).
------------	--------------------------------------------------------------------------------------

Policies must be consistent. Immutable policies cannot be changed after **DDS\_Topic** (p. 172) is enabled. The special value **DDS\_TOPIC\_QOS\_DEFAULT** (p. 157) can be used to indicate that the QoS of the **DDS\_Topic** (p. 172) should be changed to match the current default **DDS\_TopicQos** (p. 1778) set in the **DDS\_DomainParticipant** (p. 72). Cannot be NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) if immutable policy is changed, or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025) if policies are inconsistent

## See also

**DDS\_TopicQos** (p. 1778) for rules on consistency among QoS

**set\_qos (abstract)** (p. 1161)

**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.7.5.21 DDS\_Topic\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_Topic_set_qos_with_profile (
    DDS_Topic * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Change the QoS of this topic using the input XML QoS profile.

The **DDS\_TopicQos::topic\_data** (p. 1779) and **DDS\_TopicQos::deadline** (p. 1779), **DDS\_TopicQos::latency**↔**\_budget** (p. 1780), **DDS\_TopicQos::transport\_priority** (p. 1781) and **DDS\_TopicQos::lifespan** (p. 1781) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_DomainParticipant_set_default_library</b> (p. 98)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_DomainParticipant_set_default_profile</b> (p. 99)).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) if immutable policy is changed, or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025) if policies are inconsistent

See also

**DDS\_TopicQos** (p. 1778) for rules on consistency among QoS

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.7.5.22 DDS\_Topic\_get\_qos()

```
DDS_ReturnCode_t DDS_Topic_get_qos (
    DDS_Topic * self,
    struct DDS_TopicQos * qos )
```

Get the topic QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) QoS to be filled up. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**get\_qos (abstract)** (p. 1161)

#### 4.7.5.23 DDS\_Topic\_set\_listener()

```
DDS_ReturnCode_t DDS_Topic_set_listener (
    DDS_Topic * self,
    const struct DDS_TopicListener * l,
    DDS_StatusMask mask )
```

Set the topic listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) Listener to be installed on entity.
<i>mask</i>	<< <i>in</i> >> (p. 818) Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030). The callback function on the listener cannot be NULL if the corresponding status is turned on in the mask.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**set\_listener (abstract)** (p. 1162)

**4.7.5.24 DDS\_Topic\_get\_listener()**

```
struct DDS_TopicListener DDS_Topic_get_listener (
    DDS_Topic * self )
```

Get the topic listener.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

Existing listener attached to the **DDS\_Topic** (p. 172).

**See also**

**DDS\_Topic\_get\_listenerX** (p. 196)

**get\_listener (abstract)** (p. 1162)

**4.7.5.25 DDS\_Topic\_get\_listenerX()**

```
DDS_ReturnCode_t DDS_Topic_get_listenerX (
    DDS_Topic * self,
    struct DDS_TopicListener * listener )
```

<<**extension**>> (p. 817) Get the topic listener.

An alternative form of `get_listener` that fills in an existing listener structure rather than returning one on the stack.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <i>inout</i> >> (p. 818) Listener structure to be filled up. Cannot be NULL.

See also

**DDS\_Topic\_get\_listener** (p. 196)

**get\_listener (abstract)** (p. 1162)

#### 4.7.5.26 DDS\_ContentFilteredTopic\_as\_topicdescription()

```
DDS_TopicDescription * DDS_ContentFilteredTopic_as_topicdescription (
    DDS_ContentFilteredTopic * contentFilteredTopic )
```

Access a **DDS\_ContentFilteredTopic** (p. 173)'s supertype instance.

Parameters

<i>contentFilteredTopic</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-----------------------------	------------------------------------------

Returns

**DDS\_ContentFilteredTopic** (p. 173)'s supertype **DDS\_TopicDescription** (p. 171) instance

#### 4.7.5.27 DDS\_ContentFilteredTopic\_narrow()

```
DDS_ContentFilteredTopic * DDS_ContentFilteredTopic_narrow (
    DDS_TopicDescription * self )
```

Narrow the given **DDS\_TopicDescription** (p. 171) pointer to a **DDS\_ContentFilteredTopic** (p. 173) pointer.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

Returns

**DDS\_ContentFilteredTopic** (p. 173) if this **DDS\_TopicDescription** (p. 171) is a **DDS\_ContentFilteredTopic** (p. 173). Otherwise, return NULL.

#### 4.7.5.28 DDS\_ContentFilteredTopic\_get\_filter\_expression()

```
const char * DDS_ContentFilteredTopic_get_filter_expression (
    DDS_ContentFilteredTopic * self )
```

Get the `filter_expression`.

Return the `filter_expression` associated with the `DDS_ContentFilteredTopic` (p.173). `filter_expression` is either specified on the last successful call to `DDS_ContentFilteredTopic_set_expression` (p.199) or, if that function is never called, the expression specified when the `DDS_ContentFilteredTopic` (p.173) was created.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

the `filter_expression`.

#### 4.7.5.29 DDS\_ContentFilteredTopic\_get\_expression\_parameters()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_get_expression_parameters (
    DDS_ContentFilteredTopic * self,
    struct DDS_StringSeq * parameters )
```

Get the `expression_parameters`.

Return the `expression_parameters` associated with the `DDS_ContentFilteredTopic` (p.173). `expression_parameters` is either specified on the last successful call to `DDS_ContentFilteredTopic_set_expression_parameters` (p.198), `DDS_ContentFilteredTopic_set_expression` (p.199) or, if that function is never called, the parameters specified when the `DDS_ContentFilteredTopic` (p.173) was created.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>parameters</i>	<< <i>inout</i> >> (p. 818) the filter expression parameters. Cannot be NULL. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p.1312). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.

#### Returns

One of the **Standard Return Codes** (p.1024)

#### See also

`DDS_DomainParticipant_create_contentfilteredtopic` (p.115)

`DDS_ContentFilteredTopic_set_expression_parameters` (p.198)

#### 4.7.5.30 DDS\_ContentFilteredTopic\_set\_expression\_parameters()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression_parameters (
    DDS_ContentFilteredTopic * self,
    const struct DDS_StringSeq * parameters )
```

Set the `expression_parameters`.

Change the `expression_parameters` associated with the **DDS\_ContentFilteredTopic** (p. 173).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>parameters</i>	<< <i>in</i> >> (p. 818) the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.7.5.31 DDS\_ContentFilteredTopic\_set\_expression()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_set_expression (
    DDS_ContentFilteredTopic * self,
    const char * expression,
    const struct DDS_StringSeq * parameters )
```

Set the `filter_expression` and `expression_parameters`.

Changes the `filter_expression` and `expression_parameters` associated with the **DDS\_ContentFilteredTopic** (p. 173).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>expression</i>	<< <i>in</i> >> (p. 818) the filter expression. Cannot be NULL.
<i>parameters</i>	<< <i>in</i> >> (p. 818) the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.7.5.32 DDS\_ContentFilteredTopic\_append\_to\_expression\_parameter()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_append_to_expression_parameter (
    DDS_ContentFilteredTopic * self,
    const DDS_Long index,
    const char * val )
```

<<**extension**>> (p. 817) Appends a string term to the specified parameter string.

Appends the input string to the end of the specified parameter string, separated by a comma. If the original parameter string is enclosed in quotation marks ("), the resultant string will also be enclosed in quotation marks.

This function can be used in expression parameters associated with MATCH operators in order to add a pattern to the match pattern list. For example, if the filter expression parameter value is:

'IBM'

Then `append_to_expression_parameter(0, "MSFT")` would generate the new value:

'IBM,MSFT'

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <b>in</b> >> (p. 818) The index of the parameter string to be modified. The first index is index 0. When using the <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 161) filter, <i>index must</i> be 0.
<i>val</i>	<< <b>in</b> >> (p. 818) The string term to be appended to the parameter string.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.7.5.33 DDS\_ContentFilteredTopic\_remove\_from\_expression\_parameter()

```
DDS_ReturnCode_t DDS_ContentFilteredTopic_remove_from_expression_parameter (
    DDS_ContentFilteredTopic * self,
    const DDS_Long index,
    const char * val )
```

<<**extension**>> (p. 817) Removes a string term from the specified parameter string.

Removes the input string from the specified parameter string. To be found and removed, the input string must exist as a complete term, bounded by comma separators or the strong boundary. If the original parameter string is enclosed in quotation marks ("), the resultant string will also be enclosed in quotation marks. If the removed term was the last entry in the string, the result will be a string of empty quotation marks.

This function can be used in expression parameters associated with MATCH operators in order to remove a pattern from the match pattern list. For example, if the filter expression parameter value is:

'IBM,MSFT'

Then `remove_from_expression_parameter(0, "IBM")` would generate the expression:

'MSFT'

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) The index of the parameter string to be modified. The first index is index 0. When using the <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 161) filter, <i>index</i> <i>must</i> be 0.
<i>val</i>	<< <i>in</i> >> (p. 818) The string term to be removed from the parameter string.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.7.5.34 **DDS\_ContentFilteredTopic\_get\_related\_topic()**

```
DDS_Topic * DDS_ContentFilteredTopic_get_related_topic (
    DDS_ContentFilteredTopic * self )
```

Get the `related_topic`.

Return the **DDS\_Topic** (p. 172) specified when the **DDS\_ContentFilteredTopic** (p. 173) was created.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The **DDS\_Topic** (p. 172) associated with the **DDS\_ContentFilteredTopic** (p. 173).

4.7.5.35 **DDS\_MultiTopic\_as\_topicdescription()**

```
DDS_TopicDescription * DDS_MultiTopic_as_topicdescription (
    DDS_MultiTopic * multiTopic )
```

Access a **DDS\_MultiTopic** (p. 181)'s supertype instance.

## Parameters

<i>multiTopic</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

## Returns

**DDS\_MultiTopic** (p. 181)'s supertype **DDS\_TopicDescription** (p. 171) instance

**4.7.5.36 DDS\_MultiTopic\_narrow()**

```
DDS_MultiTopic * DDS_MultiTopic_narrow (  
    DDS_TopicDescription * self )
```

Narrow the given **DDS\_TopicDescription** (p. 171) pointer to a **DDS\_MultiTopic** (p. 181) pointer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_MultiTopic** (p. 181) if this **DDS\_TopicDescription** (p. 171) is a **DDS\_MultiTopic** (p. 181). Otherwise, return NULL.

**4.7.5.37 DDS\_MultiTopic\_get\_subscription\_expression()**

```
const char * DDS_MultiTopic_get_subscription_expression (  
    DDS_MultiTopic * self )
```

Get the expression for this **DDS\_MultiTopic** (p. 181).

The expressions syntax is described in the DDS specification. It is specified when the **DDS\_MultiTopic** (p. 181) is created.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

subscription\_expression of the **DDS\_MultiTopic** (p. 181).

#### 4.7.5.38 DDS\_MultiTopic\_get\_expression\_parameters()

```
DDS_ReturnCode_t DDS_MultiTopic_get_expression_parameters (
    DDS_MultiTopic * self,
    struct DDS_StringSeq * parameters )
```

Get the expression parameters.

The expressions syntax is described in the DDS specification.

The `parameters` is either specified on the last successful call to **DDS\_MultiTopic\_set\_expression\_parameters** (p.204), or if **DDS\_MultiTopic\_set\_expression\_parameters** (p.204) was never called, the `parameters` specified when the **DDS\_MultiTopic** (p.181) was created.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>parameters</i>	<< <i>inout</i> >> (p. 818) Fill in this sequence with the expression parameters. Cannot be NULL. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p.1312). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.

##### Returns

One of the **Standard Return Codes** (p.1024)

#### 4.7.5.39 DDS\_MultiTopic\_set\_expression\_parameters()

```
DDS_ReturnCode_t DDS_MultiTopic_set_expression_parameters (
    DDS_MultiTopic * self,
    const struct DDS_StringSeq * parameters )
```

Set the `expression_parameters`.

Changes the `expression_parameters` associated with the **DDS\_MultiTopic** (p.181).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>parameters</i>	<< <i>in</i> >> (p. 818) the filter expression parameters

##### Returns

One of the **Standard Return Codes** (p.1024).

## 4.7.6 Variable Documentation

### 4.7.6.1 DDS\_PRINT\_FORMAT\_PROPERTY\_DEFAULT

```
const struct DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT
```

Sentinel constant indicating default values for `DDS_PrintFormatProperty` (p. 1639).

Pass this object instead of your own `DDS_PrintFormatProperty` (p. 1639) object to use the default property values:

```
retCode = FooTypeSupport_data_to_string(
    sample,
    &DDS_PRINT_FORMAT_PROPERTY_DEFAULT);
```

See also

`DDS_PrintFormatProperty` (p. 1639)

## 4.8 FlatData Topic-Types

<<*extension*>> (p. 817) FlatData Language Binding for IDL topic-types

<<*extension*>> (p. 817) FlatData Language Binding for IDL topic-types

### Warning

The FlatData language binding is available in the Traditional C++ API and in the Modern C++ API. It is not available in this API.

FlatData is a language binding for IDL types in which the in-memory representation of a sample matches the wire representation. Therefore, the cost of serialization/deserialization is zero.

### Note

For a complete description of the FlatData language binding and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connex User's Manual**.

For buildable **code examples**, see <https://community.rti.com/kb/flatdata-and-zero-copy-examples>.

## 4.9 Zero Copy Transfer Over Shared Memory

<<*extension*>> (p. 817) Zero Copy transfer over shared memory

<<*extension*>> (p. 817) Zero Copy transfer over shared memory

### Note

For a description of Zero Copy transfer over shared memory and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connex User's Manual**.

For buildable **code examples**, see <https://community.rti.com/kb/flatdata-and-zero-copy-examples>.

Zero Copy transfer over shared memory is available in the C API, in the Traditional C++ API, and in the Modern C++ API.

## 4.10 User Data Type Support

Defines generic classes and macros to support user data types.

### Data Structures

- struct **DDS\_TypeAllocationParams\_t**  
*Configures whether or not to allocate pointer and optional members.*
- struct **DDS\_TypeDeallocationParams\_t**  
*Configures whether to release or not pointer and optional members.*
- struct **Foo**  
*A representative user-defined data type.*
- struct **FooTypeSupport**  
*<<interface>> (p. 818) <<generic>> (p. 818) User data type specific interface.*
- struct **DDS\_InstanceHandleSeq**  
*Instantiates **FooSeq** (p. 1845) < **DDS\_InstanceHandle\_t** (p. 210) > .*

### Macros

- #define **DDS\_TYPESUPPORT\_C**(TTypeSupport, TData)  
*Declares the interface required to support a user data type.*
- #define **DDS\_DATAWRITER\_C**(TDataWriter, TData)  
*Declares the interface required to support a user data type specific data writer.*
- #define **DDS\_DATAREADER\_C**(TDataReader, TDataSeq, TData)  
*Declares the interface required to support a user data type-specific data reader.*

### Typedefs

- typedef DDS\_HANDLE\_TYPE\_NATIVE **DDS\_InstanceHandle\_t**  
*Type definition for an instance handle.*
- typedef struct DDS\_TypeSupportImpl **DDS\_TypeSupport**  
*<<interface>> (p. 818) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

### Functions

- **Foo \* FooTypeSupport\_create\_data** (void)  
*<<extension>> (p. 817) Create a data type and initialize it.*
- **Foo \* FooTypeSupport\_create\_data\_ex** ( **DDS\_Boolean** allocatePointers)  
*<<extension>> (p. 817) Create a data type and initialize it.*
- **Foo \* FooTypeSupport\_create\_data\_w\_params** (const struct **DDS\_TypeAllocationParams\_t** \*alloc\_↔ params)  
*<<extension>> (p. 817) Create a data type and initialize it.*
- **DDS\_ReturnCode\_t FooTypeSupport\_copy\_data** ( **Foo** \*dst\_data, const **Foo** \*src\_data)

- <<extension>> (p. 817) Copy data type.
- **DDS\_ReturnCode\_t FooTypeSupport\_delete\_data** ( Foo \*a\_data)
  - <<extension>> (p. 817) Destroy a user data type instance.
- **DDS\_ReturnCode\_t FooTypeSupport\_delete\_data\_ex** ( Foo \*a\_data, DDS\_Boolean deletePointers)
  - <<extension>> (p. 817) Destroy a user data type instance.
- **DDS\_ReturnCode\_t FooTypeSupport\_delete\_data\_w\_params** ( Foo \*a\_data, const struct DDS\_Type↔ DeallocationParams\_t \*dealloc\_params)
  - <<extension>> (p. 817) Destroy a user data type instance.
- **DDS\_ReturnCode\_t FooTypeSupport\_initialize\_data** ( Foo \*a\_data)
  - <<extension>> (p. 817) Initialize data type.
- **DDS\_ReturnCode\_t FooTypeSupport\_initialize\_data\_ex** ( Foo \*a\_data, DDS\_Boolean allocatePointers)
  - <<extension>> (p. 817) Initialize data type.
- **DDS\_ReturnCode\_t FooTypeSupport\_finalize\_data** ( Foo \*a\_data)
  - <<extension>> (p. 817) Finalize data type.
- **DDS\_ReturnCode\_t FooTypeSupport\_finalize\_data\_ex** ( Foo \*a\_data, DDS\_Boolean deletePointers)
  - <<extension>> (p. 817) Finalize data type.
- const char \* **FooTypeSupport\_get\_type\_name** (void)
  - Get the default name for this type.
- **DDS\_ReturnCode\_t FooTypeSupport\_register\_type** ( DDS\_DomainParticipant \*participant, const char \*type\_name)
  - Allows an application to communicate to RTI Connext the existence of a data type.
- **DDS\_ReturnCode\_t FooTypeSupport\_unregister\_type** ( DDS\_DomainParticipant \*participant, const char \*type\_name)
  - <<extension>> (p. 817) Allows an application to unregister a data type from RTI Connext. After calling unregister\_type, no further communication using that type is possible.
- void **FooTypeSupport\_print\_data** ( Foo \*a\_data)
  - <<extension>> (p. 817) Print value of data type to standard out.
- **DDS\_ReturnCode\_t FooTypeSupport\_serialize\_data\_to\_cdr\_buffer** (char \*buffer, unsigned int \*length, const Foo \*a\_data)
  - <<extension>> (p. 817) Serializes the input sample into a CDR buffer of octets.
- **DDS\_ReturnCode\_t FooTypeSupport\_serialize\_data\_to\_cdr\_buffer\_ex** (char \*buffer, unsigned int \*length, const Foo \*a\_data, DDS\_DataRepresentationId\_t representation)
  - <<extension>> (p. 817) Serializes the input sample into a buffer of octets.
- **DDS\_ReturnCode\_t FooTypeSupport\_deserialize\_data\_from\_cdr\_buffer** ( Foo \*sample, const char \*buffer, unsigned int length)
  - <<extension>> (p. 817) Deserializes a sample from a buffer of octets.
- **DDS\_ReturnCode\_t FooTypeSupport\_data\_to\_string** ( Foo \*sample, char \*str, DDS\_UnsignedLong \*str↔\_size, const DDS\_PrintFormatProperty \*property)
  - <<extension>> (p. 817) Transforms a data sample into a human-readable string representation.
- **DDS\_TypeCode \* FooTypeSupport\_get\_typecode** (void)
  - <<extension>> (p. 817) Retrieves the TypeCode for the Type.
- **DDS\_Boolean DDS\_InstanceHandle\_equals** (const DDS\_InstanceHandle\_t \*self, const DDS\_Instance↔ Handle\_t \*other)
  - Compares this instance handle with another handle for equality.
- int **DDS\_InstanceHandle\_compare** (const DDS\_InstanceHandle\_t \*self, const DDS\_InstanceHandle\_↔ t \*other)
  - Compares this instance handle with another handle.
- void **DDS\_InstanceHandle\_copy** ( DDS\_InstanceHandle\_t \*self, const DDS\_InstanceHandle\_t \*other)
  - Copies this instance handle into another handle.
- **DDS\_Boolean DDS\_InstanceHandle\_is\_nil** (const DDS\_InstanceHandle\_t \*self)
  - Compare this handle to **DDS\_HANDLE\_NIL** (p. 224).

## Variables

- const **DDS\_InstanceHandle\_t DDS\_HANDLE\_NIL**

*The NIL instance handle.*

### 4.10.1 Detailed Description

Defines generic classes and macros to support user data types.

DDS specifies strongly typed interfaces to read and write user data. For each data class defined by the application, there is a number of specialised classes that are required to facilitate the type-safe interaction of the application with RTI Connex.

RTI Connex provides an automatic means to generate all these type-specific classes with the `rtiddsgen` utility. The complete set of automatic classes created for a hypothetical user data type named **Foo** (p. 1841) are shown below.

an application data type named **Foo** (p. 1841) "

The macros defined here declare the strongly typed APIs needed to support an arbitrary user defined data of type **Foo** (p. 1841).

See also

the `Code Generator User's Manual`

### 4.10.2 Macro Definition Documentation

#### 4.10.2.1 DDS\_TYPESUPPORT\_C

```
#define DDS_TYPESUPPORT_C(  
    TTypeSupport,  
    TData )
```

Declares the interface required to support a user data type.

Defines:

**FooTypeSupport** (p. 1846) TypeSupport of type **Foo** (p. 1841), i.e. **FooTypeSupport** (p. 1846)

Examples

**HelloWorldSupport.c.**

### 4.10.2.2 DDS\_DATAWRITER\_C

```
#define DDS_DATAWRITER_C(  
    TDataWriter,  
    TData )
```

Declares the interface required to support a user data type specific data writer.

**Uses:**

**FooTypeSupport** (p. 1846) user data type, **Foo** (p. 1841)

**Defines:**

**FooDataWriter** (p. 1845) **DDS\_DataWriter** (p.478) of type **Foo** (p.1841), i.e. **FooDataWriter** (p. 1845)

### 4.10.2.3 DDS\_DATAREADER\_C

```
#define DDS_DATAREADER_C(  
    TDataReader,  
    TDataSeq,  
    TData )
```

Declares the interface required to support a user data type-specific data reader.

**Uses:**

**FooTypeSupport** (p. 1846) user data type, **Foo** (p. 1841)  
**FooSeq** (p. 1845) sequence of user data type, `sequence<::Foo>`

**Defines:**

**FooDataReader** (p. 1845) **DDS\_DataReader** (p.608) of type **Foo** (p.1841), i.e. **FooDataReader** (p. 1845)

**See also**

**FooSeq** (p. 1845)

**Examples**

**HelloWorldSupport.c.**

### 4.10.3 Typedef Documentation

#### 4.10.3.1 DDS\_InstanceHandle\_t

```
typedef DDS_HANDLE_TYPE_NATIVE DDS_InstanceHandle_t
```

Type definition for an instance handle.

Handle to identify different instances of the same **DDS\_Topic** (p. 172) of a certain type.

See also

**FooDataWriter\_register\_instance** (p. 484)

**DDS\_SampleInfo::instance\_handle** (p. 1726)

#### 4.10.3.2 DDS\_TypeSupport

```
typedef struct DDS_TypeSupportImpl DDS_TypeSupport
```

<<*interface*>> (p. 818) An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application.

The implementation provides an automatic means to generate a type-specific class, **FooTypeSupport** (p. 1846), from a description of the type in IDL.

A **DDS\_TypeSupport** (p. 210) must be registered using the **FooTypeSupport\_register\_type** (p. 217) operation on this type-specific class before it can be used to create **DDS\_Topic** (p. 172) objects.

See also

**FooTypeSupport** (p. 1846)

the Code Generator User's Manual

### 4.10.4 Function Documentation

#### 4.10.4.1 FooTypeSupport\_create\_data()

```
Foo * FooTypeSupport_create_data (
    void )
```

<<**extension**>> (p. 817) Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

By default all memory for the type is deeply allocated, except for optional members.

##### Returns

Newly created data type, or NULL on failure.

##### See also

**FooTypeSupport\_delete\_data** (p. 212)

#### 4.10.4.2 FooTypeSupport\_create\_data\_ex()

```
Foo * FooTypeSupport_create_data_ex (
    DDS_Boolean allocatePointers )
```

<<**extension**>> (p. 817) Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

When `allocatePointers` is **DDS\_BOOLEAN\_TRUE** (p. 1004), all the references (pointers) in the type are recursively allocated.

##### Parameters

<code>allocatePointers</code>	<< <b>in</b> >> (p. 818) Whether or not to recursively allocate pointers.
-------------------------------	---------------------------------------------------------------------------

##### Returns

Newly created data type, or NULL on failure.

##### See also

**FooTypeSupport\_delete\_data\_ex** (p. 213)

#### 4.10.4.3 FooTypeSupport\_create\_data\_w\_params()

```
Foo * FooTypeSupport_create_data_w_params (
    const struct DDS_TypeAllocationParams_t * alloc_params )
```

<<**extension**>> (p. 817) Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

By default all memory for the type is deeply allocated, except for optional members.

##### Parameters

<i>alloc_params</i>	<< <b>in</b> >> (p. 818) Whether or not to recursively allocate pointers and/or optional members
---------------------	--------------------------------------------------------------------------------------------------

##### Returns

Newly created data type, or NULL on failure.

##### See also

**FooTypeSupport\_delete\_data\_ex** (p. 213)

#### 4.10.4.4 FooTypeSupport\_copy\_data()

```
DDS_ReturnCode_t FooTypeSupport_copy_data (
    Foo * dst_data,
    const Foo * src_data )
```

<<**extension**>> (p. 817) Copy data type.

The *generated* implementation of the operation knows how to copy value of a data type.

##### Parameters

<i>dst_data</i>	<< <b>inout</b> >> (p. 818) Data type to copy value to. Cannot be NULL.
<i>src_data</i>	<< <b>in</b> >> (p. 818) Data type to copy value from. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.10.4.5 FooTypeSupport\_delete\_data()

```
DDS_ReturnCode_t FooTypeSupport_delete_data (
    Foo * a_data )
```

<<**extension**>> (p. 817) Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

##### Parameters

<code>a_data</code>	<< <b>in</b> >> (p. 818) Cannot be NULL.
---------------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**FooTypeSupport\_create\_data** (p. 210)

#### 4.10.4.6 FooTypeSupport\_delete\_data\_ex()

```
DDS_ReturnCode_t FooTypeSupport_delete_data_ex (
    Foo * a_data,
    DDS_Boolean deletePointers )
```

<<**extension**>> (p. 817) Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

When `deletePointers` is **DDS\_BOOLEAN\_TRUE** (p. 1004), all the references (pointers) are destroyed as well.

##### Parameters

<code>a_data</code>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<code>deletePointers</code>	<< <b>in</b> >> (p. 818) Whether or not to destroy pointers.

##### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**FooTypeSupport\_create\_data\_ex** (p. 211)

#### 4.10.4.7 FooTypeSupport\_delete\_data\_w\_params()

```
DDS_ReturnCode_t FooTypeSupport_delete_data_w_params (
    Foo * a_data,
    const struct DDS_TypeDeallocationParams_t * dealloc_params )
```

<<**extension**>> (p. 817) Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

By default, all non-NULL pointers and optional members are deleted.

##### Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>dealloc_params</i>	<< <b>in</b> >> (p. 818) Whether or not to destroy pointers and/or optional members.

##### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**FooTypeSupport\_create\_data\_ex** (p. 211)

#### 4.10.4.8 FooTypeSupport\_initialize\_data()

```
DDS_ReturnCode_t FooTypeSupport_initialize_data (
    Foo * a_data )
```

<<**extension**>> (p. 817) Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This function is typically called to initialize a data type that is allocated on the stack. Calling this function more than once will cause a memory leak.

##### Parameters

<i>a_data</i>	<< <b>inout</b> >> (p. 818) Cannot be NULL.
---------------	---------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**FooTypeSupport\_finalize\_data** (p. 215)

**4.10.4.9 FooTypeSupport\_initialize\_data\_ex()**

```
DDS_ReturnCode_t FooTypeSupport_initialize_data_ex (
    Foo * a_data,
    DDS_Boolean allocatePointers )
```

<<**extension**>> (p. 817) Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This function is typically called to initialize a data type that is allocated on the stack. Calling this function more than once will cause a memory leak.

When `allocatePointers` is **DDS\_BOOLEAN\_TRUE** (p. 1004), all the references (pointers) in the type are recursively allocated.

**Parameters**

<code>a_data</code>	<< <b>inout</b> >> (p. 818) Cannot be NULL.
<code>allocatePointers</code>	<< <b>in</b> >> (p. 818) Whether or not to recursively allocate pointers.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**FooTypeSupport\_finalize\_data\_ex** (p. 216)

**4.10.4.10 FooTypeSupport\_finalize\_data()**

```
DDS_ReturnCode_t FooTypeSupport_finalize_data (
    Foo * a_data )
```

<<**extension**>> (p. 817) Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This function is typically called to finalize a data type that has previously been initialized.

## Parameters

<i>a_data</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
---------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**FooTypeSupport\_initialize\_data** (p. 214)

## 4.10.4.11 FooTypeSupport\_finalize\_data\_ex()

```
DDS_ReturnCode_t FooTypeSupport_finalize_data_ex (
    Foo * a_data,
    DDS_Boolean deletePointers )
```

<<**extension**>> (p. 817) Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This function is typically called to finalize a data type that has previously been initialized.

When `deletePointers` is **DDS\_BOOLEAN\_TRUE** (p. 1004), the memory required by the references (pointers) associated to the type is freed.

## Parameters

<i>a_data</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>deletePointers</i>	<< <i>in</i> >> (p. 818) Whether or not to free memory allocated by the pointers.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**FooTypeSupport\_initialize\_data\_ex** (p. 215)

#### 4.10.4.12 FooTypeSupport\_get\_type\_name()

```
const char * FooTypeSupport_get_type_name (
    void )
```

Get the default name for this type.

Can be used for calling **FooTypeSupport\_register\_type** (p. 217) or creating **DDS\_Topic** (p. 172)

##### Returns

default name for this type

##### See also

**FooTypeSupport\_register\_type** (p. 217)

**DDS\_DomainParticipant\_create\_topic** (p. 112)

#### 4.10.4.13 FooTypeSupport\_register\_type()

```
DDS_ReturnCode_t FooTypeSupport_register_type (
    DDS_DomainParticipant * participant,
    const char * type_name )
```

Allows an application to communicate to RTI Connexx the existence of a data type.

The *generated* implementation of the operation embeds all the knowledge that has to be communicated to the middle-ware in order to make it able to manage the contents of data of that type. This includes in particular the key definition that will allow RTI Connexx to distinguish different instances of the same type.

The same **DDS\_TypeSupport** (p. 210) can be registered multiple times with a **DDS\_DomainParticipant** (p. 72) using the same or different values for the `type_name`. If `register_type` is called multiple times on the same **DDS\_TypeSupport** (p. 210) with the same **DDS\_DomainParticipant** (p. 72) and `type_name`, the second (and subsequent) registrations are ignored but the operation returns **DDS\_RETCODE\_OK** (p. 1025).

##### Precondition

Cannot use the same `type_name` to register two different **DDS\_TypeSupport** (p. 210) with the same **DDS\_DomainParticipant** (p. 72), or else the operation will fail and **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) will be returned.

##### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 818) the <b>DDS_DomainParticipant</b> (p. 72) to register the data type <b>Foo</b> (p. 1841) with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 818) the type name under with the data type <b>Foo</b> (p. 1841) is registered with the participant; this type name is used when creating a new <b>DDS_Topic</b> (p. 172). (See <b>DDS_DomainParticipant_create_topic</b> (p. 112).) The name may not be NULL or longer than 255 characters.

**Returns**

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

**MT Safety:**

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

**See also**

**DDS\_DomainParticipant\_create\_topic** (p. 112)

**4.10.4.14 FooTypeSupport\_unregister\_type()**

```
DDS_ReturnCode_t FooTypeSupport_unregister_type (
    DDS_DomainParticipant * participant,
    const char * type_name )
```

<<**extension**>> (p. 817) Allows an application to unregister a data type from RTI Connext. After calling unregister\_type, no further communication using that type is possible.

The *generated* implementation of the operation removes all the information about a type from RTI Connext. No further communication using that type is possible.

**Precondition**

A type with `type_name` is registered with the participant and all **DDS\_Topic** (p. 172) objects referencing the type have been destroyed. If any **DDS\_Topic** (p. 172) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 1025).

**Postcondition**

All information about the type is removed from RTI Connext. No further communication using this type is possible.

**Parameters**

<i>participant</i>	<< <b>in</b> >> (p. 818) the <b>DDS_DomainParticipant</b> (p. 72) to unregister the data type <b>Foo</b> (p. 1841) from. Cannot be NULL.
<i>type_name</i>	<< <b>in</b> >> (p. 818) the type name under with the data type <b>Foo</b> (p. 1841) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) or **DDS\_RETCODE\_ERROR** (p. 1025)

## MT Safety:

SAFE.

## See also

**FooTypeSupport\_register\_type** (p. 217)

## 4.10.4.15 FooTypeSupport\_print\_data()

```
void FooTypeSupport_print_data (
    Foo * a_data )
```

<<**extension**>> (p. 817) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

## Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 818) Data type to be printed.
---------------	---------------------------------------------------

## 4.10.4.16 FooTypeSupport\_serialize\_data\_to\_cdr\_buffer()

```
DDS_ReturnCode_t FooTypeSupport_serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int * length,
    const Foo * a_data )
```

<<**extension**>> (p. 817) Serializes the input sample into a CDR buffer of octets.

This function serializes a sample into a buffer of octets using Common Data Representation (CDR). Calling this function is equivalent to calling **FooTypeSupport\_serialize\_data\_to\_cdr\_buffer\_ex** (p. 220) with **DDS\_AUTO\_DATA\_REPRESENTATION** (p. 1059) as the representation.

The input buffer must be big enough to store the serialized representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input buffer, the user must call this method with the buffer set to NULL.

For more information about CDR in Connex, see [Data Representation](#) in the Core Libraries Extensible Types Guide.

## Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 818). Input sample. Cannot be NULL.
<i>buffer</i>	<< <b>out</b> >> (p. 818). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 818). When <i>buffer</i> is set to NULL, after the function executes, <i>length</i> will contain a buffer size big enough to hold the serialized data. When <i>buffer</i> is not NULL, <i>length</i> must contain the size of the input buffer when the function is invoked. After the function executes, <i>length</i> will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when <i>buffer</i> is set to NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.10.4.17 FooTypeSupport\_serialize\_data\_to\_cdr\_buffer\_ex()

```
DDS_ReturnCode_t FooTypeSupport_serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int * length,
    const Foo * a_data,
    DDS_DataRepresentationId_t representation )
```

<<**extension**>> (p. 817) Serializes the input sample into a buffer of octets.

This function serializes a sample into a buffer of octets using the input data representation. See **FooTypeSupport\_serialize\_data\_to\_cdr\_buffer** (p. 219) for details.

## Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 818). Input sample. Cannot be NULL.
<i>buffer</i>	<< <b>out</b> >> (p. 818). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 818). Serialization buffer length.
<i>representation</i>	<< <b>in</b> >> (p. 818). Representation used to serialize the data.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.10.4.18 FooTypeSupport\_deserialize\_data\_from\_cdr\_buffer()

```
DDS_ReturnCode_t FooTypeSupport_deserialize_data_from_cdr_buffer (
    Foo * sample,
```

```
const char * buffer,
unsigned int length )
```

<<**extension**>> (p. 817) Deserializes a sample from a buffer of octets.

This function deserializes a sample from a CDR buffer of octets.

The content of the buffer generated by the function **FooTypeSupport\_serialize\_data\_to\_cdr\_buffer** (p. 219) can be provided to this function to get the sample back.

#### Parameters

<i>sample</i>	<< <b>in</b> >> (p. 818). Output sample. Cannot be NULL.
<i>buffer</i>	<< <b>in</b> >> (p. 818). Deserialization buffer. Cannot be NULL.
<i>length</i>	<< <b>in</b> >> (p. 818). Length of the serialized representation of the sample in the buffer.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.10.4.19 FooTypeSupport\_data\_to\_string()

```
DDS_ReturnCode_t FooTypeSupport_data_to_string (
    Foo * sample,
    char * str,
    DDS_UnsignedLong * str_size,
    const DDS_PrintfFormatProperty * property )
```

<<**extension**>> (p. 817) Transforms a data sample into a human-readable string representation.

This function takes a data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS\_← RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

This method is only provided for types that were generated with typecodes.

#### Parameters

<i>sample</i>	<< <b>in</b> >> (p. 818). The sample to get the string representation for. Cannot be NULL.
<i>str</i>	<< <b>out</b> >> (p. 818). Output string representing the data sample.
<i>str_size</i>	<< <b>inout</b> >> (p. 818). When <i>str</i> is set to NULL, after the function executes, <i>str_size</i> will contain a buffer size big enough to hold the string representation of the data. When <i>str</i> is not NULL, <i>str_size</i> must contain the size of the input buffer when the function is invoked. If the size of the input buffer is too small, after the function executes, <i>str_size</i> will be updated to contain the required size of the string content and the function will return <b>DDS_← RETCODE_OUT_OF_RESOURCES</b> (p. 1025).
<i>property</i>	<< <b>in</b> >> (p. 818). Properties describing what the format of the output string should be.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

#### 4.10.4.20 FooTypeSupport\_get\_typecode()

```
DDS_TypeCode * FooTypeSupport_get_typecode (
    void )
```

<<**extension**>> (p. 817) Retrieves the TypeCode for the Type.

This function retrieves the **DDS\_TypeCode** (p. 1806) for the Type. A **DDS\_TypeCode** (p. 1806) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. A **DDS\_TypeCode** (p. 1806) value consists of a type code *kind* (represented by the **DDS\_TCKind** (p. 239) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS\_TypeCode** (p. 1806), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

## Returns

The TypeCode for this type

#### 4.10.4.21 DDS\_InstanceHandle\_equals()

```
DDS_Boolean DDS_InstanceHandle_equals (
    const DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle for equality.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) This handle. Cannot be NULL.
<i>other</i>	<< <b>in</b> >> (p. 818) The other handle to be compared with this handle. Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two handles have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## See also

**DDS\_InstanceHandle\_is\_nil** (p. 223)

**4.10.4.22 DDS\_InstanceHandle\_compare()**

```
int DDS_InstanceHandle_compare (
    const DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) This handle. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 818) The other handle to be compared with this handle. Cannot be NULL.

**Returns**

If the two handles are equal, the function returns 0. If *self* is greater than *other* the function returns a positive number; otherwise, it returns a negative number.

**See also**

**DDS\_InstanceHandle\_is\_nil** (p. 223)

**4.10.4.23 DDS\_InstanceHandle\_copy()**

```
void DDS_InstanceHandle_copy (
    DDS_InstanceHandle_t * self,
    const DDS_InstanceHandle_t * other )
```

Copies this instance handle into another handle.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) The source handle. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 818) The destination handle to be copied into. Cannot be NULL.

**4.10.4.24 DDS\_InstanceHandle\_is\_nil()**

```
DDS_Boolean DDS_InstanceHandle_is_nil (
    const DDS_InstanceHandle_t * self )
```

Compare this handle to **DDS\_HANDLE\_NIL** (p. 224).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the given instance handle is equal to **DDS\_HANDLE\_NIL** (p. 224) or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### See also

**DDS\_InstanceHandle\_equals** (p. 222)

### 4.10.5 Variable Documentation

#### 4.10.5.1 DDS\_HANDLE\_NIL

```
const DDS_InstanceHandle_t DDS_HANDLE_NIL [extern]
```

The NIL instance handle.

Special **DDS\_InstanceHandle\_t** (p. 210) value

#### See also

**DDS\_InstanceHandle\_is\_nil** (p. 223)

#### Examples

**HelloWorld\_publisher.c.**

## 4.11 Type Code Support

**<<extension>>** (p. 817) A **DDS\_TypeCode** (p. 1806) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 308) capability or to inspect the type information you receive from remote readers and writers.

## Data Structures

- struct **DDS\_TypeCodePrintFormatProperty**  
*A collection of attributes used to configure how a TypeCode appears when converted to a string.*
- struct **DDS\_TypeCode**  
*The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtdsgen (see the *Code Generator User's Manual*) or to modify types you define yourself at runtime.*
- struct **DDS\_StructMember**  
*A description of a member of a struct.*
- struct **DDS\_StructMemberSeq**  
*Defines a sequence of struct members.*
- struct **DDS\_UnionMember**  
*A description of a member of a union.*
- struct **DDS\_UnionMemberSeq**  
*Defines a sequence of union members.*
- struct **DDS\_EnumMember**  
*A description of a member of an enumeration.*
- struct **DDS\_EnumMemberSeq**  
*Defines a sequence of enumerator members.*
- struct **DDS\_ValueMember**  
*A description of a member of a value type.*
- struct **DDS\_ValueMemberSeq**  
*Defines a sequence of value members.*
- struct **DDS\_TypeCodeFactory**  
*A singleton factory for creating, copying, and deleting data type definitions dynamically.*

## Macros

- #define **DDS\_TYPECODE\_MEMBER\_ID\_INVALID**  
*A sentinel indicating an invalid **DDS\_TypeCode** (p. 1806) member ID.*
- #define **DDS\_TYPECODE\_INDEX\_INVALID**  
*A sentinel indicating an invalid **DDS\_TypeCode** (p. 1806) member index.*
- #define **DDS\_TYPECODE\_NOT\_BITFIELD**  
*Indicates that a member of a type is not a bitfield.*
- #define **DDS\_VM\_NONE**  
*Constant used to indicate that a value type has no modifiers.*
- #define **DDS\_VM\_CUSTOM**  
*Constant used to indicate that a value type has the *custom* modifier.*
- #define **DDS\_VM\_ABSTRACT**  
*Constant used to indicate that a value type has the *abstract* modifier.*
- #define **DDS\_VM\_TRUNCATABLE**  
*Constant used to indicate that a value type has the *truncatable* modifier.*
- #define **DDS\_PRIVATE\_MEMBER**  
*Constant used to indicate that a value type member is private.*
- #define **DDS\_PUBLIC\_MEMBER**  
*Constant used to indicate that a value type member is public.*

- **#define DDS\_TYPECODE\_NONKEY\_MEMBER**  
*A flag indicating that a type member is optional and not part of the key.*
- **#define DDS\_TYPECODE\_KEY\_MEMBER**  
*A flag indicating that a type member is part of the key for that type, and therefore required.*
- **#define DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER**  
*A flag indicating that a type member is not part of the key but is nevertheless required.*
- **#define DDS\_TypeCode\_PrintFormat\_INITIALIZER**  
*Static initializer for `DDS_TypeCodePrintFormatProperty` (p. 1808).*

## Typedefs

- **typedef short DDS\_ValueModifier**  
*Modifier type for a value type.*
- **typedef short DDS\_Visibility**  
*Type to indicate the visibility of a value type member.*

## Enumerations

- **enum DDS\_TypeCodePrintFormatKind {**  
**DDS\_TYPE\_CODE\_PRINT\_KIND\_IDL ,**  
**DDS\_TYPE\_CODE\_PRINT\_KIND\_XML }**  
*The different formats to print a `DDS_TypeCode` (p. 1806).*
- **enum DDS\_TCKind {**  
**DDS\_TK\_NULL ,**  
**DDS\_TK\_SHORT ,**  
**DDS\_TK\_LONG ,**  
**DDS\_TK\_USHORT ,**  
**DDS\_TK\_ULONG ,**  
**DDS\_TK\_FLOAT ,**  
**DDS\_TK\_DOUBLE ,**  
**DDS\_TK\_BOOLEAN ,**  
**DDS\_TK\_CHAR ,**  
**DDS\_TK\_OCTET ,**  
**DDS\_TK\_STRUCT ,**  
**DDS\_TK\_UNION ,**  
**DDS\_TK\_ENUM ,**  
**DDS\_TK\_STRING ,**  
**DDS\_TK\_SEQUENCE ,**  
**DDS\_TK\_ARRAY ,**  
**DDS\_TK\_ALIAS ,**  
**DDS\_TK\_LONGLONG ,**  
**DDS\_TK\_ULONGLONG ,**  
**DDS\_TK\_LONGDOUBLE ,**  
**DDS\_TK\_WCHAR ,**  
**DDS\_TK\_WSTRING ,**  
**DDS\_TK\_VALUE ,**  
**DDS\_TK\_SPARSE ,**  
**DDS\_TK\_RAW\_BYTES = 0x7e ,**  
**DDS\_TK\_RAW\_BYTES\_KEYED = 0x7f ,**

```

DDS_TK_FINAL_EXTENSIBILITY = 0x4000 ,
DDS_TK_MUTABLE_EXTENSIBILITY = 0x2000 ,
DDS_TK_FLAT_DATA_LANGUAGE_BINDING = RTI_XCDR_TK_FLAGS_IS_FLAT_DATA ,
DDS_TK_SHMEM_REF_TRANSFER_MODE = RTI_XCDR_TK_FLAGS_IS_SHMEM_REF }

```

Enumeration type for **DDS\_TypeCode** (p. 1806) kinds.

- enum **DDS\_ExtensibilityKind** {  
**DDS\_FINAL\_EXTENSIBILITY** ,  
**DDS\_EXTENSIBLE\_EXTENSIBILITY** ,  
**DDS\_MUTABLE\_EXTENSIBILITY** }

Type to indicate the extensibility of a type.

## Functions

- **DDS\_TCKind DDS\_TypeCode\_kind** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)  
*Gets the **DDS\_TCKind** (p. 239) value of a type code.*
- **DDS\_ExtensibilityKind DDS\_TypeCode\_extensibility\_kind** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
*Gets the **DDS\_ExtensibilityKind** (p. 239) value of a type code.*
- **DDS\_Boolean DDS\_TypeCode\_equal** (const **DDS\_TypeCode** \*self, const **DDS\_TypeCode** \*tc, **DDS\_↔\_ExceptionCode\_t** \*ex)  
*Compares two **DDS\_TypeCode** (p. 1806) objects for equality.*
- const char \* **DDS\_TypeCode\_name** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)  
*Retrieves the simple name identifying this **DDS\_TypeCode** (p. 1806) object within its enclosing scope.*
- const **DDS\_TypeCode\_Annotation** \* **DDS\_TypeCode\_default\_annotation** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
***[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its **[default]** annotation value as a **DDS\_TypeCode↔\_Annotation***
- const **DDS\_TypeCode\_Annotation** \* **DDS\_TypeCode\_member\_default\_annotation** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_↔\_ExceptionCode\_t** \*ex)  
***[DEPRECATED]** Returns the **[default]** annotation of a type code member identified by the given index.*
- const **DDS\_TypeCode\_Annotation** \* **DDS\_TypeCode\_min\_annotation** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
***[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its @min annotation value as a **DDS\_TypeCode↔\_Annotation***
- const **DDS\_TypeCode\_Annotation** \* **DDS\_TypeCode\_max\_annotation** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
***[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its @max annotation value as a **DDS\_TypeCode↔\_Annotation***
- const **DDS\_AnnotationParameterValue** \* **DDS\_TypeCode\_default\_value** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
*Returns the default annotation for this **DDS\_TypeCode** (p. 1806).*
- const **DDS\_AnnotationParameterValue** \* **DDS\_TypeCode\_min\_value** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
*Returns the min annotation for this **DDS\_TypeCode** (p. 1806).*
- const **DDS\_AnnotationParameterValue** \* **DDS\_TypeCode\_max\_value** (const **DDS\_TypeCode** \*self, **DDS\_↔\_ExceptionCode\_t** \*ex)  
*Returns the max annotation for this **DDS\_TypeCode** (p. 1806).*
- const **DDS\_AnnotationParameterValue** \* **DDS\_TypeCode\_member\_default\_value** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_↔\_ExceptionCode\_t** \*ex)

Returns the member default annotation for this **DDS\_TypeCode** (p. 1806).

- **const DDS\_AnnotationParameterValue \* DDS\_TypeCode\_member\_min\_value** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the member min annotation for this **DDS\_TypeCode** (p. 1806).

- **const DDS\_AnnotationParameterValue \* DDS\_TypeCode\_member\_max\_value** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the member max annotation for this **DDS\_TypeCode** (p. 1806).

- **DDS\_UnsignedLong DDS\_TypeCode\_member\_count** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)

Returns the number of members of the type code.

- **const char \* DDS\_TypeCode\_member\_name** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the name of a type code member identified by the given index.

- **DDS\_UnsignedLong DDS\_TypeCode\_find\_member\_by\_name** (const **DDS\_TypeCode** \*self, const char \*name, **DDS\_ExceptionCode\_t** \*ex)

Get the index of the member of the given name.

- **DDS\_TypeCode \* DDS\_TypeCode\_member\_type** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Retrieves the **DDS\_TypeCode** (p. 1806) object describing the type of the member identified by the given index.

- **DDS\_UnsignedLong DDS\_TypeCode\_member\_label\_count** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the number of labels associated to the index-th union member.

- **DDS\_Long DDS\_TypeCode\_member\_label** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** member\_index, **DDS\_UnsignedLong** label\_index, **DDS\_ExceptionCode\_t** \*ex)

Return the label\_index-th label associated to the member\_index-th member.

- **DDS\_Long DDS\_TypeCode\_member\_ordinal** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the ordinal that corresponds to the index-th enum value.

- **DDS\_Boolean DDS\_TypeCode\_is\_member\_key** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Function that tells if a member is a key or not.

- **DDS\_Boolean DDS\_TypeCode\_is\_member\_required** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Indicates whether a given member of a type is required to be present in every sample of that type.

- **DDS\_Boolean DDS\_TypeCode\_is\_member\_pointer** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Function that tells if a member is a pointer or not.

- **DDS\_Boolean DDS\_TypeCode\_is\_member\_bitfield** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Function that tells if a member is a bitfield or not.

- **DDS\_Short DDS\_TypeCode\_member\_bitfield\_bits** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the number of bits of a bitfield member.

- **DDS\_Visibility DDS\_TypeCode\_member\_visibility** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** \*ex)

Returns the constant that indicates the visibility of the index-th member.

- **DDS\_TypeCode \* DDS\_TypeCode\_discriminator\_type** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)

Returns the discriminator type code.

- **DDS\_UnsignedLong DDS\_TypeCode\_length** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)  
*Returns the number of elements in the type described by this type code.*
- **DDS\_UnsignedLong DDS\_TypeCode\_array\_dimension\_count** (const **DDS\_TypeCode** \*self, **DDS\_↵**  
**ExceptionCode\_t** \*ex)  
*This function returns the number of dimensions of an array type code.*
- **DDS\_UnsignedLong DDS\_TypeCode\_array\_dimension** (const **DDS\_TypeCode** \*self, **DDS\_Unsigned\_↵**  
**Long** index, **DDS\_ExceptionCode\_t** \*ex)  
*This function returns the index-th dimension of an array type code.*
- **DDS\_UnsignedLong DDS\_TypeCode\_element\_count** (const **DDS\_TypeCode** \*self, **DDS\_Exception\_↵**  
**Code\_t** \*ex)  
*The number of elements in an array.*
- **DDS\_TypeCode \* DDS\_TypeCode\_content\_type** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t**  
\*ex)  
*Returns the **DDS\_TypeCode** (p. 1806) object representing the type for the members of the object described by this **DDS\_↵**  
**TypeCode** (p. 1806) object.*
- **DDS\_Boolean DDS\_TypeCode\_is\_alias\_pointer** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)  
*Function that tells if an alias is a pointer or not.*
- **DDS\_Long DDS\_TypeCode\_default\_index** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_t** \*ex)  
*Returns the index of the default member, or -1 if there is no default member.*
- **DDS\_TypeCode \* DDS\_TypeCode\_concrete\_base\_type** (const **DDS\_TypeCode** \*self, **DDS\_Exception\_↵**  
**Code\_t** \*ex)  
*Returns the **DDS\_TypeCode** (p. 1806) that describes the concrete base type of the value type that this **DDS\_TypeCode**  
(p. 1806) object describes.*
- **DDS\_ValueModifier DDS\_TypeCode\_type\_modifier** (const **DDS\_TypeCode** \*self, **DDS\_ExceptionCode\_↵**  
**\_t** \*ex)  
*Returns a constant indicating the modifier of the value type that this **DDS\_TypeCode** (p. 1806) object describes.*
- **DDS\_UnsignedLong DDS\_TypeCode\_find\_member\_by\_id** (const **DDS\_TypeCode** \*self, **DDS\_Long** id,  
**DDS\_ExceptionCode\_t** \*ex)  
*Get the index of the member of the given ID.*
- **DDS\_Long DDS\_TypeCode\_member\_id** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** index, **DDS\_↵**  
**ExceptionCode\_t** \*ex)  
*Returns the ID of the TypeCode member identified by the given index.*
- **DDS\_UnsignedLong DDS\_TypeCode\_get\_type\_object\_serialized\_size** (const **DDS\_TypeCode** \*self,  
**DDS\_ExceptionCode\_t** \*ex)  
*Gets the serialized size of the TypeObject created from this **DDS\_TypeCode** (p. 1806).*
- **DDS\_UnsignedLong DDS\_TypeCode\_add\_member\_to\_enum** (**DDS\_TypeCode** \*self, const char \*name,  
**DDS\_Long** ordinal, **DDS\_ExceptionCode\_t** \*ex)  
*Add a new enumerated constant to this enum **DDS\_TypeCode** (p. 1806).*
- **DDS\_UnsignedLong DDS\_TypeCode\_add\_member\_to\_union** (**DDS\_TypeCode** \*self, const char \*name,  
**DDS\_Long** id, const struct **DDS\_LongSeq** \*labels, const **DDS\_TypeCode** \*tc, **DDS\_Boolean** is\_pointer,  
**DDS\_ExceptionCode\_t** \*ex)  
*Add a new member to a union **DDS\_TypeCode** (p. 1806).*
- **DDS\_UnsignedLong DDS\_TypeCode\_add\_member** (**DDS\_TypeCode** \*self, const char \*name, **DDS\_Long**  
id, const **DDS\_TypeCode** \*tc, **DDS\_Octet** member\_flags, **DDS\_ExceptionCode\_t** \*ex)  
*Add a new member to this **DDS\_TypeCode** (p. 1806).*
- **DDS\_UnsignedLong DDS\_TypeCode\_add\_member\_ex** (**DDS\_TypeCode** \*self, const char \*name, **DDS\_↵**  
**Long** id, const **DDS\_TypeCode** \*tc, **DDS\_Octet** member\_flags, **DDS\_Visibility** visibility, **DDS\_Boolean**  
is\_pointer, **DDS\_Short** bits, **DDS\_ExceptionCode\_t** \*ex)  
*Add a new member to this **DDS\_TypeCode** (p. 1806).*

- void **DDS\_TypeCode\_print\_IDL** (const **DDS\_TypeCode** \*self, **DDS\_UnsignedLong** indent, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Prints a **DDS\_TypeCode** (p. 1806) in IDL notation.*
- void **DDS\_TypeCode\_print** (const **DDS\_TypeCode** \*self, const **DDS\_TypeCodePrintFormatProperty** \*format, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Prints a **DDS\_TypeCode** (p. 1806).*
- void **DDS\_TypeCode\_to\_string** (const **DDS\_TypeCode** \*self, char \*str, **DDS\_UnsignedLong** \*str\_size, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Get a string representation of this **DDS\_TypeCode** (p. 1806) object using the default values for **DDS\_TypeCodePrint↔  
FormatProperty** (p. 1808).*
- void **DDS\_TypeCode\_to\_string\_w\_format** (const **DDS\_TypeCode** \*self, char \*str, **DDS\_UnsignedLong** \*str\_size, const **DDS\_TypeCodePrintFormatProperty** \*format, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Get a string representation of this **DDS\_TypeCode** (p. 1806) object using the format described by **DDS\_TypeCode↔  
PrintFormatProperty** (p. 1808).*
- **DDS\_UnsignedLong** **DDS\_TypeCode\_get\_cdr\_serialized\_sample\_max\_size** (const **DDS\_TypeCode** \*self, **DDS\_DataRepresentationId\_t** representation\_id, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*[DEPRECATED] Gets the maximum serialized size of samples of this type*
- **DDS\_UnsignedLong** **DDS\_TypeCode\_cdr\_serialized\_sample\_max\_size** (const **DDS\_TypeCode** \*self, **DDS\_DataRepresentationId\_t** representation\_id, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Gets the maximum serialized size of samples of this type.*
- **DDS\_UnsignedLong** **DDS\_TypeCode\_cdr\_serialized\_sample\_min\_size** (const **DDS\_TypeCode** \*self, **DDS\_DataRepresentationId\_t** representation\_id, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Gets the minimum serialized size of samples of this type.*
- **DDS\_UnsignedLong** **DDS\_TypeCode\_cdr\_serialized\_sample\_key\_max\_size** (const **DDS\_TypeCode** \*self, **DDS\_DataRepresentationId\_t** representation\_id, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Gets the maximum serialized size of sample keys of this type.*
- **DDS\_TypeCodeFactory** \* **DDS\_TypeCodeFactory\_get\_instance** (void)  
*Gets the singleton instance of this class.*
- **DDS\_ReturnCode\_t** **DDS\_TypeCodeFactory\_finalize\_instance** (void)  
*If there are no **DDS\_DomainParticipantFactory** instances left in the system, it will finalize the **DDS\_TypeCodeFactory** (p. 1806). If there is at least one **DDS\_DomainParticipantFactory** instance left in the system, this is a noop.*
- **DDS\_TypeCode** \* **DDS\_TypeCodeFactory\_clone\_tc** ( **DDS\_TypeCodeFactory** \*self, const **DDS\_TypeCode** \*tc, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Creates and returns a copy of the input **DDS\_TypeCode** (p. 1806).*
- void **DDS\_TypeCodeFactory\_delete\_tc** ( **DDS\_TypeCodeFactory** \*self, **DDS\_TypeCode** \*tc, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Deletes the input **DDS\_TypeCode** (p. 1806).*
- const **DDS\_TypeCode** \* **DDS\_TypeCodeFactory\_get\_primitive\_tc** ( **DDS\_TypeCodeFactory** \*self, **DDS\_↔  
\_TCKind** tc\_kind)  
*Get the **DDS\_TypeCode** (p. 1806) for a primitive type (integers, floating point values, etc.) identified by the given **DDS\_↔  
\_TCKind** (p. 239).*
- **DDS\_TypeCode** \* **DDS\_TypeCodeFactory\_create\_struct\_tc** ( **DDS\_TypeCodeFactory** \*self, const char \*name, const struct **DDS\_StructMemberSeq** \*members, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Constructs a **DDS\_TK\_STRUCT** (p. 239) **DDS\_TypeCode** (p. 1806).*
- **DDS\_TypeCode** \* **DDS\_TypeCodeFactory\_create\_struct\_tc\_ex** ( **DDS\_TypeCodeFactory** \*self, const char \*name, **DDS\_ExtensibilityKind** extensibility\_kind, const struct **DDS\_StructMemberSeq** \*members, **DDS\_↔  
ExceptionCode\_t** \*ex)  
*Constructs a **DDS\_TK\_STRUCT** (p. 239) **DDS\_TypeCode** (p. 1806).*

- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_value\_tc** ( DDS\_TypeCodeFactory \*self, const char \*name, DDS\_ValueModifier type\_modifier, const DDS\_TypeCode \*concrete\_base, const struct DDS\_ValueMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_VALUE (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_value\_tc\_ex** ( DDS\_TypeCodeFactory \*self, const char \*name, DDS\_ExtensibilityKind extensibility\_kind, DDS\_ValueModifier type\_modifier, const DDS\_TypeCode \*concrete\_base, const struct DDS\_ValueMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_VALUE (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_union\_tc** ( DDS\_TypeCodeFactory \*self, const char \*name, const DDS\_TypeCode \*discriminator\_type, DDS\_Long default\_index, const struct DDS\_UnionMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_UNION (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_union\_tc\_ex** ( DDS\_TypeCodeFactory \*self, const char \*name, DDS\_ExtensibilityKind extensibility\_kind, const DDS\_TypeCode \*discriminator\_type, DDS\_Long default\_index, const struct DDS\_UnionMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_UNION (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_enum\_tc** ( DDS\_TypeCodeFactory \*self, const char \*name, const struct DDS\_EnumMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_ENUM (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_enum\_tc\_ex** ( DDS\_TypeCodeFactory \*self, const char \*name, DDS\_ExtensibilityKind extensibility\_kind, const struct DDS\_EnumMemberSeq \*members, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_ENUM (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_alias\_tc** ( DDS\_TypeCodeFactory \*self, const char \*name, const DDS\_TypeCode \*original\_type, DDS\_Boolean is\_pointer, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_ALIAS (p. 239) (typedef) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_string\_tc** ( DDS\_TypeCodeFactory \*self, DDS\_UnsignedLong bound, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_STRING (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_wstring\_tc** ( DDS\_TypeCodeFactory \*self, DDS\_UnsignedLong bound, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_WSTRING (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_sequence\_tc** ( DDS\_TypeCodeFactory \*self, DDS\_UnsignedLong bound, const DDS\_TypeCode \*element\_type, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_SEQUENCE (p. 239) DDS\_TypeCode (p. 1806).*
- **DDS\_TypeCode \* DDS\_TypeCodeFactory\_create\_array\_tc** ( DDS\_TypeCodeFactory \*self, const struct DDS\_UnsignedLongSeq \*dimensions, const DDS\_TypeCode \*element\_type, DDS\_ExceptionCode\_t \*ex)  
*Constructs a DDS\_TK\_ARRAY (p. 239) DDS\_TypeCode (p. 1806).*

## Variables

- **DDS\_TypeCode DDS\_g\_tc\_null**  
*Basic NULL type.*
- **DDS\_TypeCode DDS\_g\_tc\_short**  
*Basic 16-bit signed integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_long**  
*Basic 32-bit signed integer type.*
- **DDS\_TypeCode DDS\_g\_tc\_ushort**

- Basic unsigned 16-bit integer type.*

  - **DDS\_TypeCode DDS\_g\_tc\_ulong**
- Basic unsigned 32-bit integer type.*

  - **DDS\_TypeCode DDS\_g\_tc\_float**
- Basic 32-bit floating point type.*

  - **DDS\_TypeCode DDS\_g\_tc\_double**
- Basic 64-bit floating point type.*

  - **DDS\_TypeCode DDS\_g\_tc\_boolean**
- Basic Boolean type.*

  - **DDS\_TypeCode DDS\_g\_tc\_char**
- Basic single-byte character type.*

  - **DDS\_TypeCode DDS\_g\_tc\_octet**
- Basic octet/byte type.*

  - **DDS\_TypeCode DDS\_g\_tc\_longlong**
- Basic 64-bit integer type.*

  - **DDS\_TypeCode DDS\_g\_tc\_ulonglong**
- Basic unsigned 64-bit integer type.*

  - **DDS\_TypeCode DDS\_g\_tc\_longdouble**
- Basic 128-bit floating point type.*

  - **DDS\_TypeCode DDS\_g\_tc\_wchar**
- Basic four-byte character type.*

#### 4.11.1 Detailed Description

<<*extension*>> (p. 817) A **DDS\_TypeCode** (p. 1806) is a mechanism for representing a type at runtime. RTI Connex can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 308) capability or to inspect the type information you receive from remote readers and writers.

Type codes are values that are used to describe arbitrarily complex types at runtime. Type code values are manipulated via the **DDS\_TypeCode** (p. 1806) class, which has an analogue in CORBA.

A **DDS\_TypeCode** (p. 1806) value consists of a type code *kind* (represented by the **DDS\_TCKind** (p. 239) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS\_TypeCode** (p. 1806), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

There are a number of uses for type codes. The type code mechanism can be used to unambiguously match type representations. The **DDS\_TypeCode\_equal** (p. 243) function is a more reliable test than comparing the string type names, requiring equivalent definitions of the types.

#### 4.11.2 Accessing a Local ::DDS\_TypeCode

When generating types with `rtiddsgen`, type codes are always enabled. For these types, a **DDS\_TypeCode** (p. 1806) may be accessed by calling the `Foo_get_typecode` function for a type "Foo", which returns a **DDS\_TypeCode** (p. 1806) pointer. via the **FooTypeCode.VALUE** member. This API also includes support for dynamic creation of **DDS\_TypeCode** (p. 1806) values, typically for use with the **Dynamic Data** (p. 308) API. You can create a **DDS\_TypeCode** (p. 1806) using the **DDS\_TypeCodeFactory** (p. 1806) class. You will construct the **DDS\_TypeCode** (p. 1806) recursively, from the outside in: start with the type codes for primitive types, then compose them into complex types like arrays, structures, and so on. You will find the following methods helpful:

- **DDS\_TypeCodeFactory\_get\_primitive\_tc** (p. 287), which provides the **DDS\_TypeCode** (p. 1806) instances corresponding to the primitive types (e.g. **DDS\_TK\_LONG** (p. 239), **DDS\_TK\_SHORT** (p. 239), and so on).
- **DDS\_TypeCodeFactory\_create\_string\_tc** (p. 294) and **DDS\_TypeCodeFactory\_create\_wstring\_tc** (p. 294) create a **DDS\_TypeCode** (p. 1806) representing a text string with a certain *bound* (i.e. maximum length).
- **DDS\_TypeCodeFactory\_create\_array\_tc** (p. 296) and **DDS\_TypeCodeFactory\_create\_sequence\_tc** (p. 295) create a **DDS\_TypeCode** (p. 1806) for a collection based on the **DDS\_TypeCode** (p. 1806) for its elements.
- **DDS\_TypeCodeFactory\_create\_struct\_tc** (p. 287) and **DDS\_TypeCodeFactory\_create\_value\_tc** (p. 289) create a **DDS\_TypeCode** (p. 1806) for a structured type.

### 4.11.3 Accessing a Remote ::DDS\_TypeCode

In addition to being used locally, RTI Connext can transmit **DDS\_TypeCode** (p. 1806) on the network between participants. This information can be used to access information about types used remotely at runtime, for example to be able to publish or subscribe to topics of arbitrarily types (see **Dynamic Data** (p. 308)). This functionality is useful for a generic system monitoring tool like `rtiddsspy`.

Remote **DDS\_TypeCode** (p. 1806) information is shared during discovery over the publication and subscription built-in topics and can be accessed using the built-in readers for these topics; see **Built-in Topics** (p. 162). Discovered **DDS\_TypeCode** (p. 1806) values are not cached by RTI Connext upon receipt and are therefore not available from the built-in topic data returned by **DDS\_DataWriter\_get\_matched\_subscription\_data** (p. 533) or **DDS\_DataReader\_get\_matched\_publication\_data** (p. 671).

The space available locally to deserialize a discovered remote **DDS\_TypeCode** (p. 1806) is specified by the **DDS\_DomainParticipant** (p. 72)'s **DDS\_DomainParticipantResourceLimitsQoSPolicy::type\_code\_max\_serialized\_length** (p. 1508) QoS parameter. To support especially complex type codes, it may be necessary for you to increase the value of this parameter.

### 4.11.4 Macro Definition Documentation

#### 4.11.4.1 DDS\_TYPECODE\_MEMBER\_ID\_INVALID

```
#define DDS_TYPECODE_MEMBER_ID_INVALID
```

A sentinel indicating an invalid **DDS\_TypeCode** (p. 1806) member ID.

#### 4.11.4.2 DDS\_TYPECODE\_INDEX\_INVALID

```
#define DDS_TYPECODE_INDEX_INVALID
```

A sentinel indicating an invalid **DDS\_TypeCode** (p. 1806) member index.

#### 4.11.4.3 DDS\_TYPECODE\_NOT\_BITFIELD

```
#define DDS_TYPECODE_NOT_BITFIELD
```

Indicates that a member of a type is not a bitfield.

#### 4.11.4.4 DDS\_VM\_NONE

```
#define DDS_VM_NONE
```

Constant used to indicate that a value type has no modifiers.

See also

**DDS\_ValueModifier** (p. 238)

Examples

**HelloWorld.c.**

#### 4.11.4.5 DDS\_VM\_CUSTOM

```
#define DDS_VM_CUSTOM
```

Constant used to indicate that a value type has the `custom` modifier.

This modifier is used to specify whether the value type uses custom marshaling.

See also

**DDS\_ValueModifier** (p. 238)

#### 4.11.4.6 DDS\_VM\_ABSTRACT

```
#define DDS_VM_ABSTRACT
```

Constant used to indicate that a value type has the `abstract` modifier.

An abstract value type may not be instantiated.

See also

**DDS\_ValueModifier** (p. 238)

#### 4.11.4.7 DDS\_VM\_TRUNCATABLE

```
#define DDS_VM_TRUNCATABLE
```

Constant used to indicate that a value type has the `truncatable` modifier.

A value with a state that derives from another value with a state can be declared as truncatable. A truncatable type means the object can be truncated to the base type.

See also

**DDS\_ValueModifier** (p. 238)

#### 4.11.4.8 DDS\_PRIVATE\_MEMBER

```
#define DDS_PRIVATE_MEMBER
```

Constant used to indicate that a value type member is private.

See also

**DDS\_Visibility** (p. 238)

**DDS\_PUBLIC\_MEMBER** (p. 235)

#### 4.11.4.9 DDS\_PUBLIC\_MEMBER

```
#define DDS_PUBLIC_MEMBER
```

Constant used to indicate that a value type member is public.

See also

**DDS\_Visibility** (p. 238)

**DDS\_PRIVATE\_MEMBER** (p. 235)

Examples

**HelloWorld.c.**

#### 4.11.4.10 DDS\_TYPECODE\_NONKEY\_MEMBER

```
#define DDS_TYPECODE_NONKEY_MEMBER
```

A flag indicating that a type member is optional and not part of the key.

If a type is used with the **Dynamic Data** (p. 308) facility, a **DDS\_DynamicData** (p. 1523) sample of the type will only contain a value for a **DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 236) field if one has been explicitly set (see, for example, **DDS\_DynamicData\_set\_long** (p. 386)). The middleware will *not* assume any default value.

See also

**DDS\_TYPECODE\_KEY\_MEMBER** (p. 236)

**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 237)

**DDS\_TYPECODE\_KEY\_MEMBER** (p. 236)

**DDS\_TypeCode\_add\_member** (p. 276)

**DDS\_TypeCode\_add\_member\_ex** (p. 278)

**DDS\_TypeCode\_is\_member\_key** (p. 257)

**DDS\_TypeCode\_is\_member\_required** (p. 258)

**DDS\_StructMember::is\_key** (p. 1743)

**DDS\_ValueMember::is\_key** (p. 1823)

#### 4.11.4.11 DDS\_TYPECODE\_KEY\_MEMBER

```
#define DDS_TYPECODE_KEY_MEMBER
```

A flag indicating that a type member is part of the key for that type, and therefore required.

If a type is used with the **Dynamic Data** (p. 308) facility, all **DDS\_DynamicData** (p. 1523) samples of the type will contain a value for all **DDS\_TYPECODE\_KEY\_MEMBER** (p. 236) fields. If you do not set a value of the member explicitly (see, for example, **DDS\_DynamicData\_set\_long** (p. 386)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

See also

- DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 237)
- DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 236)
- DDS\_TypeCode\_add\_member** (p. 276)
- DDS\_TypeCode\_add\_member\_ex** (p. 278)
- DDS\_TypeCode\_is\_member\_key** (p. 257)
- DDS\_TypeCode\_is\_member\_required** (p. 258)
- DDS\_StructMember::is\_key** (p. 1743)
- DDS\_ValueMember::is\_key** (p. 1823)

#### 4.11.4.12 DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER

```
#define DDS_TYPECODE_NONKEY_REQUIRED_MEMBER
```

A flag indicating that a type member is not part of the key but is nevertheless required.

This is the most common kind of member.

If a type is used with the **Dynamic Data** (p. 308) facility, all **DDS\_DynamicData** (p. 1523) samples of the type will contain a value for all **DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 237) fields. If you do not set a value of the member explicitly (see, for example, **DDS\_DynamicData\_set\_long** (p. 386)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

See also

- DDS\_TYPECODE\_KEY\_MEMBER** (p. 236)
- DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 236)
- DDS\_TYPECODE\_KEY\_MEMBER** (p. 236)
- DDS\_TypeCode\_add\_member** (p. 276)
- DDS\_TypeCode\_add\_member\_ex** (p. 278)
- DDS\_TypeCode\_is\_member\_key** (p. 257)
- DDS\_TypeCode\_is\_member\_required** (p. 258)
- DDS\_StructMember::is\_key** (p. 1743)
- DDS\_ValueMember::is\_key** (p. 1823)

#### 4.11.4.13 DDS\_TypeCode\_PrintFormat\_INITIALIZER

```
#define DDS_TypeCode_PrintFormat_INITIALIZER
```

Static initializer for **DDS\_TypeCodePrintFormatProperty** (p. 1808).

Use this initializer to ensure that new objects don't have uninitialized contents.

```
struct DDS_TypeCodePrintFormatProperty property = DDS_TypeCodePrintFormatProperty;
```

### 4.11.5 Typedef Documentation

#### 4.11.5.1 DDS\_ValueModifier

```
typedef short DDS_ValueModifier
```

Modifier type for a value type.

See also

**DDS\_VM\_NONE** (p. 234)

**DDS\_VM\_CUSTOM** (p. 234)

**DDS\_VM\_ABSTRACT** (p. 234)

**DDS\_VM\_TRUNCATABLE** (p. 235)

#### 4.11.5.2 DDS\_Visibility

```
typedef short DDS_Visibility
```

Type to indicate the visibility of a value type member.

See also

**DDS\_PRIVATE\_MEMBER** (p. 235)

**DDS\_PUBLIC\_MEMBER** (p. 235)

### 4.11.6 Enumeration Type Documentation

#### 4.11.6.1 DDS\_TypeCodePrintFormatKind

```
enum DDS_TypeCodePrintFormatKind
```

The different formats to print a **DDS\_TypeCode** (p. 1806).

## Enumerator

DDS_TYPE_CODE_PRINT_KIND_IDL	Indicates that a <b>DDS_TypeCode</b> (p. 1806) is to be printed in IDL format.
DDS_TYPE_CODE_PRINT_KIND_XML	Indicates that a <b>DDS_TypeCode</b> (p. 1806) is to be printed in XML format.

## 4.11.6.2 DDS\_TCKind

```
enum DDS_TCKind
```

Enumeration type for **DDS\_TypeCode** (p. 1806) kinds.

Type code kinds are modeled as values of this type.

## Enumerator

DDS_TK_NULL	Indicates that a type code does not describe anything.
DDS_TK_SHORT	short type.
DDS_TK_LONG	long type.
DDS_TK_USHORT	unsigned short type.
DDS_TK_ULONG	unsigned long type.
DDS_TK_FLOAT	float type.
DDS_TK_DOUBLE	double type.
DDS_TK_BOOLEAN	boolean type.
DDS_TK_CHAR	char type.
DDS_TK_OCTET	octet type.
DDS_TK_STRUCT	struct type.
DDS_TK_UNION	union type.
DDS_TK_ENUM	enumerated type.
DDS_TK_STRING	string type.
DDS_TK_SEQUENCE	sequence type.
DDS_TK_ARRAY	array type.
DDS_TK_ALIAS	alias (typedef) type.
DDS_TK_LONGLONG	long long type.
DDS_TK_ULONGLONG	unsigned long long type.
DDS_TK_LONGDOUBLE	long double type.
DDS_TK_WCHAR	wide char type.
DDS_TK_WSTRING	wide string type.
DDS_TK_VALUE	value type.

### 4.11.6.3 DDS\_ExtensibilityKind

enum `DDS_ExtensibilityKind`

Type to indicate the extensibility of a type.

#### Enumerator

<code>DDS_FINAL_EXTENSIBILITY</code>	<p>Specifies that a type has FINAL extensibility. A type may be final, indicating that the range of its possible values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.</p> <p>The following types are always final:</p> <ul style="list-style-type: none"> <li>• <code>DDS_TK_ARRAY</code> (p. 239)</li> <li>• All primitive types</li> </ul>
<code>DDS_EXTENSIBLE_EXTENSIBILITY</code>	<p>Specifies that a type has EXTENSIBLE extensibility. A type may be appendable (formerly called extensible), indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.</p>
<code>DDS_MUTABLE_EXTENSIBILITY</code>	<p>Specifies that a type has MUTABLE extensibility. A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.</p> <p>The following types are always mutable:</p> <ul style="list-style-type: none"> <li>• <code>DDS_TK_SEQUENCE</code> (p. 239)</li> <li>• <code>DDS_TK_STRING</code> (p. 239)</li> <li>• <code>DDS_TK_WSTRING</code> (p. 239)</li> </ul>

## 4.11.7 Function Documentation

### 4.11.7.1 DDS\_TypeCode\_kind()

```
DDS_TCKind DDS_TypeCode_kind (
    const DDS_TypeCode * self,
    DDS_StatusCode_t * ex )
```

Gets the `DDS_TCKind` (p. 239) value of a type code.

#### Parameters

<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

## Parameters

<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that it can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Retrieves the kind of this **DDS\_TypeCode** (p. 1806) object. The kind of a type code determines which **DDS\_TypeCode** (p. 1806) functions may legally be invoked on it.

## MT Safety:

SAFE.

## Returns

The type code kind.

4.11.7.2 **DDS\_TypeCode\_extensibility\_kind()**

```
DDS_ExtensibilityKind DDS_TypeCode_extensibility_kind (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Gets the **DDS\_ExtensibilityKind** (p. 239) value of a type code.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that it can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

Retrieves the extensibility kind of this **DDS\_TypeCode** (p. 1806) object.

In some cases, it is desirable for types to evolve without breaking interoperability with deployed components already using those types. For example:

- A new set of applications to be integrated into an existing system may want to introduce additional fields into a structure. These new fields can be safely ignored by already deployed applications, but applications that do understand the new fields can benefit from their presence.
- A new set of applications to be integrated into an existing system may want to increase the maximum size of some sequence or string in a Type. Existing applications can receive data samples from these new applications as long as the actual number of elements (or length of the strings) in the received data sample does not exceed what the receiving applications expects. If a received data sample exceeds the limits expected by the receiving application, then the sample can be safely ignored (filtered out) by the receiver.

In order to support use cases such as these, the type system introduces the concept of appendable and mutable types.

- A type may be final, indicating that the range of its possible data values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.
- A type may be appendable, indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.
- A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.

The extensibility of **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239), **DDS\_TK\_VALUE** (p. 239), and **DDS\_TK\_ENUM** (p. 239) can be change using the built-in "Extensibility" annotation when the type is declared.

IDL examples:

```
@final
struct MyType {
    long member_1;
}
@appendable
struct MyType {
    long member_1;
}
@mutable
struct MyType {
    long member_1;
}
```

XML example:

```
<struct name="MyType" extensibility="final">
    <member name="member_1" type="long"/>
</struct>
<struct name="MyType" extensibility="appendable">
    <member name="member_1" type="long"/>
</struct>
<struct name="MyType" extensibility="mutable">
    <member name="member_1" type="long"/>
</struct>
```

XSD example:

```
<xsd:complexType name="MyType">
  <xsd:sequence>
    <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
  </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility FINAL_EXTENSIBILITY -->
<xsd:complexType name="MyType">
  <xsd:sequence>
    <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
  </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility EXTENSIBLE_EXTENSIBILITY -->
<xsd:complexType name="MyType">
  <xsd:sequence>
    <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
  </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility MUTABLE_EXTENSIBILITY -->
```

For TypeCodes built at run-time using the **DDS\_TypeCodeFactory** (p. 1806) API, the extensibility can be provided as a parameter of the following APIs:

- **DDS\_TypeCodeFactory\_create\_struct\_tc\_ex** (p. 288)
- **DDS\_TypeCodeFactory\_create\_value\_tc\_ex** (p. 289)
- **DDS\_TypeCodeFactory\_create\_union\_tc\_ex** (p. 291)
- **DDS\_TypeCodeFactory\_create\_enum\_tc\_ex** (p. 292)

See also

**DDS\_ExtensibilityKind** (p. 239)

MT Safety:

SAFE.

Returns

The type code extensibility kind.

### 4.11.7.3 DDS\_TypeCode\_equal()

```
DDS_Boolean DDS_TypeCode_equal (
    const DDS_TypeCode * self,
    const DDS_TypeCode * tc,
    DDS_ExceptionCode_t * ex )
```

Compares two **DDS\_TypeCode** (p. 1806) objects for equality.

MT Safety:

SAFE.

For equality and assignability purposes, **DDS\_TK\_STRUCT** (p. 239) and **DDS\_TK\_VALUE** (p. 239) are considered equivalent.

The **DDS\_TypeCode** (p. 1806) of structs inheriting from other structs has a **DDS\_TK\_VALUE** (p. 239) kind.

For example:

```
struct MyStruct: MyBaseStruct {
    long member_1;
};
```

The code generation for the previous type will generate a **DDS\_TypeCode** (p. 1806) with **DDS\_TK\_VALUE** (p. 239) kind.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>tc</i>	<< <i>in</i> >> (p. 818) Type code that will be compared with this <b>DDS_TypeCode</b> (p. 1806).
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the type codes are equal. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 1004).

### 4.11.7.4 DDS\_TypeCode\_name()

```
const char * DDS_TypeCode_name (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Retrieves the simple name identifying this **DDS\_TypeCode** (p. 1806) object within its enclosing scope.

## Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239), **DDS\_TK\_ENUM** (p. 239), **DDS\_TK\_VALUE** (p. 239), or **DDS\_TK\_ALIAS** (p. 239).

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

Name of the type code if no errors.

## 4.11.7.5 DDS\_TypeCode\_default\_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_default_annotation (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

**[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its **[default]** annotation value as a **DDS\_TypeCode\_Annotation**

DEPRECATED: use **DDS\_TypeCode\_default\_value** (p. 246)

## 4.11.7.6 DDS\_TypeCode\_member\_default\_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_member_default_annotation (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

**[DEPRECATED]** Returns the **[default]** annotation of a type code member identified by the given index.

DEPRECATED: use **DDS\_TypeCode\_member\_default\_value** (p. 248)

#### 4.11.7.7 DDS\_TypeCode\_min\_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_min_annotation (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

**[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its @min annotation value as a **DDS\_TypeCode\_Annotation**

DEPRECATED: use **DDS\_TypeCode\_min\_value** (p. 247)

#### 4.11.7.8 DDS\_TypeCode\_max\_annotation()

```
const DDS_TypeCode_Annotation * DDS_TypeCode_max_annotation (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

**[DEPRECATED]** Given a **DDS\_TypeCode** (p. 1806) object, retrieves its @max annotation value as a **DDS\_TypeCode\_Annotation**

DEPRECATED: use **DDS\_TypeCode\_max\_value** (p. 247)

#### 4.11.7.9 DDS\_TypeCode\_default\_value()

```
const DDS_AnnotationParameterValue * DDS_TypeCode_default_value (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the default annotation for this **DDS\_TypeCode** (p. 1806).

#### Precondition

self kind is **DDS\_TK\_ENUM** (p. 239), or **DDS\_TK\_ALIAS** (p. 239).

#### MT Safety:

SAFE

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

the default annotation for this **DDS\_TypeCode** (p. 1806)

**4.11.7.10 DDS\_TypeCode\_min\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode_min_value (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the min annotation for this **DDS\_TypeCode** (p. 1806).

**Precondition**

self kind is **DDS\_TK\_ENUM** (p. 239), or **DDS\_TK\_ALIAS** (p. 239) of a numerical kind.

**MT Safety:**

SAFE

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <b>out</b> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

the min annotation for this **DDS\_TypeCode** (p. 1806)

**4.11.7.11 DDS\_TypeCode\_max\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode_max_value (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the max annotation for this **DDS\_TypeCode** (p. 1806).

**Precondition**

self kind is **DDS\_TK\_ENUM** (p. 239), or **DDS\_TK\_ALIAS** (p. 239) of a numerical kind.

**MT Safety:**

SAFE

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

the max annotation for this **DDS\_TypeCode** (p. 1806)

**4.11.7.12 DDS\_TypeCode\_member\_default\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode_member_default_value (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Returns the member default annotation for this **DDS\_TypeCode** (p. 1806).

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 239), or **DDS\_TK\_UNION** (p. 239).

**MT Safety:**

SAFE

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	index of the target member
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

the member default annotation for this **DDS\_TypeCode** (p. 1806)

4.11.7.13 **DDS\_TypeCode\_member\_min\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode_member_min_value (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Returns the member min annotation for this **DDS\_TypeCode** (p. 1806).

## Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), or **DDS\_TK\_UNION** (p. 239).  
 member pointed to by index of a numerical kind.

## MT Safety:

SAFE

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	index of the target member

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

the member min annotation for this **DDS\_TypeCode** (p. 1806)

4.11.7.14 **DDS\_TypeCode\_member\_max\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode_member_max_value (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_StatusCode_t * ex )
```

Returns the member max annotation for this **DDS\_TypeCode** (p. 1806).

## Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), or **DDS\_TK\_UNION** (p. 239).  
member pointed to by index of a numerical kind.

## MT Safety:

SAFE

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>index</i>	index of the target member
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

the member max annotation for this **DDS\_TypeCode** (p. 1806)

**4.11.7.15 DDS\_TypeCode\_member\_count()**

```
DDS_UnsignedLong DDS_TypeCode_member_count (
    const DDS_TypeCode * self,
    DDS_StatusCode_t * ex )
```

Returns the number of members of the type code.

The function `member_count` can be invoked on structure, union, and enumeration **DDS\_TypeCode** (p. 1806) objects.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239), **DDS\_TK\_ENUM** (p. 239) or **DDS\_TK\_VALUE** (p. 239).

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <b>out</b> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The number of members constituting the type described by this **DDS\_TypeCode** (p. 1806) object if no errors.

#### 4.11.7.16 DDS\_TypeCode\_member\_name()

```
const char * DDS_TypeCode_member_name (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Returns the name of a type code member identified by the given index.

The function member\_name can be invoked on structure, union, and enumeration **DDS\_TypeCode** (p. 1806) objects.

##### Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239), **DDS\_TK\_ENUM** (p. 239) or **DDS\_TK\_VALUE** (p. 239).

The index param must be in the interval [0,(member count-1)].

##### MT Safety:

SAFE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

##### Returns

Name of the member if no errors.

#### 4.11.7.17 DDS\_TypeCode\_find\_member\_by\_name()

```
DDS_UnsignedLong DDS_TypeCode_find_member_by_name (
    const DDS_TypeCode * self,
```

```
const char * name,
DDS_ExceptionCode_t * ex )
```

Get the index of the member of the given name.

This method is applicable to **DDS\_TypeCode** (p. 1806) objects representing structs (**DDS\_TK\_STRUCT** (p. 239)) and union (**DDS\_TK\_UNION** (p. 239)) types.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) The member name.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

#### Returns

The index of the member of the given name or **DDS\_TYPECODE\_INDEX\_INVALID** (p. 233) if the member is not found.

#### MT Safety:

SAFE.

#### 4.11.7.18 DDS\_TypeCode\_member\_type()

```
DDS_TypeCode * DDS_TypeCode_member_type (
const DDS_TypeCode * self,
DDS_UnsignedLong index,
DDS_ExceptionCode_t * ex )
```

Retrieves the **DDS\_TypeCode** (p. 1806) object describing the type of the member identified by the given index.

The function `member_type` can be invoked on structure and union type codes.

#### Precondition

`self` kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239) or **DDS\_TK\_VALUE** (p. 239).  
The index param must be in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

The **DDS\_TypeCode** (p. 1806) object describing the member at the given index if no errors.

4.11.7.19 **DDS\_TypeCode\_member\_label\_count()**

```

DDS_UnsignedLong DDS_TypeCode_member_label_count (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )

```

Returns the number of labels associated to the index-th union member.

The function can be invoked on union **DDS\_TypeCode** (p. 1806) objects.

This function is an RTI Connext extension to the CORBA Type Code Specification.

## Precondition

*self* kind is **DDS\_TK\_UNION** (p. 239).  
 The *index* param must be in the interval [0,(member count-1)].

## Parameters

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

Number of labels if no errors.

## 4.11.7.20 DDS\_TypeCode\_member\_label()

```

DDS_Long DDS_TypeCode_member_label (
    const DDS_TypeCode * self,
    DDS_UnsignedLong member_index,
    DDS_UnsignedLong label_index,
    DDS_ExceptionCode_t * ex )

```

Return the *label\_index*-th label associated to the *member\_index*-th member.

This function has been modified for RTI Connex from the CORBA Type code Specification.

## Example:

```

case 1: Label index 0
case 2: Label index 1
short short_member;

```

The function can be invoked on union **DDS\_TypeCode** (p. 1806) objects.

**Precondition**

self kind is **DDS\_TK\_UNION** (p. 239).

The `member_index` param must be in the interval [0,(member count-1)].

The `label_index` param must be in the interval [0,(member labels count-1)].

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_index</i>	<< <i>in</i> >> (p. 818) Member index.
<i>label_index</i>	<< <i>in</i> >> (p. 818) Label index.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The evaluated value of the label if no errors.

**4.11.7.21 DDS\_TypeCode\_member\_ordinal()**

```
DDS_Long DDS_TypeCode_member_ordinal (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Returns the ordinal that corresponds to the index-th enum value.

The function can be invoked on enum **DDS\_TypeCode** (p. 1806) objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_ENUM** (p. 239).  
 Member index in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

Ordinal that corresponds to the index-th enumerator if no errors.

**4.11.7.22 DDS\_TypeCode\_is\_member\_key()**

```

DDS_Boolean DDS_TypeCode_is_member_key (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
  
```

Function that tells if a member is a key or not.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 239) or **DDS\_TK\_VALUE** (p. 239).  
 The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the member is a key. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 1004).

4.11.7.23 **DDS\_TypeCode\_is\_member\_required()**

```
DDS_Boolean DDS_TypeCode_is_member_required (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_StatusCode_t * ex )
```

Indicates whether a given member of a type is required to be present in every sample of that type.

A non-key member is required if it has not been marked as optional. All key members are required.

## See also

**DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 236)

**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 237)

## MT Safety:

SAFE.

## 4.11.7.24 DDS\_TypeCode\_is\_member\_pointer()

```
DDS_Boolean DDS_TypeCode_is_member_pointer (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Function that tells if a member is a pointer or not.

The function `is_member_pointer` can be invoked on union and structs type objects

This function is an RTI Connex extension to the CORBA Type Code Specification.

## Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239) or **DDS\_TK\_VALUE** (p. 239).  
The index param must be in the interval [0,(member count-1)].

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Index of the member for which type information is begin requested.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the member is a pointer. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 1004).

## 4.11.7.25 DDS\_TypeCode\_is\_member\_bitfield()

```
DDS_Boolean DDS_TypeCode_is_member_bitfield (
    const DDS_TypeCode * self,
```

```

    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )

```

Function that tells if a member is a bitfield or not.

The function can be invoked on struct type objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

#### Precondition

self kind is **DDS\_TK\_STRUCTURE** (p. 239) or **DDS\_TK\_VALUE** (p. 239).  
The index param must be in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the member is a bitfield. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 1004).

#### 4.11.7.26 DDS\_TypeCode\_member\_bitfield\_bits()

```

DDS_Short DDS_TypeCode_member_bitfield_bits (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )

```

Returns the number of bits of a bitfield member.

The function can be invoked on struct type objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 239) or **DDS\_TK\_VALUE** (p. 239).  
The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The number of bits of the bitfield or **DDS\_TYPECODE\_NOT\_BITFIELD** (p. 234) if the member is not a bitfield.

**4.11.7.27 DDS\_TypeCode\_member\_visibility()**

```

DDS_Visibility DDS_TypeCode_member_visibility (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )

```

Returns the constant that indicates the visibility of the index-th member.

**Precondition**

self kind is **DDS\_TK\_VALUE** (p.239) or **DDS\_TK\_STRUCT** (p.239). The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

For **DDS\_TK\_STRUCT** (p. 239), this function always returns **DDS\_PUBLIC\_MEMBER** (p. 235).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

One of the following constants: **DDS\_PRIVATE\_MEMBER** (p. 235) or **DDS\_PUBLIC\_MEMBER** (p. 235).

4.11.7.28 **DDS\_TypeCode\_discriminator\_type()**

```
DDS_TypeCode * DDS_TypeCode_discriminator_type (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the discriminator type code.

The function `discriminator_type` can be invoked only on union **DDS\_TypeCode** (p. 1806) objects.

## Precondition

*self* kind is **DDS\_TK\_UNION** (p. 239).

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

**DDS\_TypeCode** (p. 1806) object describing the discriminator of the union type if no errors.

## 4.11.7.29 DDS\_TypeCode\_length()

```
DDS_UnsignedLong DDS_TypeCode_length (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the number of elements in the type described by this type code.

Length is:

- The maximum length of the string for string type codes.
- The maximum length of the sequence for sequence type codes.
- The first dimension of the array for array type codes.

## Precondition

self kind is **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRING** (p. 239) or **DDS\_TK\_WSTRING** (p. 239).

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The bound for strings and sequences, or the number of elements for arrays if no errors.

**4.11.7.30 DDS\_TypeCode\_array\_dimension\_count()**

```
DDS_UnsignedLong DDS_TypeCode_array_dimension_count (
    const DDS_TypeCode * self,
    DDS_StatusCode_t * ex )
```

This function returns the number of dimensions of an array type code.

This function is an RTI Connext extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_ARRAY** (p. 239).

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

Number of dimensions if no errors.

**4.11.7.31 DDS\_TypeCode\_array\_dimension()**

```
DDS_UnsignedLong DDS_TypeCode_array_dimension (
    const DDS_TypeCode * self,
```

```

    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )

```

This function returns the index-th dimension of an array type code.

This function is an RTI Connex extension to the CORBA Type Code Specification.

#### Precondition

self kind is **DDS\_TK\_ARRAY** (p. 239).  
 Dimension index in the interval [0,(dimensions count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Dimension index in the interval [0,(dimensions count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

#### Returns

Requested dimension if no errors.

#### 4.11.7.32 DDS\_TypeCode\_element\_count()

```

    DDS_UnsignedLong DDS_TypeCode_element_count (
        const DDS_TypeCode * self,
        DDS_ExceptionCode_t * ex )

```

The number of elements in an array.

This operation isn't relevant for other kinds of types.

MT Safety:

SAFE.

#### 4.11.7.33 DDS\_TypeCode\_content\_type()

```
DDS_TypeCode * DDS_TypeCode_content_type (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the **DDS\_TypeCode** (p. 1806) object representing the type for the members of the object described by this **DDS\_TypeCode** (p. 1806) object.

For sequences and arrays, it returns the element type. For aliases, it returns the original type.

Precondition

self kind is **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239) or **DDS\_TK\_ALIAS** (p. 239).

MT Safety:

SAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

Returns

A **DDS\_TypeCode** (p. 1806) object representing the element type for sequences and arrays, and the original type for aliases.

**4.11.7.34 DDS\_TypeCode\_is\_alias\_pointer()**

```
DDS_Boolean DDS_TypeCode_is_alias_pointer (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Function that tells if an alias is a pointer or not.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_ALIAS** (p. 239).

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 1004) if an alias is a pointer to the aliased type. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 1004).

**4.11.7.35 DDS\_TypeCode\_default\_index()**

```
DDS_Long DDS_TypeCode_default_index (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the index of the default member, or -1 if there is no default member.

The function `default_index` can be invoked only on union **DDS\_TypeCode** (p. 1806) objects.

**Precondition**

self kind is **DDS\_TK\_UNION** (p. 239)

**MT Safety:**

SAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The index of the default member, or -1 if there is no default member.

**4.11.7.36 DDS\_TypeCode\_concrete\_base\_type()**

```
DDS_TypeCode * DDS_TypeCode_concrete_base_type (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Returns the **DDS\_TypeCode** (p. 1806) that describes the concrete base type of the value type that this **DDS\_TypeCode** (p. 1806) object describes.

**Precondition**

self kind is **DDS\_TK\_VALUE** (p. 239) or **DDS\_TK\_STRUCT** (p. 239).

MT Safety:

SAFE.

For **DDS\_TK\_STRUCT** (p. 239), this function always returns **DDS\_TK\_NULL** (p. 239).

The **DDS\_TypeCode** (p. 1806) of structs inheriting from other structs has a **DDS\_TK\_VALUE** (p. 239) kind.

For example:

```
struct MyBaseStruct {  
    long member_1;  
};
```

The code generation for the previous type will generate a **DDS\_TypeCode** (p. 1806) with **DDS\_TK\_VALUE** (p. 239) kind.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

**DDS\_TypeCode** (p. 1806) that describes the concrete base type or NULL if there is no a concrete base type.

4.11.7.37 **DDS\_TypeCode\_type\_modifier()**

```

DDS_ValueModifier DDS_TypeCode_type_modifier (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )

```

Returns a constant indicating the modifier of the value type that this **DDS\_TypeCode** (p. 1806) object describes.

## Precondition

*self* kind is **DDS\_TK\_VALUE** (p. 239) or **DDS\_TK\_STRUCT** (p. 239).

For **DDS\_TK\_STRUCT** (p. 239), this function always returns **DDS\_VM\_NONE** (p. 234).

## MT Safety:

SAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

One of the following type modifiers: **DDS\_VM\_NONE** (p. 234), **DDS\_VM\_ABSTRACT** (p. 234), **DDS\_VM\_↔CUSTOM** (p. 234) or **DDS\_VM\_TRUNCATABLE** (p. 235).

## 4.11.7.38 DDS\_TypeCode\_find\_member\_by\_id()

```
DDS_UnsignedLong DDS_TypeCode_find_member_by_id (
    const DDS_TypeCode * self,
    DDS_Long id,
    DDS_ExceptionCode_t * ex )
```

Get the index of the member of the given ID.

This method is applicable to **DDS\_TypeCode** (p. 1806) objects representing structs (**DDS\_TK\_STRUCT** (p. 239)) and union (**DDS\_TK\_UNION** (p. 239)) types.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>id</i>	<< <i>in</i> >> (p. 818) The member ID.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

The index of the member of the given ID or **DDS\_TYPECODE\_INDEX\_INVALID** (p. 233) if the member is not found.

## MT Safety:

SAFE.

#### 4.11.7.39 DDS\_TypeCode\_member\_id()

```
DDS_Long DDS_TypeCode_member_id (
    const DDS_TypeCode * self,
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t * ex )
```

Returns the ID of the TypeCode member identified by the given index.

This function is an RTI Connex extension to the CORBA Type Code Specification.

The function can be invoked on aggregation **DDS\_TypeCode** (p. 1806) objects.

All members of aggregated types have an integral member ID that uniquely identifies them within their defining type.

In IDL, you can specify the member ID using the built-in annotation ID. For example:

```
struct MyType {
    long member_1; //@ID 200
} //@Extensibility MUTABLE_EXTENSIBILITY
```

In XML, you can specify the member ID using the attribute 'id':

```
<struct name="MyType" extensibility="mutable" id="200">
    <member name="member_1" type="long"/>
</struct>
```

In XSD, you can specify the member ID using the built-in annotation ID

```
<xsd:complexType name="MyType">
    <xsd:sequence>
        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
        <!-- @id 200 -->
    </xsd:sequence>
</xsd:complexType>
<!-- @extensibility MUTABLE_EXTENSIBILITY -->
```

#### Precondition

self kind is **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_VALUE** (p. 239), or **DDS\_TK\_UNION** (p. 239)  
Member index in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>index</i>	<< <i>in</i> >> (p. 818) Member index in the interval [0,(member count-1)].

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

ID of the member if no errors.

4.11.7.40 **DDS\_TypeCode\_get\_type\_object\_serialized\_size()**

```
DDS_UnsignedLong DDS_TypeCode_get_type_object_serialized_size (
    const DDS_TypeCode * self,
    DDS_ExceptionCode_t * ex )
```

Gets the serialized size of the TypeObject created from this **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 818) Parameter for error indications. The values that it can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_SYSTEM_EXCEPTION_CODE</b> (p. 1022)</li> </ul>

The default buffer size used for storing a TypeObject is 8192 bytes. For a large TypeObject, this API can be used to determine the size that needs to be set in **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_↔\_serialized\_length** (p. 1508)

## MT Safety:

SAFE.

**Returns**

The TypeObject serialized size.

**4.11.7.41 DDS\_TypeCode\_add\_member\_to\_enum()**

```

DDS_UnsignedLong DDS_TypeCode_add_member_to_enum (
    DDS_TypeCode * self,
    const char * name,
    DDS_Long ordinal,
    DDS_ExceptionCode_t * ex )

```

Add a new enumerated constant to this enum **DDS\_TypeCode** (p. 1806).

This method is applicable to **DDS\_TypeCode** (p. 1806) objects representing enumerations (**DDS\_TK\_ENUM** (p. 239)). To add a field to a structured type, see **DDS\_TypeCode\_add\_member\_to\_enum** (p. 274).

Modifying a **DDS\_TypeCode** (p. 1806) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 308) APIs.

**MT Safety:**

UNSAFE.

**Parameters**

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <b>in</b> >> (p. 818) The name of the new member. This string must be unique within this type and must not be NULL.
<i>ordinal</i>	<< <b>in</b> >> (p. 818) The relative order of the new member in this enum or a custom integer value. The value must be unique within the type.
<i>ex</i>	<< <b>out</b> >> (p. 818) If this method fails, this argument will contain information about the failure. Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The zero-based index of the new member relative to any other members that previously existed.

See also

**DDS\_TypeCode\_add\_member** (p. 276)

**DDS\_TypeCode\_add\_member\_ex** (p. 278)

**DDS\_TypeCodeFactory** (p. 1806)

#### 4.11.7.42 DDS\_TypeCode\_add\_member\_to\_union()

```
DDS_UnsignedLong DDS_TypeCode_add_member_to_union (
    DDS_TypeCode * self,
    const char * name,
    DDS_Long id,
    const struct DDS_LongSeq * labels,
    const DDS_TypeCode * tc,
    DDS_Boolean is_pointer,
    DDS_ExceptionCode_t * ex )
```

Add a new member to a union **DDS\_TypeCode** (p. 1806).

This method is applicable to **DDS\_TypeCode** (p. 1806) objects representing unions (**DDS\_TK\_UNION** (p. 239)).

Modifying a **DDS\_TypeCode** (p. 1806) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 308) APIs.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) The name of the new member.
<i>id</i>	<< <i>in</i> >> (p. 818) The member ID. For automatic assignment of the member ID specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 233).
<i>labels</i>	<< <i>in</i> >> (p. 818) A sequence of labels or case values associated with the member .
<i>tc</i>	<< <i>in</i> >> (p. 818) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1806) with the <b>DDS_TypeCodeFactory</b> (p. 1806).
<i>is_pointer</i>	<< <i>in</i> >> (p. 818) Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.
<i>ex</i>	<< <i>out</i> >> (p. 818) If this method fails, this argument will contain information about the failure.

Possible values include:

- **DDS\_BADKIND\_USER\_EXCEPTION\_CODE** (p. 1023)
- **DDS\_BAD\_MEMBER\_NAME\_USER\_EXCEPTION\_CODE** (p. 1023)

- [DDS\\_BAD\\_MEMBER\\_ID\\_USER\\_EXCEPTION\\_CODE](#) (p. 1023)

#### Returns

The zero-based index of the new member relative to any other members that previously existed.

#### See also

- [DDS\\_TypeCode\\_add\\_member](#) (p. 276)
- [DDS\\_TypeCode\\_add\\_member\\_ex](#) (p. 278)
- [DDS\\_TypeCode\\_add\\_member\\_to\\_enum](#) (p. 274)
- [DDS\\_TypeCode\\_add\\_member\\_to\\_union](#) (p. 275)
- [DDS\\_TypeCodeFactory](#) (p. 1806)
- [DDS\\_TYPECODE\\_NONKEY\\_MEMBER](#) (p. 236)
- [DDS\\_TYPECODE\\_KEY\\_MEMBER](#) (p. 236)
- [DDS\\_TYPECODE\\_NONKEY\\_REQUIRED\\_MEMBER](#) (p. 237)

#### 4.11.7.43 DDS\_TypeCode\_add\_member()

```
DDS_UnsignedLong DDS_TypeCode_add_member (
    DDS_TypeCode * self,
    const char * name,
    DDS_Long id,
    const DDS_TypeCode * tc,
    DDS_Octet member_flags,
    DDS_ExceptionCode_t * ex )
```

Add a new member to this [DDS\\_TypeCode](#) (p. 1806).

This method is applicable to [DDS\\_TypeCode](#) (p. 1806) objects representing structures ([DDS\\_TK\\_STRUCT](#) (p. 239)), value types ([DDS\\_TK\\_VALUE](#) (p. 239)), and unions ([DDS\\_TK\\_UNION](#) (p. 239)). To add a constant to an enumeration, see [DDS\\_TypeCode\\_add\\_member\\_to\\_enum](#) (p. 274).

Calling this method clones the type code passed as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call [DDS\\_TypeCodeFactory\\_delete\\_tc](#) (p. 286).

The ability to modify a [DDS\\_TypeCode](#) (p. 1806) – such as by adding a member – is important if you are using the [Dynamic Data](#) (p. 308) APIs.

Here's a simple code example that adds two fields to a data type, one an integer and another a sequence of integers.

```
// Integer:
DDS_TypeCode_add_member(
    myTypeCode,
    "myFieldName",
    DDS_TYPECODE_MEMBER_ID_INVALID,
```

```

DDS_TypeCodeFactory_get_primitive_tc(DDS_TheTypeCodeFactory, DDS_TK_LONG),

// New field is a required non-key member:
DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);

// Sequence of 10 or fewer integers:
DDS_TypeCode_add_member(
    myTypeCode,
    "myFieldName",
    DDS_TYPECODE_MEMBER_ID_INVALID,
    DDS_TypeCodeFactory_create_sequence_tc(
        DDS_TheTypeCodeFactory,
        10,
        DDS_TypeCodeFactory_get_primitive_tc(DDS_TheTypeCodeFactory, DDS_TK_LONG)),
    // New field is a required non-key member:
    DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);

```

**MT Safety:**

UNSAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) The name of the new member.
<i>id</i>	<< <i>in</i> >> (p. 818) Member ID or case value. <ul style="list-style-type: none"> <li>• For <b>DDS_TK_STRUCTURE</b> (p. 239), and <b>DDS_TK_VALUE</b> (p. 239), this parameter is used to provide the member ID. For automatic assignment of the member ID specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 233).</li> <li>• For <b>DDS_TK_UNION</b> (p. 239), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API <b>DDS_TypeCode_add_member_to_union</b> (p. 275).</li> </ul>
<i>tc</i>	<< <i>in</i> >> (p. 818) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1806) with the <b>DDS_TypeCodeFactory</b> (p. 1806).
<i>member_flags</i>	<< <i>in</i> >> (p. 818) Indicates whether the member is part of the key and whether it is required.
<i>ex</i>	<< <i>out</i> >> (p. 818) If this method fails, this argument will contain information about the failure. Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

**Returns**

The zero-based index of the new member relative to any other members that previously existed.

**See also**

**DDS\_TypeCode\_add\_member\_ex** (p. 278)  
**DDS\_TypeCode\_add\_member\_to\_enum** (p. 274)  
**DDS\_TypeCodeFactory** (p. 1806)  
**DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 236)  
**DDS\_TYPECODE\_KEY\_MEMBER** (p. 236)  
**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 237)

**4.11.7.44 DDS\_TypeCode\_add\_member\_ex()**

```
DDS_UnsignedLong DDS_TypeCode_add_member_ex (
    DDS_TypeCode * self,
    const char * name,
    DDS_Long id,
    const DDS_TypeCode * tc,
    DDS_Octet member_flags,
    DDS_Visibility visibility,
    DDS_Boolean is_pointer,
    DDS_Short bits,
    DDS_ExceptionCode_t * ex )
```

Add a new member to this **DDS\_TypeCode** (p. 1806).

This method is applicable to **DDS\_TypeCode** (p. 1806) objects representing structures (**DDS\_TK\_STRUCT** (p. 239)), value types (**DDS\_TK\_VALUE** (p. 239)), and unions (**DDS\_TK\_UNION** (p. 239)). To add a constant to an enumeration, see **DDS\_TypeCode\_add\_member\_to\_enum** (p. 274).

Calling this method clones the type code passed in as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call **DDS\_TypeCodeFactory\_delete\_tc** (p. 286).

The ability to modify a **DDS\_TypeCode** (p. 1806) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 308) APIs.

**MT Safety:**

UNSAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) The name of the new member.

## Parameters

<i>id</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) Member ID or case value.</p> <ul style="list-style-type: none"> <li>• For <b>DDS_TK_STRUCT</b> (p. 239) and <b>DDS_TK_VALUE</b> (p. 239), this parameter is used to provide the member ID.</li> <li>• For <b>DDS_TK_STRUCT</b> (p. 239) and <b>DDS_TK_VALUE</b> (p. 239) only: For automatic assignment of the member ID, specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 233).</li> <li>• For <b>DDS_TK_UNION</b> (p. 239), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API <b>DDS_TypeCode_add_member_to_union</b> (p. 275).</li> </ul>
<i>tc</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1806) with the <b>DDS_TypeCodeFactory</b> (p. 1806).</p>
<i>member_flags</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) Indicates whether the member is part of the key and whether it is required.</p>
<i>visibility</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) Whether the new member is public or private. Non-public members are only relevant for types of kind <b>DDS_TK_VALUE</b> (p. 239). Possible values include:</p> <ul style="list-style-type: none"> <li>• <b>DDS_PRIVATE_MEMBER</b> (p. 235)</li> <li>• <b>DDS_PUBLIC_MEMBER</b> (p. 235)</li> </ul>
<i>is_pointer</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.</p>
<i>bits</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) The number of bits, if this new member is a bit field, or <b>DDS_TYPECODE_NOT_BITFIELD</b> (p. 234).</p>
<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) If this method fails, this argument will contain information about the failure. Possible values include:</p> <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

The zero-based index of the new member relative to any other members that previously existed.

#### 4.11.7.45 DDS\_TypeCode\_print\_IDL()

```
void DDS_TypeCode_print_IDL (
    const DDS_TypeCode * self,
    DDS_UnsignedLong indent,
    DDS_ExceptionCode_t * ex )
```

Prints a **DDS\_TypeCode** (p. 1806) in IDL notation.

MT Safety:

SAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>indent</i>	<< <i>in</i> >> (p. 818) Indent.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

#### 4.11.7.46 DDS\_TypeCode\_print()

```
void DDS_TypeCode_print (
    const DDS_TypeCode * self,
    const DDS_TypeCodePrintFormatProperty * format,
    DDS_ExceptionCode_t * ex )
```

Prints a **DDS\_TypeCode** (p. 1806).

MT Safety:

SAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>format</i>	<< <i>in</i> >> (p. 818) Format.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## 4.11.7.47 DDS\_TypeCode\_to\_string()

```
void DDS_TypeCode_to_string (
    const DDS_TypeCode * self,
    char * str,
    DDS_UnsignedLong * str_size,
    DDS_ExceptionCode_t * ex )
```

Get a string representation of this **DDS\_TypeCode** (p. 1806) object using the default values for **DDS\_TypeCodePrintFormatProperty** (p. 1808).

This function obtains a string representation of a **DDS\_TypeCode** (p. 1806) object, it creates this string using the default values of **DDS\_TypeCodePrintFormatProperty** (p. 1808).

In order to calculate the required length of the string, the user can call this function with the parameter *str* set to NULL. In this mode, the required length of the string will be stored into the value pointed to by the parameter *str\_size*.

If the parameter *str* is not equal to NULL, the string representation of the **DDS\_TypeCode** (p. 1806) will be stored into the parameter *str*. In this mode, if the size of the string is insufficient to hold the result, the parameter *\*ex* will be set to **DDS\_BAD\_PARAM\_SYSTEM\_EXCEPTION\_CODE** (p. 1023) and the parameter *str\_size* will be updated to hold the required size of the string. All string lengths include the trailing NUL byte.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>str</i>	<< <b>out</b> >> (p. 818) The char buffer that will be used to store the string representation of the <b>DDS_TypeCode</b> (p. 1806). If NULL then this function will store the required length of the buffer into the value pointed to by the <i>str_size</i> parameter.
<i>str_size</i>	<< <b>inout</b> >> (p. 818) Cannot be NULL. The length of the char buffer. If the supplied buffer is NULL or insufficiently long, the value pointed to by this parameter will be updated to contain the required length.
<i>ex</i>	<< <b>out</b> >> (p. 818) Parameter used for error indications.

See also

**DDS\_TypeCode\_print\_IDL** (p. 279)

**DDS\_TypeCode\_print** (p. 280)

**DDS\_TypeCode\_to\_string\_w\_format** (p. 282)

#### 4.11.7.48 DDS\_TypeCode\_to\_string\_w\_format()

```
void DDS_TypeCode_to_string_w_format (
    const DDS_TypeCode * self,
    char * str,
    DDS_UnsignedLong * str_size,
    const DDS_TypeCodePrintFormatProperty * format,
    DDS_ExceptionCode_t * ex )
```

Get a string representation of this **DDS\_TypeCode** (p. 1806) object using the format described by **DDS\_TypeCodePrintFormatProperty** (p. 1808).

This function behaves in the same way as **DDS\_TypeCode\_to\_string** (p. 281) but allows the user to specify the format of the string using **DDS\_TypeCodePrintFormatProperty** (p. 1808).

Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>str</i>	<< <b>out</b> >> (p. 818) The char buffer which will hold the string representation of the <b>DDS_TypeCode</b> (p. 1806).
<i>str_size</i>	<< <b>inout</b> >> (p. 818) Cannot be NULL. The length of the char buffer pointed to by the <i>str</i> parameter. If the <i>str</i> parameter is NULL, or too small, this parameter will be updated to hold the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 818) The <b>DDS_TypeCodePrintFormatProperty</b> (p. 1808) used to define the format of the string representation of the <b>DDS_TypeCode</b> (p. 1806).
<i>ex</i>	<< <b>out</b> >> (p. 818) Parameter used for error indications.

**DDS\_TypeCode\_to\_string** (p. 281)

#### 4.11.7.49 DDS\_TypeCode\_get\_cdr\_serialized\_sample\_max\_size()

```
DDS_UnsignedLong DDS_TypeCode_get_cdr_serialized_sample_max_size (
    const DDS_TypeCode * self,
```

```
DDS_DataRepresentationId_t representation_id,
DDS_ExceptionCode_t * ex )
```

**[DEPRECATED]** Gets the maximum serialized size of samples of this type

DEPRECATED: use **DDS\_TypeCode\_cdr\_serialized\_sample\_max\_size** (p. 283) instead.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>representation_id</i>	The serialized data representation for which we calculate the maximum size.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications.

#### Returns

The maximum size

#### 4.11.7.50 DDS\_TypeCode\_cdr\_serialized\_sample\_max\_size()

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_max_size (
    const DDS_TypeCode * self,
    DDS_DataRepresentationId_t representation_id,
    DDS_ExceptionCode_t * ex )
```

Gets the maximum serialized size of samples of this type.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>representation_id</i>	The serialized data representation for which we calculate the maximum size.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications.

**Returns**

The maximum size

**4.11.7.51 DDS\_TypeCode\_cdr\_serialized\_sample\_min\_size()**

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_min_size (
    const DDS_TypeCode * self,
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t * ex )
```

Gets the minimum serialized size of samples of this type.

Obtains the minimum possible size in bytes of any serialized data sample of this type.

**Precondition**

The type is an aggregation type (struct, union)

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>representation_id</i>	The serialized data representation for which we calculate the minimum size.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications.

**Returns**

The minimum size

**4.11.7.52 DDS\_TypeCode\_cdr\_serialized\_sample\_key\_max\_size()**

```
DDS_UnsignedLong DDS_TypeCode_cdr_serialized_sample_key_max_size (
    const DDS_TypeCode * self,
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t * ex )
```

Gets the maximum serialized size of sample keys of this type.

Obtains the maximum possible size in bytes of the serialized keys of any data sample of this type

**Precondition**

The type is an aggregation type (struct, union)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>representation_id</i>	The serialized data representation for which we calculate the maximum key size.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications.

## Returns

The maximum key size

## 4.11.7.53 DDS\_TypeCodeFactory\_get\_instance()

```
DDS_TypeCodeFactory * DDS_TypeCodeFactory_get_instance (
    void )
```

Gets the singleton instance of this class.

## Returns

The **DDS\_TypeCodeFactory** (p. 1806) instance if no errors. Otherwise, NULL.

## MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this function while another thread may be simultaneously calling **DDS\_DomainParticipantFactory\_get\_instance** (p. 34), **DDS\_DomainParticipantFactory\_finalize\_instance** (p. 34), **DDS\_TypeCodeFactory\_get\_instance** (p. 285), **DDS\_TypeCodeFactory\_finalize\_instance** (p. 285), **NDDS\_Utility\_enable\_network\_capture**, or **NDDS\_Utility\_disable\_network\_capture**.

## Examples

**HelloWorldPlugin.c.**

## 4.11.7.54 DDS\_TypeCodeFactory\_finalize\_instance()

```
DDS_ReturnCode_t DDS_TypeCodeFactory_finalize_instance (
    void )
```

If there are no **DDS\_DomainParticipantFactory** instances left in the system, it will finalize the **DDS\_TypeCodeFactory** (p. 1806). If there is at least one **DDS\_DomainParticipantFactory** instance left in the system, this is a noop.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if finalized.

## MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this function while another thread may be simultaneously calling **DDS\_DomainParticipantFactory\_get\_instance** (p. 34), **DDS\_DomainParticipantFactory\_finalize\_instance** (p. 34), **DDS\_TypeCodeFactory\_get\_instance** (p. 285), **DDS\_TypeCodeFactory\_finalize\_instance** (p. 285), **NDDS\_Utility\_enable\_network\_capture**, or **NDDS\_Utility\_disable\_network\_capture**.

#### 4.11.7.55 DDS\_TypeCodeFactory\_clone\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_clone_tc (
    DDS_TypeCodeFactory * self,
    const DDS_TypeCode * tc,
    DDS_StatusCode_t * ex )
```

Creates and returns a copy of the input **DDS\_TypeCode** (p. 1806).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>tc</i>	<< <i>in</i> >> (p. 818) Type code that will be copied. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

##### Returns

A clone of tc.

#### 4.11.7.56 DDS\_TypeCodeFactory\_delete\_tc()

```
void DDS_TypeCodeFactory_delete_tc (
    DDS_TypeCodeFactory * self,
    DDS_TypeCode * tc,
    DDS_StatusCode_t * ex )
```

Deletes the input **DDS\_TypeCode** (p. 1806).

All the type codes created through the **DDS\_TypeCodeFactory** (p. 1806) must be deleted using this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>tc</i>	<< <i>inout</i> >> (p. 818) Type code that will be deleted. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

Destroys a passed typecode.

#### 4.11.7.57 DDS\_TypeCodeFactory\_get\_primitive\_tc()

```
const DDS_TypeCode * DDS_TypeCodeFactory_get_primitive_tc (
    DDS_TypeCodeFactory * self,
    DDS_TCKind tc_kind )
```

Get the **DDS\_TypeCode** (p. 1806) for a primitive type (integers, floating point values, etc.) identified by the given **DDS\_↵\_TCKind** (p. 239).

This method is equivalent to, and replaces, the `DDS_g_tc_*` constants.

See also

- DDS\_g\_tc\_long** (p. 297)

- DDS\_g\_tc\_wchar** (p. 300)

#### 4.11.7.58 DDS\_TypeCodeFactory\_create\_struct\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_struct_tc (
    DDS_TypeCodeFactory * self,
    const char * name,
    const struct DDS_StructMemberSeq * members,
    DDS_ExceptionCode_t * ex )
```

Constructs a **DDS\_TK\_STRUCTURE** (p. 239) **DDS\_TypeCode** (p. 1806).

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the struct type. Cannot be NULL.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the structure. This list may be empty (that is, <b>FooSeq_get_length</b> (p. 1300) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)

## Parameters

<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a struct.

## 4.11.7.59 DDS\_TypeCodeFactory\_create\_struct\_tc\_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_struct_tc_ex (
    DDS_TypeCodeFactory * self,
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const struct DDS_StructMemberSeq * members,
    DDS_ExceptionCode_t * ex )
```

Constructs a **DDS\_TK\_STRUCTURE** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the struct type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 818) Type extensibility.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the structure. This list may be empty (that is, <b>FooSeq_get_length</b> (p. 1300) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a struct.

## 4.11.7.60 DDS\_TypeCodeFactory\_create\_value\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_value_tc (
    DDS_TypeCodeFactory * self,
    const char * name,
    DDS_ValueModifier type_modifier,
    const DDS_TypeCode * concrete_base,
    const struct DDS_ValueMemberSeq * members,
    DDS_ExceptionCode_t * ex )
```

Constructs a **DDS\_TK\_VALUE** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the value type. Cannot be NULL.
<i>type_modifier</i>	<< <i>in</i> >> (p. 818) One of the value type modifier constants: <b>DDS_VM_NONE</b> (p. 234), <b>DDS_VM_CUSTOM</b> (p. 234), <b>DDS_VM_ABSTRACT</b> (p. 234) or <b>DDS_VM_TRUNCATABLE</b> (p. 235).
<i>concrete_base</i>	<< <i>in</i> >> (p. 818) <b>DDS_TypeCode</b> (p. 1806) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a value.

## 4.11.7.61 DDS\_TypeCodeFactory\_create\_value\_tc\_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_value_tc_ex (
    DDS_TypeCodeFactory * self,
```

```

const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    DDS_ValueModifier type_modifier,
const   DDS_TypeCode * concrete_base,
const struct DDS_ValueMemberSeq * members,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_VALUE** (p. 239) **DDS\_TypeCode** (p. 1806).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the value type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 818) Type extensibility.
<i>type_modifier</i>	<< <i>in</i> >> (p. 818) One of the value type modifier constants: <b>DDS_VM_NONE</b> (p. 234), <b>DDS_VM_CUSTOM</b> (p. 234), <b>DDS_VM_ABSTRACT</b> (p. 234) or <b>DDS_VM_TRUNCATABLE</b> (p. 235).
<i>concrete_base</i>	<< <i>in</i> >> (p. 818) <b>DDS_TypeCode</b> (p. 1806) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

#### Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a value.

#### 4.11.7.62 DDS\_TypeCodeFactory\_create\_union\_tc()

```

DDS_TypeCode * DDS_TypeCodeFactory_create_union_tc (
    DDS_TypeCodeFactory * self,
const char * name,
const   DDS_TypeCode * discriminator_type,
    DDS_Long default_index,
const struct DDS_UnionMemberSeq * members,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_UNION** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the union type. Cannot be NULL.
<i>discriminator_type</i>	<< <i>in</i> >> (p. 818) Discriminator Type Code. Cannot be NULL.
<i>default_index</i>	<< <i>in</i> >> (p. 818) Index of the default member, or -1 if there is no default member.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a union.

## 4.11.7.63 DDS\_TypeCodeFactory\_create\_union\_tc\_ex()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_union_tc_ex (
    DDS_TypeCodeFactory * self,
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const DDS_TypeCode * discriminator_type,
    DDS_Long default_index,
    const struct DDS_UnionMemberSeq * members,
    DDS_ExceptionCode_t * ex )
```

Constructs a **DDS\_TK\_UNION** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the union type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 818) Type extensibility.
<i>discriminator_type</i>	<< <i>in</i> >> (p. 818) Discriminator Type Code. Cannot be NULL.
<i>default_index</i>	<< <i>in</i> >> (p. 818) Index of the default member, or -1 if there is no default member.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)

## Parameters

<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
-----------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a union.

## 4.11.7.64 DDS\_TypeCodeFactory\_create\_enum\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory_create_enum_tc (
    DDS_TypeCodeFactory * self,
    const char * name,
    const struct DDS_EnumMemberSeq * members,
    DDS_ExceptionCode_t * ex )
```

Constructs a **DDS\_TK\_ENUM** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the enum type. Cannot be NULL.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with <b>DDS_TypeCode_add_member_to_enum</b> (p. 274).
<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 818) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing an enumeration.

## 4.11.7.65 DDS\_TypeCodeFactory\_create\_enum\_tc\_ex()

```

DDS_TypeCode * DDS_TypeCodeFactory_create_enum_tc_ex (
    DDS_TypeCodeFactory * self,
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const struct DDS_EnumMemberSeq * members,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_ENUM** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the enum type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 818) Type extensibility.
<i>members</i>	<< <i>in</i> >> (p. 818) Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with <b>DDS_TypeCode_add_member_to_enum</b> (p. 274).
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing an enumeration.

## 4.11.7.66 DDS\_TypeCodeFactory\_create\_alias\_tc()

```

DDS_TypeCode * DDS_TypeCodeFactory_create_alias_tc (
    DDS_TypeCodeFactory * self,
    const char * name,
    const DDS_TypeCode * original_type,
    DDS_Boolean is_pointer,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_ALIAS** (p. 239) (typedef) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>name</i>	<< <i>in</i> >> (p. 818) Name of the alias. Cannot be NULL.

## Parameters

<i>original_type</i>	<< <i>in</i> >> (p. 818) Aliased type code. Cannot be NULL.
<i>is_pointer</i>	<< <i>in</i> >> (p. 818) Indicates if the alias is a pointer to the aliased type code.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing an alias.

4.11.7.67 **DDS\_TypeCodeFactory\_create\_string\_tc()**

```

DDS_TypeCode * DDS_TypeCodeFactory_create_string_tc (
    DDS_TypeCodeFactory * self,
    DDS_UnsignedLong bound,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_STRING** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>bound</i>	<< <i>in</i> >> (p. 818) Maximum length of the string.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a string.

## 4.11.7.68 DDS\_TypeCodeFactory\_create\_wstring\_tc()

```

DDS_TypeCode * DDS_TypeCodeFactory_create_wstring_tc (
    DDS_TypeCodeFactory * self,
    DDS_UnsignedLong bound,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_WSTRING** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>bound</i>	<< <i>in</i> >> (p. 818) Maximum length of the wide string.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a wide string.

## 4.11.7.69 DDS\_TypeCodeFactory\_create\_sequence\_tc()

```

DDS_TypeCode * DDS_TypeCodeFactory_create_sequence_tc (
    DDS_TypeCodeFactory * self,
    DDS_UnsignedLong bound,
    const DDS_TypeCode * element_type,
    DDS_ExceptionCode_t * ex )

```

Constructs a **DDS\_TK\_SEQUENCE** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>bound</i>	<< <i>in</i> >> (p. 818) The bound for the sequence (> 0).
<i>element_type</i>	<< <i>in</i> >> (p. 818) <b>DDS_TypeCode</b> (p. 1806) object describing the sequence elements.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>
Generated by Doxygen	<ul style="list-style-type: none"> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a sequence.

4.11.7.70 **DDS\_TypeCodeFactory\_create\_array\_tc()**

```
DDS_TypeCode * DDS_TypeCodeFactory_create_array_tc (
    DDS_TypeCodeFactory * self,
    const struct DDS_UnsignedLongSeq * dimensions,
    const DDS_TypeCode * element_type,
    DDS_StatusCode_t * ex )
```

Constructs a **DDS\_TK\_ARRAY** (p. 239) **DDS\_TypeCode** (p. 1806).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>dimensions</i>	<< <i>in</i> >> (p. 818) Dimensions of the array. Each dimension has to be greater than 0.
<i>element_type</i>	<< <i>in</i> >> (p. 818) <b>DDS_TypeCode</b> (p. 1806) describing the array elements. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 818) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 1022)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 1023)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1806) object describing a sequence.

## 4.11.8 Variable Documentation

4.11.8.1 **DDS\_g\_tc\_null**

```
DDS_TypeCode DDS_g_tc_null
```

Basic NULL type.

For new code, **DDS\_TypeCodeFactory\_get\_primitive\_tc** (p. 287) is preferred to using this global variable.

## See also

**DDS\_TypeCodeFactory\_get\_primitive\_tc** (p. 287)

#### 4.11.8.2 DDS\_g\_tc\_short

`DDS_TypeCode DDS_g_tc_short`

Basic 16-bit signed integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Short` (p. 1005)

#### 4.11.8.3 DDS\_g\_tc\_long

`DDS_TypeCode DDS_g_tc_long`

Basic 32-bit signed integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Long` (p. 1006)

#### 4.11.8.4 DDS\_g\_tc\_ushort

`DDS_TypeCode DDS_g_tc_ushort`

Basic unsigned 16-bit integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_UnsignedShort` (p. 1005)

#### 4.11.8.5 DDS\_g\_tc\_ulong

`DDS_TypeCode DDS_g_tc_ulong`

Basic unsigned 32-bit integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_UnsignedLong` (p. 1006)

#### 4.11.8.6 DDS\_g\_tc\_float

`DDS_TypeCode DDS_g_tc_float`

Basic 32-bit floating point type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Float` (p. 1006)

#### 4.11.8.7 DDS\_g\_tc\_double

`DDS_TypeCode DDS_g_tc_double`

Basic 64-bit floating point type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Double` (p. 1006)

#### 4.11.8.8 DDS\_g\_tc\_boolean

`DDS_TypeCode DDS_g_tc_boolean`

Basic Boolean type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Boolean` (p. 1007)

#### 4.11.8.9 DDS\_g\_tc\_char

`DDS_TypeCode DDS_g_tc_char`

Basic single-byte character type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Char` (p. 1004)

#### 4.11.8.10 DDS\_g\_tc\_octet

`DDS_TypeCode DDS_g_tc_octet`

Basic octet/byte type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Octet` (p. 1005)

#### 4.11.8.11 DDS\_g\_tc\_longlong

`DDS_TypeCode DDS_g_tc_longlong`

Basic 64-bit integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_LongLong` (p. 1006)

#### 4.11.8.12 DDS\_g\_tc\_ulonglong

`DDS_TypeCode DDS_g_tc_ulonglong`

Basic unsigned 64-bit integer type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_UnsignedLongLong` (p. 1006)

#### 4.11.8.13 DDS\_g\_tc\_longdouble

`DDS_TypeCode DDS_g_tc_longdouble`

Basic 128-bit floating point type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_LongDouble` (p. 1007)

#### 4.11.8.14 DDS\_g\_tc\_wchar

`DDS_TypeCode DDS_g_tc_wchar`

Basic four-byte character type.

For new code, `DDS_TypeCodeFactory_get_primitive_tc` (p. 287) is preferred to using this global variable.

See also

`DDS_TypeCodeFactory_get_primitive_tc` (p. 287)

`DDS_Wchar` (p. 1005)

## 4.12 Built-in Types

RTI Connex provides a set of very simple data types for you to use with the topics in your application.

### Modules

- **String Built-in Type**  
*Built-in type consisting of a single character string.*
- **KeyedString Built-in Type**  
*Built-in type consisting of a string payload and a second string that is the key.*
- **Octets Built-in Type**  
*Built-in type consisting of a variable-length array of opaque bytes.*
- **KeyedOctets Built-in Type**  
*Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.*

### 4.12.1 Detailed Description

RTI Connex provides a set of very simple data types for you to use with the topics in your application.

The middleware provides four built-in types:

- **String**: A payload consisting of a single string of characters. This type has no key.
- **DDS\_KeyedString** (p. 1565): A payload consisting of a single string of characters and a second string, the key, that identifies the instance to which the sample belongs.
- **DDS\_Octets** (p. 1606): A payload consisting of an opaque variable-length array of bytes. This type has no key.
- **DDS\_KeyedOctets** (p. 1564): A payload consisting of an opaque variable-length array of bytes and a string, the key, that identifies the instance to which the sample belongs.

The **String** and **DDS\_KeyedString** (p. 1565) types are appropriate for simple text-based applications. The **DDS\_Octets** (p. 1606) and **DDS\_KeyedOctets** (p. 1564) types are appropriate for applications that perform their own custom data serialization, such as legacy applications still in the process of migrating to RTI Connex. In most cases, string-based or structured data is preferable to opaque data, because the latter cannot be easily visualized in tools or used with content-based filters (see **DDS\_ContentFilteredTopic** (p. 173)).

The built-in types are very simple in order to get you up and running as quickly as possible. If you need a structured data type you can define your own type with exactly the fields you need in one of two ways:

- At compile time, by generating code from an IDL or XML file using the `rtiddsgen` utility
- At runtime, by using the **Dynamic Data** (p. 308) API

### 4.12.2 Managing Memory for Builtin Types

When a sample is written, the `DataWriter` serializes it and stores the result in a buffer obtained from a pool of preallocated buffers. In the same way, when a sample is received, the `DataReader` deserializes it and stores the result in a sample coming from a pool of preallocated samples.

For builtin types, the maximum size of the buffers/samples and depends on the nature of the application using the builtin type.

You can configure the maximum size of the builtin types on a per-`DataWriter` and per-`DataReader` basis using the **DDS\_PropertyQosPolicy** (p. 1645) in `DataWriters`, `DataReaders` or `Participants`.

The following table lists the supported builtin type properties to configure memory allocation. When the properties are defined in the `DomainParticipant`, they are applicable to all `DataWriters` and `DataReaders` belonging to the `DomainParticipant` unless they are overwritten in the `DataWriters` and `DataReaders`.

**Table 4.293 Builtin Types Allocation Properties**

Property	Description
<code>dds.builtin_type.string.alloc_size</code>	Maximum size of the strings published by the <b>DDS_StringDataWriter</b> (p. 917) or received by the <b>DDS_StringDataReader</b> (p. 917) (includes the NULL-terminated character). Default: <code>dds.builtin_type.string.max_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_string.alloc_key_size</code>	Maximum size of the keys used by the <b>DDS_KeyedStringDataWriter</b> (p. 932) or <b>DDS_KeyedStringDataReader</b> (p. 933) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_string.max_key_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_string.alloc_size</code>	Maximum size of the strings published by the <b>DDS_KeyedStringDataWriter</b> (p. 932) or received by the <b>DDS_KeyedStringDataReader</b> (p. 933) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_string.max_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.octets.alloc_size</code>	Maximum size of the octet sequences published by the <b>DDS_OctetsDataWriter</b> (p. 957) or received by the <b>DDS_OctetsDataReader</b> (p. 958). Default: <code>dds.builtin_type.octets.max_size</code> if defined. Otherwise, 2048.
<code>dds.builtin_type.keyed_octets.alloc_key_size</code>	Maximum size of the key published by the <b>DDS_KeyedOctetsDataWriter</b> (p. 978) or received by the <b>DDS_KeyedOctetsDataReader</b> (p. 978) (includes the NULL-terminated character). Default: <code>dds.builtin_type.keyed_octets.max_key_size</code> if defined. Otherwise, 1024.
<code>dds.builtin_type.keyed_octets.alloc_size</code>	Maximum size of the octets sequences published by a <b>DDS_KeyedOctetsDataWriter</b> (p. 978) or received by a <b>DDS_KeyedOctetsDataReader</b> (p. 978). Default: <code>dds.builtin_type.keyed_octets.max_size</code> if defined. Otherwise, 2048.

The previous properties must be set consistently with respect to the corresponding `*.max_size` properties that set the maximum size of the builtin types in the typecode.

### 4.12.3 Typecodes for Builtin Types

The typecodes associated with the builtin types are generated from the following IDL type definitions:

```
module DDS {
    struct String {
        string value;
    };

    struct KeyedString {
        string key;
        string value;
    };

    struct Octets {
        sequence<octet> value;
    };

    struct KeyedOctets {
        string key;
        sequence<octet> value;
    };
};
```

The maximum size of the strings and sequences that will be included in the type code definitions can be configured on a per-DomainParticipant-basis by using the properties in following table.

**Table 4.294 Properties for Allocating Size of Builtin Types, per DomainParticipant**

Property	Description
<code>dds.builtin_type.string.max_size</code>	Maximum size of the strings published by the <code>StringDataWriters</code> and received by the <code>StringDataReaders</code> belonging to a <code>DomainParticipant</code> (includes the NULL-terminated character). Default: 1024.
<code>dds.builtin_type.keyed_string.max_key_size</code>	Maximum size of the keys used by the <code>KeyedStringDataWriters</code> and <code>KeyedStringDataReaders</code> belonging to a <code>DomainParticipant</code> (includes the NULL-terminated character). Default: 1024.
<code>dds.builtin_type.keyed_string.max_size</code>	Maximum size of the strings published by the <code>KeyedStringDataWriters</code> and received by the <code>KeyedStringDataReaders</code> belonging to a <code>DomainParticipant</code> using the builtin type (includes the NULL-terminated character). Default: 1024
<code>dds.builtin_type.octets.max_size</code>	Maximum size of the octet sequences published by the <code>OctetsDataWriters</code> and received by the <code>OctetsDataReader</code> belonging to a <code>DomainParticipant</code> . Default: 2048

Property	Description
dds.builtin_type.keyed_octets.max_key_size	Maximum size of the keys used by the KeyedOctetsStringDataWriters and KeyedOctetsStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_octets.max_size	Maximum size of the octet sequences published by the KeyedOctetsDataWriters and received by the KeyedOctetsDataReaders belonging to a DomainParticipant. Default: 2048

For more information about the built-in types, including how to control memory usage and maximum lengths, please see the "Data Types and DDS Data Samples" chapter in the `User's Manual`.

## 4.13 Built-in Topic's Trust Types

Types used as part of `DDS_ParticipantBuiltinTopicData` (p.1616), `DDS_PublicationBuiltinTopicData` (p.1648), `DDS_SubscriptionBuiltinTopicData` (p.1748) to describe Trust Plugins configuration.

### Data Structures

- struct **DDS\_ParticipantTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered DomainParticipant.*
- struct **DDS\_EndpointTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered endpoint.*
- struct **DDS\_TrustAlgorithmRequirements**  
*Type to describe Trust Plugins algorithm requirements for an entity.*
- struct **DDS\_ParticipantTrustSignatureAlgorithmInfo**  
*Trust Plugins signature algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo**  
*Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_ParticipantTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered DomainParticipant.*
- struct **DDS\_EndpointTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered endpoint.*
- struct **DDS\_EndpointTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered endpoint.*

## Typedefs

- typedef **DDS\_UnsignedLong DDS\_ParticipantTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_PluginParticipantTrustAttributesMask**
- typedef struct **DDS\_ParticipantTrustProtectionInfo DDS\_ParticipantTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered DomainParticipant.*
- typedef **DDS\_UnsignedLong DDS\_EndpointTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_PluginEndpointTrustAttributesMask**
- typedef **DDS\_UnsignedLong DDS\_VendorEndpointTrustAttributesMask**
- typedef struct **DDS\_EndpointTrustProtectionInfo DDS\_EndpointTrustProtectionInfo**  
*Trust Plugins Protection information associated with the discovered endpoint.*
- typedef **DDS\_UnsignedLong DDS\_TrustAlgorithmBit**
- typedef **DDS\_UnsignedLong DDS\_TrustAlgorithmSet**
- typedef struct **DDS\_TrustAlgorithmRequirements DDS\_TrustAlgorithmRequirements**  
*Type to describe Trust Plugins algorithm requirements for an entity.*
- typedef struct **DDS\_ParticipantTrustSignatureAlgorithmInfo DDS\_ParticipantTrustSignatureAlgorithmInfo**  
*Trust Plugins signature algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo**  
*Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustInterceptorAlgorithmInfo DDS\_ParticipantTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_ParticipantTrustAlgorithmInfo DDS\_ParticipantTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered DomainParticipant.*
- typedef struct **DDS\_EndpointTrustInterceptorAlgorithmInfo DDS\_EndpointTrustInterceptorAlgorithmInfo**  
*Trust Plugins interception algorithm information associated with the discovered endpoint.*
- typedef struct **DDS\_EndpointTrustAlgorithmInfo DDS\_EndpointTrustAlgorithmInfo**  
*Trust Plugins algorithm information associated with the discovered endpoint.*

### 4.13.1 Detailed Description

Types used as part of **DDS\_ParticipantBuiltinTopicData** (p. 1616), **DDS\_PublicationBuiltinTopicData** (p. 1648), **DDS\_SubscriptionBuiltinTopicData** (p. 1748) to describe Trust Plugins configuration.

These types are used to describe how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins.

The meaning of the contents of these types may vary depending on what Trust Plugins the DomainParticipant is using. For information about how these types interact with the RTI Security Plugins, please refer to the *RTI Security Plugins User's Manual*.

### 4.13.2 Typedef Documentation

#### 4.13.2.1 DDS\_ParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_ParticipantTrustAttributesMask
```

#### 4.13.2.2 DDS\_PluginParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginParticipantTrustAttributesMask
```

#### 4.13.2.3 DDS\_ParticipantTrustProtectionInfo

```
typedef struct DDS_ParticipantTrustProtectionInfo DDS_ParticipantTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered DomainParticipant.

#### 4.13.2.4 DDS\_EndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_EndpointTrustAttributesMask
```

#### 4.13.2.5 DDS\_PluginEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginEndpointTrustAttributesMask
```

#### 4.13.2.6 DDS\_VendorEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_VendorEndpointTrustAttributesMask
```

#### 4.13.2.7 DDS\_EndpointTrustProtectionInfo

```
typedef struct DDS_EndpointTrustProtectionInfo DDS_EndpointTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered endpoint.

#### 4.13.2.8 DDS\_TrustAlgorithmBit

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmBit
```

#### 4.13.2.9 DDS\_TrustAlgorithmSet

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmSet
```

#### 4.13.2.10 DDS\_TrustAlgorithmRequirements

```
typedef struct DDS_TrustAlgorithmRequirements DDS_TrustAlgorithmRequirements
```

Type to describe Trust Plugins algorithm requirements for an entity.

#### 4.13.2.11 DDS\_ParticipantTrustSignatureAlgorithmInfo

```
typedef struct DDS_ParticipantTrustSignatureAlgorithmInfo DDS_ParticipantTrustSignatureAlgorithmInfo
```

Trust Plugins signature algorithm information associated with the discovered DomainParticipant.

#### 4.13.2.12 DDS\_ParticipantTrustKeyEstablishmentAlgorithmInfo

```
typedef struct DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo
```

Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

#### 4.13.2.13 DDS\_ParticipantTrustInterceptorAlgorithmInfo

```
typedef struct DDS_ParticipantTrustInterceptorAlgorithmInfo DDS_ParticipantTrustInterceptorAlgorithmInfo
```

Trust Plugins interception algorithm information associated with the discovered DomainParticipant.

#### 4.13.2.14 DDS\_ParticipantTrustAlgorithmInfo

```
typedef struct DDS_ParticipantTrustAlgorithmInfo DDS_ParticipantTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered DomainParticipant.

#### 4.13.2.15 DDS\_EndpointTrustInterceptorAlgorithmInfo

```
typedef struct DDS_EndpointTrustInterceptorAlgorithmInfo DDS_EndpointTrustInterceptorAlgorithmInfo
```

Trust Plugins interception algorithm information associated with the discovered endpoint.

#### 4.13.2.16 DDS\_EndpointTrustAlgorithmInfo

```
typedef struct DDS_EndpointTrustAlgorithmInfo DDS_EndpointTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered endpoint.

## 4.14 Dynamic Data

<<*extension*>> (p. 817) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

### Data Structures

- struct **DDS\_DynamicDataProperty\_t**  
A collection of attributes used to configure *DDS\_DynamicData* (p. 1523) objects.
- struct **DDS\_DynamicDataTypeSerializationProperty\_t**  
Properties that govern how data of a certain type will be serialized on the network.
- struct **DDS\_DynamicDataInfo**  
A descriptor for a *DDS\_DynamicData* (p. 1523) object.
- struct **DDS\_DynamicDataMemberInfo**  
A descriptor for a single member (i.e. field) of dynamically defined data type.
- struct **DDS\_DynamicData**  
A sample of any complex data type, which can be inspected and manipulated reflectively.
- struct **DDS\_DynamicDataSeq**  
An ordered collection of *DDS\_DynamicData* (p. 1523) elements.
- struct **DDS\_DynamicDataTypeProperty\_t**  
A collection of attributes used to configure *DDS\_DynamicDataTypeSupport* (p. 321) objects.
- struct **DDS\_DynamicDataJsonParserProperties\_t**  
A collection of attributes used to configure *DDS\_DynamicData* (p. 1523) objects.

## Macros

- **#define DDS\_DynamicDataProperty\_t\_INITIALIZER**  
*Static initializer for `DDS_DynamicDataProperty_t` (p. 1534) objects.*
- **#define DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED**  
*A sentinel value that indicates that no member ID is needed in order to perform some operation.*
- **#define DDS\_DynamicDataTypeProperty\_t\_INITIALIZER**  
*Static initializer for `DDS_DynamicDataTypeProperty_t` (p. 1536) objects.*

## Typedefs

- **typedef DDS\_Long DDS\_DynamicDataMemberId**  
*An integer that uniquely identifies some member of a data type within that type.*
- **typedef struct DDS\_DynamicDataWriter DDS\_DynamicDataWriter**  
*Writes (publishes) objects of type `DDS_DynamicData` (p. 1523).*
- **typedef struct DDS\_DynamicDataReader DDS\_DynamicDataReader**  
*Reads (subscribes to) objects of type `DDS_DynamicData` (p. 1523).*
- **typedef struct DDS\_DynamicDataTypeSupport DDS\_DynamicDataTypeSupport**  
*A factory for registering a dynamically defined type and creating `DDS_DynamicData` (p. 1523) objects.*

## Functions

- **DDS\_Boolean DDS\_DynamicData\_initialize ( DDS\_DynamicData \*self, const DDS\_TypeCode \*type, const struct DDS\_DynamicDataProperty\_t \*property)**  
*Initialize a `DDS_DynamicData` (p. 1523) object to a valid empty state.*
- **DDS\_DynamicData \* DDS\_DynamicData\_new (const DDS\_TypeCode \*type, const struct DDS\_DynamicDataProperty\_t \*property)**  
*The constructor for new `DDS_DynamicData` (p. 1523) objects.*
- **void DDS\_DynamicData\_finalize ( DDS\_DynamicData \*self)**  
*Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.*
- **void DDS\_DynamicData\_delete ( DDS\_DynamicData \*self)**  
*Finalize and deallocate this `DDS_DynamicData` (p. 1523) sample.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_copy ( DDS\_DynamicData \*self, const DDS\_DynamicData \*src)**  
*Deeply copy from the given object to this object.*
- **DDS\_Boolean DDS\_DynamicData\_equal (const DDS\_DynamicData \*self, const DDS\_DynamicData \*other)**  
*Indicate whether the contents of another `DDS_DynamicData` (p. 1523) sample are the same as those of this one.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_clear\_all\_members ( DDS\_DynamicData \*self)**  
*Clear the contents of all data members of this object.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_clear\_optional\_member ( DDS\_DynamicData \*self, const char \*member\_name, DDS\_DynamicDataMemberId member\_id)**  
*Clear the contents of a single optional data member of this object.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_clear\_member ( DDS\_DynamicData \*self, const char \*member\_name, DDS\_DynamicDataMemberId member\_id)**  
*Clear the contents of a single data member of this object.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_cdr\_buffer ( DDS\_DynamicData \*self, const char \*buffer, DDS\_UnsignedLong length)**

Associate a CDR buffer with a `DynamicData` object.

- `const char * DDS_DynamicData_get_cdr_buffer` (const `DDS_DynamicData *self`, `DDS_UnsignedLong *length`)
 

Get the CDR buffer associated with a `DynamicData` object.
- `DDS_Boolean DDS_DynamicData_is_cdr` (const `DDS_DynamicData *self`)
 

Determine if a `DynamicData` object is using CDR as its data representation.
- `DDS_ReturnCode_t DDS_DynamicData_print` (const `DDS_DynamicData *self`, `FILE *fp`, `int indent`)
 

Output a textual representation of this object and its contents to the given file.
- `DDS_ReturnCode_t DDS_DynamicData_from_cdr_buffer` (`DDS_DynamicData *self`, `const char *buffer`, `unsigned int length`)
 

Deserializes a `DynamicData` object from a buffer of octets.
- `DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer_ex` (`DDS_DynamicData *self`, `char *buffer`, `unsigned int *length`, `DDS_DataRepresentationId_t representation`)
 

Serializes a `DynamicData` object into a buffer of octets.
- `DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer` (`DDS_DynamicData *self`, `char *buffer`, `unsigned int *length`)
 

Serializes a `DynamicData` object into a CDR buffer of octets.
- `DDS_ReturnCode_t DDS_DynamicData_to_string` (`DDS_DynamicData *self`, `char *str`, `DDS_UnsignedLong *str_size`, `const struct DDS_PrintFormatProperty *property`)
 

Get a string representation of a `DynamicData` object.
- `DDS_ReturnCode_t DDS_DynamicData_from_string` (`DDS_DynamicData *self`, `const char *str`, `DDS_PrintFormatKind format_kind`)
 

Populates a `DynamicData` object from a JSON string representation.
- `void DDS_DynamicData_get_info` (const `DDS_DynamicData *self`, `struct DDS_DynamicDataInfo *info_out`)
 

Fill in the given descriptor with information about this `DDS_DynamicData` (p. 1523).
- `DDS_ReturnCode_t DDS_DynamicData_bind_type` (`DDS_DynamicData *self`, `const DDS_TypeCode *type`)
 

If this `DDS_DynamicData` (p. 1523) object is not yet associated with a data type, set that type now to the given `DDS_TypeCode` (p. 1806).
- `DDS_ReturnCode_t DDS_DynamicData_unbind_type` (`DDS_DynamicData *self`)
 

Dissociate this `DDS_DynamicData` (p. 1523) object from any particular data type.
- `DDS_ReturnCode_t DDS_DynamicData_bind_complex_member` (`DDS_DynamicData *self`, `DDS_DynamicData *value_out`, `const char *member_name`, `DDS_DynamicDataMemberId member_id`)
 

Use another `DDS_DynamicData` (p. 1523) object to provide access to a complex field of this `DDS_DynamicData` (p. 1523) object.
- `DDS_ReturnCode_t DDS_DynamicData_unbind_complex_member` (`DDS_DynamicData *self`, `DDS_DynamicData *value`)
 

Tear down the association created by a `DDS_DynamicData_bind_complex_member` (p. 334) operation, committing any changes to the outer object since then.
- `const DDS_TypeCode * DDS_DynamicData_get_type` (const `DDS_DynamicData *self`)
 

Get the data type, of which this `DDS_DynamicData` (p. 1523) represents an instance.
- `DDS_TCKind DDS_DynamicData_get_type_kind` (const `DDS_DynamicData *self`)
 

Get the kind of this object's data type.
- `DDS_UnsignedLong DDS_DynamicData_get_member_count` (const `DDS_DynamicData *self`)
 

Get the number of members in the type.
- `DDS_Boolean DDS_DynamicData_member_exists` (const `DDS_DynamicData *self`, `const char *member_name`, `DDS_DynamicDataMemberId member_id`)
 

Indicates whether a member exists in this sample.

- **DDS\_Boolean DDS\_DynamicData\_member\_exists\_in\_type** (const **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Indicates whether a member of a particular name/ID exists in this data sample's type.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_member\_info** (const **DDS\_DynamicData** \*self, struct **DDS\_DynamicDataMemberInfo** \*info, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 1523) sample.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_member\_info\_by\_index** (const **DDS\_DynamicData** \*self, struct **DDS\_DynamicDataMemberInfo** \*info, **DDS\_UnsignedLong** index)  
*Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 1523) sample.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_member\_type** (const **DDS\_DynamicData** \*self, const **DDS\_TypeCode** \*\*type\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the type of the given member of this sample.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_is\_member\_key** (const **DDS\_DynamicData** \*self, **DDS\_Boolean** \*is\_key\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Indicates whether a given member forms part of the key of this sample's data type.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_long** (const **DDS\_DynamicData** \*self, **DDS\_Long** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Long** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), or **DDS\_Enum** (p. 1007)).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_short** (const **DDS\_DynamicData** \*self, **DDS\_Short** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Short** (p. 1005) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005) or **DDS\_Char** (p. 1004)).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulong** (const **DDS\_DynamicData** \*self, **DDS\_UnsignedLong** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_UnsignedLong** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), or **DDS\_Enum** (p. 1007)).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ushort** (const **DDS\_DynamicData** \*self, **DDS\_UnsignedShort** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_UnsignedShort** (p. 1005) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005) or **DDS\_Char** (p. 1004)).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_float** (const **DDS\_DynamicData** \*self, **DDS\_Float** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Float** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_double** (const **DDS\_DynamicData** \*self, **DDS\_Double** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Double** (p. 1006) or another type implicitly convertible to it (**DDS\_Float** (p. 1006)).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_boolean** (const **DDS\_DynamicData** \*self, **DDS\_Boolean** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Boolean** (p. 1007).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_char** (const **DDS\_DynamicData** \*self, **DDS\_Char** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Char** (p. 1004).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_octet** (const **DDS\_DynamicData** \*self, **DDS\_Octet** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get the value of the given field, which is of type **DDS\_Octet** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longlong** (const **DDS\_DynamicData** \*self, **DDS\_LongLong** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)

Get the value of the given field, which is of type **DDS\_LongLong** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), **DDS\_Long** (p. 1006), **DDS\_UnsignedLong** (p. 1006), or **DDS\_Enum** (p. 1007)).

- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulonglong** (const **DDS\_DynamicData** \*self, **DDS\_↔\_UnsignedLongLong** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), **DDS\_Long** (p. 1006), **DDS\_UnsignedLong** (p. 1006), or **DDS\_Enum** (p. 1007)).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longdouble** (const **DDS\_DynamicData** \*self, **DDS\_Long↔\_Double** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **DDS\_LongDouble** (p. 1007) or another type implicitly convertible to it (**DDS\_Float** (p. 1006) or **DDS\_Double** (p. 1006)).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_wchar** (const **DDS\_DynamicData** \*self, **DDS\_Wchar** \*value↔\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **DDS\_Wchar** (p. 1005) or another type implicitly convertible to it (**DDS\_↔\_Char** (p. 1004)).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_int8** (const **DDS\_DynamicData** \*self, **DDS\_Int8** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **DDS\_Int8** (p. 1005).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_uint8** (const **DDS\_DynamicData** \*self, **DDS\_UInt8** \*value\_↔\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **DDS\_UInt8** (p. 1005).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_string** (const **DDS\_DynamicData** \*self, char \*\*value, **DDS\_↔\_UnsignedLong** \*size, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get the value of the given field, which is of type **char\***.
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_wstring** (const **DDS\_DynamicData** \*self, **DDS\_Wchar** \*\*value, **DDS\_UnsignedLong** \*size, const char \*member\_name, **DDS\_DynamicDataMemberId** member↔\_id)
 

Get the value of the given field, which is of type **DDS\_Wchar** (p. 1005)\*.
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_complex\_member** (const **DDS\_DynamicData** \*self, **DDS\_↔\_DynamicData** \*value\_out, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get a copy of the value of the given field, which is of some composed type.
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_long\_array** (const **DDS\_DynamicData** \*self, **DDS\_Long** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get a copy of the given array member. The array may contain members of type **DDS\_Long** (p. 1006) or **DDS\_Enum** (p. 1007).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_short\_array** (const **DDS\_DynamicData** \*self, **DDS\_Short** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulong\_array** (const **DDS\_DynamicData** \*self, **DDS\_↔\_UnsignedLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicData↔\_DataMemberId** member\_id)
 

Get a copy of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 1006) or **DDS\_↔\_Enum** (p. 1007).
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ushort\_array** (const **DDS\_DynamicData** \*self, **DDS\_↔\_UnsignedShort** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicData↔\_DataMemberId** member\_id)
 

Get a copy of the given array member.
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_float\_array** (const **DDS\_DynamicData** \*self, **DDS\_Float** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)
 

Get a copy of the given array member.

- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_double\_array** (const **DDS\_DynamicData** \*self, **DDS\_Double** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_boolean\_array** (const **DDS\_DynamicData** \*self, **DDS\_Boolean** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_char\_array** (const **DDS\_DynamicData** \*self, **DDS\_Char** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_octet\_array** (const **DDS\_DynamicData** \*self, **DDS\_Octet** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longlong\_array** (const **DDS\_DynamicData** \*self, **DDS\_LongLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulonglong\_array** (const **DDS\_DynamicData** \*self, **DDS\_UnsignedLongLong** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longdouble\_array** (const **DDS\_DynamicData** \*self, **DDS\_LongDouble** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_wchar\_array** (const **DDS\_DynamicData** \*self, **DDS\_Wchar** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_int8\_array** (const **DDS\_DynamicData** \*self, **DDS\_Int8** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_uint8\_array** (const **DDS\_DynamicData** \*self, **DDS\_UInt8** \*array, **DDS\_UnsignedLong** \*length, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_long\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_LongSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_short\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_ShortSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulong\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_UnsignedLongSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ushort\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_UnsignedShortSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_float\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_FloatSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*

- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_double\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_DoubleSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_boolean\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_BooleanSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_char\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_CharSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_octet\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_OctetSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longlong\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_LongLongSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_ulonglong\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_UnsignedLongLongSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_longdouble\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_LongDoubleSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_wchar\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_WcharSeq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_int8\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_Int8Seq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_get\_uint8\_seq** (const **DDS\_DynamicData** \*self, struct **DDS\_↔\_UInt8Seq** \*seq, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id)  
*Get a copy of the given sequence member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_long** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Long** value)  
*Set the value of the given field, which is of type **DDS\_Long** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_short** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Short** value)  
*Set the value of the given field, which is of type **DDS\_Short** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_ulong** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedLong** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_ushort** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedShort** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedShort** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_float** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Float** value)  
*Set the value of the given field, which is of type **DDS\_Float** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_double** (**DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Double** value)  
*Set the value of the given field, which is of type **DDS\_Double** (p. 1006).*

- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_boolean** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Boolean** value)  
*Set the value of the given field, which is of type **DDS\_Boolean** (p. 1007).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_char** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Char** value)  
*Set the value of the given field, which is of type **DDS\_Char** (p. 1004).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_octet** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Octet** value)  
*Set the value of the given field, which is of type **DDS\_Octet** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_longlong** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_LongLong** value)  
*Set the value of the given field, which is of type **DDS\_LongLong** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_ulonglong** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLongLong** value)  
*Set the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 1006).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_longdouble** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_LongDouble** value)  
*Set the value of the given field, which is of type **DDS\_LongDouble** (p. 1007).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_wchar** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Wchar** value)  
*Set the value of the given field, which is of type **DDS\_Wchar** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_int8** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_Int8** value)  
*Set the value of the given field, which is of type **DDS\_Int8** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_uint8** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UInt8** value)  
*Set the value of the given field, which is of type **DDS\_UInt8** (p. 1005).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_string** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const char \*value)  
*Set the value of the given field of type **char\***.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_wstring** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_Wchar** \*value)  
*Set the value of the given field of type **DDS\_Wchar** (p. 1005)\*.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_complex\_member** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, const **DDS\_DynamicData** \*value)  
*Copy the state of the given **DDS\_DynamicData** (p. 1523) object into a member of this object.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_long\_array** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Long** \*array)  
*Set the contents of the given array member. The array may contain members of type **DDS\_Long** (p. 1006) or **DDS\_Enum** (p. 1007).*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_short\_array** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_Short** \*array)  
*Set the contents of the given array member.*
- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_ulong\_array** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_UnsignedLong** \*array)  
*Set the contents of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 1006) or **DDS\_Enum** (p. 1007).*

- **DDS\_ReturnCode\_t DDS\_DynamicData\_set\_ushort\_array** ( **DDS\_DynamicData** \*self, const char \*member\_name, **DDS\_DynamicDataMemberId** member\_id, **DDS\_UnsignedLong** length, const **DDS\_↵  
UnsignedShort** \*array)  
*Set the contents of the given array member.*

- **DDS\_ReturnCode\_t DDS\_DynamicDataTypeSupport\_delete\_data** (struct **DDS\_DynamicDataTypeSupport** \*self, **DDS\_DynamicData** \*a\_data)
 

*Finalize and deallocate the **DDS\_DynamicData** (p. 1523) sample.*
- void **DDS\_DynamicDataTypeSupport\_print\_data** (const struct **DDS\_DynamicDataTypeSupport** \*self, const **DDS\_DynamicData** \*a\_data)
 

*Print a string representation of the given sample to the given file.*
- **DDS\_ReturnCode\_t DDS\_DynamicDataTypeSupport\_copy\_data** (const struct **DDS\_DynamicDataTypeSupport** \*self, **DDS\_DynamicData** \*dest, const **DDS\_DynamicData** \*source)
 

*Deeply copy the given data samples.*
- **DDS\_ReturnCode\_t DDS\_DynamicDataTypeSupport\_initialize\_data** (const struct **DDS\_DynamicDataTypeSupport** \*self, **DDS\_DynamicData** \*a\_data)
 

*Initialize a **DDS\_DynamicData** (p. 1523) object to a valid empty state.*
- **DDS\_ReturnCode\_t DDS\_DynamicDataTypeSupport\_finalize\_data** (const struct **DDS\_DynamicDataTypeSupport** \*self, **DDS\_DynamicData** \*a\_data)
 

*Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.*

## Variables

- const struct **DDS\_DynamicDataProperty\_t DDS\_DYNAMIC\_DATA\_PROPERTY\_DEFAULT**

*Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 1534).*
- const struct **DDS\_DynamicDataTypeProperty\_t DDS\_DYNAMIC\_DATA\_TYPE\_PROPERTY\_DEFAULT**

*Sentinel constant indicating default values for **DDS\_DynamicDataTypeProperty\_t** (p. 1536).*
- struct **DDS\_DynamicDataJsonParserProperties\_t DDS\_DYNAMIC\_DATA\_JSON\_PARSER\_PROPERTIES\_DEFAULT**

*Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 1534).*

### 4.14.1 Detailed Description

<<**extension**>> (p. 817) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

**1. Obtain a DDS\_TypeCode (p. 1806) (see Type Code Support (p. 224)) that defines the type definition you want to use.**

A **DDS\_TypeCode** (p. 1806) includes a type's *kind* (**DDS\_TCKind** (p. 239)), *name*, and *members* (that is, fields). You can create your own **DDS\_TypeCode** (p. 1806) using the **DDS\_TypeCodeFactory** (p. 1806) class – see, for example, the **DDS\_TypeCodeFactory\_create\_struct\_tc** (p. 287) method. Alternatively, you can use a remote **DDS\_TypeCode** (p. 1806) that you discovered on the network (see **Built-in Topics** (p. 162)) or one generated by `rtiddsgen` (see the `Code Generator User's Manual`).

**2. Wrap the DDS\_TypeCode (p. 1806) in a DDS\_DynamicDataTypeSupport (p. 321) object.**

See the constructor **DDS\_DynamicDataTypeSupport\_new** (p. 425). This object lets you connect the type definition to a **DDS\_DomainParticipant** (p. 72) and manage data samples (of type **DDS\_DynamicData** (p. 1523)).

**3. Register the DDS\_DynamicDataTypeSupport (p. 321) with one or more domain participants.**

See **DDS\_DynamicDataTypeSupport\_register\_type** (p. 426). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

**4. Create a DDS\_Topic (p. 172) from the DDS\_DomainParticipant (p. 72).**

Use the name under which you registered your data type – see **DDS\_DomainParticipant\_create\_topic** (p. 112). This **DDS\_Topic** (p. 172) is what you will use to produce and consume data.

**5. Create a DDS\_DynamicDataWriter (p. 320) and/or DDS\_DynamicDataReader (p. 321).**

These objects will produce and/or consume data (of type **DDS\_DynamicData** (p. 1523)) on the **DDS\_Topic** (p. 172). You can create these objects directly from the **DDS\_DomainParticipant** (p. 72) – see **DDS\_DomainParticipant\_create\_datawriter** (p. 105) and **DDS\_DomainParticipant\_create\_datareader** (p. 109) – or by first creating intermediate **DDS\_Publisher** (p. 436) and **DDS\_Subscriber** (p. 565) objects – see **DDS\_DomainParticipant\_create\_publisher** (p. 100) and **DDS\_DomainParticipant\_create\_subscriber** (p. 103).

**6. Write and/or read the data of interest.**

**7. Tear down the objects described above.**

You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **DDS\_DomainParticipant** (p. 72) is optional; all types are automatically unregistered when the **DDS\_DomainParticipant** (p. 72) itself is deleted.

## 4.14.2 Macro Definition Documentation

### 4.14.2.1 DDS\_DynamicDataProperty\_t\_INITIALIZER

```
#define DDS_DynamicDataProperty_t_INITIALIZER
```

Static initializer for **DDS\_DynamicDataProperty\_t** (p. 1534) objects.

Use this initializer to ensure that new properties objects don't have uninitialized contents.

```
struct DDS_DynamicDataProperty_t props = DDS_DynamicDataProperty_t_INITIALIZER;
```

See also

**DDS\_DynamicDataProperty\_t** (p. 1534)

#### 4.14.2.2 DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED

```
#define DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED
```

A sentinel value that indicates that no member ID is needed in order to perform some operation.

Most commonly, this constant will be used in "get" operations to indicate that a lookup should be performed based on a name, not on an ID.

See also

**DDS\_DynamicDataMemberId** (p. 320)

#### 4.14.2.3 DDS\_DynamicDataTypeProperty\_t\_INITIALIZER

```
#define DDS_DynamicDataTypeProperty_t_INITIALIZER
```

Static initializer for **DDS\_DynamicDataTypeProperty\_t** (p. 1536) objects.

Use this initializer to ensure that new properties objects don't have uninitialized contents.

```
struct DDS_DynamicDataTypeProperty_t props =  
    DDS_DynamicDataTypeProperty_t_INITIALIZER;
```

See also

**DDS\_DynamicDataTypeProperty\_t** (p. 1536)

### 4.14.3 Typedef Documentation

#### 4.14.3.1 DDS\_DynamicDataMemberId

```
typedef DDS_Long DDS_DynamicDataMemberId
```

An integer that uniquely identifies some member of a data type within that type.

The range of a member ID is the range of an unsigned short integer, except for the value 0, which is reserved.

See also

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

#### 4.14.3.2 DDS\_DynamicDataWriter

```
typedef struct DDS_DynamicDataWriter DDS_DynamicDataWriter
```

Writes (publishes) objects of type **DDS\_DynamicData** (p. 1523).

Instantiates **DDS\_DataWriter** (p. 478) < **DDS\_DynamicData** (p. 1523) > .

See also

**DDS\_DataWriter** (p. 478)

**FooDataWriter** (p. 1845)

**DDS\_DynamicData** (p. 1523)

#### 4.14.3.3 DDS\_DynamicDataReader

```
typedef struct DDS_DynamicDataReader DDS_DynamicDataReader
```

Reads (subscribes to) objects of type **DDS\_DynamicData** (p. 1523).

Instantiates **DDS\_DataReader** (p. 608) < **DDS\_DynamicData** (p. 1523) > .

See also

**DDS\_DataReader** (p. 608)

**FooDataReader** (p. 1845)

**DDS\_DynamicData** (p. 1523)

#### 4.14.3.4 DDS\_DynamicDataTypeSupport

```
typedef struct DDS_DynamicDataTypeSupport DDS_DynamicDataTypeSupport
```

A factory for registering a dynamically defined type and creating **DDS\_DynamicData** (p. 1523) objects.

A **DDS\_DynamicDataTypeSupport** (p. 321) has three roles:

1. It associates a **DDS\_TypeCode** (p. 1806) with policies for managing objects of that type. See the constructor, **DDS\_DynamicDataTypeSupport\_new** (p. 425).
2. It registers its type under logical names with a **DDS\_DomainParticipant** (p. 72). See **DDS\_DynamicDataTypeSupport\_register\_type** (p. 426).
3. It creates **DDS\_DynamicData** (p. 1523) samples pre-initialized with the type and properties of the type support itself. See **DDS\_DynamicDataTypeSupport\_create\_data** (p. 428).

## 4.14.4 Function Documentation

### 4.14.4.1 DDS\_DynamicData\_initialize()

```
DDS_Boolean DDS_DynamicData_initialize (
    DDS_DynamicData * self,
    const DDS_TypeCode * type,
    const struct DDS_DynamicDataProperty_t * property )
```

Initialize a **DDS\_DynamicData** (p. 1523) object to a valid empty state.

Use the constructor, **DDS\_DynamicData\_new** (p. 322), to allocate a new **DDS\_DynamicData** (p. 1523) object on the heap. Use this method to initialize a **DDS\_DynamicData** (p. 1523) object that is stored deeply, either within another object or on the stack.

When you're finished with the object, dispose of it with **DDS\_DynamicData\_finalize** (p. 323).

```
struct DDS_DynamicData sample;

DDS_Boolean succeeded = DDS_DynamicData_initialize(
    &sample, myType, myProperties);

/* Handle failure... */
/* Do something... */

DDS_DynamicData_finalize(&sample);
```

#### MT Safety:

UNSAFE.

#### See also

**DDS\_DynamicData\_finalize** (p. 323)

**DDS\_DynamicData\_new** (p. 322)

### 4.14.4.2 DDS\_DynamicData\_new()

```
DDS_DynamicData * DDS_DynamicData_new (
    const DDS_TypeCode * type,
    const struct DDS_DynamicDataProperty_t * property )
```

The constructor for new **DDS\_DynamicData** (p. 1523) objects.

This method returns a fully initialized object. It is *not* necessary to subsequently call **DDS\_DynamicData\_initialize** (p. 322).

If initialization fails, this method returns NULL.

The type parameter may be NULL. In that case, this **DDS\_DynamicData** (p. 1523) must be *bound* with **DDS\_DynamicData\_bind\_type** (p. 333) or **DDS\_DynamicData\_bind\_complex\_member** (p. 334) before it can be used.

If the **DDS\_TypeCode** (p. 1806) is not NULL, the newly constructed **DDS\_DynamicData** (p. 1523) object will retain a reference to it. It is *not* safe to delete the **DDS\_TypeCode** (p. 1806) until all samples that use it have themselves been deleted.

In most cases, it is not necessary to call this constructor explicitly. Instead, use **DDS\_DynamicData\_TypeSupport\_create\_data** (p. 428), and the **DDS\_TypeCode** (p. 1806) and properties will be specified for you. Using the factory method also ensures that the memory management contract documented above is followed correctly, because the **DDS\_DynamicData\_TypeSupport** (p. 321) object maintains the **DDS\_TypeCode** (p. 1806) used by the samples it creates.

However you create a **DDS\_DynamicData** (p. 1523) object, you must delete it when you are finished with it. If you choose to use this constructor, delete the object with the destructor: **DDS\_DynamicData\_delete** (p. 324).

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(
    myType, myProperties);
/* Failure indicated by NULL return result. */
/* Do something... */
DDS_DynamicData_delete(sample);
```

#### Parameters

<i>type</i>	<< <i>in</i> >> (p. 818) The type of which the new object will represent an object.
<i>property</i>	<< <i>in</i> >> (p. 818) Properties that configure the behavior of the new object. Most users can simply use <b>DDS_DYNAMIC_DATA_PROPERTY_DEFAULT</b> (p. 430).

#### See also

- DDS\_DynamicData\_initialize** (p. 322)
- DDS\_DynamicData\_delete** (p. 324)
- DDS\_DynamicData\_TypeSupport\_create\_data** (p. 428)

#### Examples

**HelloWorldPlugin.c.**

#### 4.14.4.3 DDS\_DynamicData\_finalize()

```
void DDS_DynamicData_finalize (
    DDS_DynamicData * self )
```

Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.

Use **DDS\_DynamicData\_delete** (p. 324) to clean up a **DDS\_DynamicData** (p. 1523) object on the heap. Use this method to clean up a **DDS\_DynamicData** (p. 1523) object that is stored deeply, either within another object or on the stack.

MT Safety:

UNSAFE.

See also

**DDS\_DynamicData\_delete** (p. 324)

**DDS\_DynamicData\_initialize** (p. 322)

#### 4.14.4.4 DDS\_DynamicData\_delete()

```
void DDS_DynamicData_delete (
    DDS_DynamicData * self )
```

Finalize and deallocate this **DDS\_DynamicData** (p. 1523) sample.

This method fully finalizes the object. It is *not* necessary to previously call **DDS\_DynamicData\_finalize** (p. 323).

MT Safety:

UNSAFE.

See also

**DDS\_DynamicData\_finalize** (p. 323)

**DDS\_DynamicData\_new** (p. 322)

Examples

**HelloWorldPlugin.c.**

#### 4.14.4.5 DDS\_DynamicData\_copy()

```
DDS_ReturnCode_t DDS_DynamicData_copy (
    DDS_DynamicData * self,
    const DDS_DynamicData * src )
```

Deeply copy from the given object to this object.

MT Safety:

UNSAFE.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔  
PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### 4.14.4.6 DDS\_DynamicData\_equal()

```
DDS_Boolean DDS_DynamicData_equal (
    const DDS_DynamicData * self,
    const DDS_DynamicData * other )
```

Indicate whether the contents of another **DDS\_DynamicData** (p. 1523) sample are the same as those of this one.

This operation compares the data and type of existing members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 1004). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

#### 4.14.4.7 DDS\_DynamicData\_clear\_all\_members()

```
DDS_ReturnCode_t DDS_DynamicData_clear_all_members (
    DDS_DynamicData * self )
```

Clear the contents of all data members of this object.

MT Safety:

UNSAFE.

Returns

One of the **Standard Return Codes** (p. 1024)

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

See also

**DDS\_DynamicData\_clear\_optional\_member** (p. 325)

#### 4.14.4.8 DDS\_DynamicData\_clear\_optional\_member()

```
DDS_ReturnCode_t DDS_DynamicData_clear_optional_member (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single optional data member of this object.

This method is only applicable to optional members. Members of unions, sequences, and arrays are not considered optional.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member (to look up the member by name), or NULL (to look up the member by its ID).
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member (to look up the member by its ID), or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) (to look up the member by name). See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DynamicData\_clear\_all\_members** (p. 325)

Clear an optional field

## 4.14.4.9 DDS\_DynamicData\_clear\_member()

```
DDS_ReturnCode_t DDS_DynamicData_clear_member (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Clear the contents of a single data member of this object.

This method can be used to clear both optional and non-optional members.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member to clear or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member to clear or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DynamicData\_clear\_all\_members** (p. 325)

Clear a field

**4.14.4.10 DDS\_DynamicData\_set\_cdr\_buffer()**

```
DDS_ReturnCode_t DDS_DynamicData_set_cdr_buffer (
    DDS_DynamicData * self,
    const char * buffer,
    DDS_UnsignedLong length )
```

Associate a CDR buffer with a DynamicData object.

This function associates a CDR buffer with a DynamicData object.

In this context, 'associates' means that the DynamicData object will use the input buffer to store its value. Additionally, if the buffer is loaned, the application is responsible for keeping it alive.

If the DynamicData is owned by the reader, this function will return an error.

**MT Safety:**

UNSAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>buffer</i>	<< <i>in</i> >> (p. 818) CDR buffer.
<i>length</i>	<< <i>in</i> >> (p. 818) CDR buffer length.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**4.14.4.11 DDS\_DynamicData\_get\_cdr\_buffer()**

```
const char * DDS_DynamicData_get_cdr_buffer (
    const DDS_DynamicData * self,
    DDS_UnsignedLong * length )
```

Get the CDR buffer associated with a DynamicData object.

This function returns the CDR buffer associated with a DynamicData object.

If the DynamicData object is not using CDR as its data representation, this function will return NULL and log an error.

To configure a DynamicData DataReader to not deserialize the incoming samples and keep the data in CDR format, you must set the configuration option **DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 1538) to **DDS\_BOOLEAN\_TRUE** (p. 1004).

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>length</i>	<< <i>out</i> >> (p. 818) CDR buffer length.

Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.14.4.12 DDS\_DynamicData\_is\_cdr()

```
DDS_Boolean DDS_DynamicData_is_cdr (
    const DDS_DynamicData * self )
```

Determine if a DynamicData object is using CDR as its data representation.

This function returns **DDS\_BOOLEAN\_TRUE** (p. 1004) if the DynamicData object is using CDR as its data representation, and **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

When the DynamicData object is using CDR as its data representation, many of the DynamicData APIs cannot be used. The DynamicData object will use CDR as its data representation when **DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 1538) has been set to **DDS\_BOOLEAN\_TRUE** (p. 1004) or **DDS\_DynamicData\_set\_cdr\_buffer** (p. 327) has been used to associate a CDR buffer with the DynamicData object. See each functions's documentation for whether or not the function is supported for DynamicData objects in CDR format.

See also

**DDS\_DynamicData\_get\_cdr\_buffer** (p. 327)

**DDS\_DynamicData\_set\_cdr\_buffer** (p. 327)

**DDS\_DynamicDataTypeSerializationProperty\_t::skip\_deserialization** (p. 1538)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## 4.14.4.13 DDS\_DynamicData\_print()

```
DDS_ReturnCode_t DDS_DynamicData_print (
    const DDS_DynamicData * self,
    FILE * fp,
    int indent )
```

Output a textual representation of this object and its contents to the given file.

This method is equivalent to **DDS\_DynamicDataSupport\_print\_data** (p. 428).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## Precondition

The type must be an aggregation or collection. That is, its **DDS\_TCKind** (p. 239) must be one of: **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_VALUE** (p. 239), **DDS\_TK\_UNION** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239) or **DDS\_TK\_ARRAY** (p. 239), otherwise this function fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>fp</i>	<< <i>in</i> >> (p. 818) The file into which the object should be printed (to print to standard output, provide the stream pointer 'stdout')
<i>indent</i>	<< <i>in</i> >> (p. 818) The output of this method will be pretty-printed. This argument indicates the amount of initial indentation of the output.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DynamicDataSupport\_print\_data** (p. 428)

#### 4.14.4.14 DDS\_DynamicData\_from\_cdr\_buffer()

```
DDS_ReturnCode_t DDS_DynamicData_from_cdr_buffer (
    DDS_DynamicData * self,
    const char * buffer,
    unsigned int length )
```

Deserializes a DynamicData object from a buffer of octets.

This function deserializes a DynamicData object from a CDR buffer of octets.

The content of the buffer generated by the function **DDS\_DynamicData\_to\_cdr\_buffer** (p. 331) can be provided to this function to get the DynamicData object back.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>buffer</i>	<< <i>in</i> >> (p. 818). Deserialization buffer.
<i>length</i>	<< <i>in</i> >> (p. 818). Length of the serialized representation of the DynamicData object in the buffer.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### Examples

**HelloWorldPlugin.c.**

#### 4.14.4.15 DDS\_DynamicData\_to\_cdr\_buffer\_ex()

```
DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer_ex (
    DDS_DynamicData * self,
    char * buffer,
    unsigned int * length,
    DDS_DataRepresentationId_t representation )
```

Serializes a DynamicData object into a buffer of octets.

This function serializes a DynamicData object into a buffer of octets using the input data representation. See **DDS\_↔ DynamicData\_to\_cdr\_buffer** (p. 331) for details.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>buffer</i>	<< <i>out</i> >> (p. 818). Serialization buffer.
<i>length</i>	<< <i>inout</i> >> (p. 818). Serialization buffer length.
<i>representation</i>	<< <i>in</i> >> (p. 818). Representation used to serialize the data

#### 4.14.4.16 DDS\_DynamicData\_to\_cdr\_buffer()

```
DDS_ReturnCode_t DDS_DynamicData_to_cdr_buffer (
    DDS_DynamicData * self,
    char * buffer,
    unsigned int * length )
```

Serializes a DynamicData object into a CDR buffer of octets.

This function serializes a DynamicData object into a buffer of octets, using CDR as the data representation. Calling this function is equivalent to calling `DDS_DynamicData_to_cdr_buffer_ex` (p. 330) with `DDS_AUTO_DATA_↔ REPRESENTATION` (p. 1059) as the representation.

The input buffer must be large enough to store the serialized representation of the DynamicData object. Otherwise, the function will return an error code.

To determine the minimum size of the input buffer, you must call this method with the buffer set to NULL.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>buffer</i>	<< <i>out</i> >> (p. 818). Serialization buffer.
<i>length</i>	<< <i>inout</i> >> (p. 818). When the buffer is set to NULL, after the function executes, length will contain the required size for the serialization buffer. When buffer is not NULL, length must contain the size of the input buffer when the function is invoked. After the function executes, length will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when <i>buffer</i> is set to NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.14.4.17 DDS\_DynamicData\_to\_string()

```
DDS_ReturnCode_t DDS_DynamicData_to_string (
    DDS_DynamicData * self,
    char * str,
    DDS_UnsignedLong * str_size,
    const struct DDS_PrintFormatProperty * property )
```

Get a string representation of a DynamicData object.

This function takes a dynamic data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the function will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS\_↵ RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↵ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>str</i>	<< <i>out</i> >> (p. 818). Output string representing the dynamic data sample.
<i>str_size</i>	<< <i>inout</i> >> (p. 818). When <i>str</i> is set to NULL, after the function executes, <i>str_size</i> will contain a buffer size big enough to hold the string representation of the data. When <i>str</i> is not NULL, <i>str_size</i> must contain the size of the input buffer when the function is invoked. If the size of the input buffer is too small, after the function executes, <i>str_size</i> will be updated to contain the required size of the string content and the function will return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 1025).
<i>property</i>	<< <i>in</i> >> (p. 818). Properties describing what the format of the output string should be. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

#### 4.14.4.18 DDS\_DynamicData\_from\_string()

```
DDS_ReturnCode_t DDS_DynamicData_from_string (
    DDS_DynamicData * self,
    const char * str,
    DDS_PrintFormatKind format_kind )
```

Populates a DynamicData object from a JSON string representation.

This function takes a JSON string representing a data sample of this type, and uses it to populate this DynamicData.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>str</i>	<< <i>in</i> >> (p. 818). The JSON string representation
<i>format_kind</i>	<< <i>in</i> >> (p. 818). Must be set to <b>DDS_JSON_PRINT_FORMAT</b> (p. 182), the only currently supported format.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## 4.14.4.19 DDS\_DynamicData\_get\_info()

```
void DDS_DynamicData_get_info (
    const DDS_DynamicData * self,
    struct DDS_DynamicDataInfo * info_out )
```

Fill in the given descriptor with information about this **DDS\_DynamicData** (p. 1523).

This API is not supported when the DynamicData object is in CDR format and will print an error log. See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>info_out</i>	<< <i>out</i> >> (p. 818) The descriptor object whose contents will be overwritten by this operation.

## 4.14.4.20 DDS\_DynamicData\_bind\_type()

```
DDS_ReturnCode_t DDS_DynamicData_bind_type (
    DDS_DynamicData * self,
    const DDS_TypeCode * type )
```

If this **DDS\_DynamicData** (p. 1523) object is not yet associated with a data type, set that type now to the given **DDS\_TypeCode** (p. 1806).

This advanced operation allows you to reuse a single **DDS\_DynamicData** (p. 1523) object with multiple data types.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

```
struct DDS_DynamicData* myData = DDS_DynamicData_new(NULL, myProperties);
```

```
DDS_TypeCode* myType = ...;
```

```
DDS_DynamicData_bind_type(myData, myType);
```

```
/* Do something... */
```

```
DDS_DynamicData_unbind_type(myData);
```

```
DDS_DynamicData_delete(myData);
```

Note that the **DDS\_DynamicData** (p. 1523) object will retain a reference to the **DDS\_TypeCode** (p. 1806) object you provide. It is *not* safe to delete the **DDS\_TypeCode** (p. 1806) until after it is unbound.

**MT Safety:**

UNSAFE.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>type</i>	<< <i>in</i> >> (p. 818) The type to associate with this <b>DDS_DynamicData</b> (p. 1523) object.

**Returns**One of the **Standard Return Codes** (p. 1024)**See also****DDS\_DynamicData\_unbind\_type** (p. 334)**4.14.4.21 DDS\_DynamicData\_unbind\_type()**

```
DDS_ReturnCode_t DDS_DynamicData_unbind_type (
    DDS_DynamicData * self )
```

Dissociate this **DDS\_DynamicData** (p. 1523) object from any particular data type.

This step is necessary before the object can be associated with a new data type.

This operation clears all members as a side effect.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

**MT Safety:**

UNSAFE.

**Returns**One of the **Standard Return Codes** (p. 1024)**See also****DDS\_DynamicData\_bind\_type** (p. 333)**DDS\_DynamicData\_clear\_all\_members** (p. 325)

#### 4.14.4.22 DDS\_DynamicData\_bind\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData_bind_complex_member (
    DDS_DynamicData * self,
    DDS_DynamicData * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Use another **DDS\_DynamicData** (p. 1523) object to provide access to a complex field of this **DDS\_DynamicData** (p. 1523) object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

For example, consider the following data types:

```
struct MyFieldType {
    float theFloat;
};

struct MyOuterType {
    MyFieldType complexMember;
};
```

Suppose you have an instance of `MyOuterType`, and you would like to examine the contents of its member `complexMember`. To do this, you must *bind* another **DDS\_DynamicData** (p. 1523) object to that member. This operation will bind the type code of the member to the provided **DDS\_DynamicData** (p. 1523) object and perform additional initialization.

The following example demonstrates the usage pattern. Note that error handling has been omitted for brevity.

```
struct DDS_DynamicData* outer = ...;

float theFloatValue = 0;

struct DDS_DynamicData* toBeBound = DDS_DynamicData_new(NULL, myProperties);

DDS_DynamicData_bind_complex_member(
    outer,
    toBeBound,
    "complexMember",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

DDS_DynamicData_get_float(
    toBeBound,
    &theFloat,
    "theFloat"
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

DDS_DynamicData_unbind_complex_member(outer, toBeBound);
```

This operation is only permitted when the object `toBeBound` (named as in the example above) is not currently associated with any type, including already being bound to another member. You can see in the example that this object is created directly with the constructor and is not provided with a **DDS\_TypeCode** (p. 1806).

Only a single member of a given **DDS\_DynamicData** (p. 1523) object may be bound at one time – however, members of members may be recursively bound to any depth. Furthermore, while the outer object has a bound member, it may only

be modified through that bound member. That is, after calling this member, all "set" operations on the outer object will be disabled until **DDS\_DynamicData\_unbind\_complex\_member** (p. 336) has been called. Furthermore, any bound member must be unbound before a sample can be written or deleted.

This method is logically related to **DDS\_DynamicData\_get\_complex\_member** (p. 357) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a view into an outer object, such that any change made to the inner object will be reflected in the outer. But the **DDS\_DynamicData\_get\_complex\_member** (p. 357) operation *copies* the state of the nested object; changes to it will not be reflected in the source object.

*Note* that you can bind to a member of a sequence at an index that is past the current length of that sequence. In that case, this method behaves like a "set" method: it automatically lengthens the sequence (filling in default elements) to allow the bind to take place. See **Getters and Setters** (p. 1526).

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) The object that you wish to bind to the field.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DynamicData\_unbind\_complex\_member** (p. 336)

**DDS\_DynamicData\_get\_complex\_member** (p. 357)

#### 4.14.4.23 DDS\_DynamicData\_unbind\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData_unbind_complex_member (
    DDS_DynamicData * self,
    DDS_DynamicData * value )
```

Tear down the association created by a **DDS\_DynamicData\_bind\_complex\_member** (p. 334) operation, committing any changes to the outer object since then.

Some changes to the outer object will not be observable until after you have performed this operation.

If you have called **DDS\_DynamicData\_bind\_complex\_member** (p. 334) on a data sample, you must unbind before writing or deleting the sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value</i>	<< <i>in</i> >> (p. 818) The same object you passed to <code>DDS_DynamicData_bind_complex_member</code> (p. 334). This argument is used for error checking purposes.

Returns

One of the **Standard Return Codes** (p. 1024) or `DDS_RETCODE_OUT_OF_RESOURCES` (p. 1025)

See also

`DDS_DynamicData_bind_complex_member` (p. 334)

#### 4.14.4.24 `DDS_DynamicData_get_type()`

```
const DDS_TypeCode * DDS_DynamicData_get_type (
    const DDS_DynamicData * self )
```

Get the data type, of which this `DDS_DynamicData` (p. 1523) represents an instance.

MT Safety:

UNSAFE.

#### 4.14.4.25 `DDS_DynamicData_get_type_kind()`

```
DDS_TCKind DDS_DynamicData_get_type_kind (
    const DDS_DynamicData * self )
```

Get the kind of this object's data type.

This is a convenience method. It's equivalent to calling `DDS_DynamicData_get_type` (p. 337) followed by `DDS_TypeCode_kind` (p. 240).

MT Safety:

UNSAFE.

#### 4.14.4.26 DDS\_DynamicData\_get\_member\_count()

```
DDS_UnsignedLong DDS_DynamicData_get_member_count (
    const DDS_DynamicData * self )
```

Get the number of members in the type.

For objects of type kind **DDS\_TK\_ARRAY** (p. 239) or **DDS\_TK\_SEQUENCE** (p. 239), this method returns the number of elements in the collection.

For objects of type kind **DDS\_TK\_STRUCT** (p. 239) or **DDS\_TK\_VALUE** (p. 239), it returns the number of fields in the type.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

**DDS\_DynamicData\_get\_member\_info\_by\_index** (p. 341)

#### 4.14.4.27 DDS\_DynamicData\_member\_exists()

```
DDS_Boolean DDS_DynamicData_member_exists (
    const DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Indicates whether a member exists in this sample.

You only need to specify the name OR the ID (not both).

If the member doesn't exist in the type, this function returns false. In all other cases, it provides the same result as **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533), which is retrieved with **idref\_DynamicDataMember\_get\_↔\_member\_info**.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 1004). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## See also

**DDS\_DynamicData\_member\_exists\_in\_type** (p. 339)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

## 4.14.4.28 DDS\_DynamicData\_member\_exists\_in\_type()

```
DDS_Boolean DDS_DynamicData_member_exists_in_type (
    const DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Indicates whether a member of a particular name/ID exists in this data sample's type.

You only need to specify the name OR the ID (not both).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_BOOLEAN\_FALSE** (p. 1004). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## See also

**DDS\_DynamicData\_member\_exists** (p. 338)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

#### 4.14.4.29 DDS\_DynamicData\_get\_member\_info()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_info (
    const DDS_DynamicData * self,
    struct DDS_DynamicDataMemberInfo * info,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 1523) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

This operation is valid for objects of **DDS\_TCKind** (p. 239) **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_UNION** (p. 239), and **DDS\_TK\_VALUE** (p. 239).

##### MT Safety:

UNSAFE.

When this sample represents a struct, a value type, or a union:

- If the specified member is not defined in the type, this function fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025).
- If the specified member is defined in the type but doesn't exist in this data sample, this function returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533) set to false.
- If the specified member is defined in the type and exists in this data sample, **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533) is true.

When this sample represents a sequence and `member_id` is the 1-based element index:

- If `member_id` is greater than the sequence's maximum length, this function fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025).
- If `member_id` is greater than the sequence's current length but smaller than or equal to its maximum length, this function returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533) set to false.
- If `member_id` is smaller than or equal to the current length, **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533) is true.

When this sample represents an array, this function either fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025) when the index is out of bounds or else returns an object with **DDS\_DynamicDataMemberInfo::member\_exists** (p. 1533) set to true.

##### Parameters

<i>self</i>	<<in>> (p. 818) Cannot be NULL.
<i>info</i>	<<out>> (p. 818) The descriptor object whose contents will be overwritten by this operations.
<i>member_name</i>	<<in>> (p. 818) The name of the member for which to get the info or NULL to look up the member by its ID. Only one of the name and the ID may be unspecified.
<i>member_id</i>	<<in>> (p. 818) The ID of the member for which to get the info, or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DynamicData\_get\_member\_info\_by\_index** (p. 341)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

## 4.14.4.30 DDS\_DynamicData\_get\_member\_info\_by\_index()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_info_by_index (
    const DDS_DynamicData * self,
    struct DDS_DynamicDataMemberInfo * info,
    DDS_UnsignedLong index )
```

Fill in the given descriptor with information about the identified member of this **DDS\_DynamicData** (p. 1523) sample.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

This operation is valid for objects of **DDS\_TCKind** (p. 239) **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_VALUE** (p. 239), and **DDS\_TK\_UNION** (p. 239).

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>info</i>	<< <b>out</b> >> (p. 818) The descriptor object whose contents will be overwritten by this operations.
<i>index</i>	<< <b>in</b> >> (p. 818) The zero-base of the member for which to get the info.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DynamicData\_get\_member\_info** (p. 339)

**DDS\_DynamicData\_get\_member\_count** (p. 337)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

#### 4.14.4.31 DDS\_DynamicData\_get\_member\_type()

```
DDS_ReturnCode_t DDS_DynamicData_get_member_type (
    const DDS_DynamicData * self,
    const DDS_TypeCode ** type_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the type of the given member of this sample.

The member can be looked up either by name or by ID.

This operation is valid for objects of **DDS\_TCKind** (p. 239) **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRUCT** (p. 239), and **DDS\_TK\_VALUE** (p. 239). For type kinds **DDS\_TK\_ARRAY** (p. 239) and **DDS\_TK\_SEQUENCE** (p. 239), the index into the collection is taken to be one less than the ID, if specified. If this index is valid, this operation will return the content type of this collection.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>type_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument refers to the found member's type. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DynamicData\_get\_member\_info** (p. 339)

**DDS\_DYNAMIC\_DATA\_MEMBER\_ID\_UNSPECIFIED** (p. 319)

#### 4.14.4.32 DDS\_DynamicData\_is\_member\_key()

```
DDS_ReturnCode_t DDS_DynamicData_is_member_key (
    const DDS_DynamicData * self,
    DDS_Boolean * is_key_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Indicates whether a given member forms part of the key of this sample's data type.

This operation is only valid for samples of types of kind **DDS\_TK\_STRUCTURE** (p. 239) or **DDS\_TK\_VALUE** (p. 239).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_←PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

##### MT Safety:

UNSAFE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>is_key_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument indicates whether the indicated member is part of the key. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.14.4.33 DDS\_DynamicData\_get\_long()

```
DDS_ReturnCode_t DDS_DynamicData_get_long (
    const DDS_DynamicData * self,
    DDS_Long * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Long** (p. 1006) or another type implicitly convertible to it (**DDS\_←Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), or **DDS\_Enum** (p. 1007)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_←PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_long** (p. 386)

## 4.14.4.34 DDS\_DynamicData\_get\_short()

```
DDS_ReturnCode_t DDS_DynamicData_get_short (
    const DDS_DynamicData * self,
    DDS_Short * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Short** (p. 1005) or another type implicitly convertible to it (**DDS\_↔\_Octet** (p. 1005) or **DDS\_Char** (p. 1004)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL. <span style="float: right;">Generated by Doxygen</span>
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member</b>

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_short** (p. 387)

4.14.4.35 **DDS\_DynamicData\_get\_ulong()**

```
DDS_ReturnCode_t DDS_DynamicData_get_ulong (
    const DDS_DynamicData * self,
    DDS_UnsignedLong * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_UnsignedLong** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), or **DDS\_Enum** (p. 1007)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_ulong** (p. 388)

#### 4.14.4.36 DDS\_DynamicData\_get\_ushort()

```
DDS_ReturnCode_t DDS_DynamicData_get_ushort (
    const DDS_DynamicData * self,
    DDS_UnsignedShort * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_UnsignedShort** (p. 1005) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005) or **DDS\_Char** (p. 1004)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_ushort** (p. 389)

#### 4.14.4.37 DDS\_DynamicData\_get\_float()

```
DDS_ReturnCode_t DDS_DynamicData_get_float (
    const DDS_DynamicData * self,
    DDS_Float * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Float** (p. 1006).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

##### MT Safety:

UNSAFE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

##### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

##### See also

**DDS\_DynamicData\_set\_float** (p. 389)

#### 4.14.4.38 DDS\_DynamicData\_get\_double()

```
DDS_ReturnCode_t DDS_DynamicData_get_double (
    const DDS_DynamicData * self,
    DDS_Double * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Double** (p. 1006) or another type implicitly convertible to it (**DDS\_Float** (p. 1006)).

The member may be specified by name or by ID.

This API is not supported when the `DynamicData` object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_double** (p. 390)

#### 4.14.4.39 DDS\_DynamicData\_get\_boolean()

```
DDS_ReturnCode_t DDS_DynamicData_get_boolean (
    const DDS_DynamicData * self,
    DDS_Boolean * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Boolean** (p. 1007).

The member may be specified by name or by ID.

This API is not supported when the `DynamicData` object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_boolean** (p. 391)

## 4.14.4.40 DDS\_DynamicData\_get\_char()

```
DDS_ReturnCode_t DDS_DynamicData_get_char (
    const DDS_DynamicData * self,
    DDS_Char * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Char** (p. 1004).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_char** (p. 391)

4.14.4.41 **DDS\_DynamicData\_get\_octet()**

```
DDS_ReturnCode_t DDS_DynamicData_get_octet (
    const DDS_DynamicData * self,
    DDS_Octet * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Octet** (p. 1005).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_octet** (p. 392)

## 4.14.4.42 DDS\_DynamicData\_get\_longlong()

```
DDS_ReturnCode_t DDS_DynamicData_get_longlong (
    const DDS_DynamicData * self,
    DDS_LongLong * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_LongLong** (p.1006) or another type implicitly convertible to it (**DDS\_Octet** (p.1005), **DDS\_Char** (p.1004), **DDS\_Short** (p.1005), **DDS\_UnsignedShort** (p.1005), **DDS\_Long** (p.1006), **DDS\_UnsignedLong** (p.1006), or **DDS\_Enum** (p.1007)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p.1025). See **DDS\_DynamicData\_is\_cdr** (p.328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p.818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p.818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p.818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p.818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p.319) to look up by name. See <b>Member Names and IDs</b> (p.1524).

## Returns

One of the **Standard Return Codes** (p.1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p.1025)

## See also

**DDS\_DynamicData\_set\_longlong** (p.393)

## 4.14.4.43 DDS\_DynamicData\_get\_ulonglong()

```
DDS_ReturnCode_t DDS_DynamicData_get_ulonglong (
    const DDS_DynamicData * self,
    DDS_UnsignedLongLong * value_out,
```

```
const char * member_name,
      DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 1006) or another type implicitly convertible to it (**DDS\_Octet** (p. 1005), **DDS\_Char** (p. 1004), **DDS\_Short** (p. 1005), **DDS\_UnsignedShort** (p. 1005), **DDS\_Long** (p. 1006), **DDS\_UnsignedLong** (p. 1006), or **DDS\_Enum** (p. 1007)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_ulonglong** (p. 394)

#### 4.14.4.44 DDS\_DynamicData\_get\_longdouble()

```
DDS_ReturnCode_t DDS_DynamicData_get_longdouble (
    const DDS_DynamicData * self,
    DDS_LongDouble * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_LongDouble** (p. 1007) or another type implicitly convertible to it (**DDS\_Float** (p. 1006) or **DDS\_Double** (p. 1006)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_longdouble** (p. 394)

#### 4.14.4.45 DDS\_DynamicData\_get\_wchar()

```
DDS_ReturnCode_t DDS_DynamicData_get_wchar (
    const DDS_DynamicData * self,
    DDS_Wchar * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Wchar** (p. 1005) or another type implicitly convertible to it (**DDS\_↔\_Char** (p. 1004)).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member</b>

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_wchar** (p. 395)

4.14.4.46 **DDS\_DynamicData\_get\_int8()**

```
DDS_ReturnCode_t DDS_DynamicData_get_int8 (
    const DDS_DynamicData * self,
    DDS_Int8 * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Int8** (p. 1005).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_int8** (p. 396)

## 4.14.4.47 DDS\_DynamicData\_get\_uint8()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8 (
    const DDS_DynamicData * self,
    DDS_UInt8 * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_UInt8** (p. 1005).

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) If this method returned success, this argument will contain the value of the indicated member. It cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_uint8** (p. 397)

## 4.14.4.48 DDS\_DynamicData\_get\_string()

```
DDS_ReturnCode_t DDS_DynamicData_get_string (
    const DDS_DynamicData * self,
    char ** value,
    DDS_UnsignedLong * size,
```

```
const char * member_name,
DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type char\*.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_←PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value</i>	<< <i>out</i> >> (p. 818) The string into which the middleware should copy the string member. The allocated size of this string is indicated by <i>size</i> argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If <i>value</i> is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will <i>not</i> free your string; instead, this operation will fail and <i>size</i> will contain the minimum required size.
<i>size</i>	<< <i>inout</i> >> (p. 818) As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

#### See also

**DDS\_String\_alloc** (p. 1313)

**DDS\_String\_free** (p. 1314)

**DDS\_DynamicData\_set\_string** (p. 397)

## 4.14.4.49 DDS\_DynamicData\_get\_wstring()

```
DDS_ReturnCode_t DDS_DynamicData_get_wstring (
    const DDS_DynamicData * self,
    DDS_Wchar ** value,
    DDS_UnsignedLong * size,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get the value of the given field, which is of type **DDS\_Wchar** (p. 1005)\*.

The member may be specified by name or by ID.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↵**  
**PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value</i>	<< <i>out</i> >> (p. 818) The string into which the middleware should copy the string member. The allocated size of this string is indicated by <i>size</i> argument. If the size is sufficient to hold the contents of the member, they will be copied into this string. If <i>value</i> is a pointer to NULL, the middleware will allocate a new string for you of sufficient length; it will be your responsibility to free that string. If the size is insufficient but greater than zero, the middleware will <i>not</i> free your string; instead, this operation will fail and <i>size</i> will contain the minimum required size.
<i>size</i>	<< <i>inout</i> >> (p. 818) As an input argument, the allocated size of the string. As an output argument, the actual size of the contents.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## See also

**DDS\_String\_alloc** (p. 1313)

**DDS\_String\_free** (p. 1314)

**DDS\_DynamicData\_set\_wstring** (p. 398)

#### 4.14.4.50 DDS\_DynamicData\_get\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData_get_complex_member (
    const DDS_DynamicData * self,
    DDS_DynamicData * value_out,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the value of the given field, which is of some composed type.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

The member may be of type kind **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_VALUE** (p. 239), or **DDS\_TK\_UNION** (p. 239). It may be specified by name or by ID.

This method is logically related to **DDS\_DynamicData\_bind\_complex\_member** (p. 334) in that both allow you to examine the state of nested objects. They are different in an important way: this method provides a *copy* of the data; changes to it will not be reflected in the source object.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>value_out</i>	<< <i>out</i> >> (p. 818) The <b>DDS_DynamicData</b> (p. 1523) sample whose contents will be overwritten by this operation. This object must <i>not</i> be a bound member of another <b>DDS_DynamicData</b> (p. 1523) sample.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

#### See also

**DDS\_DynamicData\_set\_complex\_member** (p. 399)

**DDS\_DynamicData\_bind\_complex\_member** (p. 334)

## 4.14.4.51 DDS\_DynamicData\_get\_long\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_long_array (
    const DDS_DynamicData * self,
    DDS_Long * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member. The array may contain members of type **DDS\_Long** (p. 1006) or **DDS\_Enum** (p. 1007).

This method will perform an automatic conversion from **DDS\_LongSeq** (p. 1587).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_long\_array** (p. 400)

**DDS\_DynamicData\_get\_long\_seq** (p. 373)

#### 4.14.4.52 DDS\_DynamicData\_get\_short\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_short_array (
    const DDS_DynamicData * self,
    DDS_Short * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_ShortSeq** (p. 1741).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_short\_array** (p. 401)

**DDS\_DynamicData\_get\_short\_seq** (p. 374)

## 4.14.4.53 DDS\_DynamicData\_get\_ulong\_array()

```

DDS_ReturnCode_t DDS_DynamicData_get_ulong_array (
    const DDS_DynamicData * self,
    DDS_UnsignedLong * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )

```

Get a copy of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 1006) or **DDS\_Enum** (p. 1007).

This method will perform an automatic conversion from **DDS\_UnsignedLongSeq** (p. 1819).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_ulong\_array** (p. 402)

**DDS\_DynamicData\_get\_ulong\_seq** (p. 375)

#### 4.14.4.54 DDS\_DynamicData\_get\_ushort\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_ushort_array (
    const DDS_DynamicData * self,
    DDS_UnsignedShort * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_UnsignedShortSeq** (p. 1820).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_ushort\_array** (p. 403)

**DDS\_DynamicData\_get\_ushort\_seq** (p. 376)

## 4.14.4.55 DDS\_DynamicData\_get\_float\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_float_array (
    const DDS_DynamicData * self,
    DDS_Float * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_FloatSeq** (p. 1551).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_float\_array** (p. 404)

**DDS\_DynamicData\_get\_float\_seq** (p. 377)

#### 4.14.4.56 DDS\_DynamicData\_get\_double\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_double_array (
    const DDS_DynamicData * self,
    DDS_Double * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_DoubleSeq** (p. 1515).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_double\_array** (p. 405)

**DDS\_DynamicData\_get\_double\_seq** (p. 378)

## 4.14.4.57 DDS\_DynamicData\_get\_boolean\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_boolean_array (
    const DDS_DynamicData * self,
    DDS_Boolean * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_BooleanSeq** (p. 1338).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <b>out</b> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <b>inout</b> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <b>in</b> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <b>in</b> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_boolean\_array** (p. 406)

**DDS\_DynamicData\_get\_boolean\_seq** (p. 379)

#### 4.14.4.58 DDS\_DynamicData\_get\_char\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_char_array (
    const DDS_DynamicData * self,
    DDS_Char * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_CharSeq** (p. 1347).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_char\_array** (p. 407)

**DDS\_DynamicData\_get\_char\_seq** (p. 379)

## 4.14.4.59 DDS\_DynamicData\_get\_octet\_array()

```

DDS_ReturnCode_t DDS_DynamicData_get_octet_array (
    const DDS_DynamicData * self,
    DDS_Octet * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )

```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_OctetSeq** (p. 1606).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_octet\_array** (p. 408)

**DDS\_DynamicData\_get\_octet\_seq** (p. 380)

#### 4.14.4.60 DDS\_DynamicData\_get\_longlong\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_longlong_array (
    const DDS_DynamicData * self,
    DDS_LongLong * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_LongLongSeq** (p. 1586).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_longlong\_array** (p. 408)

**DDS\_DynamicData\_get\_longlong\_seq** (p. 381)

## 4.14.4.61 DDS\_DynamicData\_get\_ulonglong\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_ulonglong_array (
    const DDS_DynamicData * self,
    DDS_UnsignedLongLong * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_UnsignedLongLongSeq** (p. 1819).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_ulonglong\_array** (p. 409)

**DDS\_DynamicData\_get\_ulonglong\_seq** (p. 382)

#### 4.14.4.62 DDS\_DynamicData\_get\_longdouble\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_longdouble_array (
    const DDS_DynamicData * self,
    DDS_LongDouble * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_LongDoubleSeq** (p. 1586).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_longdouble\_array** (p. 410)

**DDS\_DynamicData\_get\_longdouble\_seq** (p. 383)

## 4.14.4.63 DDS\_DynamicData\_get\_wchar\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_wchar_array (
    const DDS_DynamicData * self,
    DDS_Wchar * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_WcharSeq** (p. 1826).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

See also

**DDS\_DynamicData\_set\_wchar\_array** (p. 411)

**DDS\_DynamicData\_get\_wchar\_seq** (p. 384)

#### 4.14.4.64 DDS\_DynamicData\_get\_int8\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_int8_array (
    const DDS_DynamicData * self,
    DDS_Int8 * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_Int8Seq** (p. 1562).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

##### MT Safety:

UNSAFE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

##### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

##### See also

**DDS\_DynamicData\_set\_int8\_array** (p. 412)

**DDS\_DynamicData\_get\_int8\_seq** (p. 385)

## 4.14.4.65 DDS\_DynamicData\_get\_uint8\_array()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8_array (
    const DDS_DynamicData * self,
    DDS_UInt8 * array,
    DDS_UnsignedLong * length,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given array member.

This method will perform an automatic conversion from **DDS\_UInt8Seq** (p. 1817).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>array</i>	<< <i>out</i> >> (p. 818) An already-allocated array, into which the elements will be copied.
<i>length</i>	<< <i>inout</i> >> (p. 818) As an input, the allocated length of <i>array</i> . As an output, the number of elements that were copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025)

## See also

**DDS\_DynamicData\_set\_uint8\_array** (p. 413)

**DDS\_DynamicData\_get\_uint8\_seq** (p. 385)

#### 4.14.4.66 DDS\_DynamicData\_get\_long\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_long_seq (
    const DDS_DynamicData * self,
    struct DDS_LongSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Long** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_long\_seq** (p. 414)

**DDS\_DynamicData\_get\_long\_array** (p. 358)

#### 4.14.4.67 DDS\_DynamicData\_get\_short\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_short_seq (
    const DDS_DynamicData * self,
```

```

struct DDS_ShortSeq * seq,
const char * member_name,
DDS_DynamicDataMemberId member_id )

```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Short** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

#### See also

**DDS\_DynamicData\_set\_short\_seq** (p. 414)

**DDS\_DynamicData\_get\_short\_array** (p. 359)

#### 4.14.4.68 DDS\_DynamicData\_get\_ulong\_seq()

```

DDS_ReturnCode_t DDS_DynamicData_get_ulong_seq (
const DDS_DynamicData * self,
struct DDS_UnsignedLongSeq * seq,
const char * member_name,
DDS_DynamicDataMemberId member_id )

```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UnsignedLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_ulong\_seq** (p. 415)

**DDS\_DynamicData\_get\_ulong\_array** (p. 360)

#### 4.14.4.69 **DDS\_DynamicData\_get\_ushort\_seq()**

```
DDS_ReturnCode_t DDS_DynamicData_get_ushort_seq (
    const DDS_DynamicData * self,
    struct DDS_UnsignedShortSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UnsignedShort** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## See also

**DDS\_DynamicData\_set\_ushort\_seq** (p. 416)

**DDS\_DynamicData\_get\_ushort\_array** (p. 361)

## 4.14.4.70 DDS\_DynamicData\_get\_float\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_float_seq (
    const DDS_DynamicData * self,
    struct DDS_FloatSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Float** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## See also

**DDS\_DynamicData\_set\_float\_seq** (p. 417)

**DDS\_DynamicData\_get\_float\_array** (p. 362)

4.14.4.71 **DDS\_DynamicData\_get\_double\_seq()**

```
DDS_ReturnCode_t DDS_DynamicData_get_double_seq (
    const DDS_DynamicData * self,
    struct DDS_DoubleSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Double** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_double\_seq** (p. 417)

**DDS\_DynamicData\_get\_double\_array** (p. 363)

#### 4.14.4.72 DDS\_DynamicData\_get\_boolean\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_boolean_seq (
    const DDS_DynamicData * self,
    struct DDS_BooleanSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Boolean** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_boolean\_seq** (p. 418)

**DDS\_DynamicData\_get\_boolean\_array** (p. 364)

#### 4.14.4.73 DDS\_DynamicData\_get\_char\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_char_seq (
    const DDS_DynamicData * self,
    struct DDS_CharSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Char** (p. 1004).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_char\_seq** (p. 419)

**DDS\_DynamicData\_get\_char\_array** (p. 365)

#### 4.14.4.74 DDS\_DynamicData\_get\_octet\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_octet_seq (
    const DDS_DynamicData * self,
```

```

struct DDS_OctetSeq * seq,
const char * member_name,
    DDS_DynamicDataMemberId member_id )

```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Octet** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

#### Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

#### See also

**DDS\_DynamicData\_set\_octet\_seq** (p. 420)

**DDS\_DynamicData\_get\_octet\_array** (p. 366)

#### 4.14.4.75 DDS\_DynamicData\_get\_longlong\_seq()

```

DDS_ReturnCode_t DDS_DynamicData_get_longlong_seq (
    const DDS_DynamicData * self,
    struct DDS_LongLongSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )

```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_LongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_longlong\_seq** (p. 420)

**DDS\_DynamicData\_get\_longlong\_array** (p. 367)

#### 4.14.4.76 **DDS\_DynamicData\_get\_ulonglong\_seq()**

```
DDS_ReturnCode_t DDS_DynamicData_get_ulonglong_seq (
    const DDS_DynamicData * self,
    struct DDS_UnsignedLongLongSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UnsignedLongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## See also

**DDS\_DynamicData\_set\_ulonglong\_seq** (p. 421)

**DDS\_DynamicData\_get\_ulonglong\_array** (p. 368)

## 4.14.4.77 DDS\_DynamicData\_get\_longdouble\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_longdouble_seq (
    const DDS_DynamicData * self,
    struct DDS_LongDoubleSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_LongDouble** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

## See also

**DDS\_DynamicData\_set\_longdouble\_seq** (p. 422)

**DDS\_DynamicData\_get\_longdouble\_array** (p. 369)

4.14.4.78 **DDS\_DynamicData\_get\_wchar\_seq()**

```
DDS_ReturnCode_t DDS_DynamicData_get_wchar_seq (
    const DDS_DynamicData * self,
    struct DDS_WcharSeq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Wchar** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

## Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_wchar\_seq** (p. 423)

**DDS\_DynamicData\_get\_wchar\_array** (p. 370)

#### 4.14.4.79 DDS\_DynamicData\_get\_int8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_int8_seq (
    const DDS_DynamicData * self,
    struct DDS_Int8Seq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_Int8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_int8\_seq** (p. 423)

**DDS\_DynamicData\_get\_int8\_array** (p. 371)

#### 4.14.4.80 DDS\_DynamicData\_get\_uint8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_get_uint8_seq (
    const DDS_DynamicData * self,
    struct DDS_UInt8Seq * seq,
    const char * member_name,
    DDS_DynamicDataMemberId member_id )
```

Get a copy of the given sequence member.

The provided sequence will be automatically resized as necessary.

This method will perform an automatic conversion from an array of **DDS\_UInt8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_iscdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>seq</i>	<< <i>out</i> >> (p. 818) A sequence, into which the elements will be copied.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).

Returns

One of the **Standard Return Codes** (p. 1024). If the member is optional and not set, this operation will return **DDS\_RETCODE\_NO\_DATA** (p. 1025). This operation may also return **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**DDS\_DynamicData\_set\_uint8\_seq** (p. 424)

**DDS\_DynamicData\_get\_uint8\_array** (p. 372)

#### 4.14.4.81 DDS\_DynamicData\_set\_long()

```
DDS_ReturnCode_t DDS_DynamicData_set_long (
    DDS_DynamicData * self,
```

```

const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Long value )

```

Set the value of the given field, which is of type **DDS\_Long** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_long** (p. 343)

#### 4.14.4.82 DDS\_DynamicData\_set\_short()

```

DDS_ReturnCode_t DDS_DynamicData_set_short (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Short value )

```

Set the value of the given field, which is of type **DDS\_Short** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_short** (p. 344)

## 4.14.4.83 DDS\_DynamicData\_set\_ulong()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulong (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong value )
```

Set the value of the given field, which is of type **DDS\_UnsignedLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

See also

**DDS\_DynamicData\_get\_ulong** (p. 345)

#### 4.14.4.84 DDS\_DynamicData\_set\_ushort()

```
DDS_ReturnCode_t DDS_DynamicData_set_ushort (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedShort value )
```

Set the value of the given field, which is of type **DDS\_UnsignedShort** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

See also

**DDS\_DynamicData\_get\_ushort** (p. 346)

#### 4.14.4.85 DDS\_DynamicData\_set\_float()

```
DDS_ReturnCode_t DDS_DynamicData_set_float (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Float value )
```

Set the value of the given field, which is of type **DDS\_Float** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_float** (p. 346)

#### 4.14.4.86 DDS\_DynamicData\_set\_double()

```
DDS_ReturnCode_t DDS_DynamicData_set_double (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Double value )
```

Set the value of the given field, which is of type **DDS\_Double** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_double** (p. 347)

## 4.14.4.87 DDS\_DynamicData\_set\_boolean()

```
DDS_ReturnCode_t DDS_DynamicData_set_boolean (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Boolean value )
```

Set the value of the given field, which is of type **DDS\_Boolean** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_boolean** (p. 348)

#### 4.14.4.88 DDS\_DynamicData\_set\_char()

```
DDS_ReturnCode_t DDS_DynamicData_set_char (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Char value )
```

Set the value of the given field, which is of type **DDS\_Char** (p. 1004).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

##### MT Safety:

UNSAFE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

##### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

##### See also

**DDS\_DynamicData\_get\_char** (p. 349)

#### 4.14.4.89 DDS\_DynamicData\_set\_octet()

```
DDS_ReturnCode_t DDS_DynamicData_set_octet (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Octet value )
```

Set the value of the given field, which is of type **DDS\_Octet** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

##### MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_octet** (p. 350)

## 4.14.4.90 DDS\_DynamicData\_set\_longlong()

```
DDS_ReturnCode_t DDS_DynamicData_set_longlong (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_LongLong value )
```

Set the value of the given field, which is of type **DDS\_LongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_longlong** (p. 350)

4.14.4.91 **DDS\_DynamicData\_set\_ulonglong()**

```
DDS_ReturnCode_t DDS_DynamicData_set_ulonglong (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLongLong value )
```

Set the value of the given field, which is of type **DDS\_UnsignedLongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## See also

**DDS\_DynamicData\_get\_ulonglong** (p. 351)

4.14.4.92 **DDS\_DynamicData\_set\_longdouble()**

```
DDS_ReturnCode_t DDS_DynamicData_set_longdouble (
    DDS_DynamicData * self,
```

```
const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_LongDouble value )
```

Set the value of the given field, which is of type **DDS\_LongDouble** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_longdouble** (p. 352)

#### 4.14.4.93 DDS\_DynamicData\_set\_wchar()

```
DDS_ReturnCode_t DDS_DynamicData_set_wchar (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Wchar value )
```

Set the value of the given field, which is of type **DDS\_Wchar** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_char** (p. 349)

## 4.14.4.94 DDS\_DynamicData\_set\_int8()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8 (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_Int8 value )
```

Set the value of the given field, which is of type **DDS\_Int8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_int8** (p. 354)

4.14.4.95 **DDS\_DynamicData\_set\_uint8()**

```
DDS_ReturnCode_t DDS_DynamicData_set_uint8 (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UInt8 value )
```

Set the value of the given field, which is of type **DDS\_UInt8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## See also

**DDS\_DynamicData\_get\_uint8** (p. 354)

4.14.4.96 **DDS\_DynamicData\_set\_string()**

```
DDS_ReturnCode_t DDS_DynamicData_set_string (
    DDS_DynamicData * self,
```

```
const char * member_name,
    DDS_DynamicDataMemberId member_id,
const char * value )
```

Set the value of the given field of type char\*.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_string** (p. 355)

#### 4.14.4.97 DDS\_DynamicData\_set\_wstring()

```
DDS_ReturnCode_t DDS_DynamicData_set_wstring (
    DDS_DynamicData * self,
const char * member_name,
    DDS_DynamicDataMemberId member_id,
const DDS_Wchar * value )
```

Set the value of the given field of type **DDS\_Wchar** (p. 1005)\*.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The value to which to set the member.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_wstring** (p. 356)

## 4.14.4.98 DDS\_DynamicData\_set\_complex\_member()

```
DDS_ReturnCode_t DDS_DynamicData_set_complex_member (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const DDS_DynamicData * value )
```

Copy the state of the given **DDS\_DynamicData** (p. 1523) object into a member of this object.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

The member may be of type kind **DDS\_TK\_ARRAY** (p. 239), **DDS\_TK\_SEQUENCE** (p. 239), **DDS\_TK\_STRUCT** (p. 239), **DDS\_TK\_VALUE** (p. 239), or **DDS\_TK\_UNION** (p. 239). It may be specified by name or by ID.

**Example: Copying Data**

This method can be used with **DDS\_DynamicData\_bind\_complex\_member** (p. 334) to copy from one **DDS\_DynamicData** (p. 1523) object to another efficiently. Suppose the following data structure:

```
struct Bar {
    short theShort;
};

struct Foo {
    Bar theBar;
};
```

Suppose we have two instances of `Foo` (p. 1841), `foo_dst` and `foo_src`, and we want to replace the contents of `foo_dst.theBar` with the contents of `foo_src.theBar`. The following example shows how to do this (error handling has been omitted for the sake of brevity).

```
struct DDS_DynamicData* foo_dst = ...;

struct DDS_DynamicData* foo_src = ...;

struct DDS_DynamicData* bar = DDS_DynamicData_new(NULL, myProperties);

/* Point to the source of the copy: */
DDS_DynamicData_bind_complex_member(
    foo_src,
    bar,
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED);

/* Just one copy: */
DDS_DynamicData_set_complex_member(
    foo_dst,
    "theBar",
    DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED,
    bar);

/* Tear down: */
DDS_DynamicData_unbind_complex_member(foo_src, bar);
free(bar);
```

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) The source <b>DDS_DynamicData</b> (p. 1523) object whose contents will be copied.

#### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

#### See also

**DDS\_DynamicData\_get\_complex\_member** (p. 357)

**DDS\_DynamicData\_bind\_complex\_member** (p. 334)

## 4.14.4.99 DDS\_DynamicData\_set\_long\_array()

```

DDS_ReturnCode_t DDS_DynamicData_set_long_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Long * array )

```

Set the contents of the given array member. The array may contain members of type **DDS\_Long** (p. 1006) or **DDS\_Enum** (p. 1007).

This method will perform an automatic conversion to **DDS\_LongSeq** (p. 1587).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_long\_array** (p. 358)

**DDS\_DynamicData\_set\_long\_seq** (p. 414)

#### 4.14.4.100 DDS\_DynamicData\_set\_short\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_short_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Short * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_ShortSeq** (p. 1741).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_short\_array** (p. 359)

**DDS\_DynamicData\_set\_short\_seq** (p. 414)

#### 4.14.4.101 DDS\_DynamicData\_set\_ulong\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulong_array (
    DDS_DynamicData * self,
```

```

const char * member_name,
      DDS_DynamicDataMemberId member_id,
      DDS_UnsignedLong length,
const   DDS_UnsignedLong * array )

```

Set the contents of the given array member. The array may contain members of type **DDS\_UnsignedLong** (p. 1006) or **DDS\_Enum** (p. 1007).

This method will perform an automatic conversion to **DDS\_UnsignedLongSeq** (p. 1819).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

#### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

#### See also

**DDS\_DynamicData\_get\_ulong\_array** (p. 360)

**DDS\_DynamicData\_set\_ulong\_seq** (p. 415)

#### 4.14.4.102 DDS\_DynamicData\_set\_ushort\_array()

```

DDS_ReturnCode_t DDS_DynamicData_set_ushort_array (
      DDS_DynamicData * self,
      const char * member_name,
      DDS_DynamicDataMemberId member_id,

```

```

    DDS_UnsignedLong length,
    const DDS_UnsignedShort * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_UnsignedShortSeq** (p. 1820).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↵ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_ushort\_array** (p. 361)

**DDS\_DynamicData\_set\_ushort\_seq** (p. 416)

#### 4.14.4.103 DDS\_DynamicData\_set\_float\_array()

```

DDS_ReturnCode_t DDS_DynamicData_set_float_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Float * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_FloatSeq** (p. 1551).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↵ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <code>array</code> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_float\_array** (p. 362)

**DDS\_DynamicData\_set\_float\_seq** (p. 417)

#### 4.14.4.104 DDS\_DynamicData\_set\_double\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_double_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Double * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_DoubleSeq** (p. 1515).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_double\_array** (p. 363)

**DDS\_DynamicData\_set\_double\_seq** (p. 417)

4.14.4.105 **DDS\_DynamicData\_set\_boolean\_array()**

```
DDS_ReturnCode_t DDS_DynamicData_set_boolean_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Boolean * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_BooleanSeq** (p. 1338).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_boolean\_array** (p. 364)

**DDS\_DynamicData\_set\_boolean\_seq** (p. 418)

## 4.14.4.106 DDS\_DynamicData\_set\_char\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_char_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Char * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_CharSeq** (p. 1347).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_char\_array** (p. 365)

**DDS\_DynamicData\_set\_char\_seq** (p. 419)

#### 4.14.4.107 DDS\_DynamicData\_set\_octet\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_octet_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Octet * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_OctetSeq** (p. 1606).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_octet\_array** (p. 366)

**DDS\_DynamicData\_set\_octet\_seq** (p. 420)

## 4.14.4.108 DDS\_DynamicData\_set\_longlong\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_longlong_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_LongLong * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_LongLongSeq** (p. 1586).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_longlong\_array** (p. 367)

**DDS\_DynamicData\_set\_longlong\_seq** (p. 420)

## 4.14.4.109 DDS\_DynamicData\_set\_ulonglong\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulonglong_array (
    DDS_DynamicData * self,
```

```

const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
const DDS_UnsignedLongLong * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_UnsignedLongLongSeq** (p. 1819).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔ PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

#### MT Safety:

UNSAFE.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

#### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

#### See also

**DDS\_DynamicData\_get\_ulonglong\_array** (p. 368)

**DDS\_DynamicData\_set\_ulonglong\_seq** (p. 421)

#### 4.14.4.110 DDS\_DynamicData\_set\_longdouble\_array()

```

DDS_ReturnCode_t DDS_DynamicData_set_longdouble_array (
    DDS_DynamicData * self,
const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
const DDS_LongDouble * array )

```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_LongDoubleSeq** (p. 1586).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_← PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_longdouble\_array** (p. 369)

**DDS\_DynamicData\_set\_longdouble\_seq** (p. 422)

#### 4.14.4.111 DDS\_DynamicData\_set\_wchar\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_wchar_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Wchar * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_WcharSeq** (p. 1826).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_← PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <code>array</code> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_wchar\_array** (p. 370)

**DDS\_DynamicData\_set\_wchar\_seq** (p. 423)

#### 4.14.4.112 DDS\_DynamicData\_set\_int8\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_Int8 * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_Int8Seq** (p. 1562).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_int8\_array** (p. 371)

**DDS\_DynamicData\_set\_int8\_seq** (p. 423)

## 4.14.4.113 DDS\_DynamicData\_set\_uint8\_array()

```
DDS_ReturnCode_t DDS_DynamicData_set_uint8_array (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    DDS_UnsignedLong length,
    const DDS_UInt8 * array )
```

Set the contents of the given array member.

This method will perform an automatic conversion to **DDS\_UInt8Seq** (p. 1817).

If the destination array is insufficiently long to store the data, this operation will fail without copying anything.

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or
Generated by Doxygen	<b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>length</i>	<< <i>in</i> >> (p. 818) The length of <i>array</i> .
<i>array</i>	<< <i>in</i> >> (p. 818) The elements to copy.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_uint8\_array** (p. 372)

**DDS\_DynamicData\_set\_uint8\_seq** (p. 424)

## 4.14.4.114 DDS\_DynamicData\_set\_long\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_long_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_LongSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Long** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_long\_seq** (p. 373)

**DDS\_DynamicData\_set\_long\_array** (p. 400)

## 4.14.4.115 DDS\_DynamicData\_set\_short\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_short_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_ShortSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Short** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_short\_seq** (p. 374)

**DDS\_DynamicData\_set\_short\_array** (p. 401)

## 4.14.4.116 DDS\_DynamicData\_set\_ulong\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulong_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_UnsignedLongSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UnsignedLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_ulong\_seq** (p. 375)**DDS\_DynamicData\_set\_ulong\_array** (p. 402)**4.14.4.117 DDS\_DynamicData\_set\_ushort\_seq()**

```

DDS_ReturnCode_t DDS_DynamicData_set_ushort_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_UnsignedShortSeq * value )

```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UnsignedShort** (p. 1005).This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_ushort\_seq** (p. 376)

**DDS\_DynamicData\_set\_ushort\_array** (p. 403)

## 4.14.4.118 DDS\_DynamicData\_set\_float\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_float_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_FloatSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Float** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_float\_seq** (p. 377)

**DDS\_DynamicData\_set\_float\_array** (p. 404)

#### 4.14.4.119 DDS\_DynamicData\_set\_double\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_double_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_DoubleSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Double** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_double\_seq** (p. 378)

**DDS\_DynamicData\_set\_double\_array** (p. 405)

#### 4.14.4.120 DDS\_DynamicData\_set\_boolean\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_boolean_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_BooleanSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Boolean** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_boolean\_seq** (p. 379)

**DDS\_DynamicData\_set\_boolean\_array** (p. 406)

#### 4.14.4.121 DDS\_DynamicData\_set\_char\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_char_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_CharSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Char** (p. 1004).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or
Generated by Doxygen	<b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_char\_seq** (p. 379)

**DDS\_DynamicData\_set\_char\_array** (p. 407)

## 4.14.4.122 DDS\_DynamicData\_set\_octet\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_octet_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_OctetSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Octet** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_octet\_seq** (p. 380)

**DDS\_DynamicData\_set\_octet\_array** (p. 408)

## 4.14.4.123 DDS\_DynamicData\_set\_longlong\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_longlong_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_LongLongSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_LongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_longlong\_seq** (p. 381)

**DDS\_DynamicData\_set\_longlong\_array** (p. 408)

## 4.14.4.124 DDS\_DynamicData\_set\_ulonglong\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_ulonglong_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_UnsignedLongLongSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UnsignedLongLong** (p. 1006).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_ulonglong\_seq** (p. 382)

**DDS\_DynamicData\_set\_ulonglong\_array** (p. 409)

#### 4.14.4.125 DDS\_DynamicData\_set\_longdouble\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_longdouble_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_LongDoubleSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_LongDouble** (p. 1007).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_longdouble\_seq** (p. 383)

**DDS\_DynamicData\_set\_longdouble\_array** (p. 410)

## 4.14.4.126 DDS\_DynamicData\_set\_wchar\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_wchar_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_WcharSeq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Wchar** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

## MT Safety:

UNSAFE.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

## See also

**DDS\_DynamicData\_get\_wchar\_seq** (p. 384)

**DDS\_DynamicData\_set\_wchar\_array** (p. 411)

#### 4.14.4.127 DDS\_DynamicData\_set\_int8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_int8_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_Int8Seq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_Int8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_int8\_seq** (p. 385)

**DDS\_DynamicData\_set\_int8\_array** (p. 412)

#### 4.14.4.128 DDS\_DynamicData\_set\_uint8\_seq()

```
DDS_ReturnCode_t DDS_DynamicData_set_uint8_seq (
    DDS_DynamicData * self,
    const char * member_name,
    DDS_DynamicDataMemberId member_id,
    const struct DDS_UInt8Seq * value )
```

Set the contents of the given sequence member.

This method will perform an automatic conversion to an array of **DDS\_UInt8** (p. 1005).

This API is not supported when the DynamicData object is in CDR format and will fail with **DDS\_RETCODE\_↔PRECONDITION\_NOT\_MET** (p. 1025). See **DDS\_DynamicData\_is\_cdr** (p. 328) for more information.

MT Safety:

UNSAFE.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>member_name</i>	<< <i>in</i> >> (p. 818) The name of the member or NULL to look up the member by its ID.
<i>member_id</i>	<< <i>in</i> >> (p. 818) The ID of the member or <b>DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED</b> (p. 319) to look up by name. See <b>Member Names and IDs</b> (p. 1524).
<i>value</i>	<< <i>in</i> >> (p. 818) A sequence, from which the elements will be copied.

Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025)

See also

**DDS\_DynamicData\_get\_uint8\_seq** (p. 385)

**DDS\_DynamicData\_set\_uint8\_array** (p. 413)

#### 4.14.4.129 DDS\_DynamicDataSupport\_new()

```
struct DDS_DynamicDataSupport * DDS_DynamicDataSupport_new (
    const DDS_TypeCode * type,
    const struct DDS_DynamicDataSupportProperty_t * props )
```

Construct a new **DDS\_DynamicDataSupport** (p. 321) object.

This step is usually followed by type registration.

The **DDS\_TypeCode** (p. 1806) object that is passed to this constructor is cloned and stored internally; no pointer is retained to the object passed in. It is therefore safe to delete the **DDS\_TypeCode** (p. 1806) after this method returns.

Parameters

<i>type</i>	The <b>DDS_TypeCode</b> (p. 1806) that describes the members of this type. The new object will contain a <i>copy</i> of this <b>DDS_TypeCode</b> (p. 1806); you may delete the argument after this constructor returns.
<i>props</i>	Policies that describe how to manage the memory and other properties of the data samples created by this factory. In most cases, the default values will be appropriate; see <b>DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT</b> (p. 430).

See also

**DDS\_DynamicDataTypeSupport\_register\_type** (p. 426)

**DDS\_DynamicDataTypeSupport\_delete** (p. 426)

Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.14.4.130 DDS\_DynamicDataTypeSupport\_delete()

```
void DDS_DynamicDataTypeSupport_delete (
    struct DDS_DynamicDataTypeSupport * self )
```

Delete a **DDS\_DynamicDataTypeSupport** (p. 321) object.

A **DDS\_DynamicDataTypeSupport** (p. 321) cannot be deleted while it is still in use. For each **DDS\_DomainParticipant** (p. 72) with which the **DDS\_DynamicDataTypeSupport** (p. 321) is registered, either the type must be unregistered or the participant must be deleted.

See also

**DDS\_DynamicDataTypeSupport\_unregister\_type** (p. 426)

**DDS\_DynamicDataTypeSupport\_new** (p. 425)

#### 4.14.4.131 DDS\_DynamicDataTypeSupport\_register\_type()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_register_type (
    struct DDS_DynamicDataTypeSupport * self,
    DDS_DomainParticipant * participant,
    const char * type_name )
```

Associate the **DDS\_TypeCode** (p. 1806) with the given **DDS\_DomainParticipant** (p. 72) under the given logical name.

Once a type has been registered, it can be referenced by name when creating a topic. Statically and dynamically defined types behave the same way in this respect.

If the type cannot be registered, this function will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

See also

**FooTypeSupport\_register\_type** (p. 217)

**DDS\_DomainParticipant\_create\_topic** (p. 112)

**DDS\_DynamicDataTypeSupport\_unregister\_type** (p. 426)

**4.14.4.132 DDS\_DynamicDataTypeSupport\_unregister\_type()**

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_unregister_type (
    struct DDS_DynamicDataTypeSupport * self,
    DDS_DomainParticipant * participant,
    const char * type_name )
```

Remove the definition of this type from the **DDS\_DomainParticipant** (p. 72).

This operation is optional; all types are automatically unregistered when a **DDS\_DomainParticipant** (p. 72) is deleted. Most application will not need to manually unregister types.

A type cannot be unregistered while it is still in use; that is, while any **DDS\_Topic** (p. 172) is still referring to it.

If the type cannot be unregistered, this function will fail with **DDS\_RETCODE\_ERROR** (p. 1025) or **DDS\_RETCODE\_↔\_BAD\_PARAMETER** (p. 1025).

See also

**FooTypeSupport\_unregister\_type** (p. 218)

**DDS\_DynamicDataTypeSupport\_register\_type** (p. 426)

**4.14.4.133 DDS\_DynamicDataTypeSupport\_get\_type\_name()**

```
const char * DDS_DynamicDataTypeSupport_get_type_name (
    const struct DDS_DynamicDataTypeSupport * self )
```

Get the default name of this type.

The **DDS\_TypeCode** (p. 1806) that is wrapped by this **DDS\_DynamicDataTypeSupport** (p. 321) includes a name; this operation returns that name.

This operation is useful when registering a type, because in most cases it is not necessary for the physical and logical names of the type to be different.

```
DDS_DynamicDataTypeSupport_register_type(
    myTypeSupport,
    myParticipant,
    DDS_DynamicDataTypeSupport_get_type_name(myTypeSupport));
```

See also

**FooTypeSupport\_get\_type\_name** (p. 216)

#### 4.14.4.134 DDS\_DynamicDataTypeSupport\_get\_data\_type()

```
const struct DDS_TypeCode * DDS_DynamicDataTypeSupport_get_data_type (
    const struct DDS_DynamicDataTypeSupport * self )
```

Get the **DDS\_TypeCode** (p. 1806) wrapped by this **DDS\_DynamicDataTypeSupport** (p. 321).

#### 4.14.4.135 DDS\_DynamicDataTypeSupport\_create\_data()

```
DDS_DynamicData * DDS_DynamicDataTypeSupport_create_data (
    struct DDS_DynamicDataTypeSupport * self )
```

Create a new **DDS\_DynamicData** (p. 1523) sample initialized with the **DDS\_TypeCode** (p. 1806) and properties of this **DDS\_DynamicDataTypeSupport** (p. 321).

This method returns a fully initialized object. It is *not* necessary to subsequently call **DDS\_DynamicDataTypeSupport**↔  
**\_initialize\_data** (p. 429).

If initialization fails, this method returns NULL.

You must delete your **DDS\_DynamicData** (p. 1523) object when you are finished with it.

```
struct DDS_DynamicData* sample = DDS_DynamicDataTypeSupport_create_data(
    myTypeSupport);
/* Failure indicated by NULL return result. */
/* Do something... */
DDS_DynamicDataTypeSupport_delete_data(myTypeSupport, sample);
```

See also

**DDS\_DynamicDataTypeSupport\_initialize\_data** (p. 429)

**DDS\_DynamicDataTypeSupport\_delete\_data** (p. 428)

**FooTypeSupport\_create\_data** (p. 210)

**DDS\_DynamicData\_new** (p. 322)

**DDS\_DynamicDataTypeProperty\_t::data** (p. 1536)

#### 4.14.4.136 DDS\_DynamicDataTypeSupport\_delete\_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_delete_data (
    struct DDS_DynamicDataTypeSupport * self,
    DDS_DynamicData * a_data )
```

Finalize and deallocate the **DDS\_DynamicData** (p. 1523) sample.

This method fully finalizes the object. It is *not* necessary to previously call **DDS\_DynamicDataTypeSupport**↔  
**\_data** (p. 429).

See also

**DDS\_DynamicDataTypeSupport\_finalize\_data** (p. 429)

**FooTypeSupport\_delete\_data** (p. 212)

**DDS\_DynamicDataTypeSupport\_create\_data** (p. 428)

**4.14.4.137 DDS\_DynamicDataTypeSupport\_print\_data()**

```
void DDS_DynamicDataTypeSupport_print_data (
    const struct DDS_DynamicDataTypeSupport * self,
    const DDS_DynamicData * a_data )
```

Print a string representation of the given sample to the given file.

This method is equivalent to **DDS\_DynamicData\_print** (p. 329).

See also

**DDS\_DynamicData\_print** (p. 329)

**4.14.4.138 DDS\_DynamicDataTypeSupport\_copy\_data()**

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_copy_data (
    const struct DDS_DynamicDataTypeSupport * self,
    DDS_DynamicData * dest,
    const DDS_DynamicData * source )
```

Deeply copy the given data samples.

**4.14.4.139 DDS\_DynamicDataTypeSupport\_initialize\_data()**

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_initialize_data (
    const struct DDS_DynamicDataTypeSupport * self,
    DDS_DynamicData * a_data )
```

Initialize a **DDS\_DynamicData** (p. 1523) object to a valid empty state.

Use **DDS\_DynamicDataTypeSupport\_create\_data** (p. 428) to allocate a new **DDS\_DynamicData** (p. 1523) object on the heap. Use this method to initialize a **DDS\_DynamicData** (p. 1523) object that is stored deeply, either within another object or on the stack.

When you're finished with the object, dispose of it with **DDS\_DynamicDataTypeSupport\_finalize\_data** (p. 429).

```
struct DDS_DynamicData sample;

DDS_Boolean succeeded = DDS_DynamicDataTypeSupport_initialize_data(
    myTypeSupport, &sample);

/* Handle failure... */

/* Do something... */

DDS_DynamicDataTypeSupport_finalize_data(myTypeSupport, &sample);
```

See also

**FooTypeSupport\_initialize\_data** (p. 214)

**DDS\_DynamicDataTypeSupport\_finalize\_data** (p. 429)

**DDS\_DynamicDataTypeSupport\_create\_data** (p. 428)

#### 4.14.4.140 DDS\_DynamicDataTypeSupport\_finalize\_data()

```
DDS_ReturnCode_t DDS_DynamicDataTypeSupport_finalize_data (
    const struct DDS_DynamicDataTypeSupport * self,
    DDS_DynamicData * a_data )
```

Clean up the internal state of this object to get it ready for deallocation, but don't deallocate the pointer.

Use **DDS\_DynamicDataTypeSupport\_delete\_data** (p. 428) to clean up a **DDS\_DynamicData** (p. 1523) object on the heap. Use this method to clean up a **DDS\_DynamicData** (p. 1523) object that is stored deeply, either within another object or on the stack.

### 4.14.5 Variable Documentation

#### 4.14.5.1 DDS\_DYNAMIC\_DATA\_PROPERTY\_DEFAULT

```
const struct DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 1534).

Pass this object instead of your own **DDS\_DynamicDataProperty\_t** (p. 1534) object to use the default property values:

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(
    myTypeCode,
    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

- DDS\_DynamicDataProperty\_t** (p. 1534)

Examples

**HelloWorldPlugin.c.**

#### 4.14.5.2 DDS\_DYNAMIC\_DATA\_TYPE\_PROPERTY\_DEFAULT

```
const struct DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataTypeProperty\_t** (p. 1536).

Pass this object instead of your own **DDS\_DynamicDataTypeProperty\_t** (p. 1536) object to use the default property values:

```
struct DDS_DynamicDataTypeSupport* support = DDS_DynamicDataTypeSupport_new(
    myTypeCode,
    &DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT);
```

See also

**DDS\_DynamicDataTypeProperty\_t** (p. 1536)

#### 4.14.5.3 DDS\_DYNAMIC\_DATA\_JSON\_PARSER\_PROPERTIES\_DEFAULT

```
struct DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT
[extern]
```

Sentinel constant indicating default values for **DDS\_DynamicDataProperty\_t** (p. 1534).

Pass this object instead of your own **DDS\_DynamicDataProperty\_t** (p. 1534) object to use the default property values:

```
struct DDS_DynamicData* sample = DDS_DynamicData_new(
    myTypeCode,
    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

## 4.15 Publication Module

Contains the **DDS\_FlowController** (p. 551), **DDS\_Publisher** (p. 436), and **DDS\_DataWriter** (p. 478) classes as well as the **DDS\_PublisherListener** (p. 1660) and **DDS\_DataWriterListener** (p. 1417) interfaces, and more generally, all that is needed on the publication side.

### Modules

- **Publishers**
  - DDS\_Publisher* (p. 436) entity and associated elements
- **Data Writers**
  - DDS\_DataWriter* (p. 478) entity and associated elements
- **Flow Controllers**
  - <<extension>> (p. 817) *DDS\_FlowController* (p. 551) and associated elements
- **Multi-channel DataWriters**
  - APIs related to Multi-channel DataWriters.*

### 4.15.1 Detailed Description

Contains the **DDS\_FlowController** (p. 551), **DDS\_Publisher** (p. 436), and **DDS\_DataWriter** (p. 478) classes as well as the **DDS\_PublisherListener** (p. 1660) and **DDS\_DataWriterListener** (p. 1417) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

## 4.16 Publishers

**DDS\_Publisher** (p. 436) entity and associated elements

### Data Structures

- struct **DDS\_PublisherSeq**  
*Declares IDL `sequence` < **DDS\_Publisher** (p. 436) > .*
- struct **DDS\_PublisherQos**  
*QoS policies supported by a **DDS\_Publisher** (p. 436) entity.*
- struct **DDS\_PublisherListener**  
*<< **interface**>> (p. 818) **DDS\_Listener** (p. 1569) for **DDS\_Publisher** (p. 436) status.*

### Macros

- #define **DDS\_PublisherQos\_INITIALIZER**  
*Initializer for new QoS instances.*
- #define **DDS\_PublisherListener\_INITIALIZER**  
*Initializer for new **DDS\_PublisherListener** (p. 1660).*

### Typedefs

- typedef struct DDS\_PublisherImpl **DDS\_Publisher**  
*<< **interface**>> (p. 818) A publisher is the object responsible for the actual dissemination of publications.*

## Functions

- **DDS\_Boolean DDS\_PublisherQos\_equals** (const struct **DDS\_PublisherQos** \*self, const struct **DDS\_PublisherQos** \*other)  
*Compares two **DDS\_PublisherQos** (p. 1661) for equality.*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_print** (const struct **DDS\_PublisherQos** \*self)  
*Prints this **DDS\_PublisherQos** (p. 1661) to stdout.*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_to\_string** (const struct **DDS\_PublisherQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1661).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_to\_string\_w\_params** (const struct **DDS\_PublisherQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_PublisherQos** \*base, const struct **DDS\_QosPrintFormat** \*format)  
*Obtains a string representation of this **DDS\_PublisherQos** (p. 1661).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_initialize** (struct **DDS\_PublisherQos** \*self)  
*Initializer for new QoS instances.*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_finalize** (struct **DDS\_PublisherQos** \*self)  
*Free any dynamic memory allocated by the policies in this **DDS\_PublisherQos** (p. 1661).*
- **DDS\_ReturnCode\_t DDS\_PublisherQos\_copy** (struct **DDS\_PublisherQos** \*self, const struct **DDS\_PublisherQos** \*source)  
*Copy the contents of the given QoS into this QoS.*
- **DDS\_Entity \* DDS\_Publisher\_as\_entity** ( **DDS\_Publisher** \*publisher)  
*Access a **DDS\_Publisher** (p. 436)'s supertype instance.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_get\_default\_datawriter\_qos** ( **DDS\_Publisher** \*self, struct **DDS\_DataWriterQos** \*qos)  
*Copies the default **DDS\_DataWriterQos** (p. 1438) values into the provided **DDS\_DataWriterQos** (p. 1438) instance.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_default\_datawriter\_qos** ( **DDS\_Publisher** \*self, const struct **DDS\_DataWriterQos** \*qos)  
*Sets the default **DDS\_DataWriterQos** (p. 1438) values for this publisher.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_default\_datawriter\_qos\_with\_profile** ( **DDS\_Publisher** \*self, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Set the default **DDS\_DataWriterQos** (p. 1438) values for this publisher based on the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_default\_profile** ( **DDS\_Publisher** \*self, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Sets the default XML profile for a **DDS\_Publisher** (p. 436).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_default\_library** ( **DDS\_Publisher** \*self, const char \*library\_name)  
*<<extension>> (p. 817) Sets the default XML library for a **DDS\_Publisher** (p. 436).*
- **DDS\_DataWriter \* DDS\_Publisher\_create\_datawriter** ( **DDS\_Publisher** \*self, **DDS\_Topic** \*topic, const struct **DDS\_DataWriterQos** \*qos, const struct **DDS\_DataWriterListener** \*listener, **DDS\_StatusMask** mask)  
*Creates a **DDS\_DataWriter** (p. 478) that will be attached and belong to the **DDS\_Publisher** (p. 436).*
- **DDS\_DataWriter \* DDS\_Publisher\_create\_datawriter\_with\_profile** ( **DDS\_Publisher** \*self, **DDS\_Topic** \*topic, const char \*library\_name, const char \*profile\_name, const struct **DDS\_DataWriterListener** \*listener, **DDS\_StatusMask** mask)  
*<<extension>> (p. 817) Creates a **DDS\_DataWriter** (p. 478) object using the **DDS\_DataWriterQos** (p. 1438) associated with the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_delete\_datawriter** ( **DDS\_Publisher** \*self, **DDS\_DataWriter** \*a\_datawriter)  
*Deletes a **DDS\_DataWriter** (p. 478) that belongs to the **DDS\_Publisher** (p. 436).*

- **DDS\_DataWriter \* DDS\_Publisher\_lookup\_datawriter** ( **DDS\_Publisher \*self**, const char \*topic\_name)  
*Retrieves the **DDS\_DataWriter** (p. 478) for a specific **DDS\_Topic** (p. 172).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_suspend\_publications** ( **DDS\_Publisher \*self**)  
*Indicates to RTI Connxt that the application is about to make multiple modifications using **DDS\_DataWriter** (p. 478) objects belonging to the **DDS\_Publisher** (p. 436).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_resume\_publications** ( **DDS\_Publisher \*self**)  
*Indicates to RTI Connxt that the application has completed the multiple changes initiated by the previous **DDS\_Publisher\_suspend\_publications** (p. 450).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_begin\_coherent\_changes** ( **DDS\_Publisher \*self**)  
*Indicates that the application will begin a coherent set of modifications using **DDS\_DataWriter** (p. 478) objects attached to the **DDS\_Publisher** (p. 436).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_end\_coherent\_changes** ( **DDS\_Publisher \*self**)  
*Terminates the coherent set initiated by the matching call to **DDS\_Publisher\_begin\_coherent\_changes** (p. 452).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_get\_all\_datawriters** ( **DDS\_Publisher \*self**, struct **DDS\_DataWriterSeq \*writers**)  
*Retrieve all the **DataWriters** created from this **Publisher**.*
- **DDS\_DomainParticipant \* DDS\_Publisher\_get\_participant** ( **DDS\_Publisher \*self**)  
*Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Publisher** (p. 436) belongs.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_delete\_contained\_entities** ( **DDS\_Publisher \*self**)  
*Deletes all the entities that were created by means of the "create" operation on the **DDS\_Publisher** (p. 436).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_copy\_from\_topic\_qos** ( **DDS\_Publisher \*self**, struct **DDS\_DataWriterQos \*a\_datawriter\_qos**, const struct **DDS\_TopicQos \*a\_topic\_qos**)  
*Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataWriterQos** (p. 1438).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_qos** ( **DDS\_Publisher \*self**, const struct **DDS\_PublisherQos \*qos**)  
*Sets the publisher QoS.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_qos\_with\_profile** ( **DDS\_Publisher \*self**, const char \*library\_name, const char \*profile\_name)  
*<<extension>> (p. 817) Change the QoS of this publisher using the input XML QoS profile.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_get\_qos** ( **DDS\_Publisher \*self**, struct **DDS\_PublisherQos \*qos**)  
*Gets the publisher QoS.*
- const char \* **DDS\_Publisher\_get\_default\_library** ( **DDS\_Publisher \*self**)  
*<<extension>> (p. 817) Gets the default XML library associated with a **DDS\_Publisher** (p. 436).*
- const char \* **DDS\_Publisher\_get\_default\_profile** ( **DDS\_Publisher \*self**)  
*<<extension>> (p. 817) Gets the default XML profile associated with a **DDS\_Publisher** (p. 436).*
- const char \* **DDS\_Publisher\_get\_default\_profile\_library** ( **DDS\_Publisher \*self**)  
*<<extension>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_Publisher** (p. 436).*
- **DDS\_ReturnCode\_t DDS\_Publisher\_set\_listener** ( **DDS\_Publisher \*self**, const struct **DDS\_PublisherListener \*l**, **DDS\_StatusMask** mask)  
*Sets the publisher listener.*
- struct **DDS\_PublisherListener** **DDS\_Publisher\_get\_listener** ( **DDS\_Publisher \*self**)  
*Get the publisher listener.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_get\_listenerX** ( **DDS\_Publisher \*self**, struct **DDS\_PublisherListener \*listener**)  
*<<extension>> (p. 817) Get the publisher listener.*
- **DDS\_ReturnCode\_t DDS\_Publisher\_wait\_for\_acknowledgments** ( **DDS\_Publisher \*self**, const struct **DDS\_Duration\_t \*max\_wait**)  
*Blocks the calling thread until all data written by the Publisher's reliable **DataWriters** is acknowledged, or until timeout expires.*

- **DDS\_ReturnCode\_t DDS\_Publisher\_wait\_for\_asynchronous\_publishing** ( **DDS\_Publisher** \*self, const struct **DDS\_Duration\_t** \*max\_wait)  
 <<extension>> (p. 817) Blocks the calling thread until asynchronous sending is complete.
- **DDS\_DataWriter \* DDS\_Publisher\_lookup\_datawriter\_by\_name** ( **DDS\_Publisher** \*self, const char \*datawriter\_name)  
 <<extension>> (p. 817) Retrieves a **DDS\_DataWriter** (p. 478) contained within the **DDS\_Publisher** (p. 436) the **DDS\_DataWriter** (p. 478) entity name.

## Variables

- const struct **DDS\_DataWriterQos \* DDS\_DATAWRITER\_QOS\_PRINT\_ALL**  
 Special value which can be supplied to **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527) indicating that all of the QoS should be printed.
- const struct **DDS\_DataWriterQos DDS\_DATAWRITER\_QOS\_DEFAULT**  
 Special value for creating **DDS\_DataWriter** (p. 478) with default QoS.
- const struct **DDS\_DataWriterQos DDS\_DATAWRITER\_QOS\_USE\_TOPIC\_QOS**  
 Special value for creating **DDS\_DataWriter** (p. 478) with a combination of the default **DDS\_DataWriterQos** (p. 1438) and the **DDS\_TopicQos** (p. 1778).

### 4.16.1 Detailed Description

**DDS\_Publisher** (p. 436) entity and associated elements

### 4.16.2 Macro Definition Documentation

#### 4.16.2.1 DDS\_PublisherQos\_INITIALIZER

```
#define DDS_PublisherQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_PublisherQos** (p. 1661) instance stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_PublisherQos myQos = DDS_PublisherQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84) or **DDS\_Publisher\_get\_qos** (p. 457); one of those should be called subsequently to setting the QoS of a new or existing entity:

```
struct DDS_PublisherQos myQos = DDS_PublisherQos_INITIALIZER;
```

```
DDS_DomainParticipant_get_default_publisher_qos(myParticipant, &myQos);
```

```
DDS_Publisher_set_qos(myPub, &myQos);
```

```
DDS_PublisherQos_finalize(&myQos);
```

See also

**DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84)

**DDS\_PublisherQos\_finalize** (p. 440)

### 4.16.2.2 DDS\_PublisherListener\_INITIALIZER

```
#define DDS_PublisherListener_INITIALIZER
```

Initializer for new **DDS\_PublisherListener** (p. 1660).

All the new **DDS\_PublisherListener** (p. 1660) instances allocated in the stack should be initialized to this value. No memory is allocated.

```
struct DDS_PublisherListener listener = DDS_PublisherListener_INITIALIZER;

/* initialize listener functions */

listener.as_datawriterlistener.on_offered_deadline_missed = ....;

DDS_Publisher_set_listener(myPublisher, &listener, mask);
```

See also

- DDS\_Publisher\_set\_listener** (p. 459)
- DDS\_PublisherListener** (p. 1660)
- Operations Allowed in Listener Callbacks** (p. 1571)

## 4.16.3 Typedef Documentation

### 4.16.3.1 DDS\_Publisher

```
typedef struct DDS_PublisherImpl DDS_Publisher
```

<<*interface*>> (p. 818) A publisher is the object responsible for the actual dissemination of publications.

QoS:

- DDS\_PublisherQos** (p. 1661)

Listener:

- DDS\_PublisherListener** (p. 1660)

A publisher acts on the behalf of one or several **DDS\_DataWriter** (p. 478) objects that belong to it. When it is informed of a change to the data associated with one of its **DDS\_DataWriter** (p. 478) objects, it decides when it is appropriate to actually send the data-update message. In making this decision, it considers any extra information that goes with the data (timestamp, writer, etc.) as well as the QoS of the **DDS\_Publisher** (p. 436) and the **DDS\_DataWriter** (p. 478).

The following operations may be called even if the **DDS\_Publisher** (p. 436) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) if called on a disabled **DDS\_Publisher** (p. 436):

- **DDS\_Entity\_enable** (p. 1163),

- `DDS_Publisher_set_qos` (p. 455), `DDS_Publisher_get_qos` (p. 457) , `DDS_Publisher_set_qos_with_profile` (p. 456)
- `DDS_Publisher_set_listener` (p. 459), `DDS_Publisher_get_listener` (p. 459),
- `DDS_Entity_get_statuscondition` (p. 1164), `DDS_Entity_get_status_changes` (p. 1164)
- `DDS_Publisher_create_datawriter` (p. 446), `DDS_Publisher_create_datawriter_with_profile` (p. 448), `DDS_Publisher_delete_contained_entities` (p. 454), `DDS_Publisher_delete_datawriter` (p. 449),
- `DDS_Publisher_set_default_datawriter_qos` (p. 443), `DDS_Publisher_set_default_datawriter_qos_with_profile` (p. 443), `DDS_Publisher_get_default_datawriter_qos` (p. 442), `DDS_Publisher_wait_for_acknowledgments` (p. 460), `DDS_Publisher_set_default_library` (p. 445), `DDS_Publisher_set_default_profile` (p. 444),

See also

[Operations Allowed in Listener Callbacks](#) (p. 1571)

## 4.16.4 Function Documentation

### 4.16.4.1 `DDS_PublisherQos_equals()`

```
DDS_Boolean DDS_PublisherQos_equals (
    const struct DDS_PublisherQos * self,
    const struct DDS_PublisherQos * other )
```

Compares two `DDS_PublisherQos` (p. 1661) for equality.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This PublisherQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other PublisherQos to be compared with this PublisherQos.

Returns

`DDS_BOOLEAN_TRUE` (p. 1004) if the two Qos objects are equal or `DDS_BOOLEAN_FALSE` (p. 1004) otherwise.

### 4.16.4.2 `DDS_PublisherQos_print()`

```
DDS_ReturnCode_t DDS_PublisherQos_print (
    const struct DDS_PublisherQos * self )
```

Prints this **DDS\_PublisherQos** (p. 1661) to stdout.

Only the differences between this **DDS\_PublisherQos** (p. 1661) and the documented default are printed. If you wish to print everything regardless, see **DDS\_PublisherQos\_to\_string\_w\_params** (p. 439). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

### 4.16.4.3 DDS\_PublisherQos\_to\_string()

```
DDS_ReturnCode_t DDS_PublisherQos_to_string (
    const struct DDS_PublisherQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1661).

Only the differences between this **DDS\_PublisherQos** (p. 1661) and the documented default are printed to `idref←_PublisherQose` string. If you wish to print everything regardless, see **DDS\_PublisherQos\_to\_string\_w\_params** (p. 439). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_PublisherQos** (p. 1661) is written to the buffer.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1661). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

#### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

See also

**DDS\_PublisherQos\_to\_string\_w\_params** (p. 439)

#### 4.16.4.4 DDS\_PublisherQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_PublisherQos_to_string_w_params (
    const struct DDS_PublisherQos * self,
    char * string,
    DDS_UnsignedLong * string_size,
    const struct DDS_PublisherQos * base,
    const struct DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS\_PublisherQos** (p. 1661).

Only the differences between this **DDS\_PublisherQos** (p. 1661) and the **DDS\_PublisherQos** (p. 1661) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_PUBLISHER\_QOS\_PRINT\_ALL** (p. 160) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_PublisherQos** (p. 1661) is written to the buffer.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_PublisherQos</b> (p. 1661). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_PublisherQos</b> (p. 1661) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

##### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.16.4.5 DDS\_PublisherQos\_initialize()

```
DDS_ReturnCode_t DDS_PublisherQos_initialize (
    struct DDS_PublisherQos * self )
```

Initializer for new QoS instances.

New **DDS\_PublisherQos** (p. 1661) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_Publisher\_get\_qos** (p. 457) or **DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS\_PublisherQos\_finalize** (p. 440) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_PublisherQos *myQos = malloc(sizeof(struct DDS_PublisherQos));
DDS_PublisherQos_initialize(myQos);
DDS_Publisher_get_default_datawriter_qos(myFactory, myQos);
DDS_Publisher_set_qos(myPublisher, myQos);
DDS_PublisherQos_finalize(myQos);
free(myQos);
```

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DomainParticipant\_get\_default\_publisher\_qos** (p. 84)

**DDS\_PublisherQos\_finalize** (p. 440)

#### 4.16.4.6 DDS\_PublisherQos\_finalize()

```
DDS_ReturnCode_t DDS_PublisherQos_finalize (
    struct DDS_PublisherQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS\_PublisherQos** (p. 1661).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PublisherQos\_INITIALIZER** (p. 435)

**DDS\_PublisherQos\_initialize** (p. 439)

## 4.16.4.7 DDS\_PublisherQos\_copy()

```
DDS_ReturnCode_t DDS_PublisherQos_copy (
    struct DDS_PublisherQos * self,
    const struct DDS_PublisherQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_PublisherQos** (p. 1661) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818) The <b>DDS_PublisherQos</b> (p. 1661) to copy from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PublisherQos\_INITIALIZER** (p. 435)

**DDS\_PublisherQos\_initialize** (p. 439)

**DDS\_PublisherQos\_finalize** (p. 440)

#### 4.16.4.8 DDS\_Publisher\_as\_entity()

```
DDS_Entity * DDS_Publisher_as_entity (
    DDS_Publisher * publisher )
```

Access a **DDS\_Publisher** (p. 436)'s supertype instance.

##### Parameters

<i>publisher</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
------------------	------------------------------------------

##### Returns

The **DDS\_Entity** (p. 1160) that is supertype instance of the publisher.

#### 4.16.4.9 DDS\_Publisher\_get\_default\_datawriter\_qos()

```
DDS_ReturnCode_t DDS_Publisher_get_default_datawriter_qos (
    DDS_Publisher * self,
    struct DDS_DataWriterQos * qos )
```

Copies the default **DDS\_DataWriterQos** (p. 1438) values into the provided **DDS\_DataWriterQos** (p. 1438) instance.

The retrieved *qos* will match the set of values specified on the last successful call to **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443) or **DDS\_Publisher\_set\_default\_datawriter\_qos\_with\_profile** (p. 443), or else, if the call was never made, the default values from its owning **DDS\_DomainParticipant** (p. 72).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

##### MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a **DDS\_Publisher** (p. 436) while another thread may be simultaneously calling **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterQos</b> (p. 1438) to be filled-up. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463)

**DDS\_Publisher\_create\_datawriter** (p. 446)

#### 4.16.4.10 DDS\_Publisher\_set\_default\_datawriter\_qos()

```
DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos (
    DDS_Publisher * self,
    const struct DDS_DataWriterQos * qos )
```

Sets the default **DDS\_DataWriterQos** (p. 1438) values for this publisher.

This call causes the default values inherited from the owning **DDS\_DomainParticipant** (p. 72) to be overridden.

This default value will be used for newly created **DDS\_DataWriter** (p. 478) if **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) is specified as the `qos` parameter when **DDS\_Publisher\_create\_datawriter** (p. 446) is called.

##### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS\_Publisher** (p. 436) while another thread may be simultaneously calling **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443), **DDS\_Publisher\_get\_default\_↔  
datawriter\_qos** (p. 442) or calling **DDS\_Publisher\_create\_datawriter** (p. 446) with **DDS\_DATAWRITER\_QOS\_↔  
\_DEFAULT** (p. 463) as the `qos` parameter.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) Default qos to be set. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_Publisher_set_default_datawriter_qos</b> (p. 443) had never been called. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### 4.16.4.11 DDS\_Publisher\_set\_default\_datawriter\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_default_datawriter_qos_with_profile (
    DDS_Publisher * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Set the default **DDS\_DataWriterQos** (p. 1438) values for this publisher based on the input XML QoS profile.

This default value will be used for newly created **DDS\_DataWriter** (p. 478) if **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) is specified as the `qos` parameter when **DDS\_Publisher\_create\_datawriter** (p. 446) is called.

##### Precondition

The **DDS\_DataWriterQos** (p. 1438) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS\_Publisher** (p. 436) while another thread may be simultaneously calling **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443), **DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442) or calling **DDS\_Publisher\_create\_datawriter** (p. 446) with **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) as the `qos` parameter.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connexx will use the default library (see <b>DDS_Publisher_set_default_library</b> (p. 445)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <code>profile_name</code> is null RTI Connexx will use the default profile (see <b>DDS_Publisher_set_default_profile</b> (p. 444)).

If the input profile cannot be found, the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### See also

**DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463)

**DDS\_Publisher\_create\_datawriter\_with\_profile** (p. 448)

#### 4.16.4.12 DDS\_Publisher\_set\_default\_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_default_profile (
    DDS_Publisher * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Sets the default XML profile for a **DDS\_Publisher** (p. 436).

This function specifies the profile that will be used as the default the next time a default Publisher profile is needed during a call to one of this Publisher's operations. When calling a **DDS\_Publisher** (p. 436) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS\_Publisher** (p. 436) inherits the default from the **DDS\_DomainParticipant** (p. 72) (see **DDS\_DomainParticipant\_set\_default\_profile** (p. 99)).

This function does not set the default QoS for **DDS\_DataWriter** (p. 478) objects created by the **DDS\_Publisher** (p. 436); for this functionality, use **DDS\_Publisher\_set\_default\_datawriter\_qos\_with\_profile** (p. 443) (you may pass in NULL after having called `set_default_profile()`).

This function does not set the default QoS for newly created Publishers; for this functionality, use **DDS\_DomainParticipant\_set\_default\_publisher\_qos\_with\_profile** (p. 86).

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 818) The profile name. If <code>profile_name</code> is null any previous default is unset.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_Publisher\_get\_default\_profile** (p. 458)

**DDS\_Publisher\_get\_default\_profile\_library** (p. 458)

#### 4.16.4.13 DDS\_Publisher\_set\_default\_library()

```
DDS_ReturnCode_t DDS_Publisher_set_default_library (
    DDS_Publisher * self,
    const char * library_name )
```

<<**extension**>> (p. 817) Sets the default XML library for a **DDS\_Publisher** (p. 436).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this Publisher's operations.

Any API requiring a `library_name` as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS\_Publisher** (p. 436) inherits the default from the **DDS\_DomainParticipant** (p. 72) (see **DDS\_DomainParticipant\_set\_default\_library** (p. 98)).

#### Parameters

<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<code>library_name</code>	<< <i>in</i> >> (p. 818) Library name. If <code>library_name</code> is null any previous default is unset.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_Publisher\_get\_default\_library** (p. 457)

#### 4.16.4.14 DDS\_Publisher\_create\_datawriter()

```
DDS_DataWriter * DDS_Publisher_create_datawriter (
    DDS_Publisher * self,
    DDS_Topic * topic,
    const struct DDS_DataWriterQos * qos,
    const struct DDS_DataWriterListener * listener,
    DDS_StatusMask mask )
```

Creates a **DDS\_DataWriter** (p. 478) that will be attached and belong to the **DDS\_Publisher** (p. 436).

For each application-defined type, **Foo** (p. 1841), there is an implied, auto-generated class **FooDataWriter** (p. 1845) that extends **DDS\_DataWriter** (p. 478) and contains the operations to write data of type **Foo** (p. 1841).

Note that a common application pattern to construct the QoS for the **DDS\_DataWriter** (p. 478) is to:

- Retrieve the QoS policies on the associated **DDS\_Topic** (p. 172) by means of the **DDS\_Topic\_get\_qos** (p. 195) operation.
- Retrieve the default **DDS\_DataWriter** (p. 478) qos by means of the **DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442) operation.
- Combine those two QoS policies (for example, using **DDS\_Publisher\_copy\_from\_topic\_qos** (p. 455)) and selectively modify policies as desired.

When a **DDS\_DataWriter** (p. 478) is created, only those transports already registered are available to the **DDS\_DataWriter** (p. 478). See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

## Precondition

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDS\_DataWriter** (p. 478) will be created.

The given **DDS\_Topic** (p. 172) must have been created from the same participant as this publisher. If it was created from a different participant, this function will fail.

## MT Safety:

UNSAFE. If **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 463) is used for the `qos` parameter, it is not safe to create the datawriter while another thread may be simultaneously calling **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) The <b>DDS_Topic</b> (p. 172) that the <b>DDS_DataWriter</b> (p. 478) will be associated with. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) QoS to be used for creating the new <b>DDS_DataWriter</b> (p. 478). The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 463) can be used to indicate that the <b>DDS_DataWriter</b> (p. 478) should be created with the default <b>DDS_DataWriterQos</b> (p. 1438) set in the <b>DDS_Publisher</b> (p. 436). The special value <b>DDS_DATAWRITER_QOS_USE_TOPIC_QOS</b> (p. 463) can be used to indicate that the <b>DDS_DataWriter</b> (p. 478) should be created with the combination of the default <b>DDS_DataWriterQos</b> (p. 1438) set on the <b>DDS_Publisher</b> (p. 436) and the <b>DDS_TopicQos</b> (p. 1778) of the <b>DDS_Topic</b> (p. 172). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818) The listener of the <b>DDS_DataWriter</b> (p. 478).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

A **DDS\_DataWriter** (p. 478) of a derived class specific to the data type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

## See also

**FooDataWriter** (p. 1845)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_Publisher\_copy\_from\_topic\_qos** (p. 455)

**DDS\_DataWriter\_set\_listener** (p. 546)

## Examples

**HelloWorld\_publisher.c.**

## 4.16.4.15 DDS\_Publisher\_create\_datawriter\_with\_profile()

```
DDS_DataWriter * DDS_Publisher_create_datawriter_with_profile (
    DDS_Publisher * self,
    DDS_Topic * topic,
    const char * library_name,
    const char * profile_name,
    const struct DDS_DataWriterListener * listener,
    DDS_StatusMask mask )
```

<<**extension**>> (p. 817) Creates a **DDS\_DataWriter** (p. 478) object using the **DDS\_DataWriterQos** (p. 1438) associated with the input XML QoS profile.

The **DDS\_DataWriter** (p. 478) will be attached and belong to the **DDS\_Publisher** (p. 436).

For each application-defined type, **Foo** (p. 1841), there is an implied, auto-generated class **FooDataWriter** (p. 1845) that extends **DDS\_DataWriter** (p. 478) and contains the operations to write data of type **Foo** (p. 1841).

When a **DDS\_DataWriter** (p. 478) is created, only those transports already registered are available to the **DDS\_DataWriter** (p. 478). See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

## Precondition

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDS\_DataWriter** (p. 478) will be created.

The given **DDS\_Topic** (p. 172) must have been created from the same participant as this publisher. If it was created from a different participant, this function will return NULL.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <b>in</b> >> (p. 818) The <b>DDS_Topic</b> (p. 172) that the <b>DDS_DataWriter</b> (p. 478) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_Publisher_set_default_library</b> (p. 445)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_Publisher_set_default_profile</b> (p. 444)).
<i>listener</i>	<< <b>in</b> >> (p. 818) The listener of the <b>DDS_DataWriter</b> (p. 478).
<i>mask</i>	<< <b>in</b> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

A **DDS\_DataWriter** (p. 478) of a derived class specific to the data type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

## See also

**FooDataWriter** (p. 1845)

**DDS\_DataWriterQos** (p. 1438) for rules on consistency among QoS

**DDS\_Publisher\_create\_datawriter** (p. 446)

**DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442)

**DDS\_Topic\_set\_qos** (p. 193)

**DDS\_Publisher\_copy\_from\_topic\_qos** (p. 455)

**DDS\_DataWriter\_set\_listener** (p. 546)

## 4.16.4.16 DDS\_Publisher\_delete\_datawriter()

```
DDS_ReturnCode_t DDS_Publisher_delete_datawriter (
    DDS_Publisher * self,
    DDS_DataWriter * a_datawriter )
```

Deletes a **DDS\_DataWriter** (p. 478) that belongs to the **DDS\_Publisher** (p. 436).

The deletion of the **DDS\_DataWriter** (p. 478) will automatically unregister all instances.

## Precondition

If the **DDS\_DataWriter** (p. 478) does not belong to the **DDS\_Publisher** (p. 436), the operation will fail with **DDS\_↔\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Postcondition

Listener installed on the **DDS\_DataWriter** (p. 478) will not be called after this function completes successfully.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_datawriter</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataWriter</b> (p. 478) to be deleted.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

4.16.4.17 **DDS\_Publisher\_lookup\_datawriter()**

```
DDS_DataWriter * DDS_Publisher_lookup_datawriter (
    DDS_Publisher * self,
    const char * topic_name )
```

Retrieves the **DDS\_DataWriter** (p. 478) for a specific **DDS\_Topic** (p. 172).

This returned **DDS\_DataWriter** (p. 478) is either enabled or disabled.

If more than one **DDS\_DataWriter** (p. 478) is attached to the **DDS\_Publisher** (p. 436) with the same `topic_name`, then this operation may return any one of them.

## MT Safety:

UNSAFE. It is not safe to lookup a **DDS\_DataWriter** (p. 478) in one thread while another thread is simultaneously creating or destroying that **DDS\_DataWriter** (p. 478).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name of the <b>DDS_Topic</b> (p. 172) associated with the <b>DDS_DataWriter</b> (p. 478) that is to be looked up. Cannot be NULL.

## Returns

A **DDS\_DataWriter** (p. 478) that belongs to the **DDS\_Publisher** (p. 436) attached to the **DDS\_Topic** (p. 172) with `topic_name`. If no such **DDS\_DataWriter** (p. 478) exists, this operation returns NULL.

4.16.4.18 **DDS\_Publisher\_suspend\_publications()**

```
DDS_ReturnCode_t DDS_Publisher_suspend_publications (
    DDS_Publisher * self )
```

Indicates to RTI Connext that the application is about to make multiple modifications using **DDS\_DataWriter** (p. 478) objects belonging to the **DDS\_Publisher** (p. 436).

It is a **hint** to RTI Connext so it can optimize its performance by e.g., holding the dissemination of the modifications and then batching them.

The use of this operation must be matched by a corresponding call to **DDS\_Publisher\_resume\_publications** (p. 451) indicating that the set of modifications has completed.

If the **DDS\_Publisher** (p. 436) is deleted before **DDS\_Publisher\_resume\_publications** (p. 451) is called, any suspended updates yet to be published will be discarded.

RTI Connex is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDS\_FlowController** (p. 551), **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120) **DDS\_DataWriter** (p. 478) instances allow the user even finer control of traffic shaping and sample coalescing.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### See also

- DDS\_FlowController** (p. 551)
- DDS\_FlowController\_trigger\_flow** (p. 556)
- DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 558)
- DDS\_PublishModeQosPolicy** (p. 1664)

#### 4.16.4.19 DDS\_Publisher\_resume\_publications()

```
DDS_ReturnCode_t DDS_Publisher_resume_publications (
    DDS_Publisher * self )
```

Indicates to RTI Connex that the application has completed the multiple changes initiated by the previous **DDS\_Publisher\_suspend\_publications** (p. 450).

This is a **hint** to RTI Connex that can be used for example, to batch all the modifications made since the **DDS\_Publisher\_suspend\_publications** (p. 450).

RTI Connex is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDS\_FlowController** (p. 551), **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120) **DDS\_DataWriter** (p. 478) instances allow the user even finer control of traffic shaping and sample coalescing.

#### Precondition

A call to **DDS\_Publisher\_resume\_publications** (p. 451) must match a previous call to **DDS\_Publisher\_suspend\_publications** (p. 450). Otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**DDS\_FlowController** (p. 551)

**DDS\_FlowController\_trigger\_flow** (p. 556)

**DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 558)

**DDS\_PublishModeQosPolicy** (p. 1664)

#### 4.16.4.20 DDS\_Publisher\_begin\_coherent\_changes()

```
DDS_ReturnCode_t DDS_Publisher_begin_coherent_changes (
    DDS_Publisher * self )
```

Indicates that the application will begin a coherent set of modifications using **DDS\_DataWriter** (p. 478) objects attached to the **DDS\_Publisher** (p. 436).

A 'coherent set' is a set of modifications that must be propagated in such a way that they are interpreted at the receiver's side as a consistent set of modifications; that is, the receiver will only be able to access the data after all the modifications in the set are available at the receiver end.

A connectivity change may occur in the middle of a set of coherent changes; for example, the set of partitions used by the **DDS\_Publisher** (p. 436) or one of its subscribers (**DDS\_Subscriber** (p. 565)) may change, a late-joining **DDS\_↔DataReader** (p. 608) may appear on the network, or a communication failure may occur. In the event that such a change prevents an entity from receiving the entire set of coherent changes, that entity must behave as if it had received none of the set.

These calls can be nested. In that case, the coherent set terminates only with the last call to **DDS\_Publisher\_end\_↔\_coherent\_changes** (p. 453). Publisher's samples (samples published by any of the DataWriters within the Publisher) that are not published within a begin\_coherent\_changes/end\_coherent\_changes block will not be provided to the Data\_↔Readers as a set.

The support for coherent changes enables a publishing application to change the value of several data-instances that could belong to the same or different topics and have those changes be seen *atomically* by the readers. This is useful in cases where the values are inter-related (for example, if there are two data-instances representing the altitude and velocity vector of the same aircraft and both are changed, it may be useful to communicate those values in a way the reader can see both together; otherwise, it may, e.g., erroneously interpret that the aircraft is on a collision course).

## Note

Coherent sets don't apply to Topic Queries. If a **DDS\_TopicQuery** (p. 698) selects only a subset of samples that was published as a coherent set, the subscribing application will receive them regardless of their membership to the coherent set.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**DDS\_PresentationQosPolicy** (p. 1634)

## 4.16.4.21 DDS\_Publisher\_end\_coherent\_changes()

```
DDS_ReturnCode_t DDS_Publisher_end_coherent_changes (
    DDS_Publisher * self )
```

Terminates the coherent set initiated by the matching call to **DDS\_Publisher\_begin\_coherent\_changes** (p. 452).

## Precondition

If there is no matching call to **DDS\_Publisher\_begin\_coherent\_changes** (p. 452) the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## 4.16.4.22 DDS\_Publisher\_get\_all\_datawriters()

```
DDS_ReturnCode_t DDS_Publisher_get_all_datawriters (
    DDS_Publisher * self,
    struct DDS_DataWriterSeq * writers )
```

Retrieve all the DataWriters created from this Publisher.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>writers</i>	<< <i>inout</i> >> (p. 818) Sequence where the DataWriters will be added

## Returns

One of the **Standard Return Codes** (p. 1024)

4.16.4.23 **DDS\_Publisher\_get\_participant()**

```
DDS_DomainParticipant * DDS_Publisher_get_participant (
    DDS_Publisher * self )
```

Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Publisher** (p. 436) belongs.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Publisher** (p. 436) belongs.

4.16.4.24 **DDS\_Publisher\_delete\_contained\_entities()**

```
DDS_ReturnCode_t DDS_Publisher_delete_contained_entities (
    DDS_Publisher * self )
```

Deletes all the entities that were created by means of the "create" operation on the **DDS\_Publisher** (p. 436).

Deletes all contained **DDS\_DataWriter** (p. 478) objects. Once **DDS\_Publisher\_delete\_contained\_entities** (p. 454) completes successfully, the application may delete the **DDS\_Publisher** (p. 436), knowing that it has no contained **DDS\_DataWriter** (p. 478) objects.

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if any of the contained entities is in a state where it cannot be deleted.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

4.16.4.25 **DDS\_Publisher\_copy\_from\_topic\_qos()**

```
DDS_ReturnCode_t DDS_Publisher_copy_from_topic_qos (
    DDS_Publisher * self,
    struct DDS_DataWriterQos * a_datawriter_qos,
    const struct DDS_TopicQos * a_topic_qos )
```

Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataWriterQos** (p. 1438).

Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataWriterQos** (p. 1438) (replacing values in the **DDS\_DataWriterQos** (p. 1438), if present).

This is a "convenience" operation most useful in combination with the operations **DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442) and **DDS\_Topic\_get\_qos** (p. 195). The operation **DDS\_Publisher\_copy\_from\_topic\_qos** (p. 455) can be used to merge the **DDS\_DataWriter** (p. 478) default QoS policies with the corresponding ones on the **DDS\_Topic** (p. 172). The resulting QoS can then be used to create a new **DDS\_DataWriter** (p. 478), or set its QoS.

This operation does not check the resulting **DDS\_DataWriterQos** (p. 1438) for consistency. This is because the 'merged' **DDS\_DataWriterQos** (p. 1438) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDS\_DataWriter** (p. 478).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_datawriter_qos</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterQos</b> (p. 1438) to be filled-up. Cannot be NULL.
<i>a_topic_qos</i>	<< <i>in</i> >> (p. 818) <b>DDS_TopicQos</b> (p. 1778) to be merged with <b>DDS_DataWriterQos</b> (p. 1438). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.16.4.26 **DDS\_Publisher\_set\_qos()**

```
DDS_ReturnCode_t DDS_Publisher_set_qos (
    DDS_Publisher * self,
    const struct DDS_PublisherQos * qos )
```

Sets the publisher QoS.

This operation modifies the QoS of the **DDS\_Publisher** (p. 436).

The **DDS\_PublisherQos::group\_data** (p. 1663), **DDS\_PublisherQos::partition** (p. 1662) and **DDS\_PublisherQos::entity\_factory** (p. 1663) can be changed. The other policies are immutable.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) <b>DDS_PublisherQos</b> (p. 1661) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDS_Publisher</b> (p. 436) is enabled. The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 158) can be used to indicate that the QoS of the <b>DDS_Publisher</b> (p. 436) should be changed to match the current default <b>DDS_PublisherQos</b> (p. 1661) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

#### See also

**DDS\_PublisherQos** (p. 1661) for rules on consistency among QoS  
**set\_qos (abstract)** (p. 1161)  
**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.16.4.27 DDS\_Publisher\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_Publisher_set_qos_with_profile (
    DDS_Publisher * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Change the QoS of this publisher using the input XML QoS profile.

This operation modifies the QoS of the **DDS\_Publisher** (p. 436).

The **DDS\_PublisherQos::group\_data** (p. 1663), **DDS\_PublisherQos::partition** (p. 1662) and **DDS\_PublisherQos::entity\_factory** (p. 1663) can be changed. The other policies are immutable.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDS_Publisher_set_default_library</b> (p. 445)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDS_Publisher_set_default_profile</b> (p. 444)).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

## See also

**DDS\_PublisherQos** (p. 1661) for rules on consistency among QoS  
**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.16.4.28 DDS\_Publisher\_get\_qos()

```
DDS_ReturnCode_t DDS_Publisher_get_qos (
    DDS_Publisher * self,
    struct DDS_PublisherQos * qos )
```

Gets the publisher QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) <b>DDS_PublisherQos</b> (p. 1661) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**get\_qos (abstract)** (p. 1161)

## 4.16.4.29 DDS\_Publisher\_get\_default\_library()

```
const char * DDS_Publisher_get_default_library (
    DDS_Publisher * self )
```

<<*extension*>> (p. 817) Gets the default XML library associated with a **DDS\_Publisher** (p. 436).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The default library or null if the default library was not set.

## See also

**DDS\_Publisher\_set\_default\_library** (p. 445)

#### 4.16.4.30 DDS\_Publisher\_get\_default\_profile()

```
const char * DDS_Publisher_get_default_profile (
    DDS_Publisher * self )
```

<<*extension*>> (p. 817) Gets the default XML profile associated with a **DDS\_Publisher** (p. 436).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The default profile or null if the default profile was not set.

## See also

**DDS\_Publisher\_set\_default\_profile** (p. 444)

#### 4.16.4.31 DDS\_Publisher\_get\_default\_profile\_library()

```
const char * DDS_Publisher_get_default_profile_library (
    DDS_Publisher * self )
```

<<*extension*>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_Publisher** (p. 436).

The default profile library is automatically set when **DDS\_Publisher\_set\_default\_profile** (p. 444) is called.

This library can be different than the **DDS\_Publisher** (p. 436) default library (see **DDS\_Publisher\_get\_default\_library** (p. 457)).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

The default profile library or null if the default profile was not set.

## See also

**DDS\_Publisher\_set\_default\_profile** (p. 444)

## 4.16.4.32 DDS\_Publisher\_set\_listener()

```
DDS_ReturnCode_t DDS_Publisher_set_listener (
    DDS_Publisher * self,
    const struct DDS_PublisherListener * l,
    DDS_StatusMask mask )
```

Sets the publisher listener.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) <b>DDS_PublisherListener</b> (p. 1660) to set to.
<i>mask</i>	<< <i>in</i> >> (p. 818) <b>DDS_StatusMask</b> (p. 1030) associated with the <b>DDS_PublisherListener</b> (p. 1660). The callback function on the listener cannot be NULL if the corresponding status is turned on in the <i>mask</i> .

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**set\_listener (abstract)** (p. 1162)

## 4.16.4.33 DDS\_Publisher\_get\_listener()

```
struct DDS_PublisherListener DDS_Publisher_get_listener (
    DDS_Publisher * self )
```

Get the publisher listener.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_PublisherListener** (p. 1660) of the **DDS\_Publisher** (p. 436).

## See also

**DDS\_Publisher\_get\_listenerX** (p. 460)

**get\_listener (abstract)** (p. 1162)

4.16.4.34 **DDS\_Publisher\_get\_listenerX()**

```
DDS_ReturnCode_t DDS_Publisher_get_listenerX (
    DDS_Publisher * self,
    struct DDS_PublisherListener * listener )
```

<<*extension*>> (p. 817) Get the publisher listener.

An alternative form of `get_listener` that fills in an existing listener structure rather than returning one on the stack.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <i>inout</i> >> (p. 818) <b>DDS_PublisherListener</b> (p. 1660) structure to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_Publisher\_get\_listener** (p. 459)

**get\_listener (abstract)** (p. 1162)

#### 4.16.4.35 DDS\_Publisher\_wait\_for\_acknowledgments()

```
DDS_ReturnCode_t DDS_Publisher_wait_for_acknowledgments (
    DDS_Publisher * self,
    const struct DDS_Duration_t * max_wait )
```

Blocks the calling thread until all data written by the Publisher's reliable DataWriters is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable DataWriters entities is acknowledged by (a) all reliable **DDS\_DataReader** (p. 608) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged; a timeout indicates that `max_wait` elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to this operation on a **DDS\_Publisher** (p. 436) and a different thread writes new samples on any of the reliable DataWriters that belong to this Publisher, the new samples must be acknowledged before unblocking the thread that is waiting on this operation.

If none of the **DDS\_DataWriter** (p. 478) instances have **DDS\_ReliabilityQosPolicy** (p. 1678) kind set to RELIABLE, the operation will complete successfully.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>max_wait</i>	<< <i>in</i> >> (p. 818) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 1522) .

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025), **DDS\_RETCODE\_↔\_TIMEOUT** (p. 1025)

#### 4.16.4.36 DDS\_Publisher\_wait\_for\_asynchronous\_publishing()

```
DDS_ReturnCode_t DDS_Publisher_wait_for_asynchronous_publishing (
    DDS_Publisher * self,
    const struct DDS_Duration_t * max_wait )
```

<<**extension**>> (p. 817) Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDS\_DataWriter** (p. 478) entities is sent and acknowledged (if reliable) by all matched **DDS\_DataReader** (p. 608) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; if it times out, this indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDS\_DataReader** (p. 608) is complete in addition to what **DDS\_Publisher\_wait\_for\_acknowledgments** (p. 460) provides.

If none of the **DDS\_DataWriter** (p. 478) instances have **DDS\_PublishModeQosPolicy::kind** (p. 1665) set to **DDS\_↔\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120), the operation will complete immediately , with **DDS\_↔\_RETCODE\_OK** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>max_wait</i>	<< <i>in</i> >> (p. 818) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 1522).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025), **DDS\_RETCODE\_←\_TIMEOUT** (p. 1025)

4.16.4.37 **DDS\_Publisher\_lookup\_datawriter\_by\_name()**

```
DDS_DataWriter * DDS_Publisher_lookup_datawriter_by_name (
    DDS_Publisher * self,
    const char * datawriter_name )
```

<<*extension*>> (p. 817) Retrieves a **DDS\_DataWriter** (p. 478) contained within the **DDS\_Publisher** (p. 436) the **DDS\_DataWriter** (p. 478) entity name.

Every **DDS\_DataWriter** (p. 478) in the system has an entity name which is configured and stored in the <<*extension*>> (p. 817) EntityName policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves the **DDS\_DataWriter** (p. 478) within the **DDS\_Publisher** (p. 436) whose name matches the one specified. If there are several **DDS\_DataWriter** (p. 478) with the same name within the **DDS\_Publisher** (p. 436), the operation returns the first matching occurrence.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>datawriter_name</i>	<< <i>in</i> >> (p. 818) Entity name of the <b>DDS_DataWriter</b> (p. 478).

## Returns

The first **DDS\_DataWriter** (p. 478) found with the specified name or NULL if it is not found.

## See also

**DDS\_DomainParticipant\_lookup\_datawriter\_by\_name** (p. 155)

## 4.16.5 Variable Documentation

#### 4.16.5.1 DDS\_DATAWRITER\_QOS\_PRINT\_ALL

```
const struct DDS_DataWriterQos* DDS_DATAWRITER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527) indicating that all of the QoS should be printed.

The **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_↔DATAWRITER\_QOS\_PRINT\_ALL** (p. 462) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_↔DATAWRITER\_QOS\_PRINT\_ALL** (p. 462) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the **print\_private** field within the **DDS\_QoSPrint\_↔Format** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527) API.

#### 4.16.5.2 DDS\_DATAWRITER\_QOS\_DEFAULT

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT [extern]
```

Special value for creating **DDS\_DataWriter** (p. 478) with default QoS.

When used in **DDS\_Publisher\_create\_datawriter** (p. 446), this special value is used to indicate that the **DDS\_Data\_↔Writer** (p. 478) should be created with the default **DDS\_DataWriter** (p. 478) QoS by means of the operation **get\_↔default\_datawriter\_qos** and using the resulting QoS to create the **DDS\_DataWriter** (p. 478).

When used in **DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_Publisher\_set\_default\_datawriter\_↔\_qos** (p. 443) operation had never been called.

When used in **DDS\_DataWriter\_set\_qos** (p. 543), this special value is used to indicate that the QoS of the **DDS\_↔DataWriter** (p. 478) should be changed to match the current default QoS set in the **DDS\_Publisher** (p. 436) that the **DDS\_DataWriter** (p. 478) belongs to.

#### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataWriter; for this purpose, use **DDS\_DomainParticipant\_get\_default\_datawriter\_qos** (p. 87).

#### See also

- DDS\_Publisher\_create\_datawriter** (p. 446)
- DDS\_Publisher\_set\_default\_datawriter\_qos** (p. 443)
- DDS\_DataWriter\_set\_qos** (p. 543)

#### Examples

**HelloWorld\_publisher.c.**

### 4.16.5.3 DDS\_DATAWRITER\_QOS\_USE\_TOPIC\_QOS

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDS\_DataWriter** (p. 478) with a combination of the default **DDS\_DataWriterQos** (p. 1438) and the **DDS\_TopicQos** (p. 1778).

The use of this value is equivalent to the application obtaining the default **DDS\_DataWriterQos** (p. 1438) and the **DDS\_TopicQos** (p. 1778) (by means of the operation **DDS\_Topic\_get\_qos** (p. 195)) and then combining these two QoS using the operation **DDS\_Publisher\_copy\_from\_topic\_qos** (p. 455) whereby any policy that is set on the **DDS\_TopicQos** (p. 1778) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDS\_DataWriter** (p. 478).

This value should only be used in **DDS\_Publisher\_create\_datawriter** (p. 446).

## 4.17 Data Writers

**DDS\_DataWriter** (p. 478) entity and associated elements

### Data Structures

- struct **FooDataWriter**
  - <<*interface*>> (p. 818) <<*generic*>> (p. 818) User data type specific data writer.
- struct **DDS\_OfferedDeadlineMissedStatus**
  - DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 1031)
- struct **DDS\_LivelinessLostStatus**
  - DDS\_LIVELINESS\_LOST\_STATUS** (p. 1034)
- struct **DDS\_OfferedIncompatibleQosStatus**
  - DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032)
- struct **DDS\_PublicationMatchedStatus**
  - DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 1035)
- struct **DDS\_ServiceRequestAcceptedStatus**
  - DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS** (p. 1036)
- struct **DDS\_ReliableWriterCacheEventCount**
  - <<*extension*>> (p. 817) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.
- struct **DDS\_ReliableWriterCacheChangedStatus**
  - <<*extension*>> (p. 817) A summary of the state of a data writer's cache of unacknowledged samples written.
- struct **DDS\_ReliableReaderActivityChangedStatus**

<<**extension**>> (p. 817) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.

- struct **DDS\_DataWriterCacheStatus**

<<**extension**>> (p. 817) The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.

- struct **DDS\_DataWriterProtocolStatus**

<<**extension**>> (p. 817) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

- struct **DDS\_AcknowledgmentInfo**

Information about an application-level acknowledged sample.

- struct **DDS\_DataWriterQos**

QoS policies supported by a **DDS\_DataWriter** (p. 478) entity.

- struct **DDS\_DataWriterListener**

<<**interface**>> (p. 818) **DDS\_Listener** (p. 1569) for writer status.

## Macros

- #define **DDS\_OfferedDeadlineMissedStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_LivelinessLostStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_OfferedIncompatibleQoSStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_PublicationMatchedStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_ServiceRequestAcceptedStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_ReliableWriterCacheChangedStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_ReliableReaderActivityChangedStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_DataWriterCacheStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_DataWriterProtocolStatus\_INITIALIZER**

Initializer for new status instances.

- #define **DDS\_DataWriterQoS\_INITIALIZER**

Initializer for new QoS instances.

- #define **DDS\_DataWriterListener\_INITIALIZER**

Initializer for new **DDS\_DataWriterListener** (p. 1417).

## Typedefs

- typedef struct DDS\_DataWriterImpl **DDS\_DataWriter**
  - <<**interface**>> (p. 818) Allows an application to set the value of the data to be published under a given **DDS\_Topic** (p. 172).
- typedef void(\* **DDS\_DataWriterListener\_OfferedDeadlineMissedCallback**) (void \*listener\_data, **DDS\_↔DataWriter** \*writer, const struct **DDS\_OfferedDeadlineMissedStatus** \*status)
  - Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_offered\_deadline\_missed function.
- typedef void(\* **DDS\_DataWriterListener\_LivelinessLostCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const struct **DDS\_LivelinessLostStatus** \*status)
  - Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_liveliness\_lost function.
- typedef void(\* **DDS\_DataWriterListener\_OfferedIncompatibleQosCallback**) (void \*listener\_data, **DDS\_↔DataWriter** \*writer, const struct **DDS\_OfferedIncompatibleQosStatus** \*status)
  - Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_offered\_incompatible\_qos function.
- typedef void(\* **DDS\_DataWriterListener\_PublicationMatchedException**) (void \*listener\_data, **DDS\_Data↔Writer** \*writer, const struct **DDS\_PublicationMatchedException** \*status)
  - Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_publication\_matched function.
- typedef void(\* **DDS\_DataWriterListener\_ReliableWriterCacheChangedCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const struct **DDS\_ReliableWriterCacheChangedStatus** \*status)
  - <<**extension**>> (p. 817) A change has occurred in the writer's cache.
- typedef void(\* **DDS\_DataWriterListener\_ReliableReaderActivityChangedCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const struct **DDS\_ReliableReaderActivityChangedStatus** \*status)
  - <<**extension**>> (p. 817) A matched reliable reader has become active or become inactive.
- typedef void(\* **DDS\_DataWriterListener\_SampleRemovedCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const struct **DDS\_Cookie\_t** \*cookie)
  - <<**extension**>> (p. 817) A sample has been removed from the DataWriter's queue.
- typedef void(\* **DDS\_DataWriterListener\_InstanceReplacedCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const **DDS\_InstanceHandle\_t** \*handle)
  - <<**extension**>> (p. 817) An instance previously registered with the writer has been replaced
- typedef void(\* **DDS\_DataWriterListener\_OnApplicationAcknowledgmentCallback**) (void \*listener\_data, **DDS\_DataWriter** \*writer, const struct **DDS\_AcknowledgmentInfo** \*info)
  - <<**extension**>> (p. 817) An application-level acknowledgment has been received for a sample
- typedef void(\* **DDS\_DataWriterListener\_ServiceRequestAcceptedCallback**) (void \*listener\_data, **DDS\_↔DataWriter** \*writer, const struct **DDS\_ServiceRequestAcceptedStatus** \*status)
  - <<**extension**>> (p. 817) a **DDS\_ServiceRequest** (p. 1736) for the **DDS\_TopicQuery** (p. 698) service is dispatched to this **DDS\_DataWriter** (p. 478).

## Functions

- **FooDataWriter \* FooDataWriter\_narrow** ( **DDS\_DataWriter** \*writer)
  - Narrow the given **DDS\_DataWriter** (p. 478) pointer to a **FooDataWriter** (p. 1845) pointer.
- **DDS\_DataWriter \* FooDataWriter\_as\_datawriter** ( **FooDataWriter** \*writer)
  - Widen the given **FooDataWriter** (p. 1845) pointer to a **DDS\_DataWriter** (p. 478) pointer.
- **DDS\_InstanceHandle\_t FooDataWriter\_register\_instance** ( **FooDataWriter** \*self, const **Foo** \*instance\_↔data)
  - Informs RTI Connexx that the application will be modifying a particular instance.
- **DDS\_InstanceHandle\_t FooDataWriter\_register\_instance\_w\_timestamp** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const struct **DDS\_Time\_t** \*source\_timestamp)

Performs the same functions as `register_instance` except that the application provides the value for the `source_timestamp`.

- **DDS\_InstanceHandle\_t FooDataWriter\_register\_instance\_w\_params** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, struct **DDS\_WriteParams\_t** \*params)

Performs the same function as `FooDataWriter_register_instance` (p. 484) and `FooDataWriter_register_instance_w_timestamp` (p. 485) except that it also provides the values contained in `params`.

- **DDS\_ReturnCode\_t FooDataWriter\_unregister\_instance** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*handle)

Reverses the action of `FooDataWriter_register_instance` (p. 484).

- **DDS\_ReturnCode\_t FooDataWriter\_unregister\_instance\_w\_timestamp** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*handle, const struct **DDS\_Time\_t** \*source\_timestamp)

Performs the same function as `FooDataWriter_unregister_instance` (p. 486) except that it also provides the value for the `source_timestamp`.

- **DDS\_ReturnCode\_t FooDataWriter\_unregister\_instance\_w\_params** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, struct **DDS\_WriteParams\_t** \*params)

Performs the same function as `FooDataWriter_unregister_instance` (p. 486) and `FooDataWriter_unregister_instance_w_timestamp` (p. 488) except that it also provides the values contained in `params`.

- **DDS\_ReturnCode\_t FooDataWriter\_write** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*handle)

Modifies the value of a data instance.

- **DDS\_ReturnCode\_t FooDataWriter\_write\_w\_timestamp** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*handle, const struct **DDS\_Time\_t** \*source\_timestamp)

Performs the same function as `FooDataWriter_write` (p. 489) except that it also provides the value for the `source_timestamp`.

- **DDS\_ReturnCode\_t FooDataWriter\_write\_w\_params** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, struct **DDS\_WriteParams\_t** \*params)

Performs the same function as `FooDataWriter_write` (p. 489) and `FooDataWriter_write_w_timestamp` (p. 493) except that it also provides the values contained in `params`.

- **DDS\_ReturnCode\_t FooDataWriter\_dispose** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*instance\_handle)

Requests the middleware to delete the instance.

- **DDS\_ReturnCode\_t FooDataWriter\_dispose\_w\_timestamp** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, const **DDS\_InstanceHandle\_t** \*instance\_handle, const struct **DDS\_Time\_t** \*source\_timestamp)

Performs the same functions as `dispose` except that the application provides the value for the `source_timestamp` that is made available to `DDS_DataReader` (p. 608) objects by means of the `source_timestamp` attribute inside the `DDS_SampleInfo` (p. 1720).

- **DDS\_ReturnCode\_t FooDataWriter\_dispose\_w\_params** ( **FooDataWriter** \*self, const **Foo** \*instance\_data, struct **DDS\_WriteParams\_t** \*params)

Performs the same function as `FooDataWriter_dispose` (p. 495) and `FooDataWriter_dispose_w_timestamp` (p. 496) except that it also provides the values contained in `params`.

- **DDS\_ReturnCode\_t FooDataWriter\_get\_key\_value** ( **FooDataWriter** \*self, **Foo** \*key\_holder, const **DDS\_InstanceHandle\_t** \*handle)

Retrieve the instance `key` that corresponds to an instance `handle`.

- **DDS\_InstanceHandle\_t FooDataWriter\_lookup\_instance** ( **FooDataWriter** \*self, const **Foo** \*key\_holder)

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

- void \* **FooDataWriter\_create\_data** ( **FooDataWriter** \*self)

Creates a data sample and initializes it.

- void \* **FooDataWriter\_create\_data\_w\_params** ( **FooDataWriter** \*self, const struct **DDS\_TypeAllocationParams\_t** \*alloc\_params)

Creates a data sample and initializes it.

- **DDS\_Boolean FooDataWriter\_delete\_data** ( **FooDataWriter** \*self, **Foo** \*sample)
 

*Destroys a user data type instance.*
- **void \* FooDataWriter\_delete\_data\_w\_params** ( **FooDataWriter** \*self, **Foo** \*sample, const struct **DDS\_↵**  
**TypeDeallocationParams\_t** \*dealloc\_params)
 

*Destroys a user data type instance.*
- **DDS\_ReturnCode\_t FooDataWriter\_get\_loan** ( **FooDataWriter** \*self, **Foo** \*\*sample)
 

*Gets a sample managed by the DataWriter.*
- **DDS\_ReturnCode\_t FooDataWriter\_discard\_loan** ( **FooDataWriter** \*self, **Foo** \*sample)
 

*Returns a loaned sample back to the DataWriter.*
- **DDS\_ReturnCode\_t DDS\_OfferedDeadlineMissedStatus\_initialize** (struct **DDS\_OfferedDeadlineMissed↵**  
**Status** \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_OfferedDeadlineMissedStatus\_copy** (struct **DDS\_OfferedDeadlineMissed↵**  
**Status** \*self, const struct **DDS\_OfferedDeadlineMissedStatus** \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_OfferedDeadlineMissedStatus\_finalize** (struct **DDS\_OfferedDeadlineMissed↵**  
**Status** \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_OfferedDeadlineMissedStatus\_equals** (const struct **DDS\_OfferedDeadlineMissed↵**  
**Status** \*left, const struct **DDS\_OfferedDeadlineMissedStatus** \*right)
 

*Compares two **DDS\_OfferedDeadlineMissedStatus** (p. 1607) for equality.*
- **DDS\_ReturnCode\_t DDS\_LivelinessLostStatus\_initialize** (struct **DDS\_LivelinessLostStatus** \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_LivelinessLostStatus\_copy** (struct **DDS\_LivelinessLostStatus** \*self, const struct  
**DDS\_LivelinessLostStatus** \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_LivelinessLostStatus\_finalize** (struct **DDS\_LivelinessLostStatus** \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_LivelinessLostStatus\_equals** (const struct **DDS\_LivelinessLostStatus** \*left, const  
struct **DDS\_LivelinessLostStatus** \*right)
 

*Compares two **DDS\_LivelinessLostStatus** (p. 1574) for equality.*
- **DDS\_ReturnCode\_t DDS\_OfferedIncompatibleQosStatus\_initialize** (struct **DDS\_OfferedIncompatible↵**  
**QosStatus** \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_OfferedIncompatibleQosStatus\_copy** (struct **DDS\_OfferedIncompatibleQos↵**  
**Status** \*self, const struct **DDS\_OfferedIncompatibleQosStatus** \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_OfferedIncompatibleQosStatus\_finalize** (struct **DDS\_OfferedIncompatible↵**  
**QosStatus** \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_OfferedIncompatibleQosStatus\_equals** (const struct **DDS\_OfferedIncompatible↵**  
**QosStatus** \*left, const struct **DDS\_OfferedIncompatibleQosStatus** \*right)
 

*Compares two **DDS\_OfferedIncompatibleQosStatus** (p. 1609) for equality.*
- **DDS\_ReturnCode\_t DDS\_PublicationMatchedStatus\_initialize** (struct **DDS\_PublicationMatchedStatus**  
\*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_PublicationMatchedStatus\_copy** (struct **DDS\_PublicationMatchedStatus** \*self,  
const struct **DDS\_PublicationMatchedStatus** \*source)
 

*Copy the contents of the given status into this status.*

- **DDS\_ReturnCode\_t DDS\_PublicationMatchedStatus\_finalize** (struct **DDS\_PublicationMatchedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_PublicationMatchedStatus\_equals** (const struct **DDS\_PublicationMatchedStatus** \*left, const struct **DDS\_PublicationMatchedStatus** \*right)  
*Compares two **DDS\_PublicationMatchedStatus** (p. 1658) for equality.*
- **DDS\_ReturnCode\_t DDS\_ServiceRequestAcceptedStatus\_initialize** (struct **DDS\_ServiceRequestAcceptedStatus** \*self)  
*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_ServiceRequestAcceptedStatus\_copy** (struct **DDS\_ServiceRequestAcceptedStatus** \*self, const struct **DDS\_ServiceRequestAcceptedStatus** \*source)  
*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_ServiceRequestAcceptedStatus\_finalize** (struct **DDS\_ServiceRequestAcceptedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_ServiceRequestAcceptedStatus\_equals** (const struct **DDS\_ServiceRequestAcceptedStatus** \*left, const struct **DDS\_ServiceRequestAcceptedStatus** \*right)  
*Compares two **DDS\_ServiceRequestAcceptedStatus** (p. 1738) for equality.*
- **DDS\_Boolean DDS\_ReliableWriterCacheEventCount\_equals** (const struct **DDS\_ReliableWriterCacheEventCount** \*left, const struct **DDS\_ReliableWriterCacheEventCount** \*right)  
*Compares two **DDS\_ReliableWriterCacheEventCount** (p. 1687) for equality.*
- **DDS\_ReturnCode\_t DDS\_ReliableWriterCacheChangedStatus\_initialize** (struct **DDS\_ReliableWriterCacheChangedStatus** \*self)  
*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_ReliableWriterCacheChangedStatus\_copy** (struct **DDS\_ReliableWriterCacheChangedStatus** \*self, const struct **DDS\_ReliableWriterCacheChangedStatus** \*source)  
*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_ReliableWriterCacheChangedStatus\_finalize** (struct **DDS\_ReliableWriterCacheChangedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_ReliableWriterCacheChangedStatus\_equals** (const struct **DDS\_ReliableWriterCacheChangedStatus** \*left, const struct **DDS\_ReliableWriterCacheChangedStatus** \*right)  
*Compares two **DDS\_ReliableWriterCacheChangedStatus** (p. 1684) for equality.*
- **DDS\_ReturnCode\_t DDS\_ReliableReaderActivityChangedStatus\_initialize** (struct **DDS\_ReliableReaderActivityChangedStatus** \*self)  
*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_ReliableReaderActivityChangedStatus\_copy** (struct **DDS\_ReliableReaderActivityChangedStatus** \*self, const struct **DDS\_ReliableReaderActivityChangedStatus** \*source)  
*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_ReliableReaderActivityChangedStatus\_finalize** (struct **DDS\_ReliableReaderActivityChangedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_ReliableReaderActivityChangedStatus\_equals** (const struct **DDS\_ReliableReaderActivityChangedStatus** \*left, const struct **DDS\_ReliableReaderActivityChangedStatus** \*right)  
*Compares two **DDS\_ReliableReaderActivityChangedStatus** (p. 1682) for equality.*
- **DDS\_ReturnCode\_t DDS\_DataWriterCacheStatus\_initialize** (struct **DDS\_DataWriterCacheStatus** \*self)  
*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_DataWriterCacheStatus\_copy** (struct **DDS\_DataWriterCacheStatus** \*self, const struct **DDS\_DataWriterCacheStatus** \*source)

*Copy the contents of the given status into this status.*

- **DDS\_ReturnCode\_t DDS\_DataWriterCacheStatus\_finalize** (struct **DDS\_DataWriterCacheStatus** \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_DataWriterCacheStatus\_equals** (const struct **DDS\_DataWriterCacheStatus** \*left, const struct **DDS\_DataWriterCacheStatus** \*right)
 

*Compares two **DDS\_DataWriterCacheStatus** (p. 1415) for equality.*
- **DDS\_ReturnCode\_t DDS\_DataWriterProtocolStatus\_initialize** (struct **DDS\_DataWriterProtocolStatus** \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_DataWriterProtocolStatus\_copy** (struct **DDS\_DataWriterProtocolStatus** \*self, const struct **DDS\_DataWriterProtocolStatus** \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_DataWriterProtocolStatus\_finalize** (struct **DDS\_DataWriterProtocolStatus** \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_DataWriterProtocolStatus\_equals** (const struct **DDS\_DataWriterProtocolStatus** \*left, const struct **DDS\_DataWriterProtocolStatus** \*right)
 

*Compares two **DDS\_DataWriterProtocolStatus** (p. 1427) for equality.*
- **DDS\_Boolean DDS\_DataWriterQos\_equals** (const struct **DDS\_DataWriterQos** \*self, const struct **DDS\_↔DataWriterQos** \*other)
 

*Compares two **DDS\_DataWriterQos** (p. 1438) for equality.*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_print** (const struct **DDS\_DataWriterQos** \*self)
 

*Prints this **DDS\_DataWriterQos** (p. 1438) to stdout.*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_to\_string** (const struct **DDS\_DataWriterQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)
 

*Obtains a string representation of this **DDS\_DataWriterQos** (p. 1438).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_to\_string\_w\_params** (const struct **DDS\_DataWriterQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_DataWriterQos** \*base, const struct **DDS\_↔\_QosPrintFormat** \*format)
 

*Obtains a string representation of this **DDS\_DataWriterQos** (p. 1438).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_initialize** (struct **DDS\_DataWriterQos** \*self)
 

*Initializer for new QoS instances.*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_finalize** (struct **DDS\_DataWriterQos** \*self)
 

*Free any dynamic memory allocated by the policies in this **DDS\_DataWriterQos** (p. 1438).*
- **DDS\_ReturnCode\_t DDS\_DataWriterQos\_copy** (struct **DDS\_DataWriterQos** \*self, const struct **DDS\_↔DataWriterQos** \*source)
 

*Copy the contents of the given QoS into this QoS.*
- **DDS\_Entity \* DDS\_DataWriter\_as\_entity** (**DDS\_DataWriter** \*dataWriter)
 

*Access a **DDS\_DataWriter** (p. 478)'s supertype instance.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_assert\_liveliness** (**DDS\_DataWriter** \*self)
 

*This operation manually asserts the liveliness of this **DDS\_DataWriter** (p. 478).*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscription\_locators** (**DDS\_DataWriter** \*self, struct **DDS\_LocatorSeq** \*locators)
 

*<<extension>> (p. 817) Retrieve the list of locators for subscriptions currently "associated" with this **DDS\_DataWriter** (p. 478).*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscriptions** (**DDS\_DataWriter** \*self, struct **DDS\_↔\_InstanceHandleSeq** \*subscription\_handles)
 

*Retrieve the list of subscriptions currently "associated" with this **DDS\_DataWriter** (p. 478).*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_is\_matched\_subscription\_active** (**DDS\_DataWriter** \*self, **DDS\_↔\_Boolean** \*is\_active, const **DDS\_InstanceHandle\_t** \*subscription\_handle)

Check if a subscription currently matched with a `DataWriter` is active.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscription\_data** ( `DDS_DataWriter *self`, `struct DDS_SubscriptionBuiltinTopicData *subscription_data`, `const DDS_InstanceHandle_t *subscription_handle`)  
*This operation retrieves the information on a subscription that is currently "associated" with the `DDS_DataWriter` (p. 478).*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscription\_participant\_data** ( `DDS_DataWriter *self`, `struct DDS_ParticipantBuiltinTopicData *participant_data`, `const DDS_InstanceHandle_t *subscription_handle`)  
*This operation retrieves the information on the discovered `DDS_DomainParticipant` (p. 72) associated with the subscription that is currently matching with the `DDS_DataWriter` (p. 478).*
- **DDS\_Topic \* DDS\_DataWriter\_get\_topic** ( `DDS_DataWriter *self`)  
*This operation returns the `DDS_Topic` (p. 172) associated with the `DDS_DataWriter` (p. 478).*
- **DDS\_Publisher \* DDS\_DataWriter\_get\_publisher** ( `DDS_DataWriter *self`)  
*This operation returns the `DDS_Publisher` (p. 436) to which the `DDS_DataWriter` (p. 478) belongs.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_wait\_for\_acknowledgments** ( `DDS_DataWriter *self`, `const struct DDS_Duration_t *max_wait`)  
*Blocks the calling thread until all data written by reliable `DDS_DataWriter` (p. 478) entity is acknowledged, or until timeout expires.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_is\_sample\_app\_acknowledged** ( `DDS_DataWriter *self`, `DDS_Boolean *is_app_ack`, `const struct DDS_SampleIdentity_t *identity`)  
*This function can be used to see if a sample has been application acknowledged.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_wait\_for\_asynchronous\_publishing** ( `DDS_DataWriter *self`, `const struct DDS_Duration_t *max_wait`)  
*<<extension>> (p. 817) Blocks the calling thread until asynchronous sending is complete.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_liveliness\_lost\_status** ( `DDS_DataWriter *self`, `struct DDS_LivelinessLostStatus *status`)  
*Accesses the `DDS_LIVELINESS_LOST_STATUS` (p. 1034) communication status.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_offered\_deadline\_missed\_status** ( `DDS_DataWriter *self`, `struct DDS_OfferedDeadlineMissedStatus *status`)  
*Accesses the `DDS_OFFERED_DEADLINE_MISSED_STATUS` (p. 1031) communication status.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_offered\_incompatible\_qos\_status** ( `DDS_DataWriter *self`, `struct DDS_OfferedIncompatibleQosStatus *status`)  
*Accesses the `DDS_OFFERED_INCOMPATIBLE_QOS_STATUS` (p. 1032) communication status.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_publication\_matched\_status** ( `DDS_DataWriter *self`, `struct DDS_PublicationMatchedStatus *status`)  
*Accesses the `DDS_PUBLICATION_MATCHED_STATUS` (p. 1035) communication status.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_reliable\_writer\_cache\_changed\_status** ( `DDS_DataWriter *self`, `struct DDS_ReliableWriterCacheChangedStatus *status`)  
*<<extension>> (p. 817) Get the reliable cache status for this writer.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_reliable\_reader\_activity\_changed\_status** ( `DDS_DataWriter *self`, `struct DDS_ReliableReaderActivityChangedStatus *status`)  
*<<extension>> (p. 817) Get the reliable reader activity changed status for this writer.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_datawriter\_cache\_status** ( `DDS_DataWriter *self`, `struct DDS_DataWriterCacheStatus *status`)  
*<<extension>> (p. 817) Get the datawriter cache status for this writer.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_datawriter\_protocol\_status** ( `DDS_DataWriter *self`, `struct DDS_DataWriterProtocolStatus *status`)  
*<<extension>> (p. 817) Get the datawriter protocol status for this writer.*
- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscription\_datawriter\_protocol\_status** ( `DDS_DataWriter *self`, `struct DDS_DataWriterProtocolStatus *status`, `const DDS_InstanceHandle_t *subscription_handle`)

<<*extension*>> (p. 817) Get the datawriter protocol status for this writer, per matched subscription identified by the subscription\_handle.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_matched\_subscription\_datawriter\_protocol\_status\_by\_locator** ( DDS\_DataWriter \*self, struct DDS\_DataWriterProtocolStatus \*status, const struct DDS\_Locator\_t \*locator)

<<*extension*>> (p. 817) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_service\_request\_accepted\_status** ( DDS\_DataWriter \*self, struct DDS\_ServiceRequestAcceptedStatus \*status)

Accesses the *DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS* (p. 1036) communication status.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_set\_qos** ( DDS\_DataWriter \*self, const struct DDS\_DataWriterQos \*qos)

Sets the writer QoS.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_set\_qos\_with\_profile** ( DDS\_DataWriter \*self, const char \*library\_name, const char \*profile\_name)

<<*extension*>> (p. 817) Change the QoS of this writer using the input XML QoS profile.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_qos** ( DDS\_DataWriter \*self, struct DDS\_DataWriterQos \*qos)

Gets the writer QoS.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_set\_property** ( DDS\_DataWriter \*self, const char \*property\_name, const char \*value, DDS\_Boolean propagate)

Set the value for a property that applies to a DataWriter.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_set\_listener** ( DDS\_DataWriter \*self, const struct DDS\_DataWriterListener \*l, DDS\_StatusMask mask)

Sets the writer listener.

- struct **DDS\_DataWriterListener DDS\_DataWriter\_get\_listener** ( DDS\_DataWriter \*self)

Get the writer listener.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_get\_listenerX** ( DDS\_DataWriter \*self, struct DDS\_DataWriterListener \*listener)

<<*extension*>> (p. 817) Get the writer listener.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_flush** ( DDS\_DataWriter \*self)

<<*extension*>> (p. 817) Flushes the batch in progress in the context of the calling thread.

- **DDS\_ReturnCode\_t DDS\_DataWriter\_take\_discovery\_snapshot** ( DDS\_DataWriter \*self, const char \*file\_name)

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

### 4.17.1 Detailed Description

**DDS\_DataWriter** (p. 478) entity and associated elements

### 4.17.2 Macro Definition Documentation

### 4.17.2.1 DDS\_OfferedDeadlineMissedStatus\_INITIALIZER

```
#define DDS_OfferedDeadlineMissedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_OfferedDeadlineMissedStatus** (p. 1607) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_OfferedDeadlineMissedStatus\_finalize** (p. 505) should be called to free the contained fields that use dynamic memory:

```
struct DDS_OfferedDeadlineMissedStatus myStatus = DDS_OfferedDeadlineMissedStatus_INITIALIZER;
DDS_DataWriter_get_offered_deadline_missed_status(myDataWriter, &myStatus);
DDS_OfferedDeadlineMissedStatus_finalize(&myStatus);
```

See also

- DDS\_OfferedDeadlineMissedStatus\_initialize** (p. 503)
- DDS\_DataWriter\_get\_offered\_deadline\_missed\_status** (p. 538)
- DDS\_OfferedDeadlineMissedStatus\_finalize** (p. 505)

### 4.17.2.2 DDS\_LivelinessLostStatus\_INITIALIZER

```
#define DDS_LivelinessLostStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_LivelinessLostStatus** (p. 1574) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_LivelinessLostStatus\_finalize** (p. 507) should be called to free the contained fields that use dynamic memory:

```
struct DDS_LivelinessLostStatus myStatus = DDS_LivelinessLostStatus_INITIALIZER;
DDS_DataWriter_get_liveliness_lost_status(myDataWriter, &myStatus);
DDS_LivelinessLostStatus_finalize(&myStatus);
```

See also

- DDS\_LivelinessLostStatus\_initialize** (p. 506)
- DDS\_DataWriter\_get\_liveliness\_lost\_status** (p. 538)
- DDS\_LivelinessLostStatus\_finalize** (p. 507)

### 4.17.2.3 DDS\_OfferedIncompatibleQosStatus\_INITIALIZER

```
#define DDS_OfferedIncompatibleQosStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_OfferedIncompatibleQosStatus** (p. 1609) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_OfferedIncompatibleQosStatus\_finalize** (p. 509) should be called to free the contained fields that use dynamic memory:

```
struct DDS_OfferedIncompatibleQosStatus myStatus = DDS_OfferedIncompatibleQosStatus_INITIALIZER;
```

```
DDS_DataWriter_get_offered_incompatible_qos_status(myDataWriter, &myStatus);
```

```
DDS_OfferedIncompatibleQosStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_offered\_incompatible\_qos\_status** (p. 539)

**DDS\_OfferedIncompatibleQosStatus\_finalize** (p. 509)

### 4.17.2.4 DDS\_PublicationMatchedStatus\_INITIALIZER

```
#define DDS_PublicationMatchedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_PublicationMatchedStatus** (p. 1658) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_PublicationMatchedStatus\_finalize** (p. 512) should be called to free the contained fields that use dynamic memory:

```
struct DDS_PublicationMatchedStatus myStatus = DDS_PublicationMatchedStatus_INITIALIZER;
```

```
DDS_DataWriter_get_publication_matched_status(myDataWriter, &myStatus);
```

```
DDS_PublicationMatchedStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_publication\_matched\_status** (p. 539)

**DDS\_PublicationMatchedStatus\_finalize** (p. 512)

#### 4.17.2.5 DDS\_ServiceRequestAcceptedStatus\_INITIALIZER

```
#define DDS_ServiceRequestAcceptedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_ServiceRequestAcceptedStatus** (p. 1738) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_ServiceRequestAcceptedStatus\_finalize** (p. 514) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ServiceRequestAcceptedStatus myStatus = DDS_ServiceRequestAcceptedStatus_INITIALIZER;
```

```
DDS_DataWriter_get_service_request_accepted_status(myDataWriter, &myStatus);
```

```
DDS_ServiceRequestAcceptedStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_service\_request\_accepted\_status** (p. 543)

**DDS\_ServiceRequestAcceptedStatus\_finalize** (p. 514)

#### 4.17.2.6 DDS\_ReliableWriterCacheChangedStatus\_INITIALIZER

```
#define DDS_ReliableWriterCacheChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_ReliableWriterCacheChangedStatus** (p. 1684) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_ReliableWriterCacheChangedStatus\_finalize** (p. 517) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ReliableWriterCacheChangedStatus myStatus = DDS_ReliableWriterCacheChangedStatus_INITIALIZER;
```

```
DDS_DataWriter_get_reliable_writer_cache_changed_status(myDataWriter, &myStatus);
```

```
DDS_ReliableWriterCacheChangedStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_reliable\_writer\_cache\_changed\_status** (p. 540)

**DDS\_ReliableWriterCacheChangedStatus\_finalize** (p. 517)

#### 4.17.2.7 DDS\_ReliableReaderActivityChangedStatus\_INITIALIZER

```
#define DDS_ReliableReaderActivityChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_ReliableReaderActivityChangedStatus** (p. 1682) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_↔ReliableReaderActivityChangedStatus\_finalize** (p. 519) should be called to free the contained fields that use dynamic memory:

```
struct DDS_ReliableReaderActivityChangedStatus myStatus = DDS_ReliableReaderActivityChangedStatus_INITIALIZER;
DDS_DataWriter_get_reliable_reader_activity_changed_status(myDataWriter, &myStatus);
DDS_ReliableReaderActivityChangedStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_reliable\_reader\_activity\_changed\_status** (p. 540)

**DDS\_ReliableReaderActivityChangedStatus\_finalize** (p. 519)

#### 4.17.2.8 DDS\_DataWriterCacheStatus\_INITIALIZER

```
#define DDS_DataWriterCacheStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_DataWriterCacheStatus** (p. 1415) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_DataWriter↔CacheStatus\_finalize** (p. 522) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataWriterCacheStatus myStatus = DDS_DataWriterCacheStatus_INITIALIZER;
DDS_DataWriter_get_datawriter_cache_status(myDataWriter, &myStatus);
DDS_DataWriterCacheStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_datawriter\_cache\_status** (p. 541)

**DDS\_DataWriterCacheStatus\_finalize** (p. 522)

#### 4.17.2.9 DDS\_DataWriterProtocolStatus\_INITIALIZER

```
#define DDS_DataWriterProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_DataWriterProtocolStatus** (p. 1427) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_DataWriterProtocolStatus\_finalize** (p. 525) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataWriterProtocolStatus myStatus = DDS_DataWriterProtocolStatus_INITIALIZER;

DDS_DataWriter_get_datawriter_protocol_status(myDataWriter, &myStatus);

DDS_DataWriterProtocolStatus_finalize(&myStatus);
```

See also

**DDS\_DataWriter\_get\_datawriter\_protocol\_status** (p. 541)

**DDS\_DataWriterProtocolStatus\_finalize** (p. 525)

#### 4.17.2.10 DDS\_DataWriterQos\_INITIALIZER

```
#define DDS_DataWriterQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_DataWriterQos** (p. 1438) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DataWriterQos myQos = DDS_DataWriterQos_INITIALIZER;

DDS_Publisher_get_default_datawriter_qos(myPub, &myQos);

DDS_DataWriter_set_qos(myDataWriter, &myQos);

DDS_DataWriterQos_finalize(&myQos);
```

See also

**DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442)

**DDS\_DataWriterQos\_finalize** (p. 529)

#### 4.17.2.11 DDS\_DataWriterListener\_INITIALIZER

```
#define DDS_DataWriterListener_INITIALIZER
```

Initializer for new **DDS\_DataWriterListener** (p. 1417).

All the new **DDS\_DataWriterListener** (p. 1417) instances allocated in the stack should be initialized to this value. No memory is allocated.

```
struct DDS_DataWriterListener listener = DDS_DataWriterListener_INITIALIZER;

/* initialize listener functions */

listener.on_offered_deadline_missed = ....;

DDS_DataWriter_set_listener(myDataWriter, &listener, mask);
```

See also

**DDS\_DataWriter\_set\_listener** (p. 546)

**DDS\_DataWriterListener** (p. 1417)

### 4.17.3 Typedef Documentation

#### 4.17.3.1 DDS\_DataWriter

```
typedef struct DDS_DataWriterImpl DDS_DataWriter
```

<<**interface**>> (p. 818) Allows an application to set the value of the data to be published under a given **DDS\_Topic** (p. 172).

QoS:

**DDS\_DataWriterQos** (p. 1438)

Status:

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 1034), **DDS\_LivelinessLostStatus** (p. 1574);  
**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 1031), **DDS\_OfferedDeadlineMissedStatus** (p. 1607);  
**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032), **DDS\_OfferedIncompatibleQosStatus** (p. 1609);  
**DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 1035), **DDS\_PublicationMatchedStatus** (p. 1658);  
**DDS\_RELIABLE\_READER\_ACTIVITY\_CHANGED\_STATUS** (p. 1037), **DDS\_ReliableReaderActivity**↔  
**ChangedStatus** (p. 1682);  
**DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 1037), **DDS\_ReliableWriterCache**↔  
**Status** (p. 1684).

Listener:

**DDS\_DataWriterListener** (p. 1417)

A **DDS\_DataWriter** (p. 478) is attached to exactly one **DDS\_Publisher** (p. 436), that acts as a factory for it.

A **DDS\_DataWriter** (p. 478) is bound to exactly one **DDS\_Topic** (p. 172) and therefore to exactly one data type. The **DDS\_Topic** (p. 172) must exist prior to the **DDS\_DataWriter** (p. 478)'s creation.

**DDS\_DataWriter** (p. 478) is an abstract class. It must be specialized for each particular application data-type (see **USER\_DATA** (p. 1143)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 1841) are specified in the example type **DDS\_DataWriter** (p. 478).

The following operations may be called even if the **DDS\_DataWriter** (p. 478) is not enabled. Other operations will fail with **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) if called on a disabled **DDS\_DataWriter** (p. 478):

- The base-class operations **DDS\_DataWriter\_set\_qos** (p. 543), **DDS\_DataWriter\_get\_qos** (p. 545), **DDS\_DataWriter\_set\_listener** (p. 546), **DDS\_DataWriter\_get\_listener** (p. 546), **DDS\_Entity\_enable** (p. 1163), **DDS\_Entity\_get\_statuscondition** (p. 1164) and **DDS\_Entity\_get\_status\_changes** (p. 1164)
- **DDS\_DataWriter\_get\_liveliness\_lost\_status** (p. 538), **DDS\_DataWriter\_get\_offered\_deadline\_missed\_status** (p. 538), **DDS\_DataWriter\_get\_offered\_incompatible\_qos\_status** (p. 539), **DDS\_DataWriter\_get\_publication\_matched\_status** (p. 539), **DDS\_DataWriter\_get\_reliable\_writer\_cache\_changed\_status** (p. 540), **DDS\_DataWriter\_get\_reliable\_reader\_activity\_changed\_status** (p. 540) **DDS\_DataWriter\_get\_service\_request\_accepted\_status** (p. 543)

Several **DDS\_DataWriter** (p. 478) may operate in different threads. If they share the same **DDS\_Publisher** (p. 436), the middleware guarantees that its operations are thread-safe.

See also

**FooDataWriter** (p. 1845)

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.17.3.2 DDS\_DataWriterListener\_OfferedDeadlineMissedCallback

```
typedef void(* DDS_DataWriterListener_OfferedDeadlineMissedCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_OfferedDeadlineMissedStatus *status)
```

Prototype of a **DDS\_DataWriterListener** (p. 1417) on `_offered_deadline_missed` function.

#### 4.17.3.3 DDS\_DataWriterListener\_LivelinessLostCallback

```
typedef void(* DDS_DataWriterListener_LivelinessLostCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_LivelinessLostStatus *status)
```

Prototype of a **DDS\_DataWriterListener** (p. 1417) on `_liveliness_lost` function.

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 818) Current liveness lost status of the locally created <b>DDS_DataWriter</b> (p. 478)

## 4.17.3.4 DDS\_DataWriterListener\_OfferedIncompatibleQosCallback

```
typedef void(* DDS_DataWriterListener_OfferedIncompatibleQosCallback) (void *listener_data, DDS_↔
_DataWriter *writer, const struct DDS_OfferedIncompatibleQosStatus *status)
```

Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_offered\_incompatible\_qos function.

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 818) Current offered incompatible qos status of the locally created <b>DDS_DataWriter</b> (p. 478)

## 4.17.3.5 DDS\_DataWriterListener\_PublicationMatchedException

```
typedef void(* DDS_DataWriterListener_PublicationMatchedException) (void *listener_data, DDS_↔
_DataWriter *writer, const struct DDS_PublicationMatchedException *status)
```

Prototype of a **DDS\_DataWriterListener** (p. 1417) on\_publication\_matched function.

## 4.17.3.6 DDS\_DataWriterListener\_ReliableWriterCacheChangedException

```
typedef void(* DDS_DataWriterListener_ReliableWriterCacheChangedException) (void *listener_data,
DDS_DataWriter *writer, const struct DDS_ReliableWriterCacheChangedException *status)
```

<<**extension**>> (p. 817) A change has occurred in the writer's cache.

This callback is triggered when the cache becomes empty or full, or when the number of unacknowledged samples reaches a high or low watermark.

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 818) Current reliable writer cache changed status of the locally created <b>DDS_DataWriter</b> (p. 478)

## 4.17.3.7 DDS\_DataWriterListener\_ReliableReaderActivityChangedCallback

```
typedef void(* DDS_DataWriterListener_ReliableReaderActivityChangedCallback) (void *listener_data,
DDS_DataWriter *writer, const struct DDS_ReliableReaderActivityChangedStatus *status)
```

<<**extension**>> (p. 817) A matched reliable reader has become active or become inactive.

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 818) Current reliable reader activity changed status of the locally created <b>DDS_DataWriter</b> (p. 478)

## 4.17.3.8 DDS\_DataWriterListener\_SampleRemovedCallback

```
typedef void(* DDS_DataWriterListener_SampleRemovedCallback) (void *listener_data, DDS_DataWriter
*writer, const struct DDS_Cookie_t *cookie)
```

<<**extension**>> (p. 817) A sample has been removed from the DataWriter's queue.

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>cookie</i>	<< <b>out</b> >> (p. 818) <ul style="list-style-type: none"> <li>• If this sample was written with <b>FooDataWriter_write_w_params</b> (p. 494), this field contains a copy of the cookie set in <b>DDS_WriteParams_t</b> (p. 1833).</li> <li>• If this writer uses <b>Zero Copy Transfer Over Shared Memory</b> (p. 205) "Zero Copy transfer over shared memory", this field contains the absolute address of the sample that is removed. The address of the sample can be obtained by using <b>DDS_Cookie_to_pointer</b> (p. 1183).</li> </ul>

See also

**FooDataWriter\_get\_loan** (p. 501)

#### 4.17.3.9 DDS\_DataWriterListener\_InstanceReplacedCallback

```
typedef void(* DDS_DataWriterListener_InstanceReplacedCallback) (void *listener_data, DDS_DataWriter *writer, const DDS_InstanceHandle_t *handle)
```

<<**extension**>> (p. 817) An instance previously registered with the writer has been replaced

Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>handle</i>	<< <b>out</b> >> (p. 818) Handle of the replaced instance

#### 4.17.3.10 DDS\_DataWriterListener\_OnApplicationAcknowledgmentCallback

```
typedef void(* DDS_DataWriterListener_OnApplicationAcknowledgmentCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_AcknowledgmentInfo *info)
```

<<**extension**>> (p. 817) An application-level acknowledgment has been received for a sample

Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>info</i>	<< <b>out</b> >> (p. 818) <b>DDS_AcknowledgmentInfo</b> (p. 1319) of the acknowledged sample

#### 4.17.3.11 DDS\_DataWriterListener\_ServiceRequestAcceptedCallback

```
typedef void(* DDS_DataWriterListener_ServiceRequestAcceptedCallback) (void *listener_data, DDS_DataWriter *writer, const struct DDS_ServiceRequestAcceptedStatus *status)
```

<<**extension**>> (p. 817) a **DDS\_ServiceRequest** (p. 1736) for the **DDS\_TopicQuery** (p. 698) service is dispatched to this **DDS\_DataWriter** (p. 478).

## Parameters

<i>listener_data</i>	<< <b>out</b> >> (p. 818) Data associated with the listener when the listener is set
<i>writer</i>	<< <b>out</b> >> (p. 818) Locally created <b>DDS_DataWriter</b> (p. 478) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 818) Current service request accepted status of locally created <b>DDS_DataWriter</b> (p. 478)

## See also

**Topic Queries** (p. 695)

#### 4.17.4 Function Documentation

##### 4.17.4.1 FooDataWriter\_narrow()

```
FooDataWriter * FooDataWriter_narrow (
    DDS_DataWriter * writer )
```

Narrow the given **DDS\_DataWriter** (p. 478) pointer to a **FooDataWriter** (p. 1845) pointer.

Check if the given `writer` is of type **FooDataWriter** (p. 1845).

## Parameters

<i>writer</i>	<< <b>in</b> >> (p. 818) Base-class <b>DDS_DataWriter</b> (p. 478) to be converted to the auto-generated class <b>FooDataWriter</b> (p. 1845) that extends <b>DDS_DataWriter</b> (p. 478). Cannot be NULL.
---------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

**FooDataWriter** (p. 1845) if `writer` is of type **Foo** (p. 1841). Return NULL otherwise.

##### 4.17.4.2 FooDataWriter\_as\_datawriter()

```
DDS_DataWriter * FooDataWriter_as_datawriter (
    FooDataWriter * writer )
```

Widen the given **FooDataWriter** (p. 1845) pointer to a **DDS\_DataWriter** (p. 478) pointer.

## Parameters

<i>writer</i>	<< <i>in</i> >> (p. 818) auto-generated <b>FooDataWriter</b> (p. 1845) to be converted to the Base-class <b>DDS_DataWriter</b> (p. 478). Cannot be NULL.
---------------	----------------------------------------------------------------------------------------------------------------------------------------------------------

## Returns

**DDS\_DataWriter** (p. 478).

## 4.17.4.3 FooDataWriter\_register\_instance()

```
DDS_InstanceHandle_t FooDataWriter_register_instance (
    FooDataWriter * self,
    const Foo * instance_data )
```

Informs RTI Connexx that the application will be modifying a particular instance.

This operation is only useful for keyed data types. Using it for non-keyed types causes no effect and returns **DDS\_↔HANDLE\_NIL** (p. 224). The operation takes as a parameter an instance (of which only the key value is examined) and returns a `handle` that can be used in successive `write()` or `dispose()` operations.

The operation gives RTI Connexx an opportunity to pre-configure itself to improve performance.

The use of this operation by an application is optional even for keyed types. If an instance has not been pre-registered, the application can use the special value **DDS\_HANDLE\_NIL** (p. 224) as the **DDS\_InstanceHandle\_t** (p. 210) parameter to the `write` or `dispose` operation and RTI Connexx will auto-register the instance.

For best performance, the operation should be invoked prior to calling any operation that modifies the instance, such as **FooDataWriter\_write** (p. 489), **FooDataWriter\_write\_w\_timestamp** (p. 493), **FooDataWriter\_dispose** (p. 495) and **FooDataWriter\_dispose\_w\_timestamp** (p. 496) and the `handle` used in conjunction with the data for those calls.

When this operation is used, RTI Connexx will automatically supply the value of the `source_timestamp` that is used.

This operation may fail and return **DDS\_HANDLE\_NIL** (p. 224) if **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1693) limit has been exceeded.

The operation is **idempotent**. If it is called for an already registered instance, it just returns the already allocated handle. This may be used to lookup and retrieve the handle allocated to a given instance.

This operation can only be called after **DDS\_DataWriter** (p. 478) has been enabled. Otherwise, **DDS\_HANDLE\_NIL** (p. 224) will be returned.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function. Cannot be NULL.

## Returns

For keyed data type, a handle that can be used in the calls that take a **DDS\_InstanceHandle\_t** (p.210), such as `write`, `dispose`, `unregister_instance`, or return **DDS\_HANDLE\_NIL** (p.224) on failure. If the `instance_data` is of a data type that has no keys, this function always returns **DDS\_HANDLE\_NIL** (p.224).

## See also

**FooDataWriter\_unregister\_instance** (p.486), **FooDataWriter\_get\_key\_value** (p.498), **Relationship between registration, liveness and ownership** (p.1613)

## 4.17.4.4 FooDataWriter\_register\_instance\_w\_timestamp()

```
DDS_InstanceHandle_t FooDataWriter_register_instance_w_timestamp (
    FooDataWriter * self,
    const Foo * instance_data,
    const struct DDS_Time_t * source_timestamp )
```

Performs the same functions as `register_instance` except that the application provides the value for the `source_timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION\_ORDER** (p.1074) QoS policy for details.

This operation may fail and return **DDS\_HANDLE\_NIL** (p.224) if **DDS\_ResourceLimitsQosPolicy::max\_instances** (p.1693) limit has been exceeded.

This operation can only be called after **DDS\_DataWriter** (p.478) has been enabled. Otherwise, **DDS\_HANDLE\_NIL** (p.224) will be returned.

## Parameters

<i>self</i>	<< <i>in</i> >> (p.818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p.818) The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function. Cannot be NULL.
<i>source_timestamp</i>	<< <i>in</i> >> (p.818) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. Cannot be NULL.

## Returns

For keyed data type, return a handle that can be used in the calls that take a **DDS\_InstanceHandle\_t** (p.210), such as `write`, `dispose`, `unregister_instance`, or return **DDS\_HANDLE\_NIL** (p.224) on failure. If the `instance_data` is of a data type that has no keys, this function always return **DDS\_HANDLE\_NIL** (p.224).

See also

**FooDataWriter\_unregister\_instance** (p. 486), **FooDataWriter\_get\_key\_value** (p. 498)

#### 4.17.4.5 FooDataWriter\_register\_instance\_w\_params()

```
DDS_InstanceHandle_t FooDataWriter_register_instance_w_params (
    FooDataWriter * self,
    const Foo * instance_data,
    struct DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter\_register\_instance** (p. 484) and **FooDataWriter\_register\_instance\_w\_timestamp** (p. 485) except that it also provides the values contained in `params`.

See also

**FooDataWriter\_write\_w\_params** (p. 494)

#### 4.17.4.6 FooDataWriter\_unregister\_instance()

```
DDS_ReturnCode_t FooDataWriter_unregister_instance (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * handle )
```

Reverses the action of **FooDataWriter\_register\_instance** (p. 484).

This operation is useful only for keyed data types. Using it for non-keyed types causes no effect and reports no error. The operation takes as a parameter an instance (of which only the key value is examined) and a handle.

This operation should only be called on an instance that is currently registered. This includes instances that have been auto-registered by calling operations such as `write` or `dispose` as described in **FooDataWriter\_register\_instance** (p. 484). Otherwise, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

This only need be called just once per instance, regardless of how many times `register_instance` was called for that instance.

When this operation is used, RTI Connexx will automatically supply the value of the `source_timestamp` that is used.

This operation informs RTI Connexx that the **DDS\_DataWriter** (p. 478) is no longer going to provide any information about the instance. This operation also indicates that RTI Connexx can locally remove all information regarding that instance. The application should not attempt to use the `handle` previously allocated to that instance after calling this function.

The special value **DDS\_HANDLE\_NIL** (p. 224) can be used for the parameter `handle`. This indicates that the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `handle` is any value other than `DDS_HANDLE_NIL` (p. 224), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with `DDS_RETCODE_BAD_PARAMETER` (p. 1025).

RTI Connex will not detect the error when the `handle` is any value other than `DDS_HANDLE_NIL` (p. 224), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). RTI Connex will treat as if the `unregister_instance()` operation is for the instance as indicated by the `handle`.

If, after a `FooDataWriter_unregister_instance` (p. 486), the application wants to modify (`FooDataWriter_write` (p. 489) or `FooDataWriter_dispose` (p. 495)) an instance, it has to register it again, or else use the special `handle` value `DDS_HANDLE_NIL` (p. 224).

This operation does not indicate that the instance is deleted (that is the purpose of `FooDataWriter_dispose` (p. 495)). The operation `FooDataWriter_unregister_instance` (p. 486) just indicates that the `DDS_DataWriter` (p. 478) no longer has anything to say about the instance. `DDS_DataReader` (p. 608) entities that are reading the instance may receive a sample with `DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE` (p. 707) for the instance, unless there are other `DDS_DataWriter` (p. 478) objects writing that same instance.

`DDS_WriterDataLifecycleQosPolicy::autodispose_unregistered_instances` (p. 1840) controls whether instances are automatically disposed when they are unregistered.

This operation can affect the ownership of the data instance (see `OWNERSHIP` (p. 1102)). If the `DDS_DataWriter` (p. 478) was the exclusive owner of the instance, then calling `unregister_instance()` will relinquish that ownership.

If `DDS_ReliabilityQosPolicy::kind` (p. 1681) is set to `DDS_RELIABLE_RELIABILITY_QOS` (p. 1124) and the unregistration would overflow the resource limits of this writer or of a reader, this operation may block for up to `DDS_↔ ReliabilityQosPolicy::max_blocking_time` (p. 1681); if this writer is still unable to unregister after that period, this function will fail with `DDS_RETCODE_TIMEOUT` (p. 1025).

#### Parameters

<code>instance_data</code>	<< <i>in</i> >> (p. 818) The instance that should be unregistered. If <code>Foo</code> (p. 1841) has a key and <code>instance_handle</code> is <code>DDS_HANDLE_NIL</code> (p. 224), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <code>instance_data</code> is used, it must represent an instance that has been registered. Otherwise, this function may fail with <code>DDS_RETCODE_BAD_PARAMETER</code> (p. 1025). If <code>Foo</code> (p. 1841) has a key, <code>instance_data</code> can be NULL only if <code>handle</code> is not <code>DDS_HANDLE_NIL</code> (p. 224). Otherwise, this function will fail with <code>DDS_RETCODE_BAD_PARAMETER</code> (p. 1025).
<code>handle</code>	<< <i>in</i> >> (p. 818) represents the <code>instance</code> to be unregistered. If <code>Foo</code> (p. 1841) has a key and <code>handle</code> is <code>DDS_HANDLE_NIL</code> (p. 224), <code>handle</code> is not used and <code>instance</code> is deduced from <code>instance_data</code> . If <code>Foo</code> (p. 1841) has no key, <code>handle</code> is not used. If <code>handle</code> is used, it must represent an instance that has been registered. Otherwise, this function may fail with <code>DDS_RETCODE_BAD_PARAMETER</code> (p. 1025). This function will fail with <code>DDS_RETCODE_BAD_PARAMETER</code> (p. 1025) if <code>handle</code> is NULL. If <code>Foo</code> (p. 1841) has a key, <code>handle</code> cannot be <code>DDS_HANDLE_NIL</code> (p. 224) if <code>instance_data</code> is NULL. Otherwise, this function will report the error <code>DDS_RETCODE_BAD_PARAMETER</code> (p. 1025).
<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.

#### Returns

One of the `Standard Return Codes` (p. 1024), `DDS_RETCODE_TIMEOUT` (p. 1025) or `DDS_RETCODE_NOT_↔ _ENABLED` (p. 1025)

See also

- FooDataWriter\_register\_instance** (p. 484)
- FooDataWriter\_unregister\_instance\_w\_timestamp** (p. 488)
- FooDataWriter\_get\_key\_value** (p. 498)
- Relationship between registration, liveness and ownership** (p. 1613)

#### 4.17.4.7 FooDataWriter\_unregister\_instance\_w\_timestamp()

```
DDS_ReturnCode_t FooDataWriter_unregister_instance_w_timestamp (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * handle,
    const struct DDS_Time_t * source_timestamp )
```

Performs the same function as **FooDataWriter\_unregister\_instance** (p. 486) except that it also provides the value for the `source_timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION\_ORDER** (p. 1074) QoS policy for details.

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter\_unregister\_instance** (p. 486) operation.

This operation may block and may time out (**DDS\_RETCODE\_TIMEOUT** (p. 1025)) under the same circumstances described for the `unsubscribe_instance` operation.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The instance that should be unregistered. If <b>Foo</b> (p. 1841) <i>has</i> a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <code>instance_data</code> is used, it must represent an instance that has been registered. Otherwise, this function may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). If <b>Foo</b> (p. 1841) <i>has</i> a key, <code>instance_data</code> can be NULL only if <code>handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 224). Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).
<i>handle</i>	<< <i>in</i> >> (p. 818) represents the <code>instance</code> to be unregistered. If <b>Foo</b> (p. 1841) <i>has</i> a key and <code>handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), <code>handle</code> is not used and <code>instance</code> is deduced from <code>instance_data</code> . If <b>Foo</b> (p. 1841) <i>has</i> no key, <code>handle</code> is not used. If <code>handle</code> is used, it must represent an instance that has been registered. Otherwise, this function may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>handle</code> is NULL. If <b>Foo</b> (p. 1841) <i>has</i> a key, <code>handle</code> cannot be <b>DDS_HANDLE_NIL</b> (p. 224) if <code>instance_data</code> is NULL. Otherwise, this function will report the error <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 818) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unsubscribe</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataWriter\_register\_instance** (p. 484)

**FooDataWriter\_unregister\_instance** (p. 486)

**FooDataWriter\_get\_key\_value** (p. 498)

4.17.4.8 **FooDataWriter\_unregister\_instance\_w\_params()**

```
DDS_ReturnCode_t FooDataWriter_unregister_instance_w_params (
    FooDataWriter * self,
    const Foo * instance_data,
    struct DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter\_unregister\_instance** (p. 486) and **FooDataWriter\_unregister\_instance\_w\_timestamp** (p. 488) except that it also provides the values contained in `params`.

## See also

**FooDataWriter\_write\_w\_params** (p. 494)

**FooDataWriter\_dispose\_w\_params** (p. 497)

4.17.4.9 **FooDataWriter\_write()**

```
DDS_ReturnCode_t FooDataWriter_write (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * handle )
```

Modifies the value of a data instance.

When this operation is used, RTI Connex will automatically supply the value of the `source_timestamp` that is made available to **DDS\_DataReader** (p. 608) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1720). (Refer to **DDS\_SampleInfo** (p. 1720) and **DESTINATION\_ORDER** (p. 1074) QoS policy for details).

As a side effect, this operation asserts liveness on the **DDS\_DataWriter** (p. 478) itself, the **DDS\_Publisher** (p. 436) and the **DDS\_DomainParticipant** (p. 72).

Note that the special value **DDS\_HANDLE\_NIL** (p. 224) can be used for the parameter `handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `handle` is any value other than **DDS\_HANDLE\_NIL** (p. 224), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

RTI Connex will not detect the error when the `handle` is any value other than **DDS\_HANDLE\_NIL** (p. 224), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). RTI Connex will treat as if the `write()` operation is for the instance as indicated by the `handle`.

This operation may block if the **RELIABILITY** (p. 1122) `kind` is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 1124) and the modification would cause data to be lost or else cause one of the limits specified in the **RESOURCE\_LIMITS** (p. 1126) to be exceeded.

This operation will not block when using **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 1124). If you are using **BEST\_EFFORT** Reliability in combination with **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120), then instead of being blocked, samples that are queued to be sent by the asynchronous publishing thread will be overwritten when the number of DDS samples that are currently queued has reached the `depth` QoS value in the **DDS\_HistoryQosPolicy** (p. 1558).

If **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1681) elapses before the **DDS\_DataWriter** (p. 478) can store the modification without exceeding the limits, the operation will fail and return **DDS\_RETCODE\_TIMEOUT** (p. 1025) for **KEEP\_ALL** configurations.

Here is how the write operation behaves when **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 1094) and **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 1124) are used:

- The send window size is determined by the **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1711) and **DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1710) fields in the **DDS\_DataWriterProtocolQosPolicy** (p. 1422). If a send window is specified (`max_send_window_size` is not **UNLIMITED**) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1681) expires.
- Then, the **DDS\_DataWriter** (p. 478) will try to add the new sample to the writer history.
- If the instance associated with the sample is present in the writer history and there are `depth` (in the **HISTORY** (p. 1093)) samples in the instance, the DataWriter will replace the oldest sample of that instance independently of that sample's acknowledged status, and the write operation will return **DDS\_RETCODE\_OK** (p. 1025). Otherwise, no sample will be replaced and the write operation will continue.
- If the instance associated with the sample is not present in the writer history and **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1693) is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 1449) (see **DDS\_DataWriterResourceLimitsInstanceReplacementKind** (p. 1070)).
  - If no instance can be replaced, the write operation returns **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).
- If **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1693) is exceeded, the DataWriter will try to drop a sample from a different instance as follows:
  - The DataWriter will try first to remove a fully ACKed (2) sample from a different instance 'I' as long as that sample is not the last remaining sample for the instance 'I'. To find this sample, the DataWriter starts iterating from the oldest sample in the writer history to the newest sample.

- If no such sample is found, the DataWriter will replace the oldest sample in the writer history.
- The sample is added to the writer history, and the write operation returns **DDS\_RETCODE\_OK** (p. 1025).

Here is how the write operation behaves when **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 1094) and **DDS\_RELIABLE\_QOS** (p. 1124) are used:

- The send window size is determined by the **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1711) and **DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1710) fields in the **DATA\_WRITER\_PROTOCOL** (p. 1069). If a send window is specified (`max_send_window_size` is not `UNLIMITED`) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1681) expires.
  - If the `max_blocking_time` expires, the write operation returns **DDS\_RETCODE\_TIMEOUT** (p. 1025).
- When a sample is protocol-ACKed (1) before `max_blocking_time` expires, the DataWriter will try to add the sample to the writer history as follows:
  - If the instance associated with the sample is not present in the writer history and `max_instances` is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 1449) (see **DDS\_DataWriterResourceLimitsInstanceReplacementKind** (p. 1070)).
    - \* If no instance can be replaced, the write operation returns **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).
  - If **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1693) is exceeded, the DataWriter will go through the samples in the order in which they were added, and it will replace the first sample that is fully ACKed (2).
    - \* If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1681) expires. If the `max_blocking_time` expires, the write operation will return **DDS\_RETCODE\_TIMEOUT** (p. 1025).
  - If **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1693) is exceeded, the DataWriter will go through the samples of the instance in the order in which they were added, and it will replace the first sample that is fully ACKed.
    - \* If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or the `max_blocking_time` expires. If the `max_blocking_time` expires, the write operation will return **DDS\_RETCODE\_TIMEOUT** (p. 1025).
  - The sample is added to the writer history, and the write operation returns **DDS\_RETCODE\_OK** (p. 1025).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Calling **FooDataWriter\_unregister\_instance** (p. 486) may help freeing up some resources.

This operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if the timestamp is less than the timestamp used in the last writer operation (*register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application-provided timestamp).

If an instance obtained from **FooDataWriter\_get\_loan** (p. 501) is modified with this operation, then all instances modified thereafter should be from **FooDataWriter\_get\_loan** (p. 501).

See **DDS\_ReliabilityQosPolicyAcknowledgmentModeKind** (p. 1124) for more information on the following notes:

(1) A sample in the writer history is considered "protocol ACKed" when the sample has been individually ACKed at the RTPS protocol level by each one of the DataReaders that matched the DataWriter at the moment the sample was added to the writer queue.

- Late joiners do not change the protocol ACK state of a sample. If a sample is marked as protocol ACKed because it has been acknowledged by all the matching DataReaders and a DataReader joins later on, the historical sample is still considered protocol ACKed even if it has not been received by the late joiner.
- If a sample 'S1' is protocol ACKed and a TopicQuery is received, triggering the publication of 'S1', the sample is still considered protocol ACKed. If a sample 'S1' is not ACKed and a TopicQuery is received triggering the publication of 'S1', the DataWriter will require that both the matching DataReaders on the live RTPS channel and the DataReader on the TopicQuery channel individually protocol ACK the sample in order to consider the sample protocol ACKed.

(2) A sample in the writer history is considered "fully ACKed" when all of the following conditions are met:

- The sample is protocol-ACKed.
- The sample has been "application-level ACKed" by all the DataReaders matching the DataWriter that have their **DDS\_ReliabilityQosPolicy::acknowledgment\_kind** (p.1681) set to **DDS\_APPLICATION\_EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p.1125) or **DDS\_APPLICATION\_AUTO\_ACKNOWLEDGMENT\_MODE** (p.1124). Once the sample is application-level ACKed, it cannot change its status to not ACKed after new DataReaders are matched. (Application-level ACK occurs when the application acknowledges receipt of a sample.)
- If required subscriptions are enabled (see **DDS\_AvailabilityQosPolicy** (p.1330)), the sample must also be ACKed by all the required subscriptions configured on the DataWriter.

(3) It is possible within a single call to the write operation for a DataWriter to block both when the send window is full and then again when **DDS\_ResourceLimitsQosPolicy::max\_samples** (p.1693) or **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p.1693) is exceeded. This can happen because blocking on the send window only considers protocol-ACKed samples, while blocking based on resource limits considers fully-ACKed samples. In any case, the total max blocking time of a single call to the write operation will not exceed **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p.1681).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The data to write.

This function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p.1025) if *instance\_data* is NULL.

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 818) Either the handle returned by a previous call to <b>FooDataWriter_register_instance</b> (p.484), or else the special value <b>DDS_HANDLE_NIL</b> (p.224). If <b>Foo</b> (p.1841) has a key and <i>handle</i> is not <b>DDS_HANDLE_NIL</b> (p.224), <i>handle</i> must represent a registered instance of type <b>Foo</b> (p.1841). Otherwise, this function may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p.1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p.1025) if <i>handle</i> is NULL.
---------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Returns

One of the **Standard Return Codes** (p.1024), **DDS\_RETCODE\_TIMEOUT** (p.1025), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p.1025), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p.1025), or **DDS\_RETCODE\_NOT\_ENABLED** (p.1025).

**MT Safety:**

It is UNSAFE to modify `instance_data` before the operation has finished. The operation is otherwise SAFE.

**See also**

**DDS\_DataReader** (p. 608)

**FooDataWriter\_write\_w\_timestamp** (p. 493)

**DESTINATION\_ORDER** (p. 1074)

**4.17.4.10 FooDataWriter\_write\_w\_timestamp()**

```
DDS_ReturnCode_t FooDataWriter_write_w_timestamp (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * handle,
    const struct DDS_Time_t * source_timestamp )
```

Performs the same function as **FooDataWriter\_write** (p. 489) except that it also provides the value for the `source_↔timestamp`.

Explicitly provides the timestamp that will be available to the **DDS\_DataReader** (p. 608) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1720). (Refer to **DDS\_SampleInfo** (p. 1720) and **DESTINATION\_ORDER** (p. 1074) QoS policy for details)

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter\_write** (p. 489) operation.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 1025)) under the same circumstances described for **FooDataWriter\_write** (p. 489).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Calling **FooDataWriter\_unregister\_instance** (p. 486) may help free up some resources.

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) under the same circumstances described for the write operation.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The data to write. This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>instance_data</code> is NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) Either the handle returned by a previous call to <b>FooDataWriter_register_instance</b> (p. 484), or else the special value <b>DDS_HANDLE_NIL</b> (p. 224). If <b>Foo</b> (p. 1841) has a key and <code>handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 224), <code>handle</code> must represent a registered instance of type <b>Foo</b> (p. 1841). Otherwise, this function may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>handle</code> is NULL.

## Parameters

<code>source_timestamp</code>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 818) When using <b>DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS</b> (p. 1075) the timestamp value must be greater than or equal to the timestamp value used in the last writer operation (<i>register</i>, <i>unregister</i>, <i>dispose</i>, or <i>write</i>, with either the automatically supplied timestamp or the application-provided timestamp) However, if it is less than the timestamp of the previous operation but the difference is less than the <b>DDS_DestinationOrderQosPolicy::source_timestamp_tolerance</b> (p. 1459), the timestamp of the previous operation will be used as the source timestamp of this sample. Otherwise, if the difference is greater than <b>DDS_DestinationOrderQosPolicy::source_timestamp_tolerance</b> (p. 1459), the function will return <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).</p>
-------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025), or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataWriter\_write** (p. 489)

**DDS\_DataReader** (p. 608)

**DESTINATION\_ORDER** (p. 1074)

4.17.4.11 **FooDataWriter\_write\_w\_params()**

```
DDS_ReturnCode_t FooDataWriter_write_w_params (
    FooDataWriter * self,
    const Foo * instance_data,
    struct DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter\_write** (p. 489) and **FooDataWriter\_write\_w\_timestamp** (p. 493) except that it also provides the values contained in `params`.

Allows provision of the sample identity, related sample identity, source timestamp, instance handle, and publication priority contained in `params`.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 1025)) under the same circumstances described for **FooDataWriter\_write** (p. 489).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Calling **FooDataWriter\_unregister\_instance\_w\_params** (p. 489) may help free up some resources.

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) under the same circumstances described for the **FooDataWriter\_write** (p. 489).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The data to write. This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <i>instance_data</i> is NULL.
<i>params</i>	<< <i>inout</i> >> (p. 818) The write parameters. Note that this is an inout parameter if you activate <b>DDS_WriteParams_t::replace_auto</b> (p. 1834); otherwise it won't be modified. This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <i>params</i> is NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataWriter\_write** (p. 489)

**DDS\_DataReader** (p. 608)

## 4.17.4.12 FooDataWriter\_dispose()

```
DDS_ReturnCode_t FooDataWriter_dispose (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * instance_handle )
```

Requests the middleware to delete the instance.

This operation is useful only for keyed data types. Using it for non-keyed types has no effect and reports no error.

When an instance is disposed, the **DDS\_DataWriter** (p. 478) communicates this state change to **DDS\_DataReader** (p. 608) objects by propagating a dispose sample. When the instance changes to a disposed state, you can see the state change on the DataReader by looking at **DDS\_SampleInfo::instance\_state** (p. 1725). Disposed instances have the value **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707).

The resources allocated to dispose instances on the DataWriter are not removed by default. The removal of the resources allocated to a dispose instance on the DataWriter queue can be controlled by using the QoS **DDS\_WriterDataLifecycleQosPolicy::autopurge\_disposed\_instances\_delay** (p. 1840).

Likewise, on the DataReader, the removal of the resources associated with an instance in the dispose state can be controlled by using the QoS **DDS\_ReaderDataLifecycleQosPolicy::autopurge\_disposed\_instances\_delay** (p. 1675).

This operation does not modify the value of the instance. The *instance\_data* parameter is passed just for the purposes of identifying the instance.

When this operation is used, RTI Connex will automatically supply the value of the *source\_timestamp* that is made available to **DDS\_DataReader** (p. 608) objects by means of the *source\_timestamp* attribute inside the **DDS\_SampleInfo** (p. 1720).

The constraints on the values of the handle parameter and the corresponding error behavior are the same specified for the **FooDataWriter\_unregister\_instance** (p. 486) operation.

The special value **DDS\_HANDLE\_NIL** (p. 224) can be used for the parameter `instance_handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `instance_handle` is any value other than **DDS\_HANDLE\_NIL** (p. 224), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

RTI Connex will not detect the error when the `instance_handle` is any value other than **DDS\_HANDLE\_NIL** (p. 224), and the `instance_handle` corresponds to an instance that has been registered but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). In this case, the instance that will be disposed is the instance corresponding to the `instance_handle`, not to the `instance_data`.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 1025)) under the same circumstances described for **FooDataWriter\_write** (p. 489).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Calling **FooDataWriter\_unregister\_instance** (p. 486) may help free up some resources.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The data to dispose. If <b>Foo</b> (p. 1841) has a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <b>Foo</b> (p. 1841) has a key, <code>instance_data</code> can be NULL only if <code>instance_handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 224). Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).
<i>instance_handle</i>	<< <i>in</i> >> (p. 818) Either the handle returned by a previous call to <b>FooDataWriter_register_instance</b> (p. 484), or else the special value <b>DDS_HANDLE_NIL</b> (p. 224). If <b>Foo</b> (p. 1841) has a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), <code>instance_handle</code> is not used and it is deduced from <code>instance_data</code> . If <b>Foo</b> (p. 1841) has no key, <code>instance_handle</code> is not used. If <code>instance_handle</code> is used, it must represent an instance of type <b>Foo</b> (p. 1841) that has been written or registered with this writer. Otherwise, this function fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>instance_handle</code> is NULL. If <b>Foo</b> (p. 1841) has a key, <code>instance_handle</code> cannot be <b>DDS_HANDLE_NIL</b> (p. 224) if <code>instance_data</code> is NULL. Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### See also

**FooDataWriter\_dispose\_w\_timestamp** (p. 496)

**Relationship between registration, liveness and ownership** (p. 1613)

## 4.17.4.13 FooDataWriter\_dispose\_w\_timestamp()

```
DDS_ReturnCode_t FooDataWriter_dispose_w_timestamp (
    FooDataWriter * self,
    const Foo * instance_data,
    const DDS_InstanceHandle_t * instance_handle,
    const struct DDS_Time_t * source_timestamp )
```

Performs the same functions as `dispose` except that the application provides the value for the `source_timestamp` that is made available to **DDS\_DataReader** (p. 608) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1720).

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter\_dispose** (p. 495) operation.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 1025)) under the same circumstances described for **FooDataWriter\_write** (p. 489).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Calling **FooDataWriter\_unregister\_instance** (p. 486) may help freeing up some resources.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>instance_data</i>	<< <i>in</i> >> (p. 818) The data to dispose. If <b>Foo</b> (p. 1841) <i>has</i> a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <b>Foo</b> (p. 1841) <i>has</i> a key, <code>instance_data</code> can be NULL only if <code>instance_handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 224). Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).
<i>instance_handle</i>	<< <i>in</i> >> (p. 818) Either the handle returned by a previous call to <b>FooDataWriter_register_instance</b> (p. 484), or else the special value <b>DDS_HANDLE_NIL</b> (p. 224). If <b>Foo</b> (p. 1841) <i>has</i> a key and <code>handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 224), <code>handle</code> must represent a registered instance of type <b>Foo</b> (p. 1841). Otherwise, this function may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>handle</code> is NULL.
<i>source_timestamp</i>	<< <i>in</i> >> (p. 818) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. This timestamp will be available to the <b>DDS_DataReader</b> (p. 608) objects by means of the <code>source_timestamp</code> attribute inside the <b>DDS_SampleInfo</b> (p. 1720). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataWriter\_dispose** (p. 495)

#### 4.17.4.14 FooDataWriter\_dispose\_w\_params()

```
DDS_ReturnCode_t FooDataWriter_dispose_w_params (
    FooDataWriter * self,
    const Foo * instance_data,
    struct DDS_WriteParams_t * params )
```

Performs the same function as **FooDataWriter\_dispose** (p. 495) and **FooDataWriter\_dispose\_w\_timestamp** (p. 496) except that it also provides the values contained in `params`.

See also

**FooDataWriter\_write\_w\_params** (p. 494)

#### 4.17.4.15 FooDataWriter\_get\_key\_value()

```
DDS_ReturnCode_t FooDataWriter_get_key_value (
    FooDataWriter * self,
    Foo * key_holder,
    const DDS_InstanceHandle_t * handle )
```

Retrieve the instance `key` that corresponds to an instance `handle`.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this function has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if the `handle` does not correspond to an existing data-object known to the **DDS\_DataWriter** (p. 478).

##### Parameters

<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<code>key_holder</code>	<< <i>inout</i> >> (p. 818) a user data type specific key holder, whose <code>key</code> fields are filled by this operation. If <b>Foo</b> (p. 1841) has no key, this function has no effect.

This function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if `key_holder` is NULL.

##### Parameters

<code>handle</code>	<< <i>in</i> >> (p. 818) the instance whose key is to be retrieved. If <b>Foo</b> (p. 1841) has a key, <code>handle</code> must represent a registered instance of type <b>Foo</b> (p. 1841). Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). If <b>Foo</b> (p. 1841) has a key and <code>handle</code> is <b>DDS_HANDLE_NIL</b> (p. 224), this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025). This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>handle</code> is NULL.
---------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

**See also**

**FooDataReader\_get\_key\_value** (p. 640)

**4.17.4.16 FooDataWriter\_lookup\_instance()**

```
DDS_InstanceHandle_t FooDataWriter_lookup_instance (
    FooDataWriter * self,
    const Foo * key_holder )
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. This operation does not register the instance in question. If the instance has not been previously registered, or if for any other reason RTI Connex is unable to provide an instance handle, RTI Connex will return the special value `HANDLE_NIL`.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>key_holder</i>	<< <i>in</i> >> (p. 818) a user data type specific key holder.

**Returns**

the instance handle associated with this instance. If **Foo** (p. 1841) has no key, this function has no effect and returns **DDS\_HANDLE\_NIL** (p. 224)

**4.17.4.17 FooDataWriter\_create\_data()**

```
void * FooDataWriter_create_data (
    FooDataWriter * self )
```

Creates a data sample and initializes it.

The behavior of this API is identical to **FooTypeSupport\_create\_data** (p. 210).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

Newly created data type, or NULL on failure.

## See also

**FooDataWriter\_delete\_data** (p. 500)

## 4.17.4.18 FooDataWriter\_create\_data\_w\_params()

```
void * FooDataWriter_create_data_w_params (
    FooDataWriter * self,
    const struct DDS_TypeAllocationParams_t * alloc_params )
```

Creates a data sample and initializes it.

The behavior of this API is identical to **FooTypeSupport\_create\_data\_w\_params** (p. 211).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>alloc_params</i>	<< <i>in</i> >> (p. 818) Whether or not to recursively allocate pointers and/or optional members

## Returns

Newly created data type, or NULL on failure.

## See also

**FooDataWriter\_delete\_data\_w\_params** (p. 501)

## 4.17.4.19 FooDataWriter\_delete\_data()

```
DDS_Boolean FooDataWriter_delete_data (
    FooDataWriter * self,
    Foo * sample )
```

Destroys a user data type instance.

The behavior of this API is identical to **FooTypeSupport\_delete\_data** (p. 212).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) on success.

## See also

**FooDataWriter\_create\_data** (p. 499)

## 4.17.4.20 FooDataWriter\_delete\_data\_w\_params()

```
void * FooDataWriter_delete_data_w_params (
    FooDataWriter * self,
    Foo * sample,
    const struct DDS_TypeDeallocationParams_t * dealloc_params )
```

Destroys a user data type instance.

The behavior of this API is identical to **FooTypeSupport\_delete\_data\_w\_params** (p. 214).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>dealloc_params</i>	<< <i>in</i> >> (p. 818) Whether or not to destroy pointers and/or optional members.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) on success.

## See also

**FooDataWriter\_create\_data\_w\_params** (p. 500)

#### 4.17.4.21 FooDataWriter\_get\_loan()

```
DDS_ReturnCode_t FooDataWriter_get_loan (
    FooDataWriter * self,
    Foo ** sample )
```

Gets a sample managed by the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 205) over shared memory" or \ref RTIFlatDataModule "FlatData language binding".

The loaned sample is obtained from a DataWriter-managed sample pool and is uninitialized by default. An initialized sample can be obtained by setting **DDS\_DataWriterResourceLimitsQosPolicy::initialize\_writer\_loaned\_sample** (p. 1452) to **DDS\_BOOLEAN\_TRUE** (p. 1004). The **DDS\_DataWriterResourceLimitsQosPolicy::writer\_loaned\_↔sample\_allocation** (p. 1452) settings can be used to configure the DataWriter-managed sample pool.

**FooDataWriter\_get\_loan** (p. 501) fails with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) if **DDS\_Allocation\_↔Settings\_t::max\_count** (p. 1322) samples have been loaned, and none of those samples has been written with **Foo\_↔DataWriter\_write** (p. 489) or discarded via **FooDataWriter\_discard\_loan** (p. 503).

Samples returned from **FooDataWriter\_get\_loan** (p. 501) have an associated state. Due to the optimized nature of the write operation while using Zero Copy transfer over shared memory or FlatData language binding, this sample state is used to control when a sample is available for reuse after the write operation. The possible sample states are free, allocated, removed or serialized. A sample that has never been allocated is "free". **FooDataWriter\_get\_loan** (p. 501) takes a "free" or "removed" sample and makes it "allocated". When a sample is written, its state transitions from "allocated" to "serialized", and the DataWriter takes responsibility for returning the sample back to its sample pool. The sample remains in the "serialized" state until it is removed from the DataWriter queue. For a reliable DataWriter, the sample is removed from the DataWriter's queue when the sample is acknowledged by all DataReaders. For a best-effort DataWriter, the sample is removed from the queue immediately after the write operation. After the sample is removed from the DataWriter queue, the sample is put back into the sample pool, and its state transitions from "serialized" to "removed". At this time, a new call to **FooDataWriter\_get\_loan** (p. 501) may return the same sample.

A loaned sample should not be reused to write a new value after the first write operation. Instead, a new sample from **FooDataWriter\_get\_loan** (p. 501) should be used to write the new value. A loaned sample that has not been written can be returned to the DataWriter's sample pool by using **FooDataWriter\_discard\_loan** (p. 503). If the write operation fails, then the sample can be used again with a write or discard\_loan operation. Disposing or unregistering an instance with loaned samples follows the same pattern. A loaned sample used successfully with a dispose or unregister operation cannot be used again. But if the dispose or unregister operation fails, the sample is available for reuse.

A DataWriter cannot write managed samples (created with get\_loan) and unmanaged samples (created in any other way) at the same time. The first call to get\_loan automatically prepares this DataWriter to work with managed samples. Calls to get\_loan will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if an unmanaged sample was written with this DataWriter earlier. Similarly, **FooDataWriter\_write** (p. 489) will fail to write an unmanaged sample if get\_loan was called.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample</i>	<< <i>inout</i> >> (p. 818) address of a user data type pointer. The loaned sample is returned via this sample.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## See also

**FooDataWriter\_discard\_loan** (p. 503)

## 4.17.4.22 FooDataWriter\_discard\_loan()

```
DDS_ReturnCode_t FooDataWriter_discard_loan (
    FooDataWriter * self,
    Foo * sample )
```

Returns a loaned sample back to the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 205) over shared memory" or the **FlatData language binding** (p. 205).

A loaned sample that hasn't been written can be returned to the DataWriter with this operation.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample</i>	<< <i>in</i> >> (p. 818) loaned sample to be discarded.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataWriter\_get\_loan** (p. 501)

## 4.17.4.23 DDS\_OfferedDeadlineMissedStatus\_initialize()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_initialize (
    struct DDS_OfferedDeadlineMissedStatus * self )
```

Initializer for new status instances.

New **DDS\_OfferedDeadlineMissedStatus** (p. 1607) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_OfferedDeadlineMissedStatus\_finalize** (p. 505) should be called to free the contained fields that use dynamic memory:

```
DDS_OfferedDeadlineMissedStatus *myStatus = malloc(sizeof(struct DDS_OfferedDeadlineMissedStatus));
DDS_OfferedDeadlineMissedStatus_initialize(myStatus);
DDS_DataWriter_get_offered_deadline_missed_status(myDataWriter, myStatus);
DDS_OfferedDeadlineMissedStatus_finalize(myStatus);
free(myStatus);
```

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DataWriter\_get\_offered\_deadline\_missed\_status** (p. 538)

**DDS\_OfferedDeadlineMissedStatus\_finalize** (p. 505)

#### 4.17.4.24 DDS\_OfferedDeadlineMissedStatus\_copy()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_copy (
    struct DDS_OfferedDeadlineMissedStatus * self,
    const struct DDS_OfferedDeadlineMissedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_OfferedDeadlineMissedStatus\_INITIALIZER** (p. 472)

**DDS\_OfferedDeadlineMissedStatus\_initialize** (p. 503)

**DDS\_OfferedDeadlineMissedStatus\_finalize** (p. 505)

#### 4.17.4.25 DDS\_OfferedDeadlineMissedStatus\_finalize()

```
DDS_ReturnCode_t DDS_OfferedDeadlineMissedStatus_finalize (
    struct DDS_OfferedDeadlineMissedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_OfferedDeadlineMissedStatus\_INITIALIZER** (p. 472)

**DDS\_OfferedDeadlineMissedStatus\_initialize** (p. 503)

#### 4.17.4.26 DDS\_OfferedDeadlineMissedStatus\_equals()

```
DDS_Boolean DDS_OfferedDeadlineMissedStatus_equals (
    const struct DDS_OfferedDeadlineMissedStatus * left,
    const struct DDS_OfferedDeadlineMissedStatus * right )
```

Compares two **DDS\_OfferedDeadlineMissedStatus** (p. 1607) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This OfferedDeadlineMissedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other OfferedDeadlineMissedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p.1004) if the two OfferedDeadlineMissedStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p.1004) otherwise.

## 4.17.4.27 DDS\_LivelinessLostStatus\_initialize()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_initialize (
    struct DDS_LivelinessLostStatus * self )
```

Initializer for new status instances.

New **DDS\_LivelinessLostStatus** (p.1574) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_LivelinessLostStatus\_finalize** (p.507) should be called to free the contained fields that use dynamic memory:

```
DDS_LivelinessLostStatus *myStatus = malloc(sizeof(struct DDS_LivelinessLostStatus));
```

```
DDS_LivelinessLostStatus_initialize(myStatus);
```

```
DDS_DataWriter_get_liveliness_lost_status(myDataWriter, myStatus);
```

```
DDS_LivelinessLostStatus_finalize(myStatus);
```

```
free(myStatus);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p.1024)

## See also

**DDS\_DataWriter\_get\_liveliness\_lost\_status** (p.538)

**DDS\_LivelinessLostStatus\_finalize** (p.507)

#### 4.17.4.28 DDS\_LivelinessLostStatus\_copy()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_copy (
    struct DDS_LivelinessLostStatus * self,
    const struct DDS_LivelinessLostStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_LivelinessLostStatus\_INITIALIZER** (p. 473)

**DDS\_LivelinessLostStatus\_initialize** (p. 506)

**DDS\_LivelinessLostStatus\_finalize** (p. 507)

#### 4.17.4.29 DDS\_LivelinessLostStatus\_finalize()

```
DDS_ReturnCode_t DDS_LivelinessLostStatus_finalize (
    struct DDS_LivelinessLostStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_LivelinessLostStatus\_INITIALIZER** (p. 473)

**DDS\_LivelinessLostStatus\_initialize** (p. 506)

**4.17.4.30 DDS\_LivelinessLostStatus\_equals()**

```
DDS_Boolean DDS_LivelinessLostStatus_equals (
    const struct DDS_LivelinessLostStatus * left,
    const struct DDS_LivelinessLostStatus * right )
```

Compares two **DDS\_LivelinessLostStatus** (p. 1574) for equality.

**Parameters**

<i>left</i>	<< <i>in</i> >> (p. 818) This LivelinessLostStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other LivelinessLostStatus to be compared with this status instance. Can be NULL.

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two LivelinessLostStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

**4.17.4.31 DDS\_OfferedIncompatibleQosStatus\_initialize()**

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_initialize (
    struct DDS_OfferedIncompatibleQosStatus * self )
```

Initializer for new status instances.

New **DDS\_OfferedIncompatibleQosStatus** (p. 1609) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_OfferedIncompatibleQosStatus\_finalize** (p. 509) should be called to free the contained fields that use dynamic memory:

```
DDS_OfferedIncompatibleQosStatus *myStatus = malloc(sizeof(struct DDS_OfferedIncompatibleQosStatus));
DDS_OfferedIncompatibleQosStatus_initialize(myStatus);
DDS_DataWriter_get_offered_incompatible_qos_status(myDataWriter, myStatus);
DDS_OfferedIncompatibleQosStatus_finalize(myStatus);
free(myStatus);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriter\_get\_offered\_incompatible\_qos\_status** (p. 539)

**DDS\_OfferedIncompatibleQosStatus\_finalize** (p. 509)

## 4.17.4.32 DDS\_OfferedIncompatibleQosStatus\_copy()

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_copy (
    struct DDS_OfferedIncompatibleQosStatus * self,
    const struct DDS_OfferedIncompatibleQosStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_OfferedIncompatibleQosStatus\_INITIALIZER** (p. 473)

**DDS\_OfferedIncompatibleQosStatus\_initialize** (p. 508)

**DDS\_OfferedIncompatibleQosStatus\_finalize** (p. 509)

#### 4.17.4.33 DDS\_OfferedIncompatibleQosStatus\_finalize()

```
DDS_ReturnCode_t DDS_OfferedIncompatibleQosStatus_finalize (
    struct DDS_OfferedIncompatibleQosStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_OfferedIncompatibleQosStatus\_INITIALIZER** (p. 473)

**DDS\_OfferedIncompatibleQosStatus\_initialize** (p. 508)

#### 4.17.4.34 DDS\_OfferedIncompatibleQosStatus\_equals()

```
DDS_Boolean DDS_OfferedIncompatibleQosStatus_equals (
    const struct DDS_OfferedIncompatibleQosStatus * left,
    const struct DDS_OfferedIncompatibleQosStatus * right )
```

Compares two **DDS\_OfferedIncompatibleQosStatus** (p. 1609) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This OfferedIncompatibleQosStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other OfferedIncompatibleQosStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p.1004) if the two OfferedIncompatibleQosStatus have equal values, or **DDS\_↔  
BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.17.4.35 DDS\_PublicationMatchedStatus\_initialize()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_initialize (
    struct DDS_PublicationMatchedStatus * self )
```

Initializer for new status instances.

New **DDS\_PublicationMatchedStatus** (p. 1658) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_PublicationMatchedStatus\_finalize** (p.512) should be called to free the contained fields that use dynamic memory:

```
DDS_PublicationMatchedStatus *myStatus = malloc(sizeof(struct DDS_PublicationMatchedStatus));
DDS_PublicationMatchedStatus_initialize(myStatus);
DDS_DataWriter_get_publication_matched_status(myDataWriter, myStatus);
DDS_PublicationMatchedStatus_finalize(myStatus);
free(myStatus);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DataWriter\_get\_publication\_matched\_status** (p. 539)

**DDS\_PublicationMatchedStatus\_finalize** (p.512)

#### 4.17.4.36 DDS\_PublicationMatchedStatus\_copy()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_copy (
    struct DDS_PublicationMatchedStatus * self,
    const struct DDS_PublicationMatchedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PublicationMatchedStatus\_INITIALIZER** (p. 474)

**DDS\_PublicationMatchedStatus\_initialize** (p. 511)

**DDS\_PublicationMatchedStatus\_finalize** (p. 512)

## 4.17.4.37 DDS\_PublicationMatchedStatus\_finalize()

```
DDS_ReturnCode_t DDS_PublicationMatchedStatus_finalize (
    struct DDS_PublicationMatchedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_PublicationMatchedStatus\_INITIALIZER** (p. 474)

**DDS\_PublicationMatchedStatus\_initialize** (p. 511)

#### 4.17.4.38 DDS\_PublicationMatchedStatus\_equals()

```
DDS_Boolean DDS_PublicationMatchedStatus_equals (
    const struct DDS_PublicationMatchedStatus * left,
    const struct DDS_PublicationMatchedStatus * right )
```

Compares two **DDS\_PublicationMatchedStatus** (p. 1658) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This PublicationMatchedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other PublicationMatchedStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two PublicationMatchedStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.17.4.39 DDS\_ServiceRequestAcceptedStatus\_initialize()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_initialize (
    struct DDS_ServiceRequestAcceptedStatus * self )
```

Initializer for new status instances.

New **DDS\_ServiceRequestAcceptedStatus** (p. 1738) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_ServiceRequestAcceptedStatus\_finalize** (p. 514) should be called to free the contained fields that use dynamic memory:

```
DDS_ServiceRequestAcceptedStatus *myStatus = malloc(sizeof(struct DDS_ServiceRequestAcceptedStatus));
DDS_ServiceRequestAcceptedStatus_initialize(myStatus);
DDS_DataWriter_get_service_request_accepted_status(myDataWriter, myStatus);
DDS_ServiceRequestAcceptedStatus_finalize(myStatus);
free(myStatus);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DataWriter\_get\_service\_request\_accepted\_status** (p. 543)

**DDS\_ServiceRequestAcceptedStatus\_finalize** (p. 514)

#### 4.17.4.40 DDS\_ServiceRequestAcceptedStatus\_copy()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_copy (
    struct DDS_ServiceRequestAcceptedStatus * self,
    const struct DDS_ServiceRequestAcceptedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_ServiceRequestAcceptedStatus\_INITIALIZER** (p. 474)

**DDS\_ServiceRequestAcceptedStatus\_initialize** (p. 513)

**DDS\_ServiceRequestAcceptedStatus\_finalize** (p. 514)

#### 4.17.4.41 DDS\_ServiceRequestAcceptedStatus\_finalize()

```
DDS_ReturnCode_t DDS_ServiceRequestAcceptedStatus_finalize (
    struct DDS_ServiceRequestAcceptedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_ServiceRequestAcceptedStatus\_INITIALIZER** (p. 474)

**DDS\_ServiceRequestAcceptedStatus\_initialize** (p. 513)

4.17.4.42 **DDS\_ServiceRequestAcceptedStatus\_equals()**

```
DDS_Boolean DDS_ServiceRequestAcceptedStatus_equals (
    const struct DDS_ServiceRequestAcceptedStatus * left,
    const struct DDS_ServiceRequestAcceptedStatus * right )
```

Compares two **DDS\_ServiceRequestAcceptedStatus** (p. 1738) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This ServiceRequestAcceptedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other ServiceRequestAcceptedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p.1004) if the two ServiceRequestAcceptedStatus have equal values, or **DDS\_↔  
BOOLEAN\_FALSE** (p. 1004) otherwise.

4.17.4.43 **DDS\_ReliableWriterCacheEventCount\_equals()**

```
DDS_Boolean DDS_ReliableWriterCacheEventCount_equals (
    const struct DDS_ReliableWriterCacheEventCount * left,
    const struct DDS_ReliableWriterCacheEventCount * right )
```

Compares two **DDS\_ReliableWriterCacheEventCount** (p. 1687) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This ReliableWriterCacheEventCount. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other ReliableWriterCacheEventCount to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two ReliableWriterCacheEventCount have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.17.4.44 DDS\_ReliableWriterCacheChangedStatus\_initialize()

```
DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_initialize (
    struct DDS_ReliableWriterCacheChangedStatus * self )
```

Initializer for new status instances.

New **DDS\_ReliableWriterCacheChangedStatus** (p. 1684) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_ReliableWriterCacheChangedStatus\_finalize** (p. 517) should be called to free the contained fields that use dynamic memory:

```
DDS_ReliableWriterCacheChangedStatus *myStatus = malloc(sizeof(struct DDS_ReliableWriterCacheChangedStatus));
DDS_ReliableWriterCacheChangedStatus_initialize(myStatus);
DDS_DataWriter_get_reliable_writer_cache_changed_status(myDataWriter, myStatus);
DDS_ReliableWriterCacheChangedStatus_finalize(myStatus);
free(myStatus);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriter\_get\_reliable\_writer\_cache\_changed\_status** (p. 540)

**DDS\_ReliableWriterCacheChangedStatus\_finalize** (p. 517)

#### 4.17.4.45 DDS\_ReliableWriterCacheChangedStatus\_copy()

```
DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_copy (
    struct DDS_ReliableWriterCacheChangedStatus * self,
    const struct DDS_ReliableWriterCacheChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_ReliableWriterCacheChangedStatus\_INITIALIZER** (p. 475)

**DDS\_ReliableWriterCacheChangedStatus\_initialize** (p. 516)

**DDS\_ReliableWriterCacheChangedStatus\_finalize** (p. 517)

#### 4.17.4.46 DDS\_ReliableWriterCacheChangedStatus\_finalize()

```
DDS_ReturnCode_t DDS_ReliableWriterCacheChangedStatus_finalize (
    struct DDS_ReliableWriterCacheChangedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_ReliableWriterCacheChangedStatus\_INITIALIZER** (p. 475)

**DDS\_ReliableWriterCacheChangedStatus\_initialize** (p. 516)

#### 4.17.4.47 DDS\_ReliableWriterCacheChangedStatus\_equals()

```
DDS_Boolean DDS_ReliableWriterCacheChangedStatus_equals (
    const struct DDS_ReliableWriterCacheChangedStatus * left,
    const struct DDS_ReliableWriterCacheChangedStatus * right )
```

Compares two **DDS\_ReliableWriterCacheChangedStatus** (p. 1684) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This ReliableWriterCacheChangedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other ReliableWriterCacheChangedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two ReliableWriterCacheChangedStatus have equal values, or **DDS\_↵  
BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.17.4.48 DDS\_ReliableReaderActivityChangedStatus\_initialize()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_initialize (
    struct DDS_ReliableReaderActivityChangedStatus * self )
```

Initializer for new status instances.

New **DDS\_ReliableReaderActivityChangedStatus** (p. 1682) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_ReliableReaderActivityChangedStatus\_finalize** (p. 519) should be called to free the contained fields that use dynamic memory:

```
DDS_ReliableReaderActivityChangedStatus *myStatus = malloc(sizeof(struct
    DDS_ReliableReaderActivityChangedStatus));

DDS_ReliableReaderActivityChangedStatus_initialize(myStatus);

DDS_DataWriter_get_reliable_reader_activity_changed_status(myDataWriter, myStatus);

DDS_ReliableReaderActivityChangedStatus_finalize(myStatus);

free(myStatus);
```

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriter\_get\_reliable\_reader\_activity\_changed\_status** (p. 540)

**DDS\_ReliableReaderActivityChangedStatus\_finalize** (p. 519)

## 4.17.4.49 DDS\_ReliableReaderActivityChangedStatus\_copy()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_copy (
    struct DDS_ReliableReaderActivityChangedStatus * self,
    const struct DDS_ReliableReaderActivityChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_ReliableReaderActivityChangedStatus\_INITIALIZER** (p. 475)

**DDS\_ReliableReaderActivityChangedStatus\_initialize** (p. 518)

**DDS\_ReliableReaderActivityChangedStatus\_finalize** (p. 519)

## 4.17.4.50 DDS\_ReliableReaderActivityChangedStatus\_finalize()

```
DDS_ReturnCode_t DDS_ReliableReaderActivityChangedStatus_finalize (
    struct DDS_ReliableReaderActivityChangedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call `free()` on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_ReliableReaderActivityChangedStatus\_INITIALIZER** (p. 475)

**DDS\_ReliableReaderActivityChangedStatus\_initialize** (p. 518)

4.17.4.51 **DDS\_ReliableReaderActivityChangedStatus\_equals()**

```
DDS_Boolean DDS_ReliableReaderActivityChangedStatus_equals (
    const struct DDS_ReliableReaderActivityChangedStatus * left,
    const struct DDS_ReliableReaderActivityChangedStatus * right )
```

Compares two **DDS\_ReliableReaderActivityChangedStatus** (p. 1682) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This ReliableReaderActivityChangedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other ReliableReaderActivityChangedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two ReliableReaderActivityChangedStatus have equal values, or **DDS\_←  
\_BOOLEAN\_FALSE** (p. 1004) otherwise.

4.17.4.52 **DDS\_DataWriterCacheStatus\_initialize()**

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_initialize (
    struct DDS_DataWriterCacheStatus * self )
```

Initializer for new status instances.

New **DDS\_DataWriterCacheStatus** (p. 1415) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_DataWriterCacheStatus\_finalize** (p.522) should be called to free the contained fields that use dynamic memory:

```
DDS_DataWriterCacheStatus *myStatus = malloc(sizeof(struct DDS_DataWriterCacheStatus));

DDS_DataWriterCacheStatus_initialize(myStatus);

DDS_DataWriter_get_datawriter_cache_status(myDataWriter, myStatus);

DDS_DataWriterCacheStatus_finalize(myStatus);

free(myStatus);
```

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DataWriter\_get\_datawriter\_cache\_status** (p.541)

**DDS\_DataWriterCacheStatus\_finalize** (p. 522)

#### 4.17.4.53 DDS\_DataWriterCacheStatus\_copy()

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_copy (
    struct DDS_DataWriterCacheStatus * self,
    const struct DDS_DataWriterCacheStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DataWriterCacheStatus\_INITIALIZER** (p. 476)

**DDS\_DataWriterCacheStatus\_initialize** (p. 521)

**DDS\_DataWriterCacheStatus\_finalize** (p. 522)

#### 4.17.4.54 DDS\_DataWriterCacheStatus\_finalize()

```
DDS_ReturnCode_t DDS_DataWriterCacheStatus_finalize (
    struct DDS_DataWriterCacheStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DataWriterCacheStatus\_INITIALIZER** (p. 476)

**DDS\_DataWriterCacheStatus\_initialize** (p. 521)

#### 4.17.4.55 DDS\_DataWriterCacheStatus\_equals()

```
DDS_Boolean DDS_DataWriterCacheStatus_equals (
    const struct DDS_DataWriterCacheStatus * left,
    const struct DDS_DataWriterCacheStatus * right )
```

Compares two **DDS\_DataWriterCacheStatus** (p. 1415) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This DataWriterCacheStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other DataWriterCacheStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two DataWriterCacheStatus have equal values, or **DDS\_BOOLEAN\_↔**  
**FALSE** (p. 1004) otherwise.

#### 4.17.4.56 DDS\_DataWriterProtocolStatus\_initialize()

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_initialize (
    struct DDS_DataWriterProtocolStatus * self )
```

Initializer for new status instances.

New **DDS\_DataWriterProtocolStatus** (p. 1427) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_DataWriterProtocolStatus\_finalize** (p. 525) should be called to free the contained fields that use dynamic memory:

```
DDS_DataWriterProtocolStatus *myStatus = malloc(sizeof(struct DDS_DataWriterProtocolStatus));
DDS_DataWriterProtocolStatus_initialize(myStatus);
DDS_DataWriter_get_datawriter_protocol_status(myDataWriter, myStatus);
DDS_DataWriterProtocolStatus_finalize(myStatus);
free(myStatus);
```

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### See also

**DDS\_DataWriter\_get\_datawriter\_protocol\_status** (p. 541)

**DDS\_DataWriterProtocolStatus\_finalize** (p. 525)

#### 4.17.4.57 DDS\_DataWriterProtocolStatus\_copy()

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_copy (
    struct DDS_DataWriterProtocolStatus * self,
    const struct DDS_DataWriterProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriterProtocolStatus\_INITIALIZER** (p. 476)

**DDS\_DataWriterProtocolStatus\_initialize** (p. 524)

**DDS\_DataWriterProtocolStatus\_finalize** (p. 525)

4.17.4.58 **DDS\_DataWriterProtocolStatus\_finalize()**

```
DDS_ReturnCode_t DDS_DataWriterProtocolStatus_finalize (
    struct DDS_DataWriterProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriterProtocolStatus\_INITIALIZER** (p. 476)

**DDS\_DataWriterProtocolStatus\_initialize** (p. 524)

4.17.4.59 **DDS\_DataWriterProtocolStatus\_equals()**

```
DDS_Boolean DDS_DataWriterProtocolStatus_equals (
    const struct DDS_DataWriterProtocolStatus * left,
    const struct DDS_DataWriterProtocolStatus * right )
```

Compares two **DDS\_DataWriterProtocolStatus** (p. 1427) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This DataWriterProtocolStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other DataWriterProtocolStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two DataWriterProtocolStatus have equal values, or **DDS\_BOOLEAN\_↵**  
**FALSE** (p. 1004) otherwise.

## 4.17.4.60 DDS\_DataWriterQos\_equals()

```
DDS_Boolean DDS_DataWriterQos_equals (
    const struct DDS_DataWriterQos * self,
    const struct DDS_DataWriterQos * other )
```

Compares two **DDS\_DataWriterQos** (p. 1438) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This DataWriterQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other DataWriterQos to be compared with this DataWriterQos.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) other-  
wise.

## 4.17.4.61 DDS\_DataWriterQos\_print()

```
DDS_ReturnCode_t DDS_DataWriterQos_print (
    const struct DDS_DataWriterQos * self )
```

Prints this **DDS\_DataWriterQos** (p. 1438) to stdout.

Only the differences between this **DDS\_DataWriterQos** (p. 1438) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## 4.17.4.62 DDS\_DataWriterQos\_to\_string()

```
DDS_ReturnCode_t DDS_DataWriterQos_to_string (
    const struct DDS_DataWriterQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 1438).

Only the differences between this **DDS\_DataWriterQos** (p. 1438) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataWriterQos** (p. 1438) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 1438). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## See also

**DDS\_DataWriterQos\_to\_string\_w\_params** (p. 527)

## 4.17.4.63 DDS\_DataWriterQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_DataWriterQos_to_string_w_params (
    const struct DDS_DataWriterQos * self,
```

```

char * string,
    DDS_UnsignedLong * string_size,
const struct DDS_DataWriterQos * base,
const struct DDS_QosPrintFormat * format )

```

Obtains a string representation of this **DDS\_DataWriterQos** (p. 1438).

Only the differences between this **DDS\_DataWriterQos** (p. 1438) and the **DDS\_DataWriterQos** (p. 1438) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_DATAWRITER\_QOS\_PRINT\_ALL** (p. 462) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataWriterQos** (p. 1438) is written to the buffer.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DataWriterQos</b> (p. 1438). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataWriterQos</b> (p. 1438) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

#### Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.17.4.64 DDS\_DataWriterQos\_initialize()

```

DDS_ReturnCode_t DDS_DataWriterQos_initialize (
    struct DDS_DataWriterQos * self )

```

Initializer for new QoS instances.

New **DDS\_DataWriterQos** (p. 1438) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_DataWriter\_get\_qos** (p. 545) or **DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS\_DataWriterQos\_finalize** (p. 529) should be called to free the contained QoS policies that use dynamic memory:

```

DDS_DataWriterQos *myQos = malloc(sizeof(struct DDS_DataWriterQos));
DDS_DataWriterQos_initialize(myQos);
DDS_Publisher_get_default_datawriter_qos(myFactory, myQos);
DDS_DataWriter_set_qos(myDataWriter, myQos);
DDS_DataWriterQos_finalize(myQos);
free(myQos);

```

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_Publisher\_get\_default\_datawriter\_qos** (p. 442)

**DDS\_DataWriterQos\_finalize** (p. 529)

**4.17.4.65 DDS\_DataWriterQos\_finalize()**

```

DDS_ReturnCode_t DDS_DataWriterQos_finalize (
    struct DDS_DataWriterQos * self )

```

Free any dynamic memory allocated by the policies in this **DDS\_DataWriterQos** (p. 1438).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call `free()` on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DataWriterQos\_INITIALIZER** (p. 477)

**DDS\_DataWriterQos\_initialize** (p. 528)

**4.17.4.66 DDS\_DataWriterQos\_copy()**

```
DDS_ReturnCode_t DDS_DataWriterQos_copy (
    struct DDS_DataWriterQos * self,
    const struct DDS_DataWriterQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_DataWriterQos** (p. 1438) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataWriterQos</b> (p. 1438) to copy from.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_DataWriterQos\_INITIALIZER** (p. 477)

**DDS\_DataWriterQos\_initialize** (p. 528)

**DDS\_DataWriterQos\_finalize** (p. 529)

**4.17.4.67 DDS\_DataWriter\_as\_entity()**

```
DDS_Entity * DDS_DataWriter_as_entity (
    DDS_DataWriter * dataWriter )
```

Access a **DDS\_DataWriter** (p. 478)'s supertype instance.

## Parameters

<i>dataWriter</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

## Returns

The **DDS\_Entity** (p. 1160) that is supertype instance of the datawriter.

## 4.17.4.68 DDS\_DataWriter\_assert\_liveliness()

```
DDS_ReturnCode_t DDS_DataWriter_assert_liveliness (
    DDS_DataWriter * self )
```

This operation manually asserts the liveliness of this **DDS\_DataWriter** (p. 478).

This is used in combination with the **LIVELINESS** (p. 1097) policy to indicate to RTI Connex that the **DDS\_DataWriter** (p. 478) remains active.

You only need to use this operation if the **LIVELINESS** (p. 1097) setting is either **DDS\_MANUAL\_BY\_PARTICIPANT** ↔ **LIVELINESS\_QOS** (p. 1098) or **DDS\_MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** (p. 1098). Otherwise, it has no effect.

**Note:** writing data via the **FooDataWriter\_write** (p. 489) or **FooDataWriter\_write\_w\_timestamp** (p. 493) operation asserts liveliness on the **DDS\_DataWriter** (p. 478) itself, and its **DDS\_DomainParticipant** (p. 72). Consequently the use of `assert_liveliness()` is only needed if the application is not writing data regularly.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## See also

**DDS\_LivelinessQosPolicy** (p. 1575)

## 4.17.4.69 DDS\_DataWriter\_get\_matched\_subscription\_locators()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_locators (
    DDS_DataWriter * self,
    struct DDS_LocatorSeq * locators )
```

<<*extension*>> (p. 817) Retrieve the list of locators for subscriptions currently "associated" with this **DDS\_DataWriter** (p. 478).

The locators returned in the `locators` list are the ones that are used by the DDS implementation to communicate with the corresponding matched **DDS\_DataReader** (p. 608) entities.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>locators</i>	<< <i>inout</i> >> (p. 818). Handles of all the matched subscription locators.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all the matches and the system can not resize the sequence, this function will fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025). Cannot be NULL. .

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) if the sequence is too small and the system can not resize it, or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

#### 4.17.4.70 DDS\_DataWriter\_get\_matched\_subscriptions()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscriptions (
    DDS_DataWriter * self,
    struct DDS_InstanceHandleSeq * subscription_handles )
```

Retrieve the list of subscriptions currently "associated" with this **DDS\_DataWriter** (p. 478).

A subscription is considered to be matching if all of the following criteria are true:

- The subscription is within the same domain as this publication.
- The subscription has a matching **DDS\_Topic** (p. 172).
- The subscription has compatible QoS.
- If the applications are using partitions, the subscription shares a common partition with this publication.
- The **DDS\_DomainParticipant** (p. 72) has not indicated that the subscription's **DDS\_DomainParticipant** (p. 72) should be "ignored" by means of the **DDS\_DomainParticipant\_ignore\_publication** (p. 129) API.
- If the publication is using the **DDS\_MultiChannelQosPolicy** (p. 1603) and the subscription is using a **DDS\_↔ContentFilteredTopic** (p. 173), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the writer has completed the key exchange with reader.

The handles returned in the `subscription_handles` list are the ones that RTI Connex uses to locally identify the corresponding matched **DDS\_DataReader** (p. 608) entities. These handles match the ones that appear in the **DDS\_SampleInfo::instance\_handle** (p. 1726) field of the **DDS\_SampleInfo** (p. 1720) when reading the **DDS\_↔SUBSCRIPTION\_TOPIC\_NAME** (p. 902) builtin topic.

This API may return the subscription handles of subscriptions that are inactive. **DDS\_DataWriter\_is\_matched\_↔subscription\_active** (p. 533) can be used to check this.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subscription_handles</i>	<< <i>inout</i> >> (p. 818). The handles of all the matched subscriptions.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this function will fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025).

The maximum number of matches possible is configured with **DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 1494). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL. .

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) if the sequence is too small and the system cannot resize it, or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## 4.17.4.71 DDS\_DataWriter\_is\_matched\_subscription\_active()

```
DDS_ReturnCode_t DDS_DataWriter_is_matched_subscription_active (
    DDS_DataWriter * self,
    DDS_Boolean * is_active,
    const DDS_InstanceHandle_t * subscription_handle )
```

Check if a subscription currently matched with a DataWriter is active.

This API is used for querying the endpoint liveness of a matched subscription. A matched subscription will be marked as inactive when it becomes nonprogressing (e.g., not responding to a DataWriter's heartbeats, or letting its internal queue fill up without taking the available data). Note that if the participant associated with the matched subscription loses liveness, the **DDS\_InstanceHandle\_t** (p. 210) will become invalid and this function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subscription_handle</i>	<< <i>in</i> >> (p. 818) The <b>DDS_InstanceHandle_t</b> (p. 210) of the matched subscription. See <b>DDS_DataWriter_get_matched_subscriptions</b> (p. 532) for a description of what is considered a matched subscription.
<i>is_active</i>	<< <i>out</i> >> (p. 818) Indicates whether or not the matched subscription is active.

## Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.72 DDS\_DataWriter\_get\_matched\_subscription\_data()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_data (
    DDS_DataWriter * self,
    struct DDS_SubscriptionBuiltinTopicData * subscription_data,
    const DDS_InstanceHandle_t * subscription_handle )
```

This operation retrieves the information on a subscription that is currently "associated" with the **DDS\_DataWriter** (p. 478).

The `subscription_handle` must correspond to a subscription currently associated with the **DDS\_DataWriter** (p. 478). Otherwise, the operation will fail and fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025). Use **DDS\_DataWriter\_get\_matched\_subscriptions** (p. 532) to find the subscriptions that are currently matched with the **DDS\_DataWriter** (p. 478).

The above information is also available through **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) (if a reader listener is installed on the **DDS\_SubscriptionBuiltinTopicDataDataReader** (p. 902)).

When the subscription data is updated, for example when the content filter property changes, there is a small window of time in between when the DataWriter is made aware of these changes and when they actually take effect. Taking effect in this example means that the DataWriter will perform writer-side filtering using the new filter property values (filter expression and/or parameters).

When the DataWriter is made aware of the changes they will first be seen in the **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) of the **DDS\_SubscriptionBuiltinTopicDataDataReader** (p. 902). When these changes are applied, they will be seen in the output of this API because this API blocks until the most recent changes known to the DataWriter have taken effect. This API will only block when called outside of a listener callback, in order to not block the internal threads from making progress.

If application behavior depends on being made aware of information about a subscription only after it has taken effect on the DataWriter, the recommended pattern for usage of this API is to wait for subscription data to be received either through polling this API or by installing a listener on the **DDS\_SubscriptionBuiltinTopicDataDataReader** (p. 902). When a new sample is received by the builtin DataReader, this API may be called in a separate thread and will return the expected matched subscription data once it has been applied to the DataWriter.

Because this API blocks, it is possible for this API to time out while waiting for the changes to be applied. A timeout may happen if the DataReader's subscription data is changing rapidly, preventing the DataWriter from returning valid information before newer data has been received, or if an application is performing a task in a listener callback, thereby preventing the middleware's threads from executing events in a timely manner.

Note: This operation does not retrieve the **DDS\_SubscriptionBuiltinTopicData::type\_code** (p. 1754). This information is available through **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) (if a reader listener is installed on the **DDS\_SubscriptionBuiltinTopicDataDataReader** (p. 902)).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>subscription_data</i>	<< <i>inout</i> >> (p. 818). The information to be filled in on the associated subscription. Cannot be NULL.
<i>subscription_handle</i>	<< <i>in</i> >> (p. 818). Handle to a specific subscription associated with the <b>DDS_DataReader</b> (p. 608). Must correspond to a subscription currently associated with the <b>DDS_DataWriter</b> (p. 478). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025), or **DDS\_RETCODE\_TIMEOUT** (p. 1025)

## 4.17.4.73 DDS\_DataWriter\_get\_matched\_subscription\_participant\_data()

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_participant_data (
    DDS_DataWriter * self,
    struct DDS_ParticipantBuiltinTopicData * participant_data,
    const DDS_InstanceHandle_t * subscription_handle )
```

This operation retrieves the information on the discovered **DDS\_DomainParticipant** (p. 72) associated with the subscription that is currently matching with the **DDS\_DataWriter** (p. 478).

The `subscription_handle` must correspond to a subscription currently associated with the **DDS\_DataWriter** (p. 478). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025). The operation may also fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if the subscription corresponds to the same **DDS\_DomainParticipant** (p. 72) that the DataWriter belongs to. Use **DDS\_DataWriter\_get\_matched\_subscriptions** (p. 532) to find the subscriptions that are currently matched with the **DDS\_DataWriter** (p. 478).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_data</i>	<< <i>inout</i> >> (p. 818). The information to be filled in on the associated participant Cannot be NULL.
<i>subscription_handle</i>	<< <i>in</i> >> (p. 818). Handle to a specific subscription associated with the <b>DDS_DataReader</b> (p. 608). Must correspond to a subscription currently associated with the <b>DDS_DataWriter</b> (p. 478).

Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## 4.17.4.74 DDS\_DataWriter\_get\_topic()

```
DDS_Topic * DDS_DataWriter_get_topic (
    DDS_DataWriter * self )
```

This operation returns the **DDS\_Topic** (p. 172) associated with the **DDS\_DataWriter** (p. 478).

This is the same **DDS\_Topic** (p. 172) that was used to create the **DDS\_DataWriter** (p. 478).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_Topic** (p. 172) that was used to create the **DDS\_DataWriter** (p. 478).

4.17.4.75 **DDS\_DataWriter\_get\_publisher()**

```
DDS_Publisher * DDS_DataWriter_get_publisher (
    DDS_DataWriter * self )
```

This operation returns the **DDS\_Publisher** (p. 436) to which the **DDS\_DataWriter** (p. 478) belongs.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_Publisher** (p. 436) to which the **DDS\_DataWriter** (p. 478) belongs.

4.17.4.76 **DDS\_DataWriter\_wait\_for\_acknowledgments()**

```
DDS_ReturnCode_t DDS_DataWriter_wait_for_acknowledgments (
    DDS_DataWriter * self,
    const struct DDS_Duration_t * max_wait )
```

Blocks the calling thread until all data written by reliable **DDS\_DataWriter** (p. 478) entity is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable **DDS\_DataWriter** (p. 478) entity is acknowledged by (a) all reliable **DDS\_DataReader** (p. 608) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged by all reliable matched data readers and by all required subscriptions; a timeout indicates that `max_wait` elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to `wait_for_acknowledgments` on a `DataWriter` and a different thread writes new samples on the same `DataWriter`, the new samples must be acknowledged before unblocking the thread waiting on `wait_for_acknowledgments`.

If the **DDS\_DataWriter** (p. 478) does not have **DDS\_ReliabilityQosPolicy** (p. 1678) kind set to `RELIABLE`, this operation will succeed immediately.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>max_wait</i>	<< <i>in</i> >> (p. 818) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 1522) .

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025), **DDS\_RETCODE\_←  
\_TIMEOUT** (p. 1025)

4.17.4.77 **DDS\_DataWriter\_is\_sample\_app\_acknowledged()**

```
DDS_ReturnCode_t DDS_DataWriter_is_sample_app_acknowledged (
    DDS_DataWriter * self,
    DDS_Boolean * is_app_ack,
    const struct DDS_SampleIdentity_t * identity )
```

This function can be used to see if a sample has been application acknowledged.

This function can be used to see if a sample has been application acknowledged by all the matching DataReaders that were alive when the sample was written.

If a DataReader does not enable application acknowledgment (by setting **DDS\_ReliabilityQosPolicy::acknowledgment\_←  
\_kind** (p. 1681) to a value other than **DDS\_PROTOCOL\_ACKNOWLEDGMENT\_MODE** (p. 1124)), the sample is considered application acknowledged for that DataReader.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>is_app_ack</i>	<< <i>out</i> >> (p. 818) This value will be set to <b>DDS_BOOLEAN_TRUE</b> (p. 1004) when the sample has been acknowledged.
<i>identity</i>	<< <i>in</i> >> (p. 818) Sample identity.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.17.4.78 **DDS\_DataWriter\_wait\_for\_asynchronous\_publishing()**

```
DDS_ReturnCode_t DDS_DataWriter_wait_for_asynchronous_publishing (
    DDS_DataWriter * self,
    const struct DDS_Duration_t * max_wait )
```

<<*extension*>> (p. 817) Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDS\_DataWriter** (p. 478) is sent and acknowledged (if reliable) by all matched **DDS\_DataReader** (p. 608) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; a time out indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDS\_DataReader** (p. 608) is complete in addition to what **DDS\_DataWriter\_wait\_for\_acknowledgments** (p. 536) provides.

If the **DDS\_DataWriter** (p. 478) does not have **DDS\_PublishModeQosPolicy** (p. 1664) kind set to **DDS\_↵ ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120) the operation will complete immediately with **DDS\_RETCODE\_↵ \_OK** (p. 1025).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>max_wait</i>	<< <i>in</i> >> (p. 818) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 1522) .

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025), **DDS\_RETCODE\_↵ \_TIMEOUT** (p. 1025)

#### 4.17.4.79 DDS\_DataWriter\_get\_liveliness\_lost\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_liveliness_lost_status (
    DDS_DataWriter * self,
    struct DDS_LivelinessLostStatus * status )
```

Accesses the **DDS\_LIVELINESS\_LOST\_STATUS** (p. 1034) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_LivelinessLostStatus</b> (p. 1574) to be filled in. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.80 DDS\_DataWriter\_get\_offered\_deadline\_missed\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_offered_deadline_missed_status (
    DDS_DataWriter * self,
    struct DDS_OfferedDeadlineMissedStatus * status )
```

Accesses the **DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 1031) communication status.

This also resets the status so that it is no longer considered changed.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_OfferedDeadlineMissedStatus</b> (p. 1607) to be filled in. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.81 DDS\_DataWriter\_get\_offered\_incompatible\_qos\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_offered_incompatible_qos_status (
    DDS_DataWriter * self,
    struct DDS_OfferedIncompatibleQosStatus * status )
```

Accesses the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032) communication status.

This also resets the status so that it is no longer considered changed.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_OfferedIncompatibleQosStatus</b> (p. 1609) to be filled in. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.82 DDS\_DataWriter\_get\_publication\_matched\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_publication_matched_status (
    DDS_DataWriter * self,
    struct DDS_PublicationMatchedStatus * status )
```

Accesses the **DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 1035) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_PublicationMatchedStatus</b> (p. 1658) to be filled in. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.83 DDS\_DataWriter\_get\_reliable\_writer\_cache\_changed\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_reliable_writer_cache_changed_status (
    DDS_DataWriter * self,
    struct DDS_ReliableWriterCacheChangedStatus * status )
```

<<*extension*>> (p. 817) Get the reliable cache status for this writer.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_ReliableWriterCacheChangedStatus</b> (p. 1684) to be filled in. Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.17.4.84 DDS\_DataWriter\_get\_reliable\_reader\_activity\_changed\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_reliable_reader_activity_changed_status (
    DDS_DataWriter * self,
    struct DDS_ReliableReaderActivityChangedStatus * status )
```

<<*extension*>> (p. 817) Get the reliable reader activity changed status for this writer.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_ReliableReaderActivityChangedStatus</b> (p. 1682) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.17.4.85 DDS\_DataWriter\_get\_datawriter\_cache\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_datawriter_cache_status (
    DDS_DataWriter * self,
    struct DDS_DataWriterCacheStatus * status )
```

<<**extension**>> (p. 817) Get the datawriter cache status for this writer.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterCacheStatus</b> (p. 1415) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## 4.17.4.86 DDS\_DataWriter\_get\_datawriter\_protocol\_status()

```
DDS_ReturnCode_t DDS_DataWriter_get_datawriter_protocol_status (
    DDS_DataWriter * self,
    struct DDS_DataWriterProtocolStatus * status )
```

<<**extension**>> (p. 817) Get the datawriter protocol status for this writer.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterProtocolStatus</b> (p. 1427) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.17.4.87 **DDS\_DataWriter\_get\_matched\_subscription\_datawriter\_protocol\_status()**

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status (
    DDS_DataWriter * self,
    struct DDS_DataWriterProtocolStatus * status,
    const DDS_InstanceHandle_t * subscription_handle )
```

<<**extension**>> (p. 817) Get the datawriter protocol status for this writer, per matched subscription identified by the subscription\_handle.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <b>inout</b> >> (p. 818) <b>DDS_DataWriterProtocolStatus</b> (p. 1427) to be filled in. Cannot be NULL.
<i>subscription_handle</i>	<< <b>in</b> >> (p. 818) Handle to a specific subscription associated with the <b>DDS_DataReader</b> (p. 608). Cannot be NULL. Must correspond to a subscription currently associated with the <b>DDS_DataWriter</b> (p. 478).

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.17.4.88 **DDS\_DataWriter\_get\_matched\_subscription\_datawriter\_protocol\_status\_by\_locator()**

```
DDS_ReturnCode_t DDS_DataWriter_get_matched_subscription_datawriter_protocol_status_by_locator (
    DDS_DataWriter * self,
    struct DDS_DataWriterProtocolStatus * status,
    const struct DDS_Locator_t * locator )
```

<<**extension**>> (p. 817) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterProtocolStatus</b> (p. 1427) to be filled in Cannot be NULL.
<i>locator</i>	<< <i>in</i> >> (p. 818) Locator to a specific locator associated with the <b>DDS_DataReader</b> (p. 608). Cannot be NULL. Must correspond to a locator of one or more subscriptions currently associated with the <b>DDS_DataWriter</b> (p. 478).

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.17.4.89 **DDS\_DataWriter\_get\_service\_request\_accepted\_status()**

```
DDS_ReturnCode_t DDS_DataWriter_get_service_request_accepted_status (
    DDS_DataWriter * self,
    struct DDS_ServiceRequestAcceptedStatus * status )
```

Accesses the **DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS** (p. 1036) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_ServiceRequestAcceptedStatus</b> (p. 1738) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.17.4.90 **DDS\_DataWriter\_set\_qos()**

```
DDS_ReturnCode_t DDS_DataWriter_set_qos (
    DDS_DataWriter * self,
    const struct DDS_DataWriterQos * qos )
```

Sets the writer QoS.

This operation modifies the QoS of the **DDS\_DataWriter** (p. 478).

The **DDS\_DataWriterQos::user\_data** (p. 1442), **DDS\_DataWriterQos::deadline** (p. 1441), **DDS\_DataWriterQos::latency\_budget** (p. 1441), **DDS\_DataWriterQos::ownership\_strength** (p. 1443), **DDS\_DataWriterQos::transport\_priority** (p. 1442), **DDS\_DataWriterQos::lifespan** (p. 1442) and **DDS\_DataWriterQos::writer\_data\_lifecycle** (p. 1443) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataWriterQos</b> (p. 1438) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDS_DataWriter</b> (p. 478) is enabled. The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 463) can be used to indicate that the QoS of the <b>DDS_DataWriter</b> (p. 478) should be changed to match the current default <b>DDS_DataWriterQos</b> (p. 1438) set in the <b>DDS_Publisher</b> (p. 436). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## See also

**DDS\_DataWriterQos** (p. 1438) for rules on consistency among QoS  
**set\_qos (abstract)** (p. 1161)  
**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.17.4.91 DDS\_DataWriter\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DataWriter_set_qos_with_profile (
    DDS_DataWriter * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Change the QoS of this writer using the input XML QoS profile.

This operation modifies the QoS of the **DDS\_DataWriter** (p. 478).

The **DDS\_DataWriterQos::user\_data** (p. 1442), **DDS\_DataWriterQos::deadline** (p. 1441), **DDS\_DataWriterQos::latency\_budget** (p. 1441), **DDS\_DataWriterQos::ownership\_strength** (p. 1443), **DDS\_DataWriterQos::transport\_priority** (p. 1442), **DDS\_DataWriterQos::lifespan** (p. 1442) and **DDS\_DataWriterQos::writer\_data\_lifecycle** (p. 1443) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexnt will use the default library (see <b>DDS_Publisher_set_default_library</b> (p. 445)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexnt will use the default profile (see <b>DDS_Publisher_set_default_profile</b> (p. 444)).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025) or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

## See also

**DDS\_DataWriterQos** (p. 1438) for rules on consistency among QoS  
**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.17.4.92 DDS\_DataWriter\_get\_qos()

```
DDS_ReturnCode_t DDS_DataWriter_get_qos (
    DDS_DataWriter * self,
    struct DDS_DataWriterQos * qos )
```

Gets the writer QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) The <b>DDS_DataWriterQos</b> (p. 1438) to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**get\_qos (abstract)** (p. 1161)

## 4.17.4.93 DDS\_DataWriter\_set\_property()

```
DDS_ReturnCode_t DDS_DataWriter_set_property (
    DDS_DataWriter * self,
    const char * property_name,
    const char * value,
    DDS_Boolean propagate )
```

Set the value for a property that applies to a DataWriter.

## Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS\_DataWriter\_set\_qos** (p. 543) instead.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>property_name</i>	<< <i>in</i> >> (p. 818). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 818). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 818). Indicates if the property will be propagated or not.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DomainParticipant\_set\_property** (p. 150)

**DDS\_DataReader\_set\_property** (p. 681)

**DDS\_DataWriter\_set\_qos** (p. 543)

## 4.17.4.94 DDS\_DataWriter\_set\_listener()

```
DDS_ReturnCode_t DDS_DataWriter_set_listener (
    DDS_DataWriter * self,
    const struct DDS_DataWriterListener * l,
    DDS_StatusMask mask )
```

Sets the writer listener.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) <b>DDS_DataWriterListener</b> (p. 1417) to set to
<i>mask</i>	<< <i>in</i> >> (p. 818) <b>DDS_StatusMask</b> (p. 1030) associated with the <b>DDS_DataWriterListener</b> (p. 1417). The callback function on the listener cannot be NULL if the corresponding status is turned on in the <i>mask</i> .

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**set\_listener (abstract)** (p. 1162)

## 4.17.4.95 DDS\_DataWriter\_get\_listener()

```
struct DDS_DataWriterListener DDS_DataWriter_get_listener (
    DDS_DataWriter * self )
```

Get the writer listener.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_DataWriterListener** (p. 1417) of the **DDS\_DataWriter** (p. 478).

## See also

**DDS\_DataWriter\_get\_listenerX** (p. 547)

**get\_listener (abstract)** (p. 1162)

## 4.17.4.96 DDS\_DataWriter\_get\_listenerX()

```
DDS_ReturnCode_t DDS_DataWriter_get_listenerX (
    DDS_DataWriter * self,
    struct DDS_DataWriterListener * listener )
```

<<*extension*>> (p. 817) Get the writer listener.

An alternative form of `get_listener` that fills in an existing listener structure rather than returning one on the stack.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataWriterListener</b> (p. 1417) structure to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataWriter\_get\_listener** (p. 546)

**get\_listener (abstract)** (p. 1162)

#### 4.17.4.97 DDS\_DataWriter\_flush()

```
DDS_ReturnCode_t DDS_DataWriter_flush (
    DDS_DataWriter * self )
```

<<*extension*>> (p. 817) Flushes the batch in progress in the context of the calling thread.

After being flushed, the batch is available to be sent on the network.

If the **DDS\_DataWriter** (p.478) does not have **DDS\_PublishModeQosPolicy** (p.1664) kind set to **DDS\_↔  
ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p.1120), the batch will be sent on the network immediately (in the context of the calling thread).

If the **DDS\_DataWriter** (p. 478) does have **DDS\_PublishModeQosPolicy** (p. 1664) kind set to **DDS\_↔  
ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120), the batch will be sent in the context of the asynchronous publishing thread.

This operation may block in the same conditions as **FooDataWriter\_write** (p. 489).

If this operation does block, the RELIABILITY max\_blocking\_time configures the maximum time the write operation may block (waiting for space to become available). If max\_blocking\_time elapses before the DDS\_DataWriter is able to store the modification without exceeding the limits, the operation will fail with DDS\_RETCODE\_TIMEOUT.

##### MT Safety:

flush() is only thread-safe with batching if **DDS\_BatchQosPolicy::thread\_safe\_write** (p. 1337) is TRUE.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025), **DDS\_RETCODE\_OUT\_↔  
OF\_RESOURCES** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### 4.17.4.98 DDS\_DataWriter\_take\_discovery\_snapshot()

```
DDS_ReturnCode_t DDS_DataWriter_take_discovery_snapshot (
    DDS_DataWriter * self,
    const char * file_name )
```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

A possible output may be the following:

```
Remote readers that match the local writer domain=0 name="writerTestName"
```

```
guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"
```

```
topic="FooTopic" type="FooType"
```

-----

Compatible readers:

```
1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
liveliness="ALIVE"
```

Incompatible readers:

```
1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
reason="Inconsistent QoS"
```

-----

### Precondition

self is not NULL.

### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) The local writer.
<i>file_name</i>	<< <i>in</i> >> (p. 818) Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through <b>NDDS_Config_Logger</b> (p. 1848). Otherwise, the snapshot will be printed in the file specified by <i>file_name</i> .

### Returns

One of the **Standard Return Codes** (p. 1024).

## 4.18 Flow Controllers

<<*extension*>> (p. 817) **DDS\_FlowController** (p. 551) and associated elements

### Data Structures

- struct **DDS\_FlowControllerTokenBucketProperty\_t**  
*DDS\_FlowController* (p. 551) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.
- struct **DDS\_FlowControllerProperty\_t**  
Determines the flow control characteristics of the *DDS\_FlowController* (p. 551).

### Macros

- #define **DDS\_FlowControllerTokenBucketProperty\_t\_INITIALIZER**  
Initializer for new property instances.

## Typedefs

- typedef struct DDS\_FlowControllerImpl **DDS\_FlowController**  
 <<*interface*>> (p. 818) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDS\_DataWriter** (p. 478) instances are allowed to write data.

## Enumerations

- enum **DDS\_FlowControllerSchedulingPolicy** {  
**DDS\_RR\_FLOW\_CONTROLLER\_SCHED\_POLICY** ,  
**DDS\_EDF\_FLOW\_CONTROLLER\_SCHED\_POLICY** ,  
**DDS\_HPF\_FLOW\_CONTROLLER\_SCHED\_POLICY** }  
 Kinds of flow controller scheduling policy.

## Functions

- const char \* **DDS\_FlowController\_get\_name** ( **DDS\_FlowController** \*self)  
 Returns the name of the **DDS\_FlowController** (p. 551).
- **DDS\_DomainParticipant** \* **DDS\_FlowController\_get\_participant** ( **DDS\_FlowController** \*self)  
 Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_FlowController** (p. 551) belongs.
- **DDS\_ReturnCode\_t** **DDS\_FlowController\_set\_property** ( **DDS\_FlowController** \*self, const struct **DDS\_↔FlowControllerProperty\_t** \*prop)  
 Sets the **DDS\_FlowController** (p. 551) property.
- **DDS\_ReturnCode\_t** **DDS\_FlowController\_get\_property** ( **DDS\_FlowController** \*self, struct **DDS\_Flow↔ControllerProperty\_t** \*prop)  
 Gets the **DDS\_FlowController** (p. 551) property.
- **DDS\_ReturnCode\_t** **DDS\_FlowController\_trigger\_flow** ( **DDS\_FlowController** \*self)  
 Provides an external trigger to the **DDS\_FlowController** (p. 551).

## Variables

- char \* **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME**  
 [*default*] Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in default flow controller.
- char \* **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME**  
 Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in fixed-rate flow controller.
- char \* **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME**  
 Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in on-demand flow controller.

### 4.18.1 Detailed Description

<<*extension*>> (p. 817) **DDS\_FlowController** (p. 551) and associated elements

**DDS\_FlowController** (p. 551) provides the network traffic shaping capability to asynchronous **DDS\_DataWriter** (p. 478) instances. For use cases and advantages of publishing asynchronously, please refer to **DDS\_PublishModeQosPolicy** (p. 1664) of **DDS\_DataWriterQos** (p. 1438).

See also

**DDS\_PublishModeQosPolicy** (p. 1664)

**DDS\_DataWriterQos::publish\_mode** (p. 1444)

**DDS\_AsynchronousPublisherQosPolicy** (p. 1323)

### 4.18.2 Macro Definition Documentation

#### 4.18.2.1 DDS\_FlowControllerTokenBucketProperty\_t\_INITIALIZER

```
#define DDS_FlowControllerTokenBucketProperty_t_INITIALIZER
```

Initializer for new property instances.

New **DDS\_FlowControllerProperty\_t** (p. 1552) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that the contained property values are properly initialized. This does not allocate memory.

The simplest way to create a new property structure is to initialize it on the stack at the time of its creation:

```
struct DDS_FlowControllerProperty_t myProperty = DDS_FlowControllerProperty_t_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipant\_get\_default\_flowcontroller\_↔\_property** (p. 95).

See also

**DDS\_DomainParticipant\_get\_default\_flowcontroller\_property** (p. 95)

### 4.18.3 Typedef Documentation

### 4.18.3.1 DDS\_FlowController

```
typedef struct DDS_FlowControllerImpl DDS_FlowController
```

<<*interface*>> (p. 818) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDS\_DataWriter** (p. 478) instances are allowed to write data.

QoS:

**DDS\_FlowControllerProperty\_t** (p. 1552)

## 4.18.4 Enumeration Type Documentation

### 4.18.4.1 DDS\_FlowControllerSchedulingPolicy

```
enum DDS_FlowControllerSchedulingPolicy
```

Kinds of flow controller scheduling policy.

Samples written by an asynchronous **DDS\_DataWriter** (p. 478) are not sent in the context of the **FooDataWriter\_write** (p. 489) call. Instead, the middleware puts the samples in a queue for future processing. The **DDS\_FlowController** (p. 551) associated with each asynchronous DataWriter instance determines when the samples are actually sent.

Each **DDS\_FlowController** (p. 551) maintains a separate FIFO queue for each unique destination (remote application). Samples written by asynchronous **DDS\_DataWriter** (p. 478) instances associated with the flow controller, are placed in the queues that correspond to the intended destinations of the sample.

When tokens become available, a flow controller must decide which queue(s) to grant tokens first. This is determined by the flow controller's scheduling policy. Once a queue has been granted tokens, it is serviced by the asynchronous publishing thread. The queued up samples will be coalesced and sent to the corresponding destination. The number of samples sent depends on the data size and the number of tokens granted.

QoS:

**DDS\_FlowControllerProperty\_t** (p. 1552)

Enumerator

DDS_RR_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in a round-robin fashion. Whenever tokens become available, the flow controller distributes the tokens uniformly across all of its (non-empty) destination queues. No destinations are prioritized. Instead, all destinations are treated equally and are serviced in a round-robin fashion.
-------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Enumerator

DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY	<p>Indicates to flow control in an earliest-deadline-first fashion. A sample's deadline is determined by the time it was written plus the latency budget of the <code>DataWriter</code> at the time of the write call (as specified in the <b>DDS_LatencyBudgetQosPolicy</b> (p. 1566)). The relative priority of a flow controller's destination queue is determined by the earliest deadline across all samples it contains.</p> <p>When tokens become available, the <b>DDS_FlowController</b> (p. 551) distributes tokens to the destination queues in order of their deadline priority. In other words, the queue containing the sample with the earliest deadline is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal deadline value, the corresponding destination queues are serviced in a round-robin fashion.</p> <p>Hence, under the default <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 1567) setting, an <code>EDF_FLOW_CONTROLLER_SCHED_POLICY</code> <b>DDS_FlowController</b> (p. 551) preserves the order in which the user calls <code>FooDataWriter_write</code> (p. 489) across the <code>DataWriters</code> associated with the flow controller.</p> <p>Since the <b>DDS_LatencyBudgetQosPolicy</b> (p. 1566) is mutable, a sample written second may contain an earlier deadline than the sample written first if the <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 1567) value is sufficiently decreased in between writing the two samples. In that case, if the first sample is not yet written (still in queue waiting for its turn), it inherits the priority corresponding to the (earlier) deadline from the second sample.</p> <p>In other words, the priority of a destination queue is always determined by the earliest deadline among all samples contained in the queue. This priority inheritance approach is required in order to both honor the updated <b>DDS_LatencyBudgetQosPolicy::duration</b> (p. 1567) and adhere to the <b>DDS_DataWriter</b> (p. 478) in-order data delivery guarantee.</p> <p>[default] for <b>DDS_DataWriter</b> (p. 478)</p>
--------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Enumerator

DDS_HPF_FLOW_CONTROLLER_SCHED_POLICY	<p>Indicates to flow control in a highest-priority-first fashion. Determines the next destination queue to service as determined by the publication priority of the <b>DDS_DataWriter</b> (p. 478), channel of multi-channel DataWriter, or individual sample.</p> <p>The relative priority of a flow controller's destination queue is determined by the highest publication priority of all samples it contains.</p> <p>When tokens become available, the <b>DDS_FlowController</b> (p. 551) distributes tokens to the destination queues in order of their publication priority. In other words, the queue containing the sample with the highest publication priority is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal publication priority, the corresponding destination queues are serviced in a round-robin fashion.</p> <p>This priority inheritance approach is required in order to both honor the designated publication priority and adhere to the <b>DDS_DataWriter</b> (p. 478) in-order data delivery guarantee.</p>
--------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## 4.18.5 Function Documentation

### 4.18.5.1 DDS\_FlowController\_get\_name()

```
const char * DDS_FlowController_get_name (
    DDS_FlowController * self )
```

Returns the name of the **DDS\_FlowController** (p. 551).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

The name of the **DDS\_FlowController** (p. 551).

### 4.18.5.2 DDS\_FlowController\_get\_participant()

```
DDS_DomainParticipant * DDS_FlowController_get_participant (
    DDS_FlowController * self )
```

Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_FlowController** (p. 551) belongs.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

The **DDS\_DomainParticipant** (p. 72) to which the **DDS\_FlowController** (p. 551) belongs.

### 4.18.5.3 DDS\_FlowController\_set\_property()

```
DDS_ReturnCode_t DDS_FlowController_set_property (
    DDS_FlowController * self,
    const struct DDS_FlowControllerProperty_t * prop )
```

Sets the **DDS\_FlowController** (p. 551) property.

This operation modifies the property of the **DDS\_FlowController** (p. 551).

Once a **DDS\_FlowController** (p. 551) has been instantiated, only the **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) can be changed. The **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 1552) is immutable.

A new **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 1555) only takes effect at the next scheduled token distribution time (as determined by its previous value).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>prop</i>	<< <i>in</i> >> (p. 818) The new <b>DDS_FlowControllerProperty_t</b> (p. 1552). Property must be consistent. Immutable fields cannot be changed after <b>DDS_FlowController</b> (p. 551) has been created. The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 159) can be used to indicate that the property of the <b>DDS_FlowController</b> (p. 551) should be changed to match the current default <b>DDS_FlowControllerProperty_t</b> (p. 1552) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_↔RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

See also

**DDS\_FlowControllerProperty\_t** (p. 1552) for rules on consistency among property values.

#### 4.18.5.4 DDS\_FlowController\_get\_property()

```
DDS_ReturnCode_t DDS_FlowController_get_property (
    DDS_FlowController * self,
    struct DDS_FlowControllerProperty_t * prop )
```

Gets the **DDS\_FlowController** (p. 551) property.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>prop</i>	<< <i>in</i> >> (p. 818) <b>DDS_FlowController</b> (p. 551) to be filled in. Cannot be NULL.

Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.18.5.5 DDS\_FlowController\_trigger\_flow()

```
DDS_ReturnCode_t DDS_FlowController_trigger_flow (
    DDS_FlowController * self )
```

Provides an external trigger to the **DDS\_FlowController** (p. 551).

Typically, a **DDS\_FlowController** (p. 551) uses an internal trigger to periodically replenish its tokens. The period by which this trigger is called is determined by the **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 1555) property setting.

This function provides an additional, external trigger to the **DDS\_FlowController** (p. 551). This trigger adds **DDS\_FlowControllerTokenBucketProperty\_t::tokens\_added\_per\_period** (p. 1554) tokens each time it is called (subject to the other property settings of the **DDS\_FlowController** (p. 551)).

An *on-demand* **DDS\_FlowController** (p. 551) can be created with a **DDS\_DURATION\_INFINITE** (p. 1011) as **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 1555), in which case the only trigger source is external (i.e. the FlowController is solely triggered by the user on demand).

**DDS\_FlowController\_trigger\_flow** (p. 556) can be called on both strict *on-demand* FlowController and hybrid FlowController (internally and externally triggered).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

### 4.18.6 Variable Documentation

#### 4.18.6.1 DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME

```
char* DDS_DEFAULT_FLOW_CONTROLLER_NAME [extern]
```

**[default]** Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in default flow controller.

RTI Connex provides several built-in **DDS\_FlowController** (p. 551) for use with an asynchronous **DDS\_DataWriter** (p. 478). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

By default, flow control is disabled. That is, the built-in **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 557) flow controller does not apply any flow control. Instead, it allows data to be sent asynchronously as soon as it is written by the **DDS\_DataWriter** (p. 478).

Essentially, this is equivalent to a user-created **DDS\_FlowController** (p. 551) with the following **DDS\_FlowController**↔**Property\_t** (p. 1552) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 1552) = **DDS\_EDF\_FLOW\_CONTROLLER**↔**SCHED\_POLICY** (p. 553)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `max_tokens` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_added_per_period` = **DDS**↔**LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_leaked_per_period` = 0
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `period` = 60 seconds
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `bytes_per_token` = **DDS\_LENGTH**↔**UNLIMITED** (p. 1127)

## See also

- DDS\_Publisher\_create\_datawriter** (p. 446)
- DDS\_DomainParticipant\_lookup\_flowcontroller** (p. 125)
- DDS\_FlowController\_set\_property** (p. 555)
- DDS\_PublishModeQosPolicy** (p. 1664)
- DDS\_AsynchronousPublisherQosPolicy** (p. 1323)

#### 4.18.6.2 DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME

```
char* DDS_FIXED_RATE_FLOW_CONTROLLER_NAME [extern]
```

Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in fixed-rate flow controller.

RTI Connext provides several builtin **DDS\_FlowController** (p. 551) for use with an asynchronous **DDS\_DataWriter** (p. 478). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME** (p. 557) flow controller shapes the network traffic by allowing data to be sent only once every second. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

Essentially, this is equivalent to a user-created **DDS\_FlowController** (p. 551) with the following **DDS\_FlowController↔Property\_t** (p. 1552) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 1552) = **DDS\_EDF\_FLOW\_CONTROLLER↔SCHED\_POLICY** (p. 553)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `max_tokens` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_added_per_period` = **DDS↔LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_leaked_per_period` = **DDS↔LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `period` = 1 second
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `bytes_per_token` = **DDS\_LENGTH↔UNLIMITED** (p. 1127)

See also

- DDS\_Publisher\_create\_datawriter** (p. 446)
- DDS\_DomainParticipant\_lookup\_flowcontroller** (p. 125)
- DDS\_FlowController\_set\_property** (p. 555)
- DDS\_PublishModeQosPolicy** (p. 1664)
- DDS\_AsynchronousPublisherQosPolicy** (p. 1323)

### 4.18.6.3 DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME

```
char* DDS_ON_DEMAND_FLOW_CONTROLLER_NAME [extern]
```

Special value of **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1665) that refers to the built-in on-demand flow controller.

RTI Connex provides several builtin **DDS\_FlowController** (p. 551) for use with an asynchronous **DDS\_DataWriter** (p. 478). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 558) allows data to be sent only when the user calls **DDS\_FlowController\_trigger\_flow** (p. 556). With each trigger, all accumulated data since the previous trigger is sent (across all **DDS\_Publisher** (p. 436) or **DDS\_DataWriter** (p. 478) instances). In other words, the network traffic shape is fully controlled by the user. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

This external trigger source is ideal for users who want to implement some form of closed-loop flow control or who want to only put data on the wire every so many samples (e.g. with the number of samples based on **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1857)).

Essentially, this is equivalent to a user-created **DDS\_FlowController** (p. 551) with the following **DDS\_FlowController\_Property\_t** (p. 1552) settings:

- **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 1552) = **DDS\_EDF\_FLOW\_CONTROLLER\_SCHED\_POLICY** (p. 553)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `max_tokens` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_added_per_period` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `tokens_leaked_per_period` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `period` = **DDS\_DURATION\_INFINITE** (p. 1011)
- **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 1553) `bytes_per_token` = **DDS\_LENGTH\_UNLIMITED** (p. 1127)

- DDS\_PublishModeQosPolicy** (p. 1664)
- DDS\_AsynchronousPublisherQosPolicy** (p. 1323)

## 4.19 Subscription Module

Contains the **DDS\_Subscriber** (p. 565), **DDS\_DataReader** (p. 608), **DDS\_ReadCondition** (p. 686), **DDS\_Query↔Condition** (p. 691), and **DDS\_TopicQuery** (p. 698) classes, as well as the **DDS\_SubscriberListener** (p. 1744) and **DDS\_DataReaderListener** (p. 1372) interfaces, and more generally, all that is needed on the subscription side.

### Modules

- **Subscribers**

- DDS\_Subscriber* (p. 565) entity and associated elements

- **DataReaders**

- DDS\_DataReader* (p. 608) entity and associated elements

- **Data Samples**

- DDS\_SampleInfo* (p. 1720), *DDS\_SampleStateKind* (p. 702), *DDS\_ViewStateKind* (p. 704), *DDS\_InstanceStateKind* (p. 706) and associated elements

- **SampleProcessor**

- <<experimental>>* (p. 817) *<<extension>>* (p. 817) Utility to concurrently read and process the data samples received by *DDS\_DataReader* (p. 608).

### 4.19.1 Detailed Description

Contains the **DDS\_Subscriber** (p. 565), **DDS\_DataReader** (p. 608), **DDS\_ReadCondition** (p. 686), **DDS\_Query↔Condition** (p. 691), and **DDS\_TopicQuery** (p. 698) classes, as well as the **DDS\_SubscriberListener** (p. 1744) and **DDS\_DataReaderListener** (p. 1372) interfaces, and more generally, all that is needed on the subscription side.

"DCPS Subscription package"

### 4.19.2 Access to data samples

Data is made available to the application by the following operations on **DDS\_DataReader** (p. 608) objects: **Foo↔DataReader\_read** (p. 618), **FooDataReader\_read\_w\_condition** (p. 623), **FooDataReader\_take** (p. 619), **FooData↔Reader\_take\_w\_condition** (p. 625), and the other variants of `read()` and `take()`.

The general semantics of the `read()` operation is that the application only gets access to the corresponding data (i.e. a precise instance value); the data remains the responsibility of RTI Connext and can be read again.

The semantics of the `take()` operations is that the application takes full responsibility for the data; that data will no longer be available locally to RTI Connext. Consequently, it is possible to access the same information multiple times only if all previous accesses were `read()` operations, not `take()`.

Each of these operations returns a collection of `Data` values and associated **DDS\_SampleInfo** (p. 1720) objects. Each data value represents an atom of data information (i.e., a value for one instance). This collection may contain samples related to the same or different instances (identified by the key). Multiple samples can refer to the same instance if the settings of the **HISTORY** (p. 1093) QoS allow for it.

These operations reset the read communication statuses; see **Changes in read communication status** (p. 1028).

**To return the memory back to the middleware, every `read()` or `take()` that retrieves a sequence of samples must be followed with a call to `FooDataReader_return_loan` (p. 639).**

See also

**Interpretation of the `SampleInfo`** (p. 1722)

### 4.19.2.1 Data access patterns

The application accesses data by means of the operations `read` or `take` on the **DDS\_DataReader** (p. 608). These operations return an ordered collection of `DataSamples` consisting of a **DDS\_SampleInfo** (p. 1720) part and a `Data` part.

The way RTI Connexx builds the collection depends on QoS policies set on the **DDS\_DataReader** (p. 608) and **DDS\_Subscriber** (p. 565), as well as the `source_timestamp` of the samples, and the parameters passed to the `read()` / `take()` operations, namely:

- the desired sample states (any combination of **DDS\_SampleStateKind** (p. 702))
- the desired view states (any combination of **DDS\_ViewStateKind** (p. 704))
- the desired instance states (any combination of **DDS\_InstanceStateKind** (p. 706))

The `read()` and `take()` operations are non-blocking and just deliver what is currently available that matches the specified states.

The `read_w_condition()` and `take_w_condition()` operations take a **DDS\_ReadCondition** (p. 686) object as a parameter instead of sample, view or instance states. The behaviour is that the samples returned will only be those for which the condition is **DDS\_BOOLEAN\_TRUE** (p. 1004). These operations, in conjunction with **DDS\_ReadCondition** (p. 686) objects and a **DDS\_WaitSet** (p. 1170), allow performing waiting reads.

Once the data samples are available to the data readers, they can be read or taken by the application. The basic rule is that the application may do this in any order it wishes. This approach is very flexible and allows the application ultimate control.

To access data coherently, or in order, the **PRESENTATION** (p. 1105) QoS must be set properly.

## 4.20 Subscribers

**DDS\_Subscriber** (p. 565) entity and associated elements

### Data Structures

- struct **DDS\_SubscriberSeq**  
*Declares IDL sequence < DDS\_Subscriber (p. 565) > .*
- struct **DDS\_SubscriberQos**  
*QoS policies supported by a DDS\_Subscriber (p. 565) entity.*
- struct **DDS\_SubscriberListener**  
*<<interface>> (p. 818) DDS\_Listener (p. 1569) for status about a subscriber.*

### Macros

- #define **DDS\_SubscriberQos\_INITIALIZER**  
*Initializer for new QoS instances.*
- #define **DDS\_SubscriberListener\_INITIALIZER**  
*<<extension>> (p. 817) Initializer for new DDS\_SubscriberListener (p. 1744).*

## Typedefs

- typedef struct DDS\_SubscriberImpl **DDS\_Subscriber**  
 <<**interface**>> (p. 818) A subscriber is the object responsible for actually receiving data from a subscription.
- typedef void(\* **DDS\_SubscriberListener\_DataOnReadersCallback**) (void \*listener\_data, **DDS\_Subscriber** \*sub)  
 Prototype of a **DDS\_SubscriberListener** (p. 1744) `data_on_readers` function.

## Functions

- **DDS\_Boolean DDS\_SubscriberQos\_equals** (const struct **DDS\_SubscriberQos** \*self, const struct **DDS\_SubscriberQos** \*other)  
 Compares two **DDS\_SubscriberQos** (p. 1746) for equality.
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_print** (const struct **DDS\_SubscriberQos** \*self)  
 Prints this **DDS\_SubscriberQos** (p. 1746) to stdout.
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_to\_string** (const struct **DDS\_SubscriberQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)  
 Obtains a string representation of this **DDS\_SubscriberQos** (p. 1746).
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_to\_string\_w\_params** (const struct **DDS\_SubscriberQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_SubscriberQos** \*base, const struct **DDS\_QoSPrintFormat** \*format)  
 Obtains a string representation of this **DDS\_SubscriberQos** (p. 1746).
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_initialize** (struct **DDS\_SubscriberQos** \*self)  
 Initializer for new QoS instances.
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_finalize** (struct **DDS\_SubscriberQos** \*self)  
 Free any dynamic memory allocated by the policies in this **DDS\_SubscriberQos** (p. 1746).
- **DDS\_ReturnCode\_t DDS\_SubscriberQos\_copy** (struct **DDS\_SubscriberQos** \*self, const struct **DDS\_SubscriberQos** \*source)  
 Copy the contents of the given QoS into this QoS.
- **DDS\_Entity \* DDS\_Subscriber\_as\_entity** (**DDS\_Subscriber** \*subscriber)  
 Access a **DDS\_Subscriber** (p. 565)'s supertype instance.
- **DDS\_ReturnCode\_t DDS\_Subscriber\_get\_default\_datareader\_qos** (**DDS\_Subscriber** \*self, struct **DDS\_DataReaderQos** \*qos)  
 Copies the default **DDS\_DataReaderQos** (p. 1390) values into the provided **DDS\_DataReaderQos** (p. 1390) instance.
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_default\_datareader\_qos** (**DDS\_Subscriber** \*self, const struct **DDS\_DataReaderQos** \*qos)  
 Sets the default **DDS\_DataReaderQos** (p. 1390) values for this subscriber.
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_default\_datareader\_qos\_with\_profile** (**DDS\_Subscriber** \*self, const char \*library\_name, const char \*profile\_name)  
 <<**extension**>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this subscriber based on the input XML QoS profile.
- **DDS\_DataReader \* DDS\_Subscriber\_create\_datareader** (**DDS\_Subscriber** \*self, **DDS\_TopicDescription** \*topic, const struct **DDS\_DataReaderQos** \*qos, const struct **DDS\_DataReaderListener** \*listener, **DDS\_StatusMask** mask)  
 Creates a **DDS\_DataReader** (p. 608) that will be attached and belong to the **DDS\_Subscriber** (p. 565).
- **DDS\_DataReader \* DDS\_Subscriber\_create\_datareader\_with\_profile** (**DDS\_Subscriber** \*self, **DDS\_TopicDescription** \*topic, const char \*library\_name, const char \*profile\_name, const struct **DDS\_DataReaderListener** \*listener, **DDS\_StatusMask** mask)

<<extension>> (p. 817) Creates a **DDS\_DataReader** (p. 608) object using the **DDS\_DataReaderQos** (p. 1390) associated with the input XML QoS profile.

- **DDS\_ReturnCode\_t DDS\_Subscriber\_delete\_datareader** (**DDS\_Subscriber** \*self, **DDS\_DataReader** \*a↔\_datareader)
 

*Deletes a **DDS\_DataReader** (p. 608) that belongs to the **DDS\_Subscriber** (p. 565).*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_delete\_contained\_entities** (**DDS\_Subscriber** \*self)
 

*Deletes all the entities that were created by means of the "create" operation on the **DDS\_Subscriber** (p. 565).*
- **DDS\_DataReader \* DDS\_Subscriber\_lookup\_datareader** (**DDS\_Subscriber** \*self, const char \*topic\_name)
 

*Retrieves an existing **DDS\_DataReader** (p. 608).*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_begin\_access** (**DDS\_Subscriber** \*self)
 

*Indicates that the application is about to access the data samples in any of the **DDS\_DataReader** (p. 608) objects attached to the **DDS\_Subscriber** (p. 565).*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_end\_access** (**DDS\_Subscriber** \*self)
 

*Indicates that the application has finished accessing the data samples in **DDS\_DataReader** (p. 608) objects managed by the **DDS\_Subscriber** (p. 565).*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_get\_datareaders** (**DDS\_Subscriber** \*self, struct **DDS\_DataReader**↔Seq \*readers, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_Instance**↔**StateMask** instance\_states)
 

*Allows the application to access the **DDS\_DataReader** (p. 608) objects that contain samples with the specified **sample**↔**\_states**, **view\_states** and **instance\_states**.*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_get\_all\_datareaders** (**DDS\_Subscriber** \*self, struct **DDS\_Data**↔**ReaderSeq** \*readers)
 

*Retrieve all the DataReaders created from this Subscriber.*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_notify\_datareaders** (**DDS\_Subscriber** \*self)
 

*Invokes the operation **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) on the **DDS\_DataReaderListener** (p. 1372) objects attached to contained **DDS\_DataReader** (p. 608) entities with **DDS\_DATA\_AVAILABLE\_STATUS** (p. 1033) that is considered changed as described in **Changes in read communication status** (p. 1028).*
- **DDS\_DomainParticipant \* DDS\_Subscriber\_get\_participant** (**DDS\_Subscriber** \*self)
 

*Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Subscriber** (p. 565) belongs.*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_copy\_from\_topic\_qos** (**DDS\_Subscriber** \*self, struct **DDS\_Data**↔**ReaderQos** \*datareader\_qos, const struct **DDS\_TopicQos** \*topic\_qos)
 

*Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataReaderQos** (p. 1390).*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_qos** (**DDS\_Subscriber** \*self, const struct **DDS\_SubscriberQos** \*qos)
 

*Sets the subscriber QoS.*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_qos\_with\_profile** (**DDS\_Subscriber** \*self, const char \*library↔\_name, const char \*profile\_name)
 

<<extension>> (p. 817) Change the QoS of this subscriber using the input XML QoS profile.
- **DDS\_ReturnCode\_t DDS\_Subscriber\_get\_qos** (**DDS\_Subscriber** \*self, struct **DDS\_SubscriberQos** \*qos)
 

*Gets the subscriber QoS.*
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_default\_profile** (**DDS\_Subscriber** \*self, const char \*library↔\_name, const char \*profile\_name)
 

<<extension>> (p. 817) Sets the default XML profile for a **DDS\_Subscriber** (p. 565).
- const char \* **DDS\_Subscriber\_get\_default\_profile** (**DDS\_Subscriber** \*self)
 

<<extension>> (p. 817) Gets the default XML profile associated with a **DDS\_Subscriber** (p. 565).
- const char \* **DDS\_Subscriber\_get\_default\_profile\_library** (**DDS\_Subscriber** \*self)
 

<<extension>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_Subscriber** (p. 565).
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_default\_library** (**DDS\_Subscriber** \*self, const char \*library↔\_name)
 

<<extension>> (p. 817) Sets the default XML profile for a **DDS\_Subscriber** (p. 565).

- <<*extension*>> (p. 817) Sets the default XML library for a *DDS\_Subscriber* (p. 565).
- const char \* **DDS\_Subscriber\_get\_default\_library** ( *DDS\_Subscriber* \*self)
  - <<*extension*>> (p. 817) Gets the default XML library associated with a *DDS\_Subscriber* (p. 565).
- **DDS\_ReturnCode\_t DDS\_Subscriber\_set\_listener** ( *DDS\_Subscriber* \*self, const struct **DDS\_SubscriberListener** \*l, **DDS\_StatusMask** mask)
  - Sets the subscriber listener.
- struct **DDS\_SubscriberListener** **DDS\_Subscriber\_get\_listener** ( *DDS\_Subscriber* \*self)
  - Get the subscriber listener.
- **DDS\_ReturnCode\_t DDS\_Subscriber\_get\_listenerX** ( *DDS\_Subscriber* \*self, struct **DDS\_SubscriberListener** \*listener)
  - <<*extension*>> (p. 817) Get the subscriber listener.
- **DDS\_DataReader** \* **DDS\_Subscriber\_lookup\_datareader\_by\_name** ( *DDS\_Subscriber* \*self, const char \*datareader\_name)
  - <<*extension*>> (p. 817) Retrieves a *DDS\_DataReader* (p. 608) contained within the *DDS\_Subscriber* (p. 565) the *DDS\_DataReader* (p. 608) entity name.

## Variables

- const struct **DDS\_DataReaderQos** \* **DDS\_DATAREADER\_QOS\_PRINT\_ALL**
  - Special value which can be supplied to *DDS\_DataReaderQos\_to\_string\_w\_params* (p. 661) indicating that all of the QoS should be printed.
- const struct **DDS\_DataReaderQos** **DDS\_DATAREADER\_QOS\_DEFAULT**
  - Special value for creating data reader with default QoS.
- const struct **DDS\_DataReaderQos** **DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS**
  - Special value for creating *DDS\_DataReader* (p. 608) with a combination of the default *DDS\_DataReaderQos* (p. 1390) and the *DDS\_TopicQos* (p. 1778).

### 4.20.1 Detailed Description

**DDS\_Subscriber** (p. 565) entity and associated elements

### 4.20.2 Macro Definition Documentation

#### 4.20.2.1 DDS\_SubscriberQos\_INITIALIZER

```
#define DDS_SubscriberQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_SubscriberQos** (p. 1746) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_SubscriberQos myQos = DDS_SubscriberQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89) or **DDS\_Subscriber\_get\_qos** (p. 586); one of those should be called subsequently to setting the QoS of a new or existing entity. **DDS\_SubscriberQos\_finalize** (p. 570) should be called to free the contained QoS policies that use dynamic memory:

```
struct DDS_SubscriberQos myQos = DDS_SubscriberQos_INITIALIZER;
DDS_DomainParticipant_get_default_Subscriber_qos(myParticipant, &myQos);
DDS_Subscriber_set_qos(mySubscriber, &myQos);
DDS_SubscriberQos_finalize(&myQos);
```

See also

**DDS\_SubscriberQos\_initialize** (p. 570)

**DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89)

**DDS\_SubscriberQos\_finalize** (p. 570)

#### 4.20.2.2 DDS\_SubscriberListener\_INITIALIZER

```
#define DDS_SubscriberListener_INITIALIZER
```

<<**extension**>> (p. 817) Initializer for new **DDS\_SubscriberListener** (p. 1744).

All the new instances allocated in the stack should be initialized to this value.No memory is allocated.

### 4.20.3 Typedef Documentation

#### 4.20.3.1 DDS\_Subscriber

```
typedef struct DDS_SubscriberImpl DDS_Subscriber
```

<<**interface**>> (p. 818) A subscriber is the object responsible for actually receiving data from a subscription.

QoS:

**DDS\_SubscriberQos** (p. 1746)

Status:

**DDS\_DATA\_ON\_READERS\_STATUS** (p. 1033)

Listener:

**DDS\_SubscriberListener** (p. 1744)

A subscriber acts on the behalf of one or several **DDS\_DataReader** (p. 608) objects that are related to it. When it receives data (from the other parts of the system), it builds the list of concerned **DDS\_DataReader** (p. 608) objects and then indicates to the application that data is available through its listener or by enabling related conditions.

The application can access the list of concerned **DDS\_DataReader** (p. 608) objects through the operation **DDS\_Subscriber\_get\_datareaders** (p. 581) and then access the data available through operations on the **DDS\_DataReader** (p. 608).

The following operations may be called even if the **DDS\_Subscriber** (p. 565) is not enabled. Other operations will the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) if called on a disabled **DDS\_Subscriber** (p. 565):

- **DDS\_Entity\_enable** (p. 1163),
- **DDS\_Subscriber\_set\_qos** (p. 585), **DDS\_Subscriber\_get\_qos** (p. 586) , **idref\_Subscriber\_set\_qos\_with\_profile**
- **DDS\_Subscriber\_set\_listener** (p. 590), **DDS\_Subscriber\_get\_listener** (p. 590),
- **DDS\_Entity\_get\_statuscondition** (p. 1164), **DDS\_Entity\_get\_status\_changes** (p. 1164)
- **DDS\_Subscriber\_create\_datareader** (p. 574), **DDS\_Subscriber\_create\_datareader\_with\_profile** (p. 576), **DDS\_Subscriber\_delete\_contained\_entities** (p. 578), **DDS\_Subscriber\_delete\_datareader** (p. 578),
- **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573), **DDS\_Subscriber\_set\_default\_datareader\_qos\_with\_profile** (p. 573), **DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572), **DDS\_Subscriber\_set\_default\_library** (p. 588), **DDS\_Subscriber\_set\_default\_profile** (p. 587)

All operations except for **DDS\_Subscriber\_set\_qos** (p. 585), **DDS\_Subscriber\_set\_qos\_with\_profile** (p. 585), **DDS\_Subscriber\_get\_qos** (p. 586), **DDS\_Subscriber\_set\_listener** (p. 590), **DDS\_Subscriber\_get\_listener** (p. 590), **DDS\_Entity\_enable** (p. 1163) and **DDS\_Subscriber\_create\_datareader** (p. 574) may fail with **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

See also

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.20.3.2 DDS\_SubscriberListener\_DataOnReadersCallback

```
typedef void(* DDS_SubscriberListener_DataOnReadersCallback) (void *listener_data, DDS_Subscriber *sub)
```

Prototype of a **DDS\_SubscriberListener** (p. 1744) `data_on_readers` function.

#### 4.20.4 Function Documentation

#### 4.20.4.1 DDS\_SubscriberQos\_equals()

```
DDS_Boolean DDS_SubscriberQos_equals (
    const struct DDS_SubscriberQos * self,
    const struct DDS_SubscriberQos * other )
```

Compares two **DDS\_SubscriberQos** (p. 1746) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This SubscriberQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other SubscriberQos to be compared with this SubscriberQos.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.20.4.2 DDS\_SubscriberQos\_print()

```
DDS_ReturnCode_t DDS_SubscriberQos_print (
    const struct DDS_SubscriberQos * self )
```

Prints this **DDS\_SubscriberQos** (p. 1746) to stdout.

Only the differences between this **DDS\_SubscriberQos** (p. 1746) and the documented default are printed. If you wish to print everything regardless, see **DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## 4.20.4.3 DDS\_SubscriberQos\_to\_string()

```
DDS_ReturnCode_t DDS_SubscriberQos_to_string (
    const struct DDS_SubscriberQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1746).

Only the differences between this **DDS\_SubscriberQos** (p. 1746) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_SubscriberQos** (p. 1746) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1746). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## See also

**DDS\_SubscriberQos\_to\_string\_w\_params** (p. 569)

## 4.20.4.4 DDS\_SubscriberQos\_to\_string\_w\_params()

```
DDS_ReturnCode_t DDS_SubscriberQos_to_string_w_params (
    const struct DDS_SubscriberQos * self,
    char * string,
    DDS_UnsignedLong * string_size,
    const struct DDS_SubscriberQos * base,
    const struct DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS\_SubscriberQos** (p. 1746).

Only the differences between this **DDS\_SubscriberQos** (p. 1746) and the **DDS\_SubscriberQos** (p. 1746) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_SUBSCRIBER\_QOS\_PRINT\_ALL** (p. 161) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_SubscriberQos** (p. 1746) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_SubscriberQos</b> (p. 1746). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_SubscriberQos</b> (p. 1746) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

**Returns**

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

**4.20.4.5 DDS\_SubscriberQos\_initialize()**

```
DDS_ReturnCode_t DDS_SubscriberQos_initialize (
    struct DDS_SubscriberQos * self )
```

Initializer for new QoS instances.

New **DDS\_SubscriberQos** (p. 1746) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_Subscriber\_get\_qos** (p. 586) or **DDS\_DomainParticipant↔\_get\_default\_subscriber\_qos** (p. 89); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS\_SubscriberQos\_finalize** (p. 570) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_SubscriberQos *myQos = malloc(sizeof(struct DDS_SubscriberQos));
DDS_SubscriberQos_initialize(myQos);
DDS_DomainParticipantFactory_get_default_subscriber_qos(myFactory, myQos);
DDS_Subscriber_set_qos(mySubscriber, myQos);
DDS_SubscriberQos_finalize(myQos);
free(myQos);
```

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

**Returns**

One of the **Standard Return Codes** (p. 1024)

**See also**

**DDS\_SubscriberQos\_INITIALIZER** (p. 564)

**DDS\_DomainParticipant\_get\_default\_subscriber\_qos** (p. 89)

**DDS\_SubscriberQos\_finalize** (p. 570)

#### 4.20.4.6 DDS\_SubscriberQos\_finalize()

```
DDS_ReturnCode_t DDS_SubscriberQos_finalize (
    struct DDS_SubscriberQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS\_SubscriberQos** (p. 1746).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call `free()` on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.20.4.7 DDS\_SubscriberQos\_copy()

```
DDS_ReturnCode_t DDS_SubscriberQos_copy (
    struct DDS_SubscriberQos * self,
    const struct DDS_SubscriberQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_SubscriberQos** (p. 1746) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818) The <b>DDS_PublisherQos</b> (p. 1661) to copy from.

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.20.4.8 DDS\_Subscriber\_as\_entity()

```
DDS_Entity * DDS_Subscriber_as_entity (
    DDS_Subscriber * subscriber )
```

Access a **DDS\_Subscriber** (p. 565)'s supertype instance.

##### Parameters

<i>subscriber</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

##### Returns

The **DDS\_Entity** (p. 1160) that is supertype instance of the subscriber.

#### 4.20.4.9 DDS\_Subscriber\_get\_default\_datareader\_qos()

```
DDS_ReturnCode_t DDS_Subscriber_get_default_datareader_qos (
    DDS_Subscriber * self,
    struct DDS_DataReaderQos * qos )
```

Copies the default **DDS\_DataReaderQos** (p. 1390) values into the provided **DDS\_DataReaderQos** (p. 1390) instance.

The retrieved *qos* will match the set of values specified on the last successful call to **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573), or **DDS\_Subscriber\_set\_default\_datareader\_qos\_with\_profile** (p. 573), or else, if the call was never made, the default values from its owning **DDS\_DomainParticipant** (p. 72).

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

##### MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a subscriber while another thread may be simultaneously calling **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573)

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataReaderQos</b> (p. 1390) to be filled-up. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593)

**DDS\_Subscriber\_create\_datareader** (p. 574)

#### 4.20.4.10 DDS\_Subscriber\_set\_default\_datareader\_qos()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos (
    DDS_Subscriber * self,
    const struct DDS_DataReaderQos * qos )
```

Sets the default **DDS\_DataReaderQos** (p. 1390) values for this subscriber.

This call causes the default values inherited from the owning **DDS\_DomainParticipant** (p. 72) to be overridden.

This default value will be used for newly created **DDS\_DataReader** (p. 608) if **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) is specified as the `qos` parameter when **DDS\_Subscriber\_create\_datareader** (p. 574) is called.

##### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔ RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default QoS value from a subscriber while another thread may be simultaneously calling **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573), **DDS\_Subscriber\_get\_default\_datareader\_↔ qos** (p. 572) or calling **DDS\_Subscriber\_create\_datareader** (p. 574) with **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) as the `qos` parameter.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) The default <b>DDS_DataReaderQos</b> (p. 1390) to be set to. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDS_Subscriber_set_default_datareader_qos</b> (p. 573) had never been called. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), or or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

#### 4.20.4.11 DDS\_Subscriber\_set\_default\_datareader\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_datareader_qos_with_profile (
    DDS_Subscriber * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Set the default **DDS\_DataReaderQos** (p. 1390) values for this subscriber based on the input XML QoS profile.

This default value will be used for newly created **DDS\_DataReader** (p. 608) if **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) is specified as the `qos` parameter when **DDS\_Subscriber\_create\_datareader** (p. 574) is called.

##### Precondition

The **DDS\_DataReaderQos** (p. 1390) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDS\_Subscriber** (p. 565) while another thread may be simultaneously calling **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573), **DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572) or calling **DDS\_Subscriber\_create\_datareader** (p. 574) with **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) as the `qos` parameter.

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connexx will use the default library (see <b>DDS_Subscriber_set_default_library</b> (p. 588)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If <code>profile_name</code> is null RTI Connexx will use the default profile (see <b>DDS_Subscriber_set_default_profile</b> (p. 587)).

If the input profile cannot be found the function fails with **DDS\_RETCODE\_ERROR** (p. 1025).

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025)

##### See also

**DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593)

**DDS\_Subscriber\_create\_datareader\_with\_profile** (p. 576)

## 4.20.4.12 DDS\_Subscriber\_create\_datareader()

```

DDS_DataReader * DDS_Subscriber_create_datareader (
    DDS_Subscriber * self,
    DDS_TopicDescription * topic,
    const struct DDS_DataReaderQos * qos,
    const struct DDS_DataReaderListener * listener,
    DDS_StatusMask mask )

```

Creates a **DDS\_DataReader** (p. 608) that will be attached and belong to the **DDS\_Subscriber** (p. 565).

For each application-defined type **Foo** (p. 1841), there is an implied, auto-generated class **FooDataReader** (p. 1845) (an incarnation of **FooDataReader** (p. 1845)) that extends **DDS\_DataReader** (p. 608) and contains the operations to read data of type **Foo** (p. 1841).

Note that a common application pattern to construct the QoS for the **DDS\_DataReader** (p. 608) is to:

- Retrieve the QoS policies on the associated **DDS\_Topic** (p. 172) by means of the **DDS\_Topic\_get\_qos** (p. 195) operation.
- Retrieve the default **DDS\_DataReader** (p. 608) qos by means of the **DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572) operation.
- Combine those two QoS policies (for example, using **DDS\_Subscriber\_copy\_from\_topic\_qos** (p. 584)) and selectively modify policies as desired
- Use the resulting QoS policies to construct the **DDS\_DataReader** (p. 608).

When a **DDS\_DataReader** (p. 608) is created, only those transports already registered are available to the **DDS\_DataReader** (p. 608). See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

## MT Safety:

UNSAFE. If **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 593) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573).

## Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDS\_DataReader** (p. 608) will be created.

The given **DDS\_TopicDescription** (p. 171) must have been created from the same participant as this subscriber. If it was created from a different participant, this function will return NULL.

If `qos` is **DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS** (p. 594), `topic` cannot be **DDS\_MultiTopic** (p. 181), or else this function will return NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicDescription</b> (p. 171) that the <b>DDS_DataReader</b> (p. 608) will be associated with. Cannot be NULL.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 818) The qos of the <b>DDS_DataReader</b> (p. 608). The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) can be used to indicate that the <b>DDS_DataReader</b> (p. 608) should be created with the default <b>DDS_DataReaderQos</b> (p. 1390) set in the <b>DDS_Subscriber</b> (p. 565). If <b>DDS_TopicDescription</b> (p. 171) is of type <b>DDS_Topic</b> (p. 172) or <b>DDS_ContentFilteredTopic</b> (p. 173), the special value <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 594) can be used to indicate that the <b>DDS_DataReader</b> (p. 608) should be created with the combination of the default <b>DDS_DataReaderQos</b> (p. 1390) set on the <b>DDS_Subscriber</b> (p. 565) and the <b>DDS_TopicQos</b> (p. 1778) (in the case of a <b>DDS_ContentFilteredTopic</b> (p. 173), the <b>DDS_TopicQos</b> (p. 1778) of the related <b>DDS_Topic</b> (p. 172)). if <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 594) is used, <i>topic</i> cannot be a <b>DDS_MultiTopic</b> (p. 181). Cannot be NULL.
<i>listener</i>	<< <i>in</i> >> (p. 818) The listener of the <b>DDS_DataReader</b> (p. 608).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

## Returns

A **DDS\_DataReader** (p. 608) of a derived class specific to the data-type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

## See also

**FooDataReader** (p. 1845)  
**Specifying QoS on entities** (p. 1047) for information on setting QoS before entity creation  
**DDS\_DataReaderQos** (p. 1390) for rules on consistency among QoS  
**DDS\_Subscriber\_create\_datareader\_with\_profile** (p. 576)  
**DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572)  
**DDS\_Topic\_set\_qos** (p. 193)  
**DDS\_Subscriber\_copy\_from\_topic\_qos** (p. 584)  
**DDS\_DataReader\_set\_listener** (p. 682)

## Examples

**HelloWorld\_subscriber.c.**

## 4.20.4.13 DDS\_Subscriber\_create\_datareader\_with\_profile()

```
DDS_DataReader * DDS_Subscriber_create_datareader_with_profile (
    DDS_Subscriber * self,
    DDS_TopicDescription * topic,
    const char * library_name,
    const char * profile_name,
    const struct DDS_DataReaderListener * listener,
    DDS_StatusMask mask )
```

<<*extension*>> (p. 817) Creates a **DDS\_DataReader** (p. 608) object using the **DDS\_DataReaderQos** (p. 1390) associated with the input XML QoS profile.

The **DDS\_DataReader** (p. 608) will be attached and belong to the **DDS\_Subscriber** (p. 565).

For each application-defined type **Foo** (p. 1841), there is an implied, auto-generated class **FooDataReader** (p. 1845) (an incarnation of **FooDataReader** (p. 1845)) that extends **DDS\_DataReader** (p. 608) and contains the operations to read data of type **Foo** (p. 1841).

When a **DDS\_DataReader** (p. 608) is created, only those transports already registered are available to the **DDS\_DataReader** (p. 608). See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

#### Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDS\_DataReader** (p. 608) will be created.

The given **DDS\_TopicDescription** (p. 171) must have been created from the same participant as this subscriber. If it was created from a different participant, this function will return NULL.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicDescription</b> (p. 171) that the <b>DDS_DataReader</b> (p. 608) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connex will use the default library (see <b>DDS_Subscriber_set_default_library</b> (p. 588)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connex will use the default profile (see <b>DDS_Subscriber_set_default_profile</b> (p. 587)).
<i>listener</i>	<< <i>in</i> >> (p. 818) The listener of the <b>DDS_DataReader</b> (p. 608).
<i>mask</i>	<< <i>in</i> >> (p. 818). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 1030).

#### Returns

A **DDS\_DataReader** (p. 608) of a derived class specific to the data-type associated with the **DDS\_Topic** (p. 172) or NULL if an error occurred.

#### See also

**FooDataReader** (p. 1845)

**DDS\_Subscriber\_copy\_from\_topic\_qos** (p. 584)

**DDS\_DataReader\_set\_listener** (p. 682)

#### 4.20.4.14 DDS\_Subscriber\_delete\_datareader()

```
DDS_ReturnCode_t DDS_Subscriber_delete_datareader (
    DDS_Subscriber * self,
    DDS_DataReader * a_datareader )
```

Deletes a **DDS\_DataReader** (p. 608) that belongs to the **DDS\_Subscriber** (p. 565).

##### Precondition

If the **DDS\_DataReader** (p. 608) does not belong to the **DDS\_Subscriber** (p. 565), or if there are any existing **DDS\_ReadCondition** (p. 686) or **DDS\_QueryCondition** (p. 691) objects that are attached to the **DDS\_DataReader** (p. 608), or if there are outstanding loans on samples (as a result of a call to `read()`, `take()`, or one of the variants thereof), the operation fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### Postcondition

Listener installed on the **DDS\_DataReader** (p. 608) will not be called after this function completes successfully.

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>a_datareader</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataReader</b> (p. 608) to be deleted.

##### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

#### 4.20.4.15 DDS\_Subscriber\_delete\_contained\_entities()

```
DDS_ReturnCode_t DDS_Subscriber_delete_contained_entities (
    DDS_Subscriber * self )
```

Deletes all the entities that were created by means of the "create" operation on the **DDS\_Subscriber** (p. 565).

Deletes all contained **DDS\_DataReader** (p. 608) objects. This pattern is applied recursively. In this manner, the operation **DDS\_Subscriber\_delete\_contained\_entities** (p. 578) on the **DDS\_Subscriber** (p. 565) will end up deleting all the

entities recursively contained in the **DDS\_Subscriber** (p. 565), including the **DDS\_QueryCondition** (p. 691), **DDS\_↔ReadCondition** (p. 686), and **DDS\_TopicQuery** (p. 698) objects belonging to the contained **DDS\_DataReader** (p. 608).

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if any of the contained entities is in a state where it cannot be deleted. This will occur, for example, if a contained **DDS\_DataReader** (p. 608) cannot be deleted because the application has called a **FooDataReader\_read** (p. 618) or **FooDataReader\_take** (p. 619) operation and has not called the corresponding **FooDataReader\_return\_loan** (p. 639) operation to return the loaned samples.

Once **DDS\_Subscriber\_delete\_contained\_entities** (p. 578) completes successfully, the application may delete the **DDS\_Subscriber** (p. 565).

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

#### 4.20.4.16 DDS\_Subscriber\_lookup\_datareader()

```
DDS_DataReader * DDS_Subscriber_lookup_datareader (
    DDS_Subscriber * self,
    const char * topic_name )
```

Retrieves an existing **DDS\_DataReader** (p. 608).

Use this operation on the built-in **DDS\_Subscriber** (p. 565) (**Built-in Topics** (p. 162)) to access the built-in **DDS\_Data↔Reader** (p. 608) entities for the built-in topics.

The built-in **DDS\_DataReader** (p. 608) is created when this operation is called on a built-in topic for the first time. The built-in **DDS\_DataReader** (p. 608) is deleted automatically when the **DDS\_DomainParticipant** (p. 72) is deleted.

To ensure that builtin **DDS\_DataReader** (p. 608) entities receive all the discovery traffic, it is suggested that you lookup the builtin **DDS\_DataReader** (p. 608) before the **DDS\_DomainParticipant** (p. 72) is enabled. Looking up builtin **DDS\_↔DataReader** (p. 608) may implicitly register builtin transports due to creation of **DDS\_DataReader** (p. 608) (see **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered). Therefore, if you are want to modify builtin transport properties, do so *before* using this operation.

Therefore the suggested sequence when looking up builtin DataReaders is:

- Create a disabled **DDS\_DomainParticipant** (p. 72).
- (optional) Modify builtin transport properties
- Call **DDS\_DomainParticipant\_get\_builtin\_subscriber()** (p. 126).
- Call **DDS\_Subscriber\_lookup\_datareader()** (p. 579).
- Call `enable()` on the DomainParticipant.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>topic_name</i>	<< <i>in</i> >> (p. 818) Name of the <b>DDS_TopicDescription</b> (p. 171) that the retrieved <b>DDS_DataReader</b> (p. 608) is attached to. Cannot be NULL.

## Returns

A **DDS\_DataReader** (p. 608) that belongs to the **DDS\_Subscriber** (p. 565) attached to the **DDS\_TopicDescription** (p. 171) with *topic\_name*. If no such **DDS\_DataReader** (p. 608) exists, this operation returns NULL.

The returned **DDS\_DataReader** (p. 608) may be enabled or disabled.

If more than one **DDS\_DataReader** (p. 608) is attached to the **DDS\_Subscriber** (p. 565), this operation may return any one of them.

## MT Safety:

UNSAFE. It is not safe to lookup a **DDS\_DataReader** (p. 608) in one thread while another thread is simultaneously creating or destroying that **DDS\_DataReader** (p. 608).

## 4.20.4.17 DDS\_Subscriber\_begin\_access()

```
DDS_ReturnCode_t DDS_Subscriber_begin_access (
    DDS_Subscriber * self )
```

Indicates that the application is about to access the data samples in any of the **DDS\_DataReader** (p. 608) objects attached to the **DDS\_Subscriber** (p. 565).

If the **DDS\_PresentationQosPolicy::access\_scope** (p. 1638) of the **DDS\_Subscriber** (p. 565) is **DDS\_GROUP\_PRESENTATION\_QOS** (p. 1106) or **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p. 1106) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1638) is **DDS\_BOOLEAN\_TRUE** (p. 1004), the application is required to use this operation to access the samples in order across DataWriters of the same group (**DDS\_Publisher** (p. 436) with **DDS\_PresentationQosPolicy::access\_scope** (p. 1638) set to **DDS\_GROUP\_PRESENTATION\_QOS** (p. 1106)).

In the above case, this operation must be called prior to calling any of the sample-accessing operations, **DDS\_Subscriber\_get\_datareaders** (p. 581) on the **DDS\_Subscriber** (p. 565), and **FooDataReader\_read** (p. 618), **FooDataReader\_take** (p. 619), **FooDataReader\_read\_w\_condition** (p. 623), and **FooDataReader\_take\_w\_condition** (p. 625) on any **DDS\_DataReader** (p. 608).

Once the application has finished accessing the data samples, it must call **DDS\_Subscriber\_end\_access** (p. 581)

The application is not required to call **DDS\_Subscriber\_begin\_access** (p. 580) / **DDS\_Subscriber\_end\_access** (p. 581) to access the samples in order if the **PRESENTATION** (p. 1105) policy in the **DDS\_Publisher** (p. 436) has **DDS\_PresentationQosPolicy::access\_scope** (p. 1638) set to something other than **DDS\_GROUP\_PRESENTATION\_QOS** (p. 1106). In this case, calling **DDS\_Subscriber\_begin\_access** (p. 580) / **DDS\_Subscriber\_end\_access** (p. 581) is not considered an error and has no effect.

Calls to **DDS\_Subscriber\_begin\_access** (p. 580) / **DDS\_Subscriber\_end\_access** (p. 581) may be nested and must be balanced.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**Access to data samples** (p. 560)

**DDS\_Subscriber\_get\_datareaders** (p. 581)

**PRESENTATION** (p. 1105)

## 4.20.4.18 DDS\_Subscriber\_end\_access()

```
DDS_ReturnCode_t DDS_Subscriber_end_access (
    DDS_Subscriber * self )
```

Indicates that the application has finished accessing the data samples in **DDS\_DataReader** (p. 608) objects managed by the **DDS\_Subscriber** (p. 565).

This operation must be used to close a corresponding `begin_access()`.

This call must close a previous call to **DDS\_Subscriber\_begin\_access()** (p. 580), otherwise the operation will fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## 4.20.4.19 DDS\_Subscriber\_get\_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_get_datareaders (
    DDS_Subscriber * self,
```

```

struct DDS_DataReaderSeq * readers,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )

```

Allows the application to access the **DDS\_DataReader** (p.608) objects that contain samples with the specified `sample_states`, `view_states` and `instance_states`.

If the application is outside a `begin_access()/end_access()` block, or if the **DDS\_PresentationQosPolicy::access\_scope** (p.1638) of the **DDS\_Subscriber** (p.565) is **DDS\_INSTANCE\_PRESENTATION\_QOS** (p.1106) or **DDS\_TOPIC\_PRESENTATION\_QOS** (p.1106), or if the **DDS\_PresentationQosPolicy::ordered\_access** (p.1638) of the **DDS\_Subscriber** (p.565) is **DDS\_BOOLEAN\_FALSE** (p.1004), the returned collection is a 'set' containing each **DDS\_DataReader** (p.608) at most once, in no specified order.

If the application is within a `begin_access()/end_access()` block, and the **PRESENTATION** (p.1105) policy of the **DDS\_Subscriber** (p.565) is **DDS\_GROUP\_PRESENTATION\_QOS** (p.1106) or **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p.1106), and **DDS\_PresentationQosPolicy::ordered\_access** (p.1638) in the **DDS\_Subscriber** (p.565) is **DDS\_BOOLEAN\_TRUE** (p.1004), the returned collection is a 'list' of DataReaders where a DataReader may appear more than one time.

To retrieve the samples in the order they were published across DataWriters of the same group (**DDS\_Publisher** (p.436) configured with **DDS\_GROUP\_PRESENTATION\_QOS** (p.1106)), the application should `read()/take()` from each DataReader in the same order as it appears in the output sequence. The application will move to the next DataReader when the `read()/take()` operation fails with **DDS\_RETCODE\_NO\_DATA** (p.1025).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p.818) Cannot be NULL.
<i>readers</i>	<< <i>inout</i> >> (p.818) a <b>DDS_DataReaderSeq</b> (p.1411) object where the set or list of readers will be returned. Cannot be NULL.
<i>sample_states</i>	<< <i>in</i> >> (p.818) the returned DataReader must contain samples that have one of these <code>sample_states</code> .
<i>view_states</i>	<< <i>in</i> >> (p.818) the returned DataReader must contain samples that have one of these <code>view_states</code> .
<i>instance_states</i>	<< <i>in</i> >> (p.818) the returned DataReader must contain samples that have one of these <code>instance_states</code> .

#### Returns

One of the **Standard Return Codes** (p.1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p.1025).

#### See also

**Access to data samples** (p.560)  
**DDS\_Subscriber\_begin\_access** (p.580)  
**DDS\_Subscriber\_end\_access** (p.581)  
**PRESENTATION** (p.1105)

#### 4.20.4.20 DDS\_Subscriber\_get\_all\_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_get_all_datareaders (
    DDS_Subscriber * self,
    struct DDS_DataReaderSeq * readers )
```

Retrieve all the DataReaders created from this Subscriber.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>readers</i>	<< <i>inout</i> >> (p. 818) Sequence where the DataReaders will be added

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.20.4.21 DDS\_Subscriber\_notify\_datareaders()

```
DDS_ReturnCode_t DDS_Subscriber_notify_datareaders (
    DDS_Subscriber * self )
```

Invokes the operation **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) on the **DDS\_DataReaderListener** (p. 1372) objects attached to contained **DDS\_DataReader** (p. 608) entities with **DDS\_DATA\_AVAILABLE\_STATUS** (p. 1033) that is considered changed as described in **Changes in read communication status** (p. 1028).

This operation is typically invoked from the **DDS\_SubscriberListener::on\_data\_on\_readers** (p. 1745) operation in the **DDS\_SubscriberListener** (p. 1744). That way the **DDS\_SubscriberListener** (p. 1744) can delegate to the **DDS\_↔DataReaderListener** (p. 1372) objects the handling of the data.

The operation will notify the data readers that have a *sample\_state* of **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 702), *view\_state* of **DDS\_ANY\_SAMPLE\_STATE** (p. 703) and *instance\_state* of **DDS\_ANY\_INSTANCE\_STATE** (p. 707).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### 4.20.4.22 DDS\_Subscriber\_get\_participant()

```
DDS_DomainParticipant * DDS_Subscriber_get_participant (
    DDS_Subscriber * self )
```

Returns the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Subscriber** (p. 565) belongs.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

the **DDS\_DomainParticipant** (p. 72) to which the **DDS\_Subscriber** (p. 565) belongs.

#### 4.20.4.23 DDS\_Subscriber\_copy\_from\_topic\_qos()

```
DDS_ReturnCode_t DDS_Subscriber_copy_from_topic_qos (
    DDS_Subscriber * self,
    struct DDS_DataReaderQos * datareader_qos,
    const struct DDS_TopicQos * topic_qos )
```

Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataReaderQos** (p. 1390).

Copies the policies in the **DDS\_TopicQos** (p. 1778) to the corresponding policies in the **DDS\_DataReaderQos** (p. 1390) (replacing values in the **DDS\_DataReaderQos** (p. 1390), if present).

This is a "convenience" operation most useful in combination with the operations **DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572) and **DDS\_Topic\_get\_qos** (p. 195). The operation **DDS\_Subscriber\_copy\_from\_topic\_qos** (p. 584) can be used to merge the **DDS\_DataReader** (p. 608) default QoS policies with the corresponding ones on the **DDS\_Topic** (p. 172). The resulting QoS can then be used to create a new **DDS\_DataReader** (p. 608), or set its QoS.

This operation does not check the resulting **DDS\_DataReaderQos** (p. 1390) for consistency. This is because the 'merged' **DDS\_DataReaderQos** (p. 1390) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDS\_DataReader** (p. 608).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>datareader_qos</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataReaderQos</b> (p. 1390) to be filled-up. Cannot be NULL.
<i>topic_qos</i>	<< <i>in</i> >> (p. 818) <b>DDS_TopicQos</b> (p. 1778) to be merged with <b>DDS_DataReaderQos</b> (p. 1390). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.20.4.24 DDS\_Subscriber\_set\_qos()

```
DDS_ReturnCode_t DDS_Subscriber_set_qos (
    DDS_Subscriber * self,
    const struct DDS_SubscriberQos * qos )
```

Sets the subscriber QoS.

This operation modifies the QoS of the **DDS\_Subscriber** (p. 565).

The **DDS\_SubscriberQos::group\_data** (p. 1747), **DDS\_SubscriberQos::partition** (p. 1747) and **DDS\_SubscriberQos::entity\_factory** (p. 1747) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) <b>DDS_SubscriberQos</b> (p. 1746) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDS_Subscriber</b> (p. 565) is enabled. The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 159) can be used to indicate that the QoS of the <b>DDS_Subscriber</b> (p. 565) should be changed to match the current default <b>DDS_SubscriberQos</b> (p. 1746) set in the <b>DDS_DomainParticipant</b> (p. 72). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

## See also

**DDS\_SubscriberQos** (p. 1746) for rules on consistency among QoS

**set\_qos (abstract)** (p. 1161)

**Operations Allowed in Listener Callbacks** (p. 1571)

## 4.20.4.25 DDS\_Subscriber\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_qos_with_profile (
    DDS_Subscriber * self,
```

```
const char * library_name,
const char * profile_name )
```

<<**extension**>> (p. 817) Change the QoS of this subscriber using the input XML QoS profile.

This operation modifies the QoS of the **DDS\_Subscriber** (p. 565).

The **DDS\_SubscriberQos::group\_data** (p. 1747), **DDS\_SubscriberQos::partition** (p. 1747) and **DDS\_SubscriberQos::entity\_factory** (p. 1747) can be changed. The other policies are immutable.

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDS_Subscriber_set_default_library</b> (p. 588)).
<i>profile_name</i>	<< <b>in</b> >> (p. 818) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDS_Subscriber_set_default_profile</b> (p. 587)).

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

#### See also

**DDS\_SubscriberQos** (p. 1746) for rules on consistency among QoS  
**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.20.4.26 DDS\_Subscriber\_get\_qos()

```
DDS_ReturnCode_t DDS_Subscriber_get_qos (
    DDS_Subscriber * self,
    struct DDS_SubscriberQos * qos )
```

Gets the subscriber QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <b>in</b> >> (p. 818) <b>DDS_SubscriberQos</b> (p. 1746) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**get\_qos (abstract)** (p. 1161)

## 4.20.4.27 DDS\_Subscriber\_set\_default\_profile()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_profile (
    DDS_Subscriber * self,
    const char * library_name,
    const char * profile_name )
```

<<**extension**>> (p. 817) Sets the default XML profile for a **DDS\_Subscriber** (p. 565).

This function specifies the profile that will be used as the default the next time a default Subscriber profile is needed during a call to one of this Subscriber's operations. When calling a **DDS\_Subscriber** (p. 565) function that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDS\_Subscriber** (p. 565) inherits the default from the **DDS\_DomainParticipant** (p. 72) (see **DDS\_DomainParticipant\_set\_default\_profile** (p. 99)).

This function does not set the default QoS for **DDS\_DataReader** (p. 608) objects created by this **DDS\_Subscriber** (p. 565); for this functionality, use **DDS\_Subscriber\_set\_default\_datareader\_qos\_with\_profile** (p. 573) (you may pass in NULL after having called `set_default_profile()`).

This function does not set the default QoS for newly created Subscribers; for this functionality, use **DDS\_DomainParticipant\_set\_default\_subscriber\_qos\_with\_profile** (p. 92).

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 818) The profile name. If <code>profile_name</code> is null any previous default is unset.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_Subscriber\_get\_default\_profile** (p. 587)

**DDS\_Subscriber\_get\_default\_profile\_library** (p. 588)

#### 4.20.4.28 DDS\_Subscriber\_get\_default\_profile()

```
const char * DDS_Subscriber_get_default_profile (
    DDS_Subscriber * self )
```

<<*extension*>> (p. 817) Gets the default XML profile associated with a **DDS\_Subscriber** (p. 565).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The default profile or null if the default profile was not set.

##### See also

**DDS\_Subscriber\_set\_default\_profile** (p. 587)

#### 4.20.4.29 DDS\_Subscriber\_get\_default\_profile\_library()

```
const char * DDS_Subscriber_get_default_profile_library (
    DDS_Subscriber * self )
```

<<*extension*>> (p. 817) Gets the library where the default XML QoS profile is contained for a **DDS\_Subscriber** (p. 565).

The default profile library is automatically set when **DDS\_Subscriber\_set\_default\_profile** (p. 587) is called.

This library can be different than the **DDS\_Subscriber** (p. 565) default library (see **DDS\_Subscriber\_get\_default\_library** (p. 589)).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The default profile library or null if the default profile was not set.

##### See also

**DDS\_Subscriber\_set\_default\_profile** (p. 587)

#### 4.20.4.30 DDS\_Subscriber\_set\_default\_library()

```
DDS_ReturnCode_t DDS_Subscriber_set_default_library (
    DDS_Subscriber * self,
    const char * library_name )
```

<<**extension**>> (p. 817) Sets the default XML library for a **DDS\_Subscriber** (p. 565).

This function specifies the library that will be used as the default the next time a default library is needed during a call to one of this Subscriber's operations.

Any API requiring a library\_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDS\_Subscriber** (p. 565) inherits the default from the **DDS\_DomainParticipant** (p. 72) (see **DDS\_DomainParticipant\_set\_default\_library** (p. 98)).

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 818) Library name. If library_name is null any previous default is unset.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_Subscriber\_get\_default\_library** (p. 589)

#### 4.20.4.31 DDS\_Subscriber\_get\_default\_library()

```
const char * DDS_Subscriber_get_default_library (
    DDS_Subscriber * self )
```

<<**extension**>> (p. 817) Gets the default XML library associated with a **DDS\_Subscriber** (p. 565).

##### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### Returns

The default library or null if the default library was not set.

See also

**DDS\_Subscriber\_set\_default\_library** (p. 588)

#### 4.20.4.32 DDS\_Subscriber\_set\_listener()

```
DDS_ReturnCode_t DDS_Subscriber_set_listener (
    DDS_Subscriber * self,
    const struct DDS_SubscriberListener * l,
    DDS_StatusMask mask )
```

Sets the subscriber listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) <b>DDS_SubscriberListener</b> (p. 1744) to set to.
<i>mask</i>	<< <i>in</i> >> (p. 818) <b>DDS_StatusMask</b> (p. 1030) associated with the <b>DDS_SubscriberListener</b> (p. 1744). The callback function on the listener cannot be NULL if the corresponding status is turned on in the <i>mask</i> .

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**set\_listener (abstract)** (p. 1162)

#### 4.20.4.33 DDS\_Subscriber\_get\_listener()

```
struct DDS_SubscriberListener DDS_Subscriber_get_listener (
    DDS_Subscriber * self )
```

Get the subscriber listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_SubscriberListener** (p. 1744) of the **DDS\_Subscriber** (p. 565).

## See also

**DDS\_Subscriber\_get\_listenerX** (p. 591)

**get\_listener (abstract)** (p. 1162)

## 4.20.4.34 DDS\_Subscriber\_get\_listenerX()

```
DDS_ReturnCode_t DDS_Subscriber_get_listenerX (
    DDS_Subscriber * self,
    struct DDS_SubscriberListener * listener )
```

<<*extension*>> (p. 817) Get the subscriber listener.

An alternative form of `get_listener` that fills in an existing listener structure rather than returning one on the stack.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <i>inout</i> >> (p. 818) <b>DDS_SubscriberListener</b> (p. 1744) structure to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_Subscriber\_get\_listener** (p. 590)

**get\_listener (abstract)** (p. 1162)

## 4.20.4.35 DDS\_Subscriber\_lookup\_datareader\_by\_name()

```
DDS_DataReader * DDS_Subscriber_lookup_datareader_by_name (
    DDS_Subscriber * self,
    const char * datareader_name )
```

<<*extension*>> (p. 817) Retrieves a **DDS\_DataReader** (p. 608) contained within the **DDS\_Subscriber** (p. 565) the **DDS\_DataReader** (p. 608) entity name.

Every **DDS\_DataReader** (p.608) in the system has an entity name which is configured and stored in the <<*extension*>> (p. 817) EntityName policy, **ENTITY\_NAME** (p. 1091).

This operation retrieves the **DDS\_DataReader** (p. 608) within the **DDS\_Subscriber** (p. 565) whose name matches the one specified. If there are several **DDS\_DataReader** (p. 608) with the same name within the **DDS\_Subscriber** (p. 565), the operation returns the first matching occurrence.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>datareader_name</i>	<< <i>in</i> >> (p. 818) Entity name of the <b>DDS_DataReader</b> (p. 608).

## Returns

The first **DDS\_DataReader** (p. 608) found with the specified name or NULL if it is not found.

## See also

**DDS\_DomainParticipant\_lookup\_datareader\_by\_name** (p. 156)

## 4.20.5 Variable Documentation

### 4.20.5.1 DDS\_DATAREADER\_QOS\_PRINT\_ALL

```
const struct DDS_DataReaderQos* DDS_DATAREADER_QOS_PRINT_ALL [extern]
```

Special value which can be supplied to **DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661) indicating that all of the QoS should be printed.

The **DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **DDS\_↔DATAREADER\_QOS\_PRINT\_ALL** (p. 593) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **DDS\_↔DATAREADER\_QOS\_PRINT\_ALL** (p. 593) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the `print_private` field within the **DDS\_QosPrint↔Format** (p. 1668) structure.

This value should only be used as the base parameter to the **DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661) API.

### 4.20.5.2 DDS\_DATAREADER\_QOS\_DEFAULT

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT [extern]
```

Special value for creating data reader with default QoS.

When used in **DDS\_Subscriber\_create\_datareader** (p. 574), this special value is used to indicate that the **DDS\_↔DataReader** (p. 608) should be created with the default **DDS\_DataReader** (p. 608) QoS by means of the operation `get_default_datareader_qos` and using the resulting QoS to create the **DDS\_DataReader** (p. 608).

When used in **DDS\_Subscriber\_set\_default\_datareader\_qos** (p. 573), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDS\_Subscriber\_set\_default↔\_datareader\_qos** (p. 573) operation had never been called.

When used in **DDS\_DataReader\_set\_qos** (p. 679), this special value is used to indicate that the QoS of the **DDS\_↔DataReader** (p. 608) should be changed to match the current default QoS set in the **DDS\_Subscriber** (p. 565) that the **DDS\_DataReader** (p. 608) belongs to.

### Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a `DataReader`; for this purpose, use `DDS_DomainParticipant_get_default_datareader_qos` (p. 93).

### See also

`DDS_Subscriber_create_datareader` (p. 574)

`DDS_DataReader_set_qos` (p. 679)

### Examples

`HelloWorld_subscriber.c`.

#### 4.20.5.3 DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating `DDS_DataReader` (p. 608) with a combination of the default `DDS_DataReaderQos` (p. 1390) and the `DDS_TopicQos` (p. 1778).

The use of this value is equivalent to the application obtaining the default `DDS_DataReaderQos` (p. 1390) and the `DDS_TopicQos` (p. 1778) (by means of the operation `DDS_Topic_get_qos` (p. 195)) and then combining these two QoS using the operation `DDS_Subscriber_copy_from_topic_qos` (p. 584) whereby any policy that is set on the `DDS_↔TopicQos` (p. 1778) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the `DDS_DataReader` (p. 608).

This value should only be used in `DDS_Subscriber_create_datareader` (p. 574).

## Functions

- **FooDataReader \* FooDataReader\_narrow** ( **DDS\_DataReader** \*reader)  
*Narrow the given **DDS\_DataReader** (p. 608) pointer to a **FooDataReader** (p. 1845) pointer.*
- **DDS\_DataReader \* FooDataReader\_as\_datareader** ( **FooDataReader** \*reader)  
*Widen the given **FooDataReader** (p. 1845) pointer to a **DDS\_DataReader** (p. 608) pointer.*
- **DDS\_ReturnCode\_t FooDataReader\_read** ( **FooDataReader** \*self, struct **FooSeq** \*received\_data, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_samples, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)  
*Access a collection of data samples from the **DDS\_DataReader** (p. 608).*
- **DDS\_ReturnCode\_t FooDataReader\_take** ( **FooDataReader** \*self, struct **FooSeq** \*received\_data, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_samples, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)  
*Access a collection of data-samples from the **DDS\_DataReader** (p. 608).*
- **DDS\_ReturnCode\_t FooDataReader\_read\_w\_condition** ( **FooDataReader** \*self, struct **FooSeq** \*received\_data, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_samples, **DDS\_ReadCondition** \*condition)  
*Accesses via **FooDataReader\_read** (p. 618) the samples that match the criteria specified in the **DDS\_ReadCondition** (p. 686).*
- **DDS\_ReturnCode\_t FooDataReader\_take\_w\_condition** ( **FooDataReader** \*self, **FooSeq** \*received\_data, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_samples, **DDS\_ReadCondition** \*condition)

Analogous to `FooDataReader_read_w_condition` (p. 623) except it accesses samples via the `FooDataReader_take` (p. 619) operation.

- **DDS\_ReturnCode\_t** `FooDataReader_read_next_sample` ( `FooDataReader *self`, struct `Foo *received_data`, struct `DDS_SampleInfo *sample_info`)
 

*Copies the next not-previously-accessed data value from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_take_next_sample` ( `FooDataReader *self`, struct `Foo *received_data`, struct `DDS_SampleInfo *sample_info`)
 

*Copies the next not-previously-accessed data value from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_read_instance` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *a_handle`, `DDS_SampleStateMask` `sample_states`, `DDS_ViewStateMask` `view_states`, `DDS_InstanceStateMask` `instance_states`)
 

*Access a collection of data samples from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_take_instance` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *a_handle`, `DDS_SampleStateMask` `sample_states`, `DDS_ViewStateMask` `view_states`, `DDS_InstanceStateMask` `instance_states`)
 

*Access a collection of data samples from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_read_instance_w_condition` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *a_handle`, `DDS_ReadCondition` `*condition`)
 

*<<extension>> (p. 817) Accesses via `FooDataReader_read_instance` (p. 628) the samples that match the criteria specified in the `DDS_ReadCondition` (p. 686).*
- **DDS\_ReturnCode\_t** `FooDataReader_take_instance_w_condition` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *a_handle`, `DDS_ReadCondition` `*condition`)
 

*<<extension>> (p. 817) Accesses via `FooDataReader_take_instance` (p. 629) the samples that match the criteria specified in the `DDS_ReadCondition` (p. 686).*
- **DDS\_ReturnCode\_t** `FooDataReader_read_next_instance` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *previous_handle`, `DDS_SampleStateMask` `sample_states`, `DDS_ViewStateMask` `view_states`, `DDS_InstanceStateMask` `instance_states`)
 

*Access a collection of data samples from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_take_next_instance` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *previous_handle`, `DDS_SampleStateMask` `sample_states`, `DDS_ViewStateMask` `view_states`, `DDS_InstanceStateMask` `instance_states`)
 

*Access a collection of data samples from the `DDS_DataReader` (p. 608).*
- **DDS\_ReturnCode\_t** `FooDataReader_read_next_instance_w_condition` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *previous_handle`, `DDS_ReadCondition` `*condition`)
 

*Accesses via `FooDataReader_read_next_instance` (p. 633) the samples that match the criteria specified in the `DDS_ReadCondition` (p. 686).*
- **DDS\_ReturnCode\_t** `FooDataReader_take_next_instance_w_condition` ( `FooDataReader *self`, struct `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`, `DDS_Long` `max_samples`, const `DDS_InstanceHandle_t *previous_handle`, `DDS_ReadCondition` `*condition`)
 

*Accesses via `FooDataReader_take_next_instance` (p. 635) the samples that match the criteria specified in the `DDS_ReadCondition` (p. 686).*
- **DDS\_ReturnCode\_t** `FooDataReader_return_loan` ( `FooDataReader *self`, `FooSeq *received_data`, struct `DDS_SampleInfoSeq *info_seq`)
 

*Indicates to the `DDS_DataReader` (p. 608) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the `DDS_DataReader` (p. 608).*

- **DDS\_ReturnCode\_t FooDataReader\_get\_key\_value** ( FooDataReader \*self, Foo \*key\_holder, const DDS\_InstanceHandle\_t \*handle)
 

*Retrieve the instance key that corresponds to an instance handle.*
- **DDS\_InstanceHandle\_t FooDataReader\_lookup\_instance** ( FooDataReader \*self, const Foo \*key\_holder)
 

*Retrieves the instance handle that corresponds to an instance key\_holder.*
- **DDS\_ReturnCode\_t FooDataReader\_is\_data\_consistent** ( FooDataReader \*self, DDS\_Boolean \*is\_data\_consistent, const Foo \*sample, const struct DDS\_SampleInfo \*sample\_info)
 

*When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the DataWriter.*
- **DDS\_ReturnCode\_t DDS\_RequestedDeadlineMissedStatus\_initialize** (struct DDS\_RequestedDeadlineMissedStatus \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_RequestedDeadlineMissedStatus\_copy** (struct DDS\_RequestedDeadlineMissedStatus \*self, const struct DDS\_RequestedDeadlineMissedStatus \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_RequestedDeadlineMissedStatus\_finalize** (struct DDS\_RequestedDeadlineMissedStatus \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_RequestedDeadlineMissedStatus\_equals** (const struct DDS\_RequestedDeadlineMissedStatus \*left, const struct DDS\_RequestedDeadlineMissedStatus \*right)
 

*Compares two DDS\_RequestedDeadlineMissedStatus (p. 1688) for equality.*
- **DDS\_ReturnCode\_t DDS\_LivelinessChangedStatus\_initialize** (struct DDS\_LivelinessChangedStatus \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_LivelinessChangedStatus\_copy** (struct DDS\_LivelinessChangedStatus \*self, const struct DDS\_LivelinessChangedStatus \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_LivelinessChangedStatus\_finalize** (struct DDS\_LivelinessChangedStatus \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_LivelinessChangedStatus\_equals** (const struct DDS\_LivelinessChangedStatus \*left, const struct DDS\_LivelinessChangedStatus \*right)
 

*Compares two DDS\_LivelinessChangedStatus (p. 1572) for equality.*
- **DDS\_ReturnCode\_t DDS\_RequestedIncompatibleQosStatus\_initialize** (struct DDS\_RequestedIncompatibleQosStatus \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_RequestedIncompatibleQosStatus\_copy** (struct DDS\_RequestedIncompatibleQosStatus \*self, const struct DDS\_RequestedIncompatibleQosStatus \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_RequestedIncompatibleQosStatus\_finalize** (struct DDS\_RequestedIncompatibleQosStatus \*self)
 

*Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_RequestedIncompatibleQosStatus\_equals** (const struct DDS\_RequestedIncompatibleQosStatus \*left, const struct DDS\_RequestedIncompatibleQosStatus \*right)
 

*Compares two DDS\_RequestedIncompatibleQosStatus (p. 1689) for equality.*
- **DDS\_ReturnCode\_t DDS\_SampleLostStatus\_initialize** (struct DDS\_SampleLostStatus \*self)
 

*Initializer for new status instances.*
- **DDS\_ReturnCode\_t DDS\_SampleLostStatus\_copy** (struct DDS\_SampleLostStatus \*self, const struct DDS\_SampleLostStatus \*source)
 

*Copy the contents of the given status into this status.*
- **DDS\_ReturnCode\_t DDS\_SampleLostStatus\_finalize** (struct DDS\_SampleLostStatus \*self)

- Free any dynamic memory allocated by status instances.*
- **DDS\_Boolean DDS\_SampleLostStatus\_equals** (const struct **DDS\_SampleLostStatus** \*left, const struct **DDS\_SampleLostStatus** \*right)  
*Compares two **DDS\_SampleLostStatus** (p. 1732) for equality.*
  - **DDS\_ReturnCode\_t DDS\_SampleRejectedStatus\_initialize** (struct **DDS\_SampleRejectedStatus** \*self)  
*Initializer for new status instances.*
  - **DDS\_ReturnCode\_t DDS\_SampleRejectedStatus\_copy** (struct **DDS\_SampleRejectedStatus** \*self, const struct **DDS\_SampleRejectedStatus** \*source)  
*Copy the contents of the given status into this status.*
  - **DDS\_ReturnCode\_t DDS\_SampleRejectedStatus\_finalize** (struct **DDS\_SampleRejectedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
  - **DDS\_Boolean DDS\_SampleRejectedStatus\_equals** (const struct **DDS\_SampleRejectedStatus** \*left, const struct **DDS\_SampleRejectedStatus** \*right)  
*Compares two **DDS\_SampleRejectedStatus** (p. 1733) for equality.*
  - **DDS\_ReturnCode\_t DDS\_SubscriptionMatchedStatus\_initialize** (struct **DDS\_SubscriptionMatchedStatus** \*self)  
*Initializer for new status instances.*
  - **DDS\_ReturnCode\_t DDS\_SubscriptionMatchedStatus\_copy** (struct **DDS\_SubscriptionMatchedStatus** \*self, const struct **DDS\_SubscriptionMatchedStatus** \*source)  
*Copy the contents of the given status into this status.*
  - **DDS\_ReturnCode\_t DDS\_SubscriptionMatchedStatus\_finalize** (struct **DDS\_SubscriptionMatchedStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
  - **DDS\_Boolean DDS\_SubscriptionMatchedStatus\_equals** (const struct **DDS\_SubscriptionMatchedStatus** \*left, const struct **DDS\_SubscriptionMatchedStatus** \*right)  
*Compares two **DDS\_SubscriptionMatchedStatus** (p. 1758) for equality.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderCacheStatus\_initialize** (struct **DDS\_DataReaderCacheStatus** \*self)  
*Initializer for new status instances.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderCacheStatus\_copy** (struct **DDS\_DataReaderCacheStatus** \*self, const struct **DDS\_DataReaderCacheStatus** \*source)  
*Copy the contents of the given status into this status.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderCacheStatus\_finalize** (struct **DDS\_DataReaderCacheStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
  - **DDS\_Boolean DDS\_DataReaderCacheStatus\_equals** (const struct **DDS\_DataReaderCacheStatus** \*left, const struct **DDS\_DataReaderCacheStatus** \*right)  
*Compares two **DDS\_DataReaderCacheStatus** (p. 1365) for equality.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderProtocolStatus\_initialize** (struct **DDS\_DataReaderProtocolStatus** \*self)  
*Initializer for new status instances.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderProtocolStatus\_copy** (struct **DDS\_DataReaderProtocolStatus** \*self, const struct **DDS\_DataReaderProtocolStatus** \*source)  
*Copy the contents of the given status into this status.*
  - **DDS\_ReturnCode\_t DDS\_DataReaderProtocolStatus\_finalize** (struct **DDS\_DataReaderProtocolStatus** \*self)  
*Free any dynamic memory allocated by status instances.*
  - **DDS\_Boolean DDS\_DataReaderProtocolStatus\_equals** (const struct **DDS\_DataReaderProtocolStatus** \*left, const struct **DDS\_DataReaderProtocolStatus** \*right)  
*Compares two **DDS\_DataReaderProtocolStatus** (p. 1379) for equality.*

- **DDS\_Boolean DDS\_DataReaderQos\_equals** (const struct **DDS\_DataReaderQos** \*self, const struct **DDS\_DataReaderQos** \*other)  
*Compares two **DDS\_DataReaderQos** (p. 1390) for equality.*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_print** (const struct **DDS\_DataReaderQos** \*self)  
*Prints this **DDS\_DataReaderQos** (p. 1390) to stdout.*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_to\_string** (const struct **DDS\_DataReaderQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size)  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 1390).*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_to\_string\_w\_params** (const struct **DDS\_DataReaderQos** \*self, char \*string, **DDS\_UnsignedLong** \*string\_size, const struct **DDS\_DataReaderQos** \*base, const struct **DDS\_QosPrintFormat** \*format)  
*Obtains a string representation of this **DDS\_DataReaderQos** (p. 1390).*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_initialize** (struct **DDS\_DataReaderQos** \*self)  
*Initializer for new QoS instances.*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_copy** (struct **DDS\_DataReaderQos** \*self, const struct **DDS\_DataReaderQos** \*source)  
*Copy the contents of the given QoS into this QoS.*
- **DDS\_ReturnCode\_t DDS\_DataReaderQos\_finalize** (struct **DDS\_DataReaderQos** \*self)  
*Free any dynamic memory allocated by the policies in this **DDS\_DataReaderQos** (p. 1390).*
- **DDS\_Entity \* DDS\_DataReader\_as\_entity** (**DDS\_DataReader** \*dataReader)  
*Accesses the **DDS\_DataReader** (p. 608)'s supertype instance.*
- **DDS\_ReadCondition \* DDS\_DataReader\_create\_readcondition** (**DDS\_DataReader** \*self, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)  
*Creates a **DDS\_ReadCondition** (p. 686).*
- **DDS\_ReadCondition \* DDS\_DataReader\_create\_readcondition\_w\_params** (**DDS\_DataReader** \*self, const struct **DDS\_ReadConditionParams** \*params)  
*<<extension>> (p. 817) Creates a **DDS\_ReadCondition** (p. 686) with parameters.*
- **DDS\_QueryCondition \* DDS\_DataReader\_create\_querycondition** (**DDS\_DataReader** \*self, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states, const char \*query\_expression, const struct **DDS\_StringSeq** \*query\_parameters)  
*Creates a **DDS\_QueryCondition** (p. 691).*
- **DDS\_QueryCondition \* DDS\_DataReader\_create\_querycondition\_w\_params** (**DDS\_DataReader** \*self, const struct **DDS\_QueryConditionParams** \*params)  
*<<extension>> (p. 817) Creates a **DDS\_QueryCondition** (p. 691) with parameters.*
- **DDS\_ReturnCode\_t DDS\_DataReader\_delete\_readcondition** (**DDS\_DataReader** \*self, **DDS\_ReadCondition** \*condition)  
*Deletes a **DDS\_ReadCondition** (p. 686) or **DDS\_QueryCondition** (p. 691) attached to the **DDS\_DataReader** (p. 608).*
- **DDS\_ReturnCode\_t DDS\_DataReader\_delete\_contained\_entities** (**DDS\_DataReader** \*self)  
*Deletes all the entities that were created by means of the "create" operations on the **DDS\_DataReader** (p. 608).*
- **DDS\_ReturnCode\_t DDS\_DataReader\_wait\_for\_historical\_data** (**DDS\_DataReader** \*self, const struct **DDS\_Duration\_t** \*max\_wait)  
*Waits until all "historical" data is received for **DDS\_DataReader** (p. 608) entities that have a non-VOLATILE Durability Qos kind.*
- **DDS\_ReturnCode\_t DDS\_DataReader\_acknowledge\_sample\_w\_response** (**DDS\_DataReader** \*self, const struct **DDS\_SampleInfo** \*sample\_info, const struct **DDS\_AckResponseData\_t** \*response\_data)  
*<<extension>> (p. 817) Acknowledges a single sample explicitly.*
- **DDS\_ReturnCode\_t DDS\_DataReader\_acknowledge\_all\_w\_response** (**DDS\_DataReader** \*self, const struct **DDS\_AckResponseData\_t** \*response\_data)  
*<<extension>> (p. 817) Acknowledges all previously accessed samples.*

- **DDS\_ReturnCode\_t DDS\_DataReader\_acknowledge\_sample** ( DDS\_DataReader \*self, const struct DDS\_↔\_SampleInfo \*sample\_info)
  - <<extension>> (p. 817) Acknowledges a single sample explicitly.
- **DDS\_ReturnCode\_t DDS\_DataReader\_acknowledge\_all** ( DDS\_DataReader \*self)
  - <<extension>> (p. 817) Acknowledges all previously accessed samples.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_matched\_publications** ( DDS\_DataReader \*self, struct DDS\_↔\_InstanceHandleSeq \*publication\_handles)
  - Retrieves the list of publications currently "associated" with this **DDS\_DataReader** (p. 608).
- **DDS\_ReturnCode\_t DDS\_DataReader\_is\_matched\_publication\_alive** ( DDS\_DataReader \*self, DDS\_↔\_Boolean \*is\_alive, const DDS\_InstanceHandle\_t \*publication\_handle)
  - Check if a publication currently matched with a **DataReader** is alive.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_matched\_publication\_data** ( DDS\_DataReader \*self, struct DDS\_PublicationBuiltinTopicData \*publication\_data, const DDS\_InstanceHandle\_t \*publication\_handle)
  - Retrieves the information on a publication that is currently "associated" with the **DDS\_DataReader** (p. 608).
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_matched\_publication\_participant\_data** ( DDS\_Data\_↔\_Reader \*self, struct DDS\_ParticipantBuiltinTopicData \*participant\_data, const DDS\_InstanceHandle\_t \*publication\_handle)
  - <<extension>> (p. 817) Retrieves the information on the discovered **DDS\_DomainParticipant** (p. 72) associated with the publication that is currently matching with the **DDS\_DataReader** (p. 608).
- **DDS\_TopicDescription \* DDS\_DataReader\_get\_topicdescription** ( DDS\_DataReader \*self)
  - Returns the **DDS\_TopicDescription** (p. 171) associated with the **DDS\_DataReader** (p. 608).
- **DDS\_Subscriber \* DDS\_DataReader\_get\_subscriber** ( DDS\_DataReader \*self)
  - Returns the **DDS\_Subscriber** (p. 565) to which the **DDS\_DataReader** (p. 608) belongs.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_sample\_rejected\_status** ( DDS\_DataReader \*self, struct DDS\_SampleRejectedStatus \*status)
  - Accesses the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 1033) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_liveliness\_changed\_status** ( DDS\_DataReader \*self, struct DDS\_LivelinessChangedStatus \*status)
  - Accesses the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 1034) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_requested\_deadline\_missed\_status** ( DDS\_DataReader \*self, struct DDS\_RequestedDeadlineMissedStatus \*status)
  - Accesses the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 1032) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_requested\_incompatible\_qos\_status** ( DDS\_DataReader \*self, struct DDS\_RequestedIncompatibleQosStatus \*status)
  - Accesses the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_subscription\_matched\_status** ( DDS\_DataReader \*self, struct DDS\_SubscriptionMatchedStatus \*status)
  - Accesses the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 1035) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_sample\_lost\_status** ( DDS\_DataReader \*self, struct DDS\_↔\_SampleLostStatus \*status)
  - Accesses the **DDS\_SAMPLE\_LOST\_STATUS** (p. 1033) communication status.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_datareader\_cache\_status** ( DDS\_DataReader \*self, struct DDS\_DataReaderCacheStatus \*status)
  - <<extension>> (p. 817) Gets the datareader cache status for this reader.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_datareader\_protocol\_status** ( DDS\_DataReader \*self, struct DDS\_DataReaderProtocolStatus \*status)
  - <<extension>> (p. 817) Gets the datareader protocol status for this reader.
- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_matched\_publication\_datareader\_protocol\_status** ( DDS\_↔\_DataReader \*self, struct DDS\_DataReaderProtocolStatus \*status, const DDS\_InstanceHandle\_↔\_t \*publication\_handle)

<<*extension*>> (p. 817) Gets the datareader protocol status for this reader, per matched publication identified by the *publication\_handle*.

- **DDS\_ReturnCode\_t DDS\_DataReader\_set\_qos** ( **DDS\_DataReader** \*self, const struct **DDS\_DataReaderQos** \*qos)

*Sets the reader QoS.*

- **DDS\_ReturnCode\_t DDS\_DataReader\_set\_qos\_with\_profile** ( **DDS\_DataReader** \*self, const char \*library\_name, const char \*profile\_name)

<<*extension*>> (p. 817) Changes the QoS of this reader using the input XML QoS profile.

- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_qos** ( **DDS\_DataReader** \*self, struct **DDS\_DataReaderQos** \*qos)

*Gets the reader QoS.*

- **DDS\_ReturnCode\_t DDS\_DataReader\_set\_property** ( **DDS\_DataReader** \*self, const char \*property\_name, const char \*value, **DDS\_Boolean** propagate)

*Set the value for a property that applies to a DataReader.*

- **DDS\_ReturnCode\_t DDS\_DataReader\_set\_listener** ( **DDS\_DataReader** \*self, const struct **DDS\_DataReaderListener** \*l, **DDS\_StatusMask** mask)

*Sets the reader listener.*

- struct **DDS\_DataReaderListener** **DDS\_DataReader\_get\_listener** ( **DDS\_DataReader** \*self)

*Gets the reader listener.*

- **DDS\_ReturnCode\_t DDS\_DataReader\_get\_listenerX** ( **DDS\_DataReader** \*self, struct **DDS\_DataReaderListener** \*listener)

<<*extension*>> (p. 817) Gets the reader listener.

- **DDS\_TopicQuery \* DDS\_DataReader\_create\_topic\_query** ( **DDS\_DataReader** \*self, const struct **DDS\_TopicQuerySelection** \*selection)

*Creates a **DDS\_TopicQuery** (p. 698).*

- **DDS\_ReturnCode\_t DDS\_DataReader\_delete\_topic\_query** ( **DDS\_DataReader** \*self, **DDS\_TopicQuery** \*query)

*Deletes a **DDS\_TopicQuery** (p. 698).*

- **DDS\_TopicQuery \* DDS\_DataReader\_lookup\_topic\_query** ( **DDS\_DataReader** \*self, const struct **DDS\_GUID\_t** \*guid)

*Retrieves an existing **DDS\_TopicQuery** (p. 698).*

- **DDS\_ReturnCode\_t DDS\_DataReader\_take\_discovery\_snapshot** ( **DDS\_DataReader** \*self, const char \*file\_name)

*Take a snapshot of the compatible and incompatible remote writers matched by a local reader.*

### 4.21.1 Detailed Description

**DDS\_DataReader** (p. 608) entity and associated elements

### 4.21.2 Macro Definition Documentation

#### 4.21.2.1 DDS\_RequestedDeadlineMissedStatus\_INITIALIZER

```
#define DDS_RequestedDeadlineMissedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_RequestedDeadlineMissedStatus** (p. 1688) instances that are stored on the stack should be initialized with this value before they are passed to any methods. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_Inconsistent**↔  
**TopicStatus\_finalize** (p. 184) should be called to free the contained fields that use dynamic memory:

```
struct DDS_RequestedDeadlineMissedStatus myStatus = DDS_RequestedDeadlineMissedStatus_INITIALIZER;
```

```
...
```

```
DDS_RequestedDeadlineMissedStatus_finalize(&myStatus);
```

See also

**DDS\_RequestedDeadlineMissedStatus\_initialize** (p. 643)

**DDS\_RequestedDeadlineMissedStatus\_finalize** (p. 644)

#### 4.21.2.2 DDS\_LivelinessChangedStatus\_INITIALIZER

```
#define DDS_LivelinessChangedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_LivelinessChangedStatus** (p. 1572) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_Liveliness**↔  
**ChangedStatus\_finalize** (p. 645) should be called to free the contained fields that use dynamic memory:

```
struct DDS_LivelinessChangedStatus myStatus = DDS_LivelinessChangedStatus_INITIALIZER;
```

```
...
```

```
DDS_LivelinessChangedStatus_finalize(&myStatus);
```

See also

**DDS\_LivelinessChangedStatus\_initialize** (p. 644)

**DDS\_LivelinessChangedStatus\_finalize** (p. 645)

### 4.21.2.3 DDS\_RequestedIncompatibleQosStatus\_INITIALIZER

```
#define DDS_RequestedIncompatibleQosStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_RequestedIncompatibleQosStatus** (p. 1689) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647) should be called to free the contained fields that use dynamic memory:

```
struct DDS_RequestedIncompatibleQosStatus myStatus = DDS_RequestedIncompatibleQosStatus_INITIALIZER;
```

```
...
```

```
DDS_RequestedIncompatibleQosStatus_finalize(&myStatus);
```

See also

**DDS\_RequestedIncompatibleQosStatus\_initialize** (p. 646)

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647)

### 4.21.2.4 DDS\_SampleLostStatus\_INITIALIZER

```
#define DDS_SampleLostStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_SampleLostStatus** (p. 1732) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_SampleLostStatus\_finalize** (p. 650) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SampleLostStatus myStatus = DDS_SampleLostStatus_INITIALIZER;
```

```
...
```

```
DDS_SampleLostStatus_finalize(&myStatus);
```

See also

**DDS\_SampleLostStatus\_initialize** (p. 649)

**DDS\_SampleLostStatus\_finalize** (p. 650)

#### 4.21.2.5 DDS\_SampleRejectedStatus\_INITIALIZER

```
#define DDS_SampleRejectedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_SampleRejectedStatus** (p. 1733) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_SampleRejectedStatus\_finalize** (p. 652) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SampleRejectedStatus myStatus = DDS_SampleRejectedStatus_INITIALIZER;
```

```
...
```

```
DDS_SampleRejectedStatus_finalize(&myStatus);
```

See also

**DDS\_SampleRejectedStatus\_initialize** (p. 651)

**DDS\_SampleRejectedStatus\_finalize** (p. 652)

#### 4.21.2.6 DDS\_SubscriptionMatchedStatus\_INITIALIZER

```
#define DDS_SubscriptionMatchedStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_SubscriptionMatchedStatus** (p. 1758) instances that are stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_SubscriptionMatchedStatus\_finalize** (p. 654) should be called to free the contained fields that use dynamic memory:

```
struct DDS_SubscriptionMatchedStatus myStatus = DDS_SubscriptionMatchedStatus_INITIALIZER;
```

```
...
```

```
DDS_SubscriptionMatchedStatus_finalize(&myStatus);
```

See also

**DDS\_SubscriptionMatchedStatus\_initialize** (p. 653)

**DDS\_SubscriptionMatchedStatus\_finalize** (p. 654)

#### 4.21.2.7 DDS\_DataReaderCacheStatus\_INITIALIZER

```
#define DDS_DataReaderCacheStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_DataReaderCacheStatus** (p. 1365) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_DataReaderCacheStatus\_finalize** (p. 656) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataReaderCacheStatus myStatus = DDS_DataReaderCacheStatus_INITIALIZER;

DDS_DataReader_get_datareader_cache_status(myDataReader, &myStatus);

DDS_DataReaderCacheStatus_finalize(&myStatus);
```

See also

**DDS\_DataReader\_get\_datareader\_cache\_status** (p. 677)

**DDS\_DataReaderCacheStatus\_finalize** (p. 656)

#### 4.21.2.8 DDS\_DataReaderProtocolStatus\_INITIALIZER

```
#define DDS_DataReaderProtocolStatus_INITIALIZER
```

Initializer for new status instances.

New **DDS\_DataReaderProtocolStatus** (p. 1379) instances stored on the stack should be initialized with this value before they are passed to any function. This step ensures that those fields that use dynamic memory are properly initialized. This does not allocate memory.

The simplest way to create a status structure is to initialize it on the stack at the time of its creation. **DDS\_DataReaderProtocolStatus\_finalize** (p. 658) should be called to free the contained fields that use dynamic memory:

```
struct DDS_DataReaderProtocolStatus myStatus = DDS_DataReaderProtocolStatus_INITIALIZER;

DDS_DataReader_get_datareader_protocol_status(myDataReader, &myStatus);

DDS_DataReaderProtocolStatus_finalize(&myStatus);
```

See also

**DDS\_DataReader\_get\_datareader\_protocol\_status** (p. 678)

**DDS\_DataReaderProtocolStatus\_finalize** (p. 658)

### 4.21.2.9 DDS\_DataReaderQos\_INITIALIZER

```
#define DDS_DataReaderQos_INITIALIZER
```

Initializer for new QoS instances.

New **DDS\_DataReaderQos** (p. 1390) instances that are stored in the stack should be initialized with this value before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized.

The simplest way to create a new QoS structure is to initialize it on the stack at the time of its creation:

```
struct DDS_DataReaderQos myQos = DDS_DataReaderQos_INITIALIZER;
```

Note that the above assignment is not a substitute for calling **DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572) or **DDS\_DataReader\_get\_qos** (p. 680); one of those should be called subsequently to setting the QoS of a new or existing entity:

```
struct DDS_DataReaderQos myQos = DDS_DataReaderQos_INITIALIZER;
```

```
DDS_Subscriber_get_default_datareader_qos(mySub, &myQos);
```

```
DDS_DataReader_get_qos(myReader, &myQos);
```

See also

**DDS\_DataReaderQos\_initialize** (p. 661)

**DDS\_Subscriber\_get\_default\_datareader\_qos** (p. 572)

**DDS\_DataReaderQos\_finalize** (p. 663)

### 4.21.2.10 DDS\_DataReaderListener\_INITIALIZER

```
#define DDS_DataReaderListener_INITIALIZER
```

Initializer for new **DDS\_DataReaderListener** (p. 1372).

All the new instances allocated in the stack should be initialized to this value. No memory is allocated.

Examples

**HelloWorld\_subscriber.c.**

## 4.21.3 Typedef Documentation

### 4.21.3.1 DDS\_DataReader

```
typedef struct DDS_DataReaderImpl DDS_DataReader
```

<<*interface*>> (p. 818) Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **DDS\_Subscriber** (p. 565).

QoS:

**DDS\_DataReaderQos** (p. 1390)

Status:

**DDS\_DATA\_AVAILABLE\_STATUS** (p. 1033);

**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 1034), **DDS\_LivelinessChangedStatus** (p. 1572);

**DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 1032), **DDS\_RequestedDeadlineMissedStatus** (p. 1688);

**DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032), **DDS\_RequestedIncompatibleQosStatus** (p. 1689);

**DDS\_SAMPLE\_LOST\_STATUS** (p. 1033), **DDS\_SampleLostStatus** (p. 1732);

**DDS\_SAMPLE\_REJECTED\_STATUS** (p. 1033), **DDS\_SampleRejectedStatus** (p. 1733);

**DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 1035), **DDS\_SubscriptionMatchedStatus** (p. 1758);

Listener:

**DDS\_DataReaderListener** (p. 1372)

A **DDS\_DataReader** (p. 608) refers to exactly one **DDS\_TopicDescription** (p. 171) (either a **DDS\_Topic** (p. 172), a **DDS\_ContentFilteredTopic** (p. 173) or a **DDS\_MultiTopic** (p. 181)) that identifies the data to be read.

The subscription has a unique resulting type. The data-reader may give access to several instances of the resulting type, which can be distinguished from each other by their `key`.

**DDS\_DataReader** (p. 608) is an abstract class. It must be specialised for each particular application data-type (see **USER\_DATA** (p. 1143)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 1841) are specified in the generic type **FooDataReader** (p. 1845).

The following operations may be called even if the **DDS\_DataReader** (p. 608) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025) if called on a disabled **DDS\_DataReader** (p. 608):

- The base-class operations **DDS\_DataReader\_set\_qos** (p. 679), **DDS\_DataReader\_get\_qos** (p. 680), **DDS\_DataReader\_set\_listener** (p. 682), **DDS\_DataReader\_get\_listener** (p. 682), **DDS\_Entity\_enable** (p. 1163), **DDS\_Entity\_get\_statuscondition** (p. 1164), **DDS\_Entity\_get\_status\_changes** (p. 1164),
- **DDS\_DataReader\_get\_liveliness\_changed\_status** (p. 674), **DDS\_DataReader\_get\_requested\_deadline\_missed\_status** (p. 674), **DDS\_DataReader\_get\_requested\_incompatible\_qos\_status** (p. 675), **DDS\_DataReader\_get\_sample\_lost\_status** (p. 677), **DDS\_DataReader\_get\_sample\_rejected\_status** (p. 674), **DDS\_DataReader\_get\_subscription\_matched\_status** (p. 675)

All sample-accessing operations, namely: **FooDataReader\_read** (p. 618), **FooDataReader\_take** (p. 619), **FooDataReader\_read\_w\_condition** (p. 623), and **FooDataReader\_take\_w\_condition** (p. 625) may fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) as described in **DDS\_Subscriber\_begin\_access** (p. 580).

#### 4.21.3.2 DDS\_DataReaderListener\_RequestedDeadlineMissedCallback

```
typedef void(* DDS_DataReaderListener_RequestedDeadlineMissedCallback) (void *listener_data, DDS_↔  
_DataReader *reader, const struct DDS_RequestedDeadlineMissedStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) requested\_deadline\_missed function.

#### 4.21.3.3 DDS\_DataReaderListener\_LivelinessChangedCallback

```
typedef void(* DDS_DataReaderListener_LivelinessChangedCallback) (void *listener_data, DDS_Data↔  
Reader *reader, const struct DDS_LivelinessChangedStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) liveliness\_changed function.

#### 4.21.3.4 DDS\_DataReaderListener\_RequestedIncompatibleQoSCallback

```
typedef void(* DDS_DataReaderListener_RequestedIncompatibleQoSCallback) (void *listener_data,  
DDS_DataReader *reader, const struct DDS_RequestedIncompatibleQoSStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) requested\_incompatible\_QoS function.

#### 4.21.3.5 DDS\_DataReaderListener\_SampleRejectedCallback

```
typedef void(* DDS_DataReaderListener_SampleRejectedCallback) (void *listener_data, DDS_Data↔  
Reader *reader, const struct DDS_SampleRejectedStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) sample\_rejected function.

#### 4.21.3.6 DDS\_DataReaderListener\_DataAvailableCallback

```
typedef void(* DDS_DataReaderListener_DataAvailableCallback) (void *listener_data, DDS_DataReader  
*reader)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) data\_available function.

#### 4.21.3.7 DDS\_DataReaderListener\_SubscriptionMatchedCallback

```
typedef void(* DDS_DataReaderListener_SubscriptionMatchedCallback) (void *listener_data, DDS_↔
DataReader *reader, const struct DDS_SubscriptionMatchedStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) `subscription_match` function.

#### 4.21.3.8 DDS\_DataReaderListener\_SampleLostCallback

```
typedef void(* DDS_DataReaderListener_SampleLostCallback) (void *listener_data, DDS_DataReader
*reader, const struct DDS_SampleLostStatus *status)
```

Prototype of a **DDS\_DataReaderListener** (p. 1372) `subscription_lost` function.

### 4.21.4 Enumeration Type Documentation

#### 4.21.4.1 DDS\_SampleLostStatusKind

```
enum DDS_SampleLostStatusKind
```

<<*extension*>> (p. 817) Kinds of reasons why a sample was lost.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

##### Enumerator

DDS_NOT_LOST	The sample was not lost. This constant is an extension to the DDS standard.
DDS_LOST_BY_WRITER	A <b>DDS_DataWriter</b> (p. 478) removed the sample before being received by the <b>DDS_DataReader</b> (p. 608). This constant is an extension to the DDS standard.
DDS_LOST_BY_INSTANCES_LIMIT	A resource limit on the number of instances ( <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1693)) was reached. This constant is an extension to the DDS standard.  See also  <b>DDS_ResourceLimitsQosPolicy</b> (p. 1690)

## Enumerator

<p>DDS_LOST_BY_REMOTE_WRITERS_PER_INSTANCE_LIMIT</p>	<p>A resource limit on the number of remote writers for a single instance from which a <b>DDS_DataReader</b> (p. 608) may read (<b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers_per_instance</b> (p. 1400)) was reached. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_INCOMPLETE_COHERENT_SET</p>	<p>A sample is lost because it is part of an incomplete coherent set. An incomplete coherent set is a coherent set for which some of the samples are missing. For example, consider a <b>DDS_DataWriter</b> (p. 478) using <b>DDS_KEEP_LAST_HISTORY_QOS</b> (p. 1094) with a depth of 1. The DataWriter publishes two samples of the same instance as part of a coherent set 'CS1'; the first sample of 'CS1' is replaced by a new sample before it can be successfully delivered to the <b>DDS_DataReader</b> (p. 608). In this case, the coherent set containing the two samples is considered incomplete. The new sample, by default, will not be provided to the application, and will be reported as <b>LOST_BY_INCOMPLETE_COHERENT_SET</b>. (You can change this default behavior by setting <b>DDS_PresentationQosPolicy::drop_incomplete_coherent_set</b> (p. 1638) to FALSE. If you do, the new sample will be provided to the application, but it will be marked as part of an incomplete coherent set in the <b>DDS_SampleInfo</b> (p. 1720) structure.)</p> <p>This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_LARGE_COHERENT_SET</p>	<p>A sample is lost because it is part of a large coherent set. A large coherent set is a coherent set that cannot fit all at once into the <b>DDS_DataReader</b> (p. 608) queue because resource limits are exceeded. For example, if <b>DDS_ResourceLimitsQosPolicy::max_samples_per_instance</b> (p. 1693) on the DataReader is 10 and the coherent set has 15 samples for a given instance, the coherent set is a large coherent set that will be considered incomplete.</p> <p>The resource limits that can lead to large coherent sets are: <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1693), <b>DDS_ResourceLimitsQosPolicy::max_samples_per_instance</b> (p. 1693), <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1693), and <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 1400).</p> <p>This constant is an extension to the DDS standard.</p>

## Enumerator

<p>DDS_LOST_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124): a resource limit on the number of samples from a given remote writer that a <b>DDS_DataReader</b> (p. 608) may store (<b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 1400)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer</b> (p. 1400) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT</b> (p. 616). This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_VIRTUAL_WRITERS_LIMIT</p>	<p>A resource limit on the number of virtual writers from which a <b>DDS_DataReader</b> (p. 608) may read (<b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_virtual_writers</b> (p. 1405)) was reached. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_REMOTE_WRITERS_PER_SAMPLE_LIMIT</p>	<p>A resource limit on the number of remote writers per sample (<b>DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers_per_sample</b> (p. 1407)) was reached. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_AVAILABILITY_WAITING_TIME</p>	<p><b>DDS_AvailabilityQosPolicy::max_data_availability_waiting_time</b> (p. 1333) expired. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_AvailabilityQosPolicy</b> (p. 1330)</p>

## Enumerator

<p>DDS_LOST_BY_REMOTE_WRITER_SAMPLES_↔ PER_VIRTUAL_QUEUE_LIMIT</p>	<p>A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a <b>DDS_DataReader</b> (p. 608) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_OUT_OF_MEMORY</p>	<p>A sample was lost because there was not enough memory to store the sample. This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_LOST_BY_UNKNOWN_INSTANCE</p>	<p>A received sample was lost because it doesn't contain enough information for the reader to know what instance it is associated with. This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_DESERIALIZATION_FAILURE</p>	<p>A received sample was lost because it could not be deserialized. This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_DECODE_FAILURE</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124): A received sample was lost because it could not be decoded. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124), the sample will be rejected, not lost, with reason <b>DDS_REJECTED_BY_DECODE_FAILURE</b> (p. 617). This constant is an extension to the DDS standard.</p>
<p>DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT</p>	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124): A resource limit on the number of samples per instance (<b>DDS_ResourceLimitsQosPolicy::max_samples_↔ per_instance</b> (p. 1693)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_ResourceLimitsQosPolicy::max_↔ samples_per_instance</b> (p. 1693) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_↔ SAMPLES_PER_INSTANCE_LIMIT</b> (p. 616). This constant is an extension to the DDS standard.</p> <p>See also</p> <p><b>DDS_ResourceLimitsQosPolicy</b> (p. 1690)</p>

## Enumerator

DDS_LOST_BY_SAMPLES_LIMIT	<p>When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124): A resource limit on the number of samples (<b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1693)) was reached. When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1693) will trigger a rejection, not a loss, with reason <b>DDS_REJECTED_BY_SAMPLES_LIMIT</b> (p. 615). This constant is an extension to the DDS standard.</p> <p>See also</p> <p style="text-align: center;"><b>DDS_ResourceLimitsQosPolicy</b> (p. 1690)</p>

## 4.21.4.2 DDS\_SampleRejectedStatusKind

```
enum DDS_SampleRejectedStatusKind
```

Kinds of reasons for rejecting a sample.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

## Enumerator

DDS_NOT_REJECTED	The sample was not rejected.
DDS_REJECTED_BY_INSTANCES_LIMIT	<p>Connnext DDS does not reject samples based on instance limits (<b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1693)), so this value will never be used.</p> <p>See also</p> <p style="text-align: center;"><b>DDS_LOST_BY_INSTANCES_LIMIT&lt;P&gt;</b> (p. 611) This value is not currently used by our middleware, but has been kept because it is part of the DDS specification.</p>
DDS_REJECTED_BY_SAMPLES_LIMIT	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124): A resource limit on the number of samples (<b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1693)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_ResourceLimitsQosPolicy::max_samples</b> (p. 1693) will trigger a loss, not a rejection, with reason <b>DDS_LOST_BY_SAMPLES_LIMIT</b> (p. 615).</p> <p>See also</p>
Generated by Doxygen	<b>DDS_ResourceLimitsQosPolicy</b> (p. 1690)

## Enumerator

<p>DDS_REJECTED_BY_SAMPLES_PER_INSTANCE_↔ _LIMIT</p>	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124): A resource limit on the number of samples per instance (<b>DDS_ResourceLimitsQosPolicy::max_↔ samples_per_instance</b> (p. 1693)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_ResourceLimitsQosPolicy_↔ ::max_samples_per_instance</b> (p. 1693) will trigger a loss, not a rejection, with reason <b>DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT</b> (p. 614).</p> <p>See also</p> <p style="padding-left: 40px;">ResourceLimitsQosPolicy</p>
<p>DDS_REJECTED_BY_SAMPLES_PER_REMOTE_↔ WRITER_LIMIT</p>	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124): a resource limit on the number of samples from a given remote writer that a <b>DDS_DataReader</b> (p. 608) may store (<b>DDS_DataReaderResource_↔ LimitsQosPolicy::max_samples_per_remote_writer</b> (p. 1400)) was reached. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124), reaching <b>DDS_DataReaderResourceLimitsQos_↔ Policy::max_samples_per_remote_writer</b> (p. 1400) will trigger a loss, not a rejection, with reason <b>DDS_LOST_BY_SAMPLES_PER_REMOTE_↔ WRITER_LIMIT</b> (p. 613). This constant is an extension to the DDS standard.</p> <p>See also</p> <p style="padding-left: 40px;"><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>
<p>DDS_REJECTED_BY_REMOTE_WRITER_↔ SAMPLES_PER_VIRTUAL_QUEUE_LIMIT</p>	<p>A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a <b>DDS_DataReader</b> (p. 608) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard.</p> <p>See also</p> <p style="padding-left: 40px;"><b>DDS_DataReaderResourceLimitsQosPolicy</b> (p. 1398)</p>

## Enumerator

DDS_REJECTED_BY_DECODE_FAILURE	<p>When using <b>DDS_RELIABLE_RELIABILITY_QOS</b> (p. 1124): A received sample was rejected because it could not be decoded. When using <b>DDS_BEST_EFFORT_RELIABILITY_QOS</b> (p. 1124), the sample will be lost, not rejected, with reason <b>DDS_LOST_BY_DECODE_FAILURE</b> (p. 614). If a sample was rejected for this reason and the <b>DDS_DataWriter</b> (p. 478) set <b>DDS_DataWriter</b>↔ <b>ProtocolQosPolicy::disable_inline_keyhash</b> (p. 1424) to <b>DDS_BOOLEAN_TRUE</b> (p. 1004), then <b>DDS_SampleRejectedStatus::last_instance_handle</b> (p. 1734) may not be correct if the sample was encrypted.</p> <p>This constant is an extension to the DDS standard.</p>
--------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## 4.21.5 Function Documentation

## 4.21.5.1 FooDataReader\_narrow()

```
FooDataReader * FooDataReader_narrow (
    DDS_DataReader * reader )
```

Narrow the given **DDS\_DataReader** (p. 608) pointer to a **FooDataReader** (p. 1845) pointer.

## Parameters

<i>reader</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
---------------	------------------------------------------

## 4.21.5.2 FooDataReader\_as\_datareader()

```
DDS_DataReader * FooDataReader_as_datareader (
    FooDataReader * reader )
```

Widen the given **FooDataReader** (p. 1845) pointer to a **DDS\_DataReader** (p. 608) pointer.

## Parameters

<i>reader</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
---------------	------------------------------------------

### 4.21.5.3 FooDataReader\_read()

```
DDS_ReturnCode_t FooDataReader_read (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS\_DataReader** (p. 608).

This operation offers the same functionality and API as **FooDataReader\_take** (p. 619) except that the samples returned remain in the **DDS\_DataReader** (p. 608) such that they can be retrieved again by means of a read or take operation.

Please refer to the documentation of **FooDataReader\_take()** (p. 619) for details on the number of samples returned within the `received_data` and `info_seq` as well as the order in which the samples appear in these sequences.

The act of reading a sample changes its `sample_state` to **DDS\_READ\_SAMPLE\_STATE** (p. 702). If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the instance to be **DDS\_←NOT\_NEW\_VIEW\_STATE** (p. 704). It will not affect the `instance_state` of the instance.

Once the application completes its use of the samples, it must 'return the loan' to the **DDS\_DataReader** (p. 608) by calling the **FooDataReader\_return\_loan** (p. 639) operation.

**Important:** When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS\_SampleInfo** (p. 1720) objects after the call to **FooDataReader\_return\_loan** (p. 639). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

*Note:* While the loan must be returned at some point, you do *not* have to do so before the next **FooDataReader\_take** (p. 619) call. However, failure to return the loan will eventually deplete the **DDS\_DataReader** (p. 608) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDS\_DataReader** (p. 608) is specified by the **DDS\_ResourceLimitsQosPolicy** (p. 1690) and the **DDS\_DataReader←ResourceLimitsQosPolicy** (p. 1398).

**Important:** If the samples "returned" by this function are loaned from RTI Connext (see **FooDataReader\_take** (p. 619) for more information on memory loaning), it is important that their contents not be changed. Because the memory in which the data is stored belongs to the middleware, any modifications made to the data will be seen the next time the same samples are read or taken; the samples will no longer reflect the state that was received from the network.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) User data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) A <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>sample_states</i>	<< <i>in</i> >> (p. 818) Data samples matching one of these <code>sample_states</code> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 818) Data samples matching one of these <code>view_state</code> are returned.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_take** (p. 619)  
**FooDataReader\_read\_w\_condition** (p. 623),  
**FooDataReader\_take\_w\_condition** (p. 625)  
**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.4 FooDataReader\_take()

```
DDS_ReturnCode_t FooDataReader_take (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )
```

Access a collection of data-samples from the **DDS\_DataReader** (p. 608).

The operation will return the list of samples received by the **DDS\_DataReader** (p. 608) since the last **FooDataReader\_take** (p. 619) operation that matches the specified **DDS\_SampleStateMask** (p. 702), **DDS\_ViewStateMask** (p. 704) and **DDS\_InstanceStateMask** (p. 706).

This operation may fail with **DDS\_RETCODE\_ERROR** (p. 1025) if the **DDS\_DataReaderResourceLimitsQosPolicy::max\_outstanding\_reads** (p. 1402) limit has been exceeded.

The actual number of samples returned depends on the information that has been received by the middleware as well as the **DDS\_HistoryQosPolicy** (p. 1558), **DDS\_ResourceLimitsQosPolicy** (p. 1690), **DDS\_DataReaderResourceLimitsQosPolicy** (p. 1398) and the characteristics of the data-type that is associated with the **DDS\_DataReader** (p. 608):

- In the case where the **DDS\_HistoryQosPolicy::kind** (p. 1560) is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 1094), the call will return at most **DDS\_HistoryQosPolicy::depth** (p. 1560) samples for each ALIVE instance and (**DDS\_HistoryQosPolicy::depth** (p. 1560) +1) samples for each NOT\_ALIVE instance. The extra sample is an invalid sample (**DDS\_SampleInfo::valid\_data** (p. 1728) is FALSE) that is used to indicate the instance state transition from ALIVE to NOT\_ALIVE.
- The maximum number of samples returned is limited by **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1693), and by **DDS\_DataReaderResourceLimitsQosPolicy::max\_samples\_per\_read** (p. 1402).

- For multiple instances, the number of samples returned is additionally limited by the product (**DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1693)
  - **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1693))
- If **DDS\_DataReaderResourceLimitsQosPolicy::max\_infos** (p. 1401) is limited, the number of samples returned may also be limited if insufficient **DDS\_SampleInfo** (p. 1720) resources are available.

If the read or take succeeds and the number of samples returned has been limited (by means of a maximum limit, as listed above, or insufficient **DDS\_SampleInfo** (p. 1720) resources), the call will complete successfully and provide those samples the reader is able to return. The user may need to make additional calls, or return outstanding loaned buffers in the case of insufficient resources, in order to access remaining samples.

Note that in the case where the **DDS\_Topic** (p. 172) associated with the **DDS\_DataReader** (p. 608) is bound to a data-type that has no key definition, then there will be at most one instance in the **DDS\_DataReader** (p. 608). So the per-sample limits will apply.

The act of *taking* a sample removes it from RTI Connext so it cannot be read or taken again. If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the sample's instance to **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704). It will not affect the `instance_state` of the sample's instance.

After **FooDataReader\_take** (p. 619) completes, `received_data` and `info_seq` will be of the same length and contain the received data.

If the sequences are empty (maximum size equals 0) when the **FooDataReader\_take** (p. 619) is called, the samples returned in the `received_data` and the corresponding `info_seq` are 'loaned' to the application from buffers provided by the **DDS\_DataReader** (p. 608). The application can use them as desired and has guaranteed exclusive access to them.

Once the application completes its use of the samples it must 'return the loan' to the **DDS\_DataReader** (p. 608) by calling the **FooDataReader\_return\_loan** (p. 639) operation.

**Important:** When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS\_SampleInfo** (p. 1720) objects after the call to **FooDataReader\_return\_loan** (p. 639). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

**Note:** While you must call **FooDataReader\_return\_loan** (p. 639) at some point, you do *not* have to do so before the next **FooDataReader\_take** (p. 619) call. However, failure to return the loan will eventually deplete the **DDS\_DataReader** (p. 608) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDS\_DataReader** (p. 608) is specified by the **DDS\_ResourceLimitsQosPolicy** (p. 1690) and the **DDS\_DataReaderResourceLimitsQosPolicy** (p. 1398).

If the sequences are not empty (maximum size not equal to 0 and length not equal to 0) when **FooDataReader\_take** (p. 619) is called, samples are copied to `received_data` and `info_seq`. The application will not need to call **FooDataReader\_return\_loan** (p. 639).

The order of the samples returned to the caller depends on the **DDS\_PresentationQosPolicy** (p. 1634).

- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1638) is **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 1106), the returned collection is a list where samples belonging to the same data instance are consecutive.

- If `DDS_PresentationQosPolicy::access_scope` (p. 1638) is `DDS_TOPIC_PRESENTATION_QOS` (p. 1106) and `DDS_PresentationQosPolicy::ordered_access` (p. 1638) is set to `DDS_BOOLEAN_FALSE` (p. 1004), then the returned collection is a list where samples belonging to the same data instance are consecutive.
- If `DDS_PresentationQosPolicy::access_scope` (p. 1638) is `DDS_TOPIC_PRESENTATION_QOS` (p. 1106) and `DDS_PresentationQosPolicy::ordered_access` (p. 1638) is set to `DDS_BOOLEAN_TRUE` (p. 1004), then the returned collection is a list where the relative order of samples as they were written by a `DataWriter` is preserved also across different instances. In other words, changes made by a single `DataWriter` are made available to subscribers in the same order in which they occur. Samples belonging to the same instance may or may not be consecutive. This is because, to preserve order within a single `DataWriter`, it may be necessary to mix samples from different instances.
- If `DDS_PresentationQosPolicy::access_scope` (p. 1638) is `DDS_GROUP_PRESENTATION_QOS` (p. 1106) and `DDS_PresentationQosPolicy::ordered_access` (p. 1638) is set to `DDS_BOOLEAN_FALSE` (p. 1004), then the returned collection is a list where samples belonging to the same data instance are consecutive.
- If `DDS_PresentationQosPolicy::access_scope` (p. 1638) is `DDS_GROUP_PRESENTATION_QOS` (p. 1106) and `DDS_PresentationQosPolicy::ordered_access` (p. 1638) is set to `DDS_BOOLEAN_TRUE` (p. 1004), then changes made to instances by a set of `DataWriters` attached to a common `Publisher` are made available in the order in which they were written. For this to happen, the application must take the samples using the `Subscriber's DDS_Subscriber_begin_access` (p. 580) and `DDS_Subscriber_end_access` (p. 581) operations (see the "Ordered Access" section in the "PRESENTATION QosPolicy" section of the `Core Libraries User's Manual`).

In all of the above cases, the relative order between the samples of one instance is consistent with the `DESTINATION_ORDER` (p. 1074) policy:

- If `DDS_DestinationOrderQosPolicy::kind` (p. 1459) is `DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER` (p. 1075), samples belonging to the same instances will appear in the relative order in which there were received (FIFO, earlier samples ahead of the later samples).
- If `DDS_DestinationOrderQosPolicy::kind` (p. 1459) is `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER` (p. 1075), samples belonging to the same instances will appear in the relative order implied by the `source_timestamp` (FIFO, smaller values of `source_timestamp` ahead of the larger values).

If the `DDS_DataReader` (p. 608) has no samples that meet the constraints, the function will fail with `DDS_RETCODE_NO_DATA` (p. 1025).

In addition to the collection of samples, the read and take operations also use a collection of `DDS_SampleInfo` (p. 1720) structures.

The initial (input) properties of the `received_data` and `info_seq` collections will determine the precise behavior of the read or take operation. For the purposes of this description, the collections are modeled as having these properties:

- whether the collection container owns the memory of the elements within (`owns`, see `FooSeq_has_ownership` (p. 1309))
- the current-length (`len`, see `FooSeq_get_length` (p. 1300))

- the maximum length (`max_len`, see `FooSeq_get_maximum` (p. 1299))

The initial values of the `owns`, `len` and `max_len` properties for the `received_data` and `info_seq` collections govern the behavior of the read and take operations as specified by the following rules:

1. The values of `owns`, `len` and `max_len` properties for the two collections must be identical. Otherwise read/take will fail with `DDS_RETCODE_PRECONDITION_NOT_MET` (p. 1025).
2. On successful output, the values of `owns`, `len` and `max_len` will be the same for both collections.
3. If the initial `max_len==0`, then the `received_data` and `info_seq` collections will be filled with elements that are loaned by the `DDS_DataReader` (p. 608). On output, `owns` will be `FALSE`, `len` will be set to the number of values returned, and `max_len` will be set to a value verifying `max_len >= len`. The use of this variant allows for Zero Copy access to the data and the application will need to return the loan to the `DDS_DataWriter` (p. 478) using `FooDataReader_return_loan` (p. 639).
4. If the initial `max_len>0` and `owns==FALSE`, then the read or take operation will fail with `DDS_RETCODE_PRECONDITION_NOT_MET` (p. 1025). This avoids the potential hard-to-detect memory leaks caused by an application forgetting to return the loan.
5. If initial `max_len>0` and `owns==TRUE`, then the read or take operation will copy the `received_data` values and `DDS_SampleInfo` (p. 1720) values into the elements already inside the collections. On output, `owns` will be `TRUE`, `len` will be set to the number of values copied and `max_len` will remain unchanged. The use of this variant forces a copy but the application can control where the copy is placed and the application will not need to return the loan. The number of samples copied depends on the relative values of `max_len` and `max_samples`:
  - If `max_samples == LENGTH_UNLIMITED`, then at most `max_len` values will be copied. The use of this variant lets the application limit the number of samples returned to what the sequence can accommodate.
  - If `max_samples <= max_len`, then at most `max_samples` values will be copied. The use of this variant lets the application limit the number of samples returned to fewer than what the sequence can accommodate.
  - If `max_samples > max_len`, then the read or take operation will fail with `DDS_RETCODE_PRECONDITION_NOT_MET` (p. 1025). This avoids the potential confusion where the application expects to be able to access up to `max_samples`, but that number can never be returned, even if they are available in the `DDS_DataReader` (p. 608), because the output sequence cannot accommodate them.

As described above, upon completion, the `received_data` and `info_seq` collections may contain elements loaned from the `DDS_DataReader` (p. 608). If this is the case, the application will need to use `FooDataReader_return_loan` (p. 639) to return the loan once it is no longer using the `received_data` in the collection. When `FooDataReader_return_loan` (p. 639) completes, the collection will have `owns=FALSE` and `max_len=0`. The application can determine whether it is necessary to return the loan or not based on how the state of the collections when the read/take operation was called or by accessing the `owns` property. However, in many cases it may be simpler to always call `FooDataReader_return_loan` (p. 639), as this operation is harmless (i.e., it leaves all elements unchanged) if the collection does not have a loan. To avoid potential memory leaks, the implementation of the `Foo` (p. 1841) and `DDS_SampleInfo` (p. 1720) collections should disallow changing the length of a collection for which `owns==FALSE`. Furthermore, deleting a collection for which `owns==FALSE` should be considered an error.

On output, the collection of `Foo` (p. 1841) values and the collection of `DDS_SampleInfo` (p. 1720) structures are of the same length and are in a one-to-one correspondence. Each `DDS_SampleInfo` (p. 1720) provides information, such as the `source_timestamp`, the `sample_state`, `view_state`, and `instance_state`, etc., about the corresponding sample. Some elements in the returned collection may not have valid data. If the `instance_state` in the `DDS_SampleInfo` (p. 1720)

is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707) or **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 707), then the last sample for that instance in the collection (that is, the one whose **DDS\_SampleInfo** (p. 1720) has `sample_rank==0`) does not contain valid data.

Samples that contain no data do not count towards the limits imposed by the **DDS\_ResourceLimitsQosPolicy** (p. 1690). The act of reading/taking a sample sets its `sample_state` to **DDS\_READ\_SAMPLE\_STATE** (p. 702).

If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the instance to **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704). It will not affect the `instance_state` of the instance.

This operation must be provided on the specialized class that is generated for the particular application data-type that is being read (**Foo** (p. 1841)).

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the operations fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025). For an example on how `take` can be used, please refer to the **Access received data via a reader** (p. 791) "receive example".

#### Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 818) User data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) A <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described above.
<i>sample_states</i>	<< <i>in</i> >> (p. 818) Data samples matching one of these <code>sample_states</code> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 818) Data samples matching one of these <code>view_state</code> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 818) Data samples matching one of these <code>instance_state</code> are returned.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### See also

**FooDataReader\_read** (p. 618)

**FooDataReader\_read\_w\_condition** (p. 623), **FooDataReader\_take\_w\_condition** (p. 625)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

#### 4.21.5.5 FooDataReader\_read\_w\_condition()

```
DDS_ReturnCode_t FooDataReader_read_w_condition (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    DDS_ReadCondition * condition )
```

Accesses via **FooDataReader\_read** (p. 618) the samples that match the criteria specified in the **DDS\_ReadCondition** (p. 686).

This operation is especially useful in combination with **DDS\_QueryCondition** (p. 691) to filter data samples based on the content.

The specified **DDS\_ReadCondition** (p. 686) must be attached to the **DDS\_DataReader** (p. 608); otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

In case the **DDS\_ReadCondition** (p. 686) is a plain **DDS\_ReadCondition** (p. 686) and not the specialized **DDS\_↔\_QueryCondition** (p. 691), the operation is equivalent to calling **FooDataReader\_read** (p. 618) and passing as `sample_states`, `view_states` and `instance_states` the value of the corresponding attributes in the `read_condition`. Using this operation, the application can avoid repeating the same parameters specified when creating the **DDS\_ReadCondition** (p. 686).

The samples are accessed with the same semantics as **FooDataReader\_read** (p. 618).

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the operation will fail with **DDS\_RETCODE\_↔\_NO\_DATA** (p. 1025).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>condition</i>	<< <i>in</i> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_↔\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

See also

**FooDataReader\_read** (p. 618)

**FooDataReader\_take** (p. 619), **FooDataReader\_take\_w\_condition** (p. 625)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

#### 4.21.5.6 FooDataReader\_take\_w\_condition()

```
DDS_ReturnCode_t FooDataReader_take_w_condition (
    FooDataReader * self,
    FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    DDS_ReadCondition * condition )
```

Analogous to **FooDataReader\_read\_w\_condition** (p. 623) except it accesses samples via the **FooDataReader\_take** (p. 619) operation.

This operation is analogous to **FooDataReader\_read\_w\_condition** (p. 623) except that it accesses samples via the **FooDataReader\_take** (p. 619) operation.

The specified **DDS\_ReadCondition** (p. 686) must be attached to the **DDS\_DataReader** (p. 608); otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

The samples are accessed with the same semantics as **FooDataReader\_take** (p. 619).

This operation is especially useful in combination with **DDS\_QueryCondition** (p. 691) to filter data samples based on the content.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>condition</i>	<< <i>in</i> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_read\_w\_condition** (p. 623), **FooDataReader\_read** (p. 618)

**FooDataReader\_take** (p. 619)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

4.21.5.7 **FooDataReader\_read\_next\_sample()**

```
DDS_ReturnCode_t FooDataReader_read_next_sample (
    FooDataReader * self,
    struct Foo * received_data,
    struct DDS_SampleInfo * sample_info )
```

Copies the next not-previously-accessed data value from the **DDS\_DataReader** (p. 608).

This operation copies the next not-previously-accessed data value from the **DDS\_DataReader** (p. 608). This operation also copies the corresponding **DDS\_SampleInfo** (p. 1720). The implied order among the samples stored in the **DDS\_DataReader** (p. 608) is the same as for the **FooDataReader\_read** (p. 618) operation.

The **FooDataReader\_read\_next\_sample** (p. 626) operation is semantically equivalent to the **FooDataReader\_read** (p. 618) operation, where the input data sequences has `max_len=1`, the `sample_states=NOT_READ`, the `view_states=ANY_VIEW_STATE`, and the `instance_states=ANY_INSTANCE_STATE`.

The **FooDataReader\_read\_next\_sample** (p. 626) operation provides a simplified API to 'read' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDS\_DataReader** (p. 608), the operation will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025) and nothing is copied.

## Note

Calling **FooDataReader\_read\_next\_sample** (p. 626) from the **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) callback reads only one sample of potentially many samples in the reader queue, because **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader\_read\_next\_sample** (p. 626) in a loop within the `on_data_available` callback until **FooDataReader\_read\_next\_sample** (p. 626) returns **DDS\_RETCODE\_NO\_DATA** (p. 1025) . This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use **FooDataReader\_read** (p. 618) rather than **FooDataReader\_read\_next\_sample** (p. 626) in order to read more than one sample at a time.)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>Foo</b> (p. 1841) object where the next received data sample will be returned. The <code>received_data</code> must have been fully allocated. Otherwise, this operation may fail. Must be a valid non-NULL <b>Foo</b> (p. 1841). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>sample_info</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfo</b> (p. 1720) object where the next received sample info

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_read** (p. 618)

## 4.21.5.8 FooDataReader\_take\_next\_sample()

```
DDS_ReturnCode_t FooDataReader_take_next_sample (
    FooDataReader * self,
    struct Foo * received_data,
    struct DDS_SampleInfo * sample_info )
```

Copies the next not-previously-accessed data value from the **DDS\_DataReader** (p. 608).

This operation copies the next not-previously-accessed data value from the **DDS\_DataReader** (p. 608) and 'removes' it from the **DDS\_DataReader** (p. 608) so that it is no longer accessible. This operation also copies the corresponding **DDS\_SampleInfo** (p. 1720). This operation is analogous to the **FooDataReader\_read\_next\_sample** (p. 626) except for the fact that the sample is removed from the **DDS\_DataReader** (p. 608).

The **FooDataReader\_take\_next\_sample** (p. 627) operation is semantically equivalent to the **FooDataReader\_take** (p. 619) operation, where the input data sequences has max\_len=1, the sample\_states=NOT\_READ, the view\_states=ANY\_VIEW\_STATE, and the instance\_states=ANY\_INSTANCE\_STATE.

The **FooDataReader\_take\_next\_sample** (p. 627) operation provides a simplified API to 'take' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDS\_DataReader** (p. 608), the operation will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025) and nothing is copied.

## Note

Calling **FooDataReader\_take\_next\_sample** (p. 627) from the **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) callback retrieves only one sample of potentially many samples in the reader queue, because **DDS\_DataReaderListener::on\_data\_available()** (p. 1374) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader\_take\_next\_sample** (p. 627) in a loop within the on\_data\_available callback until **FooDataReader\_take\_next\_sample** (p. 627) returns **DDS\_RETCODE\_NO\_DATA** (p. 1025). This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use the **FooDataReader\_take** (p. 619) rather than **FooDataReader\_take\_next\_sample** (p. 627) in order to take more than one sample at a time.)

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>Foo</b> (p. 1841) object where the next received data sample will be returned. The received_data must have been fully allocated. Otherwise, this operation may fail. Must be a valid non-NULL <b>Foo</b> (p. 1841). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
Generated by Doxygen	
<i>sample_info</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfo</b> (p. 1720) object where the next received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfo</b> (p. 1720). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024),

**DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

**See also**

**FooDataReader\_take** (p. 619)

**4.21.5.9 FooDataReader\_read\_instance()**

```
DDS_ReturnCode_t FooDataReader_read_instance (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * a_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS\_DataReader** (p. 608).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608). The behavior is identical to **FooDataReader\_read** (p. 618), except that all samples returned belong to the single specified instance whose handle is `a_handle`.

Upon successful completion, the data collection will contain samples all belonging to the same instance. The corresponding **DDS\_SampleInfo** (p. 1720) verifies **DDS\_SampleInfo::instance\_handle** (p. 1726) == `a_handle`.

The **FooDataReader\_read\_instance** (p. 628) operation is semantically equivalent to the **FooDataReader\_read** (p. 618) operation, except in building the collection, the **DDS\_DataReader** (p. 608) will check that the sample belongs to the specified instance and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader\_read\_instance** (p. 628) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_read\_instance** (p. 628) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if the **DDS\_InstanceHandle\_t** (p. 210) `a_handle` does not correspond to an existing data-object known to the **DDS\_DataReader** (p. 608).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>a_handle</i>	<< <i>in</i> >> (p. 818) The specified instance to return samples for. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL. The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if the <i>handle</i> does not correspond to an existing data-object known to the <b>DDS_DataReader</b> (p. 608).
<i>sample_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>sample_states</i> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>view_state</i> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>instance_state</i> are returned.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

## 4.21.5.10 FooDataReader\_take\_instance()

```

DDS_ReturnCode_t FooDataReader_take_instance (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * a_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )

```

Access a collection of data samples from the **DDS\_DataReader** (p. 608).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608). The behavior is identical to **FooDataReader\_take** (p. 619), except for that all samples returned belong to the single specified instance whose handle is `a_handle`.

The semantics are the same for the **FooDataReader\_take** (p. 619) operation, except in building the collection, the **DDS\_DataReader** (p. 608) will check that the sample belongs to the specified instance, and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader\_take\_instance** (p. 629) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_take\_instance** (p. 629) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if the **DDS\_InstanceHandle\_t** (p. 210) `a_handle` does not correspond to an existing data-object known to the **DDS\_DataReader** (p. 608).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>a_handle</i>	<< <i>in</i> >> (p. 818) The specified instance to return samples for. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL. The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if the <code>handle</code> does not correspond to an existing data-object known to the <b>DDS_DataReader</b> (p. 608).
<i>sample_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>sample_states</code> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>view_state</code> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>instance_state</code> are returned.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

See also

**FooDataReader\_take** (p. 619)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

#### 4.21.5.11 FooDataReader\_read\_instance\_w\_condition()

```
DDS_ReturnCode_t FooDataReader_read_instance_w_condition (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * a_handle,
    DDS_ReadCondition * condition )
```

<<**extension**>> (p. 817) Accesses via **FooDataReader\_read\_instance** (p. 628) the samples that match the criteria specified in the **DDS\_ReadCondition** (p. 686).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608). The behavior is identical to **FooDataReader\_read\_instance** (p. 628), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is *a\_handle*, and for which the specified **DDS\_ReadCondition** (p. 686) evaluates to TRUE.

The behavior of the **FooDataReader\_read\_instance\_w\_condition** (p. 631) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the *received\_data* and *sample\_info*. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_read\_instance\_w\_condition** (p. 631) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

#### Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <b>inout</b> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <b>inout</b> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <b>in</b> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>a_handle</i>	<< <b>in</b> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>condition</i>	<< <b>in</b> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) **DDS\_↵  
RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_read\_next\_instance** (p. 633)

4.21.5.12 **FooDataReader\_take\_instance\_w\_condition()**

```
DDS_ReturnCode_t FooDataReader_take_instance_w_condition (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * a_handle,
    DDS_ReadCondition * condition )
```

<<**extension**>> (p. 817) Accesses via **FooDataReader\_take\_instance** (p. 629) the samples that match the criteria specified in the **DDS\_ReadCondition** (p. 686).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608) and 'removes' them from the **DDS\_DataReader** (p. 608). The behavior is identical to **FooDataReader\_take\_instance** (p. 629), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is `a_handle`, and for which the specified **DDS\_ReadCondition** (p. 686) evaluates to TRUE.

The operation has the same behavior as **FooDataReader\_read\_instance\_w\_condition** (p. 631), except that the samples are 'taken' from the **DDS\_DataReader** (p. 608) such that they are no longer accessible via subsequent 'read' or 'take' operations.

The behavior of the **FooDataReader\_take\_instance\_w\_condition** (p. 632) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_take\_instance\_w\_condition** (p. 632) operation may 'loan' elements to the output collections, which must then be returned by means of **FooData↵  
Reader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_↵  
\_NO\_DATA** (p. 1025).

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>a_handle</i>	<< <i>in</i> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>condition</i>	<< <i>in</i> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), or **DDS\_RETCODE\_NO\_DATA** (p. 1025), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_take\_next\_instance** (p. 635)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.13 FooDataReader\_read\_next\_instance()

```
DDS_ReturnCode_t FooDataReader_read_next_instance (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * previous_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS\_DataReader** (p. 608).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608) where all the samples belong to a single instance. The behavior is similar to **FooDataReader\_read\_instance** (p. 628), except that the actual instance is not directly specified. Rather, the samples will all belong to the 'next' instance with *instance\_handle* 'greater' than the specified 'previous\_handle' that has available samples.

This operation implies the existence of a total order 'greater-than' relationship between the instance handles. The specifics of this relationship are not all important and are implementation specific. The important thing is that, according to the middleware, all instances are ordered relative to each other. This ordering is between the instance handles; it should not depend on the state of the instance (e.g. whether it has data or not) and must be defined even for instance handles that do not correspond to instances currently managed by the **DDS\_DataReader** (p. 608). For the purposes of the ordering, it should be 'as if' each instance handle was represented as unique integer.

The behavior of **FooDataReader\_read\_next\_instance** (p. 633) is 'as if' the **DDS\_DataReader** (p. 608) invoked **FooDataReader\_read\_instance** (p. 628), passing the smallest `instance_handle` among all the ones that: (a) are greater than `previous_handle`, and (b) have available samples (i.e. samples that meet the constraints imposed by the specified states).

The special value **DDS\_HANDLE\_NIL** (p. 224) is guaranteed to be 'less than' any valid `instance_handle`. So the use of the parameter value `previous_handle == DDS_HANDLE_NIL` (p. 224) will return the samples for the instance which has the smallest `instance_handle` among all the instances that contain available samples.

#### Note

The operation **FooDataReader\_read\_next\_instance** (p. 633) is intended to be used in an application-driven iteration, where the application starts by passing `previous_handle == DDS_HANDLE_NIL` (p. 224), examines the samples returned, and then uses the `instance_handle` returned in the **DDS\_SampleInfo** (p. 1720) as the value of the `previous_handle` argument to the next call to **FooDataReader\_read\_next\_instance** (p. 633). The iteration continues until **FooDataReader\_read\_next\_instance** (p. 633) fails with **DDS\_RETCODE\_NO\_DATA** (p. 1025). This application-driven iteration is required to ensure that all samples on the reader queue are read.

Note that it is possible to call the **FooDataReader\_read\_next\_instance** (p. 633) operation with a `previous_handle` that does not correspond to an instance currently managed by the **DDS\_DataReader** (p. 608). This is because as stated earlier the 'greater-than' relationship is defined even for handles not managed by the **DDS\_DataReader** (p. 608). One practical situation where this may occur is when an application is iterating through all the instances, takes all the samples of a **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 707) instance, returns the loan (at which point the instance information may be removed, and thus the handle becomes invalid), and tries to read the next instance. The behavior of the **FooDataReader\_read\_next\_instance** (p. 633) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_read\_instance** (p. 628) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.

## Parameters

<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>previous_handle</i>	<< <i>in</i> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>sample_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>sample_states</i> are returned. See the valid values for this parameter here: <b>DDS_SampleStateKind</b> (p. 702).
<i>view_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>view_state</i> are returned. See the valid values for this parameter here: <b>DDS_ViewStateKind</b> (p. 704).
<i>instance_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <i>instance_state</i> are returned. See the valid values for this parameter here: <b>DDS_InstanceStateKind</b> (p. 706).

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) **DDS\_↵  
RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_read** (p. 618)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.14 FooDataReader\_take\_next\_instance()

```
DDS_ReturnCode_t FooDataReader_take_next_instance (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * previous_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states )
```

Access a collection of data samples from the **DDS\_DataReader** (p. 608).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608) and 'removes' them from the **DDS\_DataReader** (p. 608).

This operation has the same behavior as **FooDataReader\_read\_next\_instance** (p. 633), except that the samples are 'taken' from the **DDS\_DataReader** (p. 608) such that they are no longer accessible via subsequent 'read' or 'take' operations.

## Note

Like **FooDataReader\_read\_next\_instance** (p. 633), this operation is intended to be used in an application-driven iteration until all samples on the reader queue are taken. The iteration continues until **FooDataReader\_take\_next\_instance** (p. 635) fails with the value **DDS\_RETCODE\_NO\_DATA** (p. 1025) .

Similar to the operation **FooDataReader\_read\_next\_instance** (p. 633), it is possible to call **FooDataReader\_take\_next\_instance** (p. 635) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS\_DataReader** (p. 608).

The behavior of the **FooDataReader\_take\_next\_instance** (p. 635) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_take\_next\_instance** (p. 635) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>previous_handle</i>	<< <i>in</i> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>sample_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>sample_states</code> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>view_state</code> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 818) data samples matching ones of these <code>instance_state</code> are returned.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), **DDS\_RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_take** (p. 619)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.15 FooDataReader\_read\_next\_instance\_w\_condition()

```

DDS_ReturnCode_t FooDataReader_read_next_instance_w_condition (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * previous_handle,
    DDS_ReadCondition * condition )

```

Accesses via **FooDataReader\_read\_next\_instance** (p. 633) the samples that match the criteria specified in the **DDS\_ReadCondition** (p. 686).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608). The behavior is identical to **FooDataReader\_read\_next\_instance** (p. 633), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to the same instance, and the instance is the instance with 'smallest' `instance_handle` among the ones that verify: (a) `instance_handle >= previous_handle`, and (b) have samples for which the specified **DDS\_ReadCondition** (p. 686) evaluates to TRUE.

Similar to the operation **FooDataReader\_read\_next\_instance** (p. 633), it is possible to call **FooDataReader\_read\_next\_instance\_w\_condition** (p. 636) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS\_DataReader** (p. 608).

The behavior of the **FooDataReader\_read\_next\_instance\_w\_condition** (p. 636) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader\_read** (p. 618), the **FooDataReader\_read\_next\_instance\_w\_condition** (p. 636) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_NO\_DATA** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>previous_handle</i>	<< <i>in</i> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>condition</i>	<< <i>in</i> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) **DDS\_↵  
RETCODE\_NO\_DATA** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_read\_next\_instance** (p. 633)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.16 FooDataReader\_take\_next\_instance\_w\_condition()

```
DDS_ReturnCode_t FooDataReader_take_next_instance_w_condition (
    FooDataReader * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t * previous_handle,
    DDS_ReadCondition * condition )
```

Accesses via **FooDataReader\_take\_next\_instance** (p. 635) the samples that match the criteria specified in the **DDS\_↵  
\_ReadCondition** (p. 686).

This operation accesses a collection of data values from the **DDS\_DataReader** (p. 608) and 'removes' them from the **DDS\_DataReader** (p. 608).

The operation has the same behavior as **FooDataReader\_read\_next\_instance\_w\_condition** (p. 636), except that the samples are 'taken' from the **DDS\_DataReader** (p. 608) such that they are no longer accessible via subsequent 'read' or 'take' operations.

Similar to the operation **FooDataReader\_read\_next\_instance** (p. 633), it is possible to call **FooDataReader\_take\_↵  
next\_instance\_w\_condition** (p. 638) with a `previous_handle` that does not correspond to an instance currently managed by the **DDS\_DataReader** (p. 608).

The behavior of the **FooDataReader\_take\_next\_instance\_w\_condition** (p. 638) operation follows the same rules as the **FooDataReader\_read** (p. 618) operation regarding the pre-conditions and post-conditions for the `received_↵  
data` and `sample_info`. Similar to **FooDataReader\_read** (p. 618), the **FooDataReader\_take\_next\_instance\_↵  
w\_condition** (p. 638) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader\_return\_loan** (p. 639).

Similar to the **FooDataReader\_read** (p. 618), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDS\_DataReader** (p. 608) has no samples that meet the constraints, the function will fail with **DDS\_RETCODE\_↵  
\_NO\_DATA** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples will be returned. Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>info_seq</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info will be returned. Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>max_samples</i>	<< <i>in</i> >> (p. 818) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader_take()</b> (p. 619).
<i>previous_handle</i>	<< <i>in</i> >> (p. 818) The 'next smallest' instance with a value greater than this value that has available samples will be returned. Must be a valid non-NULL <b>DDS_InstanceHandle_t</b> (p. 210). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>condition</i>	<< <i>in</i> >> (p. 818) the <b>DDS_ReadCondition</b> (p. 686) to select samples of interest. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025), or **DDS\_RETCODE\_NO\_DATA** (p. 1025), **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

## See also

**FooDataReader\_take\_next\_instance** (p. 635)

**DDS\_LENGTH\_UNLIMITED** (p. 1127)

## 4.21.5.17 FooDataReader\_return\_loan()

```
DDS_ReturnCode_t FooDataReader_return_loan (
    FooDataReader * self,
    FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq )
```

Indicates to the **DDS\_DataReader** (p. 608) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of read or take on the **DDS\_DataReader** (p. 608).

This operation indicates to the **DDS\_DataReader** (p. 608) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of read or take on the **DDS\_DataReader** (p. 608).

The *received\_data* and *info\_seq* must belong to a single related "pair"; that is, they should correspond to a pair returned from a single call to read or take. The *received\_data* and *info\_seq* must also have been obtained from the same **DDS\_DataReader** (p. 608) to which they are returned. If either of these conditions is not met, the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

The operation **FooDataReader\_return\_loan** (p. 639) allows implementations of the read and take operations to "loan" buffers from the **DDS\_DataReader** (p. 608) to the application and in this manner provide "zerocopy" access to the data. During the loan, the **DDS\_DataReader** (p. 608) will guarantee that the data and sample-information are not modified.

It is not necessary for an application to return the loans immediately after the read or take calls. However, as these buffers correspond to internal resources inside the **DDS\_DataReader** (p. 608), the application should not retain them indefinitely.

The use of **FooDataReader\_return\_loan** (p. 639) is only necessary if the read or take calls "loaned" buffers to the application. This only occurs if the `received_data` and `info_seq` collections had `max_len=0` at the time read or take was called.

The application may also examine the "owns" property of the collection to determine where there is an outstanding loan. However, calling **FooDataReader\_return\_loan** (p. 639) on a collection that does not have a loan is safe and has no side effects.

If the collections had a loan, upon completion of **FooDataReader\_return\_loan** (p. 639), the collections will have `max_len=0`.

Similar to read, this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

#### Parameters

<code>received_data</code>	<< <i>in</i> >> (p. 818) user data type-specific <b>FooSeq</b> (p. 1845) object where the received data samples was obtained from earlier invocation of read or take on the <b>DDS_DataReader</b> (p. 608). Must be a valid non-NULL <b>FooSeq</b> (p. 1845). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<code>info_seq</code>	<< <i>in</i> >> (p. 818) a <b>DDS_SampleInfoSeq</b> (p. 1732) object where the received sample info was obtained from earlier invocation of read or take on the <b>DDS_DataReader</b> (p. 608). Must be a valid non-NULL <b>DDS_SampleInfoSeq</b> (p. 1732). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### 4.21.5.18 FooDataReader\_get\_key\_value()

```
DDS_ReturnCode_t FooDataReader_get_key_value (
    FooDataReader * self,
    Foo * key_holder,
    const DDS_InstanceHandle_t * handle )
```

Retrieve the instance `key` that corresponds to an instance `handle`.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this function has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if the `handle` does not correspond to an existing data-object known to the **DDS\_DataReader** (p. 608).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>key_holder</i>	<< <i>inout</i> >> (p. 818) a user data type specific key holder, whose <code>key</code> fields are filled by this operation. If <b>Foo</b> (p. 1841) has no key, this function has no effect. This function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if <code>key_holder</code> is NULL.
<i>handle</i>	<< <i>in</i> >> (p. 818) the <code>instance</code> whose key is to be retrieved. If <b>Foo</b> (p. 1841) has a key, <code>handle</code> must represent an existing instance of type <b>Foo</b> (p. 1841) known to the <b>DDS_DataReader</b> (p. 608). Otherwise, this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025).

If **Foo** (p. 1841) has a key and `handle` is **DDS\_HANDLE\_NIL** (p. 224), this function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

If **Foo** (p. 1841) has a key and `handle` represents an instance of another type or an instance of type **Foo** (p. 1841) that has been unregistered, this function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025). If **Foo** (p. 1841) has no key, this function has no effect.

This function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025) if `handle` is NULL.

#### Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### See also

**FooDataWriter\_get\_key\_value** (p. 498)

#### 4.21.5.19 FooDataReader\_lookup\_instance()

```
DDS_InstanceHandle_t FooDataReader_lookup_instance (
    FooDataReader * self,
    const Foo * key_holder )
```

Retrieves the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. If the instance is unknown to the DataReader, or if for any other reason the Service is unable to provide an instance handle, the Service will return the special value **DDS\_HANDLE\_NIL** (p. 224).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>key_holder</i>	<< <i>in</i> >> (p. 818) a user data type specific key holder.

## Returns

the instance handle associated with this instance. If **Foo** (p. 1841) has no key, this function has no effect and returns **DDS\_HANDLE\_NIL** (p. 224)

4.21.5.20 **FooDataReader\_is\_data\_consistent()**

```
DDS_ReturnCode_t FooDataReader_is_data_consistent (
    FooDataReader * self,
    DDS_Boolean * is_data_consistent,
    const Foo * sample,
    const struct DDS_SampleInfo * sample_info )
```

When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the DataWriter.

When a sample is received via **Zero Copy transfer over shared memory** (p. 205), the sample can be reused by the DataWriter once it is removed from the DataWriter's send queue. Since there is no synchronization between the DataReader and the DataWriter, the sample could be overwritten by the DataWriter before it is processed by the DataReader. The **FooDataReader\_is\_data\_consistent** (p. 642) operation can be used after processing the sample to check if it was overwritten by the DataWriter.

A precondition for using this operation is to set **DDS\_DataWriterShmemRefTransferModeSettings::enable\_data\_consistency\_check** (p. 1453) to true.

## Warning

This operation cannot be used when the data type is annotated with `@language_binding(FLAT_DATA)`. Reading a FlatData sample delivered with Zero Copy transfer over shared memory while the DataWriter is overwriting it is undefined behavior. An application-level synchronization mechanism is required in this case.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>is_data_consistent</i>	<< <i>inout</i> >> (p. 818) Set to true if the sample is consistent (i.e., the sample has not been overwritten by the DataWriter)
<i>sample</i>	<< <i>in</i> >> (p. 818) Sample to be validated
<i>sample_info</i>	<< <i>in</i> >> (p. 818) <b>DDS_SampleInfo</b> (p. 1720) object received with the sample

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## 4.21.5.21 DDS\_RequestedDeadlineMissedStatus\_initialize()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_initialize (
    struct DDS_RequestedDeadlineMissedStatus * self )
```

Initializer for new status instances.

New **DDS\_RequestedDeadlineMissedStatus** (p. 1688) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_RequestedDeadlineMissedStatus\_finalize** (p. 644) should be called to free the contained fields that use dynamic memory:

```
DDS_RequestedDeadlineMissedStatus *myStatus = malloc(sizeof(struct DDS_RequestedDeadlineMissedStatus));
```

```
DDS_RequestedDeadlineMissedStatus_initialize(myStatus);
```

```
...
```

```
DDS_RequestedDeadlineMissedStatus_finalize(myStatus);
```

```
free(myStatus);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## See also

**DDS\_RequestedDeadlineMissedStatus\_INITIALIZER** (p. 603)

**DDS\_RequestedDeadlineMissedStatus\_finalize** (p. 644)

## 4.21.5.22 DDS\_RequestedDeadlineMissedStatus\_copy()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_copy (
    struct DDS_RequestedDeadlineMissedStatus * self,
    const struct DDS_RequestedDeadlineMissedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## 4.21.5.23 DDS\_RequestedDeadlineMissedStatus\_finalize()

```
DDS_ReturnCode_t DDS_RequestedDeadlineMissedStatus_finalize (
    struct DDS_RequestedDeadlineMissedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## 4.21.5.24 DDS\_RequestedDeadlineMissedStatus\_equals()

```
DDS_Boolean DDS_RequestedDeadlineMissedStatus_equals (
    const struct DDS_RequestedDeadlineMissedStatus * left,
    const struct DDS_RequestedDeadlineMissedStatus * right )
```

Compares two **DDS\_RequestedDeadlineMissedStatus** (p. 1688) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This RequestedDeadlineMissedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other RequestedDeadlineMissedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two RequestedDeadlineMissedStatus have equal values, or **DDS\_↔  
BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.21.5.25 DDS\_LivelinessChangedStatus\_initialize()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_initialize (
    struct DDS_LivelinessChangedStatus * self )
```

Initializer for new status instances.

New **DDS\_LivelinessChangedStatus** (p. 1572) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_LivelinessChangedStatus\_finalize** (p.645) should be called to free the contained fields that use dynamic memory:

```
DDS_LivelinessChangedStatus *myStatus = malloc(sizeof(struct DDS_LivelinessChangedStatus));
DDS_LivelinessChangedStatus_initialize(myStatus);
...
DDS_LivelinessChangedStatus_finalize(myStatus);
free(myStatus);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### See also

**DDS\_LivelinessChangedStatus\_INITIALIZER** (p. 604)

**DDS\_LivelinessChangedStatus\_finalize** (p. 645)

#### 4.21.5.26 DDS\_LivelinessChangedStatus\_copy()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_copy (
    struct DDS_LivelinessChangedStatus * self,
    const struct DDS_LivelinessChangedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### 4.21.5.27 DDS\_LivelinessChangedStatus\_finalize()

```
DDS_ReturnCode_t DDS_LivelinessChangedStatus_finalize (
    struct DDS_LivelinessChangedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.21.5.28 DDS\_LivelinessChangedStatus\_equals()

```
DDS_Boolean DDS_LivelinessChangedStatus_equals (
    const struct DDS_LivelinessChangedStatus * left,
    const struct DDS_LivelinessChangedStatus * right )
```

Compares two **DDS\_LivelinessChangedStatus** (p. 1572) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This LivelinessChangedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other LivelinessChangedStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two LivelinessChangedStatus have equal values, or **DDS\_BOOLEAN\_↔**  
**FALSE** (p. 1004) otherwise.

#### 4.21.5.29 DDS\_RequestedIncompatibleQosStatus\_initialize()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_initialize (
    struct DDS_RequestedIncompatibleQosStatus * self )
```

Initializer for new status instances.

New **DDS\_RequestedIncompatibleQosStatus** (p. 1689) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647) should be called to free the contained fields that use dynamic memory:

```
DDS_RequestedIncompatibleQosStatus *myStatus = malloc(sizeof(struct DDS_RequestedIncompatibleQosStatus));
DDS_RequestedIncompatibleQosStatus_initialize(myStatus);
...
DDS_RequestedIncompatibleQosStatus_finalize(myStatus);
free(myStatus);
```

See also

**DDS\_RequestedIncompatibleQosStatus\_INITIALIZER** (p. 604)

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647)

#### 4.21.5.30 DDS\_RequestedIncompatibleQosStatus\_copy()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_copy (
    struct DDS_RequestedIncompatibleQosStatus * self,
    const struct DDS_RequestedIncompatibleQosStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### 4.21.5.31 DDS\_RequestedIncompatibleQosStatus\_finalize()

```
DDS_ReturnCode_t DDS_RequestedIncompatibleQosStatus_finalize (
    struct DDS_RequestedIncompatibleQosStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call `free()` on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## 4.21.5.32 DDS\_RequestedIncompatibleQosStatus\_equals()

```
DDS_Boolean DDS_RequestedIncompatibleQosStatus_equals (
    const struct DDS_RequestedIncompatibleQosStatus * left,
    const struct DDS_RequestedIncompatibleQosStatus * right )
```

Compares two **DDS\_RequestedIncompatibleQosStatus** (p. 1689) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This RequestedIncompatibleQosStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other RequestedIncompatibleQosStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two RequestedIncompatibleQosStatus have equal values, or **DDS\_↵  
BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.21.5.33 DDS\_SampleLostStatus\_initialize()

```
DDS_ReturnCode_t DDS_SampleLostStatus_initialize (
    struct DDS_SampleLostStatus * self )
```

Initializer for new status instances.

New **DDS\_SampleLostStatus** (p. 1732) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647) should be called to free the contained fields that use dynamic memory:

```
DDS_SampleLostStatus *myStatus = malloc(sizeof(struct DDS_SampleLostStatus));
DDS_SampleLostStatus_initialize(myStatus);
...
DDS_SampleLostStatus_finalize(myStatus);
free(myStatus);
```

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## See also

**DDS\_SampleLostStatus\_INITIALIZER** (p. 605)

**DDS\_SampleLostStatus\_finalize** (p. 650)

#### 4.21.5.34 DDS\_SampleLostStatus\_copy()

```
DDS_ReturnCode_t DDS_SampleLostStatus_copy (
    struct DDS_SampleLostStatus * self,
    const struct DDS_SampleLostStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### 4.21.5.35 DDS\_SampleLostStatus\_finalize()

```
DDS_ReturnCode_t DDS_SampleLostStatus_finalize (
    struct DDS_SampleLostStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.21.5.36 DDS\_SampleLostStatus\_equals()

```
DDS_Boolean DDS_SampleLostStatus_equals (
    const struct DDS_SampleLostStatus * left,
    const struct DDS_SampleLostStatus * right )
```

Compares two **DDS\_SampleLostStatus** (p. 1732) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This SampleLostStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other SampleLostStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two SampleLostStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.21.5.37 DDS\_SampleRejectedStatus\_initialize()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_initialize (
    struct DDS_SampleRejectedStatus * self )
```

Initializer for new status instances.

New **DDS\_SampleRejectedStatus** (p. 1733) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647) should be called to free the contained fields that use dynamic memory:

```
DDS_SampleRejectedStatus *myStatus = malloc(sizeof(struct DDS_SampleRejectedStatus));
```

```
DDS_SampleRejectedStatus_initialize(myStatus);
```

```
...
```

```
DDS_SampleRejectedStatus_finalize(myStatus);
```

```
free(myStatus);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

See also

**DDS\_SampleRejectedStatus\_INITIALIZER** (p. 605)

**DDS\_SampleRejectedStatus\_finalize** (p. 652)

#### 4.21.5.38 DDS\_SampleRejectedStatus\_copy()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_copy (
    struct DDS_SampleRejectedStatus * self,
    const struct DDS_SampleRejectedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### 4.21.5.39 DDS\_SampleRejectedStatus\_finalize()

```
DDS_ReturnCode_t DDS_SampleRejectedStatus_finalize (
    struct DDS_SampleRejectedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.21.5.40 DDS\_SampleRejectedStatus\_equals()

```
DDS_Boolean DDS_SampleRejectedStatus_equals (
    const struct DDS_SampleRejectedStatus * left,
    const struct DDS_SampleRejectedStatus * right )
```

Compares two **DDS\_SampleRejectedStatus** (p. 1733) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This SampleRejectedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other SampleRejectedStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two SampleRejectedStatus have equal values, or **DDS\_BOOLEAN\_↵**  
**FALSE** (p. 1004) otherwise.

#### 4.21.5.41 DDS\_SubscriptionMatchedStatus\_initialize()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_initialize (
    struct DDS_SubscriptionMatchedStatus * self )
```

Initializer for new status instances.

New **DDS\_SubscriptionMatchedStatus** (p. 1758) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_RequestedIncompatibleQosStatus\_finalize** (p. 647) should be called to free the contained fields that use dynamic memory:

```
DDS_SubscriptionMatchedStatus *myStatus = malloc(sizeof(struct DDS_SubscriptionMatchedStatus));
DDS_SubscriptionMatchedStatus_initialize(myStatus);
...
DDS_SubscriptionMatchedStatus_finalize(myStatus);
free(myStatus);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### See also

**DDS\_SubscriptionMatchedStatus\_INITIALIZER** (p. 606)

**DDS\_SubscriptionMatchedStatus\_finalize** (p. 654)

#### 4.21.5.42 DDS\_SubscriptionMatchedStatus\_copy()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_copy (
    struct DDS_SubscriptionMatchedStatus * self,
    const struct DDS_SubscriptionMatchedStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

#### 4.21.5.43 DDS\_SubscriptionMatchedStatus\_finalize()

```
DDS_ReturnCode_t DDS_SubscriptionMatchedStatus_finalize (
    struct DDS_SubscriptionMatchedStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.21.5.44 DDS\_SubscriptionMatchedStatus\_equals()

```
DDS_Boolean DDS_SubscriptionMatchedStatus_equals (
    const struct DDS_SubscriptionMatchedStatus * left,
    const struct DDS_SubscriptionMatchedStatus * right )
```

Compares two **DDS\_SubscriptionMatchedStatus** (p. 1758) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This SubscriptionMatchedStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other SubscriptionMatchedStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two SubscriptionMatchedStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.21.5.45 DDS\_DataReaderCacheStatus\_initialize()

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_initialize (
    struct DDS_DataReaderCacheStatus * self )
```

Initializer for new status instances.

New **DDS\_DataReaderCacheStatus** (p. 1365) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_DataReaderCacheStatus\_finalize** (p. 656) should be called to free the contained fields that use dynamic memory:

```
DDS_DataReaderCacheStatus *myStatus = malloc(sizeof(struct DDS_DataReaderCacheStatus));
DDS_DataReaderCacheStatus_initialize(myStatus);
DDS_DataReader_get_datareader_cache_status(myDataReader, myStatus);
DDS_DataReaderCacheStatus_finalize(myStatus);
free(myStatus);
```

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataReader\_get\_datareader\_cache\_status** (p. 677)

**DDS\_DataReaderCacheStatus\_finalize** (p. 656)

## 4.21.5.46 DDS\_DataReaderCacheStatus\_copy()

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_copy (
    struct DDS_DataReaderCacheStatus * self,
    const struct DDS_DataReaderCacheStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataReaderCacheStatus\_INITIALIZER** (p. 606)

**DDS\_DataReaderCacheStatus\_initialize** (p. 655)

**DDS\_DataReaderCacheStatus\_finalize** (p. 656)

4.21.5.47 **DDS\_DataReaderCacheStatus\_finalize()**

```
DDS_ReturnCode_t DDS_DataReaderCacheStatus_finalize (
    struct DDS_DataReaderCacheStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataReaderCacheStatus\_INITIALIZER** (p. 606)

**DDS\_DataReaderCacheStatus\_initialize** (p. 655)

#### 4.21.5.48 DDS\_DataReaderCacheStatus\_equals()

```
DDS_Boolean DDS_DataReaderCacheStatus_equals (
    const struct DDS_DataReaderCacheStatus * left,
    const struct DDS_DataReaderCacheStatus * right )
```

Compares two **DDS\_DataReaderCacheStatus** (p. 1365) for equality.

##### Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This DataReaderCacheStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other DataReaderCacheStatus to be compared with this status instance. Can be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two DataReaderCacheStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

#### 4.21.5.49 DDS\_DataReaderProtocolStatus\_initialize()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_initialize (
    struct DDS_DataReaderProtocolStatus * self )
```

Initializer for new status instances.

New **DDS\_DataReaderProtocolStatus** (p. 1379) instance on heap should be initialized with this function before they are passed to any function. This step ensures that those contained fields that use dynamic memory are properly initialized. This function does not allocate memory.

**DDS\_DataReaderProtocolStatus\_finalize** (p. 658) should be called to free the contained fields that use dynamic memory:

```
DDS_DataReaderProtocolStatus *myStatus = malloc(sizeof(struct DDS_DataReaderProtocolStatus));
DDS_DataReaderProtocolStatus_initialize(myStatus);
DDS_DataReader_get_datareader_protocol_status(myDataReader, myStatus);
DDS_DataReaderProtocolStatus_finalize(myStatus);
free(myStatus);
```

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DataReader\_get\_datareader\_protocol\_status** (p. 678)

**DDS\_DataReaderProtocolStatus\_finalize** (p. 658)

#### 4.21.5.50 DDS\_DataReaderProtocolStatus\_copy()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_copy (
    struct DDS_DataReaderProtocolStatus * self,
    const struct DDS_DataReaderProtocolStatus * source )
```

Copy the contents of the given status into this status.

Status instances can use dynamic memory because of the sequences contained in some status. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**DDS\_DataReaderProtocolStatus\_INITIALIZER** (p. 607)

**DDS\_DataReaderProtocolStatus\_initialize** (p. 657)

**DDS\_DataReaderProtocolStatus\_finalize** (p. 658)

#### 4.21.5.51 DDS\_DataReaderProtocolStatus\_finalize()

```
DDS_ReturnCode_t DDS_DataReaderProtocolStatus_finalize (
    struct DDS_DataReaderProtocolStatus * self )
```

Free any dynamic memory allocated by status instances.

some status may use dynamic memory (regardless of whether the status itself is in dynamic memory). This function frees that memory but otherwise leaves this status unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

Note that if this status instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based status instance after calling this function.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataReaderProtocolStatus\_INITIALIZER** (p. 607)

**DDS\_DataReaderProtocolStatus\_initialize** (p. 657)

## 4.21.5.52 DDS\_DataReaderProtocolStatus\_equals()

```
DDS_Boolean DDS_DataReaderProtocolStatus_equals (
    const struct DDS_DataReaderProtocolStatus * left,
    const struct DDS_DataReaderProtocolStatus * right )
```

Compares two **DDS\_DataReaderProtocolStatus** (p. 1379) for equality.

## Parameters

<i>left</i>	<< <i>in</i> >> (p. 818) This DataReaderProtocolStatus. Can be NULL.
<i>right</i>	<< <i>in</i> >> (p. 818) The other DataReaderProtocolStatus to be compared with this status instance. Can be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two DataReaderProtocolStatus have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.21.5.53 DDS\_DataReaderQos\_equals()

```
DDS_Boolean DDS_DataReaderQos_equals (
    const struct DDS_DataReaderQos * self,
    const struct DDS_DataReaderQos * other )
```

Compares two **DDS\_DataReaderQos** (p. 1390) for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This DataReaderQos.
<i>other</i>	<< <i>in</i> >> (p. 818) The other DataReaderQos to be compared with this DataReaderQos.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two Qos objects are equal or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

4.21.5.54 **DDS\_DataReaderQos\_print()**

```
DDS_ReturnCode_t DDS_DataReaderQos_print (
    const struct DDS_DataReaderQos * self )
```

Prints this **DDS\_DataReaderQos** (p. 1390) to stdout.

Only the differences between this **DDS\_DataReaderQos** (p. 1390) and the documented default are printed. If you wish to print everything regardless, see **DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

4.21.5.55 **DDS\_DataReaderQos\_to\_string()**

```
DDS_ReturnCode_t DDS_DataReaderQos_to_string (
    const struct DDS_DataReaderQos * self,
    char * string,
    DDS_UnsignedLong * string_size )
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 1390).

Only the differences between this **DDS\_DataReaderQos** (p. 1390) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661). The output is formatted according to the default values for **DDS\_QosPrintFormat** (p. 1668).

If the supplied buffer is NULL, the required length of the string is returned via the *string\_size* parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataReaderQos** (p. 1390) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 1390). If NULL, this function will return the required length of this buffer through the <i>string_size</i> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

## See also

**DDS\_DataReaderQos\_to\_string\_w\_params** (p. 661)

4.21.5.56 **DDS\_DataReaderQos\_to\_string\_w\_params()**

```
DDS_ReturnCode_t DDS_DataReaderQos_to_string_w_params (
    const struct DDS_DataReaderQos * self,
    char * string,
    DDS_UnsignedLong * string_size,
    const struct DDS_DataReaderQos * base,
    const struct DDS_QosPrintFormat * format )
```

Obtains a string representation of this **DDS\_DataReaderQos** (p. 1390).

Only the differences between this **DDS\_DataReaderQos** (p. 1390) and the **DDS\_DataReaderQos** (p. 1390) supplied as the base are printed to the string.

It is possible to supply the sentinel value **DDS\_DATAREADER\_QOS\_PRINT\_ALL** (p. 593) as the base to print everything within the QoS.

If the supplied buffer is NULL, the required length of the string is returned via the `string_size` parameter.

If the supplied buffer is not NULL, the string representation of the **DDS\_DataReaderQos** (p. 1390) is written to the buffer.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>string</i>	<< <i>out</i> >> (p. 818) The char buffer that will be used to store the string representation of this <b>DDS_DataReaderQos</b> (p. 1390). If NULL, this function will return the required length of this buffer through the <code>string_size</code> parameter.
<i>string_size</i>	<< <i>inout</i> >> (p. 818) Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
<i>base</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataReaderQos</b> (p. 1390) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
<i>format</i>	<< <i>in</i> >> (p. 818) The <b>DDS_QosPrintFormat</b> (p. 1668) to be used to format the output string.

## Returns

**DDS\_RETCODE\_OK** (p. 1025) if no error was encountered.

#### 4.21.5.57 DDS\_DataReaderQos\_initialize()

```
DDS_ReturnCode_t DDS_DataReaderQos_initialize (
    struct DDS_DataReaderQos * self )
```

Initializer for new QoS instances.

New **DDS\_DataReaderQos** (p. 1390) instances on heap should be initialized with this function before they are passed to any function. This step ensures that those contained QoS policies that use dynamic memory are properly initialized. This function does not allocate memory.

Calling this function is not a substitute for calling **DDS\_DataReader\_get\_qos** (p. 680) or **DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93); one of those should be called subsequently to setting the QoS of any new or existing entity. **DDS\_DataReaderQos\_finalize** (p. 663) should be called to free the contained QoS policies that use dynamic memory:

```
DDS_DataReaderQos *myQos = malloc(sizeof(struct DDS_DataReaderQos));
DDS_DataReaderQos_initialize(myQos);
DDS_DomainParticipantFactory_get_default_datareader_qos(myFactory, myQos);
DDS_DataReaderQos_set_qos(myDataReader, myQos);
DDS_DataReaderQos_finalize(myQos);
free(myQos);
```

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

##### See also

- DDS\_DataReaderQos\_INITIALIZER** (p. 607)
- DDS\_DomainParticipant\_get\_default\_datareader\_qos** (p. 93)
- DDS\_DataReaderQos\_finalize** (p. 663)

#### 4.21.5.58 DDS\_DataReaderQos\_copy()

```
DDS_ReturnCode_t DDS_DataReaderQos_copy (
    struct DDS_DataReaderQos * self,
    const struct DDS_DataReaderQos * source )
```

Copy the contents of the given QoS into this QoS.

**DDS\_DataReaderQos** (p. 1390) instances can use dynamic memory because of the sequences contained in some QoS policies. A shallow copy by assignment is therefore unsafe. This function performs a deep-copy, allocating memory if necessary.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>source</i>	<< <i>in</i> >> (p. 818). Status to be copied from.

## 4.21.5.59 DDS\_DataReaderQos\_finalize()

```
DDS_ReturnCode_t DDS_DataReaderQos_finalize (
    struct DDS_DataReaderQos * self )
```

Free any dynamic memory allocated by the policies in this **DDS\_DataReaderQos** (p. 1390).

Some QoS policies may use dynamic memory (regardless of whether the QoS itself is in dynamic memory). This function frees that memory but otherwise leaves this QoS unchanged. It should be called on all instances before they are freed (or, in the case of stack-based instances, before they go out of scope).

This function does not leave this object in an invalid state. It is permissible to clear a QoS and then subsequently allocate new dynamic memory in one or more of its QoS policies.

Note that if this QoS instance is stored in heap memory, calling this function will *not* call free() on it; the user is responsible for explicitly freeing any heap-based QoS instance after calling this function.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## 4.21.5.60 DDS\_DataReader\_as\_entity()

```
DDS_Entity * DDS_DataReader_as_entity (
    DDS_DataReader * dataReader )
```

Accesses the **DDS\_DataReader** (p. 608)'s supertype instance.

## Parameters

<i>dataReader</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

## 4.21.5.61 DDS\_DataReader\_create\_readcondition()

```
DDS_ReadCondition * DDS_DataReader_create_readcondition (
```

```

DDS_DataReader * self,
DDS_SampleStateMask sample_states,
DDS_ViewStateMask view_states,
DDS_InstanceStateMask instance_states )

```

Creates a **DDS\_ReadCondition** (p. 686).

The returned **DDS\_ReadCondition** (p. 686) will be attached and belong to the **DDS\_DataReader** (p. 608).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample_states</i>	<< <i>in</i> >> (p. 818) sample state of the data samples that are of interest
<i>view_states</i>	<< <i>in</i> >> (p. 818) view state of the data samples that are of interest
<i>instance_states</i>	<< <i>in</i> >> (p. 818) instance state of the data samples that are of interest

#### Returns

return **DDS\_ReadCondition** (p. 686) created. Returns NULL in case of failure.

#### 4.21.5.62 DDS\_DataReader\_create\_readcondition\_w\_params()

```

DDS_ReadCondition * DDS_DataReader_create_readcondition_w_params (
    DDS_DataReader * self,
    const struct DDS_ReadConditionParams * params )

```

<<*extension*>> (p. 817) Creates a **DDS\_ReadCondition** (p. 686) with parameters.

The returned **DDS\_ReadCondition** (p. 686) will be attached and belong to the **DDS\_DataReader** (p. 608).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>params</i>	<< <i>in</i> >> (p. 818) creation parameters.

#### Returns

return **DDS\_ReadCondition** (p. 686) created. Returns NULL in case of failure.

#### 4.21.5.63 DDS\_DataReader\_create\_querycondition()

```

DDS_QueryCondition * DDS_DataReader_create_querycondition (
    DDS_DataReader * self,

```

```

    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states,
    const char * query_expression,
    const struct DDS_StringSeq * query_parameters )

```

Creates a **DDS\_QueryCondition** (p. 691).

The returned **DDS\_QueryCondition** (p. 691) will be attached and belong to the **DDS\_DataReader** (p. 608).

**Queries and Filters Syntax** (p. 730) describes the syntax of `query_expression` and `query_parameters`.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample_states</i>	<< <i>in</i> >> (p. 818) sample state of the data samples that are of interest
<i>view_states</i>	<< <i>in</i> >> (p. 818) view state of the data samples that are of interest
<i>instance_states</i>	<< <i>in</i> >> (p. 818) instance state of the data samples that are of interest
<i>query_expression</i>	<< <i>in</i> >> (p. 818) Expression for the query. Cannot be NULL.
<i>query_parameters</i>	<< <i>in</i> >> (p. 818) Parameters for the query expression. Cannot be NULL.

#### Returns

return **DDS\_QueryCondition** (p. 691) created. Returns NULL in case of failure.

#### 4.21.5.64 DDS\_DataReader\_create\_querycondition\_w\_params()

```

DDS_QueryCondition * DDS_DataReader_create_querycondition_w_params (
    DDS_DataReader * self,
    const struct DDS_QueryConditionParams * params )

```

<<*extension*>> (p. 817) Creates a **DDS\_QueryCondition** (p. 691) with parameters.

The returned **DDS\_QueryCondition** (p. 691) will be attached and belong to the **DDS\_DataReader** (p. 608).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>params</i>	<< <i>in</i> >> (p. 818) creation parameters.

#### Returns

return **DDS\_QueryCondition** (p. 691) created. Returns NULL in case of failure.

#### 4.21.5.65 DDS\_DataReader\_delete\_readcondition()

```
DDS_ReturnCode_t DDS_DataReader_delete_readcondition (
    DDS_DataReader * self,
    DDS_ReadCondition * condition )
```

Deletes a **DDS\_ReadCondition** (p. 686) or **DDS\_QueryCondition** (p. 691) attached to the **DDS\_DataReader** (p. 608).

Since **DDS\_QueryCondition** (p. 691) specializes **DDS\_ReadCondition** (p. 686), it can also be used to delete a **DDS\_↔\_QueryCondition** (p. 691).

##### Precondition

The **DDS\_ReadCondition** (p. 686) must be attached to the **DDS\_DataReader** (p. 608), or the operation will fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>condition</i>	<< <i>in</i> >> (p. 818) Condition to be deleted.

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

#### 4.21.5.66 DDS\_DataReader\_delete\_contained\_entities()

```
DDS_ReturnCode_t DDS_DataReader_delete_contained_entities (
    DDS_DataReader * self )
```

Deletes all the entities that were created by means of the "create" operations on the **DDS\_DataReader** (p. 608).

Deletes all contained **DDS\_ReadCondition** (p. 686), **DDS\_QueryCondition** (p. 691), and **DDS\_TopicQuery** (p. 698) objects.

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025) if the any of the contained entities is in a state where it cannot be deleted.

Once **DDS\_DataReader\_delete\_contained\_entities** (p. 666) completes successfully, the application may delete the **DDS\_DataReader** (p. 608).

##### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025)

## 4.21.5.67 DDS\_DataReader\_wait\_for\_historical\_data()

```
DDS_ReturnCode_t DDS_DataReader_wait_for_historical_data (
    DDS_DataReader * self,
    const struct DDS_Duration_t * max_wait )
```

Waits until all "historical" data is received for **DDS\_DataReader** (p. 608) entities that have a non-VOLATILE Durability QoS kind.

This operation is intended only for **DDS\_DataReader** (p. 608) entities that have a non-VOLATILE Durability QoS kind.

As soon as an application enables a non-VOLATILE **DDS\_DataReader** (p. 608), it will start receiving both "historical" data (i.e., the data that was written prior to the time the **DDS\_DataReader** (p. 608) joined the domain) as well as any new data written by the **DDS\_DataWriter** (p. 478) entities. There are situations where the application logic may require the application to wait until all "historical" data is received. This is the purpose of the **DDS\_DataReader\_wait\_for\_historical\_data** (p. 667) operations.

**DDS\_DataReader\_wait\_for\_historical\_data()** (p. 667) blocks the calling thread until either all "historical" data is received, or until the duration specified by the *max\_wait* parameter elapses, whichever happens first. It will return immediately if no DataWriters have been discovered at the time the operation is called; therefore it is advisable to make sure at least one **DDS\_DataWriter** (p. 478) has been discovered before calling this operation. (One way to do this is by using **DDS\_DataReader\_get\_subscription\_matched\_status** (p. 675).)

A successful completion indicates that all the "historical" data was "received"; timing out indicates that *max\_wait* elapsed before all the data was received.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>max_wait</i>	<< <i>in</i> >> (p. 818) Timeout value. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_TIMEOUT** (p. 1025) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

#### 4.21.5.68 DDS\_DataReader\_acknowledge\_sample\_w\_response()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_sample_w_response (
    DDS_DataReader * self,
    const struct DDS_SampleInfo * sample_info,
    const struct DDS_AckResponseData_t * response_data )
```

<<*extension*>> (p. 817) Acknowledges a single sample explicitly.

Applicable only when `DDS_ReliabilityQosPolicy::acknowledgment_kind` (p.1681) = `DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE` (p. 1125)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values `DDS_RtpsReliableReaderProtocol_t::samples_per_app_ack` (p. 1698) and `DDS_RtpsReliableReaderProtocol_t::app_ack_period` (p. 1698).

The maximum length of the response is configured using `DDS_DataReaderResourceLimitsQosPolicy::max_app_ack_response_length` (p. 1407)

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample_info</i>	<< <i>in</i> >> (p. 818) <code>DDS_SampleInfo</code> (p. 1720) identifying the sample being acknowledged.
<i>response_data</i>	<< <i>in</i> >> (p. 818) Response data sent to <code>DDS_DataWriter</code> (p. 478) upon acknowledgment (via <code>DDS_DataWriterListener::on_application_acknowledgment</code> (p. 1421))

##### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.21.5.69 DDS\_DataReader\_acknowledge\_all\_w\_response()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_all_w_response (
    DDS_DataReader * self,
    const struct DDS_AckResponseData_t * response_data )
```

<<*extension*>> (p. 817) Acknowledges all previously accessed samples.

Applicable only when `DDS_ReliabilityQosPolicy::acknowledgment_kind` (p.1681) = `DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE` (p. 1125)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values `DDS_RtpsReliableReaderProtocol_t::samples_per_app_ack` (p. 1698) and `DDS_RtpsReliableReaderProtocol_t::app_ack_period` (p. 1698).

The maximum length of the response is configured using `DDS_DataReaderResourceLimitsQosPolicy::max_app_ack_response_length` (p. 1407).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>response_data</i>	<< <i>in</i> >> (p. 818) Response data sent to <b>DDS_DataWriter</b> (p. 478) upon acknowledgment

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.21.5.70 DDS\_DataReader\_acknowledge\_sample()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_sample (
    DDS_DataReader * self,
    const struct DDS_SampleInfo * sample_info )
```

<<*extension*>> (p. 817) Acknowledges a single sample explicitly.

Applicable only when **DDS\_ReliabilityQoSPolicy::acknowledgment\_kind** (p. 1681) = **DDS\_APPLICATION\_↔EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 1125)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS\_Rtps\_↔ReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1698) and **DDS\_RtpsReliableReaderProtocol\_t::app\_ack\_↔\_period** (p. 1698).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>sample_info</i>	<< <i>in</i> >> (p. 818) <b>DDS_SampleInfo</b> (p. 1720) identifying the sample being acknowledged.

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.21.5.71 DDS\_DataReader\_acknowledge\_all()

```
DDS_ReturnCode_t DDS_DataReader_acknowledge_all (
    DDS_DataReader * self )
```

<<*extension*>> (p. 817) Acknowledges all previously accessed samples.

Applicable only when `DDS_ReliabilityQoSPolicy::acknowledgment_kind` (p. 1681) = `DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE` (p. 1125)

A call to this function does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values `DDS_RtpsReliableReaderProtocol_t::samples_per_app_ack` (p. 1698) and `DDS_RtpsReliableReaderProtocol_t::app_ack_period` (p. 1698).

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.21.5.72 DDS\_DataReader\_get\_matched\_publications()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publications (
    DDS_DataReader * self,
    struct DDS_InstanceHandleSeq * publication_handles )
```

Retrieves the list of publications currently "associated" with this `DDS_DataReader` (p. 608).

A publication is considered to be matching if all of the following criteria are true:

- The publication is within the same domain as this subscription.
- The publication has a matching `DDS_Topic` (p. 172).
- The publication has compatible QoS.
- If the applications are using partitions, the publication shares a common partition with this subscription.
- The `DDS_DomainParticipant` (p. 72) has not indicated that the publication's `DDS_DomainParticipant` (p. 72) should be "ignored" by means of the `DDS_DomainParticipant_ignore_publication` (p. 129) API.
- If the subscription is using a `DDS_ContentFilteredTopic` (p. 173) and the publication is using the `DDS_MultiChannelQoSPolicy` (p. 1603), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the reader has completed the key exchange with the writer.

The handles returned in the `publication_handles` list are the ones that are used by the RTI Connext implementation to locally identify the corresponding matched `DDS_DataWriter` (p. 478) entities. These handles match the ones that appear in the `instance_handle` field of the `DDS_SampleInfo` (p. 1720) when reading the `DDS_PUBLICATION_TOPIC_NAME` (p. 900) builtin topic.

This API may return the publication handles of publications that are not alive. `DDS_DataReader_is_matched_publication_alive` (p. 671) can be used to check the liveness of the remote publication.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>publication_handles</i>	<< <i>inout</i> >> (p. 818). The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this function will fail with <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 1025). The maximum number of matches possible is configured with <b>DDS_DomainParticipantResourceLimitsQoSPolicy</b> (p. 1494). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 1025) if the sequence is too small and the system cannot resize it, or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

4.21.5.73 **DDS\_DataReader\_is\_matched\_publication\_alive()**

```
DDS_ReturnCode_t DDS_DataReader_is_matched_publication_alive (
    DDS_DataReader * self,
    DDS_Boolean * is_alive,
    const DDS_InstanceHandle_t * publication_handle )
```

Check if a publication currently matched with a DataReader is alive.

This API is used for querying the endpoint liveliness of a matched publication. A matched publication will be marked as not alive if the liveliness that it committed to through its **LIVELINESS** (p. 1097) QoS policy was not respected. Note that if the participant associated with the matched publication loses liveliness, the **DDS\_InstanceHandle\_t** (p. 210) will become invalid and this function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 1025).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>publication_handle</i>	<< <i>in</i> >> (p. 818) The <b>DDS_InstanceHandle_t</b> (p. 210) of the matched publication. See <b>DDS_DataReader_get_matched_publications</b> (p. 670) for a description of what is considered a matched publication.
<i>is_alive</i>	<< <i>out</i> >> (p. 818) Indicates whether or not the matched publication is alive.

## Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.21.5.74 DDS\_DataReader\_get\_matched\_publication\_data()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_data (
    DDS_DataReader * self,
    struct DDS_PublicationBuiltinTopicData * publication_data,
    const DDS_InstanceHandle_t * publication_handle )
```

Retrieves the information on a publication that is currently "associated" with the **DDS\_DataReader** (p.608).

The `publication_handle` must correspond to a publication currently associated with the **DDS\_DataReader** (p.608). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p.1025). Use the operation **DDS\_DataReader\_get\_matched\_publications** (p.670) to find the publications that are currently matched with the **DDS\_DataReader** (p.608).

Note: This operation does not retrieve the **DDS\_PublicationBuiltinTopicData::type\_code** (p.1654). This information is available through **DDS\_DataReaderListener::on\_data\_available()** (p.1374) (if a reader listener is installed on the **DDS\_PublicationBuiltinTopicDataDataReader** (p.900)).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p.818) Cannot be NULL.
<i>publication_data</i>	<< <i>inout</i> >> (p.818). The information to be filled in on the associated publication. Cannot be NULL.
<i>publication_handle</i>	<< <i>in</i> >> (p.818). Handle to a specific publication associated with the <b>DDS_DataWriter</b> (p.478). Must correspond to a publication currently associated with the <b>DDS_DataReader</b> (p.608). Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p.1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p.1025)

#### 4.21.5.75 DDS\_DataReader\_get\_matched\_publication\_participant\_data()

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_participant_data (
    DDS_DataReader * self,
    struct DDS_ParticipantBuiltinTopicData * participant_data,
    const DDS_InstanceHandle_t * publication_handle )
```

<<*extension*>> (p.817) Retrieves the information on the discovered **DDS\_DomainParticipant** (p.72) associated with the publication that is currently matching with the **DDS\_DataReader** (p.608).

The `publication_handle` must correspond to a publication currently associated with the **DDS\_DataReader** (p.608). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p.1025). The operation may also fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p.1025) if the publication corresponds to the same **DDS\_↵ DomainParticipant** (p.72) that the DataReader belongs to. Use the operation **DDS\_DataReader\_get\_matched\_↵ publications** (p.670) to find the publications that are currently matched with the **DDS\_DataReader** (p.608).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>participant_data</i>	<< <i>inout</i> >> (p. 818). The information to be filled in on the associated participant. Cannot be NULL.
<i>publication_handle</i>	<< <i>in</i> >> (p. 818). Handle to a specific publication associated with a <b>DDS_DataWriter</b> (p. 478). Must correspond to a publication currently associated with the <b>DDS_DataReader</b> (p. 608). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## 4.21.5.76 DDS\_DataReader\_get\_topicdescription()

```
DDS_TopicDescription * DDS_DataReader_get_topicdescription (
    DDS_DataReader * self )
```

Returns the **DDS\_TopicDescription** (p. 171) associated with the **DDS\_DataReader** (p. 608).

Returns that same **DDS\_TopicDescription** (p. 171) that was used to create the **DDS\_DataReader** (p. 608).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_TopicDescription** (p. 171) associated with the **DDS\_DataReader** (p. 608).

## 4.21.5.77 DDS\_DataReader\_get\_subscriber()

```
DDS_Subscriber * DDS_DataReader_get_subscriber (
    DDS_DataReader * self )
```

Returns the **DDS\_Subscriber** (p. 565) to which the **DDS\_DataReader** (p. 608) belongs.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_Subscriber** (p. 565) to which the **DDS\_DataReader** (p. 608) belongs.

#### 4.21.5.78 DDS\_DataReader\_get\_sample\_rejected\_status()

```
DDS_ReturnCode_t DDS_DataReader_get_sample_rejected_status (
    DDS_DataReader * self,
    struct DDS_SampleRejectedStatus * status )
```

Accesses the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 1033) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_SampleRejectedStatus</b> (p. 1733) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.21.5.79 DDS\_DataReader\_get\_liveliness\_changed\_status()

```
DDS_ReturnCode_t DDS_DataReader_get_liveliness_changed_status (
    DDS_DataReader * self,
    struct DDS_LivelinessChangedStatus * status )
```

Accesses the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 1034) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_LivelinessChangedStatus</b> (p. 1572) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

**4.21.5.80 DDS\_DataReader\_get\_requested\_deadline\_missed\_status()**

```
DDS_ReturnCode_t DDS_DataReader_get_requested_deadline_missed_status (
    DDS_DataReader * self,
    struct DDS_RequestedDeadlineMissedStatus * status )
```

Accesses the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 1032) communication status.

This also resets the status so that it is no longer considered changed.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_RequestedDeadlineMissedStatus</b> (p. 1688) to be filled in. Cannot be NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**4.21.5.81 DDS\_DataReader\_get\_requested\_incompatible\_qos\_status()**

```
DDS_ReturnCode_t DDS_DataReader_get_requested_incompatible_qos_status (
    DDS_DataReader * self,
    struct DDS_RequestedIncompatibleQosStatus * status )
```

Accesses the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 1032) communication status.

This also resets the status so that it is no longer considered changed.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_RequestedIncompatibleQosStatus</b> (p. 1689) to be filled in. Cannot be NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024)

**4.21.5.82 DDS\_DataReader\_get\_subscription\_matched\_status()**

```
DDS_ReturnCode_t DDS_DataReader_get_subscription_matched_status (
    DDS_DataReader * self,
    struct DDS_SubscriptionMatchedStatus * status )
```

Accesses the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 1035) communication status.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_SubscriptionMatchedStatus</b> (p. 1758) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.21.5.83 **DDS\_DataReader\_get\_sample\_lost\_status()**

```
DDS_ReturnCode_t DDS_DataReader_get_sample_lost_status (
    DDS_DataReader * self,
    struct DDS_SampleLostStatus * status )
```

Accesses the **DDS\_SAMPLE\_LOST\_STATUS** (p. 1033) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_SampleLostStatus</b> (p. 1732) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.21.5.84 **DDS\_DataReader\_get\_datareader\_cache\_status()**

```
DDS_ReturnCode_t DDS_DataReader_get_datareader_cache_status (
    DDS_DataReader * self,
    struct DDS_DataReaderCacheStatus * status )
```

<<*extension*>> (p. 817) Gets the datareader cache status for this reader.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <i>inout</i> >> (p. 818) <b>DDS_DataReaderCacheStatus</b> (p. 1365) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.21.5.85 `DDS_DataReader_get_datareader_protocol_status()`

```
DDS_ReturnCode_t DDS_DataReader_get_datareader_protocol_status (
    DDS_DataReader * self,
    struct DDS_DataReaderProtocolStatus * status )
```

<<**extension**>> (p. 817) Gets the datareader protocol status for this reader.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <b>inout</b> >> (p. 818) <b>DDS_DataReaderProtocolStatus</b> (p. 1379) to be filled in. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025).

4.21.5.86 `DDS_DataReader_get_matched_publication_datareader_protocol_status()`

```
DDS_ReturnCode_t DDS_DataReader_get_matched_publication_datareader_protocol_status (
    DDS_DataReader * self,
    struct DDS_DataReaderProtocolStatus * status,
    const DDS_InstanceHandle_t * publication_handle )
```

<<**extension**>> (p. 817) Gets the datareader protocol status for this reader, per matched publication identified by the `publication_handle`.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>status</i>	<< <b>inout</b> >> (p. 818). The information to be filled in on the associated publication. Cannot be NULL.
<i>publication_handle</i>	<< <b>in</b> >> (p. 818). Handle to a specific publication associated with the <b>DDS_DataWriter</b> (p. 478). Cannot be NULL. . Must correspond to a publication currently associated with the <b>DDS_DataReader</b> (p. 608).
	Generated by Doxygen

## Returns

One of the **Standard Return Codes** (p. 1024) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 1025)

## 4.21.5.87 DDS\_DataReader\_set\_qos()

```
DDS_ReturnCode_t DDS_DataReader_set_qos (
    DDS_DataReader * self,
    const struct DDS_DataReaderQos * qos )
```

Sets the reader QoS.

Modifies the QoS of the **DDS\_DataReader** (p. 608).

The **DDS\_DataReaderQos::user\_data** (p. 1393), **DDS\_DataReaderQos::deadline** (p. 1392), **DDS\_DataReaderQos::latency\_budget** (p. 1392), **DDS\_DataReaderQos::time\_based\_filter** (p. 1393), **DDS\_DataReaderQos::reader\_data\_lifecycle** (p. 1394) can be changed. The other policies are immutable.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 818) The <b>DDS_DataReaderQos</b> (p. 1390) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDS_DataReader</b> (p. 608) is enabled. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 593) can be used to indicate that the QoS of the <b>DDS_DataReader</b> (p. 608) should be changed to match the current default <b>DDS_DataReaderQos</b> (p. 1390) set in the <b>DDS_Subscriber</b> (p. 565). Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

## See also

**DDS\_DataReaderQos** (p. 1390) for rules on consistency among QoS

**set\_qos (abstract)** (p. 1161)

**DDS\_DataReader\_set\_qos** (p. 679)

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.21.5.88 DDS\_DataReader\_set\_qos\_with\_profile()

```
DDS_ReturnCode_t DDS_DataReader_set_qos_with_profile (
    DDS_DataReader * self,
    const char * library_name,
    const char * profile_name )
```

<<*extension*>> (p. 817) Changes the QoS of this reader using the input XML QoS profile.

This operation modifies the QoS of the **DDS\_DataReader** (p. 608).

The **DDS\_DataReaderQos::user\_data** (p. 1393), **DDS\_DataReaderQos::deadline** (p. 1392), **DDS\_DataReaderQos::latency\_budget** (p. 1392), **DDS\_DataReaderQos::time\_based\_filter** (p. 1393), **DDS\_DataReaderQos::reader\_data\_lifecycle** (p. 1394) can be changed. The other policies are immutable.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 818) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDS_Subscriber_set_default_library</b> (p. 588)).
<i>profile_name</i>	<< <i>in</i> >> (p. 818) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDS_Subscriber_set_default_profile</b> (p. 587)).

##### Returns

One of the **Standard Return Codes** (p. 1024), **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p. 1025), or **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 1025).

##### See also

**DDS\_DataReaderQos** (p. 1390) for rules on consistency among QoS

**DDS\_DataReader\_set\_qos** (p. 679)

**Operations Allowed in Listener Callbacks** (p. 1571)

#### 4.21.5.89 DDS\_DataReader\_get\_qos()

```
DDS_ReturnCode_t DDS_DataReader_get_qos (
    DDS_DataReader * self,
    struct DDS_DataReaderQos * qos )
```

Gets the reader QoS.

This function may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>qos</i>	<< <i>inout</i> >> (p. 818) The <b>DDS_DataReaderQos</b> (p. 1390) to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**get\_qos (abstract)** (p. 1161)

## 4.21.5.90 DDS\_DataReader\_set\_property()

```
DDS_ReturnCode_t DDS_DataReader_set_property (
    DDS_DataReader * self,
    const char * property_name,
    const char * value,
    DDS_Boolean propagate )
```

Set the value for a property that applies to a DataReader.

## Warning

This function is not implemented in all APIs and it's intended only for testing purposes. You should use **DDS\_↔  
DataReader\_set\_qos** (p. 679) instead.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>property_name</i>	<< <i>in</i> >> (p. 818). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 818). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 818). Indicates if the property will be propagated or not.

## Returns

One of the **Standard Return Codes** (p. 1024)

See also

**DDS\_DomainParticipant\_set\_property** (p. 150)

**DDS\_DataWriter\_set\_property** (p. 545)

**DDS\_DataReader\_set\_qos** (p. 679)

#### 4.21.5.91 DDS\_DataReader\_set\_listener()

```
DDS_ReturnCode_t DDS_DataReader_set_listener (
    DDS_DataReader * self,
    const struct DDS_DataReaderListener * l,
    DDS_StatusMask mask )
```

Sets the reader listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>l</i>	<< <i>in</i> >> (p. 818) <b>DDS_DataReaderListener</b> (p. 1372) to set to
<i>mask</i>	<< <i>in</i> >> (p. 818) <b>DDS_StatusMask</b> (p. 1030) associated with the <b>DDS_DataReaderListener</b> (p. 1372). The callback function on the listener cannot be NULL if the corresponding status is turned on in the <code>mask</code> .

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**set\_listener (abstract)** (p. 1162)

#### 4.21.5.92 DDS\_DataReader\_get\_listener()

```
struct DDS_DataReaderListener DDS_DataReader_get_listener (
    DDS_DataReader * self )
```

Gets the reader listener.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_DataReaderListener** (p. 1372) of the **DDS\_DataReader** (p. 608).

## See also

**DDS\_DataReader\_get\_listenerX** (p. 683)

**get\_listener (abstract)** (p. 1162)

## 4.21.5.93 DDS\_DataReader\_get\_listenerX()

```
DDS_ReturnCode_t DDS_DataReader_get_listenerX (
    DDS_DataReader * self,
    struct DDS_DataReaderListener * listener )
```

<<**extension**>> (p. 817) Gets the reader listener.

An alternative form of `get_listener` that fills in an existing listener structure rather than returning one on the stack.

## Parameters

<i>self</i>	<< <b>in</b> >> (p. 818) Cannot be NULL.
<i>listener</i>	<< <b>inout</b> >> (p. 818) <b>DDS_DataReaderListener</b> (p. 1372) structure to be filled up. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**DDS\_DataReader\_get\_listener** (p. 682)

**get\_listener (abstract)** (p. 1162)

## 4.21.5.94 DDS\_DataReader\_create\_topic\_query()

```
DDS_TopicQuery * DDS_DataReader_create_topic_query (
    DDS_DataReader * self,
    const struct DDS_TopicQuerySelection * selection )
```

Creates a **DDS\_TopicQuery** (p. 698).

The returned **DDS\_TopicQuery** (p. 698) will have been issued if the **DDS\_DataReader** (p. 608) is enabled. Otherwise, the **DDS\_TopicQuery** (p. 698) will be issued once the **DDS\_DataReader** (p. 608) is enabled

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>selection</i>	<< <i>in</i> >> (p. 818) The selection with which to create the <b>DDS_TopicQuery</b> (p. 698). The special values <b>DDS_TOPIC_QUERY_SELECTION_SELECT_ALL</b> (p. 701) and <b>DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER</b> (p. 701) can be used. The expression can start with the special condition "@instance_state = ALIVE AND" followed by the rest of the expression. This restricts the selection to samples of alive instances. Cannot be NULL.

## Returns

return Created **DDS\_TopicQuery** (p. 698). Returns NULL in case of failure.

4.21.5.95 **DDS\_DataReader\_delete\_topic\_query()**

```
DDS_ReturnCode_t DDS_DataReader_delete_topic_query (
    DDS_DataReader * self,
    DDS_TopicQuery * query )
```

Deletes a **DDS\_TopicQuery** (p. 698).

Cancels an active **DDS\_TopicQuery** (p. 698). After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>query</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicQuery</b> (p. 698) to delete. Cannot be NULL.

## Returns

One of the **Standard Return Codes** (p. 1024)

4.21.5.96 **DDS\_DataReader\_lookup\_topic\_query()**

```
DDS_TopicQuery * DDS_DataReader_lookup_topic_query (
    DDS_DataReader * self,
    const struct DDS_GUID_t * guid )
```

Retrieves an existing **DDS\_TopicQuery** (p. 698).

Retrieves the **DDS\_TopicQuery** (p. 698) that corresponds to the input **DDS\_GUID\_t** (p. 1557).

If no TopicQuery is found for the specified GUID or the TopicQuery is marked for deletion, this returns NULL.

To get the **DDS\_GUID\_t** (p. 1557) associated with a **DDS\_TopicQuery** (p. 698), use the function **DDS\_TopicQuery\_get\_guid** (p. 700).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>guid</i>	<< <i>in</i> >> (p. 818) The <b>DDS_TopicQuery</b> (p. 698) GUID. Cannot be NULL.

## 4.21.5.97 DDS\_DataReader\_take\_discovery\_snapshot()

```
DDS_ReturnCode_t DDS_DataReader_take_discovery_snapshot (
    DDS_DataReader * self,
    const char * file_name )
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"
guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"
topic="FooTopic" type="FooType"
-----
Compatible writers:
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"
kind="unkeyed user datareader"
unicastLocators="udpv4://192.168.1.170:7411"
liveliness="ALIVE"
Incompatible writers:
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"
kind="unkeyed user datareader"
unicastLocators="udpv4://192.168.1.170:7411"
reason="Inconsistent QoS"
-----
```

## Precondition

*self* is not NULL.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) The local reader.
<i>file_name</i>	<< <i>in</i> >> (p. 818) Name of the file where snapshot should be printed. If NULL, the snapshot will be printed through <b>NDDS_Config_Logger</b> (p. 1848). Otherwise, the snapshot will be printed in the file specified by <i>file_name</i> .

## Returns

One of the **Standard Return Codes** (p. 1024).

## 4.22 Read Conditions

**DDS\_ReadCondition** (p. 686) and associated elements

### Data Structures

- struct **DDS\_ReadConditionParams**  
 <<*extension*>> (p. 817) *Input parameters for **DDS\_DataReader\_create\_readcondition\_w\_params** (p. 664)*

### Typedefs

- typedef struct DDS\_ReadConditionImpl **DDS\_ReadCondition**  
 <<*interface*>> (p. 818) *Conditions specifically dedicated to read operations and attached to one **DDS\_DataReader** (p. 608).*

### Functions

- **DDS\_Condition \* DDS\_ReadCondition\_as\_condition** ( **DDS\_ReadCondition \*read\_condition**)  
*Accesses a **DDS\_ReadCondition** (p. 686)'s supertype instance.*
- **DDS\_SampleStateMask DDS\_ReadCondition\_get\_sample\_state\_mask** ( **DDS\_ReadCondition \*self**)  
*Retrieves the set of *sample\_states* for the condition.*
- **DDS\_ViewStateMask DDS\_ReadCondition\_get\_view\_state\_mask** ( **DDS\_ReadCondition \*self**)  
*Retrieves the set of *view\_states* for the condition.*
- **DDS\_InstanceStateMask DDS\_ReadCondition\_get\_instance\_state\_mask** ( **DDS\_ReadCondition \*self**)  
*Retrieves the set of *instance\_states* for the condition.*
- **DDS\_StreamKindMask DDS\_ReadCondition\_get\_stream\_kind\_mask** ( **DDS\_ReadCondition \*self**)  
*Retrieves the set of *stream kind mask* for the condition.*
- **DDS\_DataReader \* DDS\_ReadCondition\_get\_datareader** ( **DDS\_ReadCondition \*self**)  
*Returns the **DDS\_DataReader** (p. 608) associated with the **DDS\_ReadCondition** (p. 686).*

#### 4.22.1 Detailed Description

**DDS\_ReadCondition** (p. 686) and associated elements

#### 4.22.2 Typedef Documentation

### 4.22.2.1 DDS\_ReadCondition

```
typedef struct DDS_ReadConditionImpl DDS_ReadCondition
```

<<*interface*>> (p. 818) Conditions specifically dedicated to read operations and attached to one **DDS\_DataReader** (p. 608).

**DDS\_ReadCondition** (p. 686) objects allow an application to specify the data samples it is interested in (by specifying the desired `sample_states`, `view_states` as well as `instance_states` in **FooDataReader\_read** (p. 618) and **FooDataReader\_take** (p. 619) variants.

This allows RTI Connext to enable the condition only when suitable information is available. They are to be used in conjunction with a WaitSet as normal conditions.

More than one **DDS\_ReadCondition** (p. 686) may be attached to the same **DDS\_DataReader** (p. 608).

## 4.22.3 Function Documentation

### 4.22.3.1 DDS\_ReadCondition\_as\_condition()

```
DDS_Condition * DDS_ReadCondition_as_condition (
    DDS_ReadCondition * read_condition )
```

Accesses a **DDS\_ReadCondition** (p. 686)'s supertype instance.

#### Parameters

<code>read_condition</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-----------------------------	------------------------------------------

### 4.22.3.2 DDS\_ReadCondition\_get\_sample\_state\_mask()

```
DDS_SampleStateMask DDS_ReadCondition_get_sample_state_mask (
    DDS_ReadCondition * self )
```

Retrieves the set of `sample_states` for the condition.

#### Parameters

<code>self</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------------	------------------------------------------

#### 4.22.3.3 DDS\_ReadCondition\_get\_view\_state\_mask()

```
DDS_ViewStateMask DDS_ReadCondition_get_view_state_mask (  
    DDS_ReadCondition * self )
```

Retrieves the set of `view_states` for the condition.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.22.3.4 DDS\_ReadCondition\_get\_instance\_state\_mask()

```
DDS_InstanceStateMask DDS_ReadCondition_get_instance_state_mask (  
    DDS_ReadCondition * self )
```

Retrieves the set of `instance_states` for the condition.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.22.3.5 DDS\_ReadCondition\_get\_stream\_kind\_mask()

```
DDS_StreamKindMask DDS_ReadCondition_get_stream_kind_mask (  
    DDS_ReadCondition * self )
```

Retrieves the set of stream kind mask for the condition.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### 4.22.3.6 DDS\_ReadCondition\_get\_datareader()

```
DDS_DataReader * DDS_ReadCondition_get_datareader (  
    DDS_ReadCondition * self )
```

---

Returns the **DDS\_DataReader** (p. 608) associated with the **DDS\_ReadCondition** (p. 686).

There is exactly one **DDS\_DataReader** (p. 608) associated with each **DDS\_ReadCondition** (p. 686).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## Returns

**DDS\_DataReader** (p. 608) associated with the **DDS\_ReadCondition** (p. 686).

## 4.23 Query Conditions

**DDS\_QueryCondition** (p. 691) and associated elements

### Data Structures

- struct **DDS\_QueryConditionParams**  
 <<*extension*>> (p. 817) Input parameters for **DDS\_DataReader\_create\_querycondition\_w\_params** (p. 665)

### Typedefs

- typedef struct DDS\_QueryConditionImpl **DDS\_QueryCondition**  
 <<*interface*>> (p. 818) These are specialised **DDS\_ReadCondition** (p. 686) objects that allow the application to also specify a filter on the locally available data.

### Functions

- **DDS\_ReadCondition \* DDS\_QueryCondition\_as\_readcondition** ( **DDS\_QueryCondition \*query\_condition**)  
 Access a **DDS\_QueryCondition** (p. 691)'s supertype instance.
- const char \* **DDS\_QueryCondition\_get\_query\_expression** ( **DDS\_QueryCondition \*self**)  
 Retrieves the query expression.
- **DDS\_ReturnCode\_t DDS\_QueryCondition\_get\_query\_parameters** ( **DDS\_QueryCondition \*self**, struct **DDS\_StringSeq \*query\_parameters**)  
 Retrieves the query parameters.
- **DDS\_ReturnCode\_t DDS\_QueryCondition\_set\_query\_parameters** ( **DDS\_QueryCondition \*self**, const struct **DDS\_StringSeq \*query\_parameters**)  
 Sets the query parameters.

#### 4.23.1 Detailed Description

**DDS\_QueryCondition** (p. 691) and associated elements

## 4.23.2 Typedef Documentation

### 4.23.2.1 DDS\_QueryCondition

```
typedef struct DDS_QueryConditionImpl DDS_QueryCondition
```

<<*interface*>> (p. 818) These are specialised **DDS\_ReadCondition** (p. 686) objects that allow the application to also specify a filter on the locally available data.

Each query condition filter is composed of a **DDS\_ReadCondition** (p. 686) state filter and a content filter expressed as a `query_expression` and `query_parameters`.

The query (`query_expression`) is similar to an SQL WHERE clause and can be parameterised by arguments that are dynamically changeable by the `set_query_parameters()` operation.

Two query conditions that have the same `query_expression` will require unique query condition content filters if their `query_paramters` differ. Query conditions that differ only in their state masks will share the same query condition content filter.

**Queries and Filters Syntax** (p. 730) describes the syntax of `query_expression` and `query_parameters`.

## 4.23.3 Function Documentation

### 4.23.3.1 DDS\_QueryCondition\_as\_readcondition()

```
DDS_ReadCondition * DDS_QueryCondition_as_readcondition (
    DDS_QueryCondition * query_condition )
```

Access a **DDS\_QueryCondition** (p. 691)'s supertype instance.

Parameters

<code>query_condition</code>	<< <i>in</i> >> (p. 818) Cannot be NULL.
------------------------------	------------------------------------------

### 4.23.3.2 DDS\_QueryCondition\_get\_query\_expression()

```
const char * DDS_QueryCondition_get_query_expression (
    DDS_QueryCondition * self )
```

Retrieves the query expression.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

## 4.23.3.3 DDS\_QueryCondition\_get\_query\_parameters()

```
DDS_ReturnCode_t DDS_QueryCondition_get_query_parameters (
    DDS_QueryCondition * self,
    struct DDS_StringSeq * query_parameters )
```

Retrieves the query parameters.

## Parameters

<i>query_parameters</i>	<< <i>inout</i> >> (p. 818) the query parameters are returned here. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p. 1312). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.
<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.

## 4.23.3.4 DDS\_QueryCondition\_set\_query\_parameters()

```
DDS_ReturnCode_t DDS_QueryCondition_set_query_parameters (
    DDS_QueryCondition * self,
    const struct DDS_StringSeq * query_parameters )
```

Sets the query parameters.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>query_parameters</i>	<< <i>in</i> >> (p. 818) the new query parameters

## 4.24 Data Samples

**DDS\_SampleInfo** (p. 1720), **DDS\_SampleStateKind** (p. 702), **DDS\_ViewStateKind** (p. 704), **DDS\_InstanceStateKind** (p. 706) and associated elements

## Modules

- **Sample States**  
*DDS\_SampleStateKind* (p. 702) and associated elements
- **View States**  
*DDS\_ViewStateKind* (p. 704) and associated elements
- **Instance States**  
*DDS\_InstanceStateKind* (p. 706) and associated elements
- **Stream Kinds**  
*DDS\_StreamKind* (p. 708) and associated elements

## Data Structures

- struct **DDS\_CoherentSetInfo\_t**  
<<extension>> (p. 817) Type definition for a coherent set info.
- struct **DDS\_SampleInfo**  
Information that accompanies each sample that is read or taken.
- struct **DDS\_SampleInfoSeq**  
Declares IDL sequence < *DDS\_SampleInfo* (p. 1720) > .

## Functions

- **DDS\_Boolean DDS\_CoherentSetInfo\_equals** (const struct **DDS\_CoherentSetInfo\_t** \*self, const struct **DDS\_CoherentSetInfo\_t** \*other)  
Compares this CoherentSetInfo with another CoherentSetInfo for equality.
- void **DDS\_CoherentSetInfo\_copy** (struct **DDS\_CoherentSetInfo\_t** \*self, const struct **DDS\_CoherentSetInfo\_t** \*other)  
Copies another CoherentSetInfo into this CoherentSetInfo.
- void **DDS\_SampleInfo\_get\_sample\_identity** (const struct **DDS\_SampleInfo** \*self, struct **DDS\_SampleIdentity\_t** \*identity)  
<<extension>> (p. 817) Retrieves the identity of the sample
- void **DDS\_SampleInfo\_get\_related\_sample\_identity** (const struct **DDS\_SampleInfo** \*self, struct **DDS\_SampleIdentity\_t** \*related\_identity)  
<<extension>> (p. 817) Retrieves the identity of a sample related to this one

### 4.24.1 Detailed Description

**DDS\_SampleInfo** (p. 1720), **DDS\_SampleStateKind** (p. 702), **DDS\_ViewStateKind** (p. 704), **DDS\_InstanceStateKind** (p. 706) and associated elements

### 4.24.2 Function Documentation

#### 4.24.2.1 DDS\_CoherentSetInfo\_equals()

```
DDS_Boolean DDS_CoherentSetInfo_equals (
    const struct DDS_CoherentSetInfo_t * self,
    const struct DDS_CoherentSetInfo_t * other )
```

Compares this CoherentSetInfo with another CoherentSetInfo for equality.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This CoherentSetInfo. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 818) The other CoherentSetInfo to be compared with this GUID. Cannot be NULL.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the two CoherentSetInfos have equal values, or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.24.2.2 DDS\_CoherentSetInfo\_copy()

```
void DDS_CoherentSetInfo_copy (
    struct DDS_CoherentSetInfo_t * self,
    const struct DDS_CoherentSetInfo_t * other )
```

Copies another CoherentSetInfo into this CoherentSetInfo.

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) This CoherentSetInfo. Cannot be NULL.
<i>other</i>	<< <i>in</i> >> (p. 818) The other CoherentSetInfo to be copied.

## 4.24.2.3 DDS\_SampleInfo\_get\_sample\_identity()

```
void DDS_SampleInfo_get_sample_identity (
    const struct DDS_SampleInfo * self,
    struct DDS_SampleIdentity_t * identity )
```

<<*extension*>> (p. 817) Retrieves the identity of the sample

The identity is composed of the **DDS\_SampleInfo::original\_publication\_virtual\_guid** (p. 1729) and the **DDS\_SampleInfo::original\_publication\_virtual\_sequence\_number** (p. 1729)

## See also

**DDS\_SampleInfo\_get\_related\_sample\_identity** (p. 694)

#### 4.24.2.4 DDS\_SampleInfo\_get\_related\_sample\_identity()

```
void DDS_SampleInfo_get_related_sample_identity (
    const struct DDS_SampleInfo * self,
    struct DDS_SampleIdentity_t * related_identity )
```

<<*extension*>> (p. 817) Retrieves the identity of a sample related to this one

A sample can be logically related to another sample, when the **DDS\_DataWriter** (p. 478) wrote it using **DDS\_WriteParams\_t::related\_sample\_identity** (p. 1835). By default, a sample does not have a related sample, and this operation returns **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 1188).

The related identity is composed of the **DDS\_SampleInfo::related\_original\_publication\_virtual\_guid** (p. 1729) and the **DDS\_SampleInfo::related\_original\_publication\_virtual\_sequence\_number** (p. 1730)

**DDS\_WriteParams\_t::related\_sample\_identity** (p. 1835)

## 4.25 Topic Queries

**DDS\_TopicQuery** (p. 698) and associated elements.

### Data Structures

- struct **DDS\_TopicQuerySelection**  
<<*extension*>> (p. 817) Specifies the data query that defines a **DDS\_TopicQuery** (p. 698)
- struct **DDS\_TopicQueryData**  
<<*extension*>> (p. 817) Provides information about a **DDS\_TopicQuery** (p. 698)

### Typedefs

- typedef struct **DDS\_TopicQuerySelection DDS\_TopicQuerySelection**  
<<*extension*>> (p. 817) Specifies the data query that defines a **DDS\_TopicQuery** (p. 698)
- typedef struct DDS\_TopicQueryImpl **DDS\_TopicQuery**  
<<*extension*>> (p. 817) Allows a **DDS\_DataReader** (p. 608) to query the sample cache of its matching **DDS\_DataWriter** (p. 478).
- typedef struct **DDS\_TopicQueryData DDS\_TopicQueryData**  
<<*extension*>> (p. 817) Provides information about a **DDS\_TopicQuery** (p. 698)

### Enumerations

- enum **DDS\_TopicQuerySelectionKind** {  
**DDS\_TOPIC\_QUERY\_SELECTION\_KIND\_HISTORY\_SNAPSHOT** ,  
**DDS\_TOPIC\_QUERY\_SELECTION\_KIND\_CONTINUOUS** }  
*Kinds of TopicQuerySelection.*

## Functions

- **DDS\_Boolean DDS\_TopicQueryHelper\_topic\_query\_data\_from\_service\_request** (struct **DDS\_TopicQueryData** \*topic\_query\_data, const struct **DDS\_ServiceRequest** \*service\_request)  
*Retrieves the **DDS\_TopicQueryData** (p. 1781) data contained in the specified **DDS\_ServiceRequest** (p. 1736).*
- **DDS\_ReturnCode\_t DDS\_TopicQuery\_get\_guid** (**DDS\_TopicQuery** \*self, **DDS\_GUID\_t** \*guid)  
*Get the TopicQuery's GUID.*

## Variables

- const struct **DDS\_TopicQuerySelection DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER**  
*Special value for creating a **DDS\_TopicQuery** (p. 698) that applies the same filter as the DataReader's **DDS\_ContentFilteredTopic** (p. 173).*
- const struct **DDS\_TopicQuerySelection DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL**  
*Special value for creating a **DDS\_TopicQuery** (p. 698) that selects all the samples in a **DDS\_DataWriter** (p. 478) cache.*

### 4.25.1 Detailed Description

**DDS\_TopicQuery** (p. 698) and associated elements.

TopicQueries allow a **DDS\_DataReader** (p. 608) to query the sample cache of its matching **DDS\_DataWriter** (p. 478). A user can create a **DDS\_TopicQuery** (p. 698) with the **DDS\_DataReader\_create\_topic\_query** (p. 683) API. When a DataReader

creates a TopicQuery, DDS will propagate it to other DomainParticipants and their DataWriters. When a DataWriter matching with the DataReader that created the TopicQuery receives it, it will send the cached samples that pass the TopicQuery's filter.

To configure how to dispatch a TopicQuery, the **DDS\_DataWriterQos** (p. 1438) includes the **DDS\_TopicQueryDispatchQosPolicy** (p. 1783) policy. By default, a DataWriter ignores TopicQueries unless they are explicitly enabled using this policy.

The delivery of TopicQuery samples occurs in a separate RTPS channel. This allows DataReaders to receive TopicQuery samples and live samples in parallel. This is a key difference with respect to the Durability QoS policy.

Late-joining DataWriters will also discover existing TopicQueries. To delete a TopicQuery you must use **DDS\_DataReader\_delete\_topic\_query** (p. 684).

After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

By default, a TopicQuery queries the samples that were in the DataWriter cache at the time the DataWriter receives the TopicQuery. However a TopicQuery can be created in a "continuous" mode. A DataWriter will continue delivering samples that pass a continuous TopicQuery filter until the DataReader application explicitly deletes it.

The samples received in response to a TopicQuery are stored in the associated DataReader's cache. Any of the read/take operations can retrieve TopicQuery samples. The field **DDS\_SampleInfo::topic\_query\_guid** (p. 1731) associates each sample to its TopicQuery. If the read sample is not in response to a TopicQuery then this field will be **DDS\_GUID\_UNKNOWN** (p. 1016). Note that the same data may be received several times, depending on how many TopicQueries the DataReader creates and their TopicQuerySelection.

You can choose to read or take only TopicQuery samples, only live samples, or both. To support this ReadConditions and QueryConditions provide the **DDS\_DataReader\_create\_querycondition\_w\_params** (p. 665) and **DDS\_DataReader\_create\_readcondition\_w\_params** (p. 664) APIs.

Each TopicQuery is identified by a GUID that can be accessed using the **DDS\_TopicQuery\_get\_guid** (p. 700) method.

## 4.25.2 Debugging Topic Queries

There are a number of ways in which to gain more insight into what is happening in an application that is creating Topic Queries.

### 4.25.2.1 The Built-in ServiceRequest DataReader

TopicQueries are communicated to publishing applications through a built-in **DDS\_ServiceRequest** (p. 1736) channel. The ServiceRequest channel is designed to be generic so that it can be used for many different purposes, one of which is TopicQueries.

When a DataReader creates a TopicQuery, a **DDS\_ServiceRequest** (p. 1736) message is sent containing the TopicQuery information. Just as there are built-in DataReaders for **DDS\_ParticipantBuiltinTopicData** (p. 1616), **DDS\_SubscriptionBuiltinTopicData** (p. 1748), and **DDS\_PublicationBuiltinTopicData** (p. 1648), there is a fourth built-in DataReader for ServiceRequests.

The new built-in DataReader can be retrieved using the built-in subscriber and **DDS\_Subscriber\_lookup\_datareader** (p. 579). The topic name is **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 906). Installing a listener with the **DDS\_DataReaderListener::on\_data\_available** (p. 1374) callback implemented will allow a publishing application to be notified whenever a TopicQuery has been received from a subscribing application.

The **DDS\_ServiceRequest::service\_id** (p. 1737) of a **DDS\_ServiceRequest** (p. 1736) corresponding to a **DDS\_TopicQuery** (p. 698) will be **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 905) and the **DDS\_ServiceRequest::instance\_id** (p. 1737) will be equal to the GUID of the **DDS\_TopicQuery** (p. 698) (see **DDS\_TopicQuery\_get\_guid** (p. 700)).

The **DDS\_ServiceRequest::request\_body** (p. 1737) is a sequence of bytes containing more information about the TopicQuery. This information can be retrieved using the **DDS\_TopicQueryHelper\_topic\_query\_data\_from\_service\_request** (p. 699) function. The resulting **DDS\_TopicQueryData** (p. 1781) contains the **DDS\_TopicQuerySelection** (p. 1785) that the **DDS\_TopicQuery** (p. 698) was created with, the GUID of the original DataReader that created the TopicQuery, and the topic name of that DataReader. Note: When TopicQueries are propagated through one or more Routing Services, the last DataReader that issued the TopicQuery will be a Routing Service DataReader. The **DDS\_TopicQueryData::original\_related\_reader\_guid** (p. 1782), however, will be that of the first DataReader to have created the TopicQuery.

### 4.25.2.2 The on\_service\_request\_accepted DataWriter Listener Callback

It is possible that a **DDS\_ServiceRequest** (p. 1736) for a **DDS\_TopicQuery** (p. 698) is received but is not immediately dispatched to a DataWriter. This can happen, for example, if a DataWriter was not matching with a DataReader at the time that the TopicQuery was received by the publishing application. The **DDS\_DataWriterListener::on\_service\_request\_accepted** (p. 1421) callback notifies a DataWriter when a ServiceRequest has been dispatched to that DataWriter. The **DDS\_ServiceRequestAcceptedStatus** (p. 1738) provides information about how many ServiceRequests have been accepted by the DataWriter since the last time that the status was read. The status also includes the **DDS\_ServiceRequestAcceptedStatus::last\_request\_handle** (p. 1739), which is the **DDS\_InstanceHandle\_t** (p. 210) of the last ServiceRequest that was accepted. This instance handle can be used to read samples per instance from the built-in ServiceRequest DataReader and correlate which ServiceRequests have been dispatched to which DataWriters.

### 4.25.2.3 Reading TopicQuery Samples

Data samples that are received by a `DataReader` in response to a `TopicQuery` can be identified with two pieces of information from the corresponding `DDS_SampleInfo` (p. 1720) to the sample. First, if the `DDS_SampleInfo::topic_query_guid` (p. 1731) is not equal to `DDS_GUID_UNKNOWN` (p. 1016) then the sample is in response to the `TopicQuery` with that GUID (see `DDS_TopicQuery_get_guid` (p. 700)). Second, if the sample is in response to a `TopicQuery` and the `DDS_SampleInfo::flag` (p. 1730) `DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE` (p. 1185) flag is set then this is not the last sample in response to the `TopicQuery` for a `DataWriter` identified by `DDS_SampleInfo::original_publication_virtual_guid` (p. 1729). If that flag is not set then there will be no more samples corresponding to that `TopicQuery` coming from the `DataWriter`.

## 4.25.3 Typedef Documentation

### 4.25.3.1 DDS\_TopicQuerySelection

```
typedef struct DDS_TopicQuerySelection DDS_TopicQuerySelection
```

<<*extension*>> (p. 817) Specifies the data query that defines a `DDS_TopicQuery` (p. 698)

The query format is similar to the expression and parameters of a `DDS_QueryCondition` (p. 691) or a `DDS_ContentFilteredTopic` (p. 173), as described in `DDS_DomainParticipant_create_contentfilteredtopic_with_filter` (p. 116).

There are two special queries:

- `DDS_TOPIC_QUERY_SELECTION_SELECT_ALL` (p. 701)
- `DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER` (p. 701)

See also

**Queries and Filters Syntax** (p. 730)

### 4.25.3.2 DDS\_TopicQuery

```
typedef struct DDS_TopicQueryImpl DDS_TopicQuery
```

<<*extension*>> (p. 817) Allows a `DDS_DataReader` (p. 608) to query the sample cache of its matching `DDS_DataWriter` (p. 478).

### 4.25.3.3 DDS\_TopicQueryData

```
typedef struct DDS_TopicQueryData DDS_TopicQueryData
```

<<*extension*>> (p. 817) Provides information about a **DDS\_TopicQuery** (p. 698)

Contains the information about a TopicQuery that can be retrieved using **DDS\_TopicQueryHelper\_topic\_query\_↔data\_from\_service\_request** (p. 699).

See also

**DDS\_TopicQueryHelper\_topic\_query\_data\_from\_service\_request** (p. 699)

## 4.25.4 Enumeration Type Documentation

### 4.25.4.1 DDS\_TopicQuerySelectionKind

```
enum DDS_TopicQuerySelectionKind
```

Kinds of TopicQuerySelection.

See also

**DDS\_TopicQuerySelection** (p. 1785)

Enumerator

DDS_TOPIC_QUERY_SELECTION_KIND_↔ HISTORY_SNAPSHOT	Indicates that the <b>DDS_TopicQuery</b> (p. 698) may only select samples that were in the DataWriter cache upon reception. <b>[default]</b>
DDS_TOPIC_QUERY_SELECTION_KIND_↔ CONTINUOUS	Indicates that the <b>DDS_TopicQuery</b> (p. 698) may continue selecting samples published after its reception.  The subscribing application must explicitly delete the TopicQuery (see <b>DDS_DataReader_delete_topic_query</b> (p. 684)) to signal the DataWriters to stop publishing samples for it.

### 4.25.5 Function Documentation

#### 4.25.5.1 DDS\_TopicQueryHelper\_topic\_query\_data\_from\_service\_request()

```
DDS_Boolean DDS_TopicQueryHelper_topic_query_data_from_service_request (
    struct DDS_TopicQueryData * topic_query_data,
    const struct DDS_ServiceRequest * service_request )
```

Retrieves the **DDS\_TopicQueryData** (p. 1781) data contained in the specified **DDS\_ServiceRequest** (p. 1736).

This operation will extract the content from the request body of the **DDS\_ServiceRequest** (p. 1736) and place it into the specified **DDS\_TopicQueryData** (p. 1781) object.

The specified **DDS\_ServiceRequest** (p. 1736) must be a valid sample associated with the service id **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 905). Otherwise this operation will return **DDS\_BOOLEAN\_FALSE** (p. 1004).

This operation can be called within the context of a **DDS\_DataWriterListener::on\_service\_request\_accepted** (p. 1421) to retrieve the **DDS\_TopicQueryData** (p. 1781) of a **DDS\_ServiceRequest** (p. 1736) that has been received with service id **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 905)

##### Parameters

<i>topic_query_data</i>	<< <i>inout</i> >> (p. 818) A <b>DDS_TopicQueryData</b> (p. 1781) object where the content from the service request is extracted. Cannot be NULL.
<i>service_request</i>	<< <i>in</i> >> (p. 818) Input <b>DDS_ServiceRequest</b> (p. 1736) that contains the <b>DDS_TopicQueryData</b> (p. 1781) as part of its request body. Cannot be NULL.

##### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) on success.

#### 4.25.5.2 DDS\_TopicQuery\_get\_guid()

```
DDS_ReturnCode_t DDS_TopicQuery_get_guid (
    DDS_TopicQuery * self,
    DDS_GUID_t * guid )
```

Get the TopicQuery's GUID.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>guid</i>	<< <i>out</i> >> (p. 818) The GUID of the <b>DDS_TopicQuery</b> (p. 698). Cannot be NULL.

##### Returns

One of the **Standard Return Codes** (p. 1024)

## 4.25.6 Variable Documentation

### 4.25.6.1 DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER [extern]
```

Special value for creating a **DDS\_TopicQuery** (p. 698) that applies the same filter as the DataReader's **DDS\_ContentFilteredTopic** (p. 173).

If the **DDS\_DataReader** (p. 608) that creates the **DDS\_TopicQuery** (p. 698) uses a **DDS\_ContentFilteredTopic** (p. 173), this **DDS\_TopicQuerySelection** (p. 1785) value indicates that the TopicQuery should use the same filter.

Otherwise it behaves as **DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL** (p. 701).

### 4.25.6.2 DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_SELECT_ALL [extern]
```

Special value for creating a **DDS\_TopicQuery** (p. 698) that selects all the samples in a **DDS\_DataWriter** (p. 478) cache.

## 4.26 Sample States

**DDS\_SampleStateKind** (p. 702) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_SampleStateMask**  
A bit-mask (list) of sample states, i.e. **DDS\_SampleStateKind** (p. 702).

### Enumerations

- enum **DDS\_SampleStateKind** {  
**DDS\_READ\_SAMPLE\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_READ\_SAMPLE\_STATE** = 0x0001 << 1 }  
*Indicates whether or not a sample has ever been read.*

### Variables

- const **DDS\_SampleStateMask DDS\_ANY\_SAMPLE\_STATE**  
Any sample state **DDS\_READ\_SAMPLE\_STATE** (p. 702) | **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 702).

### 4.26.1 Detailed Description

**DDS\_SampleStateKind** (p. 702) and associated elements

### 4.26.2 Typedef Documentation

#### 4.26.2.1 DDS\_SampleStateMask

```
typedef DDS_UnsignedLong DDS_SampleStateMask
```

A bit-mask (list) of sample states, i.e. **DDS\_SampleStateKind** (p. 702).

### 4.26.3 Enumeration Type Documentation

#### 4.26.3.1 DDS\_SampleStateKind

```
enum DDS_SampleStateKind
```

Indicates whether or not a sample has ever been read.

For each sample received, the middleware internally maintains a `sample_state` relative to each **DDS\_DataReader** (p. 608). The sample state can be either:

- **DDS\_READ\_SAMPLE\_STATE** (p. 702) indicates that the **DDS\_DataReader** (p. 608) has already accessed that sample by means of a read or take operation.
- **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 702) indicates that the **DDS\_DataReader** (p. 608) has not accessed that sample before.

The sample state will, in general, be different for each sample in the collection returned by read or take.

Enumerator

DDS_READ_SAMPLE_STATE	Sample has been read.
DDS_NOT_READ_SAMPLE_STATE	Sample has not been read.

## 4.26.4 Variable Documentation

### 4.26.4.1 DDS\_ANY\_SAMPLE\_STATE

```
const DDS_SampleStateMask DDS_ANY_SAMPLE_STATE [extern]
```

Any sample state **DDS\_READ\_SAMPLE\_STATE** (p. 702) | **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 702).

#### Examples

**HelloWorld\_subscriber.c.**

## 4.27 View States

**DDS\_ViewStateKind** (p. 704) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_ViewStateMask**  
A bit-mask (list) of view states, i.e. **DDS\_ViewStateKind** (p. 704).

### Enumerations

- enum **DDS\_ViewStateKind** {  
**DDS\_NEW\_VIEW\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_NEW\_VIEW\_STATE** = 0x0001 << 1 }  
*Indicates whether or not an instance is new.*

### Variables

- const **DDS\_ViewStateMask DDS\_ANY\_VIEW\_STATE**  
Any view state **DDS\_NEW\_VIEW\_STATE** (p. 704) | **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704).

### 4.27.1 Detailed Description

**DDS\_ViewStateKind** (p. 704) and associated elements

## 4.27.2 Typedef Documentation

### 4.27.2.1 DDS\_ViewStateMask

```
typedef DDS_UnsignedLong DDS_ViewStateMask
```

A bit-mask (list) of view states, i.e. **DDS\_ViewStateKind** (p. 704).

## 4.27.3 Enumeration Type Documentation

### 4.27.3.1 DDS\_ViewStateKind

```
enum DDS_ViewStateKind
```

Indicates whether or not an instance is new.

For each instance (identified by the key), the middleware internally maintains a view state relative to each **DDS\_DataReader** (p. 608). The view state can be either:

- **DDS\_NEW\_VIEW\_STATE** (p. 704) indicates that either this is the first time that the **DDS\_DataReader** (p. 608) has ever accessed samples of that instance, or else that the **DDS\_DataReader** (p. 608) has accessed previous samples of the instance, but the instance has since been reborn (i.e. become not-alive and then alive again). These two cases are distinguished by examining the **DDS\_SampleInfo::disposed\_generation\_count** (p. 1726) and the **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1726).
- **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704) indicates that the **DDS\_DataReader** (p. 608) has already accessed samples of the same instance and that the instance has not been reborn since.

The `view_state` available in the **DDS\_SampleInfo** (p. 1720) is a snapshot of the view state of the instance relative to the **DDS\_DataReader** (p. 608) used to access the samples at the time the collection was obtained (i.e. at the time read or take was called). The `view_state` is therefore the same for all samples in the returned collection that refer to the same instance.

Once an instance has been detected as not having any "live" writers and all the samples associated with the instance are "taken" from the **DDS\_DataReader** (p. 608), the middleware can reclaim all local resources regarding the instance. Future samples will be treated as "never seen."

#### Enumerator

DDS_NEW_VIEW_STATE	New instance. This latest generation of the instance has not previously been accessed.
DDS_NOT_NEW_VIEW_STATE	Not a new instance. This latest generation of the instance has previously been accessed.

## 4.27.4 Variable Documentation

### 4.27.4.1 DDS\_ANY\_VIEW\_STATE

```
const DDS_ViewStateMask DDS_ANY_VIEW_STATE [extern]
```

Any view state **DDS\_NEW\_VIEW\_STATE** (p. 704) | **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 704).

#### Examples

```
HelloWorld_subscriber.c.
```

## 4.28 Instance States

**DDS\_InstanceStateKind** (p. 706) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_InstanceStateMask**  
A bit-mask (list) of instance states, i.e. **DDS\_InstanceStateKind** (p. 706).

### Enumerations

- enum **DDS\_InstanceStateKind** {  
**DDS\_ALIVE\_INSTANCE\_STATE** = 0x0001 << 0 ,  
**DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** = 0x0001 << 1 ,  
**DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** = 0x0001 << 2 }  
Indicates if the samples are from a live **DDS\_DataWriter** (p. 478) or not.

### Variables

- const **DDS\_InstanceStateMask DDS\_ANY\_INSTANCE\_STATE**  
Any instance state **ALIVE\_INSTANCE\_STATE** | **NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** | **NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE**.
- const **DDS\_InstanceStateMask DDS\_NOT\_ALIVE\_INSTANCE\_STATE**  
Not alive instance state **NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** | **NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE**.

### 4.28.1 Detailed Description

**DDS\_InstanceStateKind** (p. 706) and associated elements

## 4.28.2 Typedef Documentation

### 4.28.2.1 DDS\_InstanceStateMask

```
typedef DDS_UnsignedLong DDS_InstanceStateMask
```

A bit-mask (list) of instance states, i.e. **DDS\_InstanceStateKind** (p. 706).

## 4.28.3 Enumeration Type Documentation

### 4.28.3.1 DDS\_InstanceStateKind

```
enum DDS_InstanceStateKind
```

Indicates if the samples are from a live **DDS\_DataWriter** (p. 478) or not.

For each instance, the middleware internally maintains an instance state. The instance state can be:

- **DDS\_ALIVE\_INSTANCE\_STATE** (p. 707) indicates that (a) samples have been received for the instance, (b) there are live **DDS\_DataWriter** (p. 478) entities writing the instance, and (c) the instance has not been explicitly disposed (or else more samples have been received after it was disposed).
- **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707) indicates the instance was explicitly disposed by a **DDS\_DataWriter** (p. 478) by means of the dispose operation.
- **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 707) indicates the instance has been declared as not-alive by the **DDS\_DataReader** (p. 608) because it detected that there are no live **DDS\_DataWriter** (p. 478) entities writing that instance.

The precise behavior events that cause the instance state to change depends on the setting of the OWNERSHIP QoS:

- If **OWNERSHIP** (p. 1102) is set to **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 1103), then the instance state becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707) only if the **DDS\_DataWriter** (p. 478) that "owns" the instance explicitly disposes it. The instance state becomes **DDS\_ALIVE\_INSTANCE\_STATE** (p. 707) again only if the **DDS\_DataWriter** (p. 478) that owns the instance writes it.
- If **OWNERSHIP** (p. 1102) is set to **DDS\_SHARED\_OWNERSHIP\_QOS** (p. 1103), then the instance state becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 707) if any **DDS\_DataWriter** (p. 478) explicitly disposes the instance. The instance state becomes **DDS\_ALIVE\_INSTANCE\_STATE** (p. 707) as soon as any **DDS\_DataWriter** (p. 478) writes the instance again.

The instance state available in the **DDS\_SampleInfo** (p. 1720) is a snapshot of the instance state of the instance at the time the collection was obtained (i.e. at the time read or take was called). The instance state is therefore the same for all samples in the returned collection that refer to the same instance.

## Enumerator

DDS_ALIVE_INSTANCE_STATE	Instance is currently in existence.
DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE	Not alive disposed instance. The instance has been disposed by a DataWriter.
DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE	Not alive no writers for instance. None of the <b>DDS_DataWriter</b> (p. 478) objects that are currently alive (according to the <b>LIVELINESS</b> (p. 1097)) are writing the instance.

#### 4.28.4 Variable Documentation

##### 4.28.4.1 DDS\_ANY\_INSTANCE\_STATE

```
const DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE [extern]
```

Any instance state ALIVE\_INSTANCE\_STATE | NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE | NOT\_ALIVE\_NO\_↔ WRITERS\_INSTANCE\_STATE.

## Examples

**HelloWorld\_subscriber.c.**

##### 4.28.4.2 DDS\_NOT\_ALIVE\_INSTANCE\_STATE

```
const DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE [extern]
```

Not alive instance state NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE | NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_↔ STATE.

## 4.29 Stream Kinds

**DDS\_StreamKind** (p. 708) and associated elements

### Typedefs

- typedef **DDS\_UnsignedLong DDS\_StreamKindMask**  
A bit-mask (list) of stream kinds, i.e. **DDS\_StreamKind** (p. 708).

## Enumerations

- enum `DDS_StreamKind` {  
`DDS_LIVE_STREAM = 0x0001 << 0` ,  
`DDS_TOPIC_QUERY_STREAM = 0x0001 << 1` }  
*Indicates if the samples are TopicQuery samples or not.*

### 4.29.1 Detailed Description

`DDS_StreamKind` (p. 708) and associated elements

### 4.29.2 Typedef Documentation

#### 4.29.2.1 `DDS_StreamKindMask`

```
typedef DDS_UnsignedLong DDS_StreamKindMask
```

A bit-mask (list) of stream kinds, i.e. `DDS_StreamKind` (p. 708).

### 4.29.3 Enumeration Type Documentation

#### 4.29.3.1 `DDS_StreamKind`

```
enum DDS_StreamKind
```

Indicates if the samples are TopicQuery samples or not.

Enumerator

<code>DDS_LIVE_STREAM</code>	Sample is a live data sample.
<code>DDS_TOPIC_QUERY_STREAM</code>	Sample is a TopicQuery sample.

## 4.30 Infrastructure Module

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

## Modules

- **Clock Selection**  
*APIs related to clock selection.*
- **Time Support**  
*Time and duration types and defines.*
- **GUID Support**  
*<<extension>> (p. 817) GUID type and defines.*
- **Sequence Number Support**  
*<<extension>> (p. 817) Sequence number type and defines.*
- **Exception Codes**  
*<<extension>> (p. 817) Exception codes.*
- **Return Codes**  
*Types of return codes.*
- **Status Kinds**  
*Kinds of communication status.*
- **QoS Policies**

### 4.31.1 Detailed Description

Defines sequences of primitive data type. .

## 4.32 Multi-channel DataWriters

APIs related to Multi-channel DataWriters.

APIs related to Multi-channel DataWriters.

### 4.32.1 What is a Multi-channel DataWriter?

A Multi-channel **DDS\_DataWriter** (p. 478) is a **DDS\_DataWriter** (p. 478) that is configured to send data over multiple multicast addresses, according to some filtering criteria applied to the data.

To determine which multicast addresses will be used to send the data, the middleware evaluates a set of filters that are configured for the **DDS\_DataWriter** (p. 478). Each filter "guards" a channel (a set of multicast addresses). Each time a multi-channel **DDS\_DataWriter** (p. 478) writes data, the filters are applied. If a filter evaluates to true, the data is sent over that filter's associated channel (set of multicast addresses). We refer to this type of filter as a Channel Guard filter.

### 4.32.2 Configuration on the Writer Side

To configure a multi-channel **DDS\_DataWriter** (p. 478), simply define a list of all its channels in the **DDS\_MultiChannelQosPolicy** (p. 1603).

The **DDS\_MultiChannelQosPolicy** (p. 1603) is propagated along with discovery traffic. The value of this policy is available in **DDS\_PublicationBuiltinTopicData::locator\_filter** (p. 1656).

### 4.32.3 Configuration on the Reader Side

No special changes are required in a subscribing application to get data from a multichannel **DDS\_DataWriter** (p. 478). If you want the **DDS\_DataReader** (p. 608) to subscribe to only a subset of the channels, use a **DDS\_ContentFilteredTopic** (p. 173).

For more information on Multi-channel DataWriters, refer to the `User's Manual`.

### 4.32.4 Reliability with Multi-Channel DataWriters

#### 4.32.4.1 Reliable Delivery

Reliable delivery is only guaranteed when the **DDS\_PresentationQosPolicy::access\_scope** (p. 1638) is set to **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 1106) and the filters in **DDS\_MultiChannelQosPolicy** (p. 1603) are keyed-only based.

If any of the guard filters are based on non-key fields, RTI Connext only guarantees reception of the most recent data from the MultiChannel DataWriter.

#### 4.32.4.2 Reliable Protocol Considerations

Reliability is maintained on a per-channel basis. Each channel has its own reliability channel send queue. The size of that queue is limited by `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1693) and/or `DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 1449).

The protocol parameters described in `DDS_DataWriterProtocolQosPolicy` (p. 1422) are applied per channel, with the following exceptions:

`DDS_RtpsReliableWriterProtocol_t::low_watermark` (p. 1701) and `DDS_RtpsReliableWriterProtocol_t::high_watermark` (p. 1701): The low watermark and high watermark control the queue levels (in number of samples) that determine when to switch between regular and fast heartbeat rates. With MultiChannel DataWriters, `high_watermark` and `low_watermark` refer to the DataWriter's queue (not the reliability channel queue). Therefore, periodic heartbeating cannot be controlled on a per-channel basis.

Important: With MultiChannel DataWriters, `low_watermark` and `high_watermark` refer to application samples even if batching is enabled. This behavior differs from the one without MultiChannel DataWriters (where `low_watermark` and `high_watermark` refer to batches).

`DDS_RtpsReliableWriterProtocol_t::heartbeats_per_max_samples` (p. 1705): This field defines the number of heartbeats per send queue. For MultiChannel DataWriters, the value is applied per channel. However, the send queue size that is used to calculate the a piggyback heartbeat rate is defined per DataWriter (see `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1693))

Important: With MultiChannel DataWriters, `heartbeats_per_max_samples` refers to samples even if batching is enabled. This behavior differs from the one without MultiChannels DataWriters (where `heartbeats_per_max_samples` refers to batches).

With batching and MultiChannel DataWriters, the size of the DataWriter's send queue should be configured using `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1693) instead of `max_batches` `DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 1449) in order to take advantage of `heartbeats_per_max_samples`.

## 4.33 Transports

APIs related to RTI Connex pluggable transports.

### 4.33.1 Detailed Description

APIs related to RTI Connexx pluggable transports.

### 4.33.2 Overview

RTI Connexx has a pluggable transports architecture. The core of RTI Connexx is transport agnostic; it does not make any assumptions about the actual transports used to send and receive messages. Instead, the RTI Connexx core uses an abstract "transport API" to interact with the **transport plugins** which implement that API.

A transport plugin implements the abstract transport API and performs the actual work of sending and receiving messages over a physical transport. A collection of **builtin plugins** (see **Built-in Transport Plugins** (p. 728)) is delivered with RTI Connexx for commonly used transports. New transport plugins can easily be created, thus enabling RTI Connexx applications to run over transports that may not even be conceived yet. This is a powerful capability and that distinguishes RTI Connexx from competing middleware approaches.

RTI Connexx also provides a set of APIs for installing and configuring transport plugins to be used in an application. So that RTI Connexx applications work out of the box, a subset of the builtin transport plugins is preconfigured by default (see **DDS\_TransportBuiltinQosPolicy** (p. 1786)). You can "turn-off" some or all of the builtin transport plugins. In addition, you can configure other transport plugins for use by the application.

### 4.33.3 Transport Aliases

In order to use a transport plugin instance in an RTI Connexx application, it must be registered with a **DDS\_DomainParticipant** (p. 72). When you register a transport, you specify a sequence of "alias" strings to symbolically refer to the transport plugin. The same alias strings can be used to register more than one transport plugin.

You can register multiple transport plugins with a **DDS\_DomainParticipant** (p. 72). An **alias** symbolically refers to one or more transport plugins registered with the **DDS\_DomainParticipant** (p. 72). Builtin transport plugin instances can be referred to using preconfigured aliases (see **TRANSPORT\_BUILTIN** (p. 1132)).

A transport plugin's class name is automatically used as an implicit alias. It can be used to refer to all the transport plugin instances of that class.

You can use aliases to refer to transport plugins, in order to specify:

- the transport plugins to use for **discovery** (see **DDS\_DiscoveryQosPolicy::enabled\_transports** (p. 1480)), and for **DDS\_DataWriter** (p. 478) and **DDS\_DataReader** (p. 608) entities (see **DDS\_TransportSelectionQosPolicy** (p. 1799)).
- the **multicast** addresses on which to receive discovery messages (see **DDS\_DiscoveryQosPolicy::multicast\_receive\_addresses** (p. 1481)), and the multicast addresses and ports on which to receive user data (see **DDS\_DataReaderQos::multicast** (p. 1395)).
- the **unicast ports** used for user data (see **DDS\_TransportUnicastQosPolicy** (p. 1800)) on both **DDS\_DataWriter** (p. 478) and **DDS\_DataReader** (p. 608) entities.
- the transport plugins used to parse an address string in a locator (**Locator Format** (p. 1153) and **NDDS\_DISCOVERY\_PEERS** (p. 1152)).

A **DDS\_DomainParticipant** (p. 72) (and contained its entities) start using a transport plugin after the **DDS\_DomainParticipant** (p. 72) is enabled (see **DDS\_Entity\_enable** (p. 1163)). An entity will use *all* the transport plugins that match the specified transport QoS policy. All transport plugins are treated uniformly, regardless of how they were created or registered; there is no notion of some transports being more "special" than others.

#### 4.33.4 Transport Lifecycle

A transport plugin is owned by whomever creates it. Thus, if you create and register a transport plugin with a **DDS\_↔DomainParticipant** (p. 72), you are responsible for deleting it by calling its destructor. Note that builtin transport plugins (**TRANSPORT\_BUILTIN** (p. 1132)) and transport plugins that are loaded through the **PROPERTY** (p. 1107) QoS policy (see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 719)) are automatically managed by RTI Connext.

A user-created transport plugin must not be deleted while it is still in use by a **DDS\_DomainParticipant** (p. 72). This generally means that a user-created transport plugin instance can only be deleted after the **DDS\_DomainParticipant** (p. 72) with which it was registered is deleted (see **DDS\_DomainParticipantFactory\_delete\_participant** (p. 40)). Note that a transport plugin *cannot* be "unregistered" from a **DDS\_DomainParticipant** (p. 72).

A transport plugin instance cannot be registered with more than one **DDS\_DomainParticipant** (p. 72) at a time. This requirement is necessary to guarantee the multi-threaded safety of the transport API.

If the same physical transport resources are to be used with more than one **DDS\_DomainParticipant** (p. 72) in the same address space, the transport plugin should be written in such a way so that it can be instantiated multiple times—once for each **DDS\_DomainParticipant** (p. 72) in the address space. Note that it is always possible to write the transport plugin so that multiple transport plugin instances share the same underlying resources; however the burden (if any) of guaranteeing multi-threaded safety to access shared resource shifts to the transport plugin developer.

#### 4.33.5 Transport Class Attributes

A transport plugin instance is associated with two kinds of attributes:

- the *class* attributes that are decided by the plugin writer; these are invariant across all instances of the transport plugin class, and
- the *instance* attributes that can be set on a per instance basis by the transport plugin user.

Every transport plugin must specify the following class attributes.

**transport class id** (see **NDDS\_Transport\_Property\_t::classid** (p. 1855)) Identifies a transport plugin implementation class. It denotes a unique "class" to which the transport plugin instance belongs. The class is used to distinguish between different transport plugin implementations. Thus, a transport plugin vendor should ensure that its transport plugin implementation has a unique class.

Two transport plugin instances report the same class *iff* they have compatible implementations. Transport plugin instances with mismatching classes are not allowed (by the RTI Connext Core) to communicate with one another.

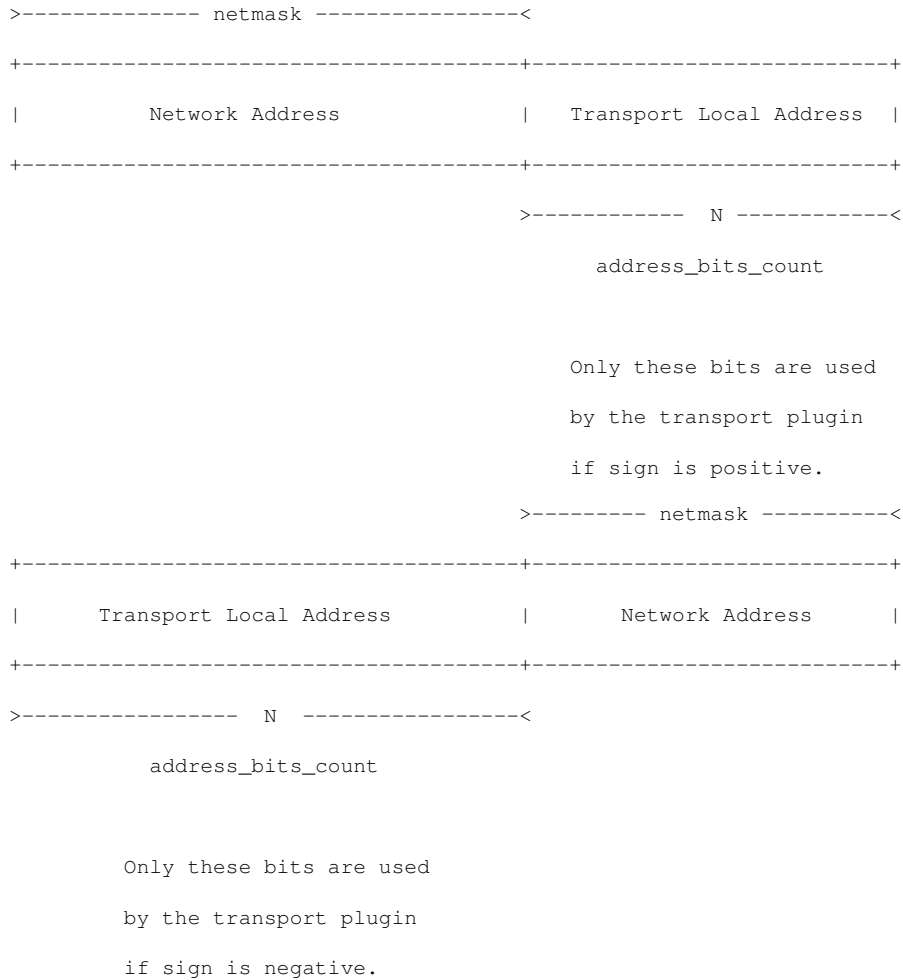

Multiple implementations (possibly from different vendors) for a physical transport mechanism can co-exist in an RTI Connext application, provided they use different transport class IDs.

The class ID can also be used to distinguish between different transport protocols over the same physical transport network (e.g., UDP vs. TCP over the IP routing infrastructure).

**transport significant address bit count** (see **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1856)) RTI Connext's addressing is modeled after the IPv6 and uses 128-bit addresses ( **Transport Address** (p. 832) ) to route messages.

A transport plugin is expected to map the transport's internal addressing scheme to 128-bit addresses. Depending on the sign of this attribute, this mapping uses only *N* least significant bits (LSB) if positive or *N* most significant bits (MSB) if negative; these bits are specified by this attribute.

The remaining bits of an address using the  $128 - \text{abs}(\text{bit address})$  representation will be considered as part of the "network address" (see **Transport Network Address** (p. 716)) and thus ignored by the transport plugin's internal addressing scheme.

For *unicast* addresses, the transport plugin is expected to ignore the higher ( $128 - \text{NDDS\_Transport\_Property\_} \leftrightarrow \text{t::address\_bit\_count}$  (p. 1856)) bits. RTI Connex is free to manipulate those bits freely in the addresses passed in/out to the transport plugin APIs.

Theoretically, the significant address bits count,  $N$  is related to the size of the underlying transport network as follows:

$$\text{address\_bits\_count} \geq \text{ceil}(\log_2(\text{total\_addressable\_transport\_unicast\_interfaces}))$$

The equality holds when the most compact (theoretical) internal address mapping scheme is used. A practical address mapping scheme may waste some bits.

### 4.33.6 Transport Instance Attributes

The *per instance* attributes to configure the plugin instance are generally passed in to the plugin constructor. These are defined by the transport plugin writer, and can be used to:

- customize the behavior of an instance of a transport plugin, including the send and the receiver buffer sizes, the maximum message size, various transport level classes of service (CoS), and so on.

- specify the resource values, network interfaces to use, various transport level policies, and so on.

RTI Connext requires that every transport plugin instance must specify the `NDDS_Transport_Property_t::message_size_max` (p. 1857) and `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).

It is up to the transport plugin developer to make these available for configuration to transport plugin user.

Note that it is important that the instance attributes are "compatible" between the sending side and the receiving side of communicating applications using different instances of a transport plugin class. For example, if one side is configured to send messages larger than can be received by the other side, then communications via the plugin may fail.

### 4.33.7 Transport Network Address

The address bits not used by the transport plugin for its internal addressing constitute its network address bits.

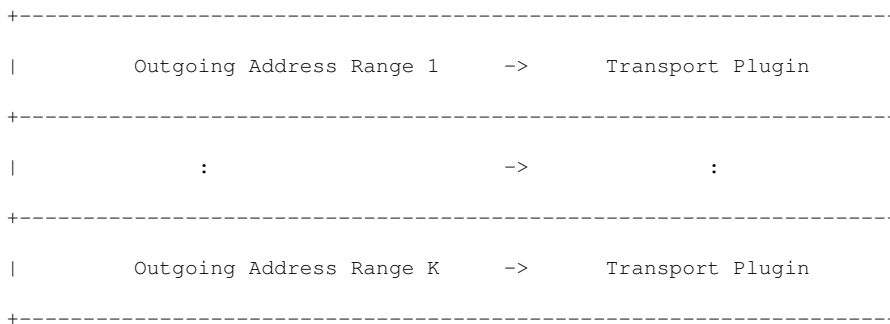

In order for RTI Connext to properly route the messages, each unicast interface in the RTI Connext *domain* must have a unique address. RTI Connext allows the user to specify the value of the network address when installing a transport plugin via the `NDDS_Transport_Support_register_transport()` (p. 722) API.

The network address for a transport plugin should be chosen such that the resulting fully qualified 128-bit address will be unique in the RTI Connext domain. Thus, if two instances of a transport plugin are registered with a `DDS_DomainParticipant` (p. 72), they will be at different network addresses in order for their unicast interfaces to have unique fully qualified 128-bit addresses. It is also possible to create multiple transports with the same network address, as it can be useful for certain use cases; note that this will require special entity configuration for most transports to avoid clashes in resource use (e.g. sockets for UDPv4 transport).

### 4.33.8 Transport Send Route

By default, a transport plugin is configured to send outgoing messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of outgoing messages via the `NDDS_Transport_Support_add_send_route()` (p. 724) API, so that a transport plugin will be used to send messages only to certain ranges of destination addresses. The function can be called multiple times for a transport plugin, with different address ranges.

The user can set up a routing table to restrict the use of a transport plugin to send messages to selected addresses ranges.

### 4.33.9 Transport Receive Route

By default, a transport plugin is configured to receive incoming messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of incoming messages via the `NDDS_Transport_Support_add_receive_route()` (p. 725) API, so that a transport plugin will be used to receive messages only on certain ranges of addresses. The function can be called multiple times for a transport plugin, with different address ranges.

```

+-----+
|      Transport Plugin      <- Incoming Address Range 1 |
+-----+
|          :                  <-          :                |
+-----+
|      Transport Plugin      <- Incoming Address Range M |
+-----+

```

The user can set up a routing table to restrict the use of a transport plugin to receive messages from selected ranges. For example, the user may restrict a transport plugin to

- receive messages from a certain multicast address range.
- receive messages only on certain unicast interfaces (when multiple unicast interfaces are available on the transport plugin).

## 4.34 Installing Transport Plugins

Installing and configuring transports used by RTI Connext.

## Variables

- const **NDDS\_Transport\_Handle\_t NDDS\_TRANSPORT\_HANDLE\_NIL**  
*The NIL transport handle.*

### 4.34.1 Detailed Description

Installing and configuring transports used by RTI Connex.

There is more than one way to install a transport plugin for use with RTI Connex:

- If it is a builtin transport plugin, by specifying a bitmask in **DDS\_TransportBuiltinQosPolicy** (p. 1786) (see **Builtin Transport Plugins** (p. 728))

- For all other non-builtin transport plugins, by dynamically loading the plugin through **PROPERTY** (p. 1107) QoS policy settings of **DDS\_DomainParticipant** (p. 72) (only supported on architectures that support dynamic libraries, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 719))
- By explicitly creating a transport plugin and registering the plugin with a **DDS\_DomainParticipant** (p. 72) through **NDDS\_Transport\_Support\_register\_transport** (p. 722) (for both builtin and non-builtin plugins)

In the first two cases, the lifecycle of the transport plugin is automatically managed by RTI Connex. In the last case, user is responsible for deleting the transport plugin after the **DDS\_DomainParticipant** (p. 72) is deleted. See **Transport Lifecycle** (p. 714) for details.

#### 4.34.2 Loading Transport Plugins through Property QoS Policy of Domain Participant

On architectures that support dynamic libraries, a non-builtin transport plugin written in C/C++ and built as a dynamic-link library (\*.dll/\*.so) can be loaded by RTI Connex through the **PROPERTY** (p. 1107) QoS policy settings of the **DDS\_DomainParticipant** (p. 72).

Dynamic libraries are supported on all architectures except INTEGRITY and certain VxWorks platforms. For VxWorks, dynamic libraries are only supported for architectures that are on Pentium/Arm CPUs AND use kernel mode.

The dynamic-link library (and all the dependent libraries) need to be in the library search path during runtime (in the **LD\_LIBRARY\_PATH** environment variable on Linux systems, **DYLD\_LIBRARY\_PATH** on macOS systems, or **Path** on Windows systems).

To allow dynamic loading of the transport plugin, the transport plugin must implement the RTI Connex abstract transport API and must provide a function with the signature **NDDS\_Transport\_create\_plugin** (p. 721) that can be called by RTI Connex to create an instance of the transport plugin. The name of the dynamic library that contains the transport plugin implementation, the name of the function and properties that can be used to create the plugin, and the aliases and network address that are used to register the plugin can all be specified through the **PROPERTY** (p. 1107) QoS policy of the **DDS\_DomainParticipant** (p. 72).

The following table lists the property names that are used to load the transport plugins dynamically:

**Table 4.709 Properties for dynamically loading and registering transport plugins**

Property Name	Description	Required?
dds.transport.load_plugins	Comma-separated strings indicating the prefix names of all plugins that will be loaded by RTI Connex. Up to 8 plugins may be specified. For example, "dds.transport.TCPv4.tcp1, dds.↵transport.TCPv4.tcp2", In the following examples, <TRANSPORT_↵PREFIX> is used to indicate one element of this string that is used as a prefix in the property names for all the settings that are related to the plugin. <TRANSPORT_PREFIX> must begin with "dds.transport." (such as "dds.transport.↵mytransport").	<b>YES</b>

Property Name	Description	Required?
<TRANSPORT_PREFIX>.library	Should be set to the name of the dynamic library (*.so for Linux systems, *.dylib for macOS systems, and *.dll for Windows systems) that contains the transport plugin implementation. This library (and all the other dependent dynamic libraries) needs to be in the library search path used by RTI Connext during run time (pointed to by the environment variable <b>LD_LIBRARY_PATH</b> on Linux systems, <b>DYLD_LIBRARY_PATH</b> on macOS systems, or <b>Path</b> on Windows systems).	YES
<TRANSPORT_PREFIX>.create_function	Should be set to the name of the function with the prototype of <b>NDDS_Transport_create_plugin</b> (p. 721) that can be called by RTI Connext to create an instance of the plugin. The resulting transport plugin will then be registered by RTI Connext through <b>NDDS_Transport_Support_register_transport</b> (p. 722)	YES
<TRANSPORT_PREFIX>.aliases	Used to register the transport plugin returned by <b>NDDS_Transport_create_plugin</b> (p. 721) (as specified by <TRANSPORT_PREFIX>.create_function) to the <b>DDS_DomainParticipant</b> (p. 72). Refer to <b>aliases_in</b> parameter in <b>NDDS_Transport_Support_register_transport</b> (p. 722) for details. Aliases should be specified as a comma-separated string, with each comma delimiting an alias. If it is not specified, <TRANSPORT_PREFIX> –without the leading "dds.transport" – is used as the default alias for the plugin.	NO
<TRANSPORT_PREFIX>.network_address	Used to register the transport plugin returned by <b>NDDS_Transport_create_plugin</b> (p. 721) (as specified by <TRANSPORT_PREFIX>.create_function) to the <b>DDS_DomainParticipant</b> (p. 72). Refer to <b>network_address_in</b> parameter in <b>NDDS_Transport_Support_register_transport</b> (p. 722) for details. If it is not specified, the <b>network_address_out</b> output parameter from <b>NDDS_Transport_create_plugin</b> (p. 721) is used. The default value is a zeroed out network address.	NO

Property Name	Description	Required?
<TRANSPORT_PREFIX>.<property_name>	Property that is passed into <b>NDDS_Transport_create_plugin</b> (p. 721) (as specified by <TRANSPORT_PREFIX>.create_function) for creating the transport plugin. This property name-value pair will be passed to <b>NDDS_Transport_create_plugin</b> (p. 721) after stripping out <TRANSPORT_PREFIX> from the property name. The parsing of this property and configuring the transport using this property should be handled by the implementation of each transport plugin. Multiple <TRANSPORT_PREFIX>.<property_name> can be specified. Note: "library", "create_function", "aliases" and "network_address" cannot be used as the <property_name> due to conflicts with other builtin property names.	NO

A transport plugin is dynamically created and registered to the **DDS\_DomainParticipant** (p. 72) by RTI Connex when:

- the **DDS\_DomainParticipant** (p. 72) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDS\_Subscriber\_lookup\_datareader** (p. 579)),

whichever happens first.

Any changes to the transport plugin related properties in the **PROPERTY** (p. 1107) QoS policy after the transport plugin has been registered with the **DDS\_DomainParticipant** (p. 72) will have no effect.

See also

**Transport Use Cases** (p. 796)

### 4.34.3 Typedef Documentation

#### 4.34.3.1 NDDS\_Transport\_Handle\_t

```
typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE NDDS_Transport_Handle_t
```

An opaque type representing the handle to a transport plugin registered with a **DDS\_DomainParticipant** (p. 72).

A transport handle represents the association between a **DDS\_DomainParticipant** (p. 72) and a transport plugin.

### 4.34.3.2 NDDS\_Transport\_create\_plugin

```
typedef NDDS_Transport_Plugin *(* NDDS_Transport_create_plugin) ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQoSPolicy *property_in)
```

Function prototype for creating plugin through **DDS\_PropertyQoSPolicy** (p. 1645).

By specifying some predefined property names in **DDS\_PropertyQoSPolicy** (p. 1645), RTI Connexx can call a function from a dynamic library to create a transport plugin and register the returned plugin with a **DDS\_DomainParticipant** (p. 72).

This is the function prototype of the function as specified in "<TRANSPORT\_PREFIX>.create\_function" of **DDS\_PropertyQoSPolicy** (p. 1645) QoS policy that will be called by RTI Connexx to create the transport plugin. See **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 719) for details.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 818) Optional output parameter. If the network address is not specified in "<TRANSPORT_PREFIX>.network_address" in <b>DDS_PropertyQoSPolicy</b> (p. 1645), this is the default network address that is used to register the returned transport plugin using <b>NDDS_Transport_Support_register_transport</b> (p. 722) . This parameter will never be null. The default value is a zeroed-out network address.
<i>property_in</i>	<< <b>in</b> >> (p. 818) <b>property_in</b> contains all the name-value pair properties that matches the format "<TRANSPORT_PREFIX>.<property_name>" in <b>DDS_PropertyQoSPolicy</b> (p. 1645) that can be used to create the transport plugin. Only <property_name> is passed in - the plugin prefix will be stripped out in the property name. Note: predefined <TRANSPORT_PREFIX> properties "library", "create_function", "aliases" and "network_address" will not be passed to this function. This parameter will never be null.

#### Returns

Upon success, a valid non-NIL transport plugin. NIL upon failure.

## 4.34.4 Function Documentation

### 4.34.4.1 NDDS\_Transport\_Handle\_is\_nil()

```
DDS_Boolean NDDS_Transport_Handle_is_nil (
    const NDDS_Transport_Handle_t * self )
```

Is the given transport handle the NIL transport handle?

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 1004) if the given transport handle is equal to **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 728) or **DDS\_BOOLEAN\_FALSE** (p. 1004) otherwise.

## 4.34.4.2 NDDS\_Transport\_Support\_register\_transport()

```
* NDDS_Transport_Handle_t NDDS_Transport_Support_register_transport (
    DDS_DomainParticipant * participant_in,
    NDDS_Transport_Plugin * transport_in,
    const struct DDS_StringSeq * aliases_in,
    const NDDS_Transport_Address_t * network_address_in )
```

Register a transport plugin for use with a **DDS\_DomainParticipant** (p. 72), assigning it a `network_address`.

A transport plugin instance can be used by exactly one **DDS\_DomainParticipant** (p. 72) at a time.

When a DataWriter/DataReader is created, only those transports already registered to the corresponding **DDS\_DomainParticipant** (p. 72) are available to the DataWriter/DataReader.

Builtin transports can be automatically registered by RTI Connext as a convenience to the user. See **Built-in Transport Plugins** (p. 728) for details on how to control the builtin transports that are automatically registered.

## Precondition

A disabled **DDS\_DomainParticipant** (p. 72) and a transport plugin that will be registered exclusively with it.

## Parameters

<i>participant_in</i>	<<in>> (p. 818) A non-null, disabled <b>DDS_DomainParticipant</b> (p. 72).
<i>transport_in</i>	<<in>> (p. 818) A non-null transport plugin that is currently not registered with another <b>DDS_DomainParticipant</b> (p. 72).
<i>aliases_in</i>	<<in>> (p. 818) A non-null sequence of strings used as aliases to symbolically refer to the transport plugins. The transport plugin will be "available for use" by a <b>DDS_Entity</b> (p. 1160) in the <b>DDS_DomainParticipant</b> (p. 72) if the transport alias list associated with the <b>DDS_Entity</b> (p. 1160) contains one of these transport aliases. An empty alias list represents a wildcard and matches all aliases. Alias names for the builtin transports are defined in <b>TRANSPORT_BUILTIN</b> (p. 1132).
<i>network_address_in</i>	<<in>> (p. 818) The network address at which to register this transport plugin. The bits indicated by <code>transport_in.property.address_bit_count</code> will be truncated. The remaining bits are the network address of the transport plugin. (see <b>Transport Class Attributes</b> (p. 714)).

## Returns

Upon success, a valid non-NIL transport handle, representing the association between the **DDS\_DomainParticipant** (p. 72) and the transport plugin; a **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 728) upon failure.

Note that a transport plugin's class name is automatically registered as an implicit alias for the plugin. Thus, a class name can be used to refer to all the transport plugin instance of that class.

See also

**Transport Class Attributes** (p. 714)

**Transport Network Address** (p. 716)

**Locator Format** (p. 1153)

**NDDS\_DISCOVERY\_PEERS** (p. 1152)

#### 4.34.4.3 NDDS\_Transport\_Support\_lookup\_transport()

```
NDDS_Transport_Handle_t NDDS_Transport_Support_lookup_transport (
    DDS_DomainParticipant * participant_in,
    struct DDS_StringSeq * aliases_out,
    NDDS_Transport_Address_t * network_address_out,
    const NDDS_Transport_Plugin * transport_in )
```

Look up a transport plugin within a **DDS\_DomainParticipant** (p. 72).

The transport plugin should have already been registered with the **DDS\_DomainParticipant** (p. 72).

Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 818) A non-null <b>DDS_DomainParticipant</b> (p. 72).
<i>aliases_out</i>	<< <i>inout</i> >> (p. 818) A sequence of string where the aliases used to refer to the transport plugin symbolically will be returned. null if not interested.
<i>network_address_out</i>	<< <i>inout</i> >> (p. 818) The network address at which to register the transport plugin will be returned here. null if not interested.
<i>transport_in</i>	<< <i>in</i> >> (p. 818) A non-null transport plugin that is already registered with the <b>DDS_DomainParticipant</b> (p. 72).

Returns

Upon success, a valid non-NIL transport handle, representating the association between the **DDS\_DomainParticipant** (p. 72) and the transport plugin; a **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 728) upon failure.

See also

**Transport Class Attributes** (p. 714)

**Transport Network Address** (p. 716)

#### 4.34.4.4 NDDS\_Transport\_Support\_add\_send\_route()

```
DDS_ReturnCode_t NDDS_Transport_Support_add_send_route (
    const NDDS_Transport_Handle_t * transport_handle_in,
    const NDDS_Transport_Address_t * address_range_in,
    DDS_Long address_range_bit_count_in )
```

Add a route for outgoing messages.

This function can be used to narrow the range of addresses to which outgoing messages can be sent.

##### Precondition

A disabled **DDS\_DomainParticipant** (p. 72).

##### Parameters

<i>transport_handle_in</i>	<< <i>in</i> >> (p. 818) A valid non-NIL transport handle as a result of a call to <b>NDDS_Transport_Support_register_transport()</b> (p. 722).
<i>address_range_in</i>	<< <i>in</i> >> (p. 818) The outgoing address range for which to use this transport plugin.
<i>address_range_bit_count_in</i>	<< <i>in</i> >> (p. 818) The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1856).

##### Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

##### See also

**Transport Send Route** (p. 716)

#### 4.34.4.5 NDDS\_Transport\_Support\_add\_receive\_route()

```
DDS_ReturnCode_t NDDS_Transport_Support_add_receive_route (
    const NDDS_Transport_Handle_t * transport_handle_in,
    const NDDS_Transport_Address_t * address_range_in,
    DDS_Long address_range_bit_count_in )
```

Add a route for incoming messages.

This function can be used to narrow the range of addresses at which to receive incoming messages.

##### Precondition

A disabled **DDS\_DomainParticipant** (p. 72).

## Parameters

<i>transport_handle_in</i>	<< <i>in</i> >> (p. 818) A valid non-NIL transport handle as a result of a call to <b>NDDS_Transport_Support_register_transport()</b> (p. 722).
<i>address_range_in</i>	<< <i>in</i> >> (p. 818) The incoming address range for which to use this transport plugin.
<i>address_range_bit_count_in</i>	<< <i>in</i> >> (p. 818) The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1856).

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## See also

**Transport Receive Route** (p. 717)

## 4.34.4.6 NDDS\_Transport\_Support\_get\_builtin\_transport\_property()

```
DDS_ReturnCode_t NDDS_Transport_Support_get_builtin_transport_property (
    DDS_DomainParticipant * participant_in,
    DDS_TransportBuiltinKind builtin_transport_kind_in,
    struct NDDS_Transport_Property_t * builtin_transport_property_inout )
```

Get the properties used to create a builtin transport plugin.

Retrieves the properties that will be used to create a builtin transport plugin.

## Precondition

The *builtin\_transport\_property\_inout* parameter must be of the type specified by the *builtin\_←\_transport\_kind\_in*.

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 818) A valid non-null <b>DDS_DomainParticipant</b> (p. 72)
<i>builtin_transport_kind_in</i>	<< <i>in</i> >> (p. 818) The builtin transport kind for which to retrieve the properties.
<i>builtin_transport_property_inout</i>	<< <i>inout</i> >> (p. 818) The storage area where the retrieved property will be output. The specific type required by the <i>builtin_transport_kind_in</i> must be used.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## See also

**NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727)

## 4.34.4.7 NDDS\_Transport\_Support\_set\_builtin\_transport\_property()

```
DDS_ReturnCode_t NDDS_Transport_Support_set_builtin_transport_property (
    DDS_DomainParticipant * participant_in,
    DDS_TransportBuiltinKind builtin_transport_kind_in,
    const struct NDDS_Transport_Property_t * builtin_transport_property_in )
```

Set the properties used to create a builtin transport plugin.

Specifies the properties that will be used to create a builtin transport plugin.

If the builtin transport is already registered when this operation is called, these property changes will *not* have any effect. Builtin transport properties should always be set before the transport is registered. See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

## Precondition

A disabled **DDS\_DomainParticipant** (p. 72). The `builtin_transport_property_inout` parameter must be of the type specified by the `builtin_transport_kind_in`.

## Parameters

<code>participant_in</code>	<< <i>in</i> >> (p. 818) A valid non-null <b>DDS_DomainParticipant</b> (p. 72) that has not been enabled.
<code>builtin_transport_kind_in</code>	<< <i>in</i> >> (p. 818) The builtin transport kind for which to specify the properties.
<code>builtin_transport_property_in</code>	<< <i>inout</i> >> (p. 818) The new transport property that will be used to create the builtin transport plugin. The specific type required by the <code>builtin_transport_kind_in</code> must be used.

## Returns

One of the **Standard Return Codes** (p. 1024), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 1025).

## See also

**NDDS\_Transport\_Support\_get\_builtin\_transport\_property()** (p. 726)

#### 4.34.4.8 NDDS\_Transport\_Support\_get\_transport\_plugin()

```
NDDS_Transport_Plugin * NDDS_Transport_Support_get_transport_plugin (
    DDS_DomainParticipant * participant_in,
    const char * alias_in )
```

Retrieve a transport plugin registered in a **DDS\_DomainParticipant** (p. 72) by its alias.

This method can be used to get a pointer to a transport Plugin that has been registered into the **DDS\_DomainParticipant** (p. 72).

##### Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 818) A non-null <b>DDS_DomainParticipant</b> (p. 72).
<i>alias_in</i>	<< <i>in</i> >> (p. 818) A non-null string used to symbolically refer to the transport plugins.

##### Returns

Upon success, a valid non-null pointer to a registered plugin; a null pointer if a plugin with that alias is not registered/found in that participant.

#### 4.34.5 Variable Documentation

##### 4.34.5.1 NDDS\_TRANSPORT\_HANDLE\_NIL

```
const NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL [extern]
```

The NIL transport handle.

### 4.35 Built-in Transport Plugins

Transport plugins delivered with RTI Connext.

#### Modules

- **UDP Transport Plugin definitions**  
*UDP Transport Plugin definitions.*
- **Shared Memory Transport**  
*Built-in transport plug-in for inter-process communications using shared memory (**NDDS\_TRANSPORT\_CLASSID\_SHMEM** (p. 829)).*
- **UDPv4 Transport**  
*Transport plug-in using UDP/IPv4 (**NDDS\_TRANSPORT\_CLASSID\_UDPv4** (p. 828)).*
- **Real-Time WAN Transport**  
*Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN** (p. 830)).*
- **UDPv6 Transport**  
*Transport plug-in using UDP/IPv6 (**NDDS\_TRANSPORT\_CLASSID\_UDPv6** (p. 829)).*

### 4.35.1 Detailed Description

Transport plugins delivered with RTI Connex.

The **TRANSPORT\_BUILTIN** (p. 1132) specifies the collection of transport plugins that can be automatically configured and managed by RTI Connex as a convenience to the user.

These transport plugins can simply be turned "on" or "off" by a specifying a bitmask in **DDS\_TransportBuiltinQosPolicy** (p. 1786), thus bypassing the steps for setting up a transport plugin. RTI Connex preconfigures the transport plugin properties, the network address, and the aliases to "factory defined" values.

If a builtin transport plugin is turned "on" in **DDS\_TransportBuiltinQosPolicy** (p. 1786), the plugin is implicitly created and registered to the corresponding **DDS\_DomainParticipant** (p. 72) by RTI Connex when:

- the **DDS\_DomainParticipant** (p. 72) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDS\_Subscriber\_lookup\_datareader** (p. 579)),

whichever happens first.

Each builtin transport contains its own set of properties. For example, the **::UDPv4 Transport** (p. 846) allows the application to specify whether or not multicast is supported, the maximum size of the message, and provides a mechanism for the application to filter out network interfaces.

The builtin transport plugin properties can be changed by the function **NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727) or by using the **PROPERTY** (p. 1107) QoS policy associated with the **DDS\_DomainParticipant** (p. 72). Builtin transport plugin properties specified in **DDS\_PropertyQosPolicy** (p. 1645) always overwrite the ones specified through **NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727). Refer to the specific builtin transport for the list of property names that can be specified through **PROPERTY** (p. 1107) QoS policy.

Any changes to the builtin transport properties after the builtin transports have been registered with will have no effect.

See also

**NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727) **DDS\_PropertyQosPolicy** (p. 1645)

The built-in transport plugins can also be instantiated and registered by the user, following the steps for **Registering a transport with a participant** (p. 798). This is useful when the application needs different values for the network addresses.

## 4.36 Creating New Transport Plugins

Developing new transport plugins for RTI Connex.

Developing new transport plugins for RTI Connex.

RTI Connex provides an abstract "C" language API for creating new transport plugins. If you are interested in creating a new transport plugin for RTI Connex, please contact your RTI representative or email [sales@rti.com](mailto:sales@rti.com).

## 4.37 Queries and Filters Syntax

### 4.37.1 Syntax for DDS Queries and Filters

A subset of the WHERE clause in SQL is used in several parts of the specification:

- The `filter_expression` in the `DDS_ContentFilteredTopic` (p. 173)
- The `query_expression` in the `DDS_QueryCondition` (p. 691)
- `<<extension>>` (p. 817) The `filter_expression` in the `DDS_TopicQuerySelection` (p. 1785)
- `<<extension>>` (p. 817) The `filter_expression` in the `DDS_ChannelSettings_t` (p. 1344)

Those expressions may use a subset of SQL, extended with the possibility to use program variables in the SQL expression. The allowed SQL expressions are defined with the BNF-grammar below.

The following notational conventions are made:

- *NonTerminals* are typeset in italics.
- 'Terminals' are quoted and typeset in a fixed width font. They are written in upper case in most cases in the BNF-grammar below, but should be case insensitive.
- **TOKENS** are typeset in bold.
- The notation (*element* // ',') represents a non-empty comma-separated list of *elements*.

### 4.37.2 SQL grammar in BNF

```

FilterExpression ::= Condition
Condition      ::= Predicate
                | Condition 'AND' Condition
                | Condition 'OR' Condition
                | 'NOT' Condition
                | '(' Condition ')'
Predicate     ::= ComparisonPredicate
                | BetweenPredicate
ComparisonPredicate ::= ComparisonTerm RelOp ComparisonTerm
ComparisonTerm    ::= FieldIdentifier
                | Parameter
BetweenPredicate  ::= FieldIdentifier 'BETWEEN' Range
                | FieldIdentifier 'NOT BETWEEN' Range
FieldIdentifier   ::= FIELDNAME
                | IDENTIFIER
RelOp            ::= '=' | '>' | '>=' | '<' | '<=' | '<>' | 'LIKE' | 'MATCH'
Range            ::= Parameter 'AND' Parameter
Parameter       ::= INTEGERVALUE
                | CHARVALUE
                | FLOATVALUE
                | STRING
                | ENUMERATEDVALUE
                | BOOLEANVALUE
                | NULLVALUE
                | PARAMETER

```

### 4.37.3 Token expression

The syntax and meaning of the tokens used in the SQL grammar is described as follows:

- **IDENTIFIER** - An identifier for a FIELDNAME, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '\_' but may not start with a digit.

Formal notation:

```
IDENTIFIER: LETTER ( PART_LETTER)*
where LETTER: [ "A"-"Z", "_", "a"-"z" ]
      PART_LETTER: [ "A"-"Z", "_", "a"-"z", "0"-"9" ]
```

- **FIELDNAME** - A fieldname is a reference to a field in the data structure. The dot '.' is used to navigate through nested structures. The number of dots that may be used in a FIELDNAME is unlimited. The FIELDNAME can refer to fields at any depth in the data structure. The names of the field are those specified in the IDL definition of the corresponding structure, which may or may not match the fieldnames that appear on the language-specific (e.g., C/C++, Java) mapping of the structure. To reference to the  $n+1$  element in an array or sequence, use the notation '[ $n$ ]', where  $n$  is a natural number (zero included). FIELDNAME must resolve to a primitive IDL type; that is either boolean, octet, (unsigned) short, (unsigned) long, (unsigned) long long, float double, char, wchar, string, wstring, or enum.

Formal notation:

```
FIELDNAME: FieldNamePart ( "." FieldNamePart )*
where FieldNamePart : IDENTIFIER ( "[" Index "]" )*
      Index> : (["0"-"9"])+
              | ["0x", "0X"] (["0"-"9", "A"-"F", "a"-"f"])+
```

Primitive IDL types referenced by FIELDNAME are treated as different types in *Predicate* according to the following table:

Predicate Data Type	IDL Type
BOOLEANVALUE	boolean
INTEGERVALUE	octet, (unsigned) short, (unsigned) long, (unsigned) long long
FLOATVALUE	float, double
CHARVALUE	char, wchar
STRING	string, wstring
ENUMERATEDVALUE	enum

- **TOPICNAME** - A topic name is an identifier for a topic, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '\_' but may not start with a digit.

Formal notation:

TOPICNAME : **IDENTIFIER**

- **INTEGERVALUE** - Any series of digits, optionally preceded by a plus or minus sign, representing a decimal integer value within the range of the system. 64-bit integers (int64 and uint64) must be followed by either l or L, otherwise the value is treated as a 32-bit integer. A hexadecimal number is preceded by 0x and must be a valid hexadecimal expression.

Formal notation:

```
INTEGERVALUE : ([ "+", "-" ])? ([ "0"-"9" ])+ [ ("L", "l") ]?
              | ([ "+", "-" ])? [ "0x", "0X" ] ([ "0"-"9", "A"-"F", "a"-"f" ])+ [ ("L", "l") ]?
```

- **CHARVALUE** - A single character enclosed between single quotes.

Formal notation:

```
CHARVALUE : "'" (~["'"])?''
```

- **FLOATVALUE** - Any series of digits, optionally preceded by a plus or minus sign and optionally including a floating point ('.'). A power-of-ten expression may be postfixed, which has the syntax *en* or *En*, where *n* is a number, optionally preceded by a plus or minus sign.

Formal notation:

```
FLOATVALUE : ([ "+", "-" ])? ([ "0"-"9" ])* ( "." )? ([ "0"-"9" ])+ ( EXPONENT )?
where EXPONENT: [ "e", "E" ] ([ "+", "-" ])? ([ "0"-"9" ])+
```

- **STRING** - Any series of characters encapsulated in single quotes, except the single quote itself.

Formal notation:

```
STRING : "'" (~["'"])*''
```

- **ENUMERATEDVALUE** - An enumerated value is a reference to a value declared within an enumeration. Enumerated values consist of the name of the enumeration label enclosed in single quotes. The name used for the enumeration label must correspond to the label names specified in the IDL definition of the enumeration.

Formal notation:

```
ENUMERATEDVALUE : "'" ["A" - "Z", "a" - "z"] ["A" - "Z", "a" - "z", "_", "0" - "9"]* "'"
```

- **BOOLEANVALUE** - Can either be 'TRUE' or 'FALSE', case insensitive.

Formal notation (case insensitive):

```
BOOLEANVALUE : ["TRUE", "FALSE"]
```

- **NULLVALUE** - Can be null, and is case insensitive.

Formal notation (case insensitive):

```
NULLVALUE : "null"
```

- **PARAMETER** - A parameter is of the form %*n*, where *n* represents a natural number (zero included) smaller than 100. It refers to the *n* + 1<sup>th</sup> argument in the given context. Argument can only in primitive type value format. It cannot be a FIELDNAME.

Formal notation:

```
PARAMETER : "%" (["0"-"9"])+
```

#### 4.37.4 String Parameters

Strings used as parameter values must contain the enclosing quotation marks (') within the parameter value, and not place the quotation marks within the expression statement. For example, the following expression is legal:

```
" symbol MATCH %0 " with parameter 0 = " 'IBM' "
```

whereas the following expression will not compile:

```
" symbol MATCH '%0' " with parameter 0 = " IBM "
```

#### 4.37.5 Type compatability in Predicate

Only certain combination of type comparisons are valid in *Predicate*. The following table marked all the compatible pairs with 'YES':

	BOOLEANVALUE	INTEGERVALUE	FLOATVALUE	CHARVALUE	STRING	ENUMERATEDVALUE
BOOLEAN	YES					
INTEGERVALUE		YES	YES			
FLOATVALUE		YES	YES			
CHARVALUE				YES	YES	YES
STRING				YES	YES(*1)	YES
ENUMERATEDVALUE		YES		YES(*2)	YES(*2)	YES(*3)

- (\*1) See **SQL Extension: Regular Expression Matching** (p. 734)
- (\*2) Because the formal notation of the Enumeration values, they are compatible with string and char literals, but they are not compatible with string or char variables, i.e., "MyEnum='EnumValue'" would be correct, but "MyEnum=MyString" is not allowed.
- (\*3) Only for same type Enums.

#### 4.37.6 SQL Extension: Regular Expression Matching

The relational operator MATCH may only be used with string fields. The right-hand operator is a string *pattern*. A string pattern specifies a template that the left-hand field value must match. The characters `,^?*[]-^!%` have special meanings unless they are escaped by the escape character `\`.

MATCH is case-sensitive.

The pattern allows limited "wild card" matching under the following rules:

Character	Meaning
,	"," separates a list of alternate patterns. The field string is matched if it matches one or more of the patterns.
/	"/" in the pattern string matches a / in the field string. This character is used to separate a sequence of mandatory substrings.
?	"?" in the pattern string matches any single <i>non-special</i> characters in the field string.
*	"*" in the pattern string matches 0 or more <i>non-special</i> characters in field string.
<b>[charlist]</b>	Matches any one of the characters from the list of characters in <i>charlist</i> .
<b>[s-e]</b>	Matches any character any character from s to e, inclusive.
%	"%" is used to designate filter expressions parameters.
<b>[!charlist]</b> or <b>[^charlist]</b>	Matches any characters not in <i>charlist</i> (not supported).
<b>[!s-e]</b> or <b>[^s-e]</b>	Matches any characters not in the interval [s-e] (not supported).
\	Escape character for special characters.

The syntax is similar to the POSIX fnmatch syntax (1003.2-1992 section B.6). The MATCH syntax is also similar to the 'subject' strings of TIBCO Rendezvous.

**Note:** To use special characters as regular characters in regular expressions, you must escape them using the character `\`. For example, 'A]' is considered a malformed expression and the result is undefined.

### 4.37.7 Character Encoding

The default encoding for IDL strings is UTF-8. RTI Connexr offers ISO 8859-1 as an alternative encoding for IDL strings.

In order to configure ISO 8859-1 as the encoding for filtering of IDL strings, you can set the DomainParticipant property **dds.domain\_participant.filtering\_character\_encoding** to ISO-8859:

The possible values for **dds.domain\_participant.filtering\_character\_encoding** are:

- **UTF-8** (default value)
- **ISO-8859-1**

### 4.37.8 Unicode Normalization

Unicode supports multiple ways to encode some characters, most notably accented characters. A composed character in Unicode can often have a number of different ways of representing the character. For example:

- Precomposed `é` is represented by `\u1e3c`
- Composed `é` = `L` + `^` is represented by `\u004c + \u032d`

The lexical comparison of the two characters above will return false. In order to do the correct comparison the characters need to be normalized, that is, reduced to the same character composition.

When the character encoding for filtering of IDL strings is UTF-8, the Unicode normalization behavior can be controlled using a DomainParticipant property called **dds.domain\_participant.filtering\_unicode\_normalization**.

The possible values of the normalization property are:

- **OFF**: Disables normalization
- **NFD**: Canonical Decomposition
- **NFC (default value)**: Canonical Decomposition, followed by Canonical Composition
- **NFK**: Compatibility Decomposition, followed by Canonical Composition
- **NFKC\_Casefold**: Casefold followed by NFKC normalization

Because normalization may affect performance, and it is enabled by default, the property allows disabling the normalization process per DomainParticipant using the value OFF. However, you should be aware that doing this may lead to unexpected behavior.

### 4.37.9 Examples

Assuming Topic "Location" has as an associated type a structure with fields "flight\_id, x, y, z", and Topic "FlightPlan" has as fields "flight\_id, source, destination". The following are examples of using these expressions.

Example of a **filter\_expression** (for **DDS\_ContentFilteredTopic** (p. 173)) or a **query\_expression** (for **DDS\_QueryCondition** (p. 691)):

- "z < 1000 AND x < 23"

Examples of a **filter\_expression** using **MATCH** (for **DDS\_ContentFilteredTopic** (p. 173)) operator:

- "symbol MATCH 'NASDAQ/GOOG' "
- "symbol MATCH 'NASDAQ/[A-M]\*' "

## 4.38 Logging and Version

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connex.

### Modules

- **Version**  
*Retrieve information for the RTI Connex product, the core library, and the C, C++ or Java libraries.*
- **Logging**  
*Configure how much debugging information is reported during runtime and where it is logged.*

### 4.38.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connex.

## 4.39 General Utilities and Compliance Configuration

API of general utilities used in the RTI Connex distribution.

### Modules

- **Compliance Configuration**  
*APIs to configure compliance with certain standard specifications.*
- **Heap Monitoring**  
*Monitor memory allocations done by the middleware on the native heap.*
- **Network Capture**  
*Save network traffic into a capture file for further analysis.*
- **Other Utilities**  
*Other Utilities, such as **NDDS\_Utility\_spin** (p. 1285).*

### 4.39.1 Detailed Description

API of general utilities used in the RTI Connex distribution.

## 4.40 Observability

API of RTI Connex Observability Framework.

### Modules

- **Observability Library**  
*RTI Monitoring Library 2.0.*

### 4.40.1 Detailed Description

API of RTI Connex Observability Framework.

## 4.41 Request-Reply Pattern

Support for the request-reply communication pattern.

### Modules

- **Requester**  
*FooBarRequester* (p. 1843) and associated elements
- **Replier**  
*FooBarReplier* (p. 1842), *FooBarSimpleReplier* (p. 1844) and associated elements

### 4.41.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- **FooBarRequester** (p. 1843)
- **FooBarReplier** (p. 1842) (and a simpler version **FooBarSimpleReplier** (p. 1844))

This functionality is built on top of RTI Connex.

A Requester publishes a request topic and subscribes to a reply topic. A Replier subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

See also

**Request-Reply Examples** (p. 806).

## 4.42 Requester

**FooBarRequester** (p. 1843) and associated elements

### Data Structures

- struct **RTI\_Connext\_Requester**  
*The type-independent version of a Requester.*
- struct **RTI\_Connext\_RequesterParams**  
*Contains the parameters for creating a **FooBarRequester** (p. 1843).*
- struct **FooBarRequester**  
*Allows sending requests and receiving replies.*

### Macros

- #define **RTI\_CONNEXT\_REQUESTER\_DECL**(TReq, TRep, TRequester)  
*Instantiates the declaration of a typed requester and its operations.*

### Typedefs

- typedef struct **RTI\_Connext\_RequesterParams** **RTI\_Connext\_RequesterParams**  
*Contains the parameters for creating a **FooBarRequester** (p. 1843).*
- typedef struct **FooBarRequester** **FooBarRequester**  
*Allows sending requests and receiving replies.*

### Functions

- **DDS\_ReturnCode\_t** **RTI\_Connext\_Requester\_delete** ( **RTI\_Connext\_Requester** \*self)  
*Releases the internal entities created by this object.*
- **DDS\_ReturnCode\_t** **RTI\_Connext\_Requester\_wait\_for\_replies** ( **RTI\_Connext\_Requester** \*self, **DDS\_↔\_Long** min\_count, const struct **DDS\_Duration\_t** \*max\_wait)  
*Waits for replies to any request.*
- **DDS\_ReturnCode\_t** **RTI\_Connext\_Requester\_wait\_for\_replies\_for\_related\_request** ( **RTI\_Connext\_↔\_Requester** \*self, **DDS\_Long** min\_count, const struct **DDS\_Duration\_t** \*max\_wait, const struct **DDS\_↔\_SampleIdentity\_t** \*related\_request\_id)  
*Waits for replies to a specific request.*
- **FooBarRequester** \* **FooBarRequester\_create** ( **DDS\_DomainParticipant** \*participant, const char \*service\_↔\_name)  
*Creates a Requester with the minimum set of parameters.*
- **FooBarRequester** \* **FooBarRequester\_create\_w\_params** (const **RTI\_Connext\_RequesterParams** \*params)  
*Creates a Requester with parameters.*
- **DDS\_ReturnCode\_t** **FooBarRequester\_send\_request** ( **FooBarRequester** \*self, const **Foo** \*request)  
*Sends a request.*

- **DDS\_ReturnCode\_t FooBarRequester\_send\_request\_w\_params** ( FooBarRequester \*self, const Foo \*request, struct DDS\_WriteParams\_t \*request\_info)
 

*Sends a request and gets back information about it that allows correlation with future replies.*
- **DDS\_ReturnCode\_t FooBarRequester\_receive\_reply** ( FooBarRequester \*self, Bar \*reply, struct DDS\_↔SampleInfo \*sample\_info, const struct DDS\_Duration\_t \*max\_wait)
 

*Waits for a reply and copies its contents into a Sample.*
- **DDS\_ReturnCode\_t FooBarRequester\_receive\_replies** ( FooBarRequester \*self, struct BarSeq \*received\_↔\_data, struct DDS\_SampleInfoSeq \*info\_seq, DDS\_Long min\_count, DDS\_Long max\_count, const struct DDS\_Duration\_t \*max\_wait)
 

*Waits for multiple replies and provides a loaned sequence to access them.*
- **DDS\_ReturnCode\_t FooBarRequester\_take\_reply** ( FooBarRequester \*self, Bar \*reply, struct DDS\_↔SampleInfo \*sample\_info)
 

*Copies the contents of a reply into a Sample.*
- **DDS\_ReturnCode\_t FooBarRequester\_take\_replies** ( FooBarRequester \*self, struct BarSeq \*reply\_seq, struct DDS\_SampleInfoSeq \*sample\_info\_seq, DDS\_Long max\_count)
 

*Provides a loaned sequence to access the existing replies.*
- **DDS\_ReturnCode\_t FooBarRequester\_take\_reply\_for\_related\_request** ( FooBarRequester \*self, Bar \*reply, struct DDS\_SampleInfo \*sample\_info, const struct DDS\_SampleIdentity\_t \*related\_request\_id)
 

*Copies the contents of a reply for a specific request.*
- **DDS\_ReturnCode\_t FooBarRequester\_take\_replies\_for\_related\_request** ( FooBarRequester \*self, struct BarSeq \*reply\_seq, struct DDS\_SampleInfoSeq \*sample\_info\_seq, DDS\_Long max\_count, const struct DDS\_SampleIdentity\_t \*related\_request\_id)
 

*Provides a loaned sequence to access the existing replies for a specific request.*
- **DDS\_ReturnCode\_t FooBarRequester\_read\_reply** ( FooBarRequester \*self, Bar \*reply, struct DDS\_↔SampleInfo \*sample\_info)
 

*Copies the contents of a reply into a Sample.*
- **DDS\_ReturnCode\_t FooBarRequester\_read\_replies** ( FooBarRequester \*self, struct BarSeq \*reply\_seq, struct DDS\_SampleInfoSeq \*sample\_info\_seq, DDS\_Long max\_count)
 

*Provides a loaned sequence to access the existing replies.*
- **DDS\_ReturnCode\_t FooBarRequester\_read\_reply\_for\_related\_request** ( FooBarRequester \*self, Bar \*reply, struct DDS\_SampleInfo \*sample\_info, const struct DDS\_SampleIdentity\_t \*related\_request\_id)
 

*Copies the contents of a reply for a specific request.*
- **DDS\_ReturnCode\_t FooBarRequester\_read\_replies\_for\_related\_request** ( FooBarRequester \*self, struct BarSeq \*reply\_seq, struct DDS\_SampleInfoSeq \*sample\_info\_seq, DDS\_Long max\_count, const struct DDS\_SampleIdentity\_t \*related\_request\_id)
 

*Provides a loaned sequence to access the existing replies for a specific request.*
- **FooDataWriter \* FooBarRequester\_get\_request\_datawriter** ( FooBarRequester \*self)
 

*Retrieves the underlying DDS\_DataWriter (p. 478).*
- **BarDataReader \* FooBarRequester\_get\_reply\_datareader** ( FooBarRequester \*self)
 

*Retrieves the underlying DDS\_DataReader (p. 608).*
- **DDS\_ReturnCode\_t FooBarRequester\_return\_loan** ( FooBarRequester \*self, struct BarSeq \*received\_data, struct DDS\_SampleInfoSeq \*info\_seq)
 

*Returns samples previously received from the middleware.*

### 4.42.1 Detailed Description

**FooBarRequester** (p. 1843) and associated elements

## 4.42.2 Macro Definition Documentation

### 4.42.2.1 RTI\_CONNEXT\_REQUESTER\_DECL

```
#define RTI_CONNEXT_REQUESTER_DECL(
    TReq,
    TRep,
    TRequester )
```

Instantiates the declaration of a typed requester and its operations.

#### Parameters

<i>TReq</i>	The request type name
<i>TRep</i>	The reply type name
<i>TRequester</i>	The type name for the typed requester and the prefix for all the operations.

#### See also

**Creating a Requester** (p. 808)

## 4.42.3 Typedef Documentation

### 4.42.3.1 RTI\_Connext\_RequesterParams

```
typedef struct RTI_Connext_RequesterParams RTI_Connext_RequesterParams
```

Contains the parameters for creating a **FooBarRequester** (p. 1843).

The following parameters are required to create a Requester:

- A **DDS\_DomainParticipant** (p. 72) (**RTI\_Connext\_RequesterParams::participant** (p. 1906)), and
- Either a service name (**RTI\_Connext\_RequesterParams::service\_name** (p. 1906))
- Or custom topic names (**RTI\_Connext\_RequesterParams::request\_topic\_name** (p. 1906) and **RTI\_Connext\_↔\_RequesterParams::reply\_topic\_name** (p. 1907))

The rest of the parameters that can be set in a RequesterParams object are optional.

#### See also

**Creating a Requester with optional parameters** (p. 808)

### 4.42.3.2 FooBarRequester

```
typedef struct FooBarRequester FooBarRequester
```

Allows sending requests and receiving replies.

A requester is an entity with two associated **topics** (p. 164): a request topic and a reply topic. It can send requests by publishing samples of the request topic and receive replies to those requests by subscribing to the reply topic.

Valid types for these topics (TReq and TRep) are: those generated by rtiddsgen, the **DDS built-in types** (p. 301), and **DDS\_DynamicData** (p. 1523). **Note:** At this moment, in the C version of this API, only rtiddsgen-generated types are supported.

To create a Requester for two types, a request type TReq=Foo (p. 1841) and a reply type TRep=Bar, your application needs to instantiate the data structure **FooBarRequester** (p. 1843) and the specific operations that can publish and subscribe to those types. In this documentation we refer to the type-dependent operations as FooBarRequester\_ (for example, **FooBarRequester\_take\_replies** (p. 748)). Some operations are type-independent and their name always begins with RTI\_Connext\_Requester\_ (for example, **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)).

See **Creating a Requester** (p. 808) to see how to instantiate a **FooBarRequester** (p. 1843).

A Replier and a Requester communicate when they use the same topics for requests and replies (see **RTI\_Connext\_RequesterParams::service\_name** (p. 1906)) on the same **domain** (p. 72).

A Requester can send requests and receive one or multiple replies. It does that using the following operations:

- Sending requests (i.e. publishing request samples on the request topic)
- Waiting for replies to be received by the middleware (for any request or for a specific request)
- Getting those replies from the middleware. There are two ways to do this: take (the data samples are removed from the middleware), read (the data samples remain in the middleware and can be read or taken again).
- A convenience operation, receive (which is a combination of wait and take).

In all cases, the middleware guarantees that a requester only receives reply samples that are associated with those requests that it sends.

For multi-reply scenarios, in which a Requester receives multiple replies from a Replier for a given request, the Requester can check if a reply is the last reply of a sequence of replies. To do so, see if the bit **DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p. 1185) is set in **DDS\_SampleInfo::flag** (p. 1730) after receiving each reply. This indicates it is NOT the last reply.

A requester has an associated **DDS\_DomainParticipant** (p. 72), which can be shared with other requesters or RTI Connext routines. All the other RTI Connext entities required for the request-reply interaction, including a **DDS\_DataWriter** (p. 478) for writing requests and a **DDS\_DataReader** (p. 608) for reading replies, are automatically created when the requester is constructed.

Quality of Service for the underlying DataWriter and DataReader can be configured (see **RTI\_Connext\_RequesterParams::qos\_profile\_name** (p. 1907)). By default, they are created with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 1124). The exact default configuration is described here: **Configuring Request-Reply QoS profiles** (p. 814)

See also

**FooBarReplier** (p. 1842)

**Request-Reply Examples** (p. 806)

**Requester example** (p. 809)

## 4.42.4 Function Documentation

### 4.42.4.1 RTI\_Connext\_Requester\_delete()

```
DDS_ReturnCode_t RTI_Connext_Requester_delete (
    RTI_Connext_Requester * self )
```

Releases the internal entities created by this object.

Among other internal resources, it deletes the underlying DataReader and DataWriter.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
-------------	------------------------------------------

#### See also

**DDS\_Subscriber\_delete\_datareader** (p. 578)

**DDS\_Publisher\_delete\_datawriter** (p. 449)

### 4.42.4.2 RTI\_Connext\_Requester\_wait\_for\_replies()

```
DDS_ReturnCode_t RTI_Connext_Requester_wait_for_replies (
    RTI_Connext_Requester * self,
    DDS_Long min_count,
    const struct DDS_Duration_t * max_wait )
```

Waits for replies to any request.

This operation waits for *min\_count* requests to be available for up to *max\_wait* .

If this operation is called several times but the available replies are not taken (with **FooBarRequester\_take\_replies** (p. 748)), this operation may return immediately and will not wait for new replies. New replies may replace existing ones if they are not taken, depending on the **DDS\_HistoryQosPolicy** (p. 1558) used to configure this Requester.

#### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>min_count</i>	Minimum number of replies that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum waiting time after which this operation unblocks, regardless of how many replies are available.

If at least `min_count` replies were available before `max_wait` elapsed, it returns **DDS\_RETCODE\_OK** (p. 1025), otherwise it returns **DDS\_RETCODE\_TIMEOUT** (p. 1025). Another **Standard Return Codes** (p. 1024) may be returned in case of error.

**MT Safety:**

Concurrent calls to this operation on the same object are not allowed. However, waiting for replies for specific requests in parallel is supported (see **RTI\_Connext\_Requester\_wait\_for\_replies\_for\_related\_request** (p. 743)).

See also

**FooBarRequester\_take\_replies** (p. 748)

#### 4.42.4.3 RTI\_Connext\_Requester\_wait\_for\_replies\_for\_related\_request()

```
DDS_ReturnCode_t RTI_Connext_Requester_wait_for_replies_for_related_request (
    RTI_Connext_Requester * self,
    DDS_Long min_count,
    const struct DDS_Duration_t * max_wait,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Waits for replies to a specific request.

This operation is analogous to **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742) except this operation waits for replies for a specific request.

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>min_count</i>	Minimum number of replies for the related request that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum wait time after which this operation unblocks, regardless of how many replies are available.
<i>related_request_id</i>	The identity of a request previously sent by this Requester

**Returns**

true if at least `min_count` replies for the related request were available before `max_wait` elapsed, or false otherwise.  
One of the **Standard Return Codes** (p. 1024)

**MT Safety:**

SAFE

See also

**RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

#### 4.42.4.4 FooBarRequester\_create()

```

FooBarRequester * FooBarRequester_create (
    DDS_DomainParticipant * participant,
    const char * service_name )

```

Creates a Requester with the minimum set of parameters.

Parameters

<i>participant</i>	The DomainParticipant this requester uses to join a DDS domain
<i>service_name</i>	The service name. See <b>RTI_Connext_RequesterParams::service_name</b> (p. 1906)

Returns

One of the **Standard Return Codes** (p. 1024)

#### 4.42.4.5 FooBarRequester\_create\_w\_params()

```

FooBarRequester * FooBarRequester_create_w_params (
    const RTI_Connext_RequesterParams * params )

```

Creates a Requester with parameters.

Parameters

<i>params</i>	All the parameters that configure this requester. See <b>RTI_Connext_RequesterParams</b> (p. 1905) for the list of mandatory parameters.
---------------	------------------------------------------------------------------------------------------------------------------------------------------

Returns

One of the **Standard Return Codes** (p. 1024)

See also

**RTI\_Connext\_RequesterParams** (p. 1905)

**Creating a Requester** (p. 808)

## 4.42.4.6 FooBarRequester\_send\_request()

```
DDS_ReturnCode_t FooBarRequester_send_request (
    FooBarRequester * self,
    const Foo * request )
```

Sends a request.

If a future reply needs to be correlated to exactly this request, use **FooBarRequester\_send\_request\_w\_params** (p. 745).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>request</i>	The request to be sent

## Returns

One of the **Standard Return Codes** (p. 1024)

## MT Safety:

SAFE

## See also

**FooBarRequester\_send\_request\_w\_params** (p. 745)

## 4.42.4.7 FooBarRequester\_send\_request\_w\_params()

```
DDS_ReturnCode_t FooBarRequester_send_request_w_params (
    FooBarRequester * self,
    const Foo * request,
    struct DDS_WriteParams_t * request_info )
```

Sends a request and gets back information about it that allows correlation with future replies.

After calling this operation, the sample contains a valid identity that can be used for correlation with future replies.

See example code in **Correlating requests and replies** (p. 810).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>request</i>	<< <i>inout</i> >> (p. 818) The request data
<i>request_info</i>	<< <i>inout</i> >> (p. 818) Optional write parameters. When this call ends successfully,
Generated by Doxygen	<b>DDS_WriteParams_t::identity</b> (p. 1834) contains a valid identity that can be used for correlation with future replies.

**Returns**

One of the **Standard Return Codes** (p. 1024) ; **DDS\_RETCODE\_TIMEOUT** (p. 1025) may be reported in the same conditions as in **FooDataWriter\_write** (p. 489).

**MT Safety:**

SAFE

**See also**

**DDS\_WriteParams\_t::identity** (p. 1834)  
**RTI\_Connext\_Requester\_wait\_for\_replies\_for\_related\_request** (p. 743)  
**FooBarRequester\_take\_replies\_for\_related\_request** (p. 749)  
**Correlating requests and replies** (p. 810)

**4.42.4.8 FooBarRequester\_receive\_reply()**

```
DDS_ReturnCode_t FooBarRequester_receive_reply (
    FooBarRequester * self,
    Bar * reply,
    struct DDS_SampleInfo * sample_info,
    const struct DDS_Duration_t * max_wait )
```

Waits for a reply and copies its contents into a Sample.

This operation is equivalent to using **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742) and **FooBarRequester\_↔take\_reply** (p. 747).

**MT Safety:**

Same restrictions as **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

**See also**

**RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)  
**FooBarRequester\_take\_reply** (p. 747)  
**Requester example** (p. 809)

#### 4.42.4.9 FooBarRequester\_receive\_replies()

```
DDS_ReturnCode_t FooBarRequester_receive_replies (
    FooBarRequester * self,
    struct BarSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long min_count,
    DDS_Long max_count,
    const struct DDS_Duration_t * max_wait )
```

Waits for multiple replies and provides a loaned sequence to access them.

This operation is equivalent to using `RTI_Connext_Requester_wait_for_replies` (p. 742) and `FooBarRequester_take_replies` (p. 748).

##### MT Safety:

See `RTI_Connext_Requester_wait_for_replies` (p. 742)

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

`RTI_Connext_Requester_wait_for_replies` (p. 742)

`FooBarRequester_take_replies` (p. 748)

#### 4.42.4.10 FooBarRequester\_take\_reply()

```
DDS_ReturnCode_t FooBarRequester_take_reply (
    FooBarRequester * self,
    Bar * reply,
    struct DDS_SampleInfo * sample_info )
```

Copies the contents of a reply into a Sample.

Takes a reply sample from the Requester and makes a copy.

This operation may be used after a call to `RTI_Connext_Requester_wait_for_replies` (p. 742).

To avoid copies, you can use `FooBarRequester_take_replies` (p. 748).

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>reply</i>	<< <i>inout</i> >> (p. 818) user data type-specific <b>Foo</b> (p. 1841) object where the next received reply
Generated by Doxygen	sample will be returned. The received_data must have been fully allocated. Otherwise, this operation may fail.
<i>sample_info</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfo</b> (p. 1720) object where the info associated to the received reply will be returned. Must be a valid non-NULL <b>DDS_SampleInfo</b> (p. 1720). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.

**Returns**

One of the **Standard Return Codes** (p. 1024) , **DDS\_RETCODE\_NO\_DATA** (p. 1025)

**MT Safety:**

SAFE

**See also**

**RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

**4.42.4.11 FooBarRequester\_take\_replies()**

```
DDS_ReturnCode_t FooBarRequester_take_replies (
    FooBarRequester * self,
    struct BarSeq * reply_seq,
    struct DDS_SampleInfoSeq * sample_info_seq,
    DDS_Long max_count )
```

Provides a loaned sequence to access the existing replies.

Takes all the existing replies up to `max_count` and provides a loaned sequence to access them.

This operation does not make a copy of the data. It is similar to **FooDataReader\_take** (p. 619).

The loan is returned with **FooBarRequester\_return\_loan** (p. 752)

This operation may be used after a call to **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

See an **example** here: **Taking loaned samples** (p. 809)

**Parameters**

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>reply_seq</i>	The data sequence
<i>sample_info_seq</i>	The associated sample info sequence
<i>max_count</i>	The maximum number of samples that are taken at a time. The special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) may be used. This value will read up to the limit specified by <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_read</b> (p. 1402)

**Returns**

One of the **Standard Return Codes** (p. 1024) , **DDS\_RETCODE\_NO\_DATA** (p. 1025)

MT Safety:

SAFE

See also

**RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

**FooDataReader\_take** (p. 619) (for a more detailed description on how QoS and other parameters affect the underlying DataReader)

#### 4.42.4.12 FooBarRequester\_take\_reply\_for\_related\_request()

```
DDS_ReturnCode_t FooBarRequester_take_reply_for_related_request (
    FooBarRequester * self,
    Bar * reply,
    struct DDS_SampleInfo * sample_info,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Copies the contents of a reply for a specific request.

This operation is analogous to **FooBarRequester\_take\_reply** (p. 747) except the reply corresponds to a specific request.

Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>reply</i>	The sample where a reply is copied into
<i>sample_info</i>	<< <i>inout</i> >> (p. 818) a <b>DDS_SampleInfo</b> (p. 1720) object where the info associated to the received reply will be returned. Must be a valid non-NULL <b>DDS_SampleInfo</b> (p. 1720). The function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 1025) if it is NULL.
<i>related_request_id</i>	The identity of a request previously sent by this Requester

MT Safety:

SAFE

**Correlating requests and replies** (p. 810)

#### 4.42.4.13 FooBarRequester\_take\_replies\_for\_related\_request()

```
DDS_ReturnCode_t FooBarRequester_take_replies_for_related_request (
    FooBarRequester * self,
    struct BarSeq * reply_seq,
    struct DDS_SampleInfoSeq * sample_info_seq,
    DDS_Long max_count,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Provides a loaned sequence to access the existing replies for a specific request.

This operation is analogous to **FooBarRequester\_take\_replies** (p. 748) except the replies this operation provides correspond to a specific request.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>reply_seq</i>	The data sequence
<i>sample_info_seq</i>	The associated sample info sequence
<i>max_count</i>	The maximum number of samples that are taken at a time. The special value <b>DDS_LENGTH_UNLIMITED</b> (p. 1127) may be used.
<i>related_request_id</i>	The identity of a request previously sent by this Requester

##### MT Safety:

SAFE

##### See also

**FooBarRequester\_take\_replies** (p. 748)

**Correlating requests and replies** (p. 810)

#### 4.42.4.14 FooBarRequester\_read\_reply()

```
DDS_ReturnCode_t FooBarRequester_read_reply (
    FooBarRequester * self,
    Bar * reply,
    struct DDS_SampleInfo * sample_info )
```

Copies the contents of a reply into a Sample.

This operation is equivalent to **FooBarRequester\_take\_reply** (p. 747) except the reply remains in the Requester and can be read or taken again.

#### 4.42.4.15 FooBarRequester\_read\_replies()

```
DDS_ReturnCode_t FooBarRequester_read_replies (
    FooBarRequester * self,
    struct BarSeq * reply_seq,
    struct DDS_SampleInfoSeq * sample_info_seq,
    DDS_Long max_count )
```

Provides a loaned sequence to access the existing replies.

This operation is equivalent to **FooBarRequester\_take\_replies** (p. 748) except the replies remain in the Requester and can be read or taken again.

#### 4.42.4.16 FooBarRequester\_read\_reply\_for\_related\_request()

```
DDS_ReturnCode_t FooBarRequester_read_reply_for_related_request (
    FooBarRequester * self,
    Bar * reply,
    struct DDS_SampleInfo * sample_info,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Copies the contents of a reply for a specific request.

This operation is equivalent to **FooBarRequester\_take\_reply\_for\_related\_request** (p. 749) except the reply remains in the Requester and can be read or taken again.

#### 4.42.4.17 FooBarRequester\_read\_replies\_for\_related\_request()

```
DDS_ReturnCode_t FooBarRequester_read_replies_for_related_request (
    FooBarRequester * self,
    struct BarSeq * reply_seq,
    struct DDS_SampleInfoSeq * sample_info_seq,
    DDS_Long max_count,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Provides a loaned sequence to access the existing replies for a specific request.

This operation is equivalent to **FooBarRequester\_take\_replies\_for\_related\_request** (p. 749) except the replies remain in the Requester and can be read or taken again.

#### 4.42.4.18 FooBarRequester\_get\_request\_datawriter()

```
FooDataWriter * FooBarRequester_get_request_datawriter (  
    FooBarRequester * self )
```

Retrieves the underlying **DDS\_DataWriter** (p. 478).

Accessing the request DataWriter may be useful for a number of advanced use cases, such as:

- Finding matching subscriptions (e.g., Repliers)
- Setting a DataWriter listener
- Getting DataWriter protocol or cache statuses

MT Safety:

SAFE

**DDS\_DataWriter\_set\_listener** (p. 546)

**DDS\_DataWriter\_get\_datawriter\_protocol\_status** (p. 541)

#### 4.42.4.19 FooBarRequester\_get\_reply\_datareader()

```
BarDataReader * FooBarRequester_get_reply_datareader (  
    FooBarRequester * self )
```

Retrieves the underlying **DDS\_DataReader** (p. 608).

Accessing the reply DataReader may be useful for a number of advanced use cases, such as:

- Finding matching publications (e.g., Repliers)
- Setting a DataReader listener
- Getting DataReader protocol or cache statuses

MT Safety:

SAFE

#### 4.42.4.20 FooBarRequester\_return\_loan()

```
DDS_ReturnCode_t FooBarRequester_return_loan (
    FooBarRequester * self,
    struct BarSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq )
```

Returns samples previously received from the middleware.

This operation needs to be called at some point after:

- **FooBarRequester\_take\_replies** (p. 748)
- **FooBarRequester\_take\_replies\_for\_related\_request** (p. 749)
- **FooBarRequester\_receive\_replies** (p. 746)

See also

**FooDataReader\_return\_loan** (p. 639), for more information on how the middleware loans data to the application.

## 4.43 Replier

**FooBarReplier** (p. 1842), **FooBarSimpleReplier** (p. 1844) and associated elements

### Data Structures

- struct **RTI\_Connext\_ReplierListener**  
*Called when a **FooBarReplier** (p. 1842) has new available requests.*
- struct **RTI\_Connext\_SimpleReplierListener**  
*The listener called by a **SimpleReplier**.*
- struct **RTI\_Connext\_Replier**  
*The type-independent version of a **Replier**.*
- struct **RTI\_Connext\_ReplierParams**  
*Contains the parameters for creating a **FooBarReplier** (p. 1842).*
- struct **FooBarReplier**  
*Allows receiving requests and sending replies.*
- struct **RTI\_Connext\_SimpleReplierParams**  
*Contains the parameters for creating a **FooBarSimpleReplier** (p. 1844).*
- struct **FooBarSimpleReplier**  
*A callback-based replier.*

## Macros

- **#define RTI\_Connext\_ReplierListener\_INITIALIZER {NULL, NULL}**  
*Initializes an **RTI\_Connext\_ReplierListener** (p. 1900).*
- **#define RTI\_Connext\_ReplierParams\_INITIALIZER**  
*Initializes a **RTI\_Connext\_ReplierParams** (p. 1901) instance.*
- **#define RTI\_CONNEXT\_REPLIER\_DECL(TReq, TRep, TReplier)**  
*Instantiates the declaration of a typed replier and its operations.*
- **#define RTI\_Connext\_RequesterParams\_INITIALIZER**  
*Initializes a **RTI\_Connext\_RequesterParams** (p. 1905) instance.*
- **#define RTI\_Connext\_SimpleReplierParams\_INITIALIZER**  
*Initializes a **RTI\_Connext\_SimpleReplierParams** (p. 1909) instance.*
- **#define RTI\_CONNEXT\_SIMPLEREPLIER\_DECL(TReq, TRep, TSimpleReplier)**  
*Instantiates the declaration of a typed SimpleReplier and its operations.*

## Typedefs

- **typedef void(\* RTI\_Connext\_ReplierListener\_OnRequestAvailableCallback) (struct RTI\_Connext\_ReplierListener \*self, RTI\_Connext\_Replier \*replier)**  
*The type of **RTI\_Connext\_ReplierListener::on\_request\_available** (p. 766).*
- **typedef void>(\* RTI\_Connext\_SimpleReplierListener\_OnRequestAvailableCallback) (RTI\_Connext\_SimpleReplierListener \*self, const void \*request, const struct DDS\_SampleInfo \*info)**  
*The type of **RTI\_Connext\_SimpleReplierListener::on\_request\_available** (p. 767).*
- **typedef void(\* RTI\_Connext\_SimpleReplierListener\_OnReturnLoanCallback) (RTI\_Connext\_SimpleReplierListener \*self, void \*reply)**  
*The type of **RTI\_Connext\_SimpleReplierListener::return\_loan** (p. 767).*
- **typedef struct RTI\_Connext\_ReplierParams RTI\_Connext\_ReplierParams**  
*Contains the parameters for creating a **FooBarReplier** (p. 1842).*
- **typedef struct FooBarReplier FooBarReplier**  
*Allows receiving requests and sending replies.*
- **typedef struct RTI\_Connext\_SimpleReplierParams RTI\_Connext\_SimpleReplierParams**  
*Contains the parameters for creating a **FooBarSimpleReplier** (p. 1844).*
- **typedef struct FooBarSimpleReplier FooBarSimpleReplier**  
*A callback-based replier.*

## Functions

- **DDS\_ReturnCode\_t RTI\_Connext\_Replier\_delete (RTI\_Connext\_Replier \*self)**  
*Releases the internal entities created by this Replier.*
- **DDS\_ReturnCode\_t RTI\_Connext\_Replier\_wait\_for\_requests (RTI\_Connext\_Replier \*self, int min\_count, const struct DDS\_Duration\_t \*max\_wait)**  
*Waits for requests.*
- **FooBarReplier \* FooBarReplier\_create (DDS\_DomainParticipant \*participant, char \*service\_name)**  
*Creates a Replier with the minimum set of parameters.*
- **FooBarReplier \* FooBarReplier\_create\_w\_params (const RTI\_Connext\_ReplierParams \*params)**  
*Creates a Replier with parameters.*

- **DDS\_ReturnCode\_t FooBarReplier\_receive\_request** ( **FooBarReplier** \*self, **Foo** \*request, struct **DDS\_SampleInfo** \*sample\_info, const struct **DDS\_Duration\_t** \*max\_wait)  
*Waits for a request and copies its contents into a Sample.*
- **DDS\_ReturnCode\_t FooBarReplier\_receive\_requests** ( **FooBarReplier** \*self, struct **FooSeq** \*received\_data, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** min\_reply\_count, **DDS\_Long** max\_reply\_count, const struct **DDS\_Duration\_t** \*max\_wait)  
*Waits for multiple requests and provides a loaned sequence to access them.*
- **DDS\_ReturnCode\_t FooBarReplier\_take\_request** ( **FooBarReplier** \*self, **Foo** \*request, struct **DDS\_SampleInfo** \*sample\_info)  
*Copies the contents of a request into a Sample.*
- **DDS\_ReturnCode\_t FooBarReplier\_take\_requests** ( **FooBarReplier** \*self, struct **FooSeq** \*request\_seq, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_count)  
*Provides a loaned sequence to access the existing requests.*
- **DDS\_ReturnCode\_t FooBarReplier\_read\_request** ( **FooBarReplier** \*self, **Foo** \*request, struct **DDS\_SampleInfo** \*sample\_info)  
*Copies the contents of a request into a Sample.*
- **DDS\_ReturnCode\_t FooBarReplier\_read\_requests** ( **FooBarReplier** \*self, struct **FooSeq** \*request\_seq, struct **DDS\_SampleInfoSeq** \*info\_seq, **DDS\_Long** max\_count)  
*Provides a loaned sequence to access the existing requests.*
- **DDS\_ReturnCode\_t FooBarReplier\_send\_reply** ( **FooBarReplier** \*self, **Bar** \*reply, const struct **DDS\_SampleIdentity\_t** \*related\_request\_id)  
*Sends a reply for a previous request.*
- **FooDataReader \* FooBarReplier\_get\_request\_datareader** ( **FooBarReplier** \*self)  
*Retrieves the underlying **DDS\_DataReader** (p. 608).*
- **BarDataWriter \* FooBarReplier\_get\_reply\_datawriter** ( **FooBarReplier** \*self)  
*Retrieves the underlying **DDS\_DataWriter** (p. 478).*
- **DDS\_ReturnCode\_t FooBarReplier\_return\_loan** ( **FooBarReplier** \*self, struct **FooSeq** \*replies, struct **DDS\_SampleInfoSeq** \*info\_seq)  
*Returns samples previously received from the middleware.*
- **FooBarSimpleReplier \* FooBarSimpleReplier\_create** ( **DDS\_DomainParticipant** \*participant, char \*service\_name, **RTI\_Connext\_SimpleReplierListener** \*listener)  
*Creates a new SimpleReplier.*
- **FooBarSimpleReplier \* FooBarSimpleReplier\_create\_w\_params** ( **RTI\_Connext\_SimpleReplierParams** \*params)  
*Creates a new SimpleReplier.*
- **DDS\_ReturnCode\_t FooBarSimpleReplier\_delete** ( **FooBarSimpleReplier** \*self)  
*Releases the resources created by this SimpleReplier.*

## Variables

- **RTI\_Connext\_ReplierListener\_OnRequestAvailableCallback**      **RTI\_Connext\_ReplierListener::on\_request\_available**  
*User callback.*
- **RTI\_Connext\_SimpleReplierListener\_OnRequestAvailableCallback**      **RTI\_Connext\_SimpleReplierListener::on\_request\_available**  
*User callback that receives a request and provides a reply.*
- **RTI\_Connext\_SimpleReplierListener\_OnReturnLoanCallback**      **RTI\_Connext\_SimpleReplierListener::return\_loan**  
*Returns a previously generated reply to the user.*

### 4.43.1 Detailed Description

**FooBarReplier** (p. 1842), **FooBarSimpleReplier** (p. 1844) and associated elements

### 4.43.2 Macro Definition Documentation

#### 4.43.2.1 RTI\_Connext\_ReplierListener\_INITIALIZER

```
#define RTI_Connext_ReplierListener_INITIALIZER {NULL, NULL}
```

Intializes an **RTI\_Connext\_ReplierListener** (p. 1900).

#### 4.43.2.2 RTI\_Connext\_ReplierParams\_INITIALIZER

```
#define RTI_Connext_ReplierParams_INITIALIZER
```

Initializes a **RTI\_Connext\_ReplierParams** (p. 1901) instance.

#### 4.43.2.3 RTI\_CONNEXT\_REPLIER\_DECL

```
#define RTI_CONNEXT_REPLIER_DECL(  
    TReq,  
    TRep,  
    TReplier )
```

Instantiates the declaration of a typed replier and its operations.

##### Parameters

<i>TReq</i>	The request type name
<i>TRep</i>	The reply type name
<i>TReplier</i>	The type name for the typed replier and the prefix for all the operations.

See also

**Creating a Replier** (p. 811)

#### 4.43.2.4 RTI\_Connext\_RequesterParams\_INITIALIZER

```
#define RTI_Connext_RequesterParams_INITIALIZER
```

Initializes a **RTI\_Connext\_RequesterParams** (p. 1905) instance.

#### 4.43.2.5 RTI\_Connext\_SimpleReplierParams\_INITIALIZER

```
#define RTI_Connext_SimpleReplierParams_INITIALIZER
```

Initializes a **RTI\_Connext\_SimpleReplierParams** (p. 1909) instance.

#### 4.43.2.6 RTI\_CONNEXT\_SIMPLEREPLIER\_DECL

```
#define RTI_CONNEXT_SIMPLEREPLIER_DECL(  
    TReq,  
    TRep,  
    TSimpleReplier )
```

Instantiates the declaration of a typed SimpleReplier and its operations.

##### Parameters

<i>TReq</i>	The request type name
<i>TRep</i>	The reply type name
<i>TSimpleReplier</i>	The type name for the typed SimpleReplier and the prefix for all the operations.

See also

**SimpleReplier example** (p. 813)

### 4.43.3 Typedef Documentation

#### 4.43.3.1 RTI\_Connext\_ReplierListener\_OnRequestAvailableCallback

```
typedef void(* RTI_Connext_ReplierListener_OnRequestAvailableCallback) (struct RTI_Connext_↔  
ReplierListener *self, RTI_Connext_Replier *replier)
```

The type of **RTI\_Connext\_ReplierListener::on\_request\_available** (p. 766).

#### 4.43.3.2 RTI\_Connext\_SimpleReplierListener\_OnRequestAvailableCallback

```
typedef void (* RTI_Connext_SimpleReplierListener_OnRequestAvailableCallback) ( RTI_Connext_↔
SimpleReplierListener *self, const void *request, const struct DDS_SampleInfo *info)
```

The type of `RTI_Connext_SimpleReplierListener::on_request_available` (p. 767).

#### 4.43.3.3 RTI\_Connext\_SimpleReplierListener\_OnReturnLoanCallback

```
typedef void(* RTI_Connext_SimpleReplierListener_OnReturnLoanCallback) ( RTI_Connext_Simple↔
ReplierListener *self, void *reply)
```

The type of `RTI_Connext_SimpleReplierListener::return_loan` (p. 767).

#### 4.43.3.4 RTI\_Connext\_ReplierParams

```
typedef struct RTI_Connext_ReplierParams RTI_Connext_ReplierParams
```

Contains the parameters for creating a `FooBarReplier` (p. 1842).

See also

`RTI_Connext_RequesterParams` (p. 1905)

#### 4.43.3.5 FooBarReplier

```
typedef struct FooBarReplier FooBarReplier
```

Allows receiving requests and sending replies.

A Replier is an entity with two associated **topics** (p. 164): a request topic and a reply topic. It can receive requests by subscribing to the request topic and can send replies to those requests by publishing the reply topic.

Valid types for these topics (`TReq` and `TRep`) are: those generated by `rtiddsgen`, the **DDS built-in types** (p. 301), and **DDS\_DynamicData** (p. 1523). **Note:** At this moment, in the C version of this API, only `rtiddsgen`-generated types are supported.

To create a Replier for two types, a request type `TReq=Foo` (p. 1841) and a reply type `TRep=Bar`, your application needs to instantiate the data structure `FooBarReplier` (p. 1842) and the specific operations that can publish and subscribe to those types. In this documentation we refer to the type-dependent operations as `FooBarReplier_` (for example, `FooBarReplier_take_requests` (p. 763)). Some operations are type-independent and their names always begin with `RTI_Connext_Replier_` (for example, `RTI_Connext_Replier_wait_for_requests` (p. 760)). See **Creating a Replier** (p. 811).

A Replier has four main types of operations:

- Waiting for requests to be received from the middleware
- Getting those requests
- Receiving requests (a convenience operation that is a combination of waiting and getting in a single operation)
- Sending a reply for a previously received request (i.e., publishing a reply sample on the reply topic with special meta-data so that the original Requester can identify it)

For multi-reply scenarios in which a **FooBarReplier** (p. 1842) generates more than one reply for a request, the **FooBarReplier** (p. 1842) should mark all the intermediate replies (all but the last) using the **DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p. 1185) flag in **DDS\_WriteParams\_t::flag** (p. 1836).

Much like a Requester, a Replier has an associated **DDS\_DomainParticipant** (p. 72), which can be shared with other Repliers or RTI Connex routines. All the other entities required for the request-reply interaction, including a **DDS\_DataWriter** (p. 478) for writing replies and a **DDS\_DataReader** (p. 608) for reading requests, are automatically created when the Replier is constructed.

Quality of Service for the underlying DataWriter and DataReader can be configured (see **RTI\_Connext\_RequesterParams::qos\_profile\_name** (p. 1907)). By default, they are created with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 1124). The exact default configuration is described here: **Configuring Request-Reply QoS profiles** (p. 814)

There are several ways to use a Replier:

- A thread **receives** (p. 762) requests and then dispatches them. If the computation of a reply is a simple operation, consider using a **FooBarSimpleReplier** (p. 1844) instead of a Replier.
- Polling without waiting, using **FooBarReplier\_take\_requests** (p. 763) directly.
- Using a **RTI\_Connext\_ReplierListener** (p. 1900) to get notified and **get** (p. 763) the requests within the callback.

See also

**FooBarRequester** (p. 1843)

**Request-Reply Examples** (p. 806)

**Replier example** (p. 812)

#### 4.43.3.6 RTI\_Connext\_SimpleReplierParams

```
typedef struct RTI_Connext_SimpleReplierParams RTI_Connext_SimpleReplierParams
```

Contains the parameters for creating a **FooBarSimpleReplier** (p. 1844).

The parameters for a SimpleReplier are identical to those of the Replier, except for the SimpleReplierListener, which is required and has a different user callback.

See also

**RTI\_Connext\_ReplierParams** (p. 1901)

### 4.43.3.7 FooBarSimpleReplier

```
typedef struct FooBarSimpleReplier FooBarSimpleReplier
```

A callback-based replier.

A SimpleReplier is based on a **RTI\_Connext\_SimpleReplierListener** (p. 1908) that users provide . Requests are passed to the callback, which returns a reply. The reply is directed only to the Requester that sent the request.

SimpleRepliers are useful for simple use cases where a single reply for a request can be generated quickly, for example, looking up a table.

When more than one reply for a request can be generated or the processing is complex or needs to happen asynchronously, use a **FooBarReplier** (p. 1842) instead.

See also

**FooBarReplier** (p. 1842)

**RTI\_Connext\_SimpleReplierListener** (p. 1908)

**SimpleReplier example** (p. 813)

## 4.43.4 Function Documentation

### 4.43.4.1 RTI\_Connext\_Replier\_delete()

```
DDS_ReturnCode_t RTI_Connext_Replier_delete (
    RTI_Connext_Replier * self )
```

Releases the internal entities created by this Replier.

Among other internal resources, it deletes the Replier's underlying DataReader and DataWriter.

See also

**DDS\_Subscriber\_delete\_datareader** (p. 578)

**DDS\_Publisher\_delete\_datawriter** (p. 449)

### 4.43.4.2 RTI\_Connext\_Replier\_wait\_for\_requests()

```
DDS_ReturnCode_t RTI_Connext_Replier_wait_for_requests (
    RTI_Connext_Replier * self,
    int min_count,
    const struct DDS_Duration_t * max_wait )
```

Waits for requests.

This operation waits for min\_count requests to be available. It will wait up to max\_wait .

This operation is similar to **RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742).

## Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>min_count</i>	Minimum number of requests that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum waiting time after which this operation unblocks regardless of how many requests are available.

## Returns

true if at least *min\_count* requests were available before *max\_wait* elapsed, or false otherwise.

## See also

**FooBarReplier\_take\_requests** (p. 763)

**RTI\_Connext\_Requester\_wait\_for\_replies** (p. 742)

## 4.43.4.3 FooBarReplier\_create()

```

FooBarReplier * FooBarReplier_create (
    DDS_DomainParticipant * participant,
    char * service_name )

```

Creates a Replier with the minimum set of parameters.

## Parameters

<i>participant</i>	The DomainParticipant that this Replier uses to join a domain.
<i>service_name</i>	The service name. See <b>RTI_Connext_ReplierParams::service_name</b> (p. 1902)

## Returns

One of the **Standard Return Codes** (p. 1024)

## 4.43.4.4 FooBarReplier\_create\_w\_params()

```

FooBarReplier * FooBarReplier_create_w_params (
    const RTI_Connext_ReplierParams * params )

```

Creates a Replier with parameters.

## Parameters

<i>params</i>	All the parameters that configure this Replier
---------------	------------------------------------------------

## Returns

One of the **Standard Return Codes** (p. 1024)

## See also

**RTI\_Connext\_ReplierParams** (p. 1901)

**Creating a Replier** (p. 811)

4.43.4.5 **FooBarReplier\_receive\_request()**

```
DDS_ReturnCode_t FooBarReplier_receive_request (
    FooBarReplier * self,
    Foo * request,
    struct DDS_SampleInfo * sample_info,
    const struct DDS_Duration_t * max_wait )
```

Waits for a request and copies its contents into a Sample.

Equivalent to using **RTI\_Connext\_Replier\_wait\_for\_requests** (p. 760) and **FooBarReplier\_take\_request** (p. 762)

## See also

**RTI\_Connext\_Replier\_wait\_for\_requests** (p. 760)

**FooBarReplier\_take\_request** (p. 762)

**Replier example** (p. 812)

4.43.4.6 **FooBarReplier\_receive\_requests()**

```
DDS_ReturnCode_t FooBarReplier_receive_requests (
    FooBarReplier * self,
    struct FooSeq * received_data,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long min_reply_count,
    DDS_Long max_reply_count,
    const struct DDS_Duration_t * max_wait )
```

Waits for multiple requests and provides a loaned sequence to access them.

Equivalent to using **RTI\_Connext\_Replier\_wait\_for\_requests** (p. 760) and **FooBarReplier\_take\_requests** (p. 763)

## See also

**RTI\_Connext\_Replier\_wait\_for\_requests** (p. 760)

**FooBarReplier\_take\_requests** (p. 763)

#### 4.43.4.7 FooBarReplier\_take\_request()

```
DDS_ReturnCode_t FooBarReplier_take_request (
    FooBarReplier * self,
    Foo * request,
    struct DDS_SampleInfo * sample_info )
```

Copies the contents of a request into a Sample.

See also

**FooBarRequester\_take\_reply** (p.747)

#### 4.43.4.8 FooBarReplier\_take\_requests()

```
DDS_ReturnCode_t FooBarReplier_take_requests (
    FooBarReplier * self,
    struct FooSeq * request_seq,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_count )
```

Provides a loaned sequence to access the existing requests.

See also

**FooBarRequester\_take\_replies** (p.748)

#### 4.43.4.9 FooBarReplier\_read\_request()

```
DDS_ReturnCode_t FooBarReplier_read_request (
    FooBarReplier * self,
    Foo * request,
    struct DDS_SampleInfo * sample_info )
```

Copies the contents of a request into a Sample.

This operation is equivalent to **FooBarReplier\_take\_request** (p.762) except the request remains in the Replier and can be read or taken again.

#### 4.43.4.10 FooBarReplier\_read\_requests()

```
DDS_ReturnCode_t FooBarReplier_read_requests (
    FooBarReplier * self,
    struct FooSeq * request_seq,
    struct DDS_SampleInfoSeq * info_seq,
    DDS_Long max_count )
```

Provides a loaned sequence to access the existing requests.

This operation is equivalent to **FooBarReplier\_take\_requests** (p. 763) except the requests remain in the Replier and can be read or taken again.

#### 4.43.4.11 FooBarReplier\_send\_reply()

```
DDS_ReturnCode_t FooBarReplier_send_reply (
    FooBarReplier * self,
    Bar * reply,
    const struct DDS_SampleIdentity_t * related_request_id )
```

Sends a reply for a previous request.

The related request identity can be retrieved from the sample info (**DDS\_SampleInfo\_get\_sample\_identity** (p. 694))

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) Cannot be NULL.
<i>reply</i>	The reply to be sent.
<i>related_request_id</i>	The identity of a previously received request

##### Returns

One of the **Standard Return Codes** (p. 1024)

##### See also

**FooBarReplier\_receive\_request** (p. 762)

**FooBarReplier\_receive\_requests** (p. 762)

**FooBarReplier\_take\_request** (p. 762)

**FooBarReplier\_take\_requests** (p. 763)

**Replier example** (p. 812)

#### 4.43.4.12 FooBarReplier\_get\_request\_datareader()

```
FooDataReader * FooBarReplier_get_request_datareader (
    FooBarReplier * self )
```

Retrieves the underlying **DDS\_DataReader** (p. 608).

See also

**FooBarRequester\_get\_reply\_datareader** (p. 752)

#### 4.43.4.13 FooBarReplier\_get\_reply\_datawriter()

```
BarDataWriter * FooBarReplier_get_reply_datawriter (
    FooBarReplier * self )
```

Retrieves the underlying **DDS\_DataWriter** (p. 478).

See also

**FooBarRequester\_get\_request\_datawriter** (p. 751)

#### 4.43.4.14 FooBarReplier\_return\_loan()

```
DDS_ReturnCode_t FooBarReplier_return_loan (
    FooBarReplier * self,
    struct FooSeq * replies,
    struct DDS_SampleInfoSeq * info_seq )
```

Returns samples previously received from the middleware.

This operation needs to be called at some point after:

- **FooBarReplier\_take\_requests** (p. 763)
- **FooBarReplier\_receive\_requests** (p. 762)

See also

**FooDataReader\_return\_loan** (p. 639), for more information on how the middleware loans data to the application.

#### 4.43.4.15 FooBarSimpleReplier\_create()

```
FooBarSimpleReplier * FooBarSimpleReplier_create (
    DDS_DomainParticipant * participant,
    char * service_name,
    RTI_Connext_SimpleReplierListener * listener )
```

Creates a new SimpleReplier.

See also

[RTI\\_Connext\\_SimpleReplierParams](#) (p. 1909)

[RTI\\_Connext\\_SimpleReplierListener](#) (p. 1908)

#### 4.43.4.16 FooBarSimpleReplier\_create\_w\_params()

```
FooBarSimpleReplier * FooBarSimpleReplier_create_w_params (
    RTI_Connext_SimpleReplierParams * params )
```

Creates a new SimpleReplier.

See also

[RTI\\_Connext\\_SimpleReplierParams](#) (p. 1909)

[RTI\\_Connext\\_SimpleReplierListener](#) (p. 1908)

#### 4.43.4.17 FooBarSimpleReplier\_delete()

```
DDS_ReturnCode_t FooBarSimpleReplier_delete (
    FooBarSimpleReplier * self )
```

Releases the resources created by this SimpleReplier.

See also

[RTI\\_Connext\\_Replier\\_delete](#) (p. 760)

### 4.43.5 Variable Documentation

#### 4.43.5.1 on\_request\_available [1/2]

**RTI\_Connext\_ReplierListener\_OnRequestAvailableCallback** `RTI_Connext_ReplierListener::on_request_↔available`

User callback.

See also

**DDS\_DataReaderListener::on\_data\_available** (p. 1374)

#### 4.43.5.2 on\_request\_available [2/2]

**RTI\_Connext\_SimpleReplierListener\_OnRequestAvailableCallback** `RTI_Connext_SimpleReplierListener↔::on_request_available`

User callback that receives a request and provides a reply.

This operation gets called when a request is available and expects a reply that is automatically sent. Immediately after that, **RTI\_Connext\_SimpleReplierListener::return\_loan** (p. 767) is called.

Parameters

<i>request</i>	The received request
----------------	----------------------

Returns

A reply for that request

#### 4.43.5.3 return\_loan

**RTI\_Connext\_SimpleReplierListener\_OnReturnLoanCallback** `RTI_Connext_SimpleReplierListener::return↔_loan`

Returns a previously generated reply to the user.

This operation is always called right after sending the reply created by **RTI\_Connext\_SimpleReplierListener::on\_request\_available** (p. 767). It can be used to release any resources from the reply creation. If there are no resources to release, the implementation body can be empty.

Parameters

<i>reply</i>	The reply previously provided in <b>RTI_Connext_SimpleReplierListener::on_request_available</b> (p. 767)
--------------	----------------------------------------------------------------------------------------------------------

## 4.44 Utilities

Utilities for the RTI Connex Messaging module.

### Typedefs

- typedef struct **DDS\_ProductVersion\_t RTI\_Connext\_Messaging\_LibraryVersion**  
*This struct represents the library version.*

### Functions

- const **RTI\_Connext\_Messaging\_LibraryVersion \* RTI\_Connext\_Messaging\_get\_api\_version** (void)  
*Get the API version number.*
- const char \* **RTI\_Connext\_Messaging\_Library\_get\_api\_version\_string** (void)  
*Get the API version strings.*
- const char \* **RTI\_Connext\_Messaging\_get\_api\_build\_number\_string** (void)  
*Get the build number string.*

#### 4.44.1 Detailed Description

Utilities for the RTI Connex Messaging module.

Connex Messaging Utilities

#### 4.44.2 Typedef Documentation

##### 4.44.2.1 RTI\_Connext\_Messaging\_LibraryVersion

```
typedef struct DDS_ProductVersion_t RTI_Connext_Messaging_LibraryVersion
```

This struct represents the library version.

#### 4.44.3 Function Documentation

#### 4.44.3.1 RTI\_Connext\_Messaging\_get\_api\_version()

```
const RTI_Connext_Messaging_LibraryVersion * RTI_Connext_Messaging_get_api_version (
    void )
```

Get the API version number.

#### 4.44.3.2 RTI\_Connext\_Messaging\_Library\_get\_api\_version\_string()

```
const char * RTI_Connext_Messaging_Library_get_api_version_string (
    void )
```

Get the API version strings.

#### 4.44.3.3 RTI\_Connext\_Messaging\_get\_api\_build\_number\_string()

```
const char * RTI_Connext_Messaging_get_api_build_number_string (
    void )
```

Get the build number string.

## 4.45 Durability and Persistence

APIs related to RTI Connext Durability and Persistence.

APIs related to RTI Connext Durability and Persistence.

RTI Connext offers the following mechanisms for achieving durability and persistence:

- **Durable Writer History** (p. 770)
- **Durable Reader State** (p. 770)
- **Data Durability** (p. 770)

To use the first two features, you need a relational database, which is not included with RTI Connext. Supported databases are listed in the [Release Notes](#).

The third feature, provided by RTI Persistence Service, can use the filesystem or a relational database to persist information.

These three features can be used separately or in combination.

### 4.45.1 Durable Writer History

This feature allows a **DDS\_DataWriter** (p. 478) to locally persist its local history cache so that it can survive shutdowns, crashes and restarts. When an application restarts, each **DDS\_DataWriter** (p. 478) that has been configured to have durable writer history automatically loads all the data in its history cache from disk and can carry on sending data as if it had never stopped executing. To the rest of the system, it will appear as if the **DDS\_DataWriter** (p. 478) had been temporarily disconnected from the network and then reappeared.

See also

**Configuring Durable Writer History** (p. 771)

### 4.45.2 Durable Reader State

This feature allows a **DDS\_DataReader** (p. 608) to locally persist its state and remember the sequence numbers it has already received. When an application restarts, each **DDS\_DataReader** (p. 608) that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the **DDS\_DataReader** (p. 608) before the restart will not be provided to the application again.

See also

**Configuring Durable Reader State** (p. 773)

### 4.45.3 Data Durability

This feature is a full implementation of the OMG DDS Persistence Profile. The **DURABILITY** (p. 1086) QoS lets an application configure a **DDS\_DataWriter** (p. 478) such that the information written by the **DDS\_DataWriter** (p. 478) survives beyond the lifetime of the **DDS\_DataWriter** (p. 478). In this manner, a late-joining **DDS\_DataReader** (p. 608) can subscribe and receive the information even after the **DDS\_DataWriter** (p. 478) application is no longer executing. To use this feature, you need RTI Persistence Service – an optional product that can be purchased separately.

### 4.45.4 Durability and Persistence Based on Virtual GUID

Every modification to the global dataspace made by a **DDS\_DataWriter** (p. 478) is identified by a pair (virtual GUID, sequence number).

- The virtual GUID (Global Unique Identifier) is a 16-byte character identifier associated with a **DDS\_DataWriter** (p. 478) or **DDS\_DataReader** (p. 608); it is used to uniquely identify this entity in the global data space.
- The sequence number is a 64-bit identifier that identifies changes published by a specific **DDS\_DataWriter** (p. 478).

Several **DDS\_DataWriter** (p. 478) entities can be configured with the same virtual GUID. If each of these **DDS\_DataWriter** (p. 478) entities publishes a sample with sequence number '0', the sample will only be received once by the **DDS\_DataReader** (p. 608) entities subscribing to the content published by the **DDS\_DataWriter** (p. 478) entities.

RTI Connext also uses the virtual GUID (Global Unique Identifier) to associate a persisted state (state in permanent storage) to the corresponding DDS entity.

For example, the history of a **DDS\_DataWriter** (p. 478) will be persisted in a database table with a name generated from the virtual GUID of the **DDS\_DataWriter** (p. 478). If the **DDS\_DataWriter** (p. 478) is restarted, it must have associated the same virtual GUID to restore its previous history.

Likewise, the state of a **DDS\_DataReader** (p. 608) will be persisted in a database table whose name is generated from the **DDS\_DataReader** (p. 608) virtual GUID

A **DDS\_DataWriter** (p. 478)'s virtual GUID can be configured using **DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 1423). Similarly, a **DDS\_DataReader** (p. 608)'s virtual GUID can be configured using **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p. 1376).

The **DDS\_PublicationBuiltinTopicData** (p. 1648) and **DDS\_SubscriptionBuiltinTopicData** (p. 1748) structures include the virtual GUID associated with the discovered publication or subscription.

Refer to the `User's Manual` for additional use cases.

See also

**DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 1423) **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p. 1376).

### 4.45.5 Configuring Durable Writer History

To configure a **DDS\_DataWriter** (p. 478) to have durable writer history, use the **PROPERTY** (p. 1107) QoS policy associated with the **DDS\_DataWriter** (p. 478) or the **DDS\_DomainParticipant** (p. 72).

Properties defined for the **DDS\_DomainParticipant** (p. 72) will be applied to all the **DDS\_DataWriter** (p. 478) objects belonging to the **DDS\_DomainParticipant** (p. 72), unless the property is overwritten by the **DDS\_DataWriter** (p. 478).

See also

**DDS\_PropertyQosPolicy** (p. 1645)

The following table lists the supported durable writer history properties.

Table 4.741 Durable Writer History Properties

Property	Description
dds.data_writer.history.plugin_name	Must be set to "dds.data_writer.history.odbc_plugin.builtin" to enable durable writer history in the DataWriter. This property is required.
dds.data_writer.history.odbc_plugin.builtin.dsn	The ODBC DSN (Data Source Name) associated with the database where the writer history must be persisted. This property is required.
dds.data_writer.history.odbc_plugin.builtin.driver	This property tells RTI Connext which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library: UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems.
dds.data_writer.history.odbc_plugin.builtin.username	Configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.password	Configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.shared	If set to 1, RTI Connext creates a single connection per DSN that will be shared across DataWriters within the same Publisher. If set to 0 (the default), a <b>DDS_DataWriter</b> (p. 478) will create its own database connection. Default: 0
dds.data_writer.history.odbc_plugin.builtin.instance_cache_max_size	These properties configure the resource limits associated with the ODBC writer history caches. To minimize the number of accesses to the database, RTI Connext uses two caches, one for samples and one for instances. The initial and maximum sizes of these caches are configured using these properties. The resource limits initial_instances, max_instances, initial_samples, max_samples and max_samples_per_instance in the <b>DDS_ResourceLimitsQosPolicy</b> (p. 1690) are used to configure the maximum number of samples and instances that can be stored in the relational database. Default: <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1693)
dds.data_writer.history.odbc_plugin.builtin.instance_cache_init_size	See description above. Default: <b>DDS_ResourceLimitsQosPolicy::initial_instances</b> (p. 1694)
dds.data_writer.history.odbc_plugin.builtin.sample_cache_max_size	See description above. Default: 32 (the minimum)
dds.data_writer.history.odbc_plugin.builtin.sample_cache_init_size	See description above. Default: 32
dds.data_writer.history.odbc_plugin.builtin.restore	This property indicates whether or not the persisted writer history must be restored once the <b>DDS_DataWriter</b> (p. 478) is restarted. If the value is 0, the content of the database associated with the <b>DDS_DataWriter</b> (p. 478) being restarted will be deleted. If the value is 1, the <b>DDS_DataWriter</b> (p. 478) will restore its previous state from the database content. Default: 1

Property	Description
dds.data_writer.history.odbc_plugin.builtin.in_memory_state	<p>This property determines how much state will be kept in memory by the ODBC writer history in order to avoid accessing the database.</p> <p>When <code>in_memory_state</code> is equal to 1, <code>instance_cache_max_size</code> is always equal to <b>DDS_ResourceLimitsQosPolicy::max_instances</b> (p. 1693) (it cannot be changed). In addition, the ODBC writer history will keep in memory a fixed state overhead of 24 bytes per sample. In this operating mode, the ODBC writer history provides the best performance. However, the restore operation will be slower and the maximum number of samples that the writer history can manage will be limited by the available physical memory.</p> <p>If <code>in_memory_state</code> is equal to 0, all the state will be kept in the underlying database. In this operating mode, the maximum number of samples in the writer history will not be limited by the physical memory available unless the underlying database is an in-memory database (TimesTen).</p> <p>Default: 1</p>

#### 4.45.6 Configuring Durable Reader State

To configure a **DDS\_DataReader** (p. 608) with durable reader state, use the **PROPERTY** (p. 1107) QoS policy associated with the **DDS\_DataReader** (p. 608) or **DDS\_DomainParticipant** (p. 72).

A property defined in the **DDS\_DomainParticipant** (p. 72) will be applicable to all the **DDS\_DataReader** (p. 608) belonging to the **DDS\_DomainParticipant** (p. 72) unless it is overwritten by the **DDS\_DataReader** (p. 608).

See also

**DDS\_PropertyQosPolicy** (p. 1645)

The following table lists the supported durable reader state properties.

**Table 4.742 Durable Reader State Properties**

Property	Description
dds.data_reader.state.odbc.dsn	The ODBC DSN (Data Source Name) associated with the database where the <b>DDS_DataReader</b> (p. 608) state must be persisted. This property is required.
dds.data_reader.state.filter_redundant_samples	To enable durable reader state, this property must be set to 1. Otherwise, the reader state will not be kept and/or persisted. When the reader state is not maintained, RTI Connext does not filter duplicate samples that may be coming from the same virtual writer. By default, this property is set to 1.

Property	Description
dds.data_reader.state.odbc.driver	This property is used to indicate which ODBC driver to load. If the property is not specified, RTI Connexx will try to use the standard ODBC driver manager library↔ : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems).
dds.data_reader.state.odbc.username	This property configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.odbc.password	This property configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.restore	This property indicates if the persisted <b>DDS_DataReader</b> ↔ (p. 608) state must be restored or not once the <b>DDS_DataReader</b> (p. 608) is restarted. If this property is 0, the previous state will be deleted from the database. If it is 1, the <b>DDS_DataReader</b> (p. 608) will restore its previous state from the database content. Default: 1
dds.data_reader.state.checkpoint_frequency	This property controls how often the reader state is stored in the database. A value of N means to store the state once every N samples. A high value will provide better performance. However, if the reader is restarted it may receive some duplicate samples. These samples will be filtered by the middleware and they will not be propagated to the application. Default: 1
dds.data_reader.state.persistence_service.request↔_depth	This property indicates the number of most recent historical samples that the persisted <b>DDS_DataReader</b> (p. 608) wants to receive when it starts up. Default: 0

#### 4.45.7 Configuring Data Durability

RTI Connexx implements **DDS\_TRANSIENT\_DURABILITY\_QOS** (p. 1089) and **DDS\_PERSISTENT\_DURABILITY\_QOS**↔ (p. 1089) durability using RTI Persistence Service, available for purchase as a separate RTI product.

For more information on RTI Persistence Service, refer to the [User's Manual](#), or the RTI Persistence Service API Reference HTML documentation.

See also

**DURABILITY** (p. 1086)

## 4.46 System Properties

System Properties.

System Properties.

RTI Connex uses the **DDS\_PropertyQosPolicy** (p. 1645) of a DomainParticipant to maintain a set of properties that provide system information such as hostname.

Unless the default **DDS\_DomainParticipantQos** (p. 1490) value is overwritten, the system properties are automatically set in the **DDS\_DomainParticipantQos** (p. 1490) obtained by calling the function **DDS\_DomainParticipantFactory**↔  
**\_get\_default\_participant\_qos** (p. 37) or using the constant **DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 60).

System properties are also automatically set in the **DDS\_DomainParticipantQos** (p. 1490) loaded from an XML QoS profile unless you disable property inheritance using the attribute **inherit** in the XML tag **<property>**.

By default, the system properties are propagated to other DomainParticipants in the system and can be accessed through **DDS\_ParticipantBuiltinTopicData::property** (p. 1618).

You can disable the propagation of individual properties by setting the flag **DDS\_Property\_t::propagate** (p. 1645) to **DDS\_BOOLEAN\_FALSE** (p. 1004) or by removing the property using the function **DDS\_PropertyQosPolicyHelper**↔  
**\_remove\_property** (p. 1115).

The number of system properties set on the **DDS\_DomainParticipantQos** (p. 1490) is platform specific.

### 4.46.1 System Properties List

The following table lists the supported system properties. For more information, see `System Properties`, in the Core Libraries User's Manual.

Property Name	Description
dds.sys_info.hostname	Name of the host where the process is running
dds.sys_info.process_id	Process ID
dds.sys_info.username	Name of the user running the process
dds.sys_info.execution_timestamp	Time when the execution started
dds.sys_info.creation_timestamp	Time when the executable was created
dds.sys_info.executable_filepath	Name and full path of the executable
dds.sys_info.target	Architecture for which the library was compiled

### 4.46.2 System Resource Consideration

System properties are affected by the resource limits **DDS\_DomainParticipantResourceLimitsQosPolicy**↔  
**::participant\_property\_list\_max\_length** (p. 1510) and **DDS\_DomainParticipantResourceLimitsQosPolicy**↔  
**::participant\_property\_string\_max\_length** (p. 1510).

## 4.47 Configuring QoS Profiles with XML

APIs related to XML QoS Profiles.

APIs related to XML QoS Profiles.

### 4.47.1 Loading QoS Profiles from XML Resources

A 'QoS profile' is a group of QoS settings, specified in XML format. By using QoS profiles, you can change QoS settings without recompiling the application.

The QoS profiles are loaded the first time any of the following operations are called:

- `DDS_DomainParticipantFactory_create_participant` (p. 37)
- `DDS_DomainParticipantFactory_create_participant_with_profile` (p. 39)
- `DDS_DomainParticipantFactory_set_default_participant_qos_with_profile` (p. 36)
- `DDS_DomainParticipantFactory_get_default_participant_qos` (p. 37)
- `DDS_DomainParticipantFactory_set_default_library` (p. 44)
- `DDS_DomainParticipantFactory_set_default_profile` (p. 45)
- `DDS_DomainParticipantFactory_get_participant_qos_from_profile` (p. 48)
- `DDS_DomainParticipantFactory_get_topic_qos_from_profile` (p. 52)
- `DDS_DomainParticipantFactory_get_topic_qos_from_profile_w_topic_name` (p. 53)
- `DDS_DomainParticipantFactory_get_publisher_qos_from_profile` (p. 48)
- `DDS_DomainParticipantFactory_get_subscriber_qos_from_profile` (p. 49)
- `DDS_DomainParticipantFactory_get_datawriter_qos_from_profile` (p. 51)
- `DDS_DomainParticipantFactory_get_datawriter_qos_from_profile_w_topic_name` (p. 51)
- `DDS_DomainParticipantFactory_get_datareader_qos_from_profile` (p. 50)
- `DDS_DomainParticipantFactory_get_datareader_qos_from_profile_w_topic_name` (p. 50)
- `DDS_DomainParticipantFactory_get_qos_profile_libraries` (p. 53)
- `DDS_DomainParticipantFactory_get_qos_profiles` (p. 54)
- `DDS_DomainParticipantFactory_load_profiles` (p. 42)

The QoS profiles are reloaded replacing previously loaded profiles when the following operations are called:

- `DDS_DomainParticipantFactory_set_qos` (p. 42)
- `DDS_DomainParticipantFactory_reload_profiles` (p. 43)

The **DDS\_DomainParticipantFactory\_unload\_profiles** (p. 43) operation will free the resources associated with the XML QoS profiles.

There are five ways to configure the XML resources (listed by load order):

- The file `NDDS_QOS_PROFILES.xml` in `$NDDSHOME/resource/xml` is loaded if it exists and **DDS\_ProfileQosPolicy::ignore\_resource\_profile** (p. 1644) in **DDS\_ProfileQosPolicy** (p. 1642) is set to **DDS\_BOOLEAN\_FALSE** (p. 1004) (first to be loaded). An example file, `NDDS_QOS_PROFILES.example.xml`, is available for reference.
- The URL groups separated by semicolons referenced by the environment variable `NDDS_QOS_PROFILES` are loaded if they exist and **DDS\_ProfileQosPolicy::ignore\_environment\_profile** (p. 1644) in **DDS\_ProfileQosPolicy** (p. 1642) is set to **DDS\_BOOLEAN\_FALSE** (p. 1004).
- The file `USER_QOS_PROFILES.xml` in the working directory will be loaded if it exists and **DDS\_ProfileQosPolicy::ignore\_user\_profile** (p. 1644) in **DDS\_ProfileQosPolicy** (p. 1642) is set to **DDS\_BOOLEAN\_FALSE** (p. 1004).
- The URL groups referenced by **DDS\_ProfileQosPolicy::url\_profile** (p. 1643) in **DDS\_ProfileQosPolicy** (p. 1642) will be loaded if specified.
- The sequence of XML strings referenced by **DDS\_ProfileQosPolicy::string\_profile** (p. 1643) will be loaded if specified (last to be loaded).

The above methods can be combined together.

## 4.47.2 URL

The location of the XML resources (only files and strings are supported) is specified using a URL (Uniform Resource Locator) format. For example:

File Specification: `file:///usr/local/default_dds.xml`

String Specification: `str://"<dds><qos_library> . . . </qos_library>&lt;/dds>"`

If the URL schema name is omitted, RTI Connexx will assume a file name. For example:

File Specification: `/usr/local/default_dds.xml`

### 4.47.2.1 URL groups

To provide redundancy and fault tolerance, you can specify multiple locations for a single XML document via URL groups. The syntax of a URL group is as follows:

`[URL1 | URL2 | URL2 | . . . | URLn]`

For example:

`[ file:///usr/local/default_dds.xml | file:///usr/local/alternative_default_dds.xml ]`

Only one of the elements in the group will be loaded by RTI Connexx, starting from the left.

Brackets are not required for groups with a single URL.

#### 4.47.2.2 NDDS\_QOS\_PROFILES environment variable

The environment variable NDDS\_QOS\_PROFILES contains a list of URL groups separated by ';'.

The URL groups referenced by the environment variable are loaded if they exist and `DDS_ProfileQosPolicy::ignore_environment_profile` (p. 1644) is set to `DDS_BOOLEAN_FALSE` (p. 1004).

#### 4.47.2.3 Built-In QoS Profiles

There are also a number of built-in QoS profiles that can be used without having to load any configurations from outside XML resources. For more information on these built-in profiles see **Built-in QoS Profiles** (p. 1191).

For more information on XML Configuration, refer to the `User's Manual`.

## 4.48 Publication Example

A data publication example.

A data publication example.

### 4.48.1 A typical publication example

#### Prep

- Create user data types using `rtiddsgen`. See the `Code Generator User's Manual`.

#### Set up

- **Get the factory** (p. 780)
- **Set up participant** (p. 780)
- **Set up publisher** (p. 785)
- **Register user data type(s)** (p. 782)
- **Set up topic(s)** (p. 782)
- **Set up data writer(s)** (p. 786)

#### Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 793)

#### Send data

- **Send data** (p. 787)

#### Tear down

- **Tear down data writer(s)** (p. 787)
- **Tear down topic(s)** (p. 782)
- **Tear down publisher** (p. 785)
- **Tear down participant** (p. 781)

## 4.49 Subscription Example

A data subscription example.

A data subscription example.

### 4.49.1 A typical subscription example

#### Prep

- Create user data types using `rtiddsgen`. See the `Code Generator User's Manual`.

#### Set up

- **Get the factory** (p. 780)
- **Set up participant** (p. 780)
- **Set up subscriber** (p. 787)
- **Register user data type(s)** (p. 782)
- **Set up topic(s)** (p. 782)
- **Set up data reader(s)** (p. 790)
  
- **Set up data reader** (p. 790) **OR Set up subscriber** (p. 788) to receive data

#### Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 793)

#### Receive data

- Access received data either **via a reader** (p. 791) **OR via a subscriber** (p. 788) (possibly in a **ordered or coherent** (p. 789) manner)

#### Tear down

- **Tear down data reader(s)** (p. 792)
- **Tear down topic(s)** (p. 782)
- **Tear down subscriber** (p. 789)
- **Tear down participant** (p. 781)

## 4.50 Participant Use Cases

Working with domain participants.

Working with domain participants.

### 4.50.1 Turning off auto-enable of newly created participant(s)

- **Get the factory** (p. 780)
- **Change the value of the ENTITY\_FACTORY** (p. 1090) for the **DDS\_DomainParticipantFactory** (p. 28)
 

```

struct DDS_DomainParticipantFactoryQos factory_qos = DDS_DomainParticipantFactoryQos_INITIALIZER;
if (DDS_DomainParticipantFactory_get_qos(factory, &factory_qos)
    != DDS_RETCODE_OK) {
    printf("***Error: failed to get domain participant factory qos\n");
}
/* Change the QosPolicy to create disabled participants */
factory_qos.entity_factory.autoenable_created_entities = DDS_BOOLEAN_FALSE;
if (DDS_DomainParticipantFactory_set_qos(factory, &factory_qos)
    != DDS_RETCODE_OK) {
    printf("***Error: failed to set domain participant factory qos\n");
}

DDS_DomainParticipantFactoryQos_finalize(&factory_qos);

```

### 4.50.2 Getting the factory

- **Get the DDS\_DomainParticipantFactory instance:**

```

DDS_DomainParticipantFactory* factory = NULL;
factory = DDS_DomainParticipantFactory_get_instance();
if (factory == NULL) {
    printf("***Error: failed to get domain participant factory\n");
}

```

### 4.50.3 Setting up a participant

- **Get the factory** (p. 780)
- **Create DDS\_DomainParticipant:**

```

struct DDS_DomainParticipantQos participant_qos =
    DDS_DomainParticipantQos_INITIALIZER;
DDS_DomainParticipant* participant;
struct DDS_DomainParticipantListener participant_listener =
    DDS_DomainParticipantListener_INITIALIZER;
DDS_ReturnCode_t retcode;
/* Set the initial peers. These list all the computers the application
may communicate with along with the maximum number of RTI Data
Distribution Service participants that can concurrently run on that
computer. This list only needs to be a superset of the actual list of
computers and participants that will be running at any time.
*/
const char* NDDS_DISCOVERY_INITIAL_PEERS[] = {
    "host1",
    "10.10.30.192",
    "1@localhost",
    "2@host2",
    "my://", /* all unicast addresses on transport plugins with alias "my" */
    "2@shmem://", /* shared memory */
    "FF00:ABCD::0",
    "sf://0/0/R", /* StarFabric transport plugin */
};

```

```

    "1@FF00:0:1234::0",
    "225.1.2.3",
    "3@225.1.0.55",
    "FAA0::0#0/0/R",
};
const long NDDS_DISCOVERY_INITIAL_PEERS_LENGTH =
    sizeof(NDDS_DISCOVERY_INITIAL_PEERS)/sizeof(const char*);

/* MyDomainParticipantListener_* functions are user defined to match
   DDS_DomainParticipantListener functions */
participant_listener.as_topiclistener.on_inconsistent_topic =
    MyDomainParticipantListener_InconsistentTopic;
participant_listener.as_publisherlistener.as_datawriterlistener.on_offered_deadline_missed =
    MyDomainParticipantListener_OfferedDeadlineMissed;
participant_listener.as_publisherlistener.as_datawriterlistener.on_offered_incompatible_qos =
    MyDomainParticipantListener_OfferedIncompatibleQos;
participant_listener.as_publisherlistener.as_datawriterlistener.on_liveliness_lost =
    MyDomainParticipantListener_LivelinessLost;
participant_listener.as_publisherlistener.as_datawriterlistener.on_publication_matched =
    MyDomainParticipantListener_PublicationMatch;
participant_listener.as_subscriberlistener.on_data_on_readers =
    MyDomainParticipantListener_DataOnReaders;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_requested_deadline_missed =
    MyDomainParticipantListener_RequestedDeadlineMissed;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_requested_incompatible_qos =
    MyDomainParticipantListener_RequestedIncompatibleQos;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_sample_rejected =
    MyDomainParticipantListener_SampleRejected;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_liveliness_changed =
    MyDomainParticipantListener_LivelinessChanged;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_data_available =
    MyDomainParticipantListener_DataAvailable;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_subscription_matched =
    MyDomainParticipantListener_SubscriptionMatched;
participant_listener.as_subscriberlistener.as_datareaderlistener.on_sample_lost =
    MyDomainParticipantListener_SampleLost;
/* initialize participant_qos with default values */
retcode = DDS_DomainParticipantFactory_get_default_participant_qos(factory,
    &participant_qos);

if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default participant qos\n");
}
if (!DDS_StringSeq_from_array(&participant_qos.discovery.initial_peers,
    NDDS_DISCOVERY_INITIAL_PEERS,
    NDDS_DISCOVERY_INITIAL_PEERS_LENGTH)) {
    printf("***Error: failed to set discovery.initial_peers qos\n");
}

/* Create the participant */
participant =
    DDS_DomainParticipantFactory_create_participant(factory,
    domain_id,
    &participant_qos,
    &participant_listener /* or NULL */,
    DDS_STATUS_MASK_ALL);

if (participant == NULL) {
    printf("***Error: failed to create domain participant\n");
}
return participant;

```

#### 4.50.4 Tearing down a participant

- Get the factory (p. 780)
- Delete DDS\_DomainParticipant:

```

DDS_ReturnCode_t retcode;
retcode = DDS_DomainParticipantFactory_delete_participant(
    factory, participant);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete domain participant\n");
}

```

## 4.51 Topic Use Cases

Working with topics.

Working with topics.

### 4.51.1 Registering a user data type

- **Set up participant** (p. 780)
- **Register user data type of type T under the name "My\_Type"**

```
const char* type_name = "My_Type";
DDS_ReturnCode_t retcode;
retcode = FooTypeSupport_register_type(participant, type_name);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to register type\n");
}
```

### 4.51.2 Setting up a topic

- **Set up participant** (p. 780)
- **Ensure user data type is registered** (p. 782)
- **Create a DDS\_Topic under the name "my\_topic"**

```
const char* topic_name = "my_topic";
const char* type_type = "My_Type"; /* user data type */
struct DDS_TopicQos topic_qos = DDS_TopicQos_INITIALIZER;
DDS_Topic* topic;
struct DDS_TopicListener topic_listener = DDS_TopicListener_INITIALIZER;
/* MyTopicListener_InconsistentTopic function is user defined to match
   DDS_TopicListener_InconsistentTopicCallback */
topic_listener.on_inconsistent_topic = MyTopicListener_InconsistentTopic;
retcode = DDS_DomainParticipant_get_default_topic_qos(participant,
                                                       &topic_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default topic qos\n");
}
topic = DDS_DomainParticipant_create_topic(participant,
                                           topic_name,
                                           type_name,
                                           &topic_qos,
                                           &topic_listener /* or NULL */,
                                           DDS_STATUS_MASK_ALL);
if (topic == NULL) {
    printf("***Error: failed to create topic\n");
}
```

### 4.51.3 Tearing down a topic

- **Delete DDS\_Topic:**

```
DDS_ReturnCode_t retcode;
retcode = DDS_DomainParticipant_delete_topic(participant, topic);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete topic\n");
}
```

## 4.52 FlowController Use Cases

Working with flow controllers.

Working with flow controllers.

### 4.52.1 Creating a flow controller

- Set up participant (p. 780)

- Create a flow controller

```
DDS_ReturnCode_t retcode;
DDS_FlowController *controller = NULL;
struct DDS_FlowControllerProperty_t property = DDS_FlowControllerProperty_t_INITIALIZER;
retcode = DDS_DomainParticipant_get_default_flowcontroller_property(
    participant, &property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default flow controller property\n");
}
/* optionally modify flow controller property values */
controller = DDS_DomainParticipant_create_flowcontroller(
    participant, "my flow controller name", &property);
if (controller == NULL) {
    printf("***Error: failed to create flow controller\n");
}
```

### 4.52.2 Flow controlling a data writer

- Set up participant (p. 780)

- Create flow controller (p. 783)

- Create an asynchronous data writer, **FooDataWriter** (p. 1845), of user data type **Foo** (p. 1841) :

```
struct DDS_DataWriterQos writer_qos = DDS_DataWriterQos_INITIALIZER;
DDS_DataWriter* writer;
struct DDS_DataWriterListener writer_listener =
    DDS_DataWriterListener_INITIALIZER;
/* MyWriterListener_* functions are user defined to match
   DDS_DataWriterListener functions */
writer_listener.on_offered_deadline_missed =
    MyWriterListener_OfferedDeadlineMissed;
writer_listener.on_offered_incompatible_qos =
    MyWriterListener_OfferedIncompatibleQos;
writer_listener.on_liveliness_lost = MyWriterListener_LivelinessLost;
writer_listener.on_publication_matched = MyWriterListener_PublicationMatch;
retcode = DDS_Publisher_get_default_datawriter_qos(publisher, &writer_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default datawriter qos\n");
}
/* Change the writer QoS to publish asynchronously */
writer_qos.publish_mode.kind = DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS;
/* Setup to use the previously created flow controller */
writer_qos.publish_mode.flow_controller_name =
    DDS_String_dup("my flow controller name");
/* Samples queued for asynchronous write are subject to the History QoS policy */
writer_qos.history.kind = DDS_KEEP_ALL_HISTORY_QOS;
writer = DDS_Publisher_create_datawriter(publisher,
    topic,
    &writer_qos,
    &writer_listener /* or NULL */,
    DDS_STATUS_MASK_ALL);

if (writer == NULL) {
    printf("***Error: failed to create writer\n");
}
/* Send data asynchronously... */
/* Wait for asynchronous send completes, if desired */
retcode = DDS_DataWriter_wait_for_asynchronous_publishing(writer, &timeout);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to wait for asynchronous publishing\n");
}
```

### 4.52.3 Using the built-in flow controllers

RTI Connex provides several built-in flow controllers.

The **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 557) built-in flow controller provides the basic asynchronous writer behavior. When calling **FooDataWriter\_write** (p. 489), the call signals the **DDS\_Publisher** (p. 436) asynchronous publishing thread (**DDS\_PublisherQos::asynchronous\_publisher** (p. 1663)) to send the actual data. As with any **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 1120) **DDS\_DataWriter** (p. 478), the **FooDataWriter\_write** (p. 489) call returns immediately afterwards. The data is sent immediately in the context of the **DDS\_Publisher** (p. 436) asynchronous publishing thread.

When using the **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME** (p. 557) flow controller, data is also sent in the context of the **DDS\_Publisher** (p. 436) asynchronous publishing thread, but at a regular fixed interval. The thread accumulates samples from different **DDS\_DataWriter** (p. 478) instances and generates data on the wire only once per **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 1555).

In contrast, the **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 558) flow controller permits flow only when **DDS\_FlowController\_trigger\_flow** (p. 556) is called. The data is still sent in the context of the **DDS\_Publisher** (p. 436) asynchronous publishing thread. The thread accumulates samples from different **DDS\_DataWriter** (p. 478) instances (across any **DDS\_Publisher** (p. 436)) and sends all data since the previous trigger.

The properties of the built-in **DDS\_FlowController** (p. 551) instances can be adjusted.

- **Set up participant** (p. 780)

- **Lookup built-in flow controller**

```
DDS_FlowController *controller = NULL;
controller = DDS_DomainParticipant_lookup_flowcontroller(
    participant, DDS_DEFAULT_FLOW_CONTROLLER_NAME);
/* This should never happen, built-in flow controllers are always created */
if (controller == NULL) {
    printf("***Error: failed to lookup flow controller\n");
}
```

- **Change property of built-in flow controller, if desired**

```
DDS_ReturnCode_t retcode;
struct DDS_FlowControllerProperty_t property = DDS_FlowControllerProperty_t_INITIALIZER;
/* Get the property of the flow controller */
retcode = DDS_FlowController_get_property(controller, &property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get flow controller property\n");
}
/* Change the property value as desired */
property.token_bucket.period.sec = 2;
property.token_bucket.period.nanosec = 0;
/* Update the flow controller property */
retcode = DDS_FlowController_set_property(controller, &property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to set flow controller property\n");
}
```

- **Create a data writer using the correct flow controller name** (p. 783)

### 4.52.4 Shaping the network traffic for a particular transport

- **Set up participant** (p. 780)

- **Create the transports** (p. 796)

- **Create a separate flow controller for each transport** (p. 783)

- Configure **DDS\_DataWriter** (p. 478) instances to only use a single transport

- **Associate all data writers using the same transport to the corresponding flow controller** (p. 783)

- For each transport, the corresponding flow controller limits the network traffic based on the token bucket properties

### 4.52.5 Coalescing multiple samples in a single network packet

- **Set up participant** (p. 780)
- **Create a flow controller with a desired token bucket period** (p. 783)
- **Associate the data writer with the flow controller** (p. 783)
- Multiple samples written within the specified period will be coalesced into a single network packet (provided that `tokens_added_per_period` and `bytes_per_token` permit).

## 4.53 Publisher Use Cases

Working with publishers.

Working with publishers.

### 4.53.1 Setting up a publisher

- **Set up participant** (p. 780)

- **Create a DDS\_Publisher**

```

struct DDS_PublisherQos publisher_qos = DDS_PublisherQos_INITIALIZER;
DDS_Publisher* publisher;
struct DDS_PublisherListener publisher_listener =
    DDS_PublisherListener_INITIALIZER;
DDS_ReturnCode_t retcode;
/* MyPublisherListener_* functions are user defined to match
   DDS_PublisherListener functions */
publisher_listener.as_datawriterlistener.on_offered_deadline_missed =
    MyPublisherListener_OfferedDeadlineMissed;
publisher_listener.as_datawriterlistener.on_offered_incompatible_qos =
    MyPublisherListener_OfferedIncompatibleQos;
publisher_listener.as_datawriterlistener.on_liveliness_lost =
    MyPublisherListener_LivelinessLost;
publisher_listener.as_datawriterlistener.on_publication_matched =
    MyPublisherListener_PublicationMatch;
retcode = DDS_DomainParticipant_get_default_publisher_qos(participant,
                                                         &publisher_qos);

if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default publisher qos\n");
}
publisher = DDS_DomainParticipant_create_publisher(participant,
                                                  &publisher_qos,
                                                  &publisher_listener /* or NULL */,
                                                  DDS_STATUS_MASK_ALL);

if (publisher == NULL) {
    printf("***Error: failed to create publisher\n");
}

```

### 4.53.2 Tearing down a publisher

- **Delete DDS\_Publisher:**

```

DDS_ReturnCode_t retcode;
retcode = DDS_DomainParticipant_delete_publisher(participant, publisher);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete publisher\n");
}

```

## 4.54 DataWriter Use Cases

Working with data writers.

Working with data writers.

### 4.54.1 Setting up a data writer

- **Set up publisher** (p. 785)
- **Set up a topic** (p. 782)
- **Create a data writer, `FooDataWriter`** (p. 1845), of user data type `Foo` (p. 1841) :

```

struct DDS_DataWriterQos writer_qos = DDS_DataWriterQos_INITIALIZER;
DDS_DataWriter* writer;
struct DDS_DataWriterListener writer_listener =
    DDS_DataWriterListener_INITIALIZER;
/* MyWriterListener_* functions are user defined to match
   DDS_DataWriterListener functions */
writer_listener.on_offered_deadline_missed =
    MyWriterListener_OfferedDeadlineMissed;
writer_listener.on_offered_incompatible_qos =
    MyWriterListener_OfferedIncompatibleQos;
writer_listener.on_liveliness_lost = MyWriterListener_LivelinessLost;
writer_listener.on_publication_match = MyWriterListener_PublicationMatch;
retcode = DDS_Publisher_get_default_datawriter_qos(publisher, &writer_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default datawriter qos\n");
}
writer = DDS_Publisher_create_datawriter(publisher,
                                       topic,
                                       &writer_qos,
                                       &writer_listener /* or NULL */,
                                       DDS_STATUS_MASK_ALL);

if (writer == NULL) {
    printf("***Error: failed to create writer\n");
}

```

### 4.54.2 Managing instances

- **Getting an instance "key" value of user data type `Foo`** (p. 1841)
 

```

struct Foo* data = ...; /* user data */
retcode = FooDataWriter_get_key_value(writer, data, &instance_handle);
if (retcode != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}

```
- **Registering an instance of type `Foo`** (p. 1841)
 

```

DDS_InstanceHandle_t instance_handle = DDS_HANDLE_NIL;
instance_handle = FooDataWriter_register_instance(writer, data);

```
- **Unregistering an instance of type `Foo`** (p. 1841)
 

```

retcode = FooDataWriter_unregister_instance(writer, data, &instance_handle);
if (retcode != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}

```
- **Disposing of an instance of type `Foo`** (p. 1841)
 

```

retcode = FooDataWriter_dispose(writer, data, &instance_handle);
if (retcode != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}

```

### 4.54.3 Sending data

- **Set up data writer** (p. 786)
- **Register instance** (p. 786)
- **Write instance of type Foo** (p. 1841)
 

```
struct Foo* data = ...; /* user data */
DDS_InstanceHandle_t instance_handle =
    DDS_HANDLE_NIL; /* or a valid registered handle */
DDS_ReturnCode_t retcode;
retcode = FooDataWriter_write(writer, data, &instance_handle);
if (retcode != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

### 4.54.4 Tearing down a data writer

- **Delete DDS\_DataWriter:**

```
DDS_ReturnCode_t retcode;
retcode = DDS_Publisher_delete_datawriter(publisher, writer);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete writer\n");
}
```

## 4.55 Subscriber Use Cases

Working with subscribers.

Working with subscribers.

### 4.55.1 Setting up a subscriber

- **Set up participant** (p. 780)
- **Create a DDS\_Subscriber**

```
struct DDS_SubscriberQos subscriber_qos = DDS_SubscriberQos_INITIALIZER;
DDS_Subscriber* subscriber;
struct DDS_SubscriberListener subscriber_listener = DDS_SubscriberListener_INITIALIZER;
DDS_ReturnCode_t retcode;
/* MySubscriberListener_* functions are user defined to match
   DDS_SubscriberListener functions */
subscriber_listener.on_data_on_readers =
    MySubscriberListener_DataOnReaders;
subscriber_listener.as_datareaderlistener.on_requested_deadline_missed =
    MySubscriberListener_RequestedDeadlineMissed;
subscriber_listener.as_datareaderlistener.on_requested_incompatible_qos =
    MySubscriberListener_RequestedIncompatibleQos;
subscriber_listener.as_datareaderlistener.on_sample_rejected =
    MySubscriberListener_SampleRejected;
subscriber_listener.as_datareaderlistener.on_liveliness_changed =
    MySubscriberListener_LivelinessChanged;
subscriber_listener.as_datareaderlistener.on_data_available =
    MySubscriberListener_DataAvailable;
subscriber_listener.as_datareaderlistener.on_subscription_matched =
    MySubscriberListener_SubscriptionMatch;
subscriber_listener.as_datareaderlistener.on_sample_lost =
    MySubscriberListener_SampleLost;
retcode = DDS_DomainParticipant_get_default_subscriber_qos(participant,
    &subscriber_qos);
if (retcode != DDS_RETCODE_OK) {
```

```

    printf("***Error: failed to get default subscriber qos\n");
}
subscriber = DDS_DomainParticipant_create_subscriber(participant,
                                                    &subscriber_qos,
                                                    &subscriber_listener /*or NULL*/,
                                                    DDS_STATUS_MASK_ALL);

if (subscriber == NULL) {
    printf("***Error: failed to create subscriber\n");
}

```

## 4.55.2 Set up subscriber to access received data

- **Set up subscriber** (p. 787)
- Set up to handle the `DDS_DATA_ON_READERS_STATUS` status, in one or both of the following two ways.
- **Enable `DDS_DATA_ON_READERS_STATUS` for the `DDS_SubscriberListener` associated with the subscriber** (p. 793)
  - The processing to handle the status change is done in the `DDS_SubscriberListener_on_data_on_readers()` method of the attached listener.
  - Typical processing will **access the received data** (p. 788), either in arbitrary order or in a **coherent and ordered manner** (p. 789).
- **Enable `DDS_DATA_ON_READERS_STATUS` for the `DDS_StatusCondition` associated with the subscriber** (p. 794)
  - The processing to handle the status change is done **when the subscriber's attached status condition is triggered** (p. 795) and the `DDS_DATA_ON_READERS_STATUS` status on the subscriber is changed.
  - Typical processing will **access the received data** (p. 788), either in an arbitrary order or in a **coherent and ordered manner** (p. 789).

## 4.55.3 Access received data via a subscriber

- **Ensure subscriber is set up to access received data** (p. 788)
- **Get the list of readers that have data samples available:**

```

struct DDS_DataReaderSeq reader_seq = DDS_SEQUENCE_INITIALIZER;
long max_samples = DDS_LENGTH_UNLIMITED;
DDS_SampleStateMask sample_state_mask = DDS_NOT_READ_SAMPLE_STATE;
DDS_ViewStateMask view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t retcode = DDS_RETCODE_OK;
retcode = DDS_Subscriber_get_datareaders(subscriber,
                                        &reader_seq,
                                        max_samples,
                                        sample_state_mask,
                                        view_state_mask,
                                        instance_state_mask);

if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to access received data via subscriber\n");
    return;
}

```
- Upon successfully getting the list of readers with data, process the data readers to either:
  - **Read the data in each reader** (p. 792), **OR**
  - **Take the data in each reader** (p. 791)

If the intent is to access the data **coherently or in order** (p. 789), the list of data readers *must* be processed in the order returned:

```
int i;
for(i = 0; i < DDS_DataReaderSeq_get_length(&reader_seq); ++i) {

    TDataReader* reader = DDS_DataReaderSeq_get_reference(&reader_seq, i);
    /* Take the data from reader,
       OR
       Read the data from reader */
}
```

- **Alternatively**, call **DDS\_Subscriber\_notify\_datareaders** (p.583) to invoke the **DDS\_DataReaderListener** (p. 1372) for each of the data readers.

```
DDS_ReturnCode_t retcode;
retcode = DDS_Subscriber_notify_datareaders(subscriber);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to notify datareaders\n");
}
```

#### 4.55.4 Access received data coherently and/or in order

To access the received data coherently and/or in an ordered manner, according to the settings of the **DDS\_↔ PresentationQosPolicy** (p. 1634) attached to a **DDS\_Subscriber**:

- **Ensure subscriber is set up to access received data** (p. 788)
- Indicate that data will be accessed via the subscriber:
 

```
retcode = DDS_Subscriber_begin_access(subscriber);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to begin access\n");
}
```
- **Access received data via the subscriber, making sure that the data readers are processed in the order returned.** (p. 788)
- Indicate that the data access via the subscriber is done:
 

```
retcode = DDS_Subscriber_end_access(subscriber);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to end access\n");
}
```

#### 4.55.5 Tearing down a subscriber

- Delete **DDS\_Subscriber**:
 

```
DDS_ReturnCode_t retcode;
retcode = DDS_DomainParticipant_delete_subscriber(participant, subscriber);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete subscriber\n");
}
```

## 4.56 DataReader Use Cases

Working with data readers.

Working with data readers.

### 4.56.1 Setting up a data reader

- **Set up subscriber** (p. 787)
- **Set up a topic** (p. 782)
- **Create a data reader, `FooDataReader`** (p. 1845), of user data type `Foo` (p. 1841) :

```

struct DDS_DataReaderQos reader_qos = DDS_DataReaderQos_INITIALIZER;
DDS_DataReader* reader;
struct DDS_DataReaderListener reader_listener =
    DDS_DataReaderListener_INITIALIZER;
DDS_ReturnCode_t retcode;
/* MyReaderListener_* functions are user defined to match
   DDS_ReaderListener functions */
reader_listener.on_requested_deadline_missed =
    MyReaderListener_RequestedDeadlineMissed;
reader_listener.on_requested_incompatible_qos =
    MyReaderListener_RequestedIncompatibleQos;
reader_listener.on_sample_rejected = MyReaderListener_SampleRejected;
reader_listener.on_liveliness_changed =
    MyReaderListener_LivelinessChanged;
reader_listener.on_data_available = MyReaderListener_DataAvailable;
reader_listener.on_subscription_match =
    MyReaderListener_SubscriptionMatch;
reader_listener.on_sample_lost = MyReaderListener_SampleLost;
retcode = DDS_Subscriber_get_default_datareader_qos(
    subscriber, &reader_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default datareader qos\n");
}
reader = DDS_Subscriber_create_datareader(subscriber,
    DDS_Topic_as_topicdescription(topic),
    &reader_qos,
    &reader_listener /* or NULL */,
    DDS_STATUS_MASK_ALL);
if (reader == NULL) {
    printf("***Error: failed to create reader\n");
}

```

### 4.56.2 Managing instances

- **Given a data reader**  
`FooDataReader* reader = ...;`
- **Getting an instance "key" value of user data type `Foo`** (p. 1841)

```

struct Foo* data = ...; /* user data of type Foo */
retcode = FooDataReader_get_key_value(reader, data, &instance_handle);
if (retcode != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}

```

### 4.56.3 Set up reader to access received data

- **Set up data reader** (p. 790)
- Set up to handle the `DDS_DATA_AVAILABLE_STATUS` status, in one or both of the following two ways.
- **Enable `DDS_DATA_AVAILABLE_STATUS` for the `DDS_DataReaderListener` associated with the data reader** (p. 793)
  - The processing to handle the status change is done in the `DDS_DataReaderListener_on_data_available()` method of the attached listener.
  - Typical processing will **access the received data** (p. 791).

- **Enable DDS\_DATA\_AVAILABLE\_STATUS for the DDSStatusCondition associated with the data reader** (p. 794)
  - The processing to handle the status change is done **when the data reader's attached status condition is triggered** (p. 795) and the DDS\_DATA\_AVAILABLE\_STATUS status on the data reader is changed.
  - Typical processing will **access the received data** (p. 791).

#### 4.56.4 Access received data via a reader

- **Ensure reader is set up to access received data** (p. 790)
- Access the received data, by either:
  - **Taking the received data in the reader** (p. 791), **OR**
  - **Reading the received data in the reader** (p. 792)

#### 4.56.5 Taking data

- **Ensure reader is set up to access received data** (p. 790)
- Take samples of user data type T. The samples are removed from the Service. The caller is responsible for deallocating the buffers.

```

DDS_SampleStateMask  sample_state_mask = DDS_ANY_SAMPLE_STATE;
DDS_ViewStateMask   view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
struct FooSeq data_seq = FooSeq_INITIALIZER;
struct DDS_SampleInfoSeq info_seq = DDS_SampleInfoSeq_INITIALIZER;
DDS_ReturnCode_t retcode;
retcode = FooDataReader_take(reader, &data_seq, &info_seq,
                             max_samples,
                             sample_state_mask,
                             view_state_mask,
                             instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else { if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to access data from the reader\n");
}
}

```

- **Use the received data**

```

struct Foo* data = NULL;
struct DDS_SampleInfo* info = NULL;
int i;
for(i = 0; i < FooSeq_get_length(&data_seq); ++i) {
    info = DDS_SampleInfoSeq_get_reference(&info_seq, i);
    data = FooSeq_get_reference(&data_seq, i);
    /* Note that depending on the info->sample_state
       it is possible that data will be NULL
       */
    /* ... */
}

```

- **Return the data samples and the information buffers back to the middleware. *IMPORTANT:*** Once this call returns, you must not retain any pointers to any part of any sample or sample info object.

```

DDS_ReturnCode_t retcode;
retcode = FooDataReader_return_loan(reader, &data_seq, &info_seq);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to return loan\n");
}

```

## 4.56.6 Reading data

- **Ensure reader is set up to access received data** (p. 790)
- Read samples of user data type **Foo** (p. 1841). The samples are not removed from the Service. It remains responsible for deallocating the buffers.

```
DDS_SampleStateMask sample_state_mask = DDS_ANY_SAMPLE_STATE;
DDS_ViewStateMask view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
struct FooSeq data_seq = FooSeq_INITIALIZER;
struct DDS_SampleInfoSeq info_seq = DDS_SampleInfoSeq_INITIALIZER;
DDS_ReturnCode_t retcode;
retcode = FooDataReader_read(reader, &data_seq, &info_seq,
                             max_samples,
                             sample_state_mask,
                             view_state_mask,
                             instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to access data from the reader\n");
}
```

- **Use the received data**

```
struct Foo* data = NULL;
struct DDS_SampleInfo* info = NULL;
int i;
for(i = 0; i < FooSeq_get_length(&data_seq); ++i) {
    info = DDS_SampleInfoSeq_get_reference(&info_seq, i);
    data = FooSeq_get_reference(&data_seq, i);
    /* Note that depending on the info->sample_state
     * it is possible that data will be NULL
     */
    /* ... */
}
```

- **Return the data samples and the information buffers back to the middleware**

```
retcode = FooDataReader_return_loan(reader, &data_seq, &info_seq);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to return loan\n");
}
```

## 4.56.7 Tearing down a data reader

- **Delete DDS\_DataReader:**

```
DDS_ReturnCode_t retcode;
retcode = DDS_Subscriber_delete_datareader(subscriber, reader);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to delete reader\n");
}
```

## 4.57 Entity Use Cases

Working with entities.

Working with entities.

### 4.57.1 Enabling an entity

- To enable an **DDS\_Entity** (p. 1160)

```
if (DDS_Entity_enable((DDS_Entity*)entity) != DDS_RETCODE_OK) {
    printf("***Error: failed to enable entity\n");
}
```

### 4.57.2 Checking if a status changed on an entity.

- Given an **DDS\_Entity** (p. 1160) and a **DDS\_StatusKind** (p. 1030) to check for, get the list of statuses that have changed since the last time they were respectively cleared.

```
DDS_StatusMask status_changes_mask;

status_changes_mask = DDS_Entity_get_status_changes(entity);
```

- Check if `status_kind` was changed since the last time it was cleared. A plain communication status change is cleared when the status is read using the entity's `get_<plain communication status>()` method. A read communication status change is cleared when the data is taken from the middleware via a `TDataReader_←take()` call [see **Changes in Status** (p. 1028) for details].

```
if (status_changes_mask & status_kind) {
    return 1; /* ... YES, status_kind changed ... */
} else {
    return 0; /* ... NO, status_kind did NOT change ... */
}
```

### 4.57.3 Changing the QoS for an entity

The QoS for an entity can be specified at the entity creation time. Once an entity has been created, its QoS can be manipulated as follows.

- Get an entity's QoS settings using **get\_qos (abstract)** (p. 1161)

```
if (DDS_DomainParticipant_get_qos(entity, &qos) != DDS_RETCODE_OK) {
    printf("***Error: failed to get qos\n");
}
```

- Change the desired qos policy fields

```
/* Change the desired qos policies */
/* qos.policy.field = ... */
```

- Set the qos using **set\_qos (abstract)** (p. 1161).

```
switch (DDS_DomainParticipant_set_qos(entity, &qos)) {
    case DDS_RETCODE_OK: { /* success */
    } break;
    case DDS_RETCODE_IMMUTABLE_POLICY: {
        printf("***Error: tried changing a policy that can only be"
              "      set at entity creation time\n");
    } break;
    case DDS_RETCODE_INCONSISTENT_POLICY: {
        printf("***Error: tried changing a policy to a value inconsistent"
              "      with other policy settings\n");
    } break;
    default: {
        printf("***Error: some other failure\n");
    }
}

DDS_DomainParticipantQos_finalize(&qos);
```

### 4.57.4 Changing the listener and enabling/disabling statuses associated with it

The listener for an entity can be specified at the entity creation time. By default the listener is *enabled* for all the statuses supported by the entity.

Once an entity has been created, its listener and/or the statuses for which it is enabled can be manipulated as follows.

- User defines entity listener methods

```
/* ... methods defined by EntityListener ... */
MyEntityListener_LivelinessChanged( /* one example method */
    void* listener_data,
    DDS_Entity* entity,
    const struct DDS_LivelinessChangedStatus *status);
```

- Set the entity\_listener functions

```
/* ... set the listener struct to the previously defined functions ...
   one example is shown */
entity_listener.on_liveliness_changed = MyEntityListener_LivelinessChanged;
```

- Get an entity's listener using **get\_listener (abstract)** (p. 1162)

```
entity_listener = DDS_Entity_get_listener(entity);
```

- Enable status\_kind for the listener

```
enabled_status_list |= status_kind;
```

- Disable status\_kind for the listener

```
enabled_status_list &= ~status_kind;
```

- Set an entity's listener to entity\_listener using **set\_listener (abstract)** (p. 1162). Only enable the listener for the statuses specified by the enabled\_status\_list.

```
if (DDS_Entity_set_listener(entity, &entity_listener, enabled_status_list)
    != DDS_RETCODE_OK) {
    printf("***Error: setting entity listener\n");
}
```

#### 4.57.5 Enabling/Disabling statuses associated with a status condition

Upon entity creation, by default, all the statuses are *enabled* for the DDS\_StatusCondition associated with the entity.

Once an entity has been created, the list of statuses for which the DDS\_StatusCondition is triggered can be manipulated as follows.

- Given an entity, a status\_kind, and the associated status\_condition:

```
statuscondition = DDS_Entity_get_statuscondition(entity);
```

- Get the list of statuses enabled for the status\_condition

```
enabled_status_list = DDS_StatusCondition_get_enabled_statuses(statuscondition);
```

- Check if the given status\_kind is enabled for the status\_condition

```
if (enabled_status_list & status_kind) {
    /*... YES, status_kind is enabled ... */
} else {
    /* ... NO, status_kind is NOT enabled ... */
}
```

- Enable status\_kind for the status\_condition

```
if (DDS_StatusCondition_set_enabled_statuses(status_condition,
    enabled_status_list | status_kind)
    != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

- Disable status\_kind for the status\_condition

```
if (DDS_StatusCondition_set_enabled_statuses(status_condition,
    enabled_status_list & ~status_kind)
    != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

## 4.58 Waitset Use Cases

Using wait-sets and conditions.

Using wait-sets and conditions.

### 4.58.1 Setting up a wait-set

- Create a wait-set

```
DDS_WaitSet* waitset = DDS_WaitSet_new();
```

- Attach conditions

```
DDS_Condition* cond1 = ...;
DDS_Condition* cond2 = DDS_StatusCondition_as_condition(
    DDS_Entity_get_statuscondition(entity));
DDS_Condition* cond3 = DDS_ReadCondition_as_condition(
    DDS_DataReader_create_readcondition(
        reader,
        DDS_NOT_READ_SAMPLE_STATE,
        DDS_ANY_VIEW_STATE,
        DDS_ANY_INSTANCE_STATE));
DDS_Condition* cond4 = DDS_GuardCondition_as_condition(
    DDS_GuardCondition_new());
DDS_Condition* cond5 = ...;
DDS_ReturnCode_t retcode;
retcode = DDS_WaitSet_attach_condition(waitset, cond1);
if (retcode != DDS_RETCODE_OK) {
    /* ... error */
}
retcode = DDS_WaitSet_attach_condition(waitset, cond2);
if (retcode != DDS_RETCODE_OK) {
    /* ... error */
}
retcode = DDS_WaitSet_attach_condition(waitset, cond3);
if (retcode != DDS_RETCODE_OK) {
    /* ... error */
}
retcode = DDS_WaitSet_attach_condition(waitset, cond4);
if (retcode != DDS_RETCODE_OK) {
    /* ... error */
}
retcode = DDS_WaitSet_attach_condition(waitset, cond5);
if (retcode != DDS_RETCODE_OK) {
    /* ... error */
}
}
```

### 4.58.2 Waiting for condition(s) to trigger

- Set up a wait-set (p. 795)
- Wait for a condition to trigger or timeout, whichever occurs first

```
#define TRUE 1
#define FALSE 0
struct DDS_Duration_t timeout = { 0, 1000000 }; /* 1ms */
struct DDS_ConditionSeq active_conditions = DDS_SEQUENCE_INITIALIZER; /* holder for active conditions */
int is_cond1_triggered = FALSE;
int is_cond2_triggered = FALSE;
int i;
DDS_ReturnCode_t retcode;
retcode = DDS_WaitSet_wait(waitset, &active_conditions, &timeout);
if (retcode == DDS_RETCODE_TIMEOUT) {
    /* handle timeout */
} else if (retcode != DDS_RETCODE_OK) {
    /* check for other cause of failure */
} else {
    /* success */
    /* check if "cond1" or "cond2" are triggered: */
}
```

```

for(i = 0; i < DDS_ConditionSeq_get_length(&active_conditions); ++i) {
    if (DDS_ConditionSeq_get(&active_conditions, i) == cond1) {
        printf("Cond1 was triggered!");
        is_cond1_triggered = TRUE;
    }
    if (DDS_ConditionSeq_get(&active_conditions, i) == cond2) {
        printf("Cond2 was triggered!");
        is_cond2_triggered = TRUE;
    }
    if (is_cond1_triggered && is_cond2_triggered) {
        break;
    }
}
}
if (is_cond1_triggered) {
    /* ... do something because "cond1" was triggered ... */
}
if (is_cond2_triggered) {
    /* ... do something because "cond2" was triggered ... */
}

```

### 4.58.3 Tearing down a wait-set

- Delete the wait-set

```

DDS_WaitSet_delete(waitset);
waitset = NULL;

```

## 4.59 Transport Use Cases

Working with pluggable transports.

Working with pluggable transports.

### 4.59.1 Changing the automatically registered built-in transports

- The **DDS\_TRANSPORTBUILTIN\_MASK\_DEFAULT** (p. 1133) specifies the transport plugins that will be automatically registered with a newly created **DDS\_DomainParticipant** (p. 72) by default.
- This default can be changed by changing the value of the value of **TRANSPORT\_BUILTIN** (p. 1132) Qos Policy on the **DDS\_DomainParticipant** (p. 72)
- To change the **DDS\_DomainParticipantQos::transport\_builtin** (p. 1492) Qos Policy:

```

struct DDS_DomainParticipantQos participant_qos = DDS_DomainParticipantQos_INITIALIZER;

DDS_DomainParticipantFactory_get_default_participant_qos(factory, &participant_qos);

participant_qos.transport_builtin.mask = DDS_TRANSPORTBUILTIN_SHMEM |
    DDS_TRANSPORTBUILTIN_UDPv4;

```

## 4.59.2 Changing the properties of the automatically registered builtin transports

The behavior of the automatically registered builtin transports can be altered by changing their properties.

- Tell the **DDS\_DomainParticipantFactory** (p. 28) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 780)

- Get the property of the desired builtin transport plugin, say **::UDPv4 Transport** (p. 846)

```
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT;

if (NDDS_Transport_Support_get_builtin_transport_property(
    participant,
    DDS_TRANSPORTBUILTIN_UDPv4,
    (struct NDDS_Transport_Property_t*)&property)
    != DDS_RETCODE_OK) {
    printf("***Error: get builtin transport property\n");
}
```

- Change the property fields as desired. Note that the properties should be changed carefully, as inappropriate values may prevent communications. For example, the **::UDPv4 Transport** (p. 846) properties can be changed to support **large messages** (assuming the underlying operating system's UDPv4 stack supports the large message size). Note: if `message_size_max` is increased from the default for any of the built-in transports, then the **DDS\_ReceiverPoolQosPolicy::buffer\_size** (p. 1677) on the DomainParticipant should also be changed.

```
/* Decrease the UDPv4 maximum message size to 9K (small messages). */
property.parent.message_size_max = 9216;
property.recv_socket_buffer_size = 9216;
property.send_socket_buffer_size = 9216;
```

- Set the property of the desired builtin transport plugin, say **::UDPv4 Transport** (p. 846)

```
if (NDDS_Transport_Support_set_builtin_transport_property(
    participant,
    DDS_TRANSPORTBUILTIN_UDPv4,
    (struct NDDS_Transport_Property_t*)&property)
    != DDS_RETCODE_OK) {
    printf("***Error: set builtin transport property\n");
}
```

- **Enable the participant** (p. 792) to turn on communications with other participants in the domain using the new properties for the automatically registered builtin transport plugins.

## 4.59.3 Creating a transport

- A transport plugin is created using methods provided by the supplier of the transport plugin.

- For example to create an instance of the **::UDPv4 Transport** (p. 846)

```
NDDS_Transport_Plugin* transport = NULL;
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT;
transport = NDDS_Transport_UDPv4_new(&property);
if (transport == NULL) {
    printf("***Error: creating transport plugin\n");
}
```

## 4.59.4 Deleting a transport

- A transport plugin can only be deleted only after the **DDS\_DomainParticipant** (p. 72) with which it is registered is deleted.

- The virtual destructor provided by the abstract transport plugin API can be used to delete a transport plugin.

```
transport->delete_cEA(transport, NULL);
```

### 4.59.5 Registering a transport with a participant

The basic steps for setting up transport plugins for use in an RTI Connex application are described below.

- Tell the **DDS\_DomainParticipantFactory** (p. 28) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 780)

#### Optionally Changing the automatically registered built-in transports (p. 796)

#### Optionally Changing the properties of the automatically registered builtin transports (p. 797)

- Create a disabled **DDS\_DomainParticipant** (p. 72), as described in **Setting up a participant** (p. 780)
- Decide on the **network address** (p. 716) for the transport plugin. The network address should be chosen so that the resulting fully qualified address is globally unique (across all transports used in the domain).

```
/* Decide on a network address (96 bits for UDPv4), such that the fully
   qualified unicast address for the transport's interfaces will be
   globally unique. For example, we use the network address:
       1234:1234:1234:0000
   It will be prepended to the unicast addresses of the transport plugin's
   interfaces, to give a fully qualified address that is unique in the
   domain.
*/
NDDS_Transport_Address_t network_address = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 0,0,0,0}};
```

- Decide on the **aliases** (p. 713) for the transport plugin. An alias can refer to one or more transport plugins. The transport class name (see **Builtin Transport Class Names** (p. 1158)) are automatically appended to the user-provided aliases. Alias names are useful in creating logical groupings of transports, e.g. all the transports that are configured to support large messages may be given the alias "large\_message".

```
/* Decide aliases, i.e. the names by which this transport plugin will be known */
const char* ALIASES[] = {
    "my",
    "large_message",
};
const DDS_Long ALIASES_LENGTH = sizeof(ALIASES)/sizeof(const char*);

/* Initialize the aliases StringSeq */
struct DDS_StringSeq aliases = DDS_SEQUENCE_INITIALIZER;
if (!DDS_StringSeq_from_array(&aliases, ALIASES, ALIASES_LENGTH)) {
    printf("***Error: creating initializing aliases\n");
}
}
```

- Register the transport plugin with the **DDS\_DomainParticipant** (p. 72). Note that a transport plugin should **NOT be registered with more than one DomainParticipant**. It is the responsibility of the application programmer to ensure that this requirement is not violated.

```
NDDS_Transport_Handle_t handle = NDDS_TRANSPORT_HANDLE_NIL;

handle = NDDS_Transport_Support_register_transport(
    participant,          /* Disabled Domain Participant */
    transport,           /* Transport plugin */
    &aliases,             /* Transport aliases */
    &network_address);   /* Transport network address */
if (NDDS_Transport_Handle_is_nil(&handle)) {
    printf("***Error: registering transport\n");
}

/* Finalize the aliases StringSeq */
DDS_StringSeq_finalize(&aliases);
```

#### Optionally Adding receive routes for a transport (p. 799)

#### Optionally Adding send routes for a transport (p. 799)

- **Enable the participant** (p. 792) to turn on communications with other participants in the domain, using the newly registered transport plugins, and automatically registered builtin transport plugins (if any).

### 4.59.6 Adding receive routes for a transport

- Receive routes can be added to restrict address ranges on which incoming messages can be received. Any number of receive routes can be added, but these must be done before the participant is enabled.
- To restrict the address range from which incoming messages can be received by the transport plugin:

```
/* Restrict to receiving messages only on interfaces
   1234:1234:1234:10.10.*.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,0,0}};
if (NDDS_Transport_Support_add_receive_route(&handle, &subnet, 112)
    != DDS_RETCODE_OK) {
    printf("***Error: adding receive route\n");
}
```

### 4.59.7 Adding send routes for a transport

- Send routes can be added to restrict the address ranges to which outgoing messages can be sent by the transport plugin. Any number of send routes can be added, but these must be done before the participant is enabled.
- To restrict address ranges to which outgoing messages can be sent by the transport plugin:

```
/* Restrict to sending messages only to addresses (subnets)
   1234:1234:1234:10.10.30.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,30,0}};
if (NDDS_Transport_Support_add_send_route(&handle, &subnet, 120)
    != DDS_RETCODE_OK) {
    printf("***Error: adding send route\n");
}
```

## 4.60 Filter Use Cases

Working with data filters.

Working with data filters.

### 4.60.1 Introduction <br>

RTI Connex supports filtering data either during the exchange from **DDS\_DataWriter** (p. 478) to **DDS\_DataReader** (p. 608), or after the data has been stored at the **DDS\_DataReader** (p. 608).

Filtering during the exchange process is performed by a **DDS\_ContentFilteredTopic** (p. 173), which is created by the **DDS\_DataReader** (p. 608) as a way of specifying a subset of the data samples that it wishes to receive.

Filtering samples that have already been received by the **DDS\_DataReader** (p. 608) is performed by creating a **DDS\_↔\_QueryCondition** (p. 691), which can then used to check for matching samples, be alerted when matching samples arrive, or retrieve matching samples through use of the **FooDataReader\_read\_w\_condition** (p. 623) or **FooData↔\_Reader\_take\_w\_condition** (p. 625) functions. (Conditions may also be used with the APIs **FooDataReader\_read\_↔\_next\_instance\_w\_condition** (p. 636) and **FooDataReader\_take\_next\_instance\_w\_condition** (p. 638).)

Filtering may be performed on any topic, either keyed or un-keyed, except the **Built-in Topics** (p. 162). Filtering may be performed on any field, subset of fields, or combination of fields, subject only to the limitations of the filter syntax, and some restrictions against filtering some *sparse value types* of the **Dynamic Data** (p. 308) API.

RTI Connex contains built in support for filtering using SQL syntax, described in the **Queries and Filters Syntax** (p. 730) module.

#### 4.60.1.1 Overview of ContentFilteredTopic

Each **DDS\_ContentFilteredTopic** (p. 173) is created based on an existing **DDS\_Topic** (p. 172). The **DDS\_Topic** (p. 172) specifies the **field\_names** and **field\_types** of the data contained within the topic. The **DDS\_ContentFilteredTopic** (p. 173), by means of its **filter\_expression** and **expression\_parameters**, further specifies the *values* of the data which the **DDS\_DataReader** (p. 608) wishes to receive.

Custom filters may also be constructed and utilized as described in the **Creating Custom Content Filters** (p. 802) module.

Once the **DDS\_ContentFilteredTopic** (p. 173) has been created, a **DDS\_DataReader** (p. 608) can be created using the filtered topic. The filter's characteristics are exchanged between the **DDS\_DataReader** (p. 608) and any matching **DDS\_DataWriter** (p. 478) during the discovery process.

If the **DDS\_DataWriter** (p. 478) allows (by **DDS\_DataWriterResourceLimitsQosPolicy::max\_remote\_reader\_filters** (p. 1448)), and the **DDS\_DataReader** (p. 608) 's **DDS\_TransportMulticastQosPolicy** (p. 1793) is empty, then the **DDS\_DataWriter** (p. 478) will filter out samples that don't meet the filtering criteria.

If disallowed by the **DDS\_DataWriter** (p. 478), or the **DDS\_DataReader** (p. 608) has set the **DDS\_TransportMulticastQosPolicy** (p. 1793), then the **DDS\_DataWriter** (p. 478) sends all samples to the **DDS\_DataReader** (p. 608), and the **DDS\_DataReader** (p. 608) discards any samples that do not meet the filtering criteria.

The **expression\_parameters** can be modified using **DDS\_ContentFilteredTopic\_set\_expression\_parameters** (p. 198). Any changes made to the filtering criteria by means of **DDS\_ContentFilteredTopic\_set\_expression\_parameters** (p. 198), will be conveyed to any connected **DDS\_DataWriter** (p. 478). New samples will be subject to the modified filtering criteria, but samples that have already been accepted or rejected are unaffected. However, if the **DDS\_DataReader** (p. 608) connects to a **DDS\_DataWriter** (p. 478) that *re-sends* its data, the re-sent samples will be subjected to the new filtering criteria.

#### 4.60.1.2 Overview of QueryCondition

**DDS\_QueryCondition** (p. 691) combine aspects of the content filtering capabilities of **DDS\_ContentFilteredTopic** (p. 173) with state filtering capabilities of **DDS\_ReadCondition** (p. 686) to create a reconfigurable means of filtering or searching data in the **DDS\_DataReader** (p. 608) queue.

**DDS\_QueryCondition** (p. 691) may be created on a disabled **DDS\_DataReader** (p. 608), or after the **DDS\_DataReader** (p. 608) has been enabled. If the **DDS\_DataReader** (p. 608) is enabled, and has already received and stored samples in its queue, then all data samples in the are filtered against the **DDS\_QueryCondition** (p. 691) filter criteria at the time that the **DDS\_QueryCondition** (p. 691) is created. (Note that an exclusive lock is held on the **DDS\_DataReader** (p. 608) sample queue for the duration of the **DDS\_QueryCondition** (p. 691) creation).

Once created, incoming samples are filtered against all **DDS\_QueryCondition** (p. 691) filter criteria at the time of their arrival and storage into the **DDS\_DataReader** (p. 608) queue.

The number of **DDS\_QueryCondition** (p. 691) filters that an individual **DDS\_DataReader** (p. 608) may create is set by **DDS\_DataReaderResourceLimitsQosPolicy::max\_query\_condition\_filters** (p. 1407), to an upper maximum of 32.

## 4.60.2 Filtering with ContentFilteredTopic

- Set up subscriber (p. 787)
- Set up a topic (p. 782)
- Create a ContentFilteredTopic, of user data type **Foo** (p. 1841) :

```
DDS_ContentFilteredTopic *cft = NULL;
struct DDS_StringSeq cft_parameters;
const char* cft_param_list[] = {"1", "100"};
DDS_StringSeq_initialize(&cft_parameters);
DDS_StringSeq_set_maximum(&cft_parameters, 2);
DDS_StringSeq_from_array(&cft_parameters, param_list, 2);
cft = DDS_DomainParticipant_create_contentfilteredtopic(participant,
                                                       "ContentFilteredTopic",
                                                       Foo_topic,
                                                       "value > %0 AND value < %1",
                                                       &cft_parameters);

if (cft == NULL) {
    printf("create_contentfilteredtopic error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

- Create a FooReader using the ContentFilteredTopic:

```
DDS_DataReader* reader;
FooDataReader* Foo_reader;
reader = DDS_Subscriber_create_datareader(subscriber,
                                         DDS_ContentFilteredTopic_as_topicdescription(cft),
                                         &reader_qos, /* or DDS_DATAREADER_QOS_DEFAULT */
                                         &reader_listener, /* or NULL */
                                         DDS_STATUS_MASK_ALL);

if (reader == NULL) {
    printf("create_datareader error\n");
    subscriber_shutdown(participant);
    return -1;
}
Foo_reader = FooDataReader_narrow(reader);
if (Foo_reader == NULL) {
    printf("DataReader narrow error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

Once setup, reading samples with a **DDS\_ContentFilteredTopic** (p. 173) is exactly the same as normal reads or takes, as described in **DataReader Use Cases** (p. 789).

- Changing filter criteria using `set_expression_parameters`:

```
DDS_String_free(DDS_StringSeq_get(&parameters, 0));
DDS_String_free(DDS_StringSeq_get(&parameters, 1));
*DDS_StringSeq_get_reference(&parameters, 0) = DDS_String_dup("5");
*DDS_StringSeq_get_reference(&parameters, 1) = DDS_String_dup("9");
retcode = DDS_ContentFilteredTopic_set_expression_parameters(cft,
                                                           &parameters);

if (retcode != DDS_RETCODE_OK) {
    printf("set_expression_parameters error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

## 4.60.3 Filtering with Query Conditions

- Given a data reader of type **Foo** (p. 1841)
 

```
DDS_DataReader* reader = ...;
FooDataReader* Foo_reader = FooDataReader_narrow(reader);
```
- Creating a QueryCondition
 

```
DDS_QueryCondition *queryCondition = NULL;
struct DDS_StringSeq qc_parameters;
const char *qc_param_list[] = {"1", "100"};
DDS_StringSeq_initialize(&qc_parameters);
```

```

DDS_StringSeq_set_maximum(&qc_parameters, 2);
DDS_StringSeq_from_array(&qc_parameters, qc_param_list, 2);
queryCondition = DDS_DataReader_create_querycondition(reader,
                                                    DDS_NOT_READ_SAMPLE_STATE,
                                                    DDS_ANY_VIEW_STATE,
                                                    DDS_ALIVE_INSTANCE_STATE,
                                                    "value > %0 AND value < %1",
                                                    &qc_parameters);

if (queryCondition == NULL) {
    printf("create_query_condition error\n");
    subscriber_shutdown(participant);
    return -1;
}

```

- **Reading matching samples with a DDS\_QueryCondition** (p. 691)

```

struct FooSeq data_seq = DDS_SEQUENCE_INITIALIZER;
struct DDS_SampleInfoSeq info_seq = DDS_SEQUENCE_INITIALIZER;
retcode = FooDataReader_read_w_condition(Foo_reader,
                                        &data_seq, &info_seq,
                                        DDS_LENGTH_UNLIMITED,
                                        queryCondition);

if (retcode == DDS_RETCODE_NO_DATA) {
    printf("no matching data\n");
} else if (retcode != DDS_RETCODE_OK) {
    printf("read_w_condition error %d\n", retcode);
    subscriber_shutdown(participant);
    return -1;
} else {
    for (i = 0; i < FooSeq_get_length(&data_seq); ++i) {
        if (DDS_SampleInfoSeq_get_reference(&info_seq, i)->valid_data) {
            /* process your data here */
        }
    }
    retcode = FooDataReader_return_loan(Foo_reader,
                                       &data_seq, &info_seq);

    if (retcode != DDS_RETCODE_OK) {
        printf("return loan error %d\n", retcode);
        subscriber_shutdown(participant);
        return -1;
    }
}

```

- **DDS\_QueryCondition\_set\_query\_parameters** (p. 692) is used similarly to **DDS\_ContentFilteredTopic\_set\_expression\_parameters** (p. 198), and the same coding techniques can be used.
- Any **DDS\_QueryCondition** (p. 691) that have been created must be deleted before the **DDS\_DataReader** (p. 608) can be deleted. This can be done using **DDS\_DataReader\_delete\_contained\_entities** (p. 666) or manually as in:

```

retcode = DDS_DataReader_delete_readcondition(reader,
                                             queryCondition);

```

#### 4.60.4 Filtering Performance

Although RTI Connexx supports filtering on any field or combination of fields using the SQL syntax of the built-in filter, filters for keyed topics that filter solely on the contents of key fields have the potential for much higher performance. This is because for key-only filters, the **DDS\_DataReader** (p. 608) caches the results of the filter (pass or not pass) for each instance. When another sample of the same instance is seen at the **DDS\_DataReader** (p. 608), the filter results are retrieved from the cache, dispensing with the need to call the filter function.

This optimization applies to all filtering using the built-in SQL filter, performed by the **DDS\_DataReader** (p. 608), for either **DDS\_ContentFilteredTopic** (p. 173) or **DDS\_QueryCondition** (p. 691). This does *not* apply to filtering performed for **DDS\_ContentFilteredTopic** (p. 173) by the **DDS\_DataWriter** (p. 478).

### 4.61 Creating Custom Content Filters

Working with custom content filters.

Working with custom content filters.

### 4.61.1 Introduction

By default, RTI Connexx creates content filters with the `DDS_SQL_FILTER`, which implements a superset of the DDS-specified SQL `WHERE` clause. However, in many cases this filter may not be what you want. Some examples are:

- The default filter can only filter based on the content of a sample, not on a computation on the content of a sample. You can use a custom filter that is customized for a specific type and can filter based on a computation of the type members.
- You want to use a different filter language than SQL

This HOWTO explains how to write your own custom filter and is divided into the following sections:

- **The Custom Content Filter API** (p. 803)
- **Example Using C format strings** (p. 804)

### 4.61.2 The Custom Content Filter API

A custom content filter is created by calling the `DDS_DomainParticipant_register_contentfilter` (p. 117) function with a `DDS_ContentFilter` (p. 1352) that contains a `compile`, an `evaluate` function and a `finalize` function. `DDS_ContentFilteredTopic` (p. 173) can be created with `DDS_DomainParticipant_create_contentfilteredtopic_with_filter` (p. 116) to use this filter.

A custom content filter is used by RTI Connexx at the following times during the life-time of a `DDS_ContentFilteredTopic` (p. 173) (the function called is shown in parenthesis).

- When a `DDS_ContentFilteredTopic` (p. 173) is created (`compile` (p. 803))
- When the filter parameters are changed on the `DDS_ContentFilteredTopic` (p. 173) (`compile` (p. 803)) with `DDS_ContentFilteredTopic_set_expression_parameters` (p. 198)
- When a sample is filtered (`evaluate` (p. 803)). This function is called by the RTI Connexx core with a de-serialized sample
- When a `DDS_ContentFilteredTopic` (p. 173) is deleted (`finalize` (p. 804))

#### 4.61.2.1 The compile function

The `compile` (p. 804) function is used to `compile` a filter expression and expression parameters. Please note that the term `compile` is intentionally loosely defined. It is up to the user to decide what this function should do and return.

See `DDS_ContentFilter::compile` (p. 1353) for details.

#### 4.61.2.2 The evaluate function

The `evaluate` (p. 804) function is called each time a sample is received to determine if a sample should be filtered out and discarded.

See `DDS_ContentFilter::evaluate` (p. 1355) for details.

### 4.61.2.3 The finalize function

The **finalize** (p. 805) function is called when an instance of the custom content filter is no longer needed. When this function is called, it is safe to free all resources used by this particular instance of the custom content filter.

See `DDS_ContentFilter::finalize` (p. 1356) for details.

## 4.61.3 Example Using C format strings

Assume that you have a type **Foo** (p. 1841).

You want to write a custom filter function that will drop all samples where the value of `Foo.x > x` and `x` is a value determined by an expression parameter. The filter will **only** be used to filter samples of type **Foo** (p. 1841).

### 4.61.3.1 Writing the Compile Function

The first thing to note is that we can ignore the filter expression, since we already know what the expression is. The second is that `x` is a parameter that can be changed. By using this information, the compile function is very easy to implement. Simply return the parameter string. This string will then be passed to the evaluate function every time a sample of this type is filtered.

Below is the entire **compile** (p. 803) function.

```
DDS_ReturnCode_t
howto_write_simple_compile_function(void *handle,
                                   void **new_compile_data,
                                   const char *expression,
                                   const struct DDS_StringSeq *parameters,
                                   const struct DDS_TypeCode *type_code,
                                   const char *type_class_name,
                                   void *old_compile_data)
{
    *new_compile_data = (void*)DDS_String_dup(*DDS_StringSeq_get_reference(parameters, 0));
    return DDS_RETCODE_OK;
}
```

### 4.61.3.2 Writing the Evaluate Function

The next step is to implement the **evaluate** function. The evaluate function receives the parameter string with the actual value to test against. Thus the evaluate function must read the actual value from the parameter string before evaluating the expression. Below is the entire **evaluate** (p. 803) function.

```
DDS_Boolean
howto_write_simple_evaluate_function(void *filter_data,
                                    void *compile_data,
                                    const void *sample,
                                    const struct DDS_FilterSampleInfo * meta_data)
{
    char *parameter = (char*)compile_data;
    DDS_Long x;
    Foo *foo_sample = (Foo*)sample;
    sscanf(parameter, "%d", &x);
    return (foo_sample->x > x ? DDS_BOOLEAN_FALSE : DDS_BOOLEAN_TRUE);
}
```

### 4.61.3.3 Writing the Finalize Function

The last function to write is the finalize function. It is safe to free all resources used by this particular instance of the custom content filter that is allocated in **compile**. Below is the entire **finalize** (p. 804) function.

```
void
howto_write_simple_finalize_function(void *filter_data,
                                   void *compile_data)
{
    /* free parameter string from compile function */
    DDS_String_free((char *)compile_data);
}
```

### 4.61.3.4 Registering the Filter

Before the custom filter can be used, it must be registered with RTI Connex:

```
struct DDS_ContentFilter filter = DDS_ContentFilter_INITIALIZER;
filter.compile = howto_write_simple_compile_function;
filter.evaluate = howto_write_simple_evaluate_function;
filter.finalize = howto_write_simple_finalize_function;
filter.filter_data = NULL;
if (DDS_DomainParticipant_register_contentfilter(
    participant, "MyCustomFilter", &filter) != DDS_RETCODE_OK) {
    printf("Failed to register custom filter\n");
}
```

### 4.61.3.5 Unregistering the Filter

When the filter is no longer needed, it can be unregistered from RTI Connex:

```
if (DDS_DomainParticipant_unregister_contentfilter(
    participant, "MyCustomFilter" ) != DDS_RETCODE_OK) {
    printf("Failed to unregister custom filter\n");
}
```

## 4.62 Large Data Use Cases

Working with large data types.

Working with large data types.

### 4.62.1 Introduction <br>

RTI Connex supports data types whose size exceeds the maximum message size of the underlying transports. A **DDS\_DataWriter** (p. 478) will fragment data samples when required. Fragments are automatically reassembled at the receiving end.

Once all fragments of a sample have been received, the new sample is passed to the **DDS\_DataReader** (p. 608) which can then make it available to the user. Note that the new sample is treated as a regular sample at that point and its availability depends on standard QoS settings such as **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1693) and **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 1094).

The large data feature is fully supported by all DDS API's, so its use is mostly transparent. Some additional considerations apply as explained below.

### 4.62.2 Writing Large Data

In order to use the large data feature with the `DDS_RELIABLE_RELIABILITY_QOS` (p. 1124) setting, the `DDS_↔DataWriter` (p. 478) must be configured as an asynchronous writer (`DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS` (p. 1120)) with associated `DDS_FlowController` (p. 551).

While the use of an asynchronous writer and flow controller is optional when using the `DDS_BEST_EFFORT_↔RELIABILITY_QOS` (p. 1124) setting, most large data use cases will benefit from the use of a flow controller to prevent flooding the network when fragments are being sent.

- [Set up writer](#) (p. 786)
- [Add flow control](#) (p. 783)

### 4.62.3 Receiving Large Data

Large data is supported by default and in most cases, no further changes are required.

The `DDS_DataReaderResourceLimitsQosPolicy` (p. 1398) allows tuning the resources available to the `DDS_Data↔Reader` (p. 608) for reassembling fragmented large data.

- [Set up reader](#) (p. 790)

## 4.63 Request-Reply Examples

Examples on how to use the request-reply API .

Examples on how to use the request-reply API .

Request-Reply code examples.

### 4.63.1 Request-Reply Examples

Requesters and Repliers provide a way to use the Request-Reply communication pattern on top of the DDS entities. An application uses a Requester to send requests to a Replier; another application using a Replier receives a request and can send one or more replies for that request. The Requester that sent the request (and only that one) will receive the reply (or replies).

#### DDS Types

RTI Connex uses DDS data types for sending and receiving requests and replies. Valid types are those generated by the `rtiddsgen` code generator, the DDS built-in types, and `DynamicData`. Refer to the `Core Libraries User's Manual` and the following links for more information:

- Code Generator User's Manual,
- **Using the DDS built-in types** (p. 301),
- **Using DynamicData** (p. 308)

#### Set up

- **Create a DomainParticipant** (p. 780)
- **Create a requester** (p. 808)
- **Create a requester with parameters** (p. 808)
- **Create a replier** (p. 811)

#### Requester: sending requests and receiving replies

- **Requester example** (p. 809)
- **Taking loaned samples** (p. 809)
- **Correlation between requests and replies** (p. 810)

#### Replier: receiving requests and sending replies

- **Replier example** (p. 812)
- **SimpleReplier example** (p. 813)
- **Taking loaned samples** (p. 809)

#### Note

To use Request-Reply you need to build and link your application with the additional `rticonnextmsgc` library.

The examples in this section require the following header files:

```
#include "connext_c/connext_c_requester.h"  
#include "connext_c/connext_c_replier.h"  
#include "connext_c/connext_c_simple_replier.h"
```

### 4.63.2 Creating a Requester

- **Setting up a participant** (p. 780)
- Instantiate the declaration of a **FooBarRequester** (p. 1843), a requester that sends requests of type **Foo** (p. 1841) and receives replies of type **Bar** (for example, in `FooBarRequester.h`)

```
/* Instantiate the FooBarRequester structure and declare its functions, for
 * example in a file named FooBarRequester.h
 *
 * The request type is Foo
 * The reply type is Bar
 * The name of the requester struct and prefix for the operations is FooBarRequester
 *
 */
RTI_CONNEXT_REQUESTER_DECL(Foo, Bar, FooBarRequester)
```

- Instantiate the implementation of a **FooBarRequester** (p. 1843) (for example, in `FooBarRequester.c`)

```
/* Instantiate the implementation of the FooBarRequester functions,
 * for example in a file named FooBarRequester.c.
 *
 *
 */
#define TReq Foo
#define TRep Bar
#define TRequester FooBarRequester
#include "connext_c/generic/connext_c_requestreply_TReqTRepRequester.gen"
```

- **Create a Requester**

```
DDS_DomainParticipant * participant;
FooBarRequester * requester;
/* Create a DomainParticipant */
participant = DDS_DomainParticipantFactory_create_participant(
    DDS_DomainParticipantFactory_get_instance(),
    domain_id, &DDS_PARTICIPANT_QOS_DEFAULT,
    NULL, DDS_STATUS_MASK_NONE);
if (participant == NULL) {
    printf("Error creating participant\n");
}
/* Create a Requester */
requester = FooBarRequester_create(participant, "TestService");
if (requester == NULL) {
    printf("Error creating requester\n");
}
```

### 4.63.3 Creating a Requester with optional parameters

- **Setting up a participant** (p. 780)
- **Creating a Requester with optional parameters**

```
DDS_DomainParticipant * participant;
FooBarRequester * requester;
struct RTI_Connext_RequesterParams params =
    RTI_Connext_RequesterParams_INITIALIZER;
/* Create a DomainParticipant */
participant = DDS_DomainParticipantFactory_create_participant(
    DDS_DomainParticipantFactory_get_instance(),
    domain_id, &DDS_PARTICIPANT_QOS_DEFAULT,
    NULL, DDS_STATUS_MASK_NONE);
if (participant == NULL) {
    printf("Error creating participant\n");
}
/* Set the parameters */
/* The participant is always required */
params.participant = participant;
/* The service name is required, or alternatively
 * params.request_topic_name and params.reply_topic_name can be used */
params.service_name = (char *) "TestService";
/* Create a Requester with a QoS profile (located for example in
 * USER_QOS_PROFILES.xml, in the current working directory) */
params.qos_library_name = (char *) "RequestReplyExampleProfiles";
params.qos_profile_name = (char *) "RequesterExampleProfile";
/* Create a Requester */
```

```

requester = FooBarRequester_create_w_params(&params);
if (requester == NULL) {
    printf("Error creating requester\n");
}

```

#### 4.63.4 Requester example

- **Creating a Requester** (p. 808)
- **Creating a Requester with optional parameters** (p. 808)

- Requester example

```

DDS_ReturnCode_t retcode;
Foo * request;
Bar * reply;
struct DDS_SampleInfo info = DDS_SAMPLEINFO_DEFAULT;
/* Note: error checking omitted for simplicity */
/* Send request */
request = FooTypeSupport_create_data();
strcpy(request->message, "A Request");
retcode = FooBarRequester_send_request(requester, request);
/* Receive reply (wait for it and get the sample) */
reply = BarTypeSupport_create_data();
retcode = FooBarRequester_receive_reply(requester, reply, &info, &MAX_WAIT);
if (retcode == DDS_RETCODE_OK) {
    if(info.valid_data) {
        printf("Received reply: %s\n", reply->message);
    } else {
        printf("Received invalid reply\n");
    }
} else if (retcode == DDS_RETCODE_TIMEOUT || retcode == DDS_RETCODE_NO_DATA) {
    printf("Reply not received\n");
} else {
    printf("Error receiving reply\n");
}
/* Delete the samples */
FooTypeSupport_delete_data(request);
BarTypeSupport_delete_data(reply);

```

See also

**Replier example** (p. 812)

**SimpleReplier example** (p. 813)

#### 4.63.5 Taking loaned samples

- **Creating a Requester** (p. 808)
- Get iterator to loaned replies (no copies)

```

int i;
DDS_ReturnCode_t retcode;
struct BarSeq replies = DDS_SEQUENCE_INITIALIZER;
struct DDS_SampleInfoSeq infos = DDS_SEQUENCE_INITIALIZER;
/* Get loaned samples
   Unlike receive_replies(), take_replies() doesn't block and returns an
   empty collection if there are no replies at that moment.
   (before that we can call requester.wait_for_replies)
*/
retcode = FooBarRequester_take_replies(

```

```

    requester, &replies, &infos, DDS_LENGTH_UNLIMITED);
if (retcode == DDS_RETCODE_NO_DATA) {
    printf("No replies are available\n");
    return;
} else if (retcode != DDS_RETCODE_OK) {
    printf("Error getting replies\n");
    return;
}
for (i = 0; i < BarSeq_get_length(&replies); i++) {
    Bar * reply = BarSeq_get_reference(&replies, i);
    struct DDS_SampleInfo * info = DDS_SampleInfoSeq_get_reference(&infos, i);
    if (info->valid_data) {
        printf("Received reply: %s\n", reply->message);
    }
}
/* Return the loan */
FooBarRequester_return_loan(requester, &replies, &infos);

```

**Requester example** (p. 809)

**Replier example** (p. 812)

#### 4.63.6 Correlating requests and replies

- **Creating a Requester** (p. 808)
- **Example 1) Waiting for a reply for a specific request**

```

DDS_ReturnCode_t retcode;
Foo * request;
struct DDS_WriteParams_t request_info1 = DDS_WRITEPARAMS_DEFAULT;
struct DDS_WriteParams_t request_info2 = DDS_WRITEPARAMS_DEFAULT;
Bar * reply;
struct DDS_SampleInfo reply_info;
struct DDS_SampleIdentity_t related_sample_id;
/* Note: error checking omitted for simplicity */
request = FooTypeSupport_create_data();
/* Send first request */
strcpy(request->message, "Request 1");
FooBarRequester_send_request_w_params(requester, request, &request_info1);
/* Send second request */
strcpy(request->message, "Request 2");
FooBarRequester_send_request_w_params(requester, request, &request_info2);
/* Wait for one reply to the second request */
retcode = RTI_Connext_Requester_wait_for_replies_for_related_request(
    (RTI_Connext_Requester *) requester, 1, &MAX_WAIT,
    &request_info2.identity);
if (retcode != DDS_RETCODE_OK) {
    printf("Did not receive reply for request 2\n");
    return;
}
/* Take that reply */
reply = BarTypeSupport_create_data();
retcode = FooBarRequester_take_reply_for_related_request(
    requester, reply, &reply_info, &request_info2.identity);
/* This postcondition should always be true */
DDS_SampleInfo_get_related_sample_identity(&reply_info, &related_sample_id);
if (!DDS_SampleIdentity_equals(&related_sample_id, &request_info2.identity)) {
    printf("postcondition failed\n");
}
if (reply_info.valid_data) {
    printf("Received reply for request 2: %s\n", reply->message);
}
/* Wait for one reply to the second request */
retcode = RTI_Connext_Requester_wait_for_replies_for_related_request(
    (RTI_Connext_Requester *) requester, 1, &MAX_WAIT,
    &request_info1.identity);
if (retcode != DDS_RETCODE_OK) {
    printf("Did not receive reply for request 1\n");
    return;
}

```

```

/* Take that reply */
retcode = FooBarRequester_take_reply_for_related_request(
    requester, reply, &reply_info, &request_info1.identity);
/* This postcondition should always be true */
DDS_SampleInfo_get_related_sample_identity(&reply_info, &related_sample_id);
if (!DDS_SampleIdentity_equals(&related_sample_id, &request_info1.identity)) {
    printf("postcondition failed\n");
}
}
if (reply_info.valid_data) {
    printf("Received reply for request 1: %s\n", reply->message);
}
}
FooTypeSupport_delete_data(request);
BarTypeSupport_delete_data(reply);

```

- Example 2) Correlate reply after receiving it

```

int i;
DDS_ReturnCode_t retcode;
Foo * request;
struct DDS_WriteParams_t request_info1 = DDS_WRITEPARAMS_DEFAULT;
struct DDS_WriteParams_t request_info2 = DDS_WRITEPARAMS_DEFAULT;
struct BarSeq replies = DDS_SEQUENCE_INITIALIZER;
struct DDS_SampleInfoSeq infos = DDS_SEQUENCE_INITIALIZER;
struct DDS_SampleIdentity_t related_sample_id;
/* Note: error checking omitted for simplicity */
request = FooTypeSupport_create_data();
/* Send first request */
strcpy(request->message, "Request 1");
FooBarRequester_send_request_w_params(requester, request, &request_info1);
/* Send second request */
strcpy(request->message, "Request 2");
FooBarRequester_send_request_w_params(requester, request, &request_info2);
/* Wait for two replies. In this case we don't mind the reception order */
retcode = RTI_Connext_Requester_wait_for_replies(
    (RTI_Connext_Requester *) requester, 2, &MAX_WAIT);
if (retcode != DDS_RETCODE_OK) {
    printf("Replies not received\n");
    return;
}
}
retcode = FooBarRequester_take_replies(
    requester, &replies, &infos, DDS_LENGTH_UNLIMITED);
for (i = 0; i < BarSeq_get_length(&replies); i++) {
    Bar * reply = BarSeq_get_reference(&replies, i);
    struct DDS_SampleInfo * info = DDS_SampleInfoSeq_get_reference(&infos, i);
    DDS_SampleInfo_get_related_sample_identity(info, &related_sample_id);
    if (DDS_SampleIdentity_equals(&related_sample_id, &request_info1.identity)) {
        printf("Received reply for request 1: %s\n", reply->message);
    } else if (DDS_SampleIdentity_equals(&related_sample_id, &request_info2.identity)) {
        printf("Received reply for request 2: %s\n", reply->message);
    } else {
        /* Should not happen */
        printf("Received unexpected reply\n");
    }
}
}
/* Return the loan */
FooBarRequester_return_loan(requester, &replies, &infos);
FooTypeSupport_delete_data(request);

```

**Replier example** (p. 812)

### 4.63.7 Creating a Replier

- **Setting up a participant** (p. 780)
- Instantiate the declaration of a **FooBarReplier** (p. 1842), a replier that receives requests of type **Foo** (p. 1841) and sends replies of type **Bar** (for example, in `FooBarReplier.h`)

```

/* Instantiate the FooBarReplier structure and declare its functions, for
 * example in a file named FooBarReplier.h
 *

```

```

* The request type is Foo
* The reply type is Bar
* The name of the replier struct and prefix for the operations is FooBarReplier
*/
RTI_CONNEXT_REPLIER_DECL(Foo, Bar, FooBarReplier)

```

- Instantiate the implementation of a **FooBarReplier** (p. 1842) (for example, in FooBarReplier.c)

```

/* Instantiate the implementation of the FooBarReplier functions,
* for example in a file named FooBarReplier.c.
*
*
*/
#define TReq Foo
#define TRep Bar
#define TReplier FooBarReplier
#include "connext_c/generic/connext_c_requestreply_TReqTRepReplier.gen"

```

- Create a Replier

```

DDS_DomainParticipant * participant;
FooBarReplier * replier;
/* Create a DomainParticipant */
participant = DDS_DomainParticipantFactory_create_participant(
    DDS_DomainParticipantFactory_get_instance(),
    domain_id, &DDS_PARTICIPANT_QOS_DEFAULT,
    NULL, DDS_STATUS_MASK_NONE);
if (participant == NULL) {
    printf("Error creating participant\n");
}
/* Create a Replier */
replier = FooBarReplier_create(participant, "TestService");
if (replier == NULL) {
    printf("Error creating replier\n");
}

```

## 4.63.8 Replier example

- **Creating a Replier** (p. 811)

- Replier example

```

DDS_ReturnCode_t retcode;
Foo * request;
Bar * reply;
struct DDS_SampleInfo request_info;
struct DDS_SampleIdentity_t request_id;
/* Note: error checking omitted for simplicity */
/* Receive one request */
request = FooTypeSupport_create_data();
retcode = FooBarReplier_receive_request(
    replier, request, &request_info, &MAX_WAIT);
if (retcode != DDS_RETCODE_OK) {
    printf("Request not received\n");
    FooTypeSupport_delete_data(request);
    return 0;
}
if (request_info.valid_data) {
    reply = BarTypeSupport_create_data();
    sprintf(reply->message, "Reply for %s", request->message);
    /* Send a reply for that request */
    DDS_SampleInfo_get_sample_identity(&request_info, &request_id);
    retcode = FooBarReplier_send_reply(replier, reply, &request_id);
    /* Note: a replier can send more than one reply for the same request */
    BarTypeSupport_delete_data(reply);
}
FooTypeSupport_delete_data(request);

```

See also

**Requester example** (p. 809)

### 4.63.9 SimpleReplier example

- Instantiate the declaration of a **FooBarSimpleReplier** (p. 1844), a replier that receives requests of type **Foo** (p. 1841) and sends replies of type **Bar** (for example, in `FooBarSimpleReplier.h`)

```
/* Instantiate the FooBarSimpleReplier structure and declare its functions, for
 * example in a file named FooBarSimpleReplier.h
 *
 * The request type is Foo
 * The reply type is Bar
 * The name of the simple replier struct and prefix for the operations is
 * FooBarSimpleReplier
 *
 */
RTI_Connext_SimpleReplier_DECL(Foo, Bar, FooBarSimpleReplier)
```

- Instantiate the implementation of a **FooBarSimpleReplier** (p. 1844) (for example, in `FooBarSimpleReplier.c`)

```
/* Instantiate the implementation of the FooBarSimpleReplier functions,
 * for example in a file named FooBarSimpleReplier.c.
 *
 *
 */
#define TReq Foo
#define TRep Bar
#define TSimpleReplier FooBarSimpleReplier
#include "connext_c/generic/connext_c_requestreply_TReqTRepSimpleReplier.gen"
```

- A **FooBarSimpleReplier** (p. 1844) wraps a **FooBarReplier** (p. 1842), which has to be defined as well. If you haven't already, instantiate the declaration and definition of **FooBarReplier** (p. 1842) as described in **Creating a Replier** (p. 811) (you can do this in the same `.h` and `.c` files you just used for **FooBarSimpleReplier** (p. 1844)).

- Implement a listener

```
void MySimpleReplierListener_on_request_available(
    RTI_Connext_SimpleReplierListener * listener,
    const void * request_untyped, const struct DDS_SampleInfo * info)
{
    Bar * reply;
    Foo * request = (Foo *) request_untyped;
    if (!info->valid_data) {
        /* In this example we don't reply to invalid-data samples.
         * In other cases it could make sense to reply
         * to a disposed instance, for example. */
        return NULL;
    }
    reply = BarTypeSupport_create_data();
    sprintf(reply->message, "Simple reply for %s", request->message);
    return (void *) reply;
}

void MySimpleReplierListener_on_return_loan(
    RTI_Connext_SimpleReplierListener * listener,
    void * reply)
{
    /* Delete the data we created on request available
     *
     * Note: we can store a single reply sample in listener->user_data
     * and reuse it to avoid reserving and deleting memory on every call
     * to on_request_available/on_return_loan
     */
    BarTypeSupport_delete_data(reply);
}
```

- And create a **SimpleReplier** with the listener:

```
RTI_Connext_SimpleReplierListener listener;
FooBarSimpleReplier * replier;
/* Note: error checking omitted for simplicity */
listener.on_request_available = MySimpleReplierListener_on_request_available;
listener.return_loan = MySimpleReplierListener_on_return_loan;
replier = FooBarSimpleReplier_create(participant, "TestService", &listener);
/* After creation the SimpleReplier is already active and may call
the listener */
```

**Requester example** (p. 809)

### 4.63.10 Configuring Request-Reply QoS profiles

If you do not specify your own quality of service parameters (in `RTI_Connext_RequesterParams` (p. 1905) and `RTI_Connext_ReplierParams` (p. 1901)), a `FooBarRequester` (p. 1843) and `FooBarReplier` (p. 1842) are created using a default configuration. That configuration is equivalent to the one in the following QoS profile called "default":

```
<?xml version="1.0"?>
<dds xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
     xsi:noNamespaceSchemaLocation="../../resource/schema/rti_dds_qos_profiles.xsd">
  <qos_library name="RequestReplyExampleProfiles">

    <!-- Default QoS:

        This profile contains the QoS that Requesters and Repliers
        would use by default. We can use it as a base profile to inherit
        from and override some parameters
    -->
    <qos_profile name="default">
      <datawriter_qos>

        <!-- Strict reliable -->
        <reliability>
          <kind>RELIABLE_RELIABILITY_QOS</kind>
          <max_blocking_time>
            <sec>10</sec>
            <nanosec>0</nanosec>
          </max_blocking_time>
        </reliability>

        <history>
          <kind>KEEP_ALL_HISTORY_QOS</kind>
        </history>

        <!-- These are typical protocol parameters for a reliable
            DataWriter -->
        <protocol>
          <rtps_reliable_writer>
            <max_heartbeat_retries>
              LENGTH_UNLIMITED
            </max_heartbeat_retries>
            <heartbeats_per_max_samples>
              2
            </heartbeats_per_max_samples>
            <heartbeat_period>
              <sec>0</sec>
              <nanosec>100000000</nanosec> <!--100ms -->
            </heartbeat_period>
            <fast_heartbeat_period>
              <sec>0</sec>
              <nanosec>10000000</nanosec> <!--10ms -->
            </fast_heartbeat_period>
            <late_joiner_heartbeat_period>
              <sec>0</sec>
              <nanosec>10000000</nanosec> <!--10ms -->
            </late_joiner_heartbeat_period>
            <max_nack_response_delay>
              <sec>0</sec>
              <nanosec>0</nanosec>
            </max_nack_response_delay>
            <min_nack_response_delay>
              <sec>0</sec>
              <nanosec>0</nanosec>
            </min_nack_response_delay>
            <max_send_window_size>32</max_send_window_size>
            <min_send_window_size>32</min_send_window_size>
          </rtps_reliable_writer>
        </protocol>

        <writer_resource_limits>
          <!-- This setting enables efficient communication
              between a replier and an arbitrary number of requesters
          -->
          <max_remote_reader_filters>
            LENGTH_UNLIMITED
          </max_remote_reader_filters>
        </writer_resource_limits>
      </datawriter_qos>

      <datareader_qos>
```

```

    <!-- Strict reliable -->
    <reliability>
      <kind>RELIABLE_RELIABILITY_QOS</kind>
      <max_blocking_time>
        <sec>10</sec>
        <nanosec>0</nanosec>
      </max_blocking_time>
    </reliability>

    <history>
      <kind>KEEP_ALL_HISTORY_QOS</kind>
    </history>

    <!-- These are typical protocol parameters for a reliable
    DataReader -->
    <protocol>
      <rtps_reliable_reader>
        <max_heartbeat_response_delay>
          <sec>0</sec>
          <nanosec>0</nanosec>
        </max_heartbeat_response_delay>
        <min_heartbeat_response_delay>
          <sec>0</sec>
          <nanosec>0</nanosec>
        </min_heartbeat_response_delay>
      </rtps_reliable_reader>
    </protocol>

  </datareader_qos>
</qos_profile>

<!-- This is the profile used by the Requester.
It inherits from "default", defined above,
and overrides some QoS -->
<qos_profile name="RequesterExampleProfile"
  base_name="default">
  <!-- QoS for the data writer that sends requests -->
  <datawriter_qos>
    <durability>
      <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
    </durability>
  </datawriter_qos>
  <!-- QoS for the data reader that receives replies -->
  <datareader_qos>
    <durability>
      <kind>VOLATILE_DURABILITY_QOS</kind>
    </durability>
  </datareader_qos>
</qos_profile>

<!-- This is the profile used by the Replier.
It inherits from "default", defined above,
and overrides some QoS -->
<qos_profile name="ReplierExampleProfile"
  base_name="default">
  <!-- QoS for the data writer that sends replies -->
  <datawriter_qos>
    <durability>
      <kind>VOLATILE_DURABILITY_QOS</kind>
    </durability>
  </datawriter_qos>
  <!-- QoS for the data reader that receives requests -->
  <datareader_qos>
    <durability>
      <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
    </durability>
  </datareader_qos>
</qos_profile>
</qos_library>
</dds>

```

You can use the profile called "RequesterExampleProfile", which modifies some parameters from the default. The example **Creating a Requester with optional parameters** (p. 808) shows how to create a **FooBarRequester** (p. 1843) using this profile.

[Creating a Requester with optional parameters](#) (p. 808)

[Configuring QoS Profiles with XML](#) (p. 776)

## 4.64 Documentation Roadmap

This section contains a roadmap for the new user with pointers on what to read first.

If you are new to RTI Connext, we recommend starting in the following order:

- See the [Getting Started Guide](#). This document provides download and installation instructions. It also lays out the core value and concepts behind the product and takes you step-by-step through the creation of a simple example application.
- The [User's Manual](#) describes the features of the product and how to use them. It is organized around the structure of the DDS APIs and certain common high-level tasks.
- The documentation in the [RTI Connext DDS API Reference](#) (p. 818) provides an overview of API classes and modules for the DDS data-centric publish-subscribe (DCPS) package from a programmer's perspective. Start by reading the documentation on the main page.
- After reading the high level module documentation, look at the [Publication Example](#) (p. 778) and [Subscription Example](#) (p. 779) for step-by-step examples of creating a publication and subscription. These are hyperlinked code snippets to the full API documentation, and provide a good place to begin learning the APIs.
- Next, work through your own application using the example code files generated by `rtiddsgen`. See the [Code Generator User's Manual](#).
- To integrate similar code into your own application and build system, you will likely need to refer to the [Platform Notes](#).

## 4.65 Conventions

This section describes the conventions used in the API documentation.

### 4.65.1 Unsupported Features

**[Not supported (optional)]** This note means that the optional feature from the DDS specification is not supported in the current release.

## 4.65.2 API Naming Conventions

### 4.65.2.1 Structure & Class Names

RTI Data Distribution Service 4 makes a distinction between *value types* and *interface types*. Value types are types such as primitives, enumerations, strings, and structures whose identity and equality are determined solely by explicit state. Interface types are those abstract opaque data types that conceptually have an identity apart from their explicit state. Examples include all of the **DDS\_Entity** (p. 1160) subtypes, the **DDS\_Condition** (p. 1169) subtypes, and **DDS\_WaitSet** (p. 1170). Instances of value types are frequently transitory and are declared on the stack. Instances of interface types typically have longer lifecycles, are accessible by pointer only, and may be managed by a factory object.

Value type structures are made more explicit through the use of C's structure tag syntax. For example, a **DDS\_↔Duration\_t** (p. 1522) object must be declared as being of type "struct DDS\_Duration\_t," not simply "DDS\_Duration\_t." Interface types, by contrast, are always of typedef'ed types; their underlying representations are opaque.

### 4.65.3 API Documentation Terms

In the API documentation, the term module refers to a logical grouping of documentation and elements in the API.

At this time, typedefs that occur in the API, such as **DDS\_ReturnCode\_t** (p. 1024) do not show up in the compound list or indices. This is a known limitation in the generated HTML.

### 4.65.4 Stereotypes

Commonly used stereotypes in the API documentation include the following.

#### 4.65.4.1 Extensions

- `<<extension>>` (p. 817)
  - An RTI Connex product extension to the DDS standard specification.
  - The extension APIs complement the standard APIs specified by the OMG DDS specification. They are provided to improve product usability and enable access to product-specific features such as pluggable transports.

#### 4.65.4.2 Experimental

- `<<experimental>>` (p. 817)
  - RTI Connex experimental features are used to evaluate new features and get user feedback.
  - These features are not guaranteed to be fully supported and might be implemented only of some of the programming languages supported bt RTI Connex
  - The functional APIs corresponding to experimental features can be distinguished from other APIs by the suffix '\_exp'.
  - Experimental features may or may not appear in future product releases.
  - The name of the experimental features APIs will change if they become officially supported. At the very least the suffix '\_exp' will be removed.
  - Experimental features should not be used in production.

#### 4.65.4.3 Types

- `<<interface>>` (p. 818)
  - Pure interface type with *no state*.
  - Languages such as Java natively support the concept of an *interface* type, which is a collection of function signatures devoid of any dynamic state.
  - In C++, this is achieved via a class with all *pure virtual* methods and devoid of any instance variables (ie no dynamic state).
  - Interfaces are generally organized into a type hierarchy. Static typecasting along the interface type hierarchy is "safe" for valid objects.
- `<<generic>>` (p. 818)
  - A *generic* type is a *skeleton* class written in terms of generic parameters. Type-specific instantiations of such types are conventionally referred to in this documentation in terms of the hypothetical type "Foo"; for example: **FooSeq** (p. 1845), **FooDataType**, **FooDataWriter** (p. 1845), and **FooDataReader** (p. 1845).
  - For portability and efficiency, we implement generics using C preprocessor macros, rather than using C++ templates.
  - A *generic* type interface is declared via a `#define` macro.
  - Concrete types are generated from the generic type statically at compile time. The implementation of the concrete types is provided via the generic macros which can then be compiled as normal C or C++ code.
- `<<singleton>>` (p. 818)
  - Singleton class. There is a single instance of the class.
  - Generally accessed via a `get_instance()` static function.

#### 4.65.4.4 Method Parameters

- `<<in>>` (p. 818)
  - An *input* parameter.
- `<<out>>` (p. 818)
  - An *output* parameter.
- `<<inout>>` (p. 818)
  - An *input* and *output* parameter.

## 4.66 RTI Connex DDS API Reference

RTI Connex modules following the DDS module definitions.

## Modules

- **Domain Module**

Contains the **DDS\_DomainParticipant** (p. 72) class that acts as an entrypoint of RTI Connex and acts as a factory for many of the classes. The **DDS\_DomainParticipant** (p. 72) also acts as a container for the other objects that make up RTI Connex.

- **Topic Module**

Contains the **DDS\_Topic** (p. 172), **DDS\_ContentFilteredTopic** (p. 173), and **DDS\_MultiTopic** (p. 181) classes, the **DDS\_TopicListener** (p. 1777) interface, and more generally, all that is needed by an application to define **DDS\_Topic** (p. 172) objects and attach QoS policies to them.

- **Publication Module**

Contains the **DDS\_FlowController** (p. 551), **DDS\_Publisher** (p. 436), and **DDS\_DataWriter** (p. 478) classes as well as the **DDS\_PublisherListener** (p. 1660) and **DDS\_DataWriterListener** (p. 1417) interfaces, and more generally, all that is needed on the publication side.

- **Subscription Module**

Contains the **DDS\_Subscriber** (p. 565), **DDS\_DataReader** (p. 608), **DDS\_ReadCondition** (p. 686), **DDS\_QueryCondition** (p. 691), and **DDS\_TopicQuery** (p. 698) classes, as well as the **DDS\_SubscriberListener** (p. 1744) and **DDS\_DataReaderListener** (p. 1372) interfaces, and more generally, all that is needed on the subscription side.

- **Infrastructure Module**

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

- **Transports**

APIs related to RTI Connex pluggable transports.

- **Queries and Filters Syntax**

- **Logging and Version**

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connex.

- **General Utilities and Compliance Configuration**

API of general utilities used in the RTI Connex distribution.

- **Observability**

API of RTI Connex Observability Framework.

- **Durability and Persistence**

APIs related to RTI Connex Durability and Persistence.

- **System Properties**

System Properties.

- **Configuring QoS Profiles with XML**

APIs related to XML QoS Profiles.

- **Additional RTI Connex Communication Patterns**

Extensions to the RTI Connex publish-subscribe functionality.

### 4.66.1 Detailed Description

RTI Connex modules following the DDS module definitions.

### 4.66.2 Overview

Information flows with the aid of the following constructs: **DDS\_Publisher** (p. 436) and **DDS\_DataWriter** (p. 478) on the sending side, **DDS\_Subscriber** (p. 565) and **DDS\_DataReader** (p. 608) on the receiving side.

- A **DDS\_Publisher** (p. 436) is an object responsible for data distribution. It may publish data of different data types. A **TDataWriter** acts as a *typed* (i.e. each **DDS\_DataWriter** (p. 478) object is dedicated to one application data type) accessor to a publisher. A **DDS\_DataWriter** (p. 478) is the object the application must use to communicate to a publisher the existence and value of data objects of a given type. When data object values have been communicated to the publisher through the appropriate data-writer, it is the publisher's responsibility to perform the distribution (the publisher will do this according to its own QoS, or the QoS attached to the corresponding data-writer). A *publication* is defined by the association of a data-writer to a publisher. This association expresses the intent of the application to publish the data described by the data-writer in the context provided by the publisher.
- A **DDS\_Subscriber** (p. 565) is an object responsible for receiving published data and making it available (according to the Subscriber's QoS) to the receiving application. It may receive and dispatch data of different specified types. To access the received data, the application must use a *typed* **TDataReader** attached to the subscriber. Thus, a *subscription* is defined by the association of a data-reader with a subscriber. This association expresses the intent of the application to subscribe to the data described by the data-reader in the context provided by the subscriber.

**DDS\_Topic** (p. 172) objects conceptually fit between publications and subscriptions. Publications must be known in such a way that subscriptions can refer to them unambiguously. A **DDS\_Topic** (p. 172) is meant to fulfill that purpose: it associates a name (unique in the domain i.e. the set of applications that are communicating with each other), a data type, and QoS related to the data itself. In addition to the topic QoS, the QoS of the **DDS\_DataWriter** (p. 478) associated with that Topic and the QoS of the **DDS\_Publisher** (p. 436) associated to the **DDS\_DataWriter** (p. 478) control the behavior on the publisher's side, while the corresponding **DDS\_Topic** (p. 172), **DDS\_DataReader** (p. 608) and **DDS\_Subscriber** (p. 565) QoS control the behavior on the subscriber's side.

When an application wishes to publish data of a given type, it must create a **DDS\_Publisher** (p. 436) (or reuse an already created one) and a **DDS\_DataWriter** (p. 478) with all the characteristics of the desired publication. Similarly, when an application wishes to receive data, it must create a **DDS\_Subscriber** (p. 565) (or reuse an already created one) and a **DDS\_DataReader** (p. 608) to define the subscription.

### 4.66.3 Conceptual Model

The overall conceptual model is shown below.

Notice that all the main communication objects (the specializations of Entity) follow unified patterns of:

- Supporting QoS (made up of several QoSPolicy); QoS provides a generic mechanism for the application to control the behavior of the Service and tailor it to its needs. Each **DDS\_Entity** (p. 1160) supports its own specialized kind of QoS policies (see **QoS Policies** (p. 1041)).
- Accepting a **DDS\_Listener** (p. 1569); listeners provide a generic mechanism for the middleware to notify the application of relevant asynchronous events, such as arrival of data corresponding to a subscription, violation of a QoS setting, etc. Each **DDS\_Entity** (p. 1160) supports its own specialized kind of listener. Listeners are related to changes in status conditions (see **Status Kinds** (p. 1025)).

Note that only one Listener per entity is allowed (instead of a list of them). The reason for that choice is that this allows a much simpler (and, thus, more efficient) implementation as far as the middleware is concerned. Moreover, if it were required, the application could easily implement a listener that, when triggered, triggers in return attached 'sub-listeners'.

- Accepting a **DDS\_StatusCondition** (p. 1170) (and a set of **DDS\_ReadCondition** (p. 686) objects for the **DDS\_Reader** (p. 608)); conditions (in conjunction with **DDS\_WaitSet** (p. 1170) objects) provide support for an alternate communication style between the middleware and the application (i.e., wait-based rather than notification-based).

All DCPS entities are attached to a **DDS\_DomainParticipant** (p. 72). A domain participant represents the local membership of the application in a domain. A *domain* is a distributed concept that links all the applications able to communicate with each other. It represents a communication plane: only the publishers and the subscribers attached to the same domain may interact.

**DDS\_DomainEntity** (p. 1162) is an intermediate object whose only purpose is to state that a DomainParticipant cannot contain other domain participants.

At the DCPS level, data types represent information that is sent atomically. For performance reasons, only plain data structures are handled by this level.

By default, each data modification is propagated individually, independently, and uncorrelated with other modifications. However, an application may request that several modifications be sent as a whole and interpreted as such at the recipient side. This functionality is offered on a Publisher/Subscriber basis. That is, these relationships can only be specified among **DDS\_DataWriter** (p. 478) objects attached to the same **DDS\_Publisher** (p. 436) and retrieved among **DDS\_DataReader** (p. 608) objects attached to the same **DDS\_Subscriber** (p. 565).

By definition, a **DDS\_Topic** (p. 172) corresponds to a single data type. However, several topics may refer to the same data type. Therefore, a **DDS\_Topic** (p. 172) identifies data of a single type, ranging from one single instance to a whole collection of instances of that given type. This is shown below for the hypothetical data type **Foo** (p. 1841).

In case a set of instances is gathered under the same topic, different instances must be distinguishable. This is achieved by means of the values of some data fields that form the **key** to that data set. The *key description* (i.e., the list of data fields whose value forms the key) has to be indicated to the middleware. The rule is simple: *different data samples with the same key value represent successive values for the same instance, while different data samples with different key values represent different instances*. If no key is provided, the data set associated with the **DDS\_Topic** (p. 172) is restricted to a *single instance*.

Topics need to be known by the middleware and potentially propagated. Topic objects are created using the create operations provided by **DDS\_DomainParticipant** (p. 72).

The interaction style is straightforward on the publisher's side: when the application decides that it wants to make data available for publication, it calls the appropriate operation on the related **DDS\_DataWriter** (p. 478) (this, in turn, will trigger its **DDS\_Publisher** (p. 436)).

On the subscriber's side however, there are more choices: relevant information may arrive when the application is busy doing something else or when the application is just waiting for that information. Therefore, depending on the way the application is designed, asynchronous notifications or synchronous access may be more appropriate. Both interaction modes are allowed, a **DDS\_Listener** (p. 1569) is used to provide a callback for synchronous access and a **DDS\_WaitSet** (p. 1170) associated with one or several **DDS\_Condition** (p. 1169) objects provides asynchronous data access.

The same synchronous and asynchronous interaction modes can also be used to access changes that affect the middleware communication status (see **Status Kinds** (p. 1025)). For instance, this may occur when the middleware asynchronously detects an inconsistency. In addition, other middleware information that may be relevant to the application (such as the list of the existing topics) is made available by means of **built-in topics** (p. 162) that the application can access as plain application data, using built-in data-readers.

## 4.66.4 Modules

DCPS consists of five modules:

- **Infrastructure module** (p. 708) defines the abstract classes and the interfaces that are refined by the other modules. It also provides support for the two interaction styles (notification-based and wait-based) with the middleware.
- **Domain module** (p. 22) contains the **DDS\_DomainParticipant** (p. 72) class that acts as an endpoint of the Service and acts as a factory for many of the classes. The **DDS\_DomainParticipant** (p. 72) also acts as a container for the other objects that make up the Service.
- **Topic module** (p. 164) contains the **DDS\_Topic** (p. 172) class, the **DDS\_TopicListener** (p. 1777) interface, and more generally, all that is needed by the application to define **DDS\_Topic** (p. 172) objects and attach QoS policies to them.
- **Publication module** (p. 431) contains the **DDS\_Publisher** (p. 436) and **DDS\_DataWriter** (p. 478) classes as well as the **DDS\_PublisherListener** (p. 1660) and **DDS\_DataWriterListener** (p. 1417) interfaces, and more generally, all that is needed on the publication side.
- **Subscription module** (p. 560) contains the **DDS\_Subscriber** (p. 565), **DDS\_DataReader** (p. 608), **DDS\_↔ReadCondition** (p. 686), and **DDS\_QueryCondition** (p. 691) classes, as well as the **DDS\_SubscriberListener** (p. 1744) and **DDS\_DataReaderListener** (p. 1372) interfaces, and more generally, all that is needed on the subscription side.

## 4.67 Additional RTI Connex Communication Patterns

Extensions to the RTI Connex publish-subscribe functionality.

### Modules

- **Request-Reply Pattern**  
*Support for the request-reply communication pattern.*
- **Utilities**  
*Utilities for the RTI Connex Messaging module.*

### 4.67.1 Detailed Description

Extensions to the RTI Connex publish-subscribe functionality.

This section includes the **Request-Reply API** (p. 737).

## 4.68 Programming How-To's

These "How To"s illustrate how to apply RTI Connex API's to common use cases.

### Modules

- **Publication Example**  
*A data publication example.*
- **Subscription Example**  
*A data subscription example.*
- **Participant Use Cases**  
*Working with domain participants.*
- **Topic Use Cases**  
*Working with topics.*
- **FlowController Use Cases**  
*Working with flow controllers.*
- **Publisher Use Cases**  
*Working with publishers.*
- **DataWriter Use Cases**  
*Working with data writers.*
- **Subscriber Use Cases**  
*Working with subscribers.*
- **DataReader Use Cases**  
*Working with data readers.*
- **Entity Use Cases**  
*Working with entities.*
- **Waitset Use Cases**  
*Using wait-sets and conditions.*
- **Transport Use Cases**  
*Working with pluggable transports.*
- **Filter Use Cases**  
*Working with data filters.*
- **Creating Custom Content Filters**  
*Working with custom content filters.*
- **Large Data Use Cases**  
*Working with large data types.*
- **Request-Reply Examples**  
*Examples on how to use the request-reply API .*

### 4.68.1 Detailed Description

These "How To"s illustrate how to apply RTI Connex API's to common use cases.

These are a good starting point to familiarize yourself with DDS. You can use these code fragments as "templates" for writing your own code.

## 4.69 Interface

Abstraction of a Transport Plugin network interface.

### Data Structures

- struct **NDDS\_Transport\_Interface\_t**  
*Storage for the description of a network interface used by a Transport Plugin.*

### Enumerations

- enum **NDDS\_Transport\_Interface\_Status\_t** {  
    **NDDS\_TRANSPORT\_INTERFACE\_OFF** = 0 ,  
    **NDDS\_TRANSPORT\_INTERFACE\_ON** = 1 }  
*Interface status.*

#### 4.69.1 Detailed Description

Abstraction of a Transport Plugin network interface.

A Transport Plugin may be able to use several logical or physical network interfaces in a single node (machine). For example, there may be multiple NICs for IP networks or multiple serial ports for serial networks.

An instance of a Transport Plugin is a conduit to one or more network interfaces associated with the transport.

Instances of a Transport Plugin must assign a unique unicast address to each of the network interfaces that it can use to send and receive messages. The unicast address should be within the range of addresses that are addressable by the Transport Plugin (as defined by the plugin itself).

Then, when RTI Connext sends a message to an unicast destination address, the destination address will be made of two parts. The network address and an interface address. The network address portion will be used by RTI Connext to select the Transport Plugin instance that will send the message. The interface address portion is passed to the Transport Plugin instance as the destination interface to which the message should be sent.

**NDDS\_Transport\_Address\_t** (p. 1852) **NDDS\_Transport\_ClassId\_t** (p. 831)

#### 4.69.2 Enumeration Type Documentation

##### 4.69.2.1 NDDS\_Transport\_Interface\_Status\_t

enum **NDDS\_Transport\_Interface\_Status\_t**

Interface status.

## Enumerator

NDDS_TRANSPORT_INTERFACE_OFF	The transport interface is OFF.
NDDS_TRANSPORT_INTERFACE_ON	The transport interface is ON.

## 4.70 Transport Plugins Configuration

Transport plugins configuration with RTI Connex.

### Data Structures

- struct **NDDS\_Transport\_UUID**  
*Univocally identifies a transport plugin instance.*
- struct **TransportAllocationSettings\_t**  
*Allocation settings used by various internal buffers.*
- struct **NDDS\_Transport\_Property\_t**  
*Base configuration structure that must be inherited by derived Transport Plugin classes.*

### Macros

- #define **NDDS\_TRANSPORT\_PORT\_INVALID** (( NDDS\_Transport\_Port\_t) 0)  
*Port 0 is considered to be invalid.*
- #define **NDDS\_TRANSPORT\_UUID\_SIZE** 12  
*Size of a **NDDS\_Transport\_UUID** (p. 1896).*
- #define **NDDS\_TRANSPORT\_LENGTH\_UNLIMITED** -1  
*Represent an unlimited length.*
- #define **NDDS\_TRANSPORT\_INTERFACE\_RANK\_UNKNOWN** 0  
*Rank interface as unknown or not yet set.*
- #define **NDDS\_TRANSPORT\_UUID\_UNKNOWN** {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED** (-1)  
*The constant used as 'unlimited' for the 'max\_count' field of the structure **TransportAllocationSettings\_t** (p. 1913).*
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC** (-1)  
*The constant used as 'automatic' for the 'incremental\_count' field of the structure **TransportAllocationSettings\_t** (p. 1913).*
- #define **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_DEFAULT**  
*The constant used as default value for the struct **TransportAllocationSettings\_t** (p. 1913).*
- #define **NDDS\_TRANSPORT\_CLASSID\_INVALID** (-1)  
*Invalid Transport Class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_UDPv4** (1)  
*Builtin IPv4 UDP/IP Transport Plugin class ID.*
- #define **NDDS\_TRANSPORT\_CLASSID\_SHMEM** (0x01000000)  
*Builtin Shared-Memory Transport Plugin class ID.*

- **#define NDDS\_TRANSPORT\_CLASSID\_SHMEM\_510** (2)  
*Builtin Shared-Memory Transport Plugin class ID for Connex 5.1.0 and earlier.*
- **#define NDDS\_TRANSPORT\_CLASSID\_UDPv6** (2)  
*Builtin IPv6 UDP/IP Transport Plugin class ID.*
- **#define NDDS\_TRANSPORT\_CLASSID\_UDPv6\_510** (5)  
*Builtin IPv6 UDP/IP Transport Plugin class ID for Connex 5.1.0 and earlier.*
- **#define NDDS\_TRANSPORT\_CLASSID\_TCPV4\_LAN** (8)  
*IPv4 TCP/IP Transport Plugin class ID for LAN case.*
- **#define NDDS\_TRANSPORT\_CLASSID\_TCPV4\_WAN** (9)  
*IPv4 TCP/IP Transport Plugin class ID for WAN case.*
- **#define NDDS\_TRANSPORT\_CLASSNAME\_TCPV4\_WAN** "tcpv4\_wan"  
*IPv4 TCP/IP Transport Plugin class name for WAN case.*
- **#define NDDS\_TRANSPORT\_CLASSID\_TLsv4\_LAN** (10)  
*IPv4 TCP/IP Transport Plugin class ID for LAN case with TLS enabled.*
- **#define NDDS\_TRANSPORT\_CLASSID\_TLsv4\_WAN** (11)  
*IPv4 TCP/IP Transport Plugin class ID for WAN case with TLS enabled.*
- **#define NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN** (0x01000001)  
*Builtin IPv4 UDP/IP Asymmetric Transport Plugin class ID.*
- **#define NDDS\_TRANSPORT\_CLASSID\_RESERVED\_RANGE** (1000)  
*Transport Plugin class IDs below this are reserved by RTI.*
- **#define NDDS\_TRANSPORT\_PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOANED** (0x2)  
*Specified zero-copy behavior of transport.*
- **#define NDDS\_TRANSPORT\_PROPERTY\_GATHER\_SEND\_BUFFER\_COUNT\_MIN** (3)  
*Minimum number of gather-send buffers that must be supported by a Transport Plugin implementation.*

## Typedefs

- **typedef RTI\_UINT32 NDDS\_Transport\_Port\_t**  
*Type for storing RTI Connex RTPS ports.*
- **typedef RTI\_INT32 NDDS\_Transport\_ClassId\_t**  
*Type for storing RTI Connex Transport Plugin class IDs.*

### 4.70.1 Detailed Description

Transport plugins configuration with RTI Connex.

Transport plugins are configured using properties. Each transport plugin must derive its property from a base configuration structure **NDDS\_Transport\_Property\_t** (p. 1854).

To see how to configure the Built-in Transport Plugins, see **Built-in Transport Plugins** (p. 728).

See also

**Built-in Transport Plugins** (p. 728)

## 4.70.2 Macro Definition Documentation

### 4.70.2.1 NDDS\_TRANSPORT\_PORT\_INVALID

```
#define NDDS_TRANSPORT_PORT_INVALID (( NDDS_Transport_Port_t) 0)
```

Port 0 is considered to be invalid.

### 4.70.2.2 NDDS\_TRANSPORT\_UUID\_SIZE

```
#define NDDS_TRANSPORT_UUID_SIZE 12
```

Size of a **NDDS\_Transport\_UUID** (p. 1896).

### 4.70.2.3 NDDS\_TRANSPORT\_LENGTH\_UNLIMITED

```
#define NDDS_TRANSPORT_LENGTH_UNLIMITED -1
```

Represent an unlimited length.

### 4.70.2.4 NDDS\_TRANSPORT\_INTERFACE\_RANK\_UNKNOWN

```
#define NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN 0
```

Rank interface as unknown or not yet set.

### 4.70.2.5 NDDS\_TRANSPORT\_UUID\_UNKNOWN

```
#define NDDS_TRANSPORT_UUID_UNKNOWN {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
```

Value for UUIDs that have no known value. Used as default.

#### 4.70.2.6 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED (-1)
```

The constant used as 'unlimited' for the 'max\_count' field of the structure **TransportAllocationSettings\_t** (p. 1913).

#### 4.70.2.7 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC (-1)
```

The constant used as 'automatic' for the 'incremental\_count' field of the structure **TransportAllocationSettings\_t** (p. 1913).

Automatic means the buffer size will double at every reallocation.

#### 4.70.2.8 NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_DEFAULT

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT
```

##### Value:

```
{
    2L, /* initial_count */ \
    NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED, /* max_count */ \
    NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC /* incremental_count */ \
}
```

The constant used as default value for the struct **TransportAllocationSettings\_t** (p. 1913).

The default value defined in this constant, sets the buffer to have:

- initial\_count = 2 elements
- max\_count = **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_MAX\_COUNT\_UNLIMITED** (p. 827)
- incremental\_count = **NDDS\_TRANSPORT\_ALLOCATION\_SETTINGS\_INCREMENTAL\_COUNT\_AUTOMATIC**

#### 4.70.2.9 NDDS\_TRANSPORT\_CLASSID\_INVALID

```
#define NDDS_TRANSPORT_CLASSID_INVALID (-1)
```

Invalid Transport Class ID.

Transport-Plugins implementations should set their class ID to a value different than this.

#### 4.70.2.10 NDDS\_TRANSPORT\_CLASSID\_UDPv4

```
#define NDDS_TRANSPORT_CLASSID_UDPv4 (1)
```

Builtin IPv4 UDP/IP Transport Plugin class ID.

#### 4.70.2.11 NDDS\_TRANSPORT\_CLASSID\_SHMEM

```
#define NDDS_TRANSPORT_CLASSID_SHMEM (0x01000000)
```

Builtin Shared-Memory Transport Plugin class ID.

#### 4.70.2.12 NDDS\_TRANSPORT\_CLASSID\_SHMEM\_510

```
#define NDDS_TRANSPORT_CLASSID_SHMEM_510 (2)
```

Builtin Shared-Memory Transport Plugin class ID for Connex 5.1.0 and earlier.

#### 4.70.2.13 NDDS\_TRANSPORT\_CLASSID\_UDPv6

```
#define NDDS_TRANSPORT_CLASSID_UDPv6 (2)
```

Builtin IPv6 UDP/IP Transport Plugin class ID.

#### 4.70.2.14 NDDS\_TRANSPORT\_CLASSID\_UDPv6\_510

```
#define NDDS_TRANSPORT_CLASSID_UDPv6_510 (5)
```

Builtin IPv6 UDP/IP Transport Plugin class ID for Connex 5.1.0 and earlier.

#### 4.70.2.15 NDDS\_TRANSPORT\_CLASSID\_TCPV4\_LAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_LAN (8)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case.

#### 4.70.2.16 NDDS\_TRANSPORT\_CLASSID\_TCPV4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_WAN (9)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case.

#### 4.70.2.17 NDDS\_TRANSPORT\_CLASSNAME\_TCPV4\_WAN

```
#define NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN "tcpv4_wan"
```

IPv4 TCP/IP Transport Plugin class name for WAN case.

#### 4.70.2.18 NDDS\_TRANSPORT\_CLASSID\_TLSV4\_LAN

```
#define NDDS_TRANSPORT_CLASSID_TLSV4_LAN (10)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case with TLS enabled.

#### 4.70.2.19 NDDS\_TRANSPORT\_CLASSID\_TLSV4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_TLSV4_WAN (11)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case with TLS enabled.

#### 4.70.2.20 NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN

```
#define NDDS_TRANSPORT_CLASSID_UDPv4_WAN (0x01000001)
```

Builtin IPv4 UDP/IP Asymmetric Transport Plugin class ID.

#### 4.70.2.21 NDDS\_TRANSPORT\_CLASSID\_RESERVED\_RANGE

```
#define NDDS_TRANSPORT_CLASSID_RESERVED_RANGE (1000)
```

Transport Plugin class IDs below this are reserved by RTI.

User-defined Transport-Plugins should use a class ID greater than this number.

#### 4.70.2.22 NDDS\_TRANSPORT\_PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOANED

```
#define NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED (0x2)
```

Specified zero-copy behavior of transport.

A Transport Plugin may commit to one of three behaviors for zero copy receives:

1. Always does zero copy.
2. Sometimes does zero copy, up to the transport discretion.
3. Never does zero copy.

This bit should be set only if the Transport Plugin commits to always doing a zero copy receive, or more specifically, always loaning a buffer through its `receive_rEA()` call.

In that case, RTI Connexx will not need to allocate storage for a message that it retrieves with the `receive_rEA()` call.

#### 4.70.2.23 NDDS\_TRANSPORT\_PROPERTY\_GATHER\_SEND\_BUFFER\_COUNT\_MIN

```
#define NDDS_TRANSPORT_PROPERTY_GATHER_SEND_BUFFER_COUNT_MIN (3)
```

Minimum number of gather-send buffers that must be supported by a Transport Plugin implementation.

For the `NDDS_Transport_Property_t` (p. 1854) structure to be valid, the value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857) must be greater than or equal to this value.

### 4.70.3 Typedef Documentation

#### 4.70.3.1 NDDS\_Transport\_Port\_t

```
typedef RTI_UINT32 NDDS_Transport_Port_t
```

Type for storing RTI Connexx RTPS ports.

Unlike IPv4 Socket API ports, which are 2 bytes long, the RTI Connexx representation of an RTPS port is 4 bytes.

### 4.70.3.2 NDDS\_Transport\_ClassId\_t

```
typedef RTI_INT32 NDDS_Transport_ClassId_t
```

Type for storing RTI Connex Transport Plugin class IDs.

Each implementation of a Transport Plugin must have a unique ID. For example, a UDP/IP Transport Plugin implementation must have a different ID than a Shared Memory Transport Plugin.

User-implemented Transport Plugins must have an ID higher than **NDDS\_TRANSPORT\_CLASSID\_RESERVED\_RANGE** (p. 830).

## 4.71 Transport Address

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

### Data Structures

- struct **NDDS\_Transport\_Address\_t**  
*Addresses are stored individually as network-ordered bytes.*

### Macros

- #define **NDDS\_TRANSPORT\_ADDRESS\_INVALID\_INITIALIZER** {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
- An invalid transport address. Used as an initializer.*
- #define **NDDS\_TRANSPORT\_ADDRESS\_STRING\_BUFFER\_SIZE** (72)
- The minimum size of the buffer that should be passed to **NDDS\_Transport\_Address\_to\_string** (p. 834).*

### Functions

- RTI\_INT32 **NDDS\_Transport\_Address\_to\_string** (const **NDDS\_Transport\_Address\_t** \*self, char \*buffer\_↔ inout, RTI\_INT32 buffer\_length\_in)  
*Converts a numerical address to a printable string representation.*
- RTIBool **NDDS\_Transport\_Address\_to\_string\_with\_protocol\_family\_format** (const **NDDS\_Transport\_↔ Address\_t** \*me, char \*buffer, RTI\_INT32 buffer\_length\_in, RTIOsapiSocketAFKind family)  
*Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.*
- RTI\_INT32 **NDDS\_Transport\_Address\_from\_string** (**NDDS\_Transport\_Address\_t** \*address\_out, const char \*address\_in)  
*Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.*
- void **NDDS\_Transport\_Address\_print** (const **NDDS\_Transport\_Address\_t** \*address\_in, const char \*desc\_in, RTI\_INT32 indent\_in)  
*Prints an address to standard out.*
- RTI\_INT32 **NDDS\_Transport\_Address\_is\_ipv4** (const **NDDS\_Transport\_Address\_t** \*address\_in)  
*Checks if an address is an IPv4 address.*
- RTI\_INT32 **NDDS\_Transport\_Address\_is\_multicast** (const **NDDS\_Transport\_Address\_t** \*address\_in)  
*Checks if an address is an IPv4 or IPv6 multicast address.*

## Variables

- const **NDDS\_Transport\_Address\_t NDDS\_TRANSPORT\_ADDRESS\_INVALID**  
*An invalid transport address.*

### 4.71.1 Detailed Description

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

The APIs of RTI Connex uses IPv6 address notation for all transports.

Transport Plugin implementations that are not IP-based are required to map whatever addressing scheme natively used by the physical transport (if any) to an address in IPv6 notation and vice versa.

IPv6 addresses are numerically stored in 16 bytes. An IPv6 address can be presented in string notation in a variety of ways. For example,

```
"00AF:0000:0037:FE01:0000:0000:034B:0089"  
"AF:0:37:FE01:0:0:34B:89"  
"AF:0:37:FE01::34B:89"
```

are all valid IPv6 presentation of the same address.

IPv4 address in dot notation can be used to specify the last 4 bytes of the address. For example,

```
"0000:0000:0000:0000:0000:0000:192.168.0.1"  
"0:0:0:0:0:0:192.168.0.1"  
"::192.168.0.1"
```

are all valid IPv6 presentation of the same address.

For a complete description of valid IPv6 address notation, consult the IPv6 Addressing Architecture (RFC 2373).

Addresses are divided into unicast addresses and multicast addresses.

Multicast addresses are defined as

- Addresses that start with 0xFF. That is `FFxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx`.

or an IPv4 multicast address

- Address in the range `:::224.0.0.0, :::239.255.255.255]`

Multicast addresses do not refer to any specific destination (network interface). Instead, they usually refer to a group of network interfaces, often called a "multicast group".

Unicast addresses always refer to a specific network interface.

### 4.71.2 Macro Definition Documentation

#### 4.71.2.1 NDDS\_TRANSPORT\_ADDRESS\_INVALID\_INITIALIZER

```
#define NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER {{0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}}
```

An invalid transport address. Used as an initializer.

For example: `NDDS_Transport_Address_t` (p.1852) `address = NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER;`

#### 4.71.2.2 NDDS\_TRANSPORT\_ADDRESS\_STRING\_BUFFER\_SIZE

```
#define NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE (72)
```

The minimum size of the buffer that should be passed to `NDDS_Transport_Address_to_string` (p. 834).

For regular addresses, the string size needs to be at least 40 to include space for 8 tuples of 4 characters each plus 7 delimiting colons plus a terminating NULL.

To support UDPv4\_WAN strings, it has been adjusted to 72 to fit the following representation (plus NULL terminator):  
f=XXXXRBPU,u={FF,FF,FF,FF,FF,FF,FF,FF,FF,FF},p=255.255.255.255:65555:65555

### 4.71.3 Function Documentation

#### 4.71.3.1 NDDS\_Transport\_Address\_to\_string()

```
RTI_INT32 NDDS_Transport_Address_to_string (
    const NDDS_Transport_Address_t * self,
    char * buffer_inout,
    RTI_INT32 buffer_length_in )
```

Converts a numerical address to a printable string representation.

##### Precondition

The `buffer_inout` provided must be at least `NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE` (p. 834) characters long.

##### Parameters

<i>self</i>	<< <i>in</i> >> (p. 818) The address to be converted.
<i>buffer_inout</i>	<< <i>inout</i> >> (p. 818) Storage passed in which to return the string corresponding to the address.
<i>buffer_length_in</i>	<< <i>in</i> >> (p. 818) The length of the storage buffer. Must be >= <code>NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE</code> (p. 834)

**Returns**

1 upon success; 0 upon failure (not enough space in the provided buffer)

**4.71.3.2 NDDS\_Transport\_Address\_to\_string\_with\_protocol\_family\_format()**

```
RTIBool NDDS_Transport_Address_to_string_with_protocol_family_format (
    const NDDS_Transport_Address_t * me,
    char * buffer,
    RTI_INT32 buffer_length_in,
    RTIOsapiSocketAFKind family )
```

Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.

**Precondition**

The `buffer_inout` provided must be at least `NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE` (p. 834) characters long.

**Parameters**

<i>me</i>	<< <i>in</i> >> (p. 818) The address to be converted.
<i>buffer</i>	<< <i>inout</i> >> (p. 818) Storage passed in which to return the string corresponding to the address.
<i>buffer_length_in</i>	<< <i>in</i> >> (p. 818) The length of the storage buffer. Must be >= <b>NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE</b> (p. 834)
<i>family</i>	<< <i>in</i> >> (p. 818) The protocol family <code>RTI_OSAPI_SOCKET_AF_INET</code> or <code>RTI_OSAPI_SOCKET_AF_INET6</code>

**Returns**

RTI\_TRUE upon success; 0 upon failure (not enough space in the provided buffer)

**4.71.3.3 NDDS\_Transport\_Address\_from\_string()**

```
RTI_INT32 NDDS_Transport_Address_from_string (
    NDDS_Transport_Address_t * address_out,
    const char * address_in )
```

Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.

The address string must be in IPv4 dotted notation (X.X.X.X) or IPv6 presentation notation. The string cannot be a hostname since this function does not perform a hostname lookup.

## Parameters

<i>address_out</i>	<< <b>out</b> >> (p. 818) Numerical value of the address.
<i>address_in</i>	<< <b>in</b> >> (p. 818) String representation of an address.

## Returns

- 1 if *address\_out* contains a valid address
- 0 if it was not able to convert the string into an address.

## 4.71.3.4 NDDS\_Transport\_Address\_print()

```
void NDDS_Transport_Address_print (
    const NDDS_Transport_Address_t * address_in,
    const char * desc_in,
    RTI_INT32 indent_in )
```

Prints an address to standard out.

## Parameters

<i>address_in</i>	<< <b>in</b> >> (p. 818) Address to be printed.
<i>desc_in</i>	<< <b>in</b> >> (p. 818) A prefix to be printed before the address.
<i>indent_in</i>	<< <b>in</b> >> (p. 818) Indentation level for the printout.

## 4.71.3.5 NDDS\_Transport\_Address\_is\_ipv4()

```
RTI_INT32 NDDS_Transport_Address_is_ipv4 (
    const NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 address.

## Parameters

<i>address_in</i>	<< <b>in</b> >> (p. 818) Address to be tested.
-------------------	------------------------------------------------

## Note

May be implemented as a macro for efficiency.

**Returns**

1 if address is an IPv4 address  
0 otherwise.

**4.71.3.6 NDDS\_Transport\_Address\_is\_multicast()**

```
RTI_INT32 NDDS_Transport_Address_is_multicast (
    const NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 or IPv6 multicast address.

**Parameters**

<i>address</i> <i>_in</i>	<< <i>in</i> >> (p. 818) Address to be tested.
------------------------------	------------------------------------------------

May be implemented as a macro for efficiency.

**Returns**

1 if address is a multicast address  
0 otherwise.

**4.71.4 Variable Documentation****4.71.4.1 NDDS\_TRANSPORT\_ADDRESS\_INVALID**

```
const NDDS_Transport_Address_t NDDS_TRANSPORT_ADDRESS_INVALID
```

An invalid transport address.

**4.72 UDP Transport Plugin definitions**

UDP Transport Plugin definitions.

**Data Structures**

- struct **NDDS\_Transport\_UDP\_WAN\_CommPortsMappingInfo**  
*Type for storing UDP WAN communication ports.*

## Macros

- `#define NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT (0)`  
*Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).*
- `#define NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (16)`  
*Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).*
- `#define NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT (-1)`  
*Used to specify that os default be used to specify socket buffer size.*
- `#define NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT (131072)`  
*Default value of `send_socket_buffer_size`.*
- `#define NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT (131072)`  
*Default value of `recv_socket_buffer_size`.*
- `#define NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT (1)`  
*Default value of `multicast_ttl`.*

## Typedefs

- `typedef RTI_UINT16 NDDS_Transport_UDP_Port`  
*UDP port.*

### 4.72.1 Detailed Description

UDP Transport Plugin definitions.

### 4.72.2 Macro Definition Documentation

#### 4.72.2.1 NDDS\_TRANSPORT\_UDP\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT (0)
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).

#### 4.72.2.2 NDDS\_TRANSPORT\_UDP\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (16)
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).

This is also the maximum value that can be used when instantiating the udp transport.

16 is sufficient for RTI Connex, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

#### 4.72.2.3 NDDS\_TRANSPORT\_UDP\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT (-1)
```

Used to specify that os default be used to specify socket buffer size.

#### 4.72.2.4 NDDS\_TRANSPORT\_UDP\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT (131072)
```

Default value of send\_socket\_buffer\_size.

#### 4.72.2.5 NDDS\_TRANSPORT\_UDP\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT (131072)
```

Default value of recv\_socket\_buffer\_size.

#### 4.72.2.6 NDDS\_TRANSPORT\_UDP\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT (1)
```

Default value of multicast\_ttl.

### 4.72.3 Typedef Documentation

#### 4.72.3.1 NDDS\_Transport\_UDP\_Port

```
typedef RTI_UINT16 NDDS_Transport_UDP_Port
```

UDP port.

## 4.73 Shared Memory Transport

Built-in transport plug-in for inter-process communications using shared memory (**NDDS\_TRANSPORT\_CLASSID\_↔SHMEM** (p. 829)) .

## Data Structures

- struct **NDDS\_Transport\_Shmem\_Property\_t**

*Subclass of **NDDS\_Transport\_Property\_t** (p. 1854) allowing specification of parameters that are specific to the shared-memory transport.*

## Macros

- #define **NDDS\_TRANSPORT\_SHMEM\_ADDRESS\_BIT\_COUNT** (-96)  
*Default value of **NDDS\_Transport\_Property\_t::address\_bit\_count** (p. 1856).*
- #define **NDDS\_TRANSPORT\_SHMEM\_PROPERTIES\_BITMAP\_DEFAULT** ( **NDDS\_TRANSPORT\_↔  
PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOADED** )  
*Default value of **NDDS\_Transport\_Property\_t::properties\_bitmap** (p. 1856).*
- #define **NDDS\_TRANSPORT\_SHMEM\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT** (1024)  
*Default value of **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1857).*
- #define **NDDS\_TRANSPORT\_SHMEM\_MESSAGE\_SIZE\_MAX\_DEFAULT** (65536)  
*Default value of **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1857).*
- #define **NDDS\_TRANSPORT\_SHMEM\_RECEIVED\_MESSAGE\_COUNT\_MAX\_DEFAULT** (64)  
*Default value of **NDDS\_Transport\_Shmem\_Property\_t::received\_message\_count\_max** (p. 1863).*
- #define **NDDS\_TRANSPORT\_SHMEM\_RECEIVE\_BUFFER\_SIZE\_DEFAULT**  
*Default value of **NDDS\_Transport\_Shmem\_Property\_t::receive\_buffer\_size** (p. 1863).*
- #define **NDDS\_TRANSPORT\_SHMEM\_MAJOR\_AFTER\_BUG\_14240\_FIX** (2)  
*Major version for the transport plugin after fixing bug 14240 (RTI-28)*
- #define **NDDS\_TRANSPORT\_SHMEM\_PROPERTY\_DEFAULT**  
*Use this to initialize stack variable.*

## Functions

- **NDDS\_Transport\_Plugin \* NDDS\_Transport\_Shmem\_new** (const struct **NDDS\_Transport\_Shmem\_↔  
Property\_t** \*property\_in)  
*Create a new shmem process transport.*
- **NDDS\_Transport\_Plugin \* NDDS\_Transport\_Shmem\_create** ( **NDDS\_Transport\_Address\_t** \*default\_↔  
network\_address\_out, const struct **DDS\_PropertyQosPolicy** \*property\_in, const struct **DDS\_Product\_↔  
Version\_t** \*minimum\_compatibility\_version)  
*Create a new shmem process transport, using PropertyQosPolicy.*

### 4.73.1 Detailed Description

Built-in transport plug-in for inter-process communications using shared memory (**NDDS\_TRANSPORT\_CLASSID\_↔  
SHMEM** (p. 829)) .

This transport plugin uses System Shared Memory to send messages between processes on the same node. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_SHMEM\_ALIAS** (p. 1135).

### 4.73.2 Compatibility of Sender and Receiver Transports

Opening a receiver "port" on shared memory corresponds to creating a shared memory segment using a name based on the port number. The transport plugin's properties are embedded in the shared memory segment.

When a sender tries to send to the shared memory port, it verifies that properties of the receiver's shared memory transport are compatible with those specified in its transport plugin. If not, the sender will fail to attach to the port and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_attachShmem:failed to initialize incompatible properties
NDDS_Transport_Shmem_attachShmem:countMax 0 > -19417345 or max size -19416188 > 2147482624
```

In this scenario, the properties of the sender or receiver transport plugin instances should be adjusted, so that they are compatible.

### 4.73.3 Crashing and Restarting Programs

If a process using shared memory crashes (say because the user typed in  $\wedge C$ ), resources associated with its shared memory ports may not be properly cleaned up. Later, if another RTI Connex process needs to open the same ports (say, the crashed program is restarted), it will attempt to reuse the shared memory segment left behind by the crashed process.

The reuse is allowed iff the properties of transport plugin are compatible with those embedded in the shared memory segment (i.e., of the original creator). Otherwise, the process will fail to open the ports, and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_create_recvresource_rrEA:failed to initialize shared
memory resource Cannot recycle existing shmem: size not compatible for key 0x1234
```

In this scenario, the shared memory segments must be cleaned up using appropriate platform specific commands. For details, please refer to the [Platform Notes](#).

### 4.73.4 Shared Resource Keys

The transport uses the **shared memory segment keys**, given by the formula below.

```
0x400000 + port
```

The transport also uses signaling **shared semaphore** keys given by the formula below.

```
0x800000 + port
```

The transport also uses mutex **shared semaphore keys** given by the formula below.

```
0xb00000 + port
```

where the `port` is a function of the `domain_id` and the `participant_id`, as described in [DDS\\_WireProtocol](#)↔ [QosPolicy::participant\\_id](#) (p. 1830)

See also

[DDS\\_WireProtocolQosPolicy::participant\\_id](#) (p. 1830)

[NDDS\\_Transport\\_Support\\_set\\_builtin\\_transport\\_property\(\)](#) (p. 727)

### 4.73.5 Creating and Registering Shared Memory Transport Plugin

RTI Connexant can implicitly create this plugin and register with the **DDS\_DomainParticipant** (p. 72) if this transport is specified in **DDS\_TransportBuiltinQoSPolicy** (p. 1786).

To specify the properties of the builtin shared memory transport that is implicitly registered, you can either:

- call **NDDS\_Transport\_Support\_set\_builtin\_transport\_property** (p. 727) or
- specify the pre-defined property names in **DDS\_PropertyQoSPolicy** (p. 1645) associated with the **DDS\_DomainParticipant** (p. 72). (see **Shared Memory Transport Property Names in Property QoS Policy of Domain Participant** (p. 842)).

Builtin transport plugin properties specified in **DDS\_PropertyQoSPolicy** (p. 1645) always overwrite the ones specified through **NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727). The default value is assumed on any unspecified property. Note that all properties should be set before the transport is implicitly created and registered by RTI Connexant. See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, **NDDS\_Transport\_Shmem\_new()** (p. 845) should be called. The instance should be registered with RTI Connexant, see **NDDS\_Transport\_Support\_register\_transport** (p. 722). In some configurations, you may have to disable the builtin shared memory transport plugin instance (**DDS\_TransportBuiltinQoSPolicy** (p. 1786), **DDS\_TRANSPORTBUILTIN\_SHMEM** (p. 1134)), to avoid port conflicts with the newly created plugin instance.

### 4.73.6 Shared Memory Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS\_DomainParticipantQoS::property** (p. 1493) to configure the builtin shared memory transport plugin.

**Table 4.751 Property Strings for Shared Memory Transport**

Name	Descriptions
dds.transport.shmem.builtin.parent.address_bit_count	See <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1856)
dds.transport.shmem.builtin.parent.properties_bitmap	See <b>NDDS_Transport_Property_t::properties_bitmap</b> (p. 1856)
dds.transport.shmem.builtin.parent.gather_send_buffer_count_max	See <b>NDDS_Transport_Property_t::gather_send_buffer_count_max</b> (p. 1857)
dds.transport.shmem.builtin.parent.message_size_max	See <b>NDDS_Transport_Property_t::message_size_max</b> (p. 1857)
dds.transport.shmem.builtin.parent.allow_interfaces	See <b>NDDS_Transport_Property_t::allow_interfaces_list</b> (p. 1857) and <b>NDDS_Transport_Property_t::allow_interfaces_list_length</b> (p. 1858). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0

Name	Descriptions
dds.transport.shmem.builtin.parent.deny_interfaces	See <b>NDDS_Transport_Property_t::deny_interfaces_list</b> (p.1858) and <b>NDDS_Transport_Property_t::deny_interfaces_list_length</b> (p.1859). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.allow_multicast_interfaces	See <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list</b> (p.1859) and <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list_length</b> (p.1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.deny_multicast_interfaces	See <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list</b> (p.1860) and <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list_length</b> (p.1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.max_interface_count	See <b>NDDS_Transport_Property_t::max_interface_count</b> (p.1861)
dds.transport.shmem.builtin.parent.thread_name_prefix	See <b>NDDS_Transport_Property_t::thread_name_prefix</b> (p.1861)
dds.transport.shmem.builtin.received_message_count_max	See <b>NDDS_Transport_Shmem_Property_t::received_message_count_max</b> (p.1863)
dds.transport.shmem.builtin.receive_buffer_size	See <b>NDDS_Transport_Shmem_Property_t::receive_buffer_size</b> (p.1863)
dds.transport.shmem.builtin.enable_udp_debugging	See <b>NDDS_Transport_Shmem_Property_t::enable_udp_debugging</b> (p.1864)
dds.transport.shmem.builtin.udp_debugging_address	See <b>NDDS_Transport_Shmem_Property_t::udp_debugging_address</b> (p.1864)
dds.transport.shmem.builtin.udp_debugging_port	See <b>NDDS_Transport_Shmem_Property_t::udp_debugging_port</b> (p.1865)

## 4.73.7 Macro Definition Documentation

### 4.73.7.1 NDDS\_TRANSPORT\_SHMEM\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_SHMEM_ADDRESS_BIT_COUNT (-96)
```

Default value of **NDDS\_Transport\_Property\_t::address\_bit\_count** (p.1856).

#### 4.73.7.2 NDDS\_TRANSPORT\_SHMEM\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_PROPERTIES_BITMAP_DEFAULT ( NDDS_TRANSPORT_PROPERTY_BIT_BUFFER ↔  
ALWAYS_LOANED )
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).

#### 4.73.7.3 NDDS\_TRANSPORT\_SHMEM\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (1024)
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).

#### 4.73.7.4 NDDS\_TRANSPORT\_SHMEM\_MESSAGE\_SIZE\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT (65536)
```

Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).

#### 4.73.7.5 NDDS\_TRANSPORT\_SHMEM\_RECEIVED\_MESSAGE\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT (64)
```

Default value of `NDDS_Transport_Shmem_Property_t::received_message_count_max` (p. 1863).

#### 4.73.7.6 NDDS\_TRANSPORT\_SHMEM\_RECEIVE\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_RECEIVE_BUFFER_SIZE_DEFAULT
```

**Value:**

```
(NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT * \  
NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT / 4)
```

Default value of `NDDS_Transport_Shmem_Property_t::receive_buffer_size` (p. 1863).

**4.73.7.7 NDDS\_TRANSPORT\_SHMEM\_MAJOR\_AFTER\_BUG\_14240\_FIX**

```
#define NDDS_TRANSPORT_SHMEM_MAJOR_AFTER_BUG_14240_FIX (2)
```

Major version for the transport plugin after fixing bug 14240 (RTI-28)

**4.73.7.8 NDDS\_TRANSPORT\_SHMEM\_PROPERTY\_DEFAULT**

```
#define NDDS_TRANSPORT_SHMEM_PROPERTY_DEFAULT
```

Use this to initialize stack variable.

**4.73.8 Function Documentation****4.73.8.1 NDDS\_Transport\_Shmem\_new()**

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_new (
    const struct NDDS_Transport_Shmem_Property_t * property_in )
```

Create a new shmem process transport.

An application may create multiple transports, possibly for use in different domains.

**Parameters**

<i>property_in</i>	<< <i>in</i> >> (p. 818) Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.
--------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Returns**

handle to a Shmem inter-process Transport Plugin on success  
 NULL on failure.

**4.73.8.2 NDDS\_Transport\_Shmem\_create()**

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_create (
    NDDS_Transport_Address_t * default_network_address_out,
```

```
const struct DDS_PropertyQosPolicy * property_in,
const struct DDS_ProductVersion_t * minimum_compatibility_version )
```

Create a new shmем process transport, using PropertyQosPolicy.

An application may create multiple transports, possibly for use in different domains.

#### Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 818) Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.
<i>minimum_compatibility_version</i>	<< <b>in</b> >> (p. 818) Desired product version for the shared memory transport. If NULL, the default shared memory transport is used (no additional compatibility restrictions for the transport version). Please refer to the <code>minimum_compatibility_version</code> property for more information.

#### Returns

handle to a Shmem inter-process Transport Plugin on success  
 NULL on failure.

## 4.74 UDPv4 Transport

Transport plug-in using UDP/IPv4 (`NDDS_TRANSPORT_CLASSID_UDPv4` (p. 828)) .

### Data Structures

- struct `NDDS_Transport_UDPv4_Property_t`  
*Configurable IPv4/UDP Transport-Plugin properties.*

### Macros

- `#define NDDS_TRANSPORT_UDPv4_ADDRESS_BIT_COUNT (32)`  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1856).*
- `#define NDDS_TRANSPORT_UDPv4_WAN_ADDRESS_BIT_COUNT (128)`  
*Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1856) for UDPv4 asymmetric transport.*
- `#define NDDS_TRANSPORT_UDPv4_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT`  
*Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).*
- `#define NDDS_TRANSPORT_UDPv4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT`  
*Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).*

- **#define NDDS\_TRANSPORT\_UDPv4\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT NDDS\_TRANSPORT\_UDP\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT**  
*Used to specify that os default be used to specify socket buffer size.*
- **#define NDDS\_TRANSPORT\_UDPv4\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT NDDS\_TRANSPORT\_UDP\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size` (p. 1868) and `NDDS_Transport_UDPv4_WAN_Property_t::send_socket_buffer_size` (p. 1878).*
- **#define NDDS\_TRANSPORT\_UDPv4\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT NDDS\_TRANSPORT\_UDP\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size` (p. 1868) and `NDDS_Transport_UDPv4_WAN_Property_t::recv_socket_buffer_size` (p. 1878).*
- **#define NDDS\_TRANSPORT\_UDPv4\_PAYLOAD\_SIZE\_MAX (65507)**  
*Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).*
- **#define NDDS\_TRANSPORT\_UDPv4\_MESSAGE\_SIZE\_MAX\_DEFAULT NDDS\_TRANSPORT\_UDPv4\_PAYLOAD\_SIZE\_MAX**  
*Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).*
- **#define NDDS\_TRANSPORT\_UDPv4\_MULTICAST\_TTL\_DEFAULT NDDS\_TRANSPORT\_UDP\_MULTICAST\_TTL\_DEFAULT**  
*Default value of `NDDS_Transport_UDPv4_Property_t::multicast_ttl` (p. 1869).*
- **#define NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_NEVER**  
*Value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1872) to specify non-blocking sockets.*
- **#define NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS**  
*[default] Value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1872) to specify blocking sockets.*
- **#define NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_DEFAULT NDDS\_TRANSPORT\_UDP\_BLOCKING\_DEFAULT**  
*Default value for `NDDS_Transport_UDPv4_Property_t::send_blocking` (p. 1872) to specify blocking sockets.*
- **#define NDDS\_TRANSPORT\_UDPv4\_PROPERTY\_DEFAULT**  
*Use this to initialize a `NDDS_Transport_UDPv4_Property_t` (p. 1866) structure.*
- **#define NDDS\_Transport\_UDPv4\_string\_to\_address\_cEA NDDS\_Transport\_UDP\_string\_to\_address\_cEA**  
*Realization of `NDDS_Transport_String_To_Address_Fcn_cEA` for IP transports.*

## Functions

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_new` (const struct `NDDS_Transport_UDPv4_Property_t *property_in`)  
*Create an instance of a UDPv4 Transport Plugin.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`)  
*Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create_from_properties_with_prefix` ( `NDDS_Transport_Address_t *default_network_address_out`, const struct `DDS_PropertyQosPolicy *property_in`, const char `*propertyPrefix`)  
*Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as `NDDS_Transport_UDPv4_create` but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 4.74.1 Detailed Description

Transport plug-in using UDP/IPv4 (**NDDS\_TRANSPORT\_CLASSID\_UDPv4** (p. 828)) .

This transport plugin uses UDPv4 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_UDPv4\_ALIAS** (p. 1135).

You can configure an instance of this plugin to only use unicast or only use multicast, see **NDDS\_Transport\_UDPv4\_Property\_t::unicast\_enabled** (p. 1869) and **NDDS\_Transport\_UDPv4\_Property\_t::multicast\_enabled** (p. 1869).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the **NDDS\_Transport\_Property\_t::max\_interface\_count** (p. 1861) and the "white" and "black" lists in the base property's fields (**NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857), **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858), **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1859), **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1860)).

RTI Connexant can implicitly create this plugin and register with the **DDS\_DomainParticipant** (p. 72) if this transport is specified in **DDS\_TransportBuiltinQoSPolicy** (p. 1786).

To specify the properties of the builtin UDPv4 transport that is implicitly registered, you can either:

- call **NDDS\_Transport\_Support\_set\_builtin\_transport\_property** (p. 727) or
- specify the predefined property names in **DDS\_PropertyQoSPolicy** (p. 1645) associated with the **DDS\_DomainParticipant** (p. 72). (see **UDPv4 Transport Property Names in Property QoS Policy of Domain Participant** (p. 848)). Builtin transport plugin properties specified in **DDS\_PropertyQoSPolicy** (p. 1645) always overwrite the ones specified through **NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connexant. Any properties set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, **NDDS\_Transport\_UDPv4\_new()** (p. 854) should be called. The instance should be registered with RTI Connexant, see **NDDS\_Transport\_Support\_register\_transport** (p. 722). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (**DDS\_TransportBuiltinQoSPolicy** (p. 1786), **DDS\_TRANSPORTBUILTIN\_UDPv4** (p. 1134)), to avoid port conflicts with the newly created plugin instance.

### 4.74.2 UDPv4 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS\_DomainParticipantQoS::property** (p. 1493) to configure the builtin UDPv4 transport plugin.

Table 4.754 Property Names for UDPv4 Transport Plugin

Property Name	Description
dds.transport.UDPv4.builtin.parent.classid	See <b>NDDS_Transport_Property_t::classid</b> (p. 1855) Should be set to " <b>NDDS_TRANSPORT_CLASSID_↔UDPv6</b> (p. 828)"
dds.transport.UDPv4.builtin.parent.address_bit_count	See <b>NDDS_Transport_Property_t::address_bit_↔count</b> (p. 1856)
dds.transport.UDPv4.builtin.parent.properties_bitmap	See <b>NDDS_Transport_Property_t::properties_↔bitmap</b> (p. 1856)
dds.transport.UDPv4.builtin.parent.gather_send_↔buffer_count_max	See <b>NDDS_Transport_Property_t::gather_send_↔buffer_count_max</b> (p. 1857)
dds.transport.UDPv4.builtin.parent.message_size_max	See <b>NDDS_Transport_Property_t::message_size_↔max</b> (p. 1857)
dds.transport.UDPv4.builtin.parent.allow_interfaces	See <b>NDDS_Transport_Property_t::allow_↔interfaces_list</b> (p.1857) and <b>NDDS_Transport_↔Property_t::allow_interfaces_list_length</b> (p. 1858). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.deny_interfaces	See <b>NDDS_Transport_Property_t::deny_interfaces_↔_list</b> (p.1858) and <b>NDDS_Transport_Property_t_↔::deny_interfaces_list_length</b> (p. 1859). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.allow_multicast_↔interfaces	See <b>NDDS_Transport_Property_t::allow_multicast_↔_interfaces_list</b> (p.1859) and <b>NDDS_Transport_↔Property_t::allow_multicast_interfaces_list_length</b> (p. 1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.deny_multicast_↔interfaces	See <b>NDDS_Transport_Property_t::deny_multicast_↔_interfaces_list</b> (p.1860) and <b>NDDS_Transport_↔Property_t::deny_multicast_interfaces_list_length</b> (p.1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.max_interface_count	See <b>NDDS_Transport_Property_t::max_interface_↔count</b> (p. 1861)
dds.transport.UDPv4.builtin.parent.thread_name_prefix	See <b>NDDS_Transport_Property_t::thread_name_↔prefix</b> (p. 1861)
dds.transport.UDPv4.builtin.send_socket_buffer_size	See <b>NDDS_Transport_UDPv4_Property_t::send_↔socket_buffer_size</b> (p. 1868)
dds.transport.UDPv4.builtin.recv_socket_buffer_size	See <b>NDDS_Transport_UDPv4_Property_t::recv_↔socket_buffer_size</b> (p. 1868)
dds.transport.UDPv4.builtin.unicast_enabled	See <b>NDDS_Transport_UDPv4_Property_t::unicast_↔_enabled</b> (p. 1869)
dds.transport.UDPv4.builtin.multicast_enabled	See <b>NDDS_Transport_UDPv4_Property_t_↔::multicast_enabled</b> (p. 1869)

Property Name	Description
dds.transport.UDPv4.builtin.multicast_ttl	See <a href="#">NDDS_Transport_UDPv4_Property_t::multicast_ttl</a> (p. 1869)
dds.transport.UDPv4.builtin.multicast_loopback_↔ disabled	See <a href="#">NDDS_Transport_UDPv4_Property_t::multicast_loopback_disabled</a> (p. 1869)
dds.transport.UDPv4.builtin.ignore_loopback_interface	See <a href="#">NDDS_Transport_UDPv4_Property_t::ignore_loopback_interface</a> (p. 1870)
dds.transport.UDPv4.builtin.ignore_nonrunning_↔ interfaces	See <a href="#">NDDS_Transport_UDPv4_Property_t::ignore_nonrunning_interfaces</a> (p. 1871)
dds.transport.UDPv4.builtin.ignore_nonup_interfaces	<b>[DEPRECATED]</b> See <a href="#">NDDS_Transport_UDPv4_Property_t::ignore_nonup_interfaces</a> (p. 1870)
dds.transport.UDPv4.builtin.no_zero_copy	<b>[DEPRECATED]</b> See <a href="#">NDDS_Transport_UDPv4_Property_t::no_zero_copy</a> (p. 1871)
dds.transport.UDPv4.builtin.send_blocking	See <a href="#">NDDS_Transport_UDPv4_Property_t::send_blocking</a> (p. 1872)
dds.transport.UDPv4.builtin.transport_priority_mask	See <a href="#">NDDS_Transport_UDPv4_Property_t::transport_priority_mask</a> (p. 1872)
dds.transport.UDPv4.builtin.transport_priority_↔ mapping_low	See <a href="#">NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_low</a> (p. 1873)
dds.transport.UDPv4.builtin.transport_priority_↔ mapping_high	See <a href="#">NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high</a> (p. 1873)
dds.transport.UDPv4.builtin.send_ping	See <a href="#">NDDS_Transport_UDPv4_Property_t::send_ping</a> (p. 1873)
dds.transport.UDPv4.builtin.force_interface_poll_↔ detection	See <a href="#">NDDS_Transport_UDPv4_Property_t::force_interface_poll_detection</a> (p. 1874)
dds.transport.UDPv4.builtin.interface_poll_period	See <a href="#">NDDS_Transport_UDPv4_Property_t::interface_poll_period</a> (p. 1874)
dds.transport.UDPv4.builtin.reuse_multicast_receive_↔ resource	See <a href="#">NDDS_Transport_UDPv4_Property_t::reuse_multicast_receive_resource</a> (p. 1874)
dds.transport.UDPv4.builtin.protocol_overhead_max	See <a href="#">NDDS_Transport_UDPv4_Property_t::protocol_overhead_max</a> (p. 1874)
dds.transport.UDPv4.builtin.disable_interface_tracking	See <a href="#">NDDS_Transport_UDPv4_Property_t::disable_interface_tracking</a> (p. 1875)
dds.transport.UDPv4.builtin.public_address	See <a href="#">NDDS_Transport_UDPv4_Property_t::public_address</a> (p. 1875)
dds.transport.UDPv4.builtin.join_multicast_group_↔ timeout	See <a href="#">NDDS_Transport_UDPv4_Property_t::join_multicast_group_timeout</a> (p. 1875)
dds.transport.UDPv4.builtin.port_offset	See <a href="#">NDDS_Transport_UDPv4_Property_t::port_offset</a> (p. 1876)

#### 4.74.3 Macro Definition Documentation

#### 4.74.3.1 NDDS\_TRANSPORT\_UDPv4\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPv4_ADDRESS_BIT_COUNT (32)
```

Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1856).

#### 4.74.3.2 NDDS\_TRANSPORT\_UDPv4\_WAN\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPv4_WAN_ADDRESS_BIT_COUNT (128)
```

Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1856) for UDPv4 asymmetric transport.

#### 4.74.3.3 NDDS\_TRANSPORT\_UDPv4\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_↔  
DEFAULT
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).

#### 4.74.3.4 NDDS\_TRANSPORT\_UDPv4\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_↔  
SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for RTI Connex, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

#### 4.74.3.5 NDDS\_TRANSPORT\_UDPv4\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_SOCKET_BUFFER_SIZE_OS_DEFAULT NDDS_TRANSPORT_UDP_SOCKET_BUFFER_↔  
SIZE_OS_DEFAULT
```

Used to specify that os default be used to specify socket buffer size.

#### 4.74.3.6 NDDS\_TRANSPORT\_UDPv4\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_SEND_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_SEND_SOCKET_↔  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size` (p. 1868) and `NDDS_Transport_↔  
_UDPv4_WAN_Property_t::send_socket_buffer_size` (p. 1878).

#### 4.74.3.7 NDDS\_TRANSPORT\_UDPv4\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_RECV_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_RECV_SOCKET_↔  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size` (p. 1868) and `NDDS_Transport_↔  
_UDPv4_WAN_Property_t::recv_socket_buffer_size` (p. 1878).

#### 4.74.3.8 NDDS\_TRANSPORT\_UDPv4\_PAYLOAD\_SIZE\_MAX

```
#define NDDS_TRANSPORT_UDPv4_PAYLOAD_SIZE_MAX (65507)
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).

#### 4.74.3.9 NDDS\_TRANSPORT\_UDPv4\_MESSAGE\_SIZE\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_MESSAGE_SIZE_MAX_DEFAULT NDDS_TRANSPORT_UDPv4_PAYLOAD_SIZE_MAX
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).

#### 4.74.3.10 NDDS\_TRANSPORT\_UDPv4\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_MULTICAST_TTL_DEFAULT NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of `NDDS_Transport_UDPv4_Property_t::multicast_ttl` (p. 1869).

**4.74.3.11 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_NEVER**

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_NEVER
```

Value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1872) to specify non-blocking sockets.

**4.74.3.12 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS**

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_ALWAYS
```

**[default]** Value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1872) to specify blocking sockets.

**4.74.3.13 NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_DEFAULT**

```
#define NDDS_TRANSPORT_UDPv4_BLOCKING_DEFAULT NDDS_TRANSPORT_UDP_BLOCKING_DEFAULT
```

Default value for **NDDS\_Transport\_UDPv4\_Property\_t::send\_blocking** (p. 1872) to specify blocking sockets.

**4.74.3.14 NDDS\_TRANSPORT\_UDPv4\_PROPERTY\_DEFAULT**

```
#define NDDS_TRANSPORT_UDPv4_PROPERTY_DEFAULT
```

Use this to initialize a **NDDS\_Transport\_UDPv4\_Property\_t** (p. 1866) structure.

**4.74.3.15 NDDS\_Transport\_UDPv4\_string\_to\_address\_cEA**

```
#define NDDS_Transport_UDPv4_string_to_address_cEA NDDS_Transport_UDP_string_to_address_cEA
```

Realization of **NDDS\_Transport\_String\_To\_Address\_Fcn\_cEA** for IP transports.

Converts a host name string to a IPv4 address.

**Parameters**

<i>self</i>	NOT USED. May be NULL.
<i>address_out</i>	<< <b>out</b> >> (p. 818) The corresponding numerical value in IPv4 format.
<i>address_in</i>	<< <b>in</b> >> (p. 818) The name of the IPv4 address. It can be a dot notation name or a host name. If
Generated by Doxygen	
	NULL, then the IP address of the localhost will be returned.

See also

`NDDS_Transport_String_To_Address_Fcn_cEA` for complete documentation.

#### 4.74.4 Function Documentation

##### 4.74.4.1 `NDDS_Transport_UDPv4_new()`

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_new (
    const struct NDDS_Transport_UDPv4_Property_t * property_in )
```

Create an instance of a UDPv4 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the `NDDS_Transport_UDP_↔_Property_t::parent`:

- `NDDS_Transport_Property_t::allow_interfaces_list` (p. 1857),
- `NDDS_Transport_Property_t::deny_interfaces_list` (p. 1858),
- `NDDS_Transport_Property_t::allow_multicast_interfaces_list` (p. 1859),
- `NDDS_Transport_Property_t::deny_multicast_interfaces_list` (p. 1860)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

##### Parameters

<code>property_↔_in</code>	<< <i>in</i> >> (p. 818) Desired behavior of this transport. May be NULL for default property.
----------------------------	------------------------------------------------------------------------------------------------

## Returns

A UDPv4 Transport Plugin instance on success; or NULL on failure.

## 4.74.4.2 NDDS\_Transport\_UDPv4\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS\_Transport\_UDPv4\_Property\_t::parent** (p. 1868):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1859),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1860)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 818) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 1493).

## Returns

A UDPv4 Transport Plugin instance on success; or NULL on failure.

#### 4.74.4.3 NDDS\_Transport\_UDPv4\_create\_from\_properties\_with\_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as `NDDS_Transport_UDPv4_create` but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

##### Parameters

<code>default_network_address_out</code>	<< <i>out</i> >> (p. 818) Network address to be used when registering the transport.
<code>property_in</code>	<< <i>in</i> >> (p. 818) Desired behavior of this transport as defined in the <code>DDS_DomainParticipantQos::property</code> (p. 1493).
<code>propertyPrefix</code>	a prefix for the properties. Expected UDP properties have the form <code>prefix.property_name</code>

## 4.75 Real-Time WAN Transport

Transport plug-in using UDP/IPv4 for WAN communications. (`NDDS_TRANSPORT_CLASSID_UDPv4_WAN` (p. 830))

### Data Structures

- struct `NDDS_Transport_UDPv4_WAN_Property_t`  
*Configurable IPv4/UDP WAN Transport-Plugin properties.*

### Macros

*Use this to initialize a `NDDS_Transport_UDPv4_WAN_Property_t` (p. 1877) structure.*

### Functions

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_new` (const struct `NDDS_Transport_UDPv4_WAN_Property_t` \*property\_in)  
*Create an instance of a UDPv4\_WAN Transport Plugin.*
- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create` ( `NDDS_Transport_Address_t` \*default\_network\_address\_out, const struct `DDS_PropertyQosPolicy` \*property\_in)

*Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy.*

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQosPolicy *property_in, const char *propertyPrefix)`

*Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv4\_WAN\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 4.75.1 Detailed Description

Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS\_TRANSPORT\_CLASSID\_UDPv4\_WAN** (p. 830))

RTI Real-Time WAN Transport (RWT) is a transport that enables secure, scalable, and high-performance communication over wide area networks (WANs), including public networks.

It extends RTI Connex capabilities to WAN environments. Real-Time WAN Transport uses UDPv4 as the underlying IP transport-layer protocol to better anticipate and adapt to the challenges of diverse network conditions, device mobility, and the dynamic nature of WAN system architectures.

Real-Time WAN Transport, in combination with RTI Cloud Discovery Service (CDS), provides a complete, seamless solution out of the box for WAN connectivity.

**This transport is not installed as part of an RTI Connex package; it must be downloaded and installed separately.**

Real-Time WAN Transport replaces the transport capabilities of the Secure WAN Transport optionally available with previous RTI Connex releases (prior to 7.0.0), and provides the following capabilities:

- NAT (Network Address Translator) traversal: Ability to communicate between DomainParticipants running in a Local Area Network (LAN) that is behind a NAT-enabled router, and DomainParticipants on the outside of the NAT across a WAN. This functionality is provided in combination with Cloud Discovery Service.
- IP mobility: Support for network transitions and changes in IP addresses in any of the DomainParticipants participating in the communication.
- Security: Secure communications between DomainParticipants using Security Plugins.

Real-Time WAN Transport does not require third-party components, such as STUN servers, or protocols like SIP to handle session establishment. Using a single API and security model, you can leverage the extensive capabilities of the RTI Connex framework and ecosystem, including tools and infrastructure services, even for real-time connectivity from edge to cloud and back in highly distributed systems that communicate across wide area networks.

This transport plugin uses UDPv4 sockets to send and receive messages. It supports unicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_UDPv4\_WAN\_ALIAS** (p. 1135).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node by specifying the **NDDS\_Transport\_Property\_t::max\_interface\_count** (p. 1861) and the "white" and "black" lists in the base property's fields (**NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857), **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858)).

RTI Connex can implicitly create this plugin and register with the **DDS\_DomainParticipant** (p. 72) if this transport is specified in **DDS\_TransportBuiltinQosPolicy** (p. 1786).

To specify the properties of the Real-Time WAN Transport that is implicitly registered, you can either:

- call `NDDS_Transport_Support_set_builtin_transport_property` (p. 727) or
- specify the predefined property names in `DDS_PropertyQoSPolicy` (p. 1645) associated with the `DDS_DomainParticipant` (p. 72). (see [Real-Time WAN Transport Property](#) (p. 858)). Builtin transport plugin properties specified in `DDS_PropertyQoSPolicy` (p. 1645) always overwrite the ones specified through `NDDS_Transport_Support_set_builtin_transport_property()` (p. 727). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connex. Any properties set after the builtin transport is registered will be ignored. See [Built-in Transport Plugins](#) (p. 728) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, `NDDS_Transport_UDPv4_WAN_new()` (p. 860) should be called. The instance should be registered with RTI Connex, see `NDDS_Transport_Support_register_transport` (p. 722). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (`DDS_TransportBuiltinQoSPolicy` (p. 1786), `DDS_TRANSPORTBUILTIN_UDPv4_WAN` (p. 1134)), to avoid port conflicts with the newly created plugin instance.

**For additional details on how to configure and use the Real-Time WAN Transport, see the [Core Libraries User's Manual](#).**

## 4.75.2 Real-Time WAN Transport Property

Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the `DDS_DomainParticipantQoS::property` (p. 1493) to configure the Real-Time WAN Transport plugin.

**Table 4.759 Property Names for Real-Time WAN Transport Plugin**

Property Name	Description
<code>dds.transport.UDPv4_WAN.builtin.parent.classid</code>	See <code>NDDS_Transport_Property_t::classid</code> (p. 1855) Should be set to " <code>NDDS_TRANSPORT_CLASSID_UDPv4_WAN</code> " (p. 830)"
<code>dds.transport.UDPv4_WAN.builtin.parent.address_bit_count</code>	See <code>NDDS_Transport_Property_t::address_bit_count</code> (p. 1856)
<code>dds.transport.UDPv4_WAN.builtin.parent.properties_bitmap</code>	See <code>NDDS_Transport_Property_t::properties_bitmap</code> (p. 1856)
<code>dds.transport.UDPv4_WAN.builtin.parent.gather_send_buffer_count_max</code>	See <code>NDDS_Transport_Property_t::gather_send_buffer_count_max</code> (p. 1857)
<code>dds.transport.UDPv4_WAN.builtin.parent.message_size_max</code>	See <code>NDDS_Transport_Property_t::message_size_max</code> (p. 1857)
<code>dds.transport.UDPv4_WAN.builtin.parent.allow_interfaces</code>	See <code>NDDS_Transport_Property_t::allow_interfaces_list</code> (p. 1857) and <code>NDDS_Transport_Property_t::allow_interfaces_list_length</code> (p. 1858). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, <code>127.0.0.1,eth0</code>
<code>dds.transport.UDPv4_WAN.builtin.parent.deny_interfaces</code>	See <code>NDDS_Transport_Property_t::deny_interfaces_list</code> (p. 1858) and <code>NDDS_Transport_Property_t::deny_interfaces_list_length</code> (p. 1859). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: <code>127.0.0.1,eth0</code>
	Generated by Doxygen

### 4.75.3 Macro Definition Documentation

#### 4.75.3.1 NDDS\_TRANSPORT\_UDPv4\_WAN\_PROPERTY\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv4_WAN_PROPERTY_DEFAULT
```

Use this to initialize a `NDDS_Transport_UDPv4_WAN_Property_t` (p. 1877) structure.

### 4.75.4 Function Documentation

#### 4.75.4.1 NDDS\_Transport\_UDPv4\_WAN\_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_new (
    const struct NDDS_Transport_UDPv4_WAN_Property_t * property_in )
```

Create an instance of a UDPv4\_WAN Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the `NDDS_Transport_UDP_Property_t`↔  
::parent:

- `NDDS_Transport_Property_t::allow_interfaces_list` (p. 1857),
- `NDDS_Transport_Property_t::deny_interfaces_list` (p. 1858),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>property</i> <sub>↔</sub> <i>_in</i>	<< <i>in</i> >> (p. 818) Desired behavior of this transport. May be NULL for default property.
--------------------------------------------	------------------------------------------------------------------------------------------------

## Returns

A UDPv4\_WAN Transport Plugin instance on success; or NULL on failure.

## 4.75.4.2 NDDS\_Transport\_UDPv4\_WAN\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the **NDDS\_Transport\_UDPv4\_WAN\_↔Property\_t::parent** (p. 1878):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>default_network_address_out</i>	<< <i>out</i> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <i>in</i> >> (p. 818) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 1493).

**Returns**

A UDPv4\_WAN Transport Plugin instance on success; or NULL on failure.

**4.75.4.3 NDDS\_Transport\_UDPv4\_WAN\_create\_from\_properties\_with\_prefix()**

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv4\_WAN Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv4\_WAN\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

**Parameters**

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 818) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 1493).
<i>propertyPrefix</i>	Prefix for the properties. Expected UDP properties have the form prefix.property_name

**4.76 UDPv6 Transport**

- `NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create_from_properties_with_prefix ( NDDS_Transport_Address_t *default_network_address_out, const struct DDS_PropertyQosPolicy *property_in, const char *propertyPrefix)`  
*Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy. Same as `NDDS_Transport_UDPv6_create` but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.*

### 4.76.1 Detailed Description

Transport plug-in using UDP/IPv6 (`NDDS_TRANSPORT_CLASSID_UDPv6` (p. 829)) .

This transport plugin uses UDPv6 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and

"UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS\_TRANSPORTBUILTIN\_UDPv6\_ALIAS** (p. 1135).

You can configure an instance of this plugin to only use unicast or only use multicast, see **NDDS\_Transport\_UDPv6\_Property\_t::unicast\_enabled** (p. 1889) and **NDDS\_Transport\_UDPv6\_Property\_t::multicast\_enabled** (p. 1889).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the **NDDS\_Transport\_Property\_t::max\_interface\_count** (p. 1861) and the "white" and "black" lists in the base property's fields (**NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857), **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858), **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1859), **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1860)).

RTI Connex can implicitly create this plugin and register it with the **DDS\_DomainParticipant** (p. 72) if this transport is specified in the **DDS\_TransportBuiltinQoSPolicy** (p. 1786).

To specify the properties of the builtin UDPv6 transport that is implicitly registered, you can either:

- call **NDDS\_Transport\_Support\_set\_builtin\_transport\_property** (p. 727) or
- specify the predefined property names in **DDS\_PropertyQoSPolicy** (p. 1645) associated with the **DDS\_DomainParticipant** (p. 72). (see **UDPv6 Transport Property Names in Property QoS Policy of Domain Participant** (p. 864)). Builtin transport plugin properties specified in **DDS\_PropertyQoSPolicy** (p. 1645) always overwrite the ones specified through **NDDS\_Transport\_Support\_set\_builtin\_transport\_property()** (p. 727). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connex. Any properties that are set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 728) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, **NDDS\_Transport\_UDPv6\_new()** (p. 869) should be called. The instance should be registered with RTI Connex, see **NDDS\_Transport\_Support\_register\_transport** (p. 722). In some configurations, you may have to disable the builtin UDPv6 transport plugin instance (**DDS\_TransportBuiltinQoSPolicy** (p. 1786), **DDS\_TRANSPORTBUILTIN\_UDPv6** (p. 1134)), to avoid port conflicts with the newly created plugin instance.

#### 4.76.2 UDPv6 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in **DDS\_PropertyQoSPolicy** (p. 1645) of a **DDS\_DomainParticipant** (p. 72) to configure the builtin UDPv6 transport plugin.

**Table 4.763 Property Names for UDPv6 Transport Plugin**

Property Name	Description
dds.transport.UDPv6.builtin.parent.address_bit_count	See <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1856)
dds.transport.UDPv6.builtin.parent.properties_bitmap	See <b>NDDS_Transport_Property_t::properties_bitmap</b> (p. 1856)
dds.transport.UDPv6.builtin.parent.gather_send_buffer_count_max	See <b>NDDS_Transport_Property_t::gather_send_buffer_count_max</b> (p. 1857)

Property Name	Description
dds.transport.UDPv6.builtin.parent.message_size_max	See <b>NDDS_Transport_Property_t::message_size_max</b> (p. 1857)
dds.transport.UDPv6.builtin.parent.allow_interfaces	See <b>NDDS_Transport_Property_t::allow_interfaces_list</b> (p.1857) and <b>NDDS_Transport_Property_t::allow_interfaces_list_length</b> (p. 1858). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.deny_interfaces	See <b>NDDS_Transport_Property_t::deny_interfaces_list</b> (p.1858) and <b>NDDS_Transport_Property_t::deny_interfaces_list_length</b> (p. 1859). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.allow_multicast_interfaces	See <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list</b> (p.1859) and <b>NDDS_Transport_Property_t::allow_multicast_interfaces_list_length</b> (p. 1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.deny_multicast_interfaces	See <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list</b> (p.1860) and <b>NDDS_Transport_Property_t::deny_multicast_interfaces_list_length</b> (p.1860). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.max_interface_count	See <b>NDDS_Transport_Property_t::max_interface_count</b> (p. 1861)
dds.transport.UDPv6.builtin.parent.thread_name_prefix	See <b>NDDS_Transport_Property_t::thread_name_prefix</b> (p. 1861)
dds.transport.UDPv6.builtin.send_socket_buffer_size	See <b>NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size</b> (p. 1888)
dds.transport.UDPv6.builtin.recv_socket_buffer_size	See <b>NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size</b> (p. 1888)
dds.transport.UDPv6.builtin.unicast_enabled	See <b>NDDS_Transport_UDPv6_Property_t::unicast_enabled</b> (p. 1889)
dds.transport.UDPv6.builtin.multicast_enabled	See <b>NDDS_Transport_UDPv6_Property_t::multicast_enabled</b> (p. 1889)
dds.transport.UDPv6.builtin.multicast_ttl	See <b>NDDS_Transport_UDPv6_Property_t::multicast_ttl</b> (p. 1889)
dds.transport.UDPv6.builtin.multicast_loopback_disabled	See <b>NDDS_Transport_UDPv6_Property_t::multicast_loopback_disabled</b> (p. 1889)
dds.transport.UDPv6.builtin.ignore_loopback_interface	See <b>NDDS_Transport_UDPv6_Property_t::ignore_loopback_interface</b> (p. 1890)
dds.transport.UDPv6.builtin.ignore_nonrunning_interfaces	See <b>NDDS_Transport_UDPv6_Property_t::ignore_nonrunning_interfaces</b> (p. 1890)
dds.transport.UDPv6.builtin.no_zero_copy	<b>[DEPRECATED]</b> See <b>NDDS_Transport_UDPv6_Property_t::no_zero_copy</b> (p. 1891)

Property Name	Description
dds.transport.UDPv6.builtin.send_blocking	See <code>NDDS_Transport_UDPv6_Property_t::send_blocking</code> (p. 1891)
dds.transport.UDPv6.builtin.enable_v4mapped	See <code>NDDS_Transport_UDPv6_Property_t::enable_v4mapped</code> (p. 1891)
dds.transport.UDPv6.builtin.transport_priority_mask	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mask</code> (p. 1892)
dds.transport.UDPv6.builtin.transport_priority_mapping_low	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mapping_low</code> (p. 1892)
dds.transport.UDPv6.builtin.transport_priority_mapping_high	See <code>NDDS_Transport_UDPv6_Property_t::transport_priority_mapping_high</code> (p. 1892)
dds.transport.UDPv6.builtin.send_ping	See <code>NDDS_Transport_UDPv6_Property_t::send_ping</code> (p. 1893) <code>interface_poll_detection_kind</code>
dds.transport.UDPv6.builtin.force_interface_poll_detection	See <code>NDDS_Transport_UDPv6_Property_t::force_interface_poll_detection</code> (p. 1893)
dds.transport.UDPv6.builtin.interface_poll_period	See <code>NDDS_Transport_UDPv6_Property_t::interface_poll_period</code> (p. 1893)
dds.transport.UDPv6.builtin.reuse_multicast_receive_resource	See <code>NDDS_Transport_UDPv6_Property_t::reuse_multicast_receive_resource</code> (p. 1893)
dds.transport.UDPv6.builtin.protocol_overhead_max	See <code>NDDS_Transport_UDPv6_Property_t::protocol_overhead_max</code> (p. 1894)
dds.transport.UDPv6.builtin.disable_interface_tracking	See <code>NDDS_Transport_UDPv6_Property_t::disable_interface_tracking</code> (p. 1894)
dds.transport.UDPv6.builtin.public_address	See <code>NDDS_Transport_UDPv6_Property_t::public_address</code> (p. 1895)
dds.transport.UDPv6.builtin.join_multicast_group_timeout	See <code>NDDS_Transport_UDPv6_Property_t::join_multicast_group_timeout</code> (p. 1894)
dds.transport.UDPv6.builtin.port_offset	See <code>NDDS_Transport_UDPv6_Property_t::port_offset</code> (p. 1895)

### 4.76.3 Macro Definition Documentation

#### 4.76.3.1 NDDS\_TRANSPORT\_UDPv6\_ADDRESS\_BIT\_COUNT

```
#define NDDS_TRANSPORT_UDPv6_ADDRESS_BIT_COUNT (128)
```

Default value of `NDDS_Transport_Property_t::address_bit_count` (p. 1856).

#### 4.76.3.2 NDDS\_TRANSPORT\_UDPv6\_PROPERTIES\_BITMAP\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_↔  
DEFAULT
```

Default value of `NDDS_Transport_Property_t::properties_bitmap` (p. 1856).

#### 4.76.3.3 NDDS\_TRANSPORT\_UDPv6\_GATHER\_SEND\_BUFFER\_COUNT\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_↔  
SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of `NDDS_Transport_Property_t::gather_send_buffer_count_max` (p. 1857).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for NDDS, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

#### 4.76.3.4 NDDS\_TRANSPORT\_UDPv6\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_SOCKET_BUFFER_SIZE_OS_DEFAULT NDDS_TRANSPORT_UDP_SOCKET_BUFFER_↔  
SIZE_OS_DEFAULT
```

Used to specify that os default be used to specify socket buffer size.

#### 4.76.3.5 NDDS\_TRANSPORT\_UDPv6\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_SEND_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_SEND_SOCKET_↔  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size` (p. 1888).

#### 4.76.3.6 NDDS\_TRANSPORT\_UDPv6\_RECV\_SOCKET\_BUFFER\_SIZE\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_RECV_SOCKET_BUFFER_SIZE_DEFAULT NDDS_TRANSPORT_UDP_RECV_SOCKET_↔  
BUFFER_SIZE_DEFAULT
```

Default value for `NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size` (p. 1888).

#### 4.76.3.7 NDDS\_TRANSPORT\_UDPv6\_PAYLOAD\_SIZE\_MAX

```
#define NDDS_TRANSPORT_UDPv6_PAYLOAD_SIZE_MAX (65487)
```

Maximum value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).

#### 4.76.3.8 NDDS\_TRANSPORT\_UDPv6\_MESSAGE\_SIZE\_MAX\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_MESSAGE_SIZE_MAX_DEFAULT NDDS_TRANSPORT_UDPv6_PAYLOAD_SIZE_MAX
```

Default value of `NDDS_Transport_Property_t::message_size_max` (p. 1857).

#### 4.76.3.9 NDDS\_TRANSPORT\_UDPv6\_MULTICAST\_TTL\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_MULTICAST_TTL_DEFAULT NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of `NDDS_Transport_UDPv6_Property_t::multicast_ttl` (p. 1889).

#### 4.76.3.10 NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_NEVER

```
#define NDDS_TRANSPORT_UDPv6_BLOCKING_NEVER
```

Value for `NDDS_Transport_UDPv6_Property_t::send_blocking` (p. 1891) to specify non-blocking sockets.

#### 4.76.3.11 NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_ALWAYS

```
#define NDDS_TRANSPORT_UDPv6_BLOCKING_ALWAYS
```

**[default]** Value for `NDDS_Transport_UDPv6_Property_t::send_blocking` (p. 1891) to specify blocking sockets.

#### 4.76.3.12 NDDS\_TRANSPORT\_UDPv6\_PROPERTY\_DEFAULT

```
#define NDDS_TRANSPORT_UDPv6_PROPERTY_DEFAULT
```

Use this to initialize a `NDDS_Transport_UDPv6_Property_t` (p. 1887) structure.

#### 4.76.3.13 NDDS\_Transport\_UDPv6\_string\_to\_address\_cEA

```
#define NDDS_Transport_UDPv6_string_to_address_cEA NDDS_Transport_UDP_string_to_address_cEA
```

Realization of `NDDS_Transport_String_To_Address_Fcn_cEA` for IP transports.

Converts a host name string to a IPv6 address.

## Parameters

<i>self</i>	NOT USED. May be NULL.
<i>address_out</i>	<< <i>out</i> >> (p. 818) The corresponding numerical value in IPv6 format.
<i>address_in</i>	<< <i>in</i> >> (p. 818) The name of the IPv6 address. It can be a dot notation name or a host name. If NULL, then the IP address of the localhost will be returned.

## See also

NDDS\_Transport\_String\_To\_Address\_Fcn\_cEA for complete documentation.

#### 4.76.4 Function Documentation

##### 4.76.4.1 NDDS\_Transport\_UDPv6\_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_new (
    const struct NDDS_Transport_UDPv6_Property_t * property_in )
```

Create an instance of a UDPv6 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS\_Transport\_UDPv6\_Property\_t::parent** (p. 1888):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1859),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1860)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.\*.\*
- 192.168.1.\*
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>property</i> <i>_in</i>	<< <i>in</i> >> (p. 818) Desired behavior of this transport. May be NULL for default property.
-------------------------------	------------------------------------------------------------------------------------------------

## Returns

A UDPv6 Transport Plugin instance on success; or NULL on failure.

## 4.76.4.2 NDDS\_Transport\_UDPv6\_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connex. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connex domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS\_Transport\_UDPv6**  
**\_Property\_t::parent** (p. 1888):

- **NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1857),
- **NDDS\_Transport\_Property\_t::deny\_interfaces\_list** (p. 1858),
- **NDDS\_Transport\_Property\_t::allow\_multicast\_interfaces\_list** (p. 1859),
- **NDDS\_Transport\_Property\_t::deny\_multicast\_interfaces\_list** (p. 1860)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- `*:*:*:*:*:*`
- `FE80:aBc::202:*:*`
- `*:aBC::2::2*`
- etc. Strings not in the correct format will be ignored.

## Parameters

<i>default_network_address_out</i>	<< <i>out</i> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <i>in</i> >> (p. 818) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 1493).

**Returns**

A UDPv6 Transport Plugin instance on success; or NULL on failure.

**4.76.4.3 NDDS\_Transport\_UDPv6\_create\_from\_properties\_with\_prefix()**

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create_from_properties_with_prefix (
    NDDS_Transport_Address_t * default_network_address_out,
    const struct DDS_PropertyQosPolicy * property_in,
    const char * propertyPrefix )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy. Same as NDDS\_Transport\_UDPv6\_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

**Parameters**

<i>default_network_address_out</i>	<< <b>out</b> >> (p. 818) Network address to be used when registering the transport.
<i>property_in</i>	<< <b>in</b> >> (p. 818) Desired behavior of this transport as defined in the <b>DDS_DomainParticipantQos::property</b> (p. 1493).
<i>propertyPrefix</i>	a prefix for the properties. Expected UDP properties have the form prefix.property_name

**4.77 AsyncWaitSet**

<<**extension**>> (p. 817) A specialization of **DDS\_WaitSet** (p. 1170) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDS\_Condition** (p. 1169).

**Data Structures**

- struct **DDS\_AsyncWaitSetProperty\_t**  
*Specifies the **DDS\_AsyncWaitSet** (p. 874) behavior.*
- struct **DDS\_AsyncWaitSetListener**  
<<**interface**>> (p. 818) Listener for receiving event notifications related to the thread pool of the **DDS\_AsyncWaitSet** (p. 874).

**Macros**

- #define **DDS\_AsyncWaitSetListener\_INITIALIZER**  
*Initializer for new **DDS\_AsyncWaitSetListener** (p. 1326).*

## Typedefs

- typedef struct DDS\_AsyncWaitSetImpl **DDS\_AsyncWaitSet**  
*A class for dispatching **DDS\_Condition** (p. 1169) objects using separate threads of execution. You can see this class as an extension of a **DDS\_WaitSet** (p. 1170) that allows asynchronously waiting for the attached **DDS\_Condition** (p. 1169) objects to trigger and provide a notification by calling **DDS\_Condition\_dispatch** (p. 1174).*
- typedef struct DDS\_AsyncWaitSetCompletionTokenImpl **DDS\_AsyncWaitSetCompletionToken**  
*<<interface>> (p. 818) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDS\_AsyncWaitSet** (p. 874) behavior.*
- typedef void(\* **DDS\_AsyncWaitSetListener\_OnThreadSpawnedCallback**) (void \*listener\_data, **DDS\_↔UnsignedLongLong** thread\_id)  
*Prototype of a **DDS\_AsyncWaitSetListener::on\_thread\_spawned** (p. 1327) function.*
- typedef void(\* **DDS\_AsyncWaitSetListener\_OnThreadDeletedCallback**) (void \*listener\_data, **DDS\_↔UnsignedLongLong** thread\_id)  
*Prototype of a **DDS\_AsyncWaitSetListener::on\_thread\_deleted** (p. 1327) function.*
- typedef void(\* **DDS\_AsyncWaitSetListener\_OnWaitTimeoutCallback**) (void \*listener\_data, **DDS\_↔UnsignedLongLong** thread\_id)  
*Prototype of a **DDS\_AsyncWaitSetListener::on\_wait\_timeout** (p. 1327) function.*
- typedef struct DDS\_DataReaderStatusConditionHandlerImpl **DDS\_DataReaderStatusConditionHandler**  
*<<interface>> (p. 818) Realization of a **DDS\_ConditionHandler** (p. 1350) that handles the status of a **DDS\_Data↔Reader** (p. 608).*

## Functions

- **DDS\_ReturnCode\_t DDS\_AsyncWaitSetCompletionToken\_wait** ( **DDS\_AsyncWaitSetCompletionToken** \*self, const struct **DDS\_Duration\_t** \*max\_wait)  
*Waits for the request associated to an operation made on the **DDS\_AsyncWaitSet** (p. 874) to complete.*
- **DDS\_ReturnCode\_t DDS\_AsyncWaitSet\_get\_property** ( **DDS\_AsyncWaitSet** \*self, struct **DDS\_Async↔WaitSetProperty\_t** \*property)  
*Retrieves the **DDS\_AsyncWaitSetProperty\_t** (p. 1327) configuration of the associated **DDS\_AsyncWaitSet** (p. 874).*
