If NULL (the default value), then RTI Monitoring Library 2.0 uses **DDS\_PROFILE\_GENERIC\_MONITORING2** (p. 497).

**[default]** NULL

### 9.108.2.3 thread

```
struct DDS_ThreadSettings_t DDS_MonitoringEventDistributionSettings::thread
```

The settings of the event metric thread.

The event metric thread periodically publishes the event metrics pushed into RTI Monitoring Library 2.0 event metric queues after they change their values.

The thread runs at the period configured using **DDS\_MonitoringEventDistributionSettings::publication\_period** (p. 953).

**[default]** DDS\_THREAD\_SETTINGS\_DEFAULT

### 9.108.2.4 publication\_period

```
struct DDS_Duration_t DDS_MonitoringEventDistributionSettings::publication_period
```

Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.

With a period of 0 seconds, changes to event metrics will be published immediately after they are pushed into RTI Monitoring Library 2.0.

**[default]** 1 second

## 9.109 DDS\_MonitoringLoggingDistributionSettings Struct Reference

Configures the distribution of log messages.

### Public Attributes

- **DDS\_UnsignedLong concurrency\_level**  
*Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.*
- **DDS\_UnsignedLong max\_historical\_logs**  
*The number of log messages that RTI Monitoring Library 2.0 will keep as history.*
- char \* **datawriter\_qos\_profile\_name**  
*The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1321) that distributes log messages.*
- struct **DDS\_ThreadSettings\_t thread**  
*The settings of the logging thread.*
- struct **DDS\_Duration\_t publication\_period**  
*Period at which the logging thread publishes log messages.*

### 9.109.1 Detailed Description

Configures the distribution of log messages.

Log messages are pushed into RTI Monitoring Library 2.0 and published by the logging thread.

The logging thread only publishes a log message with a Syslog level smaller than or equal to the forwarding level of the **NDDS\_Config\_LogFacility** (p. 528) associated with the log message.

The default value of the forwarding level for all facilities is **NDDS\_CONFIG\_SYSLOG\_VERBOSITY\_WARNING** (p. 529). This value can be changed with the **DDS\_MonitoringTelemetryData::logs** (p. 964) QoS Policy or by sending a command to RTI Monitoring Library 2.0.

In this release, commands can only be sent from the RTI Observability Dashboards.

RTI Monitoring Library 2.0 can be configured to keep a history of log messages for later distribution when a log snapshot is requested by a RTI Observability Collector Service.

The log messages maintained in the history are the last 'n' messages published by the logging thread (where 'n' is the value of **DDS\_MonitoringLoggingDistributionSettings::max\_historical\_logs** (p. 955)).

## 9.109.2 Member Data Documentation

### 9.109.2.1 concurrency\_level

`DDS_UnsignedLong DDS_MonitoringLoggingDistributionSettings::concurrency_level`

Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.

With a `concurrency_level` of one, all the log messages pushed to RTI Monitoring Library 2.0 will be stored into a single queue protected by a single mutex.

With a `concurrency_level` of 'n', RTI Monitoring Library 2.0 will create 'n' queues for log messages, each queue protected by its own mutex.

The log messages generated by a single thread will always be pushed to the same queue. The log messages for two threads associated with different log queues can be pushed in parallel. This is why a higher `concurrency_level` provides more concurrency.

The log messages added to the log queues are processed and published by a single thread configured using `DDS_MonitoringLoggingDistributionSettings::thread` (p. 955).

**[default]** 5

**[range]** [1, 100]

### 9.109.2.2 max\_historical\_logs

`DDS_UnsignedLong DDS_MonitoringLoggingDistributionSettings::max_historical_logs`

The number of log messages that RTI Monitoring Library 2.0 will keep as history.

RTI Monitoring Library 2.0 will keep as history the last `max_historical_logs` published messages.

A value of 0 means that RTI Monitoring Library 2.0 should not keep any history.

**[default]** 128

### 9.109.2.3 datawriter\_qos\_profile\_name

`char* DDS_MonitoringLoggingDistributionSettings::datawriter_qos_profile_name`

The fully qualified name of the profile used to configure the `DDSDataWriter` (p. 1321) that distributes log messages.

The `DDSDataWriter` (p. 1321) Topic is `RTI_MONITORING_LOGGING_TOPIC_NAME` (p. 522).

If NULL (the default value), then RTI Monitoring Library 2.0 uses `DDS_PROFILE_GENERIC_MONITORING2` (p. 497).

**[default]** NULL

### 9.109.2.4 thread

```
struct DDS_ThreadSettings_t DDS_MonitoringLoggingDistributionSettings::thread
```

The settings of the logging thread.

The logging thread periodically publishes the log messages pushed into RTI Monitoring Library 2.0 log message queues after they are generated.

The thread runs at the period configured using **DDS\_MonitoringLoggingDistributionSettings::publication\_period** (p. 956).

**[default]** DDS\_THREAD\_SETTINGS\_DEFAULT

### 9.109.2.5 publication\_period

```
struct DDS_Duration_t DDS_MonitoringLoggingDistributionSettings::publication_period
```

Period at which the logging thread publishes log messages.

With a period of 0 seconds, log messages will be published immediately after they are pushed into RTI Monitoring Library 2.0.

**[default]** 1 second

## 9.110 DDS\_MonitoringLoggingForwardingSettings Struct Reference

Configures the forwarding levels of log messages for the different **NDDS\_Config\_LogFacility** (p. 528).

### Public Attributes

- **NDDS\_Config\_SyslogVerbosity middleware\_forwarding\_level**  
*Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_MIDDLEWARE** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.*
- **NDDS\_Config\_SyslogVerbosity security\_event\_forwarding\_level**  
*Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_SECURITY\_EVENT** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.*
- **NDDS\_Config\_SyslogVerbosity service\_forwarding\_level**  
*Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_SERVICE** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.*
- **NDDS\_Config\_SyslogVerbosity user\_forwarding\_level**  
*Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_USER** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.*

## 9.110.1 Detailed Description

Configures the forwarding levels of log messages for the different **NDDS\_Config\_LogFacility** (p. 528).

## 9.110.2 Member Data Documentation

### 9.110.2.1 middleware\_forwarding\_level

**NDDS\_Config\_SyslogVerbosity** DDS\_MonitoringLoggingForwardingSettings::middleware\_forwarding\_level

Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_MIDDLEWARE** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

[default] **NDDS\_CONFIG\_SYSLOG\_VERBOSITY\_WARNING** (p. 529)

Keep in mind that setting this property beyond WARNING if your application's verbosity is greater than **NDDS\_CONFIG\_LOG\_VERBOSITY\_WARNING** (p. 525), may affect performance due to the large amount of messages produced.

### 9.110.2.2 security\_event\_forwarding\_level

**NDDS\_Config\_SyslogVerbosity** DDS\_MonitoringLoggingForwardingSettings::security\_event\_forwarding\_level

Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_SECURITY\_EVENT** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

[default] **NDDS\_CONFIG\_SYSLOG\_VERBOSITY\_WARNING** (p. 529)

Keep in mind that setting this property beyond WARNING if your application's verbosity is greater than **NDDS\_CONFIG\_LOG\_VERBOSITY\_WARNING** (p. 525), may affect performance due to the large amount of messages produced.

### 9.110.2.3 service\_forwarding\_level

**NDDS\_Config\_SyslogVerbosity** DDS\_MonitoringLoggingForwardingSettings::service\_forwarding\_level

Log messages with **NDDS\_CONFIG\_LOG\_FACILITY\_SERVICE** (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

[default] **NDDS\_CONFIG\_SYSLOG\_VERBOSITY\_WARNING** (p. 529)

Keep in mind that setting this property beyond WARNING if your application's verbosity is greater than **NDDS\_CONFIG\_LOG\_VERBOSITY\_WARNING** (p. 525), may affect performance due to the large amount of messages produced.

### 9.110.2.4 user\_forwarding\_level

`NDDS_Config_SyslogVerbosity` `DDS_MonitoringLoggingForwardingSettings::user_forwarding_level`

Log messages with `NDDS_CONFIG_LOG_FACILITY_USER` (p. 528) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

[default] `NDDS_CONFIG_SYSLOG_VERBOSITY_WARNING` (p. 529)

Keep in mind that setting this property beyond `WARNING` if your application's verbosity is greater than `NDDS_CONFIG_LOG_VERBOSITY_WARNING` (p. 525), may affect performance due to the large amount of messages produced.

## 9.111 DDS\_MonitoringMetricSelection Struct Reference

This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.

### Public Attributes

- char \* **resource\_selection**

*An expression pattern that selects a subset of resources by matching the pattern to the resource names. `DDS_MonitoringMetricSelection::enabled_metrics_selection` (p. 959) and `DDS_MonitoringMetricSelection::disabled_metrics_selection` (p. 959) are applied to this subset of resources.*

- struct `DDS_StringSeq` **enabled\_metrics\_selection**

*A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by `DDS_MonitoringMetricSelection::resource_selection` (p. 958).*

- struct `DDS_StringSeq` **disabled\_metrics\_selection**

*A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by `DDS_MonitoringMetricSelection::resource_selection` (p. 958).*

### 9.111.1 Detailed Description

This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.

### 9.111.2 Member Data Documentation

### 9.111.2.1 resource\_selection

```
char* DDS_MonitoringMetricSelection::resource_selection
```

An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS\_MonitoringMetricSelection::enabled\_metrics\_selection** (p. 959) and **DDS\_MonitoringMetricSelection::disabled\_metrics\_selection** (p. 959) are applied to this subset of resources.

Examples of resource expression patterns:

- /applications/myApp/domain\_participants/myParticipant
- /applications/\*/domain\_participants\*/subscribers/\*
- /applications/myApp/domain\_participants/GUID(1234.5678.4321.8765)
- //myEntity

The first expression refers to a DomainParticipant named "myParticipant" that belongs to an application named "myApp". The second expression applies to all the Subscribers in the system (resource name wildcards follow the POSIX fnmatch syntax). The third expression refers to a DomainParticipant with a specific resource GUID in the "myApp" application. The last expression uses the XPath "/" operator. It matches observable resources named "myEntity" no matter where they are located in the resource hierarchy.

See the Telemetry Data / Resources chapter of the RTI Connex Observability Framework documentation for further information on the observable resource names and expression patterns.

### 9.111.2.2 enabled\_metrics\_selection

```
struct DDS_StringSeq DDS_MonitoringMetricSelection::enabled_metrics_selection
```

A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS\_MonitoringMetricSelection::resource\_selection** (p. 958).

This sequence is evaluated first, followed by **DDS\_MonitoringMetricSelection::disabled\_metrics\_selection** (p. 959). Therefore, if the same metric is enabled and disabled at the same time, the disablement will be the final result.

The patterns in the sequence are evaluated in order.

Examples of valid patterns:

- dds\_data\_writer\_qos\_durability\_writer\_depth
- dds\_data\_reader\_qos\_reliability\_\*
- dds\_application\_\*

The first pattern refers to a specific DataWriter metric (**DDS\_DurabilityQosPolicy::writer\_depth** (p. 770)). The second pattern refers to all the DataReader **DDS\_ReliabilityQosPolicy** (p. 1041) metrics. The last pattern selects all the available application metrics.

See the Telemetry Data / Metrics chapter of the RTI Connex Observability Framework documentation for further information on the metric names and metric patterns.

### 9.111.2.3 disabled\_metrics\_selection

```
struct DDS_StringSeq DDS_MonitoringMetricSelection::disabled_metrics_selection
```

A sequence of POSIX fnmatch patterns that match the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS\_MonitoringMetricSelection::resource\_selection** (p. 958).

This sequence is evaluated after **DDS\_MonitoringMetricSelection::enabled\_metrics\_selection** (p. 959). Therefore, if the same metric is enabled and disabled at the same time, the disablement will be the final result.

The patterns in the sequence are evaluated in order.

Examples of valid patterns:

- dds\_data\_writer\_qos\_durability\_writer\_depth
- dds\_data\_reader\_qos\_reliability\_\*
- dds\_application\_\*

The first pattern refers to a specific DataWriter metric (**DDS\_DurabilityQosPolicy::writer\_depth** (p. 770)). The second pattern refers to all the DataReader **DDS\_ReliabilityQosPolicy** (p. 1041) metrics. The last pattern selects all the available application metrics.

See the Telemetry Data / Metrics chapter of the RTI Connex Observability Framework documentation for further information on the metric names and metric patterns.

## 9.112 DDS\_MonitoringMetricSelectionSeq Struct Reference

Declares IDL sequence < **DDS\_MonitoringMetricSelection** (p. 958) >

### 9.112.1 Detailed Description

Declares IDL sequence < **DDS\_MonitoringMetricSelection** (p. 958) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_MonitoringMetricSelection** (p. 958)

## 9.113 DDS\_MonitoringPeriodicDistributionSettings Struct Reference

Configures the distribution of periodic metrics.

## Public Attributes

- char \* **datawriter\_qos\_profile\_name**  
The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1321) that distributes periodic metrics.
- struct **DDS\_ThreadSettings\_t** **thread**  
The settings of the periodic metric thread.
- struct **DDS\_Duration\_t** **polling\_period**  
Period at which the periodic metric thread polls and publishes the periodic metrics.

### 9.113.1 Detailed Description

Configures the distribution of periodic metrics.

Periodic metrics change often, and they are polled and published periodically by a thread created by RTI Monitoring Library 2.0.

RTI Monitoring Library 2.0 obtains periodic metrics by polling the current value of periodic statuses such as **DDS\_↔DataWriterProtocolStatus** (p. 678).

The periodic metrics that will be distributed for an observable resource can be configured with **DDS\_Monitoring\_↔TelemetryData::metrics** (p. 964).

### 9.113.2 Member Data Documentation

#### 9.113.2.1 datawriter\_qos\_profile\_name

```
char* DDS_MonitoringPeriodicDistributionSettings::datawriter_qos_profile_name
```

The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1321) that distributes periodic metrics.

The **DDSDataWriter** (p. 1321) Topic is **RTI\_MONITORING\_PERIODIC\_TOPIC\_NAME** (p. 521).

If NULL (the default value), then RTI Monitoring Library 2.0 uses **DDS\_PROFILE\_GENERIC\_MONITORING2** (p. 497).

**[default]** NULL

#### 9.113.2.2 thread

```
struct DDS_ThreadSettings_t DDS_MonitoringPeriodicDistributionSettings::thread
```

The settings of the periodic metric thread.

The periodic metric thread periodically polls and publishes periodic event metrics.

The thread runs at the period configured using **DDS\_MonitoringPeriodicDistributionSettings::polling\_period** (p. 961).

**[default]** DDS\_THREAD\_SETTINGS\_DEFAULT

### 9.113.2.3 polling\_period

```
struct DDS_Duration_t DDS_MonitoringPeriodicDistributionSettings::polling_period
```

Period at which the periodic metric thread polls and publishes the periodic metrics.

**[default]** 5 seconds

**[range]** > 0 seconds

## 9.114 DDS\_MonitoringQosPolicy Struct Reference

Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connexx telemetry data.

### Public Attributes

- **DDS\_Boolean enable**  
*Enables the collection and distribution of telemetry data for an RTI Connexx application using RTI Monitoring Library 2.0.*
- char \* **application\_name**  
*The name of the resource that represents this RTI Connexx application.*
- struct **DDS\_MonitoringDistributionSettings distribution\_settings**  
*Configures the distribution of telemetry data.*
- struct **DDS\_MonitoringTelemetryData telemetry\_data**  
*Configures the telemetry data that will be distributed.*

### 9.114.1 Detailed Description

Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connexx telemetry data.

### 9.114.2 Member Data Documentation

#### 9.114.2.1 enable

```
DDS_Boolean DDS_MonitoringQosPolicy::enable
```

Enables the collection and distribution of telemetry data for an RTI Connexx application using RTI Monitoring Library 2.0.

**Note:** Enabling and disabling RTI Monitoring Library 2.0 while DDS Entities are being created or deleted is not a safe operation. The entities created while RTI Monitoring Library 2.0 is being enabled may not be monitored. In that case, children entities from that entity (invisible to the library) will not be monitored either.

**[default]** `DDS_BOOLEAN_FALSE` (p. 317)

### 9.114.2.2 application\_name

```
char* DDS_MonitoringQosPolicy::application_name
```

The name of the resource that represents this RTI Connex application.

When this member is set to a value other than NULL , the resource identifier representing this application will be:

```
/applications/<application_name>
```

This is the resource identifier that will be used to send commands to this application from the RTI Observability Dashboards.

The application\_name should be unique across the RTI Connex system; however, RTI Monitoring Library 2.0 does not currently enforce uniqueness.

When this member is set to NULL , RTI Monitoring Library 2.0 will automatically assign a resource identifier with this format:

```
/applications/<host_name:process_id:uuid>
```

**[default]** NULL

### 9.114.2.3 distribution\_settings

```
struct DDS_MonitoringDistributionSettings DDS_MonitoringQosPolicy::distribution_settings
```

Configures the distribution of telemetry data.

### 9.114.2.4 telemetry\_data

```
struct DDS_MonitoringTelemetryData DDS_MonitoringQosPolicy::telemetry_data
```

Configures the telemetry data that will be distributed.

## 9.115 DDS\_MonitoringTelemetryData Struct Reference

Configures the telemetry data that will be distributed.

### Public Attributes

- struct **DDS\_MonitoringMetricSelectionSeq** **metrics**  
*Sequence of **DDS\_MonitoringMetricSelection** (p. 958) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.*
- struct **DDS\_MonitoringLoggingForwardingSettings** **logs**  
*DDS\_MonitoringLoggingForwardingSettings (p. 956) containing the **NDDS\_Config\_SyslogVerbosity** (p. 528) levels that will be forwarded for the different **NDDS\_Config\_LogFacility** (p. 528).*

### 9.115.1 Detailed Description

Configures the telemetry data that will be distributed.

### 9.115.2 Member Data Documentation

#### 9.115.2.1 metrics

```
struct DDS_MonitoringMetricSelectionSeq DDS_MonitoringTelemetryData::metrics
```

Sequence of **DDS\_MonitoringMetricSelection** (p. 958) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.

The different **DDS\_MonitoringMetricSelection** (p. 958) in the sequence are evaluated in order.

**[default]** An empty sequence, meaning that no metrics will be collected and distributed for any observable resource.

See also

**DDS\_MonitoringEventDistributionSettings** (p. 952) and **DDS\_MonitoringPeriodicDistributionSettings** (p. 960) for further information on how RTI Monitoring Library 2.0 distributes **metrics** (p. 964).

#### 9.115.2.2 logs

```
struct DDS_MonitoringLoggingForwardingSettings DDS_MonitoringTelemetryData::logs
```

**DDS\_MonitoringLoggingForwardingSettings** (p. 956) containing the **NDDS\_Config\_SyslogVerbosity** (p. 528) levels that will be forwarded for the different **NDDS\_Config\_LogFacility** (p. 528).

See also

**DDS\_MonitoringLoggingDistributionSettings** (p. 954) for further information on how RTI Monitoring Library 2.0 distributes log messages.

## 9.116 DDS\_MultiChannelQosPolicy Struct Reference

Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

## Public Attributes

- struct **DDS\_ChannelSettingsSeq channels**  
*A sequence of **DDS\_ChannelSettings\_t** (p. 610) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.*
- char \* **filter\_name**  
*Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.*

### 9.116.1 Detailed Description

Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

This QoS policy is used to partition the data published by a **DDSDataWriter** (p. 1321) across multiple channels. A *channel* is defined by a filter expression and a sequence of multicast locators.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.116.2 Usage

By using this QoS, a **DDSDataWriter** (p. 1321) can be configured to send data to different multicast groups based on the content of the data. Using syntax similar to those used in Content-Based Filters, you can associate different multicast addresses with filter expressions that operate on the values of the fields within the data. When your application's code calls **FooDataWriter::write** (p. 1683), data is sent to any multicast address for which the data passes the filter.

Multi-channel DataWriters can be used to trade off network bandwidth with the unnecessary processing of unwanted data for situations where there are multiple DataReaders that are interested in different subsets of data that come from the same data stream (Topic). For example, in Financial applications, the data stream may be quotes for different stocks at an exchange. Applications usually only want to receive data (quotes) for only a subset of the stocks being traded. In tracking applications, a data stream may carry information on hundreds or thousands of objects being tracked, but again, applications may only be interested in a subset.

The problem is that the most efficient way to deliver data to multiple applications is to use multicast, so that a data value is only sent once on the network for any number of subscribers to the data. However, using multicast, an application will receive *all* of the data sent and not just the data in which it is interested, thus extra CPU time is wasted to throw away unwanted data. With this QoS, you can analyze the data-usage patterns of your applications and optimize network vs. CPU usage by partitioning the data into multiple multicast streams. While network bandwidth is still being conserved by sending data only once using multicast, most applications will only need to listen to a subset of the multicast addresses and receive a reduced amount of unwanted data.

Your system can gain more of the benefits of using multiple multicast groups if your network uses Layer 2 Ethernet switches. Layer 2 switches can be configured to only route multicast packets to those ports that have added membership to specific multicast groups. Using those switches will ensure that only the multicast packets used by applications on a node are routed to the node; all others are filtered-out by the switch.

### 9.116.3 Member Data Documentation

#### 9.116.3.1 channels

```
struct DDS_ChannelSettingsSeq DDS_MultiChannelQosPolicy::channels
```

A sequence of **DDS\_ChannelSettings\_t** (p.610) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.

A sequence length of zero indicates the **DDS\_MultiChannelQosPolicy** (p.964) is not in use.

The sequence length cannot be greater than **DDS\_DomainParticipantResourceLimitsQosPolicy::channel\_seq\_↔ max\_length** (p.762).

**[default]** Empty sequence.

#### 9.116.3.2 filter\_name

```
char* DDS_MultiChannelQosPolicy::filter_name
```

Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

The following builtin filters are supported:

- **DDS\_SQLFILTER\_NAME** (p.59)
- **DDS\_STRINGMATCHFILTER\_NAME** (p.59)

#### Warning

The value for this field can be one of the constants above or a string allocated with **DDS\_String\_dup()** (p.553) to specify your own filter. You should not assign a string literal. When you assign a new value with **DDS\_String\_↔ dup()** (p.553), first check if the current value is one of the constants above. If it is, simply replace it; if it's not, you have to release the current string and assign the new one. Here is an example of such an approach:

```
struct DDS_DataWriterQos writer_qos;
char *filter_name = NULL;
DDS_DataWriterQos_initialize(&writer_qos);
...
DDS_Publisher_get_default_datawriter_qos(publisher, &writer_qos);
...
filter_name = writer_qos.multi_channel.filter_name;
if (filter_name == DDS_SQLFILTER_NAME
    || filter_name == DDS_STRINGMATCH_FILTER_NAME) {
    // Since the value was never on the heap, this won't leak memory
```

```

    filter_name = NULL;
} else {
    // This means the value is present on the heap
    DDS_String_free(filter_name);
}
// New value using DDS_String_dup() or one of the predefined constants
filter_name = DDS_String_dup("My custom filter name");
...
DDS_DataWriterQos_finalize(&writer_qos);

```

The strings allocated with **DDS\_String\_dup()** (p. 553) are released when `writer_qos` is finalized.

More information about string handling can be found under **String Conventions** (p. 552).

**[default] DDS\_STRINGMATCHFILTER\_NAME** (p. 59)

## 9.117 DDS\_Octets Struct Reference

Built-in type consisting of a variable-length array of opaque bytes.

### Public Member Functions

- **DDS\_Octets ()**  
*Constructor.*
- **DDS\_Octets (int size)**  
*Constructor that specifies the size of the allocated octets array.*
- **~DDS\_Octets ()**  
*Destructor.*

### Public Attributes

- int **length**  
*Number of octets to serialize.*
- unsigned char \* **value**  
*DDS\_Octets (p. 967) array value.*

#### 9.117.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes.

## 9.117.2 Constructor & Destructor Documentation

### 9.117.2.1 DDS\_Octets() [1/2]

```
DDS_Octets::DDS_Octets ( ) [inline]
```

Constructor.

The default constructor initializes the newly created object with NULL value, and zero length.

### 9.117.2.2 DDS\_Octets() [2/2]

```
DDS_Octets::DDS_Octets (
    int size ) [inline]
```

Constructor that specifies the size of the allocated octets array.

After this method is called, length is set to zero.

If a memory allocation failure occurs, and the **DDS\_Octets** (p. 967) structure is allocated but the array inside of it cannot be, the array will be NULL.

#### Parameters

<i>size</i>	<< <i>in</i> >> (p. 238) Size of the allocated octets array
-------------	---

References **DDS\_OctetBuffer\_alloc()**, and **value**.

### 9.117.2.3 ~DDS\_Octets()

```
DDS_Octets::~~DDS_Octets ( ) [inline]
```

Destructor.

References **DDS\_OctetBuffer\_free()**, and **value**.

## 9.117.3 Member Data Documentation

### 9.117.3.1 length

```
int DDS_Octets::length
```

Number of octets to serialize.

### 9.117.3.2 value

```
unsigned char* DDS_Octets::value
```

**DDS\_Octets** (p. 967) array value.

Referenced by **DDS\_Octets()**, and **~DDS\_Octets()**.

## 9.118 DDS\_OctetSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Octet** (p. 317) >

### 9.118.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Octet** (p. 317) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

**DDS\_Octet** (p. 317)

**FooSeq** (p. 1697)

## 9.119 DDS\_OctetsSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Octets** (p. 967) > .

### 9.119.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Octets** (p. 967) > .

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Octets** (p. 967)

## 9.120 DDS\_OfferedDeadlineMissedStatus Struct Reference

**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343)

### Public Attributes

- **DDS\_Long total\_count**  
*Total cumulative count of the number of times the **DDSDataWriter** (p. 1321) failed to write within its offered deadline.*
- **DDS\_Long total\_count\_change**  
*The incremental changes in total\_count since the last time the listener was called or the status was read.*
- **DDS\_InstanceHandle\_t last\_instance\_handle**  
*Handle to the last instance in the **DDSDataWriter** (p. 1321) for which an offered deadline was missed.*

### 9.120.1 Detailed Description

**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343)

Entity:

**DDSDataWriter** (p. 1321)

Listener:

**DDSDataWriterListener** (p. 1344)

The deadline that the **DDSDataWriter** (p. 1321) has committed through its **DDS\_DeadlineQosPolicy** (p. 707) was not respected for a specific instance.

### 9.120.2 Member Data Documentation

### 9.120.2.1 total\_count

`DDS_Long DDS_OfferedDeadlineMissedStatus::total_count`

Total cumulative count of the number of times the **DDSDataWriter** (p. 1321) failed to write within its offered deadline.

Missed deadlines accumulate; that is, each deadline period the `total_count` will be incremented by one.

### 9.120.2.2 total\_count\_change

`DDS_Long DDS_OfferedDeadlineMissedStatus::total_count_change`

The incremental changes in `total_count` since the last time the listener was called or the status was read.

### 9.120.2.3 last\_instance\_handle

`DDS_InstanceHandle_t DDS_OfferedDeadlineMissedStatus::last_instance_handle`

Handle to the last instance in the **DDSDataWriter** (p. 1321) for which an offered deadline was missed.

## 9.121 DDS\_OfferedIncompatibleQoSStatus Struct Reference

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344)

### Public Attributes

- **DDS\_Long total\_count**

*Total cumulative number of times the concerned **DDSDataWriter** (p. 1321) discovered a **DDSDataReader** (p. 1288) for the same **DDSTopic** (p. 1617), common partition with a requested QoS that is incompatible with that offered by the **DDSDataWriter** (p. 1321).*

- **DDS\_Long total\_count\_change**

*The incremental changes in `total_count` since the last time the listener was called or the status was read.*

- **DDS\_QoSPolicyId\_t last\_policy\_id**

*The **DDS\_QoSPolicyId\_t** (p. 360) of one of the policies that was found to be incompatible the last time an incompatibility was detected.*

- struct **DDS\_QoSPolicyCountSeq policies**

*A list containing for each policy the total number of times that the concerned **DDSDataWriter** (p. 1321) discovered a **DDSDataReader** (p. 1288) for the same **DDSTopic** (p. 1617) and common partition with a requested QoS that is incompatible with that offered by the **DDSDataWriter** (p. 1321).*

### 9.121.1 Detailed Description

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344)

Entity:

**DDSDataWriter** (p. 1321)

Listener:

**DDSDataWriterListener** (p. 1344)

The qos policy value was incompatible with what was requested.

### 9.121.2 Member Data Documentation

#### 9.121.2.1 total\_count

**DDS\_Long** `DDS_OfferedIncompatibleQosStatus::total_count`

Total cumulative number of times the concerned **DDSDataWriter** (p. 1321) discovered a **DDSDataReader** (p. 1288) for the same **DDSTopic** (p. 1617), common partition with a requested QoS that is incompatible with that offered by the **DDSDataWriter** (p. 1321).

#### 9.121.2.2 total\_count\_change

**DDS\_Long** `DDS_OfferedIncompatibleQosStatus::total_count_change`

The incremental changes in total\_count since the last time the listener was called or the status was read.

#### 9.121.2.3 last\_policy\_id

**DDS\_QosPolicyId\_t** `DDS_OfferedIncompatibleQosStatus::last_policy_id`

The **DDS\_QosPolicyId\_t** (p. 360) of one of the policies that was found to be incompatible the last time an incompatibility was detected.

### 9.121.2.4 policies

```
struct DDS_QosPolicyCountSeq DDS_OfferedIncompatibleQosStatus::policies
```

A list containing for each policy the total number of times that the concerned **DDSDataWriter** (p. 1321) discovered a **DDSDataReader** (p. 1288) for the same **DDSTopic** (p. 1617) and common partition with a requested QoS that is incompatible with that offered by the **DDSDataWriter** (p. 1321).

## 9.122 DDS\_OwnershipQosPolicy Struct Reference

Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

### Public Attributes

- **DDS\_OwnershipQosPolicyKind kind**

*The kind of ownership.*

### 9.122.1 Detailed Description

Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1321) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_↔  
STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES  
**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

See also

**OWNERSHIP\_STRENGTH** (p. 415)

## 9.122.2 Usage

Along with the **OWNERSHIP\_STRENGTH** (p. 415), this QoS policy specifies if **DDSDataReader** (p. 1288) entities can receive updates to the same instance (identified by its key) from multiple **DDSDataWriter** (p. 1321) entities at the same time.

There are two kinds of ownership, selected by the setting of the `kind`: SHARED and EXCLUSIVE.

### 9.122.2.1 SHARED ownership

**DDS\_SHARED\_OWNERSHIP\_QOS** (p. 415) indicates that RTI Connexx does not enforce unique ownership for each instance. In this case, multiple writers can update the same data type instance. The subscriber to the **DDSTopic** (p. 1617) will be able to access modifications from all **DDSDataWriter** (p. 1321) objects, subject to the settings of other QoS that may filter particular samples (e.g. the **TIME\_BASED\_FILTER** (p. 440) or **HISTORY** (p. 405) policy). In any case, there is no "filtering" of modifications made based on the identity of the **DDSDataWriter** (p. 1321) that causes the modification.

### 9.122.2.2 EXCLUSIVE ownership

**DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415) indicates that each instance of a data type can only be modified by one **DDSDataWriter** (p. 1321). In other words, at any point in time, a single **DDSDataWriter** (p. 1321) owns each instance and is the only one whose modifications will be visible to the **DDSDataReader** (p. 1288) objects. The owner is determined by selecting the **DDSDataWriter** (p. 1321) with the highest value of the **DDS\_OwnershipStrengthQos**↔**Policy::value** (p. 978) that is currently alive, as defined by the **LIVELINESS** (p. 409) policy, and has not violated its **DEADLINE** (p. 385) contract with regards to the data instance.

Ownership can therefore change as a result of:

- a **DDSDataWriter** (p. 1321) in the system with a higher value of the strength that modifies the instance,
- a change in the strength value of the **DDSDataWriter** (p. 1321) that owns the instance, and
- a change in the liveliness of the **DDSDataWriter** (p. 1321) that owns the instance.
- a deadline with regards to the instance that is missed by the **DDSDataWriter** (p. 1321) that owns the instance.

The behavior of the system is as if the determination was made independently by each **DDSDataReader** (p. 1288). Each **DDSDataReader** (p. 1288) may detect the change of ownership at a different time. It is not a requirement that at a particular point in time all the **DDSDataReader** (p. 1288) objects for that **DDSTopic** (p. 1617) have a consistent picture of who owns each instance.

It is also not a requirement that the **DDSDataWriter** (p. 1321) objects are aware of whether they own a particular instance. There is no error or notification given to a **DDSDataWriter** (p. 1321) that modifies an instance it does not currently own.

The requirements are chosen to (a) preserve the decoupling of publishers and subscriber, and (b) allow the policy to be implemented efficiently.

It is possible that multiple **DDSDataWriter** (p. 1321) objects with the same strength modify the same instance. If this occurs RTI Connex will pick one of the **DDSDataWriter** (p. 1321) objects as the owner. It is not specified how the owner is selected. However, the algorithm used to select the owner guarantees that all **DDSDataReader** (p. 1288) objects will make the same choice of the particular **DDSDataWriter** (p. 1321) that is the owner. It also guarantees that the owner remains the same until there is a change in strength, liveliness, the owner misses a deadline on the instance, or a new **DDSDataWriter** (p. 1321) with higher same strength, or a new **DDSDataWriter** (p. 1321) with same strength that should be deemed the owner according to the policy of the Service, modifies the instance.

Exclusive ownership is on an instance-by-instance basis. That is, a subscriber can receive values written by a lower strength **DDSDataWriter** (p. 1321) as long as they affect instances whose values have not been set by the higher-strength **DDSDataWriter** (p. 1321).

### 9.122.3 Compatibility

The value of the **DDS\_OwnershipQosPolicyKind** (p. 414) offered must exactly match the one requested or else they are considered incompatible.

### 9.122.4 Relationship between registration, liveliness and ownership

The need for registering/unregistering instances stems from two use cases:

- Ownership resolution on redundant systems
- Detection of loss in topological connectivity

These two use cases also illustrate the semantic differences between the **FooDataWriter::unregister\_instance** (p. 1680) and **FooDataWriter::dispose** (p. 1689).

#### 9.122.4.1 Ownership Resolution on Redundant Systems

It is expected that users may use DDS to set up redundant systems where multiple **DDSDataWriter** (p. 1321) entities are "capable" of writing the same instance. In this situation, the **DDSDataWriter** (p. 1321) entities are configured such that:

- Either both are writing the instance "constantly"
- Or else they use some mechanism to classify each other as "primary" and "secondary", such that the primary is the only one writing, and the secondary monitors the primary and only writes when it detects that the primary "writer" is no longer writing.

Both cases above use the **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415) and arbitrate themselves by means of the **DDS\_OwnershipStrengthQosPolicy** (p. 978). Regardless of the scheme, the desired behavior from the **DDSDataReader** (p. 1288) point of view is that **DDSDataReader** (p. 1288) normally receives data from the primary unless the "primary" writer stops writing, in which case the **DDSDataReader** (p. 1288) starts to receive data from the secondary **DDSDataWriter** (p. 1321).

This approach requires some mechanism to detect that a **DDSDataWriter** (p. 1321) (the primary) is no longer "writing" the data as it should. There are several reasons why this may happen and all must be detected (but not necessarily distinguished):

crash The writing process is no longer running (e.g. the whole application has crashed)

connectivity loss Connectivity to the writing application has been lost (e.g. network disconnection)

application fault The application logic that was writing the data is faulty and has stopped calling **FooDataWriter::write** (p. 1683).

Arbitrating from a **DDSDataWriter** (p. 1321) to one of a higher strength is simple and the decision can be taken autonomously by the **DDSDataReader** (p. 1288). Switching ownership from a higher strength **DDSDataWriter** (p. 1321) to one of a lower strength **DDSDataWriter** (p. 1321) requires that the **DDSDataReader** (p. 1288) can make a determination that the stronger **DDSDataWriter** (p. 1321) is "no longer writing the instance".

**9.122.4.1.1 Case where the data is periodically updated** This determination is reasonably simple when the data is being written periodically at some rate. The **DDSDataWriter** (p. 1321) simply states its offered **DDS\_DeadlineQosPolicy** (p. 707) (maximum interval between updates) and the **DDSDataReader** (p. 1288) automatically monitors that the **DDSDataWriter** (p. 1321) indeed updates the instance at least once per **DDS\_DeadlineQosPolicy::period** (p. 708). If the deadline is missed, the **DDSDataReader** (p. 1288) considers the **DDSDataWriter** (p. 1321) "not alive" and automatically gives ownership to the next highest-strength **DDSDataWriter** (p. 1321) that *is* alive.

**9.122.4.1.2 Case where data is not periodically updated** The case where the **DDSDataWriter** (p. 1321) is not writing data periodically is also a very important use-case. Since the instance is not being updated at any fixed period, the "deadline" mechanism cannot be used to determine ownership. The liveliness solves this situation. Ownership is maintained while the **DDSDataWriter** (p. 1321) is "alive" and for the **DDSDataWriter** (p. 1321) to be alive it must fulfill its **DDS\_LivelinessQosPolicy** (p. 936) contract. The different means to renew liveliness (automatic, manual) combined by the implied renewal each time data is written handle the three conditions above [crash], [connectivity loss], and [application fault]. Note that to handle [application fault], LIVELINESS must be **DDS\_MANUAL\_BY\_TOPIC LIVELINESS\_QOS** (p. 410). The **DDSDataWriter** (p. 1321) can retain ownership by periodically writing data or else calling `assert_liveliness` if it has no data to write. Alternatively if only protection against [crash] or [connectivity loss] is desired, it is sufficient that some task on the **DDSDataWriter** (p. 1321) process periodically writes data or calls **DDSDomainParticipant::assert\_liveliness** (p. 1399). However, this scenario requires that the **DDSDataReader** (p. 1288) knows what instances are being "written" by the **DDSDataWriter** (p. 1321). That is the only way that the **DDSDataReader** (p. 1288) deduces the ownership of specific instances from the fact that the **DDSDataWriter** (p. 1321) is still "alive". Hence the need for the **DDSDataWriter** (p. 1321) to "register" and "unregister" instances. Note that while "registration" can be done lazily the first time the **DDSDataWriter** (p. 1321) writes the instance, "unregistration," in general, cannot. Similar reasoning will lead to the fact that unregistration will also require a message to be sent to the **DDSDataReader** (p. 1288).

### 9.122.4.2 Detection of Loss in Topological Connectivity

There are applications that are designed in such a way that their correct operation requires some minimal topological connectivity, that is, the writer needs to have a minimum number of readers or alternatively the reader must have a minimum number of writers.

A common scenario is that the application does not start doing its logic until it knows that some specific writers have the minimum configured readers (e.g. the alarm monitor is up).

A *more* common scenario is that the application logic will wait until some writers appear that can provide some needed source of information (e.g. the raw sensor data that must be processed).

Furthermore, once the application is running it is a requirement that this minimal connectivity (from the source of the data) is monitored and the application informed if it is ever lost. For the case where data is being written periodically, the **DDS\_DeadlineQosPolicy** (p. 707) and the `on_deadline_missed` listener provides the notification. The case where data is not periodically updated requires the use of the **DDS\_LivelinessQosPolicy** (p. 936) in combination with `register_instance/unregister_instance` to detect whether the "connectivity" has been lost, and the notification is provided by means of **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

In terms of the required mechanisms, the scenario is very similar to the case of maintaining ownership. In both cases, the reader needs to know whether a writer is still "managing the current value of an instance" even though it is not continually writing it and this knowledge requires the writer to keep its liveliness plus some means to know which instances the writer is currently "managing" (i.e. the registered instances).

### 9.122.4.3 Semantic Difference between `unregister_instance` and `dispose`

**FooDataWriter::dispose** (p. 1689) is semantically different from **FooDataWriter::unregister\_instance** (p. 1680). **FooDataWriter::dispose** (p. 1689) indicates that the data instance no longer exists (e.g. a track that has disappeared, a simulation entity that has been destroyed, a record entry that has been deleted, etc.) whereas **FooDataWriter::unregister\_instance** (p. 1680) indicates that the writer is no longer taking responsibility for updating the value of the instance.

Deleting a **DDSDataWriter** (p. 1321) is equivalent to unregistering all the instances it was writing, but is *not* the same as "disposing" all the instances.

For a **DDSTopic** (p. 1617) with **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415), if the current owner of an instance *disposes* it, the readers accessing the instance will see the `instance_state` as being "DISPOSED" and not see the values being written by the weaker writer (even after the stronger one has disposed the instance). This is because the **DDSDataWriter** (p. 1321) that owns the instance is saying that the instance no longer exists (e.g. the master of the database is saying that a record has been deleted) and thus the readers should see it as such.

For a **DDSTopic** (p. 1617) with **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415), if the current owner of an instance *unregisters* it, then it will relinquish ownership of the instance and thus the readers may see the value updated by another writer (which will then become the owner). This is because the owner said that it no longer will be providing values for the instance and thus another writer can take ownership and provide those values.

## 9.122.5 Member Data Documentation

### 9.122.5.1 kind

`DDS_OwnershipQosPolicyKind DDS_OwnershipQosPolicy::kind`

The kind of ownership.

[default] `DDS_SHARED_OWNERSHIP_QOS` (p. 415)

## 9.123 DDS\_OwnershipStrengthQosPolicy Struct Reference

Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).

### Public Attributes

- **DDS\_Long value**

*The strength value used to arbitrate among multiple writers.*

### 9.123.1 Detailed Description

Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1321) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1617) + key).

This policy only applies if the **OWNERSHIP** (p. 414) policy is of kind **DDS\_EXCLUSIVE\_OWNERSHIP\_QOS** (p. 415).

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360)

The value of the **OWNERSHIP\_STRENGTH** (p. 415) is used to determine the ownership of a data instance (identified by the key). The arbitration is performed by the **DDSDataReader** (p. 1288).

See also

**EXCLUSIVE ownership** (p. 974)

### 9.123.2 Member Data Documentation

## 9.123.2.1 value

**DDS\_Long** DDS\_OwnershipStrengthQosPolicy::value

The strength value used to arbitrate among multiple writers.

[default] 0

[range] [0, 1 million]

## 9.124 DDS\_ParticipantBuiltinTopicData Struct Reference

Entry created when a DomainParticipant object is discovered.

### Public Attributes

- **DDS\_BuiltinTopicKey\_t key**

### 9.124.1 Detailed Description

Entry created when a DomainParticipant object is discovered.

Data associated with the built-in topic **DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295). It contains QoS policies and additional information that apply to the remote **DDSDomainParticipant** (p. 1351).

See also

**DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295)

**DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

### 9.124.2 Member Data Documentation

#### 9.124.2.1 key

```
DDS_BuiltinTopicKey_t DDS_ParticipantBuiltinTopicData::key
```

DCPS key to distinguish entries.

#### 9.124.2.2 user\_data

```
struct DDS_UserDataQosPolicy DDS_ParticipantBuiltinTopicData::user_data
```

Policy of the corresponding DomainParticipant.

#### 9.124.2.3 property

```
struct DDS_PropertyQosPolicy DDS_ParticipantBuiltinTopicData::property
```

<<*extension*>> (p. 237) Name value pair properties to be stored with DomainParticipant

#### 9.124.2.4 rtps\_protocol\_version

```
DDS_ProtocolVersion_t DDS_ParticipantBuiltinTopicData::rtps_protocol_version
```

<<*extension*>> (p. 237) Version number of the RTPS wire protocol used.

### 9.124.2.5 rtps\_vendor\_id

```
struct DDS_VendorId_t DDS_ParticipantBuiltinTopicData::rtps_vendor_id
```

<<*extension*>> (p. 237) ID of vendor implementing the RTPS wire protocol.

### 9.124.2.6 dds\_builtin\_endpoints

```
DDS_UnsignedLong DDS_ParticipantBuiltinTopicData::dds_builtin_endpoints
```

<<*extension*>> (p. 237) Bitmap of builtin endpoints supported by the participant.

Each bit indicates a builtin endpoint that may be available on the participant for use in discovery.

### 9.124.2.7 default\_unicast\_locators

```
struct DDS_LocatorSeq DDS_ParticipantBuiltinTopicData::default_unicast_locators
```

<<*extension*>> (p. 237) Unicast locators used when individual entities do not specify unicast locators.

### 9.124.2.8 product\_version

```
struct DDS_ProductVersion_t DDS_ParticipantBuiltinTopicData::product_version
```

<<*extension*>> (p. 237) This is a vendor specific parameter. It gives the current version for rti-dds.

### 9.124.2.9 participant\_name

```
struct DDS_EntityNameQosPolicy DDS_ParticipantBuiltinTopicData::participant_name
```

<<*extension*>> (p. 237) The participant name and role name.

This parameter contains the name and the role name of the discovered participant.

### 9.124.2.10 domain\_id

```
DDS_DomainId_t DDS_ParticipantBuiltinTopicData::domain_id
```

<<*extension*>> (p. 237) Domain ID associated with the discovered participant.

### 9.124.2.11 transport\_info

```
struct DDS_TransportInfoSeq DDS_ParticipantBuiltinTopicData::transport_info
```

<<*extension*>> (p. 237) A sequence of **DDS\_TransportInfo\_t** (p. 1145) containing information about each of the installed transports of the discovered participant.

This parameter contains a sequence of **DDS\_TransportInfo\_t** (p. 1145) containing the `class_id` and `message_size_max` for all installed transports of the discovered participant. The maximum number of **DDS\_TransportInfo\_t** (p. 1145) that will be stored in this sequence is controlled by the Domain Participant's resource limit **DDS\_DomainParticipantResourceLimitsQosPolicy::transport\_info\_list\_max\_length** (p. 764).

### 9.124.2.12 reachability\_lease\_duration

```
struct DDS_Duration_t DDS_ParticipantBuiltinTopicData::reachability_lease_duration
```

<<*extension*>> (p. 237) Locator reachability lease duration.

This parameter contains the value of the participant properties: **dds.domain\_participant.locator\_reachability\_lease\_duration.sec** and **dds.domain\_participant.locator\_reachability\_lease\_duration.nanosec** used to configure the locator reachability lease duration.

### 9.124.2.13 partition

```
struct DDS_PartitionQosPolicy DDS_ParticipantBuiltinTopicData::partition
```

<<*extension*>> (p. 237) PartitionQosPolicy of the participant.

### 9.124.2.14 trust\_protection\_info

```
DDS_ParticipantTrustProtectionInfo DDS_ParticipantBuiltinTopicData::trust_protection_info
```

<<*extension*>> (p. 237) Trust Plugins protection information associated with the discovered DomainParticipant.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged DomainParticipant data and metadata.

`trust_protection_info` contains information about how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins. Two DomainParticipants will not match if their `trust_protection_info` is incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the DomainParticipant is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

### 9.124.2.15 trust\_algorithm\_info

`DDS_ParticipantTrustAlgorithmInfo DDS_ParticipantBuiltinTopicData::trust_algorithm_info`

<<*extension*>> (p. 237) Trust Plugins algorithms associated with the discovered DomainParticipant.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged DomainParticipant data and metadata. `trust_algorithm_info` contains information about what algorithms the loaded Trust Plugins are running. Two DomainParticipants will not match if their `trust_algorithm_info` are incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the DomainParticipant is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

### 9.124.2.16 partial\_configuration

`DDS_Boolean DDS_ParticipantBuiltinTopicData::partial_configuration`

<<*extension*>> (p. 237) Indicates whether a `DDS_ParticipantBuiltinTopicData` (p. 979) only contains bootstrapping information.

If this is `DDS_BOOLEAN_TRUE` (p. 317), the `DDS_ParticipantBuiltinTopicData` (p. 979) only contains bootstrapping information. If it is `DDS_BOOLEAN_FALSE` (p. 317), it contains both bootstrapping and configuration information. The following fields are valid when this is set to `DDS_BOOLEAN_TRUE` (p. 317):

- `DDS_ParticipantBuiltinTopicData::key` (p. 980)
- `DDS_ParticipantBuiltinTopicData::property` (p. 980) (only `dds.domain_participant.domain_tag` is valid if set)
- `DDS_ParticipantBuiltinTopicData::rtps_protocol_version` (p. 980)
- `DDS_ParticipantBuiltinTopicData::rtps_vendor_id` (p. 980)
- `DDS_ParticipantBuiltinTopicData::product_version` (p. 981)
- `DDS_ParticipantBuiltinTopicData::domain_id` (p. 981)
- `DDS_ParticipantBuiltinTopicData::transport_info` (p. 981)
- `DDS_ParticipantBuiltinTopicData::partition` (p. 982)
- `DDS_ParticipantBuiltinTopicData::trust_protection_info` (p. 982)
- `DDS_ParticipantBuiltinTopicData::trust_algorithm_info` (p. 982)

All other fields are invalid.

This field will only be set to `DDS_BOOLEAN_TRUE` (p. 317) if a participant using `DDS_DISCOVERYCONFIG_BUILTIN_SPDP2` (p. 394) receives a bootstrap message and `DDS_DiscoveryConfigQosPolicy::ignore_default_domain_announcements` (p. 724) is set to `DDS_BOOLEAN_FALSE` (p. 317) (non-default).

If a participant is using `DDS_DISCOVERYCONFIG_BUILTIN_SPDP` (p. 393), this field will always be set to `DDS_BOOLEAN_FALSE` (p. 317).

Trust Plugins signature algorithm requirements of the DomainParticipant in the context of checking that messages are authentic.

## 9.131 DDS\_PartitionQosPolicy Struct Reference

Set of strings that introduces logical partitions in **DDSDomainParticipant** (p.1351), **DDSPublisher** (p.1550), or **DDSSubscriber** (p.1592) entities.

### Public Attributes

- struct **DDS\_StringSeq** name

*A list of partition names.*

### 9.131.1 Detailed Description

Set of strings that introduces logical partitions in **DDSDomainParticipant** (p.1351), **DDSPublisher** (p.1550), or **DDSSubscriber** (p.1592) entities.

This QoS policy is used to set string identifiers that are used for partitioning entities that would otherwise be connected to and exchange data with each other:

- A **DDSDataWriter** (p.1321) within a **DDSPublisher** (p.1550) only communicates with a **DDSDataReader** (p.1288) in a **DDSSubscriber** (p.1592) if (in addition to matching the **DDSTopic** (p.1617) and having compatible QoS) the **DDSPublisher** (p.1550) and **DDSSubscriber** (p.1592) have a common partition name string.
- **DDSDomainParticipant** (p.1351) entities (with the same domain ID and domain tag) are visible to each other only if they have at least one partition name string in common.

Entity:

**DDSPublisher** (p.1550), **DDSSubscriber** (p.1592), **DDSDomainParticipant** (p.1351)

Properties:

**RxO** (p.360) = NO

**Changeable** (p.360) = YES (p.360)

### 9.131.2 Usage

The Partition QoS policy provides another way to control which entities will match-and thus communicate with-which other entities. It can be used to prevent entities that would have otherwise matched from talking to each other. Much in the same way that only applications within the same DDS domain will communicate with each other, only entities that belong to the same partition can talk to each other.

The Partition QoS policy allows you to add one or more strings, "partitions", to an entity:

- A DataWriter and DataReader for the same topic are only considered matched if their Publishers and Subscribers have partitions in common (intersecting partitions).
- DomainParticipants (with the same domain ID and domain tag) are visible to each other only if they have at least one partition in common.

Since the set of partitions for an entity can be dynamically changed, the Partition QoS policy is useful for creating temporary separation groups among entities that would otherwise be connected to and exchange data with each other.

DomainParticipant partitions and Publisher/Subscriber partitions are independent of each other. You can use both features independently or in combination to provide the right level of isolation.

Failure to match partitions is not considered an incompatible QoS and does not trigger any listeners or conditions. A change in this policy *can* potentially modify the "match" of existing DataReader and DataWriter entities. It may establish new "matches" that did not exist before, or break existing matches.

Partition strings are usually directly matched via string comparisons. However, partition strings can also contain wildcard symbols so that partitions can be matched via pattern matching. As long as the partitions or wildcard patterns of an entity intersect with the partitions or wildcard patterns of otherwise matching entities, the entities match; otherwise they do not.

These partition name patterns are regular expressions as defined by the POSIX fnmatch API (1003.2-1992 section B.6). A **DDSDomainParticipant** (p. 1351), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) entity may include regular expressions in partition names, but no two names that both contain wildcards will ever be considered to match. This means that although regular expressions may be used on the entities, RTI Connexx will not try to match two regular expressions.

Each entity must belong to at least one logical partition. A regular expression is not considered to be a logical partition. If an entity has not specified a logical partition, it is assumed to be in the default partition. The default partition is defined to be an empty string (""). Put another way:

- An empty sequence of strings in this QoS policy is considered equivalent to a sequence containing only a single string, the empty string.
- A string sequence that contains only regular expressions and no literal strings, it is treated as if it had an additional element, the empty string.

Partitions are different from creating **DDSEntity** (p. 1463) objects in different domains in several ways.

- First, entities belonging to different domains are completely isolated from each other; there is no traffic, meta-traffic or any other way for an application or RTI Connexx itself to see entities in a domain it does not belong to.
- Second, a **DDSEntity** (p. 1463) can only belong to one domain whereas a **DDSEntity** (p. 1463) can be in multiple partitions.
- Finally, as far as RTI Connexx is concerned, each unique data instance is identified by the tuple (**DomainID**, **domain tag**, **DDSTopic** (p. 1617), **key**). Therefore two **DDSEntity** (p. 1463) objects in different domains cannot refer to the same data instance. On the other hand, the same data instance can be made available (published) or requested (subscribed) on one or more partitions.

For more information, see the "PARTITION QoS Policy" section of the `Core Libraries User's Manual`.

### 9.131.3 Member Data Documentation

#### 9.131.3.1 name

```
struct DDS_StringSeq DDS_PartitionQosPolicy::name
```

A list of partition names.

Several restrictions apply to the partition names in this sequence. A violation of one of the following rules will result in a **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) when setting a **DDSPublisher** (p. 1550)'s or **DDSSubscriber** (p. 1592)'s QoS.

- A partition name string cannot be NULL, nor can it contain the reserved comma character (',').
- The maximum number of partition name strings allowable in a **DDS\_PartitionQosPolicy** (p. 989) is specified on a domain basis in **DDS\_DomainParticipantResourceLimitsQosPolicy::max\_partitions** (p. 759). The length of this sequence may not be greater than that value.
- The maximum cumulative length of all partition name strings in a **DDS\_PartitionQosPolicy** (p. 989) is specified on a domain basis in **DDS\_DomainParticipantResourceLimitsQosPolicy::max\_partition\_cumulative\_characters** (p. 759).

The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.

**[default]** Empty sequence (zero-length sequence). Since no logical partition is specified, RTI Connexx will assume the entity to be in default partition (empty string partition "").

**[range]** List of partition name with above restrictions

## 9.132 DDS\_PersistentStorageSettings Struct Reference

Configures durable writer history and durable reader state.

## Public Attributes

- **DDS\_Boolean enable**  
*Enables durable writer history in a **DDSDataWriter** (p. 1321) and durable reader state in a **DDSDataReader** (p. 1288).*
- char \* **file\_name**  
*The file name where the durable writer history or durable reader state will be stored.*
- char \* **trace\_file\_name**  
*The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.*
- **DDS\_PersistentJournalKind journal\_kind**  
*Sets the journal mode of the persistent storage.*
- **DDS\_PersistentSynchronizationKind synchronization\_kind**  
*Sets the level of synchronization with the physical disk.*
- **DDS\_Boolean vacuum**  
*Sets the auto-vacuum status of the storage.*
- **DDS\_Boolean restore**  
*Indicates if the persisted writer history or reader state must be restored.*
- struct **DDS\_AllocationSettings\_t writer\_instance\_cache\_allocation**  
*Configures the resource limits associated with the instance durable writer history cache.*
- struct **DDS\_AllocationSettings\_t writer\_sample\_cache\_allocation**  
*Configures the resource limits associated with the sample durable writer history cache.*
- **DDS\_Boolean writer\_memory\_state**  
*Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.*
- **DDS\_UnsignedLong reader\_checkpoint\_frequency**  
*Controls how often the reader state is stored into the database.*

### 9.132.1 Detailed Description

Configures durable writer history and durable reader state.

In a **DDSDataWriter** (p. 1321), this structure configures durable writer history. This feature allows a DataWriter to persist its historical cache, so that it can survive shutdowns, crashes, and restarts. When an application restarts, each DataWriter that has been configured to have durable writer history automatically loads all of the data in this cache from disk and can carry on sending data as if it had never stopped executing.

In a **DDSDataReader** (p. 1288), this structure configures durable reader state. This feature allows a DataReader to persist its state and remember which data it has already received. When an application restarts, each DataReader that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the DataReader before the restart will be suppressed so that it is not even sent over the network.

RTI Connex uses SQLite to store the durable writer history and durable reader state.

QoS:

**DDS\_DurabilityQosPolicy** (p. 767)

## 9.132.2 Member Data Documentation

### 9.132.2.1 enable

`DDS_Boolean DDS_PersistentStorageSettings::enable`

Enables durable writer history in a **DDSDataWriter** (p. 1321) and durable reader state in a **DDSDataReader** (p. 1288).

When this field is set to **DDS\_BOOLEAN\_TRUE** (p.317), the persistent storage configuration using this structure will take precedence over the configuration using the deprecated `dds.data_writer.history.odbc_plugin.builtin.*` and `dds.data_reader.state.*` properties.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.132.2.2 file\_name

`char* DDS_PersistentStorageSettings::file_name`

The file name where the durable writer history or durable reader state will be stored.

Setting this field to a value other than NULL is mandatory when enabling durable writer history or durable reader state.

If the file does not exist, it will be created.

If the file exists and **DDS\_PersistentStorageSettings::restore** (p.994) is set to **DDS\_BOOLEAN\_TRUE** (p. 317), the durable writer history or durable reader state will be restored from the file. Otherwise, the file will be overwritten.

Important: When the file exists, the fields **DDS\_DataReaderProtocolQosPolicy::virtual\_guid** (p.631) and **DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p.674) will be set by RTI Connexx based on the file content. If you change these fields, the value will be ignored.

RTI Connexx uses SQLite to store the durable writer history and durable reader state.

[default] NULL

### 9.132.2.3 trace\_file\_name

`char* DDS_PersistentStorageSettings::trace_file_name`

The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.

Setting this field to a value other than NULL will enable tracing of the SQL statements executed when loading and storing the durable writer history or durable reader state.

Important: Enabling tracing will have a negative impact on performance. Use this feature only for debugging purposes.

[default] NULL

#### 9.132.2.4 journal\_kind

`DDS_PersistentJournalKind DDS_PersistentStorageSettings::journal_kind`

Sets the journal mode of the persistent storage.

[default] `DDS_WAL_PERSISTENT_JOURNAL` (p. 399)

#### 9.132.2.5 synchronization\_kind

`DDS_PersistentSynchronizationKind DDS_PersistentStorageSettings::synchronization_kind`

Sets the level of synchronization with the physical disk.

[default] `DDS_NORMAL_PERSISTENT_SYNCHRONIZATION` (p. 400)

#### 9.132.2.6 vacuum

`DDS_Boolean DDS_PersistentStorageSettings::vacuum`

Sets the auto-vacuum status of the storage.

When auto-vacuum is `DDS_BOOLEAN_TRUE` (p. 317), the storage files will be compacted automatically with every transaction.

When auto-vacuum is `DDS_BOOLEAN_FALSE` (p. 317), after data is deleted from the storage files, the files remain the same size.

[default] `DDS_BOOLEAN_TRUE` (p. 317)

#### 9.132.2.7 restore

`DDS_Boolean DDS_PersistentStorageSettings::restore`

Indicates if the persisted writer history or reader state must be restored.

For a `DDSDataWriter` (p. 1321), this field indicates whether or not the persisted writer history must be restored once the `DataWriter` is restarted.

For a `DDSDataReader` (p. 1288), this field indicates whether or not the persisted reader state must be restored once the `DataReader` is restarted.

[default] `DDS_BOOLEAN_TRUE` (p. 317)

### 9.132.2.8 writer\_instance\_cache\_allocation

```
struct DDS_AllocationSettings_t DDS_PersistentStorageSettings::writer_instance_cache_allocation
```

Configures the resource limits associated with the instance durable writer history cache.

This field only applies to **DDSDataWriter** (p. 1321) entities.

To minimize the number of accesses to the persisted storage, RTI Connex uses an instance cache.

Do not confuse this limit with the initial and maximum number of instances that can be maintained by a **DataWriter** in persistent storage. These resource limits are configured using **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) and **DDS\_ResourceLimitsQosPolicy::initial\_instances** (p. 1056).

If **DDS\_PersistentStorageSettings::writer\_memory\_state** (p. 995) is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then the value of **DDS\_AllocationSettings\_t::max\_count** (p. 589) is set to **DDS\_LENGTH\_UNLIMITED** (p. 438), overwriting any value set by the user.

**DDS\_AllocationSettings\_t::incremental\_count** (p. 589) is ignored.

[range] **DDS\_AllocationSettings\_t::max\_count** (p. 589) in interval [1, INT\_MAX], **DDS\_LENGTH\_AUTO** (p. 433), or **DDS\_LENGTH\_UNLIMITED** (p. 438). **DDS\_AllocationSettings\_t::initial\_count** (p. 589) in interval [1, INT\_MAX], or **DDS\_LENGTH\_AUTO** (p. 433).

**DDS\_LENGTH\_AUTO** (p. 433) means that the value will be set to the equivalent value of **DDS\_ResourceLimitsQosPolicy** (p. 1052).

[default] **DDS\_AllocationSettings\_t::max\_count** (p. 589) = **DDS\_LENGTH\_AUTO** (p. 433) (= **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055)) and **DDS\_AllocationSettings\_t::initial\_count** (p. 589) = **DDS\_LENGTH\_AUTO** (p. 433) (= **DDS\_ResourceLimitsQosPolicy::initial\_instances** (p. 1056)).

### 9.132.2.9 writer\_sample\_cache\_allocation

```
struct DDS_AllocationSettings_t DDS_PersistentStorageSettings::writer_sample_cache_allocation
```

Configures the resource limits associated with the sample durable writer history cache.

This field only applies to **DDSDataWriter** (p. 1321) entities.

To minimize the number of accesses to the persisted storage, RTI Connex uses a sample cache.

Do not confuse this limit with the initial and maximum number of samples that can be maintained by a **DataWriter** in persistent storage. These resource limits are configured using **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) and **DDS\_ResourceLimitsQosPolicy::initial\_samples** (p. 1055).

**DDS\_AllocationSettings\_t::incremental\_count** (p. 589) is ignored.

[range] **DDS\_AllocationSettings\_t::max\_count** (p. 589) in interval [1, INT\_MAX], **DDS\_LENGTH\_AUTO** (p. 433), or **DDS\_LENGTH\_UNLIMITED** (p. 438). **DDS\_AllocationSettings\_t::initial\_count** (p. 589) in interval [1, INT\_MAX], or **DDS\_LENGTH\_AUTO** (p. 433).

**DDS\_LENGTH\_AUTO** (p. 433) means that the value will be set to the equivalent value of **DDS\_ResourceLimitsQosPolicy** (p. 1052).

[default] **DDS\_AllocationSettings\_t::max\_count** (p. 589) = 32 and **DDS\_AllocationSettings\_t::initial\_count** (p. 589) = 32.

### 9.132.2.10 `writer_memory_state`

`DDS_Boolean DDS_PersistentStorageSettings::writer_memory_state`

Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.

This field only applies to `DDSDataWriter` (p. 1321) entities.

If this field is set to `DDS_BOOLEAN_TRUE` (p. 317), then `DDS_AllocationSettings_t::max_count` (p. 589) in `DDS_PersistentStorageSettings::writer_instance_cache_allocation` (p. 994) is set to `DDS_LENGTH_UNLIMITED` (p. 438), overwriting any value set by the user.

In addition, the durable writer history will keep a fixed state overhead per sample in memory. This mode provides the best durable writer history performance. However, the restore operation will be slower, and the maximum number of samples that the durable writer history can manage is limited by the available physical memory.

If this field is set to `DDS_BOOLEAN_FALSE` (p. 317), all the state will be kept in the underlying database. In this mode, the maximum number of samples in the durable writer history is not limited by the physical memory available.

This field is always set to `DDS_BOOLEAN_FALSE` (p. 317) when the DataWriter is configured with `DDS_ReliabilityQosPolicy::acknowledgment_kind` (p. 1043) set to `DDS_APPLICATION_AUTO_ACKNOWLEDGMENT_MODE` (p. 435) or `DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE` (p. 436), or `DDS_AvailabilityQosPolicy::enable_required_subscriptions` (p. 599) is set to `DDS_BOOLEAN_TRUE` (p. 317).

[default] `DDS_BOOLEAN_TRUE` (p. 317)

### 9.132.2.11 `reader_checkpoint_frequency`

`DDS_UnsignedLong DDS_PersistentStorageSettings::reader_checkpoint_frequency`

Controls how often the reader state is stored into the database.

This field only applies to `DDSDataReader` (p. 1288) entities.

A value of N means store the state once every N received and processed samples.

The circumstances under which a data sample is considered "processed by the application" depends on the DataReader configuration.

For additional information on when a sample is considered "processed by the application" see `Durable Reader State`, in the Core Libraries User's Manual.

A high value will provide better performance. However, if the DataReader is restarted it may receive some duplicate samples.

[range] [1, 1000000] [default] 1

## 9.133 `DDS_PresentationQosPolicy` Struct Reference

Specifies how the samples representing changes to data instances are presented to a subscribing application.

## Public Attributes

- **DDS\_PresentationQosPolicyAccessScopeKind access\_scope**  
*Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.*
- **DDS\_Boolean coherent\_access**  
*Specifies support for coherent access. Controls whether coherent access is supported within the scope access\_scope.*
- **DDS\_Boolean ordered\_access**  
*Specifies support for ordered access to the samples received at the subscription end. Controls whether ordered access is supported within the scope access\_scope.*
- **DDS\_Boolean drop\_incomplete\_coherent\_set**  
*<<extension>> (p. 237) Indicates whether or not a **DDSDataReader** (p. 1288) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the **SAMPLE\_LOST** Status.*

### 9.133.1 Detailed Description

Specifies how the samples representing changes to data instances are presented to a subscribing application.

This QoS policy controls the extent to which changes to data instances can be made dependent on each other and also the kind of dependencies that can be propagated and maintained by RTI Connext. Specifically, this policy affects the application's ability to:

- specify and receive coherent changes to instances
- specify the relative order in which changes are presented

Entity:

**DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_↔  
STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

### 9.133.2 Usage

A **DDSDataReader** (p. 1288) will usually receive data in the order that it was sent by a **DDSDataWriter** (p. 1321), and the data is presented to the **DDSDataReader** (p. 1288) as soon as the application receives the next expected value. However, sometimes you may want a set of data for the same DataWriter or different DataWriters to be presented to the DataReader(s) only after *all* of the elements of the set have been received, but not before. Or you may want the data to be presented in a different order than that in which it was sent. Specifically for keyed data, you may want the middleware to present the data in keyed – or *instance* – order, such that samples pertaining to the same instance are presented together.

The Presentation QoS policy is a request-offered QoS policy that allows you to specify different *scopes* of presentation. It also controls whether or not a set of changes within the scope is delivered at the same time or can be delivered as soon as each element is received.

- `coherent_access` controls whether RTI Connexx will preserve the groupings of changes made by a publishing application by means of the operations **DDSPublisher::begin\_coherent\_changes** (p. 1564) and **DDSPublisher::end\_coherent\_changes** (p. 1565).
- `ordered_access` controls whether RTI Connexx will preserve the order of changes.
- `access_scope` controls the granularity of the other settings. See below:

If `coherent_access` is set, then the `access_scope` set on the **DDSSubscriber** (p. 1592) controls the maximum extent of coherent changes. The behavior is as follows:

- If `access_scope` is set to **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418) (the default), the behavior is the same as **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418).
- If `access_scope` is set to **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418), then coherent changes (indicated by their enclosure within calls to **DDSPublisher::begin\_coherent\_changes** (p. 1564) and **DDSPublisher::end\_coherent\_changes** (p. 1565)) will be made available as a unit to each remote **DDSDataReader** (p. 1288) independently. That is, changes made to instances within each individual **DDSDataWriter** (p. 1321) will be presented as a unit. They will not be grouped with changes made to instances belonging to a different **DDSDataWriter** (p. 1321).
- If `access_scope` is set to **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418), then coherent changes made to instances through a set of **DDSDataWriter** (p. 1321) entities attached to a common **DDSPublisher** (p. 1550) will be made available as a unit to the **DDSDataReader** (p. 1288) entities within a **DDSSubscriber** (p. 1592).

If `ordered_access` is set, then the `access_scope` set on the **DDSSubscriber** (p. 1592) controls the maximum extent to which order will be preserved by RTI Connexx.

- If `access_scope` is set to **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418) (the lowest level), then the relative order of DDS samples sent by a **DDSDataWriter** (p. 1321) is only preserved on a per-instance basis. If two DDS samples refer to the same instance (identified by Topic and a particular value for the key), then the order in which they are stored in the **DDSDataReader** (p. 1288) queue is consistent with the order in which the changes occurred. However, if the two DDS samples belong to different instances, the order in which they are presented may or may not match the order in which the changes occurred. This is the case even if it is the same application thread making the changes using the same **DDSDataWriter** (p. 1321).

- If `access_scope` is set to **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418), changes (creations, deletions, modifications) made by a single **DDSDataWriter** (p. 1321) to one or more instances are presented to a **DDSDataReader** (p. 1288) in the same order in which they occur. Changes made to instances through different **DDSDataWriter** (p. 1321) entities are not required to be presented in the order in which they occur. This is the case even if the changes are made by a single application thread using **DDSDataWriter** (p. 1321) objects attached to the same **DDSPublisher** (p. 1550).
- Finally, if `access_scope` is set to **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418), changes made to instances via **DDSDataWriter** (p. 1321) entities attached to the same **DDSPublisher** (p. 1550) object are presented to the **DDSDataReader** (p. 1288) entities within a **DDSSubscriber** (p. 1592) in the same order in which they occur. For this to happen, the application must take the samples using the Subscriber's **DDSSubscriber::begin\_access** (p. 1605) and **DDSSubscriber::end\_access** (p. 1606) operations (see the "Ordered Access" section in the "PRESENTATION QosPolicy" section of the [Core Libraries User's Manual](http://manual.rti.com/manual/RTI_ConnextDDS_CoreLibraries_UsersManual.pdf)).

If `access_scope` is set to **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p. 418) on the **DDSSubscriber** (p. 1592), then the **DDSSubscriber** (p. 1592) will use the `access_scope` offered by the remote **DDSPublisher** (p. 1550).

Note that this QoS policy controls the scope at which related changes are made available to the subscriber. This means the subscriber **can** access the changes in a coherent manner and in the proper order; however, it does not necessarily imply that the **DDSSubscriber** (p. 1592) **will** indeed access the changes in the correct order. For that to occur, the application at the subscriber end must use the proper logic in reading the **DDSDataReader** (p. 1288) objects.

For **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418) the subscribing application must use the APIs **DDSSubscriber::begin\_access** (p. 1605), **DDSSubscriber::end\_access** (p. 1606) and **DDSSubscriber::get\_datareaders** (p. 1606) to access the changes in the proper order. If you do not use these operations, the data may not be ordered across DataWriters that belong to the same **DDSPublisher** (p. 1550).

The field **DDS\_SampleInfo::coherent\_set\_info** (p. 1092) is set when a sample is part of a coherent set. This field provides information to identify the coherent set that a sample is part of. In addition, **DDS\_CoherentSetInfo\_t::incomplete\_coherent\_set** (p. 614) indicates if a sample is part of an incomplete coherent set (one for which not all samples have been received). Coherent sets for which some of the samples are filtered out by content or time on the **DDSDataWriter** (p. 1321) are considered incomplete.

By default, the samples that are received from an incomplete coherent set are dropped by the DataReader(s) and they are not provided to the application. Such samples are reported as lost in the `SAMPLE_LOST` Status. By setting **DDS\_PresentationQosPolicy::drop\_incomplete\_coherent\_set** (p. 1000) to **DDS\_BOOLEAN\_FALSE** (p. 317), you can change this behavior and, in this case, samples from incomplete coherent sets will be provided to the application. These samples have **DDS\_CoherentSetInfo\_t::incomplete\_coherent\_set** (p. 614) set to **DDS\_BOOLEAN\_TRUE** (p. 317).

### 9.133.3 Compatibility

The value offered is considered compatible with the value requested if and only if the following conditions are met:

- the inequality *offered access\_scope*  $\geq$  *requested access\_scope* evaluates to 'TRUE' or requested `access_scope` is **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p. 418). For the purposes of this inequality, the values of `access_scope` are considered ordered such that **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418)  $<$  **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418)  $<$  **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418).
- requested `coherent_access` is **DDS\_BOOLEAN\_FALSE** (p. 317), or else both offered and requested `coherent_access` are **DDS\_BOOLEAN\_TRUE** (p. 317).
- requested `ordered_access` is **DDS\_BOOLEAN\_FALSE** (p. 317), or else both offered and requested `ordered_access` are **DDS\_BOOLEAN\_TRUE** (p. 317).

## 9.133.4 Member Data Documentation

### 9.133.4.1 access\_scope

`DDS_PresentationQosPolicyAccessScopeKind DDS_PresentationQosPolicy::access_scope`

Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.

[default] `DDS_INSTANCE_PRESENTATION_QOS` (p. 418)

### 9.133.4.2 coherent\_access

`DDS_Boolean DDS_PresentationQosPolicy::coherent_access`

Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.

That is, the ability to group a set of changes as a unit on the publishing end such that they are received as a unit at the subscribing end.

Note: To use this feature, the DataWriter must be configured for RELIABLE communication (see `DDS_RELIABLE_RELIABILITY_QOS` (p. 435)).

[default] `DDS_BOOLEAN_FALSE` (p. 317)

### 9.133.4.3 ordered\_access

`DDS_Boolean DDS_PresentationQosPolicy::ordered_access`

Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.

That is, the ability of the subscriber to see changes in the same order as they occurred on the publishing end.

[default] `DDS_BOOLEAN_FALSE` (p. 317)

### 9.133.4.4 drop\_incomplete\_coherent\_set

`DDS_Boolean DDS_PresentationQosPolicy::drop_incomplete_coherent_set`

<<*extension*>> (p. 237) Indicates whether or not a `DDSDataReader` (p. 1288) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the `SAMPLE_LOST` Status.

Note that a coherent set will be considered incomplete if some of its samples are filtered by content or time on the DataWriter side.

By default, the samples that are received from an incomplete coherent set are dropped (and reported as lost) by the DataReader(s) and they are not provided to the application. By setting this parameter to `DDS_BOOLEAN_FALSE` (p. 317), you can change this behavior.

Samples from an incomplete coherent set have `DDS_CoherentSetInfo_t::incomplete_coherent_set` (p. 614) set to `DDS_BOOLEAN_TRUE` (p. 317) in `DDS_SampleInfo::coherent_set_info` (p. 1092).

[default] `DDS_BOOLEAN_TRUE` (p. 317)

## 9.134 DDS\_PrintFormatProperty Struct Reference

A collection of attributes used to configure how data samples will be formatted when converted to a string.

### Public Attributes

- **DDS\_PrintFormatKind kind**  
*The kind of format to be used when converting a data sample to a string.*
- **DDS\_Boolean pretty\_print**  
*Choose whether to print a data sample in a more readable format or to eliminate all white space.*
- **DDS\_Boolean enum\_as\_int**  
*Choose whether to print enum values as integers or as strings.*
- **DDS\_Boolean include\_root\_elements**  
*Choose whether or not to include the root elements of the print format in the output string.*

### 9.134.1 Detailed Description

A collection of attributes used to configure how data samples will be formatted when converted to a string.

Examples

```
HelloWorldPlugin.cxx.
```

### 9.134.2 Member Data Documentation

#### 9.134.2.1 kind

```
DDS_PrintFormatKind DDS_PrintFormatProperty::kind
```

The kind of format to be used when converting a data sample to a string.

Data samples can be represented in a default, XML, or JSON format.

See also

**DDS\_PrintFormatKind** (p. 64)

**[default] DDS\_DEFAULT\_PRINT\_FORMAT** (p. 65)

### 9.134.2.2 pretty\_print

**DDS\_Boolean** DDS\_PrintFormatProperty::pretty\_print

Choose whether to print a data sample in a more readable format or to eliminate all white space.

A value of **DDS\_BOOLEAN\_TRUE** (p.317) will add indentation and newlines to the string representation of the data sample making it more readable. For example:

```
<FooType>
  <myLong>5</myLong>
</FooType>
```

A value of **DDS\_BOOLEAN\_FALSE** (p.317) will cause all white space in the string representation of the data sample to be eliminated. For example:

```
<FooType><myLong>5</myLong></FooType>
```

**[default] DDS\_BOOLEAN\_TRUE** (p.317)

### 9.134.2.3 enum\_as\_int

**DDS\_Boolean** DDS\_PrintFormatProperty::enum\_as\_int

Choose whether to print enum values as integers or as strings.

A value of **DDS\_BOOLEAN\_TRUE** (p.317) will cause enumeration literals to be printed using their integer value. For example:

```
<FooType>
  <myEnum>5</myEnum>
</FooType>
```

A value of **DDS\_BOOLEAN\_FALSE** (p.317) will cause enumeration literals to be printed as strings using their member names. For example:

```
<FooType>
  <myEnum>RED</myEnum>
</FooType>
```

**[default] DDS\_BOOLEAN\_FALSE** (p.317)

### 9.134.2.4 include\_root\_elements

**DDS\_Boolean** DDS\_PrintFormatProperty::include\_root\_elements

Choose whether or not to include the root elements of the print format in the output string.

This field only applies if the **DDS\_PrintFormatProperty::kind** (p.1001) is **DDS\_XML\_PRINT\_FORMAT** (p.65) or **DDS\_JSON\_PRINT\_FORMAT** (p.65)

If the value is **DDS\_BOOLEAN\_TRUE** (p.317) and the kind is **DDS\_XML\_PRINT\_FORMAT** (p.65) then a top-level tag with the type's name in it will be included in the output. For example:

```
<FooType>
  <myLong>5</myLong>
</FooType>
```

If the value is **DDS\_BOOLEAN\_TRUE** (p.317) and the kind is **DDS\_JSON\_PRINT\_FORMAT** (p.65) then top-level opening and closing braces will be included in the output. For example:

```
{
  "myLong":5
}
```

If the value is **DDS\_BOOLEAN\_FALSE** (p.317) the elements described above will not be included in the output. For example:

```
<myLong>5</myLong>
"myLong":5
```

**[default] DDS\_BOOLEAN\_TRUE** (p.317)

## 9.135 DDS\_ProductVersion\_t Struct Reference

<<*extension*>> (p. 237) Type used to represent the current version of RTI Connex.

### Public Attributes

- **DDS\_Char major**  
*Major product version.*
- **DDS\_Char minor**  
*Minor product version.*
- **DDS\_Char release**  
*Release letter for product version.*
- **DDS\_Char revision**  
*Revision number of product.*

### 9.135.1 Detailed Description

<<*extension*>> (p. 237) Type used to represent the current version of RTI Connex.

### 9.135.2 Member Data Documentation

#### 9.135.2.1 major

**DDS\_Char** DDS\_ProductVersion\_t::major

Major product version.

#### 9.135.2.2 minor

**DDS\_Char** DDS\_ProductVersion\_t::minor

Minor product version.

### 9.135.2.3 release

**DDS\_Char** DDS\_ProductVersion\_t::release

Release letter for product version.

### 9.135.2.4 revision

**DDS\_Char** DDS\_ProductVersion\_t::revision

Revision number of product.

## 9.136 DDS\_ProfileQoSPolicy Struct Reference

Configures the way that XML documents containing QoS profiles are loaded by RTI Connex.

### Public Attributes

- struct **DDS\_StringSeq string\_profile**  
*Sequence of strings containing a XML document to load.*
- struct **DDS\_StringSeq url\_profile**  
*Sequence of **URL groups** (p. 199) containing a set of XML documents to load.*
- **DDS\_Boolean ignore\_user\_profile**  
*Ignores the file `USER_QOS_PROFILES.xml` in the current working directory.*
- **DDS\_Boolean ignore\_environment\_profile**  
*Ignores the value of the `NDDS_QOS_PROFILES` environment variable (p. 199).*
- **DDS\_Boolean ignore\_resource\_profile**  
*Ignores the file `NDDS_QOS_PROFILES.xml`.*

### 9.136.1 Detailed Description

Configures the way that XML documents containing QoS profiles are loaded by RTI Connex.

All QoS values for Entities can be configured in QoS profiles defined in XML documents. XML documents can be passed to RTI Connex in string form or, more likely, through files found on a file system.

There are also default locations where DomainParticipants will look for files to load QoS profiles. These include the current working directory from where an application is started, a file in the distribution directory for RTI Connex, and the locations specified by an environment variable.

You may disable any or all of these default locations using the Profile QoS policy.

Entity:

**DDSDomainParticipantFactory** (p. 1426)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **Changeable** (p. 360)

## 9.136.2 Member Data Documentation

### 9.136.2.1 string\_profile

```
struct DDS_StringSeq DDS_ProfileQosPolicy::string_profile
```

Sequence of strings containing a XML document to load.

The concatenation of the strings in this sequence must be a valid XML document according to the XML QoS profile schema.

**[default]** Empty sequence (zero-length).

### 9.136.2.2 url\_profile

```
struct DDS_StringSeq DDS_ProfileQosPolicy::url_profile
```

Sequence of **URL groups** (p. 199) containing a set of XML documents to load.

Only one of the elements of each group will be loaded by RTI Connext, starting from the left.

**[default]** Empty sequence (zero-length).

### 9.136.2.3 ignore\_user\_profile

```
DDS_Boolean DDS_ProfileQosPolicy::ignore_user_profile
```

Ignores the file USER\_QOS\_PROFILES.xml in the current working directory.

When this field is set to **DDS\_BOOLEAN\_TRUE** (p.317), the QoS profiles contained in the file USER\_QOS\_↔  
PROFILES.xml in the current working directory will be ignored.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.136.2.4 ignore\_environment\_profile

```
DDS_Boolean DDS_ProfileQosPolicy::ignore_environment_profile
```

Ignores the value of the **NDDS\_QOS\_PROFILES environment variable** (p. 199).

When this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317), the value of the environment variable NDDS\_QOS\_PROFILES will be ignored.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.136.2.5 ignore\_resource\_profile

`DDS_Boolean` `DDS_ProfileQosPolicy::ignore_resource_profile`

Ignores the file `NDDS_QOS_PROFILES.xml`.

When this field is set to **DDS\_BOOLEAN\_TRUE** (p.317), the QoS profiles contained in the file `NDDS_QOS_PROFILES.xml` in `$NDDSHOME/resource/xml` will be ignored.

[default] **DDS\_BOOLEAN\_FALSE** (p.317)

## 9.137 DDS\_Property\_t Struct Reference

Properties are name/value pairs objects.

### Public Attributes

- `char * name`  
*Property name.*
- `char * value`  
*Property value.*
- **DDS\_Boolean propagate**  
*Indicates if the property must be propagated on discovery.*

### 9.137.1 Detailed Description

Properties are name/value pairs objects.

### 9.137.2 Member Data Documentation

#### 9.137.2.1 name

`char* DDS_Property_t::name`

Property name.

It must be a NULL-terminated string allocated with **DDS\_String\_alloc** (p.553) or **DDS\_String\_dup** (p.553).

### 9.137.2.2 value

```
char* DDS_Property_t::value
```

Property value.

It must be a NULL-terminated string allocated with **DDS\_String\_alloc** (p. 553) or **DDS\_String\_dup** (p. 553).

### 9.137.2.3 propagate

```
DDS_Boolean DDS_Property_t::propagate
```

Indicates if the property must be propagated on discovery.

## 9.138 DDS\_PropertyQosPolicy Struct Reference

Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

### Public Attributes

- struct **DDS\_PropertySeq** value  
*Sequence of properties.*

### 9.138.1 Detailed Description

Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connex that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

Entity:

**DDSDomainParticipant** (p. 1351) **DDSDataReader** (p. 1288) **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A;  
**Changeable** (p. 360) = **YES** (p. 360)

See also

**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

## 9.138.2 Usage

The **PROPERTY** QoS policy can be used to associate a set of properties in the form of (name, value) pairs with a **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321), or **DDSDomainParticipant** (p. 1351). This is similar to the **DDS\_UserDataQosPolicy** (p. 1237), except this policy uses (name, value) pairs, and you can select whether or not a particular pair should be propagated (included in the builtin topic).

You can find a complete list of predefined properties in the [Property Reference Guide](#).

This QoS policy may be used to configure:

- Durable Writer History, see **Configuring Durable Writer History** (p. 193)
- Durable Reader State, see **Configuring Durable Reader State** (p. 195)
- Builtin Transport Plugins, see **UDIPv4 Transport Property Names in Property QoS Policy of Domain Participant** (p. 269), **UDIPv6 Transport Property Names in Property QoS Policy of Domain Participant** (p. 285), and **Shared Memory Transport Property Names in Property QoS Policy of Domain Participant** (p. 263)
- Extension Transport Plugins, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 173)
- **Clock Selection** (p. 38)

In addition, you may add your own name/value pairs to the Property QoS policy of an Entity. Via this QoS policy, you can direct RTI Connext to propagate these name/value pairs with the discovery information for the Entity. Applications that discover the Entity can then access the user-specific name/value pairs in the discovery information of the remote Entity. This allows you to add meta-information about an Entity for application-specific use, for example, authentication/authorization certificates (which can also be done using the **DDS\_UserDataQosPolicy** (p. 1237) or **DDS\_GroupDataQosPolicy** (p. 916)).

### 9.138.2.1 Reasons for Using the PropertyQosPolicy

- Supports dynamic loading of extension transports
- Supports multiple instances of the builtin transports
- Allows full pluggable transport configuration for non-C/C++ language bindings (Java, .NET, etc.)
- Avoids the process of creating entities disabled, changing their QoS settings, then enabling them
- Allows selection of clock

Some of the RTI Connext capabilities configurable via the Property QoS policy can also be configured in code via APIs. However, the Property QoS policy allows you to configure those parameters via XML files. In addition, some of the configuration APIs will only work if the Entity was created in a disabled state and then enabled after the configuration change was applied. By configuring those parameters using the Property QoS policy during entity creation, you avoid the additional work of first creating a disabled entity and then enabling it afterwards.

There are helper functions to facilitate working with properties, see the **PROPERTY** (p. 419) page.

### 9.138.3 Member Data Documentation

#### 9.138.3.1 value

```
struct DDS_PropertySeq DDS_PropertyQosPolicy::value
```

Sequence of properties.

[default] An empty list.

## 9.139 DDS\_PropertySeq Struct Reference

Declares IDL `sequence < DDS_Property_t (p. 1006) >`

### 9.139.1 Detailed Description

Declares IDL `sequence < DDS_Property_t (p. 1006) >`

### 9.141.1 Detailed Description

Entry created when a **DDSDataWriter** (p. 1321) is discovered in association with its Publisher.

Data associated with the built-in topic **DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298). It contains QoS policies and additional information that apply to the remote **DDSDataWriter** (p. 1321) the related **DDSPublisher** (p. 1550).

See also

**DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298)

**DDSPublicationBuiltinTopicDataDataReader** (p. 1549)

### 9.141.2 Member Data Documentation

#### 9.141.2.1 key

`DDS_BuiltinTopicKey_t` `DDS_PublicationBuiltinTopicData::key`

DCPS key to distinguish entries.

#### 9.141.2.2 participant\_key

`DDS_BuiltinTopicKey_t` `DDS_PublicationBuiltinTopicData::participant_key`

DCPS key of the participant to which the DataWriter belongs.

### 9.141.2.3 topic\_name

```
char* DDS_PublicationBuiltinTopicData::topic_name
```

Name of the related **DDSTopic** (p. 1617).

The length of this string is limited to 255 characters.

The memory for this field is managed as described in **String Conventions** (p. 552).

See also

**String Conventions** (p. 552)

### 9.141.2.4 type\_name

```
char* DDS_PublicationBuiltinTopicData::type_name
```

Name of the type attached to the **DDSTopic** (p. 1617).

The length of this string is limited to 255 characters.

The memory for this field is managed as described in **String Conventions** (p. 552).

See also

**String Conventions** (p. 552)

### 9.141.2.5 durability

```
struct DDS_DurabilityQosPolicy DDS_PublicationBuiltinTopicData::durability
```

durability policy of the corresponding DataWriter

### 9.141.2.6 durability\_service

```
struct DDS_DurabilityServiceQosPolicy DDS_PublicationBuiltinTopicData::durability_service
```

durability\_service policy of the corresponding DataWriter

#### 9.141.2.7 deadline

```
struct DDS_DeadlineQosPolicy DDS_PublicationBuiltinTopicData::deadline
```

Policy of the corresponding DataWriter.

#### 9.141.2.8 latency\_budget

```
struct DDS_LatencyBudgetQosPolicy DDS_PublicationBuiltinTopicData::latency_budget
```

Policy of the corresponding DataWriter.

#### 9.141.2.9 liveliness

```
struct DDS_LivelinessQosPolicy DDS_PublicationBuiltinTopicData::liveliness
```

Policy of the corresponding DataWriter.

#### 9.141.2.10 reliability

```
struct DDS_ReliabilityQosPolicy DDS_PublicationBuiltinTopicData::reliability
```

Policy of the corresponding DataWriter.

#### 9.141.2.11 lifespan

```
struct DDS_LifespanQosPolicy DDS_PublicationBuiltinTopicData::lifespan
```

Policy of the corresponding DataWriter.

#### 9.141.2.12 user\_data

```
struct DDS_UserDataQosPolicy DDS_PublicationBuiltinTopicData::user_data
```

Policy of the corresponding DataWriter.

### 9.141.2.13 ownership

```
struct DDS_OwnershipQosPolicy DDS_PublicationBuiltinTopicData::ownership
```

Policy of the corresponding DataWriter.

### 9.141.2.14 ownership\_strength

```
struct DDS_OwnershipStrengthQosPolicy DDS_PublicationBuiltinTopicData::ownership_strength
```

Policy of the corresponding DataWriter.

### 9.141.2.15 destination\_order

```
struct DDS_DestinationOrderQosPolicy DDS_PublicationBuiltinTopicData::destination_order
```

Policy of the corresponding DataWriter.

#### Warning

Only the field **DDS\_DestinationOrderQosPolicy::kind** (p. 711) is propagated during discovery. The other fields always contain their default values.

### 9.141.2.16 presentation

```
struct DDS_PresentationQosPolicy DDS_PublicationBuiltinTopicData::presentation
```

Policy of the Publisher to which the DataWriter belongs.

### 9.141.2.17 partition

```
struct DDS_PartitionQosPolicy DDS_PublicationBuiltinTopicData::partition
```

Policy of the Publisher to which the DataWriter belongs.

#### 9.141.2.18 topic\_data

```
struct DDS_TopicDataQosPolicy DDS_PublicationBuiltinTopicData::topic_data
```

Policy of the related Topic.

#### 9.141.2.19 group\_data

```
struct DDS_GroupDataQosPolicy DDS_PublicationBuiltinTopicData::group_data
```

Policy of the Publisher to which the DataWriter belongs.

#### 9.141.2.20 representation

```
struct DDS_DataRepresentationQosPolicy DDS_PublicationBuiltinTopicData::representation
```

Data representation policy of the corresponding DataWriter.

#### 9.141.2.21 data\_tags

```
DDS_DataTagQosPolicy DDS_PublicationBuiltinTopicData::data_tags
```

Tags of the corresponding DataWriter.

#### 9.141.2.22 type\_code

```
struct DDS_TypeCode* DDS_PublicationBuiltinTopicData::type_code
```

<<*extension*>> (p. 237) Type code information of the corresponding Topic

#### 9.141.2.23 publisher\_key

```
DDS_BuiltinTopicKey_t DDS_PublicationBuiltinTopicData::publisher_key
```

<<*extension*>> (p. 237) DCPS key of the publisher to which the DataWriter belongs

#### 9.141.2.24 property

```
struct DDS_PropertyQosPolicy DDS_PublicationBuiltinTopicData::property
```

<<*extension*>> (p. 237) Properties of the corresponding DataWriter.

#### 9.141.2.25 unicast\_locators

```
struct DDS_LocatorSeq DDS_PublicationBuiltinTopicData::unicast_locators
```

<<*extension*>> (p. 237) Custom unicast locators that the endpoint can specify. The default locators will be used if this is not specified.

#### 9.141.2.26 virtual\_guid

```
struct DDS_GUID_t DDS_PublicationBuiltinTopicData::virtual_guid
```

<<*extension*>> (p. 237) Virtual GUID associated to the DataWriter.

See also

**DDS\_GUID\_t** (p. 918)

#### 9.141.2.27 service

```
struct DDS_ServiceQosPolicy DDS_PublicationBuiltinTopicData::service
```

<<*extension*>> (p. 237) Policy of the corresponding DataWriter.

#### 9.141.2.28 rtps\_protocol\_version

```
DDS_ProtocolVersion_t DDS_PublicationBuiltinTopicData::rtps_protocol_version
```

<<*extension*>> (p. 237) Version number of the RTPS wire protocol used.

### 9.141.2.29 rtps\_vendor\_id

```
struct DDS_VendorId_t DDS_PublicationBuiltinTopicData::rtps_vendor_id
```

<<*extension*>> (p. 237) ID of vendor implementing the RTPS wire protocol.

### 9.141.2.30 product\_version

```
struct DDS_ProductVersion_t DDS_PublicationBuiltinTopicData::product_version
```

<<*extension*>> (p. 237) This is a vendor specific parameter. It gives the current version for rti-dds.

### 9.141.2.31 locator\_filter

```
struct DDS_LocatorFilterQosPolicy DDS_PublicationBuiltinTopicData::locator_filter
```

<<*extension*>> (p. 237) Policy of the corresponding DataWriter

Related to **DDS\_MultiChannelQosPolicy** (p. 964).

### 9.141.2.32 disable\_positive\_acks

```
DDS_Boolean DDS_PublicationBuiltinTopicData::disable_positive_acks
```

<<*extension*>> (p. 237) This is a vendor specific parameter. Determines whether matching DataReaders send positive acknowledgements for reliability.

### 9.141.2.33 publication\_name

```
struct DDS_EntityNameQosPolicy DDS_PublicationBuiltinTopicData::publication_name
```

<<*extension*>> (p. 237) The publication name and role name.

This member contains the name and the role name of the discovered publication.

### 9.141.2.34 trust\_protection\_info

```
struct DDS_EndpointTrustProtectionInfo DDS_PublicationBuiltinTopicData::trust_protection_info
```

<<*extension*>> (p. 237) Trust Plugins protection information associated with the discovered DataWriter.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged data and metadata.

trust\_protection\_info contains information about how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins. Two endpoints will not match if their trust\_protection\_info is incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

### 9.141.2.35 trust\_algorithm\_info

```
struct DDS_EndpointTrustAlgorithmInfo DDS_PublicationBuiltinTopicData::trust_algorithm_info
```

<<*extension*>> (p. 237) Trust Plugins algorithms associated with the discovered DataWriter.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged data and metadata.

trust\_algorithm\_info contains information about what algorithms the loaded Trust Plugins are running. Two endpoints will not match if their trust\_algorithm\_info are incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

## 9.143 DDS\_PublicationMatchedStatus Struct Reference

**DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347)

### Public Attributes

- **DDS\_Long total\_count**  
*The total cumulative number of times that this **DDSDataWriter** (p. 1321) discovered a "match" with a **DDSDataReader** (p. 1288).*
- **DDS\_Long total\_count\_change**  
*The changes in total\_count since the last time the listener was called or the status was read.*
- **DDS\_Long current\_count**  
*The current number of DataReaders with which this **DDSDataWriter** (p. 1321) is matched.*
- **DDS\_Long current\_count\_peak**  
*<<extension>> (p. 237) Greatest number of DataReaders that matched this **DDSDataWriter** (p. 1321) simultaneously.*
- **DDS\_Long current\_count\_change**  
*The change in current\_count since the last time the listener was called or the status was read.*
- **DDS\_InstanceHandle\_t last\_subscription\_handle**  
*This InstanceHandle can be used to look up which remote **DDSDataReader** (p. 1288) was the last to cause this Data↔Writer's status to change, using **DDSDataWriter::get\_matched\_subscription\_data** (p. 1332).*

### 9.143.1 Detailed Description

**DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347)

A "match" happens when the **DDSDataWriter** (p. 1321) finds a **DDSDataReader** (p. 1288) with the same **DDSTopic** (p. 1617), same or compatible data type, and requested QoS that is compatible with that offered by the **DDSDataWriter** (p. 1321). (For information on compatible data types, see the `Extensible Types Guide`.)

This status is also changed (and the listener, if any, called) when a match is ended. A local **DDSDataWriter** (p. 1321) will become "unmatched" from a remote **DDSDataReader** (p. 1288) when that **DDSDataReader** (p. 1288) goes away for any of the following reasons:

- The matched **DDSDataReader** (p. 1288)'s **DDSDomainParticipant** (p. 1351) has lost liveliness.
- This DataWriter or the matched DataReader has changed QoS such that the entities are now incompatible.
- The matched DataReader has been deleted.

This status may reflect changes from multiple match or unmatched events, and the **DDS\_PublicationMatchedStatus**↔**::current\_count\_change** (p. 1021) can be used to determine the number of changes since the listener was called back or the status was checked.

### 9.143.2 Member Data Documentation

### 9.143.2.1 total\_count

```
DDS_Long DDS_PublicationMatchedStatus::total_count
```

The total cumulative number of times that this **DDSDataWriter** (p. 1321) discovered a "match" with a **DDSDataReader** (p. 1288).

This number increases whenever a new match is discovered. It does not decrease when an existing match goes away for any of the reasons described in **DDS\_PublicationMatchedStatus** (p. 1020).

### 9.143.2.2 total\_count\_change

```
DDS_Long DDS_PublicationMatchedStatus::total_count_change
```

The changes in total\_count since the last time the listener was called or the status was read.

Note that this number will never be negative (because it's the total number of times this DataWriter ever matched with a DataReader).

### 9.143.2.3 current\_count

```
DDS_Long DDS_PublicationMatchedStatus::current_count
```

The current number of DataReaders with which this **DDSDataWriter** (p. 1321) is matched.

This number increases when a new match is discovered and decreases when an existing match goes away for any of the reasons described in **DDS\_PublicationMatchedStatus** (p. 1020).

### 9.143.2.4 current\_count\_peak

```
DDS_Long DDS_PublicationMatchedStatus::current_count_peak
```

<<*extension*>> (p. 237) Greatest number of DataReaders that matched this **DDSDataWriter** (p. 1321) simultaneously.

That is, there was no moment in time when more than this many DataReaders matched this DataWriter. (As a result, total\_count can be higher than current\_count\_peak.)

### 9.143.2.5 current\_count\_change

```
DDS_Long DDS_PublicationMatchedStatus::current_count_change
```

The change in current\_count since the last time the listener was called or the status was read.

Note that a negative current\_count\_change means that one or more DataReaders have become unmatched for one or more of the reasons described in **DDS\_PublicationMatchedStatus** (p. 1020).

### 9.143.2.6 last\_subscription\_handle

```
DDS_InstanceHandle_t DDS_PublicationMatchedStatus::last_subscription_handle
```

This InstanceHandle can be used to look up which remote **DDSDataReader** (p. 1288) was the last to cause this DataWriter's status to change, using **DDSDataWriter::get\_matched\_subscription\_data** (p. 1332).

If the DataReader no longer matches this DataWriter due to any of the reasons in **DDS\_PublicationMatchedStatus** (p. 1020) except incompatible QoS, then the DataReader has been purged from this DataWriter's DomainParticipant discovery database. (See the "Discovery Overview" section of the *User's Manual*.) In that case, the **DDSDataWriter::get\_matched\_subscription\_data** (p. 1332) method will not be able to return information about the DataReader. The only way to get information about the lost DataReader is if you cached the information previously.

## 9.144 DDS\_PublisherQos Struct Reference

QoS policies supported by a **DDSPublisher** (p. 1550) entity.

### Public Member Functions

- bool **operator==** (const **DDS\_PublisherQos** &r) const  
*Compares two PublisherQos objects for equality.*

- struct **DDS\_EntityNameQosPolicy** **publisher\_name**  
*<<extension>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).*

### 9.144.1 Detailed Description

QoS policies supported by a **DDSPublisher** (p. 1550) entity.

You must set certain members in a consistent manner:

length of **DDS\_GroupDataQosPolicy::value** (p. 918) <= **DDS\_DomainParticipantResourceLimitsQosPolicy::publisher\_group\_data\_max\_length** (p. 758)

length of **DDS\_PartitionQosPolicy::name** (p. 991) <= **DDS\_DomainParticipantResourceLimitsQosPolicy::max\_partitions** (p. 759)

combined number of characters (including terminating 0) in **DDS\_PartitionQosPolicy::name** (p. 991) <= **DDS\_DomainParticipantResourceLimitsQosPolicy::max\_partition\_cumulative\_characters** (p. 759)

If any of the above are not true, **DDSPublisher::set\_qos** (p. 1568) and **DDSPublisher::set\_qos\_with\_profile** (p. 1569) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) and **DDSDomainParticipant::create\_publisher** (p. 1376) will return NULL.

### 9.144.2 Member Function Documentation

#### 9.144.2.1 operator==( )

```
bool DDS_PublisherQos::operator==(
    const DDS_PublisherQos & r ) const [inline]
```

Compares two PublisherQos objects for equality.

## 9.145 DDS\_PublishModeQosPolicy Struct Reference

Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread.

### Public Attributes

- **DDS\_PublishModeQosPolicyKind** kind  
*Publishing mode.*
- char \* **flow\_controller\_name**  
*Name of the associated flow controller.*
- **DDS\_Long** priority  
*Publication priority.*

### 9.145.1 Detailed Description

Specifies how RTI Connexx sends application data on the network. This QoS policy can be used to tell RTI Connexx to use its *own* thread to send data, instead of the user thread.

The publishing mode of a **DDSDataWriter** (p. 1321) determines whether data is written synchronously in the context of the user thread when calling **FooDataWriter::write** (p. 1683) or asynchronously in the context of a separate thread internal to the middleware.

Each **DDSPublisher** (p. 1550) spawns a single asynchronous publishing thread (**DDS\_AsynchronousPublisherQosPolicy::thread** (p. 592)) to serve all its asynchronous **DDSDataWriter** (p. 1321) instances.

See also

**DDS\_AsynchronousPublisherQosPolicy** (p. 590)

**DDS\_HistoryQosPolicy** (p. 919)

**DDSFlowController** (p. 1468)

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.145.2 Usage

The fastest way for RTI Connexx to send data is for the user thread to execute the middleware code that actually sends the data itself. However, there are times when user applications may need or want an internal middleware thread to send the data instead. For instance, to send large data reliably, you must use an asynchronous thread.

When data is written asynchronously, a **DDSFlowController** (p. 1468), identified by `flow_controller_name`, can be used to shape the network traffic. Shaping a data flow usually means limiting the maximum data rates at which the middleware will send data for a **DDSDataWriter** (p. 1321). The flow controller will buffer any excess data and only send it when the send rate drops below the maximum rate. The flow controller's properties determine when the asynchronous publishing thread is allowed to send data and how much.

Asynchronous publishing may increase latency, but offers the following advantages:

- The **FooDataWriter::write** (p. 1683) call does not make any network calls and is therefore faster and more deterministic. This becomes important when the user thread is executing time-critical code.
- When data is written in bursts or when sending large data types as multiple fragments, a flow controller can throttle the send rate of the asynchronous publishing thread to avoid flooding the network.

- Asynchronously written samples for the same destination will be coalesced into a single network packet which reduces bandwidth consumption.

The maximum number of samples that will be coalesced depends on **NDDS\_Transport\_Property\_t::gather\_send\_↔buffer\_count\_max** (p. 1779) (each sample requires at least 2-4 gather-send buffers). Performance can be improved by increasing **NDDS\_Transport\_Property\_t::gather\_send\_buffer\_count\_max** (p. 1779). Note that the maximum value is operating system dependent.

The middleware must queue samples until they can be sent by the asynchronous publishing thread (as determined by the corresponding **DDSFlowController** (p. 1468)). The number of samples that will be queued is determined by the **DDS\_HistoryQosPolicy** (p. 919). When using **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406), only the most recent **DDS\_HistoryQosPolicy::depth** (p. 921) samples are kept in the queue. Once unsent samples are removed from the queue, they are no longer available to the asynchronous publishing thread and will therefore never be sent.

### 9.145.3 Member Data Documentation

#### 9.145.3.1 kind

```
DDS_PublishModeQosPolicyKind DDS_PublishModeQosPolicy::kind
```

Publishing mode.

[default] **DDS\_SYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431)

#### 9.145.3.2 flow\_controller\_name

```
char* DDS_PublishModeQosPolicy::flow_controller_name
```

Name of the associated flow controller.

The following builtin values are supported:

- **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 121)
- **DDS\_FIXED\_RATE\_FLOW\_CONTROLLER\_NAME** (p. 122)
- **DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 123)

NULL value or zero-length string refers to **DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 121).

## Warning

The value for this field can be one of the constants above or a string allocated with **DDS\_String\_dup()** (p. 553) to specify your own custom flow controller name. You should not assign a string literal. When you assign a new value with **DDS\_String\_dup()** (p. 553), first check if the current value is one of the constants above. If it is, simply replace it; if it's not, you have to release the current string and assign the new one. Here is an example of such an approach:

```
struct DDS_DataWriterQos writer_qos;
char *flow_controller_name = NULL;
DDS_DataWriterQos_initialize(&writer_qos);
...
DDS_Publisher_get_default_datawriter_qos(publisher, &writer_qos);
...
flow_controller_name = writer_qos.publish_mode.flow_controller_name;
if (flow_controller_name == DDS_DEFAULT_FLOW_CONTROLLER_NAME
    || flow_controller_name == DDS_FIXED_RATE_FLOW_CONTROLLER_NAME
    || flow_controller_name == DDS_ON_DEMAND_FLOW_CONTROLLER_NAME) {
    // Since the value was never on the heap, this won't leak memory
    flow_controller_name = NULL;
} else {
    // This means the value is present on the heap
    DDS_String_free(flow_controller_name);
}
// New value using DDS_String_dup() or one of the predefined constants
flow_controller_name = DDS_String_dup("My custom flow controller name");
...
DDS_DataWriterQos_finalize(&writer_qos);
```

The strings allocated with **DDS\_String\_dup()** (p. 553) are released when `writer_qos` is finalized.

More information about string handling can be found under **String Conventions** (p. 552).

## See also

**[default] DDS\_DEFAULT\_FLOW\_CONTROLLER\_NAME** (p. 121)

### 9.145.3.3 priority

**DDS\_Long** `DDS_PublishModeQosPolicy::priority`

Publication priority.

A positive integer value designating the relative priority of the **DDSDataWriter** (p. 1321), used to determine the transmission order of pending writes.

Use of publication priorities requires the asynchronous publisher (**DDS\_ASYNCRONOUS\_PUBLISH\_MODE\_↔\_QOS** (p. 431)) with **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) set to **DDS\_HPF\_FLOW\_↔\_CONTROLLER\_SCHED\_POLICY** (p. 121).

Larger numbers have higher priority.

For multi-channel DataWriters, if the publication priority of any channel is set to any value other than **DDS\_↔\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430), then the channel's priority will take precedence over that of the DataWriter.

For multi-channel DataWriters, if the publication priority of any channel is **DDS\_PUBLICATION\_PRIORITY\_↔\_UNDEFINED** (p. 430), then the channel will inherit the publication priority of the DataWriter.

If the publication priority of the DataWriter, and of any channel of a multi-channel DataWriter, are **DDS\_PUBLICATION\_↔\_PRIORITY\_UNDEFINED** (p. 430), then the priority of the DataWriter or DataWriter channel will be assigned the lowest priority value.

If the publication priority of the DataWriter is **DDS\_PUBLICATION\_PRIORITY\_AUTOMATIC** (p. 430), then the Data↔Writer will be assigned the priority of the largest publication priority of all samples in the DataWriter.

The publication priority of each sample can be set in the **DDS\_WriteParams\_t** (p. 1251) of the **FooDataWriter::write\_↔\_w\_params** (p. 1688) function.

For dispose and unregister samples, use the **DDS\_WriteParams\_t** (p. 1251) of **FooDataWriter::dispose\_w\_params** (p. 1691) and **FooDataWriter::unregister\_instance\_w\_params** (p. 1683).

[default] **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430)

[range] [-1, MAX\_INT]

## 9.146 DDS\_QosPolicyCount Struct Reference

Type to hold a counter for a **DDS\_QosPolicyId\_t** (p. 360).

### Public Attributes

[DDS\\_QosPolicyCount](#) (p. 1029)

## 9.148 DDS\_QosPrintAll\_t Struct Reference

Special type which is used to select the `to_string` overloads when printing Qos objects.

### 9.148.1 Detailed Description

Special type which is used to select the to\_string overloads when printing Qos objects.

This sentinel value is used to select the to\_string overload which prints the entirety of a Qos object (e.g., `DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_QosPrintAll_t&) const` (p. 146)). The only valid value for this type is the sentinel value `DDS_QOS_PRINT_ALL` (p. 164).

For example:

```
DataReaderQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, DDS_QOS_PRINT_ALL);
```

## 9.149 DDS\_QosPrintFormat Struct Reference

A collection of attributes used to configure how a QoS appears when printed.

### Public Attributes

- **DDS\_Boolean is\_standalone**  
*Controls whether or not to print valid XML for this QoS policy (through the inclusion of a preamble).*
- **DDS\_Boolean print\_private**  
*Configures how private QoS policies should be printed.*
- **DDS\_UnsignedLong indent**  
*Configures how much additional indent should be added to the string representation of a QoS.*

### 9.149.1 Detailed Description

A collection of attributes used to configure how a QoS appears when printed.

To ensure that new objects of this type are initialized to a known value, assign them with the static initializer `DDS_QosPrintFormat_INITIALIZER` (p. 360).

### 9.149.2 Member Data Documentation

### 9.149.2.1 is\_standalone

**DDS\_Boolean** DDS\_QosPrintFormat::is\_standalone

Controls whether or not to print valid XML for this QoS policy (through the inclusion of a preamble).

The default value for this property (false) results in QoS being printed starting from the <ENTITY\_qos> tag (where the <ENTITY\_qos> tag is, e.g., <domain\_participant\_qos>, or, <datareader\_qos>. This result cannot be directly parsed as valid XML (as it lacks <dds>, <qos\_library>, and <qos\_profile> tags). If is\_standalone is set to true, these additional tags are printed, resulting in valid, parseable XML.

For example, with is\_standalone set to false, a Qos may appear as:

```
<datareader_qos>
  <durability>
    <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
  </durability>
</datareader_qos>
```

Setting is\_standalone to true would result in the same Qos being printed as:

```
<?xml version="1.0"?>
<dds xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <qos_library name="QosLibrary">
    <qos_profile name="QosProfile">
      <datareader_qos>
        <durability>
          <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
        </durability>
      </datareader_qos>
    </qos_profile>
  </qos_library>
</dds>
```

**[default]** false

### 9.149.2.2 print\_private

**DDS\_Boolean** DDS\_QosPrintFormat::print\_private

Configures how private QoS policies should be printed.

There are some QoS policies which are not intended for external use. By default, these QoS policies are only printed if they are different to the default value for that policy. When true, private policies are treated like any other policy, and printed if they are different to the supplied base QoS. These private policies cannot be parsed from XML, and are always printed as XML comments.

**[default]** false

### 9.149.2.3 indent

`DDS_UnsignedLong DDS_QosPrintFormat::indent`

Configures how much additional indent should be added to the string representation of a QoS.

Configures how much additional indent is applied when converting a QoS to a string. This value acts as a total offset on the string, increasing the indent which is applied to all elements by the same amount. With indent set to 0, a string representation of a QoS may appear as:

```
<datareader_qos>
  <durability>
    <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
  </durability>
</datareader_qos>
```

Setting the indent property to 1, the same QoS would be printed as:

```
  <datareader_qos>
    <durability>
      <kind>TRANSIENT_LOCAL_DURABILITY_QOS</kind>
    </durability>
  </datareader_qos>
```

I.e., the entire structure is indented.

**[default]** 0

## 9.150 DDS\_QueryConditionParams Struct Reference

*Minimum duration for which the **DDSDataReader** (p. 1288) will maintain samples for an instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).*
- struct **DDS\_Duration\_t autopurge\_disposed\_instances\_delay**  
*<<extension>> (p. 237) Minimum duration for which the **DDSDataReader** (p. 1288) will maintain information about a received instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) and there are no samples for the instance in the DataReader queue.*
- struct **DDS\_Duration\_t autopurge\_nowriter\_instances\_delay**  
*<<extension>> (p. 237) Minimum duration for which the **DDSDataReader** (p. 1288) will maintain information about a received instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) and there are no samples for the instance in the DataReader queue.*

### 9.152.1 Detailed Description

Controls how a DataReader manages the lifecycle of the data that it has received.

When a DataReader receives data, it is stored in a receive queue for the DataReader. The user application may either take the data from the queue or leave it there.

This QoS policy controls whether or not RTI Connex will automatically remove data from the receive queue (so that user applications cannot access it afterwards) when it detects that there are no more DataWriters alive for that data. It specifies how long a **DDSDataReader** (p. 1288) must retain information regarding instances that have the `instance_state` **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

Note: This policy is not concerned with keeping reliable reader state or discovery information.

The **DDSDataReader** (p. 1288) internally maintains the samples that have not been "taken" by the application, subject to the constraints imposed by other QoS policies such as **DDS\_HistoryQosPolicy** (p. 919) and **DDS\_ResourceLimitsQosPolicy** (p. 1052).

The **DDSDataReader** (p. 1288) also maintains information regarding the identity, `view_state` and `instance_state` of data instances even after all samples have been taken. This is needed to properly compute the states when future samples arrive.

Under normal circumstances the **DDSDataReader** (p. 1288) can only reclaim all resources for instances for which there are no writers and for which all samples have been 'taken'. The last sample the **DDSDataReader** (p. 1288) will have taken for that instance will have an `instance_state` of either **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) or **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) depending on whether or not the last writer that had ownership of the instance disposed it.

In the absence of **READER\_DATA\_LIFECYCLE** (p. 432), this behavior could cause problems if the application forgets to take those samples. "Untaken" samples will prevent the **DDSDataReader** (p. 1288) from reclaiming the resources and they would remain in the **DDSDataReader** (p. 1288) indefinitely.

A DataReader can also reclaim all resources for instances that have an `instance_state` of **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) and for which all DDS samples have been 'taken'. DataReaders will only reclaim resources in this situation when the `autopurge_disposed_instances_delay` has been set to zero.

For keyed Topics, the consideration of removing data samples from the receive queue is done on a per instance (key) basis. Thus when RTI Connex detects that there are no longer DataWriters alive for a certain key value of a Topic (an instance of the Topic), it can be configured to remove all data samples for that instance (key).

Entity:

**DDSDataReader** (p. 1288)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360)

## 9.152.2 Member Data Documentation

### 9.152.2.1 autopurge\_nowriter\_samples\_delay

```
struct DDS_Duration_t DDS_ReaderDataLifecyleQosPolicy::autopurge_nowriter_samples_delay
```

Minimum duration for which the **DDSDataReader** (p. 1288) will maintain information regarding an instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

At some point after this time elapses, the **DDSDataReader** (p. 1288) will purge all internal information regarding the instance, any "untaken" samples will also be dropped.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326)

**[range]** [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.152.2.2 autopurge\_disposed\_samples\_delay

```
struct DDS_Duration_t DDS_ReaderDataLifecyleQosPolicy::autopurge_disposed_samples_delay
```

Minimum duration for which the **DDSDataReader** (p. 1288) will maintain samples for an instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).

After this time elapses, the **DDSDataReader** (p. 1288) will purge all samples for the instance even if they have not been read by the application. This purge is done lazily when space is needed for other samples or instances.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326)

**[range]** [1 nanosec, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.152.2.3 autopurge\_disposed\_instances\_delay

```
struct DDS_Duration_t DDS_ReaderDataLifecycleQosPolicy::autopurge_disposed_instances_delay
```

<<**extension**>> (p. 237) Minimum duration for which the **DDSDataReader** (p. 1288) will maintain information about a received instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) and there are no samples for the instance in the DataReader queue.

After this time elapses, when the last sample for the disposed instance is taken, the **DDSDataReader** (p. 1288) will keep only the minimum state about the instance.

If you do not want to keep this minimum state after the delay period, also set `keep_minimum_state_for_instances` to `FALSE` in **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).

The only currently supported values are **DDS\_DURATION\_ZERO** (p. 327) and **DDS\_DURATION\_INFINITE** (p. 326). A value of **DDS\_DURATION\_ZERO** (p. 327) will purge an instance's state immediately after the instance state transitions to **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161), as long as all samples, including the dispose sample, associated with that instance have been 'taken'.

[default] **DDS\_DURATION\_INFINITE** (p. 326)

### 9.152.2.4 autopurge\_nowriter\_instances\_delay

```
struct DDS_Duration_t DDS_ReaderDataLifecycleQosPolicy::autopurge_nowriter_instances_delay
```

<<**extension**>> (p. 237) Minimum duration for which the **DDSDataReader** (p. 1288) will maintain information about a received instance once its `instance_state` becomes **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) and there are no samples for the instance in the DataReader queue.

An instance will transition to the **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) `instance_state` when all known writers for the instance have either lost liveliness or have unregistered themselves from the instance. After this time elapses, when the last sample for the instance without writers is taken, the **DDSDataReader** (p. 1288) will keep only the minimum state about the instance.

If you do not want to keep this minimum state after the delay period, also set `keep_minimum_state_for_instances` to `FALSE` in **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).

The only currently supported values are **DDS\_DURATION\_ZERO** (p. 327) and **DDS\_DURATION\_INFINITE** (p. 326). A value of **DDS\_DURATION\_ZERO** (p. 327) will purge an instance's state immediately after the instance state transitions to **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161), as long as all samples, including the `no_writers` sample, associated with that instance have been 'taken'.

[default] **DDS\_DURATION\_ZERO** (p. 327)

## 9.153 DDS\_ReceiverPoolQosPolicy Struct Reference

Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).

## Public Attributes

- struct **DDS\_ThreadSettings\_t** **thread**  
*Receiver pool thread(s).*
- **DDS\_Long** **buffer\_size**  
*The receive buffer size in bytes.*
- **DDS\_Long** **buffer\_alignment**  
*The receive buffer alignment.*

### 9.153.1 Detailed Description

Configures threads used by RTI Connex to receive and process data from transports (for example, UDP sockets).

This QoS policy is an extension to the DDS standard.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

See also

**Controlling CPU Core Affinity for RTI Threads** (p. 352)

### 9.153.2 Usage

This QoS policy sets the thread properties such as priority level and stack size for the threads used by the middleware to receive and process data from transports.

RTI uses a separate receive thread per port per transport plug-in. To force RTI Connex to use a separate thread to process the data for a **DDSDataReader** (p. 1288), set a unique port for the **DDS\_TransportUnicastQosPolicy** (p. 1158) or **DDS\_TransportMulticastQosPolicy** (p. 1151) for the **DDSDataReader** (p. 1288).

This QoS policy also sets the size of the buffer used to store packets received from a transport. This buffer size will limit the largest single packet of data that a **DDSDomainParticipant** (p. 1351) will accept from a transport. Users will often set this size to the largest packet that any of the transports used by their application will deliver. For many applications, the value 65,536 (64 K) is a good choice; this value is the largest packet that can be sent/received via UDP.

### 9.153.3 Member Data Documentation

### 9.153.3.1 thread

```
struct DDS_ThreadSettings_t DDS_ReceiverPoolQosPolicy::thread
```

Receiver pool thread(s).

There is at least one receive thread, possibly more.

**[default]** priority above normal.

The actual value depends on your architecture:

For Windows: 2

For Linux: OS default priority

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** The actual value depends on your architecture:

For Windows: OS default stack size

For Linux: OS default stack size

For a complete list of platform specific values, please refer to `Platform Notes`.

**[default]** mask `DDS_THREAD_SETTINGS_FLOATING_POINT` (p. 352) | `DDS_THREAD_SETTINGS_STUDIO` (p. 352)

### 9.153.3.2 buffer\_size

```
DDS_Long DDS_ReceiverPoolQosPolicy::buffer_size
```

The receive buffer size in bytes.

The receive buffer is used by the receive thread to store the raw data that arrives over the transports in non-zero-copy transports.

Zero-copy transports do not copy their data into the buffer provided by the receive thread. Instead, they provide the receive thread data in buffers allocated by the transports themselves. Only the shared memory built-in transport (SHMEM) supports zero-copy.

`buffer_size` must always be at least as large as the maximum `NDDS_Transport_Property_t::message_size_max` (p. 1779) across *all* of the transports being used that are not doing zero-copy.

By default (`DDS_LENGTH_AUTO` (p. 433)): the size is equal to the maximum `NDDS_Transport_Property_t::message_size_max` (p. 1779) across *all* of the non-zero-copy transports.

You may want the value to be greater than the default if you try to limit the largest data packet that can be sent through the transport(s) in one application, but you still want to receive data from other applications that have not made the same change.

For example, to avoid IP fragmentation, you may want to set `NDDS_Transport_Property_t::message_size_max` (p. 1779) for IP-based transports to a small value, such as 1400 bytes. However, you may not be able to apply this change to all the applications at the same time. To receive data from these other applications the `buffer_size` should be equal to the original `NDDS_Transport_Property_t::message_size_max` (p. 1779).

**[default]** `DDS_LENGTH_AUTO` (p. 433)

**[range]** [1, 1 GB] or `DDS_LENGTH_AUTO` (p. 433)

### 9.153.3.3 buffer\_alignment

`DDS_Long DDS_ReceiverPoolQosPolicy::buffer_alignment`

The receive buffer alignment.

Most users will not need to change this alignment.

**[default]** 16

**[range]** [1,1024] Value must be a power of 2.

## 9.154 DDS\_ReliabilityQosPolicy Struct Reference

Indicates the level of reliability offered/requested by RTI Connex.

### Public Attributes

- **DDS\_ReliabilityQosPolicyKind kind**  
*Kind of reliability.*
- struct **DDS\_Duration\_t max\_blocking\_time**  
*The maximum time a DataWriter can block on a write() call.*
- **DDS\_ReliabilityQosPolicyAcknowledgmentModeKind acknowledgment\_kind**  
<<extension>> (p. 237) *Kind of reliable acknowledgment*
- **DDS\_InstanceStateConsistencyKind instance\_state\_consistency\_kind**  
<<extension>> (p. 237) *Whether instance state consistency is enabled*

### 9.154.1 Detailed Description

Indicates the level of reliability offered/requested by RTI Connex.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344)

Properties:

**RxO** (p. 360) = YES

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360) (the `instance_state_consistency_kind` is **Changeable** (p. 360) = **NO** (p. 360))

## 9.154.2 Usage

This policy indicates the level of reliability requested by a **DDSDataReader** (p. 1288) or offered by a **DDSDataWriter** (p. 1321).

The reliability of a connection between a DataWriter and DataReader is entirely user configurable. It can be done on a per DataWriter/DataReader connection. A connection may be configured to be "best effort" which means that RTI Connext will not use any resources to monitor or guarantee that the data sent by a DataWriter is received by a DataReader.

For some use cases, such as the periodic update of sensor values to a GUI displaying the value to a person, **DDS\_←\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435) delivery is often good enough. It is certainly the fastest, most efficient, and least resource-intensive (CPU and network bandwidth) method of getting the newest/latest value for a topic from DataWriters to DataReaders. But there is no guarantee that the data sent will be received. It may be lost due to a variety of factors, including data loss by the physical transport such as wireless RF or even Ethernet.

However, there are data streams (topics) in which you want an absolute guarantee that all data sent by a DataWriter is received reliably by DataReaders. This means that RTI Connext must check whether or not data was received, and repair any data that was rejected by resending a copy of the data as many times as it takes for the DataReader to receive the data. RTI Connext uses a reliability protocol configured and tuned by these QoS policies: **DDS\_History\_←\_QosPolicy** (p. 919), **DDS\_DataWriterProtocolQosPolicy** (p. 673), **DDS\_DataReaderProtocolQosPolicy** (p. 630), and **DDS\_ResourceLimitsQosPolicy** (p. 1052).

The Reliability QoS policy is simply a switch to turn on the reliability protocol for a DataWriter/DataReader connection. The level of reliability provided by RTI Connext is determined by the configuration of the aforementioned QoS policies.

You can configure RTI Connext to deliver *all* data in the order they were sent (also known as absolute or strict reliability). Or, as a tradeoff for less memory, CPU, and network usage, you can choose a reduced level of reliability where only the last *N* values are guaranteed to be delivered reliably to DataReaders (where *N* is user-configurable). In the reduced level of reliability, there are no guarantees that the data sent before the last *N* are received. Only the last *N* data packets are monitored and repaired if necessary.

These levels are ordered, **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435) < **DDS\_RELIABLE\_RELIABILITY\_←\_QOS** (p. 435). A **DDSDataWriter** (p. 1321) offering one level is implicitly offering all levels below.

Note: To send *large* data reliably, you will also need to set **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431). *Large* in this context means that the data cannot be sent as a single packet by the transport (for example, data larger than 63K when using UDP/IP).

The setting of this policy has a dependency on the setting of the **RESOURCE\_LIMITS** (p. 437) policy. In case the reliability kind is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) the write operation on the **DDSDataWriter** (p. 1321) may block if the modification would cause data to be lost or else cause one of the limits in specified in the **RESOURCE\_←\_LIMITS** (p. 437) to be exceeded. Under these circumstances, the **RELIABILITY** (p. 433) `max_blocking_time` configures the maximum duration the write operation may block.

If the **DDS\_ReliabilityQosPolicy::kind** (p. 1043) is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435), data samples originating from a single **DDSDataWriter** (p. 1321) cannot be made available to the **DDSDataReader** (p. 1288) if there are previous data samples that have not been received yet due to a communication error. In other words, RTI Connext will repair the error and resend data samples as needed in order to reconstruct a correct snapshot of the **DDSDataWriter** (p. 1321) history before it is accessible by the **DDSDataReader** (p. 1288).

If the **DDS\_ReliabilityQosPolicy::kind** (p. 1043) is set to **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435), the service will not re-transmit missing data samples. However, for data samples originating from any one DataWriter the service will ensure they are stored in the **DDSDataReader** (p. 1288) history in the same order they originated in the **DDSDataWriter** (p. 1321). In other words, the **DDSDataReader** (p. 1288) may miss some data samples, but it will never see the value of a data object change from a newer value to an older value.

**DDS\_HistoryQosPolicy** (p. 919)

**DDS\_ResourceLimitsQosPolicy** (p. 1052)

### 9.154.3 Compatibility

The value offered is considered compatible with the value requested if and only if:

- the inequality *offered kind*  $\geq$  *requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of **DDS\_ReliabilityQosPolicy::kind** (p. 1043) are considered ordered such that **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435)  $<$  **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435).
- The offered *acknowledgment\_kind* = **DDS\_PROTOCOL\_ACKNOWLEDGMENT\_MODE** (p.435) and requested *acknowledgment\_kind* = **DDS\_PROTOCOL\_ACKNOWLEDGMENT\_MODE** (p.435) OR offered *acknowledgment\_kind*  $\neq$  **DDS\_PROTOCOL\_ACKNOWLEDGMENT\_MODE** (p. 435).
- the inequality *offered instance\_state\_consistency\_kind*  $\geq$  *requested instance\_state\_consistency\_kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of **DDS\_ReliabilityQosPolicy::instance\_state\_consistency\_kind** (p. 1044) are considered ordered such that **DDS\_NO\_RECOVER\_INSTANCE\_STATE\_CONSISTENCY** (p. 436)  $<$  **DDS\_RECOVER\_INSTANCE\_STATE\_CONSISTENCY** (p. 436).

### 9.154.4 Member Data Documentation

#### 9.154.4.1 kind

```
DDS_ReliabilityQosPolicyKind DDS_ReliabilityQosPolicy::kind
```

Kind of reliability.

**[default]** **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435) for **DDSDataReader** (p. 1288) and **DDSTopic** (p. 1617), **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) for **DDSDataWriter** (p. 1321)

#### 9.154.4.2 max\_blocking\_time

```
struct DDS_Duration_t DDS_ReliabilityQosPolicy::max_blocking_time
```

The maximum time a DataWriter can block on a write() call.

See *Writing Data*, in the Core Libraries User's Manual, for more information about when the write() call can block and what happens when it times out.

Has no meaning for DataReaders.

**[default]** 100 milliseconds

**[range]** [0,1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

See also

**DDS\_ResourceLimitsQosPolicy** (p. 1052)

### 9.154.4.3 acknowledgment\_kind

`DDS_ReliabilityQosPolicyAcknowledgmentModeKind` `DDS_ReliabilityQosPolicy::acknowledgment_kind`

<<*extension*>> (p. 237) Kind of reliable acknowledgment

This setting applies only to the case where `DDS_ReliabilityQosPolicy::kind` (p. 1043) = `DDS_RELIABLE_↔RELIABILITY_QOS` (p. 435).

Sets the kind acknowledgments supported by a `DDSDataWriter` (p. 1321) and sent by `DDSDataReader` (p. 1288).

[default] `DDS_PROTOCOL_ACKNOWLEDGMENT_MODE` (p. 435)

### 9.154.4.4 instance\_state\_consistency\_kind

`DDS_InstanceStateConsistencyKind` `DDS_ReliabilityQosPolicy::instance_state_consistency_kind`

<<*extension*>> (p. 237) Whether instance state consistency is enabled

A DataReader that determines that the DataWriter is no longer alive will transition instances to `NOT_ALIVE_NO_↔WRITERS` if there are no other DataWriters updating that instance. If the DataReader rediscovers the DataWriter, the DataReader does not automatically transition instances back to the state they were in prior to the disconnection until it gets updates (i.e., samples) for them.

If `InstanceStateConsistencyKind` is set to `RECOVER_INSTANCE_STATE_CONSISTENCY`, then when the DataReader rediscovers a DataWriter, the DataReader will query the DataWriter for the state of its instances, and restore the instances to their correct state.

[default] `DDS_NO_RECOVER_INSTANCE_STATE_CONSISTENCY` (p. 436) for `DDSDataReader` (p. 1288), `DDS_↔RECOVER_INSTANCE_STATE_CONSISTENCY` (p. 436) for `DDSDataWriter` (p. 1321)

## 9.155 DDS\_ReliableReaderActivityChangedStatus Struct Reference

<<*extension*>> (p. 237) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.

### Public Attributes

- **DDS\_Long active\_count**  
*The current number of reliable readers currently matched with this reliable writer.*
- **DDS\_Long inactive\_count**  
*The number of reliable readers that have been dropped by this reliable writer because they failed to send acknowledgements in a timely fashion.*
- **DDS\_Long active\_count\_change**  
*The most recent change in the number of active remote reliable readers.*
- **DDS\_Long inactive\_count\_change**  
*The most recent change in the number of inactive remote reliable readers.*
- **DDS\_InstanceHandle\_t last\_instance\_handle**  
*The instance handle of the last reliable remote reader to be determined inactive.*

## 9.155.1 Detailed Description

<<*extension*>> (p. 237) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.

Entity:

**DDSDataWriter** (p. 1321)

Listener:

**DDSDataWriterListener** (p. 1344)

This status is the reciprocal status to the **DDS\_LivelinessChangedStatus** (p. 932) on the reader. It is different than the **DDS\_LivelinessLostStatus** (p. 934) on the writer in that the latter informs the writer about its own liveliness; this status informs the writer about the "liveliness" (activity) of its matched readers.

All counts in this status will remain at zero for best effort writers.

## 9.155.2 Member Data Documentation

### 9.155.2.1 active\_count

**DDS\_Long** DDS\_ReliableReaderActivityChangedStatus::active\_count

The current number of reliable readers currently matched with this reliable writer.

### 9.155.2.2 inactive\_count

**DDS\_Long** DDS\_ReliableReaderActivityChangedStatus::inactive\_count

The number of reliable readers that have been dropped by this reliable writer because they failed to send acknowledgements in a timely fashion.

A reader is considered to be inactive after is has been sent heartbeats **DDS\_RtpsReliableWriterProtocol\_t::max\_heartbeat\_retries** (p. 1066) times, each heartbeat having been separated from the previous by the current heartbeat period.

### 9.155.2.3 active\_count\_change

`DDS_Long DDS_ReliableReaderActivityChangedStatus::active_count_change`

The most recent change in the number of active remote reliable readers.

### 9.155.2.4 inactive\_count\_change

`DDS_Long DDS_ReliableReaderActivityChangedStatus::inactive_count_change`

The most recent change in the number of inactive remote reliable readers.

### 9.155.2.5 last\_instance\_handle

`DDS_InstanceHandle_t DDS_ReliableReaderActivityChangedStatus::last_instance_handle`

The instance handle of the last reliable remote reader to be determined inactive.

## 9.156 DDS\_ReliableWriterCacheChangedStatus Struct Reference

<<*extension*>> (p. 237) A summary of the state of a data writer's cache of unacknowledged samples written.

### Public Attributes

- struct **DDS\_ReliableWriterCacheEventCount empty\_reliable\_writer\_cache**  
*The number of times the reliable writer's cache of unacknowledged samples has become empty.*
- struct **DDS\_ReliableWriterCacheEventCount full\_reliable\_writer\_cache**  
*The number of times the reliable writer's cache, or send window, of unacknowledged samples has become full.*
- struct **DDS\_ReliableWriterCacheEventCount low\_watermark\_reliable\_writer\_cache**  
*The number of times the reliable writer's cache of unacknowledged samples has fallen to the low watermark.*
- struct **DDS\_ReliableWriterCacheEventCount high\_watermark\_reliable\_writer\_cache**  
*The number of times the reliable writer's cache of unacknowledged samples has risen to the high watermark.*
- **DDS\_Long unacknowledged\_sample\_count**  
*The current number of unacknowledged samples in the writer's cache.*
- **DDS\_Long unacknowledged\_sample\_count\_peak**  
*The highest value that unacknowledged\_sample\_count has reached until now.*
- **DDS\_LongLong replaced\_unacknowledged\_sample\_count**  
*The number of unacknowledged samples that have been replaced in the writer's cache.*

### 9.156.1 Detailed Description

<<**extension**>> (p. 237) A summary of the state of a data writer's cache of unacknowledged samples written.

Entity:

**DDSDataWriter** (p. 1321)

Listener:

**DDSDataWriterListener** (p. 1344)

A written sample is unacknowledged (and therefore accounted for in this status) if the writer is reliable and one or more readers matched with the writer has not yet sent an acknowledgement to the writer declaring that it has received the sample.

If the low watermark is zero and the unacknowledged sample count decreases to zero, both the low watermark and cache empty events are considered to have taken place. A single callback will be dispatched (assuming the user has requested one) that contains both status changes. The same logic applies when the high watermark is set equal to the maximum number of samples and the cache becomes full.

### 9.156.2 Member Data Documentation

#### 9.156.2.1 empty\_reliable\_writer\_cache

```
struct DDS_ReliableWriterCacheEventCount DDS_ReliableWriterCacheChangedStatus::empty_reliable_↔
writer_cache
```

The number of times the reliable writer's cache of unacknowledged samples has become empty.

#### 9.156.2.2 full\_reliable\_writer\_cache

```
struct DDS_ReliableWriterCacheEventCount DDS_ReliableWriterCacheChangedStatus::full_reliable_↔
writer_cache
```

The number of times the reliable writer's cache, or send window, of unacknowledged samples has become full.

Applies to writer's cache when the send window is enabled (when both **DDS\_RtpsReliableWriterProtocol\_t::min\_↔\_send\_window\_size** (p. 1072) and **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1073) are not **DDS\_LENGTH\_UNLIMITED** (p. 438)).

Otherwise, applies when the number of unacknowledged samples has reached the send window limit.

### 9.156.2.3 low\_watermark\_reliable\_writer\_cache

```
struct DDS_ReliableWriterCacheEventCount DDS_ReliableWriterCacheChangedStatus::low_watermark_↔
reliable_writer_cache
```

The number of times the reliable writer's cache of unacknowledged samples has fallen to the low watermark.

A low watermark event will only be considered to have taken place when the number of unacknowledged samples in the writer's cache *decreases* to this value. A sample count that increases to this value will not result in a callback or in a change to the total count of low watermark events.

When the writer's send window is enabled, the low watermark is scaled down, if necessary, to fit within the current send window.

Set the low watermark value using the **DDS\_RtpsReliableWriterProtocol\_t::low\_watermark** (p. 1063) field of the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061) structure.

### 9.156.2.4 high\_watermark\_reliable\_writer\_cache

```
struct DDS_ReliableWriterCacheEventCount DDS_ReliableWriterCacheChangedStatus::high_watermark_↔
reliable_writer_cache
```

The number of times the reliable writer's cache of unacknowledged samples has risen to the high watermark.

A high watermark event will only be considered to have taken place when the number of unacknowledged sampled *increases* to this value. A sample count that was above this value and then decreases back to it will not trigger an event.

When the writer's send window is enabled, the high watermark is scaled down, if necessary, to fit within the current send window.

Set the high watermark value using the **DDS\_RtpsReliableWriterProtocol\_t::high\_watermark** (p. 1063) field of the **DDS\_RtpsReliableWriterProtocol\_t** (p. 1061) structure.

### 9.156.2.5 unacknowledged\_sample\_count

```
DDS_Long DDS_ReliableWriterCacheChangedStatus::unacknowledged_sample_count
```

The current number of unacknowledged samples in the writer's cache.

A sample is considered unacknowledged if the writer has failed to receive an acknowledgement from one or more reliable readers matched to it.

### 9.156.2.6 unacknowledged\_sample\_count\_peak

```
DDS_Long DDS_ReliableWriterCacheChangedStatus::unacknowledged_sample_count_peak
```

The highest value that `unacknowledged_sample_count` has reached until now.

### 9.156.2.7 replaced\_unacknowledged\_sample\_count

```
DDS_LongLong DDS_ReliableWriterCacheChangedStatus::replaced_unacknowledged_sample_count
```

The number of unacknowledged samples that have been replaced in the writer's cache.

Total number of unacknowledged samples that have been replaced by a DataWriter after applying **DDS\_KEEP\_LAST**↔  
**\_HISTORY\_QOS** (p. 406) policy.

## 9.157 DDS\_ReliableWriterCacheEventCount Struct Reference

<<*extension*>> (p. 237) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.

### Public Attributes

- **DDS\_Long total\_count**  
*The total number of times the event has occurred.*
- **DDS\_Long total\_count\_change**  
*The incremental number of times the event has occurred since the listener was last invoked or the status read.*

### 9.157.1 Detailed Description

<<*extension*>> (p. 237) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.

The threshold interpretation depends on the usage of this data type in **DDS\_ReliableWriterCacheChangedStatus** (p. 1046).

See also

**DDS\_ReliableWriterCacheChangedStatus** (p. 1046)

### 9.157.2 Member Data Documentation

#### 9.157.2.1 total\_count

```
DDS_Long DDS_ReliableWriterCacheEventCount::total_count
```

The total number of times the event has occurred.

### 9.157.2.2 total\_count\_change

`DDS_Long DDS_ReliableWriterCacheEventCount::total_count_change`

The incremental number of times the event has occurred since the listener was last invoked or the status read.

## 9.158 DDS\_RequestedDeadlineMissedStatus Struct Reference

`DDS_REQUESTED_DEADLINE_MISSED_STATUS` (p. 344)

### Public Attributes

- **DDS\_Long total\_count**  
*Total cumulative count of the deadlines detected for any instance read by the `DDSDataReader` (p. 1288).*
- **DDS\_Long total\_count\_change**  
*The incremental number of deadlines detected since the last time the listener was called or the status was read.*
- **DDS\_InstanceHandle\_t last\_instance\_handle**  
*Handle to the last instance in the `DDSDataReader` (p. 1288) for which a deadline was detected.*

### 9.158.1 Detailed Description

`DDS_REQUESTED_DEADLINE_MISSED_STATUS` (p. 344)

### 9.158.2 Member Data Documentation

#### 9.158.2.1 total\_count

`DDS_Long DDS_RequestedDeadlineMissedStatus::total_count`

Total cumulative count of the deadlines detected for any instance read by the `DDSDataReader` (p. 1288).

#### 9.158.2.2 total\_count\_change

`DDS_Long DDS_RequestedDeadlineMissedStatus::total_count_change`

The incremental number of deadlines detected since the last time the listener was called or the status was read.

### 9.158.2.3 last\_instance\_handle

`DDS_InstanceHandle_t DDS_RequestedDeadlineMissedStatus::last_instance_handle`

Handle to the last instance in the `DDSDataReader` (p. 1288) for which a deadline was detected.

## 9.159 DDS\_RequestedIncompatibleQoSStatus Struct Reference

`DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS` (p. 344)

### Public Attributes

- `DDS_Long total_count`

*Total cumulative count of how many times the concerned `DDSDataReader` (p. 1288) discovered a `DDSDataWriter` (p. 1321) for the same `DDSTopic` (p. 1617) with an offered QoS that is incompatible with that requested by the `DDSDataReader` (p. 1288).*

- `DDS_Long total_count_change`

*The change in `total_count` since the last time the listener was called or the status was read.*

- `DDS_QosPolicyId_t last_policy_id`

*The `DDS_QosPolicyId_t` (p. 360) of one of the policies that was found to be incompatible the last time an incompatibility was detected.*

- struct `DDS_QosPolicyCountSeq policies`

*A list containing, for each policy, the total number of times that the concerned `DDSDataReader` (p. 1288) discovered a `DDSDataWriter` (p. 1321) for the same `DDSTopic` (p. 1617) with an offered QoS that is incompatible with that requested by the `DDSDataReader` (p. 1288).*

### 9.159.1 Detailed Description

`DESTINATION_ORDER` (p. 386)

### 9.159.2 Member Data Documentation

### 9.159.2.1 total\_count

```
DDS_Long DDS_RequestedIncompatibleQosStatus::total_count
```

Total cumulative count of how many times the concerned **DDSDataReader** (p. 1288) discovered a **DDSDataWriter** (p. 1321) for the same **DDSTopic** (p. 1617) with an offered QoS that is incompatible with that requested by the **DDSDataReader** (p. 1288).

### 9.159.2.2 total\_count\_change

```
DDS_Long DDS_RequestedIncompatibleQosStatus::total_count_change
```

The change in `total_count` since the last time the listener was called or the status was read.

### 9.159.2.3 last\_policy\_id

```
DDS_QosPolicyId_t DDS_RequestedIncompatibleQosStatus::last_policy_id
```

The **DDS\_QosPolicyId\_t** (p. 360) of one of the policies that was found to be incompatible the last time an incompatibility was detected.

### 9.159.2.4 policies

```
struct DDS_QosPolicyCountSeq DDS_RequestedIncompatibleQosStatus::policies
```

A list containing, for each policy, the total number of times that the concerned **DDSDataReader** (p. 1288) discovered a **DDSDataWriter** (p. 1321) for the same **DDSTopic** (p. 1617) with an offered QoS that is incompatible with that requested by the **DDSDataReader** (p. 1288).

## 9.160 DDS\_ResourceLimitsQosPolicy Struct Reference

Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

## Public Attributes

- **DDS\_Long max\_samples**  
*Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)).*
- **DDS\_Long max\_instances**  
*Represents the maximum number of instances a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) can manage.*
- **DDS\_Long max\_samples\_per\_instance**  
*Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) can manage.*
- **DDS\_Long initial\_samples**  
*<<extension>> (p. 237) Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)).*
- **DDS\_Long initial\_instances**  
*<<extension>> (p. 237) Represents the initial number of instances a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) will manage.*
- **DDS\_Long instance\_hash\_buckets**  
*<<extension>> (p. 237) Number of hash buckets for instances.*

### 9.160.1 Detailed Description

Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

Entity:

**DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Status:

**DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345), **DDS\_SampleRejectedStatus** (p. 1094)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = UNTIL ENABLE (p. 360)

### 9.160.2 Usage

This policy controls the resources that RTI Connext can use to meet the requirements imposed by the application and other QoS settings.

For the reliability protocol (and **DDS\_DurabilityQosPolicy** (p. 767)), this QoS policy determines the actual maximum queue size when the **DDS\_HistoryQosPolicy** (p. 919) is set to **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406).

In general, this QoS policy is used to limit the amount of system memory that RTI Connext can allocate. For embedded real-time systems and safety-critical systems, pre-determination of maximum memory usage is often required. In addition, dynamic memory allocation could introduce non-deterministic latencies in time-critical paths.

This QoS policy can be set such that an entity does not dynamically allocate any more memory after its initialization phase.

If **DDSDataWriter** (p. 1321) objects are communicating samples faster than they are ultimately taken by the **DDSDataReader** (p. 1288) objects, the middleware will eventually hit against some of the QoS-imposed resource limits. Note that this may occur when just a single **DDSDataReader** (p. 1288) cannot keep up with its corresponding **DDSDataWriter** (p. 1321). The behavior in this case depends on the setting for the **RELIABILITY** (p. 433). If reliability is **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435), then RTI Connext is allowed to drop samples. If the reliability is **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435), RTI Connext will block the **DDSDataWriter** (p. 1321) or discard the sample at the **DDSDataReader** (p. 1288) in order not to lose existing samples.

The constant **DDS\_LENGTH\_UNLIMITED** (p. 438) may be used to indicate the absence of a particular limit. For example setting **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055) to **DDS\_LENGTH\_UNLIMITED** (p. 438) will cause RTI Connext not to enforce this particular limit.

If these resource limits are not set sufficiently, under certain circumstances the **DDSDataWriter** (p. 1321) may block on a write() call even though the **DDS\_HistoryQosPolicy** (p. 919) is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406). To guarantee the writer does not block for **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406), make sure the resource limits are set such that:

```
max_samples >= max_instances * max_samples_per_instance
```

See also

**DDS\_ReliabilityQosPolicy** (p. 1041)

**DDS\_HistoryQosPolicy** (p. 919)

### 9.160.3 Consistency

The setting of **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) must be consistent with **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055). For these two values to be consistent, it must be true that **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055)  $\geq$  **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055). As described above, this limit will not be enforced if **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055) is set to **DDS\_LENGTH\_UNLIMITED** (p. 438).

The setting of **RESOURCE\_LIMITS** (p. 437) `max_samples_per_instance` must be consistent with the **HISTORY** (p. 405) `depth`. For these two QoS to be consistent, it must be true that `depth`  $\leq$  `max_samples_per_instance`.

See also

**DDS\_HistoryQosPolicy** (p. 919)

## 9.160.4 Member Data Documentation

### 9.160.4.1 max\_samples

**DDS\_Long** DDS\_ResourceLimitsQosPolicy::max\_samples

Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)).

Specifies the maximum number of data samples a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) can manage across all the instances associated with it.

For unkeyed types, this value has to be equal to max\_samples\_per\_instance if max\_samples\_per\_instance is not equal to **DDS\_LENGTH\_UNLIMITED** (p. 438).

When batching is enabled, the maximum number of data samples a **DDSDataWriter** (p. 1321) can manage will also be limited by **DDS\_DataWriterResourceLimitsQosPolicy::max\_batches** (p. 700).

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_samples,  $\geq$  max\_samples\_per\_instance,  $\geq$  **DDS\_DataReaderResourceLimitsQosPolicy::max\_samples\_per\_remote\_writer** (p. 657) or  $\geq$  **DDS\_RtpsReliableWriterProtocol\_t::heartbeats\_per\_max\_samples** (p. 1067)

For **DDS\_DataWriterQos** (p. 689) max\_samples  $\geq$  **DDS\_RtpsReliableWriterProtocol\_t::heartbeats\_per\_max\_samples** (p. 1067) in **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677) if batching is disabled.

### 9.160.4.2 max\_instances

**DDS\_Long** DDS\_ResourceLimitsQosPolicy::max\_instances

Represents the maximum number of instances a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) can manage.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  initial\_instances

### 9.160.4.3 max\_samples\_per\_instance

**DDS\_Long** DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance

Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) can manage.

While an unkeyed type is logically considered as a single instance, for unkeyed types this value has to be equal to max\_samples or **DDS\_LENGTH\_UNLIMITED** (p. 438).

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\leq$  max\_samples or **DDS\_LENGTH\_UNLIMITED** (p. 438),  $\geq$  **DDS\_HistoryQosPolicy::depth** (p. 921)

#### 9.160.4.4 initial\_samples

`DDS_Long DDS_ResourceLimitsQosPolicy::initial_samples`

<<*extension*>> (p. 237) Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)).

Specifies the initial number of data samples a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) will manage across all the instances associated with it.

**[default]** 32

**[range]** [1,100 million], <= max\_samples

#### 9.160.4.5 initial\_instances

`DDS_Long DDS_ResourceLimitsQosPolicy::initial_instances`

<<*extension*>> (p. 237) Represents the initial number of instances a **DDSDataWriter** (p. 1321) (or **DDSDataReader** (p. 1288)) will manage.

**[default]** 32

**[range]** [1,1 million], <= max\_instances

#### 9.160.4.6 instance\_hash\_buckets

`DDS_Long DDS_ResourceLimitsQosPolicy::instance_hash_buckets`

<<*extension*>> (p. 237) Number of hash buckets for instances.

The instance hash table facilitates instance lookup. A higher number of buckets decreases instance lookup time but increases the memory usage.

**[default]** 1 **[range]** [1,1 million]

## 9.161 DDS\_RTPS\_EntityId\_t Struct Reference

From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.

### 9.161.1 Detailed Description

From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

## 9.162 DDS\_RTPS\_GUID\_t Struct Reference

From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.

### 9.162.1 Detailed Description

From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

## 9.163 DDS\_RtpsReliableReaderProtocol\_t Struct Reference

Qos related to reliable reader protocol defined in RTPS.

### Public Attributes

- struct **DDS\_Duration\_t min\_heartbeat\_response\_delay**  
*The minimum delay to respond to a heartbeat.*
- struct **DDS\_Duration\_t max\_heartbeat\_response\_delay**  
*The maximum delay to respond to a heartbeat.*
- struct **DDS\_Duration\_t heartbeat\_suppression\_duration**  
*The duration a reader ignores consecutively received heartbeats.*
- struct **DDS\_Duration\_t nack\_period**  
*The period at which to send NACKs.*
- **DDS\_Long receive\_window\_size**  
*The number of received out-of-order samples a reader can keep at a time.*
- struct **DDS\_Duration\_t round\_trip\_time**  
*The duration from sending a NACK to receiving a repair of a sample.*
- struct **DDS\_Duration\_t app\_ack\_period**  
*The period at which application-level acknowledgment messages are sent.*
- struct **DDS\_Duration\_t min\_app\_ack\_response\_keep\_duration**  
*Minimum duration for which application-level acknowledgment response data is kept.*
- **DDS\_Long samples\_per\_app\_ack**  
*The minimum number of samples acknowledged by one application-level acknowledgment message.*

### 9.163.1 Detailed Description

Qos related to reliable reader protocol defined in RTPS.

It is used to config reliable reader according to RTPS protocol.

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

QoS:

**DDS\_DataReaderProtocolQosPolicy** (p. 630) **DDS\_DiscoveryConfigQosPolicy** (p. 712)

## 9.163.2 Member Data Documentation

### 9.163.2.1 min\_heartbeat\_response\_delay

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::min_heartbeat_response_delay
```

The minimum delay to respond to a heartbeat.

When a reliable reader receives a heartbeat from a remote writer and finds out that it needs to send back an ACK/NACK message, the reader can choose to delay a while. This sets the value of the minimum delay.

**[default]** 0 seconds

**[range]** [0, 1 year], <= max\_heartbeat\_response\_delay

### 9.163.2.2 max\_heartbeat\_response\_delay

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::max_heartbeat_response_delay
```

The maximum delay to respond to a heartbeat.

When a reliable reader receives a heartbeat from a remote writer and finds out that it needs to send back an ACK/NACK message, the reader can choose to delay a while. This sets the value of maximum delay.

**[default]** The default value depends on the container policy:

- For **DDS\_DataReaderProtocolQosPolicy::rtps\_reliable\_reader** (p. 633): 0.5 seconds
- For **DDS\_DiscoveryConfigQosPolicy::publication\_reader** (p. 718): 0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_reader** (p. 718): 0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_reader** (p. 721): 0 seconds

**[range]** [0, 1 year], >= min\_heartbeat\_response\_delay

### 9.163.2.3 heartbeat\_suppression\_duration

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::heartbeat_suppression_duration
```

The duration a reader ignores consecutively received heartbeats.

When a reliable reader receives consecutive heartbeats within a short duration that will trigger redundant NACKs, the reader may ignore the latter heartbeat(s). This sets the duration during which additionally received heartbeats are suppressed.

**[default]** 0.0625 seconds

**[range]** [0, 1 year],

### 9.163.2.4 nack\_period

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::nack_period
```

The period at which to send NACKs.

A reliable reader will send periodic NACKs at this rate when it first matches with a reliable writer. The reader will stop sending NACKs when it has received all available historical data from the writer.

**[default]** 5 seconds

**[range]** [1 nanosec, 1 year]

### 9.163.2.5 receive\_window\_size

```
DDS_Long DDS_RtpsReliableReaderProtocol_t::receive_window_size
```

The number of received out-of-order samples a reader can keep at a time.

A reliable reader stores the out-of-order samples it receives until it can present them to the application in-order. The receive window is the maximum number of out-of-order samples that a reliable reader keeps at a given time. When the receive window is full, subsequently received out-of-order samples are dropped.

**[default]** 256

**[range]** [ $\geq 1$ ]

### 9.163.2.6 round\_trip\_time

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::round_trip_time
```

The duration from sending a NACK to receiving a repair of a sample.

This round-trip time is an estimate of the time starting from when the reader sends a NACK for a specific sample to when it receives that sample. For each sample, the reader will not send a subsequent NACK for it until the round-trip time has passed, thus preventing inefficient redundant requests.

**[default]** 0 seconds

**[range]** [0 nanosec, 1 year]

### 9.163.2.7 app\_ack\_period

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::app_ack_period
```

The period at which application-level acknowledgment messages are sent.

A **DDSDataReader** (p. 1288) sends application-level acknowledgment messages to a **DDSDataWriter** (p. 1321) at this periodic rate, and will continue sending until it receives a message from the **DDSDataWriter** (p. 1321) that it has received and processed the acknowledgment and an AppAckConfirmation has been received by the **DDSDataReader** (p. 1288). Note: application-level acknowledgment messages can also be sent non-periodically, as determined by **DDS\_RtpsReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1060).

**[default]** 5 seconds

**[range]** [1 nanosec, 1 year]

### 9.163.2.8 min\_app\_ack\_response\_keep\_duration

```
struct DDS_Duration_t DDS_RtpsReliableReaderProtocol_t::min_app_ack_response_keep_duration
```

Minimum duration for which application-level acknowledgment response data is kept.

The user-specified response data of an explicit application-level acknowledgment (called by **DDSDataReader::acknowledge\_sample** (p. 1296) or **DDSDataReader::acknowledge\_all** (p. 1297)) is cached by the **DDSDataReader** (p. 1288) for the purpose of reliably resending the data with the acknowledgment message. After this duration has passed from the time of the first acknowledgment, the response data is dropped from the cache and will not be resent with future acknowledgments for the corresponding sample(s).

**[default]** 0 sec

**[range]** [0 sec, 1 year]

### 9.163.2.9 samples\_per\_app\_ack

**DDS\_Long** DDS\_RtpsReliableReaderProtocol\_t::samples\_per\_app\_ack

The minimum number of samples acknowledged by one application-level acknowledgment message.

This setting applies only when **DDS\_ReliabilityQosPolicy::acknowledgment\_kind** (p. 1043) = **DDS\_APPLICATION\_←\_EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436) or **DDS\_APPLICATION\_AUTO\_ACKNOWLEDGMENT\_MODE** (p. 435)

A **DDSDataReader** (p. 1288) will immediately send an application-level acknowledgment message when it has at least this many samples that have been acknowledged. It will not send an acknowledgment message until it has at least this many samples pending acknowledgment.

For example, calling **DDSDataReader::acknowledge\_sample** (p. 1296) this many times consecutively will trigger the sending of an acknowledgment message. Calling **DDSDataReader::acknowledge\_all** (p. 1297) may trigger the sending of an acknowledgment message, if at least this many samples are being acknowledged at once.

This is independent of the **DDS\_RtpsReliableReaderProtocol\_t::app\_ack\_period** (p. 1060), where a **DDSData←Reader** (p. 1288) will send acknowledgement messages at the periodic rate regardless.

When this is set to **DDS\_LENGTH\_UNLIMITED** (p. 438), then acknowledgement messages are sent only periodically, at the rate set by **DDS\_RtpsReliableReaderProtocol\_t::app\_ack\_period** (p. 1060).

[default] 1

[range] [1, 1000000], or **DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.164 DDS\_RtpsReliableWriterProtocol\_t Struct Reference

QoS related to the reliable writer protocol defined in RTPS.

### Public Attributes

- **DDS\_Long low\_watermark**

*When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is considered to have changed.*

- **DDS\_Long high\_watermark**

*When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is considered to have changed.*

- struct **DDS\_Duration\_t heartbeat\_period**

*The period at which to send heartbeats.*

- struct **DDS\_Duration\_t fast\_heartbeat\_period**

*An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.*

- struct **DDS\_Duration\_t late\_joiner\_heartbeat\_period**

*An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.*

- struct **DDS\_Duration\_t virtual\_heartbeat\_period**

The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.

- **DDS\_Long samples\_per\_virtual\_heartbeat**  
The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
- **DDS\_Long max\_heartbeat\_retries**  
The maximum number of periodic heartbeat retries before marking a remote reader as inactive.
- **DDS\_Boolean inactivate\_nonprogressing\_readers**  
Whether to treat remote readers as inactive when their NACKs do not progress.
- **DDS\_Long heartbeats\_per\_max\_samples**  
The number of piggyback heartbeats sent per max send window.
- struct **DDS\_Duration\_t min\_nack\_response\_delay**  
The minimum delay to respond to a NACK.
- struct **DDS\_Duration\_t max\_nack\_response\_delay**  
The maximum delay to respond to a nack.
- struct **DDS\_Duration\_t nack\_suppression\_duration**  
The duration for ignoring consecutive NACKs that may trigger redundant repairs.
- **DDS\_Long max\_bytes\_per\_nack\_response**  
The maximum total message size when resending rejected samples.
- struct **DDS\_Duration\_t disable\_positive\_acks\_min\_sample\_keep\_duration**  
The minimum duration a sample is queued for ACK-disabled readers.
- struct **DDS\_Duration\_t disable\_positive\_acks\_max\_sample\_keep\_duration**  
The maximum duration a sample is queued for ACK-disabled readers.
- **DDS\_Boolean disable\_positive\_acks\_enable\_adaptive\_sample\_keep\_duration**  
Enables dynamic adjustment of sample keep duration in response to congestion.
- **DDS\_Long disable\_positive\_acks\_decrease\_sample\_keep\_duration\_factor**  
Controls rate of contraction of dynamic sample keep duration.
- **DDS\_Long disable\_positive\_acks\_increase\_sample\_keep\_duration\_factor**  
Controls rate of growth of dynamic sample keep duration.
- **DDS\_Long min\_send\_window\_size**  
Minimum size of send window of unacknowledged samples.
- **DDS\_Long max\_send\_window\_size**  
Maximum size of send window of unacknowledged samples.
- struct **DDS\_Duration\_t send\_window\_update\_period**  
Period in which send window may be dynamically changed.
- **DDS\_Long send\_window\_increase\_factor**  
Increases send window size by this percentage when reacting dynamically to network conditions.
- **DDS\_Long send\_window\_decrease\_factor**  
Decreases send window size by this percentage when reacting dynamically to network conditions.
- **DDS\_Boolean enable\_multicast\_periodic\_heartbeat**  
Whether periodic heartbeat messages are sent over multicast.
- **DDS\_Long multicast\_resend\_threshold**  
The minimum number of requesting readers needed to trigger a multicast resend.
- **DDS\_Boolean disable\_repair\_piggyback\_heartbeat**  
Prevents piggyback heartbeats from being sent with repair samples.

### 9.164.1 Detailed Description

QoS related to the reliable writer protocol defined in RTPS.

It is used to configure a reliable writer according to RTPS protocol.

The reliability protocol settings are applied to batches instead of individual data samples when batching is enabled.

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

QoS:

**DDS\_DataWriterProtocolQosPolicy** (p. 673) **DDS\_DiscoveryConfigQosPolicy** (p. 712)

### 9.164.2 Member Data Documentation

#### 9.164.2.1 low\_watermark

**DDS\_Long** DDS\_RtpsReliableWriterProtocol\_t::low\_watermark

When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is considered to have changed.

This value is measured in units of samples, except with batching configurations where it is measured in units of batches.

The value must be greater than or equal to zero and strictly less than high\_watermark.

The high and low watermarks are used for switching between the regular and fast heartbeat rates (**DDS\_RtpsReliableWriterProtocol\_t::heartbeat\_period** (p. 1064) and **DDS\_RtpsReliableWriterProtocol\_t::fast\_heartbeat\_period** (p. 1064), respectively). When the number of unacknowledged samples in the queue of a reliable **DDSDataWriter** (p. 1321) meets or exceeds high\_watermark, the **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is changed, and the DataWriter will start heartbeating at **DDS\_RtpsReliableWriterProtocol\_t::fast\_heartbeat\_period** (p. 1064). When the number of samples meets or falls below low\_watermark, **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is changed, and the heartbeat rate will return to the "normal" rate (**DDS\_RtpsReliableWriterProtocol\_t::heartbeat\_period** (p. 1064)).

**[default]** 0

**[range]** [0, 100 million], < high\_watermark

### 9.164.2.2 high\_watermark

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::high_watermark
```

When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349) is considered to have changed.

This value is measured in units of samples, except with batching configurations where it is measured in units of batches.

The value must be strictly greater than `low_watermark` and less than or equal to a maximum that depends on the container QoS policy:

In **DDS\_DomainParticipantQos::discovery\_config** (p. 745):

For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719)

`high_watermark <= DDS_AllocationSettings_t::max_count` (p. 589) in **DDS\_DomainParticipantResourceLimits**↔  
**QosPolicy::local\_writer\_allocation** (p. 750)

For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720)

`high_watermark <= DDS_AllocationSettings_t::max_count` (p. 589) in **DDS\_DomainParticipantResourceLimits**↔  
**QosPolicy::local\_reader\_allocation** (p. 750)

In **DDS\_DataWriterQos::protocol** (p. 695):

For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677),

`high_watermark <= DDS_ResourceLimitsQosPolicy::max_samples` (p. 1055) if batching is disabled. Otherwise,  
`high_watermark <= DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 700) `high_watermark <= DDS_↔`  
**RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1073)

**[default]** 1

**[range]** [1, 100 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438), `> low_watermark <= maximum` which depends on the container policy

### 9.164.2.3 heartbeat\_period

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::heartbeat_period
```

The period at which to send heartbeats.

A reliable writer will send periodic heartbeats at this rate.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 1.0 seconds

**[range]** [1 nanosec, 1 year], `>= DDS_RtpsReliableWriterProtocol_t::fast_heartbeat_period` (p. 1064), `>= DDS_↔`  
**RtpsReliableWriterProtocol\_t::late\_joiner\_heartbeat\_period** (p. 1065)

#### 9.164.2.4 fast\_heartbeat\_period

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::fast_heartbeat_period
```

An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.

This heartbeat period will be used when the number of unacknowledged samples in the cache of a reliable writer meets or exceeds the writer's high watermark and has not subsequently dropped to the low watermark. The normal period will be used at all other times.

This period must not be slower (i.e. must be of the same or shorter duration) than the normal heartbeat period.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 3.0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 1.0 seconds

**[range]** [1 nanosec,1 year], <= **DDS\_RtpsReliableWriterProtocol\_t::heartbeat\_period** (p. 1064)

#### 9.164.2.5 late\_joiner\_heartbeat\_period

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::late_joiner_heartbeat_period
```

An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.

This heartbeat period will be used when a reliable reader joins after a reliable writer with non-volatile durability has begun publishing samples. Once the reliable reader has received all cached samples, it will be serviced at the same rate as other reliable readers.

This period must not be slower (i.e., must be of the same or shorter duration) than the normal heartbeat period.

A reliable writer will use whichever heartbeat period is faster, the current heartbeat period being used for other reliable readers or the **DDS\_RtpsReliableWriterProtocol\_t::late\_joiner\_heartbeat\_period** (p. 1065), to service the late joining reader. This means that if the **DDS\_RtpsReliableWriterProtocol\_t::fast\_heartbeat\_period** (p. 1064) is currently being used and is faster than the `late_joiner_heartbeat_period`, then the `fast_heartbeat_period` will continue to be used for the late joiner as well.

**[default]** The default value depends on the container policy:

- For `DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer` (p. 677): 3.0 seconds
- For `DDS_DiscoveryConfigQosPolicy::publication_writer` (p. 719): 3.0 seconds
- For `DDS_DiscoveryConfigQosPolicy::subscription_writer` (p. 720): 3.0 seconds
- For `DDS_DiscoveryConfigQosPolicy::participant_message_writer` (p. 722): 1.0 seconds

**[range]** [1 nanosec,1 year], <= `DDS_RtpsReliableWriterProtocol_t::heartbeat_period` (p. 1064)

### 9.164.2.6 virtual\_heartbeat\_period

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::virtual_heartbeat_period
```

The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.

A reliable writer will send periodic virtual heartbeats at this rate.

**[default]** The default value depends on the container policy:

- For `DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer` (p. 677): `DDS_DURATION_AUTO` (p. 327). If `DDS_PresentationQosPolicy::access_scope` (p. 1000) is set to `DDS_GROUP_PRESENTATION_QOS` (p. 418) on the DataWriter, this value is set to `DDS_RtpsReliableWriterProtocol_t::heartbeat_period` (p. 1064). Otherwise, the value is set to `DDS_DURATION_INFINITE` (p. 326).
- For `DDS_DiscoveryConfigQosPolicy::publication_writer` (p. 719): `DDS_DURATION_INFINITE` (p. 326)
- For `DDS_DiscoveryConfigQosPolicy::subscription_writer` (p. 720): `DDS_DURATION_INFINITE` (p. 326)
- For `DDS_DiscoveryConfigQosPolicy::participant_message_writer` (p. 722): `DDS_DURATION_INFINITE` (p. 326)

**[range]** > 1 nanosec, `DDS_DURATION_INFINITE` (p. 326), or `DDS_DURATION_AUTO` (p. 327)

### 9.164.2.7 samples\_per\_virtual\_heartbeat

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::samples_per_virtual_heartbeat
```

The number of samples that a reliable writer has to publish before sending a virtual heartbeat.

**[default]** `DDS_LENGTH_UNLIMITED` (p. 438)

**[range]** [1,1000000], `DDS_LENGTH_UNLIMITED` (p. 438)

### 9.164.2.8 max\_heartbeat\_retries

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::max_heartbeat_retries
```

The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.

When a remote reader has not acked all the samples the reliable writer has in its queue, and max\_heartbeat\_retries number of periodic heartbeats has been sent without receiving any ack/nack back, the remote reader will be marked as inactive (not alive) and be ignored until it resumes sending ack/nack.

Note that piggyback heartbeats do NOT count towards this value.

**[default]** 10

**[range]** [1, 1 million] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.164.2.9 inactivate\_nonprogressing\_readers

```
DDS_Boolean DDS_RtpsReliableWriterProtocol_t::inactivate_nonprogressing_readers
```

Whether to treat remote readers as inactive when their NACKs do not progress.

Nominally, a remote reader is marked inactive when a successive number of periodic heartbeats equal or greater than **DDS\_RtpsReliableWriterProtocol\_t::max\_heartbeat\_retries** (p. 1066) have been sent without receiving any ack/nacks back.

By setting this **DDS\_BOOLEAN\_TRUE** (p. 317), it changes the conditions of inactivating a remote reader: a reader will be considered inactive when it either does not send any ack/nacks or keeps sending non-progressing nacks for **DDS\_RtpsReliableWriterProtocol\_t::max\_heartbeat\_retries** (p. 1066) number of heartbeat periods, where a non-progressing nack is one whose oldest sample requested has not advanced from the oldest sample requested of the previous nack.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.164.2.10 heartbeats\_per\_max\_samples

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::heartbeats_per_max_samples
```

The number of piggyback heartbeats sent per max send window.

When a DataWriter is configured with a fixed send window size (**DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1072) is equal to effective max\_send\_window\_size), a piggyback heartbeat is sent every [(effective max send window size/heartbeats\_per\_max\_samples)] number of samples written.

Otherwise, the number of piggyback heartbeats sent is scaled according to the current size of the send window. For example, consider a **DDS\_RtpsReliableWriterProtocol\_t::heartbeats\_per\_max\_samples** (p. 1067) of 50. If the current send window size is 100, a piggyback heartbeat will be sent every 2 samples. If the send window size grows to 150, a piggyback heartbeat will be sent every 3 samples, and so on. Additionally, when the send window size grows, a piggyback heartbeat is sent with the next sample. (If it weren't, the sending of that heartbeat could be delayed, since the heartbeat rate scales with the increasing window size.)

The effective max send window is calculated as follows:

Without batching:

`min (DDS_ResourceLimitsQosPolicy::max_samples (p. 1055), DDS_RtpsReliableWriterProtocol_t::max_send_window_size (p. 1073))`

With batching:

`min (DDS_DataWriterResourceLimitsQosPolicy::max_batches (p. 700), DDS_RtpsReliableWriterProtocol_t::max_send_window_size (p. 1073))`

If `heartbeats_per_max_samples` is set to zero, no piggyback heartbeats will be sent.

If current send window size is `DDS_LENGTH_UNLIMITED` (p. 438), 100 million is assumed as the effective max send window.

**[default]** The default value depends on the container policy:

- For `DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer` (p. 677): 8
- For `DDS_DiscoveryConfigQosPolicy::publication_writer` (p. 719): 8
- For `DDS_DiscoveryConfigQosPolicy::subscription_writer` (p. 720): 8
- For `DDS_DiscoveryConfigQosPolicy::participant_message_writer` (p. 722): 1

**[range]** [0, 100 million]

- For `DDS_DiscoveryConfigQosPolicy::publication_writer` (p. 719):  
`heartbeats_per_max_samples` ≤ `DDS_AllocationSettings_t::max_count` (p. 589) in `DDS_Domain` ↔ `ParticipantResourceLimitsQosPolicy::local_writer_allocation` (p. 750)
- For `DDS_DiscoveryConfigQosPolicy::subscription_writer` (p. 720):  
`heartbeats_per_max_samples` ≤ `DDS_AllocationSettings_t::max_count` (p. 589) in `DDS_Domain` ↔ `ParticipantResourceLimitsQosPolicy::local_reader_allocation` (p. 750)
- For `DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer` (p. 677):

`heartbeats_per_max_samples` ≤ `DDS_ResourceLimitsQosPolicy::max_samples` (p. 1055) if batching is disabled. Otherwise:

`heartbeats_per_max_samples` ≤ `DDS_DataWriterResourceLimitsQosPolicy::max_batches` (p. 700)

`heartbeats_per_max_samples` ≤ `DDS_RtpsReliableWriterProtocol_t::max_send_window_size` (p. 1073)

### 9.164.2.11 min\_nack\_response\_delay

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::min_nack_response_delay
```

The minimum delay to respond to a NACK.

When a reliable writer receives a NACK from a remote reader, the writer can choose to delay a while before it sends repair samples or a heartbeat. This sets the value of the minimum delay.

**[default]** 0 seconds

**[range]** [0,1 day], <= max\_nack\_response\_delay

### 9.164.2.12 max\_nack\_response\_delay

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::max_nack_response_delay
```

The maximum delay to respond to a nack.

This set the value of maximum delay between receiving a NACK and sending repair samples or a heartbeat.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 0.2 seconds
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 0 seconds
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 0 seconds

**[range]** [0,1 day], >= min\_nack\_response\_delay

### 9.164.2.13 nack\_suppression\_duration

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::nack_suppression_duration
```

The duration for ignoring consecutive NACKs that may trigger redundant repairs.

A reliable writer may receive consecutive NACKs within a short duration from a remote reader that will trigger the sending of redundant repair messages.

This specifies the duration during which consecutive NACKs are ignored to prevent redundant repairs from being sent.

**[default]** 0 seconds

**[range]** [0,1 day],

### 9.164.2.14 max\_bytes\_per\_nack\_response

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::max_bytes_per_nack_response
```

The maximum total message size when resending rejected samples.

As part of the reliable communication protocol, data writers send heartbeat (HB) messages to their data readers. Each HB message contains the sequence number of the most recent sample sent by the data writer.

In response, a data reader sends an acknowledgement (ACK) message, indicating what sequence numbers it did not receive, if any. If the data reader is missing some samples, the data writer will send them again.

max\_bytes\_per\_nack\_response determines the maximum size of the message sent by the data writer in response to an ACK. This message may contain multiple samples. The data writer will always send at least one message, even if the size of that message exceeds the max\_bytes\_per\_nack\_response value.

If max\_bytes\_per\_nack\_response is larger than the maximum message size supported by the underlying transport, RTI Connext will send multiple messages. If the total size of all samples that need to be resent is larger than max\_bytes\_per\_nack\_response, the remaining samples will be resent the next time an ACK arrives.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 131072 bytes
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 131072 bytes
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 131072 bytes
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 9216 bytes

**[range]** [0, 1 GB]

### 9.164.2.15 disable\_positive\_acks\_min\_sample\_keep\_duration

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_min_sample_keep_↔
duration
```

The minimum duration a sample is queued for ACK-disabled readers.

When positive ACKs are disabled for a data writer (**DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks** (p. 675) = **DDS\_BOOLEAN\_TRUE** (p. 317)) or a data reader (**DDS\_DataReaderProtocolQosPolicy::disable\_↔positive\_acks** (p. 632) = **DDS\_BOOLEAN\_TRUE** (p. 317)), a sample is available from the data writer's queue for at least this duration, after which the sample may be considered to be acknowledged.

**[default]** 1 millisecond

**[range]** [0,1 year], <= **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_max\_sample\_keep\_duration** (p. 1070)

**9.164.2.16 disable\_positive\_acks\_max\_sample\_keep\_duration**

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_max_sample_keep_↵
duration
```

The maximum duration a sample is queued for ACK-disabled readers.

When positive ACKs are disabled for a data writer (**DDS\_DataWriterProtocolQosPolicy::disable\_positive\_acks** (p.675) = **DDS\_BOOLEAN\_TRUE** (p.317)) or a data reader (**DDS\_DataReaderProtocolQosPolicy::disable\_↵positive\_acks** (p.632) = **DDS\_BOOLEAN\_TRUE** (p.317)), a sample is available from the data writer's queue for at most this duration, after which the sample is considered to be acknowledged.

**[default]** 1 second

**[range]** [0,1 year], >= **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_min\_sample\_keep\_duration** (p.1070)

**9.164.2.17 disable\_positive\_acks\_enable\_adaptive\_sample\_keep\_duration**

```
DDS_Boolean DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_enable_adaptive_sample_keep_↵
duration
```

Enables dynamic adjustment of sample keep duration in response to congestion.

For dynamic networks where a static minimum sample keep duration may not provide sufficient performance or reliability, setting **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_enable\_adaptive\_sample\_keep\_duration** (p.1071) = **DDS\_BOOLEAN\_TRUE** (p.317), enables the sample keep duration to be dynamically adjusted to adapt to network conditions. The keep duration changes according to the detected level of congestion, which is determined to be proportional to the rate of NACKs received. An adaptive algorithm automatically controls the keep duration to optimize throughput and reliability.

To relieve high congestion, the keep duration is increased to effectively decrease the send rate; this lengthening of the keep duration is controlled by **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_increase\_sample\_↵keep\_duration\_factor** (p.1072). Alternatively, when congestion is low, the keep duration is decreased to effectively increase send rate; this shortening of the keep duration is controlled by **DDS\_RtpsReliableWriterProtocol\_t::disable\_↵positive\_acks\_decrease\_sample\_keep\_duration\_factor** (p.1071).

The lower and upper bounds of the dynamic sample keep duration are set by **DDS\_RtpsReliableWriterProtocol\_↵t::disable\_positive\_acks\_min\_sample\_keep\_duration** (p.1070) and **DDS\_RtpsReliableWriterProtocol\_t\_↵::disable\_positive\_acks\_max\_sample\_keep\_duration** (p.1070), respectively.

When **DDS\_RtpsReliableWriterProtocol\_t::disable\_positive\_acks\_enable\_adaptive\_sample\_keep\_duration** (p.1071) = **DDS\_BOOLEAN\_FALSE** (p.317), the sample keep duration is set to **DDS\_RtpsReliableWriterProtocol\_↵t::disable\_positive\_acks\_min\_sample\_keep\_duration** (p.1070) .

**[default]** **DDS\_BOOLEAN\_TRUE** (p.317)

### 9.164.2.18 `disable_positive_acks_decrease_sample_keep_duration_factor`

**DDS\_Long** `DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_decrease_sample_keep_duration_factor`

Controls rate of contraction of dynamic sample keep duration.

Used when `DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_enable_adaptive_sample_keep_duration` (p. 1071) = `DDS_BOOLEAN_TRUE` (p. 317).

When the adaptive algorithm determines that the keep duration should be decreased, this factor (a percentage) is multiplied with the current keep duration to get the new shorter keep duration. For example, if the current keep duration is 20 milliseconds, using the default factor of 95% would result in a new keep duration of 19 milliseconds.

**[default]** 95

**[range]**  $\leq 100$

### 9.164.2.19 `disable_positive_acks_increase_sample_keep_duration_factor`

**DDS\_Long** `DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_increase_sample_keep_duration_factor`

Controls rate of growth of dynamic sample keep duration.

Used when `DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_enable_adaptive_sample_keep_duration` (p. 1071) = `DDS_BOOLEAN_TRUE` (p. 317).

When the adaptive algorithm determines that the keep duration should be increased, this factor (a percentage) is multiplied with the current keep duration to get the new longer keep duration. For example, if the current keep duration is 20 milliseconds, using the default factor of 150% would result in a new keep duration of 30 milliseconds.

**[default]** 150

**[range]**  $\geq 100$

### 9.164.2.20 `min_send_window_size`

**DDS\_Long** `DDS_RtpsReliableWriterProtocol_t::min_send_window_size`

Minimum size of send window of unacknowledged samples.

A `DDSDataWriter` (p. 1321) has a limit on the number of unacknowledged samples in-flight at a time. This send window can be configured to have a minimum size (this field) and a maximum size (`max_send_window_size`). The send window can dynamically change, between the min and max sizes, to throttle the effective send rate in response to changing network congestion, as measured by negative acknowledgements received.

When a variable sized send window is used (i.e., when `min_send_window_size` and `max_send_window_size` are not set to the same value) the send window is initialized to `min_send_window_size`.

**[default]** `DDS_LENGTH_UNLIMITED` (p. 438)

**[range]**  $> 0$ ,  $\leq \text{max\_send\_window\_size}$ , or `DDS_LENGTH_UNLIMITED` (p. 438)

See also

**DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1073)

**DDS\_RtpsReliableWriterProtocol\_t::low\_watermark** (p. 1063)

**DDS\_RtpsReliableWriterProtocol\_t::high\_watermark** (p. 1063)

**DDS\_ReliableWriterCacheChangedStatus::full\_reliable\_writer\_cache** (p. 1047)

### 9.164.2.21 max\_send\_window\_size

**DDS\_Long** DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size

Maximum size of send window of unacknowledged samples.

A **DDSDataWriter** (p. 1321) has a limit on the number of unacknowledged samples in-flight at a time. This send window can be configured to have a minimum size (`min_send_window_size`) and a maximum size (this field). The send window can dynamically change, between the min and max sizes, to throttle the effective send rate in response to changing network congestion, as measured by negative acknowledgements received.

When a variable sized send window is used (i.e., when `min_send_window_size` and `max_send_window_size` are not set to the same value) the send window is initialized to `min_send_window_size`.

When both `min_send_window_size` and `max_send_window_size` are **DDS\_LENGTH\_UNLIMITED** (p. 438), then either **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) (for non-batching) or **DDS\_DataWriterResourceLimitsQosPolicy::max\_batches** (p. 700) (for batching) serves as the effective `max_send_window_size`. When **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) (for non-batching) or **DDS\_DataWriterResourceLimitsQosPolicy::max\_batches** (p. 700) (for batching) is less than `max_send_window_size`, then it serves as the effective `max_send_window_size`. If it is also less than `min_send_window_size`, then effectively both min and max send window sizes are equal to `max_samples` or `max_batches`.

In addition, the low and high watermarks are scaled down linearly to stay within the current send window size, and the full reliable queue status is set when the send window is full.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]**  $> 0$ ,  $\geq \text{min\_send\_window\_size}$ , or **DDS\_LENGTH\_UNLIMITED** (p. 438)

See also

**DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1072)

**DDS\_RtpsReliableWriterProtocol\_t::low\_watermark** (p. 1063)

**DDS\_RtpsReliableWriterProtocol\_t::high\_watermark** (p. 1063)

**DDS\_ReliableWriterCacheChangedStatus::full\_reliable\_writer\_cache** (p. 1047)

### 9.164.2.22 send\_window\_update\_period

```
struct DDS_Duration_t DDS_RtpsReliableWriterProtocol_t::send_window_update_period
```

Period in which send window may be dynamically changed.

The **DDSDataWriter** (p. 1321)'s send window will dynamically change, between the min and max send window sizes, to throttle the effective send rate in response to changing network congestion, as measured by negative acknowledgements received.

The change in send window size happens at this update period, whereupon the send window is either increased or decreased in size according to the increase or decrease factors, respectively.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 3 seconds
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 3 seconds
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 3 seconds
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 1 second

**[range]** > [0,1 year]

See also

**DDS\_RtpsReliableWriterProtocol\_t::send\_window\_increase\_factor** (p. 1074), **DDS\_RtpsReliableWriterProtocol\_t::send\_window\_decrease\_factor** (p. 1074)

### 9.164.2.23 send\_window\_increase\_factor

```
DDS_Long DDS_RtpsReliableWriterProtocol_t::send_window_increase_factor
```

Increases send window size by this percentage when reacting dynamically to network conditions.

The **DDSDataWriter** (p. 1321)'s send window will dynamically change, between the min and max send window sizes, to throttle the effective send rate in response to changing network congestion, as measured by negative acknowledgements received.

After an update period during which no negative acknowledgements were received, the send window will be increased by this factor. The factor is treated as a percentage, where a factor of 150 would increase the send window by 150%. The increased send window size will not exceed the `max_send_window_size`.

**[default]** 105

**[range]** > 100

See also

**DDS\_RtpsReliableWriterProtocol\_t::send\_window\_update\_period** (p. 1073), **DDS\_RtpsReliableWriterProtocol\_t::send\_window\_decrease\_factor** (p. 1074)

### 9.164.2.24 send\_window\_decrease\_factor

**DDS\_Long** DDS\_RtpsReliableWriterProtocol\_t::send\_window\_decrease\_factor

Decreases send window size by this percentage when reacting dynamically to network conditions.

The **DDSDataWriter** (p. 1321)'s send window will dynamically change, between the min and max send window sizes, to throttle the effective send rate in response to changing network congestion, as measured by negative acknowledgements received.

When increased network congestion causes a negative acknowledgement to be received by a writer, the send window will be decreased by this factor to throttle the effective send rate. The factor is treated as a percentage, where a factor of 80 would decrease the send window to 80% of its previous size. The decreased send window size will not be less than the min\_send\_window\_size.

**[default]** The default value depends on the container policy:

- For **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p. 677): 70
- For **DDS\_DiscoveryConfigQosPolicy::publication\_writer** (p. 719): 50
- For **DDS\_DiscoveryConfigQosPolicy::subscription\_writer** (p. 720): 50
- For **DDS\_DiscoveryConfigQosPolicy::participant\_message\_writer** (p. 722): 50

**[range]** [0, 100]

See also

**DDS\_RtpsReliableWriterProtocol\_t::send\_window\_update\_period** (p. 1073), **DDS\_RtpsReliableWriterProtocol\_t::send\_window\_increase\_factor** (p. 1074)

### 9.164.2.25 enable\_multicast\_periodic\_heartbeat

**DDS\_Boolean** DDS\_RtpsReliableWriterProtocol\_t::enable\_multicast\_periodic\_heartbeat

Whether periodic heartbeat messages are sent over multicast.

When enabled, if a reader has a multicast destination, then the writer will send its periodic HEARTBEAT messages to that destination. Otherwise, if not enabled or the reader does not have a multicast destination, the writer will send its periodic HEARTBEATs over unicast.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.164.2.26 multicast\_resend\_threshold

**DDS\_Long** DDS\_RtpsReliableWriterProtocol\_t::multicast\_resend\_threshold

The minimum number of requesting readers needed to trigger a multicast resend.

Given readers with multicast destinations, when a reader NACKs for samples to be resent, the writer can either resend them over unicast or multicast. In order for the writer to resend over multicast, this threshold is the minimum number of readers of the same multicast group that the writer must receive NACKs from within a single response-delay. This allows the writer to coalesce near-simultaneous unicast resends into a multicast resend. Note that a threshold of 1 means that all resends will be sent over multicast, if available.

**[default]** 2

**[range]** [ $\geq$  1]

### 9.164.2.27 disable\_repair\_piggyback\_heartbeat

**DDS\_Boolean** DDS\_RtpsReliableWriterProtocol\_t::disable\_repair\_piggyback\_heartbeat

Prevents piggyback heartbeats from being sent with repair samples.

When samples are repaired, the **DDSDataWriter** (p.1321) resends **DDS\_RtpsReliableWriterProtocol\_t::max\_bytes\_per\_nack\_response** (p.1069) bytes and a piggyback heartbeat with each message. You can configure the **DDSDataWriter** (p.1321) to not send the piggyback heartbeat and instead rely on the **DDS\_RtpsReliableWriterProtocol\_t::late\_joiner\_heartbeat\_period** (p.1065) to control the throughput used to repair samples. This field is mutable only for **DDS\_DataWriterProtocolQosPolicy::rtps\_reliable\_writer** (p.677). **[default]** **DDS\_BOOLEAN\_FALSE** (p.317)

### 9.165.1 Detailed Description

RTPS well-known port mapping configuration.

RTI Connex uses the RTPS wire protocol. The discovery protocols defined by RTPS rely on well-known ports to initiate discovery. These well-known ports define the multicast and unicast ports on which a Participant will listen for discovery **metatraffic** from other Participants. The discovery metatraffic contains all the information required to establish the presence of remote DDS entities in the network.

The well-known ports are defined by RTPS in terms of port mapping expressions with several tunable parameters, which allow you to customize what network ports are used by RTI Connex. These parameters are exposed in **DDS\_RtpsWellKnownPorts\_t** (p. 1076). In order for all Participants in a system to correctly discover each other, it is important that they all use the same port mapping expressions.

The actual port mapping expressions, as defined by the RTPS specification, can be found below. In addition to the parameters listed in **DDS\_RtpsWellKnownPorts\_t** (p. 1076), the port numbers depend on:

- `domain_id`, as specified in **DDSDomainParticipantFactory::create\_participant** (p. 1442)
- `participant_id`, as specified using **DDS\_WireProtocolQoSPolicy::participant\_id** (p. 1247)

The `domain_id` parameter ensures no port conflicts exist between Participants belonging to different domains. This also means that discovery metatraffic in one domain is not visible to Participants in a different domain. The `participant_id` parameter ensures that unique unicast port numbers are assigned to Participants belonging to the same domain on a given host.

The `metatraffic_unicast_port` is used to exchange discovery metatraffic using unicast.

```
metatraffic_unicast_port = port_base + (domain_id_gain * domain_id) + (participant_id_gain * participant_id) + b
```

The `metatraffic_multicast_port` is used to exchange discovery metatraffic using multicast. The corresponding multicast group addresses are specified via **DDS\_DiscoveryQoSPolicy::multicast\_receive\_addresses** (p. 733) on a **DDSDomainParticipant** (p. 1351) entity.

```
metatraffic_multicast_port = port_base + (domain_id_gain * domain_id) + builtin_multicast_port_offset
```

RTPS also defines the *default* multicast and unicast ports on which DataReaders and DataWriters receive **usertraffic**. These default ports can be overridden using the **DDS\_DataReaderQoS::multicast** (p. 651), **DDS\_DataReaderQoS::unicast** (p. 651), or by the **DDS\_DataWriterQoS::unicast** (p. 696) QoS policies.

The `usertraffic_unicast_port` is used to exchange user data using unicast.

```
usertraffic_unicast_port = port_base + (domain_id_gain * domain_id) + (participant_id_gain * participant_id) + u
```

The `usertraffic_multicast_port` is used to exchange user data using multicast. The corresponding multicast group addresses can be configured using **DDS\_TransportMulticastQoSPolicy** (p. 1151).

```
usertraffic_multicast_port = port_base + (domain_id_gain * domain_id) + user_multicast_port_offset
```

By default, the port mapping parameters are configured to compliant with OMG's DDS Interoperability Wire Protocol (see also **DDS\_INTEROPERABLE\_RTPTS\_WELL\_KNOWN\_PORTS** (p. 461)).

The OMG's DDS Interoperability Wire Protocol compliant port mapping parameters are *not* backwards compatible with previous versions of the RTI Connex middleware.

When modifying the port mapping parameters, care must be taken to avoid port aliasing. This would result in undefined discovery behavior. The chosen parameter values will also determine the maximum possible number of domains in the system and the maximum number of participants per domain. Additionally, any resulting mapped port number must be within the range imposed by the underlying transport. For example, for UDPv4, this range typically equals [1024 - 65535].

Note: On Windows, you should avoid using ports 49152 through 65535 for inbound traffic. RTI Connex's ephemeral ports (see "Ports Used for Communication" in the *User's Manual*) may be within that range (see [https://msdn.microsoft.com/en-us/library/windows/desktop/ms737550\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/ms737550(v=vs.85).aspx)). With the default `RtpsWellKnownPorts` settings, port 49152 corresponds to domain ID 167, so using domain IDs 168 through 232 on Windows introduces the risk of a port collision and failure to create the Domain Participant when using multicast discovery. You may see this error:

RTIOsapiSocket\_bindWithIP:OS bind() failure, error 0X271D: An attempt was made to access a socket in a way forbidden by its access permissions.

QoS:

**DDS\_WireProtocolQosPolicy** (p. 1244)

## 9.165.2 Member Data Documentation

### 9.165.2.1 port\_base

`DDS_Long DDS_RtpsWellKnownPorts_t::port_base`

The base port offset.

All mapped well-known ports are offset by this value.

**[default]** 7400

**[range]** [ $\geq$  1], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.2 domain\_id\_gain

```
DDS_Long DDS_RtpsWellKnownPorts_t::domain_id_gain
```

Tunable domain gain parameter.

Multiplier of the `domain_id`. Together with `participant_id_gain`, it determines the highest `domain_id` and `participant_id` allowed on this network.

In general, there are two ways to setup `domain_id_gain` and `participant_id_gain` parameters.

If `domain_id_gain > participant_id_gain`, it results in a port mapping layout where all **DDSDomain**↔**Participant** (p. 1351) instances within a single domain occupy a consecutive range of `domain_id_gain` ports. Precisely, all ports occupied by the domain fall within:

```
(port_base + (domain_id_gain * domain_id))
```

and:

```
(port_base + (domain_id_gain * (domain_id + 1)) - 1)
```

Under such a case, the highest `domain_id` is limited only by the underlying transport's maximum port. The highest `participant_id`, however, must satisfy:

```
max_participant_id < (domain_id_gain / participant_id_gain)
```

On the contrary, if `domain_id_gain <= participant_id_gain`, it results in a port mapping layout where a given domain's **DDSDomainParticipant** (p. 1351) instances occupy ports spanned across the entire valid port range allowed by the underlying transport. For instance, it results in the following potential mapping:

Mapped Port	Domain Id	Participant ID
higher port number	Domain Id = 1	Participant ID = 2
	Domain Id = 0	Participant ID = 2
	Domain Id = 1	Participant ID = 1
	Domain Id = 0	Participant ID = 1
	Domain Id = 1	Participant ID = 0
lower port number	Domain Id = 0	Participant ID = 0

Under this case, the highest `participant_id` is limited only by the underlying transport's maximum port. The highest `domain_id`, however, must satisfy:

```
max_domain_id < (participant_id_gain / domain_id_gain)
```

Additionally, `domain_id_gain` also determines the range of the port-specific offsets.

```
domain_id_gain > abs(builtin_multicast_port_offset - user_multicast_port_offset)
```

```
domain_id_gain > abs(builtin_unicast_port_offset - user_unicast_port_offset)
```

Violating this may result in port aliasing and undefined discovery behavior.

**[default]** 250

**[range]** [ $> 0$ ], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.3 participant\_id\_gain

```
DDS_Long DDS_RtpsWellKnownPorts_t::participant_id_gain
```

Tunable participant gain parameter.

Multiplier of the `participant_id`. See `DDS_RtpsWellKnownPorts_t::domain_id_gain` (p. 1078) for its implications on the highest `domain_id` and `participant_id` allowed on this network.

Additionally, `participant_id_gain` also determines the range of `builtin_unicast_port_offset` and `user_unicast_port_offset`.

```
participant_id_gain > abs(builtin_unicast_port_offset - user_unicast_port_offset)
```

**[default]** 2

**[range]** [ $> 0$ ], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.4 builtin\_multicast\_port\_offset

```
DDS_Long DDS_RtpsWellKnownPorts_t::builtin_multicast_port_offset
```

Additional offset for **metatraffic** multicast port.

It must be unique from other port-specific offsets.

**[default]** 0

**[range]** [ $\geq 0$ ], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.5 builtin\_unicast\_port\_offset

```
DDS_Long DDS_RtpsWellKnownPorts_t::builtin_unicast_port_offset
```

Additional offset for **metatraffic** unicast port.

It must be unique from other port-specific offsets.

**[default]** 10

**[range]** [ $\geq 0$ ], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.6 user\_multicast\_port\_offset

`DDS_Long DDS_RtpsWellKnownPorts_t::user_multicast_port_offset`

Additional offset for **usertraffic** multicast port.

It must be unique from other port-specific offsets.

**[default]** 1

**[range]** [ $\geq 0$ ], but resulting ports must be within the range imposed by the underlying transport.

### 9.165.2.7 user\_unicast\_port\_offset

`DDS_Long DDS_RtpsWellKnownPorts_t::user_unicast_port_offset`

Additional offset for **usertraffic** unicast port.

It must be unique from other port-specific offsets.

**[default]** 11

**[range]** [ $\geq 0$ ], but resulting ports must be within the range imposed by the underlying transport.

## 9.166 DDS\_SampleIdentity\_t Struct Reference

Type definition for a Sample Identity.

### Public Attributes

- struct **DDS\_GUID\_t** **writer\_guid**  
*16-byte identifier identifying the virtual GUID.*
- struct **DDS\_SequenceNumber\_t** **sequence\_number**  
*monotonically increasing 64-bit integer that identifies the sample in the data source.*

### 9.166.1 Detailed Description

Type definition for a Sample Identity.

A SampleIdentity defines a pair (Virtual Writer GUID, Sequence Number) that uniquely identifies a sample within a DDS domain and a Topic.

## 9.167 DDS\_SampleInfo Struct Reference

Information that accompanies each sample that is read or taken.

### Public Attributes

- **DDS\_SampleStateKind sample\_state**  
*The sample state of the sample.*
- **DDS\_ViewStateKind view\_state**  
*The view state of the instance.*
- **DDS\_InstanceStateKind instance\_state**  
*The instance state of the instance.*
- struct **DDS\_Time\_t source\_timestamp**  
*The timestamp when the sample was written by a DataWriter.*
- **DDS\_InstanceHandle\_t instance\_handle**  
*Identifies locally the corresponding instance.*
- **DDS\_InstanceHandle\_t publication\_handle**  
*Identifies locally the DataWriter that modified the instance.*
- **DDS\_Long disposed\_generation\_count**  
*The disposed generation count of the instance at the time of sample reception.*
- **DDS\_Long no\_writers\_generation\_count**  
*The no writers generation count of the instance at the time of sample reception.*
- **DDS\_Long sample\_rank**  
*The sample rank of the sample.*
- **DDS\_Long generation\_rank**  
*The generation rank of the sample.*
- **DDS\_Long absolute\_generation\_rank**  
*The absolute generation rank of the sample.*
- **DDS\_Boolean valid\_data**  
*Indicates whether the DataSample contains data or else it is only used to communicate a change in the instance↵\_state of the instance.*
- struct **DDS\_Time\_t reception\_timestamp**  
*<<extension>> (p. 237) The timestamp when the sample was committed by a DataReader.*
- struct **DDS\_SequenceNumber\_t publication\_sequence\_number**  
*<<extension>> (p. 237) The publication sequence number.*
- struct **DDS\_SequenceNumber\_t reception\_sequence\_number**  
*<<extension>> (p. 237) The reception sequence number when sample was committed by a DataReader*
- struct **DDS\_GUID\_t original\_publication\_virtual\_guid**  
*<<extension>> (p. 237) The original publication virtual GUID.*
- struct **DDS\_SequenceNumber\_t original\_publication\_virtual\_sequence\_number**  
*<<extension>> (p. 237) The original publication virtual sequence number.*
- struct **DDS\_GUID\_t related\_original\_publication\_virtual\_guid**  
*<<extension>> (p. 237) The original publication virtual GUID of a related sample.*
- struct **DDS\_SequenceNumber\_t related\_original\_publication\_virtual\_sequence\_number**  
*<<extension>> (p. 237) The original publication virtual sequence number of a related sample.*
- **DDS\_SampleFlag flag**

- `<<extension>>` (p. 237) *Flags associated with the sample.*
- struct **DDS\_GUID\_t source\_guid**
  - `<<extension>>` (p. 237) *The application logical data source associated with the sample.*
- struct **DDS\_GUID\_t related\_source\_guid**
  - `<<extension>>` (p. 237) *The application logical data source that is related to the sample.*
- struct **DDS\_GUID\_t related\_subscription\_guid**
  - `<<extension>>` (p. 237) *The related\_reader\_guid associated with the sample.*
- struct **DDS\_GUID\_t topic\_query\_guid**
  - `<<extension>>` (p. 237) *The GUID of the **DDSTopicQuery** (p. 1627) that is related to the sample.*
- struct **DDS\_CoherentSetInfo\_t \* coherent\_set\_info**
  - `<<extension>>` (p. 237) *The information about the coherent set that this sample is a part of.*

### 9.167.1 Detailed Description

Information that accompanies each sample that is `read` or `taken`.

### 9.167.2 Interpretation of the SampleInfo

The **DDS\_SampleInfo** (p. 1082) contains information pertaining to the associated `Data` instance sample including:

- the `sample_state` of the `Data` value (i.e., if it has already been read or not)
- the `view_state` of the related instance (i.e., if the instance is new or not)
- the `instance_state` of the related instance (i.e., if the instance is alive or not)
- **DDS\_SampleInfo::valid\_data** (p. 1089) flag. This flag indicates whether there is data associated with the sample. Some samples do not contain data indicating only a change on the `instance_state` of the corresponding instance.
- The values of `disposed_generation_count` and `no_writers_generation_count` for the related instance at the time the sample was received. These counters indicate the number of times the instance had become ALIVE (with `instance_state= DDS_ALIVE_INSTANCE_STATE` (p. 161)) at the time the sample was received.
- The `sample_rank` and `generation_rank` of the sample within the returned sequence. These ranks provide a preview of the samples that follow within the sequence returned by the `read` or `take` operations.
- The `absolute_generation_rank` of the sample within the **DDSDataReader** (p. 1288). This rank provides a preview of what is available within the **DDSDataReader** (p. 1288).
- The `source_timestamp` of the sample. This is the timestamp provided by the **DDSDataWriter** (p. 1321) at the time the sample was produced.

### 9.167.3 Interpretation of the SampleInfo disposed\_generation\_count and no\_writers\_generation\_count

For each instance, RTI Connexx internally maintains two counts, the **DDS\_SampleInfo::disposed\_generation\_count** (p. 1087) and **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1087), relative to each DataReader:

- The **DDS\_SampleInfo::disposed\_generation\_count** (p. 1087) and **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1087) are initialized to zero when the **DDSDataReader** (p. 1288) first detects the presence of a never-seen-before instance.
- The **DDS\_SampleInfo::disposed\_generation\_count** (p. 1087) is incremented each time the `instance_state` of the corresponding instance changes from **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) to **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161).
- The **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1087) is incremented each time the `instance_state` of the corresponding instance changes from **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) to **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161).
- These 'generation counts' are reset to zero when the instance resource is reclaimed.

The **DDS\_SampleInfo::disposed\_generation\_count** (p. 1087) and **DDS\_SampleInfo::no\_writers\_generation\_count** (p. 1087) available in the **DDS\_SampleInfo** (p. 1082) capture a snapshot of the corresponding counters at the time the sample was received.

### 9.167.4 Interpretation of the SampleInfo sample\_rank, generation\_rank and absolute\_generation\_rank

The **DDS\_SampleInfo::sample\_rank** (p. 1088) and **DDS\_SampleInfo::generation\_rank** (p. 1088) available in the **DDS\_SampleInfo** (p. 1082) are computed based solely on the actual samples in the ordered collection returned by read or take.

- The **DDS\_SampleInfo::sample\_rank** (p. 1088) indicates the number of samples of the same instance that follow the current one in the collection.
- The **DDS\_SampleInfo::generation\_rank** (p. 1088) available in the **DDS\_SampleInfo** (p. 1082) indicates the difference in "generations" between the sample (S) and the Most Recent Sample of the same instance that appears in the returned Collection (MRSIC). That is, it counts the number of times the instance transitioned from not-alive to alive in the time from the reception of the S to the reception of MRSIC.
- These 'generation ranks' are reset to zero when the instance resource is reclaimed.

The **DDS\_SampleInfo::generation\_rank** (p. 1088) is computed using the formula:

```

generation_rank = (MRSIC.disposed_generation_count
                   + MRSIC.no_writers_generation_count)
                 - (S.disposed_generation_count
                   + S.no_writers_generation_count)

```

The **DDS\_SampleInfo::absolute\_generation\_rank** (p. 1088) available in the **DDS\_SampleInfo** (p. 1082) indicates the difference in "generations" between the sample (S) and the Most Recent Sample of the same instance that the middleware has received (MRS). That is, it counts the number of times the instance transitioned from not-alive to alive in the time from the reception of the S to the time when the read or take was called.

```

absolute_generation_rank = (MRS.disposed_generation_count
                            + MRS.no_writers_generation_count)
                          - (S.disposed_generation_count
                            + S.no_writers_generation_count)

```

### 9.167.5 Interpretation of the SampleInfo counters and ranks

These counters and ranks allow the application to distinguish samples belonging to different "generations" of the instance. Note that it is possible for an instance to transition from not-alive to alive (and back) several times before the application accesses the data by means of read or take. In this case, the returned collection may contain samples that cross generations (i.e. some samples were received before the instance became not-alive, other after the instance re-appeared again). Using the information in the **DDS\_SampleInfo** (p. 1082), the application can anticipate what other information regarding the same instance appears in the returned collection, as well as in the infrastructure and thus make appropriate decisions.

For example, an application desiring to only consider the most current sample for each instance would only look at samples with `sample_rank == 0`. Similarly, an application desiring to only consider samples that correspond to the latest generation in the collection will only look at samples with `generation_rank == 0`. An application desiring only samples pertaining to the latest generation available will ignore samples for which `absolute_generation_rank != 0`. Other application-defined criteria may also be used.

See also

**DDS\_SampleStateKind** (p. 156), **DDS\_InstanceStateKind** (p. 160), **DDS\_ViewStateKind** (p. 158), **DDS\_SampleInfo::valid\_data** (p. 1089)

"Statechart of the \p instance\_state and \p view\_state of a single instance"

### 9.167.6 Member Data Documentation

### 9.167.6.1 sample\_state

`DDS_SampleStateKind DDS_SampleInfo::sample_state`

The sample state of the sample.

Indicates whether or not the corresponding data sample has already been read.

See also

**DDS\_SampleStateKind** (p. 156)

### 9.167.6.2 view\_state

`DDS_ViewStateKind DDS_SampleInfo::view_state`

The view state of the instance.

Indicates whether the **DDSDataReader** (p. 1288) has already seen samples for the most-current generation of the related instance.

See also

**DDS\_ViewStateKind** (p. 158)

### 9.167.6.3 instance\_state

`DDS_InstanceStateKind DDS_SampleInfo::instance_state`

The instance state of the instance.

Indicates whether the instance is currently in existence or, if it has been disposed, the reason why it was disposed.

See also

**DDS\_InstanceStateKind** (p. 160)

#### 9.167.6.4 source\_timestamp

```
struct DDS_Time_t DDS_SampleInfo::source_timestamp
```

The timestamp when the sample was written by a DataWriter.

#### 9.167.6.5 instance\_handle

```
DDS_InstanceHandle_t DDS_SampleInfo::instance_handle
```

Identifies locally the corresponding instance.

The handle is equal to **DDS\_HANDLE\_NIL** (p. 76) for unkeyed topics.

#### 9.167.6.6 publication\_handle

```
DDS_InstanceHandle_t DDS_SampleInfo::publication_handle
```

Identifies locally the DataWriter that modified the instance.

The `publication_handle` is the same **DDS\_InstanceHandle\_t** (p. 74) that is returned by the operation **DDSDataReader::get\_matched\_publications** (p. 1299) and can also be used as a parameter to the operation **DDSDataReader::get\_matched\_publication\_data** (p. 1300).

#### 9.167.6.7 disposed\_generation\_count

```
DDS_Long DDS_SampleInfo::disposed_generation_count
```

The disposed generation count of the instance at the time of sample reception.

Indicates how many times the `instance_state` of the corresponding instance changed from **DDS\_NOT\_ALIVE**↔**\_DISPOSED\_INSTANCE\_STATE** (p. 161) to **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161). The counter is reset when the instance resource is reclaimed (removed from the DataReader cache).

See also

**Interpretation of the SampleInfo disposed\_generation\_count and no\_writers\_generation\_count** (p. 1084)

**Interpretation of the SampleInfo counters and ranks** (p. 1085)

### 9.167.6.8 no\_writers\_generation\_count

```
DDS_Long DDS_SampleInfo::no_writers_generation_count
```

The no writers generation count of the instance at the time of sample reception.

Indicates how many times the `instance_state` of the corresponding instance changed from **DDS\_NOT\_ALIVE**↔**\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) to **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161). The counter is reset when the instance resource is reclaimed (removed from the DataReader cache).

See also

**Interpretation of the SampleInfo disposed\_generation\_count and no\_writers\_generation\_count** (p. 1084)  
**Interpretation of the SampleInfo counters and ranks** (p. 1085)

### 9.167.6.9 sample\_rank

```
DDS_Long DDS_SampleInfo::sample_rank
```

The sample rank of the sample.

Indicates the number of samples related to the same instance that follow in the collection returned by `read` or `take`.

See also

**Interpretation of the SampleInfo sample\_rank, generation\_rank and absolute\_generation\_rank** (p. 1084)  
**Interpretation of the SampleInfo counters and ranks** (p. 1085)

### 9.167.6.10 generation\_rank

```
DDS_Long DDS_SampleInfo::generation_rank
```

The generation rank of the sample.

Indicates the generation difference (number of times the instance was **NOT\_ALIVE** and become alive again) between the time the sample was received and the time the most recent sample in the collection related to the same instance was received.

See also

**Interpretation of the SampleInfo sample\_rank, generation\_rank and absolute\_generation\_rank** (p. 1084)  
**Interpretation of the SampleInfo counters and ranks** (p. 1085)

### 9.167.6.11 absolute\_generation\_rank

```
DDS_Long DDS_SampleInfo::absolute_generation_rank
```

The absolute generation rank of the sample.

Indicates the generation difference (number of times the instance was disposed and become alive again) between the time the sample was received, and the time the most recent sample (which may not be in the returned collection) related to the same instance was received.

See also

**Interpretation of the SampleInfo sample\_rank, generation\_rank and absolute\_generation\_rank** (p. 1084)  
**Interpretation of the SampleInfo counters and ranks** (p. 1085)

### 9.167.6.12 valid\_data

```
DDS_Boolean DDS_SampleInfo::valid_data
```

Indicates whether the `DataSample` contains data or else it is only used to communicate a change in the `instance↔_state` of the instance.

Normally each `DataSample` contains both a **DDS\_SampleInfo** (p. 1082) and some `Data`. However there are situations where a `DataSample` contains only the **DDS\_SampleInfo** (p. 1082) and does not have any associated data. This occurs when the RTI Connexx notifies the application of a change of state for an instance that was caused by some internal mechanism (such as a timeout) for which there is no associated data. An example of this situation is when the RTI Connexx detects that an instance has no writers and changes the corresponding `instance_state` to **DDS\_NOT\_↔ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

The application can distinguish whether a particular `DataSample` has data by examining the value of the **DDS\_↔SampleInfo::valid\_data** (p. 1089). If this flag is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then the `Data↔Sample` contains valid `Data`. If the flag is set to **DDS\_BOOLEAN\_FALSE** (p. 317), the `DataSample` contains no `Data`.

To ensure correctness and portability, the `valid_data` flag must be examined by the application prior to accessing the `Data` associated with the `DataSample` and if the flag is set to **DDS\_BOOLEAN\_FALSE** (p. 317), the application should not access the `Data` associated with the `DataSample`, that is, the application should access only the **DDS\_↔SampleInfo** (p. 1082).

### 9.167.6.13 reception\_timestamp

```
struct DDS_Time_t DDS_SampleInfo::reception_timestamp
```

<<*extension*>> (p. 237) The timestamp when the sample was committed by a `DataReader`.

#### 9.167.6.14 publication\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_SampleInfo::publication_sequence_number
```

<<*extension*>> (p. 237) The publication sequence number.

#### 9.167.6.15 reception\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_SampleInfo::reception_sequence_number
```

<<*extension*>> (p. 237) The reception sequence number when sample was committed by a DataReader

#### 9.167.6.16 original\_publication\_virtual\_guid

```
struct DDS_GUID_t DDS_SampleInfo::original_publication_virtual_guid
```

<<*extension*>> (p. 237) The original publication virtual GUID.

If the **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) of the **DDSPublisher** (p. 1550) is **DDS\_GROUP\_↔ PRESENTATION\_QOS** (p. 418), this field contains the **DDSPublisher** (p. 1550) virtual GUID that uniquely identifies the DataWriter group.

See also

**connext::Sample::identity()** (p. 1914)

#### 9.167.6.17 original\_publication\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_SampleInfo::original_publication_virtual_sequence_number
```

<<*extension*>> (p. 237) The original publication virtual sequence number.

If the **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) of the **DDSPublisher** (p. 1550) is **DDS\_GROUP\_↔ PRESENTATION\_QOS** (p. 418), this field contains the **DDSPublisher** (p. 1550) virtual sequence number that uniquely identifies a sample within the DataWriter group.

See also

**connext::Sample::identity()** (p. 1914)

### 9.167.6.18 related\_original\_publication\_virtual\_guid

```
struct DDS_GUID_t DDS_SampleInfo::related_original_publication_virtual_guid
```

<<*extension*>> (p. 237) The original publication virtual GUID of a related sample.

See also

**connext::Sample::related\_identity()** (p. 1914)

### 9.167.6.19 related\_original\_publication\_virtual\_sequence\_number

```
struct DDS_SequenceNumber_t DDS_SampleInfo::related_original_publication_virtual_sequence_number
```

<<*extension*>> (p. 237) The original publication virtual sequence number of a related sample.

See also

**connext::Sample::related\_identity()** (p. 1914)

### 9.167.6.20 flag

```
DDS_SampleFlag DDS_SampleInfo::flag
```

<<*extension*>> (p. 237) Flags associated with the sample.

The flags can be set by using the field **DDS\_WriteParams\_t::flag** (p. 1254) when writing a sample using the method **FooDataWriter::write\_w\_params** (p. 1688).

### 9.167.6.21 source\_guid

```
struct DDS_GUID_t DDS_SampleInfo::source_guid
```

<<*extension*>> (p. 237) The application logical data source associated with the sample.

The `source_guid` can be set by using the field **DDS\_WriteParams\_t::source\_guid** (p. 1254) when writing a sample using the method **FooDataWriter::write\_w\_params** (p. 1688).

### 9.167.6.22 related\_source\_guid

```
struct DDS_GUID_t DDS_SampleInfo::related_source_guid
```

<<**extension**>> (p. 237) The application logical data source that is related to the sample.

The related\_source\_guid can be set by using the field **DDS\_WriteParams\_t::related\_source\_guid** (p. 1255) when writing a sample using the method **FooDataWriter::write\_w\_params** (p. 1688).

### 9.167.6.23 related\_subscription\_guid

```
struct DDS_GUID_t DDS_SampleInfo::related_subscription_guid
```

<<**extension**>> (p. 237) The related\_reader\_guid associated with the sample.

The related\_reader\_guid can be set by using the field **DDS\_WriteParams\_t::related\_reader\_guid** (p. 1255) when writing a sample using the method **FooDataWriter::write\_w\_params** (p. 1688).

### 9.167.6.24 topic\_query\_guid

```
struct DDS_GUID_t DDS_SampleInfo::topic_query_guid
```

<<**extension**>> (p. 237) The GUID of the **DDSTopicQuery** (p. 1627) that is related to the sample.

This GUID indicates whether a sample is part of the response to a **DDSTopicQuery** (p. 1627) or a regular ("live") sample:

- If the sample was written for the TopicQuery stream, this field contains the GUID of the target TopicQuery.
- If the sample was written for the live stream, this field will be set to **DDS\_GUID\_UNKNOWN** (p. 331).

### 9.167.6.25 coherent\_set\_info

```
struct DDS_CoherentSetInfo_t* DDS_SampleInfo::coherent_set_info
```

<<**extension**>> (p. 237) The information about the coherent set that this sample is a part of.

This field is set for all samples that are part of a coherent set. Coherent sets are initiated using the operation **DDSPublisher::begin\_coherent\_changes** (p. 1564) and finalized using the operation **DDSPublisher::end\_coherent\_changes** (p. 1565).

See also

**DDSPublisher::begin\_coherent\_changes** (p. 1564) for additional information on coherent sets.

## 9.168 DDS\_SampleInfoSeq Struct Reference

Declares IDL sequence < DDS\_SampleInfo (p. 1082) > .

### 9.168.1 Detailed Description

Declares IDL sequence < DDS\_SampleInfo (p. 1082) > .

HelloWorld\_subscriber.cxx.

## 9.169 DDS\_SampleLostStatus Struct Reference

DDS\_SAMPLE\_LOST\_STATUS (p. 345)

### Public Attributes

- **DDS\_Long total\_count**  
*Total cumulative count of all samples lost across all instances of data published under the **DDSTopic** (p. 1617).*
- **DDS\_Long total\_count\_change**  
*The incremental number of samples lost since the last time the listener was called or the status was read.*
- **DDS\_SampleLostStatusKind last\_reason**  
*<<extension>> (p. 237) Reason why the last sample was lost.*

### 9.169.1 Detailed Description

DDS\_SAMPLE\_LOST\_STATUS (p. 345)

### 9.169.2 Member Data Documentation

#### 9.169.2.1 total\_count

```
DDS_Long DDS_SampleLostStatus::total_count
```

Total cumulative count of all samples lost across all instances of data published under the **DDSTopic** (p. 1617).

### 9.169.2.2 total\_count\_change

`DDS_Long DDS_SampleLostStatus::total_count_change`

The incremental number of samples lost since the last time the listener was called or the status was read.

### 9.169.2.3 last\_reason

`DDS_SampleLostStatusKind DDS_SampleLostStatus::last_reason`

<<*extension*>> (p. 237) Reason why the last sample was lost.

See also

`DDS_SampleLostStatusKind` (p. 136)

## 9.170 DDS\_SampleRejectedStatus Struct Reference

`DDS_SAMPLE_REJECTED_STATUS` (p. 345)

### Public Attributes

- **DDS\_Long total\_count**  
*Total cumulative count of samples rejected by the `DDSDataReader` (p. 1288).*
- **DDS\_Long total\_count\_change**  
*The incremental number of samples rejected since the last time the listener was called or the status was read.*
- **DDS\_SampleRejectedStatusKind last\_reason**  
*Reason for rejecting the last sample rejected.*
- **DDS\_InstanceHandle\_t last\_instance\_handle**  
*Handle to the instance being updated by the last sample that was rejected.*

### 9.170.1 Detailed Description

`DDS_SAMPLE_REJECTED_STATUS` (p. 345)

### 9.170.2 Member Data Documentation

### 9.170.2.1 total\_count

`DDS_Long DDS_SampleRejectedStatus::total_count`

Total cumulative count of samples rejected by the **DDSDataReader** (p. 1288).

### 9.170.2.2 total\_count\_change

`DDS_Long DDS_SampleRejectedStatus::total_count_change`

The incremental number of samples rejected since the last time the listener was called or the status was read.

### 9.170.2.3 last\_reason

`DDS_SampleRejectedStatusKind DDS_SampleRejectedStatus::last_reason`

Reason for rejecting the last sample rejected.

See also

**DDS\_SampleRejectedStatusKind** (p. 140)

### 9.170.2.4 last\_instance\_handle

`DDS_InstanceHandle_t DDS_SampleRejectedStatus::last_instance_handle`

Handle to the instance being updated by the last sample that was rejected.

If the sample was rejected because of **DDS\_REJECTED\_BY\_DECODE\_FAILURE** (p. 142) and the **DDSDataWriter** (p. 1321) set **DDS\_DataWriterProtocolQosPolicy::disable\_inline\_keyhash** (p. 675) to **DDS\_BOOLEAN\_TRUE** (p. 317), then the `last_instance_handle` may not be correct if the sample was encrypted.

## 9.171 DDS\_SequenceNumber\_t Struct Reference

Type for *sequence* number representation.

## Public Attributes

- **DDS\_Long high**  
*The most significant part of the sequence number.*
- **DDS\_UnsignedLong low**  
*The least significant part of the sequence number.*

### 9.171.1 Detailed Description

Type for *sequence* number representation.

Represents a 64-bit sequence number.

### 9.171.2 Member Data Documentation

#### 9.171.2.1 high

**DDS\_Long** DDS\_SequenceNumber\_t::high

The most significant part of the sequence number.

#### 9.171.2.2 low

**DDS\_UnsignedLong** DDS\_SequenceNumber\_t::low

The least significant part of the sequence number.

## 9.172 DDS\_ServiceQosPolicy Struct Reference

Service associated with a DDS entity.

## Public Attributes

- **DDS\_ServiceQosPolicyKind kind**  
*The kind of service.*

### 9.172.1 Detailed Description

Service associated with a DDS entity.

This QoS policy is intended to be used by RTI infrastructure services.

User applications should not modify its value.

Entity:

**DDSDomainParticipant** (p. 1351), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

### 9.172.2 Member Data Documentation

#### 9.172.2.1 kind

`DDS_ServiceQosPolicyKind DDS_ServiceQosPolicy::kind`

The kind of service.

[default] **DDS\_NO\_SERVICE\_QOS** (p. 439)

## 9.173 DDS\_ServiceRequest Struct Reference

A request coming from one of the built-in services.

### Public Attributes

- **DDS\_Long service\_id**  
*The id of the service that the request was sent on.*
- struct **DDS\_GUID\_t instance\_id**  
*Each ServiceRequest is keyed on the instance\_id.*
- struct **DDS\_OctetSeq request\_body**  
*Service-specific information.*

### 9.173.1 Detailed Description

A request coming from one of the built-in services.

Data associated with the built-in topic **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303). It contains service-specific information.

See also

**DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303)

**DDSParticipantBuiltinTopicDataDataReader** (p. 1548)

### 9.173.2 Member Data Documentation

#### 9.173.2.1 service\_id

```
DDS_Long DDS_ServiceRequest::service_id
```

The id of the service that the request was sent on.

There can be multiple services that use the built-in ServiceRequest topic. The `service_id` identifies which service a specific request was sent from.

See also

**DDS\_UNKNOWN\_SERVICE\_REQUEST\_ID** (p. 302)

**DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 302)

#### 9.173.2.2 instance\_id

```
struct DDS_GUID_t DDS_ServiceRequest::instance_id
```

Each ServiceRequest is keyed on the `instance_id`.

The `instance_id` provides a way for users to differentiate between different requests coming from the same service.

### 9.173.2.3 request\_body

```
struct DDS_OctetSeq DDS_ServiceRequest::request_body
```

Service-specific information.

Each service uses the `request_body` field to send information specific to that service in the form of an opaque sequence of bytes. Each service provides a helper function that will deserialize the information from the request body.

See also

`DDSTopicQueryHelper::topic_query_data_from_service_request` (p. 1628)

## 9.174 DDS\_ServiceRequestAcceptedStatus Struct Reference

`DDS_SERVICE_REQUEST_ACCEPTED_STATUS` (p. 348)

### Public Attributes

- **DDS\_Long total\_count**  
*The total cumulative number of ServiceRequests that have been accepted by a `DDSDataWriter` (p. 1321).*
- **DDS\_Long total\_count\_change**  
*The incremental changes in `total_count` since the last time the listener was called or the status was read.*
- **DDS\_Long current\_count**  
*The current number of ServiceRequests that have been accepted by this `DDSDataWriter` (p. 1321).*
- **DDS\_Long current\_count\_change**  
*The change in `current_count` since the last time the listener was called or the status was read.*
- **DDS\_InstanceHandle\_t last\_request\_handle**  
*A handle to the last `DDS_ServiceRequest` (p. 1097) that caused the `DDSDataWriter` (p. 1321)'s status to change.*
- **DDS\_Long service\_id**  
*ID of the service to which the accepted Request belongs.*

### 9.174.1 Detailed Description

`DDS_SERVICE_REQUEST_ACCEPTED_STATUS` (p. 348)

Currently, the only service that causes the `ServiceRequestAcceptedStatus` to be triggered is the `DDSTopicQuery` (p. 1627) service. A `DDS_ServiceRequest` (p. 1097) is accepted when a `DDSDataWriter` (p. 1321) matches with a `DDSDataReader` (p. 1288) that has created a `DDSTopicQuery` (p. 1627).

This status is also changed (and the listener, if any, called) when a `ServiceRequest` has been cancelled, or deleted. This will happen when a `DDSDataReader` (p. 1288) deletes a `TopicQuery` using `DDSDataReader::delete_topic_query` (p. 1310).

## 9.174.2 Member Data Documentation

### 9.174.2.1 total\_count

`DDS_Long DDS_ServiceRequestAcceptedStatus::total_count`

The total cumulative number of ServiceRequests that have been accepted by a **DDSDataWriter** (p. 1321).

This number increases whenever a new request is accepted. It does not change when a request is cancelled.

### 9.174.2.2 total\_count\_change

`DDS_Long DDS_ServiceRequestAcceptedStatus::total_count_change`

The incremental changes in total\_count since the last time the listener was called or the status was read.

### 9.174.2.3 current\_count

`DDS_Long DDS_ServiceRequestAcceptedStatus::current_count`

The current number of ServiceRequests that have been accepted by this **DDSDataWriter** (p. 1321).

This number increases when a new request is accepted and decreases when an existing request is cancelled.

### 9.174.2.4 current\_count\_change

`DDS_Long DDS_ServiceRequestAcceptedStatus::current_count_change`

The change in current\_count since the last time the listener was called or the status was read.

### 9.174.2.5 last\_request\_handle

`DDS_InstanceHandle_t DDS_ServiceRequestAcceptedStatus::last_request_handle`

A handle to the last **DDS\_ServiceRequest** (p. 1097) that caused the **DDSDataWriter** (p. 1321)'s status to change.

### 9.174.2.6 service\_id

`DDS_Long DDS_ServiceRequestAcceptedStatus::service_id`

ID of the service to which the accepted Request belongs.

See also

`DDS_TOPIC_QUERY_SERVICE_REQUEST_ID` (p. 302)

## 9.175 DDS\_ServiceRequestSeq Struct Reference

Instantiates `FooSeq` (p. 1697) < `DDS_ServiceRequest` (p. 1097) > .

### 9.175.1 Detailed Description

Instantiates `FooSeq` (p. 1697) < `DDS_ServiceRequest` (p. 1097) > .

Instantiates:

<<*generic*>> (p. 237) `FooSeq` (p. 1697)

See also

`DDS_ServiceRequest` (p. 1097)

## 9.176 DDS\_ShortSeq Struct Reference

Instantiates `FooSeq` (p. 1697) < `DDS_Short` (p. 318) >

### 9.176.1 Detailed Description

Instantiates `FooSeq` (p. 1697) < `DDS_Short` (p. 318) >

Instantiates:

<<*generic*>> (p. 237) `FooSeq` (p. 1697)

See also

`DDS_Short` (p. 318)

`FooSeq` (p. 1697)

## 9.177 DDS\_StringSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < char\* > with value type semantics.

### 9.177.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < char\* > with value type semantics.

StringSeq is a sequence that contains strings.

Even though the element type is a `char*`, i.e. a pointer, the sequence semantically behaves as a sequence of `char*` *value* types. When a **DDS\_StringSeq** (p. 1102) is copied or deleted, the contained strings are also respectively copied or deleted.

*Important:* Users of this type must understand its memory management contract.

- Ownership of this sequence's buffer implies ownership of the pointers stored in that buffer; a loan of the buffer implies lack of ownership of the pointers. In other words, for a type **FooSeq** (p. 1697) where **Foo** (p. 1648) is a pointer, ownership of **Foo** (p. 1648) implies ownership of \* **Foo** (p. 1648). In other words, deleting a string sequence that owns its memory implies the deletion of all strings in that sequence. See **FooSeq::loan\_contiguous** (p. 1708) for more information about sequence memory ownership.
- The second important rule is that non-NULL strings are *assumed to be of sufficient size* to store the necessary characters. This is a dangerous rule, but it cannot be avoided because a string doesn't store the amount of memory it has. The only other alternative is to always free and re-allocate memory. Not only would this latter policy be very expensive, but it would essentially render any loaned **DDS\_StringSeq** (p. 1102) immutable, since to modify any string in it would require freeing and re-allocating that string, which would violate the first principle discussed above.

It is also worth noting that the element type of a string sequence is `char*`, not `const char*`. It is therefore incorrect and dangerous, for example, to insert a string literal into a string sequence without first copying it into mutable memory.

In order to guarantee correct behavior, it is recommended that the contained elements always be manipulated using the string support API's described in **String Support** (p. 551).

See also

**String Support** (p. 551)

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**FooSeq** (p. 1697)

## 9.178 DDS\_StructMember Struct Reference

A description of a member of a struct.

### Public Attributes

- `char * name`  
*The name of the struct member.*
- `const DDS_TypeCode * type`  
*The type of the struct member.*
- `DDS_Boolean is_pointer`  
*Indicates whether the struct member is a pointer or not.*
- `DDS_Short bits`  
*Number of bits of a bitfield member.*
- `DDS_Boolean is_key`  
*Indicates if the struct member is a key member or not.*
- `DDS_Long id`  
*The member ID.*
- `DDS_Boolean is_optional`  
*Indicates if the struct member is optional or required.*

### 9.178.1 Detailed Description

A description of a member of a struct.

See also

[DDS\\_StructMemberSeq](#) (p. 1105)

[DDS\\_TypeCodeFactory::create\\_struct\\_tc](#) (p. 1214)

### 9.178.2 Member Data Documentation

#### 9.178.2.1 name

```
char* DDS_StructMember::name
```

The name of the struct member.

Cannot be NULL.

### 9.178.2.2 type

```
const DDS_TypeCode* DDS_StructMember::type
```

The type of the struct member.

Cannot be NULL.

### 9.178.2.3 is\_pointer

```
DDS_Boolean DDS_StructMember::is_pointer
```

Indicates whether the struct member is a pointer or not.

### 9.178.2.4 bits

```
DDS_Short DDS_StructMember::bits
```

Number of bits of a bitfield member.

If the struct member is a bitfield, this field contains the number of bits of the bitfield. Otherwise, bits should contain **DDS\_TYPECODE\_NOT\_BITFIELD** (p. 81).

### 9.178.2.5 is\_key

```
DDS_Boolean DDS_StructMember::is_key
```

Indicates if the struct member is a key member or not.

### 9.178.2.6 id

```
DDS_Long DDS_StructMember::id
```

The member ID.

Use **DDS\_TYPECODE\_MEMBER\_ID\_INVALID** (p. 81) to have the member ID automatically assigned.

### 9.178.2.7 is\_optional

```
DDS_Boolean DDS_StructMember::is_optional
```

Indicates if the struct member is optional or required.

## 9.179 DDS\_StructMemberSeq Struct Reference

Defines a sequence of struct members.

### 9.179.1 Detailed Description

Defines a sequence of struct members.

See also

**DDS\_StructMember** (p. 1103)

**FooSeq** (p. 1697)

**DDS\_TypeCodeFactory::create\_struct\_tc** (p. 1214)

## 9.180 DDS\_SubscriberQos Struct Reference

QoS policies supported by a **DDSSubscriber** (p. 1592) entity.

### Public Member Functions

- bool **operator==** (const **DDS\_SubscriberQos** &r) const  
*Compares two SubscriberQos objects for equality.*
- bool **operator!=** (const **DDS\_SubscriberQos** &r) const  
*Compares two SubscriberQos objects for inequality.*
- **DDS\_ReturnCode\_t print** () const  
*Prints this **DDS\_SubscriberQos** (p. 1105) to stdout.*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_SubscriberQos** &base) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_SubscriberQos** &base, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*
- **DDS\_ReturnCode\_t to\_string** (char \*string, **DDS\_UnsignedLong** &string\_size, const **DDS\_QosPrintAll\_t** &, const **DDS\_QosPrintFormat** &format) const  
*Obtains a string representation of this **DDS\_SubscriberQos** (p. 1105).*

## Public Attributes

- struct **DDS\_PresentationQosPolicy** **presentation**  
*Presentation policy, **PRESENTATION** (p. 417).*
- struct **DDS\_PartitionQosPolicy** **partition**  
*Partition policy, **PARTITION** (p. 416).*
- struct **DDS\_GroupDataQosPolicy** **group\_data**  
*Group data policy, **GROUP\_DATA** (p. 406).*
- struct **DDS\_EntityFactoryQosPolicy** **entity\_factory**  
*Entity factory policy, **ENTITY\_FACTORY** (p. 402).*
- struct **DDS\_EntityNameQosPolicy** **subscriber\_name**  
*<<extension>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).*

### 9.180.1 Detailed Description

QoS policies supported by a **DDSSubscriber** (p. 1592) entity.

You must set certain members in a consistent manner:

length of **DDS\_GroupDataQosPolicy::value** (p. 918)  $\leq$  **DDS\_DomainParticipantResourceLimitsQosPolicy**↔  
**::subscriber\_group\_data\_max\_length** (p. 758)

length of **DDS\_PartitionQosPolicy::name** (p. 991)  $\leq$  **DDS\_DomainParticipantResourceLimitsQosPolicy::max**↔  
**partitions** (p. 759)

combined number of characters (including terminating 0) in **DDS\_PartitionQosPolicy::name** (p. 991)  $\leq$  **DDS**↔  
**DomainParticipantResourceLimitsQosPolicy::max\_partition\_cumulative\_characters** (p. 759)

If any of the above are not true, **DDSSubscriber::set\_qos** (p. 1609) and **DDSSubscriber::set\_qos\_with\_profile** (p. 1610) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

### 9.180.2 Member Function Documentation

#### 9.180.2.1 operator==( )

```
bool DDS_SubscriberQos::operator==(
    const DDS_SubscriberQos & r ) const [inline]
```

Compares two SubscriberQos objects for equality.

See also

**DDS\_SubscriberQos\_equals** (p. 127)

References **DDS\_SubscriberQos\_equals()**.

### 9.180.2.2 operator"!=()

```
bool DDS_SubscriberQos::operator!= (
    const DDS_SubscriberQos & r ) const [inline]
```

Compares two SubscriberQos objects for inequality.

See also

**DDS\_SubscriberQos\_equals** (p. 127)

References **DDS\_SubscriberQos\_equals()**.

## 9.180.3 Member Data Documentation

### 9.180.3.1 presentation

```
struct DDS_PresentationQosPolicy DDS_SubscriberQos::presentation
```

Presentation policy, **PRESENTATION** (p. 417).

### 9.180.3.2 partition

```
struct DDS_PartitionQosPolicy DDS_SubscriberQos::partition
```

Partition policy, **PARTITION** (p. 416).

### 9.180.3.3 group\_data

```
struct DDS_GroupDataQosPolicy DDS_SubscriberQos::group_data
```

Group data policy, **GROUP\_DATA** (p. 406).

### 9.180.3.4 entity\_factory

```
struct DDS_EntityFactoryQosPolicy DDS_SubscriberQos::entity_factory
```

Entity factory policy, **ENTITY\_FACTORY** (p. 402).

### 9.180.3.5 subscriber\_name

```
struct DDS_EntityNameQosPolicy DDS_SubscriberQos::subscriber_name
```

<<*extension*>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).

## 9.181 DDS\_SubscriptionBuiltinTopicData Struct Reference

Entry created when a **DDSDataReader** (p. 1288) is discovered in association with its Subscriber.

### Public Attributes

- **DDS\_BuiltinTopicKey\_t key**  
*DCPS key to distinguish entries.*
- **DDS\_BuiltinTopicKey\_t participant\_key**  
*DCPS key of the participant to which the DataReader belongs.*
- char \* **topic\_name**  
*Name of the related **DDSTopic** (p. 1617).*
- char \* **type\_name**  
*Name of the type attached to the **DDSTopic** (p. 1617).*
- struct **DDS\_DurabilityQosPolicy durability**  
*Policy of the corresponding DataReader.*
- struct **DDS\_DeadlineQosPolicy deadline**  
*Policy of the corresponding DataReader.*
- struct **DDS\_LatencyBudgetQosPolicy latency\_budget**  
*Policy of the corresponding DataReader.*
- struct **DDS\_LivelinessQosPolicy liveliness**  
*Policy of the corresponding DataReader.*
- struct **DDS\_ReliabilityQosPolicy reliability**  
*Policy of the corresponding DataReader.*
- struct **DDS\_OwnershipQosPolicy ownership**  
*Policy of the corresponding DataReader.*
- struct **DDS\_DestinationOrderQosPolicy destination\_order**  
*Policy of the corresponding DataReader.*
- struct **DDS\_UserDataQosPolicy user\_data**  
*Policy of the corresponding DataReader.*

- struct **DDS\_TimeBasedFilterQosPolicy** `time_based_filter`  
*Policy of the corresponding DataReader.*
- struct **DDS\_PresentationQosPolicy** `presentation`  
*Policy of the Subscriber to which the DataReader belongs.*
- struct **DDS\_PartitionQosPolicy** `partition`  
*Policy of the Subscriber to which the DataReader belongs.*
- struct **DDS\_TopicDataQosPolicy** `topic_data`  
*Policy of the related Topic.*
- struct **DDS\_GroupDataQosPolicy** `group_data`  
*Policy of the Subscriber to which the DataReader belongs.*
- struct **DDS\_TypeConsistencyEnforcementQosPolicy** `type_consistency`  
*Policy of the corresponding DataReader.*
- struct **DDS\_DataRepresentationQosPolicy** `representation`  
*Data representation policy of the corresponding DataReader.*
- **DDS\_DataTagQosPolicy** `data_tags`  
*Tags of the corresponding DataReader.*
- struct **DDS\_TypeCode** \* `type_code`  
<<extension>> (p. 237) Type code information of the corresponding Topic
- **DDS\_BuiltinTopicKey\_t** `subscriber_key`  
<<extension>> (p. 237) DCPS key of the subscriber to which the DataReader belongs.
- struct **DDS\_PropertyQosPolicy** `property`  
<<extension>> (p. 237) Properties of the corresponding DataReader.
- struct **DDS\_LocatorSeq** `unicast_locators`  
<<extension>> (p. 237) Custom unicast locators that the endpoint can specify. The default locators will be used if this is not specified.
- struct **DDS\_LocatorSeq** `multicast_locators`  
<<extension>> (p. 237) Custom multicast locators that the endpoint can specify. The default locators will be used if this is not specified.
- struct **DDS\_ContentFilterProperty\_t** `content_filter_property`  
<<extension>> (p. 237) This field provides all the required information to enable content filtering on the Writer side.
- struct **DDS\_GUID\_t** `virtual_guid`  
<<extension>> (p. 237) Virtual GUID associated to the DataReader.
- struct **DDS\_ServiceQosPolicy** `service`  
<<extension>> (p. 237) Policy of the corresponding DataReader.
- **DDS\_ProtocolVersion\_t** `rtps_protocol_version`  
<<extension>> (p. 237) Version number of the RTPS wire protocol used.
- struct **DDS\_VendorId\_t** `rtps_vendor_id`  
<<extension>> (p. 237) ID of vendor implementing the RTPS wire protocol.
- struct **DDS\_ProductVersion\_t** `product_version`  
<<extension>> (p. 237) This is a vendor specific parameter. It gives the current version of RTI Connext
- **DDS\_Boolean** `disable_positive_acks`  
<<extension>> (p. 237) This is a vendor specific parameter. Determines whether the corresponding DataReader sends positive acknowledgments for reliability.
- struct **DDS\_EntityNameQosPolicy** `subscription_name`  
<<extension>> (p. 237) The subscription name and role name.
- struct **DDS\_EndpointTrustProtectionInfo** `trust_protection_info`  
<<extension>> (p. 237) Trust plugins protection information associated with the discovered DataReader.
- struct **DDS\_EndpointTrustAlgorithmInfo** `trust_algorithm_info`  
<<extension>> (p. 237) Trust Plugins algorithms associated with the discovered DataReader.

### 9.181.1 Detailed Description

Entry created when a **DDSDataReader** (p. 1288) is discovered in association with its Subscriber.

Data associated with the built-in topic **DDS\_SUBSCRIPTION\_TOPIC\_NAME** (p. 300). It contains QoS policies and additional information that apply to the remote **DDSDataReader** (p. 1288) the related **DDSSubscriber** (p. 1592).

See also

**DDS\_SUBSCRIPTION\_TOPIC\_NAME** (p. 300)

**DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)

### 9.181.2 Member Data Documentation

#### 9.181.2.1 key

```
DDS_BuiltinTopicKey_t DDS_SubscriptionBuiltinTopicData::key
```

DCPS key to distinguish entries.

#### 9.181.2.2 participant\_key

```
DDS_BuiltinTopicKey_t DDS_SubscriptionBuiltinTopicData::participant_key
```

DCPS key of the participant to which the DataReader belongs.

#### 9.181.2.3 topic\_name

```
char* DDS_SubscriptionBuiltinTopicData::topic_name
```

Name of the related **DDSTopic** (p. 1617).

The length of this string is limited to 255 characters.

The memory for this field is managed as described in **String Conventions** (p. 552).

See also

**String Conventions** (p. 552)

#### 9.181.2.4 type\_name

```
char* DDS_SubscriptionBuiltinTopicData::type_name
```

Name of the type attached to the **DDSTopic** (p. 1617).

The length of this string is limited to 255 characters.

The memory for this field is managed as described in **String Conventions** (p. 552).

See also

**String Conventions** (p. 552)

#### 9.181.2.5 durability

```
struct DDS_DurabilityQosPolicy DDS_SubscriptionBuiltinTopicData::durability
```

Policy of the corresponding DataReader.

#### 9.181.2.6 deadline

```
struct DDS_DeadlineQosPolicy DDS_SubscriptionBuiltinTopicData::deadline
```

Policy of the corresponding DataReader.

#### 9.181.2.7 latency\_budget

```
struct DDS_LatencyBudgetQosPolicy DDS_SubscriptionBuiltinTopicData::latency_budget
```

Policy of the corresponding DataReader.

#### 9.181.2.8 liveliness

```
struct DDS_LivelinessQosPolicy DDS_SubscriptionBuiltinTopicData::liveliness
```

Policy of the corresponding DataReader.

### 9.181.2.9 reliability

```
struct DDS_ReliabilityQosPolicy DDS_SubscriptionBuiltinTopicData::reliability
```

Policy of the corresponding DataReader.

### 9.181.2.10 ownership

```
struct DDS_OwnershipQosPolicy DDS_SubscriptionBuiltinTopicData::ownership
```

Policy of the corresponding DataReader.

### 9.181.2.11 destination\_order

```
struct DDS_DestinationOrderQosPolicy DDS_SubscriptionBuiltinTopicData::destination_order
```

Policy of the corresponding DataReader.

#### Warning

Only the field **DDS\_DestinationOrderQosPolicy::kind** (p. 711) is propagated during discovery. The other fields always contain their default values.

### 9.181.2.12 user\_data

```
struct DDS_UserDataQosPolicy DDS_SubscriptionBuiltinTopicData::user_data
```

Policy of the corresponding DataReader.

### 9.181.2.13 time\_based\_filter

```
struct DDS_TimeBasedFilterQosPolicy DDS_SubscriptionBuiltinTopicData::time_based_filter
```

Policy of the corresponding DataReader.

#### 9.181.2.14 presentation

```
struct DDS_PresentationQosPolicy DDS_SubscriptionBuiltinTopicData::presentation
```

Policy of the Subscriber to which the DataReader belongs.

#### 9.181.2.15 partition

```
struct DDS_PartitionQosPolicy DDS_SubscriptionBuiltinTopicData::partition
```

Policy of the Subscriber to which the DataReader belongs.

#### 9.181.2.16 topic\_data

```
struct DDS_TopicDataQosPolicy DDS_SubscriptionBuiltinTopicData::topic_data
```

Policy of the related Topic.

#### 9.181.2.17 group\_data

```
struct DDS_GroupDataQosPolicy DDS_SubscriptionBuiltinTopicData::group_data
```

Policy of the Subscriber to which the DataReader belongs.

#### 9.181.2.18 type\_consistency

```
struct DDS_TypeConsistencyEnforcementQosPolicy DDS_SubscriptionBuiltinTopicData::type_consistency
```

Policy of the corresponding DataReader.

#### 9.181.2.19 representation

```
struct DDS_DataRepresentationQosPolicy DDS_SubscriptionBuiltinTopicData::representation
```

Data representation policy of the corresponding DataReader.

### 9.181.2.20 data\_tags

`DDS_DataTagQosPolicy DDS_SubscriptionBuiltinTopicData::data_tags`

Tags of the corresponding DataReader.

### 9.181.2.21 type\_code

`struct DDS_TypeCode* DDS_SubscriptionBuiltinTopicData::type_code`

<<*extension*>> (p. 237) Type code information of the corresponding Topic

### 9.181.2.22 subscriber\_key

`DDS_BuiltinTopicKey_t DDS_SubscriptionBuiltinTopicData::subscriber_key`

<<*extension*>> (p. 237) DCPS key of the subscriber to which the DataReader belongs.

### 9.181.2.23 property

`struct DDS_PropertyQosPolicy DDS_SubscriptionBuiltinTopicData::property`

<<*extension*>> (p. 237) Properties of the corresponding DataReader.

### 9.181.2.24 unicast\_locators

`struct DDS_LocatorSeq DDS_SubscriptionBuiltinTopicData::unicast_locators`

<<*extension*>> (p. 237) Custom unicast locators that the endpoint can specify. The default locators will be used if this is not specified.

### 9.181.2.25 multicast\_locators

```
struct DDS_LocatorSeq DDS_SubscriptionBuiltinTopicData::multicast_locators
```

<<*extension*>> (p. 237) Custom multicast locators that the endpoint can specify. The default locators will be used if this is not specified.

### 9.181.2.26 content\_filter\_property

```
struct DDS_ContentFilterProperty_t DDS_SubscriptionBuiltinTopicData::content_filter_property
```

<<*extension*>> (p. 237) This field provides all the required information to enable content filtering on the Writer side.

### 9.181.2.27 virtual\_guid

```
struct DDS_GUID_t DDS_SubscriptionBuiltinTopicData::virtual_guid
```

<<*extension*>> (p. 237) Virtual GUID associated to the DataReader.

**DDS\_GUID\_t** (p. 918)

### 9.181.2.28 service

```
struct DDS_ServiceQosPolicy DDS_SubscriptionBuiltinTopicData::service
```

<<*extension*>> (p. 237) Policy of the corresponding DataReader.

### 9.181.2.29 rtps\_protocol\_version

```
DDS_ProtocolVersion_t DDS_SubscriptionBuiltinTopicData::rtps_protocol_version
```

<<*extension*>> (p. 237) Version number of the RTPS wire protocol used.

### 9.181.2.30 rtps\_vendor\_id

```
struct DDS_VendorId_t DDS_SubscriptionBuiltinTopicData::rtps_vendor_id
```

<<*extension*>> (p. 237) ID of vendor implementing the RTPS wire protocol.

### 9.181.2.31 product\_version

```
struct DDS_ProductVersion_t DDS_SubscriptionBuiltinTopicData::product_version
```

<<*extension*>> (p. 237) This is a vendor specific parameter. It gives the current version of RTI Connext

### 9.181.2.32 disable\_positive\_acks

```
DDS_Boolean DDS_SubscriptionBuiltinTopicData::disable_positive_acks
```

<<*extension*>> (p. 237) This is a vendor specific parameter. Determines whether the corresponding DataReader sends positive acknowledgments for reliability.

### 9.181.2.33 subscription\_name

```
struct DDS_EntityNameQosPolicy DDS_SubscriptionBuiltinTopicData::subscription_name
```

<<*extension*>> (p. 237) The subscription name and role name.

This member contains the name and the role name of the discovered subscription.

### 9.181.2.34 trust\_protection\_info

```
struct DDS_EndpointTrustProtectionInfo DDS_SubscriptionBuiltinTopicData::trust_protection_info
```

<<*extension*>> (p. 237) Trust plugins protection information associated with the discovered DataReader.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged data and metadata.

trust\_protection\_info contains information about how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins. Two endpoints will not match if their trust\_protection\_info is incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the [RTI Security Plugins User's Manual](#).

### 9.181.2.35 trust\_algorithm\_info

```
struct DDS_EndpointTrustAlgorithmInfo DDS_SubscriptionBuiltinTopicData::trust_algorithm_info
```

<<*extension*>> (p. 237) Trust Plugins algorithms associated with the discovered DataReader.

Trust Plugins is a generic abstraction that represents any plugin intended to do transformation, interception, and validation of exchanged data and metadata.

trust\_algorithm\_info contains information about what algorithms the loaded Trust Plugins are running. Two endpoints will not match if their trust\_algorithm\_info are incompatible.

The meaning of the contents of this field may vary depending on what Trust Plugins the endpoint is using. For information about how this field interacts with the RTI Security Plugins, please refer to the *RTI Security Plugins User's Manual*.

## 9.182 DDS\_SubscriptionBuiltinTopicDataSeq Struct Reference

## 9.183 DDS\_SubscriptionMatchedStatus Struct Reference

**DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347)

## Public Attributes

- **DDS\_Long total\_count**

*The total cumulative number of times that this **DDSDataReader** (p. 1288) discovered a "match" with a **DDSDataWriter** (p. 1321).*

- **DDS\_Long total\_count\_change**

*The changes in total\_count since the last time the listener was called or the status was read.*

- **DDS\_Long current\_count**

*The current number of DataWriters with which the **DDSDataReader** (p. 1288) is matched.*

- **DDS\_Long current\_count\_peak**

*<<extension>> (p. 237) Greatest number of DataWriters that matched this DataReader simultaneously.*

- **DDS\_Long current\_count\_change**

*The change in current\_count since the last time the listener was called or the status was read.*

- **DDS\_InstanceHandle\_t last\_publication\_handle**

*This InstanceHandle can be used to look up which remote **DDSDataWriter** (p. 1321) was the last to cause this DataReader's status to change, using **DDSDataReader::get\_matched\_publication\_data** (p. 1300).*

### 9.183.1 Detailed Description

#### **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347)

A "match" happens when the **DDSDataReader** (p. 1288) finds a **DDSDataWriter** (p. 1321) with the same **DDSTopic** (p. 1617), same or compatible data type, and an offered QoS that is compatible with that requested by the **DDSDataReader** (p. 1288). (For information on compatible data types, see the `Extensible Types Guide`.)

This status is also changed (and the listener, if any, called) when a match is ended. A local **DDSDataReader** (p. 1288) will become "unmatched" from a remote **DDSDataWriter** (p. 1321) when that **DDSDataWriter** (p. 1321) goes away for any of the following reasons:

- The **DDSDomainParticipant** (p. 1351) containing the matched **DDSDataWriter** (p. 1321) has lost liveliness.
- This DataReader or the matched DataWriter has changed QoS such that the entities are now incompatible.
- The matched DataWriter has been deleted.

This status may reflect changes from multiple match or unmatched events, and the **DDS\_SubscriptionMatchedStatus::current\_count\_change** (p. 1119) can be used to determine the number of changes since the listener was called back or the status was checked.

Note: A DataWriter's loss of liveliness (which is determined by **DDS\_LivelinessQosPolicyKind** (p. 409)) does not trigger an unmatched event. So a DataWriter may still match even though its liveliness is lost.

### 9.183.2 Member Data Documentation

### 9.183.2.1 total\_count

```
DDS_Long DDS_SubscriptionMatchedStatus::total_count
```

The total cumulative number of times that this **DDSDataReader** (p. 1288) discovered a "match" with a **DDSDataWriter** (p. 1321).

This number increases whenever a new match is discovered. It does not decrease when an existing match goes away for any of the reasons described in **DDS\_SubscriptionMatchedStatus** (p. 1117).

### 9.183.2.2 total\_count\_change

```
DDS_Long DDS_SubscriptionMatchedStatus::total_count_change
```

The changes in total\_count since the last time the listener was called or the status was read.

Note that this number will never be negative (because it's the total number of times the DataReader ever matched with a DataWriter).

### 9.183.2.3 current\_count

```
DDS_Long DDS_SubscriptionMatchedStatus::current_count
```

The current number of DataWriters with which the **DDSDataReader** (p. 1288) is matched.

This number increases when a new match is discovered and decreases when an existing match goes away for any of the reasons described in **DDS\_SubscriptionMatchedStatus** (p. 1117).

### 9.183.2.4 current\_count\_peak

```
DDS_Long DDS_SubscriptionMatchedStatus::current_count_peak
```

<<*extension*>> (p. 237) Greatest number of DataWriters that matched this DataReader simultaneously.

That is, there was no moment in time when more than this many DataWriters matched this DataReader. (As a result, total\_count can be higher than current\_count\_peak.)

### 9.183.2.5 current\_count\_change

```
DDS_Long DDS_SubscriptionMatchedStatus::current_count_change
```

The change in current\_count since the last time the listener was called or the status was read.

Note that a negative current\_count\_change means that one or more DataWriters have become unmatched for one or more of the reasons described in **DDS\_SubscriptionMatchedStatus** (p. 1117).

### 9.183.2.6 last\_publication\_handle

```
DDS_InstanceHandle_t DDS_SubscriptionMatchedStatus::last_publication_handle
```

This InstanceHandle can be used to look up which remote **DDSDataWriter** (p. 1321) was the last to cause this DataReader's status to change, using **DDSDataReader::get\_matched\_publication\_data** (p. 1300).

If the DataWriter no longer matches this DataReader due to any of the reasons in **DDS\_SubscriptionMatchedStatus** (p. 1117) except incompatible QoS, then the DataWriter has been purged from this DataReader's DomainParticipant discovery database. (See the "Discovery Overview" section of the *User's Manual*.) In that case, the **DDSDataReader::get\_matched\_publication\_data** (p. 1300) method will not be able to return information about the DataWriter. The only way to get information about the lost DataWriter is if you cached the information previously.

## 9.184 DDS\_SystemResourceLimitsQosPolicy Struct Reference

<<*extension*>> (p. 237) Configures **DDSDomainParticipant** (p. 1351)-independent resources used by RTI Connex. Mainly used to change the maximum number of **DDSDomainParticipant** (p. 1351) entities that can be created within a single process (address space).

### Public Attributes

- **DDS\_Long max\_objects\_per\_thread**

*The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1426).*

- **DDS\_Long initial\_objects\_per\_thread**

*The number of objects per thread for a **DDSDomainParticipantFactory** (p. 1426) for which infrastructure will initially be allocated.*

### 9.184.1 Detailed Description

<<*extension*>> (p. 237) Configures **DDSDomainParticipant** (p. 1351)-independent resources used by RTI Connex. Mainly used to change the maximum number of **DDSDomainParticipant** (p. 1351) entities that can be created within a single process (address space).

Entity:

**DDSDomainParticipantFactory** (p. 1426)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.184.2 Usage

Within a single process (or address space for some supported real-time operating systems), applications may create and use multiple **DDSDomainParticipant** (p. 1351) entities. This QoS policy sets a parameter that places an effective upper bound on the maximum number of **DDSDomainParticipant** (p. 1351) entities that can be created in a single process/address space. These values cannot be changed after a DomainParticipant has been created and they cannot be set in a QoS XML file.

## 9.184.3 Member Data Documentation

### 9.184.3.1 max\_objects\_per\_thread

```
DDS_Long DDS_SystemResourceLimitsQoSPolicy::max_objects_per_thread
```

The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1426).

This value is the upper bound on the number of objects that can be stored per thread. When a **DDSDomainParticipantFactory** (p. 1426) is created, infrastructure will be created to manage the number of objects specified by `initial_objects_per_thread`. As more objects are required by the application, the infrastructure will be automatically grown to accommodate up to `max_objects_per_thread` objects. Leave this property set to the default value to allow the infrastructure to grow as needed. If you wish to strictly control memory allocation, set `max_objects_per_thread` to a smaller value, but note that this runs the risk of a runtime error and reduced application functionality if your limit is reached.

**[default]** 261120

**[range]** [1, 261120]

### 9.184.3.2 initial\_objects\_per\_thread

```
DDS_Long DDS_SystemResourceLimitsQoSPolicy::initial_objects_per_thread
```

The number of objects per thread for a **DDSDomainParticipantFactory** (p. 1426) for which infrastructure will initially be allocated.

The infrastructure for managing thread-specific objects will initially be sized according to this value. The infrastructure will grow automatically, up to a maximum of `max_objects_per_thread`, as required by the application at runtime. If you are certain that more than the default value of `initial_objects_per_thread` will be required for your application and you wish to reduce the number of memory allocations performed while your application reaches steady state, you may set this value to a larger number. To improve the efficiency of memory allocation, RTI Connexant may initially size the infrastructure to a larger value than the value of `initial_objects_per_thread`. The infrastructure will never be sized less than `initial_objects_per_thread` or greater than `max_objects_per_thread`. When the infrastructure for managing thread-specific objects is created or increased, a log message stating "Allowed number of thread specific objects is now " will be produced at the local log level.

**[default]** 1024

**[range]** [1, 261120]; must be less than or equal to `max_objects_per_thread`

## 9.185 DDS\_Tag Struct Reference

Tags are name/value pair objects.

### Public Attributes

- char \* **name**  
*Tag name.*
- char \* **value**  
*Tag value.*

### 9.185.1 Detailed Description

Tags are name/value pair objects.

### 9.185.2 Member Data Documentation

#### 9.185.2.1 name

```
char* DDS_Tag::name
```

Tag name.

It must be a NULL-terminated string.

#### 9.185.2.2 value

```
char* DDS_Tag::value
```

Tag value.

It must be a NULL-terminated string.

## 9.186 DDS\_TagSeq Struct Reference

Declares IDL sequence < **DDS\_Tag** (p. 1122) >

### 9.186.1 Detailed Description

Declares IDL `sequence` < **DDS\_Tag** (p. 1122) >

See also

**DDS\_Tag** (p. 1122)

## 9.187 DDS\_ThreadSettings\_t Struct Reference

The properties of a thread of execution.

### Public Attributes

- **DDS\_ThreadSettingsKindMask** `mask`  
*Describes the type of thread.*
- **DDS\_Long** `priority`  
*Thread priority.*
- **DDS\_Long** `stack_size`  
*The thread stack-size.*
- struct **DDS\_LongSeq** `cpu_list`  
*The list of processors on which the thread(s) may run.*
- **DDS\_ThreadSettingsCpuRotationKind** `cpu_rotation`  
*Determines how processor affinity is applied to multiple threads.*

### 9.187.1 Detailed Description

The properties of a thread of execution.

QoS:

**DDS\_EventQosPolicy** (p. 908) **DDS\_DatabaseQosPolicy** (p. 619) **DDS\_ReceiverPoolQosPolicy** (p. 1038)  
**DDS\_AsynchronousPublisherQosPolicy** (p. 590)

### 9.187.2 Member Data Documentation

#### 9.187.2.1 mask

**DDS\_ThreadSettingsKindMask** `DDS_ThreadSettings_t::mask`

Describes the type of thread.

The meaning of each bit of the mask are defined by **DDS\_ThreadSettingsKind** (p. 352).

**[default]** 0, use default options of the OS

### 9.187.2.2 priority

```
DDS_Long DDS_ThreadSettings_t::priority
```

Thread priority.

**[range]** Platform-dependent - Consult `Platform Notes` for additional details.

### 9.187.2.3 stack\_size

```
DDS_Long DDS_ThreadSettings_t::stack_size
```

The thread stack-size.

**[range]** Platform-dependent. Consult `Platform Notes` for additional details.

### 9.187.2.4 cpu\_list

```
struct DDS_LongSeq DDS_ThreadSettings_t::cpu_list
```

The list of processors on which the thread(s) may run.

A sequence of integers that represent the set of processors on which the thread(s) controlled by this QoS may run. An empty sequence (the default) means the middleware will make no CPU affinity adjustments.

Note: This feature is currently only supported on a subset of architectures (see the `Platform Notes`). The API may change as more architectures are added in future releases.

This value is only relevant to the **DDS\_ReceiverPoolQoSPolicy** (p. 1038). It is ignored within other QoS policies that include **DDS\_ThreadSettings\_t** (p. 1123).

See also

**Controlling CPU Core Affinity for RTI Threads** (p. 352)

**[default]** Empty sequence

### 9.187.2.5 cpu\_rotation

```
DDS_ThreadSettingsCpuRotationKind DDS_ThreadSettings_t::cpu_rotation
```

Determines how processor affinity is applied to multiple threads.

This value is only relevant to the **DDS\_ReceiverPoolQoSPolicy** (p. 1038). It is ignored within other QoS policies that include **DDS\_ThreadSettings\_t** (p. 1123).

See also

**Controlling CPU Core Affinity for RTI Threads** (p. 352)

Note: This feature is currently only supported on a subset of architectures (see the `Platform Notes`). The API may change as more architectures are added in future releases. ;

## 9.188 DDS\_Time\_t Struct Reference

Type for *time* representation.

### Static Public Member Functions

- static **DDS\_Time\_t from\_micros** ( **DDS\_UnsignedLongLong** microseconds)  
*Creates a new time object from a time expressed in microseconds.*
- static **DDS\_Time\_t from\_millis** ( **DDS\_UnsignedLongLong** milliseconds)  
*Creates a new time object from a time expressed in milliseconds.*
- static **DDS\_Time\_t from\_nanos** ( **DDS\_UnsignedLongLong** nanoseconds)  
*Creates a new time object from a time expressed in nanoseconds.*

#### 9.188.2.1 sec

**DDS\_LongLong** DDS\_Time\_t::sec

seconds

### 9.188.2.2 nanosec

`DDS_UnsignedLong DDS_Time_t::nanosec`

nanoseconds

[range] [0,1000000000)

## 9.189 DDS\_TimeBasedFilterQosPolicy Struct Reference

Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.

### Public Attributes

- struct **DDS\_Duration\_t** `minimum_separation`  
*The minimum separation duration between subsequent samples.*

### 9.189.1 Detailed Description

Filter that allows a **DDSDataReader** (p. 1288) to specify that it is interested only in (potentially) a subset of the values of the data.

The filter states that the **DDSDataReader** (p. 1288) does not want to receive more than one value each `minimum_↔separation`, regardless of how fast the changes occur.

Entity:

**DDSDataReader** (p. 1288)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360)

## 9.189.2 Usage

You can use this QoS policy to reduce the amount of data received by a **DDSDataReader** (p. 1288). **DDSDataWriter** (p. 1321) entities may send data faster than needed by a **DDSDataReader** (p. 1288). For example, a **DDSDataReader** (p. 1288) of sensor data that is displayed to a human operator in a GUI application does not need to receive data updates faster than a user can reasonably perceive changes in data values. This is often measured in tenths (0.1) of a second up to several seconds. However, a **DDSDataWriter** (p. 1321) of sensor information may have other **DDSDataReader** (p. 1288) entities that are processing the sensor information to control parts of the system and thus need new data updates in measures of hundredths (0.01) or thousandths (0.001) of a second.

With this QoS policy, different **DDSDataReader** (p. 1288) entities can set their own time-based filters, so that data published faster than the period set by a each **DDSDataReader** (p. 1288) will not be delivered to that **DDSDataReader** (p. 1288).

The **TIME\_BASED\_FILTER** (p. 440) also applies to each instance separately; that is, the constraint is that the **DDSDataReader** (p. 1288) does not want to see more than one sample of each instance per `minimum_separation` period.

This QoS policy allows you to optimize resource usage (CPU and possibly network bandwidth) by only delivering the required amount of data to each **DDSDataReader** (p. 1288), accommodating the fact that, for rapidly-changing data, different subscribers may have different requirements and constraints as to how frequently they need or can handle being notified of the most current values. As such, it can also be used to protect applications that are running on a heterogeneous network where some nodes are capable of generating data much faster than others can consume it.

For best effort data delivery, if the data type is unkeyed and the **DDSDataWriter** (p. 1321) has an infinite **DDS\_LivelinessQosPolicy::lease\_duration** (p. 938), RTI Connexx will only send as many packets to a **DDSDataReader** (p. 1288) as required by the **TIME\_BASED\_FILTER**, no matter how fast **DDSDataWriter::write** (p. 1683) is called.

For multicast data delivery to multiple DataReaders, the one with the lowest `minimum_separation` determines the DataWriter's send rate. For example, if a **DDSDataWriter** (p. 1321) sends over multicast to two DataReaders, one with `minimum_separation` of 2 seconds and one with `minimum_separation` of 1 second, the DataWriter will send every 1 second.

In configurations where RTI Connexx must send all the data published by the **DDSDataWriter** (p. 1321) (for example, when the **DDSDataWriter** (p. 1321) is reliable, when the data type is keyed, or when the **DDSDataWriter** (p. 1321) has a finite **DDS\_LivelinessQosPolicy::lease\_duration** (p. 938)), only the data that passes the **TIME\_BASED\_FILTER** will be stored in the receive queue of the **DDSDataReader** (p. 1288). Extra data will be accepted but dropped. Note that filtering is only applied on alive samples (that is, samples that have not been disposed/unregistered).

## 9.189.3 Consistency

It is inconsistent for a **DDSDataReader** (p. 1288) to have a `minimum_separation` longer than its **DEADLINE** (p. 385) period.

However, it is important to be aware of certain edge cases that can occur when your publication rate, minimum separation, and deadline period align and that can cause missed deadlines that you may not expect. For example, suppose that you nominally publish samples every second but that this rate can vary somewhat over time. You declare a minimum separation of 1 second to filter out rapid updates and set a deadline of two seconds so that you will be aware if the rate falls too low. Even if your update rate never wavers, you can still miss deadlines! Here's why:

Suppose you publish the first sample at time  $t=0$  seconds. You then publish your next sample at  $t=1$  seconds. Depending on how your operating system schedules the time-based filter execution relative to the publication, this second sample may be filtered. You then publish your third sample at  $t=2$  seconds, and depending on how your OS schedules this publication in relation to the deadline check, you could miss the deadline.

This scenario demonstrates a couple of rules of thumb:

- Beware of setting your `minimum_separation` to a value very close to your publication rate: you may filter more data than you intend to.
- Beware of setting your `minimum_separation` to a value that is too close to your deadline period relative to your publication rate. You may miss deadlines.

See **DDS\_DeadlineQosPolicy** (p. 707) for more information about the interactions between deadlines and time-based filters.

The setting of a **TIME\_BASED\_FILTER** (p. 440) – that is, the selection of a `minimum_separation` with a value greater than zero – is consistent with all settings of the **HISTORY** (p. 405) and **RELIABILITY** (p. 433) QoS. The **TIME\_BASED\_FILTER** (p. 440) specifies the samples that are of interest to the **DDSDataReader** (p. 1288). The **HISTORY** (p. 405) and **RELIABILITY** (p. 433) QoS affect the behavior of the middleware with respect to the samples that have been determined to be of interest to the **DDSDataReader** (p. 1288); that is, they apply *after* the **TIME\_BASED\_FILTER** (p. 440) has been applied.

In the case where the reliability QoS kind is **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435), in steady-state – defined as the situation where the **DDSDataWriter** (p. 1321) does not write new samples for a period "long" compared to the `minimum_separation` – the system should guarantee delivery of the last sample to the **DDSDataReader** (p. 1288).

### 9.190.1 Detailed Description

Entry created when a Topic object discovered.

Data associated with the built-in topic **DDS\_TOPIC\_TOPIC\_NAME** (p. 297). It contains QoS policies and additional information that apply to the remote **DDSTopic** (p. 1617).

Note: The **DDS\_TopicBuiltinTopicData** (p. 1128) built-in topic is meant to convey information about discovered Topics. This Topic's samples are not propagated in a separate packet on the wire. Instead, the data is sent as part of the information carried by other built-in topics (**DDS\_PublicationBuiltinTopicData** (p. 1010) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108)). Therefore TopicBuiltinTopicData DataReaders will not receive any data.

**String Conventions** (p. 552)

### 9.190.2.3 type\_name

```
char* DDS_TopicBuiltinTopicData::type_name
```

Name of the type attached to the **DDSTopic** (p. 1617).

The length of this string is limited to 255 characters.

The memory for this field is managed as described in **String Conventions** (p. 552).

See also

**String Conventions** (p. 552)

#### 9.190.2.4 durability

```
struct DDS_DurabilityQosPolicy DDS_TopicBuiltinTopicData::durability
```

durability policy of the corresponding Topic

#### 9.190.2.5 durability\_service

```
struct DDS_DurabilityServiceQosPolicy DDS_TopicBuiltinTopicData::durability_service
```

durability service policy of the corresponding Topic

#### 9.190.2.6 deadline

```
struct DDS_DeadlineQosPolicy DDS_TopicBuiltinTopicData::deadline
```

Policy of the corresponding Topic.

#### 9.190.2.7 latency\_budget

```
struct DDS_LatencyBudgetQosPolicy DDS_TopicBuiltinTopicData::latency_budget
```

Policy of the corresponding Topic.

#### 9.190.2.8 liveliness

```
struct DDS_LivelinessQosPolicy DDS_TopicBuiltinTopicData::liveliness
```

Policy of the corresponding Topic.

#### 9.190.2.9 reliability

```
struct DDS_ReliabilityQosPolicy DDS_TopicBuiltinTopicData::reliability
```

Policy of the corresponding Topic.

#### 9.190.2.10 transport\_priority

```
struct DDS_TransportPriorityQosPolicy DDS_TopicBuiltinTopicData::transport_priority
```

Policy of the corresponding Topic.

#### 9.190.2.11 lifespan

```
struct DDS_LifespanQosPolicy DDS_TopicBuiltinTopicData::lifespan
```

Policy of the corresponding Topic.

#### 9.190.2.12 destination\_order

```
struct DDS_DestinationOrderQosPolicy DDS_TopicBuiltinTopicData::destination_order
```

Policy of the corresponding Topic.

#### 9.190.2.13 history

```
struct DDS_HistoryQosPolicy DDS_TopicBuiltinTopicData::history
```

Policy of the corresponding Topic.

#### 9.190.2.14 resource\_limits

```
struct DDS_ResourceLimitsQosPolicy DDS_TopicBuiltinTopicData::resource_limits
```

Policy of the corresponding Topic.

#### 9.190.2.15 ownership

```
struct DDS_OwnershipQosPolicy DDS_TopicBuiltinTopicData::ownership
```

Policy of the corresponding Topic.

### 9.190.2.16 topic\_data

```
struct DDS_TopicDataQosPolicy DDS_TopicBuiltinTopicData::topic_data
```

Policy of the corresponding Topic.

### 9.190.2.17 representation

```
struct DDS_DataRepresentationQosPolicy DDS_TopicBuiltinTopicData::representation
```

Data representation policy of the corresponding Topic.

## 9.191 DDS\_TopicBuiltinTopicDataSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_TopicBuiltinTopicData** (p. 1128) > .

### 9.191.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_TopicBuiltinTopicData** (p. 1128) > .

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_TopicBuiltinTopicData** (p. 1128)

## 9.192 DDS\_TopicDataQosPolicy Struct Reference

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

### Public Attributes

- struct **DDS\_OctetSeq** value  
*a sequence of octets*

### 9.192.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

Entity:

**DDSTopic** (p. 1617)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **YES** (p. 360)

See also

**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.192.2 Usage

The purpose of this QoS is to allow the application to attach additional information to the created **DDSTopic** (p. 1617) objects, so that when a remote application discovers their existence, it can access that information and use it for its own purposes. This extra data is not used by RTI Connex.

One possible use of this QoS is to attach security credentials or some other information that can be used by the remote application to authenticate the source.

In combination with **DDSDataReaderListener** (p. 1315), **DDSDataWriterListener** (p. 1344), or operations such as **DDSDomainParticipant::ignore\_topic** (p. 1395), this QoS policy can assist an application in defining and enforcing its own security policies.

The use of this QoS is not limited to security; it offers a simple, yet flexible extensibility mechanism.

*Important:* RTI Connex stores the data placed in this policy in pre-allocated pools. It is therefore necessary to configure RTI Connex with the maximum size of the data that will be stored in policies of this type. This size is configured with **DDS\_DomainParticipantResourceLimitsQosPolicy::topic\_data\_max\_length** (p. 758).

### 9.192.3 Member Data Documentation

#### 9.192.3.1 value

```
struct DDS_OctetSeq DDS_TopicDataQosPolicy::value
```

a sequence of octets

**[default]** empty (zero-length)

**[range]** Octet sequence of length [0,max\_length]

## 9.193 DDS\_TopicQos Struct Reference

QoS policies supported by a **DDSTopic** (p. 1617) entity.

### Public Member Functions

- bool **operator==** (const **DDS\_TopicQos** &r) const  
*Compares two TopicQos objects for equality.*
- bool **operator!=** (const **DDS\_TopicQos** &r) const

*Data representation policy, **DATA\_REPRESENTATION** (p. 369).*

### 9.193.1 Detailed Description

QoS policies supported by a **DDSTopic** (p. 1617) entity.

You must set certain members in a consistent manner:

length of **DDS\_TopicQos::topic\_data** (p. 1137) `.value <= DDS_DomainParticipantQos::resource_limits` (p. 744) `.topic_data_max_length`

If any of the above are not true, **DDSTopic::set\_qos** (p. 1619), **DDSTopic::set\_qos\_with\_profile** (p. 1620) and **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369) will fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337) and **DDSDomainParticipant::create\_topic** (p. 1382) will return NULL.

Entity:

**DDSTopic** (p. 1617)

See also

**QoS Policies** (p. 353) allowed ranges within each Qos.

### 9.193.2 Member Function Documentation

### 9.193.2.1 operator==( )

```
bool DDS_TopicQos::operator==(
    const DDS_TopicQos & r ) const [inline]
```

Compares two TopicQos objects for equality.

```

Resource limits policy, **RESOURCE\_LIMITS** (p. 437).

### 9.193.3.11 transport\_priority

```
struct DDS_TransportPriorityQosPolicy DDS_TopicQos::transport_priority
```

Transport priority policy, **TRANSPORT\_PRIORITY** (p. 449).

### 9.193.3.12 lifespan

```
struct DDS_LifespanQosPolicy DDS_TopicQos::lifespan
```

Lifespan policy, **LIFESPAN** (p. 408).

### 9.193.3.13 ownership

```
struct DDS_OwnershipQosPolicy DDS_TopicQos::ownership
```

Ownership policy, **OWNERSHIP** (p. 414).

### 9.193.3.14 representation

```
struct DDS_DataRepresentationQosPolicy DDS_TopicQos::representation
```

Data representation policy, **DATA\_REPRESENTATION** (p. 369).

## 9.194 DDS\_TopicQueryData Struct Reference

<<*extension*>> (p. 237) Provides information about a **DDSTopicQuery** (p. 1627)

### Public Attributes

- struct **DDS\_TopicQuerySelection** **topic\_query\_selection**  
*The data selection.*
- char \* **topic\_name**  
*The topic name of the **DDSDataReader** (p. 1288).*
- struct **DDS\_GUID\_t** **original\_related\_reader\_guid**  
*Identifies the **DDSDataReader** (p. 1288) that created the **DDSTopicQuery** (p. 1627).*

### 9.194.1 Detailed Description

<<*extension*>> (p. 237) Provides information about a **DDSTopicQuery** (p. 1627)

Contains the information about a TopicQuery that can be retrieved using **DDSTopicQueryHelper::topic\_query\_data**↔  
**\_from\_service\_request** (p. 1628).

See also

**DDSTopicQueryHelper::topic\_query\_data\_from\_service\_request** (p. 1628)

### 9.194.2 Member Data Documentation

#### 9.194.2.1 topic\_query\_selection

```
struct DDS_TopicQuerySelection DDS_TopicQueryData::topic_query_selection
```

The data selection.

#### 9.194.2.2 topic\_name

```
char* DDS_TopicQueryData::topic_name
```

The topic name of the **DDSDataReader** (p. 1288).

### 9.194.2.3 original\_related\_reader\_guid

```
struct DDS_GUID_t DDS_TopicQueryData::original_related_reader_guid
```

Identifies the **DDSDataReader** (p. 1288) that created the **DDSTopicQuery** (p. 1627).

## 9.195 DDS\_TopicQueryDispatchQosPolicy Struct Reference

Configures the ability of a **DDSDataWriter** (p. 1321) to publish samples in response to a **DDSTopicQuery** (p. 1627).

### Public Attributes

- **DDS\_Boolean enable**  
*Allows this writer to dispatch TopicQueries.*
- struct **DDS\_Duration\_t publication\_period**  
*Sets the periodic interval at which samples are published.*
- **DDS\_Long samples\_per\_period**  
*Sets the maximum number of samples to publish in each publication\_period.*

### 9.195.1 Detailed Description

Configures the ability of a **DDSDataWriter** (p. 1321) to publish samples in response to a **DDSTopicQuery** (p. 1627).

Enables the ability of a **DDSDataWriter** (p. 1321) to publish historical samples upon reception of a **DDSTopicQuery** (p. 1627) and how often they are published.

Since a TopicQuery selects previously written samples, the DataWriter must have a **DDS\_DurabilityQosPolicy::kind** (p. 770) different from **DDS\_VOLATILE\_DURABILITY\_QOS** (p. 400). Also, **DDS\_ReliabilityQosPolicy::kind** (p. 1043) must be set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435).

Only samples that fall within the **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770) for an instance are evaluated against the TopicQuery filter. While the DataWriter is waiting for acknowledgements from one or more DataReaders, there may temporarily be more than **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770) samples per instance in the DataWriter's queue if the **DDS\_HistoryQosPolicy::depth** (p. 921) is set to a higher value than **DDS\_DurabilityQosPolicy::writer\_↵\_depth** (p. 770). Those additional samples past **DDS\_DurabilityQosPolicy::writer\_depth** (p. 770) are not eligible to be sent in response to the TopicQuery.

A TopicQuery may select multiple samples at once. The writer will publish them periodically, independently from newly written samples. **DDS\_TopicQueryDispatchQosPolicy::publication\_period** (p. 1142) configures the frequency of that period and **DDS\_TopicQueryDispatchQosPolicy::samples\_per\_period** (p. 1142) configures the maximum number of samples to publish each period.

If the DataWriter blocks during the publication of one of these samples, it will stop and try again the next period. (See **FooDataWriter::write** (p. 1683) for the conditions that may cause the write operation to block.)

All the DataWriters that belong to a single **DDSPublisher** (p. 1550) and enable TopicQueries share the same event thread, but each DataWriter schedules separate events. To configure that thread, see **DDS\_AsynchronousPublisher↵\_QosPolicy::topic\_query\_publication\_thread** (p. 593).

If the DataWriter is dispatching more than one TopicQuery at the same time, the configuration of this periodic event applies to all of them. For example, if a DataWriter receives two TopicQueries around the same time, the period is 1 second, the number of samples per period is 10, the first TopicQuery selects 5 samples, and the second one selects 8, the DataWriter will immediately attempt to publish all 5 for the first TopicQuery and 5 for the second one. After one second, it will publish the remaining 3 samples.

Entity:

**DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

See also

**DDSPublisher** (p. 1550)

## 9.195.2 Member Data Documentation

### 9.195.2.1 enable

```
DDS_Boolean DDS_TopicQueryDispatchQosPolicy::enable
```

Allows this writer to dispatch TopicQueries.

When set to true, this writer can receive and dispatch TopicQueries.

**[default]** **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.195.2.2 publication\_period

```
struct DDS_Duration_t DDS_TopicQueryDispatchQosPolicy::publication_period
```

Sets the periodic interval at which samples are published.

**[default]** 1 second

**[range]** [0,1 year]

### 9.195.2.3 samples\_per\_period

```
DDS_Long DDS_TopicQueryDispatchQosPolicy::samples_per_period
```

Sets the maximum number of samples to publish in each publication\_period.

**[default]** **DDS\_LENGTH\_UNLIMITED** (p. 438)

**[range]** [1, 100000000] or **DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.196 DDS\_TopicQuerySelection Struct Reference

<<**extension**>> (p. 237) Specifies the data query that defines a **DDSTopicQuery** (p. 1627)

### Public Attributes

- char \* **filter\_class\_name**  
*The name of the filter to use.*
- char \* **filter\_expression**  
*The filter expression.*
- struct **DDS\_StringSeq filter\_parameters**  
*The query parameters.*
- **DDS\_TopicQuerySelectionKind kind**  
*Indicates whether the sample selection is limited to cached samples or not.*

### 9.196.1 Detailed Description

<<**extension**>> (p. 237) Specifies the data query that defines a **DDSTopicQuery** (p. 1627)

The query format is similar to the expression and parameters of a **DDSQueryCondition** (p. 1573) or a **DDSContentFilteredTopic** (p. 1283), as described in **DDSDomainParticipant::create\_contentfilteredtopic\_with\_filter** (p. 1386).

There are two special queries:

- **DDS\_TOPIC\_QUERY\_SELECTION\_SELECT\_ALL** (p. 155)
- **DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER** (p. 155)

See also

**Queries and Filters Syntax** (p. 179)

### 9.196.2 Member Data Documentation

#### 9.196.2.1 filter\_class\_name

```
char* DDS_TopicQuerySelection::filter_class_name
```

The name of the filter to use.

Name of content filter to use. Must be one of the built-in filter names or previously registered with **DDSDomainParticipant::register\_contentfilter** (p. 1364) on the same **DDSDomainParticipant** (p. 1351).

Built-in filter names are **DDS\_SQLFILTER\_NAME** (p. 59) and **DDS\_STRINGMATCHFILTER\_NAME** (p. 59).

[default] See **DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER** (p. 155)

### 9.196.2.2 filter\_expression

```
char* DDS_TopicQuerySelection::filter_expression
```

The filter expression.

The expression to filter samples in the DataWriters. It follows the format described in **Queries and Filters Syntax** (p. 179).

**[default]** See **DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER** (p. 155)

See also

**Queries and Filters Syntax** (p. 179)

### 9.196.2.3 filter\_parameters

```
struct DDS_StringSeq DDS_TopicQuerySelection::filter_parameters
```

The query parameters.

**[default]** See **DDS\_TOPIC\_QUERY\_SELECTION\_USE\_READER\_CONTENT\_FILTER** (p. 155)

See also

**DDSDomainParticipant::create\_contentfilteredtopic\_with\_filter** (p. 1386).

### 9.196.2.4 kind

```
DDS_TopicQuerySelectionKind DDS_TopicQuerySelection::kind
```

Indicates whether the sample selection is limited to cached samples or not.

**[default]** **DDS\_TOPIC\_QUERY\_SELECTION\_KIND\_HISTORY\_SNAPSHOT** (p. 155)

## 9.197 DDS\_TransportBuiltinQosPolicy Struct Reference

Specifies which built-in transports are used.

## Public Attributes

- **DDS\_TransportBuiltinKindMask** *mask*

*Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.*

### 9.197.1 Detailed Description

Specifies which built-in transports are used.

Three different transport plug-ins are built into the core RTI Connex libraries (for most supported target platforms): UDPv4, shared memory, and UDPv6.

This QoS policy allows you to control which of these built-in transport plug-ins are used by a **DDSDomainParticipant** (p. 1351). By default, only the UDPv4 and shared memory plug-ins are enabled (although on some embedded platforms, the shared memory plug-in is not available). In some cases, users will disable the shared memory transport when they do not want applications to use shared memory to communicate when running on the same node.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.197.2 Member Data Documentation

#### 9.197.2.1 mask

`DDS_TransportBuiltinKindMask DDS_TransportBuiltinQosPolicy::mask`

Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.

RTI Connex provides several built-in transports. Only those that are specified with this mask are registered automatically when the **DDSDomainParticipant** (p. 1351) is enabled.

[default] `DDS_TRANSPORTBUILTIN_MASK_DEFAULT` (p. 444)

## 9.198 DDS\_TransportInfo\_t Struct Reference

Contains the `class_id` and `message_size_max` of an installed transport.

## Public Attributes

- **NDDS\_Transport\_ClassId\_t class\_id**  
*The class\_id identifies the transport associated with the message\_size\_max.*
- **DDS\_Long message\_size\_max**  
*The maximum size of an RTPS message in bytes that can be sent or received by the transport plugin identified by the class\_id.*

### 9.198.1 Detailed Description

Contains the class\_id and message\_size\_max of an installed transport.

### 9.198.2 Member Data Documentation

#### 9.198.2.1 class\_id

```
NDDS_Transport_ClassId_t DDS_TransportInfo_t::class_id
```

The class\_id identifies the transport associated with the message\_size\_max.

#### 9.198.2.2 message\_size\_max

```
DDS_Long DDS_TransportInfo_t::message_size_max
```

The maximum size of an RTPS message in bytes that can be sent or received by the transport plugin identified by the class\_id.

## 9.199 DDS\_TransportInfoSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_TransportInfo\_t** (p. 1145) > .

### 9.199.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_TransportInfo\_t** (p. 1145) > .

Instantiates:

```
<<generic>> (p. 237) FooSeq (p. 1697)
```

See also

```
DDS_TransportInfo_t (p. 1145)
```

## 9.200 DDS\_TransportMulticastMapping\_t Struct Reference

Type representing a list of multicast mapping elements.

### Public Attributes

- char \* **addresses**  
*A string containing a comma-separated list of IP addresses or IP address ranges to be used to receive multicast traffic for the entity with a topic that matches the `DDS_TransportMulticastMapping_t::topic_expression` (p. 1147).*
- char \* **topic\_expression**  
*A regular expression that will be used to map topic names to corresponding multicast receive addresses.*
- struct **DDS\_TransportMulticastMappingFunction\_t mapping\_function**  
*Specifies a function that will define the mapping between a topic name and a specific multicast address from a list of addresses.*

### 9.200.1 Detailed Description

Type representing a list of multicast mapping elements.

A multicast mapping element specifies a string containing a list of IP addresses, a topic expression and a mapping function.

QoS:

**DDS\_TransportMulticastMappingQosPolicy** (p. 1149)

### 9.200.2 Member Data Documentation

#### 9.200.2.1 addresses

```
char* DDS_TransportMulticastMapping_t::addresses
```

A string containing a comma-separated list of IP addresses or IP address ranges to be used to receive *multicast* traffic for the entity with a topic that matches the `DDS_TransportMulticastMapping_t::topic_expression` (p. 1147).

The string must contain IPv4 or IPv6 addresses separated by commas. For example: "239.255.100.1,239.255.100.↵  
2,239.255.100.3"

You may specify ranges of addresses by enclosing the start address and the end address in square brackets. For example: "[239.255.100.1,239.255.100.3]"

You may combine the two approaches. For example:

```
"239.255.200.1,[239.255.100.1,239.255.100.3], 239.255.200.3"
```

IPv4 addresses must be specified in Dot-decimal notation.

IPv6 addresses must be specified using 8 groups of 16-bit hexadecimal values separated by colons. For example: FF00:0000:0000:0000:0202:B3FF:FE1E:8329

Leading zeroes can be skipped. For example: "FF00:0:0:0:202:B3FF:FE1E:8329"

You may replace a consecutive number of zeroes with a double colon, but only once within an address. For example: "FF00::202:B3FF:FE1E:8329"

**[default]** NULL

### 9.200.2.2 topic\_expression

```
char* DDS_TransportMulticastMapping_t::topic_expression
```

A regular expression that will be used to map topic names to corresponding multicast receive addresses.

A topic name must match the expression before a corresponding address is assigned.

**[default]** NULL

### 9.200.2.3 mapping\_function

```
struct DDS_TransportMulticastMappingFunction_t DDS_TransportMulticastMapping_t::mapping_function
```

Specifies a function that will define the mapping between a topic name and a specific multicast address from a list of addresses.

This function is optional. If not specified, the middleware will use a hash function to perform the mapping.

## 9.201 DDS\_TransportMulticastMappingFunction\_t Struct Reference

Type representing an external mapping function.

### Public Attributes

- char \* **dll**  
*Specifies a dynamic library that contains a mapping function.*
- char \* **function\_name**  
*Specifies the name of a mapping function.*

### 9.201.1 Detailed Description

Type representing an external mapping function.

A mapping function is defined by a dynamic library name and a function name.

QoS:

**DDS\_TransportMulticastMappingQosPolicy** (p. 1149)

### 9.201.2 Member Data Documentation

### 9.201.2.1 dll

```
char* DDS_TransportMulticastMappingFunction_t::dll
```

Specifies a dynamic library that contains a mapping function.

A relative or absolute path can be specified.

If the name is specified as "foo", the library name on Linux systems will be libfoo.so; on Windows systems it will be foo.dll.

**[default]** NULL

### 9.201.2.2 function\_name

```
char* DDS_TransportMulticastMappingFunction_t::function_name
```

Specifies the name of a mapping function.

This function must be implemented in the library specified in **DDS\_TransportMulticastMappingFunction\_t::dll** (p. 1148).

The function must implement the following interface:

```
int function(const char* topic_name, int numberOfAddresses);
```

The function must return an integer that indicates the *index* of the address to use for the given `topic_name`. For example, if the first address in the list should be used, it must return 0; if the second address in the list should be used, it must return 1, etc.

## 9.202 DDS\_TransportMulticastMappingQosPolicy Struct Reference

Specifies a list of `topic_expressions` and multicast addresses that can be used by an Entity with a specific topic name to receive data.

### Public Attributes

- struct **DDS\_TransportMulticastMappingSeq** value  
*A sequence of multicast communication mappings.*

## 9.202.1 Detailed Description

Specifies a list of `topic_expressions` and multicast addresses that can be used by an Entity with a specific topic name to receive data.

This QoS policy provides an alternate way to assign multicast receive addresses to DataReaders. It allows you to perform multicast configuration at the **DDSDomainParticipant** (p. 1351) level.

To use multicast communication *without* this QoS policy, you must explicitly assign a multicast receive address on each **DDSDataReader** (p. 1288). This can quickly become difficult to configure as more DataReaders of different topics and multicast addresses are added.

With this QoS policy, you can configure a set of multicast addresses on the **DDSDomainParticipant** (p. 1351); those addresses will then be automatically assigned to the DomainParticipant's DataReaders. A single configuration on the **DDSDomainParticipant** (p. 1351) can thus replace per-DataReader configuration.

On the DomainParticipant, the set of assignable addresses can be configured for specific topics. Addresses are configured on topics because efficient usage of multicast will have all DataWriters and DataReaders of a single topic using the same multicast address.

You can specify a mapping between a topic's name and a multicast address. For example, topic 'A' can be assigned to address 239.255.1.1 and topic 'B' can be assigned to address 239.255.1.2.

You can use filter expressions to configure a subset of topics to use a specific list of addresses. For example, suppose topics "X", "Y" and "Z" need to be sent to any address within the range [239.255.1.1, 239.255.1.255]. You can specify an expression on the topic name (e.g. "[X-Z]") corresponding to that range of addresses. Then the DomainParticipant will select an address for a topic whose name matches the expression.

The middleware will use a hash function to perform the mapping from topic to address. Alternatively, you can specify a pluggable mapping function.

IMPORTANT: All the strings defined in each element of the sequence must be assigned using `RTI_String_dup("foo");`. For example:

```
mcastMappingElement->addresses = DDS_String_dup("[239.255.1.1,239.255.1.255]");
```

**NOTE:** To use this QoS policy, you must:

- Set **DDS\_TransportMulticastQosPolicy::kind** (p. 1152) to **DDS\_AUTOMATIC\_TRANSPORT\_MULTICAST\_QOS** (p. 448).
- Set the first element in **DDSDataReader** (p. 1288)'s **DDS\_TransportMulticastQosPolicy::value** (p. 1152) with an empty address.

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.202.2 Member Data Documentation

### 9.202.2.1 value

```
struct DDS_TransportMulticastMappingSeq DDS_TransportMulticastMappingQosPolicy::value
```

A sequence of multicast communication mappings.

[default] Empty sequence.

## 9.203 DDS\_TransportMulticastMappingSeq Struct Reference

Declares IDL `sequence< DDS_TransportMulticastMapping_t (p. 1147) >`

### 9.203.1 Detailed Description

Declares IDL `sequence< DDS_TransportMulticastMapping_t (p. 1147) >`

Instantiates:

`<<generic>>` (p. 237) `FooSeq` (p. 1697)

See also

`DDS_TransportMulticastMapping_t` (p. 1147)

## 9.204 DDS\_TransportMulticastQosPolicy Struct Reference

Specifies the multicast address on which a `DDSDataReader` (p. 1288) wants to receive its data. It can also specify a port number as well as a subset of the available (at the `DDSDomainParticipant` (p. 1351) level) transports with which to receive the multicast data.

### Public Attributes

- struct `DDS_TransportMulticastSettingsSeq` `value`  
*A sequence of multicast communications settings.*
- `DDS_TransportMulticastQosPolicyKind` `kind`  
*A value that specifies a way to determine how to obtain the multicast address.*

### 9.204.1 Detailed Description

Specifies the multicast address on which a **DDSDataReader** (p. 1288) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **DDSDomainParticipant** (p. 1351) level) transports with which to receive the multicast data.

By default, a **DDSDataWriter** (p. 1321) will send individually addressed packets for each **DDSDataReader** (p. 1288) that subscribes to the topic of the DataWriter – this is known as unicast delivery. Thus, as many copies of the data will be sent over the network as there are DataReaders for the data. The network bandwidth used by a DataWriter will thus increase linearly with the number of DataReaders.

Multicast addressing (on UDP/IP transports) allows multiple DataReaders to receive the *same* network packet. By using multicast, a **DDSDataWriter** (p. 1321) can send a single network packet that is received by all subscribing applications. Thus the network bandwidth usage will be constant, independent of the number of DataReaders.

Coordinating the multicast address specified by DataReaders can help optimize network bandwidth usage in systems where there are multiple DataReaders for the same **DDSTopic** (p. 1617).

Entity:

**DDSDataReader** (p. 1288)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.204.2 Member Data Documentation

#### 9.204.2.1 value

```
struct DDS_TransportMulticastSettingsSeq DDS_TransportMulticastQosPolicy::value
```

A sequence of multicast communications settings.

An empty sequence means that multicast is not used by the entity.

The RTPS wire protocol currently limits the maximum number of multicast locators to

1. Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain\_participant.max\_announced\_locator\_list\_size' property in the **DDS\_PropertyQosPolicy** (p. 1007) associated with the **DDS\_DomainParticipantQos** (p. 741).

**[default]** Empty sequence.

### 9.204.2.2 kind

`DDS_TransportMulticastQosPolicyKind` `DDS_TransportMulticastQosPolicy::kind`

A value that specifies a way to determine how to obtain the multicast address.

This field can be set to one of the following two values: `DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS` (p. 448) or `DDS_UNICAST_ONLY_TRANSPORT_MULTICAST_QOS` (p. 448).

- If it is set to `DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS` (p. 448), the behavior will depend on the `DDS_TransportMulticastQosPolicy::value` (p. 1152):
  - If `DDS_TransportMulticastQosPolicy::value` (p. 1152) does not have any elements, then multicast will not be used.
  - If `DDS_TransportMulticastQosPolicy::value` (p. 1152) first element has an empty address, then the address will be obtained from `DDS_TransportMulticastMappingQosPolicy` (p. 1149).
  - If none of the elements in `DDS_TransportMulticastQosPolicy::value` (p. 1152) is empty, and at least one element has a valid address, then that address will be used.
- If it is set to `DDS_UNICAST_ONLY_TRANSPORT_MULTICAST_QOS` (p. 448), then multicast will not be used.

[default] `DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS` (p. 448)

## 9.205 DDS\_TransportMulticastSettings\_t Struct Reference

Type representing a list of multicast locators.

### Public Attributes

- struct `DDS_StringSeq transports`  
*A sequence of transport aliases that specifies the transports on which to receive multicast traffic for the entity.*
- char \* `receive_address`  
*The multicast group address on which the entity can receive data.*
- `DDS_Long receive_port`  
*The multicast port on which the entity can receive data.*

### 9.205.1 Detailed Description

Type representing a list of multicast locators.

A multicast locator specifies a transport class, a multicast address, and a multicast port number on which messages can be received by an entity.

QoS:

`DDS_TransportMulticastQosPolicy` (p. 1151)

## 9.205.2 Member Data Documentation

### 9.205.2.1 transports

```
struct DDS_StringSeq DDS_TransportMulticastSettings_t::transports
```

A sequence of transport aliases that specifies the transports on which to receive *multicast* traffic for the entity.

Of the transport instances available to the entity, only those with aliases matching an alias in this sequence are used to subscribe to the multicast group addresses. Thus, this list of aliases sub-selects from the transport s available to the entity.

An empty sequence is a special value that specifies all the transports available to the entity.

The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.

Alias names for the builtin transports are defined in **TRANSPORT\_BUILTIN** (p. 443).

**[default]** Empty sequence; i.e. all the transports available to the entity.

**[range]** Any sequence of non-null, non-empty strings.

### 9.205.2.2 receive\_address

```
char* DDS_TransportMulticastSettings_t::receive_address
```

The multicast group address on which the entity can receive data.

Must be an address in the proper format (see **Address Format** (p. 466)).

**[default]** NONE/INVALID. Required to specify a multicast group address to join.

**[range]** A valid IPv4 or IPv6 multicast address.

See also

**Address Format** (p. 466)

### 9.205.2.3 receive\_port

`DDS_Long DDS_TransportMulticastSettings_t::receive_port`

The multicast port on which the entity can receive data.

**[default]** 0, which implies that the actual port number is determined by a formula as a function of the `domain_id` (see `DDS_WireProtocolQosPolicy::participant_id` (p. 1247)).

**[range]** [0,0xffffffff]

## 9.206 DDS\_TransportMulticastSettingsSeq Struct Reference

Declares IDL `sequence< DDS_TransportMulticastSettings_t` (p. 1153) >

### 9.206.1 Detailed Description

Declares IDL `sequence< DDS_TransportMulticastSettings_t` (p. 1153) >

Instantiates:

<<*generic*>> (p. 237) `FooSeq` (p. 1697)

See also

`DDS_TransportMulticastSettings_t` (p. 1153)

## 9.207 DDS\_TransportPriorityQosPolicy Struct Reference

This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities.

### Public Attributes

- `DDS_Long` `value`

*This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.*

### 9.207.1 Detailed Description

This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities.

The Transport Priority QoS policy is optional and only supported on certain OSs and transports. It allows you to specify on a per-DataWriter or DataReader basis that the data sent by that endpoint is of a different priority.

The DDS specification does not indicate how a DDS implementation should treat data of different priorities. It is often difficult or impossible for DDS implementations to treat data of higher priority differently than data of lower priority, especially when data is being sent (delivered to a physical transport) directly by the thread that called **FooDataWriter**↔**::write** (p. 1683). Also, many physical network transports themselves do not have a end-user controllable level of data packet priority.

Entity:

**DDSDataWriter** (p. 1321), **DDSDataReader** (p. 1288), **DDSTopic** (p. 1617)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.207.2 Usage

In RTI Connext, for the IP-based transports (UDPv4, UDPv6, Real-Time WAN, and TCP), the value set in the Transport Priority QoS policy can be used to set the differentiated services field (DS field) bits of the IPv4 and IPv6 headers for datagrams sent by a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). It is platform-dependent on how and whether setting the DS field has an effect. Some platforms may require external permissions in order to set the DS field.

The transport priority value is not provided as is to the transports, but transformed according to the following fields: `transport_priority_mask` (for example, see **NDDS\_Transport\_UDPv4\_Property\_t::transport\_priority\_mask** (p. 1794)), `transport_priority_mapping_low` (for example, see **NDDS\_Transport\_UDPv4\_Property\_t::transport\_↔priority\_mapping\_low** (p. 1794)), and `transport_priority_mapping_high` (for example, see **NDDS\_Transport\_UDPv4\_↔\_Property\_t::transport\_priority\_mapping\_high** (p. 1794)). If you want the priority value to be exactly equal to the DS value, then the only change you need to make is to set `transport_priority_mask` to `0xff` (and keep the `transport_↔priority_mapping_low` and `transport_priority_mapping_high` defaults).

It is incorrect to assume that using the Transport Priority QoS policy will have any effect at all on the end-to-end delivery of data from a **DDSDataWriter** (p. 1321) and a **DDSDataReader** (p. 1288). All network elements, including switches and routers, must have the capability and be enabled to actually use the DS field to treat higher priority packets differently. Thus the ability to use the Transport Priority QoS policy must be designed and configured at a *system* level; just turning it on in an application may have no effect at all at a transport level.

For additional details on how to set the DS field in IP-based transports, see the "TRANSPORT\_PRIORITY QoSPolicy" section of the `User's Manual`.

### 9.207.3 Member Data Documentation

#### 9.207.3.1 value

`DDS_Long DDS_TransportPriorityQosPolicy::value`

This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.

You may choose any value within the range of a 32-bit signed integer; higher values indicate higher priority. However, any further interpretation of this policy is specific to a particular transport and a particular DDS implementation. For example, a particular transport is permitted to treat a range of priority values as equivalent to one another.

[default] 0

## 9.208 DDS\_TransportSelectionQosPolicy Struct Reference

Specifies the physical transports a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.

### Public Attributes

- struct **DDS\_StringSeq enabled\_transports**

*A sequence of transport aliases that specifies the transport instances available for use by the entity.*

### 9.208.1 Detailed Description

Specifies the physical transports a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) may use to send or receive data.

An application may be simultaneously connected to many different physical transports, e.g., Ethernet, Infiniband, shared memory, VME backplane, and wireless. By default, RTI Connex will use up to 16 transports to deliver data from a DataWriter to a DataReader.

This QoS policy can be used to both limit and control which of the application's available transports may be used by a **DDSDataWriter** (p. 1321) to send data or by a **DDSDataReader** (p. 1288) to receive data.

Entity:

**DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.208.2 Member Data Documentation

### 9.208.2.1 enabled\_transports

```
struct DDS_StringSeq DDS_TransportSelectionQosPolicy::enabled_transports
```

A sequence of transport aliases that specifies the transport instances available for use by the entity.

Of the transport instances installed with the **DDSDomainParticipant** (p. 1351), only those with aliases matching an alias in this sequence are available to the entity.

Thus, this list of aliases sub-selects from the transports available to the **DDSDomainParticipant** (p. 1351).

An empty sequence is a special value that specifies all the transports installed with the **DDSDomainParticipant** (p. 1351).

The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.

Alias names for the builtin transports are defined in **TRANSPORT\_BUILTIN** (p. 443). These alias names are case sensitive and should be written in lowercase.

**[default]** Empty sequence; i.e. all the transports installed with and available to the **DDSDomainParticipant** (p. 1351).

**[range]** A sequence of non-null, non-empty strings.

See also

**DDS\_DomainParticipantQos::transport\_builtin** (p. 744).

## 9.209 DDS\_TransportUnicastQosPolicy Struct Reference

Specifies a subset of transports and a port number that can be used by an Entity to receive data.

### Public Attributes

- struct **DDS\_TransportUnicastSettingsSeq** value  
*A sequence of unicast communication settings.*

## 9.209.1 Detailed Description

Specifies a subset of transports and a port number that can be used by an Entity to receive data.

Entity:

**DDSDomainParticipant** (p. 1351), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

## 9.209.2 Usage

RTI Connext may send data to a variety of Entities, not just DataReaders. For example, reliable DataWriters may receive ACK/NACK packets from reliable DataReaders.

During discovery, each **DDSEntity** (p. 1463) announces to remote applications a list of (up to 16) unicast addresses to which the remote application should send data (either user data packets or reliable protocol meta-data such as ACK/↔NACKs and heartbeats). Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain\_participant.max\_announced\_locator\_list\_size' property in the **DDS\_PropertyQosPolicy** (p. 1007) associated with the **DDS\_DomainParticipantQos** (p. 741).

By default, the list of addresses is populated automatically with values obtained from the enabled transport plug-ins allowed to be used by the Entity (see **DDS\_TransportBuiltinQosPolicy** (p. 1144) and **DDS\_TransportSelection↔QosPolicy** (p. 1157)). Also, the associated ports are automatically determined (see **DDS\_RtpsWellKnownPorts\_t** (p. 1076)).

Use this QoS policy to manually set the receive address list for an Entity. You may optionally set a port to use a non-default receive port as well. Only the first 16 addresses will be used.

RTI Connext will create a receive thread for every unique port number that it encounters (on a per transport basis).

- For a **DDSDomainParticipant** (p. 1351), this QoS policy sets the default list of addresses used by other applications to send user data for local DataReaders.
- For a **DDSDataReader** (p. 1288), if set, then other applications will use the specified list of addresses to send user data (and reliable protocol packets for reliable DataReaders). Otherwise, if not set, the other applications will use the addresses set by the **DDSDomainParticipant** (p. 1351).
- For a reliable **DDSDataWriter** (p. 1321), if set, then other applications will use the specified list of addresses to send reliable protocol packets (ACKS/NACKS) on the behalf of reliable DataReaders. Otherwise, if not set, the other applications will use the addresses set by the **DDSDomainParticipant** (p. 1351).

## 9.209.3 Member Data Documentation

### 9.209.3.1 value

```
struct DDS_TransportUnicastSettingsSeq DDS_TransportUnicastQosPolicy::value
```

A sequence of unicast communication settings.

An empty sequence means that applicable defaults specified by elsewhere (e.g. **DDS\_DomainParticipantQos**↔  
::**default\_unicast** (p. 744)) should be used.

The RTPS wire protocol currently limits the maximum number of unicast locators to

1. Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain\_participant.max\_announced\_locator\_list\_size' property in the **DDS\_PropertyQosPolicy** (p. 1007) associated with the **DDS\_DomainParticipantQos** (p. 741).

**[default]** Empty sequence.

See also

**DDS\_DomainParticipantQos::default\_unicast** (p. 744)

## 9.210 DDS\_TransportUnicastSettings\_t Struct Reference

Type representing a list of unicast locators.

### Public Attributes

- struct **DDS\_StringSeq transports**  
*A sequence of transport aliases that specifies the unicast interfaces on which to receive unicast traffic for the entity.*
- **DDS\_Long receive\_port**  
*The unicast port on which the entity can receive data.*

### 9.210.1 Detailed Description

Type representing a list of unicast locators.

A unicast locator specifies a transport class, a unicast address, and a unicast port number on which messages can be received by an entity.

QoS:

**DDS\_TransportUnicastQosPolicy** (p. 1158)

## 9.210.2 Member Data Documentation

### 9.210.2.1 transports

```
struct DDS_StringSeq DDS_TransportUnicastSettings_t::transports
```

A sequence of transport aliases that specifies the unicast interfaces on which to receive *unicast* traffic for the entity.

Of the transport instances available to the entity, only those with aliases matching an alias on this sequence are used to determine the unicast interfaces used by the entity.

Thus, this list of aliases sub-selects from the transports available to the entity.

Each unicast interface on a transport results in a unicast locator for the entity.

An empty sequence is a special value that specifies all the transports available to the entity.

The memory for the strings in this sequence is managed according to the conventions described in **String Conventions** (p. 552). In particular, be careful to avoid a situation in which RTI Connex allocates a string on your behalf and you then reuse that string in such a way that RTI Connex believes it to have more memory allocated to it than it actually does.

Alias names for the builtin transports are defined in **TRANSPORT\_BUILTIN** (p. 443).

**[default]** Empty sequence; i.e. all the transports available to the entity.

**[range]** Any sequence of non-null, non-empty strings.

### 9.210.2.2 receive\_port

```
DDS_Long DDS_TransportUnicastSettings_t::receive_port
```

The unicast port on which the entity can receive data.

Must be an *unused* unicast port on the system.

**[default]** 0, which implies that the actual port number is determined by a formula as a function of the `domain_id`, and the `DDS_WireProtocolQosPolicy::participant_id` (p. 1247).

**[range]** [0,0xffffffff]

See also

`DDS_WireProtocolQosPolicy::participant_id` (p. 1247).

### 9.213.3.2 allocate\_optional\_members

```
DDS_Boolean DDS_TypeAllocationParams_t::allocate_optional_members
```

Whether to allocate optional members or not.

## 9.214 DDS\_TypeCode Struct Reference

The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the [Code Generator User's Manual](#)) or to modify types you define yourself at runtime.

## Public Member Functions

- **DDS\_TCKind kind** ( **DDS\_ExceptionCode\_t** &ex) const  
*Gets the **DDS\_TCKind** (p. 86) value of a type code.*
- **DDS\_ExtensibilityKind extensibility\_kind** ( **DDS\_ExceptionCode\_t** &ex) const  
*Gets the **DDS\_ExtensibilityKind** (p. 86) value of a type code.*
- **DDS\_Boolean equal** (const **DDS\_TypeCode** \*tc, **DDS\_ExceptionCode\_t** &ex) const  
*Compares two **DDS\_TypeCode** (p. 1164) objects for equality.*
- const char \* **name** ( **DDS\_ExceptionCode\_t** &ex) const  
*Retrieves the simple name identifying this **DDS\_TypeCode** (p. 1164) object within its enclosing scope.*
- **DDS\_UnsignedLong member\_count** ( **DDS\_ExceptionCode\_t** &ex) const  
*Returns the number of members of the type code.*
- const char \* **member\_name** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Returns the name of a type code member identified by the given index.*
- **DDS\_UnsignedLong find\_member\_by\_name** (const char \* name, **DDS\_ExceptionCode\_t** &ex) const  
*Get the index of the member of the given name.*
- **DDS\_TypeCode** \* **member\_type** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Retrieves the **DDS\_TypeCode** (p. 1164) object describing the type of the member identified by the given index.*
- **DDS\_UnsignedLong member\_label\_count** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Returns the number of labels associated to the index-th union member.*
- **DDS\_Long member\_label** ( **DDS\_UnsignedLong** member\_index, **DDS\_UnsignedLong** label\_index, **DDS\_↔\_ExceptionCode\_t** &ex) const  
*Return the label\_index-th label associated to the member\_index-th member.*
- **DDS\_Long member\_ordinal** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Returns the ordinal that corresponds to the index-th enum value.*
- **DDS\_Boolean is\_member\_key** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Function that tells if a member is a key or not.*
- **DDS\_Boolean is\_member\_required** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Indicates whether a given member of a type is required to be present in every sample of that type.*
- **DDS\_Boolean is\_member\_pointer** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Function that tells if a member is a pointer or not.*
- **DDS\_Boolean is\_member\_bitfield** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Function that tells if a member is a bitfield or not.*
- **DDS\_Short member\_bitfield\_bits** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Returns the number of bits of a bitfield member.*
- **DDS\_Visibility member\_visibility** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*Returns the constant that indicates the visibility of the index-th member.*
- **DDS\_TypeCode** \* **discriminator\_type** ( **DDS\_ExceptionCode\_t** &ex) const  
*Returns the discriminator type code.*
- **DDS\_UnsignedLong length** ( **DDS\_ExceptionCode\_t** &ex) const  
*Returns the number of elements in the type described by this type code.*
- **DDS\_UnsignedLong array\_dimension\_count** ( **DDS\_ExceptionCode\_t** &ex) const  
*This function returns the number of dimensions of an array type code.*
- **DDS\_UnsignedLong array\_dimension** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex) const  
*This function returns the index-th dimension of an array type code.*
- **DDS\_UnsignedLong element\_count** ( **DDS\_ExceptionCode\_t** &ex) const

The number of elements in an array.

- **DDS\_TypeCode \* content\_type** ( DDS\_ExceptionCode\_t &ex) const  
Returns the **DDS\_TypeCode** (p. 1164) object representing the type for the members of the object described by this **DDS\_TypeCode** (p. 1164) object.
- **DDS\_Boolean is\_alias\_pointer** ( DDS\_ExceptionCode\_t &ex) const  
Function that tells if an alias is a pointer or not.
- **DDS\_Long default\_index** ( DDS\_ExceptionCode\_t &ex) const  
Returns the index of the default member, or -1 if there is no default member.
- **DDS\_TypeCode \* concrete\_base\_type** ( DDS\_ExceptionCode\_t &ex) const  
Returns the **DDS\_TypeCode** (p. 1164) that describes the concrete base type of the value type that this **DDS\_TypeCode** (p. 1164) object describes.
- **DDS\_ValueModifier type\_modifier** ( DDS\_ExceptionCode\_t &ex) const  
Returns a constant indicating the modifier of the value type that this **DDS\_TypeCode** (p. 1164) object describes.
- **DDS\_Long member\_id** ( DDS\_UnsignedLong index, DDS\_ExceptionCode\_t &ex) const  
Returns the ID of the **TypeCode** member identified by the given index.
- **DDS\_UnsignedLong find\_member\_by\_id** ( DDS\_Long id, DDS\_ExceptionCode\_t &ex) const  
Get the index of the member of the given ID.
- **DDS\_UnsignedLong get\_type\_object\_serialized\_size** ( DDS\_ExceptionCode\_t &ex) const  
Gets the serialized size of the **TypeObject** created from this **DDS\_TypeCode** (p. 1164).
- **DDS\_UnsignedLong get\_cdr\_serialized\_sample\_max\_size** ( DDS\_DataRepresentationId\_t representation\_id, DDS\_ExceptionCode\_t &ex) const  
**[DEPRECATED]** Gets the maximum serialized size of samples of this type
- **DDS\_UnsignedLong cdr\_serialized\_sample\_max\_size** ( DDS\_DataRepresentationId\_t representation\_id, DDS\_ExceptionCode\_t &ex) const  
Gets the maximum serialized size of samples of this type.
- **DDS\_UnsignedLong cdr\_serialized\_sample\_min\_size** ( DDS\_DataRepresentationId\_t representation\_id, DDS\_ExceptionCode\_t &ex) const  
Gets the minimum serialized size of samples of this type.
- **DDS\_UnsignedLong cdr\_serialized\_sample\_key\_max\_size** ( DDS\_DataRepresentationId\_t representation\_id, DDS\_ExceptionCode\_t &ex) const  
Gets the maximum serialized size of sample keys of this type.
- **DDS\_UnsignedLong cdr\_serialized\_sample\_max\_size** ( DDS\_ExceptionCode\_t &ex) const  
Gets the maximum serialized size of samples of this type.
- **DDS\_UnsignedLong cdr\_serialized\_sample\_min\_size** ( DDS\_ExceptionCode\_t &ex) const  
Gets the minimum serialized size of samples of this type.
- **DDS\_UnsignedLong cdr\_serialized\_sample\_key\_max\_size** ( DDS\_ExceptionCode\_t &ex) const  
Gets the maximum serialized size of sample keys of this type.
- **DDS\_UnsignedLong add\_member\_to\_enum** (const char \* name, DDS\_Long ordinal, DDS\_ExceptionCode\_t &ex)  
Add a new enumerated constant to this enum **DDS\_TypeCode** (p. 1164).
- **DDS\_UnsignedLong add\_member\_to\_union** (const char \* name, DDS\_Long id, const DDS\_LongSeq &labels, const DDS\_TypeCode \*tc, DDS\_Boolean is\_pointer, DDS\_ExceptionCode\_t &ex)  
Add a new member to a union **DDS\_TypeCode** (p. 1164).
- **DDS\_UnsignedLong add\_member** (const char \* name, DDS\_Long id, const DDS\_TypeCode \*tc, DDS\_Octet member\_flags, DDS\_ExceptionCode\_t &ex)  
Add a new member to this **DDS\_TypeCode** (p. 1164).
- **DDS\_UnsignedLong add\_member\_ex** (const char \* name, DDS\_Long id, const DDS\_TypeCode \*tc, DDS\_Octet member\_flags, DDS\_Visibility visibility, DDS\_Boolean is\_pointer, DDS\_Short bits, DDS\_ExceptionCode\_t &ex)

Add a new member to this **DDS\_TypeCode** (p. 1164).

- const **DDS\_AnnotationParameterValue** \* **default\_value** ( **DDS\_ExceptionCode\_t** &ex)  
Returns the default annotation for this **DDS\_TypeCode** (p. 1164).
- const **DDS\_AnnotationParameterValue** \* **min\_value** ( **DDS\_ExceptionCode\_t** &ex)  
Returns the min annotation for this **DDS\_TypeCode** (p. 1164).
- const **DDS\_AnnotationParameterValue** \* **max\_value** ( **DDS\_ExceptionCode\_t** &ex)  
Returns the max annotation for this **DDS\_TypeCode** (p. 1164).
- const **DDS\_AnnotationParameterValue** \* **member\_default\_value** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex)  
Returns the member default annotation for this **DDS\_TypeCode** (p. 1164).
- const **DDS\_AnnotationParameterValue** \* **member\_min\_value** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex)  
Returns the member min annotation for this **DDS\_TypeCode** (p. 1164).
- const **DDS\_AnnotationParameterValue** \* **member\_max\_value** ( **DDS\_UnsignedLong** index, **DDS\_ExceptionCode\_t** &ex)  
Returns the member max annotation for this **DDS\_TypeCode** (p. 1164).
- void **print\_IDL** ( **DDS\_UnsignedLong** indent, **DDS\_ExceptionCode\_t** &ex) const  
Prints a **DDS\_TypeCode** (p. 1164) in IDL notation.
- void **print** (const **DDS\_TypeCodePrintFormatProperty** &format, **DDS\_ExceptionCode\_t** &ex) const  
Prints a **DDS\_TypeCode** (p. 1164).
- void **to\_string** (char \*str, **DDS\_UnsignedLong** &str\_size, **DDS\_ExceptionCode\_t** &ex) const  
Get a string representation of this **DDS\_TypeCode** (p. 1164) object using the default values for **DDS\_TypeCodePrintFormatProperty** (p. 1224).
- void **to\_string** (char \*str, **DDS\_UnsignedLong** &str\_size, const **DDS\_TypeCodePrintFormatProperty** &format, **DDS\_ExceptionCode\_t** &ex) const  
Get a string representation of this **DDS\_TypeCode** (p. 1164) object using the format described by **DDS\_TypeCodePrintFormatProperty** (p. 1224).

### 9.214.1 Detailed Description

The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with `rtiddsgen` (see the `Code Generator User's Manual`) or to modify types you define yourself at runtime.

You create **DDS\_TypeCode** (p. 1164) objects using the **DDS\_TypeCodeFactory** (p. 1210) singleton. Then you can use the methods on *this* class to inspect and modify the data type definition.

This class is based on a similar class from CORBA.

#### MT Safety:

SAFE for read-only access, UNSAFE for modification. Modifying a single **DDS\_TypeCode** (p. 1164) object concurrently from multiple threads is *unsafe*. Modifying a **DDS\_TypeCode** (p. 1164) from a single thread while concurrently reading the state of that **DDS\_TypeCode** (p. 1164) from another thread is also *unsafe*. However, reading the state of a **DDS\_TypeCode** (p. 1164) concurrently from multiple threads, without any modification, is *safe*.

#### Examples

**HelloWorld.cxx**, and **HelloWorldPlugin.cxx**.

## 9.214.2 Member Function Documentation

### 9.214.2.1 kind()

```
DDS_TCKind DDS_TypeCode::kind (
    DDS_ExceptionCode_t & ex ) const
```

Gets the **DDS\_TCKind** (p. 86) value of a type code.

#### Parameters

<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications. The values that it can take are: <ul style="list-style-type: none"><li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li><li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li></ul>
-----------	--

Retrieves the kind of this **DDS\_TypeCode** (p. 1164) object. The kind of a type code determines which **DDS\_TypeCode** (p. 1164) methods may legally be invoked on it.

#### MT Safety:

SAFE.

#### Returns

The type code kind.

### 9.214.2.2 extensibility\_kind()

```
DDS_ExtensibilityKind DDS_TypeCode::extensibility_kind (
    DDS_ExceptionCode_t & ex ) const
```

Gets the **DDS\_ExtensibilityKind** (p. 86) value of a type code.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that it can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

Retrieves the extensibility kind of this **DDS\_TypeCode** (p. 1164) object.

In some cases, it is desirable for types to evolve without breaking interoperability with deployed components already using those types. For example:

- A new set of applications to be integrated into an existing system may want to introduce additional fields into a structure. These new fields can be safely ignored by already deployed applications, but applications that do understand the new fields can benefit from their presence.
- A new set of applications to be integrated into an existing system may want to increase the maximum size of some sequence or string in a Type. Existing applications can receive data samples from these new applications as long as the actual number of elements (or length of the strings) in the received data sample does not exceed what the receiving applications expects. If a received data sample exceeds the limits expected by the receiving application, then the sample can be safely ignored (filtered out) by the receiver.

In order to support use cases such as these, the type system introduces the concept of appendable and mutable types.

- A type may be final, indicating that the range of its possible data values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.
- A type may be appendable, indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.
- A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.

The extensibility of **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86), **DDS\_TK\_VALUE** (p. 86), and **DDS\_TK\_ENUM** (p. 86) can be change using the built-in "Extensibility" annotation when the type is declared.

## IDL examples:

```

@final
struct MyType {
    long member_1;
}
@appendable
struct MyType {
    long member_1;
}
@mutable
struct MyType {

```

```

    long member_1;
}

```

#### XML example:

```

<struct name="MyType" extensibility="final">
    <member name="member_1" type="long"/>
</struct>
<struct name="MyType" extensibility="appendable">
    <member name="member_1" type="long"/>
</struct>
<struct name="MyType" extensibility="mutable">
    <member name="member_1" type="long"/>
</struct>

```

#### XSD example:

```

<xsd:complexType name="MyType">
    <xsd:sequence>
        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
    </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility FINAL_EXTENSIBILITY -->
<xsd:complexType name="MyType">
    <xsd:sequence>
        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
    </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility EXTENSIBLE_EXTENSIBILITY -->
<xsd:complexType name="MyType">
    <xsd:sequence>
        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
    </xsd:sequence>
</xsd:complexType>
<!-- @struct true -->
<!-- @extensibility MUTABLE_EXTENSIBILITY -->

```

For TypeCodes built at run-time using the **DDS\_TypeCodeFactory** (p. 1210) API, the extensibility can be provided as a parameter of the following APIs:

- **DDS\_TypeCodeFactory::create\_struct\_tc** (p. 1214)
- **DDS\_TypeCodeFactory::create\_value\_tc** (p. 1215)
- **DDS\_TypeCodeFactory::create\_union\_tc** (p. 1217)
- **DDS\_TypeCodeFactory::create\_enum\_tc** (p. 1218)

See also

**DDS\_ExtensibilityKind** (p. 86)

MT Safety:

SAFE.

Returns

The type code extensibility kind.

### 9.214.2.3 equal()

```
DDS_Boolean DDS_TypeCode::equal (
    const DDS_TypeCode * tc,
    DDS_ExceptionCode_t & ex ) const
```

Compares two **DDS\_TypeCode** (p. 1164) objects for equality.

MT Safety:

SAFE.

For equality and assignability purposes, **DDS\_TK\_STRUCTURE** (p. 86) and **DDS\_TK\_VALUE** (p. 86) are considered equivalent.

The **DDS\_TypeCode** (p. 1164) of structs inheriting from other structs has a **DDS\_TK\_VALUE** (p. 86) kind.

For example:

```
struct MyStruct: MyBaseStruct {
    long member_1;
};
```

The code generation for the previous type will generate a **DDS\_TypeCode** (p. 1164) with **DDS\_TK\_VALUE** (p. 86) kind.

Parameters

<i>tc</i>	<< <i>in</i> >> (p. 238) Type code that will be compared with this <b>DDS_TypeCode</b> (p. 1164).
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the type codes are equal. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317).

## 9.214.2.4 name()

```
const char * DDS_TypeCode::name (
    DDS_ExceptionCode_t & ex ) const
```

Retrieves the simple name identifying this **DDS\_TypeCode** (p. 1164) object within its enclosing scope.

## Precondition

self kind is **DDS\_TK\_STRUCTURE** (p. 86), **DDS\_TK\_UNION** (p. 86), **DDS\_TK\_ENUM** (p. 86), **DDS\_TK\_VALUE** (p. 86), or **DDS\_TK\_ALIAS** (p. 86).

## MT Safety:

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

Name of the type code if no errors.

## 9.214.2.5 member\_count()

```
DDS_UnsignedLong DDS_TypeCode::member_count (
    DDS_ExceptionCode_t & ex ) const
```

Returns the number of members of the type code.

The method `member_count` can be invoked on structure, union, and enumeration **DDS\_TypeCode** (p. 1164) objects.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86), **DDS\_TK\_ENUM** (p. 86) or **DDS\_TK\_VALUE** (p. 86).

**MT Safety:**

SAFE.

**Parameters**

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

**Returns**

The number of members constituting the type described by this **DDS\_TypeCode** (p. 1164) object if no errors.

**9.214.2.6 member\_name()**

```
const char * DDS_TypeCode::member_name (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Returns the name of a type code member identified by the given index.

The method `member_name` can be invoked on structure, union, and enumeration **DDS\_TypeCode** (p. 1164) objects.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86), **DDS\_TK\_ENUM** (p. 86) or **DDS\_TK\_VALUE** (p. 86).

The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

## Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

Name of the member if no errors.

## 9.214.2.7 find\_member\_by\_name()

```
DDS_UnsignedLong DDS_TypeCode::find_member_by_name (
    const char * name,
    DDS_ExceptionCode_t & ex ) const
```

Get the index of the member of the given name.

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing structs (**DDS\_TK\_STRUCT** (p. 86)) and union (**DDS\_TK\_UNION** (p. 86)) types.

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) The member name.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

The index of the member of the given name or **DDS\_TYPECODE\_INDEX\_INVALID** (p. 81) if the member is not found.

MT Safety:

SAFE.

### 9.214.2.8 member\_type()

```
DDS_TypeCode * DDS_TypeCode::member_type (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Retrieves the **DDS\_TypeCode** (p. 1164) object describing the type of the member identified by the given index.

The method `member_type` can be invoked on structure and union type codes.

#### Precondition

self kind is **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86) or **DDS\_TK\_VALUE** (p. 86).  
The index param must be in the interval [0,(member count-1)].

MT Safety:

SAFE.

#### Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

#### Returns

The **DDS\_TypeCode** (p. 1164) object describing the member at the given index if no errors.

### 9.214.2.9 member\_label\_count()

```
DDS_UnsignedLong DDS_TypeCode::member_label_count (
    DDS_UnsignedLong index,
    DDS_StatusCode_t & ex ) const
```

Returns the number of labels associated to the index-th union member.

The method can be invoked on union **DDS\_TypeCode** (p. 1164) objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

#### Precondition

self kind is **DDS\_TK\_UNION** (p. 86).  
The index param must be in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

#### Returns

Number of labels if no errors.

### 9.214.2.10 member\_label()

```
DDS_Long DDS_TypeCode::member_label (
    DDS_UnsignedLong member_index,
    DDS_UnsignedLong label_index,
    DDS_StatusCode_t & ex ) const
```

Return the `label_index`-th label associated to the `member_index`-th member.

This method has been modified for RTI Connex from the CORBA Type code Specification.

Example:

```
case 1: Label index 0
case 2: Label index 1
short short_member;
```

The method can be invoked on union **DDS\_TypeCode** (p. 1164) objects.

#### Precondition

self kind is **DDS\_TK\_UNION** (p. 86).  
 The `member_index` param must be in the interval `[0,(member count-1)]`.  
 The `label_index` param must be in the interval `[0,(member labels count-1)]`.

#### MT Safety:

SAFE.

#### Parameters

<code>member_index</code>	<< <i>in</i> >> (p. 238) Member index.
<code>label_index</code>	<< <i>in</i> >> (p. 238) Label index.
<code>ex</code>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

#### Returns

The evaluated value of the label if no errors.

#### 9.214.2.11 member\_ordinal()

```
DDS_Long DDS_TypeCode::member_ordinal (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Returns the ordinal that corresponds to the index-th enum value.

The method can be invoked on enum **DDS\_TypeCode** (p. 1164) objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

#### Precondition

self kind is **DDS\_TK\_ENUM** (p. 86).  
Member index in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>index</i>	<< <b>in</b> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

#### Returns

Ordinal that corresponds to the index-th enumerator if no errors.

#### 9.214.2.12 is\_member\_key()

```
DDS_Boolean DDS_TypeCode::is_member_key (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Function that tells if a member is a key or not.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86) or **DDS\_TK\_VALUE** (p. 86).  
The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

## Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the member is a key. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317).

9.214.2.13 `is_member_required()`

```
DDS_Boolean DDS_TypeCode::is_member_required (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Indicates whether a given member of a type is required to be present in every sample of that type.

A non-key member is required if it has not been marked as optional. All key members are required.

## See also

**DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 83)

**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84)

## MT Safety:

SAFE.

### 9.214.2.14 is\_member\_pointer()

```
DDS_Boolean DDS_TypeCode::is_member_pointer (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Function that tells if a member is a pointer or not.

The method `is_member_pointer` can be invoked on union and structs type objects

This function is an RTI Connex extension to the CORBA Type Code Specification.

#### Precondition

self kind is **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_UNION** (p. 86) or **DDS\_TK\_VALUE** (p. 86).  
The index param must be in the interval [0,(member count-1)].

#### MT Safety:

SAFE.

#### Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Index of the member for which type information is begin requested.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the member is a pointer. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317).

### 9.214.2.15 is\_member\_bitfield()

```
DDS_Boolean DDS_TypeCode::is_member_bitfield (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Function that tells if a member is a bitfield or not.

The method can be invoked on struct type objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86) or **DDS\_TK\_VALUE** (p. 86).  
The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

**Parameters**

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if the member is a bitfield. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317).

**9.214.2.16 member\_bitfield\_bits()**

```

DDS_Short DDS_TypeCode::member_bitfield_bits (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const

```

Returns the number of bits of a bitfield member.

The method can be invoked on struct type objects.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86) or **DDS\_TK\_VALUE** (p. 86).  
The index param must be in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

## Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

The number of bits of the bitfield or **DDS\_TYPECODE\_NOT\_BITFIELD** (p. 81) if the member is not a bitfield.

## 9.214.2.17 member\_visibility()

```

DDS_Visibility DDS_TypeCode::member_visibility (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const

```

Returns the constant that indicates the visibility of the index-th member.

## Precondition

self kind is **DDS\_TK\_VALUE** (p. 86) or **DDS\_TK\_STRUCT** (p. 86). The index param must be in the interval [0,(member count-1)].

## MT Safety:

SAFE.

For **DDS\_TK\_STRUCT** (p. 86), this method always returns **DDS\_PUBLIC\_MEMBER** (p. 83).

## Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
Generated by Doxygen	

## Returns

One of the following constants: **DDS\_PRIVATE\_MEMBER** (p. 82) or **DDS\_PUBLIC\_MEMBER** (p. 83).

### 9.214.2.18 discriminator\_type()

```
DDS_TypeCode * DDS_TypeCode::discriminator_type (
    DDS_ExceptionCode_t & ex ) const
```

Returns the discriminator type code.

The method `discriminator_type` can be invoked only on union **DDS\_TypeCode** (p. 1164) objects.

## Precondition

self kind is **DDS\_TK\_UNION** (p. 86).

## MT Safety:

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

**DDS\_TypeCode** (p. 1164) object describing the discriminator of the union type if no errors.

### 9.214.2.19 length()

```
DDS_UnsignedLong DDS_TypeCode::length (
    DDS_ExceptionCode_t & ex ) const
```

Returns the number of elements in the type described by this type code.

Length is:

- The maximum length of the string for string type codes.
- The maximum length of the sequence for sequence type codes.
- The first dimension of the array for array type codes.

**Precondition**

self kind is **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86), **DDS\_TK\_STRING** (p. 86) or **DDS\_TK\_WSTRING** (p. 86).

**MT Safety:**

SAFE.

**Parameters**

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

**Returns**

The bound for strings and sequences, or the number of elements for arrays if no errors.

**9.214.2.20 array\_dimension\_count()**

```
DDS_UnsignedLong DDS_TypeCode::array_dimension_count (
    DDS_StatusCode_t & ex ) const
```

This function returns the number of dimensions of an array type code.

This function is an RTI Connex extension to the CORBA Type Code Specification.

**Precondition**

self kind is **DDS\_TK\_ARRAY** (p. 86).

**MT Safety:**

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

Number of dimensions if no errors.

## 9.214.2.21 array\_dimension()

```
DDS_UnsignedLong DDS_TypeCode::array_dimension (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

This function returns the index-th dimension of an array type code.

This function is an RTI Connex extension to the CORBA Type Code Specification.

## Precondition

self kind is **DDS\_TK\_ARRAY** (p. 86).  
Dimension index in the interval [0,(dimensions count-1)].

## MT Safety:

SAFE.

## Parameters

<i>index</i>	<< <b>in</b> >> (p. 238) Dimension index in the interval [0,(dimensions count-1)].
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

Requested dimension if no errors.

**9.214.2.22 element\_count()**

```
DDS_UnsignedLong DDS_TypeCode::element_count (
    DDS_ExceptionCode_t & ex ) const
```

The number of elements in an array.

This operation isn't relevant for other kinds of types.

**MT Safety:**

SAFE.

**9.214.2.23 content\_type()**

```
DDS_TypeCode * DDS_TypeCode::content_type (
    DDS_ExceptionCode_t & ex ) const
```

Returns the **DDS\_TypeCode** (p. 1164) object representing the type for the members of the object described by this **DDS\_TypeCode** (p. 1164) object.

For sequences and arrays, it returns the element type. For aliases, it returns the original type.

**Precondition**

self kind is **DDS\_TK\_ARRAY** (p. 86), **DDS\_TK\_SEQUENCE** (p. 86) or **DDS\_TK\_ALIAS** (p. 86).

**MT Safety:**

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

A **DDS\_TypeCode** (p. 1164) object representing the element type for sequences and arrays, and the original type for aliases.

9.214.2.24 `is_alias_pointer()`

```
DDS_Boolean DDS_TypeCode::is_alias_pointer (
    DDS_ExceptionCode_t & ex ) const
```

Function that tells if an alias is a pointer or not.

This function is an RTI Connex extension to the CORBA Type Code Specification.

## Precondition

self kind is **DDS\_TK\_ALIAS** (p. 86).

## MT Safety:

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if an alias is a pointer to the aliased type. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317).

## 9.214.2.25 default\_index()

```
DDS_Long DDS_TypeCode::default_index (
    DDS_ExceptionCode_t & ex ) const
```

Returns the index of the default member, or -1 if there is no default member.

The method `default_index` can be invoked only on union **DDS\_TypeCode** (p. 1164) objects.

## Precondition

self kind is **DDS\_TK\_UNION** (p. 86)

## MT Safety:

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<i>out</i>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

The index of the default member, or -1 if there is no default member.

## 9.214.2.26 concrete\_base\_type()

```
DDS_TypeCode * DDS_TypeCode::concrete_base_type (
    DDS_ExceptionCode_t & ex ) const
```

Returns the **DDS\_TypeCode** (p. 1164) that describes the concrete base type of the value type that this **DDS\_TypeCode** (p. 1164) object describes.

**Precondition**

self kind is **DDS\_TK\_VALUE** (p. 86) or **DDS\_TK\_STRUCT** (p. 86).

**MT Safety:**

SAFE.

For **DDS\_TK\_STRUCT** (p. 86), this method always returns **DDS\_TK\_NULL** (p. 86).

The **DDS\_TypeCode** (p. 1164) of structs inheriting from other structs has a **DDS\_TK\_VALUE** (p. 86) kind.

**For example:**

```
struct MyStruct: MyBaseStruct {
    long member_1;
};
```

The code generation for the previous type will generate a **DDS\_TypeCode** (p. 1164) with **DDS\_TK\_VALUE** (p. 86) kind.

**Parameters**

<b>ex</b>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

**Returns**

**DDS\_TypeCode** (p. 1164) that describes the concrete base type or NULL if there is no a concrete base type.

**9.214.2.27 type\_modifier()**

```
DDS_ValueModifier DDS_TypeCode::type_modifier (
    DDS_ExceptionCode_t & ex ) const
```

Returns a constant indicating the modifier of the value type that this **DDS\_TypeCode** (p. 1164) object describes.

**Precondition**

self kind is **DDS\_TK\_VALUE** (p. 86) or **DDS\_TK\_STRUCT** (p. 86).

For **DDS\_TK\_STRUCT** (p. 86), this method always returns **DDS\_VM\_NONE** (p. 81).

**MT Safety:**

SAFE.

## Parameters

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	--

## Returns

One of the following type modifiers: **DDS\_VM\_NONE** (p. 81), **DDS\_VM\_ABSTRACT** (p. 82), **DDS\_VM\_CUSTOM** (p. 81) or **DDS\_VM\_TRUNCATABLE** (p. 82).

## 9.214.2.28 member\_id()

```
DDS_Long DDS_TypeCode::member_id (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex ) const
```

Returns the ID of the TypeCode member identified by the given index.

This function is an RTI Connex extension to the CORBA Type Code Specification.

The method can be invoked on aggregation **DDS\_TypeCode** (p. 1164) objects.

All members of aggregated types have an integral member ID that uniquely identifies them within their defining type.

In IDL, you can specify the member ID using the built-in annotation ID. For example:

```
struct MyType {
    long member_1; //@ID 200
} //@Extensibility MUTABLE_EXTENSIBILITY
```

In XML, you can specify the member ID using the attribute 'id':

```
<struct name="MyType" extensibility="mutable" id="200">
    <member name="member_1" type="long"/>
</struct>
```

In XSD, you can specify the member ID using the built-in annotation ID

```
<xsd:complexType name="MyType">
    <xsd:sequence>
        <xsd:element name="member_1" minOccurs="1" maxOccurs="1" type="xsd:int"/>
        <!-- @id 200 -->
    </xsd:sequence>
</xsd:complexType>
<!-- @extensibility MUTABLE_EXTENSIBILITY -->
```

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), **DDS\_TK\_VALUE** (p. 86), or **DDS\_TK\_UNION** (p. 86)  
 Member index in the interval [0,(member count-1)].

**MT Safety:**

SAFE.

**Parameters**

<i>index</i>	<< <i>in</i> >> (p. 238) Member index in the interval [0,(member count-1)].
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

ID of the member if no errors.

**9.214.2.29 find\_member\_by\_id()**

```
DDS_UnsignedLong DDS_TypeCode::find_member_by_id (
    DDS_Long id,
    DDS_ExceptionCode_t & ex ) const
```

Get the index of the member of the given ID.

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing structs (**DDS\_TK\_STRUCT** (p. 86)) and union (**DDS\_TK\_UNION** (p. 86)) types.

**Parameters**

<i>id</i>	<< <i>in</i> >> (p. 238) The member ID.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

The index of the member of the given ID or **DDS\_TYPECODE\_INDEX\_INVALID** (p. 81) if the member is not found.

**MT Safety:**

SAFE.

**9.214.2.30 get\_type\_object\_serialized\_size()**

```
DDS_UnsignedLong DDS_TypeCode::get_type_object_serialized_size (
    DDS_StatusCode_t & ex ) const
```

Gets the serialized size of the TypeObject created from this **DDS\_TypeCode** (p. 1164).

**Parameters**

<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that it can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	---

The default buffer size used for storing a TypeObject is 8192 bytes. For a large TypeObject, this API can be used to determine the size that needs to be set in **DDS\_DomainParticipantResourceLimitsQosPolicy::type\_object\_max\_↔\_serialized\_length** (p. 760)

**MT Safety:**

SAFE.

**Returns**

The TypeObject serialized size.

**9.214.2.31 get\_cdr\_serialized\_sample\_max\_size()**

```
DDS_UnsignedLong DDS_TypeCode::get_cdr_serialized_sample_max_size (
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t & ex ) const
```

**[DEPRECATED]** Gets the maximum serialized size of samples of this type

DEPRECATED: use **DDS\_TypeCode::cdr\_serialized\_sample\_max\_size** (p. 1194) instead.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

**Precondition**

The type is an aggregation type (struct, union)

**Parameters**

<i>representation</i> <sub>↔</sub> <i>_id</i>	The serialized data representation for which we calculate the maximum size.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.

**Returns**

The maximum size

**9.214.2.32 cdr\_serialized\_sample\_max\_size() [1/2]**

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_max_size (
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t & ex ) const
```

Gets the maximum serialized size of samples of this type.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

**Precondition**

The type is an aggregation type (struct, union)

**Parameters**

<i>representation</i> <sub>↔</sub> <i>_id</i>	The serialized data representation for which we calculate the maximum size.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.

**Returns**

The maximum size

**9.214.2.33 cdr\_serialized\_sample\_min\_size() [1/2]**

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_min_size (
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t & ex ) const
```

Gets the minimum serialized size of samples of this type.

Obtains the minimum possible size in bytes of any serialized data sample of this type.

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>representation</i> <i>_id</i>	The serialized data representation for which we calculate the minimum size.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.

#### Returns

The minimum size

#### 9.214.234 cdr\_serialized\_sample\_key\_max\_size() [1/2]

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_key_max_size (
    DDS_DataRepresentationId_t representation_id,
    DDS_StatusCode_t & ex ) const
```

Gets the maximum serialized size of sample keys of this type.

Obtains the maximum possible size in bytes of the serialized keys of any data sample of this type

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>representation</i> <i>_id</i>	The serialized data representation for which we calculate the maximum key size.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.

#### Returns

The maximum key size

### 9.214.2.35 cdr\_serialized\_sample\_max\_size() [2/2]

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_max_size (
    DDS_StatusCode_t & ex ) const
```

Gets the maximum serialized size of samples of this type.

Obtains the maximum possible size in bytes of any serialized data sample of this type.

Assumes the **DDS\_DataRepresentationId\_t** (p. 370) to be DDS\_AUTO\_DATA\_REPRESENTATION

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.
-----------	--

#### Returns

The maximum size

### 9.214.2.36 cdr\_serialized\_sample\_min\_size() [2/2]

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_min_size (
    DDS_StatusCode_t & ex ) const
```

Gets the minimum serialized size of samples of this type.

Obtains the minimum possible size in bytes of any serialized data sample of this type.

Assumes the **DDS\_DataRepresentationId\_t** (p. 370) to be DDS\_AUTO\_DATA\_REPRESENTATION

#### Precondition

The type is an aggregation type (struct, union)

#### Parameters

<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.
-----------	--

**Returns**

The minimum size

**9.214.2.37 cdr\_serialized\_sample\_key\_max\_size() [2/2]**

```
DDS_UnsignedLong DDS_TypeCode::cdr_serialized_sample_key_max_size (
    DDS_ExceptionCode_t & ex ) const
```

Gets the maximum serialized size of sample keys of this type.

Obtains the maximum possible size in bytes of the serialized keys of any data sample of this type

Assumes the **DDS\_DataRepresentationId\_t** (p. 370) to be **DDS\_AUTO\_DATA\_REPRESENTATION**

**Precondition**

The type is an aggregation type (struct, union)

**Parameters**

<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications.
-----------	--

**Returns**

The maximum key size

**9.214.2.38 add\_member\_to\_enum()**

```
DDS_UnsignedLong DDS_TypeCode::add_member_to_enum (
    const char * name,
    DDS_Long ordinal,
    DDS_ExceptionCode_t & ex )
```

Add a new enumerated constant to this enum **DDS\_TypeCode** (p. 1164).

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing enumerations (**DDS\_TK\_ENUM** (p. 86)). To add a field to a structured type, see **DDS\_TypeCode::add\_member\_to\_enum** (p. 1197).

Modifying a **DDS\_TypeCode** (p. 1164) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 99) APIs.

**MT Safety:**

UNSAFE.

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) The name of the new member. This string must be unique within this type and must not be NULL.
<i>ordinal</i>	<< <i>in</i> >> (p. 238) The relative order of the new member in this enum or a custom integer value. The value must be unique within the type.
<i>ex</i>	<< <i>out</i> >> (p. 238) If this method fails, this argument will contain information about the failure. Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 335)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 335)</li> </ul>

## Returns

The zero-based index of the new member relative to any other members that previously existed.

## See also

**DDS\_TypeCode::add\_member** (p. 1199)

**DDS\_TypeCode::add\_member\_ex** (p. 1201)

**DDS\_TypeCodeFactory** (p. 1210)

### 9.214.2.39 add\_member\_to\_union()

```

DDS_UnsignedLong DDS_TypeCode::add_member_to_union (
    const char * name,
    DDS_Long id,
    const DDS_LongSeq & labels,
    const DDS_TypeCode * tc,
    DDS_Boolean is_pointer,
    DDS_ExceptionCode_t & ex )

```

Add a new member to a union **DDS\_TypeCode** (p. 1164).

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing unions (**DDS\_TK\_UNION** (p. 86)).

Modifying a **DDS\_TypeCode** (p. 1164) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 99) APIs.

**MT Safety:**

UNSAFE.

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) The name of the new member.
<i>id</i>	<< <i>in</i> >> (p. 238) The member ID. For automatic assignment of the member ID specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 81).
<i>labels</i>	<< <i>in</i> >> (p. 238) A sequence of labels or case values associated with the member .
<i>tc</i>	<< <i>in</i> >> (p. 238) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1164) with the <b>DDS_TypeCodeFactory</b> (p. 1210).
<i>is_pointer</i>	<< <i>in</i> >> (p. 238) Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.
<i>ex</i>	<< <i>out</i> >> (p. 238) If this method fails, this argument will contain information about the failure.

Possible values include:

- **DDS\_BADKIND\_USER\_EXCEPTION\_CODE** (p. 334)
- **DDS\_BAD\_MEMBER\_NAME\_USER\_EXCEPTION\_CODE** (p. 335)
- **DDS\_BAD\_MEMBER\_ID\_USER\_EXCEPTION\_CODE** (p. 335)

## Returns

The zero-based index of the new member relative to any other members that previously existed.

## See also

**DDS\_TypeCode::add\_member** (p. 1199)  
**DDS\_TypeCode::add\_member\_ex** (p. 1201)  
**DDS\_TypeCode::add\_member\_to\_enum** (p. 1197)  
**DDS\_TypeCode::add\_member\_to\_union** (p. 1198)  
**DDS\_TypeCodeFactory** (p. 1210)  
**DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 83)  
**DDS\_TYPECODE\_KEY\_MEMBER** (p. 83)  
**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84)

## 9.214.2.40 add\_member()

```
DDS_UnsignedLong DDS_TypeCode::add_member (
    const char * name,
    DDS_Long id,
    const DDS_TypeCode * tc,
    DDS_Octet member_flags,
    DDS_ExceptionCode_t & ex )
```

Add a new member to this **DDS\_TypeCode** (p. 1164).

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing structures (**DDS\_TK\_STRUCT** (p. 86)), value types (**DDS\_TK\_VALUE** (p. 86)), and unions (**DDS\_TK\_UNION** (p. 86)). To add a constant to an enumeration, see **DDS\_TypeCode::add\_member\_to\_enum** (p. 1197).

Calling this method clones the type code passed as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call **DDS\_TypeCodeFactory::delete\_tc** (p. 1213).

The ability to modify a **DDS\_TypeCode** (p. 1164) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 99) APIs.

Here's a simple code example that adds two fields to a data type, one an integer and another a sequence of integers.

```
// Integer:
myTypeCode->add_member (
    "myFieldName",
    DDS_TYPECODE_MEMBER_ID_INVALID,
    DDS_TheTypeCodeFactory->get_primitive_tc(DDS_TK_LONG),
    // New field is a required non-key member:
    DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);

// Sequence of 10 or fewer integers:
myTypeCode.add_member (
    "myFieldName",
    DDS_TYPECODE_MEMBER_ID_INVALID,
    DDS_TheTypeCodeFactory->create_sequence_tc(
        10,
        DDS_TheTypeCodeFactory->get_primitive_tc(DDS_TK_LONG)),
    // New field is a required non-key member:
    DDS_TYPECODE_NONKEY_REQUIRED_MEMBER);
```

#### MT Safety:

UNSAFE.

#### Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) The name of the new member.
<i>id</i>	<< <i>in</i> >> (p. 238) Member ID or case value. <ul style="list-style-type: none"> <li>For <b>DDS_TK_STRUCT</b> (p. 86), and <b>DDS_TK_VALUE</b> (p. 86), this parameter is used to provide the member ID. For automatic assignment of the member ID specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 81).</li> <li>For <b>DDS_TK_UNION</b> (p. 86), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API <b>DDS_TypeCode::add_member_to_union</b> (p. 1198).</li> </ul>
<i>tc</i>	<< <i>in</i> >> (p. 238) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1164) with the <b>DDS_TypeCodeFactory</b> (p. 1210).

## Parameters

<i>member_flags</i>	<< <i>in</i> >> (p. 238) Indicates whether the member is part of the key and whether it is required.
<i>ex</i>	<< <i>out</i> >> (p. 238) If this method fails, this argument will contain information about the failure. Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 335)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 335)</li> </ul>

## Returns

The zero-based index of the new member relative to any other members that previously existed.

## See also

**DDS\_TypeCode::add\_member\_ex** (p. 1201)  
**DDS\_TypeCode::add\_member\_to\_enum** (p. 1197)  
**DDS\_TypeCodeFactory** (p. 1210)  
**DDS\_TYPECODE\_NONKEY\_MEMBER** (p. 83)  
**DDS\_TYPECODE\_KEY\_MEMBER** (p. 83)  
**DDS\_TYPECODE\_NONKEY\_REQUIRED\_MEMBER** (p. 84)

## 9.214.2.41 add\_member\_ex()

```

DDS_UnsignedLong DDS_TypeCode::add_member_ex (
    const char * name,
    DDS_Long id,
    const DDS_TypeCode * tc,
    DDS_Octet member_flags,
    DDS_Visibility visibility,
    DDS_Boolean is_pointer,
    DDS_Short bits,
    DDS_ExceptionCode_t & ex )
  
```

Add a new member to this **DDS\_TypeCode** (p. 1164).

This method is applicable to **DDS\_TypeCode** (p. 1164) objects representing structures (**DDS\_TK\_STRUCT** (p. 86)), value types (**DDS\_TK\_VALUE** (p. 86)), and unions (**DDS\_TK\_UNION** (p. 86)). To add a constant to an enumeration, see **DDS\_TypeCode::add\_member\_to\_enum** (p. 1197).

Calling this method clones the type code passed in as the `tc` parameter if the type code is not a builtin one. To delete this cloned type code, call **DDS\_TypeCodeFactory::delete\_tc** (p. 1213).

The ability to modify a **DDS\_TypeCode** (p. 1164) – such as by adding a member – is important if you are using the **Dynamic Data** (p. 99) APIs.

## MT Safety:

UNSAFE.

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) The name of the new member.
<i>id</i>	<< <i>in</i> >> (p. 238) Member ID or case value. <ul style="list-style-type: none"> <li>• For <b>DDS_TK_STRUCT</b> (p. 86) and <b>DDS_TK_VALUE</b> (p. 86), this parameter is used to provide the member ID.</li> <li>• For <b>DDS_TK_STRUCT</b> (p. 86) and <b>DDS_TK_VALUE</b> (p. 86) only: For automatic assignment of the member ID, specify <b>DDS_TYPECODE_MEMBER_ID_INVALID</b> (p. 81).</li> <li>• For <b>DDS_TK_UNION</b> (p. 86), this parameter is used to provide the case value associated with the member. The member ID is assigned automatically. To explicitly assign the member ID, use the API <b>DDS_TypeCode::add_member_to_union</b> (p. 1198).</li> </ul>
<i>tc</i>	<< <i>in</i> >> (p. 238) The type of the new member. You can get or create this <b>DDS_TypeCode</b> (p. 1164) with the <b>DDS_TypeCodeFactory</b> (p. 1210).
<i>member_flags</i>	<< <i>in</i> >> (p. 238) Indicates whether the member is part of the key and whether it is required.
<i>visibility</i>	<< <i>in</i> >> (p. 238) Whether the new member is public or private. Non-public members are only relevant for types of kind <b>DDS_TK_VALUE</b> (p. 86). Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_PRIVATE_MEMBER</b> (p. 82)</li> <li>• <b>DDS_PUBLIC_MEMBER</b> (p. 83)</li> </ul>
<i>is_pointer</i>	<< <i>in</i> >> (p. 238) Whether the data member, in its deserialized form, should be stored by pointer as opposed to by value.
<i>bits</i>	<< <i>in</i> >> (p. 238) The number of bits, if this new member is a bit field, or <b>DDS_TYPECODE_NOT_BITFIELD</b> (p. 81).
<i>ex</i>	<< <i>out</i> >> (p. 238) If this method fails, this argument will contain information about the failure. Possible values include: <ul style="list-style-type: none"> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE</b> (p. 335)</li> <li>• <b>DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE</b> (p. 335)</li> </ul>

## Returns

The zero-based index of the new member relative to any other members that previously existed.

## See also

### 9.214.2.42 default\_value()

```
const DDS_AnnotationParameterValue * DDS_TypeCode::default_value (
    DDS_ExceptionCode_t & ex )
```

Returns the default annotation for this **DDS\_TypeCode** (p. 1164).

#### Precondition

self kind is **DDS\_TK\_ENUM** (p. 86), or **DDS\_TK\_ALIAS** (p. 86).

#### MT Safety:

SAFE

#### Parameters

<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"><li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li><li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li><li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li></ul>
-----------	---

#### Returns

the default annotation for this **DDS\_TypeCode** (p. 1164)

### 9.214.2.43 min\_value()

```
const DDS_AnnotationParameterValue * DDS_TypeCode::min_value (
    DDS_ExceptionCode_t & ex )
```

Returns the min annotation for this **DDS\_TypeCode** (p. 1164).

#### Precondition

self kind is **DDS\_TK\_ENUM** (p. 86), or **DDS\_TK\_ALIAS** (p. 86) of a numerical kind.

#### MT Safety:

SAFE

## Parameters

<i>ex</i>	<p>&lt;&lt;<b><i>out</i></b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	---

## Returns

the min annotation for this **DDS\_TypeCode** (p. 1164)

**9.214.2.44 max\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode::max_value (
    DDS_ExceptionCode_t & ex )
```

Returns the max annotation for this **DDS\_TypeCode** (p. 1164).

## Precondition

self kind is **DDS\_TK\_ENUM** (p. 86), or **DDS\_TK\_ALIAS** (p. 86) of a numerical kind.

## MT Safety:

SAFE

## Parameters

<i>ex</i>	<p>&lt;&lt;<b><i>out</i></b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>
-----------	---

**Returns**

the max annotation for this **DDS\_TypeCode** (p. 1164)

**9.214.2.45 member\_default\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode::member_default_value (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex )
```

Returns the member default annotation for this **DDS\_TypeCode** (p. 1164).

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), or **DDS\_TK\_UNION** (p. 86).

**MT Safety:**

SAFE

**Parameters**

<i>index</i>	index of the target member
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

the member default annotation for this **DDS\_TypeCode** (p. 1164)

**9.214.2.46 member\_min\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode::member_min_value (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex )
```

Returns the member min annotation for this **DDS\_TypeCode** (p. 1164).

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), or **DDS\_TK\_UNION** (p. 86).  
 member pointed to by index of a numerical kind.

**MT Safety:**

SAFE

**Parameters**

<i>index</i>	index of the target member
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**Returns**

the member min annotation for this **DDS\_TypeCode** (p. 1164)

**9.214.2.47 member\_max\_value()**

```
const DDS_AnnotationParameterValue * DDS_TypeCode::member_max_value (
    DDS_UnsignedLong index,
    DDS_ExceptionCode_t & ex )
```

Returns the member max annotation for this **DDS\_TypeCode** (p. 1164).

**Precondition**

self kind is **DDS\_TK\_STRUCT** (p. 86), or **DDS\_TK\_UNION** (p. 86).  
 member pointed to by index of a numerical kind.

**MT Safety:**

SAFE

## Parameters

<i>index</i>	index of the target member
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BADKIND_USER_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BOUNDS_USER_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

the member max annotation for this **DDS\_TypeCode** (p. 1164)

## 9.214.2.48 print\_IDL()

```
void DDS_TypeCode::print_IDL (
    DDS_UnsignedLong indent,
    DDS_ExceptionCode_t & ex ) const
```

Prints a **DDS\_TypeCode** (p. 1164) in IDL notation.

## MT Safety:

SAFE.

## Parameters

<i>indent</i>	<< <b>in</b> >> (p. 238) Indent.
<i>ex</i>	<p>&lt;&lt;<b>out</b>&gt;&gt; (p. 238) Parameter for error indications. The values that can take are:</p> <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**9.214.2.49 print()**

```
void DDS_TypeCode::print (
    const DDS_TypeCodePrintFormatProperty & format,
    DDS_ExceptionCode_t & ex ) const
```

Prints a **DDS\_TypeCode** (p. 1164).

**MT Safety:**

SAFE.

**Parameters**

<i>format</i>	<< <i>in</i> >> (p. 238) Format.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

**9.214.2.50 to\_string() [1/2]**

```
void DDS_TypeCode::to_string (
    char * str,
    DDS_UnsignedLong & str_size,
    DDS_ExceptionCode_t & ex ) const
```

Get a string representation of this **DDS\_TypeCode** (p. 1164) object using the default values for **DDS\_TypeCodePrintFormatProperty** (p. 1224).

This function obtains a string representation of a **DDS\_TypeCode** (p. 1164) object, it creates this string using the default values of **DDS\_TypeCodePrintFormatProperty** (p. 1224).

In order to calculate the required length of the string, the user can call this function with the parameter *str* set to NULL. In this mode, the required length of the string will be stored into the value pointed to by the parameter *str\_size*.

If the parameter *str* is not equal to NULL, the string representation of the **DDS\_TypeCode** (p. 1164) will be stored into the parameter *str*. In this mode, if the size of the string is insufficient to hold the result, the parameter *\*ex* will be set to **DDS\_BAD\_PARAM\_SYSTEM\_EXCEPTION\_CODE** (p. 334) and the parameter *str\_size* will be updated to hold the required size of the string. All string lengths include the trailing NUL byte.

## Parameters

<i>str</i>	<< <b>out</b> >> (p. 238) The char buffer that will be used to store the string representation of the <b>DDS_TypeCode</b> (p. 1164). If NULL then this function will store the required length of the buffer into the value pointed to by the <i>str_size</i> parameter.
<i>str_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The length of the char buffer. If the supplied buffer is NULL or insufficiently long, the value pointed to by this parameter will be updated to contain the required length.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter used for error indications.

## See also

**DDS\_TypeCode::print\_IDL** (p. 1207)

**DDS\_TypeCode::print** (p. 1207)

**DDS\_TypeCode::to\_string** (p. 1208)

## 9.214.2.51 to\_string() [2/2]

```
void DDS_TypeCode::to_string (
    char * str,
    DDS_UnsignedLong & str_size,
    const DDS_TypeCodePrintFormatProperty & format,
    DDS_StatusCode_t & ex ) const
```

Get a string representation of this **DDS\_TypeCode** (p. 1164) object using the format described by **DDS\_TypeCodePrintFormatProperty** (p. 1224).

This function behaves in the same way as **DDS\_TypeCode::to\_string** (p. 1208) but allows the user to specify the format of the string using **DDS\_TypeCodePrintFormatProperty** (p. 1224).

## Parameters

<i>str</i>	<< <b>out</b> >> (p. 238) The char buffer which will hold the string representation of the <b>DDS_TypeCode</b> (p. 1164).
<i>str_size</i>	<< <b>inout</b> >> (p. 238) Cannot be NULL. The length of the char buffer pointed to by the <i>str</i> parameter. If the <i>str</i> parameter is NULL, or too small, this parameter will be updated to hold the required length of the buffer.
<i>format</i>	<< <b>in</b> >> (p. 238) The <b>DDS_TypeCodePrintFormatProperty</b> (p. 1224) used to define the format of the string representation of the <b>DDS_TypeCode</b> (p. 1164).
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter used for error indications.

## 9.215 DDS\_TypeCodeFactory Struct Reference

A singleton factory for creating, copying, and deleting data type definitions dynamically.

### Public Member Functions

- **DDS\_TypeCode \* clone\_tc** (const **DDS\_TypeCode** \*tc, **DDS\_ExceptionCode\_t** &ex)  
*Creates and returns a copy of the input **DDS\_TypeCode** (p. 1164).*
- void **delete\_tc** (**DDS\_TypeCode** \*tc, **DDS\_ExceptionCode\_t** &ex)  
*Deletes the input **DDS\_TypeCode** (p. 1164).*
- const **DDS\_TypeCode** \* **get\_primitive\_tc** (**DDS\_TCKind** tc\_kind)  
*Get the **DDS\_TypeCode** (p. 1164) for a primitive type (integers, floating point values, etc.) identified by the given **DDS\_↔\_TCKind** (p. 86).*
- **DDS\_TypeCode** \* **create\_struct\_tc** (const char \*name, const **DDS\_StructMemberSeq** &members, **DDS\_↔\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_STRUCT** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_struct\_tc** (const char \*name, **DDS\_ExtensibilityKind** extensibility\_kind, const **DDS\_StructMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_STRUCT** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_value\_tc** (const char \*name, **DDS\_ValueModifier** type\_modifier, const **DDS\_↔\_TypeCode** \*concrete\_base, const **DDS\_ValueMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_VALUE** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_value\_tc** (const char \*name, **DDS\_ExtensibilityKind** extensibility\_kind, **DDS\_↔\_ValueModifier** type\_modifier, const **DDS\_TypeCode** \*concrete\_base, const **DDS\_ValueMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_VALUE** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_union\_tc** (const char \*name, const **DDS\_TypeCode** \*discriminator\_type, **DDS\_↔\_Long** default\_index, const **DDS\_UnionMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_UNION** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_union\_tc** (const char \*name, **DDS\_ExtensibilityKind** extensibility\_kind, const **DDS\_TypeCode** \*discriminator\_type, **DDS\_Long** default\_index, const **DDS\_UnionMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_UNION** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_enum\_tc** (const char \*name, const **DDS\_EnumMemberSeq** &members, **DDS\_↔\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_ENUM** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_enum\_tc** (const char \*name, **DDS\_ExtensibilityKind** extensibility\_kind, const **DDS\_EnumMemberSeq** &members, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_ENUM** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_alias\_tc** (const char \*name, const **DDS\_TypeCode** \*original\_type, **DDS\_Boolean** is\_pointer, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_ALIAS** (p. 86) (typedef) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_string\_tc** (**DDS\_UnsignedLong** bound, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_STRING** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_wstring\_tc** (**DDS\_UnsignedLong** bound, **DDS\_ExceptionCode\_t** &ex)  
*Constructs a **DDS\_TK\_WSTRING** (p. 86) **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCode** \* **create\_sequence\_tc** (**DDS\_UnsignedLong** bound, const **DDS\_TypeCode** \*element\_type, **DDS\_ExceptionCode\_t** &ex)

Constructs a *DDS\_TK\_SEQUENCE* (p. 86) *DDS\_TypeCode* (p. 1164).

- **DDS\_TypeCode \* create\_array\_tc** (const **DDS\_UnsignedLongSeq** &dimensions, const **DDS\_TypeCode** \*element\_type, **DDS\_ExceptionCode\_t** &ex)

Constructs a *DDS\_TK\_ARRAY* (p. 86) *DDS\_TypeCode* (p. 1164).

- **DDS\_TypeCode \* create\_array\_tc** ( **DDS\_UnsignedLong** length, const **DDS\_TypeCode** \*element\_type, **DDS\_ExceptionCode\_t** &ex)

Constructs a *DDS\_TK\_ARRAY* (p. 86) *DDS\_TypeCode* (p. 1164) for a single-dimensional array.

## Static Public Member Functions

- static **DDS\_TypeCodeFactory \* get\_instance** ()

*Gets the singleton instance of this class.*

### 9.215.1 Detailed Description

A singleton factory for creating, copying, and deleting data type definitions dynamically.

You can access the singleton with the **DDS\_TypeCodeFactory::get\_instance** (p. 1212) method.

If you want to publish and subscribe to data of types that are not known to you at system design time, this class will be your starting point. After creating a data type definition with this class, you will modify that definition using the **DDS\_TypeCode** (p. 1164) class and then register it with the **Dynamic Data** (p. 99) API.

The methods of this class fall into several categories:

#### Getting definitions for primitive types:

Type definitions for primitive types (e.g. integers, floating point values, etc.) are pre-defined; your application only needs to *get* them, not *create* them.

- **DDS\_TypeCodeFactory::get\_primitive\_tc** (p. 1213)

#### Creating definitions for strings, arrays, and sequences:

Type definitions for strings, arrays, and sequences (i.e. variables-size lists) must be created as you need them, because the type definition includes the maximum length of those containers.

- **DDS\_TypeCodeFactory::create\_string\_tc** (p. 1221)
- **DDS\_TypeCodeFactory::create\_wstring\_tc** (p. 1222)
- **DDS\_TypeCodeFactory::create\_array\_tc** (p. 1223)
- **DDS\_TypeCodeFactory::create\_array\_tc** (p. 1223)
- **DDS\_TypeCodeFactory::create\_sequence\_tc** (p. 1222)

#### Creating definitions for structured types:

Structured types include structures, value types, and unions.

- **DDS\_TypeCodeFactory::create\_struct\_tc** (p. 1214)

- `DDS_TypeCodeFactory::create_value_tc` (p. 1215)
- `DDS_TypeCodeFactory::create_union_tc` (p. 1217)

#### Creating definitions for other types:

The type system also supports enumerations and aliases (i.e. `typedefs` in C and C++).

- `DDS_TypeCodeFactory::create_enum_tc` (p. 1218)
- `DDS_TypeCodeFactory::create_alias_tc` (p. 1221)

#### Deleting type definitions:

When you're finished using a type definition, you should delete it. (*Note* that you only need to delete a `DDS_TypeCode` (p. 1164) that you *created*; if you got the object from `DDS_TypeCodeFactory::get_primitive_tc` (p. 1213), you must *not* delete it.)

- `DDS_TypeCodeFactory::delete_tc` (p. 1213)

#### Copying type definitions:

You can also create deep copies of type definitions:

- `DDS_TypeCodeFactory::clone_tc` (p. 1212)

## 9.215.2 Member Function Documentation

### 9.215.2.1 `get_instance()`

```
static DDS_TypeCodeFactory * DDS_TypeCodeFactory::get_instance ( ) [static]
```

Gets the singleton instance of this class.

#### Returns

The `DDS_TypeCodeFactory` (p. 1210) instance if no errors. Otherwise, `NULL`.

#### MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling `DDSDomainParticipantFactory::get_instance` (p. 1429), `DDSDomainParticipantFactory::finalize_instance` (p. 1429), `DDS_TypeCodeFactory::get_instance` (p. 1212), `NDDUtilityNetworkCapture::enable` (p. 1847), or `NDDUtilityNetworkCapture::disable` (p. 1848).

### 9.215.2.2 `clone_tc()`

```
DDS_TypeCode * DDS_TypeCodeFactory::clone_tc (
    const DDS_TypeCode * tc,
    DDS_ExceptionCode_t & ex )
```

Creates and returns a copy of the input `DDS_TypeCode` (p. 1164).

## Parameters

<i>tc</i>	<< <i>in</i> >> (p. 238) Type code that will be copied. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A clone of *tc*.

## 9.215.2.3 delete\_tc()

```
void DDS_TypeCodeFactory::delete_tc (
    DDS_TypeCode * tc,
    DDS_ExceptionCode_t & ex )
```

Deletes the input **DDS\_TypeCode** (p. 1164).

All the type codes created through the **DDS\_TypeCodeFactory** (p. 1210) must be deleted using this method.

## Parameters

<i>tc</i>	<< <i>inout</i> >> (p. 238) Type code that will be deleted. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## 9.215.2.4 get\_primitive\_tc()

```
const DDS_TypeCode * DDS_TypeCodeFactory::get_primitive_tc (
    DDS_TCKind tc_kind )
```

Get the **DDS\_TypeCode** (p. 1164) for a primitive type (integers, floating point values, etc.) identified by the given **DDS\_←\_TCKind** (p. 86).

This method is equivalent to, and replaces, the `DDS_g_tc_*` constants.

See also

**DDS\_g\_tc\_long** (p. 88)

**DDS\_g\_tc\_boolean** (p. 89)  
**DDS\_g\_tc\_char** (p. 90)  
**DDS\_g\_tc\_wchar** (p. 91)

### 9.215.2.5 create\_struct\_tc() [1/2]

```

DDS_TypeCode * DDS_TypeCodeFactory::create_struct_tc (
    const char * name,
    const DDS_StructMemberSeq & members,
    DDS_ExceptionCode_t & ex )
  
```

Constructs a **DDS\_TK\_STRUCTURE** (p. 86) **DDS\_TypeCode** (p. 1164).

Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the struct type. Cannot be NULL.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the structure. This list may be empty (that is, <b>FooSeq::length()</b> (p. 1705) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a struct.

## 9.215.2.6 create\_struct\_tc() [2/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_struct_tc (
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const DDS_StructMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_STRUCTURE** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the struct type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 238) Type extensibility.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the structure. This list may be empty (that is, <b>FooSeq::length()</b> (p. 1705) may return zero). If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a struct.

## 9.215.2.7 create\_value\_tc() [1/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_value_tc (
    const char * name,
    DDS_ValueModifier type_modifier,
    const DDS_TypeCode * concrete_base,
    const DDS_ValueMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_VALUE** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the value type. Cannot be NULL.
<i>type_modifier</i>	<< <i>in</i> >> (p. 238) One of the value type modifier constants: <b>DDS_VM_NONE</b> (p. 81), <b>DDS_VM_CUSTOM</b> (p. 81), <b>DDS_VM_ABSTRACT</b> (p. 82) or <b>DDS_VM_TRUNCATABLE</b> (p. 82).
<i>concrete_base</i>	<< <i>in</i> >> (p. 238) <b>DDS_TypeCode</b> (p. 1164) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a value.

## 9.215.2.8 create\_value\_tc() [2/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_value_tc (
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    DDS_ValueModifier type_modifier,
    const DDS_TypeCode * concrete_base,
    const DDS_ValueMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_VALUE** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the value type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 238) Type extensibility.
<i>type_modifier</i>	<< <i>in</i> >> (p. 238) One of the value type modifier constants: <b>DDS_VM_NONE</b> (p. 81), <b>DDS_VM_CUSTOM</b> (p. 81), <b>DDS_VM_ABSTRACT</b> (p. 82) or <b>DDS_VM_TRUNCATABLE</b> (p. 82).
<i>concrete_base</i>	<< <i>in</i> >> (p. 238) <b>DDS_TypeCode</b> (p. 1164) object describing the concrete valuetype base. It may be NULL if the valuetype does not have a concrete base.

## Parameters

<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the value type. This list may be empty. If the list is not empty, the elements must describe valid value type members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a value.

## 9.215.2.9 create\_union\_tc() [1/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_union_tc (
    const char * name,
    const DDS_TypeCode * discriminator_type,
    DDS_Long default_index,
    const DDS_UnionMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_UNION** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the union type. Cannot be NULL.
<i>discriminator_type</i>	<< <i>in</i> >> (p. 238) Discriminator Type Code. Cannot be NULL.
<i>default_index</i>	<< <i>in</i> >> (p. 238) Index of the default member, or -1 if there is no default member.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a union.

## 9.215.2.10 create\_union\_tc() [2/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_union_tc (
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const DDS_TypeCode * discriminator_type,
    DDS_Long default_index,
    const DDS_UnionMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_UNION** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the union type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 238) Type extensibility.
<i>discriminator_type</i>	<< <i>in</i> >> (p. 238) Discriminator Type Code. Cannot be NULL.
<i>default_index</i>	<< <i>in</i> >> (p. 238) Index of the default member, or -1 if there is no default member.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the union. This list may be empty. If the list is not empty, the elements must describe valid struct members. (For example, the names must be unique within the type.)
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a union.

## 9.215.2.11 create\_enum\_tc() [1/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_enum_tc (
    const char * name,
```

```
const DDS_EnumMemberSeq & members,  
      DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_ENUM** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the enum type. Cannot be NULL.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with <b>DDS_TypeCode::add_member_to_enum</b> (p. 1197).
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing an enumeration.

## 9.215.2.12 create\_enum\_tc() [2/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_enum_tc (
    const char * name,
    DDS_ExtensibilityKind extensibility_kind,
    const DDS_EnumMemberSeq & members,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_ENUM** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the enum type. Cannot be NULL.
<i>extensibility_kind</i>	<< <i>in</i> >> (p. 238) Type extensibility.
<i>members</i>	<< <i>in</i> >> (p. 238) Initial members of the enumeration. All members must have non-NULL names, and both names and ordinal values must be unique within the type. Note that it is also possible to add members later with <b>DDS_TypeCode::add_member_to_enum</b> (p. 1197).
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing an enumeration.

## 9.215.2.13 create\_alias\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory::create_alias_tc (
    const char * name,
    const DDS_TypeCode * original_type,
    DDS_Boolean is_pointer,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_ALIAS** (p. 86) (typedef **DDS\_TypeCode** (p. 1164)).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the alias. Cannot be NULL.
<i>original_type</i>	<< <i>in</i> >> (p. 238) Aliased type code. Cannot be NULL.
<i>is_pointer</i>	<< <i>in</i> >> (p. 238) Indicates if the alias is a pointer to the aliased type code.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing an alias.

## 9.215.2.14 create\_string\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory::create_string_tc (
    DDS_UnsignedLong bound,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_STRING** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>bound</i>	<< <b>in</b> >> (p. 238) Maximum length of the string.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a string.

## 9.215.2.15 create\_wstring\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory::create_wstring_tc (
    DDS_UnsignedLong bound,
    DDS_StatusCode_t & ex )
```

Constructs a **DDS\_TK\_WSTRING** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>bound</i>	<< <b>in</b> >> (p. 238) Maximum length of the wide string.
<i>ex</i>	<< <b>out</b> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a wide string.

## 9.215.2.16 create\_sequence\_tc()

```
DDS_TypeCode * DDS_TypeCodeFactory::create_sequence_tc (
    DDS_UnsignedLong bound,
    const DDS_TypeCode * element_type,
    DDS_StatusCode_t & ex )
```

Constructs a **DDS\_TK\_SEQUENCE** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>bound</i>	<< <i>in</i> >> (p. 238) The bound for the sequence (> 0).
<i>element_type</i>	<< <i>in</i> >> (p. 238) <b>DDS_TypeCode</b> (p. 1164) object describing the sequence elements.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a sequence.

## 9.215.2.17 create\_array\_tc() [1/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_array_tc (
    const DDS_UnsignedLongSeq & dimensions,
    const DDS_TypeCode * element_type,
    DDS_StatusCode_t & ex )
```

Constructs a **DDS\_TK\_ARRAY** (p. 86) **DDS\_TypeCode** (p. 1164).

## Parameters

<i>dimensions</i>	<< <i>in</i> >> (p. 238) Dimensions of the array. Each dimension has to be greater than 0.
<i>element_type</i>	<< <i>in</i> >> (p. 238) <b>DDS_TypeCode</b> (p. 1164) describing the array elements. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>
Generated by Doxygen	• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a sequence.

### 9.215.2.18 create\_array\_tc() [2/2]

```
DDS_TypeCode * DDS_TypeCodeFactory::create_array_tc (
    DDS_UnsignedLong length,
    const DDS_TypeCode * element_type,
    DDS_ExceptionCode_t & ex )
```

Constructs a **DDS\_TK\_ARRAY** (p. 86) **DDS\_TypeCode** (p. 1164) for a single-dimensional array.

## Parameters

<i>length</i>	<< <i>in</i> >> (p. 238) Length of the single-dimensional array.
<i>element_type</i>	<< <i>in</i> >> (p. 238) <b>DDS_TypeCode</b> (p. 1164) describing the array elements. Cannot be NULL.
<i>ex</i>	<< <i>out</i> >> (p. 238) Parameter for error indications. The values that can take are: <ul style="list-style-type: none"> <li>• <b>DDS_NO_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> <li>• <b>DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE</b> (p. 334)</li> </ul>

## Returns

A newly-created **DDS\_TypeCode** (p. 1164) object describing a sequence.

## 9.216 DDS\_TypeCodePrintFormatProperty Struct Reference

A collection of attributes used to configure how a TypeCode appears when converted to a string.

### Public Attributes

- **DDS\_Long indent**  
*Configures how much indent should be added to the string representation of a **DDS\_TypeCode** (p. 1164).*
- **DDS\_Boolean print\_ordinals**  
*Configures whether or not to print the ordinal value of each enumerator within a **DDS\_TypeCode** (p. 1164).*
- **DDS\_TypeCodePrintFormatKind print\_kind**  
*Configures whether the type should be printed in XML or IDL format.*
- **DDS\_Boolean print\_complete\_type**  
*Configures whether or not to print the complete type.*

## 9.216.1 Detailed Description

A collection of attributes used to configure how a TypeCode appears when converted to a string.

To ensure that new objects are initialized to a known value, assign them with the static initializer `DDS_TypeCode_↔PrintFormat_INITIALIZER` (p. 84).

## 9.216.2 Member Data Documentation

### 9.216.2.1 indent

```
DDS_Long DDS_TypeCodePrintFormatProperty::indent
```

Configures how much indent should be added to the string representation of a `DDS_TypeCode` (p. 1164).

Configures how much additional indent is applied when converting a TypeCode to a string. This value acts as a total offset on the string, increasing the indent applied to all elements by the same amount. With an indent of 0, a string representation of a TypeCode may appear as:

```
struct myType {  
    long x;  
};
```

Using an indent of 1, the same TypeCode would be printed as:

```
    struct myType {  
        long x;  
    };
```

I.e., the entire structure is indented.

### 9.216.2.2 print\_ordinals

**DDS\_Boolean** DDS\_TypeCodePrintFormatProperty::print\_ordinals

Configures whether or not to print the ordinal value of each enumerator within a **DDS\_TypeCode** (p. 1164).

When set to true, the ordinal value of each enumerator within an enum will be printed, otherwise only non-default ordinals are printed. Take for example the following enum:

```
enum myEnum {  
    RED,  
    GREEN = 3,  
    BLUE,  
};
```

When print\_ordinals is set to false it would be printed as:

```
enum myEnum {  
    RED,  
    GREEN = 3,  
    BLUE,  
};
```

But with print\_ordinals set to true it would be printed as:

```
enum myEnum {  
    RED = 0,  
    GREEN = 3,  
    BLUE = 4,  
};
```

### 9.216.2.3 print\_kind

**DDS\_TypeCodePrintFormatKind** DDS\_TypeCodePrintFormatProperty::print\_kind

Configures whether the type should be printed in XML or IDL format.

When print\_kind is DDS\_TYPE\_CODE\_PRINT\_KIND\_IDL, the type will be printed in IDL format. For example:

```
struct Foo {  
    float32 bar;  
};
```

When `print_kind` is `DDS_TYPE_CODE_PRINT_KIND_XML`, the type will be printed in XML format. For example:

```
<struct name="Foo">  
    <member name="bar" type="float32"/>  
</struct>
```

#### 9.216.2.4 print\_complete\_type

**DDS\_Boolean** `DDS_TypeCodePrintFormatProperty::print_complete_type`

Configures whether or not to print the complete type.

When `print_complete_type` is true, the complete type will be printed. When `print_complete_type` is false, only the top level will be printed.

Take for example the following types:

```
struct Foo {  
    float32 member;  
};  
  
struct Bar {  
    Foo foo;  
};
```

When `print_complete_type` is false, this is printed as:

```
struct Bar {  
    Foo foo;  
};
```

When `print_complete_type` is true, this is printed as:

```
struct Foo {  
    float32 member;  
};  
  
struct Bar {  
    Foo foo;  
};
```

## 9.217 DDS\_TypeConsistencyEnforcementQosPolicy Struct Reference

Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

### Public Attributes

- **DDS\_TypeConsistencyKind kind**  
*Type consistency kind.*
- **DDS\_Boolean ignore\_sequence\_bounds**  
*Controls whether sequence bounds are taken into consideration for type assignability.*
- **DDS\_Boolean ignore\_string\_bounds**  
*Controls whether string bounds are taken into consideration for type assignability.*
- **DDS\_Boolean ignore\_member\_names**  
*Controls whether member names are taken into consideration for type assignability.*
- **DDS\_Boolean prevent\_type\_widening**  
*Controls whether type widening is allowed.*
- **DDS\_Boolean force\_type\_validation**  
*Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1321) and a **DDSDataReader** (p. 1288).*
- **DDS\_Boolean ignore\_enum\_literal\_names**  
*Controls whether enumeration constant names are taken into consideration for type assignability.*

### 9.217.1 Detailed Description

Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

This policy defines a type consistency kind, which allows applications to select from among a set of predetermined behaviors. The following consistency kinds are specified: **DDS\_DISALLOW\_TYPE\_COERCION** (p. 453), **DDS\_ALLOW\_TYPE\_COERCION** (p. 453) and **DDS\_AUTO\_TYPE\_COERCION** (p. 453).

The type-consistency-enforcement rules consist of two steps:

**Step 1.** If both the DataWriter and DataReader specify a TypeObject, it is considered first. If the DataReader allows type coercion, then its type must be assignable from the DataWriter's type, taking into account the values of prevent\_type\_widening, ignore\_sequence\_bounds, ignore\_string\_bounds, ignore\_member\_names, and ignore\_enum\_literal\_names. If the DataReader does not allow type coercion, then its type must be equivalent to the type of the DataWriter.

**Step 2.** If either the DataWriter or the DataReader does not provide a TypeObject definition, then the registered type names are examined. The DataReader's and DataWriter's registered type names must match exactly, as was true in RTI Connext releases prior to 5.0.0.

If either Step 1 or Step 2 fails, the Topics associated with the DataReader and DataWriter are considered to be inconsistent and the **DDS\_InconsistentTopicStatus** (p. 921) is updated.

The default enforcement kind is **DDS\_AUTO\_TYPE\_COERCION** (p.453). This default kind translates to **DDS\_ALLOW\_TYPE\_COERCION** (p. 453) except in the following cases:

- When a **Zero Copy** (p. 70) DataReader is used, the kind is translated to **DDS\_DISALLOW\_TYPE\_COERCION** (p. 453).
- When the middleware is introspecting the built-in topic data declaration of a remote DataReader in order to determine whether it can match with a local DataWriter, if it observes that no TypeConsistencyEnforcement↔QosPolicy value is provided (as would be the case when communicating with a Service implementation not in conformance with this specification), it assumes a kind of **DDS\_DISALLOW\_TYPE\_COERCION** (p. 453).

For additional information on type consistency enforcement refer to the `Extensible Types Guide` and the `OMG Extensible and Dynamic Topic Types for DDS Specification`.

#### Entity:

**DDSDataReader** (p. 1288)

#### Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

## 9.217.2 Member Data Documentation

### 9.217.2.1 kind

**DDS\_TypeConsistencyKind** DDS\_TypeConsistencyEnforcementQosPolicy::kind

Type consistency kind.

**[default] DDS\_AUTO\_TYPE\_COERCION** (p. 453)

### 9.217.2.2 ignore\_sequence\_bounds

**DDS\_Boolean** DDS\_TypeConsistencyEnforcementQosPolicy::ignore\_sequence\_bounds

Controls whether sequence bounds are taken into consideration for type assignability.

If the option is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then sequence bounds (maximum lengths) are not considered as part of the type assignability. This means that a T2 sequence type with maximum length L2 would be assignable to a T1 sequence type with maximum length L1, even if L2 is greater than L1. If the option is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then sequence bounds are taken into consideration for type assignability, and in order for T1 to be assignable from T2, it is required that  $L1 \geq L2$ .

**[default] DDS\_BOOLEAN\_TRUE** (p. 317)

### 9.217.2.3 ignore\_string\_bounds

`DDS_Boolean DDS_TypeConsistencyEnforcementQosPolicy::ignore_string_bounds`

Controls whether string bounds are taken into consideration for type assignability.

If the option is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then string bounds (maximum lengths) are not considered as part of the type assignability. This means that a T2 string type with maximum length L2 would be assignable to a T1 string type with maximum length L1, even if L2 is greater than L1. If the option is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then string bounds are taken into consideration for type assignability, and in order for T1 to be assignable from T2, it is required that  $L1 \geq L2$ .

[default] **DDS\_BOOLEAN\_TRUE** (p. 317)

### 9.217.2.4 ignore\_member\_names

`DDS_Boolean DDS_TypeConsistencyEnforcementQosPolicy::ignore_member_names`

Controls whether member names are taken into consideration for type assignability.

If the option is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then member names are not considered as part of the type assignability. If the option is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then member names are taken into consideration for type assignability, and in order for members with the same ID to be assignable, the members must also have the same name.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.217.2.5 prevent\_type\_widening

`DDS_Boolean DDS_TypeConsistencyEnforcementQosPolicy::prevent_type_widening`

Controls whether type widening is allowed.

If the option is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then type widening is permitted. If the option is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then a wider type may not be assignable from a narrower type.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.217.2.6 force\_type\_validation

`DDS_Boolean DDS_TypeConsistencyEnforcementQosPolicy::force_type_validation`

Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1321) and a **DDSDataReader** (p. 1288).

If the option is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then type information must be available in order to complete matching between a **DDSDataWriter** (p. 1321) and a **DDSDataReader** (p. 1288). If the option is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then matching can occur without complete type information as long as the type names match exactly. Note that if the types have the same name but are not assignable, DataReaders may fail to deserialize incoming data samples.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.217.2.7 ignore\_enum\_literal\_names

`DDS_Boolean` DDS\_TypeConsistencyEnforcementQosPolicy::ignore\_enum\_literal\_names

Controls whether enumeration constant names are taken into consideration for type assignability.

If the option is set to `DDS_BOOLEAN_TRUE` (p.317), then enumeration constants may change their names, but not their values, and still maintain assignability. If the option is set to `DDS_BOOLEAN_FALSE` (p.317), then in order for enumerations to be assignable, any constant that has the same value in both enumerations must also have the same name.

[default] `DDS_BOOLEAN_FALSE` (p.317)

## 9.218 DDS\_TypeDeallocationParams\_t Struct Reference

Configures whether to release or not pointer and optional members.

### Public Member Functions

- struct `DDS_TypeDeallocationParams_t` & `set_delete_pointers` (`DDS_Boolean` do\_delete)
- struct `DDS_TypeDeallocationParams_t` & `set_delete_optional_members` (`DDS_Boolean` do\_delete)

### Public Attributes

- `DDS_Boolean` `delete_pointers`  
*Whether to delete pointer members or not.*
- `DDS_Boolean` `delete_optional_members`  
*Whether to delete optional members or not.*

### 9.218.1 Detailed Description

Configures whether to release or not pointer and optional members.

By default both pointers optional members are released when they are not null.

This structure is also defined in `xcdr.1.0/srcC/typeObject/TypeObjectInfrastructure.h`. If changes are made, please ensure they are made in both locations.

#### Examples

`HelloWorld.cxx`, and `HelloWorldPlugin.cxx`.

### 9.218.2 Member Function Documentation

### 9.218.2.1 set\_delete\_pointers()

```
struct DDS_TypeDeallocationParams_t & DDS_TypeDeallocationParams_t::set_delete_pointers (
    DDS_Boolean do_delete ) [inline]
```

Whether to delete pointer members or not

### 9.218.2.2 set\_delete\_optional\_members()

```
struct DDS_TypeDeallocationParams_t & DDS_TypeDeallocationParams_t::set_delete_optional_members (
    DDS_Boolean do_delete ) [inline]
```

Whether to delete optional members or not

## 9.218.3 Member Data Documentation

### 9.218.3.1 delete\_pointers

```
DDS_Boolean DDS_TypeDeallocationParams_t::delete_pointers
```

Whether to delete pointer members or not.

#### Examples

**HelloWorld.cxx**, and **HelloWorldPlugin.cxx**.

### 9.218.3.2 delete\_optional\_members

```
DDS_Boolean DDS_TypeDeallocationParams_t::delete_optional_members
```

Whether to delete optional members or not.

#### Examples

**HelloWorld.cxx**, and **HelloWorldPlugin.cxx**.

## 9.219 DDS\_TypeSupportQosPolicy Struct Reference

Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

## Public Attributes

- void \* **plugin\_data**  
*Value to pass into the type plugin's de-/serialization function.*
- **DDS\_CdrPaddingKind cdr\_padding\_kind**  
*Determines whether or not the padding bytes will be set to zero during CDR serialization.*

### 9.219.1 Detailed Description

Allows you to attach application-specific values to a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

The purpose of this QoS is to allow a user application to pass data to a type plugin's support functions and choose whether or not to set the padding bytes to zero when serializing a sample using CDR encapsulation.

Entity:

**DDSDomainParticipant** (p. 1351), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO

**Changeable** (p. 360) = **UNTIL ENABLE** (p. 360)

### 9.219.2 Usage

The **DDS\_TypeSupportQosPolicy::plugin\_data** (p. 1234) allows you to associate a pointer to an object with a **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288). This object pointer is passed to the serialization routine of the data type associated with the **DDSDataWriter** (p. 1321) or the deserialization routine of the data type associated with the **DDSDataReader** (p. 1288).

You can modify the rttidsgen-generated code so that the de/serialization routines act differently depending on the information passed in via the object pointer. (The generated serialization and deserialization code does not use the pointer.)

This functionality can be used to change how data sent by a **DDSDataWriter** (p. 1321) or received by a **DDSDataReader** (p. 1288) is serialized or deserialized on a per DataWriter and DataReader basis.

It can also be used to dynamically change how serialization (or for a less common case, deserialization) occurs. For example, a data type could represent a table, including the names of the rows and columns. However, since the row/column names of an instance of the table (a Topic) don't change, they only need to be sent once. The information passed in through the TypeSupport QoS policy could be used to signal the serialization routine to send the row/column names the first time a **DDSDataWriter** (p. 1321) calls **FooDataWriter::write** (p. 1683), and then never again.

The **DDS\_TypeSupportQosPolicy::cdr\_padding\_kind** (p. 1234) allows you to choose whether or not the padding bytes are set to zero during CDR serialization.

## 9.219.3 Member Data Documentation

### 9.219.3.1 plugin\_data

void\* DDS\_TypeSupportQosPolicy::plugin\_data

Value to pass into the type plugin's de-/serialization function.

**[default]** NULL

### 9.219.3.2 cdr\_padding\_kind

DDS\_CdrPaddingKind DDS\_TypeSupportQosPolicy::cdr\_padding\_kind

Determines whether or not the padding bytes will be set to zero during CDR serialization.

In a DomainParticipant, this value configures how the padding bytes are set when serializing data for the Built-In Topic DataWriters and DataReaders. A value of **DDS\_AUTO\_CDR\_PADDING** (p. 454) defaults to **DDS\_NOT\_SET\_CDR\_↔PADDING** (p. 454).

For DataWriters and DataReaders, this value configures how padding bytes are set when serializing data for that entity. A value of **DDS\_AUTO\_CDR\_PADDING** (p. 454) means that the entity will inherit whatever value is set on the Domain↔Participant.

**[default]** **DDS\_AUTO\_CDR\_PADDING** (p. 454)

## 9.220 DDS\_UInt8Seq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_UInt8** (p. 318) >

### 9.220.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_UInt8** (p. 318) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_UInt8** (p. 318)

**FooSeq** (p. 1697)

## 9.221 DDS\_UnionMember Struct Reference

A description of a member of a union.

### Public Attributes

- char \* **name**  
*The name of the union member.*
- **DDS\_Boolean is\_pointer**  
*Indicates whether the union member is a pointer or not.*
- struct **DDS\_LongSeq labels**  
*The labels of the union member.*
- const **DDS\_TypeCode \* type**  
*The type of the union member.*

### 9.221.1 Detailed Description

A description of a member of a union.

See also

**DDS\_UnionMemberSeq** (p. 1236)

**DDS\_TypeCodeFactory::create\_union\_tc** (p. 1217)

### 9.221.2 Member Data Documentation

#### 9.221.2.1 name

```
char* DDS_UnionMember::name
```

The name of the union member.

Cannot be NULL.

#### 9.221.2.2 is\_pointer

```
DDS_Boolean DDS_UnionMember::is_pointer
```

Indicates whether the union member is a pointer or not.

### 9.221.2.3 labels

```
struct DDS_LongSeq DDS_UnionMember::labels
```

The labels of the union member.

Each union member should contain at least one label. If the union discriminator type is not **DDS\_Long** (p. 318) the label value should be evaluated to an integer value. For instance, 'a' would be evaluated to 97.

### 9.221.2.4 type

```
const DDS_TypeCode* DDS_UnionMember::type
```

The type of the union member.

Cannot be NULL.

## 9.222 DDS\_UnionMemberSeq Struct Reference

Defines a sequence of union members.

### 9.222.1 Detailed Description

Defines a sequence of union members.

## 9.226 DDS\_UserDataQosPolicy Struct Reference

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

## Public Attributes

- struct **DDS\_OctetSeq** value  
*a sequence of octets*

### 9.226.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 59) during discovery.

Entity:

**DDSDomainParticipant** (p. 1351), **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321)

Properties:

**RxO** (p. 360) = NO;  
**Changeable** (p. 360) = YES (p. 360)

See also

**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.226.2 Usage

The purpose of this QoS is to allow the application to attach additional information to the created **DDSEntity** (p. 1463) objects, so that when a remote application discovers their existence, it can access that information and use it for its own purposes. This information is not used by RTI Connex.

One possible use of this QoS is to attach security credentials or some other information that can be used by the remote application to authenticate the source.

In combination with operations such as **DDSDomainParticipant::ignore\_participant** (p. 1393), **DDSDomainParticipant::ignore\_publication** (p. 1396), **DDSDomainParticipant::ignore\_subscription** (p. 1396), and **DDSDomainParticipant::ignore\_topic** (p. 1395), this QoS policy can assist an application to define and enforce its own security policies.

The use of this QoS is not limited to security; it offers a simple, yet flexible extensibility mechanism.

*Important:* RTI Connex stores the data placed in this policy in pre-allocated pools. It is therefore necessary to configure RTI Connex with the maximum size of the data that will be stored in policies of this type. This size is configured with **DDS\_DomainParticipantResourceLimitsQosPolicy::participant\_user\_data\_max\_length** (p. 758), **DDS\_DomainParticipantResourceLimitsQosPolicy::writer\_user\_data\_max\_length** (p. 759), and **DDS\_DomainParticipantResourceLimitsQosPolicy::reader\_user\_data\_max\_length** (p. 759).

### 9.226.3 Member Data Documentation

### 9.226.3.1 value

```
struct DDS_OctetSeq DDS_UserDataQosPolicy::value
```

a sequence of octets

**[default]** empty (zero-length)

**[range]** Octet sequence of length [0,max\_length]

## 9.227 DDS\_ValueMember Struct Reference

A description of a member of a value type.

### Public Attributes

- **char \* name**  
*The name of the value member.*
- **const DDS\_TypeCode \* type**  
*The type of the value member.*
- **DDS\_Boolean is\_pointer**  
*Indicates whether the value member is a pointer or not.*
- **DDS\_Short bits**  
*Number of bits of a bitfield member.*
- **DDS\_Boolean is\_key**  
*Indicates if the value member is a key member or not.*
- **DDS\_Visibility access**  
*The type of access (public, private) for the value member.*
- **DDS\_Long id**  
*The member ID.*
- **DDS\_Boolean is\_optional**  
*Indicates if the value member is optional or required.*

### 9.227.1 Detailed Description

A description of a member of a value type.

See also

**DDS\_ValueMemberSeq** (p. 1241)

**DDS\_TypeCodeFactory::create\_value\_tc** (p. 1215)

## 9.227.2 Member Data Documentation

### 9.227.2.1 name

```
char* DDS_ValueMember::name
```

The name of the value member.

Cannot be NULL.

### 9.227.2.2 type

```
const DDS_TypeCode* DDS_ValueMember::type
```

The type of the value member.

Cannot be NULL.

### 9.227.2.3 is\_pointer

```
DDS_Boolean DDS_ValueMember::is_pointer
```

Indicates whether the value member is a pointer or not.

### 9.227.2.4 bits

```
DDS_Short DDS_ValueMember::bits
```

Number of bits of a bitfield member.

If the struct member is a bitfield, this field contains the number of bits of the bitfield. Otherwise, bits should contain **DDS\_TYPECODE\_NOT\_BITFIELD** (p. 81).

### 9.227.2.5 is\_key

```
DDS_Boolean DDS_ValueMember::is_key
```

Indicates if the value member is a key member or not.

### 9.227.2.6 access

`DDS_Visibility DDS_ValueMember::access`

The type of access (public, private) for the value member.

It can take the values: `DDS_PRIVATE_MEMBER` (p. 82) or `DDS_PUBLIC_MEMBER` (p. 83).

### 9.227.2.7 id

`DDS_Long DDS_ValueMember::id`

The member ID.

Use `DDS_TYPECODE_MEMBER_ID_INVALID` (p. 81) to have the member ID automatically assigned.

### 9.227.2.8 is\_optional

`DDS_Boolean DDS_ValueMember::is_optional`

Indicates if the value member is optional or required.

## 9.228 DDS\_ValueMemberSeq Struct Reference

Defines a sequence of value members.

### 9.228.1 Detailed Description

Defines a sequence of value members.

See also

`DDS_ValueMember` (p. 1239)

## 9.229 DDS\_VendorId\_t Struct Reference

`<<extension>>` (p. 237) Type used to represent the vendor of the service implementing the RTPS protocol.

## Public Attributes

- **DDS\_Octet vendorId** [ **DDS\_VENDOR\_ID\_LENGTH\_MAX**]  
*The vendor Id.*

### 9.229.1 Detailed Description

<<*extension*>> (p. 237) Type used to represent the vendor of the service implementing the RTPS protocol.

### 9.229.2 Member Data Documentation

#### 9.229.2.1 vendorId

**DDS\_Octet** DDS\_VendorId\_t::vendorId[ **DDS\_VENDOR\_ID\_LENGTH\_MAX**]

The vendor Id.

## 9.230 DDS\_WaitSetProperty\_t Struct Reference

<<*extension*>> (p. 237) Specifies the **DDSWaitSet** (p. 1629) behavior for multiple trigger events.

## Public Attributes

- **DDS\_Long max\_event\_count**  
*Maximum number of trigger events to cause a **DDSWaitSet** (p. 1629) to awaken.*
- struct **DDS\_Duration\_t max\_event\_delay**  
*Maximum delay from occurrence of first trigger event to cause a **DDSWaitSet** (p. 1629) to awaken.*

### 9.230.1 Detailed Description

<<*extension*>> (p. 237) Specifies the **DDSWaitSet** (p. 1629) behavior for multiple trigger events.

In simple use, a **DDSWaitSet** (p. 1629) returns when a single trigger event occurs on one of its attached **DDSCondition** (p. 1276) (s), or when the `timeout` maximum wait duration specified in the **DDSWaitSet::wait** (p. 1634) call expires.

The **DDS\_WaitSetProperty\_t** (p. 1242) allows configuration of the waiting behavior of a **DDSWaitSet** (p. 1629). If no conditions are true at the time of the call to wait, then the `max_event_count` parameter may be used to configure the WaitSet to wait for `max_event_count` trigger events to occur before returning, or to wait for up to `max_event_↔delay` time from the occurrence of the first trigger event before returning.

The `timeout` maximum wait duration specified in the **DDSWaitSet::wait** (p. 1634) call continues to apply.

Entity:

**DDSWaitSet** (p. 1629)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360)

## 9.230.2 Member Data Documentation

### 9.230.2.1 max\_event\_count

```
DDS_Long DDS_WaitSetProperty_t::max_event_count
```

Maximum number of trigger events to cause a **DDSWaitSet** (p. 1629) to awaken.

The **DDSWaitSet** (p. 1629) will wait until up to `max_event_count` trigger events have occurred before returning. The **DDSWaitSet** (p. 1629) may return earlier if either the `timeout` duration has expired, or `max_event_delay` has elapsed since the occurrence of the first trigger event. `max_event_count` may be used to "collect" multiple trigger events for processing at the same time.

[default] 1

[range] >= 1

;

### 9.230.2.2 max\_event\_delay

```
struct DDS_Duration_t DDS_WaitSetProperty_t::max_event_delay
```

Maximum delay from occurrence of first trigger event to cause a **DDSWaitSet** (p. 1629) to awaken.

The **DDSWaitSet** (p. 1629) will return no later than `max_event_delay` after the first trigger event. `max_event_delay` may be used to establish a maximum latency for events reported by the **DDSWaitSet** (p. 1629).

Note that **DDS\_RETCODE\_TIMEOUT** (p. 337) is *not* returned if `max_event_delay` is exceeded. **DDS\_RETCODE\_TIMEOUT** (p. 337) is returned only if the `timeout` duration expires before any trigger events occur.

[default] **DDS\_DURATION\_INFINITE** (p. 326) ;

## 9.231 DDS\_WcharSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Wchar** (p. 317) >

### 9.231.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Wchar** (p. 317) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Wchar** (p. 317)

**FooSeq** (p. 1697)

## 9.232 DDS\_WireProtocolQosPolicy Struct Reference

Specifies the wire-protocol-related attributes for the **DDSDomainParticipant** (p. 1351).

### Public Attributes

- **DDS\_Long participant\_id**  
*A value used to distinguish among different participants belonging to the same domain on the same host.*
- **DDS\_UnsignedLong rtps\_host\_id**  
*The RTPS Host ID of the domain participant.*
- **DDS\_UnsignedLong rtps\_app\_id**  
*The RTPS App ID of the domain participant.*
- **DDS\_UnsignedLong rtps\_instance\_id**  
*The RTPS Instance ID of the **DDSDomainParticipant** (p. 1351).*
- struct **DDS\_RtpsWellKnownPorts\_t rtps\_well\_known\_ports**  
*Configures the RTPS well-known port mappings.*
- **DDS\_RtpsReservedPortKindMask rtps\_reserved\_port\_mask**  
*Specifies which well-known ports to reserve when enabling the participant.*
- **DDS\_WireProtocolQosPolicyAutoKind rtps\_auto\_id\_kind**  
*Kind of auto mechanism used to calculate the GUID prefix.*
- **DDS\_Boolean compute\_crc**  
*Adds RTPS CRC submessage to every message when this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317).*
- **DDS\_Boolean check\_crc**  
*Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317).*

### 9.232.1 Detailed Description

Specifies the wire-protocol-related attributes for the **DDSDomainParticipant** (p. 1351).

Entity:

**DDSDomainParticipant** (p. 1351)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **NO** (p. 360)

### 9.232.2 Usage

This QoS policy configures some participant-wide properties of the DDS Real-Time Publish Subscribe (RTPS) on-the-wire protocol. (**DDS\_DataWriterProtocolQosPolicy** (p. 673) and **DDS\_DataReaderProtocolQosPolicy** (p. 630) configure RTPS and reliability properties on a per **DDSDataWriter** (p. 1321) or **DDSDataReader** (p. 1288) basis.)

**NOTE:** The default QoS policies returned by RTI Connexx contain the correctly initialized wire protocol attributes. The defaults are not normally expected to be modified, but are available to the advanced user customizing the implementation behavior.

The default values should not be modified without an understanding of the underlying Real-Time Publish Subscribe (RTPS) wire protocol.

In order for the discovery process to work correctly, each **DDSDomainParticipant** (p. 1351) must have a unique identifier. This QoS policy specifies how that identifier should be generated.

RTPS defines a 96-bit prefix to this identifier; each **DDSDomainParticipant** (p. 1351) must have a unique value for this prefix relative to all other participants in its domain.

If an application dies unexpectedly and is restarted, the IDs used by the new instance of DomainParticipants should be different than the ones used by the previous instances. A change in these values allows other DomainParticipants to know that they are communicating with a new instance of an application, and not the previous instance.

For legacy reasons, RTI Connexx divides the 96-bit prefix into three integers:

- The first integer is called host ID. The original purpose of this integer was to contain the identity of the machine on which the DomainParticipant is executing.
- The second integer is called an application ID. The original purpose of this integer was to contain a value that identifies the process or task in which the DomainParticipant is contained.
- The third integer is called instance ID. The original purpose was to contain a value that uniquely identifies a DomainParticipant within a task or process.

The **DDS\_WireProtocolQosPolicy::rtps\_auto\_id\_kind** (p. 1250) field can be used to configure the algorithm that RTI Connext uses to populate the 96-bit prefix. Then you can optionally overwrite specific parts of the 96-bit prefix by explicitly configuring the **DDS\_WireProtocolQosPolicy::rtps\_host\_id** (p. 1248) (first integer), **DDS\_WireProtocolQosPolicy::rtps\_app\_id** (p. 1248) (second integer), and **DDS\_WireProtocolQosPolicy::rtps\_instance\_id** (p. 1249) (third integer).

The **DDS\_WireProtocolQosPolicy::rtps\_auto\_id\_kind** (p.1250) field supports three different prefix generation algorithms:

1. In the default and most common scenario, **DDS\_WireProtocolQosPolicy::rtps\_auto\_id\_kind** (p. 1250) is set to **DDS RTPS\_AUTO\_ID\_FROM\_UUID** (p. 460). As the name suggests, this mechanism uses a unique, randomly generated UUID to fill the **rtps\_host\_id**, **rtps\_app\_id**, or **rtps\_instance\_id** fields. The first two bytes of the **rtps\_host\_id** are replaced with the RTI vendor ID (0x0101).
2. (Legacy) When **rtps\_auto\_id\_kind** is set to **DDS RTPS\_AUTO\_ID\_FROM\_IP** (p. 460), the 96-bit prefix is generated as follows:
  - **rtps\_host\_id**: The 32-bit value of the IPv4 of the first up and running interface of the host machine is assigned. If the host does not have an IPv4 address, the host-id will be automatically set to 0x7F000001.
  - **rtps\_app\_id**: The process (or task) ID is assigned.
  - **rtps\_instance\_id**: A counter is assigned that is incremented per new participant within a process.

**DDS RTPS\_AUTO\_ID\_FROM\_IP** is not a good algorithm to guarantee prefix uniqueness, because the process ID can be recycled by the OSs.

3. (Legacy) When **rtps\_auto\_id\_kind** is set to **DDS RTPS\_AUTO\_ID\_FROM\_MAC** (p. 460), the 96-bit prefix is generated as follows:
  - **rtps\_host\_id**: The first 32 bits of the MAC address of the first up and running interface of the host machine are assigned.
  - **rtps\_app\_id**: The last 32 bits of the MAC address of the first up and running interface of the host machine are assigned.
  - **rtps\_instance\_id**: This field is split into two different parts. The process (or task) ID is assigned to the first 24 bits. A counter is assigned to the last 8 bits. This counter is incremented per new participant.

**DDS RTPS\_AUTO\_ID\_FROM\_IP** is not a good algorithm to guarantee prefix uniqueness, because the process ID can be recycled by the OSs.

Some examples are provided to clarify the behavior of this QoS Policy in case you want to change the default behavior with **DDS RTPS\_AUTO\_ID\_FROM\_MAC** (p. 460).

First, get the participant QoS from the **DomainParticipantFactory**:

```
DDSDomainParticipantFactory *factory = NULL;

factory = DDSTheParticipantFactory->get_instance();

factory->get_default_participant_qos(participant_qos);
```

Second, change the **DDS\_WireProtocolQosPolicy** (p. 1244) using one of the options shown below.

Third, create the **DDSDomainParticipant** (p. 1351) as usual, using the modified QoS structure instead of the default one.

Option 1: Use **DDS\_RTSPS\_AUTO\_ID\_FROM\_MAC** (p. 460) to explicitly set just the application/task identifier portion of the **rtps\_instance\_id** field.

```
participant_qos.wire_protocol.rtps_auto_id_kind = DDS_RTSPS_AUTO_ID_FROM_MAC;
participant_qos.wire_protocol.rtps_host_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_app_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_instance_id = ( /* App ID */ (12 << 8) |
                                                /* Instance ID*/ (DDS_RTSPS_AUTO_ID));
```

Option 2: Handle only the per participant counter and let RTI Connexthandle the application/task identifier:

```
participant_qos.wire_protocol.rtps_auto_id_kind = DDS_RTSPS_AUTO_ID_FROM_MAC;
participant_qos.wire_protocol.rtps_host_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_app_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_instance_id = ( /* App ID */ (DDS_RTSPS_AUTO_ID) |
                                                /* Instance ID*/ (12));
```

Option 3: Handle the entire **rtps\_instance\_id** field yourself:

```
participant_qos.wire_protocol.rtps_auto_id_kind = DDS_RTSPS_AUTO_ID_FROM_MAC;
participant_qos.wire_protocol.rtps_host_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_app_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_instance_id = ( /* App ID */ (12 << 8) |
                                                /* Instance ID */ (9) )
```

**NOTE:** If you are using **DDS\_RTSPS\_AUTO\_ID\_FROM\_MAC** (p. 460) as **rtps\_auto\_id\_kind** and you decide to manually handle the **rtps\_instance\_id** field, you must ensure that both parts are non-zero (otherwise RTI Connexthandle will take responsibility for them). RTI recommends that you always specify the two parts separately in order to avoid errors.

Option 4: Let RTI Connexthandle the entire **rtps\_instance\_id** field:

```
participant_qos.wire_protocol.rtps_auto_id_kind = DDS_RTSPS_AUTO_ID_FROM_MAC;
participant_qos.wire_protocol.rtps_host_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_app_id      = DDS_RTSPS_AUTO_ID;
participant_qos.wire_protocol.rtps_instance_id = DDS_RTSPS_AUTO_ID;
```

**NOTE:** If you are using **DDS\_RTSPS\_AUTO\_ID\_FROM\_MAC** (p. 460) as **rtps\_auto\_id\_kind** and you decide to manually handle the **rtps\_instance\_id** field, you must ensure that both parts are non-zero (otherwise RTI Connexthandle will take responsibility for them). RTI recommends that you always specify the two parts separately in order to clearly show the difference.

### 9.232.3 Member Data Documentation

### 9.232.3.1 participant\_id

`DDS_Long DDS_WireProtocolQosPolicy::participant_id`

A value used to distinguish among different participants belonging to the same domain on the same host.

Determines the unicast port on which meta-traffic is received. Also defines the *default* unicast port for receiving user-traffic for DataReaders and DataWriters (can be overridden by the `DDS_DataReaderQos::unicast` (p. 651) or `DDS_DataWriterQos::unicast` (p. 696)).

For more information on port mapping, please refer to `DDS_RtpsWellKnownPorts_t` (p. 1076).

Each `DDSDomainParticipant` (p. 1351) in the same domain and running on the same host, must have a unique `participant_id`. The participants may be in the same address space or in distinct address spaces.

A negative number (-1) means that RTI Connex will *automatically* resolve the participant ID as follows.

- RTI Connex will pick the *smallest* participant ID based on the unicast ports available on the transports enabled for discovery.
- RTI Connex will attempt to resolve an automatic port index either when a DomainParticipant is enabled, or when a DataReader or DataWriter is created. Therefore, all the transports enabled for discovery must have been registered by this time. Otherwise, the discovery transports registered after resolving the automatic port index may produce port conflicts when the DomainParticipant is enabled.

**[default]** -1 [automatic], i.e. RTI Connex will automatically pick the `participant_id`, as described above.

**[range]** [ $\geq 0$ ], or -1, and does not violate guidelines stated in `DDS_RtpsWellKnownPorts_t` (p. 1076).

See also

`DDSEntity::enable()` (p. 1466)

`NDDSTransportSupport::register_transport()` (p. 1834)

### 9.232.3.2 rtps\_host\_id

`DDS_UnsignedLong DDS_WireProtocolQosPolicy::rtps_host_id`

The RTPS Host ID of the domain participant.

A specific host ID that is unique in the domain.

**[default]** `DDS RTPS_AUTO_ID` (p. ??). The default value is interpreted as follows:

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_IP` (p. 460), the value will be interpreted as the IPv4 address of the *first* up and running interface of the host machine.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_MAC` (p. 460), the value will be interpreted as the first 32 bits of the MAC address assigned to the *first* up and running interface of the host machine.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_UUID` (p. 460), the value will be the first 32 bits of the GUID prefix assigned by the UUID algorithm.

**[range]** [0,0xffffffff]

### 9.232.3.3 rtps\_app\_id

```
DDS_UnsignedLong DDS_WireProtocolQosPolicy::rtps_app_id
```

The RTPS App ID of the domain participant.

A participant specific ID that, together with the `rtps_instance_id`, is unique within the scope of the `rtps_host_id`.

If a participant dies and is restarted, it is recommended that it be given an app ID that is distinct from the previous one so that other participants in the domain can distinguish between them.

**[default]** `DDS RTPS_AUTO_ID` (p. ??). The default value is interpreted as follows:

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_IP` (p. 460) the value will be the process (or task) ID.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_MAC` (p. 460) the value will be the last 32 bits of the MAC address assigned to the *first* up and running interface of the host machine.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_UUID` (p. 460), the value will be the middle 32 bits of the GUID prefix assigned by the UUID algorithm.

**[range]** [0,0xffffffff]

### 9.232.3.4 rtps\_instance\_id

```
DDS_UnsignedLong DDS_WireProtocolQosPolicy::rtps_instance_id
```

The RTPS Instance ID of the `DDSDomainParticipant` (p. 1351).

This is an instance-specific ID of a participant that, together with the `rtps_app_id`, is unique within the scope of the `rtps_host_id`.

If a participant dies and is restarted, it is recommended that it be given an instance ID that is distinct from the previous one so that other participants in the domain can distinguish between them.

**[default]** `DDS RTPS_AUTO_ID` (p. ??). The default value is interpreted as follows:

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_IP` (p. 460), a counter is assigned that is incremented per new participant. For VxWorks-653, the first 8 bits are assigned to the partition id for the application.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_MAC` (p. 460), the first 24 bits are assigned to the application/task identifier and the last 8 bits are assigned to a counter that is incremented per new participant.

If `DDS_WireProtocolQosPolicy::rtps_auto_id_kind` (p. 1250) is equal to `DDS RTPS_AUTO_ID_FROM_UUID` (p. 460), the value will be the last 32 bits of the GUID prefix assigned by the UUID algorithm.

**[range]** [0,0xffffffff] **NOTE:** If you use `DDS RTPS_AUTO_ID_FROM_MAC` (p. 460) as `rtps_auto_id_kind` and you decide to manually handle the `rtps_instance_id` field, you must ensure that both the two parts are non-zero, otherwise the middleware will take responsibility for them. We recommend that you always specify the two parts separately in order to avoid errors. ( `examples` )

### 9.232.3.5 rtps\_well\_known\_ports

```
struct DDS_RtpsWellKnownPorts_t DDS_WireProtocolQosPolicy::rtps_well_known_ports
```

Configures the RTPS well-known port mappings.

Determines the well-known multicast and unicast port mappings for discovery (meta) traffic and user traffic.

[default] **DDS\_INTEROPERABLE\_RTPS\_WELL\_KNOWN\_PORTS** (p. 461)

### 9.232.3.6 rtps\_reserved\_port\_mask

```
DDS_RtpsReservedPortKindMask DDS_WireProtocolQosPolicy::rtps_reserved_port_mask
```

Specifies which well-known ports to reserve when enabling the participant.

Specifies which of the well-known multicast and unicast ports will be reserved when the DomainParticipant is enabled. Failure to allocate a port that is computed based on the **DDS\_RtpsWellKnownPorts\_t** (p. 1076) will be detected at this time, and the enable operation will fail.

[default] **DDS\_RTPS\_RESERVED\_PORT\_MASK\_DEFAULT** (p. 457)

### 9.232.3.7 rtps\_auto\_id\_kind

```
DDS_WireProtocolQosPolicyAutoKind DDS_WireProtocolQosPolicy::rtps_auto_id_kind
```

Kind of auto mechanism used to calculate the GUID prefix.

[default] **DDS\_RTPS\_AUTO\_ID\_FROM\_UUID** (p. 460)

### 9.232.3.8 compute\_crc

```
DDS_Boolean DDS_WireProtocolQosPolicy::compute_crc
```

Adds RTPS CRC submessage to every message when this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317).

The computed CRC covers the entire RTPS message excluding the RTPS header.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.232.3.9 check\_crc

```
DDS_Boolean DDS_WireProtocolQosPolicy::check_crc
```

Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS\_BOOLEAN\_TRUE** (p. 317).

**DDS\_WireProtocolQosPolicy::compute\_crc** (p. 1250) must be enabled at the publishing application for validating the message at the subscribing application.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

## 9.233 DDS\_WriteParams\_t Struct Reference

<<*extension*>> (p. 237) Input parameters for writing with `FooDataWriter::write_w_params` (p. 1688), `FooDataWriter::dispose_w_params` (p. 1691), `FooDataWriter::register_instance_w_params` (p. 1680), `FooDataWriter::unregister_instance_w_params` (p. 1683)

### Public Attributes

- struct **DDS\_GUID\_t** `related_source_guid`  
*Identifies the application logical data source that is related to the sample being written.*
- struct **DDS\_GUID\_t** `related_reader_guid`  
*Identifies a DataReader that is logically related to the sample that is being written.*

### 9.233.1 Detailed Description

<<*extension*>> (p. 237) Input parameters for writing with `FooDataWriter::write_w_params` (p. 1688), `FooDataWriter::dispose_w_params` (p. 1691), `FooDataWriter::register_instance_w_params` (p. 1680), `FooDataWriter::unregister_instance_w_params` (p. 1683)

### 9.233.2 Member Data Documentation

### 9.233.2.1 replace\_auto

```
DDS_Boolean DDS_WriteParams_t::replace_auto
```

Allows retrieving the actual value of those fields that were automatic.

When this field is set, the fields that were configured with an automatic value (for example, **DDS\_AUTO\_SAMPLE\_IDENTITY** (p. 478)) receive their actual value after **FooDataWriter::write\_w\_params** (p. 1688) is called.

To reset those fields to their automatic value after calling **FooDataWriter::write\_w\_params** (p. 1688), use **DDS\_WriteParams\_reset** (p. 478)

### 9.233.2.2 identity

```
struct DDS_SampleIdentity_t DDS_WriteParams_t::identity
```

Identity of the sample.

Identifies the sample being written. The identity consists of a pair (Virtual Writer GUID, Virtual Sequence Number).

Use the default value to let RTI Connexx determine the sample identity as follows:

- The Virtual Writer GUID is the virtual GUID associated with the writer writing the sample. This virtual GUID is configured using **DDS\_DataWriterProtocolQosPolicy::virtual\_guid** (p. 674).
- The sequence number is increased by one with respect to the previous value.

The virtual sequence numbers for a virtual writer must be strictly monotonically increasing. If the user tries to write a sample with a sequence number smaller or equal to the last sequence number, the write operation will fail.

A DataReader can access the identity of a received sample by using the fields **DDS\_SampleInfo::original\_publication\_virtual\_guid** (p. 1090) and **DDS\_SampleInfo::original\_publication\_virtual\_sequence\_number** (p. 1090) in the **DDS\_SampleInfo** (p. 1082).

[default] **DDS\_AUTO\_SAMPLE\_IDENTITY** (p. 478).

Referenced by **connexx::WriteSample< T >::identity()**, and **connexx::WriteSampleRef< T >::identity()**.

### 9.233.2.3 related\_sample\_identity

```
struct DDS_SampleIdentity_t DDS_WriteParams_t::related_sample_identity
```

The identity of another sample related to this one.

Identifies another sample that is logically related to the one that is written.

When this field is set, the related sample identity is propagated and subscribing applications can retrieve it from the **DDS\_SampleInfo** (p. 1082) (see **DDS\_SampleInfo\_get\_related\_sample\_identity** (p. 150)).

The default value is **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 479), and is not propagated.

A DataReader can access the related identity of a received sample by using the fields **DDS\_SampleInfo::related\_original\_publication\_virtual\_guid** (p. 1090) and **DDS\_SampleInfo::related\_original\_publication\_virtual\_sequence\_number** (p. 1091) in the **DDS\_SampleInfo** (p. 1082).

[default] **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 479)

#### 9.233.2.4 source\_timestamp

```
struct DDS_Time_t DDS_WriteParams_t::source_timestamp
```

Source timestamp upon write.

Specifies the source timestamp that will be available to the **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute within the **DDS\_SampleInfo** (p. 1082).

**[default]** **DDS\_TIME\_INVALID** (p. 326).

#### 9.233.2.5 cookie

```
struct DDS_Cookie_t DDS_WriteParams_t::cookie
```

Octet sequence identifying written data sample.

Used in the callback **DDSDataWriterListener::on\_sample\_removed** (p. 1348) to associate a removed sample with a written sample.

**[default]** Empty sequence (zero-length).

#### 9.233.2.6 handle

```
DDS_InstanceHandle_t DDS_WriteParams_t::handle
```

Instance handle.

Either the handle returned by a previous call to **FooDataWriter::register\_instance** (p. 1678), or else the special value **DDS\_HANDLE\_NIL** (p. 76).

**[default]** **DDS\_HANDLE\_NIL** (p. 76)

#### 9.233.2.7 priority

```
DDS_Long DDS_WriteParams_t::priority
```

Publication priority.

A positive integer value designating the relative priority of the sample, used to determine the transmission order of pending writes.

Use of publication priorities requires an asynchronous publisher (**DDS\_ASYNCHRONOUS\_PUBLISH\_MODE** ↔ **\_QOS** (p. 431)) with **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) set to **DDS\_HPF\_FLOW** ↔ **CONTROLLER\_SCHED\_POLICY** (p. 121).

Larger numbers have higher priority.

For multi-channel DataWriters, the publication priority of a sample may be used as a filter criteria for determining channel membership.

If the publication priority of the parent DataWriter, or for multi-channel DataWriters, if the publication priority of the parent channel, is set to **DDS\_PUBLICATION\_PRIORITY\_AUTOMATIC** (p. 430), then the DataWriter or channel will be assigned the priority of the largest publication priority of all samples in the DataWriter or channel.

If the publication priority of the parent DataWriter, and for multi-channel DataWriters, if the publication priority of the parent channel, are set to **DDS\_PUBLICATION\_PRIORITY\_UNDEFINED** (p. 430), then the DataWriter or channel will be assigned the lowest priority, regardless of the value of the publication priorities of samples written to the DataWriter or channel.

The publication priority of each sample can be set in the **DDS\_WriteParams\_t** (p. 1251) of **FooDataWriter::write\_w←\_params** (p. 1688).

For dispose and unregister samples, use the **DDS\_WriteParams\_t** (p. 1251) of **FooDataWriter::dispose\_w\_params** (p. 1691) and **FooDataWriter::unregister\_instance\_w\_params** (p. 1683).

**[default]** 0 (lowest priority)

See also

**DDS\_ChannelSettings\_t::priority** (p. 611)

### 9.233.2.8 flag

**DDS\_SampleFlag** `DDS_WriteParams_t::flag`

Flags associated with the sample.

The flags are represented as a 32-bit integer, of which only the 16 least-significant bits are used.

RTI reserves least-significant bits [0-7] for middleware-specific usage.

The application can use least-significant bits [8-15].

The first bit (**DDS\_REDELIVERED\_SAMPLE** (p. 475)) is reserved for marking samples as redelivered when using RTI Queuing Service.

The second bit (**DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p. 475)) is used to indicate that a response sample is not the last response sample for a given request. This bit is usually set by a Replier sending multiple responses for a request.

An application can inspect the flags associated with a received sample by checking the field **DDS\_SampleInfo::flag** (p. 1091).

**[default]** 0 (no flags are set)

### 9.233.2.9 source\_guid

```
struct DDS_GUID_t DDS_WriteParams_t::source_guid
```

Identifies the application logical data source associated with the sample being written.

When this field is set, the `source_guid` is propagated and subscribing applications can retrieve it from the `DDS_↔_SampleInfo` (p. 1082) (see `DDS_SampleInfo::source_guid` (p. 1091)).

The default value is `DDS_GUID_AUTO` (p. 331), and is not propagated.

The main use case for `source_guid` and `related_source_guid` is a request/reply scenario in which a reply has to be sent only to the Requester that issue the related request.

In this case, the Requester's DataWriter will send a request setting the `source_guid` to a unique value. This value must be the same value even after Requester restart.

The Replier's DataReader will get the request's `source_guid` from the `SampleInfo` and it will send it as the `related_↔_source_guid` of the reply using the Replier's DataWriter.

The Requester's DataReader will install a CFT on the `related_source_guid` using a filter expression. For example:  
`@related_source_guid.value = &hex(00000000000000000000000000000001)`

This way the reply will be send only to the right Requester.

The `source_guid` and `related_source_guid` fields are used by RTI Queuing Service in a request/reply scenario.

**[default]** `DDS_GUID_AUTO` (p.331) (the `source_guid` is automatically set to the `DDSDataWriter` (p.1321) virtual GUID).

See also

**DDS\_WriteParams\_t::related\_source\_guid** (p.1255)

### 9.233.2.10 related\_source\_guid

```
struct DDS_GUID_t DDS_WriteParams_t::related_source_guid
```

Identifies the application logical data source that is related to the sample being written.

When this field is set, the `related_source_guid` is propagated and subscribing applications can retrieve it from the `DDS_↔_SampleInfo` (p. 1082) (see `DDS_SampleInfo::related_source_guid` (p. 1091)).

The default value is `DDS_GUID_UNKNOWN` (p. 331), and is not propagated.

**[default]** `DDS_GUID_UNKNOWN` (p.331)

See also

**DDS\_WriteParams\_t::source\_guid** (p.1254)

### 9.233.2.11 related\_reader\_guid

```
struct DDS_GUID_t DDS_WriteParams_t::related_reader_guid
```

Identifies a DataReader that is logically related to the sample that is being written.

When this field is set, the `related_reader_guid` is propagated and subscribing applications can retrieve it from the `DDS_SampleInfo` (p. 1082) (see `DDS_SampleInfo::related_subscription_guid` (p. 1092)).

The default value is `DDS_GUID_UNKNOWN` (p. 331), and is not propagated.

The main use case for this field is point-to-point sample distribution using CFT. DataReaders install a CFT on the `related_reader_guid` using a unique GUID. For example, the filter for DataReader 'n' can be:

```
@related_reader_guid.value = &hex(00000000000000000000000000000001)
```

Then, a DataWriter that wants to send the sample to DataReader 'n' will use the `FooDataWriter::write_w_params` (p. 1688) method and set `related_reader_guid` to the value used by DataReader 'n' in its filter expression.

This field is currently used by RTI Queuing Service to distribute a sample to only one of the Consumer's DataReaders attached to a SharedReaderQueue.

[default] `DDS_GUID_UNKNOWN` (p. 331)

## 9.234 DDS\_WriterDataLifecycleQosPolicy Struct Reference

Controls how a `DDSDataWriter` (p. 1321) handles the lifecycle of the instances (keys) that it is registered to manage.

### Public Attributes

- **DDS\_Boolean autodispose\_unregister\_instances**  
*Boolean flag that controls the behavior when the `DDSDataWriter` (p. 1321) unregisters an instance by means of the unregister operations.*
- struct **DDS\_Duration\_t autopurge\_unregister\_instances\_delay**  
*<<extension>> (p. 237) Maximum duration for which the `DDSDataWriter` (p. 1321) will maintain information regarding an instance once it has unregistered the instance.*
- struct **DDS\_Duration\_t autopurge\_disposed\_instances\_delay**  
*<<extension>> (p. 237) Maximum duration for which the `DDSDataWriter` (p. 1321) will maintain information regarding an instance once it has disposed the instance.*

### 9.234.1 Detailed Description

Controls how a `DDSDataWriter` (p. 1321) handles the lifecycle of the instances (keys) that it is registered to manage.

Entity:

`DDSDataWriter` (p. 1321)

Properties:

**RxO** (p. 360) = N/A

**Changeable** (p. 360) = **YES** (p. 360)

## 9.234.2 Usage

This policy determines how the **DDSDataWriter** (p. 1321) acts with regards to the lifecycle of the data instances it manages (data instances that have been either explicitly registered with the **DDSDataWriter** (p. 1321) or implicitly registered by directly writing the data).

You may use **FooDataWriter::unregister\_instance** (p. 1680) to indicate that the **DDSDataWriter** (p. 1321) no longer wants to send data for a **DDSTopic** (p. 1617).

The behavior controlled by this QoS policy applies on a per instance (key) basis for keyed Topics, so that when a **DDSDataWriter** (p. 1321) unregisters an instance, RTI Connexant can automatically also dispose that instance. This is the default behavior.

In many cases where the ownership of a Topic is shared (see **DDS\_OwnershipQoSPolicy** (p. 973)), DataWriters may want to relinquish their ownership of a particular instance of the Topic to allow other DataWriters to send updates for the value of that instance regardless of Ownership Strength. In that case, you may only want a DataWriter to unregister an instance without disposing the instance. *Disposing* an instance is a statement that an instance no longer exists. User applications may be coded to trigger on the disposal of instances, thus the ability to unregister without disposing may be useful to properly maintain the semantic of disposal.

## 9.234.3 Member Data Documentation

### 9.234.3.1 autodispose\_unregistered\_instances

**DDS\_Boolean** DDS\_WriterDataLifecycleQoSPolicy::autodispose\_unregistered\_instances

Boolean flag that controls the behavior when the **DDSDataWriter** (p. 1321) unregisters an instance by means of the unregister operations.

- **DDS\_BOOLEAN\_TRUE** (p. 317)  
The **DDSDataWriter** (p. 1321) will dispose of the instance each time it is unregistered. The behavior is identical to explicitly calling one of the `dispose` operations on the instance prior to calling the `unregister` operation.
- **DDS\_BOOLEAN\_FALSE** (p. 317) (default)  
The **DDSDataWriter** (p. 1321) will not dispose of the instance. The application can still call one of the `dispose` operations prior to unregistering the instance and dispose of the instance that way.

[default] **DDS\_BOOLEAN\_FALSE** (p. 317)

### 9.234.3.2 autopurge\_unregistered\_instances\_delay

```
struct DDS_Duration_t DDS_WriterDataLifecycleQosPolicy::autopurge_unregistered_instances_delay
```

<<**extension**>> (p. 237) Maximum duration for which the **DDSDataWriter** (p. 1321) will maintain information regarding an instance once it has unregistered the instance.

Determines how long the **DDSDataWriter** (p. 1321) will maintain information regarding an instance that has been unregistered. By default, the **DDSDataWriter** (p. 1321) resources associated with an instance (e.g., the space needed to remember the Instance Key or KeyHash) are released lazily. This means the resources are only reclaimed when the space is needed for another instance because **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) is exceeded. This behavior can be changed by setting `autopurge_unregistered_instances_delay` to a value other than **DDS\_DURATION\_INFINITE** (p. 326).

After this time elapses, the **DDSDataWriter** (p. 1321) will purge all internal information regarding the instance, including historical samples, even if **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) has not been reached.

The purging of unregistered instances can be done based on the source timestamp of the unregister sample or the time where the unregister sample was added to the DataWriter queue by setting the following property to 1 or 0 respectively (default: 0): `dds.data_writer.history.source_timestamp_based_autopurge_instances_delay`.

For durable writer history, `autopurge_unregistered_instances_delay` supports only the **DDS\_DURATION\_INFINITE** (p. 326) value.

**[default]** **DDS\_DURATION\_INFINITE** (p. 326) (disabled) for all **DDSDataWriter** (p. 1321) except for the built-in discovery DataWriters

**DDS\_DURATION\_ZERO** (p.327) for built-in discovery DataWriters (see **DDS\_DiscoveryConfigQosPolicy::publication\_writer\_data\_lifecycle** (p. 719), **DDS\_DiscoveryConfigQosPolicy::subscription\_writer\_data\_lifecycle** (p. 720) and **DDS\_DiscoveryConfigQosPolicy::participant\_configuration\_writer\_data\_lifecycle** (p. 730)).

**[range]** [0, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

### 9.234.3.3 autopurge\_disposed\_instances\_delay

```
struct DDS_Duration_t DDS_WriterDataLifecycleQosPolicy::autopurge_disposed_instances_delay
```

<<**extension**>> (p. 237) Maximum duration for which the **DDSDataWriter** (p. 1321) will maintain information regarding an instance once it has disposed the instance.

Determines how long the **DDSDataWriter** (p. 1321) will maintain information regarding an instance that has been disposed of. By default, disposing of an instance does not make it eligible to be purged. By setting `autopurge_disposed_instances_delay` to a value other than **DDS\_DURATION\_INFINITE** (p. 326), the DataWriter will delete the resources associated with an instance (including historical samples) once the time has elapsed and all matching DataReaders have acknowledged all the samples for this instance including the dispose sample.

The purging of disposed instances can be done based on the source timestamp of the dispose sample or the time when the dispose sample was added to the DataWriter queue by setting the following property to 1 or 0 respectively (default: 0): `dds.data_writer.history.source_timestamp_based_autopurge_instances_delay`.

This QoS value is supported with durable DataWriter queues only for **DDS\_DURATION\_ZERO** (p. 327) and **DDS\_DURATION\_INFINITE** (p. 326) values (finite values are not supported).

**[default]** **DDS\_DURATION\_INFINITE** (p. 326) (disabled)

**[range]** [0, 1 year] or **DDS\_DURATION\_INFINITE** (p. 326)

## 9.235 DDS\_WstringSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDS\_Wchar** (p. 317)\* >

### 9.235.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDS\_Wchar** (p. 317)\* >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

See also

**DDS\_Wchar** (p. 317)

**DDS\_StringSeq** (p. 1102)

**FooSeq** (p. 1697)

## 9.236 DDSAsyncWaitSet Class Reference

A class for dispatching **DDSCondition** (p. 1276) objects using separate threads of execution. You can see this class as an extension of a **DDSWaitSet** (p. 1629) that allows asynchronously waiting for the attached **DDSCondition** (p. 1276) objects to trigger and provide a notification by calling **DDSCondition::dispatch** (p. 1278).

### Public Member Functions

- virtual **DDS\_ReturnCode\_t** **start** ()  
*Initiates the asynchronous wait on this **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t** **start\_with\_completion\_token** ( **DDSAsyncWaitSetCompletionToken** \*completion\_token)  
*Initiates the asynchronous wait on this **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t** **stop** ()  
*Initiates the stop procedure on this **DDSAsyncWaitSet** (p. 1259) that will stop the asynchronous wait.*
- virtual **DDS\_ReturnCode\_t** **stop\_with\_completion\_token** ( **DDSAsyncWaitSetCompletionToken** \*completion\_token)  
*Initiates the stop procedure on this **DDSAsyncWaitSet** (p. 1259) that will stop the asynchronous wait.*
- virtual **DDS\_ReturnCode\_t** **attach\_condition** ( **DDSCondition** \*condition)  
*Attaches the specified **DDSCondition** (p. 1276) to this **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t** **detach\_condition** ( **DDSCondition** \*condition)  
*Deaches the specified **DDSCondition** (p. 1276) from this **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t** **attach\_condition\_with\_completion\_token** ( **DDSCondition** \*condition, **DDSAsyncWaitSetCompletionToken** \*completion\_token)  
*Attaches the specified **DDSCondition** (p. 1276) to this **DDSAsyncWaitSet** (p. 1259).*

- virtual **DDS\_ReturnCode\_t detach\_condition\_with\_completion\_token** (**DDSCondition** \*condition, **DDSAsyncWaitSetCompletionToken** \*completion\_token)  
*Detaches the specified **DDSCondition** (p. 1276) from this **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t unlock\_condition** (**DDSCondition** \*condition)  
*Allows the **DDSCondition** (p. 1276) under dispatch to be available for concurrent dispatch from another thread from the pool.*
- virtual **DDS\_ReturnCode\_t get\_property** (**DDS\_AsyncWaitSetProperty\_t** &property)  
*Retrieves the **DDS\_AsyncWaitSetProperty\_t** (p. 594) configuration of the associated **DDSAsyncWaitSet** (p. 1259).*
- virtual **DDS\_ReturnCode\_t get\_conditions** (**DDSConditionSeq** &attached\_conditions)  
*Retrieves the list of attached **DDSCondition** (p. 1276) (s).*
- virtual **DDSAsyncWaitSetCompletionToken \* create\_completion\_token** ()  
*Creates a new **DDSAsyncWaitSetCompletionToken** (p. 1273).*
- virtual **DDS\_ReturnCode\_t delete\_completion\_token** (**DDSAsyncWaitSetCompletionToken** \*completion\_token)  
*Deletes a **DDSAsyncWaitSetCompletionToken** (p. 1273) previously created from this **DDSAsyncWaitSet** (p. 1259).*
- **DDSAsyncWaitSet** ()  
*Creates a **DDSAsyncWaitSet** (p. 1259) with default property.*
- **DDSAsyncWaitSet** (const **DDS\_AsyncWaitSetProperty\_t** &property)  
*Single-argument constructor that allows creating a **DDSAsyncWaitSet** (p. 1259) with custom behavior.*
- **DDSAsyncWaitSet** (const **DDS\_AsyncWaitSetProperty\_t** &property, **DDSAsyncWaitSetListener** \*listener)  
*Constructor that allows specifying a **DDSAsyncWaitSetListener** (p. 1275).*
- **DDSAsyncWaitSet** (const **DDS\_AsyncWaitSetProperty\_t** &property, **DDSAsyncWaitSetListener** \*listener, **DDSThreadFactory** \*thread\_factory)  
*Constructor with arguments that allow specifying behavior different than the default one, including specifying a **DDSThreadFactory** (p. 1615) for the creation and deletion of the threads within the thread pool.*
- virtual **~DDSAsyncWaitSet** ()  
*Deletes a **DDSAsyncWaitSet** (p. 1259).*

## Static Public Attributes

- static **DDSAsyncWaitSetCompletionToken \*const COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT**  
*For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to use the implicit completion token and wait on it for request completion.*
- static **DDSAsyncWaitSetCompletionToken \*const COMPLETION\_TOKEN\_IGNORE**  
*For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1273), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1259) to perform the action associating a 'null' completion token.*

### 9.236.1 Detailed Description

A class for dispatching **DDSCondition** (p. 1276) objects using separate threads of execution. You can see this class as an extension of a **DDSWaitSet** (p. 1629) that allows asynchronously waiting for the attached **DDSCondition** (p. 1276) objects to trigger and provide a notification by calling **DDSCondition::dispatch** (p. 1278).

**DDSAsyncWaitSet** (p. 1259) provides a proactive model to process application events through **DDSCondition** (p. 1276) objects. **DDSAsyncWaitSet** (p. 1259) owns a pool of threads to asynchronously wait for the attached **DDSCondition** (p. 1276) objects to trigger and dispatch them upon wakeup. The asynchronous behavior is the main key different with regards to the **DDSWaitSet** (p. 1629).

The class diagram and its collaborators is shown below:

## 9.236.2 AsyncWaitSet Thread Orchestration

**DDSAsyncWaitSet** (p. 1259) internally applies a leader-follower pattern for the orchestration of the thread pool. Once a **DDSAsyncWaitSet** (p. 1259) starts, it will create the thread pool of  $M$  threads from which only one thread will become the `Leader` thread, and remaining threads will become the `Followers`, where:

- The `Leader` thread is the one waiting for the attached **DDSCondition** (p. 1276) to trigger. Remaining threads in the pool, if any, are either idle awaiting to become the leader or busy while processing active **DDSCondition** (p. 1276).
- Upon wait wakeup, the `Leader` thread resigns its leader status to become a `Processor` thread and dispatch the next active **DDSCondition** (p. 1276) through the **DDSCondition::dispatch** (p. 1278) operation.
- One of the `Follower` threads wakes up and becomes the new leader to resume the wait for **DDSCondition** (p. 1276).

"Thread orchestration in a `::DDSAsyncWaitSet`"

This behavior implies the following considerations:

- Only one thread a time can wait for the attached **DDSCondition** (p. 1276) objects to trigger. From a pool of  $M$  threads, only one is the leader,  $P$  are processing active **DDSCondition** (p. 1276), and  $F$  are idle followers.
- A thread can dispatch only one active **DDSCondition** (p. 1276) at a time.
- **DDSAsyncWaitSet** (p. 1259) efficiently distributes threads to dispatch **DDSCondition** (p. 1276) objects on demand. This avoids underutilizing a thread if **DDSCondition** (p. 1276) objects do not trigger or trigger unfrequently.
- At a given time, all the threads in the pool could be in processing state. In this situation, the **DDSAsyncWaitSet** (p. 1259) is not able to wait for more **DDSCondition** (p. 1276) objects until one thread becomes the leader.

**DDSAsyncWaitSet** (p. 1259) has a built-in dispatcher that guarantees fairness and avoids starvation of **DDSCondition** (p. 1276) objects. By applying a round-robin distribution policy, each attached and active **DDSCondition** (p. 1276) is dispatched within a finite period of time, assuming the **DDSConditionHandler** (p. 1278) always return control after the **DDSCondition::dispatch** (p. 1278) operation.

## 9.236.3 AsyncWaitSet Thread Safety

A key aspect of the **DDSAsyncWaitSet** (p. 1259) is the thread safety. **DDSAsyncWaitSet** (p. 1259) interface is thread safe, so you can concurrently call any operation on the **DDSAsyncWaitSet** (p. 1259) object from multiple threads in your application.

Furthermore, **DDSAsyncWaitSet** (p. 1259) also safely interacts with its own thread pool. Internally, the **DDSAsync↔WaitSet** (p. 1259) applies the asynchronous completion token pattern to perform activities that involve synchronization with the thread pool.

For instance to detach a **DDSCondition** (p. 1276), the **DDSAsyncWaitSet** (p. 1259) generates an internal request to its thread pool to process it. As soon as the detachment completes, the thread pool provides the notification through an associated completion token.

## Note

The asynchronous completion token behavior only takes place if the **DDSAsyncWaitSet** (p. 1259) is started. Otherwise the internal request will be directly executed by the calling thread.

For a finer control on this behavior, each **DDSAsyncWaitSet** (p. 1259) operation where this applies comes in two flavors:

- **Default**: the operation hides all the details of the completion token and returns after the operation completes. Operations of this kind internally use an implicit **DDSAsyncWaitSetCompletionToken** (p. 1273). The **DDSAsyncWaitSet** (p. 1259) creates and reuses **DDSAsyncWaitSetCompletionToken** (p. 1273) objects as needed. This is the recommended flavor unless your application has special resource needs.
- **With completion token**: An overloaded version of the default one that also receives an **DDSAsyncWaitSetCompletionToken** (p. 1273) object on which you can wait on at any time for the actual operation to complete. This flavor is available to assist applications with resource constraints and that want more control on the interaction with the thread pool of the **DDSAsyncWaitSet** (p. 1259).

### 9.236.3.1 Condition Locking

**DDSAsyncWaitSet** (p. 1259) incorporates a safety mechanism that prevents calling **DDSCondition::dispatch** (p. 1278) concurrently. **DDSAsyncWaitSet** (p. 1259) locks the **DDSCondition** (p. 1276) while a processor thread is dispatching it so no other thread within the pool can dispatch it again.

This mechanism ensures not only unexpected concurrent dispatch of a **DDSCondition** (p. 1276) but also spurious thread activity. Because it is responsibility of your application to reset the Condition trigger, there is a period of time in which the dispatched condition may remain active, causing the **DDSAsyncWaitSet** (p. 1259) to enter in a continuous immediate wakeup from the wait. This behavior typically leads to thread hogging and high CPU usage.

Nevertheless, your application may still want to receive concurrent and controlled dispatch notifications. **DDSAsyncWaitSet** (p. 1259) will still allow you to unlock a **DDSCondition** (p. 1276) so any other available thread can dispatch the same condition concurrently while preventing the above mentioned problems. You can achieve this by calling **DDSAsyncWaitSet::unlock\_condition** (p. 1270) on the Condition being dispatched within the dispatch callback. Note that the AsyncWaitSet locks a Condition each time it dispatches it. Hence you need to unlock the Condition each time you want to enable a concurrent dispatch.

### 9.236.4 AsyncWaitSet Events and Resources

Besides **DDSCondition** (p. 1276) processing, you can listen to other kind of internal events related to the **DDSAsyncWaitSet** (p. 1259) and its thread pool by means of the **DDSAsyncWaitSetListener** (p. 1275).

**DDSAsyncWaitSet** (p. 1259) exposes operations to start and stop the asynchronous wait, which involves the creation and deletion of the thread pool respectively.

**DDSAsyncWaitSet** (p. 1259) relies on thread-specific storage to provide the described functionality. Each application thread that calls an operation on a **DDSAsyncWaitSet** (p. 1259) will generate resources that will be associated with such thread. You can free these resources upon thread termination by calling **DDSDomainParticipantFactory::unregister\_thread** (p. 1448).

MT Safety:

Safe.

**DDS\_AsyncWaitSetProperty\_t** (p. 594)

## 9.236.5 Constructor & Destructor Documentation

### 9.236.5.1 DDSAsyncWaitSet() [1/4]

```
DDSAsyncWaitSet::DDSAsyncWaitSet ( )
```

Creates a **DDSAsyncWaitSet** (p. 1259) with default property.

### 9.236.5.2 DDSAsyncWaitSet() [2/4]

```
DDSAsyncWaitSet::DDSAsyncWaitSet (
    const DDS_AsyncWaitSetProperty_t & property )
```

Single-argument constructor that allows creating a **DDSAsyncWaitSet** (p. 1259) with custom behavior.

You can provide **DDS\_ASYNC\_WAITSET\_PROPERTY\_DEFAULT** (p. 293) as `property` to create an **DDSAsyncWaitSet** (p. 1259) with default behavior.

The **DDSAsyncWaitSet** (p. 1259) is created with no listener installed.

Parameters

<code>property</code>	<< <i>in</i> >> (p. 238) configuration <b>DDS_AsyncWaitSetProperty_t</b> (p. 594)
-----------------------	---

### 9.236.5.3 DDSAsyncWaitSet() [3/4]

```
DDSAsyncWaitSet::DDSAsyncWaitSet (
```

```
const DDS_AsyncWaitSetProperty_t & property,
      DDSAsyncWaitSetListener * listener )
```

Constructor that allows specifying a **DDSAsyncWaitSetListener** (p. 1275).

Creates a new **DDSAsyncWaitSet** (p. 1259) with the specified property **DDS\_AsyncWaitSetProperty\_t** (p. 594) and **DDSAsyncWaitSetListener** (p. 1275).

#### Parameters

<i>property</i>	<< <i>in</i> >> (p. 238) configuration <b>DDS_AsyncWaitSetProperty_t</b> (p. 594)
<i>listener</i>	<< <i>in</i> >> (p. 238) the <b>DDSAsyncWaitSetListener</b> (p. 1275). Cannot be NULL.

#### 9.236.5.4 DDSAsyncWaitSet() [4/4]

```
DDSAsyncWaitSet::DDSAsyncWaitSet (
    const DDS_AsyncWaitSetProperty_t & property,
    DDSAsyncWaitSetListener * listener,
    DDSThreadFactory * thread_factory )
```

Constructor with arguments that allow specifying behavior different than the default one, including specifying a **DDSThreadFactory** (p. 1615) for the creation and deletion of the threads within the thread pool.

This operation extends **DDSAsyncWaitSet::DDSAsyncWaitSet()** (p. 1263) by allowing to provide a **DDSThreadFactory** (p. 1615)

#### Parameters

<i>property</i>	<< <i>in</i> >> (p. 238) configuration <b>DDS_AsyncWaitSetProperty_t</b> (p. 594)
<i>listener</i>	<< <i>in</i> >> (p. 238) the <b>DDSAsyncWaitSetListener</b> (p. 1275). Cannot be NULL.
<i>thread_factory</i>	<< <i>in</i> >> (p. 238) <b>DDSThreadFactory</b> (p. 1615) for the creation and deletion of threads.

#### 9.236.5.5 ~DDSAsyncWaitSet()

```
virtual DDSAsyncWaitSet::~DDSAsyncWaitSet ( ) [virtual]
```

Deletes a **DDSAsyncWaitSet** (p. 1259).

If the **DDSAsyncWaitSet** (p. 1259) is started, this operation will initiate the stop procedure and block until it completes.

The deletion will fail if there are outstanding **DDSAsyncWaitSetCompletionToken** (p. 1273) that have not been deleted.

Any outstanding **DDSAsyncWaitSet** (p. 1259) must be deleted before finalizing the **DDSDomainParticipantFactory** (p. 1426). Otherwise undefined behavior may occur.

See also

**DDSAsyncWaitSet::DDSAsyncWaitSet()** (p. 1263)

## 9.236.6 Member Function Documentation

### 9.236.6.1 start()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::start ( ) [virtual]
```

Initiates the asynchronous wait on this **DDSAsyncWaitSet** (p. 1259).

This operation is equivalent to calling **DDSAsyncWaitSet::start\_with\_completion\_token** (p. 1265) providing **DDSAsyncWaitSet::COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT** (p. 293) as a *completion\_token*.

This operation blocks until the start request completes. Upon successful return, it is guaranteed that this **DDSAsyncWaitSet** (p. 1259) has initiated the asynchronous wait and dispatch.

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSAsyncWaitSet::start\_with\_completion\_token** (p. 1265)

**DDSAsyncWaitSet::stop** (p. 1266)

### 9.236.6.2 start\_with\_completion\_token()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::start_with_completion_token (
    DDSAsyncWaitSetCompletionToken * completion_token ) [virtual]
```

Initiates the asynchronous wait on this **DDSAsyncWaitSet** (p. 1259).

If this operation succeeds, a start request has been scheduled and your application can use the provided *completion\_token* to wait for this **DDSAsyncWaitSet** (p. 1259) to process the request. If the **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) operation returns successfully, it is guaranteed that the thread pool has been created and the leader thread is waiting for the attached **DDSCondition** (p. 1276) to trigger.

Once this **DDSAsyncWaitSet** (p. 1259) is started, attached **DDSCondition** (p. 1276) will be dispatched through the **DDSCondition::dispatch** (p. 1278) operation when they trigger.

The start procedure causes the **DDSAsyncWaitSet** (p. 1259) to spawn all the threads within the thread pool, which involves the underlying operating system to allocate the associated thread stack and context for each thread. If a **DDSAsyncWaitSetListener** (p. 1275) is installed, this **DDSAsyncWaitSet** (p. 1259) will sequentially invoke the **DDSAsyncWaitSetListener::on\_thread\_spawned** (p. 1275) once per spawned thread.

A **DDSAsyncWaitSet** (p. 1259) can be restarted after a stop. If this **DDSAsyncWaitSet** (p. 1259) is already started, this operation will return immediately with success, and waiting on the `completion_token` will also return immediately with success.

#### Parameters

<i>completion_token</i>	<p>&lt;&lt;<i>inout</i>&gt;&gt; (p. 238) a valid <b>DDSAsyncWaitSetCompletionToken</b> (p. 1273) instance that can be used by your application to wait for the start request to complete. You can provide one of the special sentinels <b>DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT</b> (p. 293) and <b>DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE</b> (p. 293).</p>
-------------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDSAsyncWaitSet::start** (p. 1265)

**DDSAsyncWaitSet::stop\_with\_completion\_token** (p. 1267)

**DDWaitSet::wait** (p. 1634)

### 9.236.6.3 stop()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::stop ( ) [virtual]
```

Initiates the stop procedure on this **DDSAsyncWaitSet** (p. 1259) that will stop the asynchronous wait.

This operation is equivalent to calling **DDSAsyncWaitSet::stop\_with\_completion\_token** (p. 1267) providing **DDSAsyncWaitSet::COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT** (p. 293) as a `completion_token`.

This operation will block until the stop request completes. Upon successful return, it is guaranteed that this **DDSAsyncWaitSet** (p. 1259) stopped the asynchronous wait and dispatch.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSAsyncWaitSet::start\_with\_completion\_token** (p. 1265)

**DDSAsyncWaitSet::stop** (p. 1266)

#### 9.236.6.4 stop\_with\_completion\_token()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::stop_with_completion_token (
    DDSAsyncWaitSetCompletionToken * completion_token ) [virtual]
```

Initiates the stop procedure on this **DDSAsyncWaitSet** (p. 1259) that will stop the asynchronous wait.

If this operation succeeds, a stop request has been scheduled and your application can use the provided `completion_token` to wait for this **DDSAsyncWaitSet** (p. 1259) to process the request. If the **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) operation returns successfully, it is guaranteed that the thread pool has been deleted and this **DDSAsyncWaitSet** (p. 1259) no longer process any of the attached **DDSCondition** (p. 1276) objects.

Once this **DDSAsyncWaitSet** (p. 1259) is stopped, the **DDSCondition::dispatch** (p. 1278) will no longer be called on any of the attached **DDSCondition** (p. 1276), no matter what their trigger value is.

The stop procedure causes the **DDSAsyncWaitSet** (p. 1259) to delete all the threads within the thread pool, which involves the underlying operating system to release the associated thread stack and context of each thread. If a **DDSAsyncWaitSetListener** (p. 1275) is installed, this **DDSAsyncWaitSet** (p. 1259) will sequentially invoke the **DDSAsyncWaitSetListener::on\_thread\_deleted** (p. 1275) once per deleted thread.

If this **DDSAsyncWaitSet** (p. 1259) is already stopped, this operation will return immediately with success, and waiting on the `completion_token` will also return immediately with success.

#### Parameters

<i>completion_token</i>	<p>&lt;&lt;<i>inout</i>&gt;&gt; (p. 238) a valid <b>DDSAsyncWaitSetCompletionToken</b> (p. 1273) instance that can be used by your application to wait for the stop request to complete. You can provide one of the special sentinels <b>DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT</b> (p. 293) and <b>DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE</b> (p. 293).</p>
-------------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSAsyncWaitSet::stop** (p. 1266)

**DDSAsyncWaitSet::start\_with\_completion\_token** (p. 1265)

### 9.236.6.5 attach\_condition()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::attach_condition (
    DDSCondition * condition ) [virtual]
```

Attaches the specified **DDSCondition** (p. 1276) to this **DDSAsyncWaitSet** (p. 1259).

This operation is equivalent to calling **DDSAsyncWaitSet::attach\_condition\_with\_completion\_token** (p. 1269) providing **DDSAsyncWaitSet::COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT** (p. 293) as a `completion_token`.

This operation will block until the attach request completes. Upon successful return, it is guaranteed that the specified **DDSCondition** (p. 1276) is attached.

#### Parameters

<i>condition</i>	<< <i>in</i> >> (p. 238) <b>DDSCondition</b> (p. 1276) to be attached.
------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDSAsyncWaitSet::attach\_condition\_with\_completion\_token** (p. 1269)

### 9.236.6.6 detach\_condition()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::detach_condition (
    DDSCondition * condition ) [virtual]
```

Deaches the specified **DDSCondition** (p. 1276) from this **DDSAsyncWaitSet** (p. 1259).

This operation is equivalent to call **DDSAsyncWaitSet::detach\_condition\_with\_completion\_token** (p. 1269) providing **DDSAsyncWaitSet::COMPLETION\_TOKEN\_USE\_IMPLICIT\_AND\_WAIT** (p. 293) as a `completion_token`.

This operation blocks until the detach request completes. Upon successful return, it is guaranteed that the specified **DDSCondition** (p. 1276) is detached.

#### Parameters

<i>condition</i>	<< <i>in</i> >> (p. 238) <b>DDSCondition</b> (p. 1276) to be detached.
------------------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSAsyncWaitSet::detach\_condition\_with\_completion\_token** (p. 1269)

## 9.236.6.7 attach\_condition\_with\_completion\_token()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::attach_condition_with_completion_token (
    DDSCondition * condition,
    DDSAsyncWaitSetCompletionToken * completion_token ) [virtual]
```

Attaches the specified **DDSCondition** (p. 1276) to this **DDSAsyncWaitSet** (p. 1259).

If this operation succeeds, an attach request has been scheduled and your application can use the output parameter `completion_token` to wait for this **DDSAsyncWaitSet** (p. 1259) to process the request. **DDSAsyncWaitSet**↔**CompletionToken::wait** (p. 1274) operation returns successfully, it is guaranteed that the **DDSCondition** (p. 1276) is attached to this **DDSAsyncWaitSet** (p. 1259).

Once the **DDSCondition** (p. 1276) is attached, its trigger value may cause the leader thread of the **DDSAsyncWaitSet** (p. 1259) to wake up call the **DDSCondition::dispatch** (p. 1278) operation.

**DDSCondition** (p. 1276) may be attached at any time independently of the state of the **DDSAsyncWaitSet** (p. 1259).

## Parameters

<i>condition</i>	<< <i>in</i> >> (p. 238) <b>DDSCondition</b> (p. 1276) to be attached.
<i>completion_token</i>	<< <i>inout</i> >> (p. 238) a valid <b>DDSAsyncWaitSetCompletionToken</b> (p. 1273) instance that can be used by your application to wait for the attach request to complete. You can provide one of the special sentinels <b>DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT</b> (p. 293) and <b>DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE</b> (p. 293).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSAsyncWaitSet::attach\_condition** (p. 1267)

**DDSAsyncWaitSet::detach\_condition\_with\_completion\_token** (p. 1269)

**DDSAsyncWaitSetCompletionToken::wait** (p. 1274)

### 9.236.6.8 detach\_condition\_with\_completion\_token()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::detach_condition_with_completion_token (
    DDSCondition * condition,
    DDSAsyncWaitSetCompletionToken * completion_token ) [virtual]
```

Detaches the specified **DDSCondition** (p. 1276) from this **DDSAsyncWaitSet** (p. 1259).

If this operation succeeds, a detach request has been scheduled and your application can use the provided `completion_token` to wait for this **DDSAsyncWaitSet** (p. 1259) to process the request. If the **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) operation returns successfully, it is guaranteed that the **DDSCondition** (p. 1276) is detached from this **DDSAsyncWaitSet** (p. 1259).

Once the **DDSCondition** (p. 1276) is detached, it is guaranteed that the **DDSAsyncWaitSet** (p. 1259) will no longer process it so it is safe for your application to release any resources associated with the detached **DDSCondition** (p. 1276).

**DDSCondition** (p. 1276) may be detached at any time independently of the state of the **DDSAsyncWaitSet** (p. 1259).

#### Parameters

<i>condition</i>	<< <i>in</i> >> (p. 238) <b>DDSCondition</b> (p. 1276) to be detached.
<i>completion_token</i>	<< <i>inout</i> >> (p. 238) a valid <b>DDSAsyncWaitSetCompletionToken</b> (p. 1273) instance that can be used by your application to wait for the detach request to complete. You can provide one of the special sentinels <b>DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT</b> (p. 293) and <b>DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE</b> (p. 293).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDSAsyncWaitSet::detach\_condition** (p. 1268)

**DDSAsyncWaitSet::attach\_condition\_with\_completion\_token** (p. 1269)

**DDSAsyncWaitSetCompletionToken::wait** (p. 1274)

### 9.236.6.9 unlock\_condition()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::unlock_condition (
    DDSCondition * condition ) [virtual]
```

Allows the **DDSCondition** (p. 1276) under dispatch to be available for concurrent dispatch from another thread from the pool.

This operation can be called from the dispatch callback of the **DDSCondition** (p. 1276) this **DDSAsyncWaitSet** (p. 1259) is dispatching. After successfully calling this operation, if the **DDSCondition** (p. 1276) becomes active this **DDSAsyncWaitSet** (p. 1259) is allowed to dispatch it again from any available thread from the pool.

You may call this operation any time you need the same **DDSCondition** (p. 1276) to be dispatched concurrently.

This operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if you call it from a different context than the dispatch callback or on a different **DDSCondition** (p. 1276).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### 9.236.6.10 get\_property()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::get_property (
    DDS_AsyncWaitSetProperty_t & property ) [virtual]
```

Retrieves the **DDS\_AsyncWaitSetProperty\_t** (p. 594) configuration of the associated **DDSAsyncWaitSet** (p. 1259).

#### Parameters

<i>property</i>	<< <i>out</i> >> (p. 238)
-----------------	---------------------------

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### 9.236.6.11 get\_conditions()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::get_conditions (
    DDSConditionSeq & attached_conditions ) [virtual]
```

Retrieves the list of attached **DDSCondition** (p. 1276) (s).

#### Parameters

<i>attached_conditions</i>	<< <i>inout</i> >> (p. 238) a <b>DDSConditionSeq</b> (p. 1279) object where the list of attached conditions will be returned.
----------------------------	---

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSAsyncWaitSet::attach\_condition** (p. 1267)

**DDSAsyncWaitSet::detach\_condition** (p. 1268)

**9.236.6.12 create\_completion\_token()**

```
virtual DDSAsyncWaitSetCompletionToken * DDSAsyncWaitSet::create_completion_token ( ) [virtual]
```

Creates a new **DDSAsyncWaitSetCompletionToken** (p. 1273).

All the created **DDSAsyncWaitSetCompletionToken** (p. 1273) must be deleted by calling **DDSAsyncWaitSet::delete\_completion\_token** (p. 1272).

## Returns

A new **DDSAsyncWaitSetCompletionToken** (p. 1273) or NULL on error.

## See also

**DDSAsyncWaitSet::delete\_completion\_token** (p. 1272)

**DDSAsyncWaitSet::~DDSAsyncWaitSet()** (p. 1264)

**9.236.6.13 delete\_completion\_token()**

```
virtual DDS_ReturnCode_t DDSAsyncWaitSet::delete_completion_token (
    DDSAsyncWaitSetCompletionToken * completion_token ) [virtual]
```

Deletes a **DDSAsyncWaitSetCompletionToken** (p. 1273) previously created from this **DDSAsyncWaitSet** (p. 1259).

This operation will fail if the specified `completion_token` was not created from this **DDSAsyncWaitSet** (p. 1259).

This operation will fail if the specified `completion_token` is associated with a request that has not completed yet.

## Parameters

<i>completion_token</i>	<< <i>inout</i> >> (p. 238) a valid <b>DDSAsyncWaitSetCompletionToken</b> (p. 1273) created from this <b>DDSAsyncWaitSet</b> (p. 1259).
-------------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.237 DDSAsyncWaitSetCompletionToken Class Reference

<<*interface*>> (p. 237) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDSAsyncWaitSet** (p. 1259) behavior.

### Public Member Functions

- virtual **DDS\_ReturnCode\_t wait** (const **DDS\_Duration\_t** &max\_wait)=0  
*Waits for the request associated to an operation made on the **DDSAsyncWaitSet** (p. 1259) to complete.*

### 9.237.1 Detailed Description

<<*interface*>> (p. 237) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDSAsyncWaitSet** (p. 1259) behavior.

A **DDSAsyncWaitSetCompletionToken** (p. 1273) can be in one of the following states:

- **READY**: The completion token can be used to associate a new request. Calling **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) on a ready completion token will return immediately with success. A ready completion token can only transition to the queued state.
- **QUEUED**: The completion token has an associated request that is pending processing. Calling **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) on a queued completion token will block until the request completes or times out. A queued completion token can only transition to the processed state.
- **PROCESS**: The completion token has an associated request that has been processed but the application did not call **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) yet. Calling **DDSAsyncWaitSetCompletionToken::wait** (p. 1274) on a processed completion token will return immediately with the return code result of processing the associated request. A processed completion token can transition to both ready or queued states.

## 9.237.2 AsyncWaitSetCompletionToken management

The same **DDSAsyncWaitSetCompletionToken** (p. 1273) instance can be reused multiple times to associate a request and wait for its completion. Reusing is allowed only if the completion token is either in `READY` or `PROCESSED` state. Otherwise the **DDSAsyncWaitSet** (p. 1259) operation that associates the completion token will fail with **DDS\_↔  
RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The completion token functionality can be viewed as a **DDSAsyncWaitSet** (p. 1259) internal detail from which your application should not need to know. In general, it is recommended to use the default flavor of **DDSAsyncWaitSet** (p. 1259) operations that handle the internals of the completion tokens for you.

Nevertheless, if a completion token represents an expensive resource in your environment, your application may want to have full control of how and when completion tokens are created. It's for these reasons why is exposed as a public collaborator of the **DDSAsyncWaitSet** (p. 1259).

### MT Safety:

Safe.

### See also

**DDSAsyncWaitSet** (p. 1259)

## 9.237.3 Member Function Documentation

### 9.237.3.1 wait()

```
virtual DDS_ReturnCode_t DDSAsyncWaitSetCompletionToken::wait (
    const DDS_Duration_t & max_wait ) [pure virtual]
```

Waits for the request associated to an operation made on the **DDSAsyncWaitSet** (p. 1259) to complete.

This operation will block the calling thread for a maximum amount of time specified by `max_wait` until the **DDSAsync↔  
WaitSet** (p. 1259) request associated with this completion token completes.

If there is no timeout, upon return it is guaranteed that the request associated with this token completed. This operation may fail due to an error during the wait or while processing the associated request.

If this operation is called from within the context of one the thread that conforms the thread pool of the **DDSAsyncWaitSet** (p. 1259), it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

If the operation failed with **DDS\_RETCODE\_TIMEOUT** (p. 337) your application can wait again on this completion token.

## Parameters

<i>max_wait</i>	<< <i>in</i> >> (p. 238) Cannot be NULL. Maximum time to wait for the request associated to this completion token to complete before timeout.
-----------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDSAsyncWaitSet** (p. 1259)

## 9.238 DDSAsyncWaitSetListener Class Reference

<<*interface*>> (p. 237) Listener for receiving event notifications related to the thread pool of the **DDSAsyncWaitSet** (p. 1259).

### Public Member Functions

- virtual void **on\_thread\_spawned** (RTI\_UINT64 thread\_id)  
*Handles the spawning of each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).*
- virtual void **on\_thread\_deleted** (RTI\_UINT64 thread\_id)  
*Handles the deletion of each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).*
- virtual void **on\_wait\_timeout** (RTI\_UINT64 thread\_id)  
*Handles the wait timeout generated by the leader thread of the **DDSAsyncWaitSet** (p. 1259).*

### 9.238.1 Detailed Description

<<*interface*>> (p. 237) Listener for receiving event notifications related to the thread pool of the **DDSAsyncWaitSet** (p. 1259).

### 9.238.2 Member Function Documentation

#### 9.238.2.1 on\_thread\_spawned()

```
virtual void DDSAsyncWaitSetListener::on_thread_spawned (
    RTI_UINT64 thread_id ) [virtual]
```

Handles the spawning of each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).

### 9.238.2.2 on\_thread\_deleted()

```
virtual void DDSAsyncWaitSetListener::on_thread_deleted (
    RTI_UINT64 thread_id ) [virtual]
```

Handles the deletion of each thread conforming the thread pool of the **DDSAsyncWaitSet** (p. 1259).

### 9.238.2.3 on\_wait\_timeout()

```
virtual void DDSAsyncWaitSetListener::on_wait_timeout (
    RTI_UINT64 thread_id ) [virtual]
```

Handles the wait timeout generated by the leader thread of the **DDSAsyncWaitSet** (p. 1259).

## 9.239 DDSCondition Class Reference

<<**interface**>> (p. 237) Root class for all the conditions that may be attached to a **DDSWaitSet** (p. 1629).

Inheritance diagram for DDSCondition:

### Public Member Functions

- virtual **DDS\_Boolean** **get\_trigger\_value** ()=0  
*Retrieve the `trigger_value`.*
- virtual **DDS\_ReturnCode\_t** **set\_handler** ( **DDSConditionHandler** \*handler)  
<<**extension**>> (p. 237) Registers a **DDSConditionHandler** (p. 1278) in this **DDSCondition** (p. 1276).
- virtual **DDSConditionHandler** \* **get\_handler** ()  
<<**extension**>> (p. 237) Returns the registered **DDSConditionHandler** (p. 1278).
- virtual void **dispatch** ()  
<<**extension**>> (p. 237) Calls **DDSConditionHandler::on\_condition\_triggered** (p. 1279) of the registered **DDSConditionHandler** (p. 1278).

## 9.239.1 Detailed Description

<<*interface*>> (p. 237) Root class for all the conditions that may be attached to a **DDSWaitSet** (p. 1629).

This basic class is specialised in three classes:

**DDSGuardCondition** (p. 1471), **DDSStatusCondition** (p. 1578), and **DDSReadCondition** (p. 1574).

A **DDSCondition** (p.1276) has a `trigger_value` that can be **DDS\_BOOLEAN\_TRUE** (p.317) or **DDS\_↔  
BOOLEAN\_FALSE** (p.317) and is set automatically by RTI Connex.

See also

**DDSWaitSet** (p. 1629)

## 9.239.2 Member Function Documentation

### 9.239.2.1 `get_trigger_value()`

```
virtual DDS_Boolean DDSCondition::get_trigger_value ( ) [pure virtual]
```

Retrieve the `trigger_value`.

Returns

the trigger value.

Implemented in **DDSGuardCondition** (p. 1473).

### 9.239.2.2 `set_handler()`

```
virtual DDS_ReturnCode_t DDSCondition::set_handler (
    DDSConditionHandler * handler ) [virtual]
```

<<*extension*>> (p. 237) Registers a **DDSConditionHandler** (p. 1278) in this **DDSCondition** (p. 1276).

This operation replaces any existing registered handler. If there is any resources associated with an existing registered handler that need to be released, you may first call **DDSCondition::get\_handler** (p. 1278) to retrieve the handler.

MT Safety:

It is not safe to call **DDSCondition::set\_handler** (p.1277), **DDSCondition::get\_handler** (p.1278) or **DDSCondition::dispatch** (p. 1278) concurrently.

## Parameters

<i>handler</i>	The <b>DDSConditionHandler</b> (p. 1278) to be called by <b>DDSCondition::dispatch</b> (p. 1278). If this parameter is null, an no-op handler implementation will be set.
----------------	---

**9.239.2.3 get\_handler()**

```
virtual DDSConditionHandler * DDSCondition::get_handler ( ) [virtual]
```

<<**extension**>> (p. 237) Returns the registered **DDSConditionHandler** (p. 1278).

If no **DDSConditionHandler** (p. 1278) is registered, this operation returns a no-op **DDSConditionHandler** (p. 1278) implementation.

**9.239.2.4 dispatch()**

```
virtual void DDSCondition::dispatch ( ) [virtual]
```

<<**extension**>> (p. 237) Calls **DDSConditionHandler::on\_condition\_triggered** (p. 1279) of the registered **DDSConditionHandler** (p. 1278).

If the trigger value is true, calling this operation will call the registered.

If no **DDSConditionHandler** (p. 1278) is registered, this operation is a no-op.

**9.240 DDSConditionHandler Class Reference**

<<**extension**>> (p. 237) <<**interface**>> (p. 237) Handler called by the **DDSCondition::dispatch** (p. 1278).

Inheritance diagram for DDSConditionHandler:

**Public Member Functions**

- virtual void **on\_condition\_triggered** ( **DDSCondition** \*condition)=0  
Handles the dispatch of a **DDSCondition** (p. 1276).

## 9.240.1 Detailed Description

<<*extension*>> (p. 237) <<*interface*>> (p. 237) Handler called by the **DDSCondition::dispatch** (p. 1278).

Direct known implementations: **DDSDataReaderStatusConditionHandler** (p. 1318)

## 9.240.2 Member Function Documentation

### 9.240.2.1 on\_condition\_triggered()

```
virtual void DDSConditionHandler::on_condition_triggered (  
    DDSCondition * condition ) [pure virtual]
```

Handles the dispatch of a **DDSCondition** (p. 1276).

This callback is called by **DDSCondition::dispatch** (p. 1278).

Implemented in **DDSDataReaderStatusConditionHandler** (p. 1320).

## 9.241 DDSConditionSeq Struct Reference

Instantiates **FooSeq** (p. 1697) < **DDSCondition** (p. 1276) >

### 9.241.1 Detailed Description

Instantiates **FooSeq** (p. 1697) < **DDSCondition** (p. 1276) >

Instantiates:

<<*generic*>> (p. 237) **FooSeq** (p. 1697)

**HelloWorld\_subscriber.cxx.**

## 9.242 DDSContentFilter Class Reference

<<*interface*>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283)

Inheritance diagram for DDSContentFilter:

### Public Member Functions

- virtual **DDS\_ReturnCode\_t compile** (void \*\*new\_compile\_data, const char \*expression, const **DDS\_String**↔**Seq** &parameters, const **DDS\_TypeCode** \*type\_code, const char \*type\_class\_name, void \*old\_compile\_data)=0  
*Compile an instance of the content filter according to the filter expression and parameters of the given data type.*
- virtual **DDS\_Boolean evaluate** (void \*compile\_data, const void \*sample, const struct **DDS\_FilterSampleInfo** \*meta\_data)=0  
*Evaluate whether the sample is passing the filter or not according to the sample content.*
- virtual void **finalize** (void \*compile\_data)=0  
*A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.*

### 9.242.1 Detailed Description

<<*interface*>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283)

Entity:

**DDSContentFilteredTopic** (p. 1283)

This interface can be implemented by an application-provided class and then registered with the **DDSDomain**↔**Participant** (p. 1351) such that samples can be filtered for a **DDSContentFilteredTopic** (p. 1283) with the given filter name.

**Note:** the API for using a custom content filter is subject to change in a future release.

See also

**DDSContentFilteredTopic** (p. 1283)

**DDSDomainParticipant::register\_contentfilter** (p. 1364)

### 9.242.2 Member Function Documentation

## 9.242.2.1 compile()

```
virtual DDS_ReturnCode_t DDSContentFilter::compile (
    void ** new_compile_data,
    const char * expression,
    const DDS_StringSeq & parameters,
    const DDS_TypeCode * type_code,
    const char * type_class_name,
    void * old_compile_data ) [pure virtual]
```

Compile an instance of the content filter according to the filter expression and parameters of the given data type.

This method is called when an instance of the locally registered content filter is created or when the expression parameter for the locally registered content filter instance is changed.

An instance of the locally registered content filter is created every time a local **DDSContentFilteredTopic** (p. 1283) with the matching filter name is created, or when a **DDSDataReader** (p. 1288) with a matching filter name is discovered.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

## Parameters

<i>new_compile_data</i>	<< <b>out</b> >> (p. 238) User specified opaque pointer of this instance of the content filter. This value is then passed to the <b>DDSContentFilter::evaluate</b> (p. 1282) and <b>DDSContentFilter::finalize</b> (p. 1282) functions for this instance of the content filter. Can be set to NULL .
<i>expression</i>	<< <b>in</b> >> (p. 238) An ASCIIZ string with the filter expression. The memory used by this string is owned by RTI Connex and <b>must</b> not be freed. If you want to manipulate this string, you <b>must</b> first make a copy of it.
<i>parameters</i>	<< <b>in</b> >> (p. 238) A string sequence with the expression parameters the <b>DDSContentFilteredTopic</b> (p. 1283) was created with. The string sequence is <b>equal</b> (but <b>not</b> identical) to the string sequence passed to <b>DDSDomainParticipant::create_contentfilteredtopic</b> (p. 1385). Note that the sequence passed to the compile function is <b>owned</b> by RTI Connex and <b>must not</b> be referenced outside the compile function.
<i>type_code</i>	<< <b>in</b> >> (p. 238) A pointer to the type code for the related <b>DDSTopic</b> (p. 1617) of the <b>DDSContentFilteredTopic</b> (p. 1283). A type_code is a description of a type in terms of which types it contains (such as long, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
<i>type_class_name</i>	<< <b>in</b> >> (p. 238) Fully qualified class name of the related <b>DDSTopic</b> (p. 1617).
<i>old_compile_data</i>	<< <b>in</b> >> (p. 238) The previous new_compile_data value from a previous call to this instance of a content filter. If the compile function is called more than once for an instance of a <b>DDSContentFilteredTopic</b> (p. 1283), e.g., if the expression parameters are changed, then the new_compile_data value returned by the previous invocation is passed in the old_compile_data parameter (which can be NULL ). If this is a new instance of the filter, NULL is passed. This parameter is useful for freeing or reusing previously allocated resources.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

### 9.242.2.2 evaluate()

```
virtual DDS_Boolean DDSContentFilter::evaluate (
    void * compile_data,
    const void * sample,
    const struct DDS_FilterSampleInfo * meta_data ) [pure virtual]
```

Evaluate whether the sample is passing the filter or not according to the sample content.

This method is called when a sample for a locally created **DDSDataReader** (p. 1288) associated with the filter is received, or when a sample for a discovered **DDSDataReader** (p. 1288) associated with the filter needs to be sent.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

#### Parameters

<i>compile_data</i>	<< <i>in</i> >> (p. 238) The last return value of the <b>DDSContentFilter::compile</b> (p. 1280) function for this instance of the content filter. Can be NULL .
<i>sample</i>	<< <i>in</i> >> (p. 238) Pointer to a deserialized sample to be filtered
<i>meta_data</i>	<< <i>in</i> >> (p. 238) Pointer to meta data associated with the sample.

#### Returns

The function must return 0 if the sample should be filtered out, non zero otherwise

### 9.242.2.3 finalize()

```
virtual void DDSContentFilter::finalize (
    void * compile_data ) [pure virtual]
```

A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.

This method is called when an instance of the locally registered content filter is deleted.

An instance of the locally registered content filter is deleted every time a local **DDSContentFilteredTopic** (p. 1283) with the matching filter name is deleted, or when a **DDSDataReader** (p. 1288) with a matching filter name is removed due to discovery.

This method is also called on all instances of the discovered **DDSDataReader** (p. 1288) with a matching filter name if the filter is unregistered with **DDSDomainParticipant::unregister\_contentfilter** (p. 1365).

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

## Parameters

<i>compile_data</i>	<< <i>in</i> >> (p. 238) The last return value of the <b>DDSContentFilter::compile</b> (p. 1280) function for this instance of the content filter. Can be NULL
---------------------	--

## 9.243 DDSContentFilteredTopic Class Reference

<<*interface*>> (p. 237) Specialization of **DDSTopicDescription** (p. 1624) that allows for content-based subscriptions.

Inheritance diagram for DDSContentFilteredTopic:

### Public Member Functions

- virtual const char \* **get\_filter\_expression** ()=0  
*Get the filter\_expression.*

<<*extension*>> (p. 237) Appends a string term to the specified parameter string.
- virtual **DDS\_ReturnCode\_t** **remove\_from\_expression\_parameter** (const **DDS\_Long** index, const char \*val)=0  
<<*extension*>> (p. 237) Removes a string term from the specified parameter string.
- virtual **DDSTopic** \* **get\_related\_topic** ()=0  
*Get the related\_topic.*

### Static Public Member Functions

- static **DDSContentFilteredTopic** \* **narrow** ( **DDSTopicDescription** \*topic\_description)  
*Narrow the given DDSTopicDescription (p. 1624) pointer to a DDSContentFilteredTopic (p. 1283) pointer.*

### 9.243.1 Detailed Description

<<*interface*>> (p. 237) Specialization of **DDSTopicDescription** (p. 1624) that allows for content-based subscriptions.

It describes a more sophisticated subscription that indicates a **DDSDataReader** (p. 1288) does not want to necessarily see all values of each instance published under the **DDSTopic** (p. 1617). Rather, it wants to see only the values whose contents satisfy certain criteria. This class therefore can be used to request content-based subscriptions.

The selection of the content is done using the `filter_expression` with parameters `expression_↵` parameters.

- The `filter_expression` attribute is a string that specifies the criteria to select the data samples of interest. It is similar to the WHERE part of an SQL clause.
- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `filter_expression`. The number of supplied parameters must fit with the requested values in the `filter_expression` (i.e. the number of n tokens).

**Queries and Filters Syntax** (p.179) describes the syntax of `filter_expression` and `expression_↵` parameters.

### 9.243.2 Member Function Documentation

#### 9.243.2.1 narrow()

```
static DDSContentFilteredTopic * DDSContentFilteredTopic::narrow (  
    DDSTopicDescription * topic_description ) [static]
```

Narrow the given **DDSTopicDescription** (p. 1624) pointer to a **DDSContentFilteredTopic** (p. 1283) pointer.

#### Returns

**DDSContentFilteredTopic** (p.1283) if this **DDSTopicDescription** (p.1624) is a **DDSContentFilteredTopic** (p. 1283). Otherwise, return NULL.

### 9.243.2.2 get\_filter\_expression()

```
virtual const char * DDSContentFilteredTopic::get_filter_expression ( ) [pure virtual]
```

Get the `filter_expression`.

Return the `filter_expression` associated with the **DDSContentFilteredTopic** (p.1283). `filter_expression` is either specified on the last successful call to **DDSContentFilteredTopic::set\_expression** (p.1286) or, if that method is never called, the expression specified when the **DDSContentFilteredTopic** (p.1283) was created.

#### Returns

the `filter_expression`.

### 9.243.2.3 get\_expression\_parameters()

```
virtual DDS_ReturnCode_t DDSContentFilteredTopic::get_expression_parameters (
    DDS_StringSeq & parameters ) [pure virtual]
```

Get the `expression_parameters`.

Return the `expression_parameters` associated with the **DDSContentFilteredTopic** (p.1283). `expression_parameters` is either specified on the last successful call to **DDSContentFilteredTopic::set\_expression\_parameters** (p.1285), **DDSContentFilteredTopic::set\_expression** (p.1286) or, if that method is never called, the parameters specified when the **DDSContentFilteredTopic** (p.1283) was created.

#### Parameters

<i>parameters</i>	<< <i>inout</i> >> (p.238) the filter expression parameters. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p.552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.
-------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p.336)
------------	---

#### See also

**DDSDomainParticipant::create\_contentfilteredtopic** (p.1385)

**DDSContentFilteredTopic::set\_expression\_parameters** (p.1285)

#### 9.243.2.4 set\_expression\_parameters()

```
virtual DDS_ReturnCode_t DDSContentFilteredTopic::set_expression_parameters (
    const DDS_StringSeq & parameters ) [pure virtual]
```

Set the `expression_parameters`.

Change the `expression_parameters` associated with the **DDSContentFilteredTopic** (p. 1283).

##### Parameters

<i>parameters</i>	<< <i>in</i> >> (p. 238) the filter expression parameters Length of sequence cannot be greater than 100.
-------------------	--

##### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### 9.243.2.5 set\_expression()

```
virtual DDS_ReturnCode_t DDSContentFilteredTopic::set_expression (
    const char * expression,
    const DDS_StringSeq & parameters ) [pure virtual]
```

Set the `filter_expression` and `expression_parameters`.

Changes the `filter_expression` and `expression_parameters` associated with the **DDSContentFilteredTopic** (p. 1283).

##### Parameters

<i>expression</i>	<< <i>in</i> >> (p. 238) the filter expression.
<i>parameters</i>	<< <i>in</i> >> (p. 238) the filter expression parameters Length of sequence cannot be greater than 100.

##### Returns

One of the **Standard Return Codes** (p. 336)

#### 9.243.2.6 append\_to\_expression\_parameter()

```
virtual DDS_ReturnCode_t DDSContentFilteredTopic::append_to_expression_parameter (
    const DDS_Long index,
    const char * val ) [pure virtual]
```

<<**extension**>> (p. 237) Appends a string term to the specified parameter string.

Appends the input string to the end of the specified parameter string, separated by a comma. If the original parameter string is enclosed in quotation marks ("), the resultant string will also be enclosed in quotation marks.

This method can be used in expression parameters associated with MATCH operators in order to add a pattern to the match pattern list. For example, if the filter expression parameter value is:

'IBM'

Then `append_to_expression_parameter(0, "MSFT")` would generate the new value:

'IBM,MSFT'

#### Parameters

<i>index</i>	<< <b>in</b> >> (p. 238) The index of the parameter string to be modified. The first index is index 0. When using the <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 59) filter, <i>index</i> <i>must</i> be 0.
<i>val</i>	<< <b>in</b> >> (p. 238) The string term to be appended to the parameter string.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.243.2.7 `remove_from_expression_parameter()`

```
virtual DDS_ReturnCode_t DDSContentFilteredTopic::remove_from_expression_parameter (
    const DDS_Long index,
    const char * val ) [pure virtual]
```

<<**extension**>> (p. 237) Removes a string term from the specified parameter string.

Removes the input string from the specified parameter string. To be found and removed, the input string must exist as a complete term, bounded by comma separators or the string boundary. If the original parameter string is enclosed in quotation marks ("), the resultant string will also be enclosed in quotation marks. If the removed term was the last entry in the string, the result will be a string of empty quotation marks.

This method can be used in expression parameters associated with MATCH operators in order to remove a pattern from the match pattern list. For example, if the filter expression parameter value is:

'IBM,MSFT'

Then `remove_from_expression_parameter(0, "IBM")` would generate the expression:

'MSFT'

## Parameters

<i>index</i>	<< <i>in</i> >> (p. 238) The index of the parameter string to be modified. The first index is index 0. When using the <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 59) filter, <i>index</i> <i>must</i> be 0.
<i>val</i>	<< <i>in</i> >> (p. 238) The string term to be removed from the parameter string.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

9.243.2.8 `get_related_topic()`

```
virtual DDSTopic * DDSContentFilteredTopic::get_related_topic ( ) [pure virtual]
```

Get the `related_topic`.

Return the **DDSTopic** (p. 1617) specified when the **DDSContentFilteredTopic** (p. 1283) was created.

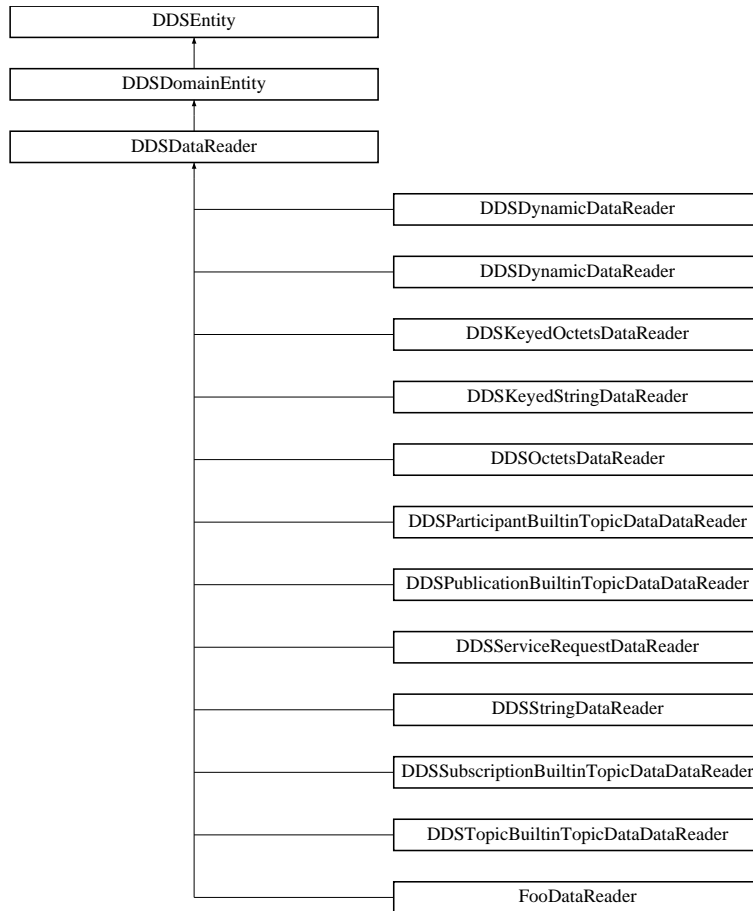

## Returns

The **DDSTopic** (p. 1617) associated with the **DDSContentFilteredTopic** (p. 1283).

9.244 **DDSDataReader Class Reference**

<<*interface*>> (p. 237) Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **DDSSubscriber** (p. 1592).

Inheritance diagram for DDSDataReader:

## Public Member Functions

- virtual **DDSReadCondition** \* **create\_readcondition** ( **DDS\_SampleStateMask** sample\_states, **DDS\_View↔StateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)  
Creates a **DDSReadCondition** (p. 1574).
- virtual **DDSReadCondition** \* **create\_readcondition\_w\_params** ( **DDS\_ReadConditionParams** &params)  
<<extension>> (p. 237) Creates a **DDSReadCondition** (p. 1574) with parameters.
- virtual **DDSQueryCondition** \* **create\_querycondition** ( **DDS\_SampleStateMask** sample\_states, **DDS\_↔ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states, const char \*query\_expression, const struct **DDS\_StringSeq** &query\_parameters)  
Creates a **DDSQueryCondition** (p. 1573).
- virtual **DDSQueryCondition** \* **create\_querycondition\_w\_params** ( **DDS\_QueryConditionParams** &params)  
<<extension>> (p. 237) Creates a **DDSQueryCondition** (p. 1573) with parameters.
- virtual **DDS\_ReturnCode\_t** **delete\_readcondition** ( **DDSReadCondition** \*condition)  
Deletes a **DDSReadCondition** (p. 1574) or **DDSQueryCondition** (p. 1573) attached to the **DDSDataReader** (p. 1288).
- virtual **DDS\_ReturnCode\_t** **delete\_contained\_entities** ()  
Deletes all the entities that were created by means of the "create" operations on the **DDSDataReader** (p. 1288).
- virtual **DDS\_ReturnCode\_t** **wait\_for\_historical\_data** (const **DDS\_Duration\_t** &max\_wait)  
Waits until all "historical" data is received for **DDSDataReader** (p. 1288) entities that have a non-VOLATILE Durability Qos kind.

- virtual **DDS\_ReturnCode\_t** **acknowledge\_sample** (const **DDS\_SampleInfo** &sample\_info)  
 <<extension>> (p. 237) Acknowledges a single sample explicitly.
- virtual **DDS\_ReturnCode\_t** **acknowledge\_all** ()  
 <<extension>> (p. 237) Acknowledges all previously accessed samples.
- virtual **DDS\_ReturnCode\_t** **acknowledge\_sample** (const **DDS\_SampleInfo** &sample\_info, const **DDS\_AckResponseData\_t** &response\_data)  
 <<extension>> (p. 237) Acknowledges a single sample explicitly.
- virtual **DDS\_ReturnCode\_t** **acknowledge\_all** (const **DDS\_AckResponseData\_t** &response\_data)  
 <<extension>> (p. 237) Acknowledges all previously accessed samples.
- virtual **DDS\_ReturnCode\_t** **get\_matched\_publications** (**DDS\_InstanceHandleSeq** &publication\_handles)  
 Retrieves the list of publications currently "associated" with this **DDSDataReader** (p. 1288).
- virtual **DDS\_ReturnCode\_t** **get\_matched\_publication\_data** (**DDS\_PublicationBuiltinTopicData** &publication\_data, const **DDS\_InstanceHandle\_t** &publication\_handle)  
 Retrieves the information on a publication that is currently "associated" with the **DDSDataReader** (p. 1288).
- virtual **DDS\_ReturnCode\_t** **is\_matched\_publication\_alive** (**DDS\_Boolean** &is\_alive, const **DDS\_InstanceHandle\_t** &publication\_handle)  
 Check if a publication currently matched with a **DataReader** is alive.
- virtual **DDS\_ReturnCode\_t** **get\_matched\_publication\_participant\_data** (**DDS\_ParticipantBuiltinTopicData** &participant\_data, const **DDS\_InstanceHandle\_t** &publication\_handle)  
 <<extension>> (p. 237) Retrieves the information on the discovered **DDSDomainParticipant** (p. 1351) associated with the publication that is currently matching with the **DDSDataReader** (p. 1288).
- virtual **DDSTopicDescription** \* **get\_topicdescription** ()  
 Returns the **DDSTopicDescription** (p. 1624) associated with the **DDSDataReader** (p. 1288).
- virtual **DDSSubscriber** \* **get\_subscriber** ()  
 Returns the **DDSSubscriber** (p. 1592) to which the **DDSDataReader** (p. 1288) belongs.
- virtual **DDS\_ReturnCode\_t** **get\_sample\_rejected\_status** (**DDS\_SampleRejectedStatus** &status)  
 Accesses the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_liveliness\_changed\_status** (**DDS\_LivelinessChangedStatus** &status)  
 Accesses the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_requested\_deadline\_missed\_status** (**DDS\_RequestedDeadlineMissedStatus** &status)  
 Accesses the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_requested\_incompatible\_qos\_status** (**DDS\_RequestedIncompatibleQosStatus** &status)  
 Accesses the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_sample\_lost\_status** (**DDS\_SampleLostStatus** &status)  
 Accesses the **DDS\_SAMPLE\_LOST\_STATUS** (p. 345) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_subscription\_matched\_status** (**DDS\_SubscriptionMatchedStatus** &status)  
 Accesses the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347) communication status.
- virtual **DDS\_ReturnCode\_t** **get\_datareader\_cache\_status** (**DDS\_DataReaderCacheStatus** &status)  
 <<extension>> (p. 237) Gets the datareader cache status for this reader.
- virtual **DDS\_ReturnCode\_t** **get\_datareader\_protocol\_status** (**DDS\_DataReaderProtocolStatus** &status)  
 <<extension>> (p. 237) Gets the datareader protocol status for this reader.
- virtual **DDS\_ReturnCode\_t** **get\_matched\_publication\_datareader\_protocol\_status** (**DDS\_DataReaderProtocolStatus** &status, const **DDS\_InstanceHandle\_t** &publication\_handle)  
 <<extension>> (p. 237) Gets the datareader protocol status for this reader, per matched publication identified by the **publication\_handle**.
- virtual **DDS\_ReturnCode\_t** **set\_qos** (const **DDS\_DataReaderQos** &qos)

- Sets the reader QoS.*

  - virtual **DDS\_ReturnCode\_t** **get\_qos** ( **DDS\_DataReaderQos** &qos)

*Gets the reader QoS.*
- virtual **DDS\_ReturnCode\_t** **set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)
  - <<*extension*>> (p. 237) *Changes the QoS of this reader using the input XML QoS profile.*
- virtual **DDS\_ReturnCode\_t** **set\_property** (const char \*property\_name, const char \*value, bool propagate)
  - Set the value for a property that applies to a DataReader.*
- virtual **DDS\_ReturnCode\_t** **set\_listener** ( **DDSDataReaderListener** \*l, **DDS\_StatusMask** mask= **DDS\_↔STATUS\_MASK\_ALL**)
  - Sets the reader listener.*
- virtual **DDSDataReaderListener** \* **get\_listener** ()
  - Gets the reader listener.*
- virtual **DDSTopicQuery** \* **create\_topic\_query** (const **DDS\_TopicQuerySelection** &selection)
  - Creates a **DDSTopicQuery** (p. 1627).*
- virtual **DDS\_ReturnCode\_t** **delete\_topic\_query** ( **DDSTopicQuery** \*query)
  - Deletes a **DDSTopicQuery** (p. 1627).*
- virtual **DDSTopicQuery** \* **lookup\_topic\_query** (const **DDS\_GUID\_t** &guid)
  - Retrieves an existing **DDSTopicQuery** (p. 1627).*
- virtual **DDS\_ReturnCode\_t** **take\_discovery\_snapshot** ()
  - Take a snapshot of the compatible and incompatible remote writers matched by a local reader.*
- virtual **DDS\_ReturnCode\_t** **take\_discovery\_snapshot** (const char \*file\_name)
  - Take a snapshot of the compatible and incompatible remote writers matched by a local reader.*
- virtual **DDS\_ReturnCode\_t** **enable** ()
  - Enables the **DDSEntity** (p. 1463).*
- virtual **DDSStatusCondition** \* **get\_statuscondition** ()
  - Allows access to the **DDSStatusCondition** (p. 1578) associated with the **DDSEntity** (p. 1463).*
- virtual **DDS\_StatusMask** **get\_status\_changes** ()
  - Retrieves the list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.*
- virtual **DDS\_InstanceHandle\_t** **get\_instance\_handle** ()
  - Allows access to the **DDS\_InstanceHandle\_t** (p. 74) associated with the **DDSEntity** (p. 1463).*

### 9.244.1 Detailed Description

<<*interface*>> (p. 237) Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **DDSSubscriber** (p. 1592).

QoS:

**DDS\_DataReaderQos** (p. 644)

## Status:

**DDS\_DATA\_AVAILABLE\_STATUS** (p. 345);  
**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346), **DDS\_LivelinessChangedStatus** (p. 932);  
**DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344), **DDS\_RequestedDeadlineMissedStatus** (p. 1050);  
**DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_RequestedIncompatibleQosStatus**  
 (p. 1051);  
**DDS\_SAMPLE\_LOST\_STATUS** (p. 345), **DDS\_SampleLostStatus** (p. 1093);  
**DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345), **DDS\_SampleRejectedStatus** (p. 1094);  
**DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347), **DDS\_SubscriptionMatchedStatus** (p. 1117);

## Listener:

**DDSDataReaderListener** (p. 1315)

A **DDSDataReader** (p. 1288) refers to exactly one **DDSTopicDescription** (p. 1624) (either a **DDSTopic** (p. 1617), a **DDSContentFilteredTopic** (p. 1283) or a **DDSMultiTopic** (p. 1529)) that identifies the data to be read.

The subscription has a unique resulting type. The data-reader may give access to several instances of the resulting type, which can be distinguished from each other by their `key`.

**DDSDataReader** (p. 1288) is an abstract class. It must be specialised for each particular application data-type (see **USER\_DATA** (p. 455)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 1648) are specified in the generic type **FooDataReader** (p. 1649).

The following operations may be called even if the **DDSDataReader** (p. 1288) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) if called on a disabled **DDSDataReader** (p. 1288):

- The base-class operations **DDSDataReader::set\_qos** (p. 1306), **DDSDataReader::get\_qos** (p. 1307), **DDSDataReader::set\_listener** (p. 1309), **DDSDataReader::get\_listener** (p. 1309), **DDSEntity::enable** (p. 1466), **DDSEntity::get\_statuscondition** (p. 1467), **DDSEntity::get\_status\_changes** (p. 1467),
- **DDSDataReader::get\_liveliness\_changed\_status** (p. 1302), **DDSDataReader::get\_requested\_deadline\_mis↔  
missed\_status** (p. 1303), **DDSDataReader::get\_requested\_incompatible\_qos\_status** (p. 1303), **DDSDat↔  
Reader::get\_sample\_lost\_status** (p. 1304), **DDSDataReader::get\_sample\_rejected\_status** (p. 1302),  
**DDSDataReader::get\_subscription\_matched\_status** (p. 1304)

All sample-accessing operations, namely: **FooDataReader::read** (p. 1651), **FooDataReader::take** (p. 1652), **Foo↔  
DataReader::read\_w\_condition** (p. 1657), and **FooDataReader::take\_w\_condition** (p. 1658) may fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) as described in **DDSSubscriber::begin\_access** (p. 1605).

## 9.244.2 Member Function Documentation

### 9.244.2.1 create\_readcondition()

```
virtual DDSReadCondition * DDSDataReader::create_readcondition (
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [inline], [virtual]
```

Creates a **DDSReadCondition** (p. 1574).

The returned **DDSReadCondition** (p. 1574) will be attached and belong to the **DDSDataReader** (p. 1288).

#### Parameters

<i>sample_states</i>	<< <b>in</b> >> (p. 238) sample state of the data samples that are of interest
<i>view_states</i>	<< <b>in</b> >> (p. 238) view state of the data samples that are of interest
<i>instance_states</i>	<< <b>in</b> >> (p. 238) instance state of the data samples that are of interest

#### Returns

return **DDSReadCondition** (p. 1574) created. Returns NULL in case of failure.

### 9.244.2.2 create\_readcondition\_w\_params()

```
virtual DDSReadCondition * DDSDataReader::create_readcondition_w_params (
    DDS_ReadConditionParams & params ) [inline], [virtual]
```

<<**extension**>> (p. 237) Creates a **DDSReadCondition** (p. 1574) with parameters.

The returned **DDSReadCondition** (p. 1574) will be attached and belong to the **DDSDataReader** (p. 1288).

#### Parameters

<i>params</i>	<< <b>in</b> >> (p. 238) creation parameters.
---------------	---

#### Returns

return **DDSReadCondition** (p. 1574) created. Returns NULL in case of failure.

### 9.244.2.3 create\_querycondition()

```
virtual DDSQueryCondition * DDSDataReader::create_querycondition (
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states,
    const char * query_expression,
    const struct DDS_StringSeq & query_parameters ) [inline], [virtual]
```

Creates a **DDSQueryCondition** (p. 1573).

The returned **DDSQueryCondition** (p. 1573) will be attached and belong to the **DDSDataReader** (p. 1288).

**Queries and Filters Syntax** (p. 179) describes the syntax of `query_expression` and `query_parameters`.

#### Parameters

<code>sample_states</code>	<< <i>in</i> >> (p. 238) sample state of the data samples that are of interest
<code>view_states</code>	<< <i>in</i> >> (p. 238) view state of the data samples that are of interest
<code>instance_states</code>	<< <i>in</i> >> (p. 238) instance state of the data samples that are of interest
<code>query_expression</code>	<< <i>in</i> >> (p. 238) Expression for the query. Cannot be NULL.
<code>query_parameters</code>	<< <i>in</i> >> (p. 238) Parameters for the query expression.

#### Returns

return **DDSQueryCondition** (p. 1573) created. Returns NULL in case of failure.

### 9.244.2.4 create\_querycondition\_w\_params()

```
virtual DDSQueryCondition * DDSDataReader::create_querycondition_w_params (
    DDS_QueryConditionParams & params ) [inline], [virtual]
```

<<*extension*>> (p. 237) Creates a **DDSQueryCondition** (p. 1573) with parameters.

The returned **DDSQueryCondition** (p. 1573) will be attached and belong to the **DDSDataReader** (p. 1288).

#### Parameters

<code>params</code>	<< <i>in</i> >> (p. 238) creation parameters.
---------------------	---

#### Returns

return **DDSQueryCondition** (p. 1573) created. Returns NULL in case of failure.

### 9.244.2.5 delete\_readcondition()

```
virtual DDS_ReturnCode_t DDSDataReader::delete_readcondition (
    DDSReadCondition * condition ) [inline], [virtual]
```

Deletes a **DDSReadCondition** (p. 1574) or **DDSQueryCondition** (p. 1573) attached to the **DDSDataReader** (p. 1288).

Since **DDSQueryCondition** (p. 1573) specializes **DDSReadCondition** (p. 1574), it can also be used to delete a **DDSQueryCondition** (p. 1573).

#### Precondition

The **DDSReadCondition** (p. 1574) must be attached to the **DDSDataReader** (p. 1288), or the operation will fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>condition</i>	<< <i>in</i> >> (p. 238) Condition to be deleted.
------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	---

### 9.244.2.6 delete\_contained\_entities()

```
virtual DDS_ReturnCode_t DDSDataReader::delete_contained_entities ( ) [inline], [virtual]
```

Deletes all the entities that were created by means of the "create" operations on the **DDSDataReader** (p. 1288).

Deletes all contained **DDSReadCondition** (p. 1574), **DDSQueryCondition** (p. 1573), and **DDSTopicQuery** (p. 1627) objects.

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if the any of the contained entities is in a state where it cannot be deleted.

Once **DDSDataReader::delete\_contained\_entities** (p. 1295) completes successfully, the application may delete the **DDSDataReader** (p. 1288).

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	---

**9.244.2.7 wait\_for\_historical\_data()**

```
virtual DDS_ReturnCode_t DDSDataReader::wait_for_historical_data (
    const DDS_Duration_t & max_wait ) [inline], [virtual]
```

Waits until all "historical" data is received for **DDSDataReader** (p. 1288) entities that have a non-VOLATILE Durability Qos kind.

This operation is intended only for **DDSDataReader** (p. 1288) entities that have a non-VOLATILE Durability QoS kind.

As soon as an application enables a non-VOLATILE **DDSDataReader** (p. 1288), it will start receiving both "historical" data (i.e., the data that was written prior to the time the **DDSDataReader** (p. 1288) joined the domain) as well as any new data written by the **DDSDataWriter** (p. 1321) entities. There are situations where the application logic may require the application to wait until all "historical" data is received. This is the purpose of the **DDSDataReader::wait\_for\_historical\_data** (p. 1296) operations.

**DDSDataReader::wait\_for\_historical\_data()** (p. 1296) blocks the calling thread until either all "historical" data is received, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. It will return immediately if no DataWriters have been discovered at the time the operation is called; therefore it is advisable to make sure at least one **DDSDataWriter** (p. 1321) has been discovered before calling this operation. (One way to do this is by using **DDSDataReader::get\_subscription\_matched\_status** (p. 1304).)

A successful completion indicates that all the "historical" data was "received"; timing out indicates that `max_wait` elapsed before all the data was received.

## Parameters

<i>max_wait</i>	<< <i>in</i> >> (p. 238) Timeout value.
-----------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

**9.244.2.8 acknowledge\_sample()** [1/2]

```
virtual DDS_ReturnCode_t DDSDataReader::acknowledge_sample (
    const DDS_SampleInfo & sample_info ) [inline], [virtual]
```

<<*extension*>> (p. 237) Acknowledges a single sample explicitly.

Applicable only when **DDS\_ReliabilityQoSPolicy::acknowledgment\_kind** (p. 1043) = **DDS\_APPLICATION\_↔EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS\_Rtps↔ReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1060) and **DDS\_RtpsReliableReaderProtocol\_t::app\_ack↔\_period** (p. 1060).

#### Parameters

<i>sample_info</i>	<< <i>in</i> >> (p. 238) <b>DDS_SampleInfo</b> (p. 1082) identifying the sample being acknowledged.
--------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.9 acknowledge\_all() [1/2]

```
virtual DDS_ReturnCode_t DDSDataReader::acknowledge_all ( ) [inline], [virtual]
```

<<*extension*>> (p. 237) Acknowledges all previously accessed samples.

Applicable only when **DDS\_ReliabilityQoSPolicy::acknowledgment\_kind** (p. 1043) = **DDS\_APPLICATION\_↔EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS\_Rtps↔ReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1060) and **DDS\_RtpsReliableReaderProtocol\_t::app\_ack↔\_period** (p. 1060).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.10 acknowledge\_sample() [2/2]

```
virtual DDS_ReturnCode_t DDSDataReader::acknowledge_sample (
    const DDS_SampleInfo & sample_info,
    const DDS_AckResponseData_t & response_data ) [inline], [virtual]
```

<<*extension*>> (p. 237) Acknowledges a single sample explicitly.

Applicable only when **DDS\_ReliabilityQoSPolicy::acknowledgment\_kind** (p.1043) = **DDS\_APPLICATION\_EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS\_RtpsReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1060) and **DDS\_RtpsReliableReaderProtocol\_t::app\_ack\_period** (p. 1060).

The maximum length of the response is configured using **DDS\_DataReaderResourceLimitsQoSPolicy::max\_app\_ack\_response\_length** (p. 664)

#### Parameters

<i>sample_info</i>	<< <i>in</i> >> (p. 238) <b>DDS_SampleInfo</b> (p. 1082) identifying the sample being acknowledged.
<i>response_data</i>	<< <i>in</i> >> (p. 238) Response data sent to <b>DDSDataWriter</b> (p. 1321) upon acknowledgment (via <b>DDSDataWriterListener::on_application_acknowledgment</b> (p. 1349))

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.11 acknowledge\_all() [2/2]

```
virtual DDS_ReturnCode_t DDSDataReader::acknowledge_all (
    const DDS_AckResponseData_t & response_data ) [inline], [virtual]
```

<<*extension*>> (p. 237) Acknowledges all previously accessed samples.

Applicable only when **DDS\_ReliabilityQoSPolicy::acknowledgment\_kind** (p.1043) = **DDS\_APPLICATION\_EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the DataReader to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **DDS\_RtpsReliableReaderProtocol\_t::samples\_per\_app\_ack** (p. 1060) and **DDS\_RtpsReliableReaderProtocol\_t::app\_ack\_period** (p. 1060).

The maximum length of the response is configured using **DDS\_DataReaderResourceLimitsQoSPolicy::max\_app\_ack\_response\_length** (p. 664).

#### Parameters

<i>response_data</i>	<< <i>in</i> >> (p. 238) Response data sent to <b>DDSDataWriter</b> (p. 1321) upon acknowledgment
----------------------	---

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## 9.244.2.12 get\_matched\_publications()

```
virtual DDS_ReturnCode_t DDSDataReader::get_matched_publications (
    DDS_InstanceHandleSeq & publication_handles ) [inline], [virtual]
```

Retrieves the list of publications currently "associated" with this **DDSDataReader** (p. 1288).

A publication is considered to be matching if all of the following criteria are true:

- The publication is within the same domain as this subscription.
- The publication has a matching **DDSTopic** (p. 1617).
- The publication has compatible QoS.
- If the applications are using partitions, the publication shares a common partition with this subscription.
- The **DDSDomainParticipant** (p. 1351) has not indicated that the publication's **DDSDomainParticipant** (p. 1351) should be "ignored" by means of the **DDSDomainParticipant::ignore\_publication** (p. 1396) API.
- If the subscription is using a **DDSContentFilteredTopic** (p. 1283) and the publication is using the **DDS\_MultiChannelQoSPolicy** (p. 964), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the reader has completed the key exchange with the writer.

The handles returned in the `publication_handles` list are the ones that are used by the RTI Connext implementation to locally identify the corresponding matched **DDSDataWriter** (p. 1321) entities. These handles match the ones that appear in the `instance_handle` field of the **DDS\_SampleInfo** (p. 1082) when reading the **DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298) builtin topic.

This API may return the publication handles of publications that are not alive. **DDSDataReader::is\_matched\_publication\_alive** (p. 1300) can be used to check the liveness of the remote publication.

## Parameters

<code>publication_handles</code>	<< <i>inout</i> >> (p. 238). The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this method will fail with <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337). The maximum number of matches possible is configured with <b>DDS_DomainParticipantResourceLimitsQoSPolicy</b> (p. 746). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory.
----------------------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) if the sequence is too small and the system cannot resize it, or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	--

**9.244.2.13 get\_matched\_publication\_data()**

```
virtual DDS_ReturnCode_t DDSDataReader::get_matched_publication_data (
    DDS_PublicationBuiltinTopicData & publication_data,
    const DDS_InstanceHandle_t & publication_handle ) [inline], [virtual]
```

Retrieves the information on a publication that is currently "associated" with the **DDSDataReader** (p. 1288).

The `publication_handle` must correspond to a publication currently associated with the **DDSDataReader** (p. 1288). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). Use the operation **DDSDataReader::get\_matched\_publications** (p. 1299) to find the publications that are currently matched with the **DDSDataReader** (p. 1288).

Note: This operation does not retrieve the **DDS\_PublicationBuiltinTopicData::type\_code** (p. 1016). This information is available through **DDSDataReaderListener::on\_data\_available()** (p. 1317) (if a reader listener is installed on the **DDSPublicationBuiltinTopicDataDataReader** (p. 1549)).

## Parameters

<i>publication_data</i>	<< <i>inout</i> >> (p. 238). The information to be filled in on the associated publication. Cannot be NULL.
<i>publication_handle</i>	<< <i>in</i> >> (p. 238). Handle to a specific publication associated with the <b>DDSDataWriter</b> (p. 1321). Must correspond to a publication currently associated with the <b>DDSDataReader</b> (p. 1288).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

**9.244.2.14 is\_matched\_publication\_alive()**

```
virtual DDS_ReturnCode_t DDSDataReader::is_matched_publication_alive (
    DDS_Boolean & is_alive,
    const DDS_InstanceHandle_t & publication_handle ) [inline], [virtual]
```

Check if a publication currently matched with a DataReader is alive.

This API is used for querying the endpoint liveness of a matched publication. A matched publication will be marked as not alive if the liveness that it committed to through its **LIVELINESS** (p. 409) QoS policy was not respected. Note that if the participant associated with the matched publication loses liveness, the **DDS\_InstanceHandle\_t** (p. 74) will become invalid and this function will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

#### Parameters

<i>publication_handle</i>	<< <b>in</b> >> (p. 238) The <b>DDS_InstanceHandle_t</b> (p. 74) of the matched publication. See <b>DDSDataReader::get_matched_publications</b> (p. 1299) for a description of what is considered a matched publication.
<i>is_alive</i>	<< <b>out</b> >> (p. 238) Indicates whether or not the matched publication is alive.

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

#### 9.244.2.15 get\_matched\_publication\_participant\_data()

```
virtual DDS_ReturnCode_t DDSDataReader::get_matched_publication_participant_data (
    DDS_ParticipantBuiltinTopicData & participant_data,
    const DDS_InstanceHandle_t & publication_handle ) [inline], [virtual]
```

<<**extension**>> (p. 237) Retrieves the information on the discovered **DDSDomainParticipant** (p. 1351) associated with the publication that is currently matching with the **DDSDataReader** (p. 1288).

The *publication\_handle* must correspond to a publication currently associated with the **DDSDataReader** (p. 1288). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). The operation may also fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if the publication corresponds to the same **DDSDomainParticipant** (p. 1351) that the DataReader belongs to. Use the operation **DDSDataReader::get\_matched\_publications** (p. 1299) to find the publications that are currently matched with the **DDSDataReader** (p. 1288).

#### Parameters

<i>participant_data</i>	<< <b>inout</b> >> (p. 238). The information to be filled in on the associated participant. Cannot be NULL.
<i>publication_handle</i>	<< <b>in</b> >> (p. 238). Handle to a specific publication associated with a <b>DDSDataWriter</b> (p. 1321). Must correspond to a publication currently associated with the <b>DDSDataReader</b> (p. 1288).

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
-----	---

### 9.244.2.16 `get_topicdescription()`

```
virtual DDSTopicDescription * DDSDataReader::get_topicdescription ( ) [inline], [virtual]
```

Returns the **DDSTopicDescription** (p. 1624) associated with the **DDSDataReader** (p. 1288).

Returns that same **DDSTopicDescription** (p. 1624) that was used to create the **DDSDataReader** (p. 1288).

#### Returns

**DDSTopicDescription** (p. 1624) associated with the **DDSDataReader** (p. 1288).

### 9.244.2.17 `get_subscriber()`

```
virtual DDSSubscriber * DDSDataReader::get_subscriber ( ) [inline], [virtual]
```

Returns the **DDSSubscriber** (p. 1592) to which the **DDSDataReader** (p. 1288) belongs.

#### Returns

**DDSSubscriber** (p. 1592) to which the **DDSDataReader** (p. 1288) belongs.

### 9.244.2.18 `get_sample_rejected_status()`

```
virtual DDS_ReturnCode_t DDSDataReader::get_sample_rejected_status (
    DDS_SampleRejectedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_SampleRejectedStatus</b> (p. 1094) to be filled in.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.19 get\_liveliness\_changed\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_liveliness_changed_status (
    DDS_LivelinessChangedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_LivelinessChangedStatus</b> (p. 932) to be filled in.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.20 get\_requested\_deadline\_missed\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_requested_deadline_missed_status (
    DDS_RequestedDeadlineMissedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_RequestedDeadlineMissedStatus</b> (p. 1050) to be filled in.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.21 get\_requested\_incompatible\_qos\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_requested_incompatible_qos_status (
    DDS_RequestedIncompatibleQosStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_RequestedIncompatibleQosStatus</b> (p. 1051) to be filled in.
---------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.244.2.22 get\_sample\_lost\_status()**

```
virtual DDS_ReturnCode_t DDSDataReader::get_sample_lost_status (
    DDS_SampleLostStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_SAMPLE\_LOST\_STATUS** (p. 345) communication status.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_SampleLostStatus</b> (p. 1093) to be filled in.
---------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.244.2.23 get\_subscription\_matched\_status()**

```
virtual DDS_ReturnCode_t DDSDataReader::get_subscription_matched_status (
    DDS_SubscriptionMatchedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347) communication status.

## Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_SubscriptionMatchedStatus</b> (p. 1117) to be filled in.
---------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.244.2.24 get\_datareader\_cache\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_datareader_cache_status (
    DDS_DataReaderCacheStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Gets the datareader cache status for this reader.

#### Parameters

<i>status</i>	<< <b>inout</b> >> (p. 238) <b>DDS_DataReaderCacheStatus</b> (p. 623) to be filled in.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.244.2.25 get\_datareader\_protocol\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_datareader_protocol_status (
    DDS_DataReaderProtocolStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Gets the datareader protocol status for this reader.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <b>inout</b> >> (p. 238) <b>DDS_DataReaderProtocolStatus</b> (p. 633) to be filled in.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.244.2.26 get\_matched\_publication\_datareader\_protocol\_status()

```
virtual DDS_ReturnCode_t DDSDataReader::get_matched_publication_datareader_protocol_status (
    DDS_DataReaderProtocolStatus & status,
    const DDS_InstanceHandle_t & publication_handle ) [inline], [virtual]
```

<<*extension*>> (p. 237) Gets the datareader protocol status for this reader, per matched publication identified by the `publication_handle`.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238). The information to be filled in on the associated publication. Cannot be NULL.
<i>publication_handle</i>	<< <i>in</i> >> (p. 238). Handle to a specific publication associated with the <b>DDSDataWriter</b> (p. 1321). . Must correspond to a publication currently associated with the <b>DDSDataReader</b> (p. 1288).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

### 9.244.2.27 set\_qos()

```
virtual DDS_ReturnCode_t DDSDataReader::set_qos (
    const DDS_DataReaderQos & qos ) [inline], [virtual]
```

Sets the reader QoS.

Modifies the QoS of the **DDSDataReader** (p. 1288).

The **DDS\_DataReaderQos::user\_data** (p. 649), **DDS\_DataReaderQos::deadline** (p. 648), **DDS\_DataReaderQos::latency\_budget** (p. 648), **DDS\_DataReaderQos::time\_based\_filter** (p. 650), **DDS\_DataReaderQos::reader\_data\_lifecycle** (p. 650) can be changed. The other policies are immutable.

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DataReaderQos</b> (p. 644) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDSDataReader</b> (p. 1288) is enabled. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) can be used to indicate that the QoS of the <b>DDSDataReader</b> (p. 1288) should be changed to match the current default <b>DDS_DataReaderQos</b> (p. 644) set in the <b>DDSSubscriber</b> (p. 1592).
------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

See also

**DDS\_DataReaderQos** (p. 644) for rules on consistency among QoS

**set\_qos (abstract)** (p. 1464)

**DDSDataReader::set\_qos** (p. 1306)

**Operations Allowed in Listener Callbacks** (p. 1528)

### 9.244.2.28 get\_qos()

```
virtual DDS_ReturnCode_t DDSDataReader::get_qos (
    DDS_DataReaderQos & qos ) [inline], [virtual]
```

Gets the reader QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) The <b>DDS_DataReaderQos</b> (p. 644) to be filled up.
------------	--

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**get\_qos (abstract)** (p. 1465)

### 9.244.2.29 set\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDataReader::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [inline], [virtual]
```

<<*extension*>> (p. 237) Changes the QoS of this reader using the input XML QoS profile.

This operation modifies the QoS of the **DDSDataReader** (p. 1288).

The **DDS\_DataReaderQos::user\_data** (p. 649), **DDS\_DataReaderQos::deadline** (p. 648), **DDS\_DataReaderQos::latency\_budget** (p. 648), **DDS\_DataReaderQos::time\_based\_filter** (p. 650), **DDS\_DataReaderQos::reader\_data\_lifecycle** (p. 650) can be changed. The other policies are immutable.

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSSubscriber::set_default_library</b> (p. 1597)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSSubscriber::set_default_profile</b> (p. 1598)).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

## See also

**DDS\_DataReaderQos** (p. 644) for rules on consistency among QoS

**DDSDataReader::set\_qos** (p. 1306)

**Operations Allowed in Listener Callbacks** (p. 1528)

**9.244.2.30 set\_property()**

```
virtual DDS_ReturnCode_t DDSDataReader::set_property (
    const char * property_name,
    const char * value,
    bool propagate ) [inline], [virtual]
```

Set the value for a property that applies to a DataReader.

## Warning

This method is not implemented in all APIs and it's intended only for testing purposes. You should use **DDSDataReader::set\_qos** (p. 1306) instead.

## Parameters

<i>property_name</i>	<< <i>in</i> >> (p. 238). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 238). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 238). Indicates if the property will be propagated or not.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSDomainParticipant::set\_property** (p. 1407)

**DDSDataWriter::set\_property** (p. 1337)

**DDSDataReader::set\_qos** (p. 1306)

### 9.244.2.31 set\_listener()

```
virtual DDS_ReturnCode_t DDSDataReader::set_listener (
    DDSDataReaderListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [inline], [virtual]
```

Sets the reader listener.

Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) <b>DDSDataReaderListener</b> (p. 1315) to set to
<i>mask</i>	<< <i>in</i> >> (p. 238) <b>DDS_StatusMask</b> (p. 341) associated with the <b>DDSDataReaderListener</b> (p. 1315).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**set\_listener (abstract)** (p. 1465)

### 9.244.2.32 get\_listener()

```
virtual DDSDataReaderListener * DDSDataReader::get_listener ( ) [inline], [virtual]
```

Gets the reader listener.

Returns

**DDSDataReaderListener** (p. 1315) of the **DDSDataReader** (p. 1288).

See also

**get\_listener (abstract)** (p. 1466)

**9.244.2.33 create\_topic\_query()**

```
virtual DDSTopicQuery * DDSDataReader::create_topic_query (
    const DDS_TopicQuerySelection & selection ) [inline], [virtual]
```

Creates a **DDSTopicQuery** (p. 1627).

The returned **DDSTopicQuery** (p. 1627) will have been issued if the **DDSDataReader** (p. 1288) is enabled. Otherwise, the **DDSTopicQuery** (p. 1627) will be issued once the **DDSDataReader** (p. 1288) is enabled

**Parameters**

<i>selection</i>	<< <i>in</i> >> (p. 238) The selection with which to create the <b>DDSTopicQuery</b> (p. 1627). The special values <b>DDS_TOPIC_QUERY_SELECTION_SELECT_ALL</b> (p. 155) and <b>DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER</b> (p. 155) can be used. The expression can start with the special condition "@instance_state = ALIVE AND" followed by the rest of the expression. This restricts the selection to samples of alive instances.
------------------	--

**Returns**

return Created **DDSTopicQuery** (p. 1627). Returns NULL in case of failure.

**9.244.2.34 delete\_topic\_query()**

```
virtual DDS_ReturnCode_t DDSDataReader::delete_topic_query (
    DDSTopicQuery * query ) [inline], [virtual]
```

Deletes a **DDSTopicQuery** (p. 1627).

Cancels an active **DDSTopicQuery** (p. 1627). After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

**Parameters**

<i>query</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopicQuery</b> (p. 1627) to delete.
--------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.244.2.35 lookup\_topic\_query()**

```
virtual DDSTopicQuery * DDSDataReader::lookup_topic_query (
```

```
const DDS_GUID_t & guid ) [inline], [virtual]
```

Retrieves an existing **DDSTopicQuery** (p. 1627).

Retrieves the **DDSTopicQuery** (p. 1627) that corresponds to the input **DDS\_GUID\_t** (p. 918).

If no TopicQuery is found for the specified GUID or the TopicQuery is marked for deletion, this returns NULL.

To get the **DDS\_GUID\_t** (p. 918) associated with a **DDSTopicQuery** (p. 1627), use the method **DDSTopicQuery::get\_↵\_guid** (p. 1627).

#### Parameters

<i>guid</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopicQuery</b> (p. 1627) GUID.
-------------	---

### 9.244.2.36 take\_discovery\_snapshot() [1/2]

```
virtual DDS_ReturnCode_t DDSDataReader::take_discovery_snapshot ( ) [inline], [virtual]
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

The snapshot will be printed through the **NDDConfigLogger** (p. 1822). A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"
```

```
guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"
```

```
topic="FooTopic" type="FooType"
```

```
-----
```

```
Compatible writers:
```

```
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
liveliness="ALIVE"
```

```
Incompatible writers:
```

```
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
reason="Inconsistent QoS"
```

```
-----
```

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336).
------------	---

**9.244.2.37 take\_discovery\_snapshot()** [2/2]

```
virtual DDS_ReturnCode_t DDSDataReader::take_discovery_snapshot (
    const char * file_name ) [inline], [virtual]
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

The snapshot will be printed in the file specified by `file_name`. A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"
```

```
guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"
```

```
topic="FooTopic" type="FooType"
```

```
-----
```

```
Compatible writers:
```

```
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
liveliness="ALIVE"
```

```
Incompatible writers:
```

```
1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```
reason="Inconsistent QoS"
```

```
-----
```

**Parameters**

<code>file_name</code>	<< <i>in</i> >> (p. 238) Name of the file where snapshot should be printed.
------------------------	---

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336).
------------	---

**9.244.2.38 enable()**

```
virtual DDS_ReturnCode_t DDSDataReader::enable ( ) [inline], [virtual]
```

Enables the **DDSEntity** (p. 1463).

This operation enables the Entity. Entity objects can be created either enabled or disabled. This is controlled by the value of the **ENTITY\_FACTORY** (p. 402) QoS policy on the corresponding factory for the **DDSEntity** (p. 1463).

By default, **ENTITY\_FACTORY** (p. 402) is set so that it is not necessary to explicitly call **DDSEntity::enable** (p. 1466) on newly created entities.

The **DDSEntity::enable** (p. 1466) operation is idempotent. Calling enable on an already enabled Entity returns OK and has no effect.

If a **DDSEntity** (p. 1463) has not yet been enabled, the following kinds of operations may be invoked on it:

- set or get the QoS policies (including default QoS policies) and listener
- **DDSEntity::get\_statuscondition** (p. 1467)
- 'factory' operations
- **DDSEntity::get\_status\_changes** (p. 1467) and other get status operations (although the status of a disabled entity never changes)
- 'lookup' operations

Other operations may explicitly state that they may be called on disabled entities; those that do not will return the error **DDS\_RETCODE\_NOT\_ENABLED** (p. 337).

It is legal to delete an **DDSEntity** (p. 1463) that has not been enabled by calling the proper operation on its factory .

Entities created from a factory Entity that is disabled are created disabled, regardless of the setting of the **DDS\_EntityFactoryQosPolicy** (p. 903).

Calling enable on an Entity whose factory Entity is not enabled will fail and return **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

If **DDS\_EntityFactoryQosPolicy::autoenable\_created\_entities** (p. 905) is TRUE, the enable operation on a factory will automatically enable all entities created from that factory (for example, enabling a **DDSPublisher** (p. 1550) will enable all its contained **DDSDataWriter** (p. 1321) objects)

Listeners associated with an entity are not called until the entity is enabled.

Conditions associated with a disabled entity are "inactive," that is, they have a `trigger_value == FALSE`.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

Implements **DDSEntity** (p. 1466).

#### 9.244.2.39 get\_statuscondition()

```
virtual DDSStatusCondition * DDSDataReader::get_statuscondition ( ) [inline], [virtual]
```

Allows access to the **DDSStatusCondition** (p. 1578) associated with the **DDSEntity** (p. 1463).

The returned condition can then be added to a **DDSWaitSet** (p. 1629) so that the application can wait for specific status changes that affect the **DDSEntity** (p. 1463).

**Returns**

the status condition associated with this entity.

Implements **DDSEntity** (p. 1467).

**9.244.2.40 get\_status\_changes()**

```
virtual DDS_StatusMask DDSDataReader::get_status_changes ( ) [inline], [virtual]
```

Retrieves the list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

That is, the list of statuses whose value has changed since the last time the application read the status using the `get_*_status()` method.

When the entity is first created or if the entity is not enabled, all communication statuses are in the "untriggered" state so the list returned by the `get_status_changes` operation will be empty.

The list of statuses returned by the `get_status_changes` operation refers to the status that are triggered on the Entity itself and does not include statuses that apply to contained entities.

**Returns**

list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

**See also**

**Status Kinds** (p. 337)

Implements **DDSEntity** (p. 1467).

**9.244.2.41 get\_instance\_handle()**

```
virtual DDS_InstanceHandle_t DDSDataReader::get_instance_handle ( ) [inline], [virtual]
```

Allows access to the **DDS\_InstanceHandle\_t** (p. 74) associated with the **DDSEntity** (p. 1463).

This operation returns the **DDS\_InstanceHandle\_t** (p. 74) that represents the **DDSEntity** (p. 1463).

**Returns**

the instance handle associated with this entity.

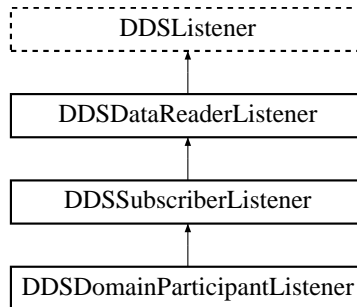

Implements **DDSEntity** (p. 1468).

## 9.245 DDSDataReaderListener Class Reference

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for reader status.

Inheritance diagram for DDSDataReaderListener:

### Public Member Functions

- virtual void **on\_requested\_deadline\_missed** ( **DDSDataReader** \*reader, const **DDS\_RequestedDeadlineMissedStatus** &status)  
*Handles the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344) communication status.*
- virtual void **on\_liveliness\_changed** ( **DDSDataReader** \*reader, const **DDS\_LivelinessChangedStatus** &status)  
*Handles the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346) communication status.*
- virtual void **on\_requested\_incompatible\_qos** ( **DDSDataReader** \*reader, const **DDS\_RequestedIncompatibleQosStatus** &status)  
*Handles the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.*
- virtual void **on\_sample\_rejected** ( **DDSDataReader** \*reader, const **DDS\_SampleRejectedStatus** &status)  
*Handles the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345) communication status.*
- virtual void **on\_data\_available** ( **DDSDataReader** \*reader)  
*Handle the **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345) communication status.*
- virtual void **on\_sample\_lost** ( **DDSDataReader** \*reader, const **DDS\_SampleLostStatus** &status)  
*Handles the **DDS\_SAMPLE\_LOST\_STATUS** (p. 345) communication status.*
- virtual void **on\_subscription\_matched** ( **DDSDataReader** \*reader, const **DDS\_SubscriptionMatchedStatus** &status)  
*Handles the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347) communication status.*

### 9.245.1 Detailed Description

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for reader status.

Entity:

**DDSDataReader** (p. 1288)

Status:

**DDS\_DATA\_AVAILABLE\_STATUS** (p. 345);  
**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346), **DDS\_LivelinessChangedStatus** (p. 932);  
**DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344), **DDS\_RequestedDeadlineMissedStatus** (p. 1050);  
**DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_RequestedIncompatibleQosStatus** (p. 1051);  
**DDS\_SAMPLE\_LOST\_STATUS** (p. 345), **DDS\_SampleLostStatus** (p. 1093);  
**DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345), **DDS\_SampleRejectedStatus** (p. 1094);  
**DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347), **DDS\_SubscriptionMatchedStatus** (p. 1117);

See also

**Status Kinds** (p. 337)  
**Operations Allowed in Listener Callbacks** (p. 1528)

## 9.245.2 Member Function Documentation

### 9.245.2.1 on\_requested\_deadline\_missed()

```
virtual void DDSDataReaderListener::on_requested_deadline_missed (  
    DDSDataReader * reader,  
    const DDS_RequestedDeadlineMissedStatus & status ) [virtual]
```

Handles the **DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344) communication status.

### 9.245.2.2 on\_liveliness\_changed()

```
virtual void DDSDataReaderListener::on_liveliness_changed (  
    DDSDataReader * reader,  
    const DDS_LivelinessChangedStatus & status ) [virtual]
```

Handles the **DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346) communication status.

### 9.245.2.3 on\_requested\_incompatible\_qos()

```
virtual void DDSDataReaderListener::on_requested_incompatible_qos (  
    DDSDataReader * reader,  
    const DDS_RequestedIncompatibleQosStatus & status ) [virtual]
```

Handles the **DDS\_REQUESTED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.

#### 9.245.2.4 on\_sample\_rejected()

```
virtual void DDSDataReaderListener::on_sample_rejected (
    DDSDataReader * reader,
    const DDS_SampleRejectedStatus & status ) [virtual]
```

Handles the **DDS\_SAMPLE\_REJECTED\_STATUS** (p. 345) communication status.

#### 9.245.2.5 on\_data\_available()

```
virtual void DDSDataReaderListener::on_data_available (
    DDSDataReader * reader ) [virtual]
```

Handle the **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345) communication status.

#### 9.245.2.6 on\_sample\_lost()

```
virtual void DDSDataReaderListener::on_sample_lost (
    DDSDataReader * reader,
    const DDS_SampleLostStatus & status ) [virtual]
```

Handles the **DDS\_SAMPLE\_LOST\_STATUS** (p. 345) communication status.

#### 9.245.2.7 on\_subscription\_matched()

```
virtual void DDSDataReaderListener::on_subscription_matched (
    DDSDataReader * reader,
    const DDS_SubscriptionMatchedStatus & status ) [virtual]
```

Handles the **DDS\_SUBSCRIPTION\_MATCHED\_STATUS** (p. 347) communication status.

## 9.246 DDSDataReaderSeq Class Reference

Declares IDL sequence < **DDSDataReader** (p. 1288) > .

### 9.246.1 Detailed Description

Declares IDL sequence < **DDSDataReader** (p. 1288) > .

**FooSeq** (p. 1697)

## 9.247 DDSDataReaderStatusConditionHandler Class Reference

<<*interface*>> (p. 237) Realization of a **DDSConditionHandler** (p. 1278) that handles the status of a **DDSData**↔  
**Reader** (p. 1288).

Inheritance diagram for DDSDataReaderStatusConditionHandler:

### Public Member Functions

- virtual void **on\_condition\_triggered** ( **DDSCondition** \*condition)  
*Handles the dispatch of a **DDSCondition** (p. 1276).*
- **DDSDataReaderStatusConditionHandler** ( **DDSDataReader** \*reader, **DDSDataReaderListener** \*listener, **DDS\_StatusMask** listener\_mask)  
*Creates a new **DDSDataReaderStatusConditionHandler** (p. 1318) instance.*
- virtual **~DDSDataReaderStatusConditionHandler** ()  
*Deletes a **DDSDataReaderStatusConditionHandler** (p. 1318) instance previously created with **DDSDataReader**↔  
**StatusConditionHandler::DDSDataReaderStatusConditionHandler** (p. 1319).*

### 9.247.1 Detailed Description

<<*interface*>> (p. 237) Realization of a **DDSConditionHandler** (p. 1278) that handles the status of a **DDSData**↔  
**Reader** (p. 1288).

A **DDSDataReaderStatusConditionHandler** (p. 1318) demultiplexes a **DDSDataReader** (p. 1288) status change into the corresponding callback of a provided **DDSDataReaderListener** (p. 1315) implementation.

Note that the **DDSDataReaderListener** (p. 1315) notifications have different considerations than if they were made by the **DDSDataReader** (p. 1288) directly:

- Context: The **DDSDataReaderListener** (p. 1315) callback context is the one of the thread that dispatches the **DDSCondition** (p. 1276) where this handler is set. For instance, if you attach the condition to a **DDSAsync**↔  
**WaitSet** (p. 1259), the context will be one of the threads within the pool.

- Status clearing: All the **DDSDataReader** (p. 1288)'s enabled statuses are cleared upon condition dispatch except the **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345), which will not be cleared until your application reads the data.
- Exclusive Area: Restrictions depend on the context of the dispatching thread. For instance, if the **DDSAsyncWaitSet** (p. 1259) dispatches the condition, the listener notifications are free of any exclusive area restrictions.

The **DDSDataReaderStatusConditionHandler** (p.1318) is a convenience to handle the status changes of a **DDSDataReader** (p.1288). You can install a **DDSDataReaderStatusConditionHandler** (p.1318) as the handler of a reader's **DDSStatusCondition** (p. 1578). You can then attach it to a **DDSWaitSet** (p. 1629) or **DDSAsyncWaitSet** (p. 1259) and receive status changes notifications through a specific **DDSDataReaderListener** (p. 1315) implementation instance.

## 9.247.2 Constructor & Destructor Documentation

### 9.247.2.1 DDSDataReaderStatusConditionHandler()

```
DDSDataReaderStatusConditionHandler::DDSDataReaderStatusConditionHandler (
    DDSDataReader * reader,
    DDSDataReaderListener * listener,
    DDS_StatusMask listener_mask )
```

Creates a new **DDSDataReaderStatusConditionHandler** (p. 1318) instance.

The created DataReaderStatusConditionHandler can set as **DDSConditionHandler** (p. 1278) in any **DDSCondition** (p. 1276) and will demultiplex the specified status changes from the specified **DDSDataReader** (p. 1288)

#### Parameters

<i>reader</i>	<< <i>in</i> >> (p. 238) The <b>DDSDataReader</b> (p. 1288) for which the status changes are demultiplexed to the specified <i>listener</i>
<i>listener</i>	<< <i>in</i> >> (p. 238) that receives the status changes notifications from the specified <i>reader</i> .
<i>listener_mask</i>	<< <i>in</i> >> (p. 238) Specifies which status changes from the reader to demultiplex to the <i>listener</i> .

#### See also

- DDSDataReader** (p. 1288)
- DDSDataReader::set\_listener** (p. 1309)
- DDSStatusCondition** (p. 1578)
- DDSConditionHandler** (p. 1278)

### 9.247.2.2 ~DDSDataReaderStatusConditionHandler()

```
virtual DDSDataReaderStatusConditionHandler::~DDSDataReaderStatusConditionHandler ( ) [virtual]
```

Deletes a **DDSDataReaderStatusConditionHandler** (p. 1318) instance previously created with **DDSDataReader←StatusConditionHandler::DDSDataReaderStatusConditionHandler** (p. 1319).

## 9.247.3 Member Function Documentation

### 9.247.3.1 on\_condition\_triggered()

```
virtual void DDSDataReaderStatusConditionHandler::on_condition_triggered (
    DDSCondition * condition ) [virtual]
```

Handles the dispatch of a **DDSCondition** (p. 1276).

This callback is called by **DDSCondition::dispatch** (p. 1278).

Implements **DDSConditionHandler** (p. 1279).

## 9.248 DDSDataTagQosPolicyHelper Class Reference

Policy helpers that facilitate management of the data tags in the input policy.

### Static Public Member Functions

- static **DDS\_Long get\_number\_of\_tags** ( **DDS\_DataTagQosPolicy** &policy)
 

*Gets the number of data tags in the input policy.*
- static **DDS\_ReturnCode\_t assert\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name, const char \*value)
 

*Asserts the tag identified by name in the input policy.*
- static **DDS\_ReturnCode\_t add\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name, const char \*value)
 

*Adds a new tag to the input policy.*
- static struct **DDS\_Tag \* lookup\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name)
 

*Searches by tag name for a tag in the input policy.*
- static **DDS\_ReturnCode\_t remove\_tag** ( **DDS\_DataTagQosPolicy** &policy, const char \*name)
 

*Removes a tag from the input policy.*

### 9.248.1 Detailed Description

Policy helpers that facilitate management of the data tags in the input policy.

## 9.249 DDSDataWriter Class Reference

<<**interface**>> (p. 237) Allows an application to set the value of the data to be published under a given **DDSTopic** (p. 1617).

Inheritance diagram for DDSDataWriter:

### Public Member Functions

- virtual **DDS\_ReturnCode\_t** **get\_liveliness\_lost\_status** ( **DDS\_LivelinessLostStatus** &status)  
*Accesses the **DDS\_LIVELINESS\_LOST\_STATUS** (p. 346) communication status.*
- virtual **DDS\_ReturnCode\_t** **get\_offered\_deadline\_missed\_status** ( **DDS\_OfferedDeadlineMissedStatus** &status)  
*Accesses the **DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343) communication status.*
- virtual **DDS\_ReturnCode\_t** **get\_offered\_incompatible\_qos\_status** ( **DDS\_OfferedIncompatibleQosStatus** &status)  
*Accesses the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.*
- virtual **DDS\_ReturnCode\_t** **get\_publication\_matched\_status** ( **DDS\_PublicationMatchedStatus** &status)  
*Accesses the **DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347) communication status.*
- virtual **DDS\_ReturnCode\_t** **get\_reliable\_writer\_cache\_changed\_status** ( **DDS\_ReliableWriterCache↔ChangedStatus** &status)  
 <<**extension**>> (p. 237) *Get the reliable cache status for this writer.*
- virtual **DDS\_ReturnCode\_t** **get\_reliable\_reader\_activity\_changed\_status** ( **DDS\_ReliableReaderActivity↔ChangedStatus** &status)  
 <<**extension**>> (p. 237) *Get the reliable reader activity changed status for this writer.*
- virtual **DDS\_ReturnCode\_t** **get\_datawriter\_cache\_status** ( **DDS\_DataWriterCacheStatus** &status)  
 <<**extension**>> (p. 237) *Get the datawriter cache status for this writer.*
- virtual **DDS\_ReturnCode\_t** **get\_datawriter\_protocol\_status** ( **DDS\_DataWriterProtocolStatus** &status)  
 <<**extension**>> (p. 237) *Get the datawriter protocol status for this writer.*
- virtual **DDS\_ReturnCode\_t** **get\_matched\_subscription\_datawriter\_protocol\_status** ( **DDS\_DataWriter↔ProtocolStatus** &status, const **DDS\_InstanceHandle\_t** &subscription\_handle)  
 <<**extension**>> (p. 237) *Get the datawriter protocol status for this writer, per matched subscription identified by the subscription\_handle.*
- virtual **DDS\_ReturnCode\_t** **is\_matched\_subscription\_active** ( **DDS\_Boolean** &is\_active, const **DDS\_↔InstanceHandle\_t** &subscription\_handle)  
*Check if a subscription currently matched with a DataWriter is active.*
- virtual **DDS\_ReturnCode\_t** **get\_service\_request\_accepted\_status** ( **DDS\_ServiceRequestAcceptedStatus** &status)  
*Accesses the **DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS** (p. 348) communication status.*
- virtual **DDS\_ReturnCode\_t** **get\_matched\_subscription\_datawriter\_protocol\_status\_by\_locator** ( **DDS\_↔DataWriterProtocolStatus** &status, const **DDS\_Locator\_t** &locator)

- <<**extension**>> (p. 237) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.
- virtual **DDS\_ReturnCode\_t assert\_liveliness** ()  
*This operation manually asserts the liveliness of this **DDSDataWriter** (p. 1321).*
  - virtual **DDS\_ReturnCode\_t get\_matched\_subscription\_locators** ( **DDS\_LocatorSeq** &locators)  
 <<**extension**>> (p. 237) Retrieve the list of locators for subscriptions currently "associated" with this **DDSDataWriter** (p. 1321).
  - virtual **DDS\_ReturnCode\_t get\_matched\_subscriptions** ( **DDS\_InstanceHandleSeq** &subscription\_handles)  
*Retrieve the list of subscriptions currently "associated" with this **DDSDataWriter** (p. 1321).*
  - virtual **DDS\_ReturnCode\_t get\_matched\_subscription\_data** ( **DDS\_SubscriptionBuiltinTopicData** &subscription\_data, const **DDS\_InstanceHandle\_t** &subscription\_handle)  
*This operation retrieves the information on a subscription that is currently "associated" with the **DDSDataWriter** (p. 1321).*
  - virtual **DDS\_ReturnCode\_t get\_matched\_subscription\_participant\_data** ( **DDS\_ParticipantBuiltinTopicData** &participant\_data, const **DDS\_InstanceHandle\_t** &subscription\_handle)  
*This operation retrieves the information on the discovered **DDSDomainParticipant** (p. 1351) associated with the subscription that is currently matching with the **DDSDataWriter** (p. 1321).*
  - virtual **DDSTopic \* get\_topic** ()  
*This operation returns the **DDSTopic** (p. 1617) associated with the **DDSDataWriter** (p. 1321).*
  - virtual **DDSPublisher \* get\_publisher** ()  
*This operation returns the **DDSPublisher** (p. 1550) to which the **DDSDataWriter** (p. 1321) belongs.*
  - virtual **DDS\_ReturnCode\_t wait\_for\_acknowledgments** (const **DDS\_Duration\_t** &max\_wait)  
*Blocks the calling thread until all data written by reliable **DDSDataWriter** (p. 1321) entity is acknowledged, or until timeout expires.*
  - virtual **DDS\_ReturnCode\_t is\_sample\_app\_acknowledged** ( **DDS\_Boolean** &is\_app\_ack, const struct **DDS\_SampleIdentity\_t** &identity)  
*This method can be used to see if a sample has been application acknowledged.*
  - virtual **DDS\_ReturnCode\_t wait\_for\_asynchronous\_publishing** (const **DDS\_Duration\_t** &max\_wait)  
 <<**extension**>> (p. 237) Blocks the calling thread until asynchronous sending is complete.
  - virtual **DDS\_ReturnCode\_t set\_qos** (const **DDS\_DataWriterQoS** &qos)  
*Sets the writer QoS.*
  - virtual **DDS\_ReturnCode\_t set\_property** (const char \*property\_name, const char \*value, bool propagate)  
*Set the value for a property that applies to a DataWriter.*
  - virtual **DDS\_ReturnCode\_t set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)  
 <<**extension**>> (p. 237) Change the QoS of this writer using the input XML QoS profile.
  - virtual **DDS\_ReturnCode\_t get\_qos** ( **DDS\_DataWriterQoS** &qos)  
*Gets the writer QoS.*
  - virtual **DDS\_ReturnCode\_t set\_listener** ( **DDSDataWriterListener** \*, **DDS\_StatusMask** mask= **DDS\_STATUS\_MASK\_ALL**)  
*Sets the writer listener.*
  - virtual **DDSDataWriterListener \* get\_listener** ()  
*Get the writer listener.*
  - virtual **DDS\_ReturnCode\_t flush** ()  
 <<**extension**>> (p. 237) Flushes the batch in progress in the context of the calling thread.
  - virtual **DDS\_ReturnCode\_t take\_discovery\_snapshot** ()  
*Take a snapshot of the compatible and incompatible remote readers matched by a local writer.*
  - virtual **DDS\_ReturnCode\_t take\_discovery\_snapshot** (const char \*file\_name)  
*Take a snapshot of the compatible and incompatible remote readers matched by a local writer.*
  - virtual **DDS\_ReturnCode\_t enable** ()

Enables the *DDSEntity* (p. 1463).

- virtual **DDSStatusCondition \* get\_statuscondition** ()  
Allows access to the *DDSStatusCondition* (p. 1578) associated with the *DDSEntity* (p. 1463).
- virtual **DDS\_StatusMask get\_status\_changes** ()  
Retrieves the list of communication statuses in the *DDSEntity* (p. 1463) that are triggered.
- virtual **DDS\_InstanceHandle\_t get\_instance\_handle** ()  
Allows access to the *DDS\_InstanceHandle\_t* (p. 74) associated with the *DDSEntity* (p. 1463).

### 9.249.1 Detailed Description

<<*interface*>> (p. 237) Allows an application to set the value of the data to be published under a given **DDSTopic** (p. 1617).

QoS:

**DDS\_DataWriterQos** (p. 689)

Status:

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 346), **DDS\_LivelinessLostStatus** (p. 934);  
**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343), **DDS\_OfferedDeadlineMissedStatus** (p. 970);  
**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_OfferedIncompatibleQosStatus** (p. 971);  
**DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347), **DDS\_PublicationMatchedStatus** (p. 1020);  
**DDS\_RELIABLE\_READER\_ACTIVITY\_CHANGED\_STATUS** (p. 349), **DDS\_ReliableReaderActivity↔  
 ChangedStatus** (p. 1044);  
**DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349), **DDS\_ReliableWriterCache↔  
 Status** (p. 1046).

Listener:

**DDSDataWriterListener** (p. 1344)

A **DDSDataWriter** (p. 1321) is attached to exactly one **DDSPublisher** (p. 1550), that acts as a factory for it.

A **DDSDataWriter** (p. 1321) is bound to exactly one **DDSTopic** (p. 1617) and therefore to exactly one data type. The **DDSTopic** (p. 1617) must exist prior to the **DDSDataWriter** (p. 1321)'s creation.

**DDSDataWriter** (p. 1321) is an abstract class. It must be specialized for each particular application data-type (see **USER\_DATA** (p. 455)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **Foo** (p. 1648) are specified in the example type **DDSDataWriter** (p. 1321).

The following operations may be called even if the **DDSDataWriter** (p. 1321) is not enabled. Other operations will fail with **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) if called on a disabled **DDSDataWriter** (p. 1321):

- The base-class operations **DDSDataWriter::set\_qos** (p. 1336), **DDSDataWriter::get\_qos** (p. 1338), **DDSData↔  
 Writer::set\_listener** (p. 1339), **DDSDataWriter::get\_listener** (p. 1339), **DDSEntity::enable** (p. 1466),  
**DDSEntity::get\_statuscondition** (p. 1467) and **DDSEntity::get\_status\_changes** (p. 1467)

- `DDSDataWriter::get_liveliness_lost_status` (p. 1324), `DDSDataWriter::get_offered_deadline_missed_status` (p. 1324), `DDSDataWriter::get_offered_incompatible_qos_status` (p. 1325), `DDSDataWriter::get_publication_matched_status` (p. 1325), `DDSDataWriter::get_reliable_writer_cache_changed_status` (p. 1326), `DDSDataWriter::get_reliable_reader_activity_changed_status` (p. 1326) `DDSDataWriter::get_service_request_accepted_status` (p. 1328)

Several `DDSDataWriter` (p. 1321) may operate in different threads. If they share the same `DDSPublisher` (p. 1550), the middleware guarantees that its operations are thread-safe.

Examples

`HelloWorldSupport.cxx`, and `HelloWorld_publisher.cxx`.

## 9.249.2 Member Function Documentation

### 9.249.2.1 `get_liveliness_lost_status()`

```
virtual DDS_ReturnCode_t DDSDataWriter::get_liveliness_lost_status (
    DDS_LivelinessLostStatus & status ) [inline], [virtual]
```

Accesses the `DDS_LIVELINESS_LOST_STATUS` (p. 346) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <code>DDS_LivelinessLostStatus</code> (p. 934) to be filled in.
---------------	---

Exceptions

<i>One</i>	of the <code>Standard Return Codes</code> (p. 336)
------------	--

### 9.249.2.2 `get_offered_deadline_missed_status()`

```
virtual DDS_ReturnCode_t DDSDataWriter::get_offered_deadline_missed_status (
    DDS_OfferedDeadlineMissedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_OfferedDeadlineMissedStatus</b> (p. 970) to be filled in.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.249.2.3 get\_offered\_incompatible\_qos\_status()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_offered_incompatible_qos_status (
    DDS_OfferedIncompatibleQosStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_OfferedIncompatibleQosStatus</b> (p. 971) to be filled in.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.249.2.4 get\_publication\_matched\_status()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_publication_matched_status (
    DDS_PublicationMatchedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347) communication status.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_PublicationMatchedStatus</b> (p. 1020) to be filled in.
---------------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

**9.249.2.5 get\_reliable\_writer\_cache\_changed\_status()**

```
virtual DDS_ReturnCode_t DDSDataWriter::get_reliable_writer_cache_changed_status (
    DDS_ReliableWriterCacheChangedStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the reliable cache status for this writer.

This also resets the status so that it is no longer considered changed.

## Parameters

status	<< <b>inout</b> >> (p. 238) <b>DDS_ReliableWriterCacheChangedStatus</b> (p. 1046) to be filled in.
--------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

**9.249.2.6 get\_reliable\_reader\_activity\_changed\_status()**

```
virtual DDS_ReturnCode_t DDSDataWriter::get_reliable_reader_activity_changed_status (
    DDS_ReliableReaderActivityChangedStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the reliable reader activity changed status for this writer.

This also resets the status so that it is no longer considered changed.

## Parameters

status	<< <b>inout</b> >> (p. 238) <b>DDS_ReliableReaderActivityChangedStatus</b> (p. 1044) to be filled in.
--------	---

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

### 9.249.2.7 get\_datawriter\_cache\_status()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_datawriter_cache_status (
    DDS_DataWriterCacheStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the datawriter cache status for this writer.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <b>inout</b> >> (p. 238) <b>DDS_DataWriterCacheStatus</b> (p. 671) to be filled in.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.249.2.8 get\_datawriter\_protocol\_status()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_datawriter_protocol_status (
    DDS_DataWriterProtocolStatus & status ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the datawriter protocol status for this writer.

This also resets the status so that it is no longer considered changed.

#### Parameters

<i>status</i>	<< <b>inout</b> >> (p. 238) <b>DDS_DataWriterProtocolStatus</b> (p. 678) to be filled in.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.249.2.9 get\_matched\_subscription\_datawriter\_protocol\_status()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscription_datawriter_protocol_status (
    DDS_DataWriterProtocolStatus & status,
    const DDS_InstanceHandle_t & subscription_handle ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the datawriter protocol status for this writer, per matched subscription identified by the `subscription_handle`.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

#### Parameters

<code>status</code>	<< <b>inout</b> >> (p. 238) <b>DDS_DataWriterProtocolStatus</b> (p. 678) to be filled in.
<code>subscription_handle</code>	<< <b>in</b> >> (p. 238) Handle to a specific subscription associated with the <b>DDSDataReader</b> (p. 1288). Must correspond to a subscription currently associated with the <b>DDSDataWriter</b> (p. 1321).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.249.2.10 `is_matched_subscription_active()`

```
virtual DDS_ReturnCode_t DDSDataWriter::is_matched_subscription_active (
    DDS_Boolean & is_active,
    const DDS_InstanceHandle_t & subscription_handle ) [inline], [virtual]
```

Check if a subscription currently matched with a DataWriter is active.

This API is used for querying the endpoint liveness of a matched subscription. A matched subscription will be marked as inactive when it becomes nonprogressing (e.g., not responding to a DataWriter's heartbeats, or letting its internal queue fill up without taking the available data). Note that if the participant associated with the matched subscription loses liveness, the **DDS\_InstanceHandle\_t** (p. 74) will become invalid and this function will fail with **DDS\_RETCODE\_↵BAD\_PARAMETER** (p. 336).

#### Parameters

<code>subscription_handle</code>	<< <b>in</b> >> (p. 238) The <b>DDS_InstanceHandle_t</b> (p. 74) of the matched subscription. See <b>DDSDataWriter::get_matched_subscriptions</b> (p. 1331) for a description of what is considered a matched subscription.
<code>is_active</code>	<< <b>out</b> >> (p. 238) Indicates whether or not the matched subscription is active.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.249.2.11 get\_service\_request\_accepted\_status()**

```
virtual DDS_ReturnCode_t DDSDataWriter::get_service_request_accepted_status (
    DDS_ServiceRequestAcceptedStatus & status ) [inline], [virtual]
```

Accesses the **DDS\_SERVICE\_REQUEST\_ACCEPTED\_STATUS** (p. 348) communication status.

This also resets the status so that it is no longer considered changed.

**Parameters**

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_ServiceRequestAcceptedStatus</b> (p. 1099) to be filled in.
---------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.249.2.12 get\_matched\_subscription\_datawriter\_protocol\_status\_by\_locator()**

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscription_datawriter_protocol_status_by_←
locator (
    DDS_DataWriterProtocolStatus & status,
    const DDS_Locator_t & locator ) [inline], [virtual]
```

<<**extension**>> (p. 237) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

**Parameters**

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_DataWriterProtocolStatus</b> (p. 678) to be filled in
<i>locator</i>	<< <i>in</i> >> (p. 238) Locator to a specific locator associated with the <b>DDSDataReader</b> (p. 1288). Must correspond to a locator of one or more subscriptions currently associated with the <b>DDSDataWriter</b> (p. 1321).

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.249.2.13 assert\_liveliness()

```
virtual DDS_ReturnCode_t DDSDataWriter::assert_liveliness ( ) [inline], [virtual]
```

This operation manually asserts the liveliness of this **DDSDataWriter** (p. 1321).

This is used in combination with the **LIVELINESS** (p. 409) policy to indicate to RTI Connexx that the **DDSDataWriter** (p. 1321) remains active.

You only need to use this operation if the **LIVELINESS** (p. 409) setting is either **DDS\_MANUAL\_BY\_PARTICIPANT\_↔LIVELINESS\_QOS** (p. 410) or **DDS\_MANUAL\_BY\_TOPIC\_LIVELINESS\_QOS** (p. 410). Otherwise, it has no effect.

**Note:** writing data via the **FooDataWriter::write** (p. 1683) or **FooDataWriter::write\_w\_timestamp** (p. 1687) operation asserts liveliness on the **DDSDataWriter** (p. 1321) itself, and its **DDSDomainParticipant** (p. 1351). Consequently the use of **assert\_liveliness()** (p. 1329) is only needed if the application is not writing data regularly.

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
-----	---

#### See also

**DDS\_LivelinessQosPolicy** (p. 936)

### 9.249.2.14 get\_matched\_subscription\_locators()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscription_locators (
    DDS_LocatorSeq & locators ) [inline], [virtual]
```

<<**extension**>> (p. 237) Retrieve the list of locators for subscriptions currently "associated" with this **DDSDataWriter** (p. 1321).

The locators returned in the `locators` list are the ones that are used by the DDS implementation to communicate with the corresponding matched **DDSDataReader** (p. 1288) entities.

#### Parameters

<code>locators</code>	<< <b>inout</b> >> (p. 238). Handles of all the matched subscription locators.
-----------------------	--

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all the matches and the system can not resize the sequence, this method will fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) if the sequence is too small and the system can not resize it, or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

## 9.249.2.15 get\_matched\_subscriptions()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscriptions (
    DDS_InstanceHandleSeq & subscription_handles ) [inline], [virtual]
```

Retrieve the list of subscriptions currently "associated" with this **DDSDataWriter** (p. 1321).

A subscription is considered to be matching if all of the following criteria are true:

- The subscription is within the same domain as this publication.
- The subscription has a matching **DDSTopic** (p. 1617).
- The subscription has compatible QoS.
- If the applications are using partitions, the subscription shares a common partition with this publication.
- The **DDSDomainParticipant** (p. 1351) has not indicated that the subscription's **DDSDomainParticipant** (p. 1351) should be "ignored" by means of the **DDSDomainParticipant::ignore\_publication** (p. 1396) API.
- If the publication is using the **DDS\_MultiChannelQoSPolicy** (p.964) and the subscription is using a **DDSContentFilteredTopic** (p. 1283), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the writer has completed the key exchange with reader.

The handles returned in the `subscription_handles` list are the ones that RTI Connex uses to locally identify the corresponding matched **DDSDataReader** (p.1288) entities. These handles match the ones that appear in the **DDS\_SampleInfo::instance\_handle** (p.1087) field of the **DDS\_SampleInfo** (p.1082) when reading the **DDS\_↔SUBSCRIPTION\_TOPIC\_NAME** (p.300) builtin topic.

This API may return the subscription handles of subscriptions that are inactive. **DDSDataWriter::is\_matched\_↔subscription\_active** (p. 1328) can be used to check this.

## Parameters

<code>subscription_handles</code>	<< <i>inout</i> >> (p. 238). The handles of all the matched subscriptions.
-----------------------------------	--

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this method will fail with **DDS\_RETCODE\_OUT\_OF\_↔RESOURCES** (p. 337).

The maximum number of matches possible is configured with **DDS\_DomainParticipantResourceLimitsQosPolicy** (p. 746). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. .

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) if the sequence is too small and the system cannot resize it, or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	--

#### 9.249.2.16 `get_matched_subscription_data()`

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscription_data (
    DDS_SubscriptionBuiltinTopicData & subscription_data,
    const DDS_InstanceHandle_t & subscription_handle ) [inline], [virtual]
```

This operation retrieves the information on a subscription that is currently "associated" with the **DDSDataWriter** (p. 1321).

The `subscription_handle` must correspond to a subscription currently associated with the **DDSDataWriter** (p. 1321). Otherwise, the operation will fail and fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). Use **DDSDataWriter::get\_matched\_subscriptions** (p. 1331) to find the subscriptions that are currently matched with the **DDSDataWriter** (p. 1321).

The above information is also available through **DDSDataReaderListener::on\_data\_available()** (p. 1317) (if a reader listener is installed on the **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)).

When the subscription data is updated, for example when the content filter property changes, there is a small window of time in between when the DataWriter is made aware of these changes and when they actually take effect. Taking effect in this example means that the DataWriter will perform writer-side filtering using the new filter property values (filter expression and/or parameters).

When the DataWriter is made aware of the changes they will first be seen in the **DDSDataReaderListener::on\_data\_available()** (p. 1317) of the **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614). When these changes are applied, they will be seen in the output of this API because this API blocks until the most recent changes known to the DataWriter have taken effect. This API will only block when called outside of a listener callback, in order to not block the internal threads from making progress.

If application behavior depends on being made aware of information about a subscription only after it has taken effect on the DataWriter, the recommended pattern for usage of this API is to wait for subscription data to be received either through polling this API or by installing a listener on the **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614). When a new sample is received by the builtin DataReader, this API may be called in a separate thread and will return the expected matched subscription data once it has been applied to the DataWriter.

Because this API blocks, it is possible for this API to time out while waiting for the changes to be applied. A timeout may happen if the DataReader's subscription data is changing rapidly, preventing the DataWriter from returning valid information before newer data has been received, or if an application is performing a task in a listener callback, thereby preventing the middleware's threads from executing events in a timely manner.

Note: This operation does not retrieve the **DDS\_SubscriptionBuiltinTopicData::type\_code** (p. 1114). This information is available through **DDSDataReaderListener::on\_data\_available()** (p. 1317) (if a reader listener is installed on the **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1614)).

## Parameters

<i>subscription_data</i>	<< <i>inout</i> >> (p. 238). The information to be filled in on the associated subscription. Cannot be NULL.
<i>subscription_handle</i>	<< <i>in</i> >> (p. 238). Handle to a specific subscription associated with the <b>DDSDataReader</b> (p. 1288). Must correspond to a subscription currently associated with the <b>DDSDataWriter</b> (p. 1321).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337), or <b>DDS_RETCODE_TIMEOUT</b> (p. 337)
------------	---

## 9.249.2.17 get\_matched\_subscription\_participant\_data()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_matched_subscription_participant_data (
    DDS_ParticipantBuiltinTopicData & participant_data,
    const DDS_InstanceHandle_t & subscription_handle ) [inline], [virtual]
```

This operation retrieves the information on the discovered **DDSDomainParticipant** (p. 1351) associated with the subscription that is currently matching with the **DDSDataWriter** (p. 1321).

The *subscription\_handle* must correspond to a subscription currently associated with the **DDSDataWriter** (p. 1321). Otherwise, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). The operation may also fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if the subscription corresponds to the same **DDSDomainParticipant** (p. 1351) that the DataWriter belongs to. Use **DDSDataWriter::get\_matched\_subscriptions** (p. 1331) to find the subscriptions that are currently matched with the **DDSDataWriter** (p. 1321).

## Parameters

<i>participant_data</i>	<< <i>inout</i> >> (p. 238). The information to be filled in on the associated participant Cannot be NULL.
<i>subscription_handle</i>	<< <i>in</i> >> (p. 238). Handle to a specific subscription associated with the <b>DDSDataReader</b> (p. 1288). Must correspond to a subscription currently associated with the <b>DDSDataWriter</b> (p. 1321).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	--

## 9.249.2.18 get\_topic()

```
virtual DDS_Topic * DDSDataWriter::get_topic ( ) [inline], [virtual]
```

This operation returns the **DDSTopic** (p. 1617) associated with the **DDSDataWriter** (p. 1321).

This is the same **DDSTopic** (p. 1617) that was used to create the **DDSDataWriter** (p. 1321).

#### Returns

**DDSTopic** (p. 1617) that was used to create the **DDSDataWriter** (p. 1321).

### 9.249.2.19 get\_publisher()

```
virtual DDSPublisher * DDSDataWriter::get_publisher ( ) [inline], [virtual]
```

This operation returns the **DDSPublisher** (p. 1550) to which the **DDSDataWriter** (p. 1321) belongs.

#### Returns

**DDSPublisher** (p. 1550) to which the **DDSDataWriter** (p. 1321) belongs.

### 9.249.2.20 wait\_for\_acknowledgments()

```
virtual DDS_ReturnCode_t DDSDataWriter::wait_for_acknowledgments (
    const DDS_Duration_t & max_wait ) [inline], [virtual]
```

Blocks the calling thread until all data written by reliable **DDSDataWriter** (p. 1321) entity is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable **DDSDataWriter** (p. 1321) entity is acknowledged by (a) all reliable **DDSDataReader** (p. 1288) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged by all reliable matched data readers and by all required subscriptions; a timeout indicates that `max_wait` elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to `wait_for_acknowledgments` on a `DataWriter` and a different thread writes new samples on the same `DataWriter`, the new samples must be acknowledged before unblocking the thread waiting on `wait_for_acknowledgments`.

If the **DDSDataWriter** (p. 1321) does not have **DDS\_ReliabilityQosPolicy** (p. 1041) kind set to `RELIABLE`, this operation will succeed immediately.

#### Parameters

<code>max_wait</code>	<< <i>in</i> >> (p. 238) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 774) .
-----------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337), <b>DDS_RETCODE_TIMEOUT</b> (p. 337)
------------	--

## 9.249.2.21 is\_sample\_app\_acknowledged()

```
virtual DDS_ReturnCode_t DDSDataWriter::is_sample_app_acknowledged (
    DDS_Boolean & is_app_ack,
    const struct DDS_SampleIdentity_t & identity ) [inline], [virtual]
```

This method can be used to see if a sample has been application acknowledged.

This method can be used to see if a sample has been application acknowledged by all the matching DataReaders that were alive when the sample was written.

If a DataReader does not enable application acknowledgment (by setting **DDS\_ReliabilityQosPolicy::acknowledgment\_kind** (p. 1043) to a value other than **DDS\_PROTOCOL\_ACKNOWLEDGMENT\_MODE** (p. 435)), the sample is considered application acknowledged for that DataReader.

## Parameters

<i>is_app_ack</i>	<< <b>out</b> >> (p. 238) This value will be set to <b>DDS_BOOLEAN_TRUE</b> (p. 317) when the sample has been acknowledged.
<i>identity</i>	<< <b>in</b> >> (p. 238) Sample identity.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.249.2.22 wait\_for\_asynchronous\_publishing()

```
virtual DDS_ReturnCode_t DDSDataWriter::wait_for_asynchronous_publishing (
    const DDS_Duration_t & max_wait ) [inline], [virtual]
```

<<**extension**>> (p. 237) Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDSDataWriter** (p. 1321) is sent and acknowledged (if reliable) by all matched **DDSDataReader** (p. 1288) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; a time out indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDSDataReader** (p. 1288) is complete in addition to what **DDSDataWriter::wait\_for\_acks** (p. 1334) provides.

If the **DDSDataWriter** (p. 1321) does not have **DDS\_PublishModeQosPolicy** (p. 1025) kind set to **DDS\_↔ ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) the operation will complete immediately with **DDS\_RETURN\_↔ CODE\_OK** (p. 336).

#### Parameters

<i>max_wait</i>	<< <i>in</i> >> (p. 238) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 774) .
-----------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETURN_CODE_NOT_ENABLED</b> (p. 337), <b>DDS_RETURN_CODE_TIMEOUT</b> (p. 337)
------------	--

### 9.249.2.23 set\_qos()

```
virtual DDS_ReturnCode_t DDSDataWriter::set_qos (
    const DDS_DataWriterQos & qos ) [inline], [virtual]
```

Sets the writer QoS.

This operation modifies the QoS of the **DDSDataWriter** (p. 1321).

The **DDS\_DataWriterQos::user\_data** (p. 694), **DDS\_DataWriterQos::deadline** (p. 693), **DDS\_DataWriterQos::latency\_budget** (p. 693), **DDS\_DataWriterQos::ownership\_strength** (p. 694), **DDS\_DataWriterQos::transport\_priority** (p. 694), **DDS\_DataWriterQos::lifespan** (p. 694) and **DDS\_DataWriterQos::writer\_data\_lifecycle** (p. 695) can be changed. The other policies are immutable.

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) The <b>DDS_DataWriterQos</b> (p. 689) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDSDataWriter</b> (p. 1321) is enabled. The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 110) can be used to indicate that the QoS of the <b>DDSDataWriter</b> (p. 1321) should be changed to match the current default <b>DDS_DataWriterQos</b> (p. 689) set in the <b>DDSPublisher</b> (p. 1550).
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETURN_CODE_IMMUTABLE_POLICY</b> (p. 337) or <b>DDS_RETURN_CODE_INCONSISTENT_POLICY</b> (p. 337)
------------	---

See also

**DDS\_DataWriterQos** (p. 689) for rules on consistency among QoS

**set\_qos (abstract)** (p. 1464)

**Operations Allowed in Listener Callbacks** (p. 1528)

### 9.249.2.24 set\_property()

```
virtual DDS_ReturnCode_t DDSDataWriter::set_property (
    const char * property_name,
    const char * value,
    bool propagate ) [inline], [virtual]
```

Set the value for a property that applies to a DataWriter.

#### Warning

This method is not implemented in all APIs and it's intended only for testing purposes. You should use **DDSDataWriter::set\_qos** (p. 1336) instead.

#### Parameters

<i>property_name</i>	<< <i>in</i> >> (p. 238). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 238). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 238). Indicates if the property will be propagated or not.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSDomainParticipant::set\_property** (p. 1407)

**DDSDataReader::set\_property** (p. 1308)

**DDSDataWriter::set\_qos** (p. 1336)

### 9.249.2.25 set\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDataWriter::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [inline], [virtual]
```

<<*extension*>> (p. 237) Change the QoS of this writer using the input XML QoS profile.

This operation modifies the QoS of the **DDSDataWriter** (p. 1321).

The **DDS\_DataWriterQos::user\_data** (p. 694), **DDS\_DataWriterQos::deadline** (p. 693), **DDS\_DataWriterQos::latency\_budget** (p. 693), **DDS\_DataWriterQos::ownership\_strength** (p. 694), **DDS\_DataWriterQos::transport\_priority** (p. 694), **DDS\_DataWriterQos::lifespan** (p. 694) and **DDS\_DataWriterQos::writer\_data\_lifecycle** (p. 695) can be changed. The other policies are immutable.

#### Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSPublisher::set_default_library</b> (p. 1555)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSPublisher::set_default_profile</b> (p. 1556)).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337) or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	---

#### See also

**DDS\_DataWriterQos** (p. 689) for rules on consistency among QoS  
**Operations Allowed in Listener Callbacks** (p. 1528)

### 9.249.2.26 get\_qos()

```
virtual DDS_ReturnCode_t DDSDataWriter::get_qos (
    DDS_DataWriterQos & qos ) [inline], [virtual]
```

Gets the writer QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

#### Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) The <b>DDS_DataWriterQos</b> (p. 689) to be filled up.
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**get\_qos (abstract)** (p. 1465)

### 9.249.2.27 set\_listener()

```
virtual DDS_ReturnCode_t DDSDataWriter::set_listener (
    DDSDataWriterListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [inline], [virtual]
```

Sets the writer listener.

Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) <b>DDSDataWriterListener</b> (p. 1344) to set to
<i>mask</i>	<< <i>in</i> >> (p. 238) <b>DDS_StatusMask</b> (p. 341) associated with the <b>DDSDataWriterListener</b> (p. 1344).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**set\_listener (abstract)** (p. 1465)

### 9.249.2.28 get\_listener()

```
virtual DDSDataWriterListener * DDSDataWriter::get_listener ( ) [inline], [virtual]
```

Get the writer listener.

Returns

**DDSDataWriterListener** (p. 1344) of the **DDSDataWriter** (p. 1321).

See also

**get\_listener (abstract)** (p. 1466)

### 9.249.2.29 flush()

```
virtual DDS_ReturnCode_t DDSDataWriter::flush ( ) [inline], [virtual]
```

<<*extension*>> (p. 237) Flushes the batch in progress in the context of the calling thread.

After being flushed, the batch is available to be sent on the network.

If the **DDSDataWriter** (p.1321) does not have **DDS\_PublishModeQosPolicy** (p.1025) kind set to **DDS\_↔ ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431), the batch will be sent on the network immediately (in the context of the calling thread).

If the **DDSDataWriter** (p. 1321) does have **DDS\_PublishModeQosPolicy** (p. 1025) kind set to **DDS\_ ASYNCHRONOUS\_↔ PUBLISH\_MODE\_QOS** (p. 431), the batch will be sent in the context of the asynchronous publishing thread.

This operation may block in the same conditions as **FooDataWriter::write** (p. 1683).

If this operation does block, the **RELIABILITY max\_blocking\_time** configures the maximum time the write operation may block (waiting for space to become available). If **max\_blocking\_time** elapses before the **DDS\_DataWriter** is able to store the modification without exceeding the limits, the operation will fail with **DDS\_RETCODE\_TIMEOUT**.

#### MT Safety:

**flush()** (p. 1339) is only thread-safe with batching if **DDS\_BatchQosPolicy::thread\_safe\_write** (p. 603) is **TRUE**.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

### 9.249.2.30 take\_discovery\_snapshot() [1/2]

```
virtual DDS_ReturnCode_t DDSDataWriter::take_discovery_snapshot ( ) [inline], [virtual]
```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

The snapshot will be printed through the **NDDConfigLogger** (p. 1822). A possible output may be the following:  
Remote readers that match the local writer domain=0 name="writerTestName"

```
guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"
```

```
topic="FooTopic" type="FooType"
```

```
-----
```

Compatible readers:

```
1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"
```

```
kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"
```

```

liveliness="ALIVE"

Incompatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"
-----

```

### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336).
------------	---

#### 9.249.2.31 take\_discovery\_snapshot() [2/2]

```

virtual DDS_ReturnCode_t DDSDataWriter::take_discovery_snapshot (
    const char * file_name ) [inline], [virtual]

```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

The snapshot will be printed in the file specified by `file_name`. A possible output may be the following:

Remote readers that match the local writer domain=0 name="writerTestName"

```

guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"

topic="FooTopic" type="FooType"
-----

```

Compatible readers:

```

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

```

Incompatible readers:

```

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"
-----

```

### Parameters

<i>file_name</i>	<< <i>in</i> >> (p. 238) Name of the file where snapshot should be printed.
------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336).
------------	---

**9.249.2.32 enable()**

```
virtual DDS_ReturnCode_t DDSDataWriter::enable ( ) [inline], [virtual]
```

Enables the **DDSEntity** (p. 1463).

This operation enables the Entity. Entity objects can be created either enabled or disabled. This is controlled by the value of the **ENTITY\_FACTORY** (p. 402) QoS policy on the corresponding factory for the **DDSEntity** (p. 1463).

By default, **ENTITY\_FACTORY** (p. 402) is set so that it is not necessary to explicitly call **DDSEntity::enable** (p. 1466) on newly created entities.

The **DDSEntity::enable** (p. 1466) operation is idempotent. Calling enable on an already enabled Entity returns OK and has no effect.

If a **DDSEntity** (p. 1463) has not yet been enabled, the following kinds of operations may be invoked on it:

- set or get the QoS policies (including default QoS policies) and listener
- **DDSEntity::get\_statuscondition** (p. 1467)
- 'factory' operations
- **DDSEntity::get\_status\_changes** (p. 1467) and other get status operations (although the status of a disabled entity never changes)
- 'lookup' operations

Other operations may explicitly state that they may be called on disabled entities; those that do not will return the error **DDS\_RETCODE\_NOT\_ENABLED** (p. 337).

It is legal to delete an **DDSEntity** (p. 1463) that has not been enabled by calling the proper operation on its factory .

Entities created from a factory Entity that is disabled are created disabled, regardless of the setting of the **DDS\_EntityFactoryQosPolicy** (p. 903).

Calling enable on an Entity whose factory Entity is not enabled will fail and return **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

If **DDS\_EntityFactoryQosPolicy::autoenable\_created\_entities** (p. 905) is TRUE, the enable operation on a factory will automatically enable all entities created from that factory (for example, enabling a **DDSPublisher** (p. 1550) will enable all its contained **DDSDataWriter** (p. 1321) objects)

Listeners associated with an entity are not called until the entity is enabled.

Conditions associated with a disabled entity are "inactive," that is, they have a `trigger_value == FALSE`.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

Implements **DDSEntity** (p. 1466).

### 9.249.2.33 get\_statuscondition()

```
virtual DDSStatusCondition * DDSDataWriter::get_statuscondition ( ) [inline], [virtual]
```

Allows access to the **DDSStatusCondition** (p. 1578) associated with the **DDSEntity** (p. 1463).

The returned condition can then be added to a **DDSWaitSet** (p. 1629) so that the application can wait for specific status changes that affect the **DDSEntity** (p. 1463).

## Returns

the status condition associated with this entity.

Implements **DDSEntity** (p. 1467).

### 9.249.2.34 get\_status\_changes()

```
virtual DDS_StatusMask DDSDataWriter::get_status_changes ( ) [inline], [virtual]
```

Retrieves the list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

That is, the list of statuses whose value has changed since the last time the application read the status using the `get_*_status()` method.

When the entity is first created or if the entity is not enabled, all communication statuses are in the "untriggered" state so the list returned by the `get_status_changes` operation will be empty.

The list of statuses returned by the `get_status_changes` operation refers to the status that are triggered on the Entity itself and does not include statuses that apply to contained entities.

## Returns

list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

## See also

**Status Kinds** (p. 337)

Implements **DDSEntity** (p. 1467).

### 9.249.2.35 get\_instance\_handle()

```
virtual DDS_InstanceHandle_t DDSDataWriter::get_instance_handle ( ) [inline], [virtual]
```

Allows access to the **DDS\_InstanceHandle\_t** (p. 74) associated with the **DDSEntity** (p. 1463).

This operation returns the **DDS\_InstanceHandle\_t** (p. 74) that represents the **DDSEntity** (p. 1463).

#### Returns

the instance handle associated with this entity.

Implements **DDSEntity** (p. 1468).

## 9.250 DDSDataWriterListener Class Reference

<<**interface**>> (p. 237) **DDSListener** (p. 1526) for writer status.

Inheritance diagram for DDSDataWriterListener:

### Public Member Functions

- virtual void **on\_offered\_deadline\_missed** ( **DDSDataWriter** \*writer, const **DDS\_OfferedDeadlineMissed**↔**Status** &status)  
*Handles the **DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343) status.*
- virtual void **on\_liveliness\_lost** ( **DDSDataWriter** \*writer, const **DDS\_LivelinessLostStatus** &status)  
*Handles the **DDS\_LIVELINESS\_LOST\_STATUS** (p. 346) status.*
- virtual void **on\_offered\_incompatible\_qos** ( **DDSDataWriter** \*writer, const **DDS\_OfferedIncompatibleQos**↔**Status** &status)  
*Handles the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) status.*
- virtual void **on\_publication\_matched** ( **DDSDataWriter** \*writer, const **DDS\_PublicationMatchedStatus** &status)  
*Handles the **DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347) status.*
- virtual void **on\_reliable\_writer\_cache\_changed** ( **DDSDataWriter** \*writer, const **DDS\_ReliableWriterCache**↔**ChangedStatus** &status)  
 <<**extension**>> (p. 237) *A change has occurred in the writer's cache of unacknowledged samples.*

- virtual void **on\_reliable\_reader\_activity\_changed** ( **DDSDataWriter** \*writer, const **DDS\_ReliableReader**↔  
**ActivityChangedStatus** &status)  
    <<*extension*>> (p. 237) *A matched reliable reader has become active or become inactive.*
- virtual void **on\_sample\_removed** ( **DDSDataWriter** \*writer, const **DDS\_Cookie\_t** &cookie)  
    <<*extension*>> (p. 237) *Called when a sample is removed from the DataWriter queue.*
- virtual void **on\_instance\_replaced** ( **DDSDataWriter** \*writer, const **DDS\_InstanceHandle\_t** &handle)  
    <<*extension*>> (p. 237) *Notifies when an instance is replaced in DataWriter queue.*
- virtual void **on\_application\_acknowledgment** ( **DDSDataWriter** \*writer, const **DDS\_AcknowledgmentInfo**  
&info)  
    <<*extension*>> (p. 237) *Called when a sample is application-acknowledged*
- virtual void **on\_service\_request\_accepted** ( **DDSDataWriter** \*writer, const **DDS\_ServiceRequestAccepted**↔  
**Status** &status)  
    <<*extension*>> (p. 237) *Called when a **DDS\_ServiceRequest** (p. 1097) for the **DDSTopicQuery** (p. 1627) service is  
    dispatched to this **DDSDataWriter** (p. 1321) for processing.*

### 9.250.1 Detailed Description

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for writer status.

Entity:

**DDSDataWriter** (p. 1321)

Status:

**DDS\_LIVELINESS\_LOST\_STATUS** (p. 346), **DDS\_LivelinessLostStatus** (p. 934);  
**DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343), **DDS\_OfferedDeadlineMissedStatus** (p. 970);  
**DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344), **DDS\_OfferedIncompatibleQosStatus** (p. 971);  
**DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347), **DDS\_PublicationMatchedStatus** (p. 1020);  
**DDS\_RELIABLE\_READER\_ACTIVITY\_CHANGED\_STATUS** (p. 349), **DDS\_ReliableReaderActivity**↔  
**ChangedStatus** (p. 1044);  
**DDS\_RELIABLE\_WRITER\_CACHE\_CHANGED\_STATUS** (p. 349), **DDS\_ReliableWriterCacheChanged**↔  
**Status** (p. 1046);

See also

**DDSListener** (p. 1526)

**Status Kinds** (p. 337)

**Operations Allowed in Listener Callbacks** (p. 1528)

### 9.250.2 Member Function Documentation

### 9.250.2.1 on\_offered\_deadline\_missed()

```
virtual void DDSDataWriterListener::on_offered_deadline_missed (
    DDSDataWriter * writer,
    const DDS_OfferedDeadlineMissedStatus & status ) [virtual]
```

Handles the **DDS\_OFFERED\_DEADLINE\_MISSED\_STATUS** (p. 343) status.

This callback is called when the deadline that the **DDSDataWriter** (p. 1321) has committed through its **DEADLINE** (p. 385) qos policy was not respected for a specific instance. This callback is called for each deadline period elapsed during which the **DDSDataWriter** (p. 1321) failed to provide data for an instance.

#### Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current deadline missed status of locally created <b>DDSDataWriter</b> (p. 1321)

### 9.250.2.2 on\_liveliness\_lost()

```
virtual void DDSDataWriterListener::on_liveliness_lost (
    DDSDataWriter * writer,
    const DDS_LivelinessLostStatus & status ) [virtual]
```

Handles the **DDS\_LIVELINESS\_LOST\_STATUS** (p. 346) status.

This callback is called when the liveliness that the **DDSDataWriter** (p. 1321) has committed through its **LIVELINESS** (p. 409) qos policy was not respected; this **DDSDataReader** (p. 1288) entities will consider the **DDSDataWriter** (p. 1321) as no longer "alive/active". This callback will not be called when an already not alive **DDSDataWriter** (p. 1321) simply remains not alive for another liveliness period.

#### Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current liveliness lost status of locally created <b>DDSDataWriter</b> (p. 1321)

### 9.250.2.3 on\_offered\_incompatible\_qos()

```
virtual void DDSDataWriterListener::on_offered_incompatible_qos (
    DDSDataWriter * writer,
    const DDS_OfferedIncompatibleQosStatus & status ) [virtual]
```

Handles the **DDS\_OFFERED\_INCOMPATIBLE\_QOS\_STATUS** (p. 344) status.

This callback is called when the **DDS\_DataWriterQos** (p. 689) of the **DDSDataWriter** (p. 1321) was incompatible with what was requested by a **DDSDataReader** (p. 1288). This callback is called when a **DDSDataWriter** (p. 1321) has discovered a **DDSDataReader** (p. 1288) for the same **DDSTopic** (p. 1617) and common partition, but with a requested QoS that is incompatible with that offered by the **DDSDataWriter** (p. 1321).

#### Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current incompatible qos status of locally created <b>DDSDataWriter</b> (p. 1321)

#### 9.250.2.4 on\_publication\_matched()

```
virtual void DDSDataWriterListener::on_publication_matched (
    DDSDataWriter * writer,
    const DDS_PublicationMatchedStatus & status ) [virtual]
```

Handles the **DDS\_PUBLICATION\_MATCHED\_STATUS** (p. 347) status.

This callback is called when the **DDSDataWriter** (p. 1321) has found a **DDSDataReader** (p. 1288) that matches the **DDSTopic** (p. 1617), has a common partition and compatible QoS, or has ceased to be matched with a **DDSDataReader** (p. 1288) that was previously considered to be matched.

#### Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current publication match status of locally created <b>DDSDataWriter</b> (p. 1321)

#### 9.250.2.5 on\_reliable\_writer\_cache\_changed()

```
virtual void DDSDataWriterListener::on_reliable_writer_cache_changed (
    DDSDataWriter * writer,
    const DDS_ReliableWriterCacheChangedStatus & status ) [virtual]
```

<<**extension**>> (p. 237) A change has occurred in the writer's cache of unacknowledged samples.

This listener callback is triggered when:

- The cache is empty (contains no unacknowledged samples).
- The cache is full (the number of unacknowledged samples has reached the value specified in **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055)).
- The number of unacknowledged samples has reached **DDS\_RtpsReliableWriterProtocol\_t::high\_watermark** (p. 1063) or **DDS\_RtpsReliableWriterProtocol\_t::low\_watermark** (p. 1063).

## Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current reliable writer cache changed status of locally created <b>DDSDataWriter</b> (p. 1321)

## 9.250.2.6 on\_reliable\_reader\_activity\_changed()

```
virtual void DDSDataWriterListener::on_reliable_reader_activity_changed (
    DDSDataWriter * writer,
    const DDS_ReliableReaderActivityChangedStatus & status ) [virtual]
```

<<**extension**>> (p. 237) A matched reliable reader has become active or become inactive.

## Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current reliable reader activity changed status of locally created <b>DDSDataWriter</b> (p. 1321)

## 9.250.2.7 on\_sample\_removed()

```
virtual void DDSDataWriterListener::on_sample_removed (
    DDSDataWriter * writer,
    const DDS_Cookie_t & cookie ) [virtual]
```

<<**extension**>> (p. 237) Called when a sample is removed from the DataWriter queue.

This callback is called only if the sample was written with a **DDS\_Cookie\_t** (p. 618) with **FooDataWriter::write\_w←\_params** (p. 1688), or if this writer uses **Zero Copy** (p. 70) transfer over shared memory" or **FlatData Topic-Types** (p. 568) "FlatData language binding".

## Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>cookie</i>	<< <b>out</b> >> (p. 238) <ul style="list-style-type: none"> <li>• If this sample was written with <b>FooDataWriter::write_w_params</b> (p. 1688), this field contains a copy of the cookie set in <b>DDS_WriteParams_t</b> (p. 1251).</li> <li>• If this writer uses <b>Zero Copy transfer over shared memory</b> (p. 70) or <b>FlatData language binding</b> (p. 568), this field contains the absolute address of the sample that is removed. The address of the sample can be obtained by using <b>DDS_Cookie_t::to_pointer</b> (p. 473)</li> </ul>

See also

**FooDataWriter::get\_loan** (p. 1695)

### 9.250.2.8 on\_instance\_replaced()

```
virtual void DDSDataWriterListener::on_instance_replaced (
    DDSDataWriter * writer,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<**extension**>> (p. 237) Notifies when an instance is replaced in DataWriter queue.

This callback is called when an instance is replaced by the **DDSDataWriter** (p. 1321) due to instance resource limits being reached. This callback returns to the user the handle of the replaced instance, which can be used to get the key of the replaced instance using the **FooDataWriter::get\_key\_value** (p. 1691) API.

Because this callback can be called within the context of an in-progress write, dispose, or unregister call, most APIs on the DataWriter must not be used. The only DataWriter APIs that are safe to call within this callback are:

- **FooDataWriter::get\_key\_value** (p. 1691)
- **FooDataWriter::narrow** (p. 1678)
- **FooDataWriter::create\_data** (p. 1694)
- **FooDataWriter::delete\_data** (p. 1694)
- **DDSDataWriter::get\_matched\_subscriptions** (p. 1331)
- **DDSDataWriter::is\_matched\_subscription\_active** (p. 1328)
- **DDSDataWriter::get\_matched\_subscription\_participant\_data** (p. 1333)
- **DDSDataWriter::get\_topic** (p. 1333)
- **DDSDataWriter::get\_publisher** (p. 1334)
- **DDSDataWriter::is\_sample\_app\_acknowledged** (p. 1335)

#### Parameters

<i>writer</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>handle</i>	<< <b>out</b> >> (p. 238) Handle of the replaced instance

### 9.250.2.9 on\_application\_acknowledgment()

```
virtual void DDSDataWriterListener::on_application_acknowledgment (
```

```

    DDSDataWriter * writer,
    const DDS_AcknowledgmentInfo & info ) [virtual]

```

<<*extension*>> (p. 237) Called when a sample is application-acknowledged

Applicable only when **DDS\_ReliabilityQosPolicy::acknowledgment\_kind** (p. 1043) = **DDS\_APPLICATION\_AUTO\_←\_ACKNOWLEDGMENT\_MODE** (p. 435) or **DDS\_APPLICATION\_EXPLICIT\_ACKNOWLEDGMENT\_MODE** (p. 436)

Called when a sample is application-level acknowledged. Provides identities of the sample and the acknowledging **DDSDataReader** (p. 1288). Also provides user-specified response data sent from the **DDSDataReader** (p. 1288) by the acknowledgment message.

#### Parameters

<i>writer</i>	<< <i>out</i> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>info</i>	<< <i>out</i> >> (p. 238) <b>DDS_AcknowledgmentInfo</b> (p. 586) of the acknowledged sample

#### 9.250.2.10 on\_service\_request\_accepted()

```

virtual void DDSDataWriterListener::on_service_request_accepted (
    DDSDataWriter * writer,
    const DDS_ServiceRequestAcceptedStatus & status ) [virtual]

```

<<*extension*>> (p. 237) Called when a **DDS\_ServiceRequest** (p. 1097) for the **DDSTopicQuery** (p. 1627) service is dispatched to this **DDSDataWriter** (p. 1321) for processing.

#### Parameters

<i>writer</i>	<< <i>out</i> >> (p. 238) Locally created <b>DDSDataWriter</b> (p. 1321) that triggers the listener callback
<i>status</i>	<< <i>out</i> >> (p. 238) Current service request accepted status of locally created <b>DDSDataWriter</b> (p. 1321)

## 9.251 DDSDomainEntity Class Reference

<<*interface*>> (p. 237) Abstract base class for all DDS entities except for the **DDSDomainParticipant** (p. 1351).

Inheritance diagram for DDSDomainEntity:

## Additional Inherited Members

### 9.251.1 Detailed Description

<<*interface*>> (p. 237) Abstract base class for all DDS entities except for the **DDSDomainParticipant** (p. 1351).

Its sole purpose is to *conceptually* express that **DDSDomainParticipant** (p. 1351) is a special kind of **DDSEntity** (p. 1463) that acts as a container of all other **DDSEntity** (p. 1463) but itself cannot contain other **DDSDomainParticipant** (p. 1351).

## 9.252 DDSDomainParticipant Class Reference

<<*interface*>> (p. 237) Container for all **DDSDomainEntity** (p. 1350) objects.

Inheritance diagram for DDSDomainParticipant:

## Public Member Functions

- virtual **DDS\_ReturnCode\_t** **get\_default\_datawriter\_qos** ( **DDS\_DataWriterQos** &qos)=0  
 <<*extension*>> (p. 237) Copy the default **DDS\_DataWriterQos** (p. 689) values into the provided **DDS\_DataWriterQos** (p. 689) instance.
- virtual **DDS\_ReturnCode\_t** **set\_default\_datawriter\_qos** (const **DDS\_DataWriterQos** &qos)=0  
 <<*extension*>> (p. 237) Set the default DataWriterQos values for this DomainParticipant.
- virtual **DDS\_ReturnCode\_t** **set\_default\_datawriter\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0

- <<extension>>* (p. 237) Set the default **DDS\_DataWriterQos** (p. 689) values for this domain participant based on the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t get\_default\_datareader\_qos** (**DDS\_DataReaderQos** &qos)=0

*<<extension>>* (p. 237) Copy the default **DDS\_DataReaderQos** (p. 644) values into the provided **DDS\_DataReaderQos** (p. 644) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_datareader\_qos** (const **DDS\_DataReaderQos** &qos)=0

*<<extension>>* (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this domain participant.
- virtual **DDS\_ReturnCode\_t set\_default\_datareader\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0

*<<extension>>* (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this DomainParticipant based on the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t get\_default\_flowcontroller\_property** (**DDS\_FlowControllerProperty\_t** &prop)=0

*<<extension>>* (p. 237) Copies the default **DDS\_FlowControllerProperty\_t** (p. 912) values for this domain participant into the given **DDS\_FlowControllerProperty\_t** (p. 912) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_flowcontroller\_property** (const **DDS\_FlowControllerProperty\_t** &prop)=0

*<<extension>>* (p. 237) Set the default **DDS\_FlowControllerProperty\_t** (p. 912) values for this domain participant.
- virtual **DDS\_ReturnCode\_t register\_contentfilter** (const char \*filter\_name, const **DDSContentFilter** \*contentfilter)=0

*<<extension>>* (p. 237) Register a content filter which can be used to create a **DDSContentFilteredTopic** (p. 1283).
- virtual **DDSContentFilter \* lookup\_contentfilter** (const char \*filter\_name)=0

*<<extension>>* (p. 237) Lookup a content filter previously registered with **DDSDomainParticipant::register\_contentfilter** (p. 1364).
- virtual **DDS\_ReturnCode\_t unregister\_contentfilter** (const char \*filter\_name)=0

*<<extension>>* (p. 237) Unregister a content filter previously registered with **DDSDomainParticipant::register\_contentfilter** (p. 1364).
- virtual const char \* **get\_default\_library** ()=0

*<<extension>>* (p. 237) Gets the default XML library associated with a **DDSDomainParticipant** (p. 1351).
- virtual const char \* **get\_default\_profile** ()=0

*<<extension>>* (p. 237) Gets the default XML profile associated with a **DDSDomainParticipant** (p. 1351).
- virtual const char \* **get\_default\_profile\_library** ()=0

*<<extension>>* (p. 237) Gets the library where the default XML QoS profile is contained for a **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t set\_default\_library** (const char \*library\_name)=0

*<<extension>>* (p. 237) Sets the default XML library for a **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t set\_default\_profile** (const char \*library\_name, const char \*profile\_name)=0

*<<extension>>* (p. 237) Sets the default XML profile for a **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_default\_topic\_qos** (**DDS\_TopicQos** &qos)=0

Copies the default **DDS\_TopicQos** (p. 1135) values for this domain participant into the given **DDS\_TopicQos** (p. 1135) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_topic\_qos** (const **DDS\_TopicQos** &qos)=0

Set the default **DDS\_TopicQos** (p. 1135) values for this domain participant.
- virtual **DDS\_ReturnCode\_t set\_default\_topic\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0

*<<extension>>* (p. 237) Set the default **DDS\_TopicQos** (p. 1135) values for this domain participant based on the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t get\_default\_publisher\_qos** (**DDS\_PublisherQos** &qos)=0

Copy the default **DDS\_PublisherQos** (p. 1022) values into the provided **DDS\_PublisherQos** (p. 1022) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_publisher\_qos** (const **DDS\_PublisherQos** &qos)=0

Set the default **DDS\_PublisherQos** (p. 1022) values for this *DomainParticipant*.

- virtual **DDS\_ReturnCode\_t set\_default\_publisher\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0
 

*<<extension>>* (p. 237) Set the default **DDS\_PublisherQos** (p. 1022) values for this *DomainParticipant* based on the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t get\_default\_subscriber\_qos** ( **DDS\_SubscriberQos** &qos)=0
 

Copy the default **DDS\_SubscriberQos** (p. 1105) values into the provided **DDS\_SubscriberQos** (p. 1105) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_subscriber\_qos** (const **DDS\_SubscriberQos** &qos)=0
 

Set the default **DDS\_SubscriberQos** (p. 1105) values for this *DomainParticipant*.
- virtual **DDS\_ReturnCode\_t set\_default\_subscriber\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0
 

*<<extension>>* (p. 237) Set the default **DDS\_SubscriberQos** (p. 1105) values for this *DomainParticipant* based on the input XML QoS profile.
- virtual **DDSPublisher \* create\_publisher** (const **DDS\_PublisherQos** &qos, **DDSPublisherListener** \*listener, **DDS\_StatusMask** mask)=0
 

Creates a **DDSPublisher** (p. 1550) with the desired QoS policies and attaches to it the specified **DDSPublisherListener** (p. 1571).
- virtual **DDSPublisher \* create\_publisher\_with\_profile** (const char \*library\_name, const char \*profile\_name, **DDSPublisherListener** \*listener, **DDS\_StatusMask** mask)=0
 

*<<extension>>* (p. 237) Creates a new **DDSPublisher** (p. 1550) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t delete\_publisher** ( **DDSPublisher** \*p)=0
 

Deletes an existing **DDSPublisher** (p. 1550).
- virtual **DDSSubscriber \* create\_subscriber** (const **DDS\_SubscriberQos** &qos, **DDSSubscriberListener** \*listener, **DDS\_StatusMask** mask)=0
 

Creates a **DDSSubscriber** (p. 1592) with the desired QoS policies and attaches to it the specified **DDSSubscriberListener** (p. 1613).
- virtual **DDSSubscriber \* create\_subscriber\_with\_profile** (const char \*library\_name, const char \*profile\_name, **DDSSubscriberListener** \*listener, **DDS\_StatusMask** mask)=0
 

*<<extension>>* (p. 237) Creates a new **DDSSubscriber** (p. 1592) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t delete\_subscriber** ( **DDSSubscriber** \*s)=0
 

Deletes an existing **DDSSubscriber** (p. 1592).
- virtual **DDS\_ReturnCode\_t get\_publishers** ( **DDSPublisherSeq** &publishers)=0
 

*<<extension>>* (p. 237) Allows the application to access all the publishers the participant has.
- virtual **DDS\_ReturnCode\_t get\_subscribers** ( **DDSSubscriberSeq** &subscribers)=0
 

*<<extension>>* (p. 237) Allows the application to access all the subscribers the participant has.
- virtual **DDSTopic \* create\_topic** (const char \*topic\_name, const char \*type\_name, const **DDS\_TopicQos** &qos, **DDSTopicListener** \*listener, **DDS\_StatusMask** mask)=0
 

Creates a **DDSTopic** (p. 1617) with the desired QoS policies and attaches to it the specified **DDSTopicListener** (p. 1626).
- virtual **DDSTopic \* create\_topic\_with\_profile** (const char \*topic\_name, const char \*type\_name, const char \*library\_name, const char \*profile\_name, **DDSTopicListener** \*listener, **DDS\_StatusMask** mask)=0
 

*<<extension>>* (p. 237) Creates a new **DDSTopic** (p. 1617) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t delete\_topic** ( **DDSTopic** \*topic)=0
 

Deletes a **DDSTopic** (p. 1617).
- virtual **DDSContentFilteredTopic \* create\_contentfilteredtopic** (const char \*name, **DDSTopic** \*related\_topic, const char \*filter\_expression, const **DDS\_StringSeq** &expression\_parameters)=0
 

Creates a **DDSContentFilteredTopic** (p. 1283), that can be used to do content-based subscriptions.

- virtual **DDSContentFilteredTopic \* create\_contentfilteredtopic\_with\_filter** (const char \*name, **DDSTopic** \*related\_topic, const char \*filter\_expression, const **DDS\_StringSeq** &expression\_parameters, const char \*filter\_name=**DDS\_SQLFILTER\_NAME**)=0  
*<<extension>>* (p. 237) Creates a **DDSContentFilteredTopic** (p. 1283) using the specified filter to do content-based subscriptions.
- virtual **DDS\_ReturnCode\_t delete\_contentfilteredtopic** (**DDSContentFilteredTopic** \*a\_contentfilteredtopic)=0  
*Deletes a **DDSContentFilteredTopic** (p. 1283).*
- virtual **DDSMultiTopic \* create\_multitopic** (const char \*name, const char \*type\_name, const char \*subscription\_expression, const **DDS\_StringSeq** &expression\_parameters)=0  
**[Not supported (optional)]** Creates a **MultiTopic** that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.
- virtual **DDS\_ReturnCode\_t delete\_multitopic** (**DDSMultiTopic** \*a\_multitopic)=0  
**[Not supported (optional)]** Deletes a **DDSMultiTopic** (p. 1529).
- virtual **DDSTopic \* find\_topic** (const char \*topic\_name, const **DDS\_Duration\_t** &timeout)=0  
*Finds an existing (or ready to exist) **DDSTopic** (p. 1617), based on its name.*
- virtual **DDSTopicDescription \* lookup\_topicdescription** (const char \*topic\_name)=0  
*Looks up an existing, locally created **DDSTopicDescription** (p. 1624), based on its name.*
- virtual **DDSFlowController \* create\_flowcontroller** (const char \*name, const **DDS\_FlowController\_Property\_t** &prop)=0  
*<<extension>>* (p. 237) Creates a **DDSFlowController** (p. 1468) with the desired property.
- virtual **DDS\_ReturnCode\_t delete\_flowcontroller** (**DDSFlowController** \*fc)=0  
*<<extension>>* (p. 237) Deletes an existing **DDSFlowController** (p. 1468).
- virtual **DDSFlowController \* lookup\_flowcontroller** (const char \*name)=0  
*<<extension>>* (p. 237) Looks up an existing locally-created **DDSFlowController** (p. 1468), based on its name.
- virtual **DDSSubscriber \* get\_builtin\_subscriber** ()=0  
*Accesses the **built-in DDSSubscriber** (p. 1592).*
- virtual **DDS\_ReturnCode\_t ignore\_participant** (const **DDS\_InstanceHandle\_t** &handle)=0  
*Instructs RTI Connex to locally ignore a remote **DDSDomainParticipant** (p. 1351).*
- virtual **DDS\_ReturnCode\_t banish\_ignored\_participants** ()=0  
*<<extension>>* (p. 237) Prevents ignored remote **DomainParticipants** from receiving traffic from the local **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t ignore\_topic** (const **DDS\_InstanceHandle\_t** &handle)=0  
*Instructs RTI Connex to locally ignore a **DDSTopic** (p. 1617).*
- virtual **DDS\_ReturnCode\_t ignore\_publication** (const **DDS\_InstanceHandle\_t** &handle)=0  
*Instructs RTI Connex to locally ignore a publication.*
- virtual **DDS\_ReturnCode\_t ignore\_subscription** (const **DDS\_InstanceHandle\_t** &handle)=0  
*Instructs RTI Connex to locally ignore a subscription.*
- virtual **DDS\_DomainId\_t get\_domain\_id** ()=0  
*Get the unique domain identifier.*
- virtual **DDS\_ReturnCode\_t get\_current\_time** (**DDS\_Time\_t** &current\_time)=0  
*Returns the current value of the time.*
- virtual **DDS\_ReturnCode\_t register\_durable\_subscription** (const **DDS\_EndpointGroup\_t** &group, const char \*topic\_name)=0  
*<<extension>>* (p. 237) Registers a Durable Subscription on the specified **DDSTopic** (p. 1617) on all Persistence Services.
- virtual **DDS\_ReturnCode\_t delete\_durable\_subscription** (const **DDS\_EndpointGroup\_t** &group)=0  
*<<extension>>* (p. 237) Deletes an existing Durable Subscription on all Persistence Services.
- virtual **DDS\_ReturnCode\_t assert\_liveliness** ()=0

Manually asserts the liveness of this *DDSDomainParticipant* (p. 1351).

- virtual **DDS\_ReturnCode\_t resume\_endpoint\_discovery** (const **DDS\_InstanceHandle\_t** &remote\_↔ participant\_handle)=0  
 <<extension>> (p. 237) Initiates endpoint discovery with the specified remote *DDSDomainParticipant* (p. 1351).
- virtual **DDS\_ReturnCode\_t delete\_contained\_entities** ()=0  
 Delete all the entities that were created by means of the "create" operations on the *DDSDomainParticipant* (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_discovered\_participants** ( **DDS\_InstanceHandleSeq** &participant\_↔ handles)=0  
 Returns a list of discovered *DDSDomainParticipant* (p. 1351) entities.
- virtual **DDS\_ReturnCode\_t get\_discovered\_participants\_from\_subject\_name** ( **DDS\_InstanceHandleSeq** &participant\_handles, const char \*subject\_name)=0  
 <<extension>> (p. 237) Returns a list of discovered *DDSDomainParticipant* (p. 1351) entities that have the given *DDS\_EntityNameQoSPolicy::name* (p. 906).
- virtual **DDS\_ReturnCode\_t get\_discovered\_participant\_data** (struct **DDS\_ParticipantBuiltinTopicData** &participant\_data, const **DDS\_InstanceHandle\_t** &participant\_handle)=0  
 Returns *DDS\_ParticipantBuiltinTopicData* (p. 979) for the specified *DDSDomainParticipant* (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_discovered\_participant\_subject\_name** (char \*subject\_name, **DDS\_↔ UnsignedLong** &subject\_name\_size, const **DDS\_InstanceHandle\_t** &participant\_handle)=0  
 <<extension>> (p. 237) Returns *DDS\_EntityNameQoSPolicy::name* (p. 906) for the specified *DDSDomain↔ Participant* (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_discovered\_topics** ( **DDS\_InstanceHandleSeq** &topic\_handles)=0  
 Returns list of discovered *DDSTopic* (p. 1617) objects.
- virtual **DDS\_ReturnCode\_t get\_discovered\_topic\_data** (struct **DDS\_TopicBuiltinTopicData** &topic\_data, const **DDS\_InstanceHandle\_t** &topic\_handle)=0  
 Returns *DDS\_TopicBuiltinTopicData* (p. 1128) for the specified *DDSTopic* (p. 1617).
- virtual **DDS\_Boolean contains\_entity** (const **DDS\_InstanceHandle\_t** &a\_handle)=0  
 Completes successfully with *DDS\_BOOLEAN\_TRUE* (p. 317) if the referenced *DDSEntity* (p. 1463) is contained by the *DDSDomainParticipant* (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_participant\_protocol\_status** (struct **DDS\_DomainParticipantProtocol↔ Status** &status)=0  
 <<extension>> (p. 237) Get the domain participant protocol status for this participant.
- virtual **DDS\_ReturnCode\_t set\_property** (const char \*property\_name, const char \*value, bool propagate)=0  
 Set the value for a property that applies to a *DomainParticipant*.
- virtual **DDS\_ReturnCode\_t set\_qos** (const **DDS\_DomainParticipantQoS** &qos)=0  
 Change the QoS of this *DomainParticipant*.
- virtual **DDS\_ReturnCode\_t set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p. 237) Change the QoS of this domain participant using the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t get\_qos** ( **DDS\_DomainParticipantQoS** &qos)=0  
 Get the participant QoS.
- virtual **DDS\_ReturnCode\_t add\_peer** (const char \*peer\_desc\_string)=0  
 <<extension>> (p. 237) Attempt to contact one or more additional peer participants.
- virtual **DDS\_ReturnCode\_t remove\_peer** (const char \*peer\_desc\_string)=0  
 <<extension>> (p. 237) Remove one or more peer participants from the list of peers with which this *DDSDomain↔ Participant* (p. 1351) will try to communicate.
- virtual **DDS\_ReturnCode\_t get\_dns\_tracker\_polling\_period** ( **DDS\_Duration\_t** &polling\_period)=0  
 <<extension>> (p. 237) Retrieves the frequency used by the DNS tracker thread to query the DNS service.
- virtual **DDS\_ReturnCode\_t set\_dns\_tracker\_polling\_period** (const **DDS\_Duration\_t** &polling\_period)=0  
 <<extension>> (p. 237) Configures the frequency in which the DNS tracker queries the DNS service.

- virtual `DDS_ReturnCode_t set_listener ( DDSDomainParticipantListener *l, DDS_StatusMask mask=DDS_STATUS_MASK_ALL)=0`  
*Sets the participant listener.*
- virtual `DDSDomainParticipantListener * get_listener ()=0`  
*Get the participant listener.*
- virtual `DDSPublisher * get_implicit_publisher ()=0`  
 <<extension>> (p. 237) Returns the implicit *DDSPublisher* (p. 1550). If an implicit Publisher does not already exist, this creates one.
- virtual `DDSSubscriber * get_implicit_subscriber ()=0`  
 <<extension>> (p. 237) Returns the implicit *DDSSubscriber* (p. 1592). If an implicit Subscriber does not already exist, this creates one.
- virtual `DDSDataWriter * create_datawriter ( DDSTopic *topic, const DDS_DataWriterQos &qos, DDSDataWriterListener *listener, DDS_StatusMask mask)=0`  
 <<extension>> (p. 237) Creates a *DDSDataWriter* (p. 1321) that will be attached and belong to the implicit *DDSPublisher* (p. 1550).
- virtual `DDSDataWriter * create_datawriter_with_profile ( DDSTopic *topic, const char *library_name, const char *profile_name, DDSDataWriterListener *listener, DDS_StatusMask mask)=0`  
 <<extension>> (p. 237) Creates a *DDSDataWriter* (p. 1321) using a XML QoS profile that will be attached and belong to the implicit *DDSPublisher* (p. 1550).
- virtual `DDS_ReturnCode_t delete_datawriter ( DDSDataWriter *a_datawriter)=0`  
 <<extension>> (p. 237) Deletes a *DDSDataWriter* (p. 1321) that belongs to the implicit *DDSPublisher* (p. 1550).
- virtual `DDSDataReader * create_datareader ( DDSTopicDescription *topic, const DDS_DataReaderQos &qos, DDSDataReaderListener *listener, DDS_StatusMask mask)=0`  
 <<extension>> (p. 237) Creates a *DDSDataReader* (p. 1288) that will be attached and belong to the implicit *DDSSubscriber* (p. 1592).
- virtual `DDSDataReader * create_datareader_with_profile ( DDSTopicDescription *topic, const char *library_name, const char *profile_name, DDSDataReaderListener *listener, DDS_StatusMask mask)=0`  
 <<extension>> (p. 237) Creates a *DDSDataReader* (p. 1288) using a XML QoS profile that will be attached and belong to the implicit *DDSSubscriber* (p. 1592).
- virtual `DDS_ReturnCode_t delete_datareader ( DDSDataReader *a_datareader)=0`  
 <<extension>> (p. 237) Deletes a *DDSDataReader* (p. 1288) that belongs to the implicit *DDSSubscriber* (p. 1592).
- virtual `DDSPublisher * lookup_publisher_by_name (const char *publisher_name)=0`  
 <<extension>> (p. 237) Looks up a *DDSPublisher* (p. 1550) by its entity name within this *DDSDomainParticipant* (p. 1351).
- virtual `DDSSubscriber * lookup_subscriber_by_name (const char *subscriber_name)=0`  
 <<extension>> (p. 237) Retrieves a *DDSSubscriber* (p. 1592) by its entity name within this *DDSDomainParticipant* (p. 1351).
- virtual `DDSDataWriter * lookup_datawriter_by_name (const char *datawriter_full_name)=0`  
 <<extension>> (p. 237) Looks up a *DDSDataWriter* (p. 1321) by its entity name within this *DDSDomainParticipant* (p. 1351).
- virtual `DDSDataReader * lookup_datareader_by_name (const char *datareader_full_name)=0`  
 <<extension>> (p. 237) Retrieves up a *DDSDataReader* (p. 1288) by its entity name in this *DDSDomainParticipant* (p. 1351).
- virtual `DDS_ReturnCode_t take_discovery_snapshot ()=0`  
*Take a snapshot of the remote participants discovered by a local one.*
- virtual `DDS_ReturnCode_t take_discovery_snapshot (const char *file_name)=0`  
*Take a snapshot of the remote participants discovered by a local one.*

### 9.252.1 Detailed Description

<<*interface*>> (p. 237) Container for all **DDSDomainEntity** (p. 1350) objects.

The DomainParticipant object plays several roles:

- It acts as a container for all other **DDSEntity** (p. 1463) objects.
- It acts as a *factory* for the **DDSPublisher** (p.1550), **DDSSubscriber** (p.1592), **DDSTopic** (p.1617) and **DDSMultiTopic** (p. 1529) **DDSEntity** (p. 1463) objects.
- It represents the participation of the application on a communication plane that isolates applications running on the same set of physical computers from each other. A domain establishes a virtual network linking all applications that share the same `domainId` and isolating them from applications running on different domains. In this way, several independent distributed applications can coexist in the same physical network without interfering, or even being aware of each other.
- It provides administration services in the domain, offering operations that allow the application to ignore locally any information about a given participant (**DDSDomainParticipant::ignore\_participant** (p. 1393)), publication (**DDSDomainParticipant::ignore\_publication** (p. 1396)), subscription (**DDSDomainParticipant::ignore\_subscription()** (p. 1396)) or topic (**DDSDomainParticipant::ignore\_topic()** (p. 1395)).

The following operations may be called even if the **DDSDomainParticipant** (p. 1351) is not enabled. Operations NOT in this list will fail with **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) \ if called on a disabled DomainParticipant.

- **DDSEntity::enable** (p. 1466),
- **DDSDomainParticipant::set\_qos** (p. 1408), **DDSDomainParticipant::set\_qos\_with\_profile** (p. 1408), **DDSDomainParticipant::get\_qos** (p. 1409),
- **DDSDomainParticipant::set\_listener** (p. 1413), **DDSDomainParticipant::get\_listener** (p. 1414),
- Factory operations: **DDSDomainParticipant::create\_flowcontroller** (p.1391), **DDSDomainParticipant::create\_topic** (p.1382), **DDSDomainParticipant::create\_topic\_with\_profile** (p.1383), **DDSDomainParticipant::create\_publisher** (p.1376), **DDSDomainParticipant::create\_publisher\_with\_profile** (p.1377), **DDSDomainParticipant::create\_subscriber** (p.1379), **DDSDomainParticipant::create\_subscriber\_with\_profile** (p.1380), **DDSDomainParticipant::delete\_flowcontroller** (p.1392), **DDSDomainParticipant::delete\_topic** (p.1385), **DDSDomainParticipant::delete\_publisher** (p.1378), **DDSDomainParticipant::delete\_subscriber** (p.1380), **DDSDomainParticipant::set\_default\_topic\_qos** (p.1369), **DDSDomainParticipant::set\_default\_topic\_qos\_with\_profile** (p.1370), **DDSDomainParticipant::get\_default\_topic\_qos** (p.1368), **DDSDomainParticipant::set\_default\_publisher\_qos** (p.1372), **DDSDomainParticipant::set\_default\_publisher\_qos\_with\_profile** (p.1372), **DDSDomainParticipant::get\_default\_publisher\_qos** (p.1371), **DDSDomainParticipant::set\_default\_subscriber\_qos** (p.1374), **DDSDomainParticipant::set\_default\_subscriber\_qos\_with\_profile** (p.1375), **DDSDomainParticipant::get\_default\_subscriber\_qos** (p.1373), **DDSDomainParticipant::delete\_contained\_entities** (p.1401), **DDSDomainParticipant::set\_default\_datareader\_qos** (p.1361), **DDSDomainParticipant::set\_default\_datareader\_qos\_with\_profile** (p.1362), **DDSDomainParticipant::get\_default\_datareader\_qos** (p.1360), **DDSDomainParticipant::set\_default\_datawriter\_qos** (p.1359), **DDSDomainParticipant::set\_default\_datawriter\_qos\_with\_profile** (p.1359), **DDSDomainParticipant::get\_default\_datawriter\_qos** (p.1358), **DDSDomainParticipant::set\_default\_library** (p.1367), **DDSDomainParticipant::set\_default\_profile** (p.1368) **DDSDomainParticipant::set\_default\_flowcontroller\_property** (p.1363), **DDSDomainParticipant::get\_default\_flowcontroller\_property** (p.1362), ;

- Operations for looking up topics: **DDSDomainParticipant::lookup\_topicdescription** (p. 1390);
- Operations that access status: **DDSEntity::get\_statuscondition** (p. 1467), **DDSEntity::get\_status\_changes** (p. 1467).

**QoS:****DDS\_DomainParticipantQos** (p. 741)**Status:****Status Kinds** (p. 337)**Listener:****DDSDomainParticipantListener** (p. 1454)**See also****Operations Allowed in Listener Callbacks** (p. 1528)**Examples****HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

## 9.252.2 Member Function Documentation

### 9.252.2.1 `get_default_datawriter_qos()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_datawriter_qos (
    DDS_DataWriterQos & qos ) [pure virtual]
```

<<*extension*>> (p. 237) Copy the default **DDS\_DataWriterQos** (p. 689) values into the provided **DDS\_DataWriterQos** (p. 689) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_datawriter\_qos** (p. 1359), or **DDSDomainParticipant::set\_default\_datawriter\_qos\_with\_profile** (p. 1359), or else, if the call was never made, the default values listed in **DDS\_DataWriterQos** (p. 689).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

**MT Safety:**

UNSAFE. It is not safe to retrieve the default DataWriterQoS from a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datawriter\_qos** (p. 1359).

## Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) Qos to be filled up.
------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.252.2.2 set\_default\_datawriter\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_datawriter_qos (
    const DDS_DataWriterQos & qos ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default DataWriterQos values for this DomainParticipant.

This set of default values will be inherited for a newly created **DDSPublisher** (p. 1550).

## Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 337)

## MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datawriter\_qos** (p. 1359) or **DDSDomain↔  
Participant::get\_default\_datawriter\_qos** (p. 1358) or calling **DDSDomainParticipant::create\_datawriter** (p. 1415) with **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) as the *qos* parameter.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 110) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipant::set_default_datawriter_qos</b> (p. 1359) had never been called.
------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

### 9.252.2.3 set\_default\_datawriter\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_datawriter_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Set the default **DDS\_DataWriterQos** (p. 689) values for this domain participant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDSPublisher** (p. 1550).

#### Precondition

The **DDS\_DataWriterQos** (p. 689) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default DataWriter QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datawriter\_qos** (p. 1359) or **DDSDomainParticipant::get\_default\_datawriter\_qos** (p. 1358)

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

### 9.252.2.4 get\_default\_datareader\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_datareader_qos (
    DDS_DataReaderQos & qos ) [pure virtual]
```

<<**extension**>> (p. 237) Copy the default **DDS\_DataReaderQos** (p. 644) values into the provided **DDS\_DataReaderQos** (p. 644) instance.

The retrieved qos will match the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_datareader\_qos** (p. 1361), or **DDSDomainParticipant::set\_default\_datareader\_qos\_with\_profile** (p. 1362), or else, if the call was never made, the default values listed in **DDS\_DataReaderQos** (p. 644).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

**MT Safety:**

UNSAFE. It is not safe to retrieve the default DataReader QoS from a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datareader\_qos** (p. 1361).

**Parameters**

<i>qos</i>	<< <i>inout</i> >> (p. 238) Qos to be filled up.
------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.252.2.5 set\_default\_datareader\_qos()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_datareader_qos (
    const DDS_DataReaderQos & qos ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this domain participant.

This set of default values will be inherited for a newly created **DDSSubscriber** (p. 1592).

**Precondition**

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 337)

**MT Safety:**

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datareader\_qos** (p. 1361) or **DDSDomain↔  
Participant::get\_default\_datareader\_qos** (p. 1360).

**Parameters**

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipant::set_default_datareader_qos</b> (p. 1361) had never been called.
------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

### 9.252.2.6 set\_default\_datareader\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_datareader_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be inherited for a newly created **DDSSubscriber** (p. 1592).

#### Precondition

The **DDS\_DataReaderQos** (p. 644) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default DataReader QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datareader\_qos** (p. 1361) or **DDSDomainParticipant::get\_default\_datareader\_qos** (p. 1360).

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

### 9.252.2.7 get\_default\_flowcontroller\_property()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_flowcontroller_property (
    DDS_FlowControllerProperty_t & prop ) [pure virtual]
```

<<**extension**>> (p. 237) Copies the default **DDS\_FlowControllerProperty\_t** (p. 912) values for this domain participant into the given **DDS\_FlowControllerProperty\_t** (p. 912) instance.

The retrieved `property` will match the set of values specified on the last successful call to `DDSDomainParticipant::set_default_flowcontroller_property` (p. 1363), or else, if the call was never made, the default values listed in `DDS_FlowControllerProperty_t` (p. 912).

#### MT Safety:

UNSAFE. It is not safe to retrieve the default flow controller properties from a `DomainParticipant` while another thread may be simultaneously calling `DDSDomainParticipant::set_default_flowcontroller_property` (p. 1363)

#### Parameters

<code>prop</code>	<< <i>in</i> >> (p. 238) Default property to be retrieved.
-------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

`DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT` (p. 58)

`DDSDomainParticipant::create_flowcontroller` (p. 1391)

### 9.252.2.8 set\_default\_flowcontroller\_property()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_flowcontroller_property (
    const DDS_FlowControllerProperty_t & prop ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default `DDS_FlowControllerProperty_t` (p. 912) values for this domain participant.

This default value will be used for newly created `DDSFlowController` (p. 1468) if `DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT` (p. 58) is specified as the `property` parameter when `DDSDomainParticipant::create_flowcontroller` (p. 1391) is called.

#### Precondition

The specified property values must be consistent, or else the operation will have no effect and fail with `DDS_RETCODE_INCONSISTENT_POLICY` (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default flow controller properties for a `DomainParticipant` while another thread may be simultaneously calling `DDSDomainParticipant::set_default_flowcontroller_property` (p. 1363), `DDSDomainParticipant::get_default_flowcontroller_property` (p. 1362) or calling `DDSDomainParticipant::create_flowcontroller` (p. 1391) with `DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT` (p. 58) as the `qos` parameter.

## Parameters

<i>prop</i>	<< <i>in</i> >> (p. 238) Default property to be set. The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 58) may be passed as <code>property</code> to indicate that the default property should be reset to the default values the factory would use if <b>DDSDomainParticipant::set_default_flowcontroller_property</b> (p. 1363) had never been called.
-------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 58)

**DDSDomainParticipant::create\_flowcontroller** (p. 1391)

## 9.252.2.9 register\_contentfilter()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::register_contentfilter (
    const char * filter_name,
    const DDSContentFilter * contentfilter ) [pure virtual]
```

<<*extension*>> (p. 237) Register a content filter which can be used to create a **DDSContentFilteredTopic** (p. 1283).

DDS specifies a SQL-like content filter for use by content filtered topics. If this filter does not meet your filtering requirements, you can register a custom filter.

To use a custom filter, it must be registered in the following places:

- In any application that uses the custom filter to create a **DDSContentFilteredTopic** (p. 1283) and the corresponding **DDSDataReader** (p. 1288).
- In each application that writes the data to the applications mentioned above.

For example, suppose Application A on the subscription side creates a Topic named X and a ContentFilteredTopic named filteredX (and a corresponding DataReader), using a previously registered content filter, myFilter. With only that, you will have filtering at the subscription side. If you also want to perform filtering in any application that publishes Topic X, then you also need to register the same definition of the ContentFilter myFilter in that application.

Each `filter_name` can only be used to registered a content filter once with a **DDSDomainParticipant** (p. 1351).

## Parameters

<i>filter_name</i>	<< <i>in</i> >> (p. 238) Name of the filter. The name must be unique within the <b>DDSDomainParticipant</b> (p. 1351) and must not exceed 255 characters. Cannot be NULL.
<i>contentfilter</i>	<< <i>in</i> >> (p. 238) Content filter to be registered. Cannot be NULL.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSDomainParticipant::unregister\_contentfilter** (p. 1365)

## 9.252.2.10 lookup\_contentfilter()

```
virtual DDSContentFilter * DDSDomainParticipant::lookup_contentfilter (
    const char * filter_name ) [pure virtual]
```

<<**extension**>> (p. 237) Lookup a content filter previously registered with **DDSDomainParticipant::register\_contentfilter** (p. 1364).

## Parameters

<i>filter_name</i>	<< <b>in</b> >> (p. 238) Name of the filter. Cannot be NULL.
--------------------	--

## Returns

NULL if the given *filter\_name* has not been previously registered to the **DDSDomainParticipant** (p. 1351) with **DDSDomainParticipant::register\_contentfilter** (p. 1364). Otherwise, return the **DDSContentFilter** (p. 1280) that has been previously registered with the given *filter\_name*.

## See also

**DDSDomainParticipant::register\_contentfilter** (p. 1364)

## 9.252.2.11 unregister\_contentfilter()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::unregister_contentfilter (
    const char * filter_name ) [pure virtual]
```

<<**extension**>> (p. 237) Unregister a content filter previously registered with **DDSDomainParticipant::register\_contentfilter** (p. 1364).

A *filter\_name* can be unregistered only if it has been previously registered to the **DDSDomainParticipant** (p. 1351) with **DDSDomainParticipant::register\_contentfilter** (p. 1364).

The unregistration of filter is not allowed if there are any existing **DDSContentFilteredTopic** (p. 1283) objects that are using the filter. If the operation is called on a filter with existing **DDSContentFilteredTopic** (p. 1283) objects attached to it, this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

If there are still existing discovered **DDSDataReader** (p. 1288) s with the same `filter_name` and the filter's compile method of the filter have previously been called on the discovered **DDSDataReader** (p. 1288) s, `finalize` method of the filter will be called on those discovered **DDSDataReader** (p. 1288) s before the content filter is unregistered. This means filtering will now be performed on the application that is creating the **DDSDataReader** (p. 1288).

#### Parameters

<i>filter_name</i>	<< <i>in</i> >> (p. 238) Name of the filter. Cannot be NULL.
--------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	--

#### See also

**DDSDomainParticipant::register\_contentfilter** (p. 1364)

#### 9.252.2.12 get\_default\_library()

```
virtual const char * DDSDomainParticipant::get_default_library ( ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the default XML library associated with a **DDSDomainParticipant** (p. 1351).

#### Returns

The default library or null if the default library was not set.

#### See also

**DDSDomainParticipant::set\_default\_library** (p. 1367)

#### 9.252.2.13 get\_default\_profile()

```
virtual const char * DDSDomainParticipant::get_default_profile ( ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the default XML profile associated with a **DDSDomainParticipant** (p. 1351).

#### Returns

The default profile or null if the default profile was not set.

#### See also

**DDSDomainParticipant::set\_default\_profile** (p. 1368)

### 9.252.2.14 get\_default\_profile\_library()

```
virtual const char * DDSDomainParticipant::get_default_profile_library ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the library where the default XML QoS profile is contained for a **DDSDomainParticipant** (p. 1351).

The default profile library is automatically set when **DDSDomainParticipant::set\_default\_profile** (p. 1368) is called.

This library can be different than the **DDSDomainParticipant** (p. 1351) default library (see **DDSDomainParticipant::get\_default\_library** (p. 1366)).

#### Returns

The default profile library or null if the default profile was not set.

#### See also

**DDSDomainParticipant::set\_default\_profile** (p. 1368)

### 9.252.2.15 set\_default\_library()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_library (
    const char * library_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML library for a **DDSDomainParticipant** (p. 1351).

This method specifies the library that will be used as the default the next time a default library is needed during a call to one of this DomainParticipant's operations.

Any API requiring a library\_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDSDomainParticipant** (p. 1351) inherits the default from the **DDSDomainParticipantFactory** (p. 1426) (see **DDSDomainParticipantFactory::set\_default\_library** (p. 1433)).

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name. If library_name is null any previous default is unset.
---------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSDomainParticipant::get\_default\_library** (p. 1366)

### 9.252.2.16 set\_default\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML profile for a **DDSDomainParticipant** (p. 1351).

This method specifies the profile that will be used as the default the next time a default DomainParticipant profile is needed during a call to one of this DomainParticipant's operations. When calling a **DDSDomainParticipant** (p. 1351) method that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDSDomainParticipant** (p. 1351) inherits the default from the **DDSDomainParticipantFactory** (p. 1426) (see **DDSDomainParticipantFactory::set\_default\_profile** (p. 1434)).

This method does not set the default QoS for entities created by the **DDSDomainParticipant** (p. 1351); for this functionality, use the methods `set_default_<entity>_qos_with_profile` (you may pass in NULL after having called **set\_default\_profile**) (p. 1368)).

This method does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDSDomainParticipantFactory::set\_default\_participant\_qos\_with\_profile** (p. 1431).

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 238) The profile name. If <code>profile_name</code> is null any previous default is unset.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSDomainParticipant::get\_default\_profile** (p. 1366)

**DDSDomainParticipant::get\_default\_profile\_library** (p. 1366)

### 9.252.2.17 get\_default\_topic\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_topic_qos (
    DDS_TopicQos & qos ) [pure virtual]
```

Copies the default **DDS\_TopicQos** (p. 1135) values for this domain participant into the given **DDS\_TopicQos** (p. 1135) instance.

The retrieved qos will match the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369), or **DDSDomainParticipant::set\_default\_topic\_qos\_with\_profile** (p. 1370) or else, if the call was never made, the default values listed in **DDS\_TopicQos** (p. 1135).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

#### MT Safety:

UNSAFE. It is not safe to retrieve the default Topic QoS from a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369)

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be retrieved.
------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 56)

**DDSDomainParticipant::create\_topic** (p. 1382)

### 9.252.2.18 set\_default\_topic\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_topic_qos (
    const DDS_TopicQos & qos ) [pure virtual]
```

Set the default **DDS\_TopicQos** (p. 1135) values for this domain participant.

This default value will be used for newly created **DDSTopic** (p. 1617) if **DDS\_TOPIC\_QOS\_DEFAULT** (p. 56) is specified as the qos parameter when **DDSDomainParticipant::create\_topic** (p. 1382) is called.

#### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369), **DDSDomainParticipant::get\_default\_topic\_qos** (p. 1368) or calling **DDSDomainParticipant::create\_topic** (p. 1382) with **DDS\_TOPIC\_QOS\_DEFAULT** (p. 56) as the qos parameter.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_TOPIC_QOS_DEFAULT</b> (p. 56) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipant::set_default_topic_qos</b> (p. 1369) had never been called.
------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 56)

**DDSDomainParticipant::create\_topic** (p. 1382)

**9.252.2.19 set\_default\_topic\_qos\_with\_profile()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_topic_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default **DDS\_TopicQos** (p. 1135) values for this domain participant based on the input XML QoS profile.

This default value will be used for newly created **DDSTopic** (p. 1617) if **DDS\_TOPIC\_QOS\_DEFAULT** (p. 56) is specified as the *qos* parameter when **DDSDomainParticipant::create\_topic** (p. 1382) is called.

## Precondition

The **DDS\_TopicQos** (p. 1135) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

## MT Safety:

UNSAFE. It is not safe to set the default topic QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369), **DDSDomainParticipant::get\_default\_topic\_qos** (p. 1368) or calling **DDSDomainParticipant::create\_topic** (p. 1382) with **DDS\_TOPIC\_QOS\_DEFAULT** (p. 56) as the *qos* parameter.

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).

If the input profile cannot be found the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

#### See also

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 56)

### 9.252.2.20 get\_default\_publisher\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_publisher_qos (
    DDS_PublisherQos & qos ) [pure virtual]
```

Copy the default **DDS\_PublisherQos** (p. 1022) values into the provided **DDS\_PublisherQos** (p. 1022) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372), or **DDSDomainParticipant::set\_default\_publisher\_qos\_with\_profile** (p. 1372), or else, if the call was never made, the default values listed in **DDS\_PublisherQos** (p. 1022).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

If **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_topic** (p. 1382) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling **DDSDomainParticipant::get\_default\_publisher\_qos** (p. 1371), will be used to create the **DDSPublisher** (p. 1550).

#### MT Safety:

UNSAFE. It is not safe to retrieve the default publisher QoS from a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372)

#### Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) Qos to be filled up.
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_publisher** (p. 1376)

### 9.252.2.21 set\_default\_publisher\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_publisher_qos (
    const DDS_PublisherQos & qos ) [pure virtual]
```

Set the default **DDS\_PublisherQos** (p. 1022) values for this DomainParticipant.

This set of default values will be used for a newly created **DDSPublisher** (p. 1550) if **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_publisher** (p. 1376) is called.

#### Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372), **DDSDomainParticipant::get\_default\_publisher\_qos** (p. 1371) or calling **DDSDomainParticipant::create\_publisher** (p. 1376) with **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) as the `qos` parameter.

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 57) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipant::set_default_publisher_qos</b> (p. 1372) had never been called.
------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## 9.252.2.22 set\_default\_publisher\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_publisher_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Set the default **DDS\_PublisherQos** (p. 1022) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDSPublisher** (p. 1550) if **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_publisher** (p. 1376) is called.

## Precondition

The **DDS\_PublisherQos** (p. 1022) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

## MT Safety:

UNSAFE. It is not safe to set the default publisher QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372), **DDSDomainParticipant::get\_default\_publisher\_qos** (p. 1371) or calling **DDSDomainParticipant::create\_publisher** (p. 1376) with **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) as the `qos` parameter.

## Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connex will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If <code>profile_name</code> is null RTI Connex will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_publisher\_with\_profile** (p. 1377)

### 9.252.2.23 `get_default_subscriber_qos()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_default_subscriber_qos (
    DDS_SubscriberQos & qos ) [pure virtual]
```

Copy the default **DDS\_SubscriberQos** (p. 1105) values into the provided **DDS\_SubscriberQos** (p. 1105) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDSDomainParticipant::set\_default\_subscriber\_qos** (p. 1374), or **DDSDomainParticipant::set\_default\_subscriber\_qos\_with\_profile** (p. 1375), or else, if the call was never made, the default values listed in **DDS\_SubscriberQos** (p. 1105).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

If **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_subscriber** (p. 1379) is called, the default value of the QoS set in the factory, equivalent to the value obtained by calling **DDSDomainParticipant::get\_default\_subscriber\_qos** (p. 1373), will be used to create the **DDSSubscriber** (p. 1592).

#### MT Safety:

UNSAFE. It is not safe to retrieve the default Subscriber QoS from a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_subscriber\_qos** (p. 1374).

#### Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) Qos to be filled up.
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_subscriber** (p. 1379)

### 9.252.2.24 `set_default_subscriber_qos()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_subscriber_qos (
    const DDS_SubscriberQos & qos ) [pure virtual]
```

Set the default **DDS\_SubscriberQos** (p. 1105) values for this DomainParticipant.

This set of default values will be used for a newly created **DDSSubscriber** (p. 1592) if **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_subscriber** (p. 1379) is called.

**Precondition**

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↵  
RETCODE\_INCONSISTENT\_POLICY** (p. 337)

**MT Safety:**

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_subscriber\_qos** (p.1374), **DDSDomain↵  
Participant::get\_default\_subscriber\_qos** (p.1373) or calling **DDSDomainParticipant::create\_subscriber** (p. 1379) with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) as the `qos` parameter.

**Parameters**

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 57) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipant::set_default_subscriber_qos</b> (p. 1374) had never been called.
------------	---

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

**9.252.2.25 set\_default\_subscriber\_qos\_with\_profile()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_default_subscriber_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default **DDS\_SubscriberQos** (p. 1105) values for this DomainParticipant based on the input XML QoS profile.

This set of default values will be used for a newly created **DDSSubscriber** (p. 1592) if **DDS\_SUBSCRIBER\_QOS\_↵  
\_DEFAULT** (p. 57) is specified as the `qos` parameter when **DDSDomainParticipant::create\_subscriber** (p. 1379) is called.

**Precondition**

The **DDS\_SubscriberQos** (p. 1105) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

**MT Safety:**

UNSAFE. It is not safe to set the default Subscriber QoS for a DomainParticipant while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_subscriber\_qos** (p.1374), **DDSDomain↵  
Participant::get\_default\_subscriber\_qos** (p.1373) or calling **DDSDomainParticipant::create\_subscriber** (p. 1379) with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) as the `qos` parameter.

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57)

**9.252.2.26 create\_publisher()**

```
virtual DDSPublisher * DDSDomainParticipant::create_publisher (
    const DDS_PublisherQos & qos,
    DDSPublisherListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a **DDSPublisher** (p. 1550) with the desired QoS policies and attaches to it the specified **DDSPublisherListener** (p. 1571).

## Precondition

The specified QoS policies must be consistent, or the operation will fail and no **DDSPublisher** (p. 1550) will be created.

## MT Safety:

UNSAFE. If **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) is used for *qos*, it is not safe to create the publisher while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_publisher\_qos** (p. 1372).

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) QoS to be used for creating the new <b>DDSPublisher</b> (p. 1550). The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 57) can be used to indicate that the <b>DDSPublisher</b> (p. 1550) should be created with the default <b>DDS_PublisherQos</b> (p. 1022) set in the <b>DDSDomainParticipant</b> (p. 1351).
<i>listener</i>	<< <i>in</i> >> (p. 238). Listener to be attached to the newly created <b>DDSPublisher</b> (p. 1550).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341). <span style="float: right;">Generated by Doxygen</span>

## Returns

newly created publisher object or NULL on failure.

## See also

**DDSDomainParticipant::get\_default\_publisher\_qos** (p. 1371)

**DDSPublisher::set\_listener** (p. 1570)

## Examples

**HelloWorld\_publisher.cxx.**

## 9.252.2.27 create\_publisher\_with\_profile()

```
virtual DDSPublisher * DDSDomainParticipant::create_publisher_with_profile (
    const char * library_name,
    const char * profile_name,
    DDSPublisherListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a new **DDSPublisher** (p. 1550) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.

## Precondition

The **DDS\_PublisherQos** (p. 1022) in the input profile must be consistent, or the operation will fail and no **DDSPublisher** (p. 1550) will be created.

## Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).
<i>listener</i>	<< <b>in</b> >> (p. 238). Listener to be attached to the newly created <b>DDSPublisher</b> (p. 1550).
<i>mask</i>	<< <b>in</b> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

newly created publisher object or NULL on failure.

**9.252.2.28 delete\_publisher()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_publisher (
    DDSPublisher * p ) [pure virtual]
```

Deletes an existing **DDSPublisher** (p. 1550).

## Precondition

The **DDSPublisher** (p. 1550) must not have any attached **DDSDataWriter** (p. 1321) objects. If there are existing **DDSDataWriter** (p. 1321) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

**DDSPublisher** (p. 1550) must have been created by this **DDSDomainParticipant** (p. 1351), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Postcondition

Listener installed on the **DDSPublisher** (p. 1550) will not be called after this method completes successfully.

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>p</i>	<< <i>in</i> >> (p. 238) <b>DDSPublisher</b> (p. 1550) to be deleted.
----------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

**9.252.2.29 create\_subscriber()**

```
virtual DDSSubscriber * DDSDomainParticipant::create_subscriber (
    const DDS_SubscriberQos & qos,
    DDSSubscriberListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a **DDSSubscriber** (p. 1592) with the desired QoS policies and attaches to it the specified **DDSSubscriber**↔  
**Listener** (p. 1613).

**Precondition**

The specified QoS policies must be consistent, or the operation will fail and no **DDSSubscriber** (p. 1592) will be created.

**MT Safety:**

UNSAFE. If **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) is used for `qos`, it is not safe to create the subscriber while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_subscriber**↔  
**\_qos** (p. 1374).

**Parameters**

<i>qos</i>	<< <i>in</i> >> (p. 238) QoS to be used for creating the new <b>DDSSubscriber</b> (p. 1592). The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 57) can be used to indicate that the <b>DDSSubscriber</b> (p. 1592) should be created with the default <b>DDS_SubscriberQos</b> (p. 1105) set in the <b>DDSDomainParticipant</b> (p. 1351).
<i>listener</i>	<< <i>in</i> >> (p. 238). Listener to be attached to the newly created <b>DDSSubscriber</b> (p. 1592).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

**Returns**

newly created subscriber object or NULL on failure.

**See also**

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_SubscriberQos** (p. 1105) for rules on consistency among QoS

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_subscriber\_with\_profile** (p. 1380)

**DDSDomainParticipant::get\_default\_subscriber\_qos** (p. 1373)

**DDSSubscriber::set\_listener** (p. 1611)

## Examples

**HelloWorld\_subscriber.cxx.**

### 9.252.2.30 create\_subscriber\_with\_profile()

```
virtual DDSSubscriber * DDSDomainParticipant::create_subscriber_with_profile (
    const char * library_name,
    const char * profile_name,
    DDSSubscriberListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a new **DDSSubscriber** (p. 1592) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.

## Precondition

The **DDS\_SubscriberQos** (p. 1105) in the input profile must be consistent, or the operation will fail and no **DDSSubscriber** (p. 1592) will be created.

## Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexxt will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexxt will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).
<i>listener</i>	<< <b>in</b> >> (p. 238). Listener to be attached to the newly created <b>DDSSubscriber</b> (p. 1592).
<i>mask</i>	<< <b>in</b> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

newly created subscriber object or NULL on failure.

## See also

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_SubscriberQos** (p. 1105) for rules on consistency among QoS

**DDSDomainParticipant::get\_default\_subscriber\_qos** (p. 1373)

**DDSSubscriber::set\_listener** (p. 1611)

**9.252.2.31 delete\_subscriber()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_subscriber (
    DDSSubscriber * s ) [pure virtual]
```

Deletes an existing **DDSSubscriber** (p. 1592).

**Precondition**

The **DDSSubscriber** (p. 1592) must not have any attached **DDSDataReader** (p. 1288) objects. If there are existing **DDSDataReader** (p. 1288) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336)

The **DDSSubscriber** (p. 1592) must have been created by this **DDSDomainParticipant** (p. 1351), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

**Postcondition**

A Listener installed on the **DDSSubscriber** (p. 1592) will not be called after this method completes successfully.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>s</i>	<< <i>in</i> >> (p. 238) <b>DDSSubscriber</b> (p. 1592) to be deleted.
----------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

**9.252.2.32 get\_publishers()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_publishers (
    DDSPublisherSeq & publishers ) [pure virtual]
```

<<**extension**>> (p. 237) Allows the application to access all the publishers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of publishers, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

**MT Safety:**

Safe.

## Parameters

<i>publishers</i>	<< <i>inout</i> >> (p. 238) a PublisherSeq object where the set or list of publishers will be returned
-------------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

**9.252.2.33 get\_subscribers()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_subscribers (
    DDSSubscriberSeq & subscribers ) [pure virtual]
```

<<**extension**>> (p. 237) Allows the application to access all the subscribers the participant has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of subscribers, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

**MT Safety:**

Safe.

## Parameters

<i>subscribers</i>	<< <i>inout</i> >> (p. 238) a SubscriberSeq object where the set or list of subscribers will be returned
--------------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
------------	--

**9.252.2.34 create\_topic()**

```
virtual DDSTopic * DDSDomainParticipant::create_topic (
    const char * topic_name,
    const char * type_name,
    const DDS_TopicQos & qos,
    DDSTopicListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a **DDSTopic** (p. 1617) with the desired QoS policies and attaches to it the specified **DDSTopicListener** (p. 1626).

**Precondition**

The application is not allowed to create two **DDSTopic** (p. 1617) objects with the same `topic_name` attached to the same **DDSDomainParticipant** (p. 1351). If the application attempts this, this method will fail and return a NULL topic.

The specified QoS policies must be consistent, or the operation will fail and no **DDSTopic** (p. 1617) will be created. Prior to creating a **DDSTopic** (p. 1617), the type must have been registered with RTI Connex. This is done using the **FooTypeSupport::register\_type** (p. 1713) operation on a derived class of the **DDSTypeSupport** (p. 1629) interface.

**MT Safety:**

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDSDomainParticipant::lookup\_topicdescription** (p. 1390).

**MT Safety:**

UNSAFE. If **DDS\_TOPIC\_QOS\_DEFAULT** (p. 56) is used for `qos`, it is not safe to create the topic while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_topic\_qos** (p. 1369).

**Parameters**

<i>topic_name</i>	<< <i>in</i> >> (p. 238) Name for the new topic, must not exceed 255 characters. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) The type to which the new <b>DDSTopic</b> (p. 1617) will be bound. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 238) QoS to be used for creating the new <b>DDSTopic</b> (p. 1617). The special value <b>DDS_TOPIC_QOS_DEFAULT</b> (p. 56) can be used to indicate that the <b>DDSTopic</b> (p. 1617) should be created with the default <b>DDS_TopicQos</b> (p. 1135) set in the <b>DDSDomainParticipant</b> (p. 1351).
<i>listener</i>	<< <i>in</i> >> (p. 238). Listener to be attached to the newly created <b>DDSTopic</b> (p. 1617).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

**Returns**

newly created topic, or NULL on failure

**See also**

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_TopicQos** (p. 1135) for rules on consistency among QoS

**DDS\_TOPIC\_QOS\_DEFAULT** (p. 56)

**DDSDomainParticipant::create\_topic\_with\_profile** (p. 1383)

**DDSDomainParticipant::get\_default\_topic\_qos** (p. 1368)

**DDSTopic::set\_listener** (p. 1621)

**Examples**

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

### 9.252.2.35 create\_topic\_with\_profile()

```
virtual DDSTopic * DDSDomainParticipant::create_topic_with_profile (
    const char * topic_name,
    const char * type_name,
    const char * library_name,
    const char * profile_name,
    DDSTopicListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a new **DDSTopic** (p. 1617) object using the **DDS\_PublisherQos** (p. 1022) associated with the input XML QoS profile.

#### Precondition

The application is not allowed to create two **DDSTopicDescription** (p. 1624) objects with the same `topic_name` attached to the same **DDSDomainParticipant** (p. 1351). If the application attempts this, this method will fail and return a NULL topic.

The **DDS\_TopicQos** (p. 1135) in the input profile must be consistent, or the operation will fail and no **DDSTopic** (p. 1617) will be created.

Prior to creating a **DDSTopic** (p. 1617), the type must have been registered with RTI Connex. This is done using the **FooTypeSupport::register\_type** (p. 1713) operation on a derived class of the **DDSTypeSupport** (p. 1629) interface.

#### MT Safety:

UNSAFE. It is not safe to create a topic while another thread is trying to lookup that topic description with **DDSDomainParticipant::lookup\_topicdescription** (p. 1390).

#### Parameters

<i>topic_name</i>	<< <b>in</b> >> (p. 238) Name for the new topic, must not exceed 255 characters. Cannot be NULL.
<i>type_name</i>	<< <b>in</b> >> (p. 238) The type to which the new <b>DDSTopic</b> (p. 1617) will be bound. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connex will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If <code>profile_name</code> is null RTI Connex will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).
<i>listener</i>	<< <b>in</b> >> (p. 238). Listener to be attached to the newly created <b>DDSTopic</b> (p. 1617).
<i>mask</i>	<< <b>in</b> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### Returns

newly created topic, or NULL on failure

See also

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_TopicQos** (p. 1135) for rules on consistency among QoS

**DDSDomainParticipant::create\_topic** (p. 1382)

**DDSDomainParticipant::get\_default\_topic\_qos** (p. 1368)

**DDSTopic::set\_listener** (p. 1621)

### 9.252.2.36 delete\_topic()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_topic (
    DDSTopic * topic ) [pure virtual]
```

Deletes a **DDSTopic** (p. 1617).

#### Precondition

If the **DDSTopic** (p. 1617) does not belong to the application's **DDSDomainParticipant** (p. 1351), this operation fails with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

Make sure no objects are using the topic. More specifically, there must be no existing **DDSDataReader** (p. 1288), **DDSDataWriter** (p. 1321), **DDSContentFilteredTopic** (p. 1283), or **DDSMultiTopic** (p. 1529) objects belonging to the same **DDSDomainParticipant** (p. 1351) that are using the **DDSTopic** (p. 1617). If `delete_topic` is called on a **DDSTopic** (p. 1617) with any of these existing objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Postcondition

Listener installed on the **DDSTopic** (p. 1617) will not be called after this method completes successfully.

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) <b>DDSTopic</b> (p. 1617) to be deleted.
--------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	---

### 9.252.2.37 create\_contentfilteredtopic()

```
virtual DDSContentFilteredTopic * DDSDomainParticipant::create_contentfilteredtopic (
    const char * name,
    DDSTopic * related_topic,
    const char * filter_expression,
    const DDS_StringSeq & expression_parameters ) [pure virtual]
```

Creates a **DDSContentFilteredTopic** (p. 1283), that can be used to do content-based subscriptions.

The **DDSContentFilteredTopic** (p. 1283) only relates to samples published under that **DDSTopic** (p. 1617), filtered according to their content. The filtering is done by means of evaluating a logical expression that involves the values of some of the data-fields in the sample. The logical expression derived from the `filter_expression` and `expression_parameters` arguments.

**Queries and Filters Syntax** (p.179) describes the syntax of `filter_expression` and `expression_← parameters`.

#### Precondition

The application is not allowed to create two **DDSContentFilteredTopic** (p. 1283) objects with the same `topic_← _name` attached to the same **DDSDomainParticipant** (p. 1351). If the application attempts this, this method will fail and returns NULL.

If `related_topic` does not belong to this **DDSDomainParticipant** (p. 1351), this operation returns NULL.

This function will create a content filter using the builtin SQL filter which implements a superset of the DDS specification. This filter **requires** that all IDL types have been compiled with typecodes. If this precondition is not met, this operation returns NULL.

#### Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name for the new content filtered topic, must not exceed 255 characters. Cannot be NULL.
<i>related_topic</i>	<< <i>in</i> >> (p. 238) <b>DDSTopic</b> (p. 1617) to be filtered. Cannot be NULL.
<i>filter_expression</i>	<< <i>in</i> >> (p. 238) Cannot be NULL
<i>expression_parameters</i>	<< <i>in</i> >> (p. 238) An empty sequence <b>must</b> be used if the filter expression does not contain any parameters. Length of sequence cannot be greater than 100.

#### Returns

newly created **DDSContentFilteredTopic** (p. 1283), or NULL on failure

### 9.252.2.38 create\_contentfilteredtopic\_with\_filter()

```
virtual DDSContentFilteredTopic * DDSDomainParticipant::create_contentfilteredtopic_with_filter (
    const char * name,
```

```

    DDSTopic * related_topic,
    const char * filter_expression,
    const DDS_StringSeq & expression_parameters,
    const char * filter_name = DDS_SQLFILTER_NAME ) [pure virtual]

```

<<**extension**>> (p. 237) Creates a **DDSContentFilteredTopic** (p. 1283) using the specified filter to do content-based subscriptions.

#### Parameters

<i>name</i>	<< <b>in</b> >> (p. 238) Name for the new content filtered topic. Cannot exceed 255 characters. Cannot be NULL.
<i>related_topic</i>	<< <b>in</b> >> (p. 238) <b>DDSTopic</b> (p. 1617) to be filtered. Cannot be NULL.
<i>filter_expression</i>	<< <b>in</b> >> (p. 238) Cannot be NULL.
<i>expression_parameters</i>	<< <b>in</b> >> (p. 238) . An empty sequence <b>must</b> be used if the filter expression does not contain any parameters. Length of the sequence cannot be greater than 100.
<i>filter_name</i>	<< <b>in</b> >> (p. 238) Name of content filter to use. Must previously have been registered with <b>DDSDomainParticipant::register_contentfilter</b> (p. 1364) on the same <b>DDSDomainParticipant</b> (p. 1351). Cannot be NULL. Builtin filter names are <b>DDS_SQLFILTER_NAME</b> (p. 59) and <b>DDS_STRINGMATCHFILTER_NAME</b> (p. 59)

#### Returns

newly created **DDSContentFilteredTopic** (p. 1283), or NULL on failure

#### 9.252.2.39 delete\_contentfilteredtopic()

```

virtual DDS_ReturnCode_t DDSDomainParticipant::delete_contentfilteredtopic (
    DDSContentFilteredTopic * a_contentfilteredtopic ) [pure virtual]

```

Deletes a **DDSContentFilteredTopic** (p. 1283).

#### Precondition

The deletion of a **DDSContentFilteredTopic** (p.1283) is not allowed if there are any existing **DDSDataReader** (p.1288) objects that are using the **DDSContentFilteredTopic** (p.1283). If the operation is called on a **DDSContentFilteredTopic** (p.1283) with existing **DDSDataReader** (p.1288) objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p.336).

The **DDSContentFilteredTopic** (p.1283) must be created by this **DDSDomainParticipant** (p.1351), or else this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p.336).

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>a_contentfilteredtopic</i>	<< <i>in</i> >> (p. 238)
-------------------------------	--------------------------

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	--

**9.252.2.40 create\_multitopic()**

```
virtual DDSMultiTopic * DDSDomainParticipant::create_multitopic (
    const char * name,
    const char * type_name,
    const char * subscription_expression,
    const DDS_StringSeq & expression_parameters ) [pure virtual]
```

**[Not supported (optional)]** Creates a MultiTopic that can be used to subscribe to multiple topics and combine/filter the received data into a resulting type.

The resulting type is specified by the *type\_name* argument. The list of topics and the logic used to combine, filter, and rearrange the information from each **DDSTopic** (p. 1617) are specified using the *subscription\_expression* and *expression\_parameters* arguments.

**Queries and Filters Syntax** (p. 179) describes the syntax of *subscription\_expression* and *expression\_parameters*.

## Precondition

The application is not allowed to create two **DDSTopicDescription** (p. 1624) objects with the same *name* attached to the same **DDSDomainParticipant** (p. 1351). If the application attempts this, this method will fail and return NULL.

Prior to creating a **DDSMultiTopic** (p. 1529), the type must have been registered with RTI Connex. This is done using the **FooTypeSupport::register\_type** (p. 1713) operation on a derived class of the **DDSTypeSupport** (p. 1629) interface. Otherwise, this method will return NULL.

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of the newly create <b>DDSMultiTopic</b> (p. 1529). Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) Cannot be NULL.
<i>subscription_expression</i>	<< <i>in</i> >> (p. 238) Cannot be NULL.
<i>expression_parameters</i>	<< <i>in</i> >> (p. 238)

## Returns

NULL

## 9.252.2.41 delete\_multitopic()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_multitopic (
    DDSMultiTopic * a_multitopic ) [pure virtual]
```

**[Not supported (optional)]** Deletes a **DDSMultiTopic** (p. 1529).

## Precondition

The deletion of a **DDSMultiTopic** (p. 1529) is not allowed if there are any existing **DDSDataReader** (p. 1288) objects that are using the **DDSMultiTopic** (p. 1529). If the `delete_multitopic` operation is called on a **DDSMultiTopic** (p. 1529) with existing **DDSDataReader** (p. 1288) objects attached to it, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The **DDSMultiTopic** (p. 1529) must be created by this **DDSDomainParticipant** (p. 1351), or else this operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Parameters

<i>a_multitopic</i>	<< <i>in</i> >> (p. 238)
---------------------	--------------------------

## 9.252.2.42 find\_topic()

```
virtual DDSTopic * DDSDomainParticipant::find_topic (
    const char * topic_name,
    const DDS_Duration_t & timeout ) [pure virtual]
```

Finds an existing (or ready to exist) **DDSTopic** (p. 1617), based on its name.

This call can be used to block for a specified duration to wait for the **DDSTopic** (p. 1617) to be created.

If the requested **DDSTopic** (p. 1617) already exists, it is returned. Otherwise, `find_topic()` (p. 1389) waits until another thread creates it or else returns when the specified timeout occurs.

**find\_topic()** (p. 1389) is useful when multiple threads are concurrently creating and looking up topics. In that case, one thread can call **find\_topic()** (p. 1389) and, if another thread has not yet created the topic being looked up, it can wait for some period of time for it to do so. In almost all other cases, it is more straightforward to call **DDSDomainParticipant**↔**::lookup\_topicdescription** (p. 1390).

The **DDSDomainParticipant** (p. 1351) must already be enabled.

**Note:** Each **DDSTopic** (p. 1617) obtained by **DDSDomainParticipant::find\_topic** (p. 1389) must also be deleted by means of **DDSDomainParticipant::delete\_topic** (p. 1385). If **DDSTopic** (p. 1617) is obtained multiple times by means of **DDSDomainParticipant::find\_topic** (p. 1389) or **DDSDomainParticipant::create\_topic** (p. 1382), it must also be deleted that same number of times using **DDSDomainParticipant::delete\_topic** (p. 1385).

#### Parameters

<i>topic_name</i>	<< <i>in</i> >> (p. 238) Name of the <b>DDSTopic</b> (p. 1617) to search for. Cannot be NULL.
<i>timeout</i>	<< <i>in</i> >> (p. 238) The time to wait if the <b>DDSTopic</b> (p. 1617) does not exist already.

#### Returns

the topic, if it exists, or NULL

### 9.252.2.43 lookup\_topicdescription()

```
virtual DDSTopicDescription * DDSDomainParticipant::lookup_topicdescription (
    const char * topic_name ) [pure virtual]
```

Looks up an existing, locally created **DDSTopicDescription** (p. 1624), based on its name.

**DDSTopicDescription** (p.1624) is the base class for **DDSTopic** (p.1617), **DDSMultiTopic** (p.1529) and **DDSContentFilteredTopic** (p.1283). So you can narrow the **DDSTopicDescription** (p.1624) returned from this operation to a **DDSTopic** (p. 1617) or **DDSContentFilteredTopic** (p. 1283) as appropriate.

Unlike **DDSDomainParticipant::find\_topic** (p. 1389), which logically returns a new **DDSTopic** (p. 1617) object that must be independently deleted, *this* operation returns a reference to the original local object.

The **DDSDomainParticipant** (p. 1351) does not have to be enabled when you call **lookup\_topicdescription()** (p. 1390).

The returned topic may be either enabled or disabled.

#### MT Safety:

UNSAFE. It is not safe to lookup a topic description while another thread is creating that topic.

#### Parameters

<i>topic_name</i>	<< <i>in</i> >> (p. 238) Name of <b>DDSTopicDescription</b> (p. 1624) to search for. This string must be no more than 255 characters; it cannot be NULL.
-------------------	--

## Returns

The topic description, if it has already been created locally, otherwise it returns NULL.

## 9.252.2.44 create\_flowcontroller()

```
virtual DDSFlowController * DDSDomainParticipant::create_flowcontroller (
    const char * name,
    const DDS_FlowControllerProperty_t & prop ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a **DDSFlowController** (p. 1468) with the desired property.

The created **DDSFlowController** (p. 1468) is associated with a **DDSDataWriter** (p. 1321) via **DDS\_PublishModeQosPolicy::flow\_controller\_name** (p. 1027). A single FlowController may service multiple DataWriters instances, even if they belong to a different **DDSPublisher** (p. 1550). The `property` determines how the FlowController shapes the network traffic.

## Precondition

The specified `property` must be consistent, or the operation will fail and no **DDSFlowController** (p. 1468) will be created.

## MT Safety:

UNSAFE. If **DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 58) is used for `property`, it is not safe to create the flow controller while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_flowcontroller\_property** (p. 1363) or trying to lookup that flow controller with **DDSDomainParticipant::lookup\_flowcontroller** (p. 1392).

## Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) name of the <b>DDSFlowController</b> (p. 1468) to create. A <b>DDSDataWriter</b> (p. 1321) is associated with a <b>DDSFlowController</b> (p. 1468) by name. Limited to 255 characters.
<i>prop</i>	<< <i>in</i> >> (p. 238) property to be used for creating the new <b>DDSFlowController</b> (p. 1468). The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 58) can be used to indicate that the <b>DDSFlowController</b> (p. 1468) should be created with the default <b>DDS_FlowControllerProperty_t</b> (p. 912) set in the <b>DDSDomainParticipant</b> (p. 1351).

## Returns

Newly created flow controller object or NULL on failure.

See also

**DDS\_FlowControllerProperty\_t** (p. 912) for rules on consistency among property

**DDS\_FLOW\_CONTROLLER\_PROPERTY\_DEFAULT** (p. 58)

**DDSDomainParticipant::get\_default\_flowcontroller\_property** (p. 1362)

### 9.252.2.45 delete\_flowcontroller()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_flowcontroller (
    DDSFlowController * fc ) [pure virtual]
```

<<*extension*>> (p. 237) Deletes an existing **DDSFlowController** (p. 1468).

#### Precondition

The **DDSFlowController** (p. 1468) must not have any attached **DDSDataWriter** (p. 1321) objects. If there are any attached **DDSDataWriter** (p. 1321) objects, it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The **DDSFlowController** (p. 1468) must have been created by this **DDSDomainParticipant** (p. 1351), or else it will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Postcondition

The **DDSFlowController** (p. 1468) is deleted if this method completes successfully.

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>fc</i>	<< <i>in</i> >> (p. 238) The <b>DDSFlowController</b> (p. 1468) to be deleted.
-----------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

### 9.252.2.46 lookup\_flowcontroller()

```
virtual DDSFlowController * DDSDomainParticipant::lookup_flowcontroller (
    const char * name ) [pure virtual]
```

<<*extension*>> (p. 237) Looks up an existing locally-created **DDSFlowController** (p. 1468), based on its name.

Looks up a previously created **DDSFlowController** (p. 1468), including the built-in ones. Once a **DDSFlowController** (p. 1468) has been deleted, subsequent lookups will fail.

#### MT Safety:

UNSAFE. It is not safe to lookup a flow controller description while another thread is creating that flow controller.

#### Parameters

<i>name</i>	<< <i>in</i> >> (p. 238) Name of <b>DDSFlowController</b> (p. 1468) to search for. Limited to 255 characters. Cannot be NULL.
-------------	---

#### Returns

The flow controller if it has already been created locally, or NULL otherwise.

### 9.252.2.47 get\_builtin\_subscriber()

```
virtual DDSSubscriber * DDSDomainParticipant::get_builtin_subscriber ( ) [pure virtual]
```

Accesses the **built-in DDSSubscriber** (p. 1592).

Each **DDSDomainParticipant** (p. 1351) contains several built-in **DDSTopic** (p. 1617) objects as well as corresponding **DDSDataReader** (p. 1288) objects to access them. All of these **DDSDataReader** (p. 1288) objects belong to a single built-in **DDSSubscriber** (p. 1592).

The built-in Topics are used to communicate information about other **DDSDomainParticipant** (p. 1351), **DDSTopic** (p. 1617), **DDSDataReader** (p. 1288), and **DDSDataWriter** (p. 1321) objects.

The built-in subscriber is created when this operation is called for the first time. The built-in subscriber is deleted automatically when the **DDSDomainParticipant** (p. 1351) is deleted.

#### Returns

The built-in **DDSSubscriber** (p. 1592) singleton.

#### See also

**DDS\_SubscriptionBuiltinTopicData** (p. 1108)

**DDS\_ParticipantBuiltinTopicData** (p. 979)

**DDS\_TopicBuiltinTopicData** (p. 1128)

### 9.252.2.48 ignore\_participant()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::ignore_participant (
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Instructs RTI Connex to locally ignore a remote **DDSDomainParticipant** (p. 1351).

From the time of this call onwards, RTI Connex will locally behave as if the remote participant did not exist. This means it will ignore any topic, publication, or subscription that originates on that **DDSDomainParticipant** (p. 1351).

There is no way to reverse this operation.

This operation can be used in conjunction with the discovery of remote participants offered by means of the **DDS\_↔ParticipantBuiltinTopicData** (p. 979) to provide access control.

Application data can be associated with a **DDSDomainParticipant** (p. 1351) by means of the **USER\_DATA** (p. 455) policy. This application data is propagated as a field in the built-in topic and can be used by an application to implement its own access control policy.

The **DDSDomainParticipant** (p. 1351) to ignore is identified by the `handle` argument. This `handle` is the one that appears in the **DDS\_SampleInfo** (p. 1082) retrieved when reading the data-samples available for the built-in **DDSData↔Reader** (p. 1288) to the **DDSDomainParticipant** (p. 1351) topic. The built-in **DDSDataReader** (p. 1288) is read with the same **FooDataReader::read** (p. 1651) and **FooDataReader::take** (p. 1652) operations used for any **DDSDataReader** (p. 1288).

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) <b>DDS_InstanceHandle_t</b> (p. 74) of the <b>DDSDomainParticipant</b> (p. 1351) to be ignored.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

#### See also

- DDS\_ParticipantBuiltinTopicData** (p. 979)
- DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295)
- DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.252.2.49 banish\_ignored\_participants()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::banish_ignored_participants ( ) [pure virtual]
```

<<*extension*>> (p. 237) Prevents ignored remote DomainParticipants from receiving traffic from the local **DDSDomainParticipant** (p. 1351).

This method complements **DDSDomainParticipant::ignore\_participant** (p. 1393): `ignore_participant` prevents the local **DDSDomainParticipant** (p. 1351) from processing traffic from the remote `DomainParticipant`, while this method prevents already ignored remote `DomainParticipants` from processing traffic from the local `DomainParticipant`.

Note: this method is currently only supported when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information.

#### MT Safety:

Safe.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

#### See also

**DDSDomainParticipant::ignore\_participant** (p. 1393)

### 9.252.2.50 ignore\_topic()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::ignore_topic (
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Instructs RTI Connex to locally ignore a **DDSTopic** (p. 1617).

This means it will locally ignore any publication, or subscription to the **DDSTopic** (p. 1617).

There is no way to reverse this operation.

This operation can be used to save local resources when the application knows that it will never publish or subscribe to data under certain topics.

The **DDSTopic** (p. 1617) to ignore is identified by the `handle` argument. This is the handle of a **DDSTopic** (p. 1617) that appears in the **DDS\_SampleInfo** (p. 1082) retrieved when reading data samples from the built-in **DDSDataReader** (p. 1288) for the **DDSTopic** (p. 1617).

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) Handle of the <b>DDSTopic</b> (p. 1617) to be ignored.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

See also

- DDS\_TopicBuiltinTopicData** (p. 1128)
- DDS\_TOPIC\_TOPIC\_NAME** (p. 297)
- DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.252.2.51 ignore\_publication()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::ignore_publication (
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Instructs RTI Connnext to locally ignore a publication.

A publication is defined by the association of a topic name, user data, and partition set on the **DDSPublisher** (p. 1550) (see **DDS\_PublicationBuiltinTopicData** (p. 1010)). After this call, any data written by that publication's **DDSDataWriter** (p. 1321) will be ignored.

This operation can be used to ignore local *and* remote DataWriters.

The publication (DataWriter) to ignore is identified by the `handle` argument.

- To ignore a *remote* DataWriter, the `handle` can be obtained from the **DDS\_SampleInfo** (p. 1082) retrieved when reading data samples from the built-in **DDSDataReader** (p. 1288) for the publication topic.
- To ignore a *local* DataWriter, the `handle` can be obtained by calling **DDSEntity::get\_instance\_handle** (p. 1468) for the local DataWriter.

There is no way to reverse this operation.

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) Handle of the <b>DDSDataWriter</b> (p. 1321) to be ignored.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

See also

- DDS\_PublicationBuiltinTopicData** (p. 1010)

- DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

### 9.252.2.52 ignore\_subscription()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::ignore_subscription (
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Instructs RTI Connex to locally ignore a subscription.

A subscription is defined by the association of a topic name, user data, and partition set on the **DDSSubscriber** (p. 1592) (see **DDS\_SubscriptionBuiltinTopicData** (p. 1108)). After this call, any data received related to that subscription's **DDSDataReader** (p. 1288) will be ignored.

This operation can be used to ignore local *and* remote DataReaders.

The subscription to ignore is identified by the `handle` argument.

- To ignore a *remote* DataReader, the `handle` can be obtained from the **DDS\_SampleInfo** (p. 1082) retrieved when reading data samples from the built-in **DDSDataReader** (p. 1288) for the subscription topic.
- To ignore a *local* DataReader, the `handle` can be obtained by calling **DDSEntity::get\_instance\_handle** (p. 1468) for the local DataReader.

There is no way to reverse this operation.

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) Handle of the <b>DDSDataReader</b> (p. 1288) to be ignored.
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

#### See also

**DDS\_SubscriptionBuiltinTopicData** (p. 1108)

### 9.252.2.53 get\_domain\_id()

```
virtual DDS_DomainId_t DDSDomainParticipant::get_domain_id ( ) [pure virtual]
```

Get the unique domain identifier.

This operation retrieves the domain id used to create the **DDSDomainParticipant** (p. 1351). The domain id identifies the DDS domain to which the **DDSDomainParticipant** (p. 1351) belongs. Each DDS domain represents a separate data 'communication plane' isolated from other domains.

**Returns**

the unique `domainId` that was used to create the domain

**See also**

**DDSDomainParticipantFactory::create\_participant** (p. 1442)

**DDSDomainParticipantFactory::create\_participant\_with\_profile** (p. 1443)

**9.252.2.54 get\_current\_time()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_current_time (
    DDS_Time_t & current_time ) [pure virtual]
```

Returns the current value of the time.

The current value of the time that RTI Connexx uses to time-stamp **DDSDataWriter** (p. 1321) and to set the reception-timestamp for the data updates that it receives.

**Parameters**

<code>current_time</code>	<< <i>inout</i> >> (p. 238) Current time to be filled up.
---------------------------	---

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.252.2.55 register\_durable\_subscription()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::register_durable_subscription (
    const DDS_EndpointGroup_t & group,
    const char * topic_name ) [pure virtual]
```

<<*extension*>> (p. 237) Registers a Durable Subscription on the specified **DDSTopic** (p. 1617) on all Persistence Services.

If you need to receive all samples published on a **DDSTopic** (p. 1617), including the ones published while a **DDSDataReader** (p. 1288) is inactive or before it may be created, create a Durable Subscription using this method.

In this way, the Persistence Service will ensure that all the samples on that **DDSTopic** (p. 1617) are retained until they are acknowledged by at least *N* DataReaders belonging to the Durable Subscription where *N* is the quorum count.

If the same Durable Subscription is created on a different **DDSTopic** (p. 1617), the Persistence Service will implicitly delete the previous Durable Subscription and create a new one on the new **DDSTopic** (p. 1617).

## Parameters

<i>group</i>	<< <i>in</i> >> (p. 238) <b>DDS_EndpointGroup_t</b> (p. 900) The Durable Subscription name and quorum.
<i>topic_name</i>	<< <i>in</i> >> (p. 238) The topic name for which the Durable Subscription is created.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.252.2.56 delete\_durable\_subscription()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_durable_subscription (
    const DDS_EndpointGroup_t & group ) [pure virtual]
```

<<**extension**>> (p. 237) Deletes an existing Durable Subscription on all Persistence Services.

The Persistence Service will delete the Durable Subscription and the quorum of the existing samples will be considered satisfied.

## Parameters

<i>group</i>	<< <i>in</i> >> (p. 238) <b>DDS_EndpointGroup_t</b> (p. 900) specifying the Durable Subscription name. Quorum is not required for this operation.
--------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.252.2.57 assert\_liveliness()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::assert_liveliness ( ) [pure virtual]
```

Manually asserts the liveliness of this **DDSDomainParticipant** (p. 1351).

This is used in combination with the **DDS\_LivelinessQosPolicy** (p. 936) to indicate to RTI Connext that the entity remains active.

You need to use this operation if the **DDSDomainParticipant** (p. 1351) contains **DDSDataWriter** (p. 1321) entities with the **DDS\_LivelinessQosPolicy::kind** (p. 938) set to **DDS\_MANUAL\_BY\_PARTICIPANT\_LIVELINESS\_QOS** (p. 410) and it only affects the liveliness of those **DDSDataWriter** (p. 1321) entities. Otherwise, it has no effect.

**Note:** writing data via the **FooDataWriter::write** (p. 1683) or **FooDataWriter::write\_w\_timestamp** (p. 1687) operation asserts liveliness on the **DDSDataWriter** (p. 1321) itself and its **DDSDomainParticipant** (p. 1351). Consequently the use of **assert\_liveliness()** (p. 1399) is only needed if the application is not writing data regularly.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
-----	--

## See also

**DDS\_LivelinessQosPolicy** (p. 936)

**9.252.2.58 resume\_endpoint\_discovery()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::resume_endpoint_discovery (
    const DDS_InstanceHandle_t & remote_participant_handle ) [pure virtual]
```

<<**extension**>> (p. 237) Initiates endpoint discovery with the specified remote **DDSDomainParticipant** (p. 1351).

If the operation returns **DDS\_RETCODE\_OK** (p. 336), the **DDSDomainParticipant** (p. 1351) will initiate endpoint discovery with the remote **DDSDomainParticipant** (p. 1351) provided as a parameter.

When **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 734) is set to **DDS\_BOOLEAN\_FALSE** (p. 317), this operation allows the RTI Connex application to select for which remote DomainParticipants endpoint discovery is performed. By disabling endpoint discovery, the DomainParticipant will not store any state about remote endpoints and will not send local endpoint information to remote DomainParticipants.

If **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 734) is set to **DDS\_BOOLEAN\_TRUE** (p. 317), endpoint discovery will automatically occur for every discovered **DDSDomainParticipant** (p. 1351). In this case, invoking this operation will have no effect and will return **DDS\_RETCODE\_OK** (p. 336).

When **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 734) is set to **DDS\_BOOLEAN\_FALSE** (p. 317), you have two options after a remote **DDSDomainParticipant** (p. 1351) is discovered:

- Call this operation to enable endpoint discovery. After invoking this operation, the **DDSDomainParticipant** (p. 1351) will start to exchange endpoint information so that matching and communication can occur with the remote **DDSDomainParticipant** (p. 1351).
- Call the **DDSDomainParticipant::ignore\_participant** (p. 1393) operation to permanently ignore endpoint discovery with the remote **DDSDomainParticipant** (p. 1351).

Setting **DDS\_DiscoveryQosPolicy::enable\_endpoint\_discovery** (p. 734) to **DDS\_BOOLEAN\_FALSE** (p. 317) enables application-level authentication use cases, in which a **DDSDomainParticipant** (p. 1351) will initiate endpoint discovery with a remote **DDSDomainParticipant** (p. 1351) after successful authentication at the application level.

The `remote_participant_handle` parameter is the one that appears in the **DDS\_SampleInfo** (p. 1082) retrieved when reading the data samples available for the built-in **DDSParticipantBuiltinTopicDataDataReader** (p. 1548).

If the specified remote **DDSDomainParticipant** (p. 1351) is not in the database of discovered DomainParticipants or has been previously ignored, this operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

This operation can be called multiple times on the same remote participant. If endpoint discovery has already been resumed, successive calls will have no effect and will return **DDS\_RETCODE\_OK** (p. 336).

## Parameters

<i>remote_participant_handle</i>	<< <i>in</i> >> (p. 238) Handle of a discovered <b>DDSDomainParticipant</b> (p. 1351) for which endpoint discovery is to be resumed.
----------------------------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	--

## See also

**DDS\_DiscoveryQosPolicy** (p. 731)

## 9.252.2.59 delete\_contained\_entities()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_contained_entities ( ) [pure virtual]
```

Delete all the entities that were created by means of the "create" operations on the **DDSDomainParticipant** (p. 1351).

This operation deletes all contained **DDSPublisher** (p. 1550) (including an implicit Publisher, if one exists), **DDSSubscriber** (p. 1592) (including implicit Subscriber), **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529) objects.

Prior to deleting each contained entity, this operation will recursively call the corresponding **delete\_contained\_entities()** (p. 1401) operation on each contained entity (if applicable). This pattern is applied recursively. In this manner the operation **delete\_contained\_entities()** (p. 1401) on the **DDSDomainParticipant** (p. 1351) will end up recursively deleting all the entities contained in the **DDSDomainParticipant** (p. 1351), including the **DDSDataWriter** (p. 1321), **DDSDataReader** (p. 1288), as well as the **DDSQueryCondition** (p. 1573), **DDSReadCondition** (p. 1574), and **DDSTopicQuery** (p. 1627) objects belonging to the contained **DDSDataReader** (p. 1288).

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if any of the contained entities is in a state where it cannot be deleted .

If **delete\_contained\_entities()** (p. 1401) completes successfully, the application may delete the **DDSDomainParticipant** (p. 1351).

## MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

## Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

9.252.2.60 `get_discovered_participants()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_participants (
    DDS_InstanceHandleSeq & participant_handles ) [pure virtual]
```

Returns a list of discovered **DDSDomainParticipant** (p. 1351) entities.

This operation retrieves the list of **DDSDomainParticipant** (p. 1351) entities that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDSDomainParticipant::ignore\_participant** (p. 1393) operation. When using **DDS\_DISCOVERYCONFIG\_BUILTIN\_SPDP2** (p. 394), this list only includes **DDSDomainParticipant** (p. 1351) entities that the application has received configuration information from.

## Parameters

<i>participant_handles</i>	<< <i>inout</i> >> (p. 238) <b>DDS_InstanceHandleSeq</b> (p. 923) to be filled with handles of the discovered <b>DDSDomainParticipant</b> (p. 1351) entities.
----------------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

9.252.2.61 `get_discovered_participants_from_subject_name()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_participants_from_subject_name (
    DDS_InstanceHandleSeq & participant_handles,
    const char * subject_name ) [pure virtual]
```

<<*extension*>> (p. 237) Returns a list of discovered **DDSDomainParticipant** (p. 1351) entities that have the given **DDS\_EntityNameQosPolicy::name** (p. 906).

This operation retrieves the same list as **DDSDomainParticipant::get\_discovered\_participants** (p. 1402), except this list contains only the participants that have the given **DDS\_EntityNameQosPolicy::name** (p. 906).

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the **RTI Security Plugins User's Manual** for more information.

## MT Safety:

Safe.

## Parameters

<i>participant_handles</i>	<< <i>inout</i> >> (p. 238) <b>DDS_InstanceHandleSeq</b> (p. 923) to be filled with handles of the discovered <b>DDSDomainParticipant</b> (p. 1351) entities.
<i>subject_name</i>	<< <i>in</i> >> (p. 238) The <b>DDS_EntityNameQosPolicy::name</b> (p. 906) by which to filter the list.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

9.252.2.62 `get_discovered_participant_data()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_participant_data (
    struct DDS_ParticipantBuiltinTopicData & participant_data,
    const DDS_InstanceHandle_t & participant_handle ) [pure virtual]
```

Returns **DDS\_ParticipantBuiltinTopicData** (p. 979) for the specified **DDSDomainParticipant** (p. 1351).

This operation retrieves information on a **DDSDomainParticipant** (p. 1351) that has been discovered on the network. The participant must be in the same domain as the participant on which this operation is invoked and must not have been "ignored" by means of the **DDSDomainParticipant::ignore\_participant** (p. 1393) operation.

The *participant\_handle* must correspond to such a DomainParticipant. Otherwise, the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

Use the operation **DDSDomainParticipant::get\_discovered\_participants** (p. 1402) to find the **DDSDomainParticipant** (p. 1351) entities that are currently discovered.

## MT Safety:

Safe.

## Parameters

<i>participant_data</i>	<< <i>inout</i> >> (p. 238) <b>DDS_ParticipantBuiltinTopicData</b> (p. 979) to be filled in with the data for the specified <b>DDSDomainParticipant</b> (p. 1351).
<i>participant_handle</i>	<< <i>in</i> >> (p. 238) <b>DDS_InstanceHandle_t</b> (p. 74) of <b>DDSDomainParticipant</b> (p. 1351).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

See also

**DDS\_ParticipantBuiltinTopicData** (p. 979)

**DDSDomainParticipant::get\_discovered\_participants** (p. 1402)

### 9.252.2.63 get\_discovered\_participant\_subject\_name()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_participant_subject_name (
    char * subject_name,
    DDS_UnsignedLong & subject_name_size,
    const DDS_InstanceHandle_t & participant_handle ) [pure virtual]
```

<<*extension*>> (p. 237) Returns **DDS\_EntityNameQosPolicy::name** (p. 906) for the specified **DDSDomainParticipant** (p. 1351).

This operation retrieves the **DDS\_EntityNameQosPolicy::name** (p. 906) of a **DDSDomainParticipant** (p. 1351) that has been discovered on the network. The participant must be in the same domain as the participant on which this operation is invoked and must not have been "ignored" by means of the **DDSDomainParticipant::ignore\_participant** (p. 1393) operation.

The `participant_handle` must correspond to such a DomainParticipant. If the `participant_handle` is **DDS\_HANDLE NIL** (p. 76) or is not a valid **DDS\_InstanceHandle\_t** (p. 74) for a DomainParticipant, then the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). If the `participant_handle` corresponds to a DomainParticipant that has not been discovered, then the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

Use the operation **DDSDomainParticipant::get\_discovered\_participants** (p. 1402) to find the **DDSDomainParticipant** (p. 1351) entities that are currently discovered.

Note: this method has different functionality when enabling the RTI Security Plugins. Please refer to the **RTI Security Plugins User's Manual** for more information.

**MT Safety:**

Safe.

**Parameters**

<i>subject_name</i>	<< <i>out</i> >> (p. 238) The char buffer that will be used to store the <b>DDS_EntityNameQosPolicy::name</b> (p. 906) of the discovered <b>DDSDomainParticipant</b> (p. 1351). If NULL, this function will return the required length of this buffer through the <code>subject_name_size</code> parameter.
<i>subject_name_size</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL. The size of the supplied char buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer, which includes space for the NUL terminator. If the supplied buffer is not NULL but this value is not large enough, then this function will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336). If the <b>DDS_EntityNameQosPolicy::name</b> (p. 906) is NULL, then this value will be set to 0.
<i>participant_handle</i>	<< <i>in</i> >> (p. 238) <b>DDS_InstanceHandle_t</b> (p. 74) of <b>DDSDomainParticipant</b> (p. 1351).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

## See also

**DDS\_EntityNameQosPolicy::name** (p. 906)

**DDSDomainParticipant::get\_discovered\_participants** (p. 1402)

## 9.252.2.64 get\_discovered\_topics()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_topics (
    DDS_InstanceHandleSeq & topic_handles ) [pure virtual]
```

Returns list of discovered **DDSTopic** (p. 1617) objects.

This operation retrieves the list of **DDSTopic** (p. 1617) s that have been discovered in the domain and that the application has not indicated should be "ignored" by means of the **DDSDomainParticipant::ignore\_topic** (p. 1395) operation.

## Parameters

<i>topic_handles</i>	<< <i>inout</i> >> (p. 238) <b>DDS_InstanceHandleSeq</b> (p. 923) to be filled with handles of the discovered <b>DDSTopic</b> (p. 1617) objects
----------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

## 9.252.2.65 get\_discovered\_topic\_data()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_discovered_topic_data (
    struct DDS_TopicBuiltinTopicData & topic_data,
    const DDS_InstanceHandle_t & topic_handle ) [pure virtual]
```

Returns **DDS\_TopicBuiltinTopicData** (p. 1128) for the specified **DDSTopic** (p. 1617).

This operation retrieves information on a **DDSTopic** (p. 1617) that has been discovered by the local Participant and must not have been "ignored" by means of the **DDSDomainParticipant::ignore\_topic** (p. 1395) operation.

The *topic\_handle* must correspond to such a topic. Otherwise, the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

This call is not supported for remote topics. If a remote `topic_handle` is used, the operation will fail with **DDS\_↔RETCODE\_UNSUPPORTED** (p. 336).

Use the operation **DDSDomainParticipant::get\_discovered\_topics** (p. 1405) to find the topics that are currently discovered.

#### Parameters

<code>topic_data</code>	<< <i>inout</i> >> (p. 238) <b>DDS_TopicBuiltinTopicData</b> (p. 1128) to be filled with the specified <b>DDSTopic</b> (p. 1617)'s data.
<code>topic_handle</code>	<< <i>in</i> >> (p. 238) <b>DDS_InstanceHandle_t</b> (p. 74) of <b>DDSTopic</b> (p. 1617).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	---

#### See also

**DDS\_TopicBuiltinTopicData** (p. 1128)

**DDSDomainParticipant::get\_discovered\_topics** (p. 1405)

### 9.252.2.66 contains\_entity()

```
virtual DDS_Boolean DDSDomainParticipant::contains_entity (
    const DDS_InstanceHandle_t & a_handle ) [pure virtual]
```

Completes successfully with **DDS\_BOOLEAN\_TRUE** (p. 317) if the referenced **DDSEntity** (p. 1463) is contained by the **DDSDomainParticipant** (p. 1351).

This operation checks whether or not the given `a_handle` represents an **DDSEntity** (p. 1463) that was created from the **DDSDomainParticipant** (p. 1351). The containment applies recursively. That is, it applies both to entities (**DDSTopicDescription** (p. 1624), **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592)) created directly using the **DDSDomainParticipant** (p. 1351) as well as entities created using a contained **DDSPublisher** (p. 1550), or **DDSSubscriber** (p. 1592) as the factory, and so forth.

The `instance` handle for an **DDSEntity** (p. 1463) may be obtained from built-in topic data, from various statuses, or from the operation **DDSEntity::get\_instance\_handle** (p. 1468).

#### Parameters

<code>a_handle</code>	<< <i>in</i> >> (p. 238) <b>DDS_InstanceHandle_t</b> (p. 74) of the <b>DDSEntity</b> (p. 1463) to be checked.
-----------------------	---

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if **DDSEntity** (p. 1463) is contained by the **DDSDomainParticipant** (p. 1351), or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

9.252.2.67 `get_participant_protocol_status()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_participant_protocol_status (
    struct DDS_DomainParticipantProtocolStatus & status ) [pure virtual]
```

<<*extension*>> (p. 237) Get the domain participant protocol status for this participant.

This also resets the status so that it is no longer considered changed.

## Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) <b>DDS_DomainParticipantProtocolStatus</b> (p. 740) to be filled in.
---------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

9.252.2.68 `set_property()`

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_property (
    const char * property_name,
    const char * value,
    bool propagate ) [pure virtual]
```

Set the value for a property that applies to a DomainParticipant.

## Warning

This method is not implemented in all APIs and it's intended only for testing purposes. You should use **DDSDomainParticipant::set\_qos** (p. 1408) instead.

## Parameters

<i>property_name</i>	<< <i>in</i> >> (p. 238). Name of the property that you want to set.
<i>value</i>	<< <i>in</i> >> (p. 238). New value for the property.
<i>propagate</i>	<< <i>in</i> >> (p. 238). Indicates if the property will be propagated or not.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDSDataWriter::set\_property** (p. 1337)

**DDSDataReader::set\_property** (p. 1308)

**DDSDomainParticipant::set\_qos** (p. 1408)

## 9.252.2.69 set\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_qos (
    const DDS_DomainParticipantQos & qos ) [pure virtual]
```

Change the QoS of this DomainParticipant.

The **DDS\_DomainParticipantQos::user\_data** (p. 743) and **DDS\_DomainParticipantQos::entity\_factory** (p. 744) can be changed. The other policies are immutable.

## Parameters

<i>qos</i>	<p>&lt;&lt;<i>in</i>&gt;&gt; (p. 238) Set of policies to be applied to <b>DDSDomainParticipant</b> (p. 1351). Policies must be consistent. Immutable policies cannot be changed after <b>DDSDomainParticipant</b> (p. 1351) is enabled. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 48) can be used to indicate that the QoS of the <b>DDSDomainParticipant</b> (p. 1351) should be changed to match the current default <b>DDS_DomainParticipantQos</b> (p. 741) set in the <b>DDSDomainParticipantFactory</b> (p. 1426).</p>
------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337) if an immutable policy is changed, or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337) if policies are inconsistent
------------	---

## See also

**DDS\_DomainParticipantQos** (p. 741) for rules on consistency among QoS policies

**set\_qos (abstract)** (p. 1464)

## 9.252.2.70 set\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Change the QoS of this domain participant using the input XML QoS profile.

The **DDS\_DomainParticipantQos::user\_data** (p. 743) and **DDS\_DomainParticipantQos::entity\_factory** (p. 744) can be changed. The other policies are immutable.

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337) if immutable policy is changed, or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337) if policies are inconsistent
------------	--

#### See also

**DDS\_DomainParticipantQos** (p. 741) for rules on consistency among QoS

### 9.252.2.71 get\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_qos (
    DDS_DomainParticipantQos & qos ) [pure virtual]
```

Get the participant QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

#### Parameters

<i>qos</i>	<< <b>inout</b> >> (p. 238) QoS to be filled up.
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**get\_qos (abstract)** (p. 1465)

**9.252.2.72 add\_peer()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::add_peer (
    const char * peer_desc_string ) [pure virtual]
```

<<*extension*>> (p. 237) Attempt to contact one or more additional peer participants.

Add the given peer description to the list of peers with which this **DDSDomainParticipant** (p. 1351) will try to communicate.

This method may be called at any time after this **DDSDomainParticipant** (p. 1351) has been created (before or after it has been enabled).

If this method is called after **DDSEntity::enable** (p. 1466), an attempt will be made to contact the new peer(s) immediately.

If this method is called *before* the DomainParticipant is enabled, the peer description will simply be added to the list that was populated by **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732); the first attempted contact will take place after this **DDSDomainParticipant** (p. 1351) is enabled.

Adding a peer description with this method does not guarantee that any peer(s) discovered as a result will exactly correspond to those described:

- This **DDSDomainParticipant** (p. 1351) will attempt to discover peer participants at the given locations but may not succeed if no such participants are available. In this case, this method will not wait for contact attempt(s) to be made and it will not report an error.
- If remote participants described by the given peer description *are* discovered, the distributed application is configured with asymmetric peer lists, and **DDS\_DiscoveryQosPolicy::accept\_unknown\_peers** (p. 734) is set to **DDS\_BOOLEAN\_TRUE** (p. 317). Thus, this **DDSDomainParticipant** (p. 1351) may actually discover *more* peers than are described in the given peer description.

To be informed of the exact remote participants that are discovered, regardless of which peers this **DDSDomainParticipant** (p. 1351) *attempts* to discover, use the built-in participant topic: **DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295).

To remove specific peer locators, you may use **DDSDomainParticipant::remove\_peer** (p. 1411). If a peer is removed, the `add_peer` operation will add it back to the list of peers.

To stop communicating with a peer **DDSDomainParticipant** (p. 1351) that has been discovered, use **DDSDomainParticipant::ignore\_participant** (p. 1393).

Adding a peer description with this method has no effect on the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) that may be subsequently retrieved with **DDSDomainParticipant::get\_qos()** (p. 1409) (because **DDS\_DiscoveryQosPolicy** (p. 731) is immutable).

**Parameters**

<i>peer_desc_string</i>	<< <i>in</i> >> (p. 238) New peer descriptor to be added. The format is specified in <b>Peer Descriptor Format</b> (p. 465).
-------------------------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**Peer Descriptor Format** (p. 465)  
**DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732)  
**DDS\_PARTICIPANT\_TOPIC\_NAME** (p. 295)  
**DDSDomainParticipant::get\_builtin\_subscriber** (p. 1393)

## 9.252.2.73 remove\_peer()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::remove_peer (
    const char * peer_desc_string ) [pure virtual]
```

<<**extension**>> (p. 237) Remove one or more peer participants from the list of peers with which this **DDSDomainParticipant** (p. 1351) will try to communicate.

This method may be called any time after this **DDSDomainParticipant** (p. 1351) has been enabled

Calling this method has the following effects:

- If a **DDSDomainParticipant** (p. 1351) was already discovered, it will be locally removed along with all its entities.
- Any further requests coming from a **DDSDomainParticipant** (p. 1351) located on any of the removed peers will be ignored.
- All the locators contained in the peer description will be removed from the peer list. The local **DDSDomainParticipant** (p. 1351) will stop sending announcement to those locators.

If remote participants located on a peer that was previously removed are discovered, they will be ignored until the related peer is added back by using **DDSDomainParticipant::add\_peer** (p. 1409).

Removing a peer description with this method has no effect on the **DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732) that may be subsequently retrieved with **DDSDomainParticipant::get\_qos()** (p. 1409) (because **DDS\_DiscoveryQosPolicy** (p. 731) is immutable).

## Parameters

<i>peer_desc_string</i>	<< <b>in</b> >> (p. 238) Peer descriptor to be removed. The format is specified in <b>Peer Descriptor Format</b> (p. 465).
-------------------------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**Peer Descriptor Format** (p. 465)

**DDS\_DiscoveryQosPolicy::initial\_peers** (p. 732)

**DDSDomainParticipant::add\_peer** (p. 1409)

**9.252.2.74 get\_dns\_tracker\_polling\_period()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::get_dns_tracker_polling_period (
    DDS_Duration_t & polling_period ) [pure virtual]
```

<<**extension**>> (p. 237) Retrieves the frequency used by the DNS tracker thread to query the DNS service.

The DNS tracker queries the DNS for hostnames specified in the initial peers of a DomainParticipant. The frequency of these queries is defined by **DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 728). If the value returned is **DDS\_DURATION\_INFINITE** (p. 326), the DNS tracker is disabled.

## Parameters

<i>polling_period</i>	<< <b>out</b> >> (p. 238) Duration that the API populates with the period of the DNS tracker.
-----------------------	---

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 728)

**9.252.2.75 set\_dns\_tracker\_polling\_period()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_dns_tracker_polling_period (
    const DDS_Duration_t & polling_period ) [pure virtual]
```

<<**extension**>> (p. 237) Configures the frequency in which the DNS tracker queries the DNS service.

This API allows you to change the frequency of the polling period for the DNS tracker. The range of accepted values, in seconds, goes from 1 second to 1 year. **DDS\_DURATION\_INFINITE** (p. 326) is also accepted as a valid value. If the duration is set to **DDS\_DURATION\_INFINITE** (p. 326), the DNS tracker is disabled.

Modifying the DNS tracker polling period through this has no effect on the **DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 728) when it is retrieved with **DDSDomainParticipant::get\_qos()** (p. 1409).

#### Parameters

<i>polling_period</i>	<< <i>in</i> >> (p. 238) Duration that is set as the polling period for the DNS tracker.
-----------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_DiscoveryConfigQosPolicy::dns\_tracker\_polling\_period** (p. 728)

**DDSDomainParticipant::add\_peer** (p. 1409)

### 9.252.2.76 set\_listener()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::set_listener (
    DDSDomainParticipantListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [pure virtual]
```

Sets the participant listener.

#### Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) Listener to be installed on the entity.
<i>mask</i>	<< <i>in</i> >> (p. 238) Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### MT Safety:

Unsafe. This method is not synchronized with the listener callbacks, so it is possible to set a new listener on a participant when the old listener is in a callback.

Care should therefore be taken not to delete any listener that has been set on an enabled participant unless some application-specific means are available of ensuring that the old listener cannot still be in use.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**set\_listener (abstract)** (p. 1465)

**9.252.2.77 get\_listener()**

```
virtual DDSDomainParticipantListener * DDSDomainParticipant::get_listener ( ) [pure virtual]
```

Get the participant listener.

## Returns

Existing listener attached to the **DDSDomainParticipant** (p. 1351).

## See also

**get\_listener (abstract)** (p. 1466)

**9.252.2.78 get\_implicit\_publisher()**

```
virtual DDSPublisher * DDSDomainParticipant::get_implicit_publisher ( ) [pure virtual]
```

<<**extension**>> (p. 237) Returns the implicit **DDSPublisher** (p. 1550). If an implicit Publisher does not already exist, this creates one.

There can only be one implicit Publisher per DomainParticipant.

The implicit Publisher is created with **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) and no Listener.

This implicit Publisher will be deleted automatically when the following methods are called: **DDSDomainParticipant**↔**::delete\_contained\_entities** (p. 1401), or **DDSDomainParticipant::delete\_publisher** (p. 1378) with the implicit publisher as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataWriters that belong to the implicit Publisher, the implicit Publisher will be implicitly deleted.

## Returns

The implicit publisher

## See also

**DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_publisher** (p. 1376)

**9.252.2.79 get\_implicit\_subscriber()**

```
virtual DDSSubscriber * DDSDomainParticipant::get_implicit_subscriber ( ) [pure virtual]
```

<<**extension**>> (p. 237) Returns the implicit **DDSSubscriber** (p. 1592). If an implicit Subscriber does not already exist, this creates one.

There can only be one implicit Subscriber per DomainParticipant.

The implicit Subscriber is created with **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) and no Listener.

This implicit Subscriber will be deleted automatically when the following methods are called: **DDSDomainParticipant::delete\_contained\_entities** (p. 1401), or **DDSDomainParticipant::delete\_subscriber** (p. 1380) with the subscriber as a parameter. Additionally, when a DomainParticipant is deleted, if there are no attached DataReaders that belong to the implicit Subscriber, the implicit Subscriber will be implicitly deleted.

**MT Safety:**

UNSAFE. it is not safe to create the implicit subscriber while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_subscriber\_qos** (p. 1374).

**Returns**

The implicit subscriber

**See also**

**DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57)

**DDSDomainParticipant::create\_subscriber** (p. 1379)

**9.252.2.80 create\_datawriter()**

```
virtual DDSDataWriter * DDSDomainParticipant::create_datawriter (
    DDSTopic * topic,
    const DDS_DataWriterQos & qos,
    DDSDataWriterListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a **DDSDataWriter** (p. 1321) that will be attached and belong to the implicit **DDSPublisher** (p. 1550).

**Precondition**

The given **DDSTopic** (p. 1617) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this method will fail.

The **DDSDataWriter** (p. 1321) created using this method will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) when the following methods are called: **DDSDomainParticipant::create\_datawriter** (p. 1415), **DDSDomainParticipant::create\_datawriter\_with\_profile** (p. 1416), or **DDSDomainParticipant::get\_implicit\_publisher** (p. 1414).

**MT Safety:**

UNSAFE. If **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) is used for the qos parameter, it is not safe to create the DataWriter while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datawriter\_qos** (p. 1359).

## Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopic</b> (p. 1617) that the <b>DDSDataWriter</b> (p. 1321) will be associated with.
<i>qos</i>	<< <i>in</i> >> (p. 238) QoS to be used for creating the new <b>DDSDataWriter</b> (p. 1321). The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 110) can be used to indicate that the <b>DDSDataWriter</b> (p. 1321) should be created with the default <b>DDS_DataWriterQos</b> (p. 689) set in the implicit <b>DDSPublisher</b> (p. 1550). The special value <b>DDS_DATAWRITER_QOS_USE_TOPIC_QOS</b> (p. 110) can be used to indicate that the <b>DDSDataWriter</b> (p. 1321) should be created with the combination of the default <b>DDS_DataWriterQos</b> (p. 689) set on the <b>DDSPublisher</b> (p. 1550) and the <b>DDS_TopicQos</b> (p. 1135) of the <b>DDSTopic</b> (p. 1617).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataWriter</b> (p. 1321).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

A **DDSDataWriter** (p. 1321) of a derived class specific to the data type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

## See also

**FooDataWriter** (p. 1676)

**DDSDomainParticipant::get\_implicit\_publisher** (p. 1414)

**DDSTopic::set\_qos** (p. 1619)

**DDSDataWriter::set\_listener** (p. 1339)

### 9.252.2.81 create\_datawriter\_with\_profile()

```
virtual DDSDataWriter * DDSDomainParticipant::create_datawriter_with_profile (
    DDSTopic * topic,
    const char * library_name,
    const char * profile_name,
    DDSDataWriterListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a **DDSDataWriter** (p. 1321) using a XML QoS profile that will be attached and belong to the implicit **DDSPublisher** (p. 1550).

## Precondition

The given **DDSTopic** (p. 1617) must have been created from the same DomainParticipant as the implicit Publisher. If it was created from a different DomainParticipant, this method will return NULL.

The **DDSDataWriter** (p. 1321) created using this method will be associated with the implicit Publisher. This Publisher is automatically created (if it does not exist) using **DDS\_PUBLISHER\_QOS\_DEFAULT** (p. 57) when the following methods are called: **DDSDomainParticipant::create\_datawriter** (p. 1415), **DDSDomainParticipant::create\_datawriter←\_with\_profile** (p. 1416), or **DDSDomainParticipant::get\_implicit\_publisher** (p. 1414)

## Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopic</b> (p. 1617) that the <b>DDSDataWriter</b> (p. 1321) will be associated with.
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataWriter</b> (p. 1321).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

A **DDSDataWriter** (p. 1321) of a derived class specific to the data type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

## See also

**FooDataWriter** (p. 1676)

**DDS\_DataWriterQos** (p. 689) for rules on consistency among QoS

**DDSDomainParticipant::create\_datawriter** (p. 1415)

**DDSDomainParticipant::get\_default\_datawriter\_qos** (p. 1358)

**DDSDomainParticipant::get\_implicit\_publisher** (p. 1414)

**DDSTopic::set\_qos** (p. 1619)

**DDSDataWriter::set\_listener** (p. 1339)

## 9.252.2.82 delete\_datawriter()

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_datawriter (
    DDSDataWriter * a_datawriter ) [pure virtual]
```

<<*extension*>> (p. 237) Deletes a **DDSDataWriter** (p. 1321) that belongs to the implicit **DDSPublisher** (p. 1550).

The deletion of the **DDSDataWriter** (p. 1321) will automatically unregister all instances.

**Precondition**

If the **DDSDataWriter** (p. 1321) does not belong to the implicit **DDSPublisher** (p. 1550), the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

**Postcondition**

Listener installed on the **DDSDataWriter** (p. 1321) will not be called after this method completes successfully.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>a_datawriter</i>	<< <i>in</i> >> (p. 238) The <b>DDSDataWriter</b> (p. 1321) to be deleted.
---------------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

**See also**

**DDSDomainParticipant::get\_implicit\_publisher** (p. 1414)

**9.252.2.83 create\_datareader()**

```
virtual DDSDataReader * DDSDomainParticipant::create_datareader (
    DDSTopicDescription * topic,
    const DDS_DataReaderQos & qos,
    DDSDataReaderListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a **DDSDataReader** (p. 1288) that will be attached and belong to the implicit **DDSSubscriber** (p. 1592).

**Precondition**

The given **DDSTopicDescription** (p. 1624) must have been created from the same DomainParticipant as the implicit Subscriber. If it was created from a different DomainParticipant, this method will return NULL.

The **DDSDataReader** (p. 1288) created using this method will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) when the following methods are called: **DDSDomainParticipant::create\_datareader** (p. 1418), **DDSDomainParticipant::create\_datareader\_with\_profile** (p. 1419), or **DDSDomainParticipant::get\_implicit\_subscriber** (p. 1414).

## MT Safety:

UNSAFE. If **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDSDomainParticipant::set\_default\_datareader\_qos** (p. 1361).

## Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopicDescription</b> (p. 1624) that the <b>DDSDataReader</b> (p. 1288) will be associated with.
<i>qos</i>	<< <i>in</i> >> (p. 238) The qos of the <b>DDSDataReader</b> (p. 1288). The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) can be used to indicate that the <b>DDSDataReader</b> (p. 1288) should be created with the default <b>DDS_DataReaderQos</b> (p. 644) set in the implicit <b>DDSSubscriber</b> (p. 1592). If <b>DDSTopicDescription</b> (p. 1624) is of type <b>DDSTopic</b> (p. 1617) or <b>DDSContentFilteredTopic</b> (p. 1283), the special value <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 133) can be used to indicate that the <b>DDSDataReader</b> (p. 1288) should be created with the combination of the default <b>DDS_DataReaderQos</b> (p. 644) set on the implicit <b>DDSSubscriber</b> (p. 1592) and the <b>DDS_TopicQos</b> (p. 1135) (in the case of a <b>DDSContentFilteredTopic</b> (p. 1283), the <b>DDS_TopicQos</b> (p. 1135) of the related <b>DDSTopic</b> (p. 1617)). if <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 133) is used, <i>topic</i> cannot be a <b>DDSMultiTopic</b> (p. 1529).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataReader</b> (p. 1288).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

A **DDSDataReader** (p. 1288) of a derived class specific to the data-type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

## See also

**DDSDataReader::set\_listener** (p. 1309)

### 9.252.2.84 create\_datareader\_with\_profile()

```
virtual DDSDataReader * DDSDomainParticipant::create_datareader_with_profile (
    DDSTopicDescription * topic,
    const char * library_name,
    const char * profile_name,
    DDSDataReaderListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a **DDSDataReader** (p. 1288) using a XML QoS profile that will be attached and belong to the implicit **DDSSubscriber** (p. 1592).

#### Precondition

The given **DDSTopicDescription** (p. 1624) must have been created from the same DomainParticipant as the implicit subscriber. If it was created from a different DomainParticipant, this method will return NULL.

The **DDSDataReader** (p. 1288) created using this method will be associated with the implicit Subscriber. This Subscriber is automatically created (if it does not exist) using **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p. 57) when the following methods are called: **DDSDomainParticipant::create\_datareader** (p. 1418), **DDSDomainParticipant::create\_datareader\_with\_profile** (p. 1419), or **DDSDomainParticipant::get\_implicit\_subscriber** (p. 1414)

#### Parameters

<i>topic</i>	<< <b>in</b> >> (p. 238) The <b>DDSTopicDescription</b> (p. 1624) that the <b>DDSDataReader</b> (p. 1288) will be associated with.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipant::set_default_library</b> (p. 1367)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDSDomainParticipant::set_default_profile</b> (p. 1368)).
<i>listener</i>	<< <b>in</b> >> (p. 238) The listener of the <b>DDSDataReader</b> (p. 1288).
<i>mask</i>	<< <b>in</b> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### Returns

A **DDSDataReader** (p. 1288) of a derived class specific to the data-type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

#### See also

**DDSTopic::set\_qos** (p. 1619)

**DDSDataReader::set\_listener** (p. 1309)

**9.252.2.85 delete\_datareader()**

```
virtual DDS_ReturnCode_t DDSDomainParticipant::delete_datareader (
    DDSDataReader * a_datareader ) [pure virtual]
```

<<**extension**>> (p. 237) Deletes a **DDSDataReader** (p. 1288) that belongs to the implicit **DDSSubscriber** (p. 1592).

**Precondition**

If the **DDSDataReader** (p. 1288) does not belong to the implicit **DDSSubscriber** (p. 1592), or if there are any existing **DDSReadCondition** (p. 1574) or **DDSQueryCondition** (p. 1573) objects that are attached to the **DDSDataReader** (p. 1288), or if there are outstanding loans on samples (as a result of a call to `read()`, `take()`, or one of the variants thereof), the operation fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

**Postcondition**

Listener installed on the **DDSDataReader** (p. 1288) will not be called after this method completes successfully.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Parameters**

<i>a_datareader</i>	<< <b>in</b> >> (p. 238) The <b>DDSDataReader</b> (p. 1288) to be deleted.
---------------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

**See also**

**DDSDomainParticipant::get\_implicit\_subscriber** (p. 1414)

**9.252.2.86 lookup\_publisher\_by\_name()**

```
virtual DDSPublisher * DDSDomainParticipant::lookup_publisher_by_name (
    const char * publisher_name ) [pure virtual]
```

<<**extension**>> (p. 237) Looks up a **DDSPublisher** (p. 1550) by its entity name within this **DDSDomainParticipant** (p. 1351).

Every **DDSPublisher** (p. 1550) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves a **DDSPublisher** (p. 1550) within the **DDSDomainParticipant** (p. 1351) given the entity's name. If there are several **DDSPublisher** (p. 1550) with the same name within the **DDSDomainParticipant** (p. 1351), this function returns the first matching occurrence.

#### Parameters

<i>publisher_name</i>	<< <i>in</i> >> (p. 238) Entity name of the <b>DDSPublisher</b> (p. 1550).
-----------------------	--

#### Returns

The first **DDSPublisher** (p. 1550) found with the specified name or NULL if it is not found.

#### See also

**DDSDomainParticipant::lookup\_datawriter\_by\_name** (p. 1422)

### 9.252.2.87 lookup\_subscriber\_by\_name()

```
virtual DDSSubscriber * DDSDomainParticipant::lookup_subscriber_by_name (
    const char * subscriber_name ) [pure virtual]
```

<<*extension*>> (p. 237) Retrieves a **DDSSubscriber** (p. 1592) by its entity name within this **DDSDomainParticipant** (p. 1351).

Every **DDSSubscriber** (p. 1592) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves a **DDSSubscriber** (p. 1592) within the **DDSDomainParticipant** (p. 1351) given the entity's name. If there are several **DDSSubscriber** (p. 1592) with the same name within the **DDSDomainParticipant** (p. 1351), this function returns the first matching occurrence.

#### Parameters

<i>subscriber_name</i>	<< <i>in</i> >> (p. 238) Entity name of the <b>DDSSubscriber</b> (p. 1592).
------------------------	---

#### Returns

The first **DDSSubscriber** (p. 1592) found with the specified name or NULL if it is not found.

#### See also

**DDSDomainParticipant::lookup\_datareader\_by\_name** (p. 1423)

## 9.252.2.88 lookup\_datawriter\_by\_name()

```
virtual DDSDataWriter * DDSDomainParticipant::lookup_datawriter_by_name (
    const char * datawriter_full_name ) [pure virtual]
```

<<*extension*>> (p. 237) Looks up a **DDSDataWriter** (p. 1321) by its entity name within this **DDSDomainParticipant** (p. 1351).

Every **DDSDataWriter** (p. 1321) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

Every **DDSPublisher** (p. 1550) in the system has an entity name which is also configured and stored in the EntityName policy.

This operation retrieves a **DDSDataWriter** (p. 1321) within a **DDSPublisher** (p. 1550) given the specified name which encodes both to the **DDSDataWriter** (p. 1321) and the **DDSPublisher** (p. 1550) name.

If there are several **DDSDataWriter** (p. 1321) with the same name within the corresponding **DDSPublisher** (p. 1550) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDSPublisher** (p. 1550) to which the **DDSDataWriter** (p. 1321) belongs and the entity name of of the **DDSDataWriter** (p. 1321) itself, separated by a double colon "::". For example: MyPublisherName::MyDataWriterName

The plain name contains the **DDSDataWriter** (p. 1321) name only. In this situation it is implied that the **DDSDataWriter** (p. 1321) belongs to the implicit **DDSPublisher** (p. 1550) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDSPublisher** (p. 1550) name part being "implicit". For example: the plain name "MyDataWriterName" is equivalent to specifying the fully qualified name "implicit::MyDataWriterName"

The **DDSDataWriter** (p. 1321) is only looked up within the **DDSPublisher** (p. 1550) specified in the fully qualified name, or within the implicit **DDSPublisher** (p. 1550) if the name was not fully qualified.

## Parameters

<i>datawriter_full_name</i>	<< <i>in</i> >> (p. 238) Entity name or fully-qualified entity name of the <b>DDSDataWriter</b> (p. 1321).
-----------------------------	--

## Returns

The first **DDSDataWriter** (p. 1321) found with the specified name or NULL if it is not found.

## See also

**DDSPublisher::lookup\_datawriter\_by\_name** (p. 1571)

**DDSDomainParticipant::lookup\_publisher\_by\_name** (p. 1421)

**9.252.2.89 lookup\_datareader\_by\_name()**

```
virtual DDSDataReader * DDSDomainParticipant::lookup_datareader_by_name (
    const char * datareader_full_name ) [pure virtual]
```

<<*extension*>> (p. 237) Retrieves up a **DDSDataReader** (p. 1288) by its entity name in this **DDSDomainParticipant** (p. 1351).

Every **DDSDataReader** (p. 1288) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

Every **DDSSubscriber** (p. 1592) in the system has an entity name which is also configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves a **DDSDataReader** (p. 1288) within a **DDSSubscriber** (p. 1592) given the specified name which encodes both to the **DDSDataReader** (p. 1288) and the **DDSSubscriber** (p. 1592) name.

If there are several **DDSDataReader** (p. 1288) with the same name within the corresponding **DDSSubscriber** (p. 1592) this function returns the first matching occurrence.

The specified name might be given as a fully-qualified entity name or as a plain name.

The fully qualified entity name is a concatenation of the **DDSSubscriber** (p. 1592) to which the **DDSDataReader** (p. 1288) belongs and the entity name of of the **DDSDataReader** (p. 1288) itself, separated by a double colon ":". For example: MySubscriberName::MyDataReaderName

The plain name contains the **DDSDataReader** (p. 1288) name only. In this situation it is implied that the **DDSDataReader** (p. 1288) belongs to the implicit **DDSSubscriber** (p. 1592) so the use of a plain name is equivalent to specifying a fully qualified name with the **DDSSubscriber** (p. 1592) name part being "implicit". For example: the plain name "MyDataReaderName" is equivalent to specifying the fully qualified name "implicit::MyDataReaderName"

The **DDSDataReader** (p. 1288) is only looked up within the **DDSSubscriber** (p. 1592) specified in the fully qualified name, or within the implicit **DDSSubscriber** (p. 1592) if the name was not fully qualified.

**Parameters**

<i>datareader_full_name</i>	<< <i>in</i> >> (p. 238) Full entity name of the <b>DDSDataReader</b> (p. 1288).
-----------------------------	--

**Returns**

The first **DDSDataReader** (p. 1288) found with the specified name or NULL if it is not found.

- virtual **DDS\_ReturnCode\_t** **get\_datawriter\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_DataWriterQos** &qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)=0  
 <<extension>> (p. 237) Gets the **DDS\_DataWriterQos** (p. 689) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- virtual **DDS\_ReturnCode\_t** **get\_datareader\_qos\_from\_profile** ( **DDS\_DataReaderQos** &qos, const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p. 237) Gets the **DDS\_DataReaderQos** (p. 644) values associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t** **get\_datareader\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_DataReaderQos** &qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)=0  
 <<extension>> (p. 237) Gets the **DDS\_DataReaderQos** (p. 644) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- virtual **DDS\_ReturnCode\_t** **get\_topic\_qos\_from\_profile** ( **DDS\_TopicQos** &qos, const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p. 237) Gets the **DDS\_TopicQos** (p. 1135) values associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t** **get\_topic\_qos\_from\_profile\_w\_topic\_name** ( **DDS\_TopicQos** &qos, const char \*library\_name, const char \*profile\_name, const char \*topic\_name)=0  
 <<extension>> (p. 237) Gets the **DDS\_TopicQos** (p. 1135) values associated with the input XML QoS profile while applying topic filters to the input topic name.
- virtual **DDS\_ReturnCode\_t** **get\_qos\_profile\_libraries** (struct **DDS\_StringSeq** &library\_names)=0  
 <<extension>> (p. 237) Gets the names of all XML QoS profile libraries associated with the **DDSDomainParticipantFactory** (p. 1426)
- virtual **DDS\_ReturnCode\_t** **get\_qos\_profiles** (struct **DDS\_StringSeq** &profile\_names, const char \*library\_name)=0  
 <<extension>> (p. 237) Gets the names of all XML QoS profiles associated with the input XML QoS profile library.
- virtual **DDSDomainParticipant \*** **create\_participant** ( **DDS\_DomainId\_t** domainId, const **DDS\_DomainParticipantQos** &qos, **DDSDomainParticipantListener** \*listener, **DDS\_StatusMask** mask)=0  
 Creates a new **DDSDomainParticipant** (p. 1351) object.
- virtual **DDSDomainParticipant \*** **create\_participant\_with\_profile** ( **DDS\_DomainId\_t** domainId, const char \*library\_name, const char \*profile\_name, **DDSDomainParticipantListener** \*listener, **DDS\_StatusMask** mask)=0  
 <<extension>> (p. 237) Creates a new **DDSDomainParticipant** (p. 1351) object using the **DDS\_DomainParticipantQos** (p. 741) associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t** **delete\_participant** ( **DDSDomainParticipant** \*a\_participant)=0  
 Deletes an existing **DDSDomainParticipant** (p. 1351).
- virtual **DDSDomainParticipant \*** **lookup\_participant** ( **DDS\_DomainId\_t** domainId)=0  
 Locates an existing **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t** **set\_qos** (const **DDS\_DomainParticipantFactoryQos** &qos)=0  
 Sets the value for a participant factory QoS.
- virtual **DDS\_ReturnCode\_t** **get\_qos** ( **DDS\_DomainParticipantFactoryQos** &qos)=0  
 Gets the value for participant factory QoS.
- virtual **DDS\_ReturnCode\_t** **load\_profiles** ()=0  
 <<extension>> (p. 237) Loads the XML QoS profiles.
- virtual **DDS\_ReturnCode\_t** **reload\_profiles** ()=0  
 <<extension>> (p. 237) Reloads the XML QoS profiles.
- virtual **DDS\_ReturnCode\_t** **unload\_profiles** ()=0  
 <<extension>> (p. 237) Unloads the XML QoS profiles.

- virtual **DDS\_ReturnCode\_t unregister\_thread** ()=0  
 <<extension>> (p. 237) Allows the user to release thread specific resources kept by the middleware.
- virtual const **DDS\_TypeCode \* get\_typecode\_from\_config** (const char \*type\_name)=0  
 <<extension>> (p. 237) Gets a **DDS\_TypeCode** (p. 1164) from a definition provided in an XML configuration file.
- virtual **DDSDomainParticipant \* create\_participant\_from\_config** (const char \*configuration\_name)=0  
 <<extension>> (p. 237) Creates a **DDSDomainParticipant** (p. 1351) given its configuration name from a description provided in an XML configuration file.
- virtual **DDSDomainParticipant \* create\_participant\_from\_config\_w\_params** (const char \*configuration\_name, const **DDS\_DomainParticipantConfigParams\_t** &params)=0  
 <<extension>> (p. 237) Creates a **DDSDomainParticipant** (p. 1351) given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.
- virtual **DDSDomainParticipant \* lookup\_participant\_by\_name** (const char \*participant\_name)=0  
 <<extension>> (p. 237) Looks up a **DDSDomainParticipant** (p. 1351) by its entity name in the **DDSDomainParticipantFactory** (p. 1426).
- virtual **DDS\_ReturnCode\_t register\_type\_support** ( **DDSDomainParticipantFactory\_RegisterTypeFunction** register\_type\_fcn, const char \*type\_name)=0  
 <<extension>> (p. 237) Registers a **DDSTypeSupport** (p. 1629) with the **DDSDomainParticipantFactory** (p. 1426) to enable automatic registration if the corresponding type, should it be needed by a **DDSDomainParticipant** (p. 1351).
- virtual **DDS\_ReturnCode\_t get\_participants** (**DDSDomainParticipantSeq** &participants)=0  
 <<extension>> (p. 237) Allows the application to access all the participants the **DomainParticipantFactory** has.
- virtual **DDS\_ReturnCode\_t set\_thread\_factory** ( **DDSThreadFactory** \*thread\_factory)=0  
 <<extension>> (p. 237) Sets a **DDSThreadFactory** (p. 1615) in the **DDSDomainParticipantFactory** (p. 1426) that will be used to create the internal threads of the DDS middleware.

## Static Public Member Functions

- static **DDSDomainParticipantFactory \* get\_instance** ()  
 Gets the singleton instance of this class.
- static **DDS\_ReturnCode\_t finalize\_instance** ()  
 <<extension>> (p. 237) Destroys the singleton instance of this class.

### 9.253.1 Detailed Description

<<singleton>> (p. 238) <<interface>> (p. 237) Allows creation and destruction of **DDSDomainParticipant** (p. 1351) objects.

The sole purpose of this class is to allow the creation and destruction of **DDSDomainParticipant** (p. 1351) objects. This class itself is a <<singleton>> (p. 238), and accessed via the **get\_instance()** (p. 1429) method, and destroyed with **finalize\_instance()** (p. 1429) method.

A single application can participate in multiple domains by instantiating multiple **DDSDomainParticipant** (p. 1351) objects.

An application may even instantiate multiple participants in the same domain. Participants in the same domain exchange data in the same way regardless of whether they are in the same application or different applications or on the same node or different nodes; their location is transparent.

There are two important caveats:

- When there are multiple participants on the same node (in the same application or different applications) in the same domain, the application(s) must make sure that the participants do not try to bind to the same port numbers. You must disambiguate between the participants by setting a participant ID for each participant (**DDS\_WireProtocolQosPolicy::participant\_id** (p. 1247)). The port numbers used by a participant are calculated based on both the participant index and the domain ID, so if all participants on the same node have different participant indexes, they can coexist in the same domain.
- You cannot mix entities from different participants. For example, you cannot delete a topic on a different participant than you created it from, and you cannot ask a subscriber to create a reader for a topic created from a participant different than the subscriber's own participant. (Note that it is permissible for an application built on top of RTI Connext to know about entities from different participants. For example, an application could keep references to a reader from one domain and a writer from another and then bridge the domains by writing the data received in the reader callback.)

See also

**DDSDomainParticipant** (p. 1351)

## 9.253.2 Member Function Documentation

### 9.253.2.1 get\_instance()

```
static DDSDomainParticipantFactory * DDSDomainParticipantFactory::get_instance ( ) [static]
```

Gets the singleton instance of this class.

**DDSTheParticipantFactory** (p. 41) can be used as an alias for the singleton factory returned by this operation.

Returns

The singleton **DDSDomainParticipantFactory** (p. 1426) instance.

MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet()** (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_& t&)** (p. 1633), **DDSGuardCondition::~DDSGuardCondition** (p. 1472), **DDSWaitSet::~DDSWaitSet()** (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

See also

**DDSTheParticipantFactory** (p. 41)

### 9.253.2.2 finalize\_instance()

```
static DDS_ReturnCode_t DDSDomainParticipantFactory::finalize_instance ( ) [static]
```

<<*extension*>> (p. 237) Destroys the singleton instance of this class.

Only necessary to explicitly reclaim resources used by the participant factory singleton. Note that on many OSs, these resources are automatically reclaimed by the OS when the program terminates. However, some memory-check tools still flag these as unreclaimed. So this method provides a way to clean up memory used by the participant factory.

#### Precondition

All participants created from the factory have been deleted.

#### Postcondition

All resources belonging to the factory have been reclaimed. Another call to **DDSDomainParticipantFactory**↔**::get\_instance** (p. 1429) will return a new lifecycle of the singleton.

#### MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet()** (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_↔t&)** (p. 1633), **DDSGuardCondition::~~DDSGuardCondition** (p. 1472), **DDSWaitSet::~~DDSWaitSet()** (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
-----	---

#### See also

**DDSTheParticipantFactory** (p. 41)

#### Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

### 9.253.2.3 set\_default\_participant\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_default_participant_qos (
    const DDS_DomainParticipantQos & qos ) [pure virtual]
```

Sets the default **DDS\_DomainParticipantQos** (p. 741) values for this domain participant factory.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) Qos to be filled up. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 48) may be passed as <i>qos</i> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSDomainParticipantFactory::set_default_participant_qos</b> (p. 1430) had never been called.
------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)

**DDSDomainParticipantFactory::create\_participant** (p. 1442)

## 9.253.2.4 set\_default\_participant\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_default_participant_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Sets the default **DDS\_DomainParticipantQos** (p. 741) values for this domain participant factory based on the input XML QoS profile.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

This default value will be used for newly created **DDSDomainParticipant** (p. 1351) if **DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48) is specified as the *qos* parameter when **DDSDomainParticipantFactory::create\_participant** (p. 1442) is called.

## Precondition

The **DDS\_DomainParticipantQos** (p. 741) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

## MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a domain participant factory while another thread may be simultaneously calling **DDSDomainParticipantFactory::set\_default\_participant\_qos** (p. 1430)

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)

**DDSDomainParticipantFactory::create\_participant\_with\_profile** (p. 1443)

9.253.2.5 **get\_default\_participant\_qos()**

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_default_participant_qos (
    DDS_DomainParticipantQos & qos ) [pure virtual]
```

Initializes the **DDS\_DomainParticipantQos** (p. 741) instance with default values.

The retrieved *qos* will match the set of values specified on the last successful call to **DDSDomainParticipantFactory::set\_default\_participant\_qos** (p. 1430), or **DDSDomainParticipantFactory::set\_default\_participant\_qos\_with\_profile** (p. 1431), or else, if the call was never made, the default values listed in **DDS\_DomainParticipantQos** (p. 741).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>qos</i>	<< <i>out</i> >> (p. 238) the domain participant's QoS
------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)

**DDSDomainParticipantFactory::create\_participant** (p. 1442)

### 9.253.2.6 set\_default\_library()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_default_library (
    const char * library_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML library for a **DDSDomainParticipantFactory** (p. 1426).

Any API requiring a `library_name` as a parameter can use NULL to refer to the default library set with this function.

Note: if the library set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS\_DomainParticipantFactoryQos::profile** (p. 739)) the default library will be set to the last library containing a profile with the attribute `is_default_qos=true` or NULL no such library exists.

See also

**DDSDomainParticipantFactory::set\_default\_profile** (p. 1434) for more information.

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name. If <code>library_name</code> is NULL any previous default is unset.
---------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSDomainParticipantFactory::get\_default\_library** (p. 1433)

### 9.253.2.7 get\_default\_library()

```
virtual const char * DDSDomainParticipantFactory::get_default_library ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the default XML library associated with a **DDSDomainParticipantFactory** (p. 1426).

**Returns**

The returned library name is determined as follows:

- If it was previously set with **DDSDomainParticipantFactory::set\_default\_library** (p. 1433), this function returns that library name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the library where the last one is contained.
- Otherwise, this function returns NULL.

**See also**

**DDSDomainParticipantFactory::set\_default\_library** (p. 1433)

**9.253.2.8 set\_default\_profile()**

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_default_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML profile for a **DDSDomainParticipantFactory** (p. 1426).

This method specifies the profile that will be used as the default the next time a default DomainParticipantFactory profile is needed during a call to a DomainParticipantFactory method. When calling a **DDSDomainParticipantFactory** (p. 1426) method that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

This method does not set the default QoS for newly created DomainParticipants; for this functionality, use **DDSDomainParticipantFactory::set\_default\_participant\_qos\_with\_profile** (p. 1431) (you may pass in NULL after having called **set\_default\_profile()** (p. 1434)).

Note: if the profile set with this function no longer exists after reloading the QoS profiles (for example, by changing **DDS\_DomainParticipantFactoryQos::profile** (p. 739)) the default profile will be set to the last one marked with the attribute `is_default_qos=true` or NULL no such profile exists.

**Parameters**

<i>library_name</i>	<< <b>in</b> >> (p. 238) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 238) The profile name. If profile_name is NULL any previous default is unset.

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**DDSDomainParticipantFactory::get\_default\_profile** (p. 1435)

**DDSDomainParticipantFactory::get\_default\_profile\_library** (p. 1435)

### 9.253.2.9 get\_default\_profile()

```
virtual const char * DDSDomainParticipantFactory::get_default_profile ( ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the default XML profile associated with a **DDSDomainParticipantFactory** (p. 1426).

Returns

The returned profile name is determined as follows:

- If it was previously set with **DDSDomainParticipantFactory::set\_default\_profile** (p. 1434), this function returns that profile name
- Otherwise, if one or more profiles have the XML attribute `is_default_qos="true"`, this function returns the name of one of them
- Otherwise, this function returns NULL.

See also

**DDSDomainParticipantFactory::set\_default\_profile** (p. 1434)

### 9.253.2.10 get\_default\_profile\_library()

```
virtual const char * DDSDomainParticipantFactory::get_default_profile_library ( ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the library where the default XML profile is contained for a **DDSDomainParticipantFactory** (p. 1426).

The default profile library is automatically set when **DDSDomainParticipantFactory::set\_default\_profile** (p. 1434) is called.

This library can be different than the **DDSDomainParticipantFactory** (p. 1426) default library (see **DDSDomainParticipantFactory::get\_default\_library** (p. 1433)).

Returns

The default profile library for the profile returned by **DDSDomainParticipantFactory::get\_default\_profile** (p. 1435), or NULL if that profile is NULL.

See also

**DDSDomainParticipantFactory::get\_default\_profile** (p. 1435)

### 9.253.2.11 get\_participant\_factory\_qos\_from\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_participant_factory_qos_from_profile (
    DDS_DomainParticipantFactoryQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the **DDS\_DomainParticipantFactoryQos** (p. 737) values associated with the input XML QoS profile.

#### Parameters

<i>qos</i>	<< <i>out</i> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.253.2.12 get\_participant\_qos\_from\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_participant_qos_from_profile (
    DDS_DomainParticipantQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the **DDS\_DomainParticipantQos** (p. 741) values associated with the input XML QoS profile.

#### Parameters

<i>qos</i>	<< <i>out</i> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## 9.253.2.13 get\_publisher\_qos\_from\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_publisher_qos_from_profile (
    DDS_PublisherQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the **DDS\_PublisherQos** (p. 1022) values associated with the input XML QoS profile.

## Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## 9.253.2.14 get\_subscriber\_qos\_from\_profile()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_subscriber_qos_from_profile (
    DDS_SubscriberQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the **DDS\_SubscriberQos** (p. 1105) values associated with the input XML QoS profile.

## Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
------------	--

## Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexxt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexxt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.253.2.15 get\_datawriter\_qos\_from\_profile()**

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_datawriter_qos_from_profile (
    DDS_DataWriterQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the **DDS\_DataWriterQos** (p. 689) values associated with the input XML QoS profile.

## Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexxt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexxt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.253.2.16 get\_datawriter\_qos\_from\_profile\_w\_topic\_name()**

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_datawriter_qos_from_profile_w_topic_↵
name (
```

```

    DDS_DataWriterQos & qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name ) [pure virtual]

```

<<**extension**>> (p. 237) Gets the **DDS\_DataWriterQos** (p. 689) values associated with the input XML QoS profile while applying topic filters to the input topic name.

#### Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).
<i>topic_name</i>	<< <b>in</b> >> (p. 238) Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connex will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

#### 9.253.2.17 get\_datareader\_qos\_from\_profile()

```

virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_datareader_qos_from_profile (
    DDS_DataReaderQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]

```

<<**extension**>> (p. 237) Gets the **DDS\_DataReaderQos** (p. 644) values associated with the input XML QoS profile.

#### Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connex will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

9.253.2.18 `get_datareader_qos_from_profile_w_topic_name()`

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_datareader_qos_from_profile_w_topic_↔
name (
    DDS_DataReaderQos & qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the **DDS\_DataReaderQos** (p. 644) values associated with the input XML QoS profile while applying topic filters to the input topic name.

## Parameters

<i>qos</i>	<< <i>out</i> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connex will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connex will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).
<i>topic_name</i>	<< <i>in</i> >> (p. 238) Topic name that will be evaluated against the <i>topic_filter</i> attribute in the XML QoS profile. If <i>topic_name</i> is null, RTI Connex will match only QoSs without explicit <i>topic_filter</i> expressions.

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

9.253.2.19 `get_topic_qos_from_profile()`

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_topic_qos_from_profile (
    DDS_TopicQos & qos,
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the **DDS\_TopicQos** (p. 1135) values associated with the input XML QoS profile.

## Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## 9.253.2.20 get\_topic\_qos\_from\_profile\_w\_topic\_name()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_topic_qos_from_profile_w_topic_name (
    DDS_TopicQos & qos,
    const char * library_name,
    const char * profile_name,
    const char * topic_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the **DDS\_TopicQos** (p. 1135) values associated with the input XML QoS profile while applying topic filters to the input topic name.

## Parameters

<i>qos</i>	<< <b>out</b> >> (p. 238) Qos to be filled up. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).
<i>topic_name</i>	<< <b>in</b> >> (p. 238) Topic name that will be evaluated against the topic_filter attribute in the XML QoS profile. If topic_name is null, RTI Connexnt will match only QoSs without explicit topic_filter expressions.

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

### 9.253.2.21 get\_qos\_profile\_libraries()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_qos_profile_libraries (
    struct DDS_StringSeq & library_names ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the names of all XML QoS profile libraries associated with the **DDSDomainParticipantFactory** (p. 1426)

#### Parameters

<i>library_names</i>	<< <b>out</b> >> (p. 238) <b>DDS_StringSeq</b> (p. 1102) to be filled with names of XML QoS profile libraries. Cannot be NULL.
----------------------	--

### 9.253.2.22 get\_qos\_profiles()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_qos_profiles (
    struct DDS_StringSeq & profile_names,
    const char * library_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the names of all XML QoS profiles associated with the input XML QoS profile library.

#### Parameters

<i>profile_names</i>	<< <b>out</b> >> (p. 238) <b>DDS_StringSeq</b> (p. 1102) to be filled with names of XML QoS profiles. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connex will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).

### 9.253.2.23 create\_participant()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::create_participant (
    DDS_DomainId_t domainId,
    const DDS_DomainParticipantQos & qos,
    DDSDomainParticipantListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a new **DDSDomainParticipant** (p. 1351) object.

**Precondition**

The specified QoS policies must be consistent or the operation will fail and no **DDSDomainParticipant** (p. 1351) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS\_WireProtocolQoSPolicy** (p. 1244)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

**MT Safety:**

Safe.

**Parameters**

<i>domain↔ id</i>	<< <i>in</i> >> (p. 238) ID of the domain that the application intends to join. <b>[range]</b> [ $\geq 0$ ], and does not violate guidelines stated in <b>DDS_RtpsWellKnownPorts_t</b> (p. 1076).
<i>qos</i>	<< <i>in</i> >> (p. 238) the DomainParticipant's QoS. The special value <b>DDS_PARTICIPANT_QOS_DEFAULT</b> (p. 48) can be used to indicate that the <b>DDSDomainParticipant</b> (p. 1351) should be created with the default <b>DDS_DomainParticipantQos</b> (p. 741) set in the <b>DDSDomainParticipantFactory</b> (p. 1426).
<i>listener</i>	<< <i>in</i> >> (p. 238) the domain participant's listener.
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

**Returns**

domain participant or NULL on failure

**See also**

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_DomainParticipantQos** (p. 741) for rules on consistency among QoS

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)

**NDDS\_DISCOVERY\_PEERS** (p. 464)

**DDSDomainParticipantFactory::create\_participant\_with\_profile** (p. 1443)

**DDSDomainParticipantFactory::get\_default\_participant\_qos** (p. 1432)

**DDSDomainParticipant::set\_listener** (p. 1413)

### 9.253.2.24 create\_participant\_with\_profile()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::create_participant_with_profile (
    DDS_DomainId_t domainId,
    const char * library_name,
    const char * profile_name,
    DDSDomainParticipantListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a new **DDSDomainParticipant** (p. 1351) object using the **DDS\_Domain**↔  
**ParticipantQos** (p. 741) associated with the input XML QoS profile.

#### Precondition

The **DDS\_DomainParticipantQos** (p. 741) in the input profile must be consistent, or the operation will fail and no **DDSDomainParticipant** (p. 1351) will be created.

If you want to create multiple participants on a given host in the same domain, make sure each one has a different participant index (set in the **DDS\_WireProtocolQoSPolicy** (p. 1244)). This in turn will ensure each participant uses a different port number (since the unicast port numbers are calculated from the participant index and the domain ID).

Note that if there is a single participant per host in a given domain, the participant index can be left at the default value (-1).

#### MT Safety:

Safe.

#### Parameters

<i>domainId</i>	<< <i>in</i> >> (p. 238) ID of the domain that the application intends to join. <b>[range]</b> [ $\geq 0$ ], and does not violate guidelines stated in <b>DDS_RtpsWellKnownPorts_t</b> (p. 1076).
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSDomainParticipantFactory::set_default_library</b> (p. 1433)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSDomainParticipantFactory::set_default_profile</b> (p. 1434)).
<i>listener</i>	<< <i>in</i> >> (p. 238) the DomainParticipant's listener.
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### Returns

domain participant or NULL on failure

See also

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_DomainParticipantQos** (p. 741) for rules on consistency among QoS

**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p. 48)

**NDDS\_DISCOVERY\_PEERS** (p. 464)

**DDSDomainParticipantFactory::create\_participant()** (p. 1442)

**DDSDomainParticipantFactory::get\_default\_participant\_qos()** (p. 1432)

**DDSDomainParticipant::set\_listener()** (p. 1413)

### 9.253.2.25 delete\_participant()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::delete_participant (
    DDSDomainParticipant * a_participant ) [pure virtual]
```

Deletes an existing **DDSDomainParticipant** (p. 1351).

#### Precondition

All domain entities belonging to the participant must have already been deleted. Otherwise it fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Postcondition

Listener installed on the **DDSDomainParticipant** (p. 1351) will not be called after this method returns successfully.

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>a_participant</i>	<< <i>in</i> >> (p. 238) <b>DDSDomainParticipant</b> (p. 1351) to be deleted.
----------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

### 9.253.2.26 lookup\_participant()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::lookup_participant (
    DDS_DomainId_t domainId ) [pure virtual]
```

Locates an existing **DDSDomainParticipant** (p. 1351).

If no such **DDSDomainParticipant** (p. 1351) exists, the operation will return NULL value.

If multiple **DDSDomainParticipant** (p. 1351) entities belonging to that domainId exist, then the operation will return one of them. It is not specified which one.

#### Parameters

<i>domainId</i>	<< <i>in</i> >> (p. 238) ID of the domain participant to lookup.
-----------------	--

#### Returns

domain participant if it exists, or NULL

### 9.253.2.27 set\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_qos (
    const DDS_DomainParticipantFactoryQos & qos ) [pure virtual]
```

Sets the value for a participant factory QoS.

The **DDS\_DomainParticipantFactoryQos::entity\_factory** (p. 739) can be changed. The other policies are immutable.

Note that despite having QoS, the **DDSDomainParticipantFactory** (p. 1426) is not an **DDSEntity** (p. 1463).

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Set of policies to be applied to <b>DDSDomainParticipantFactory</b> (p. 1426). Policies must be consistent. Immutable policies can only be changed before calling any other RTI Connexnt methods except for <b>DDSDomainParticipantFactory::get_qos</b> (p. 1447)
------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337) if immutable policy is changed, or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337) if policies are inconsistent
------------	--

See also

**DDS\_DomainParticipantFactoryQos** (p. 737) for rules on consistency among QoS

### 9.253.2.28 get\_qos()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_qos (
    DDS_DomainParticipantFactoryQos & qos ) [pure virtual]
```

Gets the value for participant factory QoS.

Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) QoS to be filled up.
------------	--

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.253.2.29 load\_profiles()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::load_profiles ( ) [pure virtual]
```

<<*extension*>> (p. 237) Loads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDSDomainParticipant** (p. 1351) is created or explicitly, after a call to this method.

This has the same effect as **DDSDomainParticipantFactory::reload\_profiles()** (p. 1447).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDS\_ProfileQosPolicy** (p. 1004)

### 9.253.2.30 reload\_profiles()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::reload_profiles ( ) [pure virtual]
```

<<**extension**>> (p. 237) Reloads the XML QoS profiles.

The XML QoS profiles are loaded implicitly after the first **DDSDomainParticipant** (p. 1351) is created or explicitly, after a call to this method.

This has the same effect as **DDSDomainParticipantFactory::load\_profiles()** (p. 1447).

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

#### See also

**DDS\_ProfileQosPolicy** (p. 1004)

### 9.253.2.31 unload\_profiles()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::unload_profiles ( ) [pure virtual]
```

<<**extension**>> (p. 237) Unloads the XML QoS profiles.

The resources associated with the XML QoS profiles are freed. Any reference to the profiles after calling this method will fail with an error.

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

#### See also

**DDS\_ProfileQosPolicy** (p. 1004)

### 9.253.2.32 unregister\_thread()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::unregister_thread ( ) [pure virtual]
```

<<**extension**>> (p. 237) Allows the user to release thread specific resources kept by the middleware.

This function should be called by the user right before exiting a thread where DDS API were used. In this way the middleware will be able to free all the resources related to this specific thread. The best approach is to call the function during the thread deletion after all the DDS related API have been called.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.253.2.33 get\_typecode\_from\_config()

```
virtual const DDS_TypeCode * DDSDomainParticipantFactory::get_typecode_from_config (
    const char * type_name ) [pure virtual]
```

<<**extension**>> (p. 237) Gets a **DDS\_TypeCode** (p. 1164) from a definition provided in an XML configuration file.

## Parameters

<i>type_name</i>	<< <b>in</b> >> (p. 238) Name of the type in the configuration file.
------------------	--

## Returns

The **DDS\_TypeCode** (p. 1164) or NULL if a type with that name doesn't exist or an error occurs.

## 9.253.2.34 create\_participant\_from\_config()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::create_participant_from_config (
    const char * configuration_name ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a **DDSDomainParticipant** (p. 1351) given its configuration name from a description provided in an XML configuration file.

This operation creates a **DDSDomainParticipant** (p. 1351) registering all the necessary data types and creating all the contained entities (**DDSTopic** (p. 1617), **DDSPublisher** (p. 1550), **DDSSubscriber** (p. 1592), **DDSDataWriter** (p. 1321), **DDSDataReader** (p. 1288)) from a description given in an XML configuration file.

The configuration name is the fully qualified name of the XML participant object, consisting of the name of the participant library plus the name of participant configuration.

For example the name "MyParticipantLibrary::PublicationParticipant" can be used to create the domain participant from the description in an XML file with contents shown in the snippet below:

```
<participant_library name="MyParticipantLibrary">
    <domain_participant name="PublicationParticipant" domain_ref="MyDomainLibrary::HelloWorldDomain">
        <publisher name="MyPublisher">
            <data_writer name="HelloWorldWriter" topic_ref="HelloWorldTopic"/>
        </publisher>
    </domain_participant>
```

```
</participant_library>
```

The entities belonging to the newly created **DDSDomainParticipant** (p. 1351) can be retrieved with the help of lookup operations such as: **DDSDomainParticipant::lookup\_datareader\_by\_name** (p. 1423).

This operation is equivalent to call **DDSDomainParticipantFactory::create\_participant\_from\_config\_w\_params** (p. 1450) passing **DDS\_PARTICIPANT\_CONFIG\_PARAMS\_DEFAULT** (p. 48) as parameters.

#### MT Safety:

Safe.

#### Parameters

<i>configuration_name</i>	<< <i>in</i> >> (p. 238) Name of the participant configuration in the XML file.
---------------------------	---

#### Returns

The created **DDSDomainParticipant** (p. 1351) or NULL on error.

#### See also

**DDSDomainParticipantFactory::lookup\_participant\_by\_name** (p. 1451)

**DDSDomainParticipant::lookup\_topicdescription** (p. 1390)

**DDSDomainParticipant::lookup\_publisher\_by\_name** (p. 1421)

**DDSDomainParticipant::lookup\_subscriber\_by\_name** (p. 1422)

**DDSDomainParticipant::lookup\_datareader\_by\_name** (p. 1423)

**DDSDomainParticipant::lookup\_datawriter\_by\_name** (p. 1422)

**DDSPublisher::lookup\_datawriter\_by\_name** (p. 1571)

**DDSSubscriber::lookup\_datareader\_by\_name** (p. 1612)

### 9.253.2.35 create\_participant\_from\_config\_w\_params()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::create_participant_from_config_w_↵
params (
    const char * configuration_name,
    const DDS_DomainParticipantConfigParams_t & params ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a **DDSDomainParticipant** (p. 1351) given its configuration name from a description provided in an XML configuration file and a set of parameters that allow changing some properties of such configuration.

The operation will create a **DDSDomainParticipant** (p. 1351) the same way specified in **DDSDomainParticipant↵Factory::create\_participant\_from\_config** (p. 1449).

In addition, this operation allows overriding the domain ID, participant name, and entities QoS specified in the configuration.

#### MT Safety:

Safe.

## Parameters

<i>configuration_name</i>	<< <i>in</i> >> (p. 238) Name of the participant configuration in the XML file.
<i>params</i>	<< <i>in</i> >> (p. 238) input parameters that allow changing some properties of the configuration referred to by <i>configuration_name</i> .

## Returns

The created **DDSDomainParticipant** (p. 1351) or NULL on error.

## 9.253.2.36 lookup\_participant\_by\_name()

```
virtual DDSDomainParticipant * DDSDomainParticipantFactory::lookup_participant_by_name (
    const char * participant_name ) [pure virtual]
```

<<*extension*>> (p. 237) Looks up a **DDSDomainParticipant** (p. 1351) by its entity name in the **DDSDomainParticipantFactory** (p. 1426).

Every **DDSDomainParticipant** (p. 1351) in the system has an entity name which is configured and stored in the EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves a **DDSDomainParticipant** (p. 1351) within the **DDSDomainParticipantFactory** (p. 1426) given the entity's name. If there are several **DDSDomainParticipant** (p. 1351) with the same name within the **DDSDomainParticipantFactory** (p. 1426) this function returns the first matching occurrence.

## Parameters

<i>participant_name</i>	<< <i>in</i> >> (p. 238) Entity name of the <b>DDSDomainParticipant</b> (p. 1351). Cannot be NULL.
-------------------------	--

## Returns

The first **DDSDomainParticipant** (p. 1351) found with the specified name or NULL if it is not found.

## 9.253.2.37 register\_type\_support()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::register_type_support (
    DDSDomainParticipantFactory_RegisterTypeFunction register_type_fcn,
    const char * type_name ) [pure virtual]
```

<<*extension*>> (p. 237) Registers a **DDSTypeSupport** (p. 1629) with the **DDSDomainParticipantFactory** (p. 1426) to enable automatic registration if the corresponding type, should it be needed by a **DDSDomainParticipant** (p. 1351).

Types referred by the **DDSTopic** (p. 1617) entities within a **DDSDomainParticipant** (p. 1351) must be registered with the **DDSDomainParticipant** (p. 1351).

Type registration in a **DDSDomainParticipant** (p. 1351) is performed by a call to the **FooTypeSupport::register\_type** (p. 1713) operation. This can be done directly from the application code or indirectly by the RTI Connex infrastructure as a result of parsing an XML configuration file that refers to that type.

The **DDSDomainParticipantFactory::register\_type\_support** (p.1451) operation provides the **DDSDomainParticipantFactory** (p. 1426) with the information it needs to automatically call the **FooTypeSupport::register\_type** (p. 1713) operation and register the corresponding type if the type is needed as a result of parsing an XML configuration file.

Automatic type registration while parsing XML files can also be done by the RTI Connex infrastructure based on the type description provided in the XML files. If the **DDSTypeSupport** (p. 1629) has been registered with the **DDSDomainParticipantFactory** (p. 1426) this definition takes precedence over the description of the type given in the XML file.

The **DDSDomainParticipantFactory::register\_type\_support** (p.1451) operation receives a **FooTypeSupport::register\_type** (p.1713) function as a parameter. This function is normally generated using `rtiddsgen` from a description of the corresponding type in IDL, XML, or XSD.

The typical workflow when using this function is as follows: Define the data-type in IDL (or XML, or XSD) in a file. E.g. `Foo.idl` Run `rtiddsgen` in that file to generate the `TypeSupport` files, for the desired programming language. E.g. in C++ `FooTypeSupport.h` `FooTypeSupport.cxx` Include the proper header file (e.g. `FooTypeSupport.h`) in your program and call **DDSDomainParticipantFactory::register\_type\_support** (p. 1451) passing the function that was generated by `rtiddsgen`. E.g. **FooTypeSupport::register\_type** (p. 1713) Include the `TypeSupport` source file in your project such that it is compiled and linked. E.g. `FooTypeSupport.cxx`

You may refer to the [Getting Started Guide](#) for additional details in this process.

Note that only one register function is allowed per registered type name.

#### Parameters

<i>register_type_fcn</i>	<< <i>in</i> >> (p. 238) <b>DDSDomainParticipantFactory_RegisterTypeFunction</b> (p. 42) to be used for registering the type with a <b>DDSDomainParticipant</b> (p. 1351).
<i>type_name</i>	<< <i>in</i> >> (p. 238) Name the type is registered with.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.253.2.38 get\_participants()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::get_participants (
    DDSDomainParticipantSeq & participants ) [pure virtual]
```

<<**extension**>> (p. 237) Allows the application to access all the participants the `DomainParticipantFactory` has.

If the sequence doesn't own its buffer, and its maximum is less than the total number of participants, it will be filled up to its maximum, and fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

DomainParticipants are ordered in the output sequence from the most recently created to the oldest.

#### MT Safety:

Unsafe. Creating or deleting DomainParticipants at the same time as calling this operation is not safe.

#### Parameters

<i>participants</i>	<< <i>inout</i> >> (p. 238) a DomainParticipantSeq object where the set or list of participants will be returned
---------------------	--

#### Returns

One of the **Standard Return Codes** (p. 336) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337)

### 9.253.2.39 set\_thread\_factory()

```
virtual DDS_ReturnCode_t DDSDomainParticipantFactory::set_thread_factory (
    DDSThreadFactory * thread_factory ) [pure virtual]
```

<<*extension*>> (p. 237) Sets a **DDSThreadFactory** (p. 1615) in the **DDSDomainParticipantFactory** (p. 1426) that will be used to create the internal threads of the DDS middleware.

DDS threads are managed by the **DDSDomainParticipant** (p. 1351), which is responsible for creating and deleting threads throughout its lifecycle. Some threads are created when the **DDSDomainParticipant** (p. 1351) gets enabled (i.e., database, event, etc.) and others when special features are enabled (i.e., asynchronous publication thread).

DDS threads have **DDSDomainParticipant** (p. 1351) scope. This means every DomainParticipant creates all the necessary threads to operate and each **DDSDomainParticipant** (p. 1351) will create its own independent set of threads.

Each **DDSDomainParticipant** (p. 1351) creates an independent set of DDS threads and will use the **DDSThreadFactory** (p. 1615) that is held by the **DDSDomainParticipantFactory** (p. 1426) at the time the DomainParticipant is created. A **DDSThreadFactory** (p. 1615) is immutable from a **DDSDomainParticipant** (p. 1351) point of view. This means that a **DDSDomainParticipant** (p. 1351) will use throughout its lifecycle the same **DDSThreadFactory** (p. 1615) that was set when it was created, even if a new **DDSThreadFactory** (p. 1615) is set in the **DDSDomainParticipantFactory** (p. 1426) later. That is, if a new **DDSThreadFactory** (p. 1615) is set, a previously created **DDSDomainParticipant** (p. 1351) will not be affected.

ThreadFactory lifecycle: A **DDSThreadFactory** (p. 1615) instance must be alive while there are DomainParticipants using it. A **DDSThreadFactory** (p. 1615) instance can be deleted only after all DomainParticipants using it are deleted.

By default, the **DDSDomainParticipantFactory** (p. 1426) has an internal **DDSThreadFactory** (p. 1615) so threads are created automatically by the core product. These threads are usually created using the typical framework for the target platform (i.e., pthread for Linux systems).

#### MT Safety:

: Safe. Creation and deletion of a **DDSDomainParticipant** (p. 1351) can occur concurrently with setting a **DDSThreadFactory** (p. 1615).

## Parameters

<i>thread_factory</i>	<< <i>in</i> >> (p. 238) Instance of a <b>DDSThreadFactory</b> (p. 1615) to be used for creating the DDS threads. If null is specified, the current <b>DDSThreadFactory</b> (p. 1615) is removed and the internal default will be used.
-----------------------	---

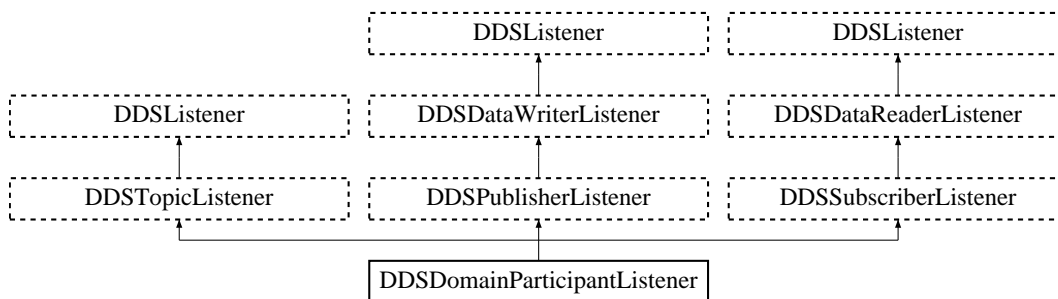

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.254 DDSDomainParticipantListener Class Reference

<<*interface*>> (p. 237) Listener for participant status.

Inheritance diagram for DDSDomainParticipantListener:

### Public Member Functions

- virtual void **on\_invalid\_local\_identity\_status\_advance\_notice** ( **DDSDomainParticipant** \*participant, const **DDS\_InvalidLocalIdentityAdvanceNoticeStatus** &status)

*Notifies the user that the identity of the local **DDSDomainParticipant** (p. 1351) is about to expire.*

### 9.254.1 Detailed Description

<<*interface*>> (p. 237) Listener for participant status.

Entity:

**DDSDomainParticipant** (p. 1351)

Status:

**Status Kinds** (p. 337)

This is the interface that can be implemented by an application-provided class and then registered with the **DDSDomainParticipant** (p. 1351) such that the application can be notified by RTI Connex of relevant status changes.

The **DDSDomainParticipantListener** (p. 1454) interface extends all other Listener interfaces and has no additional operation beyond the ones defined by the more general listeners.

The purpose of the **DDSDomainParticipantListener** (p. 1454) is to be the listener of last resort that is notified of all status changes not captured by more specific listeners attached to the **DDSDomainEntity** (p. 1350) objects. When a relevant status change occurs, RTI Connex will first attempt to notify the listener attached to the concerned **DDSDomainEntity** (p. 1350) if one is installed. Otherwise, RTI Connex will notify the Listener attached to the **DDSDomainParticipant** (p. 1351).

*Important:* Because a **DDSDomainParticipantListener** (p. 1454) may receive callbacks pertaining to many different entities, it is possible for the same listener to receive multiple callbacks simultaneously in different threads. (Such is not the case for listeners of other types.) It is therefore critical that users of this listener provide their own protection for any thread-unsafe activities undertaken in a **DDSDomainParticipantListener** (p. 1454) callback.

*Note:* Due to a thread-safety issue, the destruction of a DomainParticipantListener from an enabled DomainParticipant should be avoided – even if the DomainParticipantListener has been removed from the DomainParticipant. (This limitation does not affect the Java API.)

- virtual **~DDSDynamicDataTypeSupport ()**  
*Delete a **DDSDynamicDataTypeSupport** (p. 1456) object.*

### 9.256.1 Detailed Description

A factory for registering a dynamically defined type and creating **DDS\_DynamicData** (p. 775) objects.

A **DDSDynamicDataTypeSupport** (p. 1456) has three roles:

1. It associates a **DDS\_TypeCode** (p. 1164) with policies for managing objects of that type. See the constructor, **DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport** (p. 1457).
2. It registers its type under logical names with a **DDSDomainParticipant** (p. 1351). See **DDSDynamicDataType↔Support::register\_type** (p. 1459).
3. It creates **DDS\_DynamicData** (p. 775) samples pre-initialized with the type and properties of the type support itself. See **DDSDynamicDataTypeSupport::create\_data** (p. 1460).

### 9.256.2 Constructor & Destructor Documentation

### 9.256.2.1 DDSDynamicDataTypeSupport()

```
DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport (
    const DDS_TypeCode * type,
    const struct DDS_DynamicDataTypeProperty_t & props )
```

Construct a new **DDSDynamicDataTypeSupport** (p. 1456) object.

This step is usually followed by type registration.

**NOTE** that RTI Connex does not explicitly generate any exceptions in this constructor, because C++ exception support is not consistent across all platforms on which RTI Connex runs. Therefore, to check whether construction succeeded, you must use the **DDSDynamicDataTypeSupport::is\_valid** (p. 1459) method.

The **DDS\_TypeCode** (p. 1164) object that is passed to this constructor is cloned and stored internally; no pointer is retained to the object passed in. It is therefore safe to delete the **DDS\_TypeCode** (p. 1164) after this method returns.

#### Parameters

<i>type</i>	The <b>DDS_TypeCode</b> (p. 1164) that describes the members of this type. The new object will contain a <i>copy</i> of this <b>DDS_TypeCode</b> (p. 1164); you may delete the argument after this constructor returns.
<i>props</i>	Policies that describe how to manage the memory and other properties of the data samples created by this factory. In most cases, the default values will be appropriate; see <b>DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT</b> (p. 102).

#### See also

**DDSDynamicDataTypeSupport::is\_valid** (p. 1459)

**DDSDynamicDataTypeSupport::register\_type** (p. 1459)

**DDSDynamicDataTypeSupport::~~DDSDynamicDataTypeSupport** (p. 1458)

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.256.2.2 ~DDSDynamicDataTypeSupport()

```
virtual DDSDynamicDataTypeSupport::~~DDSDynamicDataTypeSupport ( ) [virtual]
```

Delete a **DDSDynamicDataTypeSupport** (p. 1456) object.

A **DDSDynamicDataTypeSupport** (p. 1456) cannot be deleted while it is still in use. For each **DDSDomainParticipant** (p. 1351) with which the **DDSDynamicDataTypeSupport** (p. 1456) is registered, either the type must be unregistered or the participant must be deleted.

#### See also

**DDSDynamicDataTypeSupport::unregister\_type** (p. 1459)

**DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport** (p. 1457)

### 9.256.3 Member Function Documentation

#### 9.256.3.1 is\_valid()

```
DDS_Boolean DDSDynamicDataTypeSupport::is_valid ( )
```

Indicates whether the object was constructed properly.

This method returns **DDS\_BOOLEAN\_TRUE** (p. 317) if the constructor succeeded; it returns **DDS\_BOOLEAN\_FALSE** (p. 317) if the constructor failed for any reason, which should also have resulted in a log message.

Possible failure reasons include passing an invalid type or invalid properties to the constructor.

This method is necessary because C++ exception support is not consistent across all of the platforms on which RTI Connex runs. Therefore, the implementation does not throw any exceptions in the constructor.

See also

**DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport** (p. 1457)

#### 9.256.3.2 register\_type()

```
DDS_ReturnCode_t DDSDynamicDataTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name )
```

Associate the **DDS\_TypeCode** (p. 1164) with the given **DDSDomainParticipant** (p. 1351) under the given logical name.

Once a type has been registered, it can be referenced by name when creating a topic. Statically and dynamically defined types behave the same way in this respect.

If the type cannot be registered, this function will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

See also

**FooTypeSupport::register\_type** (p. 1713)

**DDSDomainParticipant::create\_topic** (p. 1382)

**DDSDynamicDataTypeSupport::unregister\_type** (p. 1459)

### 9.256.3.3 unregister\_type()

```
DDS_ReturnCode_t DDSDynamicDataTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name )
```

Remove the definition of this type from the **DDSDomainParticipant** (p. 1351).

This operation is optional; all types are automatically unregistered when a **DDSDomainParticipant** (p. 1351) is deleted. Most application will not need to manually unregister types.

A type cannot be unregistered while it is still in use; that is, while any **DDSTopic** (p. 1617) is still referring to it.

If the type cannot be unregistered, this function will fail with **DDS\_RETCODE\_ERROR** (p. 336) or **DDS\_RETCODE\_↔BAD\_PARAMETER** (p. 336).

See also

**FooTypeSupport::unregister\_type** (p. 1714)

**DDSDynamicDataTypeSupport::register\_type** (p. 1459)

### 9.256.3.4 get\_type\_name()

```
const char * DDSDynamicDataTypeSupport::get_type_name ( ) const
```

Get the default name of this type.

The **DDS\_TypeCode** (p. 1164) that is wrapped by this **DDSDynamicDataTypeSupport** (p. 1456) includes a name; this operation returns that name.

This operation is useful when registering a type, because in most cases it is not necessary for the physical and logical names of the type to be different.

```
myTypeSupport->register_type(myParticipant, myTypeSupport->get_type_name());
```

See also

**FooTypeSupport::get\_type\_name** (p. 1720)

### 9.256.3.5 get\_data\_type()

```
const DDS_TypeCode * DDSDynamicDataTypeSupport::get_data_type ( ) const
```

Get the **DDS\_TypeCode** (p. 1164) wrapped by this **DDSDynamicDataTypeSupport** (p. 1456).

### 9.256.3.6 create\_data()

```
DDS_DynamicData * DDSDynamicDataTypeSupport::create_data ( )
```

Create a new **DDS\_DynamicData** (p. 775) sample initialized with the **DDS\_TypeCode** (p. 1164) and properties of this **DDSDynamicDataTypeSupport** (p. 1456).

You must delete your **DDS\_DynamicData** (p. 775) object when you are finished with it.

```
DDS_DynamicData* sample = myTypeSupport->create_data();
```

```
// Do something...
```

```
myTypeSupport->delete_data(sample);
```

See also

**DDSDynamicDataTypeSupport::delete\_data** (p. 1461)

**FooTypeSupport::create\_data** (p. 1715)

**DDS\_DynamicData::DDS\_DynamicData(const DDS\_TypeCode \*, const DDS\_DynamicDataProperty\_t &)**  
(p. 790)

**DDS\_DynamicDataTypeProperty\_t::data** (p. 897)

### 9.256.3.7 delete\_data()

```
DDS_ReturnCode_t DDSDynamicDataTypeSupport::delete_data (
    DDS_DynamicData * a_data )
```

Finalize and deallocate the **DDS\_DynamicData** (p. 775) sample.

See also

**FooTypeSupport::delete\_data** (p. 1716)

**DDSDynamicDataTypeSupport::create\_data** (p. 1460)

### 9.256.3.8 print\_data()

```
void DDSDynamicDataTypeSupport::print_data (
    const DDS_DynamicData * a_data ) const
```

Print a string representation of the given sample to the given file.

This method is equivalent to **DDS\_DynamicData::print** (p. 801).

See also

**DDS\_DynamicData::print** (p. 801)

### 9.256.3.9 copy\_data()

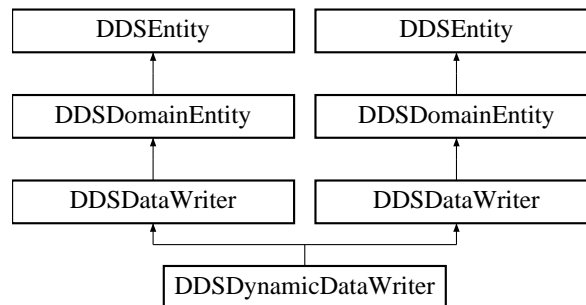

```
DDS_ReturnCode_t DDSDynamicDataTypeSupport::copy_data (
    DDS_DynamicData * dest,
    const DDS_DynamicData * source ) const
```

Deeply copy the given data samples.

## 9.257 DDSDynamicDataWriter Class Reference

Writes (publishes) objects of type **DDS\_DynamicData** (p. 775).

Inheritance diagram for DDSDynamicDataWriter:

### Additional Inherited Members

#### 9.257.1 Detailed Description

Writes (publishes) objects of type **DDS\_DynamicData** (p. 775).

Instantiates **DDSDataWriter** (p. 1321) < **DDS\_DynamicData** (p. 775) > .

See also

**DDSDataWriter** (p. 1321)

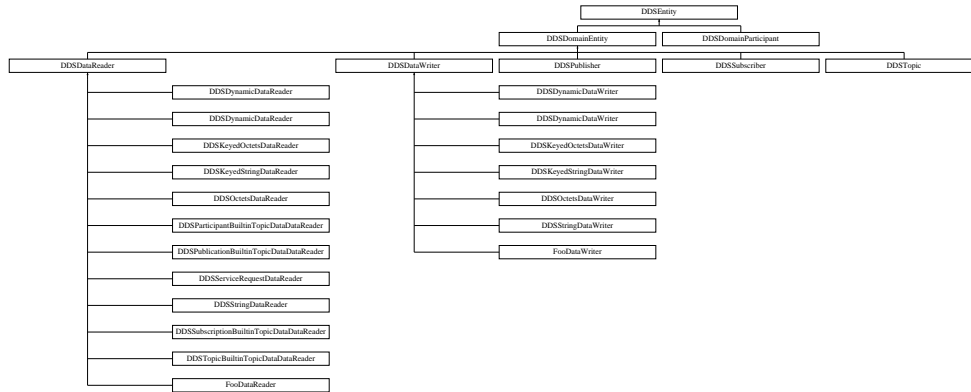

**FooDataWriter** (p. 1676)

**DDS\_DynamicData** (p. 775)

## 9.258 DDSEntity Class Reference

<<*interface*>> (p. 237) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.

Inheritance diagram for DDSEntity:

### Public Member Functions

- virtual **DDS\_ReturnCode\_t enable** ()=0  
*Enables the **DDSEntity** (p. 1463).*
- virtual **DDSStatusCondition \* get\_statuscondition** ()=0  
*Allows access to the **DDSStatusCondition** (p. 1578) associated with the **DDSEntity** (p. 1463).*
- virtual **DDS\_StatusMask get\_status\_changes** ()=0  
*Retrieves the list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.*
- virtual **DDS\_InstanceHandle\_t get\_instance\_handle** ()=0  
*Allows access to the **DDS\_InstanceHandle\_t** (p. 74) associated with the **DDSEntity** (p. 1463).*

### 9.258.1 Detailed Description

<<*interface*>> (p. 237) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.

All operations except for `set_qos()`, `get_qos()`, `set_listener()`, `get_listener()` and **enable()** (p. 1466), may return the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 337).

QoS:

**QoS Policies** (p. 353)

Status:

**Status Kinds** (p. 337)

Listener:

**DDSListener** (p. 1526)

## 9.258.2 Abstract operations

Each derived entity provides the following operations specific to its role in RTI Connex.

### 9.258.2.1 `set_qos` (abstract)

This operation sets the QoS policies of the **DDSEntity** (p.1463). Each of the derived entity classes provides this operation: **DDSEntity** (p.1463) classes (**DDSDomainParticipant** (p.1351), **DDSTopic** (p.1617), **DDSPublisher** (p.1550), **DDSDataWriter** (p.1321), **DDSSubscriber** (p.1592), and **DDSDataReader** (p.1288)) so that the policies that are meaningful to each **DDSEntity** (p.1463) can be set. For example, see **DDSDomainParticipant::set\_qos** (p.1408).

#### Precondition

Certain policies are immutable (see **QoS Policies** (p.353)): they can only be set at **DDSEntity** (p.1463) creation time or before the entity is enabled. If `set_qos()` is invoked after the **DDSEntity** (p.1463) is enabled and it attempts to change the value of an immutable policy, the operation will fail and return **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p.337).

Certain values of QoS policies can be incompatible with the settings of the other policies. The `set_qos()` operation will also fail if it specifies a set of values that, once combined with the existing values, would result in an inconsistent set of policies. In this case, the operation will fail and return **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p.337).

If the application supplies a non-default value for a QoS policy that is not supported by the implementation of the service, the `set_qos` operation will fail and return **DDS\_RETCODE\_UNSUPPORTED** (p.336).

#### Postcondition

The existing set of policies is only changed if the `set_qos()` operation succeeds. This is indicated by a return code of **DDS\_RETCODE\_OK** (p.336). In all other cases, none of the policies are modified.

Each derived **DDSEntity** (p.1463) class (**DDSDomainParticipant** (p.1351), **DDSTopic** (p.1617), **DDSPublisher** (p.1550), **DDSDataWriter** (p.1321), **DDSSubscriber** (p.1592), **DDSDataReader** (p.1288)) has a corresponding special value of the QoS (**DDS\_PARTICIPANT\_QOS\_DEFAULT** (p.48), **DDS\_PUBLISHER\_QOS\_DEFAULT** (p.57), **DDS\_SUBSCRIBER\_QOS\_DEFAULT** (p.57), **DDS\_TOPIC\_QOS\_DEFAULT** (p.56), **DDS\_DATAWRITER\_QOS\_DEFAULT** (p.110), **DDS\_DATAREADER\_QOS\_DEFAULT** (p.132)). This special value may be used as a parameter to the `set_qos` operation to indicate that the QoS of the **DDSEntity** (p.1463) should be changed to match the current default QoS set in the **DDSEntity** (p.1463)'s factory. The operation `set_qos` cannot modify the immutable QoS, so a successful return of the operation indicates that the mutable QoS for the Entity has been modified to match the current default for the **DDSEntity** (p.1463)'s factory.

The set of policies specified in the `qos` parameter are applied on top of the existing QoS, replacing the values of any policies previously set.

Possible error codes returned in addition to **Standard Return Codes** (p.336) : **DDS\_RETCODE\_IMMUTABLE\_POLICY** (p.337), **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p.337).

### 9.258.2.2 get\_qos (abstract)

This operation allows access to the existing set of QoS policies for the **DDSEntity** (p. 1463). This operation must be provided by each of the derived **DDSEntity** (p. 1463) classes (**DDSDomainParticipant** (p. 1351), **DDSTopic** (p. 1617), **DDSPublisher** (p. 1550), **DDSDataWriter** (p. 1321), **DDSSubscriber** (p. 1592), and **DDSDataReader** (p. 1288)), so that the policies that are meaningful to each **DDSEntity** (p. 1463) can be retrieved. For example, see **DDSDomainParticipant::get\_qos** (p. 1409)

Possible error codes are **Standard Return Codes** (p. 336).

### 9.258.2.3 set\_listener (abstract)

This operation installs a **DDSListener** (p. 1526) on the **DDSEntity** (p. 1463). The listener will only be invoked on the changes of communication status indicated by the specified `mask`.

This operation must be provided by each of the derived **DDSEntity** (p. 1463) classes (**DDSDomainParticipant** (p. 1351), **DDSTopic** (p. 1617), **DDSPublisher** (p. 1550), **DDSDataWriter** (p. 1321), **DDSSubscriber** (p. 1592), and **DDSDataReader** (p. 1288)), so that the listener is of the concrete type suitable to the particular **DDSEntity** (p. 1463).

There are two components involved when setting up listeners: the listener itself and the mask. Both of these can be NULL.

Listeners for some Entities derive from the Connex DDS Listeners for related Entities. This means that the derived Listener has all of the methods of its parent class. You can install Listeners at all levels of the object hierarchy. At the top is the DomainParticipantListener; only one can be installed in a DomainParticipant. Then every Subscriber and Publisher can have their own Listener. Finally, each Topic, DataReader and DataWriter can have their own listeners. All are optional.

Suppose, however, that an Entity does not install a Listener, or installs a Listener that does not have particular communication status selected in the bitmask. In this case, if/when that particular status changes for that Entity, the corresponding Listener for that Entity's parent is called. Status changes are "propagated" from child Entity to parent Entity until a Listener is found that is registered for that status. Connex DDS will give up and drop the status-change event only if no Listeners have been installed in the object hierarchy to be called back for the specific status.

The following table describes the effect of different combinations of Listeners and Status Bit Masks considering the hierarchical processing.

**Table 9.672 Effect of Different Combinations of Listeners and Status Bit Masks**

	No Bits Set in Mask	Some/All Bits Set in Mask
Listener is Specified	Connex DDS finds the next most relevant listener for the changed status	For the statuses that are enabled in the mask, the most relevant listener will be called. The 'statusChangedFlag' for the relevant status is reset
Listener is NULL	Connex DDS behaves as if the listener is not installed and finds the next most relevant listener for that status	Connex DDS behaves as if the listener is installed, but the callback is doing nothing. This is called a "nil" listener

**Postcondition**

Only one listener can be attached to each **DDSEntity** (p. 1463). If a listener was already set, the operation `set_listener()` will replace it with the new one. Consequently, if the value NULL is passed for the listener parameter to the `set_listener` operation, any existing listener will be removed.

**9.258.2.4 get\_listener (abstract)**

This operation allows access to the existing **DDSListener** (p. 1526) attached to the **DDSEntity** (p. 1463).

This operation must be provided by each of the derived **DDSEntity** (p. 1463) classes (**DDSDomainParticipant** (p. 1351), **DDSTopic** (p. 1617), **DDSPublisher** (p. 1550), **DDSDataWriter** (p. 1321), **DDSSubscriber** (p. 1592), and **DDSDataReader** (p. 1288)) so that the listener is of the concrete type suitable to the particular **DDSEntity** (p. 1463).

If no listener is installed on the **DDSEntity** (p. 1463), this operation will return NULL.

**9.258.3 Member Function Documentation****9.258.3.1 enable()**

```
virtual DDS_ReturnCode_t DDSEntity::enable ( ) [pure virtual]
```

Enables the **DDSEntity** (p. 1463).

This operation enables the Entity. Entity objects can be created either enabled or disabled. This is controlled by the value of the **ENTITY\_FACTORY** (p. 402) QoS policy on the corresponding factory for the **DDSEntity** (p. 1463).

By default, **ENTITY\_FACTORY** (p. 402) is set so that it is not necessary to explicitly call **DDSEntity::enable** (p. 1466) on newly created entities.

The **DDSEntity::enable** (p. 1466) operation is idempotent. Calling enable on an already enabled Entity returns OK and has no effect.

If a **DDSEntity** (p. 1463) has not yet been enabled, the following kinds of operations may be invoked on it:

- set or get the QoS policies (including default QoS policies) and listener
- **DDSEntity::get\_statuscondition** (p. 1467)
- 'factory' operations
- **DDSEntity::get\_status\_changes** (p. 1467) and other get status operations (although the status of a disabled entity never changes)
- 'lookup' operations

Other operations may explicitly state that they may be called on disabled entities; those that do not will return the error **DDS\_RETCODE\_NOT\_ENABLED** (p. 337).

It is legal to delete an **DDSEntity** (p. 1463) that has not been enabled by calling the proper operation on its factory .

Entities created from a factory Entity that is disabled are created disabled, regardless of the setting of the **DDS\_EntityFactoryQosPolicy** (p. 903).

Calling `enable` on an Entity whose factory Entity is not enabled will fail and return **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

If **DDS\_EntityFactoryQosPolicy::autoenable\_created\_entities** (p. 905) is TRUE, the `enable` operation on a factory will automatically enable all entities created from that factory (for example, enabling a **DDSPublisher** (p. 1550) will enable all its contained **DDSDataWriter** (p. 1321) objects)

Listeners associated with an entity are not called until the entity is enabled.

Conditions associated with a disabled entity are "inactive," that is, they have a `trigger_value == FALSE`.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

Implemented in **DDSDataWriter** (p. 1342), and **DDSDataReader** (p. 1312).

### 9.258.3.2 `get_statuscondition()`

```
virtual DDSStatusCondition * DDSEntity::get_statuscondition ( ) [pure virtual]
```

Allows access to the **DDSStatusCondition** (p. 1578) associated with the **DDSEntity** (p. 1463).

The returned condition can then be added to a **DDSWaitSet** (p. 1629) so that the application can wait for specific status changes that affect the **DDSEntity** (p. 1463).

#### Returns

the status condition associated with this entity.

Implemented in **DDSDataWriter** (p. 1343), and **DDSDataReader** (p. 1313).

### 9.258.3.3 `get_status_changes()`

```
virtual DDS_StatusMask DDSEntity::get_status_changes ( ) [pure virtual]
```

Retrieves the list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

That is, the list of statuses whose value has changed since the last time the application read the status using the `get_*_status()` method.

When the entity is first created or if the entity is not enabled, all communication statuses are in the "untriggered" state so the list returned by the `get_status_changes` operation will be empty.

The list of statuses returned by the `get_status_changes` operation refers to the status that are triggered on the Entity itself and does not include statuses that apply to contained entities.

#### Returns

list of communication statuses in the **DDSEntity** (p. 1463) that are triggered.

#### See also

**Status Kinds** (p. 337)

Implemented in **DDSDataWriter** (p. 1343), and **DDSDataReader** (p. 1314).

### 9.258.3.4 `get_instance_handle()`

```
virtual DDS_InstanceHandle_t DDSEntity::get_instance_handle ( ) [pure virtual]
```

Allows access to the **DDS\_InstanceHandle\_t** (p. 74) associated with the **DDSEntity** (p. 1463).

This operation returns the **DDS\_InstanceHandle\_t** (p. 74) that represents the **DDSEntity** (p. 1463).

#### Returns

the instance handle associated with this entity.

Implemented in **DDSDataWriter** (p. 1343), and **DDSDataReader** (p. 1314).

## 9.259 DDSFlowController Class Reference

<<**interface**>> (p. 237) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDSDataWriter** (p. 1321) instances are allowed to write data.

## Public Member Functions

- virtual **DDS\_ReturnCode\_t set\_property** (const struct **DDS\_FlowControllerProperty\_t** &prop)=0  
*Sets the **DDSFlowController** (p. 1468) property.*
- virtual **DDS\_ReturnCode\_t get\_property** (struct **DDS\_FlowControllerProperty\_t** &prop)=0  
*Gets the **DDSFlowController** (p. 1468) property.*
- virtual **DDS\_ReturnCode\_t trigger\_flow** ()=0  
*Provides an external trigger to the **DDSFlowController** (p. 1468).*
- virtual const char \* **get\_name** ()=0  
*Returns the name of the **DDSFlowController** (p. 1468).*
- virtual **DDSDomainParticipant \* get\_participant** ()=0  
*Returns the **DDSDomainParticipant** (p. 1351) to which the **DDSFlowController** (p. 1468) belongs.*

### 9.259.1 Detailed Description

<<**interface**>> (p. 237) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDSDataWriter** (p. 1321) instances are allowed to write data.

QoS:

**DDS\_FlowControllerProperty\_t** (p. 912)

### 9.259.2 Member Function Documentation

#### 9.259.2.1 set\_property()

```
virtual DDS_ReturnCode_t DDSFlowController::set_property (
    const struct DDS_FlowControllerProperty_t & prop ) [pure virtual]
```

Sets the **DDSFlowController** (p. 1468) property.

This operation modifies the property of the **DDSFlowController** (p. 1468).

Once a **DDSFlowController** (p. 1468) has been instantiated, only the **DDS\_FlowControllerProperty\_t::token\_bucket** (p. 913) can be changed. The **DDS\_FlowControllerProperty\_t::scheduling\_policy** (p. 913) is immutable.

A new **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 915) only takes effect at the next scheduled token distribution time (as determined by its previous value).

## Parameters

<i>prop</i>	<< <i>in</i> >> (p. 238) The new <b>DDS_FlowControllerProperty_t</b> (p. 912). Property must be consistent. Immutable fields cannot be changed after <b>DDSFlowController</b> (p. 1468) has been created. The special value <b>DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT</b> (p. 58) can be used to indicate that the property of the <b>DDSFlowController</b> (p. 1468) should be changed to match the current default <b>DDS_FlowControllerProperty_t</b> (p. 912) set in the <b>DDSDomainParticipant</b> (p. 1351).
-------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

## See also

**DDS\_FlowControllerProperty\_t** (p. 912) for rules on consistency among property values.

9.259.2.2 `get_property()`

```
virtual DDS_ReturnCode_t DDSFlowController::get_property (
    struct DDS_FlowControllerProperty_t & prop ) [pure virtual]
```

Gets the **DDSFlowController** (p. 1468) property.

## Parameters

<i>prop</i>	<< <i>in</i> >> (p. 238) <b>DDSFlowController</b> (p. 1468) to be filled in.
-------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

9.259.2.3 `trigger_flow()`

```
virtual DDS_ReturnCode_t DDSFlowController::trigger_flow ( ) [pure virtual]
```

Provides an external trigger to the **DDSFlowController** (p. 1468).

Typically, a **DDSFlowController** (p. 1468) uses an internal trigger to periodically replenish its tokens. The period by which this trigger is called is determined by the **DDS\_FlowControllerTokenBucketProperty\_t::period** (p. 915) property setting.

This function provides an additional, external trigger to the **DDSFlowController** (p. 1468). This trigger adds **DDS\_↔\_FlowControllerTokenBucketProperty\_t::tokens\_added\_per\_period** (p. 915) tokens each time it is called (subject to the other property settings of the **DDSFlowController** (p. 1468)).

An *on-demand* **DDSFlowController** (p. 1468) can be created with a **DDS\_DURATION\_INFINITE** (p. 326) as **DDS\_↔\_FlowControllerTokenBucketProperty\_t::period** (p. 915), in which case the only trigger source is external (i.e. the FlowController is solely triggered by the user on demand).

**DDSFlowController::trigger\_flow** (p. 1470) can be called on both strict *on-demand* FlowController and hybrid Flow↔Controller (internally and externally triggered).

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

#### 9.259.2.4 get\_name()

```
virtual const char * DDSFlowController::get_name ( ) [pure virtual]
```

Returns the name of the **DDSFlowController** (p. 1468).

#### Returns

The name of the **DDSFlowController** (p. 1468).

#### 9.259.2.5 get\_participant()

```
virtual DDSDomainParticipant * DDSFlowController::get_participant ( ) [pure virtual]
```

Returns the **DDSDomainParticipant** (p. 1351) to which the **DDSFlowController** (p. 1468) belongs.

#### Returns

The **DDSDomainParticipant** (p. 1351) to which the **DDSFlowController** (p. 1468) belongs.

## 9.260 DDSGuardCondition Class Reference

<<**interface**>> (p. 237) A specific **DDSCondition** (p. 1276) whose `trigger_value` is completely under the control of the application.

Inheritance diagram for DDSGuardCondition:

## Public Member Functions

- virtual **DDS\_Boolean** `get_trigger_value` ()  
*Retrieve the `trigger_value`.*
- virtual **DDS\_ReturnCode\_t** `set_trigger_value` ( **DDS\_Boolean** value)  
*Set the guard condition trigger value.*
- **DDSGuardCondition** ()  
*No argument constructor.*
- virtual `~DDSGuardCondition` ()  
*Destructor.*

### 9.260.1 Detailed Description

<<*interface*>> (p. 237) A specific **DDSCondition** (p. 1276) whose `trigger_value` is completely under the control of the application.

The **DDSGuardCondition** (p. 1471) provides a way for an application to manually wake up a **DDSWaitSet** (p. 1629). This is accomplished by attaching the **DDSGuardCondition** (p. 1471) to the **DDSWaitSet** (p. 1629) and then setting the `trigger_value` by means of the **DDSGuardCondition::set\_trigger\_value** (p. 1473) operation.

See also

**DDSWaitSet** (p. 1629)

### 9.260.2 Constructor & Destructor Documentation

#### 9.260.2.1 DDSGuardCondition()

```
DDSGuardCondition::DDSGuardCondition ( )
```

No argument constructor.

The default constructor initializes the guard condition with trigger value **DDS\_BOOLEAN\_FALSE** (p. 317)

#### 9.260.2.2 ~DDSGuardCondition()

```
virtual DDSGuardCondition::~~DDSGuardCondition ( ) [virtual]
```

Destructor.

Releases the resources associated with this object.

MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet**() (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_< t&)** (p. 1633), **DDSGuardCondition::~~DDSGuardCondition** (p. 1472), **DDSWaitSet::~~DDSWaitSet**() (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

Deleting a NULL condition is safe and has no effect.

### 9.260.3 Member Function Documentation

#### 9.260.3.1 get\_trigger\_value()

```
virtual DDS_Boolean DDSGuardCondition::get_trigger_value ( ) [virtual]
```

Retrieve the `trigger_value`.

#### Returns

the trigger value.

Implements **DDSCondition** (p. 1277).

#### 9.260.3.2 set\_trigger\_value()

```
virtual DDS_ReturnCode_t DDSGuardCondition::set_trigger_value (
    DDS_Boolean value ) [virtual]
```

Set the guard condition trigger value.

#### Parameters

<i>value</i>	<< <i>in</i> >> (p. 238) the new trigger value.
--------------	---

## 9.261 DDSKeyedOctetsDataReader Class Reference

<<*interface*>> (p. 237) Instantiates `DataReader` < **DDS\_KeyedOctets** (p. 924) >.

Inheritance diagram for `DDSKeyedOctetsDataReader`:

## Public Member Functions

- virtual `DDS_ReturnCode_t read ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data-samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_w_condition ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Accesses via `DDSKeyedOctetsDataReader::read` (p. 1476) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t take_w_condition ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Analogous to `DDSKeyedOctetsDataReader::read_w_condition` (p. 1476) except it accesses samples via the `DDSKeyedOctetsDataReader::take` (p. 1476) operation.*
- virtual `DDS_ReturnCode_t read_next_sample ( DDS_KeyedOctets &received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take_next_sample ( DDS_KeyedOctets &received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_instance ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take_instance ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_instance_w_condition ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDSReadCondition *condition=NULL)`  
*Accesses via `DDSKeyedOctetsDataReader::read_instance` (p. 1477) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t take_instance_w_condition ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDSReadCondition *condition=NULL)`  
*Accesses via `DDSKeyedOctetsDataReader::take_instance` (p. 1478) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t read_next_instance ( DDS_KeyedOctetsSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &previous_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **take\_next\_instance** ( **DDS\_KeyedOctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDS\_SampleStateMask** sample\_states= **DDS\_ANY\_SAMPLE\_STATE**, **DDS\_ViewStateMask** view\_states= **DDS\_ANY\_VIEW\_STATE**, **DDS\_InstanceStateMask** instance\_states= **DDS\_ANY\_INSTANCE\_STATE**)

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **read\_next\_instance\_w\_condition** ( **DDS\_KeyedOctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDSReadCondition** \*condition=NULL)

Accesses via *DDSKeyedOctetsDataReader::read\_next\_instance* (p. 1479) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** **take\_next\_instance\_w\_condition** ( **DDS\_KeyedOctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDSReadCondition** \*condition=NULL)

Accesses via *DDSKeyedOctetsDataReader::take\_next\_instance* (p. 1479) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** **return\_loan** ( **DDS\_KeyedOctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq)

Indicates to the *DDSDataReader* (p. 1288) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of *read* or *take* on the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **get\_key\_value** ( **DDS\_KeyedOctets** &key\_holder, const **DDS\_InstanceHandle\_t** &handle)

Retrieve the instance *key* that corresponds to an instance *handle*.

- virtual **DDS\_ReturnCode\_t** **get\_key\_value** (char \*key, const **DDS\_InstanceHandle\_t** &handle)

<<extension>> (p. 237) Retrieve the instance *key* that corresponds to an instance *handle*.

- virtual **DDS\_InstanceHandle\_t** **lookup\_instance** (const **DDS\_KeyedOctets** &key\_holder)

Retrieve the instance *handle* that corresponds to an instance *key\_holder*.

- virtual **DDS\_InstanceHandle\_t** **lookup\_instance** (const char \*key)

<<extension>> (p. 237) Retrieve the instance *handle* that corresponds to an instance *key*.

## Static Public Member Functions

- static **DDSKeyedOctetsDataReader** \* **narrow** ( **DDSDataReader** \*reader)

Narrow the given *DDSDataReader* (p. 1288) pointer to a *DDSKeyedOctetsDataReader* (p. 1473) pointer.

### 9.261.1 Detailed Description

<<*interface*>> (p. 237) Instantiates *DataReader* < **DDS\_KeyedOctets** (p. 924) >.

When reading or taking data with this reader, if you request a copy of the samples instead of a loan, and a string or byte array in a destination data sample is NULL, the middleware will allocate a new string or array for you of sufficient length to hold the received data. New strings will be allocated with **DDS\_String\_alloc** (p. 553); new arrays will be allocated with **DDS\_OcletBuffer\_alloc** (p. 548). The sample's destructor will delete them.

A non- NULL string or array is assumed to be allocated to sufficient length to store the incoming data. It will not be reallocated.

See also

**FooDataReader** (p. 1649)

**DDSDataReader** (p. 1288)

## 9.261.2 Member Function Documentation

### 9.261.2.1 read()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read** (p. 1651)

### 9.261.2.2 take()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data-samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take** (p. 1652)

### 9.261.2.3 read\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Accesses via **DDSKeyedOctetsDataReader::read** (p. 1476) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_w\_condition** (p. 1657)

#### 9.261.2.4 take\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Analogous to **DDSKeyedOctetsDataReader::read\_w\_condition** (p.1476) except it accesses samples via the **DDSKeyedOctetsDataReader::take** (p.1476) operation.

See also

**FooDataReader::take\_w\_condition** (p.1658)

#### 9.261.2.5 read\_next\_sample()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_next_sample (
    DDS_KeyedOctets & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p.1288).

See also

**FooDataReader::read\_next\_sample** (p.1659)

#### 9.261.2.6 take\_next\_sample()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_next_sample (
    DDS_KeyedOctets & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p.1288).

See also

**FooDataReader::take\_next\_sample** (p.1660)

### 9.261.2.7 read\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_instance (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read\_instance** (p. 1661)

### 9.261.2.8 take\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_instance (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take\_instance** (p. 1663)

### 9.261.2.9 read\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_instance_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedOctetsDataReader::read\_instance** (p. 1477) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_instance\_w\_condition** (p. 1664)

## 9.261.2.10 take\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_instance_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via `DDSKeyedOctetsDataReader::take_instance` (p. 1478) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).

See also

`FooDataReader::take_instance_w_condition` (p. 1665)

## 9.261.2.11 read\_next\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_next_instance (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the `DDSDataReader` (p. 1288).

See also

`FooDataReader::read_next_instance` (p. 1667)

## 9.261.2.12 take\_next\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_next_instance (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the `DDSDataReader` (p. 1288).

See also

`FooDataReader::take_next_instance` (p. 1668)

### 9.261.2.13 read\_next\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::read_next_instance_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedOctetsDataReader::read\_next\_instance** (p. 1479) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_next\_instance\_w\_condition** (p. 1670)

### 9.261.2.14 take\_next\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::take_next_instance_w_condition (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedOctetsDataReader::take\_next\_instance** (p. 1479) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::take\_next\_instance\_w\_condition** (p. 1671)

### 9.261.2.15 return\_loan()

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::return_loan (
    DDS_KeyedOctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq ) [virtual]
```

Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

See also

**FooDataReader::return\_loan** (p. 1672)

### 9.261.2.16 get\_key\_value() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::get_key_value (
    DDS_KeyedOctets & key_holder,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Retrieve the instance `key` that corresponds to an instance handle.

See also

**FooDataReader::get\_key\_value** (p. 1673)

### 9.261.2.17 get\_key\_value() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataReader::get_key_value (
    char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance `key` that corresponds to an instance handle.

See also

**FooDataReader::get\_key\_value** (p. 1673)

### 9.261.2.18 lookup\_instance() [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataReader::lookup_instance (
    const DDS_KeyedOctets & key_holder ) [virtual]
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

See also

**FooDataReader::lookup\_instance** (p. 1674)

### 9.261.2.19 lookup\_instance() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataReader::lookup_instance (
    const char * key ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance handle that corresponds to an instance key.

See also

**FooDataReader::lookup\_instance** (p. 1674)

### 9.261.2.20 narrow()

```
static DDSKeyedOctetsDataReader * DDSKeyedOctetsDataReader::narrow (
    DDSDataReader * reader ) [static]
```

Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSKeyedOctetsDataReader** (p. 1473) pointer.

See also

**FooDataReader::narrow** (p. 1651)

## 9.262 DDSKeyedOctetsDataWriter Class Reference

<<*interface*>> (p. 237) Instantiates `DataWriter` < **DDS\_KeyedOctets** (p. 924) >.

Inheritance diagram for DDSKeyedOctetsDataWriter:

## Public Member Functions

- virtual **DDS\_InstanceHandle\_t register\_instance** (const **DDS\_KeyedOctets** &instance\_data)  
*Informs RTI Connexx that the application will be modifying a particular instance.*
- virtual **DDS\_InstanceHandle\_t register\_instance** (const char \*key)  
*<<extension>> (p. 237) Informs RTI Connexx that the application will be modifying a particular instance.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_timestamp** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same functions as **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485) except that the application provides the value for the *source\_timestamp*.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_timestamp** (const char \*key, const **DDS\_Time\_t** &source\_timestamp)  
*<<extension>> (p. 237) Performs the same functions as **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485) except that the application provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)  
*Reverses the action of **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485).*
- virtual **DDS\_ReturnCode\_t unregister\_instance** (const char \*key, const **DDS\_InstanceHandle\_t** &handle)  
*<<extension>> (p. 237) Reverses the action of **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485).*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_timestamp** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedOctetsDataWriter::unregister\_instance** (p. 1486) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_timestamp** (const char \*key, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedOctetsDataWriter::unregister\_instance** (p. 1486) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_KeyedOctets \* create\_data** (const **DDS\_TypeAllocationParams\_t** &alloc\_params)  
*Creates a keyed octet sequence.*
- virtual **DDS\_Boolean delete\_data** (**DDS\_KeyedOctets** \*sample, const **DDS\_TypeDeallocationParams\_t** &dealloc\_params)  
*Destroys a string data instance created by **DDSStringDataWriter::create\_data** (p. 1585).*
- virtual **DDS\_ReturnCode\_t write** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)  
*Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.*
- virtual **DDS\_ReturnCode\_t write** (const char \*key, const unsigned char \*octets, int length, const **DDS\_InstanceHandle\_t** &handle)  
*<<extension>> (p. 237) Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.*
- virtual **DDS\_ReturnCode\_t write** (const char \*key, const **DDS\_OctetSeq** &octets, const **DDS\_InstanceHandle\_t** &handle)  
*<<extension>> (p. 237) Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.*
- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const char \*key, const unsigned char \*octets, int length, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the *source\_timestamp*.*

- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const char \*key, const **DDS\_OctetSeq** &octets, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)
 

*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the `source_timestamp`.*
- virtual **DDS\_ReturnCode\_t write\_w\_params** (const **DDS\_KeyedOctets** &instance\_data, **DDS\_WriteParams\_t** &params)
 

*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*
- virtual **DDS\_ReturnCode\_t write\_w\_params** (const char \*key, const unsigned char \*octets, int length, **DDS\_WriteParams\_t** &params)
 

*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*
- virtual **DDS\_ReturnCode\_t write\_w\_params** (const char \*key, const **DDS\_OctetSeq** &octets, **DDS\_WriteParams\_t** &params)
 

*Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*
- virtual **DDS\_ReturnCode\_t dispose** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)
 

*Requests the middleware to delete the data.*
- virtual **DDS\_ReturnCode\_t dispose** (const char \*key, const **DDS\_InstanceHandle\_t** &instance\_handle)
 

*<<extension>> (p. 237) Requests the middleware to delete the data.*
- virtual **DDS\_ReturnCode\_t dispose\_w\_timestamp** (const **DDS\_KeyedOctets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)
 

*Performs the same functions as **DDSKeyedOctetsDataWriter::dispose** (p. 1493) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).*
- virtual **DDS\_ReturnCode\_t dispose\_w\_timestamp** (const char \*key, const **DDS\_InstanceHandle\_t** &instance\_handle, const **DDS\_Time\_t** &source\_timestamp)
 

*<<extension>> (p. 237) Performs the same functions as **DDSKeyedOctetsDataWriter::dispose** (p. 1493) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).*
- virtual **DDS\_ReturnCode\_t get\_key\_value** (**DDS\_KeyedOctets** &key\_holder, const **DDS\_InstanceHandle\_t** &handle)
 

*Retrieve the instance key that corresponds to an instance handle.*
- virtual **DDS\_ReturnCode\_t get\_key\_value** (char \*key, const **DDS\_InstanceHandle\_t** &handle)
 

*<<extension>> (p. 237) Retrieve the instance key that corresponds to an instance handle.*
- virtual **DDS\_InstanceHandle\_t lookup\_instance** (const **DDS\_KeyedOctets** &key\_holder)
 

*Retrieve the instance handle that corresponds to an instance key\_holder.*
- virtual **DDS\_InstanceHandle\_t lookup\_instance** (const char \*key)
 

*<<extension>> (p. 237) Retrieve the instance handle that corresponds to an instance key.*

## Static Public Member Functions

- static **DDSKeyedOctetsDataWriter \* narrow** (**DDSDataWriter** \*writer)
 

*Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSKeyedOctetsDataWriter** (p. 1482) pointer.*

## 9.262.1 Detailed Description

<<*interface*>> (p. 237) Instantiates `DataWriter` < **DDS\_KeyedOctets** (p. 924) >.

See also

**FooDataWriter** (p. 1676)

**DDSDataWriter** (p. 1321)

## 9.262.2 Member Function Documentation

### 9.262.2.1 `narrow()`

```
static DDSKeyedOctetsDataWriter * DDSKeyedOctetsDataWriter::narrow (  
    DDSDataWriter * writer ) [static]
```

Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSKeyedOctetsDataWriter** (p. 1482) pointer.

See also

**FooDataWriter::narrow** (p. 1678)

### 9.262.2.2 `register_instance()` [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::register_instance (  
    const DDS_KeyedOctets & instance_data ) [virtual]
```

Informs RTI Connexx that the application will be modifying a particular instance.

See also

**FooDataWriter::register\_instance** (p. 1678)

### 9.262.2.3 register\_instance() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::register_instance (
    const char * key ) [virtual]
```

<<*extension*>> (p. 237) Informs RTI Connex that the application will be modifying a particular instance.

See also

**FooDataWriter::register\_instance** (p. 1678)

### 9.262.2.4 register\_instance\_w\_timestamp() [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::register_instance_w_timestamp (
    const DDS_KeyedOctets & instance_data,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same functions as **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485) except that the application provides the value for the `source_timestamp`.

See also

**FooDataWriter::register\_instance\_w\_timestamp** (p. 1679)

### 9.262.2.5 register\_instance\_w\_timestamp() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::register_instance_w_timestamp (
    const char * key,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<*extension*>> (p. 237) Performs the same functions as **DDSKeyedOctetsDataWriter::register\_instance** (p. 1485) except that the application provides the value for the `source_timestamp`.

See also

**FooDataWriter::register\_instance\_w\_timestamp** (p. 1679)

### 9.262.2.6 unregister\_instance() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::unregister_instance (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Reverses the action of `DDSKeyedOctetsDataWriter::register_instance` (p. 1485).

See also

`FooDataWriter::unregister_instance` (p. 1680)

### 9.262.2.7 unregister\_instance() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::unregister_instance (
    const char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Reverses the action of `DDSKeyedOctetsDataWriter::register_instance` (p. 1485).

See also

`FooDataWriter::unregister_instance` (p. 1680)

### 9.262.2.8 unregister\_instance\_w\_timestamp() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::unregister_instance_w_timestamp (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as `DDSKeyedOctetsDataWriter::unregister_instance` (p. 1486) except that it also provides the value for the `source_timestamp`.

See also

`FooDataWriter::unregister_instance_w_timestamp` (p. 1682)

### 9.262.2.9 unregister\_instance\_w\_timestamp() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::unregister_instance_w_timestamp (
    const char * key,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as `DDSKeyedOctetsDataWriter::unregister_instance` (p. 1486) except that it also provides the value for the `source_timestamp`.

See also

`FooDataWriter::unregister_instance_w_timestamp` (p. 1682)

### 9.262.2.10 create\_data()

```
virtual DDS_KeyedOctets * DDSKeyedOctetsDataWriter::create_data (
    const DDS_TypeAllocationParams_t & alloc_params ) [virtual]
```

Creates a keyed octet sequence.

The size of the instance is determined by the DataWriter property `dds.builtin_type.keyed_octets.alloc_size`.

Default size: `dds.builtin_type.keyed_octets.max_size` property of DomainParticipant if defined. Otherwise 2048.

Created instances must be deleted with `DDSKeyedOctetsDataWriter::delete_data` (p. 1488).

Returns

Newly created keyed octet sequence, or NULL on failure.

See also

BuiltinTypeMemoryManagement section of Built-in Types.

### 9.262.2.11 delete\_data()

```
virtual DDS_Boolean DDSKeyedOctetsDataWriter::delete_data (
    DDS_KeyedOctets * sample,
    const DDS_TypeDeallocationParams_t & dealloc_params ) [virtual]
```

Destroys a string data instance created by `DDSStringDataWriter::create_data` (p. 1585).

Returns

`DDS_BOOLEAN_TRUE` (p. 317) upon successful deletion.

**9.262.2.12 write()** [1/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.

See also

**FooDataWriter::write** (p. 1683)

**9.262.2.13 write()** [2/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write (
    const char * key,
    const unsigned char * octets,
    int length,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<**extension**>> (p. 237) Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.

Parameters

<i>key</i>	<< <b>in</b> >> (p. 238) Instance key.
<i>octets</i>	<< <b>in</b> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <b>in</b> >> (p. 238) Number of octets to be published.
<i>handle</i>	<< <b>in</b> >> (p. 238) Either the handle returned by a previous call to <b>DDSKeyedOctetsDataWriter::register_instance</b> (p. 1485), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). See <b>FooDataWriter::write</b> (p. 1683).

See also

**FooDataWriter::write** (p. 1683)

**9.262.2.14 write()** [3/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write (
    const char * key,
    const DDS_OctetSeq & octets,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<**extension**>> (p. 237) Modifies the value of a **DDS\_KeyedOctets** (p. 924) data instance.

## Parameters

<i>key</i>	<< <i>in</i> >> (p. 238) Instance key.
<i>octets</i>	<< <i>in</i> >> (p. 238) Sequence of octets to be published.
<i>handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>DDSKeyedOctetsDataWriter::register_instance</b> (p. 1485), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). See <b>FooDataWriter::write</b> (p. 1683).

## See also

**FooDataWriter::write** (p. 1683)

## 9.262.2.15 write\_w\_timestamp() [1/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_timestamp (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the `source_timestamp`.

## See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

## 9.262.2.16 write\_w\_timestamp() [2/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_timestamp (
    const char * key,
    const unsigned char * octets,
    int length,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the `source_timestamp`.

## Parameters

<i>key</i>	<< <i>in</i> >> (p. 238) Instance key.
<i>octets</i>	<< <i>in</i> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <i>in</i> >> (p. 238) Number of octets to be published.
<i>handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>DDSKeyedOctetsDataWriter::register_instance</b> (p. 1485), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). See <b>FooDataWriter::write</b> (p. 1683).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation. See <b>FooDataWriter::write_w_timestamp</b> (p. 1687).

See also

**FooDataWriter::write** (p. 1683)

### 9.262.2.17 write\_w\_timestamp() [3/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_timestamp (
    const char * key,
    const DDS_OctetSeq & octets,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also provides the value for the `source_timestamp`.

#### Parameters

<i>key</i>	<< <i>in</i> >> (p. 238) Instance key.
<i>octets</i>	<< <i>in</i> >> (p. 238) Sequence of octets to be published.
<i>handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>DDSKeyedOctetsDataWriter::register_instance</b> (p. 1485), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). See <b>FooDataWriter::write</b> (p. 1683).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation. See <b>FooDataWriter::write_w_timestamp</b> (p. 1687).

See also

**FooDataWriter::write** (p. 1683)

### 9.262.2.18 write\_w\_params() [1/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_params (
    const DDS_KeyedOctets & instance_data,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

**9.262.2.19 write\_w\_params()** [2/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_params (
    const char * key,
    const unsigned char * octets,
    int length,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

**Parameters**

<i>key</i>	<< <i>in</i> >> (p. 238) Instance key.
<i>octets</i>	<< <i>in</i> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <i>in</i> >> (p. 238) Number of octets to be published.
<i>params</i>	<< <i>in</i> >> (p. 238) The <b>DDS_WriteParams_t</b> (p. 1251) parameter containing the instance handle, source timestamp, publication priority, and cookie to be used in write operation. See <b>FooDataWriter::write_w_params</b> (p. 1688).

**See also**

**FooDataWriter::write\_w\_params** (p. 1688)

**9.262.2.20 write\_w\_params()** [3/3]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::write_w_params (
    const char * key,
    const DDS_OctetSeq & octets,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSKeyedOctetsDataWriter::write** (p. 1488) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

**Parameters**

<i>key</i>	<< <i>in</i> >> (p. 238) Instance key.
<i>octets</i>	<< <i>in</i> >> (p. 238) Sequence of octets to be published.
<i>params</i>	<< <i>in</i> >> (p. 238) The <b>DDS_WriteParams_t</b> (p. 1251) parameter containing the instance handle, source timestamp, publication priority, and cookie to be used in write operation. See <b>FooDataWriter::write_w_params</b> (p. 1688).

**See also**

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.262.2.21 dispose() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::dispose (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Requests the middleware to delete the data.

See also

**FooDataWriter::dispose** (p. 1689)

### 9.262.2.22 dispose() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::dispose (
    const char * key,
    const DDS_InstanceHandle_t & instance_handle ) [virtual]
```

<<*extension*>> (p. 237) Requests the middleware to delete the data.

See also

**FooDataWriter::dispose** (p. 1689)

### 9.262.2.23 dispose\_w\_timestamp() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::dispose_w_timestamp (
    const DDS_KeyedOctets & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same functions as **DDSKeyedOctetsDataWriter::dispose** (p. 1493) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).

See also

**FooDataWriter::dispose\_w\_timestamp** (p. 1690)

### 9.262.2.24 `dispose_w_timestamp()` [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::dispose_w_timestamp (
    const char * key,
    const DDS_InstanceHandle_t & instance_handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<*extension*>> (p. 237) Performs the same functions as `DDSKeyedOctetsDataWriter::dispose` (p. 1493) except that the application provides the value for the `source_timestamp` that is made available to `DDSDataReader` (p. 1288) objects by means of the `source_timestamp` attribute inside the `DDS_SampleInfo` (p. 1082).

See also

`FooDataWriter::dispose_w_timestamp` (p. 1690)

### 9.262.2.25 `get_key_value()` [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::get_key_value (
    DDS_KeyedOctets & key_holder,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Retrieve the instance key that corresponds to an instance handle.

See also

`FooDataWriter::get_key_value` (p. 1691)

### 9.262.2.26 `get_key_value()` [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedOctetsDataWriter::get_key_value (
    char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance key that corresponds to an instance handle.

See also

`FooDataWriter::get_key_value` (p. 1691)

### 9.262.2.27 lookup\_instance() [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::lookup_instance (
    const DDS_KeyedOctets & key_holder ) [virtual]
```

Retrieve the instance handle that corresponds to an instance key\_holder.

See also

**FooDataWriter::lookup\_instance** (p. 1692)

### 9.262.2.28 lookup\_instance() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedOctetsDataWriter::lookup_instance (
    const char * key ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance handle that corresponds to an instance key.

See also

**FooDataWriter::lookup\_instance** (p. 1692)

## 9.263 DDSKeyedOctetsTypeSupport Class Reference

<<*interface*>> (p. 237) **DDS\_KeyedOctets** (p. 924) type support.

Inheritance diagram for DDSKeyedOctetsTypeSupport:

## Static Public Member Functions

- static `DDS_ReturnCode_t register_type ( DDSDomainParticipant *participant, const char *type_name="DDS::KeyedOctets"`)  
*Allows an application to communicate to RTI Connexx the existence of the **DDS\_KeyedOctets** (p. 924) data type.*
- static `DDS_ReturnCode_t unregister_type ( DDSDomainParticipant *participant, const char *type_name="DDS::KeyedOctets"`)  
*Allows an application to unregister the **DDS\_KeyedOctets** (p. 924) data type from RTI Connexx. After calling `unregister_type`, no further communication using this type is possible.*
- static const char \* `get_type_name ()`  
*Get the default name for the **DDS\_KeyedOctets** (p. 924) type.*
- static void `print_data (const DDS_KeyedOctets *a_data)`  
*<<extension>> (p. 237) Print value of data type to standard out.*
- static `DDS_TypeCode * get_typecode ()`  
*<<extension>> (p. 237) Retrieves the TypeCode for the Type.*
- static `DDS_ReturnCode_t serialize_data_to_cdr_buffer (char *buffer, unsigned int &length, const DDS_KeyedOctets *a_data)`  
*<<extension>> (p. 237) Serializes the input sample into a CDR buffer of octets.*
- static `DDS_ReturnCode_t serialize_data_to_cdr_buffer_ex (char *buffer, unsigned int &length, const DDS_KeyedOctets *a_data, DDS_DataRepresentationId_t representation)`  
*<<extension>> (p. 237) Serializes the input sample into a buffer of octets.*
- static `DDS_ReturnCode_t deserialize_data_from_cdr_buffer ( DDS_KeyedOctets *a_data, const char *buffer, unsigned int length)`  
*<<extension>> (p. 237) Deserializes a sample from a buffer of octets.*
- static `DDS_ReturnCode_t data_to_string ( DDS_KeyedOctets *sample, char *str, DDS_UnsignedLong &str_size, const DDS_PrintFormatProperty &property)`  
*<<extension>> (p. 237) Get the string representation of an input sample.*

### 9.263.1 Detailed Description

<<interface>> (p. 237) **DDS\_KeyedOctets** (p. 924) type support.

### 9.263.2 Member Function Documentation

#### 9.263.2.1 register\_type()

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::KeyedOctets" ) [static]
```

Allows an application to communicate to RTI Connexx the existence of the **DDS\_KeyedOctets** (p. 924) data type.

By default, The **DDS\_KeyedOctets** (p. 924) built-in type is automatically registered when a DomainParticipant is created using the `type_name` returned by **DDSKeyedOctetsTypeSupport::get\_type\_name** (p. 1499). Therefore, the usage of

this function is optional and it is only required when the automatic built-in type registration is disabled using the participant property "dds.builtin\_type.auto\_register".

This method can also be used to register the same **DDSKeyedOctetsTypeSupport** (p. 1495) with a **DDSDomain**↔**Participant** (p. 1351) using different values for the type\_name.

If `register_type` is called multiple times with the same **DDSDomainParticipant** (p. 1351) and `type_name`, the second (and subsequent) registrations are ignored by the operation.

## Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to register the data type <b>DDS_Octets</b> (p. 967) with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type <b>DDS_KeyedOctets</b> (p. 924) is registered with the participant; this type name is used when creating a new <b>DDSTopic</b> (p. 1617). (See <b>DDSDomainParticipant::create_topic</b> (p. 1382).) The name may not be NULL or longer than 255 characters.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

## MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

## See also

**DDSDomainParticipant::create\_topic** (p. 1382)

## 9.263.2.2 unregister\_type()

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::KeyedOctets" ) [static]
```

Allows an application to unregister the **DDS\_KeyedOctets** (p.924) data type from RTI Connex. After calling `unregister_type`, no further communication using this type is possible.

## Precondition

The **DDS\_KeyedOctets** (p.924) type with `type_name` is registered with the participant and all **DDSTopic** (p. 1617) objects referencing the type have been destroyed. If the type is not registered with the participant, or if any **DDSTopic** (p. 1617) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

## Postcondition

All information about the type is removed from RTI Connex. No further communication using this type is possible.

## Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to unregister the data type <b>DDS_KeyedOctets</b> (p. 924) from. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type <b>DDS_KeyedOctets</b> (p. 924) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) or <b>DDS_RETCODE_ERROR</b> (p. 336)
------------	--

## MT Safety:

SAFE.

## See also

**DDSKeyedOctetsTypeSupport::register\_type** (p. 1496)

## 9.263.2.3 get\_type\_name()

```
static const char * DDSKeyedOctetsTypeSupport::get_type_name ( ) [static]
```

Get the default name for the **DDS\_KeyedOctets** (p. 924) type.

Can be used for calling **DDSKeyedOctetsTypeSupport::register\_type** (p. 1496) or creating **DDSTopic** (p. 1617).

## Returns

default name for the **DDS\_KeyedOctets** (p. 924) type.

## See also

**DDSKeyedOctetsTypeSupport::register\_type** (p. 1496)

**DDSDomainParticipant::create\_topic** (p. 1382)

## 9.263.2.4 print\_data()

```
static void DDSKeyedOctetsTypeSupport::print_data (
    const DDS_KeyedOctets * a_data ) [static]
```

<<*extension*>> (p. 237) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

## Parameters

<i>a_data</i>	<< <i>in</i> >> (p. 238) <b>DDS_KeyedOctets</b> (p. 924) to be printed.
---------------	---

9.263.2.5 `get_typecode()`

```
static DDS_TypeCode * DDSKeyedOctetsTypeSupport::get_typecode ( ) [static]
```

<<*extension*>> (p. 237) Retrieves the TypeCode for the Type.

## See also

**FooTypeSupport::get\_typecode** (p. 1723)

9.263.2.6 `serialize_data_to_cdr_buffer()`

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int & length,
    const DDS_KeyedOctets * a_data ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a CDR buffer of octets.

## See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

9.263.2.7 `serialize_data_to_cdr_buffer_ex()`

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    const DDS_KeyedOctets * a_data,
    DDS_DataRepresentationId_t representation ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a buffer of octets.

## See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.263.2.8 deserialize\_data\_from\_cdr\_buffer()

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::deserialize_data_from_cdr_buffer (
    DDS_KeyedOctets * a_data,
    const char * buffer,
    unsigned int length ) [static]
```

<<**extension**>> (p. 237) Deserializes a sample from a buffer of octets.

See also

**FooTypeSupport::deserialize\_data\_from\_cdr\_buffer** (p. 1722)

### 9.263.2.9 data\_to\_string()

```
static DDS_ReturnCode_t DDSKeyedOctetsTypeSupport::data_to_string (
    DDS_KeyedOctets * sample,
    char * str,
    DDS_UnsignedLong & str_size,
    const DDS_PrintFormatProperty & property ) [static]
```

<<**extension**>> (p. 237) Get the string representation of an input sample.

See also

**FooTypeSupport::data\_to\_string** (p. 1723)

## 9.264 DDSKeyedStringDataReader Class Reference

<<**interface**>> (p. 237) Instantiates `DataReader` < **DDS\_KeyedString** (p. 927) >.

Inheritance diagram for DDSKeyedStringDataReader:

## Public Member Functions

- virtual `DDS_ReturnCode_t read ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data-samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_w_condition ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Accesses via `DDSKeyedStringDataReader::read` (p. 1504) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t take_w_condition ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Analogous to `DDSKeyedStringDataReader::read_w_condition` (p. 1504) except it accesses samples via the `DDSKeyedStringDataReader::take` (p. 1504) operation.*
- virtual `DDS_ReturnCode_t read_next_sample ( DDS_KeyedString &received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take_next_sample ( DDS_KeyedString &received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_instance ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t take_instance ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the `DDSDataReader` (p. 1288).*
- virtual `DDS_ReturnCode_t read_instance_w_condition ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDSReadCondition *condition=NULL)`  
*Accesses via `DDSKeyedStringDataReader::read_instance` (p. 1505) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t take_instance_w_condition ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &a_handle= DDS_HANDLE_NIL, DDSReadCondition *condition=NULL)`  
*Accesses via `DDSKeyedStringDataReader::take_instance` (p. 1506) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).*
- virtual `DDS_ReturnCode_t read_next_instance ( DDS_KeyedStringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples= DDS_LENGTH_UNLIMITED, const DDS_InstanceHandle_t &previous_handle= DDS_HANDLE_NIL, DDS_SampleStateMask sample_states= DDS_ANY_SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **take\_next\_instance** ( **DDS\_KeyedStringSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDS\_SampleStateMask** sample\_states= **DDS\_ANY\_SAMPLE\_STATE**, **DDS\_ViewStateMask** view\_states= **DDS\_ANY\_VIEW\_STATE**, **DDS\_InstanceStateMask** instance\_states= **DDS\_ANY\_INSTANCE\_STATE**)

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **read\_next\_instance\_w\_condition** ( **DDS\_KeyedStringSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDSReadCondition** \*condition=NULL)

Accesses via *DDSKeyedStringDataReader::read\_next\_instance* (p. 1507) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** **take\_next\_instance\_w\_condition** ( **DDS\_KeyedStringSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, const **DDS\_InstanceHandle\_t** &previous\_handle= **DDS\_HANDLE\_NIL**, **DDSReadCondition** \*condition=NULL)

Accesses via *DDSKeyedStringDataReader::take\_next\_instance* (p. 1507) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** **return\_loan** ( **DDS\_KeyedStringSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq)

Indicates to the *DDSDataReader* (p. 1288) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of *read* or *take* on the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** **get\_key\_value** ( **DDS\_KeyedString** &key\_holder, const **DDS\_InstanceHandle\_t** &handle)

Retrieve the instance *key* that corresponds to an instance *handle*.

- virtual **DDS\_ReturnCode\_t** **get\_key\_value** (char \*key, const **DDS\_InstanceHandle\_t** &handle)

<<extension>> (p. 237) Retrieve the instance *key* that corresponds to an instance *handle*.

- virtual **DDS\_InstanceHandle\_t** **lookup\_instance** (const **DDS\_KeyedString** &key\_holder)

Retrieve the instance *handle* that corresponds to an instance *key\_holder*.

- virtual **DDS\_InstanceHandle\_t** **lookup\_instance** (const char \*key)

<<extension>> (p. 237) Retrieve the instance *handle* that corresponds to an instance *key*.

## Static Public Member Functions

- static **DDSKeyedStringDataReader** \* **narrow** ( **DDSDataReader** \*reader)

Narrow the given *DDSDataReader* (p. 1288) pointer to a *DDSKeyedStringDataReader* (p. 1501) pointer.

### 9.264.1 Detailed Description

<<interface>> (p. 237) Instantiates *DataReader* < **DDS\_KeyedString** (p. 927) >.

When reading or taking data with this reader, if you request a copy of the samples instead of a loan, and a string in a destination data sample is NULL, the middleware will allocate a new string for you of sufficient length to hold the received string. The new string will be allocated with **DDS\_String\_alloc** (p. 553); the sample's destructor will delete it.

A non- NULL string is assumed to be allocated to sufficient length to store the incoming data. It will not be reallocated.

**FooDataReader** (p. 1649)

**DDSDataReader** (p. 1288)

## 9.264.2 Member Function Documentation

### 9.264.2.1 read()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read** (p. 1651)

### 9.264.2.2 take()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data-samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take** (p. 1652)

### 9.264.2.3 read\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Accesses via **DDSKeyedStringDataReader::read** (p. 1504) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_w\_condition** (p. 1657)

#### 9.264.2.4 take\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Analogous to **DDSKeyedStringDataReader::read\_w\_condition** (p.1504) except it accesses samples via the **DDSKeyedStringDataReader::take** (p.1504) operation.

See also

**FooDataReader::take\_w\_condition** (p.1658)

#### 9.264.2.5 read\_next\_sample()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_next_sample (
    DDS_KeyedString & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p.1288).

See also

**FooDataReader::read\_next\_sample** (p.1659)

#### 9.264.2.6 take\_next\_sample()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_next_sample (
    DDS_KeyedString & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p.1288).

See also

**FooDataReader::take\_next\_sample** (p.1660)

### 9.264.2.7 read\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_instance (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read\_instance** (p. 1661)

### 9.264.2.8 take\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_instance (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take\_instance** (p. 1663)

### 9.264.2.9 read\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_instance_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedStringDataReader::read\_instance** (p. 1505) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_instance\_w\_condition** (p. 1664)

## 9.264.2.10 take\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_instance_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & a_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via `DDSKeyedStringDataReader::take_instance` (p. 1506) the samples that match the criteria specified in the `DDSReadCondition` (p. 1574).

See also

`FooDataReader::take_instance_w_condition` (p. 1665)

## 9.264.2.11 read\_next\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_next_instance (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the `DDSDataReader` (p. 1288).

See also

`FooDataReader::read_next_instance` (p. 1667)

## 9.264.2.12 take\_next\_instance()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_next_instance (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the `DDSDataReader` (p. 1288).

See also

`FooDataReader::take_next_instance` (p. 1668)

### 9.264.2.13 read\_next\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::read_next_instance_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedStringDataReader::read\_next\_instance** (p. 1507) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_next\_instance\_w\_condition** (p. 1670)

### 9.264.2.14 take\_next\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::take_next_instance_w_condition (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    const DDS_InstanceHandle_t & previous_handle = DDS_HANDLE_NIL,
    DDSReadCondition * condition = NULL ) [virtual]
```

Accesses via **DDSKeyedStringDataReader::take\_next\_instance** (p. 1507) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::take\_next\_instance\_w\_condition** (p. 1671)

### 9.264.2.15 return\_loan()

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::return_loan (
    DDS_KeyedStringSeq & received_data,
    DDS_SampleInfoSeq & info_seq ) [virtual]
```

Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

See also

**FooDataReader::return\_loan** (p. 1672)

**9.264.2.16 get\_key\_value() [1/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::get_key_value (
    DDS_KeyedString & key_holder,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Retrieve the instance `key` that corresponds to an instance handle.

See also

**FooDataReader::get\_key\_value** (p. 1673)

**9.264.2.17 get\_key\_value() [2/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataReader::get_key_value (
    char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance `key` that corresponds to an instance handle.

See also

**FooDataReader::get\_key\_value** (p. 1673)

**9.264.2.18 lookup\_instance() [1/2]**

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataReader::lookup_instance (
    const DDS_KeyedString & key_holder ) [virtual]
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

See also

**FooDataReader::lookup\_instance** (p. 1674)

**9.264.2.19 lookup\_instance()** [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataReader::lookup_instance (
    const char * key ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance handle that corresponds to an instance key.

See also

**FooDataReader::lookup\_instance** (p. 1674)

**9.264.2.20 narrow()**

```
static DDSKeyedStringDataReader * DDSKeyedStringDataReader::narrow (
    DDSDataReader * reader ) [static]
```

Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSKeyedStringDataReader** (p. 1501) pointer.

See also

**FooDataReader::narrow** (p. 1651)

**9.265 DDSKeyedStringDataWriter Class Reference**

<<*interface*>> (p. 237) Instantiates `DataWriter < DDS_KeyedString` (p. 927) >.

Inheritance diagram for DDSKeyedStringDataWriter:

## Public Member Functions

- virtual **DDS\_InstanceHandle\_t register\_instance** (const **DDS\_KeyedString** &instance\_data)  
*Informs RTI Connexx that the application will be modifying a particular instance.*
- virtual **DDS\_InstanceHandle\_t register\_instance** (const char \*key)  
*<<extension>> (p. 237) Informs RTI Connexx that the application will be modifying a particular instance.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_timestamp** (const **DDS\_KeyedString** &instance\_data, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same functions as **DDSKeyedStringDataWriter::register\_instance** (p. 1513) except that the application provides the value for the *source\_timestamp*.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_timestamp** (const char \*key, const **DDS\_Time\_t** &source\_timestamp)  
*<<extension>> (p. 237) Performs the same functions as **DDSKeyedStringDataWriter::register\_instance** (p. 1513) except that the application provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)  
*Reverses the action of **DDSKeyedStringDataWriter::register\_instance** (p. 1513).*
- virtual **DDS\_ReturnCode\_t unregister\_instance** (const char \*key, const **DDS\_InstanceHandle\_t** &handle)  
*<<extension>> (p. 237) Reverses the action of **DDSKeyedStringDataWriter::register\_instance** (p. 1513).*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_timestamp** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedStringDataWriter::unregister\_instance** (p. 1514) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_timestamp** (const char \*key, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*<<extension>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::unregister\_instance** (p. 1514) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_KeyedString \* create\_data** (const **DDS\_TypeAllocationParams\_t** &alloc\_params)  
*Creates a keyed string data instance.*
- virtual **DDS\_Boolean delete\_data** (**DDS\_KeyedString** \*sample, const **DDS\_TypeDeallocationParams\_t** &dealloc\_params)  
*Destroys a keyed string data instance created by **DDSKeyedStringDataWriter::create\_data** (p. 1515).*
- virtual **DDS\_ReturnCode\_t write** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)  
*Modifies the value of a **DDS\_KeyedString** (p. 927) data instance.*
- virtual **DDS\_ReturnCode\_t write** (const char \*key, const char \*str, const **DDS\_InstanceHandle\_t** &handle)  
*<<extension>> (p. 237) Modifies the value of a **DDS\_KeyedString** (p. 927) data instance.*
- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const char \*key, const char \*str, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)  
*<<extension>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t write\_w\_params** (const **DDS\_KeyedString** &instance\_data, **DDS\_WriteParams\_t** &params)  
*Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*

- virtual **DDS\_ReturnCode\_t write\_w\_params** (const char \*key, const char \*str, **DDS\_WriteParams\_t** &params)
 

*<<extension>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*
- virtual **DDS\_ReturnCode\_t dispose** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)
 

*Requests the middleware to delete the data.*
- virtual **DDS\_ReturnCode\_t dispose** (const char \*key, const **DDS\_InstanceHandle\_t** &instance\_handle)
 

*<<extension>> (p. 237) Requests the middleware to delete the data.*
- virtual **DDS\_ReturnCode\_t dispose\_w\_timestamp** (const **DDS\_KeyedString** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)
 

*Performs the same functions as **DDSKeyedStringDataWriter::dispose** (p. 1518) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).*
- virtual **DDS\_ReturnCode\_t dispose\_w\_timestamp** (const char \*key, const **DDS\_InstanceHandle\_t** &instance\_handle, const **DDS\_Time\_t** &source\_timestamp)
 

*<<extension>> (p. 237) Performs the same functions as **DDSKeyedStringDataWriter::dispose** (p. 1518) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).*
- virtual **DDS\_ReturnCode\_t get\_key\_value** (**DDS\_KeyedString** &key\_holder, const **DDS\_InstanceHandle\_t** &handle)
 

*Retrieve the instance key that corresponds to an instance handle.*
- virtual **DDS\_ReturnCode\_t get\_key\_value** (char \*key, const **DDS\_InstanceHandle\_t** &handle)
 

*<<extension>> (p. 237) Retrieve the instance key that corresponds to an instance handle.*
- virtual **DDS\_InstanceHandle\_t lookup\_instance** (const **DDS\_KeyedString** &key\_holder)
 

*Retrieve the instance handle that corresponds to an instance key\_holder.*
- virtual **DDS\_InstanceHandle\_t lookup\_instance** (const char \*key)
 

*<<extension>> (p. 237) Retrieve the instance handle that corresponds to an instance key.*

## Static Public Member Functions

- static **DDSKeyedStringDataWriter \* narrow** (**DDSDataReader** \*writer)
 

*Narrow the given **DDSDataReader** (p. 1321) pointer to a **DDSKeyedStringDataWriter** (p. 1510) pointer.*

### 9.265.1 Detailed Description

*<<interface>> (p. 237) Instantiates **DataWriter** < **DDS\_KeyedString** (p. 927) >.*

### 9.265.2 Member Function Documentation

### 9.265.2.1 narrow()

```
static DDSKeyedStringDataWriter * DDSKeyedStringDataWriter::narrow (  
    DDSDataWriter * writer ) [static]
```

Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSKeyedStringDataWriter** (p. 1510) pointer.

See also

**FooDataWriter::narrow** (p. 1678)

### 9.265.2.2 register\_instance() [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::register_instance (  
    const DDS_KeyedString & instance_data ) [virtual]
```

Informs RTI Connexxt that the application will be modifying a particular instance.

See also

**FooDataWriter::register\_instance** (p. 1678)

### 9.265.2.3 register\_instance() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::register_instance (  
    const char * key ) [virtual]
```

<<**extension**>> (p. 237) Informs RTI Connexxt that the application will be modifying a particular instance.

See also

**FooDataWriter::register\_instance** (p. 1678)

### 9.265.2.4 register\_instance\_w\_timestamp() [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::register_instance_w_timestamp (  
    const DDS_KeyedString & instance_data,  
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same functions as **DDSKeyedStringDataWriter::register\_instance** (p. 1513) except that the application provides the value for the `source_timestamp`.

See also

**FooDataWriter::register\_instance\_w\_timestamp** (p. 1679)

### 9.265.2.5 register\_instance\_w\_timestamp() [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::register_instance_w_timestamp (
    const char * key,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<*extension*>> (p. 237) Performs the same functions as **DDSKeyedStringDataWriter::register\_instance** (p. 1513) except that the application provides the value for the `source_timestamp`.

See also

**FooDataWriter::register\_instance\_w\_timestamp** (p. 1679)

### 9.265.2.6 unregister\_instance() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::unregister_instance (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Reverses the action of **DDSKeyedStringDataWriter::register\_instance** (p. 1513).

See also

**FooDataWriter::unregister\_instance** (p. 1680)

### 9.265.2.7 unregister\_instance() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::unregister_instance (
    const char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Reverses the action of **DDSKeyedStringDataWriter::register\_instance** (p. 1513).

See also

**FooDataWriter::unregister\_instance** (p. 1680)

**9.265.2.8 unregister\_instance\_w\_timestamp() [1/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::unregister_instance_w_timestamp (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSKeyedStringDataWriter::unregister\_instance** (p. 1514) except that it also provides the value for the `source_timestamp`.

See also

**FooDataWriter::unregister\_instance\_w\_timestamp** (p. 1682)

**9.265.2.9 unregister\_instance\_w\_timestamp() [2/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::unregister_instance_w_timestamp (
    const char * key,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<*extension*>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::unregister\_instance** (p. 1514) except that it also provides the value for the `source_timestamp`.

See also

**FooDataWriter::unregister\_instance\_w\_timestamp** (p. 1682)

**9.265.2.10 create\_data()**

```
virtual DDS_KeyedString * DDSKeyedStringDataWriter::create_data (
    const DDS_TypeAllocationParams_t & alloc_params ) [virtual]
```

Creates a keyed string data instance.

The size of the instance including the NULL terminated character is determined by the DataWriter property **dds.builtin\_type.keyed\_string.alloc\_size**.

Default size: **dds.builtin\_type.keyed\_string.max\_size** property of DomainParticipant if defined. Otherwise 1024.

Created instances must be deleted with **DDSKeyedStringDataWriter::delete\_data** (p. 1515).

Returns

Newly created keyed string data, or NULL on failure.

See also

BuiltinTypeMemoryManagement section of Built-in Types

### 9.265.2.11 delete\_data()

```
virtual DDS_Boolean DDSKeyedStringDataWriter::delete_data (
    DDS_KeyedString * sample,
    const DDS_TypeDeallocationParams_t & dealloc_params ) [virtual]
```

Destroys a keyed string data instance created by **DDSKeyedStringDataWriter::create\_data** (p. 1515).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) upon successful deletion.

### 9.265.2.12 write() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Modifies the value of a **DDS\_KeyedString** (p. 927) data instance.

#### See also

**FooDataWriter::write** (p. 1683)

### 9.265.2.13 write() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write (
    const char * key,
    const char * str,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Modifies the value of a **DDS\_KeyedString** (p. 927) data instance.

#### See also

**FooDataWriter::write** (p. 1683)

### 9.265.2.14 write\_w\_timestamp() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write_w_timestamp (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also provides the value for the `source_timestamp`.

See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

### 9.265.2.15 write\_w\_timestamp() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write_w_timestamp (
    const char * key,
    const char * str,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<**extension**>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also provides the value for the `source_timestamp`.

See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

### 9.265.2.16 write\_w\_params() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write_w_params (
    const DDS_KeyedString & instance_data,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.265.2.17 write\_w\_params() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::write_w_params (
    const char * key,
    const char * str,
    DDS_WriteParams_t & params ) [virtual]
```

<<*extension*>> (p. 237) Performs the same function as **DDSKeyedStringDataWriter::write** (p. 1516) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.265.2.18 dispose() [1/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::dispose (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Requests the middleware to delete the data.

See also

**FooDataWriter::dispose** (p. 1689)

### 9.265.2.19 dispose() [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::dispose (
    const char * key,
    const DDS_InstanceHandle_t & instance_handle ) [virtual]
```

<<*extension*>> (p. 237) Requests the middleware to delete the data.

See also

**FooDataWriter::dispose** (p. 1689)

**9.265.2.20 dispose\_w\_timestamp() [1/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::dispose_w_timestamp (
    const DDS_KeyedString & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same functions as **DDSKeyedStringDataWriter::dispose** (p. 1518) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).

See also

**FooDataWriter::dispose\_w\_timestamp** (p. 1690)

**9.265.2.21 dispose\_w\_timestamp() [2/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::dispose_w_timestamp (
    const char * key,
    const DDS_InstanceHandle_t & instance_handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<**extension**>> (p. 237) Performs the same functions as **DDSKeyedStringDataWriter::dispose** (p. 1518) except that the application provides the value for the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p. 1082).

See also

**FooDataWriter::dispose\_w\_timestamp** (p. 1690)

**9.265.2.22 get\_key\_value() [1/2]**

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::get_key_value (
    DDS_KeyedString & key_holder,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Retrieve the instance key that corresponds to an instance handle.

See also

**FooDataWriter::get\_key\_value** (p. 1691)

**9.265.2.23 get\_key\_value()** [2/2]

```
virtual DDS_ReturnCode_t DDSKeyedStringDataWriter::get_key_value (
    char * key,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance `key` that corresponds to an instance `handle`.

See also

**FooDataWriter::get\_key\_value** (p. 1691)

**9.265.2.24 lookup\_instance()** [1/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::lookup_instance (
    const DDS_KeyedString & key_holder ) [virtual]
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

See also

**FooDataWriter::lookup\_instance** (p. 1692)

**9.265.2.25 lookup\_instance()** [2/2]

```
virtual DDS_InstanceHandle_t DDSKeyedStringDataWriter::lookup_instance (
    const char * key ) [virtual]
```

<<*extension*>> (p. 237) Retrieve the instance `handle` that corresponds to an instance `key`.

See also

**FooDataWriter::lookup\_instance** (p. 1692)

**9.266 DDSKeyedStringTypeSupport Class Reference**

<<*interface*>> (p. 237) Keyed string type support.

Inheritance diagram for DDSKeyedStringTypeSupport:

## Static Public Member Functions

- static `DDS_ReturnCode_t register_type ( DDSDomainParticipant *participant, const char *type_name="DDS::KeyedString")`  
*Allows an application to communicate to RTI Connexx the existence of the **DDS\_KeyedString** (p. 927) data type.*
- static `DDS_ReturnCode_t unregister_type ( DDSDomainParticipant *participant, const char *type_name="DDS::KeyedString")`  
*Allows an application to unregister the **DDS\_KeyedString** (p. 927) data type from RTI Connexx. After calling `unregister_type`, no further communication using this type is possible.*
- static `const char * get_type_name ()`  
*Get the default name for the **DDS\_KeyedString** (p. 927) type.*
- static `void print_data (const DDS_KeyedString *a_data)`  
*<<extension>> (p. 237) Print value of data type to standard out.*
- static `DDS_TypeCode * get_typecode ()`  
*<<extension>> (p. 237) Retrieves the TypeCode for the Type.*
- static `DDS_ReturnCode_t serialize_data_to_cdr_buffer (char *buffer, unsigned int &length, const DDS_KeyedString *a_data)`  
*<<extension>> (p. 237) Serializes the input sample into a CDR buffer of octets.*

- static `DDS_ReturnCode_t deserialize_data_from_cdr_buffer ( DDS_KeyedString *a_data, const char *buffer, unsigned int length)`  
*<<extension>> (p. 237) Deserializes a sample from a buffer of octets.*
- static `DDS_ReturnCode_t data_to_string ( DDS_KeyedString *sample, char *str, DDS_UnsignedLong &str_size, const DDS_PrintFormatProperty &property)`  
*<<extension>> (p. 237) Get the string representation of an input sample.*

### 9.266.1 Detailed Description

<<*interface*>> (p. 237) Keyed string type support.

### 9.266.2 Member Function Documentation

#### 9.266.2.1 register\_type()

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::KeyedString" ) [static]
```

Allows an application to communicate to RTI Connexx the existence of the **DDS\_KeyedString** (p. 927) data type.

By default, The **DDS\_KeyedString** (p. 927) built-in type is automatically registered when a DomainParticipant is created using the `type_name` returned by `DDSKeyedStringTypeSupport::get_type_name` (p. 1524). Therefore, the usage

of this function is optional and it is only required when the automatic built-in type registration is disabled using the participant property "dds.builtin\_type.auto\_register".

This method can also be used to register the same **DDSKeyedStringTypeSupport** (p. 1520) with a **DDSDomain**↔**Participant** (p. 1351) using different values for the `type_name`.

If `register_type` is called multiple times with the same **DDSDomainParticipant** (p. 1351) and `type_name`, the second (and subsequent) registrations are ignored by the operation.

## Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to register the data type <b>DDS_KeyedString</b> (p. 927) with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under which the data type <b>DDS_KeyedString</b> (p. 927) is registered with the participant; this type name is used when creating a new <b>DDSTopic</b> (p. 1617). (See <b>DDSDomainParticipant::create_topic</b> (p. 1382).) The name may not be NULL or longer than 255 characters.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

## MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

## See also

**DDSDomainParticipant::create\_topic** (p. 1382)

## 9.266.2.2 unregister\_type()

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::KeyedString" ) [static]
```

Allows an application to unregister the **DDS\_KeyedString** (p. 927) data type from RTI Connex. After calling `unregister_type`, no further communication using this type is possible.

## Precondition

The **DDS\_KeyedString** (p. 927) type with `type_name` is registered with the participant and all **DDSTopic** (p. 1617) objects referencing the type have been destroyed. If the type is not registered with the participant, or if any **DDSTopic** (p. 1617) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

## Postcondition

All information about the type is removed from RTI Connex. No further communication using this type is possible.

## Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to unregister the data type <b>DDS_KeyedString</b> (p. 927) from. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type <b>DDS_KeyedString</b> (p. 927) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) or <b>DDS_RETCODE_ERROR</b> (p. 336)
------------	--

## MT Safety:

SAFE.

## See also

**DDSKeyedStringTypeSupport::register\_type** (p. 1521)

9.266.2.3 `get_type_name()`

```
static const char * DDSKeyedStringTypeSupport::get_type_name ( ) [static]
```

Get the default name for the **DDS\_KeyedString** (p. 927) type.

Can be used for calling **DDSKeyedStringTypeSupport::register\_type** (p. 1521) or creating **DDSTopic** (p. 1617).

## Returns

default name for the **DDS\_KeyedString** (p. 927) type.

## See also

**DDSKeyedStringTypeSupport::register\_type** (p. 1521)

**DDSDomainParticipant::create\_topic** (p. 1382)

9.266.2.4 `print_data()`

```
static void DDSKeyedStringTypeSupport::print_data (
    const DDS_KeyedString * a_data ) [static]
```

<<*extension*>> (p. 237) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

## Parameters

<i>a_data</i>	<< <i>in</i> >> (p. 238) <b>DDS_KeyedString</b> (p. 927) to be printed.
---------------	---

9.266.2.5 `get_typecode()`

```
static DDS_TypeCode * DDSKeyedStringTypeSupport::get_typecode ( ) [static]
```

<<*extension*>> (p. 237) Retrieves the TypeCode for the Type.

## See also

**FooTypeSupport::get\_typecode** (p. 1723)

9.266.2.6 `serialize_data_to_cdr_buffer()`

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int & length,
    const DDS_KeyedString * a_data ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a CDR buffer of octets.

## See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

9.266.2.7 `serialize_data_to_cdr_buffer_ex()`

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    const DDS_KeyedString * a_data,
    DDS_DataRepresentationId_t representation ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a buffer of octets.

## See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.266.2.8 deserialize\_data\_from\_cdr\_buffer()

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::deserialize_data_from_cdr_buffer (
    DDS_KeyedString * a_data,
    const char * buffer,
    unsigned int length ) [static]
```

<<**extension**>> (p. 237) Deserializes a sample from a buffer of octets.

See also

**FooTypeSupport::deserialize\_data\_from\_cdr\_buffer** (p. 1722)

### 9.266.2.9 data\_to\_string()

```
static DDS_ReturnCode_t DDSKeyedStringTypeSupport::data_to_string (
    DDS_KeyedString * sample,
    char * str,
    DDS_UnsignedLong & str_size,
    const DDS_PrintFormatProperty & property ) [static]
```

<<**extension**>> (p. 237) Get the string representation of an input sample.

See also

**FooTypeSupport::data\_to\_string** (p. 1723)

## 9.267 DDSListener Class Reference

<<**interface**>> (p. 237) Abstract base class for all Listener interfaces.

Inheritance diagram for DDSListener:

### 9.267.1 Detailed Description

<<*interface*>> (p. 237) Abstract base class for all Listener interfaces.

Entity:

**DDSEntity** (p. 1463)

QoS:

**QoS Policies** (p. 353)

Status:

**Status Kinds** (p. 337)

All the supported kinds of concrete **DDSListener** (p. 1526) interfaces (one per concrete **DDSEntity** (p. 1463) type) derive from this root and add methods whose prototype depends on the concrete Listener.

Listeners provide a way for RTI Connext to asynchronously alert the application when there are relevant status changes.

Almost every application will have to implement listener interfaces.

Each dedicated listener presents a list of operations that correspond to the relevant communication status changes to which an application may respond.

The same **DDSListener** (p. 1526) instance may be shared among multiple entities if you so desire. Consequently, the provided parameter contains a reference to the concerned **DDSEntity** (p. 1463).

### 9.267.2 Access to Plain Communication Status

The general mapping between the plain communication statuses (see **Status Kinds** (p. 337)) and the listeners' operations is as follows:

- For each communication status, there is a corresponding operation whose name is `on_<communication_↔_status>()`, which takes a parameter of type `<communication_status>` as listed in **Status Kinds** (p. 337).
- `on_<communication_status>` is available on the relevant **DDSEntity** (p. 1463) as well as those that embed it, as expressed in the following figure:

listener processing. The most *specific* relevant enabled listener is called."

- When the application attaches a listener on an entity, it must set a mask. The mask indicates to RTI Connext which operations are enabled within the listener (cf. operation **DDSEntity** (p. 1463) `set_listener()` ).
- When a plain communication status changes, RTI Connext triggers the most specific relevant listener operation that is enabled. In case the most specific relevant listener operation corresponds to an application-installed 'nil' listener the operation will be considered handled by a NO-OP operation that does not reset the communication status.

This behavior allows the application to set a default behavior (e.g., in the listener associated with the **DDSDomain**↔**Participant** (p. 1351)) and to set dedicated behaviors only where needed.

### 9.267.3 Access to Read Communication Status

The two statuses related to data arrival are treated slightly differently. Since they constitute the core purpose of the Data Distribution Service, there is no need to provide a default mechanism (as is done for the plain communication statuses above).

The rule is as follows. Each time the read communication status changes:

- First, RTI Connext tries to trigger the **DDSSubscriberListener::on\_data\_on\_readers** (p. 1614) with a parameter of the related **DDSSubscriber** (p. 1592);
- If this does not succeed (there is no listener or the operation is not enabled), RTI Connext tries to trigger **DDSDataReaderListener::on\_data\_available** (p. 1317) on all the related **DDSDataReaderListener** (p. 1315) objects, with a parameter of the related **DDSDataReader** (p. 1288).

The rationale is that either the application is interested in relations among data arrivals and it must use the first option (and then get the corresponding **DDSDataReader** (p. 1288) objects by calling **DDSSubscriber::get\_datareaders** (p. 1606) on the related **DDSSubscriber** (p. 1592) and then get the data by calling **FooDataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652) on the returned **DDSDataReader** (p. 1288) objects), or it wants to treat each **DDSDataReader** (p. 1288) independently and it may choose the second option (and then get the data by calling **FooDataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652) on the related **DDSDataReader** (p. 1288)).

Note that if **DDSSubscriberListener::on\_data\_on\_readers** (p. 1614) is called, RTI Connext will *not* try to call **DDSDataReaderListener::on\_data\_available** (p. 1317). However, an application can force a call to the **DDSDataReader** (p. 1288) objects that have data by calling **DDSSubscriber::notify\_datareaders** (p. 1608).

### 9.267.4 Operations Allowed in Listener Callbacks

See `Restricted Operations in Listener Callbacks`, in the Core Libraries User's Manual.

### 9.267.5 Best Practices with Listeners

Note that all the issues described below are avoided by using **DDSWaitSet** (p. 1629).

#### Avoid blocking or performing a lot of processing in Listener callbacks

Listeners are invoked by internal threads that perform critical functions within the middleware and need to run in a timely manner. By default, Connext DDS creates a few threads to use to receive data and only a single thread to handle periodic events.

Because of this, user applications installing Listeners should never block in a Listener callback. There are several negative consequences of blocking in a listener callback:

- The application may lose data for the DataReader the listener is installed on, because the receive thread is not removing it from the socket buffer and it gets overwritten.

- The application may receive strictly reliable data with a delay, because the receive thread is not removing it from the socket buffer and if it gets overwritten it must be re-sent.
- The application may lose or delay data for other DataReaders, because by default all DataReaders created with the same DomainParticipant share the same threads.
- The application may not be notified of periodic events on time

If the application needs to make a blocking call when data is available, or when another event occurs, the application should use **DDSWaitSet** (p. 1629).

### Avoid taking application mutexes/semaphores in Listener callbacks

Taking application mutexes/semaphores within a Listener callback may lead to unexpected deadlock scenarios.

When a Listener callback is invoked the EA (Exclusive Area) of the Entity 'E' to which the callback applies is taken by the middleware.

If the application takes an application mutex 'M' within a critical section in which the application makes DDS calls affecting 'E', this may lead to following deadlock:

The middleware thread is within the entity EA trying to acquire the mutex 'M'. At the same time, the application thread has acquired 'M' and is blocked trying to acquire the entity EA.

### Do not write data with a DataWriter within the on\_data\_available callback

Avoid writing data with a DataWriter within the **DDSDataReaderListener::on\_data\_available()** (p. 1317) callback. If the write operation blocks because e.g. the send window is full, this will lead to a deadlock.

### Do not call wait\_for\_acknowledgements within the on\_data\_available callback

Do not call the **DDSDataWriter::wait\_for\_acknowledgments** (p. 1334) within the **DDSDataReaderListener::on\_data\_available()** (p. 1317) callback. This will lead to deadlock.

### 9.268.1 Detailed Description

**[Not supported (optional)]** <<*interface*>> (p. 237) A specialization of **DDSTopicDescription** (p. 1624) that allows subscriptions that combine/filter/rearrange data coming from several topics.

**DDSMultiTopic** (p. 1529) allows a more sophisticated subscription that can select and combine data received from multiple topics into a single resulting type (specified by the inherited `type_name`). The data will then be filtered (selection) and possibly re-arranged (aggregation/projection) according to a `subscription_expression` with parameters `expression_parameters`.

- The `subscription_expression` is a string that identifies the selection and re-arrangement of data from the associated topics. It is similar to an SQL statement where the SELECT part provides the fields to be kept, the FROM part provides the names of the topics that are searched for those fields, and the WHERE clause gives the content filter. The Topics combined may have different types but they are restricted in that the type of the fields used for the NATURAL JOIN operation must be the same.
- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `subscription_expression`. The number of supplied parameters must fit with the requested values in the `subscription_expression` (i.e. the number of n tokens).
- **DDSDataReader** (p. 1288) entities associated with a **DDSMultiTopic** (p. 1529) are alerted of data modifications by the usual **DDSListener** (p. 1526) or **DDSWaitSet** (p. 1629) / **DDSCondition** (p. 1276) mechanisms whenever modifications occur to the data associated with any of the topics relevant to the **DDSMultiTopic** (p. 1529).

Note that the source for data may not be restricted to a single topic.

**DDSDataReader** (p. 1288) entities associated with a **DDSMultiTopic** (p. 1529) may access instances that are "constructed" at the **DDSDataReader** (p. 1288) side from the instances written by multiple **DDSDataWriter** (p. 1321) entities. The **DDSMultiTopic** (p. 1529) access instance will begin to exist as soon as all the constituting **DDSTopic** (p. 1617) instances are in existence. The `view_state` and `instance_state` is computed from the corresponding states of the constituting instances:

- The `view_state` of the **DDSMultiTopic** (p. 1529) instance is **DDS\_NEW\_VIEW\_STATE** (p. 159) if at least one of the constituting instances has `view_state = DDS_NEW_VIEW_STATE` (p. 159). Otherwise, it will be **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 159).
- The `instance_state` of the **DDSMultiTopic** (p. 1529) instance is **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161) if the `instance_state` of all the constituting **DDSTopic** (p. 1617) instances is **DDS\_ALIVE\_INSTANCE\_STATE** (p. 161). It is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) if at least one of the constituting **DDSTopic** (p. 1617) instances is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161). Otherwise, it is **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161).

**Queries and Filters Syntax** (p. 179) describes the syntax of `subscription_expression` and `expression` ← `_parameters`.

## 9.268.2 Member Function Documentation

### 9.268.2.1 narrow()

```
static DDSMultiTopic * DDSMultiTopic::narrow (
    DDSTopicDescription * topic_description ) [static]
```

Narrow the given **DDSTopicDescription** (p. 1624) pointer to a **DDSMultiTopic** (p. 1529) pointer.

Returns

**DDSMultiTopic** (p. 1529) if this **DDSTopicDescription** (p. 1624) is a **DDSMultiTopic** (p. 1529). Otherwise, return NULL.

### 9.268.2.2 get\_subscription\_expression()

```
virtual const char * DDSMultiTopic::get_subscription_expression ( ) [pure virtual]
```

Get the expression for this **DDSMultiTopic** (p. 1529).

The expressions syntax is described in the DDS specification. It is specified when the **DDSMultiTopic** (p. 1529) is created.

Returns

`subscription_expression` of the **DDSMultiTopic** (p. 1529).

### 9.268.2.3 get\_expression\_parameters()

```
virtual DDS_ReturnCode_t DDSMultiTopic::get_expression_parameters (
    DDS_StringSeq & parameters ) [pure virtual]
```

Get the expression parameters.

The expressions syntax is described in the DDS specification.

The `parameters` is either specified on the last successful call to **DDSMultiTopic::set\_expression\_parameters** (p. 1532), or if **DDSMultiTopic::set\_expression\_parameters** (p. 1532) was never called, the `parameters` specified when the **DDSMultiTopic** (p. 1529) was created.

## Parameters

<i>parameters</i>	<< <i>inout</i> >> (p. 238) Fill in this sequence with the expression parameters. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p. 552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.
-------------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.268.2.4 set\_expression\_parameters()**

```
virtual DDS_ReturnCode_t DDSMultiTopic::set_expression_parameters (
    const DDS_StringSeq & parameters ) [pure virtual]
```

Set the `expression_parameters`.

Changes the `expression_parameters` associated with the **DDSMultiTopic** (p. 1529).

## Parameters

<i>parameters</i>	<< <i>in</i> >> (p. 238) the filter expression parameters
-------------------	---

## Returns

One of the **Standard Return Codes** (p. 336).

**9.269 DDSOctetsDataReader Class Reference**

<<*interface*>> (p. 237) Instantiates `DataReader` < **DDS\_Octets** (p. 967) >.

Inheritance diagram for `DDSOctetsDataReader`:

## Public Member Functions

- virtual **DDS\_ReturnCode\_t** **read** ( **DDS\_OctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_↵\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, **DDS\_SampleStateMask** sample\_states= **DDS\_ANY\_↵SAMPLE\_STATE**, **DDS\_ViewStateMask** view\_states= **DDS\_ANY\_VIEW\_STATE**, **DDS\_InstanceStateMask** instance\_states= **DDS\_ANY\_INSTANCE\_STATE**)  
*Access a collection of data samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **take** ( **DDS\_OctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_↵\_Long** max\_samples= **DDS\_LENGTH\_UNLIMITED**, **DDS\_SampleStateMask** sample\_states= **DDS\_ANY\_↵SAMPLE\_STATE**, **DDS\_ViewStateMask** view\_states= **DDS\_ANY\_VIEW\_STATE**, **DDS\_InstanceStateMask** instance\_states= **DDS\_ANY\_INSTANCE\_STATE**)  
*Access a collection of data-samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **read\_w\_condition** ( **DDS\_OctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDSReadCondition** \*condition)  
*Accesses via **DDSOctetsDataReader::read** (p. 1534) the samples that match the criteria specified in the **DDSRead\_↵Condition** (p. 1574).*
- virtual **DDS\_ReturnCode\_t** **take\_w\_condition** ( **DDS\_OctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDSReadCondition** \*condition)  
*Analogous to **DDSOctetsDataReader::read\_w\_condition** (p. 1534) except it accesses samples via the **DDSOctets\_↵DataReader::take** (p. 1534) operation.*
- virtual **DDS\_ReturnCode\_t** **read\_next\_sample** ( **DDS\_Octets** &received\_data, **DDS\_SampleInfo** &sample\_↵\_info)  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **take\_next\_sample** ( **DDS\_Octets** &received\_data, **DDS\_SampleInfo** &sample\_↵\_info)  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **return\_loan** ( **DDS\_OctetsSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq)  
*Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of *read* or *take* on the **DDSDataReader** (p. 1288).*

## Static Public Member Functions

- static **DDSOctetsDataReader** \* **narrow** ( **DDSDataReader** \*reader)  
*Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSOctetsDataReader** (p. 1532) pointer.*

### 9.269.1 Detailed Description

<<**interface**>> (p. 237) Instantiates **DataReader** < **DDS\_Octets** (p. 967) >.

When reading or taking data with this reader, if you request a copy of the samples instead of a loan, and the byte array in a destination data sample is NULL, the middleware will allocate a new array for you of sufficient length to hold the received data. The new array will be allocated with **DDS\_OctetBuffer\_alloc** (p. 548); the sample's destructor will delete it.

A non- NULL array is assumed to be allocated to sufficient length to store the incoming data. It will not be reallocated.

See also

**FooDataReader** (p. 1649)

**DDSDataReader** (p. 1288)

## 9.269.2 Member Function Documentation

### 9.269.2.1 read()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::read (
    DDS_OctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read** (p. 1651)

### 9.269.2.2 take()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::take (
    DDS_OctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data-samples from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take** (p. 1652)

### 9.269.2.3 read\_w\_condition()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::read_w_condition (
    DDS_OctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Accesses via **DDSOctetsDataReader::read** (p. 1534) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_w\_condition** (p. 1657)

#### 9.269.2.4 take\_w\_condition()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::take_w_condition (
    DDS_OctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Analogous to **DDSOctetsDataReader::read\_w\_condition** (p. 1534) except it accesses samples via the **DDSOctetsDataReader::take** (p. 1534) operation.

See also

**FooDataReader::take\_w\_condition** (p. 1658)

#### 9.269.2.5 read\_next\_sample()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::read_next_sample (
    DDS_Octets & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p. 1288).

See also

**FooDataReader::read\_next\_sample** (p. 1659)

#### 9.269.2.6 take\_next\_sample()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::take_next_sample (
    DDS_Octets & received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDDataReader** (p. 1288).

See also

**FooDataReader::take\_next\_sample** (p. 1660)

### 9.269.2.7 return\_loan()

```
virtual DDS_ReturnCode_t DDSOctetsDataReader::return_loan (
    DDS_OctetsSeq & received_data,
    DDS_SampleInfoSeq & info_seq ) [virtual]
```

Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

See also

**FooDataReader::return\_loan** (p. 1672)

### 9.269.2.8 narrow()

```
static DDSOctetsDataReader * DDSOctetsDataReader::narrow (
    DDSDataReader * reader ) [static]
```

Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSOctetsDataReader** (p. 1532) pointer.

See also

**FooDataReader::narrow** (p. 1651)

## 9.270 DDSOctetsDataWriter Class Reference

<<**interface**>> (p. 237) Instantiates `DataWriter` < **DDS\_Octets** (p. 967) >.

Inheritance diagram for `DDSOctetsDataWriter`:

## Public Member Functions

- virtual **DDS\_Octets** \* **create\_data** (const **DDS\_TypeAllocationParams\_t** &alloc\_params)  
*Creates an octet data sequence.*
- virtual **DDS\_Boolean** **delete\_data** ( **DDS\_Octets** \*sample, const **DDS\_TypeDeallocationParams\_t** &dealloc\_params)  
*Destroys a octet data sequence created by **DDSOctetsDataWriter::create\_data** (p. 1538).*
- virtual **DDS\_ReturnCode\_t** **write** (const **DDS\_Octets** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)  
*Modifies the value of a **DDS\_Octets** (p. 967) data instance.*
- virtual **DDS\_ReturnCode\_t** **write** (const unsigned char \*octets, int length, const **DDS\_InstanceHandle\_t** &handle)

## Static Public Member Functions

- static **DDSOctetsDataWriter** \* **narrow** ( **DDSDataWriter** \*writer)  
*Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSOctetsDataWriter** (p. 1536) pointer.*

### 9.270.1 Detailed Description

<<**interface**>> (p. 237) Instantiates **DataWriter** < **DDS\_Octets** (p. 967) >.

See also

**FooDataWriter** (p. 1676)

**DDSDataWriter** (p. 1321)

## 9.270.2 Member Function Documentation

### 9.270.2.1 narrow()

```
static DDSOctetsDataWriter * DDSOctetsDataWriter::narrow (  
    DDSDataWriter * writer ) [static]
```

Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSOctetsDataWriter** (p. 1536) pointer.

See also

**FooDataWriter::narrow** (p. 1678)

### 9.270.2.2 create\_data()

```
virtual DDS_Octets * DDSOctetsDataWriter::create_data (  
    const DDS_TypeAllocationParams_t & alloc_params ) [virtual]
```

Creates an octet data sequence.

The size of the instance is determined by the DataWriter property **dds.builtin\_type.octets.alloc\_size**.

Default size: **dds.builtin\_type.octets.max\_size** property of DomainParticipant if defined. Otherwise 2048.

Created instances must be deleted with **DDSOctetsDataWriter::delete\_data** (p. 1538).

Returns

Newly created octet sequence data, or NULL on failure.

See also

BuiltinTypeMemoryManagement section of Built-in Types.

### 9.270.2.3 delete\_data()

```
virtual DDS_Boolean DDSOctetsDataWriter::delete_data (
    DDS_Octets * sample,
    const DDS_TypeDeallocationParams_t & dealloc_params ) [virtual]
```

Destroys a octet data sequence created by **DDSOctetsDataWriter::create\_data** (p. 1538).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) upon successful deletion.

### 9.270.2.4 write() [1/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write (
    const DDS_Octets & instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Modifies the value of a **DDS\_Octets** (p. 967) data instance.

#### See also

**FooDataWriter::write** (p. 1683)

### 9.270.2.5 write() [2/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write (
    const unsigned char * octets,
    int length,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<**extension**>> (p. 237) Modifies the value of a **DDS\_Octets** (p. 967) data instance.

#### Parameters

<i>octets</i>	<< <b>in</b> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <b>in</b> >> (p. 238) Number of octets to be published.
<i>handle</i>	<< <b>in</b> >> (p. 238) The special value <b>DDS_HANDLE_NIL</b> (p. 76) should be used always.

See also

**FooDataWriter::write** (p. 1683)

### 9.270.2.6 write() [3/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write (
    const DDS_OctetSeq & octets,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

<<**extension**>> (p. 237) Modifies the value of a **DDS\_Octets** (p. 967) data instance.

Parameters

<i>octets</i>	<< <b>in</b> >> (p. 238) Sequence of octets to be published.
<i>handle</i>	<< <b>in</b> >> (p. 238) The special value <b>DDS_HANDLE_NIL</b> (p. 76) should be used always.

See also

**FooDataWriter::write** (p. 1683)

### 9.270.2.7 write\_w\_timestamp() [1/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_timestamp (
    const DDS_Octets & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also provides the value for the `source_timestamp`.

See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

### 9.270.2.8 write\_w\_timestamp() [2/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_timestamp (
    const unsigned char * octets,
    int length,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<**extension**>> (p. 237) Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also provides the value for the `source_timestamp`.

## Parameters

<i>octets</i>	<< <i>in</i> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <i>in</i> >> (p. 238) Number of octets to be published.
<i>handle</i>	<< <i>in</i> >> (p. 238) The special value <b>DDS_HANDLE_NIL</b> (p. 76) should be used always.
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation. See <b>FooDataWriter::write_w_timestamp</b> (p. 1687).

## See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

## 9.270.2.9 write\_w\_timestamp() [3/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_timestamp (
    const DDS_OctetSeq & octets,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

<<*extension*>> (p. 237) Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also provides the value for the *source\_timestamp*.

## Parameters

<i>octets</i>	<< <i>in</i> >> (p. 238) Sequence of octets to be published.
<i>handle</i>	<< <i>in</i> >> (p. 238) The special value <b>DDS_HANDLE_NIL</b> (p. 76) should be used always.
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation. See <b>FooDataWriter::write_w_timestamp</b> (p. 1687).

## See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

## 9.270.2.10 write\_w\_params() [1/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_params (
    const DDS_Octets & instance_data,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.270.2.11 write\_w\_params() [2/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_params (
    const unsigned char * octets,
    int length,
    DDS_WriteParams_t & params ) [virtual]
```

<<*extension*>> (p. 237) Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

Parameters

<i>octets</i>	<< <i>in</i> >> (p. 238) Array of octets to be published.
<i>length</i>	<< <i>in</i> >> (p. 238) Number of octets to be published.
<i>params</i>	<< <i>in</i> >> (p. 238) The <b>DDS_WriteParams_t</b> (p. 1251) parameter containing the instance handle, source timestamp, publication priority, and cookie to be used in write operation. See <b>FooDataWriter::write_w_params</b> (p. 1688).

See also

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.270.2.12 write\_w\_params() [3/3]

```
virtual DDS_ReturnCode_t DDSOctetsDataWriter::write_w_params (
    const DDS_OctetSeq & octets,
    DDS_WriteParams_t & params ) [virtual]
```

<<*extension*>> (p. 237) Performs the same function as **DDSOctetsDataWriter::write** (p. 1539) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

Parameters

<i>octets</i>	<< <i>in</i> >> (p. 238) Sequence of octets to be published.
<i>params</i>	<< <i>in</i> >> (p. 238) The <b>DDS_WriteParams_t</b> (p. 1251) parameter containing the instance handle, source timestamp, publication priority, and cookie to be used in write operation. See <b>FooDataWriter::write_w_params</b> (p. 1688).

See also

`FooDataWriter::write_w_params` (p. 1688)

## 9.271 DDSOctetsTypeSupport Class Reference

<<*interface*>> (p. 237) `DDS_Octets` (p. 967) type support.

Inheritance diagram for DDSOctetsTypeSupport:

### Static Public Member Functions

- static `DDS_ReturnCode_t register_type ( DDSDomainParticipant *participant, const char *type_name="DDS::Octets")`  
*Allows an application to communicate to RTI Connext the existence of the `DDS_Octets` (p. 967) data type.*
- static `DDS_ReturnCode_t unregister_type ( DDSDomainParticipant *participant, const char *type_name="DDS::Octets")`  
*Allows an application to unregister the `DDS_Octets` (p. 967) data type from RTI Connext. After calling `unregister_type`, no further communication using this type is possible.*
- static const char \* `get_type_name ()`  
*Get the default name for the `DDS_Octets` (p. 967) type.*
- static void `print_data (const DDS_Octets *a_data)`  
 <<*extension*>> (p. 237) *Print value of data type to standard out.*
- static `DDS_TypeCode * get_typecode ()`  
 <<*extension*>> (p. 237) *Retrieves the TypeCode for the Type.*
- static `DDS_ReturnCode_t serialize_data_to_cdr_buffer (char *buffer, unsigned int &length, const DDS_Octets *a_data)`  
 <<*extension*>> (p. 237) *Serializes the input sample into a CDR buffer of octets.*
- static `DDS_ReturnCode_t serialize_data_to_cdr_buffer_ex (char *buffer, unsigned int &length, const DDS_Octets *a_data, DDS_DataRepresentationId_t representation)`  
 <<*extension*>> (p. 237) *Serializes the input sample into a buffer of octets.*
- static `DDS_ReturnCode_t deserialize_data_from_cdr_buffer ( DDS_Octets *a_data, const char *buffer, unsigned int length)`  
 <<*extension*>> (p. 237) *Deserializes a sample from a buffer of octets.*
- static `DDS_ReturnCode_t data_to_string ( DDS_Octets *sample, char *str, DDS_UnsignedLong &str_size, const DDS_PrintFormatProperty &property)`  
 <<*extension*>> (p. 237) *Get the string representation of an input sample.*

### 9.271.1 Detailed Description

<<*interface*>> (p. 237) `DDS_Octets` (p. 967) type support.

## 9.271.2 Member Function Documentation

### 9.271.2.1 register\_type()

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::Octets" ) [static]
```

Allows an application to communicate to RTI Connexx the existence of the **DDS\_Octets** (p. 967) data type.

By default, The **DDS\_Octets** (p. 967) built-in type is automatically registered when a DomainParticipant is created using the type\_name returned by **DDSOctetsTypeSupport::get\_type\_name** (p. 1545). Therefore, the usage of this function is optional and it is only required when the automatic built-in type registration is disabled using the participant property "dds.builtin\_type.auto\_register".

This method can also be used to register the same **DDSOctetsTypeSupport** (p. 1543) with a **DDSDomainParticipant** (p. 1351) using different values for the type\_name.

If **register\_type** is called multiple times with the same **DDSDomainParticipant** (p. 1351) and type\_name, the second (and subsequent) registrations are ignored by the operation.

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to register the data type <b>DDS_Octets</b> (p. 967) with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type <b>DDS_Octets</b> (p. 967) is registered with the participant; this type name is used when creating a new <b>DDSTopic</b> (p. 1617). (See <b>DDSDomainParticipant::create_topic</b> (p. 1382).) The name may not be NULL or longer than 255 characters.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

#### MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

#### See also

**DDSDomainParticipant::create\_topic** (p. 1382)

### 9.271.2.2 unregister\_type()

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::Octets" ) [static]
```

Allows an application to unregister the **DDS\_Octets** (p. 967) data type from RTI Connext. After calling `unregister_type`, no further communication using this type is possible.

#### Precondition

The **DDS\_Octets** (p. 967) type with `type_name` is registered with the participant and all **DDSTopic** (p. 1617) objects referencing the type have been destroyed. If the type is not registered with the participant, or if any **DDSTopic** (p. 1617) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

#### Postcondition

All information about the type is removed from RTI Connext. No further communication using this type is possible.

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to unregister the data type <b>DDS_Octets</b> (p. 967) from. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under which the data type <b>DDS_Octets</b> (p. 967) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) or <b>DDS_RETCODE_ERROR</b> (p. 336)
------------	--

#### MT Safety:

SAFE.

#### See also

**DDSOctetsTypeSupport::register\_type** (p. 1544)

### 9.271.2.3 get\_type\_name()

```
static const char * DDSOctetsTypeSupport::get_type_name ( ) [static]
```

Get the default name for the **DDS\_Octets** (p. 967) type.

Can be used for calling **DDSOctetsTypeSupport::register\_type** (p. 1544) or creating **DDSTopic** (p. 1617).

**Returns**

default name for the **DDS\_Octets** (p. 967) type.

**See also**

**DDSOctetsTypeSupport::register\_type** (p. 1544)

**DDSDomainParticipant::create\_topic** (p. 1382)

**9.271.2.4 print\_data()**

```
static void DDSOctetsTypeSupport::print_data (
    const DDS_Octets * a_data ) [static]
```

<<**extension**>> (p. 237) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

**Parameters**

<i>a_data</i>	<< <b>in</b> >> (p. 238) <b>DDS_Octets</b> (p. 967) to be printed.
---------------	--

**9.271.2.5 get\_typecode()**

```
static DDS_TypeCode * DDSOctetsTypeSupport::get_typecode ( ) [static]
```

<<**extension**>> (p. 237) Retrieves the TypeCode for the Type.

**See also**

**FooTypeSupport::get\_typecode** (p. 1723)

**9.271.2.6 serialize\_data\_to\_cdr\_buffer()**

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int & length,
    const DDS_Octets * a_data ) [static]
```

<<**extension**>> (p. 237) Serializes the input sample into a CDR buffer of octets.

**See also**

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.271.2.7 serialize\_data\_to\_cdr\_buffer\_ex()

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    const DDS_Octets * a_data,
    DDS_DataRepresentationId_t representation ) [static]
```

<<**extension**>> (p. 237) Serializes the input sample into a buffer of octets.

See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.271.2.8 deserialize\_data\_from\_cdr\_buffer()

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::deserialize_data_from_cdr_buffer (
    DDS_Octets * a_data,
    const char * buffer,
    unsigned int length ) [static]
```

<<**extension**>> (p. 237) Deserializes a sample from a buffer of octets.

See also

**FooTypeSupport::deserialize\_data\_from\_cdr\_buffer** (p. 1722)

### 9.271.2.9 data\_to\_string()

```
static DDS_ReturnCode_t DDSOctetsTypeSupport::data_to_string (
    DDS_Octets * sample,
    char * str,
    DDS_UnsignedLong & str_size,
    const DDS_PrintFormatProperty & property ) [static]
```

<<**extension**>> (p. 237) Get the string representation of an input sample.

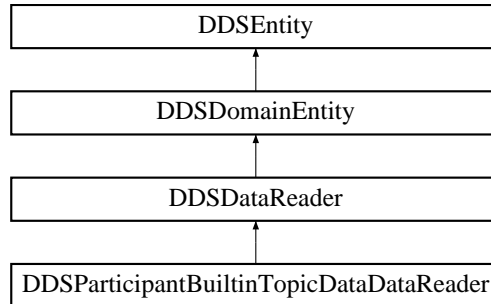

See also

**FooTypeSupport::data\_to\_string** (p. 1723)

## 9.272 DDSParticipantBuiltinTopicDataDataReader Class Reference

Instantiates `DataReader < DDS_ParticipantBuiltinTopicData (p. 979) >` .

Inheritance diagram for `DDSParticipantBuiltinTopicDataDataReader`:

### Additional Inherited Members

#### 9.272.1 Detailed Description

Instantiates `DataReader < DDS_ParticipantBuiltinTopicData (p. 979) >` .

`DDSDataReader` (p.1288) of topic `DDS_PARTICIPANT_TOPIC_NAME` (p.295) used for accessing `DDS_ParticipantBuiltinTopicData` (p. 979) of the remote `DDSDomainParticipant` (p. 1351).

Instantiates:

`<<generic>>` (p. 237) `FooDataReader` (p. 1649)

## 9.274 DDSPropertyQosPolicyHelper Class Reference

Policy helpers that facilitate management of the properties in the input policy.

### Static Public Member Functions

- static **DDS\_Long** **get\_number\_of\_properties** ( **DDS\_PropertyQosPolicy** &policy)  
*Gets the number of properties in the input policy.*
- static **DDS\_ReturnCode\_t** **assert\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const char \*value, **DDS\_Boolean** propagate)  
*Asserts the property identified by name in the input policy.*
- static **DDS\_ReturnCode\_t** **add\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const char \*value, **DDS\_Boolean** propagate)  
*Adds a new property to the input policy.*
- static **DDS\_ReturnCode\_t** **assert\_pointer\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const void \*pointer)  
*Asserts the property identified by name in the input policy. Used when the property to store is a pointer.*
- static **DDS\_ReturnCode\_t** **add\_pointer\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name, const void \*pointer)  
*Adds a new property to the input policy. Used when the property to store is a pointer.*
- static struct **DDS\_Property\_t**\* **lookup\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name)  
*Searches for a property in the input policy given its name.*
- static **DDS\_ReturnCode\_t** **remove\_property** ( **DDS\_PropertyQosPolicy** &policy, const char \*name)  
*Removes a property from the input policy.*
- static **DDS\_ReturnCode\_t** **get\_properties** ( **DDS\_PropertyQosPolicy** &policy, struct **DDS\_PropertySeq** &properties, const char \*name\_prefix)  
*Retrieves a list of properties whose names match the input prefix.*

### 9.274.1 Detailed Description

Policy helpers that facilitate management of the properties in the input policy.

## 9.275 DDSPublicationBuiltinTopicDataDataReader Class Reference

Instantiates `DataReader < DDS_PublicationBuiltinTopicData (p. 1010) >` .

Inheritance diagram for `DDSPublicationBuiltinTopicDataDataReader`:

## Additional Inherited Members

### 9.275.1 Detailed Description

Instantiates `DataReader < DDS_PublicationBuiltinTopicData (p. 1010) >` .

**DDSDataReader** (p.1288) of topic **DDS\_PUBLICATION\_TOPIC\_NAME** (p.298) used for accessing **DDS\_↔PublicationBuiltinTopicData** (p.1010) of the remote **DDSDataWriter** (p.1321) and the associated **DDSPublisher** (p. 1550).

Instantiates:

`<<generic>>` (p. 237) **FooDataReader** (p. 1649)

See also

**DDS\_PublicationBuiltinTopicData** (p. 1010)

**DDS\_PUBLICATION\_TOPIC\_NAME** (p. 298)

## 9.277 DDSPublisher Class Reference

`<<interface>>` (p. 237) A publisher is the object responsible for the actual dissemination of publications.

Inheritance diagram for `DDSPublisher`:

## Public Member Functions

- virtual **DDS\_ReturnCode\_t** **get\_default\_datawriter\_qos** ( **DDS\_DataWriterQos** &qos)=0  
*Copies the default **DDS\_DataWriterQos** (p. 689) values into the provided **DDS\_DataWriterQos** (p. 689) instance.*
- virtual **DDS\_ReturnCode\_t** **set\_default\_datawriter\_qos** (const **DDS\_DataWriterQos** &qos)=0  
*Sets the default **DDS\_DataWriterQos** (p. 689) values for this publisher.*
- virtual **DDS\_ReturnCode\_t** **set\_default\_datawriter\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p. 237) *Set the default **DDS\_DataWriterQos** (p. 689) values for this publisher based on the input XML QoS profile.*
- virtual **DDS\_ReturnCode\_t** **set\_default\_library** (const char \*library\_name)=0  
 <<extension>> (p. 237) *Sets the default XML library for a **DDSPublisher** (p. 1550).*
- virtual const char \* **get\_default\_library** ()=0  
 <<extension>> (p. 237) *Gets the default XML library associated with a **DDSPublisher** (p. 1550).*
- virtual **DDS\_ReturnCode\_t** **set\_default\_profile** (const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p. 237) *Sets the default XML profile for a **DDSPublisher** (p. 1550).*
- virtual const char \* **get\_default\_profile** ()=0  
 <<extension>> (p. 237) *Gets the default XML profile associated with a **DDSPublisher** (p. 1550).*
- virtual const char \* **get\_default\_profile\_library** ()=0  
 <<extension>> (p. 237) *Gets the library where the default XML QoS profile is contained for a **DDSPublisher** (p. 1550).*
- virtual **DDSDataWriter** \* **create\_datawriter** ( **DDSTopic** \*topic, const **DDS\_DataWriterQos** &qos, **DDSDataWriterListener** \*listener, **DDS\_StatusMask** mask)=0  
*Creates a **DDSDataWriter** (p. 1321) that will be attached and belong to the **DDSPublisher** (p. 1550).*
- virtual **DDSDataWriter** \* **create\_datawriter\_with\_profile** ( **DDSTopic** \*topic, const char \*library\_name, const char \*profile\_name, **DDSDataWriterListener** \*listener, **DDS\_StatusMask** mask)=0  
 <<extension>> (p. 237) *Creates a **DDSDataWriter** (p. 1321) object using the **DDS\_DataWriterQos** (p. 689) associated with the input XML QoS profile.*
- virtual **DDS\_ReturnCode\_t** **delete\_datawriter** ( **DDSDataWriter** \*a\_datawriter)=0  
*Deletes a **DDSDataWriter** (p. 1321) that belongs to the **DDSPublisher** (p. 1550).*
- virtual **DDSDataWriter** \* **lookup\_datawriter** (const char \*topic\_name)=0  
*Retrieves the **DDSDataWriter** (p. 1321) for a specific **DDSTopic** (p. 1617).*
- virtual **DDS\_ReturnCode\_t** **get\_all\_datawriters** (**DDSDataWriterSeq** &writers)=0  
*Retrieve all the DataWriters created from this Publisher.*
- virtual **DDS\_ReturnCode\_t** **suspend\_publications** ()=0  
*Indicates to RTI Connext that the application is about to make multiple modifications using **DDSDataWriter** (p. 1321) objects belonging to the **DDSPublisher** (p. 1550).*
- virtual **DDS\_ReturnCode\_t** **resume\_publications** ()=0  
*Indicates to RTI Connext that the application has completed the multiple changes initiated by the previous **DDSPublisher::suspend\_publications** (p. 1562).*
- virtual **DDS\_ReturnCode\_t** **begin\_coherent\_changes** ()=0  
*Indicates that the application will begin a coherent set of modifications using **DDSDataWriter** (p. 1321) objects attached to the **DDSPublisher** (p. 1550).*
- virtual **DDS\_ReturnCode\_t** **end\_coherent\_changes** ()=0  
*Terminates the coherent set initiated by the matching call to **DDSPublisher::begin\_coherent\_changes** (p. 1564).*
- virtual **DDSDomainParticipant** \* **get\_participant** ()=0  
*Returns the **DDSDomainParticipant** (p. 1351) to which the **DDSPublisher** (p. 1550) belongs.*
- virtual **DDS\_ReturnCode\_t** **delete\_contained\_entities** ()=0  
*Deletes all the entities that were created by means of the "create" operation on the **DDSPublisher** (p. 1550).*

- virtual **DDS\_ReturnCode\_t copy\_from\_topic\_qos** ( **DDS\_DataWriterQos** &a\_datawriter\_qos, const **DDS\_↔  
TopicQos** &a\_topic\_qos)=0  
*Copies the policies in the **DDS\_TopicQos** (p. 1135) to the corresponding policies in the **DDS\_DataWriterQos** (p. 689).*
- virtual **DDS\_ReturnCode\_t wait\_for\_acknowledgments** (const **DDS\_Duration\_t** &max\_wait)=0  
*Blocks the calling thread until all data written by the Publisher's reliable DataWriters is acknowledged, or until timeout expires.*
- virtual **DDS\_ReturnCode\_t wait\_for\_asynchronous\_publishing** (const **DDS\_Duration\_t** &max\_wait)=0  
*<<extension>> (p. 237) Blocks the calling thread until asynchronous sending is complete.*
- virtual **DDS\_ReturnCode\_t set\_qos** (const **DDS\_PublisherQos** &qos)=0  
*Sets the publisher QoS.*
- virtual **DDS\_ReturnCode\_t set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
*<<extension>> (p. 237) Change the QoS of this publisher using the input XML QoS profile.*
- virtual **DDS\_ReturnCode\_t get\_qos** ( **DDS\_PublisherQos** &qos)=0  
*Gets the publisher QoS.*
- virtual **DDS\_ReturnCode\_t set\_listener** ( **DDSPublisherListener** \*l, **DDS\_StatusMask** mask= **DDS\_↔  
STATUS\_MASK\_ALL**)=0  
*Sets the publisher listener.*
- virtual **DDSPublisherListener \* get\_listener** ()=0  
*Get the publisher listener.*
- virtual **DDSDataWriter \* lookup\_datawriter\_by\_name** (const char \*datawriter\_name)=0  
*<<extension>> (p. 237) Retrieves a **DDSDataWriter** (p. 1321) contained within the **DDSPublisher** (p. 1550) the **DDSDataWriter** (p. 1321) entity name.*

### 9.277.1 Detailed Description

<<**interface**>> (p. 237) A publisher is the object responsible for the actual dissemination of publications.

QoS:

**DDS\_PublisherQos** (p. 1022)

Listener:

**DDSPublisherListener** (p. 1571)

A publisher acts on the behalf of one or several **DDSDataWriter** (p. 1321) objects that belong to it. When it is informed of a change to the data associated with one of its **DDSDataWriter** (p. 1321) objects, it decides when it is appropriate to actually send the data-update message. In making this decision, it considers any extra information that goes with the data (timestamp, writer, etc.) as well as the QoS of the **DDSPublisher** (p. 1550) and the **DDSDataWriter** (p. 1321).

The following operations may be called even if the **DDSPublisher** (p. 1550) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) if called on a disabled **DDSPublisher** (p. 1550):

- **DDSEntity::enable** (p. 1466),
- **DDSPublisher::set\_qos** (p. 1568), **DDSPublisher::get\_qos** (p. 1569) , **DDSPublisher::set\_qos\_with\_profile** (p. 1569)

- `DDSPublisher::set_listener` (p. 1570), `DDSPublisher::get_listener` (p. 1570),
- `DDSEntity::get_statuscondition` (p. 1467), `DDSEntity::get_status_changes` (p. 1467)
- `DDSPublisher::create_datawriter` (p. 1558), `DDSPublisher::create_datawriter_with_profile` (p. 1559), `DDSPublisher::delete_contained_entities` (p. 1565), `DDSPublisher::delete_datawriter` (p. 1561),
- `DDSPublisher::set_default_datawriter_qos` (p. 1554), `DDSPublisher::set_default_datawriter_qos_with_profile` (p. 1555), `DDSPublisher::get_default_datawriter_qos` (p. 1553), `DDSPublisher::wait_for_acks` (p. 1567), `DDSPublisher::set_default_library` (p. 1555), `DDSPublisher::set_default_profile` (p. 1556),

See also

[Operations Allowed in Listener Callbacks](#) (p. 1528)

Examples

`HelloWorld_publisher.cxx`.

## 9.277.2 Member Function Documentation

### 9.277.2.1 `get_default_datawriter_qos()`

```
virtual DDS_ReturnCode_t DDSPublisher::get_default_datawriter_qos (
    DDS_DataWriterQos & qos ) [pure virtual]
```

Copies the default `DDS_DataWriterQos` (p. 689) values into the provided `DDS_DataWriterQos` (p. 689) instance.

The retrieved `qos` will match the set of values specified on the last successful call to `DDSPublisher::set_default_datawriter_qos` (p. 1554) or `DDSPublisher::set_default_datawriter_qos_with_profile` (p. 1555), or else, if the call was never made, the default values from its owning `DDSDomainParticipant` (p. 1351).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a `DDSPublisher` (p. 1550) while another thread may be simultaneously calling `DDSPublisher::set_default_datawriter_qos` (p. 1554).

Parameters

<code>qos</code>	<< <i>inout</i> >> (p. 238) <code>DDS_DataWriterQos</code> (p. 689) to be filled-up.
------------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110)

**DDSPublisher::create\_datawriter** (p. 1558)

### 9.277.2.2 set\_default\_datawriter\_qos()

```
virtual DDS_ReturnCode_t DDSPublisher::set_default_datawriter_qos (
    const DDS_DataWriterQos & qos ) [pure virtual]
```

Sets the default **DDS\_DataWriterQos** (p. 689) values for this publisher.

This call causes the default values inherited from the owning **DDSDomainParticipant** (p. 1351) to be overridden.

This default value will be used for newly created **DDSDataWriter** (p. 1321) if **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) is specified as the `qos` parameter when **DDSPublisher::create\_datawriter** (p. 1558) is called.

## Precondition

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↔  
RETCODE\_INCONSISTENT\_POLICY** (p. 337)

## MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDSPublisher** (p. 1550) while another thread may be simultaneously calling **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554), **DDSPublisher::get\_default\_↔  
\_datawriter\_qos** (p. 1553) or calling **DDSPublisher::create\_datawriter** (p. 1558) with **DDS\_DATAWRITER\_↔  
QOS\_DEFAULT** (p. 110) as the `qos` parameter.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Default qos to be set. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSPublisher::set_default_datawriter_qos</b> (p. 1554) had never been called.
------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

### 9.277.2.3 set\_default\_datawriter\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSPublisher::set_default_datawriter_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Set the default **DDS\_DataWriterQos** (p. 689) values for this publisher based on the input XML QoS profile.

This default value will be used for newly created **DDSDataWriter** (p. 1321) if **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) is specified as the `qos` parameter when **DDSPublisher::create\_datawriter** (p. 1558) is called.

#### Precondition

The **DDS\_DataWriterQos** (p. 689) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

#### MT Safety:

UNSAFE. It is not safe to set the default QoS value from a **DDSPublisher** (p. 1550) while another thread may be simultaneously calling **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554), **DDSPublisher::get\_default\_datawriter\_qos** (p. 1553) or calling **DDSPublisher::create\_datawriter** (p. 1558) with **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) as the `qos` parameter.

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connexx will use the default library (see <b>DDSPublisher::set_default_library</b> (p. 1555)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If <code>profile_name</code> is null RTI Connexx will use the default profile (see <b>DDSPublisher::set_default_profile</b> (p. 1556)).

If the input profile cannot be found, the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

#### See also

**DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110)

**DDSPublisher::create\_datawriter\_with\_profile** (p. 1559)

### 9.277.2.4 set\_default\_library()

```
virtual DDS_ReturnCode_t DDSPublisher::set_default_library (
    const char * library_name ) [pure virtual]
```

<<*extension*>> (p. 237) Sets the default XML library for a **DDSPublisher** (p. 1550).

This method specifies the library that will be used as the default the next time a default library is needed during a call to one of this Publisher's operations.

Any API requiring a library\_name as a parameter can use null to refer to the default library.

If the default library is not set, the **DDSPublisher** (p. 1550) inherits the default from the **DDSDomainParticipant** (p. 1351) (see **DDSDomainParticipant::set\_default\_library** (p. 1367)).

#### Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name. If library_name is null any previous default is unset.
---------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDSPublisher::get\_default\_library** (p. 1556)

### 9.277.2.5 get\_default\_library()

```
virtual const char * DDSPublisher::get_default_library ( ) [pure virtual]
```

<<*extension*>> (p. 237) Gets the default XML library associated with a **DDSPublisher** (p. 1550).

#### Returns

The default library or null if the default library was not set.

#### See also

**DDSPublisher::set\_default\_library** (p. 1555)

### 9.277.2.6 set\_default\_profile()

```
virtual DDS_ReturnCode_t DDSPublisher::set_default_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML profile for a **DDSPublisher** (p. 1550).

This method specifies the profile that will be used as the default the next time a default Publisher profile is needed during a call to one of this Publisher's operations. When calling a **DDSPublisher** (p. 1550) method that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDSPublisher** (p.1550) inherits the default from the **DDSDomainParticipant** (p. 1351) (see **DDSDomainParticipant::set\_default\_profile** (p. 1368)).

This method does not set the default QoS for **DDSDataWriter** (p. 1321) objects created by the **DDSPublisher** (p. 1550); for this functionality, use **DDSPublisher::set\_default\_datawriter\_qos\_with\_profile** (p. 1555) (you may pass in NULL after having called **set\_default\_profile()** (p. 1556)).

This method does not set the default QoS for newly created Publishers; for this functionality, use **DDSDomainParticipant::set\_default\_publisher\_qos\_with\_profile** (p. 1372).

#### Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 238) The profile name. If profile_name is null any previous default is unset.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDSPublisher::get\_default\_profile** (p. 1557)

**DDSPublisher::get\_default\_profile\_library** (p. 1558)

### 9.277.2.7 get\_default\_profile()

```
virtual const char * DDSPublisher::get_default_profile ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the default XML profile associated with a **DDSPublisher** (p. 1550).

#### Returns

The default profile or null if the default profile was not set.

See also

**DDSPublisher::set\_default\_profile** (p. 1556)

### 9.277.2.8 get\_default\_profile\_library()

```
virtual const char * DDSPublisher::get_default_profile_library ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the library where the default XML QoS profile is contained for a **DDSPublisher** (p. 1550).

The default profile library is automatically set when **DDSPublisher::set\_default\_profile** (p. 1556) is called.

This library can be different than the **DDSPublisher** (p. 1550) default library (see **DDSPublisher::get\_default\_library** (p. 1556)).

Returns

The default profile library or null if the default profile was not set.

See also

**DDSPublisher::set\_default\_profile** (p. 1556)

### 9.277.2.9 create\_datawriter()

```
virtual DDSDataWriter * DDSPublisher::create_datawriter (
    DDSTopic * topic,
    const DDS_DataWriterQos & qos,
    DDSDataWriterListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a **DDSDataWriter** (p. 1321) that will be attached and belong to the **DDSPublisher** (p. 1550).

For each application-defined type, **Foo** (p. 1648), there is an implied, auto-generated class **FooDataWriter** (p. 1676) that extends **DDSDataWriter** (p. 1321) and contains the operations to write data of type **Foo** (p. 1648).

Note that a common application pattern to construct the QoS for the **DDSDataWriter** (p. 1321) is to:

- Retrieve the QoS policies on the associated **DDSTopic** (p. 1617) by means of the **DDSTopic::get\_qos** (p. 1621) operation.
- Retrieve the default **DDSDataWriter** (p. 1321) qos by means of the **DDSPublisher::get\_default\_datawriter\_qos** (p. 1553) operation.
- Combine those two QoS policies (for example, using **DDSPublisher::copy\_from\_topic\_qos** (p. 1566)) and selectively modify policies as desired.

When a **DDSDataWriter** (p. 1321) is created, only those transports already registered are available to the **DDSDataWriter** (p. 1321). See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered.

**Precondition**

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDSDataWriter** (p. 1321) will be created.

The given **DDSTopic** (p. 1617) must have been created from the same participant as this publisher. If it was created from a different participant, this method will fail.

**MT Safety:**

UNSAFE. If **DDS\_DATAWRITER\_QOS\_DEFAULT** (p. 110) is used for the `qos` parameter, it is not safe to create the datawriter while another thread may be simultaneously calling **DDSPublisher::set\_default\_datawriter\_qos** (p. 1554).

**Parameters**

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopic</b> (p. 1617) that the <b>DDSDataWriter</b> (p. 1321) will be associated with. Cannot be NULL.
<i>qos</i>	<< <i>in</i> >> (p. 238) QoS to be used for creating the new <b>DDSDataWriter</b> (p. 1321). The special value <b>DDS_DATAWRITER_QOS_DEFAULT</b> (p. 110) can be used to indicate that the <b>DDSDataWriter</b> (p. 1321) should be created with the default <b>DDS_DataWriterQos</b> (p. 689) set in the <b>DDSPublisher</b> (p. 1550). The special value <b>DDS_DATAWRITER_QOS_USE_TOPIC_QOS</b> (p. 110) can be used to indicate that the <b>DDSDataWriter</b> (p. 1321) should be created with the combination of the default <b>DDS_DataWriterQos</b> (p. 689) set on the <b>DDSPublisher</b> (p. 1550) and the <b>DDS_TopicQos</b> (p. 1135) of the <b>DDSTopic</b> (p. 1617).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataWriter</b> (p. 1321).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

**Returns**

A **DDSDataWriter** (p. 1321) of a derived class specific to the data type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

**See also**

**FooDataWriter** (p. 1676)

**DDSTopic::set\_qos** (p. 1619)

**DDSPublisher::copy\_from\_topic\_qos** (p. 1566)

**DDSDataWriter::set\_listener** (p. 1339)

**Examples**

**HelloWorld\_publisher.cxx.**

### 9.277.2.10 create\_datawriter\_with\_profile()

```
virtual DDSDataWriter * DDSPublisher::create_datawriter_with_profile (
    DDSTopic * topic,
    const char * library_name,
    const char * profile_name,
    DDSDataWriterListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<**extension**>> (p. 237) Creates a **DDSDataWriter** (p. 1321) object using the **DDS\_DataWriterQos** (p. 689) associated with the input XML QoS profile.

The **DDSDataWriter** (p. 1321) will be attached and belong to the **DDSPublisher** (p. 1550).

For each application-defined type, **Foo** (p. 1648), there is an implied, auto-generated class **FooDataWriter** (p. 1676) that extends **DDSDataWriter** (p. 1321) and contains the operations to write data of type **Foo** (p. 1648).

When a **DDSDataWriter** (p. 1321) is created, only those transports already registered are available to the **DDSDataWriter** (p. 1321). See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered.

#### Precondition

If publisher is enabled, topic must have been enabled. Otherwise, this operation will fail and no **DDSDataWriter** (p. 1321) will be created.

The given **DDSTopic** (p. 1617) must have been created from the same participant as this publisher. If it was created from a different participant, this method will return NULL.

#### Parameters

<i>topic</i>	<< <b>in</b> >> (p. 238) The <b>DDSTopic</b> (p. 1617) that the <b>DDSDataWriter</b> (p. 1321) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSPublisher::set_default_library</b> (p. 1555)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSPublisher::set_default_profile</b> (p. 1556)).
<i>listener</i>	<< <b>in</b> >> (p. 238) The listener of the <b>DDSDataWriter</b> (p. 1321).
<i>mask</i>	<< <b>in</b> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### Returns

A **DDSDataWriter** (p. 1321) of a derived class specific to the data type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

#### See also

**FooDataWriter** (p. 1676)

**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation

**DDS\_DataWriterQos** (p. 689) for rules on consistency among QoS

**DDSPublisher::create\_datawriter** (p. 1558)  
**DDSPublisher::get\_default\_datawriter\_qos** (p. 1553)  
**DDSTopic::set\_qos** (p. 1619)  
**DDSPublisher::copy\_from\_topic\_qos** (p. 1566)  
**DDSDataWriter::set\_listener** (p. 1339)

### 9.277.2.11 delete\_datawriter()

```
virtual DDS_ReturnCode_t DDSPublisher::delete_datawriter (
    DDSDataWriter * a_datawriter ) [pure virtual]
```

Deletes a **DDSDataWriter** (p. 1321) that belongs to the **DDSPublisher** (p. 1550).

The deletion of the **DDSDataWriter** (p. 1321) will automatically unregister all instances.

#### Precondition

If the **DDSDataWriter** (p. 1321) does not belong to the **DDSPublisher** (p. 1550), the operation will fail with **DDS↔\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Postcondition

Listener installed on the **DDSDataWriter** (p. 1321) will not be called after this method completes successfully.

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>a_datawriter</i>	<< <i>in</i> >> (p. 238) The <b>DDSDataWriter</b> (p. 1321) to be deleted.
---------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

### 9.277.2.12 lookup\_datawriter()

```
virtual DDSDataWriter * DDSPublisher::lookup_datawriter (
```

```
const char * topic_name ) [pure virtual]
```

Retrieves the **DDSDataWriter** (p. 1321) for a specific **DDSTopic** (p. 1617).

This returned **DDSDataWriter** (p. 1321) is either enabled or disabled.

If more than one **DDSDataWriter** (p. 1321) is attached to the **DDSPublisher** (p. 1550) with the same `topic_name`, then this operation may return any one of them.

#### MT Safety:

UNSAFE. It is not safe to lookup a **DDSDataWriter** (p. 1321) in one thread while another thread is simultaneously creating or destroying that **DDSDataWriter** (p. 1321).

#### Parameters

<code>topic_name</code>	<< <i>in</i> >> (p. 238) Name of the <b>DDSTopic</b> (p. 1617) associated with the <b>DDSDataWriter</b> (p. 1321) that is to be looked up. Cannot be NULL.
-------------------------	--

#### Returns

A **DDSDataWriter** (p. 1321) that belongs to the **DDSPublisher** (p. 1550) attached to the **DDSTopic** (p. 1617) with `topic_name`. If no such **DDSDataWriter** (p. 1321) exists, this operation returns NULL.

### 9.277.2.13 get\_all\_datawriters()

```
virtual DDS_ReturnCode_t DDSPublisher::get_all_datawriters (
    DDSDataWriterSeq & writers ) [pure virtual]
```

Retrieve all the DataWriters created from this Publisher.

#### Parameters

<code>writers</code>	<< <i>inout</i> >> (p. 238) Sequence where the DataWriters will be added
----------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.277.2.14 suspend\_publications()

```
virtual DDS_ReturnCode_t DDSPublisher::suspend_publications ( ) [pure virtual]
```

Indicates to RTI Connex that the application is about to make multiple modifications using **DDSDataWriter** (p. 1321) objects belonging to the **DDSPublisher** (p. 1550).

It is a **hint** to RTI Connex so it can optimize its performance by e.g., holding the dissemination of the modifications and then batching them.

The use of this operation must be matched by a corresponding call to **DDSPublisher::resume\_publications** (p. 1563) indicating that the set of modifications has completed.

If the **DDSPublisher** (p. 1550) is deleted before **DDSPublisher::resume\_publications** (p. 1563) is called, any suspended updates yet to be published will be discarded.

RTI Connex is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDSFlowController** (p. 1468), **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) **DDSDataWriter** (p. 1321) instances allow the user even finer control of traffic shaping and sample coalescing.

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
-----	--

#### See also

- DDSFlowController** (p. 1468)
- DDSFlowController::trigger\_flow** (p. 1470)
- DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 123)
- DDS\_PublishModeQosPolicy** (p. 1025)

### 9.277.2.15 resume\_publications()

```
virtual DDS_ReturnCode_t DDSPublisher::resume_publications ( ) [pure virtual]
```

Indicates to RTI Connex that the application has completed the multiple changes initiated by the previous **DDSPublisher::suspend\_publications** (p. 1562).

This is a **hint** to RTI Connex that can be used for example, to batch all the modifications made since the **DDSPublisher::suspend\_publications** (p. 1562).

RTI Connex is not required and does not currently make use of this hint in any way. However, similar results can be achieved by using *asynchronous publishing*. Combined with **DDSFlowController** (p. 1468), **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431) **DDSDataWriter** (p. 1321) instances allow the user even finer control of traffic shaping and sample coalescing.

#### Precondition

A call to **DDSPublisher::resume\_publications** (p. 1563) must match a previous call to **DDSPublisher::suspend\_publications** (p. 1562). Otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

## See also

**DDSFlowController** (p. 1468)

**DDSFlowController::trigger\_flow** (p. 1470)

**DDS\_ON\_DEMAND\_FLOW\_CONTROLLER\_NAME** (p. 123)

**9.277.2.16 begin\_coherent\_changes()**

```
virtual DDS_ReturnCode_t DDSPublisher::begin_coherent_changes ( ) [pure virtual]
```

Indicates that the application will begin a coherent set of modifications using **DDSDataWriter** (p. 1321) objects attached to the **DDSPublisher** (p. 1550).

A 'coherent set' is a set of modifications that must be propagated in such a way that they are interpreted at the receiver's side as a consistent set of modifications; that is, the receiver will only be able to access the data after all the modifications in the set are available at the receiver end.

A connectivity change may occur in the middle of a set of coherent changes; for example, the set of partitions used by the **DDSPublisher** (p. 1550) or one of its subscribers (**DDSSubscriber** (p. 1592)) may change, a late-joining **DDSData↔Reader** (p. 1288) may appear on the network, or a communication failure may occur. In the event that such a change prevents an entity from receiving the entire set of coherent changes, that entity must behave as if it had received none of the set.

These calls can be nested. In that case, the coherent set terminates only with the last call to **DDSPublisher::end\_↔coherent\_changes** (p. 1565). Publisher's samples (samples published by any of the DataWriters within the Publisher) that are not published within a `begin_coherent_changes/end_coherent_changes` block will not be provided to the Data↔Readers as a set.

The support for coherent changes enables a publishing application to change the value of several data-instances that could belong to the same or different topics and have those changes be seen *atomically* by the readers. This is useful in cases where the values are inter-related (for example, if there are two data-instances representing the altitude and velocity vector of the same aircraft and both are changed, it may be useful to communicate those values in a way the reader can see both together; otherwise, it may, e.g., erroneously interpret that the aircraft is on a collision course).

## Note

Coherent sets don't apply to Topic Queries. If a **DDSTopicQuery** (p. 1627) selects only a subset of samples that was published as a coherent set, the subscribing application will receive them regardless of their membership to the coherent set.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

## See also

**DDS\_PresentationQosPolicy** (p. 996)

**9.277.2.17 end\_coherent\_changes()**

```
virtual DDS_ReturnCode_t DDSPublisher::end_coherent_changes ( ) [pure virtual]
```

Terminates the coherent set initiated by the matching call to **DDSPublisher::begin\_coherent\_changes** (p. 1564).

## Precondition

If there is no matching call to **DDSPublisher::begin\_coherent\_changes** (p. 1564) the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

**9.277.2.18 get\_participant()**

```
virtual DDSDomainParticipant * DDSPublisher::get_participant ( ) [pure virtual]
```

Returns the **DDSDomainParticipant** (p. 1351) to which the **DDSPublisher** (p. 1550) belongs.

## Returns

the **DDSDomainParticipant** (p. 1351) to which the **DDSPublisher** (p. 1550) belongs.

**9.277.2.19 delete\_contained\_entities()**

```
virtual DDS_ReturnCode_t DDSPublisher::delete_contained_entities ( ) [pure virtual]
```

Deletes all the entities that were created by means of the "create" operation on the **DDSPublisher** (p. 1550).

Deletes all contained **DDSDataWriter** (p. 1321) objects. Once **DDSPublisher::delete\_contained\_entities** (p. 1565) completes successfully, the application may delete the **DDSPublisher** (p. 1550), knowing that it has no contained **DDSDataWriter** (p. 1321) objects.

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if any of the contained entities is in a state where it cannot be deleted.

**MT Safety:**

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

**9.277.2.20 copy\_from\_topic\_qos()**

```
virtual DDS_ReturnCode_t DDSPublisher::copy_from_topic_qos (
    DDS_DataWriterQos & a_datawriter_qos,
    const DDS_TopicQos & a_topic_qos ) [pure virtual]
```

Copies the policies in the **DDS\_TopicQos** (p. 1135) to the corresponding policies in the **DDS\_DataWriterQos** (p. 689).

Copies the policies in the **DDS\_TopicQos** (p. 1135) to the corresponding policies in the **DDS\_DataWriterQos** (p. 689) (replacing values in the **DDS\_DataWriterQos** (p. 689), if present).

This is a "convenience" operation most useful in combination with the operations **DDSPublisher::get\_default\_datawriter\_qos** (p. 1553) and **DDSTopic::get\_qos** (p. 1621). The operation **DDSPublisher::copy\_from\_topic\_qos** (p. 1566) can be used to merge the **DDSDataWriter** (p. 1321) default QoS policies with the corresponding ones on the **DDSTopic** (p. 1617). The resulting QoS can then be used to create a new **DDSDataWriter** (p. 1321), or set its QoS.

This operation does not check the resulting **DDS\_DataWriterQos** (p. 689) for consistency. This is because the 'merged' **DDS\_DataWriterQos** (p. 689) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDSDataWriter** (p. 1321).

**Parameters**

<i>a_datawriter_qos</i>	<< <i>inout</i> >> (p. 238) <b>DDS_DataWriterQos</b> (p. 689) to be filled-up.
<i>a_topic_qos</i>	<< <i>in</i> >> (p. 238) <b>DDS_TopicQos</b> (p. 1135) to be merged with <b>DDS_DataWriterQos</b> (p. 689).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.277.2.21 wait\_for\_acknowledgments()**

```
virtual DDS_ReturnCode_t DDSPublisher::wait_for_acknowledgments (
    const DDS_Duration_t & max_wait ) [pure virtual]
```

Blocks the calling thread until all data written by the Publisher's reliable DataWriters is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable DataWriters entities is acknowledged by (a) all reliable **DDSDataReader** (p. 1288) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged; a timeout indicates that `max_wait` elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to this operation on a **DDSPublisher** (p. 1550) and a different thread writes new samples on any of the reliable DataWriters that belong to this Publisher, the new samples must be acknowledged before unblocking the thread that is waiting on this operation.

If none of the **DDSDataWriter** (p. 1321) instances have **DDS\_ReliabilityQosPolicy** (p. 1041) kind set to RELIABLE, the operation will complete successfully.

## Parameters

<i>max_wait</i>	<< <i>in</i> >> (p. 238) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 774) .
-----------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337), <b>DDS_RETCODE_TIMEOUT</b> (p. 337)
------------	--

**9.277.2.22 wait\_for\_asynchronous\_publishing()**

```
virtual DDS_ReturnCode_t DDSPublisher::wait_for_asynchronous_publishing (
    const DDS_Duration_t & max_wait ) [pure virtual]
```

<<*extension*>> (p. 237) Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **DDSDataWriter** (p. 1321) entities is sent and acknowledged (if reliable) by all matched **DDSDataReader** (p. 1288) entities. A successful

completion indicates that all the samples written have been sent and acknowledged where applicable; if it times out, this indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **DDSDataReader** (p. 1288) is complete in addition to what **DDSPublisher::wait\_for\_acknowledgments** (p. 1567) provides.

If none of the **DDSDataWriter** (p. 1321) instances have **DDS\_PublishModeQosPolicy::kind** (p. 1027) set to **DDS\_↔ ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431), the operation will complete immediately, with **DDS\_RETCODE\_↔ \_OK** (p. 336).

#### Parameters

<code>max_wait</code>	<< <i>in</i> >> (p. 238) Specifies maximum time to wait for acknowledgements <b>DDS_Duration_t</b> (p. 774).
-----------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337), <b>DDS_RETCODE_TIMEOUT</b> (p. 337)
------------	--

### 9.277.2.23 set\_qos()

```
virtual DDS_ReturnCode_t DDSPublisher::set_qos (
    const DDS_PublisherQos & qos ) [pure virtual]
```

Sets the publisher QoS.

This operation modifies the QoS of the **DDSPublisher** (p. 1550).

The **DDS\_PublisherQos::group\_data** (p. 1024), **DDS\_PublisherQos::partition** (p. 1024) and **DDS\_PublisherQos\_↔ ::entity\_factory** (p. 1024) can be changed. The other policies are immutable.

#### Parameters

<code>qos</code>	<< <i>in</i> >> (p. 238) <b>DDS_PublisherQos</b> (p. 1022) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDSPublisher</b> (p. 1550) is enabled. The special value <b>DDS_PUBLISHER_QOS_DEFAULT</b> (p. 57) can be used to indicate that the QoS of the <b>DDSPublisher</b> (p. 1550) should be changed to match the current default <b>DDS_PublisherQos</b> (p. 1022) set in the <b>DDSDomainParticipant</b> (p. 1351).
------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

### 9.277.2.24 set\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSPublisher::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Change the QoS of this publisher using the input XML QoS profile.

This operation modifies the QoS of the **DDSPublisher** (p. 1550).

The **DDS\_PublisherQos::group\_data** (p. 1024), **DDS\_PublisherQos::partition** (p. 1024) and **DDS\_PublisherQos::entity\_factory** (p. 1024) can be changed. The other policies are immutable.

Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexx will use the default library (see <b>DDSPublisher::set_default_library</b> (p. 1555)).
<i>profile_name</i>	<< <b>in</b> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexx will use the default profile (see <b>DDSPublisher::set_default_profile</b> (p. 1556)).

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

See also

**DDS\_PublisherQos** (p. 1022) for rules on consistency among QoS

**Operations Allowed in Listener Callbacks** (p. 1528)

### 9.277.2.25 get\_qos()

```
virtual DDS_ReturnCode_t DDSPublisher::get_qos (
    DDS_PublisherQos & qos ) [pure virtual]
```

Gets the publisher QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) <b>DDS_PublisherQos</b> (p. 1022) to be filled in.
------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**get\_qos (abstract)** (p. 1465)

**9.277.2.26 set\_listener()**

```
virtual DDS_ReturnCode_t DDSPublisher::set_listener (
    DDSPublisherListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [pure virtual]
```

Sets the publisher listener.

## Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) <b>DDSPublisherListener</b> (p. 1571) to set to.
<i>mask</i>	<< <i>in</i> >> (p. 238) <b>DDS_StatusMask</b> (p. 341) associated with the <b>DDSPublisherListener</b> (p. 1571).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**set\_listener (abstract)** (p. 1465)

**9.277.2.27 get\_listener()**

```
virtual DDSPublisherListener * DDSPublisher::get_listener ( ) [pure virtual]
```

Get the publisher listener.

## Returns

**DDSPublisherListener** (p. 1571) of the **DDSPublisher** (p. 1550).

## See also

**get\_listener (abstract)** (p. 1466)

## 9.277.2.28 lookup\_datawriter\_by\_name()

```
virtual DDSDataWriter * DDSPublisher::lookup_datawriter_by_name (
    const char * datawriter_name ) [pure virtual]
```

<<*extension*>> (p. 237) Retrieves a **DDSDataWriter** (p. 1321) contained within the **DDSPublisher** (p. 1550) the **DDSDataWriter** (p. 1321) entity name.

Every **DDSDataWriter** (p. 1321) in the system has an entity name which is configured and stored in the <<*extension*>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves the **DDSDataWriter** (p. 1321) within the **DDSPublisher** (p. 1550) whose name matches the one specified. If there are several **DDSDataWriter** (p. 1321) with the same name within the **DDSPublisher** (p. 1550), the operation returns the first matching occurrence.

## Parameters

<i>datawriter_name</i>	<< <i>in</i> >> (p. 238) Entity name of the <b>DDSDataWriter</b> (p. 1321).
------------------------	---

## Returns

The first **DDSDataWriter** (p. 1321) found with the specified name or NULL if it is not found.

## See also

**DDSDomainParticipant::lookup\_datawriter\_by\_name** (p. 1422)

## 9.278 DDSPublisherListener Class Reference

## 9.280 DDSQueryCondition Class Reference

<<**interface**>> (p. 237) These are specialised **DDSReadCondition** (p. 1574) objects that allow the application to also specify a filter on the locally available data.

Inheritance diagram for DDSQueryCondition:

### Public Member Functions

- virtual const char \* **get\_query\_expression** ()=0  
*Retrieves the query expression.*
- virtual **DDS\_ReturnCode\_t** **get\_query\_parameters** ( **DDS\_StringSeq** &query\_parameters)=0  
*Retrieves the query parameters.*
- virtual **DDS\_ReturnCode\_t** **set\_query\_parameters** (const **DDS\_StringSeq** &query\_parameters)=0  
*Sets the query parameters.*

### 9.280.1 Detailed Description

<<**interface**>> (p. 237) These are specialised **DDSReadCondition** (p. 1574) objects that allow the application to also specify a filter on the locally available data.

Each query condition filter is composed of a **DDSReadCondition** (p. 1574) state filter and a content filter expressed as a `query_expression` and `query_parameters`.

The query (`query_expression`) is similar to an SQL WHERE clause and can be parameterised by arguments that are dynamically changeable by the **set\_query\_parameters()** (p. 1574) operation.

Two query conditions that have the same `query_expression` will require unique query condition content filters if their `query_parameters` differ. Query conditions that differ only in their state masks will share the same query condition content filter.

**Queries and Filters Syntax** (p. 179) describes the syntax of `query_expression` and `query_parameters`.

## 9.280.2 Member Function Documentation

### 9.280.2.1 `get_query_expression()`

```
virtual const char * DDSQueryCondition::get_query_expression ( ) [pure virtual]
```

Retrieves the query expression.

### 9.280.2.2 `get_query_parameters()`

```
virtual DDS_ReturnCode_t DDSQueryCondition::get_query_parameters (
    DDS_StringSeq & query_parameters ) [pure virtual]
```

Retrieves the query parameters.

#### Parameters

<i>query_parameters</i>	<< <i>inout</i> >> (p. 238) the query parameters are returned here. The memory for the strings in this sequence is managed according to the conventions described in <b>String Conventions</b> (p. 552). In particular, be careful to avoid a situation in which RTI Connexx allocates a string on your behalf and you then reuse that string in such a way that RTI Connexx believes it to have more memory allocated to it than it actually does.
-------------------------	---

### 9.280.2.3 `set_query_parameters()`

```
virtual DDS_ReturnCode_t DDSQueryCondition::set_query_parameters (
    const DDS_StringSeq & query_parameters ) [pure virtual]
```

Sets the query parameters.

#### Parameters

<i>query_parameters</i>	<< <i>in</i> >> (p. 238) the new query parameters
-------------------------	---

## 9.281 DDSReadCondition Class Reference

<<*interface*>> (p. 237) Conditions specifically dedicated to read operations and attached to one **DDSDataReader**

(p. 1288).

Inheritance diagram for DDSReadCondition:

## Public Member Functions

- virtual **DDS\_SampleStateMask** **get\_sample\_state\_mask** ()=0  
*Retrieves the set of `sample_states` for the condition.*
- virtual **DDS\_ViewStateMask** **get\_view\_state\_mask** ()=0  
*Retrieves the set of `view_states` for the condition.*
- virtual **DDS\_InstanceStateMask** **get\_instance\_state\_mask** ()=0  
*Retrieves the set of `instance_states` for the condition.*
- virtual **DDS\_StreamKindMask** **get\_stream\_kind\_mask** ()=0  
*Retrieves the set of `instance_states` for the condition.*
- virtual **DDSDataReader \*** **get\_datareader** ()=0  
*Returns the **DDSDataReader** (p. 1288) associated with the **DDSReadCondition** (p. 1574).*

### 9.281.1 Detailed Description

<<*interface*>> (p. 237) Conditions specifically dedicated to read operations and attached to one **DDSDataReader** (p. 1288).

**DDSReadCondition** (p. 1574) objects allow an application to specify the data samples it is interested in (by specifying the desired `sample_states`, `view_states` as well as `instance_states` in **FooDataReader::read** (p. 1651) and **FooDataReader::take** (p. 1652) variants.

This allows RTI Connext to enable the condition only when suitable information is available. They are to be used in conjunction with a WaitSet as normal conditions.

More than one **DDSReadCondition** (p. 1574) may be attached to the same **DDSDataReader** (p. 1288).

#### Examples

**HelloWorld\_subscriber.cxx.**

### 9.281.2 Member Function Documentation

### 9.281.2.1 `get_sample_state_mask()`

```
virtual DDS_SampleStateMask DDSReadCondition::get_sample_state_mask ( ) [pure virtual]
```

Retrieves the set of `sample_states` for the condition.

### 9.281.2.2 `get_view_state_mask()`

```
virtual DDS_ViewStateMask DDSReadCondition::get_view_state_mask ( ) [pure virtual]
```

Retrieves the set of `view_states` for the condition.

### 9.281.2.3 `get_instance_state_mask()`

```
virtual DDS_InstanceStateMask DDSReadCondition::get_instance_state_mask ( ) [pure virtual]
```

Retrieves the set of `instance_states` for the condition.

### 9.281.2.4 `get_stream_kind_mask()`

```
virtual DDS_StreamKindMask DDSReadCondition::get_stream_kind_mask ( ) [pure virtual]
```

Retrieves the set of `instance_states` for the condition.

### 9.281.2.5 `get_datareader()`

```
virtual DDSDataReader * DDSReadCondition::get_datareader ( ) [pure virtual]
```

Returns the **DDSDataReader** (p. 1288) associated with the **DDSReadCondition** (p. 1574).

There is exactly one **DDSDataReader** (p. 1288) associated with each **DDSReadCondition** (p. 1574).

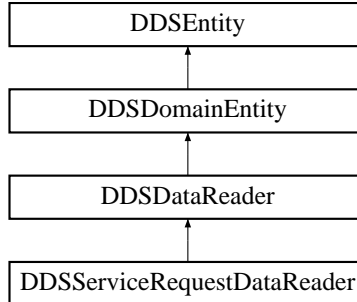

#### Returns

**DDSDataReader** (p. 1288) associated with the **DDSReadCondition** (p. 1574).

## 9.282 DDSServiceRequestDataReader Class Reference

Instantiates `DataReader < DDS_ServiceRequest (p. 1097) >` .

Inheritance diagram for DDSServiceRequestDataReader:

### Additional Inherited Members

#### 9.282.1 Detailed Description

Instantiates `DataReader < DDS_ServiceRequest (p. 1097) >` .

**DDSDataReader** (p. 1288) of topic **DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303) used for accessing **DDS\_↔ServiceRequest** (p. 1097) samples.

Instantiates:

`<<generic>>` (p. 237) **FooDataReader** (p. 1649)

See also

**DDS\_ServiceRequest** (p. 1097)

**DDS\_SERVICE\_REQUEST\_TOPIC\_NAME** (p. 303)

## 9.283 DDSServiceRequestTypeSupport Class Reference

Instantiates `TypeSupport < DDS_ServiceRequest (p. 1097) >` .

#### 9.283.1 Detailed Description

Instantiates `TypeSupport < DDS_ServiceRequest (p. 1097) >` .

Instantiates:

`<<generic>>` (p. 237) **FooTypeSupport** (p. 1711)

See also

**DDS\_ServiceRequest** (p. 1097)

## 9.284 DDSStatusCondition Class Reference

<<*interface*>> (p. 237) A specific **DDSCondition** (p. 1276) that is associated with each **DDSEntity** (p. 1463).

Inheritance diagram for DDSStatusCondition:

### Public Member Functions

- virtual **DDS\_StatusMask** **get\_enabled\_statuses** ()=0  
*Get the list of statuses enabled on an **DDSEntity** (p. 1463).*
- virtual **DDS\_ReturnCode\_t** **set\_enabled\_statuses** (**DDS\_StatusMask** mask)=0  
*This operation defines the list of communication statuses that determine the *trigger\_value* of the **DDSStatusCondition** (p. 1578).*
- virtual **DDSEntity** \* **get\_entity** ()=0  
*Get the **DDSEntity** (p. 1463) associated with the **DDSStatusCondition** (p. 1578).*

### 9.284.1 Detailed Description

<<*interface*>> (p. 237) A specific **DDSCondition** (p. 1276) that is associated with each **DDSEntity** (p. 1463).

The *trigger\_value* of the **DDSStatusCondition** (p. 1578) depends on the communication status of that entity (e.g., arrival of data, loss of information, etc.), 'filtered' by the set of *enabled\_statuses* on the **DDSStatusCondition** (p. 1578).

See also

- Status Kinds** (p. 337)
- DDSWaitSet** (p. 1629), **DDSCondition** (p. 1276)
- DDSListener** (p. 1526)

### 9.284.2 Member Function Documentation

**9.284.2.1 get\_enabled\_statuses()**

```
virtual DDS_StatusMask DDSStatusCondition::get_enabled_statuses ( ) [pure virtual]
```

Get the list of statuses enabled on an **DDSEntity** (p. 1463).

**Returns**

list of enabled statuses.

**9.284.2.2 set\_enabled\_statuses()**

```
virtual DDS_ReturnCode_t DDSStatusCondition::set_enabled_statuses (
    DDS_StatusMask mask ) [pure virtual]
```

This operation defines the list of communication statuses that determine the `trigger_value` of the **DDSStatusCondition** (p. 1578).

This operation may change the `trigger_value` of the **DDSStatusCondition** (p. 1578).

**DDSWaitSet** (p. 1629) objects' behavior depends on the changes of the `trigger_value` of their attached conditions. Therefore, any **DDSWaitSet** (p. 1629) to which the **DDSStatusCondition** (p. 1578) is attached is potentially affected by this operation.

If this function is not invoked, the default list of enabled statuses includes all the statuses.

**Parameters**

<i>mask</i>	<< <i>in</i> >> (p. 238) the list of enables statuses (see <b>Status Kinds</b> (p. 337))
-------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

**9.284.2.3 get\_entity()**

```
virtual DDSEntity * DDSStatusCondition::get_entity ( ) [pure virtual]
```

Get the **DDSEntity** (p. 1463) associated with the **DDSStatusCondition** (p. 1578).

There is exactly one **DDSEntity** (p. 1463) associated with each **DDSStatusCondition** (p. 1578).

**Returns**

**DDSEntity** (p. 1463) associated with the **DDSStatusCondition** (p. 1578).

## 9.285 DDSStringDataReader Class Reference

<<**interface**>> (p. 237) Instantiates `DataReader < char* >`.

Inheritance diagram for `DDSStringDataReader`:

### Public Member Functions

- virtual `DDS_ReturnCode_t read ( DDS_StringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_↔_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_↔SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data samples from the **DDSDataReader** (p. 1288).*
- virtual `DDS_ReturnCode_t take ( DDS_StringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_↔_Long max_samples= DDS_LENGTH_UNLIMITED, DDS_SampleStateMask sample_states= DDS_ANY_↔SAMPLE_STATE, DDS_ViewStateMask view_states= DDS_ANY_VIEW_STATE, DDS_InstanceStateMask instance_states= DDS_ANY_INSTANCE_STATE)`  
*Access a collection of data-samples from the **DDSDataReader** (p. 1288).*
- virtual `DDS_ReturnCode_t read_w_condition ( DDS_StringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Accesses via **DDSStringDataReader::read** (p. 1581) the samples that match the criteria specified in the **DDSRead\_↔Condition** (p. 1574).*
- virtual `DDS_ReturnCode_t take_w_condition ( DDS_StringSeq &received_data, DDS_SampleInfoSeq &info_seq, DDS_Long max_samples, DDSReadCondition *condition)`  
*Analogous to **DDSStringDataReader::read\_w\_condition** (p. 1581) except it accesses samples via the **DDSString\_↔DataReader::take** (p. 1581) operation.*
- virtual `DDS_ReturnCode_t read_next_sample (char *received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual `DDS_ReturnCode_t take_next_sample (char *received_data, DDS_SampleInfo &sample_info)`  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual `DDS_ReturnCode_t return_loan ( DDS_StringSeq &received_data, DDS_SampleInfoSeq &info_seq)`  
*Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).*

### Static Public Member Functions

- static `DDSStringDataReader * narrow ( DDSDataReader *reader)`  
*Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSStringDataReader** (p. 1580) pointer.*

## 9.285.1 Detailed Description

<<*interface*>> (p. 237) Instantiates DataReader < char\* >.

See also

**FooDataReader** (p. 1649)  
**DDSDDataReader** (p. 1288)  
**String Support** (p. 551)

## 9.285.2 Member Function Documentation

### 9.285.2.1 read()

```
virtual DDS_ReturnCode_t DDSStringDataReader::read (
    DDS_StringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data samples from the **DDSDDataReader** (p. 1288).

See also

**FooDataReader::read** (p. 1651)

### 9.285.2.2 take()

```
virtual DDS_ReturnCode_t DDSStringDataReader::take (
    DDS_StringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples = DDS_LENGTH_UNLIMITED,
    DDS_SampleStateMask sample_states = DDS_ANY_SAMPLE_STATE,
    DDS_ViewStateMask view_states = DDS_ANY_VIEW_STATE,
    DDS_InstanceStateMask instance_states = DDS_ANY_INSTANCE_STATE ) [virtual]
```

Access a collection of data-samples from the **DDSDDataReader** (p. 1288).

See also

**FooDataReader::take** (p. 1652)

### 9.285.2.3 read\_w\_condition()

```
virtual DDS_ReturnCode_t DDSStringDataReader::read_w_condition (
    DDS_StringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Accesses via **DDSStringDataReader::read** (p. 1581) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

See also

**FooDataReader::read\_w\_condition** (p. 1657)

### 9.285.2.4 take\_w\_condition()

```
virtual DDS_ReturnCode_t DDSStringDataReader::take_w_condition (
    DDS_StringSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [virtual]
```

Analogous to **DDSStringDataReader::read\_w\_condition** (p. 1581) except it accesses samples via the **DDSStringDataReader::take** (p. 1581) operation.

See also

**FooDataReader::take\_w\_condition** (p. 1658)

### 9.285.2.5 read\_next\_sample()

```
virtual DDS_ReturnCode_t DDSStringDataReader::read_next_sample (
    char * received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::read\_next\_sample** (p. 1659)

### 9.285.2.6 take\_next\_sample()

```
virtual DDS_ReturnCode_t DDSStringDataReader::take_next_sample (
    char * received_data,
    DDS_SampleInfo & sample_info ) [virtual]
```

Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).

See also

**FooDataReader::take\_next\_sample** (p. 1660)

### 9.285.2.7 return\_loan()

```
virtual DDS_ReturnCode_t DDSStringDataReader::return_loan (
    DDS_StringSeq & received_data,
    DDS_SampleInfoSeq & info_seq ) [virtual]
```

Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

See also

**FooDataReader::return\_loan** (p. 1672)

### 9.285.2.8 narrow()

```
static DDSStringDataReader * DDSStringDataReader::narrow (
    DDSDataReader * reader ) [static]
```

Narrow the given **DDSDataReader** (p. 1288) pointer to a **DDSStringDataReader** (p. 1580) pointer.

See also

**FooDataReader::narrow** (p. 1651)

## 9.286 DDSStringDataWriter Class Reference

<<*interface*>> (p. 237) Instantiates `DataWriter < char* >`.

Inheritance diagram for DDSStringDataWriter:

### Public Member Functions

- virtual `char *` **create\_data** (const `DDS_TypeAllocationParams_t` &alloc\_params)  
*Creates a string data instance.*
- virtual `DDS_Boolean` **delete\_data** (char \*sample, const `DDS_TypeDeallocationParams_t` &dealloc\_params)  
*Destroys a string data instance created by `DDSStringDataWriter::create_data` (p. 1585).*
- virtual `DDS_ReturnCode_t` **write** (const char \*instance\_data, const `DDS_InstanceHandle_t` &handle)  
*Modifies the value of a string data instance.*
- virtual `DDS_ReturnCode_t` **write\_w\_timestamp** (const char \*instance\_data, const `DDS_InstanceHandle_t` &handle, const `DDS_Time_t` &source\_timestamp)  
*Performs the same function as `DDSStringDataWriter::write` (p. 1586) except that it also provides the value for the `source_timestamp`.*
- virtual `DDS_ReturnCode_t` **write\_w\_params** (const char \*instance\_data, `DDS_WriteParams_t` &params)  
*Performs the same function as `DDSStringDataWriter::write` (p. 1586) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.*

### Static Public Member Functions

- static `DDSStringDataWriter *` **narrow** (`DDSDataWriter *`writer)  
*Narrow the given `DDSDataWriter` (p. 1321) pointer to a `DDSStringDataWriter` (p. 1584) pointer.*

#### 9.286.1 Detailed Description

<<*interface*>> (p. 237) Instantiates `DataWriter < char* >`.

See also

**FooDataWriter** (p. 1676)

**DDSDataWriter** (p. 1321)

**String Support** (p. 551)

## 9.286.2 Member Function Documentation

### 9.286.2.1 narrow()

```
static DDSStringDataWriter * DDSStringDataWriter::narrow (
    DDSDataWriter * writer ) [static]
```

Narrow the given **DDSDataWriter** (p. 1321) pointer to a **DDSStringDataWriter** (p. 1584) pointer.

See also

**FooDataWriter::narrow** (p. 1678)

### 9.286.2.2 create\_data()

```
virtual char * DDSStringDataWriter::create_data (
    const DDS_TypeAllocationParams_t & alloc_params ) [virtual]
```

Creates a string data instance.

The size of the instance including the NULL terminated character is determined by the DataWriter property **dds.builtin\_type.string.alloc\_size**.

Default size: **dds.builtin\_type.string.max\_size** property of DomainParticipant if defined. Otherwise 1024.

Created instances must be deleted with **DDSStringDataWriter::delete\_data** (p. 1585).

Returns

Newly created string data, or NULL on failure.

See also

BuiltinTypeMemoryManagement section of Built-in Types

### 9.286.2.3 delete\_data()

```
virtual DDS_Boolean DDSStringDataWriter::delete_data (
    char * sample,
    const DDS_TypeDeallocationParams_t & dealloc_params ) [virtual]
```

Destroys a string data instance created by **DDSStringDataWriter::create\_data** (p. 1585).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) upon successful deletion.

### 9.286.2.4 write()

```
virtual DDS_ReturnCode_t DDSStringDataWriter::write (
    const char * instance_data,
    const DDS_InstanceHandle_t & handle ) [virtual]
```

Modifies the value of a string data instance.

#### See also

**FooDataWriter::write** (p. 1683)

### 9.286.2.5 write\_w\_timestamp()

```
virtual DDS_ReturnCode_t DDSStringDataWriter::write_w_timestamp (
    const char * instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [virtual]
```

Performs the same function as **DDSStringDataWriter::write** (p. 1586) except that it also provides the value for the `source_timestamp`.

#### See also

**FooDataWriter::write\_w\_timestamp** (p. 1687)

### 9.286.2.6 write\_w\_params()

```
virtual DDS_ReturnCode_t DDSStringDataWriter::write_w_params (
    const char * instance_data,
    DDS_WriteParams_t & params ) [virtual]
```

Performs the same function as **DDSStringDataWriter::write** (p. 1586) except that it also allows specification of the instance handle, source timestamp, publication priority, and cookie.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

## 9.287 DDSStringTypeSupport Class Reference

<<**interface**>> (p. 237) String type support.

Inheritance diagram for DDSStringTypeSupport:

### Static Public Member Functions

- static **DDS\_ReturnCode\_t register\_type** ( **DDSDomainParticipant** \*participant, const char \*type\_↔ name="DDS::String")
 

*Allows an application to communicate to RTI Connext the existence of the char\* data type.*
- static **DDS\_ReturnCode\_t unregister\_type** ( **DDSDomainParticipant** \*participant, const char \*type\_↔ name="DDS::String")
 

*Allows an application to unregister the char\* data type from RTI Connext. After calling unregister\_type, no further communication using this type is possible.*
- static const char \* **get\_type\_name** ()
 

*Get the default name for the char\* type.*
- static void **print\_data** (const char \*a\_data)
 

<<**extension**>> (p. 237) Print value of data type to standard out.
- static **DDS\_TypeCode** \* **get\_typecode** ()
 

<<**extension**>> (p. 237) Retrieves the TypeCode for the Type.
- static **DDS\_ReturnCode\_t serialize\_data\_to\_cdr\_buffer** (char \*buffer, unsigned int &length, const char \*a\_↔ data)
 

<<**extension**>> (p. 237) Serializes the input sample into a CDR buffer of octets.
- static **DDS\_ReturnCode\_t serialize\_data\_to\_cdr\_buffer\_ex** (char \*buffer, unsigned int &length, const char \*a\_data, **DDS\_DataRepresentationId\_t** representation)
 

<<**extension**>> (p. 237) Serializes the input sample into a buffer of octets.
- static **DDS\_ReturnCode\_t deserialize\_data\_from\_cdr\_buffer** (char \*\*a\_data, const char \*buffer, unsigned int length)
 

<<**extension**>> (p. 237) Deserializes a sample from a buffer of octets.
- static **DDS\_ReturnCode\_t data\_to\_string** (char \*sample, char \*str, **DDS\_UnsignedLong** &str\_size, const **DDS\_PrintFormatProperty** &property)
 

<<**extension**>> (p. 237) Get the string representation of an input sample.

## 9.287.1 Detailed Description

<<*interface*>> (p. 237) String type support.

## 9.287.2 Member Function Documentation

### 9.287.2.1 register\_type()

```
static DDS_ReturnCode_t DDSStringTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::String" ) [static]
```

Allows an application to communicate to RTI Connexx the existence of the char\* data type.

By default, The char\* built-in type is automatically registered when a DomainParticipant is created using the type\_name returned by **DDSStringTypeSupport::get\_type\_name** (p. 1589). Therefore, the usage of this function is optional and it is only required when the automatic built-in type registration is disabled using the participant property "dds.builtin\_↔type.auto\_register".

This method can also be used to register the same **DDSStringTypeSupport** (p. 1587) with a **DDSDomainParticipant** (p. 1351) using different values for the type\_name.

If `register_type` is called multiple times with the same **DDSDomainParticipant** (p. 1351) and `type_name`, the second (and subsequent) registrations are ignored by the operation.

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to register the data type char* with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type char* is registered with the participant; this type name is used when creating a new <b>DDSTopic</b> (p. 1617). (See <b>DDSDomainParticipant::create_topic</b> (p. 1382).) The name may not be NULL or longer than 255 characters.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

#### MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

See also

**DDSDomainParticipant::create\_topic** (p. 1382)

### 9.287.2.2 unregister\_type()

```
static DDS_ReturnCode_t DDSStringTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name = "DDS::String" ) [static]
```

Allows an application to unregister the char\* data type from RTI Connex. After calling `unregister_type`, no further communication using this type is possible.

#### Precondition

The char\* type with `type_name` is registered with the participant and all **DDSTopic** (p. 1617) objects referencing the type have been destroyed. If the type is not registered with the participant, or if any **DDSTopic** (p. 1617) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

#### Postcondition

All information about the type is removed from RTI Connex. No further communication using this type is possible.

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to unregister the data type char* from. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type char* is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) or <b>DDS_RETCODE_ERROR</b> (p. 336)
------------	--

#### MT Safety:

SAFE.

See also

**DDSStringTypeSupport::register\_type** (p. 1588)

### 9.287.2.3 get\_type\_name()

```
static const char * DDSStringTypeSupport::get_type_name ( ) [static]
```

Get the default name for the char\* type.

Can be used for calling **DDSStringTypeSupport::register\_type** (p. 1588) or creating **DDSTopic** (p. 1617).

#### Returns

default name for the char\* type.

#### See also

**DDSStringTypeSupport::register\_type** (p. 1588)

**DDSDomainParticipant::create\_topic** (p. 1382)

### 9.287.2.4 print\_data()

```
static void DDSStringTypeSupport::print_data (
    const char * a_data ) [static]
```

<<**extension**>> (p. 237) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

#### Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 238) String to be printed.
---------------	--

### 9.287.2.5 get\_typecode()

```
static DDS_TypeCode * DDSStringTypeSupport::get_typecode ( ) [static]
```

<<**extension**>> (p. 237) Retrieves the TypeCode for the Type.

#### See also

**FooTypeSupport::get\_typecode** (p. 1723)

### 9.287.2.6 serialize\_data\_to\_cdr\_buffer()

```
static DDS_ReturnCode_t DDSStringTypeSupport::serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int & length,
    const char * a_data ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a CDR buffer of octets.

See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.287.2.7 serialize\_data\_to\_cdr\_buffer\_ex()

```
static DDS_ReturnCode_t DDSStringTypeSupport::serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    const char * a_data,
    DDS_DataRepresentationId_t representation ) [static]
```

<<*extension*>> (p. 237) Serializes the input sample into a buffer of octets.

See also

**FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721)

### 9.287.2.8 deserialize\_data\_from\_cdr\_buffer()

```
static DDS_ReturnCode_t DDSStringTypeSupport::deserialize_data_from_cdr_buffer (
    char ** a_data,
    const char * buffer,
    unsigned int length ) [static]
```

<<*extension*>> (p. 237) Deserializes a sample from a buffer of octets.

See also

**FooTypeSupport::deserialize\_data\_from\_cdr\_buffer** (p. 1722)

### 9.287.2.9 data\_to\_string()

```
static DDS_ReturnCode_t DDSStringTypeSupport::data_to_string (
    char * sample,
    char * str,
    DDS_UnsignedLong & str_size,
    const DDS_PrintFormatProperty & property ) [static]
```

<<*extension*>> (p. 237) Get the string representation of an input sample.

See also

**FooTypeSupport::data\_to\_string** (p. 1723)

## 9.288 DDSSubscriber Class Reference

<<*interface*>> (p. 237) A subscriber is the object responsible for actually receiving data from a subscription.

Inheritance diagram for DDSSubscriber:

### Public Member Functions

- virtual **DDS\_ReturnCode\_t get\_default\_datareader\_qos** ( **DDS\_DataReaderQos** &qos)=0  
Copies the default **DDS\_DataReaderQos** (p. 644) values into the provided **DDS\_DataReaderQos** (p. 644) instance.
- virtual **DDS\_ReturnCode\_t set\_default\_datareader\_qos** (const **DDS\_DataReaderQos** &qos)=0  
Sets the default **DDS\_DataReaderQos** (p. 644) values for this subscriber.
- virtual **DDS\_ReturnCode\_t set\_default\_datareader\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
<<*extension*>> (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this subscriber based on the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t set\_default\_library** (const char \*library\_name)=0  
<<*extension*>> (p. 237) Sets the default XML library for a **DDSSubscriber** (p. 1592).
- virtual const char \* **get\_default\_library** ()=0  
<<*extension*>> (p. 237) Gets the default XML library associated with a **DDSSubscriber** (p. 1592).
- virtual **DDS\_ReturnCode\_t set\_default\_profile** (const char \*library\_name, const char \*profile\_name)=0  
<<*extension*>> (p. 237) Sets the default XML profile for a **DDSSubscriber** (p. 1592).
- virtual const char \* **get\_default\_profile** ()=0  
<<*extension*>> (p. 237) Gets the default XML profile associated with a **DDSSubscriber** (p. 1592).

- virtual const char \* **get\_default\_profile\_library** ()=0  
 <<extension>> (p.237) Gets the library where the default XML QoS profile is contained for a **DDSSubscriber** (p.1592).
- virtual **DDSDataReader** \* **create\_datareader** ( **DDSTopicDescription** \*topic, const **DDS\_DataReaderQos** &qos, **DDSDataReaderListener** \*listener, **DDS\_StatusMask** mask)=0  
 Creates a **DDSDataReader** (p.1288) that will be attached and belong to the **DDSSubscriber** (p.1592).
- virtual **DDSDataReader** \* **create\_datareader\_with\_profile** ( **DDSTopicDescription** \*topic, const char \*library\_name, const char \*profile\_name, **DDSDataReaderListener** \*listener, **DDS\_StatusMask** mask)=0  
 <<extension>> (p.237) Creates a **DDSDataReader** (p.1288) object using the **DDS\_DataReaderQos** (p.644) associated with the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t** **delete\_datareader** ( **DDSDataReader** \*a\_datareader)=0  
 Deletes a **DDSDataReader** (p.1288) that belongs to the **DDSSubscriber** (p.1592).
- virtual **DDS\_ReturnCode\_t** **delete\_contained\_entities** ()=0  
 Deletes all the entities that were created by means of the "create" operation on the **DDSSubscriber** (p.1592).
- virtual **DDSDataReader** \* **lookup\_datareader** (const char \*topic\_name)=0  
 Retrieves an existing **DDSDataReader** (p.1288).
- virtual **DDS\_ReturnCode\_t** **begin\_access** ()=0  
 Indicates that the application is about to access the data samples in any of the **DDSDataReader** (p.1288) objects attached to the **DDSSubscriber** (p.1592).
- virtual **DDS\_ReturnCode\_t** **end\_access** ()=0  
 Indicates that the application has finished accessing the data samples in **DDSDataReader** (p.1288) objects managed by the **DDSSubscriber** (p.1592).
- virtual **DDS\_ReturnCode\_t** **get\_datareaders** ( **DDSDataReaderSeq** &readers, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0  
 Allows the application to access the **DDSDataReader** (p.1288) objects that contain samples with the specified *sample↔\_states, view\_states and instance\_states*.
- virtual **DDS\_ReturnCode\_t** **get\_all\_datareaders** ( **DDSDataReaderSeq** &readers)=0  
 Retrieve all the DataReaders created from this Subscriber.
- virtual **DDS\_ReturnCode\_t** **notify\_datareaders** ()=0  
 Invokes the operation **DDSDataReaderListener::on\_data\_available()** (p.1317) on the **DDSDataReaderListener** (p.1315) objects attached to contained **DDSDataReader** (p.1288) entities with **DDS\_DATA\_AVAILABLE\_STATUS** (p.345) that is considered changed as described in **Changes in read communication status** (p.340).
- virtual **DDSDomainParticipant** \* **get\_participant** ()=0  
 Returns the **DDSDomainParticipant** (p.1351) to which the **DDSSubscriber** (p.1592) belongs.
- virtual **DDS\_ReturnCode\_t** **copy\_from\_topic\_qos** ( **DDS\_DataReaderQos** &datareader\_qos, const **DDS\_↔TopicQos** &topic\_qos)=0  
 Copies the policies in the **DDS\_TopicQos** (p.1135) to the corresponding policies in the **DDS\_DataReaderQos** (p.644).
- virtual **DDS\_ReturnCode\_t** **set\_qos** (const **DDS\_SubscriberQos** &qos)=0  
 Sets the subscriber QoS.
- virtual **DDS\_ReturnCode\_t** **set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
 <<extension>> (p.237) Change the QoS of this subscriber using the input XML QoS profile.
- virtual **DDS\_ReturnCode\_t** **get\_qos** ( **DDS\_SubscriberQos** &qos)=0  
 Gets the subscriber QoS.
- virtual **DDS\_ReturnCode\_t** **set\_listener** ( **DDSSubscriberListener** \*l, **DDS\_StatusMask** mask= **DDS\_↔STATUS\_MASK\_ALL**)=0  
 Sets the subscriber listener.
- virtual **DDSSubscriberListener** \* **get\_listener** ()=0  
 Get the subscriber listener.
- virtual **DDSDataReader** \* **lookup\_datareader\_by\_name** (const char \*datareader\_name)=0  
 <<extension>> (p.237) Retrieves a **DDSDataReader** (p.1288) contained within the **DDSSubscriber** (p.1592) the **DDSDataReader** (p.1288) entity name.

## 9.288.1 Detailed Description

<<*interface*>> (p. 237) A subscriber is the object responsible for actually receiving data from a subscription.

QoS:

**DDS\_SubscriberQos** (p. 1105)

Status:

**DDS\_DATA\_ON\_READERS\_STATUS** (p. 345)

Listener:

**DDSSubscriberListener** (p. 1613)

A subscriber acts on the behalf of one or several **DDSDataReader** (p. 1288) objects that are related to it. When it receives data (from the other parts of the system), it builds the list of concerned **DDSDataReader** (p. 1288) objects and then indicates to the application that data is available through its listener or by enabling related conditions.

The application can access the list of concerned **DDSDataReader** (p.1288) objects through the operation **DDSSubscriber::get\_datareaders** (p. 1606) and then access the data available through operations on the **DDSDataReader** (p. 1288).

The following operations may be called even if the **DDSSubscriber** (p. 1592) is not enabled. Other operations will the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) if called on a disabled **DDSSubscriber** (p. 1592):

- **DDSEntity::enable** (p. 1466),
- **DDSSubscriber::set\_qos** (p. 1609), **DDSSubscriber::get\_qos** (p. 1611) , idref\_Subscriber\_set\_qos\_with\_↔profile
- **DDSSubscriber::set\_listener** (p. 1611), **DDSSubscriber::get\_listener** (p. 1612),
- **DDSEntity::get\_statuscondition** (p. 1467), **DDSEntity::get\_status\_changes** (p. 1467)
- **DDSSubscriber::create\_datareader** (p. 1599), **DDSSubscriber::create\_datareader\_with\_profile** (p. 1601), **DDSSubscriber::delete\_contained\_entities** (p. 1603), **DDSSubscriber::delete\_datareader** (p. 1602),
- **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595), **DDSSubscriber::set\_default\_datareader\_qos↔\_with\_profile** (p. 1596), **DDSSubscriber::get\_default\_datareader\_qos** (p. 1595), **DDSSubscriber::set\_↔default\_library** (p. 1597), **DDSSubscriber::set\_default\_profile** (p. 1598)

All operations except for **DDSSubscriber::set\_qos** (p.1609), **DDSSubscriber::set\_qos\_with\_profile** (p.1610), **DDSSubscriber::get\_qos** (p.1611), **DDSSubscriber::set\_listener** (p.1611), **DDSSubscriber::get\_listener** (p.1612), **DDSEntity::enable** (p.1466) and **DDSSubscriber::create\_datareader** (p.1599) may fail with **DDS\_↔RETCODE\_NOT\_ENABLED** (p.337).

See also

**Operations Allowed in Listener Callbacks** (p. 1528)

Examples

**HelloWorld\_subscriber.cxx.**

## 9.288.2 Member Function Documentation

### 9.288.2.1 `get_default_datareader_qos()`

```
virtual DDS_ReturnCode_t DDSSubscriber::get_default_datareader_qos (
    DDS_DataReaderQos & qos ) [pure virtual]
```

Copies the default **DDS\_DataReaderQos** (p. 644) values into the provided **DDS\_DataReaderQos** (p. 644) instance.

The retrieved `qos` will match the set of values specified on the last successful call to **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595), or **DDSSubscriber::set\_default\_datareader\_qos\_with\_profile** (p. 1596), or else, if the call was never made, the default values from its owning **DDSDomainParticipant** (p. 1351).

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

#### MT Safety:

UNSAFE. It is not safe to retrieve the default QoS value from a subscriber while another thread may be simultaneously calling **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595)

#### Parameters

<code>qos</code>	<< <i>inout</i> >> (p. 238) <b>DDS_DataReaderQos</b> (p. 644) to be filled-up.
------------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132)

**DDSSubscriber::create\_datareader** (p. 1599)

### 9.288.2.2 `set_default_datareader_qos()`

```
virtual DDS_ReturnCode_t DDSSubscriber::set_default_datareader_qos (
    const DDS_DataReaderQos & qos ) [pure virtual]
```

Sets the default **DDS\_DataReaderQos** (p. 644) values for this subscriber.

This call causes the default values inherited from the owning **DDSDomainParticipant** (p. 1351) to be overridden.

This default value will be used for newly created **DDSDataReader** (p. 1288) if **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132) is specified as the `qos` parameter when **DDSSubscriber::create\_datareader** (p. 1599) is called.

**Precondition**

The specified QoS policies must be consistent, or else the operation will have no effect and fail with **DDS\_↵  
RETCODE\_INCONSISTENT\_POLICY** (p. 337)

**MT Safety:**

UNSAFE. It is not safe to set the default QoS value from a subscriber while another thread may be simultaneously calling **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595), **DDSSubscriber::get\_default\_↵  
\_datareader\_qos** (p. 1595) or calling **DDSSubscriber::create\_datareader** (p. 1599) with **DDS\_DATAREADER\_↵  
\_QOS\_DEFAULT** (p. 132) as the `qos` parameter.

**Parameters**

<i>qos</i>	<< <i>in</i> >> (p. 238) The default <b>DDS_DataReaderQos</b> (p. 644) to be set to. The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) may be passed as <code>qos</code> to indicate that the default QoS should be reset back to the initial values the factory would use if <b>DDSSubscriber::set_default_datareader_qos</b> (p. 1595) had never been called.
------------	--

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	---

**9.288.2.3 set\_default\_datareader\_qos\_with\_profile()**

```
virtual DDS_ReturnCode_t DDSSubscriber::set_default_datareader_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Set the default **DDS\_DataReaderQos** (p. 644) values for this subscriber based on the input XML QoS profile.

This default value will be used for newly created **DDSDataReader** (p. 1288) if **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132) is specified as the `qos` parameter when **DDSSubscriber::create\_datareader** (p. 1599) is called.

**Precondition**

The **DDS\_DataReaderQos** (p. 644) contained in the specified XML QoS profile must be consistent, or else the operation will have no effect and fail with **DDS\_RETCODE\_INCONSISTENT\_POLICY** (p. 337)

**MT Safety:**

UNSAFE. It is not safe to set the default QoS value from a **DDSSubscriber** (p. 1592) while another thread may be simultaneously calling **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595), **DDSSubscriber\_↵  
::get\_default\_datareader\_qos** (p. 1595) or calling **DDSSubscriber::create\_datareader** (p. 1599) with **DDS\_↵  
DATAREADER\_QOS\_DEFAULT** (p. 132) as the `qos` parameter.

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSSubscriber::set_default_library</b> (p. 1597)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSSubscriber::set_default_profile</b> (p. 1598)).

If the input profile cannot be found the method fails with **DDS\_RETCODE\_ERROR** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337)
------------	--

## See also

**DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132)

**DDSSubscriber::create\_datareader\_with\_profile** (p. 1601)

## 9.288.2.4 set\_default\_library()

```
virtual DDS_ReturnCode_t DDSSubscriber::set_default_library (
    const char * library_name ) [pure virtual]
```

<<*extension*>> (p. 237) Sets the default XML library for a **DDSSubscriber** (p. 1592).

This method specifies the library that will be used as the default the next time a default library is needed during a call to one of this Subscriber's operations.

Any API requiring a *library\_name* as a parameter can use null to refer to the default library.

If the default library is not set, the **DDSSubscriber** (p. 1592) inherits the default from the **DDSDomainParticipant** (p. 1351) (see **DDSDomainParticipant::set\_default\_library** (p. 1367)).

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name. If <i>library_name</i> is null any previous default is unset.
---------------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**DDSSubscriber::get\_default\_library** (p. 1598)

### 9.288.2.5 get\_default\_library()

```
virtual const char * DDSSubscriber::get_default_library ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the default XML library associated with a **DDSSubscriber** (p. 1592).

Returns

The default library or null if the default library was not set.

See also

**DDSSubscriber::set\_default\_library** (p. 1597)

### 9.288.2.6 set\_default\_profile()

```
virtual DDS_ReturnCode_t DDSSubscriber::set_default_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<**extension**>> (p. 237) Sets the default XML profile for a **DDSSubscriber** (p. 1592).

This method specifies the profile that will be used as the default the next time a default Subscriber profile is needed during a call to one of this Subscriber's operations. When calling a **DDSSubscriber** (p. 1592) method that requires a `profile_name` parameter, you can use NULL to refer to the default profile. (This same information applies to setting a default library.)

If the default profile is not set, the **DDSSubscriber** (p. 1592) inherits the default from the **DDSDomainParticipant** (p. 1351) (see **DDSDomainParticipant::set\_default\_profile** (p. 1368)).

This method does not set the default QoS for **DDSDataReader** (p. 1288) objects created by this **DDSSubscriber** (p. 1592); for this functionality, use **DDSSubscriber::set\_default\_datareader\_qos\_with\_profile** (p. 1596) (you may pass in NULL after having called **set\_default\_profile()** (p. 1598)).

This method does not set the default QoS for newly created Subscribers; for this functionality, use **DDSDomainParticipant::set\_default\_subscriber\_qos\_with\_profile** (p. 1375).

Parameters

<i>library_name</i>	<< <b>in</b> >> (p. 238) The library name containing the profile.
<i>profile_name</i>	<< <b>in</b> >> (p. 238) The profile name. If <code>profile_name</code> is null any previous default is unset.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## See also

**DDSSubscriber::get\_default\_profile** (p. 1599)

**DDSSubscriber::get\_default\_profile\_library** (p. 1599)

**9.288.2.7 get\_default\_profile()**

```
virtual const char * DDSSubscriber::get_default_profile ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the default XML profile associated with a **DDSSubscriber** (p. 1592).

## Returns

The default profile or null if the default profile was not set.

## See also

**DDSSubscriber::set\_default\_profile** (p. 1598)

**9.288.2.8 get\_default\_profile\_library()**

```
virtual const char * DDSSubscriber::get_default_profile_library ( ) [pure virtual]
```

<<**extension**>> (p. 237) Gets the library where the default XML QoS profile is contained for a **DDSSubscriber** (p. 1592).

The default profile library is automatically set when **DDSSubscriber::set\_default\_profile** (p. 1598) is called.

This library can be different than the **DDSSubscriber** (p. 1592) default library (see **DDSSubscriber::get\_default\_library** (p. 1598)).

## Returns

The default profile library or null if the default profile was not set.

## See also

**DDSSubscriber::set\_default\_profile** (p. 1598)

### 9.288.2.9 create\_datareader()

```
virtual DDSDataReader * DDSSubscriber::create_datareader (
    DDSTopicDescription * topic,
    const DDS_DataReaderQos & qos,
    DDSDataReaderListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

Creates a **DDSDataReader** (p. 1288) that will be attached and belong to the **DDSSubscriber** (p. 1592).

For each application-defined type **Foo** (p. 1648), there is an implied, auto-generated class **FooDataReader** (p. 1649) (an incarnation of **FooDataReader** (p. 1649)) that extends **DDSDataReader** (p. 1288) and contains the operations to read data of type **Foo** (p. 1648).

Note that a common application pattern to construct the QoS for the **DDSDataReader** (p. 1288) is to:

- Retrieve the QoS policies on the associated **DDSTopic** (p. 1617) by means of the **DDSTopic::get\_qos** (p. 1621) operation.
- Retrieve the default **DDSDataReader** (p. 1288) qos by means of the **DDSSubscriber::get\_default\_datareader\_qos** (p. 1595) operation.
- Combine those two QoS policies (for example, using **DDSSubscriber::copy\_from\_topic\_qos** (p. 1608)) and selectively modify policies as desired
- Use the resulting QoS policies to construct the **DDSDataReader** (p. 1288).

When a **DDSDataReader** (p. 1288) is created, only those transports already registered are available to the **DDSDataReader** (p. 1288). See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered.

#### MT Safety:

UNSAFE. If **DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132) is used for the `qos` parameter, it is not safe to create the datareader while another thread may be simultaneously calling **DDSSubscriber::set\_default\_datareader\_qos** (p. 1595).

#### Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDSDataReader** (p. 1288) will be created.

The given **DDSTopicDescription** (p. 1624) must have been created from the same participant as this subscriber. If it was created from a different participant, this method will return NULL.

If `qos` is **DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS** (p. 133), `topic` cannot be **DDSMultiTopic** (p. 1529), or else this method will return NULL.

#### Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopicDescription</b> (p. 1624) that the <b>DDSDataReader</b> (p. 1288) will be associated with. Cannot be NULL.
--------------	--

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) The qos of the <b>DDSDataReader</b> (p. 1288). The special value <b>DDS_DATAREADER_QOS_DEFAULT</b> (p. 132) can be used to indicate that the <b>DDSDataReader</b> (p. 1288) should be created with the default <b>DDS_DataReaderQos</b> (p. 644) set in the <b>DDSSubscriber</b> (p. 1592). If <b>DDSTopicDescription</b> (p. 1624) is of type <b>DDSTopic</b> (p. 1617) or <b>DDSContentFilteredTopic</b> (p. 1283), the special value <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 133) can be used to indicate that the <b>DDSDataReader</b> (p. 1288) should be created with the combination of the default <b>DDS_DataReaderQos</b> (p. 644) set on the <b>DDSSubscriber</b> (p. 1592) and the <b>DDS_TopicQos</b> (p. 1135) (in the case of a <b>DDSContentFilteredTopic</b> (p. 1283), the <b>DDS_TopicQos</b> (p. 1135) of the related <b>DDSTopic</b> (p. 1617)). if <b>DDS_DATAREADER_QOS_USE_TOPIC_QOS</b> (p. 133) is used, <i>topic</i> cannot be a <b>DDSMultiTopic</b> (p. 1529).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataReader</b> (p. 1288).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Returns

A **DDSDataReader** (p. 1288) of a derived class specific to the data-type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

## See also

**FooDataReader** (p. 1649)

**DDSTopic::set\_qos** (p. 1619)

**DDSSubscriber::copy\_from\_topic\_qos** (p. 1608)

**DDSDataReader::set\_listener** (p. 1309)

## Examples

**HelloWorld\_subscriber.cxx.**

## 9.288.2.10 create\_datareader\_with\_profile()

```
virtual DDSDataReader * DDSSubscriber::create_datareader_with_profile (
    DDSTopicDescription * topic,
    const char * library_name,
    const char * profile_name,
    DDSDataReaderListener * listener,
    DDS_StatusMask mask ) [pure virtual]
```

<<*extension*>> (p. 237) Creates a **DDSDataReader** (p. 1288) object using the **DDS\_DataReaderQos** (p. 644) associated with the input XML QoS profile.

The **DDSDataReader** (p. 1288) will be attached and belong to the **DDSSubscriber** (p. 1592).

For each application-defined type **Foo** (p. 1648), there is an implied, auto-generated class **FooDataReader** (p. 1649) (an incarnation of **FooDataReader** (p. 1649)) that extends **DDSDataReader** (p. 1288) and contains the operations to read data of type **Foo** (p. 1648).

When a **DDSDataReader** (p. 1288) is created, only those transports already registered are available to the **DDSDataReader** (p. 1288). See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered.

#### Precondition

If subscriber is enabled, the topic must be enabled. If it is not, this operation will fail and no **DDSDataReader** (p. 1288) will be created.

The given **DDSTopicDescription** (p. 1624) must have been created from the same participant as this subscriber. If it was created from a different participant, this method will return NULL.

#### Parameters

<i>topic</i>	<< <i>in</i> >> (p. 238) The <b>DDSTopicDescription</b> (p. 1624) that the <b>DDSDataReader</b> (p. 1288) will be associated with. Cannot be NULL.
<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If library_name is null RTI Connexnt will use the default library (see <b>DDSSubscriber::set_default_library</b> (p. 1597)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If profile_name is null RTI Connexnt will use the default profile (see <b>DDSSubscriber::set_default_profile</b> (p. 1598)).
<i>listener</i>	<< <i>in</i> >> (p. 238) The listener of the <b>DDSDataReader</b> (p. 1288).
<i>mask</i>	<< <i>in</i> >> (p. 238). Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

#### Returns

A **DDSDataReader** (p. 1288) of a derived class specific to the data-type associated with the **DDSTopic** (p. 1617) or NULL if an error occurred.

#### See also

**FooDataReader** (p. 1649)  
**Specifying QoS on entities** (p. 359) for information on setting QoS before entity creation  
**DDS\_DataReaderQos** (p. 644) for rules on consistency among QoS  
**DDS\_DATAREADER\_QOS\_DEFAULT** (p. 132)  
**DDS\_DATAREADER\_QOS\_USE\_TOPIC\_QOS** (p. 133)  
**DDSSubscriber::create\_datareader** (p. 1599)  
**DDSSubscriber::get\_default\_datareader\_qos** (p. 1595)  
**DDSTopic::set\_qos** (p. 1619)  
**DDSSubscriber::copy\_from\_topic\_qos** (p. 1608)  
**DDSDataReader::set\_listener** (p. 1309)

### 9.288.2.11 delete\_datareader()

```
virtual DDS_ReturnCode_t DDSSubscriber::delete_datareader (
    DDSDataReader * a_datareader ) [pure virtual]
```

Deletes a **DDSDataReader** (p. 1288) that belongs to the **DDSSubscriber** (p. 1592).

#### Precondition

If the **DDSDataReader** (p. 1288) does not belong to the **DDSSubscriber** (p. 1592), or if there are any existing **DDSReadCondition** (p. 1574) or **DDSQueryCondition** (p. 1573) objects that are attached to the **DDSDataReader** (p. 1288), or if there are outstanding loans on samples (as a result of a call to `read()`, `take()`, or one of the variants thereof), the operation fails with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### Postcondition

Listener installed on the **DDSDataReader** (p. 1288) will not be called after this method completes successfully.

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Parameters

<i>a_datareader</i>	<<in>> (p. 238) The <b>DDSDataReader</b> (p. 1288) to be deleted.
---------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

### 9.288.2.12 delete\_contained\_entities()

```
virtual DDS_ReturnCode_t DDSSubscriber::delete_contained_entities ( ) [pure virtual]
```

Deletes all the entities that were created by means of the "create" operation on the **DDSSubscriber** (p. 1592).

Deletes all contained **DDSDataReader** (p. 1288) objects. This pattern is applied recursively. In this manner, the operation **DDSSubscriber::delete\_contained\_entities** (p. 1603) on the **DDSSubscriber** (p. 1592) will end up deleting all the entities recursively contained in the **DDSSubscriber** (p. 1592), including the **DDSQueryCondition** (p. 1573), **DDSReadCondition** (p. 1574), and **DDSTopicQuery** (p. 1627) objects belonging to the contained **DDSDataReader** (p. 1288).

The operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if any of the contained entities is in a state where it cannot be deleted. This will occur, for example, if a contained **DDSDataReader** (p. 1288) cannot

be deleted because the application has called a **FooDataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652) operation and has not called the corresponding **FooDataReader::return\_loan** (p. 1672) operation to return the loaned samples.

Once **DDSSubscriber::delete\_contained\_entities** (p. 1603) completes successfully, the application may delete the **DDSSubscriber** (p. 1592).

#### MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336)
------------	---

### 9.288.2.13 lookup\_datareader()

```
virtual DDSDataReader * DDSSubscriber::lookup_datareader (
    const char * topic_name ) [pure virtual]
```

Retrieves an existing **DDSDataReader** (p. 1288).

Use this operation on the built-in **DDSSubscriber** (p. 1592) (**Built-in Topics** (p. 59)) to access the built-in **DDSDataReader** (p. 1288) entities for the built-in topics.

The built-in **DDSDataReader** (p. 1288) is created when this operation is called on a built-in topic for the first time. The built-in **DDSDataReader** (p. 1288) is deleted automatically when the **DDSDomainParticipant** (p. 1351) is deleted.

To ensure that builtin **DDSDataReader** (p. 1288) entities receive all the discovery traffic, it is suggested that you lookup the builtin **DDSDataReader** (p. 1288) before the **DDSDomainParticipant** (p. 1351) is enabled. Looking up builtin **DDSDataReader** (p. 1288) may implicitly register builtin transports due to creation of **DDSDataReader** (p. 1288) (see **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered). Therefore, if you are want to modify builtin transport properties, do so *before* using this operation.

Therefore the suggested sequence when looking up builtin DataReaders is:

- Create a disabled **DDSDomainParticipant** (p. 1351).
- (optional) Modify builtin transport properties
- Call **DDSDomainParticipant::get\_builtin\_subscriber()** (p. 1393).
- Call **DDSSubscriber::lookup\_datareader()** (p. 1604).
- Call **enable()** (p. 1466) on the DomainParticipant.

## Parameters

<i>topic_name</i>	<< <i>in</i> >> (p. 238) Name of the <b>DDSTopicDescription</b> (p. 1624) that the retrieved <b>DDSDataReader</b> (p. 1288) is attached to. Cannot be NULL.
-------------------	---

## Returns

A **DDSDataReader** (p. 1288) that belongs to the **DDSSubscriber** (p. 1592) attached to the **DDSTopicDescription** (p. 1624) with *topic\_name*. If no such **DDSDataReader** (p. 1288) exists, this operation returns NULL.

The returned **DDSDataReader** (p. 1288) may be enabled or disabled.

If more than one **DDSDataReader** (p. 1288) is attached to the **DDSSubscriber** (p. 1592), this operation may return any one of them.

## MT Safety:

UNSAFE. It is not safe to lookup a **DDSDataReader** (p. 1288) in one thread while another thread is simultaneously creating or destroying that **DDSDataReader** (p. 1288).

## 9.288.2.14 begin\_access()

```
virtual DDS_ReturnCode_t DDSSubscriber::begin_access ( ) [pure virtual]
```

Indicates that the application is about to access the data samples in any of the **DDSDataReader** (p. 1288) objects attached to the **DDSSubscriber** (p. 1592).

If the **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) of the **DDSSubscriber** (p. 1592) is **DDS\_GROUP\_PresentationQosPolicy::access\_scope** (p. 418) or **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p. 418) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) is **DDS\_BOOLEAN\_TRUE** (p. 317), the application is required to use this operation to access the samples in order across DataWriters of the same group (**DDSPublisher** (p. 1550) with **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) set to **DDS\_GROUP\_PresentationQosPolicy::access\_scope** (p. 418)).

In the above case, this operation must be called prior to calling any of the sample-accessing operations, **DDSSubscriber::get\_datareaders** (p. 1606) on the **DDSSubscriber** (p. 1592), and **FooDataReader::read** (p. 1651), **FooDataReader::take** (p. 1652), **FooDataReader::read\_w\_condition** (p. 1657), and **FooDataReader::take\_w\_condition** (p. 1658) on any **DDSDataReader** (p. 1288).

Once the application has finished accessing the data samples, it must call **DDSSubscriber::end\_access** (p. 1606)

The application is not required to call **DDSSubscriber::begin\_access** (p. 1605) / **DDSSubscriber::end\_access** (p. 1606) to access the samples in order if the **PRESENTATION** (p. 417) policy in the **DDSPublisher** (p. 1550) has **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) set to something other than **DDS\_GROUP\_PresentationQosPolicy::access\_scope** (p. 418). In this case, calling **DDSSubscriber::begin\_access** (p. 1605) / **DDSSubscriber::end\_access** (p. 1606) is not considered an error and has no effect.

Calls to **DDSSubscriber::begin\_access** (p. 1605) / **DDSSubscriber::end\_access** (p. 1606) may be nested and must be balanced.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

## See also

**Access to data samples** (p. 125)

**DDSSubscriber::get\_datareaders** (p. 1606)

**PRESENTATION** (p. 417)

**9.288.2.15 end\_access()**

```
virtual DDS_ReturnCode_t DDSSubscriber::end_access ( ) [pure virtual]
```

Indicates that the application has finished accessing the data samples in **DDSDataReader** (p. 1288) objects managed by the **DDSSubscriber** (p. 1592).

This operation must be used to close a corresponding **begin\_access()** (p. 1605).

This call must close a previous call to **DDSSubscriber::begin\_access()** (p. 1605), otherwise the operation will fail with the error **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

**9.288.2.16 get\_datareaders()**

```
virtual DDS_ReturnCode_t DDSSubscriber::get_datareaders (
    DDSDataReaderSeq & readers,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Allows the application to access the **DDSDataReader** (p.1288) objects that contain samples with the specified `sample_states`, `view_states` and `instance_states`.

If the application is outside a **begin\_access()** (p. 1605)/**end\_access()** block, or if the **DDS\_PresentationQosPolicy**↔**::access\_scope** (p.1000) of the **DDSSubscriber** (p.1592) is **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418) or **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418), or if the **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) of

the **DDSSubscriber** (p. 1592) is **DDS\_BOOLEAN\_FALSE** (p. 317), the returned collection is a 'set' containing each **DDSDataReader** (p. 1288) at most once, in no specified order.

If the application is within a **begin\_access()** (p. 1605)/**end\_access()** block, and the **PRESENTATION** (p. 417) policy of the **DDSSubscriber** (p. 1592) is **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418) or **DDS\_HIGHEST\_OFFERED\_PRESENTATION\_QOS** (p. 418), and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) in the **DDSSubscriber** (p. 1592) is **DDS\_BOOLEAN\_TRUE** (p. 317), the returned collection is a 'list' of DataReaders where a DataReader may appear more than one time.

To retrieve the samples in the order they were published across DataWriters of the same group (**DDSPublisher** (p. 1550) configured with **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418)), the application should **read()/take()** from each DataReader in the same order as it appears in the output sequence. The application will move to the next DataReader when the **read()/take()** operation fails with **DDS\_RETCODE\_NO\_DATA** (p. 337).

#### Parameters

<i>readers</i>	<< <i>inout</i> >> (p. 238) a <b>DDSDataReaderSeq</b> (p. 1317) object where the set or list of readers will be returned.
<i>sample_states</i>	<< <i>in</i> >> (p. 238) the returned DataReader must contain samples that have one of these <i>sample_states</i> .
<i>view_states</i>	<< <i>in</i> >> (p. 238) the returned DataReader must contain samples that have one of these <i>view_states</i> .
<i>instance_states</i>	<< <i>in</i> >> (p. 238) the returned DataReader must contain samples that have one of these <i>instance_states</i> .

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### See also

- Access to data samples** (p. 125)
- DDSSubscriber::begin\_access** (p. 1605)
- DDSSubscriber::end\_access** (p. 1606)
- PRESENTATION** (p. 417)

### 9.288.2.17 get\_all\_datareaders()

```
virtual DDS_ReturnCode_t DDSSubscriber::get_all_datareaders (
    DDSDataReaderSeq & readers ) [pure virtual]
```

Retrieve all the DataReaders created from this Subscriber.

#### Parameters

<i>readers</i>	<< <i>inout</i> >> (p. 238) Sequence where the DataReaders will be added
----------------	--

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

**9.288.2.18 notify\_datareaders()**

```
virtual DDS_ReturnCode_t DDSSubscriber::notify_datareaders ( ) [pure virtual]
```

Invokes the operation **DDSDataReaderListener::on\_data\_available()** (p. 1317) on the **DDSDataReaderListener** (p. 1315) objects attached to contained **DDSDataReader** (p. 1288) entities with **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345) that is considered changed as described in **Changes in read communication status** (p. 340).

This operation is typically invoked from the **DDSSubscriberListener::on\_data\_on\_readers** (p. 1614) operation in the **DDSSubscriberListener** (p. 1613). That way the **DDSSubscriberListener** (p. 1613) can delegate to the **DDSDataReaderListener** (p. 1315) objects the handling of the data.

The operation will notify the data readers that have a `sample_state` of **DDS\_NOT\_READ\_SAMPLE\_STATE** (p. 157), `view_state` of **DDS\_ANY\_SAMPLE\_STATE** (p. 157) and `instance_state` of **DDS\_ANY\_INSTANCE\_STATE** (p. 161).

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
-----	---

**9.288.2.19 get\_participant()**

```
virtual DDSDomainParticipant * DDSSubscriber::get_participant ( ) [pure virtual]
```

Returns the **DDSDomainParticipant** (p. 1351) to which the **DDSSubscriber** (p. 1592) belongs.

## Returns

the **DDSDomainParticipant** (p. 1351) to which the **DDSSubscriber** (p. 1592) belongs.

### 9.288.2.20 copy\_from\_topic\_qos()

```
virtual DDS_ReturnCode_t DDSSubscriber::copy_from_topic_qos (
    DDS_DataReaderQos & datareader_qos,
    const DDS_TopicQos & topic_qos ) [pure virtual]
```

Copies the policies in the **DDS\_TopicQos** (p. 1135) to the corresponding policies in the **DDS\_DataReaderQos** (p. 644).

Copies the policies in the **DDS\_TopicQos** (p. 1135) to the corresponding policies in the **DDS\_DataReaderQos** (p. 644) (replacing values in the **DDS\_DataReaderQos** (p. 644), if present).

This is a "convenience" operation most useful in combination with the operations **DDSSubscriber::get\_default\_datareader\_qos** (p. 1595) and **DDSTopic::get\_qos** (p. 1621). The operation **DDSSubscriber::copy\_from\_topic\_qos** (p. 1608) can be used to merge the **DDSDataReader** (p. 1288) default QoS policies with the corresponding ones on the **DDSTopic** (p. 1617). The resulting QoS can then be used to create a new **DDSDataReader** (p. 1288), or set its QoS.

This operation does not check the resulting **DDS\_DataReaderQos** (p. 644) for consistency. This is because the 'merged' **DDS\_DataReaderQos** (p. 644) may not be the final one, as the application can still modify some policies prior to applying the policies to the **DDSDataReader** (p. 1288).

#### Parameters

<i>datareader_qos</i>	<< <i>inout</i> >> (p. 238) <b>DDS_DataReaderQos</b> (p. 644) to be filled-up.
<i>topic_qos</i>	<< <i>in</i> >> (p. 238) <b>DDS_TopicQos</b> (p. 1135) to be merged with <b>DDS_DataReaderQos</b> (p. 644).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.288.2.21 set\_qos()

```
virtual DDS_ReturnCode_t DDSSubscriber::set_qos (
    const DDS_SubscriberQos & qos ) [pure virtual]
```

Sets the subscriber QoS.

This operation modifies the QoS of the **DDSSubscriber** (p. 1592).

The **DDS\_SubscriberQos::group\_data** (p. 1107), **DDS\_SubscriberQos::partition** (p. 1107) and **DDS\_SubscriberQos::entity\_factory** (p. 1107) can be changed. The other policies are immutable.

## Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) <b>DDS_SubscriberQos</b> (p. 1105) to be set to. Policies must be consistent. Immutable policies cannot be changed after <b>DDSSubscriber</b> (p. 1592) is enabled. The special value <b>DDS_SUBSCRIBER_QOS_DEFAULT</b> (p. 57) can be used to indicate that the QoS of the <b>DDSSubscriber</b> (p. 1592) should be changed to match the current default <b>DDS_SubscriberQos</b> (p. 1105) set in the <b>DDSDomainParticipant</b> (p. 1351).
------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

## See also

**9.288.2.22 set\_qos\_with\_profile()**

```
virtual DDS_ReturnCode_t DDSSubscriber::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Change the QoS of this subscriber using the input XML QoS profile.

This operation modifies the QoS of the **DDSSubscriber** (p. 1592).

The **DDS\_SubscriberQos::group\_data** (p. 1107), **DDS\_SubscriberQos::partition** (p. 1107) and **DDS\_SubscriberQos::entity\_factory** (p. 1107) can be changed. The other policies are immutable.

## Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <i>library_name</i> is null RTI Connexx will use the default library (see <b>DDSSubscriber::set_default_library</b> (p. 1597)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <i>profile_name</i> is null RTI Connexx will use the default profile (see <b>DDSSubscriber::set_default_profile</b> (p. 1598)).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337), or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337).
------------	---

### 9.288.2.23 get\_qos()

```
virtual DDS_ReturnCode_t DDSSubscriber::get_qos (
    DDS_SubscriberQos & qos ) [pure virtual]
```

Gets the subscriber QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) <b>DDS_SubscriberQos</b> (p. 1105) to be filled in.
------------	--

Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**get\_qos (abstract)** (p. 1465)

### 9.288.2.24 set\_listener()

```
virtual DDS_ReturnCode_t DDSSubscriber::set_listener (
    DDSSubscriberListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [pure virtual]
```

Sets the subscriber listener.

Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) <b>DDSSubscriberListener</b> (p. 1613) to set to.
<i>mask</i>	<< <i>in</i> >> (p. 238) <b>DDS_StatusMask</b> (p. 341) associated with the <b>DDSSubscriberListener</b> (p. 1613).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**set\_listener (abstract)** (p. 1465)

**9.288.2.25 get\_listener()**

```
virtual DDSSubscriberListener * DDSSubscriber::get_listener ( ) [pure virtual]
```

Get the subscriber listener.

## Returns

**DDSSubscriberListener** (p. 1613) of the **DDSSubscriber** (p. 1592).

## See also

**get\_listener (abstract)** (p. 1466)

**9.288.2.26 lookup\_datareader\_by\_name()**

```
virtual DDSDataReader * DDSSubscriber::lookup_datareader_by_name (
    const char * datareader_name ) [pure virtual]
```

<<*extension*>> (p. 237) Retrieves a **DDSDataReader** (p. 1288) contained within the **DDSSubscriber** (p. 1592) the **DDSDataReader** (p. 1288) entity name.

Every **DDSDataReader** (p. 1288) in the system has an entity name which is configured and stored in the <<*extension*>> (p. 237) EntityName policy, **ENTITY\_NAME** (p. 403).

This operation retrieves the **DDSDataReader** (p. 1288) within the **DDSSubscriber** (p. 1592) whose name matches the one specified. If there are several **DDSDataReader** (p. 1288) with the same name within the **DDSSubscriber** (p. 1592), the operation returns the first matching occurrence.

## Parameters

<i>datareader_name</i>	<< <i>in</i> >> (p. 238) Entity name of the <b>DDSDataReader</b> (p. 1288).
------------------------	---

## Returns

The first **DDSDataReader** (p. 1288) found with the specified name or NULL if it is not found.

## See also

**DDSDomainParticipant::lookup\_datareader\_by\_name** (p. 1423)

## 9.289 DDSSubscriberListener Class Reference

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for status about a subscriber.

Inheritance diagram for DDSSubscriberListener:

### Public Member Functions

- virtual void **on\_data\_on\_readers** (**DDSSubscriber** \*sub)  
*Handles the **DDS\_DATA\_ON\_READERS\_STATUS** (p. 345) communication status.*

#### 9.289.1 Detailed Description

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for status about a subscriber.

## Entity:

**DDSSubscriber** (p. 1592)

## Status:

**DDS\_DATA\_AVAILABLE\_STATUS** (p. 345);  
**DDS\_DATA\_ON\_READERS\_STATUS** (p. 345);  
**DDS\_LIVELINESS\_CHANGED\_STATUS** (p. 346), **DDS\_LivelinessChangedStatus** (p. 932);  
**DDS\_REQUESTED\_DEADLINE\_MISSED\_STATUS** (p. 344), **DDS\_RequestedDeadlineMissedStatus** (p. 1050);

### 9.292.1 Detailed Description

Instantiates `TypeSupport` < `DDS_SubscriptionBuiltinTopicData` (p. 1108) > .

Instantiates:

<<*generic*>> (p. 237) `FooTypeSupport` (p. 1711)

See also

`DDS_SubscriptionBuiltinTopicData` (p. 1108)

## 9.293 DDSThreadFactory Class Reference

<<*extension*>> (p. 237) <<*interface*>> (p. 237) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the `DDSThreadFactory_OnSpawned↔Function` (p.519) that specifies the operation to run in the new thread.

Inherited by `NDDSSStackManagedThreadFactory`.

## Public Member Functions

- virtual void \* **create\_thread** (const char \*thread\_name, const struct **DDS\_ThreadSettings\_t** &settings, **DDSThreadFactory\_OnSpawnedFunction** on\_spawned, void \*thread\_param)=0

*Handles the creation of new threads.*

- virtual void **delete\_thread** (void \*thread)=0

*Handles the deletion of threads previously created by this factory.*

### 9.293.1 Detailed Description

<<**extension**>> (p. 237) <<**interface**>> (p. 237) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the **DDSThreadFactory\_OnSpawnedFunction** (p. 519) that specifies the operation to run in the new thread.

### 9.293.2 Member Function Documentation

#### 9.293.2.1 create\_thread()

```
virtual void * DDSThreadFactory::create_thread (
    const char * thread_name,
    const struct DDS_ThreadSettings_t & settings,
    DDSThreadFactory_OnSpawnedFunction on_spawned,
    void * thread_param ) [pure virtual]
```

Handles the creation of new threads.

This callback is called by the middleware whenever it needs to create a new thread. The operation creates a new thread of control that will call the function specified by **DDSThreadFactory\_OnSpawnedFunction** (p. 519). On success, this operation must guarantee that after return the new thread of control been spawned and its execution has started or will start some time after.

The **DDSThreadFactory\_OnSpawnedFunction** (p. 519), function must be called in the new thread and return its value on finalization. The function should be called as follows:

```
void * thread_out = on_spawned(thread_params);
```

...

```
return thread_out;
```

Some thread frameworks do this directly by just receiving the function and its parameters as arguments on thread creation. For instance, POSIX follows this model when creating a thread and the start\_routine function has the same signature as **DDSThreadFactory\_OnSpawnedFunction** (p. 519), so the parameter can be passed directly:

```
int result = pthread_create(&pthread_handle, &attr, on_spawned, thread_params);
```

...

```
return &pthread_handle;
```

### 9.293.2.2 delete\_thread()

```
virtual void DDSThreadFactory::delete_thread (
    void * thread ) [pure virtual]
```

Handles the deletion of threads previously created by this factory.

This callback is called by the middleware whenever it needs to delete a thread. This operation deletes a thread previously created via a call to **DDSThreadFactory::create\_thread** (p. 1616) on the same factory object. On success, the thread must be deleted but it does not have to guarantee that the execution has finished. Likewise, resources associated with the underlying operating system may be still in use. Depending on the thread framework, resources allocated on thread creation are released upon thread finalization. POSIX follows this model so no actions are required on the thread handle returned by `pthread_create()`.

## 9.294 DDSTopic Class Reference

<<**interface**>> (p. 237) The most basic description of the data to be published and subscribed.

Inheritance diagram for DDSTopic:

### Public Member Functions

- virtual **DDS\_ReturnCode\_t** **get\_inconsistent\_topic\_status** ( **DDS\_InconsistentTopicStatus** &status)=0  
*Allows the application to retrieve the **DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343) status of a **DDSTopic** (p. 1617).*
- virtual **DDS\_ReturnCode\_t** **set\_qos** (const **DDS\_TopicQos** &qos)=0  
*Set the topic QoS.*
- virtual **DDS\_ReturnCode\_t** **set\_qos\_with\_profile** (const char \*library\_name, const char \*profile\_name)=0  
*<<extension>> (p. 237) Change the QoS of this topic using the input XML QoS profile.*
- virtual **DDS\_ReturnCode\_t** **get\_qos** ( **DDS\_TopicQos** &qos)=0  
*Get the topic QoS.*
- virtual **DDS\_ReturnCode\_t** **set\_listener** ( **DDSTopicListener** \*l, **DDS\_StatusMask** mask= **DDS\_STATUS\_MASK\_ALL**)=0  
*Set the topic listener.*
- virtual **DDSTopicListener** \* **get\_listener** ()=0  
*Get the topic listener.*

## Static Public Member Functions

- static **DDSTopic** \* **narrow** (**DDSTopicDescription** \*topic\_description)  
*Narrow the given **DDSTopicDescription** (p. 1624) pointer to a **DDSTopic** (p. 1617) pointer.*

### 9.294.1 Detailed Description

<<**interface**>> (p. 237) The most basic description of the data to be published and subscribed.

QoS:

**DDS\_TopicQos** (p. 1135)

Status:

**DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343), **DDS\_InconsistentTopicStatus** (p. 921)

Listener:

**DDSTopicListener** (p. 1626)

A **DDSTopic** (p. 1617) is identified by its name, which must be unique in the whole domain. In addition (by virtue of extending **DDSTopicDescription** (p. 1624)) it fully specifies the type of the data that can be communicated when publishing or subscribing to the **DDSTopic** (p. 1617).

**DDSTopic** (p. 1617) is the only **DDSTopicDescription** (p. 1624) that can be used for publications and therefore associated with a **DDSDataWriter** (p. 1321).

The following operations may be called even if the **DDSTopic** (p. 1617) is not enabled. Other operations will fail with the value **DDS\_RETCODE\_NOT\_ENABLED** (p. 337) if called on a disabled **DDSTopic** (p. 1617):

- **DDSEntity::enable** (p. 1466)
- **DDSTopic::set\_qos** (p. 1619), **DDSTopic::get\_qos** (p. 1621)
- **DDSTopic::set\_qos\_with\_profile** (p. 1620)
- **DDSTopic::set\_listener** (p. 1621), **DDSTopic::get\_listener** (p. 1622)
- **DDSEntity::get\_statuscondition** (p. 1467), **DDSEntity::get\_status\_changes** (p. 1467)
- **DDSTopic::get\_inconsistent\_topic\_status** (p. 1619)

See also

**Operations Allowed in Listener Callbacks** (p. 1528)

Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

## 9.294.2 Member Function Documentation

### 9.294.2.1 narrow()

```
static DDSTopic * DDSTopic::narrow (
    DDSTopicDescription * topic_description ) [static]
```

Narrow the given **DDSTopicDescription** (p. 1624) pointer to a **DDSTopic** (p. 1617) pointer.

#### Returns

**DDSTopic** (p. 1617) if this **DDSTopicDescription** (p. 1624) is a **DDSTopic** (p. 1617). Otherwise, return NULL.

### 9.294.2.2 get\_inconsistent\_topic\_status()

```
virtual DDS_ReturnCode_t DDSTopic::get_inconsistent_topic_status (
    DDS_InconsistentTopicStatus & status ) [pure virtual]
```

Allows the application to retrieve the **DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343) status of a **DDSTopic** (p. 1617).

Retrieve the current **DDS\_InconsistentTopicStatus** (p. 921)

#### Parameters

<i>status</i>	<< <i>inout</i> >> (p. 238) Status to be retrieved.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**DDS\_InconsistentTopicStatus** (p. 921)

### 9.294.2.3 set\_qos()

```
virtual DDS_ReturnCode_t DDSTopic::set_qos (
    const DDS_TopicQos & qos ) [pure virtual]
```

Set the topic QoS.

The `DDS_TopicQos::topic_data` (p. 1137) and `DDS_TopicQos::deadline` (p. 1138), `DDS_TopicQos::latency`↔`_budget` (p. 1138), `DDS_TopicQos::transport_priority` (p. 1139) and `DDS_TopicQos::lifespan` (p. 1139) can be changed. The other policies are immutable.

#### Parameters

<i>qos</i>	<< <i>in</i> >> (p. 238) Set of policies to be applied to <code>DDSTopic</code> (p. 1617).
------------	--

Policies must be consistent. Immutable policies cannot be changed after `DDSTopic` (p. 1617) is enabled. The special value `DDS_TOPIC_QOS_DEFAULT` (p. 56) can be used to indicate that the QoS of the `DDSTopic` (p. 1617) should be changed to match the current default `DDS_TopicQos` (p. 1135) set in the `DDSDomainParticipant` (p. 1351).

#### Exceptions

<i>One</i>	of the <code>Standard Return Codes</code> (p. 336), <code>DDS_RETCODE_IMMUTABLE_POLICY</code> (p. 337) if immutable policy is changed, or <code>DDS_RETCODE_INCONSISTENT_POLICY</code> (p. 337) if policies are inconsistent
------------	--

#### See also

`DDS_TopicQos` (p. 1135) for rules on consistency among QoS

`set_qos` (abstract) (p. 1464)

`Operations Allowed in Listener Callbacks` (p. 1528)

### 9.294.2.4 set\_qos\_with\_profile()

```
virtual DDS_ReturnCode_t DDSTopic::set_qos_with_profile (
    const char * library_name,
    const char * profile_name ) [pure virtual]
```

<<*extension*>> (p. 237) Change the QoS of this topic using the input XML QoS profile.

The `DDS_TopicQos::topic_data` (p. 1137) and `DDS_TopicQos::deadline` (p. 1138), `DDS_TopicQos::latency`↔`_budget` (p. 1138), `DDS_TopicQos::transport_priority` (p. 1139) and `DDS_TopicQos::lifespan` (p. 1139) can be changed. The other policies are immutable.

#### Parameters

<i>library_name</i>	<< <i>in</i> >> (p. 238) Library name containing the XML QoS profile. If <code>library_name</code> is null RTI Connexnt will use the default library (see <code>DDSDomainParticipant::set_default_library</code> (p. 1367)).
<i>profile_name</i>	<< <i>in</i> >> (p. 238) XML QoS Profile name. If <code>profile_name</code> is null RTI Connexnt will use the default profile (see <code>DDSDomainParticipant::set_default_profile</code> (p. 1368)).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_IMMUTABLE_POLICY</b> (p. 337) if immutable policy is changed, or <b>DDS_RETCODE_INCONSISTENT_POLICY</b> (p. 337) if policies are inconsistent
------------	--

## See also

**DDS\_TopicQoS** (p. 1135) for rules on consistency among QoS  
**Operations Allowed in Listener Callbacks** (p. 1528)

9.294.2.5 `get_qos()`

```
virtual DDS_ReturnCode_t DDSTopic::get_qos (
    DDS_TopicQoS & qos ) [pure virtual]
```

Get the topic QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

## Parameters

<i>qos</i>	<< <i>inout</i> >> (p. 238) QoS to be filled up.
------------	--

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**get\_qos (abstract)** (p. 1465)

9.294.2.6 `set_listener()`

```
virtual DDS_ReturnCode_t DDSTopic::set_listener (
    DDSListener * l,
    DDS_StatusMask mask = DDS_STATUS_MASK_ALL ) [pure virtual]
```

Set the topic listener.

## Parameters

<i>l</i>	<< <i>in</i> >> (p. 238) Listener to be installed on entity.
<i>mask</i>	<< <i>in</i> >> (p. 238) Changes of communication status to be invoked on the listener. See <b>DDS_StatusMask</b> (p. 341).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**set\_listener (abstract)** (p. 1465)

## 9.294.2.7 get\_listener()

```
virtual DDSTopicListener * DDSTopic::get_listener ( ) [pure virtual]
```

Get the topic listener.

## Returns

Existing listener attached to the **DDSTopic** (p. 1617).

## See also

**get\_listener (abstract)** (p. 1466)

## 9.295 DDSTopicBuiltinTopicDataDataReader Class Reference

Instantiates `DataReader < DDS_TopicBuiltinTopicData (p. 1128) >` .

Inheritance diagram for `DDSTopicBuiltinTopicDataDataReader`:

## Additional Inherited Members

### 9.295.1 Detailed Description

Instantiates `DataReader` < **DDS\_TopicBuiltinTopicData** (p. 1128) > .

**DDSDataReader** (p. 1288) of topic **DDS\_TOPIC\_TOPIC\_NAME** (p. 297) used for accessing **DDS\_TopicBuiltinTopicData** (p. 1128) of the remote **DDSTopic** (p. 1617).

Note: The **DDS\_TopicBuiltinTopicData** (p. 1128) built-in topic is meant to convey information about discovered Topics. This Topic's samples are not propagated in a separate packet on the wire. Instead, the data is sent as part of the information carried by other built-in topics (**DDS\_PublicationBuiltinTopicData** (p. 1010) and **DDS\_SubscriptionBuiltinTopicData** (p. 1108)). Therefore `TopicBuiltinTopicData` `DataReaders` will not receive any data.

Instantiates:

<<*generic*>> (p. 237) **FooDataReader** (p. 1649)

See also

**DDS\_TopicBuiltinTopicData** (p. 1128)

**DDS\_TOPIC\_TOPIC\_NAME** (p. 297)

## 9.296 DDS**TopicBuiltinTopicData**TypeSupport Class Reference

Instantiates `TypeSupport` < **DDS\_TopicBuiltinTopicData** (p. 1128) > .

### 9.296.1 Detailed Description

Instantiates `TypeSupport` < **DDS\_TopicBuiltinTopicData** (p. 1128) > .

Instantiates:

<<*generic*>> (p. 237) **FooTypeSupport** (p. 1711)

See also

**DDS\_TopicBuiltinTopicData** (p. 1128)

## 9.297 DDSTopicDescription Class Reference

<<*interface*>> (p. 237) Base class for **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529).

Inheritance diagram for DDSTopicDescription:

### Public Member Functions

- virtual const char \* **get\_type\_name** ()=0  
Get the associated *type\_name*.
- virtual const char \* **get\_name** ()=0  
Get the name used to create this **DDSTopicDescription** (p. 1624) .
- virtual **DDSDomainParticipant** \* **get\_participant** ()=0  
Get the **DDSDomainParticipant** (p. 1351) to which the **DDSTopicDescription** (p. 1624) belongs.

### 9.297.1 Detailed Description

<<*interface*>> (p. 237) Base class for **DDSTopic** (p. 1617), **DDSContentFilteredTopic** (p. 1283), and **DDSMultiTopic** (p. 1529).

**DDSTopicDescription** (p. 1624) represents the fact that both publications and subscriptions are tied to a single data-type. Its attribute *type\_name* defines a unique resulting type for the publication or the subscription and therefore creates an implicit association with a **DDSTypeSupport** (p. 1629).

**DDSTopicDescription** (p. 1624) has also a *name* that allows it to be retrieved locally.

See also

**DDSTypeSupport** (p. 1629), **FooTypeSupport** (p. 1711)

### 9.297.2 Member Function Documentation

### 9.297.2.1 get\_type\_name()

```
virtual const char * DDSTopicDescription::get_type_name ( ) [pure virtual]
```

Get the associated `type_name`.

The type name defines a locally unique type for the publication or the subscription.

The `type_name` corresponds to a unique string used to register a type via the **FooTypeSupport::register\_type** (p. 1713) method.

Thus, the `type_name` implies an association with a corresponding **DDSTypeSupport** (p. 1629) and this **DDSTopicDescription** (p. 1624).

#### Returns

the type name. The returned type name is valid until the **DDSTopicDescription** (p. 1624) is deleted.

#### Postcondition

The result is non-NULL.

#### See also

**DDSTypeSupport** (p. 1629), **FooTypeSupport** (p. 1711)

### 9.297.2.2 get\_name()

```
virtual const char * DDSTopicDescription::get_name ( ) [pure virtual]
```

Get the name used to create this **DDSTopicDescription** (p. 1624) .

#### Returns

the name used to create this **DDSTopicDescription** (p.1624). The returned topic name is valid until the **DDSTopicDescription** (p. 1624) is deleted.

#### Postcondition

The result is non-NULL.

### 9.297.2.3 get\_participant()

```
virtual DDSDomainParticipant * DDSTopicDescription::get_participant ( ) [pure virtual]
```

Get the **DDSDomainParticipant** (p. 1351) to which the **DDSTopicDescription** (p. 1624) belongs.

#### Returns

The **DDSDomainParticipant** (p. 1351) to which the **DDSTopicDescription** (p. 1624) belongs.

#### Postcondition

The result is non-NULL.

## 9.298 DDSTopicListener Class Reference

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for **DDSTopic** (p. 1617) entities.

Inheritance diagram for DDSTopicListener:

### Public Member Functions

- virtual void **on\_inconsistent\_topic** ( **DDSTopic** \*topic, const **DDS\_InconsistentTopicStatus** &status)  
Handle the **DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343) status.

### 9.298.1 Detailed Description

<<*interface*>> (p. 237) **DDSListener** (p. 1526) for **DDSTopic** (p. 1617) entities.

#### Entity:

**DDSTopic** (p. 1617)

#### Status:

**DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343), **DDS\_InconsistentTopicStatus** (p. 921)

This is the interface that can be implemented by an application-provided class and then registered with the **DDSTopic** (p. 1617) such that the application can be notified by RTI Connex of relevant status changes.

#### See also

- Status Kinds** (p. 337)
- DDSListener** (p. 1526)
- DDSTopic::set\_listener** (p. 1621)
- Operations Allowed in Listener Callbacks** (p. 1528)

## 9.298.2 Member Function Documentation

### 9.298.2.1 on\_inconsistent\_topic()

```
virtual void DDSTopicListener::on_inconsistent_topic (
    DDSTopic * topic,
    const DDS_InconsistentTopicStatus & status ) [virtual]
```

Handle the **DDS\_INCONSISTENT\_TOPIC\_STATUS** (p. 343) status.

This callback is called when a remote **DDSTopic** (p. 1617) is discovered but is inconsistent with the locally created **DDSTopic** (p. 1617) of the same topic name.

#### Parameters

<i>topic</i>	<< <b>out</b> >> (p. 238) Locally created <b>DDSTopic</b> (p. 1617) that triggers the listener callback
<i>status</i>	<< <b>out</b> >> (p. 238) Current inconsistent status of locally created <b>DDSTopic</b> (p. 1617)

## 9.299 DDSTopicQuery Class Reference

<<**extension**>> (p. 237) Allows a **DDSDataReader** (p. 1288) to query the sample cache of its matching **DDSData**↔  
**Writer** (p. 1321).

### Public Member Functions

- virtual **DDS\_ReturnCode\_t** **get\_guid** ( **DDS\_GUID\_t** &guid)  
*Get the TopicQuery's GUID.*

### 9.299.1 Detailed Description

<<**extension**>> (p. 237) Allows a **DDSDataReader** (p. 1288) to query the sample cache of its matching **DDSData**↔  
**Writer** (p. 1321).

## 9.299.2 Member Function Documentation

### 9.299.2.1 get\_guid()

```
virtual DDS_ReturnCode_t DDSTopicQuery::get_guid (
    DDS_GUID_t & guid ) [inline], [virtual]
```

Get the TopicQuery's GUID.

## Parameters

<i>guid</i>	<< <b>out</b> >> (p. 238) The GUID of the <b>DDSTopicQuery</b> (p. 1627).
-------------	---

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.300 DDSTopicQueryHelper Class Reference

Helpers to provide utility operations related to **DDSTopicQuery** (p. 1627).

### Static Public Member Functions

- static **DDS\_Boolean topic\_query\_data\_from\_service\_request** ( **DDS\_TopicQueryData** &topic\_query\_data, const **DDS\_ServiceRequest** &service\_request)

*Retrieves the **DDS\_TopicQueryData** (p. 1140) data contained in the specified **DDS\_ServiceRequest** (p. 1097).*

### 9.300.1 Detailed Description

Helpers to provide utility operations related to **DDSTopicQuery** (p. 1627).

### 9.300.2 Member Function Documentation

#### 9.300.2.1 topic\_query\_data\_from\_service\_request()

```
static DDS_Boolean DDSTopicQueryHelper::topic_query_data_from_service_request (
    DDS_TopicQueryData & topic_query_data,
    const DDS_ServiceRequest & service_request ) [static]
```

Retrieves the **DDS\_TopicQueryData** (p. 1140) data contained in the specified **DDS\_ServiceRequest** (p. 1097).

This operation will extract the content from the request body of the **DDS\_ServiceRequest** (p. 1097) and place it into the specified **DDS\_TopicQueryData** (p. 1140) object.

The specified **DDS\_ServiceRequest** (p. 1097) must be a valid sample associated with the service id **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 302). Otherwise this operation will return **DDS\_BOOLEAN\_FALSE** (p. 317).

This operation can be called within the context of a **DDSDataWriterListener::on\_service\_request\_accepted** (p. 1350) to retrieve the **DDS\_TopicQueryData** (p. 1140) of a **DDS\_ServiceRequest** (p. 1097) that has been received with service id **DDS\_TOPIC\_QUERY\_SERVICE\_REQUEST\_ID** (p. 302)

## Parameters

<i>topic_query_data</i>	<< <i>inout</i> >> (p. 238) A <b>DDS_TopicQueryData</b> (p. 1140) object where the content from the service request is extracted.
<i>service_request</i>	<< <i>in</i> >> (p. 238) Input <b>DDS_ServiceRequest</b> (p. 1097) that contains the <b>DDS_TopicQueryData</b> (p. 1140) as part of its request body.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success.

## 9.301 DDSTypeSupport Class Reference

<<*interface*>> (p. 237) An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application.

Inheritance diagram for DDSTypeSupport:

### 9.301.1 Detailed Description

<<*interface*>> (p. 237) An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application.

The implementation provides an automatic means to generate a type-specific class, **FooTypeSupport** (p. 1711), from a description of the type in IDL.

A **DDSTypeSupport** (p. 1629) must be registered using the **FooTypeSupport::register\_type** (p. 1713) operation on this type-specific class before it can be used to create **DDSTopic** (p. 1617) objects.

## See also

**FooTypeSupport** (p. 1711)  
the Code Generator User's Manual

## Examples

**HelloWorldSupport.cxx.**

## 9.302 DDSWaitSet Class Reference

<<*interface*>> (p. 237) Allows an application to wait until one or more of the attached **DDSCondition** (p. 1276) objects has a `trigger_value` of **DDS\_BOOLEAN\_TRUE** (p. 317) or else until the timeout expires.

## Public Member Functions

- virtual **DDS\_ReturnCode\_t** **wait** (**DDSConditionSeq** &active\_conditions, const **DDS\_Duration\_t** &timeout)  
*Allows an application thread to wait for the occurrence of certain conditions.*
- virtual **DDS\_ReturnCode\_t** **attach\_condition** (**DDSCondition** \*cond)  
*Attaches a **DDSCondition** (p. 1276) to the **DDSWaitSet** (p. 1629).*
- virtual **DDS\_ReturnCode\_t** **detach\_condition** (**DDSCondition** \*cond)  
*Detaches a **DDSCondition** (p. 1276) from the **DDSWaitSet** (p. 1629).*
- virtual **DDS\_ReturnCode\_t** **get\_conditions** (**DDSConditionSeq** &attached\_conditions)  
*Retrieves the list of attached **DDSCondition** (p. 1276) (s).*
- virtual **DDS\_ReturnCode\_t** **set\_property** (const **DDS\_WaitSetProperty\_t** &prop)  
*<<extension>> (p. 237) Sets the **DDS\_WaitSetProperty\_t** (p. 1242), to configure the associated **DDSWaitSet** (p. 1629) to return after one or more trigger events have occurred.*
- virtual **DDS\_ReturnCode\_t** **get\_property** (**DDS\_WaitSetProperty\_t** &prop)  
*<<extension>> (p. 237) Retrieves the **DDS\_WaitSetProperty\_t** (p. 1242) configuration of the associated **DDSWaitSet** (p. 1629).*
- virtual **~DDSWaitSet** ()  
*Destructor.*
- **DDSWaitSet** ()  
*Default no-argument constructor.*
- **DDSWaitSet** (const **DDS\_WaitSetProperty\_t** &prop)  
*<<extension>> (p. 237) Constructor for a **DDSWaitSet** (p. 1629) that may delay for more while specifying that will be woken up after the given number of events or delay period, whichever happens first*

### 9.302.1 Detailed Description

<<**interface**>> (p. 237) Allows an application to wait until one or more of the attached **DDSCondition** (p. 1276) objects has a `trigger_value` of **DDS\_BOOLEAN\_TRUE** (p. 317) or else until the timeout expires.

### 9.302.2 Usage

**DDSCondition** (p. 1276) (s) (in conjunction with wait-sets) provide an alternative mechanism to allow the middleware to communicate communication status changes (including arrival of data) to the application.

"::DDSWaitSet and ::DDSCondition (s)"

This mechanism is wait-based. Its general use pattern is as follows:

- The application indicates which relevant information it wants to get by creating **DDSCondition** (p. 1276) objects (**DDSStatusCondition** (p. 1578), **DDSReadCondition** (p. 1574) or **DDSQueryCondition** (p. 1573)) and attaching them to a **DDSWaitSet** (p. 1629).
- It then waits on that **DDSWaitSet** (p. 1629) until the `trigger_value` of one or several **DDSCondition** (p. 1276) objects become **DDS\_BOOLEAN\_TRUE** (p. 317).

- It then uses the result of the wait (i.e., `active_conditions`, the list of **DDSCondition** (p. 1276) objects with `trigger_value == DDS_BOOLEAN_TRUE` (p. 317)) to actually get the information:
  - by calling **DDSEntity::get\_status\_changes** (p. 1467) and then `get_<communication_status>()` on the relevant **DDSEntity** (p. 1463), if the condition is a **DDSStatusCondition** (p. 1578) and the status changes, refer to plain communication status;
  - by calling **DDSEntity::get\_status\_changes** (p. 1467) and then **DDSSubscriber::get\_datareaders** (p. 1606) on the relevant **DDSSubscriber** (p. 1592) (and then **FooDataReader::read()** (p. 1651) or **Foo←DataReader::take** (p. 1652) on the returned **DDSDataReader** (p. 1288) objects), if the condition is a **DDSStatusCondition** (p. 1578) and the status changes refers to **DDS\_DATA\_ON\_READERS\_STATUS** (p. 345);
  - by calling **DDSEntity::get\_status\_changes** (p. 1467) and then **FooDataReader::read()** (p. 1651) or **Foo←DataReader::take** (p. 1652) on the relevant **DDSDataReader** (p. 1288), if the condition is a **DDSStatus←Condition** (p. 1578) and the status changes refers to **DDS\_DATA\_AVAILABLE\_STATUS** (p. 345);
  - by calling directly **FooDataReader::read\_w\_condition** (p. 1657) or **FooDataReader::take\_w\_condition** (p. 1658) on a **DDSDataReader** (p. 1288) with the **DDSCondition** (p. 1276) as a parameter if it is a **DDSReadCondition** (p. 1574) or a **DDSQueryCondition** (p. 1573).

Usually the first step is done in an initialization phase, while the others are put in the application main loop.

As there is no extra information passed from the middleware to the application when a wait returns (only the list of triggered **DDSCondition** (p. 1276) objects), **DDSCondition** (p. 1276) objects are meant to embed all that is needed to react properly when enabled. In particular, **DDSEntity** (p. 1463)-related conditions are related to exactly one **DDSEntity** (p. 1463) and cannot be shared.

The blocking behavior of the **DDSWaitSet** (p. 1629) is illustrated below.

blocking behavior"

The result of a **DDSWaitSet::wait** (p. 1634) operation depends on the state of the **DDSWaitSet** (p. 1629), which in turn depends on whether at least one attached **DDSCondition** (p. 1276) has a `trigger_value` of **DDS\_BOOLEAN←\_TRUE** (p. 317). If the wait operation is called on **DDSWaitSet** (p. 1629) with state `BLOCKED`, it will block the calling thread. If wait is called on a **DDSWaitSet** (p. 1629) with state `UNBLOCKED`, it will return immediately. In addition, when the **DDSWaitSet** (p. 1629) transitions from `BLOCKED` to `UNBLOCKED` it wakes up any threads that had called wait on it.

A key aspect of the Condition and WaitSet mechanism is the setting of the `trigger_value` of each **DDSCondition** (p. 1276).

The **DDSWaitSet** (p. 1629) cannot be used after calling **DDSDomainParticipantFactory::finalize\_instance** (p. 1429).

### 9.302.3 Trigger State of a ::DDSStatusCondition

The `trigger_value` of a **DDSStatusCondition** (p. 1578) is the boolean OR of the `ChangedStatusFlag` of all the communication statuses (see **Status Kinds** (p. 337)) to which it is sensitive. That is, `trigger_value == DDS_←BOOLEAN_FALSE` (p. 317) only if all the values of the `ChangedStatusFlags` are **DDS\_BOOLEAN\_FALSE** (p. 317).

The sensitivity of the **DDSStatusCondition** (p. 1578) to a particular communication status is controlled by the list of `enabled_statuses` set on the condition by means of the **DDSStatusCondition::set\_enabled\_statuses** (p. 1579) operation.

Once the `trigger_value` of a StatusCondition becomes true, it remains true until the status that changed is reset. To reset a status, call the related `get_*_status()` operation. Or, in the case of the data available status, call `read()`, `take()`, or one of their variants. Therefore, if you are using a **DDSStatusCondition** (p. 1578) on a **DDSWaitSet** (p. 1629) to be notified of events, your thread will wake up when one of the statuses associated with the StatusCondition becomes true. If you do not reset the status, the StatusCondition `trigger_value` remains true and your WaitSet will not block again; it will immediately wake up when you call **DDSWaitSet::wait** (p. 1634).

### 9.302.4 Trigger State of a `::DDSReadCondition`

Similar to the `DDSStatusCondition` (p. 1578), a `DDSReadCondition` (p. 1574) also has a `trigger_value` that determines whether the attached `DDSWaitSet` (p. 1629) is `BLOCKED` or `UNBLOCKED`. However, unlike the `DDSStatusCondition` (p. 1578), the `trigger_value` of the `DDSReadCondition` (p. 1574) is tied to the presence of *at least a sample* managed by RTI Connext with `DDS_SampleStateKind` (p. 156) and `DDS_ViewStateKind` (p. 158) matching those of the `DDSReadCondition` (p. 1574). Furthermore, for the `DDSQueryCondition` (p. 1573) to have a `trigger_value == DDS_BOOLEAN_TRUE` (p. 317), the data associated with the sample must be such that the `query_expression` evaluates to `DDS_BOOLEAN_TRUE` (p. 317).

The fact that the `trigger_value` of a `DDSReadCondition` (p. 1574) depends on the presence of samples on the associated `DDSDataReader` (p. 1288) implies that a single take operation can potentially change the `trigger_value` of several `DDSReadCondition` (p. 1574) or `DDSQueryCondition` (p. 1573) conditions. For example, if all samples are taken, any `DDSReadCondition` (p. 1574) and `DDSQueryCondition` (p. 1573) conditions associated with the `DDSDataReader` (p. 1288) that had their `trigger_value==TRUE` before will see the `trigger_value` change to `FALSE`. Note that this does not guarantee that `DDSWaitSet` (p. 1629) objects that were separately attached to those conditions will not be woken up. Once we have `trigger_value==TRUE` on a condition, it may wake up the attached `DDSWaitSet` (p. 1629), the condition transitioning to `trigger_value==FALSE` does not necessarily 'unwake up' the `WaitSet` as 'unwakening' may not be possible in general.

The consequence is that an application blocked on a `DDSWaitSet` (p. 1629) may return from the wait with a list of conditions, some of which are not no longer 'active'. This is unavoidable if multiple threads are concurrently waiting on separate `DDSWaitSet` (p. 1629) objects and taking data associated with the same `DDSDataReader` (p. 1288) entity.

To elaborate further, consider the following example: A `DDSReadCondition` (p. 1574) that has a `sample_state_mask = {DDS_NOT_READ_SAMPLE_STATE (p. 157)}` will have `trigger_value` of `DDS_BOOLEAN_TRUE` (p. 317) whenever a new sample arrives and will transition to `DDS_BOOLEAN_FALSE` (p. 317) as soon as all the newly-arrived samples are either read (so their sample state changes to `READ`) or taken (so they are no longer managed by RTI Connext). However if the same `DDSReadCondition` (p. 1574) had a `sample_state_mask = { DDS_READ_SAMPLE_STATE (p. 157), DDS_NOT_READ_SAMPLE_STATE (p. 157) }`, then the `trigger_value` would only become `DDS_BOOLEAN_FALSE` (p. 317) once all the newly-arrived samples are taken (it is not sufficient to read them as that would only change the sample state to `READ`), which overlaps the mask on the `DDSReadCondition` (p. 1574).

### 9.302.5 Trigger State of a `::DDSGuardCondition`

The `trigger_value` of a `DDSGuardCondition` (p. 1471) is completely controlled by the application via the operation `DDSGuardCondition::set_trigger_value` (p. 1473).

See also

- `Status Kinds` (p. 337)
- `DDSStatusCondition` (p. 1578), `DDSGuardCondition` (p. 1471)
- `DDSListener` (p. 1526)

Examples

`HelloWorld_subscriber.cxx`.

### 9.302.6 Constructor & Destructor Documentation

### 9.302.6.1 ~DDSWaitSet()

```
virtual DDSWaitSet::~DDSWaitSet ( ) [virtual]
```

Destructor.

Releases the resources associated with this **DDSWaitSet** (p. 1629).

Freeing a null pointer is safe and does nothing.

#### MT Safety:

UNSAFE. It is not safe to delete a **DDSWaitSet** (p.1629) while another thread is calling an API that uses the entity. For instance, a thread must not delete a WaitSet while another thread is blocked with **DDSWaitSet::wait** (p.1634). To properly handle this scenario, you can use a **DDSGuardCondition** (p.1471) to wake up the WaitSet and then wait for the finalization of the thread. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet()** (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_t&)** (p. 1633), **DDSGuardCondition::~~DDSGuardCondition** (p. 1472), **DDSWaitSet::~~DDSWaitSet()** (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

### 9.302.6.2 DDSWaitSet() [1/2]

```
DDSWaitSet::DDSWaitSet ( )
```

Default no-argument constructor.

Construct a new **DDSWaitSet** (p. 1629).

#### MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet()** (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_t&)** (p. 1633), **DDSGuardCondition::~~DDSGuardCondition** (p. 1472), **DDSWaitSet::~~DDSWaitSet()** (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

### 9.302.6.3 DDSWaitSet() [2/2]

```
DDSWaitSet::DDSWaitSet (
    const DDS_WaitSetProperty_t & prop )
```

<<**extension**>> (p. 237) Constructor for a **DDSWaitSet** (p. 1629) that may delay for more while specifying that will be woken up after the given number of events or delay period, whichever happens first

Constructs a new **DDSWaitSet** (p. 1629).

MT Safety:

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simultaneously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **DDSGuardCondition::DDSGuardCondition** (p. 1472), **DDSWaitSet::DDSWaitSet()** (p. 1633), **DDSWaitSet::DDSWaitSet(const DDS\_WaitSetProperty\_t&)** (p. 1633), **DDSGuardCondition::~DDSGuardCondition** (p. 1472), **DDSWaitSet::~DDSWaitSet()** (p. 1632), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

## 9.302.7 Member Function Documentation

### 9.302.7.1 wait()

```
virtual DDS_ReturnCode_t DDSWaitSet::wait (
    DDSConditionSeq & active_conditions,
    const DDS_Duration_t & timeout ) [virtual]
```

Allows an application thread to wait for the occurrence of certain conditions.

If none of the conditions attached to the **DDSWaitSet** (p. 1629) have a `trigger_value` of **DDS\_BOOLEAN\_TRUE** (p. 317), the wait operation will block, suspending the calling thread.

The result of the wait operation is the list of all the attached conditions that have a `trigger_value` of **DDS\_BOOLEAN\_TRUE** (p. 317) (i.e., the conditions that unblocked the wait).

The wait operation takes a `timeout` argument that specifies the maximum duration for the wait. If this duration is exceeded and none of the attached **DDSCondition** (p. 1276) objects are **DDS\_BOOLEAN\_TRUE** (p. 317), wait fails with **DDS\_RETCODE\_TIMEOUT** (p. 337). In this case, the resulting list of conditions will be empty. If a negative duration is passed, wait fails with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

Note: The resolution of the `timeout` period is constrained by the resolution of the system clock.

When the **DDSWaitSet** (p. 1629) is configured to wait for more than one trigger event and the timeout is exceeded before that number is reached, this function returns normally as long as at least one trigger event has occurred.

It is not allowable for more than one application thread to be waiting on the same **DDSWaitSet** (p. 1629). If the wait operation is invoked on a **DDSWaitSet** (p. 1629) that already has a thread blocking on it, the operation will return immediately with the value **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## Parameters

<i>active_conditions</i>	<< <i>inout</i> >> (p. 238) a valid non-NULL <b>DDSConditionSeq</b> (p. 1279) object. Note that RTI Connexit will not allocate a new object if <i>active_conditions</i> is NULL; the method will return <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
<i>timeout</i>	<< <i>in</i> >> (p. 238) a wait timeout

## Returns

One of the **Standard Return Codes** (p. 336) or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) or **DDS↔\_RETCODE\_TIMEOUT** (p. 337).

## Examples

**HelloWorld\_subscriber.cxx.**

## 9.302.7.2 attach\_condition()

```
virtual DDS_ReturnCode_t DDSWaitSet::attach_condition (
    DDSCondition * cond ) [virtual]
```

Attaches a **DDSCondition** (p. 1276) to the **DDSWaitSet** (p. 1629).

It is possible to attach a **DDSCondition** (p. 1276) on a **DDSWaitSet** (p. 1629) that is currently being waited upon (via the wait operation). In this case, if the **DDSCondition** (p. 1276) has a *trigger\_value* of **DDS\_BOOLEAN\_TRUE** (p. 317), then attaching the condition will unblock the **DDSWaitSet** (p. 1629).

## Parameters

<i>cond</i>	<< <i>in</i> >> (p. 238) Condition to be attached.
-------------	--

## Returns

One of the **Standard Return Codes** (p. 336), or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

## Examples

**HelloWorld\_subscriber.cxx.**

## 9.302.7.3 detach\_condition()

```
virtual DDS_ReturnCode_t DDSWaitSet::detach_condition (
    DDSCondition * cond ) [virtual]
```

Detaches a **DDSCondition** (p. 1276) from the **DDSWaitSet** (p. 1629).

It is possible to detach a **DDSCondition** (p. 1276) on a **DDSWaitSet** (p. 1629) that is currently being waited upon (via the wait operation). If the **DDSCondition** (p. 1276) was not attached to the **DDSWaitSet** (p. 1629), the operation will return **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

#### Parameters

<i>cond</i>	<< <i>in</i> >> (p. 238) Condition to be detached.
-------------	--

#### Returns

One of the **Standard Return Codes** (p. 336), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

### 9.302.7.4 get\_conditions()

```
virtual DDS_ReturnCode_t DDSWaitSet::get_conditions (
    DDSConditionSeq & attached_conditions ) [virtual]
```

Retrieves the list of attached **DDSCondition** (p. 1276) (s).

#### Parameters

<i>attached_conditions</i>	<< <i>inout</i> >> (p. 238) a <b>DDSConditionSeq</b> (p. 1279) object where the list of attached conditions will be returned
----------------------------	--

#### Returns

One of the **Standard Return Codes** (p. 336), or **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

### 9.302.7.5 set\_property()

```
virtual DDS_ReturnCode_t DDSWaitSet::set_property (
    const DDS_WaitSetProperty_t & prop ) [virtual]
```

<<**extension**>> (p. 237) Sets the **DDS\_WaitSetProperty\_t** (p. 1242), to configure the associated **DDSWaitSet** (p. 1629) to return after one or more trigger events have occurred.

#### Parameters

<i>prop</i>	<< <i>in</i> >> (p. 238)
-------------	--------------------------

## Returns

One of the **Standard Return Codes** (p. 336)

## 9.302.7.6 get\_property()

```
virtual DDS_ReturnCode_t DDSWaitSet::get_property (
    DDS_WaitSetProperty_t & prop ) [virtual]
```

<<*extension*>> (p. 237) Retrieves the **DDS\_WaitSetProperty\_t** (p. 1242) configuration of the associated **DDSWaitSet** (p. 1629).

## Parameters

<i>prop</i>	<< <i>out</i> >> (p. 238)
-------------	---------------------------

## Returns

One of the **Standard Return Codes** (p. 336)

## 9.303 DDSWriterContentFilter Class Reference

<<*interface*>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283).

Inheritance diagram for DDSWriterContentFilter:

## Public Member Functions

- virtual **DDS\_ReturnCode\_t** **writer\_compile** (void \*writer\_filter\_data, **DDS\_ExpressionProperty** \*prop, const char \*expression, const **DDS\_StringSeq** \*parameters, const **DDS\_TypeCode** \*type\_code, const char \*type\_class\_name, const **DDS\_Cookie\_t** \*cookie)=0  
*A writer-side filtering API to compile an instance of the content filter according to the filter expression and parameters specified by a matching **DDSDataReader** (p. 1288).*
- virtual struct **DDS\_CookieSeq** \* **writer\_evaluate** (void \*writer\_filter\_data, const void \*sample, const **DDS\_FilterSampleInfo** \*meta\_data)=0  
*A writer-side filtering API to retrieve a list of DataReaders whose content filters pass the sample.*
- virtual void **writer\_finalize** (void \*writer\_filter\_data, const **DDS\_Cookie\_t** \*cookie)=0

- virtual **DDS\_ReturnCode\_t writer\_attach** (void \*\*writer\_filter\_data)=0  
A writer-side filtering API to clean up a previously compiled instance of the content filter.
- virtual void **writer\_detach** (void \*writer\_filter\_data)=0  
A writer-side filtering API to create some state that can facilitate filtering on the writer side.
- virtual void **writer\_return\_loan** (void \*writer\_filter\_data, **DDS\_CookieSeq** \*cookies)=0  
A writer-side filtering API to clean up a previously created state using **DDSWriterContentFilter::writer\_attach** (p. 1640).
- virtual void **writer\_return\_loan** (void \*writer\_filter\_data, **DDS\_CookieSeq** \*cookies)=0  
A writer-side filtering API to return the loan on the list of DataReaders returned by **DDSWriterContentFilter::writer\_← evaluate** (p. 1639).

### 9.303.1 Detailed Description

<<**interface**>> (p. 237) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1283).

Entity:

**DDSContentFilteredTopic** (p. 1283)

This interface can be implemented by an application-provided class and then registered with the **DDSDomain**← **Participant** (p. 1351) such that samples can be filtered for a **DDSContentFilteredTopic** (p. 1283) with the given filter name.

**Note:** The API for using a custom content filter is subject to change in a future release.

See also

**DDSContentFilteredTopic** (p. 1283)

**DDSDomainParticipant::register\_contentfilter** (p. 1364)

### 9.303.2 Member Function Documentation

#### 9.303.2.1 writer\_compile()

```
virtual DDS_ReturnCode_t DDSWriterContentFilter::writer_compile (
    void * writer_filter_data,
    DDS_ExpressionProperty * prop,
    const char * expression,
    const DDS_StringSeq * parameters,
    const DDS_TypeCode * type_code,
    const char * type_class_name,
    const DDS_Cookie_t * cookie ) [pure virtual]
```

A writer-side filtering API to compile an instance of the content filter according to the filter expression and parameters specified by a matching **DDSDataReader** (p. 1288).

This method is called when the **DDSDataWriter** (p. 1321) discovers a **DDSDataReader** (p. 1288) with a **DDSContent**← **FilteredTopic** (p. 1283) or when a **DDSDataWriter** (p. 1321) is notified of a change in a DataReader's filter parameter for the locally registered content filter instance.

It is possible for multiple threads to be calling into this function at the same time.

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 238) A pointer to the state created using <b>DDSWriterContentFilter::writer_attach</b> (p. 1640) .
<i>prop</i>	<< <i>out</i> >> (p. 238) A pointer to <b>DDS_ExpressionProperty</b> (p. 910) that allows you to indicate to RTI Connex if a filter expression can be optimized.
<i>expression</i>	<< <i>in</i> >> (p. 238) An ASCII string with the filter expression. The memory used by this string is owned by RTI Connex and <b>must</b> not be freed. If you want to manipulate this string, you <b>must</b> first make a copy of it.
<i>parameters</i>	<< <i>in</i> >> (p. 238) A string sequence with the expression parameters with which the <b>DDSContentFilteredTopic</b> (p. 1283) was created. The string sequence is <b>equal</b> (but <b>not</b> identical) to the string sequence passed to <b>DDSDomainParticipant::create_contentfilteredtopic</b> (p. 1385). Note that the sequence passed to the compile function is <b>owned</b> by RTI Connex and <b>must not</b> be referenced outside the compile function.
<i>type_code</i>	<< <i>in</i> >> (p. 238) A pointer to the type code for the related <b>DDSTopic</b> (p. 1617) of the <b>DDSContentFilteredTopic</b> (p. 1283). A type_code is a description of a type in terms of which types it contains (such as long, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type.
<i>type_class_name</i>	<< <i>in</i> >> (p. 238) Fully qualified class name of the related <b>DDSTopic</b> (p. 1617).
<i>cookie</i>	<< <i>in</i> >> (p. 238) <b>DDS_Cookie_t</b> (p. 618) to uniquely identify <b>DDSDataReader</b> (p. 1288) for which <b>DDSWriterContentFilter::writer_compile</b> (p. 1638) was called.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## 9.303.2.2 writer\_evaluate()

```
virtual struct DDS_CookieSeq * DDSWriterContentFilter::writer_evaluate (
    void * writer_filter_data,
    const void * sample,
    const DDS_FilterSampleInfo * meta_data ) [pure virtual]
```

A writer-side filtering API to retrieve a list of DataReaders whose content filters pass the sample.

This method is called every time a **DDSDataWriter** (p. 1321) writes a new sample. Its purpose is to evaluate the sample for all the readers for which the **DDSDataWriter** (p. 1321) is performing writer-side filtering and return the list of **DDS\_Cookie\_t** (p. 618) structures associated with the DataReaders whose filters pass the sample.

It is possible for multiple threads to be calling into this function at the same time

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 238) A pointer to the state created using <b>DDSWriterContentFilter::writer_attach</b> (p. 1640) .
<i>sample</i>	<< <i>in</i> >> (p. 238) Pointer to a deserialized sample to be filtered.
<i>meta_data</i>	<< <i>in</i> >> (p. 238) Pointer to meta data associated with the sample.

## Returns

The function returns **DDS\_CookieSeq** (p. 619) which identifies the set of DataReaders whose filters pass the sample.

9.303.2.3 `writer_finalize()`

```
virtual void DDSWriterContentFilter::writer_finalize (
    void * writer_filter_data,
    const DDS_Cookie_t * cookie ) [pure virtual]
```

A writer-side filtering API to clean up a previously compiled instance of the content filter.

This method is called to notify the filter implementation that the **DDSDataWriter** (p. 1321) is no longer matching with a **DDSDataReader** (p. 1288) for which it was previously performing writer-side filtering. This will allow the filter to purge any state it was maintaining for the **DDSDataReader** (p. 1288).

It is possible for multiple threads to be calling into this function at the same time.

## Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 238) A pointer to the state created using <b>DDSWriterContentFilter::writer_attach</b> (p. 1640).
<i>cookie</i>	<b>DDS_Cookie_t</b> (p. 618) to uniquely identify <b>DDSDataReader</b> (p. 1288) for which <b>DDSWriterContentFilter::writer_finalize</b> (p. 1640) was called.

9.303.2.4 `writer_attach()`

```
virtual DDS_ReturnCode_t DDSWriterContentFilter::writer_attach (
    void ** writer_filter_data ) [pure virtual]
```

A writer-side filtering API to create some state that can facilitate filtering on the writer side.

This method is called to create some state required to perform filtering on the writer side using writer-side filtering APIs. This method will be called for every **DDSDataWriter** (p. 1321); it will be called only the first time the **DDSDataWriter** (p. 1321) matches a **DDSDataReader** (p. 1288) using the specified filter. This function will not be called for any subsequent DataReaders that match the DataWriter and are using the same filter.

## Parameters

<i>writer_filter_data</i>	<< <i>out</i> >> (p. 238) A user-specified opaque pointer to some state created on the <b>DDSDataWriter</b> (p. 1321) that will help perform writer-side filtering efficiently.
---------------------------	---

### 9.303.2.5 writer\_detach()

```
virtual void DDSWriterContentFilter::writer_detach (
    void * writer_filter_data ) [pure virtual]
```

A writer-side filtering API to clean up a previously created state using **DDSWriterContentFilter::writer\_attach** (p. 1640).

This method is called to delete any state created using the **DDSWriterContentFilter::writer\_attach** (p. 1640) function. This method will be called when the **DDSDataWriter** (p. 1321) is deleted.

#### Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 238) A pointer to the state created using <b>DDSWriterContentFilter::writer_attach</b> (p. 1640).
---------------------------	---

### 9.303.2.6 writer\_return\_loan()

```
virtual void DDSWriterContentFilter::writer_return_loan (
    void * writer_filter_data,
    DDS_CookieSeq * cookies ) [pure virtual]
```

A writer-side filtering API to return the loan on the list of DataReaders returned by **DDSWriterContentFilter::writer\_↔evaluate** (p. 1639).

This method is called to return the loan on **DDS\_CookieSeq** (p. 619) returned by **DDSWriterContentFilter::writer\_↔return\_loan** (p. 1641). It is possible for multiple threads to be calling into this function at the same time.

#### Parameters

<i>writer_filter_data</i>	<< <i>in</i> >> (p. 238) A pointer to the state created using <b>DDSWriterContentFilter::writer_attach</b> (p. 1640).
<i>cookies</i>	<< <i>in</i> >> (p. 238) <b>DDS_CookieSeq</b> (p. 619) for which the <b>DDSWriterContentFilter::writer_return_loan</b> (p. 1641). was invoked.

## 9.304 rti::flat::FinalAlignedArrayOffset< ElementOffset, N > Class Template Reference

Offset to an array of final elements.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for `rti::flat::FinalAlignedArrayOffset< ElementOffset, N >`:

## Public Member Functions

- `ElementOffset` **get\_element** (unsigned int i)  
*Gets the Offset to an element.*

## Additional Inherited Members

### 9.304.1 Detailed Description

```
template<typename ElementOffset, unsigned int N>
class rti::flat::FinalAlignedArrayOffset< ElementOffset, N >
```

Offset to an array of final elements.

#### Template Parameters

<i>ElementOffset</i>	A final struct Offset, such as <b>MyFlatFinalOffset</b> (p. 1746).
<i>N</i>	The array bound. For multidimensional arrays, <i>N</i> is the product of each dimension bound.

Represents an Offset to an array member and allows getting an Offset to each of its elements.

The following code shows how to use a **FinalAlignedArrayOffset** (p. 1641) to initialize an array member with **MyFlat**↔  
**MutableBuilder** (p. 1750):

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
auto array_offset = builder.add_my_final_array();
for (MyFlatFinalOffset element_offset : array_offset) {
    element_offset.my_primitive(3);
    // ...
}
// Or access an element directly:
auto element_offset = array_offset.get_element(3);
element_offset.my_primitive(3);
```

A more efficient way to access a final array, provided it complies with the required preconditions, is through **rti::flat**↔  
**::plain\_cast()** (p. 566).

**FinalArrayOffset** (p. 1643) and **FinalAlignedArrayOffset** (p. 1641) provide the same interface, but have different implementation details. **FinalArrayOffset** (p. 1643) is used when the array member is part of a final type too, whereas **FinalAlignedArrayOffset** (p. 1641) corresponds to an array inside a mutable type.

A **FinalAlignedArrayOffset** (p. 1641) may meet the requirements to be cast to an array of the equivalent plain C++ element type (see **rti::flat::plain\_cast()** (p. 566)).

See also

**MutableArrayOffset** (p. 1742) encapsulates arrays of variable-size elements

## 9.304.2 Member Function Documentation

### 9.304.2.1 get\_element()

```
template<typename ElementOffset , unsigned int N>
ElementOffset rti::flat::FinalAlignedArrayOffset< ElementOffset, N >::get_element (
    unsigned int i ) [inline]
```

Gets the Offset to an element.

Parameters

<i>i</i>	The zero-based index to the element
----------	-------------------------------------

Returns

The Offset to the element in the i-th position

See also

**rti::flat::plain\_cast()** (p. 566) for a method to access all the elements at once

## 9.305 rti::flat::FinalArrayOffset< ElementOffset, N > Class Template Reference

Offset to an array of final elements.

```

```

Inheritance diagram for rti::flat::FinalArrayOffset< ElementOffset, N >:

## Public Member Functions

- ElementOffset **get\_element** (unsigned int i)  
*Gets the Offset to an element.*

### 9.305.1 Detailed Description

```
template<typename ElementOffset, unsigned int N>
class rti::flat::FinalArrayOffset< ElementOffset, N >
```

Offset to an array of final elements.

#### Template Parameters

<i>ElementOffset</i>	A final struct Offset, such as <b>MyFlatFinalOffset</b> (p. 1746).
<i>N</i>	The array bound. For multidimensional arrays, N is the product of each dimension bound.

Represents an Offset to an array member and allows getting an Offset to each of its elements.

**FinalArrayOffset** (p. 1643) and **FinalAlignedArrayOffset** (p. 1641) provide the same interface, but have different implementation details. **FinalArrayOffset** (p. 1643) is used when the array member is part of a final type too, whereas **FinalAlignedArrayOffset** (p. 1641) corresponds to an array inside a mutable type.

A **FinalArrayOffset** (p. 1643) may meet the requirements to be cast to an array of the equivalent plain C++ element type (see **rti::flat::plain\_cast()** (p. 566)).

### 9.305.2 Member Function Documentation

#### 9.305.2.1 get\_element()

```
template<typename ElementOffset , unsigned int N>
ElementOffset rti::flat::FinalArrayOffset< ElementOffset, N >::get_element (
    unsigned int i ) [inline]
```

Gets the Offset to an element.

#### Parameters

<i>i</i>	The zero-based index to the element
----------	-------------------------------------

**Returns**

The Offset to the element in the i-th position

**9.306 rti::flat::FinalOffset< T > Class Template Reference**

The base class of all Offsets to a final struct type.

```
#include <Offset.hpp>
```

Inheritance diagram for rti::flat::FinalOffset< T >:

**Additional Inherited Members****9.306.1 Detailed Description**

```
template<typename T>
class rti::flat::FinalOffset< T >
```

The base class of all Offsets to a final struct type.

This class contains only implementation details; all the public accessors are defined in the generated type (**MyFlat**↔**FinalOffset** (p. 1746)).

**9.307 rti::flat::FinalSequenceBuilder< ElementOffset > Class Template Reference**

Builds a sequence member of fixed-size elements.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for rti::flat::FinalSequenceBuilder< ElementOffset >:

## Public Member Functions

- ElementOffset **add\_next** ()  
*Adds the next element.*
- **FinalSequenceBuilder** & **add\_n** (unsigned int count)  
*Adds a number of elements at once.*
- Offset **finish** ()  
*Finishes building the sequence.*

## Additional Inherited Members

### 9.307.1 Detailed Description

```
template<typename ElementOffset>
class rti::flat::FinalSequenceBuilder< ElementOffset >
```

Builds a sequence member of fixed-size elements.

#### Template Parameters

<i>ElementOffset</i>	The Offset type for the elements of the sequence
----------------------	--

To add an element, call **add\_next()** (p. 1646) and use the ElementOffset it returns to initialize the element's values. An empty sequence can be built by calling **finish()** (p. 1647) without any call to **add\_next()** (p. 1646).

This class doesn't enforce the sequence bound set in IDL.

The following example uses a **FinalSequenceBuilder** (p. 1645) to initialize a sequence member of **MyFlatMutableBuilder** (p. 1750) with two elements:

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
auto seq_builder = builder.build_my_final_seq();
MyFlatFinalOffset element = seq_builder.add_next();
element.my_primitive(1);
// ... continue initializing the first element
element = seq_builder.add_next();
element.my_primitive(2);
// ... continue initializing the second element

seq_builder.finish();
```

If the element type meets certain requirements, **rti::flat::plain\_cast()** (p. 566) provides a more efficient way to initialize a sequence of final elements.

### 9.307.2 Member Function Documentation

### 9.307.2.1 add\_next()

```
template<typename ElementOffset >
ElementOffset rti::flat::FinalSequenceBuilder< ElementOffset >::add_next ( ) [inline]
```

Adds the next element.

#### Returns

The Offset that can be used to set the element values

### 9.307.2.2 add\_n()

```
template<typename ElementOffset >
FinalSequenceBuilder & rti::flat::FinalSequenceBuilder< ElementOffset >::add_n (
    unsigned int count ) [inline]
```

Adds a number of elements at once.

This is an alternative to **add\_next()** (p. 1646).

To initialize the elements, call **finish()** (p. 1647) and use the Offset it returns to access the elements.

### 9.307.2.3 finish()

```
template<typename ElementOffset >
Offset rti::flat::FinalSequenceBuilder< ElementOffset >::finish ( ) [inline]
```

Finishes building the sequence.

#### Returns

An Offset to the member that has been built.

**discard()** (p. 580)

## 9.308 rti::flat::flat\_type\_traits< T > Struct Template Reference

Given a **Sample** (p. 1916), an Offset or a Builder, it allows obtaining the other types.

### 9.308.1 Detailed Description

```
template<typename T>
struct rti::flat::flat_type_traits< T >
```

Given a **Sample** (p. 1916), an Offset or a Builder, it allows obtaining the other types.

### Template Parameters

<i>T</i>	<p>One of the following:</p> <ul style="list-style-type: none"> <li>• A <b>Sample</b> (p. 1916) type, such as <b>MyFlatMutable</b> (p. 562)</li> <li>• An Offset type, such as <b>MyFlatMutableOffset</b> (p. 1757)</li> <li>• A Builder type, such as <b>MyFlatMutableBuilder</b> (p. 1750)</li> </ul>
----------	---

Given *T*, this type provides the following typedefs:

- `flat_type_traits<T>::offset`, *T*'s related offset type (undefined if *T* itself is an Offset)
- `flat_type_traits<T>::builder`, *T*'s related builder type (undefined if *T* itself is a Builder, or the topic-type is not mutable)
- `flat_type_traits<T>::flat_type`, *T*'s related **Sample** (p. 1916) type (undefined if *T* itself is a **Sample** (p. 1916) type)
- `flat_type_traits<T>::plain_type`, *T*'s equivalent definition as a plain (non-FlatData) type.

For example, for *T* = **MyFlatMutable** (p. 562), `flat_type_traits` (p. 1647) is defined as follows:

```
template <>
struct flat_type_traits<MyFlatMutable> {
    typedef MyFlatMutablePlainHelper plain_type;
    typedef MyFlatMutableOffset offset;
    typedef MyFlatMutableBuilder builder;
};
```

Or if *T* = **MyFlatMutableOffset** (p. 1757):

```
template <>
struct flat_type_traits<MyFlatMutableOffset> {
    typedef MyFlatMutable flat_type;
    typedef MyFlatMutablePlainHelper plain_type;
    typedef MyFlatMutableBuilder builder;
};
```

## 9.309 Foo Struct Reference

A representative user-defined data type.

### 9.309.1 Detailed Description

A representative user-defined data type.

**Foo** (p. 1648) represents a user-defined data-type that is intended to be distributed using DDS.

The type **Foo** (p. 1648) is usually defined using IDL syntax and placed in a ".idl" file that is then processed using `rtiddsgen`. The `rtiddsgen` utility generates the helper classes **FooSeq** (p. 1697) as well as the necessary code for DDS to manipulate the type (serialize it so that it can be sent over the network) as well as the implied **FooDataReader** (p. 1649) and **FooDataWriter** (p. 1676) types that allow the application to send and receive data of this type.

### Public Member Functions

- virtual **DDS\_ReturnCode\_t** **read** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0  
*Access a collection of data samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **take** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0  
*Access a collection of data-samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **read\_w\_condition** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDSReadCondition** \*condition)=0  
*Accesses via **FooDataReader::read** (p. 1651) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).*
- virtual **DDS\_ReturnCode\_t** **take\_w\_condition** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, **DDSReadCondition** \*condition)=0  
*Analogous to **FooDataReader::read\_w\_condition** (p. 1657) except it accesses samples via the **FooDataReader::take** (p. 1652) operation.*
- virtual **DDS\_ReturnCode\_t** **read\_next\_sample** ( **Foo** &received\_data, **DDS\_SampleInfo** &sample\_info)=0  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **take\_next\_sample** ( **Foo** &received\_data, **DDS\_SampleInfo** &sample\_info)=0  
*Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **read\_instance** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &a\_handle, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0  
*Access a collection of data samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **take\_instance** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &a\_handle, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0  
*Access a collection of data samples from the **DDSDataReader** (p. 1288).*
- virtual **DDS\_ReturnCode\_t** **read\_instance\_w\_condition** ( **FooSeq** &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDSReadCondition** \*condition)=0

<<**extension**>> (p. 237) Accesses via *FooDataReader::read\_instance* (p. 1661) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** *take\_instance\_w\_condition* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDSReadCondition** \*condition)=0

<<**extension**>> (p. 237) Accesses via *FooDataReader::take\_instance* (p. 1663) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** *read\_next\_instance* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** *take\_next\_instance* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDS\_SampleStateMask** sample\_states, **DDS\_ViewStateMask** view\_states, **DDS\_InstanceStateMask** instance\_states)=0

Access a collection of data samples from the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** *read\_next\_instance\_w\_condition* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDSReadCondition** \*condition)=0

Accesses via *FooDataReader::read\_next\_instance* (p. 1667) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** *take\_next\_instance\_w\_condition* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq, **DDS\_Long** max\_samples, const **DDS\_InstanceHandle\_t** &previous\_handle, **DDSReadCondition** \*condition)=0

Accesses via *FooDataReader::take\_next\_instance* (p. 1668) the samples that match the criteria specified in the *DDSReadCondition* (p. 1574).

- virtual **DDS\_ReturnCode\_t** *return\_loan* ( *FooSeq* &received\_data, **DDS\_SampleInfoSeq** &info\_seq)=0

Indicates to the *DDSDataReader* (p. 1288) that the application is done accessing the collection of *received\_data* and *info\_seq* obtained by some earlier invocation of *read* or *take* on the *DDSDataReader* (p. 1288).

- virtual **DDS\_ReturnCode\_t** *get\_key\_value* ( *Foo* &key\_holder, const **DDS\_InstanceHandle\_t** handle)=0

Retrieve the instance *key* that corresponds to an instance *handle*.

- virtual **DDS\_InstanceHandle\_t** *lookup\_instance* (const *Foo* &key\_holder)=0

Retrieves the instance *handle* that corresponds to an instance *key\_holder*.

- virtual **DDS\_ReturnCode\_t** *is\_data\_consistent* ( **DDS\_Boolean** &is\_data\_consistent, const *TData* \*sample, const **DDS\_SampleInfo** \*sample\_info)=0

When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the *DataWriter*.

## Static Public Member Functions

- static **FooDataReader** \* *narrow* ( **DDSDataReader** \*reader)

Narrow the given *DDSDataReader* (p. 1288) pointer to a *FooDataReader* (p. 1649) pointer.

### 9.310.1 Detailed Description

<<**interface**>> (p. 237) <<**generic**>> (p. 237) User data type-specific data reader.

Defines the user data type specific reader interface generated for each application class.

The concrete user data type reader automatically generated by the implementation is an incarnation of this class.

## 9.310.2 Member Function Documentation

### 9.310.2.1 narrow()

```
static FooDataReader * FooDataReader::narrow (
    DDSDataReader * reader ) [static]
```

Narrow the given **DDSDataReader** (p. 1288) pointer to a **FooDataReader** (p. 1649) pointer.

### 9.310.2.2 read()

```
virtual DDS_ReturnCode_t FooDataReader::read (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

This operation offers the same functionality and API as **FooDataReader::take** (p. 1652) except that the samples returned remain in the **DDSDataReader** (p. 1288) such that they can be retrieved again by means of a read or take operation.

Please refer to the documentation of **FooDataReader::take()** (p. 1652) for details on the number of samples returned within the `received_data` and `info_seq` as well as the order in which the samples appear in these sequences.

The act of reading a sample changes its `sample_state` to **DDS\_READ\_SAMPLE\_STATE** (p. 157). If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the instance to be **DDS\_↔ NOT\_NEW\_VIEW\_STATE** (p. 159). It will not affect the `instance_state` of the instance.

Once the application completes its use of the samples, it must 'return the loan' to the **DDSDataReader** (p. 1288) by calling the **FooDataReader::return\_loan** (p. 1672) operation.

**Important:** When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS\_SampleInfo** (p. 1082) objects after the call to **FooDataReader::return\_loan** (p. 1672). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

*Note:* While the loan must be returned at some point, you do *not* have to do so before the next **FooDataReader::take** (p. 1652) call. However, failure to return the loan will eventually deplete the **DDSDataReader** (p. 1288) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDSDataReader** (p. 1288) is specified by the **DDS\_ResourceLimitsQosPolicy** (p. 1052) and the **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).

*Important:* If the samples "returned" by this method are loaned from RTI Connex (see **FooDataReader::take** (p. 1652) for more information on memory loaning), it is important that their contents not be changed. Because the memory in which the data is stored belongs to the middleware, any modifications made to the data will be seen the next time the same samples are read or taken; the samples will no longer reflect the state that was received from the network.

#### Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) User data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <i>inout</i> >> (p. 238) A <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>sample_states</i>	<< <i>in</i> >> (p. 238) Data samples matching one of these <i>sample_states</i> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 238) Data samples matching one of these <i>view_state</i> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 238) Data samples matching ones of these <i>instance_state</i> are returned.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).

**FooDataReader::read\_w\_condition** (p. 1657),  
**FooDataReader::take\_w\_condition** (p. 1658)  
**DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.310.2.3 take()

```
virtual DDS_ReturnCode_t FooDataReader::take (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Access a collection of data-samples from the **DDSDataReader** (p. 1288).

The operation will return the list of samples received by the **DDSDataReader** (p. 1288) since the last **FooDataReader**↔**::take** (p. 1652) operation that matches the specified **DDS\_SampleStateMask** (p. 156), **DDS\_ViewStateMask** (p. 158) and **DDS\_InstanceStateMask** (p. 160).

This operation may fail with **DDS\_RETCODE\_ERROR** (p. 336) if the **DDS\_DataReaderResourceLimitsQosPolicy**↔**::max\_outstanding\_reads** (p. 659) limit has been exceeded.

The actual number of samples returned depends on the information that has been received by the middleware as well as the **DDS\_HistoryQosPolicy** (p. 919), **DDS\_ResourceLimitsQosPolicy** (p. 1052), **DDS\_DataReader**↔**ResourceLimitsQosPolicy** (p. 654) and the characteristics of the data-type that is associated with the **DDSDataReader** (p. 1288):

- In the case where the **DDS\_HistoryQosPolicy::kind** (p. 921) is **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406), the call will return at most **DDS\_HistoryQosPolicy::depth** (p. 921) samples for each ALIVE instance and (**DDS**↔**HistoryQosPolicy::depth** (p. 921) +1) samples for each NOT\_ALIVE instance. The extra sample is an invalid sample (**DDS\_SampleInfo::valid\_data** (p. 1089) is FALSE) that is used to indicate the instance state transition from ALIVE to NOT\_ALIVE.
- The maximum number of samples returned is limited by **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055), and by **DDS\_DataReaderResourceLimitsQosPolicy::max\_samples\_per\_read** (p. 659).
- For multiple instances, the number of samples returned is additionally limited by the product (**DDS\_Resource**↔**LimitsQosPolicy::max\_samples\_per\_instance** (p. 1055)
  - **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055))
- If **DDS\_DataReaderResourceLimitsQosPolicy::max\_infos** (p. 657) is limited, the number of samples returned may also be limited if insufficient **DDS\_SampleInfo** (p. 1082) resources are available.

If the read or take succeeds and the number of samples returned has been limited (by means of a maximum limit, as listed above, or insufficient **DDS\_SampleInfo** (p. 1082) resources), the call will complete successfully and provide those samples the reader is able to return. The user may need to make additional calls, or return outstanding loaned buffers in the case of insufficient resources, in order to access remaining samples.

Note that in the case where the **DDSTopic** (p. 1617) associated with the **DDSDataReader** (p. 1288) is bound to a data-type that has no key definition, then there will be at most one instance in the **DDSDataReader** (p. 1288). So the per-sample limits will apply.

The act of *taking* a sample removes it from RTI Connex so it cannot be read or taken again. If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the sample's instance to **DDS\_NOT**↔**NEW\_VIEW\_STATE** (p. 159). It will not affect the `instance_state` of the sample's instance.

After **FooDataReader::take** (p. 1652) completes, `received_data` and `info_seq` will be of the same length and contain the received data.

If the sequences are empty (maximum size equals 0) when the **FooDataReader::take** (p. 1652) is called, the samples returned in the `received_data` and the corresponding `info_seq` are 'loaned' to the application from buffers provided by the **DDSDataReader** (p. 1288). The application can use them as desired and has guaranteed exclusive access to them.

Once the application completes its use of the samples it must 'return the loan' to the **DDSDataReader** (p. 1288) by calling the **FooDataReader::return\_loan** (p. 1672) operation.

**Important:** When you loan data from the middleware, you *must not* keep any pointers to any part of the data samples or the **DDS\_SampleInfo** (p. 1082) objects after the call to **FooDataReader::return\_loan** (p. 1672). Returning the loan places the objects back into a pool, allowing the middleware to overwrite them with new data.

*Note:* While you must call **FooDataReader::return\_loan** (p. 1672) at some point, you do *not* have to do so before the next **FooDataReader::take** (p. 1652) call. However, failure to return the loan will eventually deplete the **DDSDataReader** (p. 1288) of the buffers it needs to receive new samples and eventually samples will start to be lost. The total number of buffers available to the **DDSDataReader** (p. 1288) is specified by the **DDS\_ResourceLimitsQosPolicy** (p. 1052) and the **DDS\_DataReaderResourceLimitsQosPolicy** (p. 654).

If the sequences are not empty (maximum size not equal to 0 and length not equal to 0) when **FooDataReader::take** (p. 1652) is called, samples are copied to `received_data` and `info_seq`. The application will not need to call **FooDataReader::return\_loan** (p. 1672).

The order of the samples returned to the caller depends on the **DDS\_PresentationQosPolicy** (p. 996).

- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is **DDS\_INSTANCE\_PRESENTATION\_QOS** (p. 418), the returned collection is a list where samples belonging to the same data instance are consecutive.
- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then the returned collection is a list where samples belonging to the same data instance are consecutive.
- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is **DDS\_TOPIC\_PRESENTATION\_QOS** (p. 418) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then the returned collection is a list where the relative order of samples as they were written by a DataWriter is preserved also across different instances. In other words, changes made by a single DataWriter are made available to subscribers in the same order in which they occur. Samples belonging to the same instance may or may not be consecutive. This is because, to preserve order within a single DataWriter, it may be necessary to mix samples from different instances.
- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) is set to **DDS\_BOOLEAN\_FALSE** (p. 317), then the returned collection is a list where samples belonging to the same data instance are consecutive.
- If **DDS\_PresentationQosPolicy::access\_scope** (p. 1000) is **DDS\_GROUP\_PRESENTATION\_QOS** (p. 418) and **DDS\_PresentationQosPolicy::ordered\_access** (p. 1000) is set to **DDS\_BOOLEAN\_TRUE** (p. 317), then changes made to instances by a set of DataWriters attached to a common Publisher are made available in the order in which they were written. For this to happen, the application must take the samples using the Subscriber's **DDSSubscriber::begin\_access** (p. 1605) and **DDSSubscriber::end\_access** (p. 1606) operations (see the "Ordered Access" section in the "PRESENTATION QosPolicy" section of the *Core Libraries User's Manual*).

In all of the above cases, the relative order between the samples of one instance is consistent with the **DESTINATION\_ORDER** (p. 386) policy:

- If `DDS_DestinationOrderQosPolicy::kind` (p. 711) is `DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387), samples belonging to the same instances will appear in the relative order in which there were received (FIFO, earlier samples ahead of the later samples).
- If `DDS_DestinationOrderQosPolicy::kind` (p. 711) is `DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS` (p. 387), samples belonging to the same instances will appear in the relative order implied by the `source_timestamp` (FIFO, smaller values of `source_timestamp` ahead of the larger values).

If the `DDSDataReader` (p. 1288) has no samples that meet the constraints, the method will fail with `DDS_RETCODE_NO_DATA` (p. 337).

In addition to the collection of samples, the read and take operations also use a collection of `DDS_SampleInfo` (p. 1082) structures.

The initial (input) properties of the `received_data` and `info_seq` collections will determine the precise behavior of the read or take operation. For the purposes of this description, the collections are modeled as having these properties:

- whether the collection container owns the memory of the elements within (`owns`, see `FooSeq::has_ownership` (p. 1711))
- the current-length (`len`, see `FooSeq::length()` (p. 1705))
- the maximum length (`max_len`, see `FooSeq::maximum()` (p. 1707))

The initial values of the `owns`, `len` and `max_len` properties for the `received_data` and `info_seq` collections govern the behavior of the read and take operations as specified by the following rules:

1. The values of `owns`, `len` and `max_len` properties for the two collections must be identical. Otherwise read/take will fail with `DDS_RETCODE_PRECONDITION_NOT_MET` (p. 336).
2. On successful output, the values of `owns`, `len` and `max_len` will be the same for both collections.
3. If the initial `max_len==0`, then the `received_data` and `info_seq` collections will be filled with elements that are loaned by the `DDSDataReader` (p. 1288). On output, `owns` will be `FALSE`, `len` will be set to the number of values returned, and `max_len` will be set to a value verifying `max_len >= len`. The use of this variant allows for Zero Copy access to the data and the application will need to return the loan to the `DDSDataWriter` (p. 1321) using `FooDataReader::return_loan` (p. 1672).
4. If the initial `max_len>0` and `owns==FALSE`, then the read or take operation will fail with `DDS_RETCODE_PRECONDITION_NOT_MET` (p. 336). This avoids the potential hard-to-detect memory leaks caused by an application forgetting to return the loan.
5. If initial `max_len>0` and `owns==TRUE`, then the read or take operation will copy the `received_data` values and `DDS_SampleInfo` (p. 1082) values into the elements already inside the collections. On output, `owns` will be `TRUE`, `len` will be set to the number of values copied and `max_len` will remain unchanged. The use of this variant forces a copy but the application can control where the copy is placed and the application will not need to return the loan. The number of samples copied depends on the relative values of `max_len` and `max_samples`:
  - If `max_samples == LENGTH_UNLIMITED`, then at most `max_len` values will be copied. The use of this variant lets the application limit the number of samples returned to what the sequence can accommodate.

- If `max_samples <= max_len`, then at most `max_samples` values will be copied. The use of this variant lets the application limit the number of samples returned to fewer than what the sequence can accommodate.
- If `max_samples > max_len`, then the read or take operation will fail with **DDS\_RETCODE\_← PRECONDITION\_NOT\_MET** (p. 336). This avoids the potential confusion where the application expects to be able to access up to `max_samples`, but that number can never be returned, even if they are available in the **DDSDataReader** (p. 1288), because the output sequence cannot accommodate them.

As described above, upon completion, the `received_data` and `info_seq` collections may contain elements loaned from the **DDSDataReader** (p. 1288). If this is the case, the application will need to use **FooDataReader← ::return\_loan** (p. 1672) to return the loan once it is no longer using the `received_data` in the collection. When **FooDataReader← ::return\_loan** (p. 1672) completes, the collection will have `owns=FALSE` and `max_len=0`. The application can determine whether it is necessary to return the loan or not based on how the state of the collections when the read/take operation was called or by accessing the `owns` property. However, in many cases it may be simpler to always call **FooDataReader← ::return\_loan** (p. 1672), as this operation is harmless (i.e., it leaves all elements unchanged) if the collection does not have a loan. To avoid potential memory leaks, the implementation of the **Foo** (p. 1648) and **DDS\_SampleInfo** (p. 1082) collections should disallow changing the length of a collection for which `owns==FALSE`. Furthermore, deleting a collection for which `owns==FALSE` should be considered an error.

On output, the collection of **Foo** (p. 1648) values and the collection of **DDS\_SampleInfo** (p. 1082) structures are of the same length and are in a one-to-one correspondence. Each **DDS\_SampleInfo** (p. 1082) provides information, such as the `source_timestamp`, the `sample_state`, `view_state`, and `instance_state`, etc., about the corresponding sample. Some elements in the returned collection may not have valid data. If the `instance_state` in the **DDS\_SampleInfo** (p. 1082) is **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161) or **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_← STATE** (p. 161), then the last sample for that instance in the collection (that is, the one whose **DDS\_SampleInfo** (p. 1082) has `sample_rank==0`) does not contain valid data.

Samples that contain no data do not count towards the limits imposed by the **DDS\_ResourceLimitsQosPolicy** (p. 1052). The act of reading/taking a sample sets its `sample_state` to **DDS\_READ\_SAMPLE\_STATE** (p. 157).

If the sample belongs to the most recent generation of the instance, it will also set the `view_state` of the instance to **DDS\_NOT\_NEW\_VIEW\_STATE** (p. 159). It will not affect the `instance_state` of the instance.

This operation must be provided on the specialized class that is generated for the particular application data-type that is being read (**Foo** (p. 1648)).

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the operation fails with **DDS\_RETCODE\_← \_NO\_DATA** (p. 337). For an example on how `take` can be used, please refer to the **Access received data via a reader** (p. 211) "receive example".

#### Parameters

<code>received_data</code>	<< <i>inout</i> >> (p. 238) User data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<code>info_seq</code>	<< <i>inout</i> >> (p. 238) A <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<code>max_samples</code>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described above.
<code>sample_states</code>	<< <i>in</i> >> (p. 238) Data samples matching one of these <code>sample_states</code> are returned.
<code>view_states</code>	<< <i>in</i> >> (p. 238) Data samples matching one of these <code>view_state</code> are returned.
<code>instance_states</code>	<< <i>in</i> >> (p. 238) Data samples matching one of these <code>instance_state</code> are returned.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::read** (p. 1651)

**FooDataReader::read\_w\_condition** (p. 1657), **FooDataReader::take\_w\_condition** (p. 1658)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.310.2.4 read\_w\_condition()

```
virtual DDS_ReturnCode_t FooDataReader::read_w_condition (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [pure virtual]
```

Accesses via **FooDataReader::read** (p. 1651) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

This operation is especially useful in combination with **DDSQueryCondition** (p. 1573) to filter data samples based on the content.

The specified **DDSReadCondition** (p. 1574) must be attached to the **DDSDataReader** (p. 1288); otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

In case the **DDSReadCondition** (p. 1574) is a plain **DDSReadCondition** (p. 1574) and not the specialized **DDSQueryCondition** (p. 1573), the operation is equivalent to calling **FooDataReader::read** (p. 1651) and passing as *sample\_states*, *view\_states* and *instance\_states* the value of the corresponding attributes in the *read\_w\_condition*. Using this operation, the application can avoid repeating the same parameters specified when creating the **DDSReadCondition** (p. 1574).

The samples are accessed with the same semantics as **FooDataReader::read** (p. 1651).

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the operation will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>condition</i>	<< <i>in</i> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::read** (p. 1651)

**FooDataReader::take** (p. 1652), **FooDataReader::take\_w\_condition** (p. 1658)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.310.2.5 take\_w\_condition()

```
virtual DDS_ReturnCode_t FooDataReader::take_w_condition (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    DDSReadCondition * condition ) [pure virtual]
```

Analogous to **FooDataReader::read\_w\_condition** (p. 1657) except it accesses samples via the **FooDataReader::take** (p. 1652) operation.

This operation is analogous to **FooDataReader::read\_w\_condition** (p. 1657) except that it accesses samples via the **FooDataReader::take** (p. 1652) operation.

The specified **DDSReadCondition** (p. 1574) must be attached to the **DDSDataReader** (p. 1288); otherwise the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The samples are accessed with the same semantics as **FooDataReader::take** (p. 1652).

This operation is especially useful in combination with **DDSQueryCondition** (p. 1573) to filter data samples based on the content.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>condition</i>	<< <i>in</i> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::read\_w\_condition** (p. 1657), **FooDataReader::read** (p. 1651)

**FooDataReader::take** (p. 1652)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.310.2.6 read\_next\_sample()

```
virtual DDS_ReturnCode_t FooDataReader::read_next_sample (
    Foo & received_data,
    DDS_SampleInfo & sample_info ) [pure virtual]
```

Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).

This operation copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288). This operation also copies the corresponding **DDS\_SampleInfo** (p. 1082). The implied order among the samples stored in the **DDSDataReader** (p. 1288) is the same as for the **FooDataReader::read** (p. 1651) operation.

The **FooDataReader::read\_next\_sample** (p. 1659) operation is semantically equivalent to the **FooDataReader::read** (p. 1651) operation, where the input data sequences has `max_len=1`, the `sample_states=NOT_READ`, the `view_↔states=ANY_VIEW_STATE`, and the `instance_states=ANY_INSTANCE_STATE`.

The **FooDataReader::read\_next\_sample** (p. 1659) operation provides a simplified API to 'read' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDSDataReader** (p. 1288), the operation will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337) and nothing is copied.

## Note

Calling **FooDataReader::read\_next\_sample** (p. 1659) from the **DDSDataReaderListener::on\_data\_available()** (p. 1317) callback reads only one sample of potentially many samples in the reader queue, because **DDSData↔ReaderListener::on\_data\_available()** (p. 1317) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader::read\_next\_sample** (p. 1659) in a loop within the `on_data_available` callback until **FooDataReader::read\_next\_sample** (p. 1659) returns **DDS\_RETCODE\_NO↔DATA** (p. 337) . This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use **FooDataReader::read** (p. 1651) rather than **FooDataReader::read\_next\_sample** (p. 1659) in order to read more than one sample at a time.)

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>Foo</b> (p. 1648) object where the next received data sample will be returned. The <i>received_data</i> must have been fully allocated. Otherwise, this operation may fail.
<i>sample_info</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfo</b> (p. 1082) object where the next received sample info will be returned.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::read** (p. 1651)

## 9.310.2.7 take\_next\_sample()

```
virtual DDS_ReturnCode_t FooDataReader::take_next_sample (
    Foo & received_data,
    DDS_SampleInfo & sample_info ) [pure virtual]
```

Copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288).

This operation copies the next not-previously-accessed data value from the **DDSDataReader** (p. 1288) and 'removes' it from the **DDSDataReader** (p. 1288) so that it is no longer accessible. This operation also copies the corresponding **DDS\_SampleInfo** (p. 1082). This operation is analogous to the **FooDataReader::read\_next\_sample** (p. 1659) except for the fact that the sample is removed from the **DDSDataReader** (p. 1288).

The **FooDataReader::take\_next\_sample** (p. 1660) operation is semantically equivalent to the **FooDataReader::take** (p. 1652) operation, where the input data sequences has `max_len=1`, the `sample_states=NOT_READ`, the `view_↔states=ANY_VIEW_STATE`, and the `instance_states=ANY_INSTANCE_STATE`.

The **FooDataReader::take\_next\_sample** (p. 1660) operation provides a simplified API to 'take' samples, avoiding the need for the application to manage sequences and specify states.

If there is no unread data in the **DDSDataReader** (p. 1288), the operation will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337) and nothing is copied.

## Note

Calling **FooDataReader::take\_next\_sample** (p. 1660) from the **DDSDataReaderListener::on\_data\_available()** (p. 1317) callback retrieves only one sample of potentially many samples in the reader queue, because **DDSDataReaderListener::on\_data\_available()** (p. 1317) is triggered only once when new samples arrive in the queue. Therefore, it is recommended that you call **FooDataReader::take\_next\_sample** (p. 1660) in a loop within the `on_data_available` callback until **FooDataReader::take\_next\_sample** (p. 1660) returns **DDS\_RETCODE\_NO\_DATA** (p. 337) . This ensures that all samples in the reader queue are serviced by application logic. (You may also choose to use the **FooDataReader::take** (p. 1652) rather than **FooDataReader::take\_next\_sample** (p. 1660) in order to take more than one sample at a time.)

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>Foo</b> (p. 1648) object where the next received data sample will be returned. The <i>received_data</i> must have been fully allocated. Otherwise, this operation may fail.
<i>sample_info</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfo</b> (p. 1082) object where the next received sample info will be returned.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336),
------------	---

**DDS\_RETCODE\_NO\_DATA** (p. 337) or **DDS\_RETCODE\_NOT\_ENABLED** (p. 337).

## See also

**FooDataReader::take** (p. 1652)

## 9.310.2.8 read\_instance()

```
virtual DDS_ReturnCode_t FooDataReader::read_instance (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & a_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288). The behavior is identical to **FooDataReader::read** (p. 1651), except that all samples returned belong to the single specified instance whose handle is *a\_handle*.

Upon successful completion, the data collection will contain samples all belonging to the same instance. The corresponding **DDS\_SampleInfo** (p. 1082) verifies **DDS\_SampleInfo::instance\_handle** (p. 1087) == *a\_handle*.

The **FooDataReader::read\_instance** (p. 1661) operation is semantically equivalent to the **FooDataReader::read** (p. 1651) operation, except in building the collection, the **DDSDataReader** (p. 1288) will check that the sample belongs to the specified instance and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader::read\_instance** (p. 1661) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the *received\_data* and *sample\_info*. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::read\_instance** (p. 1661) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_↔\_NO\_DATA** (p. 337).

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) if the **DDS\_InstanceHandle\_t** (p. 74) **a\_↔handle** does not correspond to an existing data-object known to the **DDSDataReader** (p. 1288).

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>a_handle</i>	<< <i>in</i> >> (p. 238) The specified instance to return samples for. The method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) if the <i>handle</i> does not correspond to an existing data-object known to the <b>DDSDataReader</b> (p. 1288).
<i>sample_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <i>sample_states</i> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <i>view_state</i> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <i>instance_state</i> are returned.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::read** (p. 1651)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.310.2.9 take\_instance()

```
virtual DDS_ReturnCode_t FooDataReader::take_instance (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & a_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288). The behavior is identical to **FooDataReader::take** (p. 1652), except for that all samples returned belong to the single specified instance whose handle is *a\_handle*.

The semantics are the same for the **FooDataReader::take** (p. 1652) operation, except in building the collection, the **DDSDataReader** (p. 1288) will check that the sample belongs to the specified instance, and otherwise it will not place the sample in the returned collection.

The behavior of the **FooDataReader::take\_instance** (p. 1663) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::take\_instance** (p. 1663) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method fails with **DDS\_RETCODE\_NO\_DATA** (p. 337).

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) if the **DDS\_InstanceHandle\_t** (p. 74) `a_handle` does not correspond to an existing data-object known to the **DDSDataReader** (p. 1288).

#### Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>a_handle</i>	<< <i>in</i> >> (p. 238) The specified instance to return samples for. The method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) if the <code>handle</code> does not correspond to an existing data-object known to the <b>DDSDataReader</b> (p. 1288).
<i>sample_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>sample_states</code> are returned.
<i>view_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>view_state</code> are returned.
<i>instance_states</i>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>instance_state</code> are returned.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).

### 9.310.2.10 read\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t FooDataReader::read_instance_w_condition (
    FooSeq & received_data,
```

```

    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & previous_handle,
    DDSReadCondition * condition ) [pure virtual]

```

<<**extension**>> (p. 237) Accesses via **FooDataReader::read\_instance** (p. 1661) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288). The behavior is identical to **FooDataReader::read\_instance** (p. 1661), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is `a_handle`, and for which the specified **DDSReadCondition** (p. 1574) evaluates to TRUE.

The behavior of the **FooDataReader::read\_instance\_w\_condition** (p. 1664) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::read\_instance\_w\_condition** (p. 1664) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

#### Parameters

<code>received_data</code>	<< <b>inout</b> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<code>info_seq</code>	<< <b>inout</b> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<code>max_samples</code>	<< <b>in</b> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<code>previous_handle</code>	<< <b>in</b> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<code>condition</code>	<< <b>in</b> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### See also

**FooDataReader::read\_next\_instance** (p. 1667)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.310.2.11 take\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t FooDataReader::take_instance_w_condition (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & previous_handle,
    DDSReadCondition * condition ) [pure virtual]
```

<<**extension**>> (p. 237) Accesses via **FooDataReader::take\_instance** (p. 1663) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288) and 'removes' them from the **DDSDataReader** (p. 1288). The behavior is identical to **FooDataReader::take\_instance** (p. 1663), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to belong the single specified instance whose handle is `a_handle`, and for which the specified **DDSReadCondition** (p. 1574) evaluates to TRUE.

The operation has the same behavior as **FooDataReader::read\_instance\_w\_condition** (p. 1664), except that the samples are 'taken' from the **DDSDataReader** (p. 1288) such that they are no longer accessible via subsequent 'read' or 'take' operations.

The behavior of the **FooDataReader::take\_instance\_w\_condition** (p. 1665) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::take\_instance\_w\_condition** (p. 1665) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

#### Parameters

<i>received_data</i>	<< <b>inout</b> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<i>info_seq</i>	<< <b>inout</b> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <b>in</b> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>previous_handle</i>	<< <b>in</b> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<i>condition</i>	<< <b>in</b> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), or <b>DDS_RETCODE_NO_DATA</b> (p. 337), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).

**DDS\_LENGTH\_UNLIMITED** (p. 438)

### 9.310.2.12 read\_next\_instance()

```
virtual DDS_ReturnCode_t FooDataReader::read_next_instance (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & previous_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]
```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288) where all the samples belong to a single instance. The behavior is similar to **FooDataReader::read\_instance** (p. 1661), except that the actual instance is not directly specified. Rather, the samples will all belong to the 'next' instance with `instance_handle` 'greater' than the specified 'previous\_handle' that has available samples.

This operation implies the existence of a total order 'greater-than' relationship between the instance handles. The specifics of this relationship are not all important and are implementation specific. The important thing is that, according to the middleware, all instances are ordered relative to each other. This ordering is between the instance handles; It should not depend on the state of the instance (e.g. whether it has data or not) and must be defined even for instance handles that do not correspond to instances currently managed by the **DDSDataReader** (p. 1288). For the purposes of the ordering, it should be 'as if' each instance handle was represented as unique integer.

The behavior of **FooDataReader::read\_next\_instance** (p. 1667) is 'as if' the **DDSDataReader** (p. 1288) invoked **FooDataReader::read\_instance** (p. 1661), passing the smallest `instance_handle` among all the ones that: (a) are greater than `previous_handle`, and (b) have available samples (i.e. samples that meet the constraints imposed by the specified states).

The special value **DDS\_HANDLE\_NIL** (p. 76) is guaranteed to be 'less than' any valid `instance_handle`. So the use of the parameter value `previous_handle == DDS_HANDLE_NIL` (p. 76) will return the samples for the instance which has the smallest `instance_handle` among all the instances that contain available samples.

#### Note

The operation **FooDataReader::read\_next\_instance** (p. 1667) is intended to be used in an application-driven iteration, where the application starts by passing `previous_handle == DDS_HANDLE_NIL` (p. 76), examines the samples returned, and then uses the `instance_handle` returned in the **DDS\_SampleInfo** (p. 1082) as the value of the `previous_handle` argument to the next call to **FooDataReader::read\_next\_instance** (p. 1667). The iteration continues until **FooDataReader::read\_next\_instance** (p. 1667) fails with **DDS\_RETCODE\_NO\_DATA** (p. 337). This application-driven iteration is required to ensure that all samples on the reader queue are read.

Note that it is possible to call the `FooDataReader::read_next_instance` (p. 1667) operation with a `previous_handle` that does not correspond to an instance currently managed by the `DDSDataReader` (p. 1288). This is because as stated earlier the 'greater-than' relationship is defined even for handles not managed by the `DDSDataReader` (p. 1288). One practical situation where this may occur is when an application is iterating through all the instances, takes all the samples of a `DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE` (p. 161) instance, returns the loan (at which point the instance information may be removed, and thus the handle becomes invalid), and tries to read the next instance. The behavior of the `FooDataReader::read_next_instance` (p. 1667) operation follows the same rules as the `FooDataReader::read` (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the `FooDataReader::read` (p. 1651), the `FooDataReader::read_instance` (p. 1661) operation may 'loan' elements to the output collections, which must then be returned by means of `FooDataReader::return_loan` (p. 1672).

Similar to the `FooDataReader::read` (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the `DDSDataReader` (p. 1288) has no samples that meet the constraints, the method will fail with `DDS_RETCODE_NO_DATA` (p. 337).

#### Parameters

<code>received_data</code>	<< <i>inout</i> >> (p. 238) user data type-specific <code>FooSeq</code> (p. 1697) object where the received data samples will be returned.
<code>info_seq</code>	<< <i>inout</i> >> (p. 238) a <code>DDS_SampleInfoSeq</code> (p. 1093) object where the received sample info will be returned.
<code>max_samples</code>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <code>DDS_LENGTH_UNLIMITED</code> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <code>FooDataReader::take()</code> (p. 1652).
<code>previous_handle</code>	<< <i>in</i> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<code>sample_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>sample_states</code> are returned.
<code>view_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>view_state</code> are returned.
<code>instance_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>instance_state</code> are returned.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <code>DDS_RETCODE_PRECONDITION_NOT_MET</code> (p. 336) <code>DDS_RETCODE_NO_DATA</code> (p. 337) or <code>DDS_RETCODE_NOT_ENABLED</code> (p. 337).

#### See also

`FooDataReader::read` (p. 1651)

`DDS_LENGTH_UNLIMITED` (p. 438)

#### 9.310.2.13 take\_next\_instance()

```
virtual DDS_ReturnCode_t FooDataReader::take_next_instance (
    FooSeq & received_data,
```

```

    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
const   DDS_InstanceHandle_t & previous_handle,
    DDS_SampleStateMask sample_states,
    DDS_ViewStateMask view_states,
    DDS_InstanceStateMask instance_states ) [pure virtual]

```

Access a collection of data samples from the **DDSDataReader** (p. 1288).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288) and 'removes' them from the **DDSDataReader** (p. 1288).

This operation has the same behavior as **FooDataReader::read\_next\_instance** (p. 1667), except that the samples are 'taken' from the **DDSDataReader** (p. 1288) such that they are no longer accessible via subsequent 'read' or 'take' operations.

#### Note

Like **FooDataReader::read\_next\_instance** (p. 1667), this operation is intended to be used in an application-driven iteration until all samples on the reader queue are taken. The iteration continues until **FooDataReader::take\_next\_instance** (p. 1668) fails with the value **DDS\_RETCODE\_NO\_DATA** (p. 337) .

Similar to the operation **FooDataReader::read\_next\_instance** (p. 1667), it is possible to call **FooDataReader::take\_next\_instance** (p. 1668) with a `previous_handle` that does not correspond to an instance currently managed by the **DDSDataReader** (p. 1288).

The behavior of the **FooDataReader::take\_next\_instance** (p. 1668) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::take\_next\_instance** (p. 1668) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

#### Parameters

<code>received_data</code>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<code>info_seq</code>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<code>max_samples</code>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<code>previous_handle</code>	<< <i>in</i> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<code>sample_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>sample_states</code> are returned.
<code>view_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>view_state</code> are returned.
<code>instance_states</code>	<< <i>in</i> >> (p. 238) data samples matching ones of these <code>instance_state</code> are returned.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataReader::take** (p. 1652)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

9.310.2.14 **read\_next\_instance\_w\_condition()**

```
virtual DDS_ReturnCode_t FooDataReader::read_next_instance_w_condition (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & previous_handle,
    DDSReadCondition * condition ) [pure virtual]
```

Accesses via **FooDataReader::read\_next\_instance** (p. 1667) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288). The behavior is identical to **FooDataReader::read\_next\_instance** (p. 1667), except that all returned samples satisfy the specified condition. In other words, on success, all returned samples belong to the same instance, and the instance is the instance with 'smallest' *instance\_handle* among the ones that verify: (a) *instance\_handle*  $\geq$  *previous\_handle*, and (b) have samples for which the specified **DDSReadCondition** (p. 1574) evaluates to TRUE.

Similar to the operation **FooDataReader::read\_next\_instance** (p. 1667), it is possible to call **FooDataReader::read\_next\_instance\_w\_condition** (p. 1670) with a *previous\_handle* that does not correspond to an instance currently managed by the **DDSDataReader** (p. 1288).

The behavior of the **FooDataReader::read\_next\_instance\_w\_condition** (p. 1670) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the *received\_data* and *sample\_info*. Similar to the **FooDataReader::read** (p. 1651), the **FooDataReader::read\_next\_instance\_w\_condition** (p. 1670) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

## Parameters

<i>received_data</i>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
----------------------	--

## Parameters

<i>info_seq</i>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<i>max_samples</i>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<i>previous_handle</i>	<< <i>in</i> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<i>condition</i>	<< <i>in</i> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) <b>DDS_RETCODE_NO_DATA</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

## See also

**FooDataReader::read\_next\_instance** (p. 1667)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

## 9.310.2.15 take\_next\_instance\_w\_condition()

```
virtual DDS_ReturnCode_t FooDataReader::take_next_instance_w_condition (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq,
    DDS_Long max_samples,
    const DDS_InstanceHandle_t & previous_handle,
    DDSReadCondition * condition ) [pure virtual]
```

Accesses via **FooDataReader::take\_next\_instance** (p. 1668) the samples that match the criteria specified in the **DDSReadCondition** (p. 1574).

This operation accesses a collection of data values from the **DDSDataReader** (p. 1288) and 'removes' them from the **DDSDataReader** (p. 1288).

The operation has the same behavior as **FooDataReader::read\_next\_instance\_w\_condition** (p. 1670), except that the samples are 'taken' from the **DDSDataReader** (p. 1288) such that they are no longer accessible via subsequent 'read' or 'take' operations.

Similar to the operation **FooDataReader::read\_next\_instance** (p. 1667), it is possible to call **FooDataReader::take←→\_next\_instance\_w\_condition** (p. 1671) with a *previous\_handle* that does not correspond to an instance currently managed by the **DDSDataReader** (p. 1288).

The behavior of the **FooDataReader::take\_next\_instance\_w\_condition** (p. 1671) operation follows the same rules as the **FooDataReader::read** (p. 1651) operation regarding the pre-conditions and post-conditions for the `received_data` and `sample_info`. Similar to **FooDataReader::read** (p. 1651), the **FooDataReader::take\_next\_instance\_w\_condition** (p. 1671) operation may 'loan' elements to the output collections, which must then be returned by means of **FooDataReader::return\_loan** (p. 1672).

Similar to the **FooDataReader::read** (p. 1651), this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

If the **DDSDataReader** (p. 1288) has no samples that meet the constraints, the method will fail with **DDS\_RETCODE\_NO\_DATA** (p. 337).

#### Parameters

<code>received_data</code>	<< <i>inout</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples will be returned.
<code>info_seq</code>	<< <i>inout</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info will be returned.
<code>max_samples</code>	<< <i>in</i> >> (p. 238) The maximum number of samples to be returned. If the special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) is provided, as many samples will be returned as are available, up to the limits described in the documentation for <b>FooDataReader::take()</b> (p. 1652).
<code>previous_handle</code>	<< <i>in</i> >> (p. 238) The 'next smallest' instance with a value greater than this value that has available samples will be returned.
<code>condition</code>	<< <i>in</i> >> (p. 238) the <b>DDSReadCondition</b> (p. 1574) to select samples of interest. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), or <b>DDS_RETCODE_NO_DATA</b> (p. 337), <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### See also

**FooDataReader::take\_next\_instance** (p. 1668)

**DDS\_LENGTH\_UNLIMITED** (p. 438)

#### 9.310.2.16 return\_loan()

```
virtual DDS_ReturnCode_t FooDataReader::return_loan (
    FooSeq & received_data,
    DDS_SampleInfoSeq & info_seq ) [pure virtual]
```

Indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

This operation indicates to the **DDSDataReader** (p. 1288) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of `read` or `take` on the **DDSDataReader** (p. 1288).

The `received_data` and `info_seq` must belong to a single related "pair"; that is, they should correspond to a pair returned from a single call to `read` or `take`. The `received_data` and `info_seq` must also have been obtained from the same **DDSDataReader** (p. 1288) to which they are returned. If either of these conditions is not met, the operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

The operation **FooDataReader::return\_loan** (p. 1672) allows implementations of the `read` and `take` operations to "loan" buffers from the **DDSDataReader** (p. 1288) to the application and in this manner provide "zerocopy" access to the data. During the loan, the **DDSDataReader** (p. 1288) will guarantee that the data and sample-information are not modified.

It is not necessary for an application to return the loans immediately after the `read` or `take` calls. However, as these buffers correspond to internal resources inside the **DDSDataReader** (p. 1288), the application should not retain them indefinitely.

The use of **FooDataReader::return\_loan** (p. 1672) is only necessary if the `read` or `take` calls "loaned" buffers to the application. This only occurs if the `received_data` and `info_seq` collections had `max_len=0` at the time `read` or `take` was called.

The application may also examine the "owns" property of the collection to determine where there is an outstanding loan. However, calling **FooDataReader::return\_loan** (p. 1672) on a collection that does not have a loan is safe and has no side effects.

If the collections had a loan, upon completion of **FooDataReader::return\_loan** (p. 1672), the collections will have `max_len=0`.

Similar to `read`, this operation must be provided on the specialized class that is generated for the particular application data-type that is being taken.

#### Parameters

<code>received_data</code>	<< <i>in</i> >> (p. 238) user data type-specific <b>FooSeq</b> (p. 1697) object where the received data samples was obtained from earlier invocation of <code>read</code> or <code>take</code> on the <b>DDSDataReader</b> (p. 1288).
----------------------------	---

#### Parameters

<code>info_seq</code>	<< <i>in</i> >> (p. 238) a <b>DDS_SampleInfoSeq</b> (p. 1093) object where the received sample info was obtained from earlier invocation of <code>read</code> or <code>take</code> on the <b>DDSDataReader</b> (p. 1288).
-----------------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

### 9.310.2.17 get\_key\_value()

```
virtual DDS_ReturnCode_t FooDataReader::get_key_value (
    Foo & key_holder,
    const DDS_InstanceHandle_t handle ) [pure virtual]
```

Retrieve the instance `key` that corresponds to an instance handle.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this method has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) if the `handle` does not correspond to an existing data-object known to the **DDSDataReader** (p. 1288).

#### Parameters

<i>key_holder</i>	<< <i>inout</i> >> (p. 238) a user data type specific key holder, whose <code>key</code> fields are filled by this operation. If <b>Foo</b> (p. 1648) has no key, this method has no effect.
<i>handle</i>	<< <i>in</i> >> (p. 238) the <code>instance</code> whose key is to be retrieved. If <b>Foo</b> (p. 1648) has a key, <code>handle</code> must represent an existing instance of type <b>Foo</b> (p. 1648) known to the <b>DDSDataReader</b> (p. 1288). Otherwise, this method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).

If **Foo** (p. 1648) has a key and `handle` is **DDS\_HANDLE\_NIL** (p. 76), this method will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

If **Foo** (p. 1648) has a key and `handle` represents an instance of another type or an instance of type **Foo** (p. 1648) that has been unregistered, this method will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336). If **Foo** (p. 1648) has no key, this method has no effect.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### See also

**FooDataWriter::get\_key\_value** (p. 1691)

### 9.310.2.18 lookup\_instance()

```
virtual DDS_InstanceHandle_t FooDataReader::lookup_instance (
    const Foo & key_holder ) [pure virtual]
```

Retrieves the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. If the instance is unknown to the DataReader, or if for any other reason the Service is unable to provide an instance handle, the Service will return the special value **DDS\_HANDLE\_NIL** (p. 76).

#### Parameters

<i>key_holder</i>	<< <i>in</i> >> (p. 238) a user data type specific key holder.
-------------------	--

#### Returns

the instance handle associated with this instance. If **Foo** (p. 1648) has no key, this method has no effect and returns **DDS\_HANDLE\_NIL** (p. 76)

### 9.310.2.19 is\_data\_consistent()

```
virtual DDS_ReturnCode_t FooDataReader::is_data_consistent (
    DDS_Boolean & is_data_consistent,
    const TData * sample,
    const DDS_SampleInfo * sample_info ) [pure virtual]
```

When using Zero Copy transfer over shared memory, checks if the sample has been overwritten by the DataWriter.

When a sample is received via **Zero Copy transfer over shared memory** (p. 70), the sample can be reused by the DataWriter once it is removed from the DataWriter's send queue. Since there is no synchronization between the DataReader and the DataWriter, the sample could be overwritten by the DataWriter before it is processed by the DataReader. The **FooDataReader::is\_data\_consistent** (p. 1675) operation can be used after processing the sample to check if it was overwritten by the DataWriter.

A precondition for using this operation is to set **DDS\_DataWriterShmemRefTransferModeSettings::enable\_data\_consistency\_check** (p. 705) to true.

#### Warning

This operation cannot be used when the data type is annotated with `@language_binding(FLAT_DATA)`. Reading a FlatData sample delivered with Zero Copy transfer over shared memory while the DataWriter is overwriting it is undefined behavior. An application-level synchronization mechanism is required in this case.

#### Parameters

<i>is_data_consistent</i>	<< <i>inout</i> >> (p. 238) Set to true if the sample is consistent (i.e., the sample has not been overwritten by the DataWriter)
<i>sample</i>	<< <i>in</i> >> (p. 238) Sample to be validated
<i>sample_info</i>	<< <i>in</i> >> (p. 238) <b>DDS_SampleInfo</b> (p. 1082) object received with the sample

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
-----	---

## 9.311 FooDataWriter Class Reference

<<**interface**>> (p. 237) <<**generic**>> (p. 237) User data type specific data writer.

Inheritance diagram for FooDataWriter:

### Public Member Functions

- virtual **DDS\_InstanceHandle\_t register\_instance** (const **Foo** &instance\_data)=0  
*Informs RTI Connexx that the application will be modifying a particular instance.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_timestamp** (const **Foo** &instance\_data, const **DDS\_↔**  
**Time\_t** &source\_timestamp)=0  
*Performs the same functions as register\_instance except that the application provides the value for the source\_↔  
timestamp.*
- virtual **DDS\_InstanceHandle\_t register\_instance\_w\_params** (const **Foo** &instance\_data, **DDS\_Write\_↔**  
**Params\_t** &params)=0  
*Performs the same function as **FooDataWriter::register\_instance** (p. 1678) and **FooDataWriter::register\_instance\_↔**  
**w\_timestamp** (p. 1679) except that it also provides the values contained in *params*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance** (const **Foo** &instance\_data, const **DDS\_InstanceHandle\_t**  
&handle)=0  
*Reverses the action of **FooDataWriter::register\_instance** (p. 1678).*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_timestamp** (const **Foo** &instance\_data, const **DDS\_↔**  
**InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)=0  
*Performs the same function as **FooDataWriter::unregister\_instance** (p. 1680) except that it also provides the value for  
the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t unregister\_instance\_w\_params** (const **Foo** &instance\_data, **DDS\_Write\_↔**  
**Params\_t** &params)=0  
*Performs the same function as **FooDataWriter::unregister\_instance** (p. 1680) and **FooDataWriter::unregister\_↔**  
**instance\_w\_timestamp** (p. 1682) except that it also provides the values contained in *params*.*
- virtual **DDS\_ReturnCode\_t write** (const **Foo** &instance\_data, const **DDS\_InstanceHandle\_t** &handle)=0  
*Modifies the value of a data instance.*

- virtual **DDS\_ReturnCode\_t write\_w\_timestamp** (const **Foo** &instance\_data, const **DDS\_InstanceHandle\_t** &handle, const **DDS\_Time\_t** &source\_timestamp)=0  
*Performs the same function as **FooDataWriter::write** (p. 1683) except that it also provides the value for the *source\_timestamp*.*
- virtual **DDS\_ReturnCode\_t write\_w\_params** (const **Foo** &instance\_data, **DDS\_WriteParams\_t** &params)=0  
*Performs the same function as **FooDataWriter::write** (p. 1683) and **FooDataWriter::write\_w\_timestamp** (p. 1687) except that it also provides the values contained in *params*.*
- virtual **DDS\_ReturnCode\_t dispose** (const **Foo** &instance\_data, const **DDS\_InstanceHandle\_t** &instance\_handle)=0  
*Requests the middleware to delete the instance.*
- virtual **DDS\_ReturnCode\_t dispose\_w\_timestamp** (const **Foo** &instance\_data, const **DDS\_InstanceHandle\_t** &instance\_handle, const **DDS\_Time\_t** &source\_timestamp)=0  
*Performs the same functions as **dispose** except that the application provides the value for the *source\_timestamp* that is made available to **DDSDataReader** (p. 1288) objects by means of the *source\_timestamp* attribute inside the **DDS\_SampleInfo** (p. 1082).*
- virtual **DDS\_ReturnCode\_t dispose\_w\_params** (const **Foo** &instance\_data, **DDS\_WriteParams\_t** &params)=0  
*Performs the same function as **FooDataWriter::dispose** (p. 1689) and **FooDataWriter::dispose\_w\_timestamp** (p. 1690) except that it also provides the values contained in *params*.*
- virtual **DDS\_ReturnCode\_t get\_key\_value** (**Foo** &key\_holder, const **DDS\_InstanceHandle\_t** &handle)=0  
*Retrieve the instance *key* that corresponds to an instance *handle*.*
- virtual **DDS\_InstanceHandle\_t lookup\_instance** (const **Foo** &key\_holder)=0  
*Retrieve the instance *handle* that corresponds to an instance *key\_holder*.*
- virtual void \* **create\_data** (const **DDS\_TypeAllocationParams\_t** &alloc\_params=DDS\_TYPE\_ALLOCATION\_PARAMS\_DEFAULT)  
*Creates a data sample and initializes it.*
- virtual **DDS\_Boolean delete\_data** (void \*sample, const **DDS\_TypeDeallocationParams\_t** &dealloc\_params=DDS\_TYPE\_DEALLOCATION\_PARAMS\_DEFAULT)  
*Destroys a user data type instance.*
- virtual **DDS\_ReturnCode\_t get\_loan** (TData \*&sample)  
*Gets a sample managed by the DataWriter.*
- virtual **DDS\_ReturnCode\_t discard\_loan** (TData &sample)  
*Returns a loaned sample back to the DataWriter.*

## Static Public Member Functions

- static **FooDataWriter \* narrow** (**DDSDataWriter** \*writer)  
*Narrow the given **DDSDataWriter** (p. 1321) pointer to a **FooDataWriter** (p. 1676) pointer.*

### 9.311.1 Detailed Description

<<**interface**>> (p. 237) <<**generic**>> (p. 237) User data type specific data writer.

Defines the user data type specific writer interface generated for each application class.

The concrete user data type writer automatically generated by the implementation is an incarnation of this class.

## 9.311.2 Member Function Documentation

### 9.311.2.1 narrow()

```
static FooDataWriter * FooDataWriter::narrow (
    DDSDataWriter * writer ) [static]
```

Narrow the given **DDSDataWriter** (p. 1321) pointer to a **FooDataWriter** (p. 1676) pointer.

Check if the given `writer` is of type **FooDataWriter** (p. 1676).

#### Parameters

<i>writer</i>	<< <i>in</i> >> (p. 238) Base-class <b>DDSDataWriter</b> (p. 1321) to be converted to the auto-generated class <b>FooDataWriter</b> (p. 1676) that extends <b>DDSDataWriter</b> (p. 1321).
---------------	--

#### Returns

**FooDataWriter** (p. 1676) if `writer` is of type **Foo** (p. 1648). Return NULL otherwise.

### 9.311.2.2 register\_instance()

```
virtual DDS_InstanceHandle_t FooDataWriter::register_instance (
    const Foo & instance_data ) [pure virtual]
```

Informs RTI Connexx that the application will be modifying a particular instance.

This operation is only useful for keyed data types. Using it for non-keyed types causes no effect and returns **DDS\_↔HANDLE\_NIL** (p. 76). The operation takes as a parameter an instance (of which only the key value is examined) and returns a `handle` that can be used in successive **write()** (p. 1683) or **dispose()** (p. 1689) operations.

The operation gives RTI Connexx an opportunity to pre-configure itself to improve performance.

The use of this operation by an application is optional even for keyed types. If an instance has not been pre-registered, the application can use the special value **DDS\_HANDLE\_NIL** (p. 76) as the **DDS\_InstanceHandle\_t** (p. 74) parameter to the write or dispose operation and RTI Connexx will auto-register the instance.

For best performance, the operation should be invoked prior to calling any operation that modifies the instance, such as **FooDataWriter::write** (p. 1683), **FooDataWriter::write\_w\_timestamp** (p. 1687), **FooDataWriter::dispose** (p. 1689) and **FooDataWriter::dispose\_w\_timestamp** (p. 1690) and the handle used in conjunction with the data for those calls.

When this operation is used, RTI Connexx will automatically supply the value of the `source_timestamp` that is used.

This operation may fail and return **DDS\_HANDLE\_NIL** (p. 76) if **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) limit has been exceeded.

The operation is **idempotent**. If it is called for an already registered instance, it just returns the already allocated handle. This may be used to lookup and retrieve the handle allocated to a given instance.

This operation can only be called after **DDSDataWriter** (p. 1321) has been enabled. Otherwise, **DDS\_HANDLE\_NIL** (p. 76) will be returned.

## Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function.
----------------------	---

## Returns

For keyed data type, a handle that can be used in the calls that take a **DDS\_InstanceHandle\_t** (p. 74), such as `write`, `dispose`, `unregister_instance`, or return **DDS\_HANDLE\_NIL** (p. 76) on failure. If the `instance_data` is of a data type that has no keys, this function always returns **DDS\_HANDLE\_NIL** (p. 76).

## See also

**FooDataWriter::unregister\_instance** (p. 1680), **FooDataWriter::get\_key\_value** (p. 1691), **Relationship between registration, liveliness and ownership** (p. 975)

## 9.311.2.3 register\_instance\_w\_timestamp()

```
virtual DDS_InstanceHandle_t FooDataWriter::register_instance_w_timestamp (
    const Foo & instance_data,
    const DDS_Time_t & source_timestamp ) [pure virtual]
```

Performs the same functions as `register_instance` except that the application provides the value for the `source_↵ timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION\_ORDER** (p. 386) QoS policy for details.

This operation may fail and return **DDS\_HANDLE\_NIL** (p. 76) if **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) limit has been exceeded.

This operation can only be called after **DDSDataWriter** (p. 1321) has been enabled. Otherwise, **DDS\_HANDLE\_NIL** (p. 76) will be returned.

## Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The instance that should be registered. Of this instance, only the fields that represent the key are examined by the function.
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers.

**Returns**

For keyed data type, return a handle that can be used in the calls that take a **DDS\_InstanceHandle\_t** (p. 74), such as `write`, `dispose`, `unregister_instance`, or return **DDS\_HANDLE\_NIL** (p. 76) on failure. If the `instance_data` is of a data type that has no keys, this function always return **DDS\_HANDLE\_NIL** (p. 76).

**See also**

**FooDataWriter::unregister\_instance** (p. 1680), **FooDataWriter::get\_key\_value** (p. 1691)

**9.311.2.4 register\_instance\_w\_params()**

```
virtual DDS_InstanceHandle_t FooDataWriter::register_instance_w_params (
    const Foo & instance_data,
    DDS_WriteParams_t & params ) [pure virtual]
```

Performs the same function as **FooDataWriter::register\_instance** (p. 1678) and **FooDataWriter::register\_instance\_w\_timestamp** (p. 1679) except that it also provides the values contained in `params`.

**See also**

**FooDataWriter::write\_w\_params** (p. 1688)

**9.311.2.5 unregister\_instance()**

```
virtual DDS_ReturnCode_t FooDataWriter::unregister_instance (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Reverses the action of **FooDataWriter::register\_instance** (p. 1678).

This operation is useful only for keyed data types. Using it for non-keyed types causes no effect and reports no error. The operation takes as a parameter an instance (of which only the key value is examined) and a handle.

This operation should only be called on an instance that is currently registered. This includes instances that have been auto-registered by calling operations such as `write` or `dispose` as described in **FooDataWriter::register\_instance** (p. 1678). Otherwise, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

This only need be called just once per instance, regardless of how many times `register_instance` was called for that instance.

When this operation is used, RTI Connexx will automatically supply the value of the `source_timestamp` that is used.

This operation informs RTI Connexx that the **DDSDataWriter** (p. 1321) is no longer going to provide any information about the instance. This operation also indicates that RTI Connexx can locally remove all information regarding that

instance. The application should not attempt to use the `handle` previously allocated to that instance after calling this function.

The special value **DDS\_HANDLE\_NIL** (p. 76) can be used for the parameter `handle`. This indicates that the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `handle` is any value other than **DDS\_HANDLE\_NIL** (p. 76), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

RTI Connexx will not detect the error when the `handle` is any value other than **DDS\_HANDLE\_NIL** (p. 76), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). RTI Connexx will treat as if the **unregister\_instance()** (p. 1680) operation is for the instance as indicated by the `handle`.

If, after a **FooDataWriter::unregister\_instance** (p. 1680), the application wants to modify (**FooDataWriter::write** (p. 1683) or **FooDataWriter::dispose** (p. 1689)) an instance, it has to register it again, or else use the special `handle` value **DDS\_HANDLE\_NIL** (p. 76).

This operation does not indicate that the instance is deleted (that is the purpose of **FooDataWriter::dispose** (p. 1689)). The operation **FooDataWriter::unregister\_instance** (p. 1680) just indicates that the **DDSDataWriter** (p. 1321) no longer has anything to say about the instance. **DDSDataReader** (p. 1288) entities that are reading the instance may receive a sample with **DDS\_NOT\_ALIVE\_NO\_WRITERS\_INSTANCE\_STATE** (p. 161) for the instance, unless there are other **DDSDataWriter** (p. 1321) objects writing that same instance.

**DDS\_WriterDataLifecycleQosPolicy::autodispose\_unregistered\_instances** (p. 1257) controls whether instances are automatically disposed when they are unregistered.

This operation can affect the ownership of the data instance (see **OWNERSHIP** (p. 414)). If the **DDSDataWriter** (p. 1321) was the exclusive owner of the instance, then calling **unregister\_instance()** (p. 1680) will relinquish that ownership.

If **DDS\_ReliabilityQosPolicy::kind** (p. 1043) is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) and the unregistration would overflow the resource limits of this writer or of a reader, this operation may block for up to **DDS\_↔ ReliabilityQosPolicy::max\_blocking\_time** (p. 1043); if this writer is still unable to unregister after that period, this method will fail with **DDS\_RETCODE\_TIMEOUT** (p. 337).

#### Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The instance that should be unregistered. If <b>Foo</b> (p. 1648) has a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 76), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <code>instance_data</code> is used, it must represent an instance that has been registered. Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) .
<i>handle</i>	<< <i>in</i> >> (p. 238) represents the <code>instance</code> to be unregistered. If <b>Foo</b> (p. 1648) has a key and <code>handle</code> is <b>DDS_HANDLE_NIL</b> (p. 76), <code>handle</code> is not used and <code>instance</code> is deduced from <code>instance_data</code> . If <b>Foo</b> (p. 1648) has no key, <code>handle</code> is not used. If <code>handle</code> is used, it must represent an instance that has been registered. Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337)
------------	--

See also

**FooDataWriter::unregister\_instance\_w\_timestamp** (p. 1682)

**FooDataWriter::get\_key\_value** (p. 1691)

**Relationship between registration, liveliness and ownership** (p. 975)

### 9.311.2.6 unregister\_instance\_w\_timestamp()

```
virtual DDS_ReturnCode_t FooDataWriter::unregister_instance_w_timestamp (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [pure virtual]
```

Performs the same function as **FooDataWriter::unregister\_instance** (p. 1680) except that it also provides the value for the `source_timestamp`.

The provided `source_timestamp` potentially affects the relative order in which readers observe events from multiple writers. Refer to **DESTINATION\_ORDER** (p. 386) QoS policy for details.

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter::unregister\_instance** (p. 1680) operation.

This operation may block and may time out (**DDS\_RETCODE\_TIMEOUT** (p. 337)) under the same circumstances described for the `unregister_instance` operation.

#### Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The instance that should be unregistered. If <b>Foo</b> (p. 1648) has a key and <code>instance_handle</code> is <b>DDS_HANDLE_NIL</b> (p. 76), only the fields that represent the key are examined by the function. Otherwise, <code>instance_data</code> is not used. If <code>instance_data</code> is used, it must represent an instance that has been registered. Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
<i>handle</i>	<< <i>in</i> >> (p. 238) represents the <code>instance</code> to be unregistered. If <b>Foo</b> (p. 1648) has a key and <code>handle</code> is <b>DDS_HANDLE_NIL</b> (p. 76), <code>handle</code> is not used and <code>instance</code> is deduced from <code>instance_data</code> . If <b>Foo</b> (p. 1648) has no key, <code>handle</code> is not used. If <code>handle</code> is used, it must represent an instance that has been registered. Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

See also

**FooDataWriter::register\_instance** (p. 1678)

**FooDataWriter::unregister\_instance** (p. 1680)

**FooDataWriter::get\_key\_value** (p. 1691)

### 9.311.2.7 unregister\_instance\_w\_params()

```
virtual DDS_ReturnCode_t FooDataWriter::unregister_instance_w_params (
    const Foo & instance_data,
    DDS_WriteParams_t & params ) [pure virtual]
```

Performs the same function as **FooDataWriter::unregister\_instance** (p. 1680) and **FooDataWriter::unregister\_instance\_w\_timestamp** (p. 1682) except that it also provides the values contained in `params`.

See also

**FooDataWriter::write\_w\_params** (p. 1688)

**FooDataWriter::dispose\_w\_params** (p. 1691)

### 9.311.2.8 write()

```
virtual DDS_ReturnCode_t FooDataWriter::write (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Modifies the value of a data instance.

When this operation is used, RTI Connexx will automatically supply the value of the `source_timestamp` that is made available to **DDSDDataReader** (p.1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p.1082). (Refer to **DDS\_SampleInfo** (p.1082) and **DESTINATION\_ORDER** (p.386) QoS policy for details).

As a side effect, this operation asserts liveness on the **DDSDDataWriter** (p.1321) itself, the **DDSPublisher** (p.1550) and the **DDSDomainParticipant** (p.1351).

Note that the special value **DDS\_HANDLE\_NIL** (p.76) can be used for the parameter `handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `handle` is any value other than **DDS\_HANDLE\_NIL** (p.76), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p.336).

RTI Connexx will not detect the error when the `handle` is any value other than **DDS\_HANDLE\_NIL** (p.76), corresponds to an instance that has been registered, but does not correspond to the instance deduced from the `instance_data`

(by means of the `key`). RTI Connex will treat as if the `write()` (p. 1683) operation is for the instance as indicated by the `handle`.

This operation may block if the **RELIABILITY** (p. 433) `kind` is set to **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) and the modification would cause data to be lost or else cause one of the limits specified in the **RESOURCE\_LIMITS** (p. 437) to be exceeded.

This operation will not block when using **DDS\_BEST\_EFFORT\_RELIABILITY\_QOS** (p. 435). If you are using **BEST\_EFFORT** Reliability in combination with **DDS\_ASYNCHRONOUS\_PUBLISH\_MODE\_QOS** (p. 431), then instead of being blocked, samples that are queued to be sent by the asynchronous publishing thread will be overwritten when the number of DDS samples that are currently queued has reached the `depth` QoS value in the **DDS\_HistoryQosPolicy** (p. 919).

If **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) elapses before the **DDSDataWriter** (p. 1321) can store the modification without exceeding the limits, the operation will fail and return **DDS\_RETCODE\_TIMEOUT** (p. 337) for **KEEP\_ALL** configurations.

Here is how the write operation behaves when **DDS\_KEEP\_LAST\_HISTORY\_QOS** (p. 406) and **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) are used:

- The send window size is determined by the **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1073) and **DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1072) fields in the **DDS\_DataWriterProtocolQosPolicy** (p. 673). If a send window is specified (`max_send_window_size` is not **UNLIMITED**) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) expires.
- Then, the **DDSDataWriter** (p. 1321) will try to add the new sample to the writer history.
- If the instance associated with the sample is present in the writer history and there are `depth` (in the **HISTORY** (p. 405)) samples in the instance, the DataWriter will replace the oldest sample of that instance independently of that sample's acknowledged status, and the write operation will return **DDS\_RETCODE\_OK** (p. 336). Otherwise, no sample will be replaced and the write operation will continue.
- If the instance associated with the sample is not present in the writer history and **DDS\_ResourceLimitsQosPolicy::max\_instances** (p. 1055) is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 701) (see **DDS\_DataWriterResourceLimitsInstanceReplacementKind** (p. 382)).
  - If no instance can be replaced, the write operation returns **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).
- If **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) is exceeded, the DataWriter will try to drop a sample from a different instance as follows:
  - The DataWriter will try first to remove a fully ACKed (2) sample from a different instance 'I' as long as that sample is not the last remaining sample for the instance 'I'. To find this sample, the DataWriter starts iterating from the oldest sample in the writer history to the newest sample.
  - If no such sample is found, the DataWriter will replace the oldest sample in the writer history.
- The sample is added to the writer history, and the write operation returns **DDS\_RETCODE\_OK** (p. 336).

Here is how the write operation behaves when **DDS\_KEEP\_ALL\_HISTORY\_QOS** (p. 406) and **DDS\_RELIABLE\_RELIABILITY\_QOS** (p. 435) are used:

- The send window size is determined by the **DDS\_RtpsReliableWriterProtocol\_t::max\_send\_window\_size** (p. 1073) and **DDS\_RtpsReliableWriterProtocol\_t::min\_send\_window\_size** (p. 1072) fields in the **DATA\_↔WRITER\_PROTOCOL** (p. 381). If a send window is specified (`max_send_window_size` is not UNLIMITED) and the window is full, the write operation will block until one of the samples in the send window is protocol-acknowledged (ACKed) (1) or until the **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) expires.
  - If the `max_blocking_time` expires, the write operation returns **DDS\_RETCODE\_TIMEOUT** (p. 337).
- When a sample is protocol-ACKed (1) before `max_blocking_time` expires, the DataWriter will try to add the sample to the writer history as follows:
  - If the instance associated with the sample is not present in the writer history and `max_instances` is exceeded, the DataWriter will try to replace an existing instance (and its samples) according to the value of **DDS\_DataWriterResourceLimitsQosPolicy::instance\_replacement** (p. 701) (see **DDS\_DataWriter↔ResourceLimitsInstanceReplacementKind** (p. 382)).
    - \* If no instance can be replaced, the write operation returns **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337).
  - If **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) is exceeded, the DataWriter will go through the samples in the order in which they were added, and it will replace the first sample that is fully ACKed (2).
    - \* If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or **DDS\_ReliabilityQosPolicy::max\_blocking\_time** (p. 1043) expires. If the `max_blocking_↔_time` expires, the write operation will return **DDS\_RETCODE\_TIMEOUT** (p. 337).
  - If **DDS\_ResourceLimitsQosPolicy::max\_samples\_per\_instance** (p. 1055) is exceeded, the DataWriter will go through the samples of the instance in the order in which they were added, and it will replace the first sample that is fully ACKed.
    - \* If no fully ACKed sample is found, the DataWriter will block (3) until a sample is fully ACKed and can be replaced or the `max_blocking_time` expires. If the `max_blocking_time` expires, the write operation will return **DDS\_RETCODE\_TIMEOUT** (p. 337).
  - The sample is added to the writer history, and the write operation returns **DDS\_RETCODE\_OK** (p. 336).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337). Calling **FooDataWriter::unregister\_instance** (p. 1680) may help freeing up some resources.

This operation will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if the timestamp is less than the timestamp used in the last writer operation (*register*, *unregister*, *dispose*, or *write*, with either the automatically supplied timestamp or the application-provided timestamp).

If an instance obtained from **FooDataWriter::get\_loan** (p. 1695) is modified with this operation, then all instances modified thereafter should be from **FooDataWriter::get\_loan** (p. 1695).

See **DDS\_ReliabilityQosPolicyAcknowledgmentModeKind** (p. 435) for more information on the following notes:

(1) A sample in the writer history is considered "protocol ACKed" when the sample has been individually ACKed at the RTPS protocol level by each one of the DataReaders that matched the DataWriter at the moment the sample was added to the writer queue.

- Late joiners do not change the protocol ACK state of a sample. If a sample is marked as protocol ACKed because it has been acknowledged by all the matching DataReaders and a DataReader joins later on, the historical sample is still considered protocol ACKed even if it has not been received by the late joiner.

- If a sample 'S1' is protocol ACKed and a TopicQuery is received, triggering the publication of 'S1', the sample is still considered protocol ACKed. If a sample 'S1' is not ACKed and a TopicQuery is received triggering the publication of 'S1', the DataWriter will require that both the matching DataReaders on the live RTPS channel and the DataReader on the TopicQuery channel individually protocol ACK the sample in order to consider the sample protocol ACKed.

(2) A sample in the writer history is considered "fully ACKed" when all of the following conditions are met:

- The sample is protocol-ACKed.
- The sample has been "application-level ACKed" by all the DataReaders matching the DataWriter that have their **DDS\_ReliabilityQosPolicy::acknowledgment\_kind** (p. 1043) set to **DDS\_APPLICATION\_EXPLICIT\_↔ACKNOWLEDGMENT\_MODE** (p. 436) or **DDS\_APPLICATION\_AUTO\_ACKNOWLEDGMENT\_MODE** (p. 435). Once the sample is application-level ACKed, it cannot change its status to not ACKed after new DataReaders are matched. (Application-level ACK occurs when the application acknowledges receipt of a sample.)
- If required subscriptions are enabled (see **DDS\_AvailabilityQosPolicy** (p. 596)), the sample must also be ACKed by all the required subscriptions configured on the DataWriter.

(3) It is possible within a single call to the write operation for a DataWriter to block both when the send window is full and then again when **DDS\_ResourceLimitsQosPolicy::max\_samples** (p. 1055) or **DDS\_ResourceLimitsQos↔Policy::max\_samples\_per\_instance** (p. 1055) is exceeded. This can happen because blocking on the send window only considers protocol-ACKed samples, while blocking based on resource limits considers fully-ACKed samples. In any case, the total max blocking time of a single call to the write operation will not exceed **DDS\_ReliabilityQosPolicy↔::max\_blocking\_time** (p. 1043).

#### Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The data to write.
----------------------	---

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>FooDataWriter::register_instance</b> (p. 1678), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). If <b>Foo</b> (p. 1648) has a key and <i>handle</i> is not <b>DDS_HANDLE_NIL</b> (p. 76), <i>handle</i> must represent a registered instance of type <b>Foo</b> (p. 1648). Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
---------------	--

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### MT Safety:

It is UNSAFE to modify *instance\_data* before the operation has finished. The operation is otherwise SAFE.

**DDSDataReader** (p. 1288)

**FooDataWriter::write\_w\_timestamp** (p. 1687)

**DESTINATION\_ORDER** (p. 386)

### 9.311.2.9 write\_w\_timestamp()

```
virtual DDS_ReturnCode_t FooDataWriter::write_w_timestamp (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & handle,
    const DDS_Time_t & source_timestamp ) [pure virtual]
```

Performs the same function as **FooDataWriter::write** (p. 1683) except that it also provides the value for the `source_timestamp`.

Explicitly provides the timestamp that will be available to the **DDSDataReader** (p.1288) objects by means of the `source_timestamp` attribute inside the **DDS\_SampleInfo** (p.1082). (Refer to **DDS\_SampleInfo** (p.1082) and **DESTINATION\_ORDER** (p. 386) QoS policy for details)

The constraints on the values of the `handle` parameter and the corresponding error behavior are the same specified for the **FooDataWriter::write** (p. 1683) operation.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 337)) under the same circumstances described for **FooDataWriter::write** (p. 1683).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337). Calling **FooDataWriter::unregister\_instance** (p. 1680) may help free up some resources.

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) under the same circumstances described for the write operation.

#### Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The data to write.
<i>handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>FooDataWriter::register_instance</b> (p. 1678), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). If <b>Foo</b> (p. 1648) has a key and <code>handle</code> is not <b>DDS_HANDLE_NIL</b> (p. 76), <code>handle</code> must represent a registered instance of type <b>Foo</b> (p. 1648). Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) When using <b>DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS</b> (p. 387) the timestamp value must be greater than or equal to the timestamp value used in the last writer operation ( <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application-provided timestamp) However, if it is less than the timestamp of the previous operation but the difference is less than the <b>DDS_DestinationOrderQosPolicy::source_timestamp_tolerance</b> (p. 711), the timestamp of the previous operation will be used as the source timestamp of this sample. Otherwise, if the difference is greater than <b>DDS_DestinationOrderQosPolicy::source_timestamp_tolerance</b> (p. 711), the function will return <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337), or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

## 9.311.2.10 write\_w\_params()

```
virtual DDS_ReturnCode_t FooDataWriter::write_w_params (
    const Foo & instance_data,
    DDS_WriteParams_t & params ) [pure virtual]
```

Performs the same function as **FooDataWriter::write** (p. 1683) and **FooDataWriter::write\_w\_timestamp** (p. 1687) except that it also provides the values contained in `params`.

Allows provision of the sample identity, related sample identity, source timestamp, instance handle, and publication priority contained in `params`.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 337)) under the same circumstances described for **FooDataWriter::write** (p. 1683).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337). Calling **FooDataWriter::unregister\_instance\_w\_params** (p. 1683) may help free up some resources.

This operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) under the same circumstances described for the **FooDataWriter::write** (p. 1683).

## Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The data to write.
<i>params</i>	<< <i>inout</i> >> (p. 238) The write parameters. Note that this is an inout parameter if you activate <b>DDS_WriteParams_t::replace_auto</b> (p. 1251); otherwise it won't be modified.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

**FooDataWriter::write** (p. 1683)

**DDSDataReader** (p. 1288)

### 9.311.2.11 dispose()

```
virtual DDS_ReturnCode_t FooDataWriter::dispose (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & instance_handle ) [pure virtual]
```

Requests the middleware to delete the instance.

This operation is useful only for keyed data types. Using it for non-keyed types has no effect and reports no error.

When an instance is disposed, the **DDSDataWriter** (p. 1321) communicates this state change to **DDSDataReader** (p. 1288) objects by propagating a dispose sample. When the instance changes to a disposed state, you can see the state change on the DataReader by looking at **DDS\_SampleInfo::instance\_state** (p. 1086). Disposed instances have the value **DDS\_NOT\_ALIVE\_DISPOSED\_INSTANCE\_STATE** (p. 161).

The resources allocated to dispose instances on the DataWriter are not removed by default. The removal of the resources allocated to a dispose instance on the DataWriter queue can be controlled by using the QoS **DDS\_Writer↔DataLifecycleQoSPolicy::autopurge\_disposed\_instances\_delay** (p. 1258).

Likewise, on the DataReader, the removal of the resources associated with an instance in the dispose state can be controlled by using the QoS **DDS\_ReaderDataLifecycleQoSPolicy::autopurge\_disposed\_instances\_delay** (p. 1037).

This operation does not modify the value of the instance. The `instance_data` parameter is passed just for the purposes of identifying the instance.

When this operation is used, RTI Connext will automatically supply the value of the `source_timestamp` that is made available to **DDSDataReader** (p. 1288) objects by means of the `source_timestamp` attribute inside the **DDS\_Sample↔Info** (p. 1082).

The constraints on the values of the handle parameter and the corresponding error behavior are the same specified for the **FooDataWriter::unregister\_instance** (p. 1680) operation.

The special value **DDS\_HANDLE\_NIL** (p. 76) can be used for the parameter `instance_handle`. This indicates the identity of the instance should be automatically deduced from the `instance_data` (by means of the `key`).

If `instance_handle` is any value other than **DDS\_HANDLE\_NIL** (p. 76), then it must correspond to an instance that has been registered. If there is no correspondence, the operation will fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336).

RTI Connext will not detect the error when the `instance_handle` is any value other than **DDS\_HANDLE\_NIL** (p. 76), and the `instance_handle` corresponds to an instance that has been registered but does not correspond to the instance deduced from the `instance_data` (by means of the `key`). In this case, the instance that will be disposed is the instance corresponding to the `instance_handle`, not to the `instance_data`.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 337)) under the same circumstances described for **FooDataWriter::write** (p. 1683).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337). Calling **FooDataWriter::unregister\_instance** (p. 1680) may help free up some resources.

## Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The data to dispose. If <b>Foo</b> (p. 1648) has a key and <i>instance_handle</i> is <b>DDS_HANDLE_NIL</b> (p. 76), only the fields that represent the key are examined by the function. Otherwise, <i>instance_data</i> is not used.
<i>instance_handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>FooDataWriter::register_instance</b> (p. 1678), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). If <b>Foo</b> (p. 1648) has a key and <i>instance_handle</i> is <b>DDS_HANDLE_NIL</b> (p. 76), <i>instance_handle</i> is not used and it is deduced from <i>instance_data</i> . If <b>Foo</b> (p. 1648) has no key, <i>instance_handle</i> is not used. If <i>instance_handle</i> is used, it must represent an instance of type <b>Foo</b> (p. 1648) that has been written or registered with this writer. Otherwise, this method fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336). If <b>Foo</b> (p. 1648) has a key, <i>instance_handle</i> cannot be <b>DDS_HANDLE_NIL</b> (p. 76) if <i>instance_data</i> is NULL. Otherwise, this method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

**FooDataWriter::dispose\_w\_timestamp** (p. 1690)

**Relationship between registration, liveness and ownership** (p. 975)

9.311.2.12 **dispose\_w\_timestamp()**

```
virtual DDS_ReturnCode_t FooDataWriter::dispose_w_timestamp (
    const Foo & instance_data,
    const DDS_InstanceHandle_t & instance_handle,
    const DDS_Time_t & source_timestamp ) [pure virtual]
```

Performs the same functions as **dispose** except that the application provides the value for the *source\_timestamp* that is made available to **DDSDataReader** (p. 1288) objects by means of the *source\_timestamp* attribute inside the **DDS\_SampleInfo** (p. 1082).

The constraints on the values of the *handle* parameter and the corresponding error behavior are the same specified for the **FooDataWriter::dispose** (p. 1689) operation.

This operation may block and time out (**DDS\_RETCODE\_TIMEOUT** (p. 337)) under the same circumstances described for **FooDataWriter::write** (p. 1683).

If there are no instance resources left, this operation may fail with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337). Calling **FooDataWriter::unregister\_instance** (p. 1680) may help freeing up some resources.

## Parameters

<i>instance_data</i>	<< <i>in</i> >> (p. 238) The data to dispose. If <b>Foo</b> (p. 1648) has a key and <i>instance_handle</i> is <b>DDS_HANDLE_NIL</b> (p. 76), only the fields that represent the key are examined by the function. Otherwise, <i>instance_data</i> is not used.
<i>instance_handle</i>	<< <i>in</i> >> (p. 238) Either the handle returned by a previous call to <b>FooDataWriter::register_instance</b> (p. 1678), or else the special value <b>DDS_HANDLE_NIL</b> (p. 76). If <b>Foo</b> (p. 1648) has a key and <i>handle</i> is not <b>DDS_HANDLE_NIL</b> (p. 76), <i>handle</i> must represent a registered instance of type <b>Foo</b> (p. 1648). Otherwise, this method may fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
<i>source_timestamp</i>	<< <i>in</i> >> (p. 238) The timestamp value must be greater than or equal to the timestamp value used in the last writer operation (used in a <i>register</i> , <i>unregister</i> , <i>dispose</i> , or <i>write</i> , with either the automatically supplied timestamp or the application provided timestamp). This timestamp may potentially affect the order in which readers observe events from multiple writers. This timestamp will be available to the <b>DDSDataReader</b> (p. 1288) objects by means of the <i>source_timestamp</i> attribute inside the <b>DDS_SampleInfo</b> (p. 1082).

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_TIMEOUT</b> (p. 337), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	---

## See also

**FooDataWriter::dispose** (p. 1689)

## 9.311.2.13 dispose\_w\_params()

```
virtual DDS_ReturnCode_t FooDataWriter::dispose_w_params (
    const Foo & instance_data,
    DDS_WriteParams_t & params ) [pure virtual]
```

Performs the same function as **FooDataWriter::dispose** (p. 1689) and **FooDataWriter::dispose\_w\_timestamp** (p. 1690) except that it also provides the values contained in *params*.

## See also

**FooDataWriter::write\_w\_params** (p. 1688)

### 9.311.2.14 get\_key\_value()

```
virtual DDS_ReturnCode_t FooDataWriter::get_key_value (
    Foo & key_holder,
    const DDS_InstanceHandle_t & handle ) [pure virtual]
```

Retrieve the instance `key` that corresponds to an instance handle.

Useful for keyed data types.

The operation will only fill the fields that form the `key` inside the `key_holder` instance. If the type has no keys, this method has no effect and exits with no error.

For keyed data types, this operation may fail with **DDS\_RETCODE\_BAD\_PARAMETER** (p. 336) if the `handle` does not correspond to an existing data-object known to the **DDSDataWriter** (p. 1321).

#### Parameters

<i>key_holder</i>	<< <i>inout</i> >> (p. 238) a user data type specific key holder, whose <code>key</code> fields are filled by this operation. If <b>Foo</b> (p. 1648) has no key, this method has no effect.
-------------------	--

#### Parameters

<i>handle</i>	<< <i>in</i> >> (p. 238) the <code>instance</code> whose key is to be retrieved. If <b>Foo</b> (p. 1648) has a key, <code>handle</code> must represent a registered instance of type <b>Foo</b> (p. 1648). Otherwise, this method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336). If <b>Foo</b> (p. 1648) has a key and <code>handle</code> is <b>DDS_HANDLE_NIL</b> (p. 76), this method will fail with <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336).
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

#### See also

**FooDataReader::get\_key\_value** (p. 1673)

### 9.311.2.15 lookup\_instance()

```
virtual DDS_InstanceHandle_t FooDataWriter::lookup_instance (
    const Foo & key_holder ) [pure virtual]
```

Retrieve the instance `handle` that corresponds to an instance `key_holder`.

Useful for keyed data types.

This operation takes as a parameter an instance and returns a handle that can be used in subsequent operations that accept an instance handle as an argument. The instance parameter is only used for the purpose of examining the fields that define the key. This operation does not register the instance in question. If the instance has not been previously registered, or if for any other reason RTI Connex is unable to provide an instance handle, RTI Connex will return the special value `HANDLE_NIL`.

## Parameters

<i>key_holder</i>	<< <i>in</i> >> (p. 238) a user data type specific key holder.
-------------------	--

## Returns

the instance handle associated with this instance. If **Foo** (p. 1648) has no key, this method has no effect and returns **DDS\_HANDLE\_NIL** (p. 76)

**9.311.2.16 create\_data()**

```
virtual void * FooDataWriter::create_data (
    const DDS_TypeAllocationParams_t & alloc_params = DDS_TYPE_ALLOCATION_PARAMS_DEFAULT
) [inline], [virtual]
```

Creates a data sample and initializes it.

The behavior of this API is identical to **FooTypeSupport::create\_data** (p. 1715).

## Parameters

<i>alloc_params</i>	<< <i>in</i> >> (p. 238) Whether or not to recursively allocate pointers and/or optional members
---------------------	--

## Returns

Newly created data type, or NULL on failure.

## See also

**FooDataWriter::delete\_data** (p. 1694)

**9.311.2.17 delete\_data()**

```
virtual DDS_Boolean FooDataWriter::delete_data (
    void * sample,
    const DDS_TypeDeallocationParams_t & dealloc_params = DDS_TYPE_DEALLOCATION_PARAMS↔
_DEFAULT ) [inline], [virtual]
```

Destroys a user data type instance.

The behavior of this API is identical to **FooTypeSupport::delete\_data** (p. 1716).

## Parameters

<i>sample</i>	<< <i>in</i> >> (p. 238) Cannot be NULL.
<i>dealloc_params</i>	<< <i>in</i> >> (p. 238) Whether or not to destroy pointers and/or optional members. By default they are destroyed (deleted).

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success.

## See also

**FooDataWriter::create\_data** (p. 1694)

**9.311.2.18 get\_loan()**

```
virtual DDS_ReturnCode_t FooDataWriter::get_loan (
    TData *& sample ) [inline], [virtual]
```

Gets a sample managed by the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 70) over shared memory" or \ref RTIFlatDataModule "FlatData language binding". For FlatData types, this function should be used directly if the type is final; if the type is mutable, **rti::flat::build\_data()** (p. 560) should be used to obtain a sample builder to work with the loaned sample.

The loaned sample is obtained from a DataWriter-managed sample pool and is uninitialized by default. An initialized sample can be obtained by setting **DDS\_DataWriterResourceLimitsQosPolicy::initialize\_writer\_loaned\_↔\_sample** (p. 704) to **DDS\_BOOLEAN\_TRUE** (p. 317). The **DDS\_DataWriterResourceLimitsQosPolicy::writer\_↔\_loaned\_sample\_allocation** (p. 704) settings can be used to configure the DataWriter-managed sample pool.

**FooDataWriter::get\_loan** (p. 1695) fails with **DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337) if **DDS\_Allocation\_↔\_Settings\_t::max\_count** (p. 589) samples have been loaned, and none of those samples has been written with **Foo\_↔\_DataWriter::write** (p. 1683) or discarded via **FooDataWriter::discard\_loan** (p. 1696).

Samples returned from **FooDataWriter::get\_loan** (p. 1695) have an associated state. Due to the optimized nature of the write operation while using Zero Copy transfer over shared memory or FlatData language binding, this sample state is used to control when a sample is available for reuse after the write operation. The possible sample states are free, allocated, removed or serialized. A sample that has never been allocated is "free". **FooDataWriter::get\_loan** (p. 1695) takes a "free" or "removed" sample and makes it "allocated". When a sample is written, its state transitions from "allocated" to "serialized", and the DataWriter takes responsibility for returning the sample back to its sample pool. The sample remains in the "serialized" state until it is removed from the DataWriter queue. For a reliable DataWriter, the sample is removed from the DataWriter's queue when the sample is acknowledged by all DataReaders. For a best-effort DataWriter, the sample is removed from the queue immediately after the write operation. After the sample is removed from the DataWriter queue, the sample is put back into the sample pool, and its state transitions from "serialized" to "removed". At this time, a new call to **FooDataWriter::get\_loan** (p. 1695) may return the same sample.

A loaned sample should not be reused to write a new value after the first write operation. Instead, a new sample from **FooDataWriter::get\_loan** (p. 1695) should be used to write the new value. A loaned sample that has not been written

can be returned to the DataWriter's sample pool by using **FooDataWriter::discard\_loan** (p. 1696). If the write operation fails, then the sample can be used again with a write or discard\_loan operation. Disposing or unregistering an instance with loaned samples follows the same pattern. A loaned sample used successfully with a dispose or unregister operation cannot be used again. But if the dispose or unregister operation fails, the sample is available for reuse.

A DataWriter cannot write managed samples (created with get\_loan) and unmanaged samples (created in any other way) at the same time. The first call to get\_loan automatically prepares this DataWriter to work with managed samples. Calls to get\_loan will fail with **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) if an unmanaged sample was written with this DataWriter earlier. Similarly, **FooDataWriter::write** (p. 1683) will fail to write an unmanaged sample if get\_loan was called.

#### Parameters

<i>sample</i>	<< <i>inout</i> >> (p. 238) reference to a user data type pointer. The loaned sample is returned via this sample.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337) or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	---

#### See also

**FooDataWriter::discard\_loan** (p. 1696)

### 9.311.2.19 discard\_loan()

```
virtual DDS_ReturnCode_t FooDataWriter::discard_loan (
    TData & sample ) [inline], [virtual]
```

Returns a loaned sample back to the DataWriter.

This operation is supported while using **Zero Copy transfer** (p. 70) over shared memory" or the **FlatData language binding** (p. 568).

A loaned sample that hasn't been written can be returned to the DataWriter with this operation.

#### Parameters

<i>sample</i>	<< <i>in</i> >> (p. 238) loaned sample to be discarded.
---------------	---

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336) or <b>DDS_RETCODE_NOT_ENABLED</b> (p. 337).
------------	--

*Loan a contiguous buffer to this sequence.*
- bool `loan_discontiguous` (`Foo` \*\*buffer, `DDS_Long` new\_length, `DDS_Long` new\_max)  
*Loan a discontiguous buffer to this sequence.*
- bool `unloan` ()  
*Return the loaned buffer in the sequence and set the maximum to 0.*
- `Foo` \* `get_contiguous_buffer` () const  
*Return the contiguous buffer of the sequence.*
- `Foo` \*\* `get_discontiguous_buffer` () const  
*Return the discontiguous buffer of the sequence.*
- bool `has_ownership` ()  
*Return the value of the owned flag.*

- `~FooSeq ()`  
*Deallocate this sequence's buffer.*
- `FooSeq ( DDS_Long new_max=0)`  
*Create a sequence with the given maximum.*
- `FooSeq (const struct FooSeq &foo_seq)`  
*Create a sequence by copying from an existing sequence.*

### 9.312.1 Detailed Description

<<*interface*>> (p. 237) <<*generic*>> (p. 237) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **Foo** (p. 1648).

For users who define data types in OMG IDL, this type corresponds to the IDL `sequence<Foo>` (p. 1648).

For any user-data type **Foo** (p. 1648) that an application defines for the purpose of data-distribution with RTI Context, a **FooSeq** (p. 1697) is generated. The sequence offers a subset of the methods defined by the standard OMG IDL to C++ mapping for sequences. We refer to an IDL `sequence<Foo>` (p. 1648) as **FooSeq** (p. 1697).

The state of a sequence is described by the properties 'maximum', 'length' and 'owned'.

- The 'maximum' represents the size of the underlying buffer; this is the maximum number of elements it can possibly hold. It is returned by the **FooSeq::maximum()** (p. 1707) operation.
- The 'length' represents the actual number of elements it currently holds. It is returned by the **FooSeq::length()** (p. 1705) operation.
- The 'owned' flag represents whether the sequence owns the underlying buffer. It is returned by the **FooSeq::has\_ownership** (p. 1711) operation. If the sequence does not own the underlying buffer, the underlying buffer is loaned from somewhere else. This flag influences the lifecycle of the sequence and what operations are allowed on it. The general guidelines are provided below and more details are described in detail as pre-conditions and post-conditions of each of the sequence's operations:
  - If `owned == DDS_BOOLEAN_TRUE` (p. 317), the sequence has ownership on the buffer. It is then responsible for destroying the buffer when the sequence is destroyed.
  - If the `owned == DDS_BOOLEAN_FALSE` (p. 317), the sequence does not have ownership on the buffer. This implies that the sequence is loaning the buffer. The sequence cannot be destroyed until the loan is returned.
  - A sequence with a zero maximum always has `owned == DDS_BOOLEAN_TRUE` (p. 317)

### 9.312.2 Constructor & Destructor Documentation

### 9.312.2.1 ~FooSeq()

```
FooSeq::~~FooSeq ( )
```

Deallocate this sequence's buffer.

#### Precondition

(owned == **DDS\_BOOLEAN\_TRUE** (p. 317)). If this precondition is not met, no memory will be freed and an error will be logged.

#### Postcondition

maximum == 0 and the underlying buffer is freed.

#### See also

**FooSeq::maximum()** (p. 1707), **FooSeq::unloan** (p. 1709)

### 9.312.2.2 FooSeq() [1/2]

```
FooSeq::FooSeq (
    DDS_Long new_max = 0 )
```

Create a sequence with the given maximum.

This is a constructor for the sequence. The constructor will automatically allocate memory to hold new\_max elements of type **Foo** (p. 1648).

This constructor will be used when the application creates a sequence using one of the following:

```
FooSeq mySeq(5);
```

```
// or
```

```
FooSeq mySeq;
```

```
// or
```

```
FooSeq* mySeqPtr = new FooSeq(5);
```

#### Postcondition

maximum == new\_max

length == 0

owned == **DDS\_BOOLEAN\_TRUE** (p. 317),

## Parameters

<code>new_max</code>	Must be $\geq 0$ . Otherwise the sequence will be initialized to a <code>new_max=0</code> .
----------------------	---

### 9.312.2.3 FooSeq() [2/2]

```
FooSeq::FooSeq (
    const struct FooSeq & foo_seq )
```

Create a sequence by copying from an existing sequence.

This is a constructor for the sequence. The constructor will automatically allocate memory to hold `foo_seq::maximum()` elements of type **Foo** (p. 1648) and will copy the current contents of `foo_seq` into the new sequence.

This constructor will be used when the application creates a sequence using one of the following:

```
FooSeq mySeq(foo_seq);
// or
FooSeq mySeq = foo_seq;
// or
FooSeq *mySeqPtr = new FooSeq(foo_seq);
```

## Postcondition

```
this::maximum == foo_seq::maximum
this::length == foo_seq::length
this[i] == foo_seq[i] for  $0 \leq i < \text{foo\_seq::length}$ 
this::owned == DDS_BOOLEAN_TRUE (p. 317)
```

## Note

If the pre-conditions are not met, or an error occurs during copying, the constructor will initialize the new sequence to a maximum of zero.

## 9.312.3 Member Function Documentation

### 9.312.3.1 operator=()

```
FooSeq & FooSeq::operator= (
    const struct FooSeq & src_seq )
```

Copy elements from another sequence, resizing the sequence if necessary.

This method invokes **FooSeq::copy\_no\_alloc** (p. 1702) after ensuring that the sequence has enough capacity to hold the elements to be copied.

This operator is invoked when the following expression appears in the code:  
`target_seq = src_seq`

*Important:* This method *will* allocate memory if `this::maximum < src_seq::length`.

Therefore, to programatically detect the successful completion of the operator it is recommended that the application first sets the length of this sequence to zero, makes the assignment, and then checks that the length of this sequence matches that of `src_seq`.

## Parameters

<code>src_seq</code>	<< <i>in</i> >> (p. 238) the sequence from which to copy
----------------------	--

## See also

**FooSeq::copy\_no\_alloc** (p. 1702)

## 9.312.3.2 copy\_no\_alloc()

```
bool FooSeq::copy_no_alloc (
    const struct FooSeq & src_seq )
```

Copy elements from another sequence, only if the destination sequence has enough capacity.

Fill the elements in this sequence by copying the corresponding elements in `src_seq`. The original contents in this sequence are replaced via the element assignment operation (`Foo_copy()` function). By default, elements are discarded; 'delete' is not invoked on the discarded elements.

## Precondition

```
this::maximum >= src_seq::length
this::owned == DDS_BOOLEAN_TRUE (p. 317)
```

## Postcondition

```
this::length == src_seq::length
this[i] == src_seq[i] for 0 <= i < target_seq::length
this::owned == DDS_BOOLEAN_TRUE (p. 317)
```

## Parameters

<code>src_seq</code>	<< <i>in</i> >> (p. 238) the sequence from which to copy
----------------------	--

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the sequence was successfully copied; **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

## Note

If the pre-conditions are not met, the operator will print a message to stdout and leave this sequence unchanged.

See also

**FooSeq::operator=** (p. 1700)

### 9.312.3.3 from\_array()

```
bool FooSeq::from_array (
    const Foo array[],
    DDS_Long length )
```

Copy elements from an array of elements, resizing the sequence if necessary. The original contents of the sequence (if any) are replaced.

Fill the elements in this sequence by copying the corresponding elements in `array`. The original contents in this sequence are replaced via the element assignment operation (`Foo_copy()` function). By default, elements are discarded; 'delete' is not invoked on the discarded elements.

**Precondition**

`this::owned == DDS_BOOLEAN_TRUE` (p. 317)

**Postcondition**

`this::length == length`

`this[i] == array[i]` for  $0 \leq i < \text{length}$

`this::owned == DDS_BOOLEAN_TRUE` (p. 317)

**Parameters**

<i>array</i>	<< <i>in</i> >> (p. 238) The array of elements to be copy elements from
<i>length</i>	<< <i>in</i> >> (p. 238) The length of the array.

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if the array was successfully copied; **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise.

**Note**

If the pre-conditions are not met, the method will print a message to stdout and leave this sequence unchanged.

### 9.312.3.4 to\_array()

```
bool FooSeq::to_array (
    Foo array[],
    DDS_Long length )
```

Copy elements to an array of elements. The original contents of the array (if any) are replaced.

Copy the elements of this sequence to the corresponding elements in the array. The original contents of the array are replaced via the element assignment operation (Foo\_copy() function). By default, elements are discarded; 'delete' is not invoked on the discarded elements.

#### Parameters

<i>array</i>	<< <i>in</i> >> (p. 238) The array of elements to be filled with elements from this sequence
<i>length</i>	<< <i>in</i> >> (p. 238) The number of elements to be copied.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the elements of the sequence were successfully copied; **DDS\_BOOLEAN\_↔  
FALSE** (p. 317) otherwise.

### 9.312.3.5 operator[]() [1/2]

```
Foo & FooSeq::operator[] (
    DDS_Long i )
```

Set the *i*-th element of the sequence.

This is the operator that is invoked when the application indexes into a non- const sequence:

```
myElement = mySequence[i];
```

```
mySequence[i] = myElement;
```

Note that a *reference* to the *i*-th element is returned (and not a copy).

#### Parameters

<i>i</i>	index of element to access, must be $\geq 0$ and less than <b>FooSeq::length()</b> (p. 1705)
----------	--

#### Returns

the *i*-th element

**9.312.3.6 operator[]()** [2/2]

```
const Foo & FooSeq::operator[] (
    DDS_Long i ) const
```

Get the *i*-th element for a `const` sequence.

This is the operator that is invoked when the application indexes into a `const` sequence:  
`myElement = mySequence[i];`

Note that a *reference* to the *i*-th element is returned (and not a copy).

**Parameters**

<i>i</i>	index of element to access, must be $\geq 0$ and less than <b>FooSeq::length()</b> (p. 1705)
----------	--

**Returns**

the *i*-th element

**9.312.3.7 length()** [1/2]

```
DDS_Long FooSeq::length ( ) const
```

Get the logical length of this sequence.

Get the length that was last set, or zero if the length has never been set.

**Returns**

the length of the sequence

**9.312.3.8 length()** [2/2]

```
bool FooSeq::length (
    DDS_Long new_length )
```

Set the sequence to the desired length, and resize the sequence if necessary.

If the current maximum is greater than the desired length, then sequence is not resized.

Otherwise, if this sequence owns its buffer, the sequence is resized to the new length by freeing and re-allocating the buffer. However, if the sequence does not own its buffer, this operation will fail.

For sequences that are part of a type declared in IDL, the length must not exceed the maximum established for the sequence in the IDL.

## Parameters

<i>new_length</i>	the new desired length. This value must be non-negative. Must be $\geq 0$ .
-------------------	---

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success or **DDS\_BOOLEAN\_FALSE** (p. 317) on failure

**9.312.3.9 ensure\_length()**

```
bool FooSeq::ensure_length (
    DDS_Long length,
    DDS_Long max )
```

Set the sequence to the desired length, and resize the sequence if necessary.

If the current maximum is greater than the new length, then the sequence is not resized.

Otherwise, if this sequence owns its buffer, the sequence is resized to the new maximum by freeing and re-allocating the buffer, and the length is set to the new length. However, if the sequence does not own its buffer, this operation will fail.

This function allows user to avoid unnecessary buffer re-allocation.

## Precondition

```
length <= max
max <= maximum size for IDL bounded sequences
owned == DDS_BOOLEAN_TRUE (p. 317) if sequence needs to be resized
```

## Postcondition

```
length == length
maximum == max if resized
```

## Parameters

<i>length</i>	<< <i>in</i> >> (p. 238) The new length that should be set. Must be $\geq 0$ .
<i>max</i>	<< <i>in</i> >> (p. 238) If sequence need to be resized, this is the maximum that should be set. $max \geq length$

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success, **DDS\_BOOLEAN\_FALSE** (p. 317) if the preconditions are not met. In that case the sequence is not modified.

### 9.312.3.10 maximum() [1/2]

```
DDS_Long FooSeq::maximum ( ) const
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

`maximum` can only be changed with the **FooSeq::maximum(DDS\_Long)** (p. 1707) operation.

#### Returns

the current maximum of the sequence.

#### See also

**FooSeq::length()** (p. 1705)

### 9.312.3.11 maximum() [2/2]

```
bool FooSeq::maximum (
    DDS_Long new_max )
```

Resize this sequence to a new desired maximum.

This operation does nothing if the new desired maximum matches the current maximum.

If this sequence owns its buffer and the new maximum is not equal to the old maximum, then the existing buffer will be freed and re-allocated.

#### Precondition

```
owned == DDS_BOOLEAN_TRUE (p. 317)
new_max <= maximum size for IDL bounded sequences.
```

#### Postcondition

```
owned == DDS_BOOLEAN_TRUE (p. 317)
length == MINIMUM(original length, new_max)
```

## Parameters

<i>new_max</i>	Must be $\geq 0$ .
----------------	--------------------

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) on success, **DDS\_BOOLEAN\_FALSE** (p. 317) if the preconditions are not met. In that case the sequence is not modified.

**9.312.3.12 loan\_contiguous()**

```
bool FooSeq::loan_contiguous (
    Foo * buffer,
    DDS_Long new_length,
    DDS_Long new_max )
```

Loan a contiguous buffer to this sequence.

This operation changes the `owned` flag of the sequence to **DDS\_BOOLEAN\_FALSE** (p. 317) and also sets the underlying buffer used by the sequence. See the `User's Manual` for more information about sequences and memory ownership.

Use this method if you want to manage the memory used by the sequence yourself. You must provide an array of elements and integers indicating how many elements are allocated in that array (i.e. the maximum) and how many elements are valid (i.e. the length). The sequence will subsequently use the memory you provide and will not permit it to be freed by a call to **FooSeq::maximum(DDS\_Long)** (p. 1707).

Once you have loaned a buffer to a sequence, make sure that you don't free it before calling **FooSeq::unloan** (p. 1709): the next time you access the sequence, you will be accessing freed memory!

You can use this method to wrap stack memory with a sequence interface, thereby avoiding dynamic memory allocation. Create a **FooSeq** (p. 1697) and an array of type **Foo** (p. 1648) and then loan the array to the sequence:

```
::Foo fooArray[10];

::FooSeq fooSeq;

fooSeq.loan_contiguous(fooArray, 0, 10);
```

By default, a sequence you create owns its memory unless you explicitly loan memory of your own to it. In a very few cases, RTI Connexx will return a sequence to you that has a loan; those cases are documented as such. For example, if you call **FooDataReader::read** (p. 1651) or **FooDataReader::take** (p. 1652) and pass in sequences with no loan and no memory allocated, RTI Connexx will loan memory to your sequences which must be unloaned with **FooDataReader::return\_loan** (p. 1672). See the documentation of those methods for more information.

## Precondition

**FooSeq::maximum()** (p. 1707) == 0; i.e. the sequence has no memory allocated to it.

**FooSeq::has\_ownership** (p. 1711) == **DDS\_BOOLEAN\_TRUE** (p. 317); i.e. the sequence does not already have an outstanding loan

## Postcondition

The sequence will store its elements in the buffer provided.

**FooSeq::has\_ownership** (p. 1711) == **DDS\_BOOLEAN\_FALSE** (p. 317)

**FooSeq::length()** (p. 1705) == `new_length`

**FooSeq::maximum()** (p. 1707) == `new_max`

## Parameters

<i>buffer</i>	The new buffer that the sequence will use. Must point to enough memory to hold <code>new_max</code> elements of type <b>Foo</b> (p. 1648). It may be NULL if <code>new_max == 0</code> .
<i>new_length</i>	The desired new length for the sequence. It must be the case that that $0 \leq \text{new\_length} \leq \text{new\_max}$ .
<i>new_max</i>	The allocated number of elements that could fit in the loaned buffer.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if `buffer` is successfully loaned to this sequence or **DDS\_BOOLEAN\_FALSE** (p. 317) otherwise. Failure only occurs due to failing to meet the pre-conditions. Upon failure the sequence remains unmodified.

## See also

**FooSeq::unloan** (p. 1709) , **FooSeq::loan\_discontiguous** (p. 1709)

## 9.312.3.13 loan\_discontiguous()

```
bool FooSeq::loan_discontiguous (
    Foo ** buffer,
    DDS_Long new_length,
    DDS_Long new_max )
```

Loan a discontiguous buffer to this sequence.

This method is exactly like **FooSeq::loan\_contiguous** (p. 1708) except that the buffer loaned is an array of **Foo** (p. 1648) pointers, not an array of **Foo** (p. 1648).

## Parameters

<i>buffer</i>	The new buffer that the sequence will use. Must point to enough memory to hold <code>new_max</code> elements of type <code>Foo*</code> . It may be NULL if <code>new_max == 0</code> .
<i>new_length</i>	The desired new length for the sequence. It must be the case that that $0 \leq \text{new\_length} \leq \text{new\_max}$ .
<i>new_max</i>	The allocated number of elements that could fit in the loaned buffer.

## See also

**FooSeq::unloan** (p. 1709), **FooSeq::loan\_contiguous** (p. 1708)

### 9.312.3.14 `unloan()`

```
bool FooSeq::unloan ( )
```

Return the loaned buffer in the sequence and set the maximum to 0.

This method affects only the state of this sequence; it does not change the contents of the buffer in any way.

Only the user who originally loaned a buffer should return that loan, as the user may have dependencies on that memory known only to them. Unloaning someone else's buffer may cause unspecified problems. For example, suppose a sequence is loaning memory from a custom memory pool. A user of the sequence likely has no way to release the memory back into the pool, so unloaning the sequence buffer would result in a resource leak. If the user were to then re-loan a different buffer, the original creator of the sequence would have no way to discover, when freeing the sequence, that the loan no longer referred to its own memory and would thus not free the user's memory properly, exacerbating the situation and leading to undefined behavior.

#### Precondition

`owned == DDS_BOOLEAN_FALSE` (p. 317)

#### Postcondition

`owned == DDS_BOOLEAN_TRUE` (p. 317)

`maximum == 0`

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if the preconditions were met. Otherwise **DDS\_BOOLEAN\_FALSE** (p. 317). The function only fails if the pre-conditions are not met, in which case it leaves the sequence unmodified.

#### See also

**FooSeq::loan\_contiguous** (p. 1708), **FooSeq::loan\_discontiguous** (p. 1709), **FooSeq::maximum(DDS\_↔ Long)** (p. 1707)

### 9.312.3.15 `get_contiguous_buffer()`

```
Foo * FooSeq::get_contiguous_buffer ( ) const
```

Return the contiguous buffer of the sequence.

Get the underlying buffer where contiguous elements of the sequence are stored. The size of the buffer matches the maximum of the sequence, but only the elements up to the **FooSeq::length()** (p. 1705) of the sequence are valid.

This method provides almost no encapsulation of the sequence's underlying implementation. Certain operations, such as **FooSeq::maximum(DDS\_Long)** (p. 1707), may render the buffer invalid. In light of these caveats, this operation should be used with care.

#### Returns

buffer that stores contiguous elements in sequence.

**9.312.3.16 get\_discontiguous\_buffer()**

```
Foo ** FooSeq::get_discontiguous_buffer ( ) const
```

Return the discontiguous buffer of the sequence.

This operation returns the underlying buffer where discontiguous elements of the sequence are stored. The size of the buffer matches the maximum of this sequence, but only the elements up to the **FooSeq::length()** (p. 1705) of the sequence are valid.

The same caveats apply to this method as to **FooSeq::get\_contiguous\_buffer** (p. 1710).

The sequence will dereference pointers in the discontiguous buffer to provide access to its elements by value in C and by reference in C++. If you access the discontiguous buffer directly by means of this method, do not store any NULL values into it, as accessing those values will result in a segmentation fault.

**Returns**

buffer that stores discontiguous elements in sequence.

**9.312.3.17 has\_ownership()**

```
bool FooSeq::has_ownership ( )
```

Return the value of the owned flag.

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if sequence owns the underlying buffer, or **DDS\_BOOLEAN\_FALSE** (p. 317) if it has an outstanding loan.

### 9.313.1 Detailed Description

<<*interface*>> (p. 237) <<*generic*>> (p. 237) User data type specific interface.

Defines the user data type specific interface generated for each application class.

The concrete user data type automatically generated by the implementation is an incarnation of this class.

**DDS\_Typesupport\_Cpp** (p. 72)  
the Code Generator User's Manual

### 9.313.2 Member Function Documentation

#### 9.313.2.1 register\_type()

```
static DDS_ReturnCode_t FooTypeSupport::register_type (
    DDSDomainParticipant * participant,
    const char * type_name ) [static]
```

Allows an application to communicate to RTI Connext the existence of a data type.

The *generated* implementation of the operation embeds all the knowledge that has to be communicated to the middle-ware in order to make it able to manage the contents of data of that type. This includes in particular the key definition that will allow RTI Connext to distinguish different instances of the same type.

The same **DDSTypeSupport** (p. 1629) can be registered multiple times with a **DDSDomainParticipant** (p. 1351) using the same or different values for the `type_name`. If `register_type` is called multiple times on the same **DDSTypeSupport** (p. 1629) with the same **DDSDomainParticipant** (p. 1351) and `type_name`, the second (and subsequent) registrations are ignored but the operation returns **DDS\_RETCODE\_OK** (p. 336).

#### Precondition

Cannot use the same `type_name` to register two different **DDSTypeSupport** (p.1629) with the same **DDSDomainParticipant** (p.1351), or else the operation will fail and **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336) will be returned.

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to register the data type <b>Foo</b> (p. 1648) with. Cannot be NULL.
<i>type_name</i>	<< <i>in</i> >> (p. 238) the type name under with the data type <b>Foo</b> (p. 1648) is registered with the participant; this type name is used when creating a new <b>DDSTopic</b> (p. 1617). (See <b>DDSDomainParticipant::create_topic</b> (p. 1382).) The name may not be NULL or longer than 255 characters.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336) or <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
------------	---

## MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

## See also

**DDSDomainParticipant::create\_topic** (p. 1382)

## 9.313.2.2 unregister\_type()

```
static DDS_ReturnCode_t FooTypeSupport::unregister_type (
    DDSDomainParticipant * participant,
    const char * type_name ) [static]
```

<<**extension**>> (p. 237) Allows an application to unregister a data type from RTI Connex. After calling unregister\_↵\_type, no further communication using that type is possible.

The *generated* implementation of the operation removes all the information about a type from RTI Connex. No further communication using that type is possible.

## Precondition

A type with `type_name` is registered with the participant and all **DDSTopic** (p. 1617) objects referencing the type have been destroyed. If any **DDSTopic** (p. 1617) is associated with the type, the operation will fail with **DDS\_RETCODE\_ERROR** (p. 336).

## Postcondition

All information about the type is removed from RTI Connex. No further communication using this type is possible.

## Parameters

<i>participant</i>	<< <b>in</b> >> (p. 238) the <b>DDSDomainParticipant</b> (p. 1351) to unregister the data type <b>Foo</b> (p. 1648) from. Cannot be NULL.
<i>type_name</i>	<< <b>in</b> >> (p. 238) the type name under with the data type <b>Foo</b> (p. 1648) is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be NULL.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_BAD_PARAMETER</b> (p. 336) or <b>DDS_RETCODE_ERROR</b> (p. 336)
------------	--

## MT Safety:

SAFE.

## See also

**FooTypeSupport::register\_type** (p. 1713)

## 9.313.2.3 create\_data()

```
static Foo * FooTypeSupport::create_data (
    const DDS_TypeAllocationParams_t & alloc_params = DDS_TYPE_ALLOCATION_PARAMS_DEFAULT
) [static]
```

<<**extension**>> (p. 237) Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

By default all memory for the type is deeply allocated, except for optional members.

## Parameters

<i>alloc_params</i>	<< <b>in</b> >> (p. 238) Whether or not to recursively allocate pointers and/or optional members
---------------------	--

## Returns

Newly created data type, or NULL on failure.

## See also

**FooTypeSupport::delete\_data\_ex** (p. 1717)

## 9.313.2.4 create\_data\_ex()

```
static Foo * FooTypeSupport::create_data_ex (
    DDS_Boolean allocatePointers ) [static]
```

<<*extension*>> (p. 237) Create a data type and initialize it.

The *generated* implementation of the operation knows how to instantiate a data type and initialize it properly.

When `allocatePointers` is `DDS_BOOLEAN_TRUE` (p. 317), all the references (pointers) in the type are recursively allocated.

#### Parameters

<code>allocatePointers</code>	<< <i>in</i> >> (p. 238) Whether or not to recursively allocate pointers.
-------------------------------	---

#### Returns

Newly created data type, or NULL on failure.

#### See also

`FooTypeSupport::delete_data_ex` (p. 1717)

### 9.313.2.5 copy\_data()

```
static DDS_ReturnCode_t FooTypeSupport::copy_data (
    Foo * dst_data,
    const Foo * src_data ) [static]
```

<<*extension*>> (p. 237) Copy data type.

The *generated* implementation of the operation knows how to copy value of a data type.

#### Parameters

<code>dst_data</code>	<< <i>inout</i> >> (p. 238) Data type to copy value to. Cannot be NULL.
<code>src_data</code>	<< <i>in</i> >> (p. 238) Data type to copy value from. Cannot be NULL.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.313.2.6 delete\_data()

```
static DDS_ReturnCode_t FooTypeSupport::delete_data (
    Foo * a_data,
```

```

        const DDS_TypeDeallocationParams_t & dealloc_params = DDS_TYPE_DEALLOCATION_PARAMS←
_DEFAULT ) [static]

```

<<**extension**>> (p. 237) Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

#### Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 238) Cannot be NULL.
<i>dealloc_params</i>	<< <b>in</b> >> (p. 238) Whether or not to destroy pointers and/or optional members. By default they are deleted.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**FooTypeSupport::create\_data** (p. 1715)

### 9.313.2.7 delete\_data\_ex()

```

static DDS_ReturnCode_t FooTypeSupport::delete_data_ex (
    Foo * a_data,
    DDS_Boolean deletePointers ) [static]

```

<<**extension**>> (p. 237) Destroy a user data type instance.

The *generated* implementation of the operation knows how to destroy a data type and return all resources.

When *deletePointers* is **DDS\_BOOLEAN\_TRUE** (p. 317), all the references (pointers) are destroyed as well.

#### Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 238) Cannot be NULL.
<i>deletePointers</i>	<< <b>in</b> >> (p. 238) Whether or not to destroy pointers.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**FooTypeSupport::create\_data\_ex** (p. 1715)

### 9.313.2.8 initialize\_data()

```
static DDS_ReturnCode_t FooTypeSupport::initialize_data (
    Foo * a_data,
    const DDS_TypeAllocationParams_t & alloc_params = DDS_TYPE_ALLOCATION_PARAMS_DEFAULT
) [static]
```

<<**extension**>> (p. 237) Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This method is typically called to initialize a data type that is allocated on the stack. Calling this method more than once will cause a memory leak.

The `alloc_params` determine whether or not all of the references (pointers) and optional members in the type are recursively allocated.

#### Parameters

<code>a_data</code>	<< <b>inout</b> >> (p. 238) Cannot be NULL.
<code>alloc_params</code>	<< <b>in</b> >> (p. 238) Parameters that determine whether or not to recursively allocate pointers and optional members.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

See also

**FooTypeSupport::finalize\_data** (p. 1719)

### 9.313.2.9 initialize\_data\_ex()

```
static DDS_ReturnCode_t FooTypeSupport::initialize_data_ex (
    Foo * a_data,
    DDS_Boolean allocatePointers ) [static]
```

<<**extension**>> (p. 237) Initialize data type.

The *generated* implementation of the operation knows how to initialize a data type. This method is typically called to initialize a data type that is allocated on the stack. Calling this method more than once will cause a memory leak.

When `allocatePointers` is **DDS\_BOOLEAN\_TRUE** (p. 317), all the references (pointers) in the type are recursively allocated.

## Parameters

<i>a_data</i>	<< <i>inout</i> >> (p. 238) Cannot be NULL.
<i>allocatePointers</i>	<< <i>in</i> >> (p. 238) Whether or not to recursively allocate pointers.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**FooTypeSupport::finalize\_data\_ex** (p. 1719)

## 9.313.2.10 finalize\_data()

```
static DDS_ReturnCode_t FooTypeSupport::finalize_data (
    Foo * a_data,
    const DDS_TypeDeallocationParams_t & dealloc_params = DDS_TYPE_DEALLOCATION_PARAMS↔
_DEFAULT ) [static]
```

<<*extension*>> (p. 237) Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This method is typically called to finalize a data type that has previously been initialized.

## Parameters

<i>a_data</i>	<< <i>in</i> >> (p. 238) Cannot be NULL.
<i>dealloc_params</i>	<< <i>in</i> >> (p. 238) Whether or not to destroy pointers and/or optional members. By default they are deleted.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

## See also

**FooTypeSupport::initialize\_data** (p. 1718)

### 9.313.2.11 finalize\_data\_ex()

```
static DDS_ReturnCode_t FooTypeSupport::finalize_data_ex (
    Foo * a_data,
    DDS_Boolean deletePointers ) [static]
```

<<*extension*>> (p. 237) Finalize data type.

The *generated* implementation of the operation knows how to finalize a data type. This method is typically called to finalize a data type that has previously been initialized.

When `deletePointers` is **DDS\_BOOLEAN\_TRUE** (p. 317), the memory required by the references (pointers) associated to the type is freed.

#### Parameters

<code>a_data</code>	<< <i>in</i> >> (p. 238) Cannot be NULL.
<code>deletePointers</code>	<< <i>in</i> >> (p. 238) Whether or not to free memory allocated by the pointers.

#### Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

#### See also

**FooTypeSupport::initialize\_data\_ex** (p. 1718)

### 9.313.2.12 get\_type\_name()

```
static const char * FooTypeSupport::get_type_name ( ) [static]
```

Get the default name for this type.

Can be used for calling **FooTypeSupport::register\_type** (p. 1713) or creating **DDSTopic** (p. 1617)

#### Returns

default name for this type

#### See also

**FooTypeSupport::register\_type** (p. 1713)

**DDSDomainParticipant::create\_topic** (p. 1382)

**9.313.2.13 print\_data()**

```
static void FooTypeSupport::print_data (
    const Foo * a_data ) [static]
```

<<**extension**>> (p. 237) Print value of data type to standard out.

The *generated* implementation of the operation knows how to print value of a data type.

**Parameters**

<i>a_data</i>	<< <b>in</b> >> (p. 238) Data type to be printed.
---------------	---

**9.313.2.14 serialize\_data\_to\_cdr\_buffer()**

```
static DDS_ReturnCode_t FooTypeSupport::serialize_data_to_cdr_buffer (
    char * buffer,
    unsigned int & length,
    const Foo * a_data ) [static]
```

<<**extension**>> (p. 237) Serializes the input sample into a CDR buffer of octets.

This method serializes a sample into a buffer of octets using Common Data Representation (CDR). Calling this method is equivalent to calling **FooTypeSupport::serialize\_data\_to\_cdr\_buffer\_ex** (p. 1722) with **DDS\_AUTO\_↔DATA\_REPRESENTATION** (p. 371) as the representation.

The input buffer must be big enough to store the serialized representation of the sample. Otherwise, the method will return an error.

To determine the minimum size of the input buffer, the user must call this method with the buffer set to NULL.

For more information about CDR in Connex, see [Data Representation](#) in the Core Libraries Extensible Types Guide.

**Parameters**

<i>a_data</i>	<< <b>in</b> >> (p. 238). Input sample. Cannot be NULL.
<i>buffer</i>	<< <b>out</b> >> (p. 238). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 238). When <i>buffer</i> is set to NULL, after the method executes, <i>length</i> will contain a buffer size big enough to hold the serialized data. When <i>buffer</i> is not NULL, <i>length</i> must contain the size of the input buffer when the method is invoked. After the method executes, <i>length</i> will be updated to contain the actual size of the serialized content, which may be smaller than the size obtained when <i>buffer</i> is set to NULL.

**Exceptions**

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336)
------------	--

### 9.313.2.15 serialize\_data\_to\_cdr\_buffer\_ex()

```
static DDS_ReturnCode_t FooTypeSupport::serialize_data_to_cdr_buffer_ex (
    char * buffer,
    unsigned int & length,
    const Foo * a_data,
    DDS_DataRepresentationId_t representation ) [static]
```

<<**extension**>> (p. 237) Serializes the input sample into a buffer of octets.

This method serializes a sample into a buffer of octets using the input data representation. See **FooTypeSupport**↔  
::**serialize\_data\_to\_cdr\_buffer** (p. 1721) for details.

#### Parameters

<i>a_data</i>	<< <b>in</b> >> (p. 238). Input sample. Cannot be NULL.
<i>buffer</i>	<< <b>out</b> >> (p. 238). Serialization buffer.
<i>length</i>	<< <b>inout</b> >> (p. 238). Serialization buffer length.
<i>representation</i>	<< <b>in</b> >> (p. 238). Representation used to serialize the data.

#### Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

### 9.313.2.16 deserialize\_data\_from\_cdr\_buffer()

```
static DDS_ReturnCode_t FooTypeSupport::deserialize_data_from_cdr_buffer (
    Foo * sample,
    const char * buffer,
    unsigned int length ) [static]
```

<<**extension**>> (p. 237) Deserializes a sample from a buffer of octets.

This method deserializes a sample from a CDR buffer of octets.

The content of the buffer generated by the method **FooTypeSupport::serialize\_data\_to\_cdr\_buffer** (p. 1721) can be provided to this method to get the sample back.

#### Parameters

<i>sample</i>	<< <b>in</b> >> (p. 238). Output sample. Cannot be NULL.
<i>buffer</i>	<< <b>in</b> >> (p. 238). Deserialization buffer. Cannot be NULL.
<i>length</i>	<< <b>in</b> >> (p. 238). Length of the serialized representation of the sample in the buffer.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336)
-----	--

## 9.313.2.17 data\_to\_string()

```
static DDS_ReturnCode_t FooTypeSupport::data_to_string (
    Foo * sample,
    char * str,
    DDS_UnsignedLong & str_size,
    DDS_PrintFormatProperty & property ) [static]
```

<<**extension**>> (p. 237) Transforms a data sample into a human-readable string representation.

This method takes a data sample and creates a string representation of the data.

The input character buffer must be big enough to store the string representation of the sample. Otherwise, the method will return an error.

To determine the minimum size of the input character buffer, the user must call this method with the buffer set to NULL.

If the size of the output string is longer than the size of an unsigned 32-bit integer, this operation will fail with **DDS\_↵ RETCODE\_OUT\_OF\_RESOURCES** (p. 337).

This method is only provided for types that were generated with typecodes.

## Parameters

<i>sample</i>	<< <b>in</b> >> (p. 238). The sample to get the string representation for. Cannot be NULL.
<i>str</i>	<< <b>out</b> >> (p. 238). Output string representing the data sample.
<i>str_size</i>	<< <b>inout</b> >> (p. 238). When <i>str</i> is set to NULL, after the method executes, <i>str_size</i> will contain a buffer size big enough to hold the string representation of the data. When <i>str</i> is not NULL, <i>str_size</i> must contain the size of the input buffer when the method is invoked. If the size of the input buffer is too small, after the method executes, <i>str_size</i> will be updated to contain the required size of the string content and the method will return <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337).
<i>property</i>	<< <b>in</b> >> (p. 238). Properties describing what the format of the output string should be.

## Exceptions

One	of the <b>Standard Return Codes</b> (p. 336), <b>DDS_RETCODE_OUT_OF_RESOURCES</b> (p. 337)
-----	--

### 9.313.2.18 get\_typecode()

```
static DDS_TypeCode * FooTypeSupport::get_typecode ( ) [static]
```

<<*extension*>> (p. 237) Retrieves the TypeCode for the Type.

This method retrieves the **DDS\_TypeCode** (p. 1164) for the Type. A **DDS\_TypeCode** (p. 1164) is a mechanism for representing a type at runtime. RTI Connexx can use type codes to send type definitions on the network. A **DDS\_TypeCode** (p. 1164) value consists of a type code *kind* (represented by the **DDS\_TCKind** (p. 86) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS\_TypeCode** (p. 1164), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

#### Returns

The TypeCode for this type

## 9.314 connexx::IllegalOperationException Class Reference

The operation was called under improper circumstances.

## Static Public Member Functions

- static **LoanedSamples move\_construct\_from\_loans** (TDataReader \*reader, TSeq &data\_seq, **SampleInfoSeq** &info\_seq)  
*Create a new **LoanedSamples** (p. 1727) object by moving the ownership of the data sequence and the **DDS\_SampleInfo** (p. 1082) sequences.*

### 9.320.1 Detailed Description

```
template<typename T>
class connex::LoanedSamples< T >
```

Provides access to a collection of middleware-loaned samples.

The samples in this container are loaned from the middleware and must be returned at some point.

The loan is automatically returned in the destructor. Alternatively **return\_loan** (p. 1734) can be used.

This is a move-only type. That is, The copy-construction and copy-assignment operations are explicitly disabled. In spite of that the objects of **LoanedSamples** (p. 1727) type can be passed to a function and returned from a function by-value very efficiently. The **connext::details::move()** (p. 190) should be used while passing **LoanedSamples** (p. 1727) by value in and out of a function. Moreover, as assignments are disabled, **connext::details::move()** (p. 190) must be used to transfer the ownership of the loaned samples from one object to another. **connext::details::move()** (p. 190) ensures that there exists exactly one owner of the loan.

Due to its move-only nature, instances of **LoanedSamples** (p. 1727) can't be stored in C++ standard library containers. There are two possible ways to achieve this. Both are not exception safe.

First, use dynamically allocated **LoanedSamples<T>** objects and the STL containers would store the pointers to the **LoanedSamples<T>** objects. The **LoanedSamples** (p. 1727) objects returned by the middleware can be moved in to the dynamically allocated **LoanedSamples<T>** objects using **connext::details::move()** (p. 190) . Using smart pointers for automatic memory management is highly recommended if this approach is chosen.

Second alternative is to use the **LoanMemento** (p. 1736) conversion operator. An STL container of **LoanedSamples<T>::LoanMemento** objects can be created from a **LoanedSamples<T>** object. **LoanedSamples<T>** object releases its ownership of the resources in this conversion. Therefore, when the **LoanMemento** (p. 1736) object is no longer required, the underlying resources must be returned by first creating a **LoanedSamples** (p. 1727) object from the **LoanMemento** (p. 1736). This technique does not require a dynamic allocation like the first alternative. However, this technique should be used very carefully because in case of exceptions, **LoanMemento** (p. 1736) object will not free the resources like the **LoanedSamples** (p. 1727) object does.

This container provides STL-compliant random-access iterators (**begin** (p. 1735) and **end** (p. 1735)).

The contained elements are of type **connext::SampleRef** (p. 1920) Therefore, dereferencing a **LoanedSamples** (p. 1727) iterator returns a **connext::SampleRef** (p. 1920) object, which in turn refer to the data and **DDS\_SampleInfo** (p. 1082).

The contents of this container should not be modified and references to the samples it contains are only valid before the loan is returned.

#### Template Parameters

<i>T</i>	The data type of the contained Samples
----------	--

#### See also

**connext::Requester::take\_replies(int)** (p. 1899)

**Taking samples by copy** (p. 229)

## 9.320.2 Member Typedef Documentation

### 9.320.2.1 iterator

```
template<typename T >
typedef SampleIterator<T, false> connext::LoanedSamples< T >::iterator
```

The iterator type.

### 9.320.2.2 const\_iterator

```
template<typename T >
typedef SampleIterator<T, true> connext::LoanedSamples< T >::const_iterator
```

The const iterator type.

## 9.320.3 Constructor & Destructor Documentation

### 9.320.3.1 **LoanedSamples**() [1/2]

```
template<typename T >
connext::LoanedSamples< T >::LoanedSamples ( ) [inline]
```

Creates an empty **LoanedSamples** (p. 1727) object.

Referenced by **connext::LoanedSamples**< T >::**move\_construct\_from\_loans**().

### 9.320.3.2 **LoanedSamples**() [2/2]

```
template<typename T >
connext::LoanedSamples< T >::LoanedSamples (
    LoanMemento loan_memento ) throw ( ) [inline]
```

Reconstruct a new **LoanedSamples** (p. 1727) object from an internal representation of another.

This constructor will regain the ownership of the underlying data and **::DDS\_SampleInfo** sequences.

## Parameters

<i>loan_memento</i>	The internal representation of another <b>LoanedSamples</b> (p. 1727) object.
---------------------	---

## See also

**connext::LoanedSamples** (p. 1727)

## 9.320.3.3 ~LoanedSamples()

```
template<typename T >
connext::LoanedSamples< T >::~~ LoanedSamples ( ) throw ( ) [inline]
```

Automatically returns the loan to the middleware.

## See also

**return\_loan** (p. 1734)

References **connext::LoanedSamples< T >::return\_loan()**.

## 9.320.4 Member Function Documentation

## 9.320.4.1 move\_construct\_from\_loans()

```
template<typename T >
static LoanedSamples connext::LoanedSamples< T >::move_construct_from_loans (
    TDataReader * reader,
    TSeq & data_seq,
    SampleInfoSeq & info_seq ) [inline], [static]
```

Create a new **LoanedSamples** (p. 1727) object by moving the ownership of the data sequence and the **DDS\_SampleInfo** (p. 1082) sequences.

## Precondition

The *data\_seq* and *info\_seq* parameters must contained loaned sample from the same DataReader.

## Parameters

<i>reader</i>	The DataReader from which the loan was taken.
<i>data_seq</i>	The <b>FooSeq</b> (p. 1697) object containing the loaned samples. After the call this sequence will be empty.
<i>info_seq</i>	The <b>DDS_SampleInfoSeq</b> (p. 1093) object containing the loaned SampleInfo. After this call the sequence will be empty.

## Postcondition

The new **LoanedSamples** (p. 1727) object will manage the ownership of the loans.

## Returns

void

## See also

**connext::LoanedSamples** (p. 1727)

References **DDS\_RETCODE\_BAD\_PARAMETER**, and **connext::LoanedSamples< T >::LoanedSamples()**.

**9.320.4.2 release()**

```
template<typename T >
void connext::LoanedSamples< T >::release (
    TDataReader *& reader_ptr,
    TSeq & data_seq,
    SampleInfoSeq & info_seq ) [inline]
```

Transfers the ownership of the underlying data and the **DDS\_SampleInfo** (p. 1082) sequences.

## Precondition

The *data\_seq* and *info\_seq* parameters must be default initialized prior to this call.

## Parameters

<i>reader_ptr</i>	The DataReader from which the loan was taken. After the call the pointer will be updated.
<i>data_seq</i>	The <b>FooSeq</b> (p. 1697) object that will contain the loan previously held by the <b>LoanedSamples</b> (p. 1727) object. After the call this sequence will loan the underlying data.
<i>info_seq</i>	The <b>DDS_SampleInfoSeq</b> (p. 1093) object that will contain the SampleInfo loan previously held by the <b>LoanedSamples</b> (p. 1727) object. After this call this sequence will loan the underlying <b>DDS_SampleInfoSeq</b> (p. 1093).

**Postcondition**

The `data_seq` and `info_seq` objects will contain the loan previously held by the **LoanedSamples** (p. 1727). The **LoanedSamples** (p. 1727) object will release its ownership.

**See also**

**connext::LoanedSamples** (p. 1727)

References **DDS\_RETCODE\_PRECONDITION\_NOT\_MET**.

**9.320.4.3 operator[]()** [1/2]

```
template<typename T >
value_type connext::LoanedSamples< T >::operator[] (
    size_t index ) [inline]
```

Provides access to the underlying **SampleRef** (p. 1920) object in array-like syntax.

**Parameters**

<i>index</i>	The index of the <b>Sample</b> (p. 1912). Allowed values are from 0 to <b>length()</b> (p. 1734)-1.
--------------	---

**Returns**

A **connext::SampleRef** (p. 1920) object that refers to data and **DDS\_SampleInfo** (p. 1082) at the specified `index`.

**See also**

**connext::LoanedSamples** (p. 1727)

**9.320.4.4 operator[]()** [2/2]

```
template<typename T >
const_value_type connext::LoanedSamples< T >::operator[] (
    size_t index ) const [inline]
```

Provides access to the underlying **SampleRef** (p. 1920) object in array-like syntax.

## Parameters

<i>index</i>	The index of the <b>Sample</b> (p. 1912). Allowed values are from 0 to <b>length()</b> (p. 1734)-1.
--------------	---

## Returns

A **connext::SampleRef** (p. 1920) object that refers to a constant data and constant **DDS\_SampleInfo** (p. 1082) at the specified *index*.

## See also

**connext::LoanedSamples** (p. 1727)

### 9.320.4.5 length()

```
template<typename T >  
int connext::LoanedSamples< T >::length ( ) const [inline]
```

Returns the number of samples.

### 9.320.4.6 return\_loan()

```
template<typename T >  
void connext::LoanedSamples< T >::return_loan ( ) [inline]
```

Returns the loaned samples to the middleware.

After calling this operation this object cannot be accessed again.

Calling this operation is optional, since the destructor will automatically do it.

## See also

**FooDataReader::return\_loan** (p. 1672) (for more information on how the middleware loans samples)

Referenced by **connext::LoanedSamples< T >::~~LoanedSamples()**.

### 9.320.4.7 operator LoanMemento()

```
template<typename T >
connext::LoanedSamples< T >::operator LoanMemento ( ) throw ( ) [inline]
```

Release the ownership of the underlying loaned data and SampleInfo and returns an internal representation object.

**LoanMemento** (p. 1736) object has trivial copy semantics. Therefore, it does not manage resources automatically like **LoanedSamples** (p. 1727) does. This conversion function should be used very carefully. This conversion can be used to store **LoanedSamples** (p. 1727) in a standard library containers. However, note that resource management must be handled manually.

See also

**connext::LoanedSamples** (p. 1727)

### 9.320.4.8 begin() [1/2]

```
template<typename T >
iterator connext::LoanedSamples< T >::begin ( ) [inline]
```

Provides an iterator to the first element in the container.

Returns

A STL-compliant random-access iterator to the first element in this container

See also

**connext::SampleIterator** (p. 1920)

**end** (p. 1735)

### 9.320.4.9 end() [1/2]

```
template<typename T >
iterator connext::LoanedSamples< T >::end ( ) [inline]
```

Provides an iterator to the past-the-end element in the container.

Returns

A STL-compliant random-access iterator indicating the end of the container.

See also

**connext::SampleIterator** (p. 1920)

**begin** (p. 1735)

### 9.320.4.10 begin() [2/2]

```
template<typename T >
const_iterator connext::LoanedSamples< T >::begin ( ) const [inline]
```

Provides an iterator to the first element in the container.

#### Returns

A STL-compliant random-access iterator to the first element in this container

#### See also

**connext::SampleIterator** (p. 1920)

**end** (p. 1735)

### 9.320.4.11 end() [2/2]

```
template<typename T >
const_iterator connext::LoanedSamples< T >::end ( ) const [inline]
```

Provides an iterator to the past-the-end element in the container.

#### Returns

A STL-compliant random-access iterator indicating the end of the container.

#### See also

**connext::SampleIterator** (p. 1920)

**begin** (p. 1735)

## 9.321 connext::LoanedSamples< T >::LoanMemento Struct Reference

A simple value-type for the internal representation of the a **LoanedSamples** (p. 1727) object.

### 9.321.1 Detailed Description

```
template<typename T>
struct connext::LoanedSamples< T >::LoanMemento
```

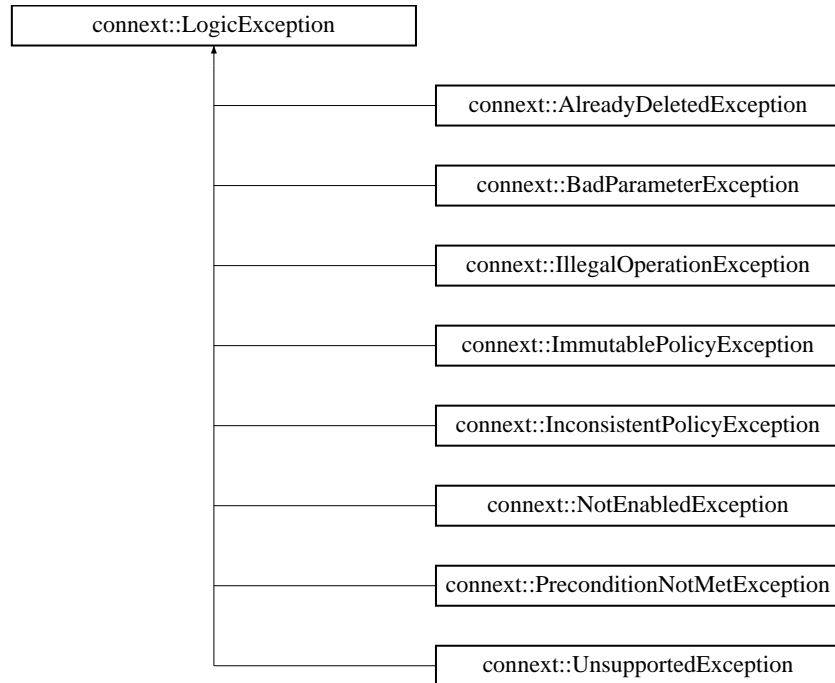

A simple value-type for the internal representation of the a **LoanedSamples** (p. 1727) object.

Objects of this type can be used to store **LoanedSamples** (p. 1727) in an STL container. Care be taken in case of exceptions because **LoanMemento** (p. 1736) does not offer support for exception-safe programming.

## 9.322 connext::LogicException Class Reference

Base class of all RTI Connex exceptions caused by a logic error.

Inheritance diagram for connext::LogicException:

### 9.322.1 Detailed Description

Base class of all RTI Connex exceptions caused by a logic error.

Its base class is `std::logic_error`, from which it inherits the `what()` method.

## 9.323 connext::MessagingLibraryVersion Class Reference

The Connex Messaging Library version.

### Public Member Functions

- **DDS\_Char major\_version () const**  
*Get the library major version digit.*
- **DDS\_Char minor\_version () const**

### 9.324.1 Detailed Description

The Connex Messaging version.

### 9.324.2 Member Function Documentation

#### 9.324.2.1 get\_api\_version()

```
static const MessagingLibraryVersion & connext::MessagingVersion::get_api_version ( ) [static]
```

Get the API version.

#### 9.324.2.2 get\_api\_version\_string()

```
static const std::string & connext::MessagingVersion::get_api_version_string ( ) [static]
```

Get the API version as a string.

#### 9.324.2.3 get\_api\_build\_version()

```
static const std::string & connext::MessagingVersion::get_api_build_version ( ) [static]
```

Get the build version as a string.

## 9.325 rti::flat::MutableArrayBuilder< ElementBuilder, N > Class Template Reference

Builds an array member of variable-size elements.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for rti::flat::MutableArrayBuilder< ElementBuilder, N >:

### Public Types

- typedef **MutableArrayOffset**< typename ElementBuilder::Offset, N > **Offset**  
*The related Offset type.*

### Public Member Functions

- ElementBuilder **build\_next** ()  
*Begins building the next element.*
- **Offset finish** ()  
*Finishes building the array.*

### Additional Inherited Members

#### 9.325.1 Detailed Description

```
template<typename ElementBuilder, unsigned int N>
class rti::flat::MutableArrayBuilder< ElementBuilder, N >
```

Builds an array member of variable-size elements.

#### Template Parameters

<i>ElementBuilder</i>	The Builder type for the elements of the array
<i>N</i>	The array bound; the exact number of elements this array builder must build. For multidimensional arrays, <i>N</i> is the product of each dimension bound.

Each element of this array needs to be built using the ElementBuilder returned by **build\_next()** (p. 1741). N elements exactly must be built. Unlike a sequence Builder, it is not possible to finish an array with less than N elements.

This example shows how to use a **MutableArrayBuilder** (p. 1740) to build an array member of **MyFlatMutableBuilder** (p. 1750):

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
auto array_builder = builder.build_my_mutable_array();
for (int i = 0; i < 10; i++) {
    FlatMutableBarBuilder element_builder = array_builder.build_next();
    // ... build element
    element_builder.finish();
}
array_builder.finish();
```

Note that Builder types are not necessary for arrays of fixed-size elements, since they are added at once (see **MyFlatMutableBuilder::add\_my\_final\_array()** (p. 1755)).

## 9.325.2 Member Typedef Documentation

### 9.325.2.1 Offset

```
template<typename ElementBuilder , unsigned int N>
typedef MutableArrayOffset<typename ElementBuilder::Offset, N> rti::flat::MutableArrayBuilder<
ElementBuilder, N >::Offset
```

The related Offset type.

## 9.325.3 Member Function Documentation

### 9.325.3.1 build\_next()

```
template<typename ElementBuilder , unsigned int N>
ElementBuilder rti::flat::MutableArrayBuilder< ElementBuilder, N >::build_next ( ) [inline]
```

Begins building the next element.

Before calling **build\_next()** (p. 1741) to create a new element, the element Builder returned by a previous call to **build\_next** must have been finished.

References **rti::flat::AbstractListBuilder**< **detail::DHeaderGenerator** >::**element\_count()**.

### 9.325.3.2 finish()

```
template<typename ElementBuilder , unsigned int N>
Offset rti::flat::MutableArrayBuilder< ElementBuilder, N >::finish ( ) [inline]
```

Finishes building the array.

#### Precondition

**build\_next()** (p. 1741) must have been successfully called  $N$  times exactly.

#### Returns

The Offset to the member that has been built.

#### See also

**discard()** (p. 580)

References `rti::flat::AbstractListBuilder< detail::DHeaderGenerator >::element_count()`.

## 9.326 rti::flat::MutableArrayOffset< ElementOffset, N > Class Template Reference

Offset to an array of variable-size elements.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for `rti::flat::MutableArrayOffset< ElementOffset, N >`:

### Public Member Functions

- ElementOffset **get\_element** (unsigned int i)  
*Gets the Offset to an element.*

### Additional Inherited Members

#### 9.326.1 Detailed Description

```
template<typename ElementOffset, unsigned int N>
class rti::flat::MutableArrayOffset< ElementOffset, N >
```

Offset to an array of variable-size elements.

## Template Parameters

<i>ElementOffset</i>	An Offset for a type of variable size, such as a mutable struct ( <b>MyFlatMutableOffset</b> (p. 1757)), union, or <b>StringOffset</b> (p. 1945).
<i>N</i>	The array bound. For multidimensional arrays, <i>N</i> is the product of each dimension bound.

Represents an Offset to an array member and allows getting an Offset to each of its elements.

See also

**FinalArrayOffset** (p. 1643) encapsulates arrays of fixed-size elements

## 9.326.2 Member Function Documentation

### 9.326.2.1 get\_element()

```
template<typename ElementOffset , unsigned int N>
ElementOffset rti::flat::MutableArrayOffset< ElementOffset, N >::get_element (
    unsigned int i ) [inline]
```

Gets the Offset to an element.

## Parameters

<i>i</i>	The zero-based index to the element
----------	-------------------------------------

## Returns

The Offset to the element in the *i*-th position

## 9.327 rti::flat::MutableOffset Class Reference

The base class of all Offsets to a final struct type.

```
#include <Offset.hpp>
```

Inheritance diagram for rti::flat::MutableOffset:

## Additional Inherited Members

### 9.327.1 Detailed Description

The base class of all Offsets to a final struct type.

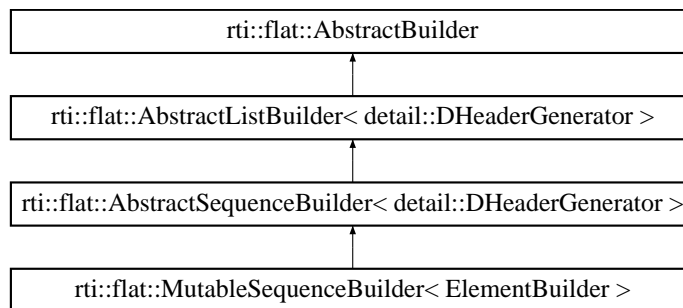

This class contains only implementation details; all the public accessors are defined in the generated type (**MyFlat**↔**MutableOffset** (p. 1757)).

## 9.328 rti::flat::MutableSequenceBuilder< ElementBuilder > Class Template Reference

Builds a sequence member of variable-size elements.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for rti::flat::MutableSequenceBuilder< ElementBuilder >:

## Public Types

- typedef **SequenceOffset**< typename ElementBuilder::Offset > **Offset**  
*The related Offset type.*

## Public Member Functions

- ElementBuilder **build\_next** ()  
*Begins building the next element.*
- **Offset finish** ()  
*Finishes building the sequence.*

## Additional Inherited Members

### 9.328.1 Detailed Description

```
template<typename ElementBuilder>
class rti::flat::MutableSequenceBuilder< ElementBuilder >
```

Builds a sequence member of variable-size elements.

### Template Parameters

<i>ElementBuilder</i>	The Builder type for the elements of the sequence
-----------------------	---

To build the elements use the ElementBuilder returned by **build\_next()** (p. 1745). An empty sequence can be built by calling **finish()** (p. 1745) without any call to **build\_next()** (p. 1745).

This class doesn't enforce the sequence bound set in IDL.

The following example uses a **MutableSequenceBuilder** (p. 1744) to initialize a sequence member of **MyFlatMutableBuilder** (p. 1750) with two elements:

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
auto seq_builder = builder.build_my_mutable_seq();
auto element_builder = seq_builder.build_next();
// ... build the first element
element_builder.finish();
element_builder = seq_builder.build_next();
// ... build the second element
element_builder.finish();

seq_builder.finish();
```

## 9.328.2 Member Typedef Documentation

### 9.328.2.1 Offset

```
template<typename ElementBuilder >
typedef SequenceOffset<typename ElementBuilder::Offset> rti::flat::MutableSequenceBuilder<
ElementBuilder >::Offset
```

The related Offset type.

## 9.328.3 Member Function Documentation

### 9.328.3.1 build\_next()

```
template<typename ElementBuilder >
ElementBuilder rti::flat::MutableSequenceBuilder< ElementBuilder >::build_next ( ) [inline]
```

Begins building the next element.

Before calling **build\_next()** (p. 1745) to create a new element, the application must have called **finish()** (p. 1745) on the previous element Builder.

### 9.328.3.2 finish()

```
template<typename ElementBuilder >
Offset rti::flat::MutableSequenceBuilder< ElementBuilder >::finish ( ) [inline]
```

Finishes building the sequence.

#### Returns

An Offset to the member that has been built.

#### See also

**discard()** (p. 580)

## 9.329 MyFlatFinalOffset Class Reference

Represents the Offset to an arbitrary user-defined FlatData final IDL struct.

```
#include <Offset.hpp>
```

Inheritance diagram for MyFlatFinalOffset:

### Public Types

- typedef MyFlatFinalConstOffset **ConstOffset**  
*The equivalent read-only Offset type.*

## Public Member Functions

- **MyFlatFinalOffset** ()  
*Creates a null Offset.*
- `int32_t my_primitive` () const  
*Retrieves the value for a primitive member.*
- `FlatFinalBar::ConstOffset my_complex` () const  
*Retrieves a const Offset to a complex member.*
- `const rti::flat::PrimitiveArrayOffset< int32_t, 10 > my_primitive_array` () const  
*Retrieves a const Offset to a primitive array.*
- `rti::flat::FinalArrayOffset< FlatFinalBar::ConstOffset, 10 > my_complex_array` () const  
*Retrieves a const Offset to a complex array.*
- `bool my_primitive` (int32\_t value)  
*Sets the value for a primitive member.*
- `FlatFinalBar::Offset my_complex` ()  
*Retrieves a non-const Offset to a complex member.*
- `rti::flat::PrimitiveArrayOffset< int32_t, 10 > my_primitive_array` ()  
*Retrieves a non-const Offset to a primitive array.*
- `rti::flat::FinalArrayOffset< FlatFinalBar::Offset, 10 > my_complex_array` ()  
*Retrieves a non-const Offset to a complex array.*

### 9.329.1 Detailed Description

Represents the Offset to an arbitrary user-defined FlatData final IDL struct.

This example type represents the Offset type that `rtiddsngen` would generate for **MyFlatFinal** (p. 562).

It provides accessors for each of its members. Accessors can return other Offsets or primitive values.

An Offset to a final type may meet the requirements to be cast to its equivalent plain C++ type (see `rti::flat::plain_cast()` (p. 566)).

### 9.329.2 Member Typedef Documentation

#### 9.329.2.1 ConstOffset

```
typedef MyFlatFinalConstOffset MyFlatFinalOffset::ConstOffset
```

The equivalent read-only Offset type.

Each Offset for a user type has an equivalent const Offset that doesn't provide the methods to modify the Sample.

### 9.329.3 Constructor & Destructor Documentation

#### 9.329.3.1 MyFlatFinalOffset()

```
MyFlatFinalOffset::MyFlatFinalOffset ( ) [inline]
```

Creates a null Offset.

Postcondition

`is_null()` (p. 1857)

### 9.329.4 Member Function Documentation

#### 9.329.4.1 my\_primitive() [1/2]

```
int32_t MyFlatFinalOffset::my_primitive ( ) const
```

Retrieves the value for a primitive member.

#### 9.329.4.2 my\_complex() [1/2]

```
FlatFinalBar::ConstOffset MyFlatFinalOffset::my_complex ( ) const
```

Retrieves a const Offset to a complex member.

FlatFinalBar is another arbitrary user-defined final FlatData type.

#### 9.329.4.3 my\_primitive\_array() [1/2]

```
const rti::flat::PrimitiveArrayOffset< int32_t, 10 > MyFlatFinalOffset::my_primitive_array ( )  
const
```

Retrieves a const Offset to a primitive array.

#### 9.329.4.4 my\_complex\_array() [1/2]

```
rti::flat::FinalArrayOffset< FlatFinalBar::ConstOffset, 10 > MyFlatFinalOffset::my_complex_array  
( ) const
```

Retrieves a const Offset to a complex array.

#### 9.329.4.5 my\_primitive() [2/2]

```
bool MyFlatFinalOffset::my_primitive (   
    int32_t value )
```

Sets the value for a primitive member.

#### 9.329.4.6 my\_complex() [2/2]

```
FlatFinalBar::Offset MyFlatFinalOffset::my_complex ( )
```

Retrieves a non-const Offset to a complex member.

FlatFinalBar is another arbitrary user-defined final FlatData type.

#### 9.329.4.7 my\_primitive\_array() [2/2]

```
rti::flat::PrimitiveArrayOffset< int32_t, 10 > MyFlatFinalOffset::my_primitive_array ( )
```

Retrieves a non-const Offset to a primitive array.

#### 9.329.4.8 my\_complex\_array() [2/2]

```
rti::flat::FinalArrayOffset< FlatFinalBar::Offset, 10 > MyFlatFinalOffset::my_complex_array ( )
```

Retrieves a non-const Offset to a complex array.

## 9.330 MyFlatMutableBuilder Class Reference

Represents the Builder for an arbitrary user-defined mutable type.

```
#include <Builder.hpp>
```

Inheritance diagram for MyFlatMutableBuilder:

### Public Types

- typedef **MyFlatMutableOffset** **Offset**  
*The related offset type.*

### Public Member Functions

- **MyFlatMutableBuilder** ()  
*Creates an invalid Builder.*
- **MyFlatMutableBuilder** (unsigned char \*buffer, int32\_t size, bool initialize\_members=false)  
*Construct a Builder with an arbitrary buffer.*
- **Offset finish** ()  
*Finishes building a member.*
- **MyFlatMutable \* finish\_sample** ()  
*Finishes building a sample.*
- bool **add\_my\_primitive** (int32\_t value)  
*Adds a primitive member.*
- bool **add\_my\_optional\_primitive** (int32\_t value)  
*Adds a primitive member.*
- **rti::flat::PrimitiveArrayOffset**< int32\_t, 10 > **add\_my\_primitive\_array** ()  
*Adds a primitive array member.*
- **rti::flat::PrimitiveSequenceBuilder**< int32\_t > **build\_my\_primitive\_seq** ()  
*Begins building a primitive-sequence member.*
- **MyFlatFinalOffset add\_my\_final** ()  
*Adds a final complex member.*

*Begins building a sequence member of string elements.*

## Additional Inherited Members

### 9.330.1 Detailed Description

Represents the Builder for an arbitrary user-defined mutable type.

This example type represents the **Builder** (p. 558) type that **rtiddsgen** would generate for **MyFlatMutable** (p. 562) and allows creating a sample or a member of that type.

The most common way to create a Builder is **rti::flat::build\_data()** (p. 560), which obtains a managed sample from a **FooDataWriter** (p. 1676) as described in **Publishing FlatData** (p. 570). It is also possible to create a Builder with an arbitrary buffer using the constructor that receives the buffer and its size.

When a Builder is created, the type is empty—it doesn't contain any members. The Builder provides functions to create each member. There are two kind of functions: `add` functions and `build` functions.

#### 9.330.1.1 Adding fixed-size members

Fixed-size members are "added", and the corresponding function is called **add\_<member\_name>**. "Add" functions directly place the member in the buffer, and return an **Offset** (p. 564) that allows setting its values.

By default, after calling **add\_<member\_name>** the member values are uninitialized. This behavior can be changed by creating the writer with **DDS\_DataWriterResourceLimitsQosPolicy::initialize\_writer\_loaned\_sample** (p. 704); this is however not recommended in general because of the performance impact for large types.

```
MyFlatMutableBuilder builder = ...;
MyFinalFooOffset member_offset = builder.add_my_final();
member_offset.my_primitive(10);
// ... add/build more members
```

#### 9.330.1.2 Building variable-size members

Variable-size members are "built", and the function is called **build\_<member\_name>**. "Build" functions return another **Builder** (p. 558) to build the member.

```
MyFlatMutableBuilder builder = ...;
auto member_builder = builder.build_my_mutable();
// ... use member_builder
member_builder.finish();
// ... add/build more members
```

While a member is being built, the parent Builder is a **bound** state, which prevents any changes to it until the member has been finished by calling `member_builder.finish()`. In particular, the member Builder must be finished before adding or building any other member, or before finishing `builder`.

### 9.330.1.3 Choosing which members are included

The `add/build` function for each member can be called one or zero times. That is, all members are optional, even those without the `@optional` IDL annotation. However `@key` member must be added or `FooDataWriter::write` (p. 1683) will fail.

FlatData samples received by `DDSDataReader` (p. 1288) will not contain the members that were not added/built—the corresponding member getters return a null Offset. A `DDSDataReader` (p. 1288) for an equivalent non-FlatData (plain) definition of this type will assign default values to any non-optional members that were not present in the sample when written.

It is not permitted to add a member more than once, but builders don't enforce this. Trying to build/add a member more than once may cause the Builder to overflow (see **Builder Error Management** (p. 560)). If it doesn't, it may be possible to write and read the data samples, but the duplicate members will be ignored.

See also

**FlatData Builders** (p. 558)

## 9.330.2 Member Typedef Documentation

### 9.330.2.1 Offset

```
typedef MyFlatMutableOffset MyFlatMutableBuilder::Offset
```

The related offset type.

## 9.330.3 Constructor & Destructor Documentation

### 9.330.3.1 MyFlatMutableBuilder() [1/2]

```
MyFlatMutableBuilder::MyFlatMutableBuilder ( ) [inline]
```

Creates an invalid Builder.

**Postcondition**

```
!is_valid()
```

**Note**

Top-level builders are created with `rti::flat::build_data()` (p. 560), and member builders are created with the corresponding `build_<member>` function.

### 9.330.3.2 MyFlatMutableBuilder() [2/2]

```
MyFlatMutableBuilder::MyFlatMutableBuilder (
    unsigned char * buffer,
    int32_t size,
    bool initialize_members = false ) [inline]
```

Construct a Builder with an arbitrary buffer.

#### Note

The recommended way to create a Builder is `rti::flat::build_data()` (p. 560) as described in **Publishing FlatData** (p. 570). This constructor provides an alternative option to use an arbitrary data buffer.

#### Parameters

<i>buffer</i>	The buffer that will be used to build the data sample
<i>size</i>	The size of the buffer
<i>initialize_members</i>	Whether fixed-size elements added to this Builder will be initialized to their default values or will be left uninitialized (more efficient).

If the sample being built overflows the buffer size, the add/build operations will fail. See **Builder Error Management** (p. 560).

## 9.330.4 Member Function Documentation

### 9.330.4.1 finish()

```
Offset MyFlatMutableBuilder::finish ( )
```

Finishes building a member.

#### Returns

The Offset to the member (normally it can be ignored)

#### Precondition

**is\_nested()** (p. 580). That is, this object must be a member Builder, not a sample Builder.

### 9.330.4.2 finish\_sample()

```
MyFlatMutable * MyFlatMutableBuilder::finish_sample ( )
```

Finishes building a sample.

#### Precondition

**!is\_nested()** (p. 580). That is, this object must be a sample Builder, not a member Builder.

#### Postcondition

**!is\_valid()** (p. 580). That is, this Builder can no longer be used.

#### Returns

The sample, ready to be written.

This function completes and returns the sample built with this Builder.

#### See also

**rti::flat::build\_data()** (p. 560), the function to create a **FooDataWriter** (p. 1676)-managed sample Builder.

### 9.330.4.3 add\_my\_primitive()

```
bool MyFlatMutableBuilder::add_my_primitive (
    int32_t value )
```

Adds a primitive member.

### 9.330.4.4 add\_my\_optional\_primitive()

```
bool MyFlatMutableBuilder::add_my_optional_primitive (
    int32_t value )
```

Adds a primitive member.

#### 9.330.4.5 add\_my\_primitive\_array()

```
rti::flat::PrimitiveArrayOffset< int32_t, 10 > MyFlatMutableBuilder::add_my_primitive_array ( )
```

Adds a primitive array member.

##### Returns

The Offset to the array, which can be used to set its values.

#### 9.330.4.6 build\_my\_primitive\_seq()

```
rti::flat::PrimitiveSequenceBuilder< int32_t > MyFlatMutableBuilder::build_my_primitive_seq ( )
```

Begins building a primitive-sequence member.

#### 9.330.4.7 add\_my\_final()

```
MyFlatFinalOffset MyFlatMutableBuilder::add_my_final ( )
```

Adds a final complex member.

##### Returns

The Offset to the member, which can be used to set its values.

#### 9.330.4.8 add\_my\_final\_array()

```
rti::flat::FinalAlignedArrayOffset< MyFlatFinalOffset, 10 > MyFlatMutableBuilder::add_my_↵  
final_array ( )
```

Adds an array member of final complex elements.

##### Returns

The Offset to the array, which can be used to set its values.

#### 9.330.4.9 build\_my\_final\_seq()

```
rti::flat::FinalSequenceBuilder< MyFlatFinalOffset > MyFlatMutableBuilder::build_my_final_seq ( )
```

Begins building a sequence member of final complex elements.

#### 9.330.4.10 build\_my\_mutable()

```
FlatMutableBarBuilder MyFlatMutableBuilder::build_my_mutable ( )
```

Begins building a mutable complex member.

FlatMutableBar represents another arbitrary mutable FlatData type.

#### 9.330.4.11 build\_my\_mutable\_array()

```
rti::flat::MutableArrayBuilder< FlatMutableBarBuilder, 10 > MyFlatMutableBuilder::build_my_mutable_array ( )
```

Begins building an array member of mutable complex elements.

#### 9.330.4.12 build\_my\_mutable\_seq()

```
rti::flat::MutableSequenceBuilder< FlatMutableBarBuilder > MyFlatMutableBuilder::build_my_mutable_seq ( )
```

Begins building a sequence member of mutable complex elements.

#### 9.330.4.13 build\_my\_string()

```
rti::flat::StringBuilder MyFlatMutableBuilder::build_my_string ( )
```

Begins building a string member.

#### 9.330.4.14 build\_my\_string\_seq()

```
rti::flat::MutableSequenceBuilder< rti::flat::StringBuilder > MyFlatMutableBuilder::build_my_↔
string_seq ( )
```

Begins building a sequence member of string elements.

## 9.331 MyFlatMutableOffset Class Reference

Represents the Offset to an arbitrary user-defined FlatData mutable IDL struct.

```
#include <Offset.hpp>
```

Inheritance diagram for MyFlatMutableOffset:

### 9.331.1 Detailed Description

Represents the Offset to an arbitrary user-defined FlatData mutable IDL struct.

This example type represents the Offset type that **rtiddsgen** would generate for **MyFlatMutable** (p. 562).

It provides accessors for each of its members. Accessors can return other Offsets or primitive values.

### 9.331.2 Member Typedef Documentation

### 9.331.2.1 ConstOffset

```
typedef MyFlatMutableConstOffset MyFlatMutableOffset::ConstOffset
```

The equivalent read-only Offset type.

Each Offset for a user type has an equivalent const Offset that doesn't allow modifying the underlying Sample.

## 9.331.3 Constructor & Destructor Documentation

### 9.331.3.1 MyFlatMutableOffset()

```
MyFlatMutableOffset::MyFlatMutableOffset ( ) [inline]
```

Creates a null Offset.

Postcondition

`is_null()` (p. 1857)

## 9.331.4 Member Function Documentation

### 9.331.4.1 my\_primitive() [1/2]

```
int32_t MyFlatMutableOffset::my_primitive ( ) const
```

Retrieves the value for a primitive member.

Returns

The value of the member or its default value if this member doesn't exist in this Sample.

### 9.331.4.2 my\_optional\_primitive()

```
rti::flat::PrimitiveConstOffset< int32_t > MyFlatMutableOffset::my_optional_primitive ( ) const
```

Retrieves a const Offset to an optional primitive.

Unlike the non-optional `my_primitive()` (p. 1759), which accesses the integer directly, for an optional primitive it is possible to check whether it exists or not. If it doesn't exist, the Offset this function returns will be null (`is_null()` (p. 1857)).

### 9.331.4.3 my\_primitive\_array() [1/2]

```
const rti::flat::PrimitiveArrayOffset< int32_t, 10 > MyFlatMutableOffset::my_primitive_array ( )  
const
```

Retrieves a const Offset to a primitive array.

### 9.331.4.4 my\_primitive\_seq() [1/2]

```
const rti::flat::PrimitiveSequenceOffset< int32_t > MyFlatMutableOffset::my_primitive_seq ( )  
const
```

Retrieves a const Offset to a primitive sequence.

### 9.331.4.5 my\_final() [1/2]

```
MyFlatFinal::ConstOffset MyFlatMutableOffset::my_final ( ) const
```

Retrieves a const Offset to a complex member.

### 9.331.4.6 my\_final\_array() [1/2]

```
rti::flat::FinalAlignedArrayOffset< MyFlatFinal::ConstOffset, 10 > MyFlatMutableOffset::my_↔  
final_array ( ) const
```

Retrieves a const Offset to a complex array.

### 9.331.4.7 my\_final\_seq() [1/2]

```
rti::flat::SequenceOffset< MyFlatFinal::ConstOffset > MyFlatMutableOffset::my_final_seq ( )  
const
```

Retrieves a const Offset to a complex sequence.

#### 9.331.4.8 my\_mutable() [1/2]

```
FlatMutableBar::ConstOffset MyFlatMutableOffset::my_mutable ( ) const
```

Retrieves a const Offset to a complex member.

FlatMutableBar is another arbitrary user-defined mutable FlatData type.

#### 9.331.4.9 my\_mutable\_array() [1/2]

```
rti::flat::MutableArrayOffset< FlatMutableBar::ConstOffset, 10 > MyFlatMutableOffset::my_↵  
mutable_array ( ) const
```

Retrieves a const Offset to a complex array.

#### 9.331.4.10 my\_mutable\_seq() [1/2]

```
rti::flat::SequenceOffset< FlatMutableBar::ConstOffset > MyFlatMutableOffset::my_mutable_seq ( )  
const
```

Retrieves a const Offset to a complex sequence.

#### 9.331.4.11 my\_string() [1/2]

```
const rti::flat::StringOffset MyFlatMutableOffset::my_string ( ) const
```

Retrieves a const Offset to a string.

#### 9.331.4.12 my\_string\_seq() [1/2]

```
rti::flat::SequenceOffset< const rti::flat::StringOffset > MyFlatMutableOffset::my_string_seq ( )  
const
```

Retrieves a const Offset to a sequence of strings.

#### 9.331.4.13 my\_primitive() [2/2]

```
bool MyFlatMutableOffset::my_primitive (
    int32_t value )
```

Sets the value of a primitive member.

#### 9.331.4.14 my\_primitive\_array() [2/2]

```
rti::flat::PrimitiveArrayOffset< int32_t, 10 > MyFlatMutableOffset::my_primitive_array ( )
```

Retrieves a non-const Offset to a primitive array.

#### 9.331.4.15 my\_primitive\_seq() [2/2]

```
rti::flat::PrimitiveSequenceOffset< int32_t > MyFlatMutableOffset::my_primitive_seq ( )
```

Retrieves a non-const Offset to a primitive sequence.

#### 9.331.4.16 my\_final() [2/2]

```
MyFlatFinal::Offset MyFlatMutableOffset::my_final ( )
```

Retrieves a non-const Offset to a complex member.

#### 9.331.4.17 my\_final\_array() [2/2]

```
rti::flat::FinalAlignedArrayOffset< MyFlatFinal::Offset, 10 > MyFlatMutableOffset::my_final_↔  
array ( )
```

Retrieves a non-const Offset to a complex array.

#### 9.331.4.18 my\_final\_seq() [2/2]

```
rti::flat::SequenceOffset< MyFlatFinal::Offset > MyFlatMutableOffset::my_final_seq ( )
```

Retrieves a non-const Offset to a complex sequence.

#### 9.331.4.19 my\_mutable() [2/2]

```
FlatMutableBar::Offset MyFlatMutableOffset::my_mutable ( )
```

Retrieves a non-const Offset to a complex member.

FlatMutableBar is another arbitrary user-defined mutable FlatData type.

#### 9.331.4.20 my\_mutable\_array() [2/2]

```
rti::flat::MutableArrayOffset< FlatMutableBar::Offset, 10 > MyFlatMutableOffset::my_mutable_↔  
array ( )
```

Retrieves a non-const Offset to a complex array.

#### 9.331.4.21 my\_mutable\_seq() [2/2]

```
rti::flat::SequenceOffset< FlatMutableBar::Offset > MyFlatMutableOffset::my_mutable_seq ( )
```

Retrieves a non-const Offset to a complex sequence.

#### 9.331.4.22 my\_string() [2/2]

```
rti::flat::StringOffset MyFlatMutableOffset::my_string ( )
```

Retrieves a non-const Offset to a string.

#### 9.331.4.23 my\_string\_seq() [2/2]

```
rti::flat::SequenceOffset< rti::flat::StringOffset > MyFlatMutableOffset::my_string_seq ( )
```

Retrieves a non-const Offset to a sequence of strings.

## 9.332 MyFlatUnionBuilder Class Reference

Represents the Builder for an arbitrary user-defined mutable IDL union.

```
#include <Builder.hpp>
```

Inheritance diagram for MyFlatUnionBuilder:

### Public Types

- typedef **MyFlatUnionOffset** **Offset**  
*The related offset type.*

### Public Member Functions

- **MyFlatUnionBuilder** ()  
*Creates an invalid Builder.*
- **Offset** **finish** ()  
*Finishes building a member.*
- **MyFlatUnion** \* **finish\_sample** ()  
*Finishes building a sample.*
- bool **add\_my\_primitive** (int32\_t value)  
*Adds a primitive member.*
- **MyFlatMutableBuilder** **build\_my\_mutable** (int32\_t discriminator=1)  
*Builds a mutable-struct member.*
- **MyFlatFinal::Offset** **add\_my\_final** ()  
*Adds a final-struct member.*

### Additional Inherited Members

#### 9.332.1 Detailed Description

Represents the Builder for an arbitrary user-defined mutable IDL union.

This example type represents the **Builder** (p. 558) type that **rtiddsgen** would generate for **MyFlatUnion** (p. 563) and allows creating a sample or a member of that type.

Union builders are similar to struct builders (see **MyFlatMutableBuilder** (p. 1750)), except that they only allow adding/building **one member**.

"Add" and "build" functions automatically set the discriminator value that in the IDL definition selects that member. If more than one discriminator value selects a member, the add/build function allows picking one.

## 9.332.2 Member Typedef Documentation

### 9.332.2.1 Offset

```
typedef MyFlatUnionOffset MyFlatUnionBuilder::Offset
```

The related offset type.

## 9.332.3 Constructor & Destructor Documentation

### 9.332.3.1 MyFlatUnionBuilder()

```
MyFlatUnionBuilder::MyFlatUnionBuilder ( ) [inline]
```

Creates an invalid Builder.

#### Postcondition

```
!is_valid()
```

#### Note

Top-level builders are created with `rti::flat::build_data()` (p. 560), and member builders are created with the corresponding `build_<member>` function.

## 9.332.4 Member Function Documentation

### 9.332.4.1 finish()

```
Offset MyFlatUnionBuilder::finish ( )
```

Finishes building a member.

#### See also

```
MyMutableBuilder::finish()
```

### 9.332.4.2 finish\_sample()

```
MyFlatUnion * MyFlatUnionBuilder::finish_sample ( )
```

Finishes building a sample.

See also

MyMutableBuilder::finish\_sample()

### 9.332.4.3 add\_my\_primitive()

```
bool MyFlatUnionBuilder::add_my_primitive (
    int32_t value )
```

Adds a primitive member.

This function automatically selects the discriminator 0, which corresponds to the member 'my\_primitive' (see **MyFlatUnion** (p. 563))

### 9.332.4.4 build\_my\_mutable()

```
MyFlatMutableBuilder MyFlatUnionBuilder::build_my_mutable (
    int32_t discriminator = 1 )
```

Builds a mutable-struct member.

Parameters

<i>discriminator</i>	Allows selecting one of the possible discriminator values for this member: 1 or 2. This argument is optional: if not specified it selects the first 'case' label in the IDL definition (1).
----------------------	---

Returns

The Builder to build this member

### 9.332.4.5 add\_my\_final()

```
MyFlatFinal::Offset MyFlatUnionBuilder::add_my_final ( )
```

Adds a final-struct member.

## Returns

The Offset to the member, which can be used to set its values.

This function automatically selects the discriminator value 3, which corresponds to the member 'my\_final' (see [MyFlatUnion](#) (p. 563)).

## 9.333 MyFlatUnionOffset Class Reference

Represents the Offset to an arbitrary user-defined FlatData mutable IDL union.

```
#include <Offset.hpp>
```

Inheritance diagram for MyFlatUnionOffset:

### Public Types

- typedef MyFlatUnionConstOffset **ConstOffset**  
*The equivalent read-only Offset type.*

### Public Member Functions

### 9.333.1 Detailed Description

Represents the Offset to an arbitrary user-defined FlatData mutable IDL union.

This example type represents the Offset type that `rtiddsgen` would generate for `MyFlatUnion` (p. 563).

It provides accessors for each of its members, plus the discriminator `_d()` (p. 1768). Accessors can return other Offsets or primitive values.

Given a union, only one member, the one identified by `_d()` (p. 1768), can exist at a time. The discriminator cannot be modified.

### 9.333.2 Member Typedef Documentation

#### 9.333.2.1 ConstOffset

```
typedef MyFlatUnionConstOffset MyFlatUnionOffset::ConstOffset
```

The equivalent read-only Offset type.

### 9.333.3 Constructor & Destructor Documentation

#### 9.333.3.1 MyFlatUnionOffset()

```
MyFlatUnionOffset::MyFlatUnionOffset ( ) [inline]
```

Creates a null Offset.

Postcondition

`is_null()` (p. 1857)

### 9.333.4 Member Function Documentation

#### 9.333.4.1 `_d()`

```
int32_t MyFlatUnionOffset::_d ( ) const
```

Retrieves the union discriminator.

##### Returns

The union discriminator, which identifies which field this union contains.

In this example:

- 0 selects `my_primitive()` (p. 1769)
- 1 and 2 select `my_mutable()` (p. 1770)
- 3 selects `my_final`

Any other discriminator value indicates that no member or an unknown member follows.

Note that the discriminator cannot be modified, since that would potentially change the size of this Sample by selecting a different member. The discriminator is selected during the building of a Sample (see `MyUnionBuilder`).

#### 9.333.4.2 `my_primitive()` [1/2]

```
int32_t MyFlatUnionOffset::my_primitive ( ) const
```

Retrieves the value for a primitive member.

##### Returns

The value of `my_primitive` if this member is selected by `_d()` (p. 1768) or its default value otherwise.

#### 9.333.4.3 `my_mutable()` [1/2]

```
MyFlatMutable::ConstOffset MyFlatUnionOffset::my_mutable ( ) const
```

Retrieves a const Offset to a complex member.

##### Returns

The Offset to the 'my\_mutable' member if selected by `_d()` (p. 1768), or a **null Offset** (p. 566) otherwise

#### 9.333.4.4 my\_final() [1/2]

```
MyFlatFinal::ConstOffset MyFlatUnionOffset::my_final ( ) const
```

Retrieves a const Offset to a complex member.

##### Returns

The Offset to the 'my\_final' member if selected by **\_d()** (p. 1768), or a **null Offset** (p. 566) otherwise

#### 9.333.4.5 my\_primitive() [2/2]

```
bool MyFlatUnionOffset::my_primitive (
    int32_t value )
```

Sets the value for a primitive member.

##### Precondition

**\_d()** (p. 1768) must select 'my\_primitive', otherwise this function returns false.

##### Returns

true if my\_primitive was set or false if the operation failed.

#### 9.333.4.6 my\_mutable() [2/2]

```
MyFlatMutable::Offset MyFlatUnionOffset::my_mutable ( )
```

Retrieves a non-const Offset to a complex member.

##### Returns

The Offset to the 'my\_mutable' member if selected by **\_d()** (p. 1768), or a **null Offset** (p. 566) otherwise

#### 9.333.4.7 my\_final() [2/2]

```
MyFlatFinal::Offset MyFlatUnionOffset::my_final ( )
```

Retrieves a non-const Offset to a complex member.

##### Returns

The Offset to the 'my\_final' member if selected by **\_d()** (p. 1768), or a **null Offset** (p. 566) otherwise

## 9.334 NDDS\_Config\_LibraryVersion\_t Struct Reference

The version of a single library shipped as part of an RTI Connex distribution.

### Public Attributes

- **DDS\_Long major**  
*The major version of a single RTI Connex library.*
- **DDS\_Long minor**  
*The minor version of a single RTI Connex library.*
- char **release**  
*The release letter of a single RTI Connex library.*
- **DDS\_Long build**  
*The build number of a single RTI Connex library.*

### 9.334.1 Detailed Description

The version of a single library shipped as part of an RTI Connex distribution.

RTI Connex is comprised of a number of separate libraries. Although RTI Connex as a whole has a version, the individual libraries each have their own versions as well. It may be necessary to check these individual library versions when seeking technical support.

### 9.334.2 Member Data Documentation

#### 9.334.2.1 major

```
DDS_Long NDDS_Config_LibraryVersion_t::major
```

The major version of a single RTI Connex library.

#### 9.334.2.2 minor

```
DDS_Long NDDS_Config_LibraryVersion_t::minor
```

The minor version of a single RTI Connex library.

### 9.334.2.3 release

```
char NDDS_Config_LibraryVersion_t::release
```

The release letter of a single RTI Connex library.

### 9.334.2.4 build

```
DDS_Long NDDS_Config_LibraryVersion_t::build
```

The build number of a single RTI Connex library.

## 9.335 NDDS\_Config\_LogMessage Struct Reference

Log message.

### Public Attributes

- const char \* **text**  
*Message text.*
- **NDDS\_Config\_LogLevel level**  
*Message level.*
- **DDS\_Boolean is\_security\_message**  
*Indicates if the message is a security-related message.*
- **DDS\_UnsignedLong message\_id**  
*A numeric code that identifies a specific log message.*
- struct **DDS\_Duration\_t timestamp**  
*The time when the log message was printed.*
- **NDDS\_Config\_LogFacility facility**  
*The Facility associated with the log message. See [NDDS\\_Config\\_LogFacility](#) (p. 528).*

### 9.335.1 Detailed Description

Log message.

### 9.335.2 Member Data Documentation

### 9.335.2.1 text

```
const char* NDDS_Config_LogMessage::text
```

Message text.

### 9.335.2.2 level

```
NDDS_Config_LogLevel NDDS_Config_LogMessage::level
```

Message level.

### 9.335.2.3 is\_security\_message

```
DDS_Boolean NDDS_Config_LogMessage::is_security_message
```

Indicates if the message is a security-related message.

A "security-related message" is a log message that meets any of the following:

- A security event logged with the RTI Security Plugins Logging Plugin.
- Any regular message coming from the RTI Security Plugins.
- RTI TLS Support log messages related to OpenSSL (e.g., SSL handshake failures or certificate validation failures).

### 9.335.2.4 message\_id

```
DDS_UnsignedLong NDDS_Config_LogMessage::message_id
```

A numeric code that identifies a specific log message.

Two log messages that have the same `message_id` will have a similar structure. E.g. "ERROR: Failed to get Data↔WriterQos" and "ERROR: Failed to get TopicName". In this case, the `message_id` is associated to the get failure.

### 9.335.2.5 timestamp

```
struct DDS_Duration_t NDDS_Config_LogMessage::timestamp
```

The time when the log message was printed.

### 9.335.2.6 facility

```
NDDS_Config_LogFacility NDDS_Config_LogMessage::facility
```

The Facility associated with the log message. See **NDDS\_Config\_LogFacility** (p. 528).

## 9.336 NDDS\_Transport\_Address\_t Struct Reference

Addresses are stored individually as network-ordered bytes.

### Public Attributes

- unsigned char **network\_ordered\_value** [NDDS\_TRANSPORT\_ADDRESS\_LENGTH]

### 9.336.1 Detailed Description

Addresses are stored individually as network-ordered bytes.

RTI Connex addresses are numerically stored in a transport independent manner. RTI Connex uses a IPv6-compatible format, which means that the data structure to hold an **NDDS\_Transport\_Address\_t** (p. 1774) is the same size as a data structure needed to hold an IPv6 address.

In addition, the functions provided to translate a string representation of an RTI Connex address to a value assumes that the string presentation follows the IPv6 address presentation as specified in RFC 2373.

An **NDDS\_Transport\_Address\_t** (p. 1774) always stores the address in network-byte order (which is Big Endian).

For example, IPv4 multicast address of 225.0.0.0 is represented by

```
{{0,0,0,0, 0,0,0,0, 0,0,0,0, 0xE1,0,0,0}}
```

 regardless of endianness,

where 0xE1 is the 13th byte of the structure (`network_ordered_value[12]`).

### 9.336.2 Member Data Documentation

### 9.336.2.1 network\_ordered\_value

```
unsigned char NDDS_Transport_Address_t::network_ordered_value[NDDS_TRANSPORT_ADDRESS_LENGTH]
```

network-byte ordered (i.e., bit 0 is the most significant bit and bit 128 is the least significant bit).

## 9.337 NDDS\_Transport\_Interface\_t Struct Reference

Storage for the description of a network interface used by a Transport Plugin.

### Public Attributes

- **NDDS\_Transport\_ClassId\_t transport\_classid**  
*The transport classid of the interface.*
- **NDDS\_Transport\_Address\_t address**  
*An unicast address that uniquely identifies this interface in the network specified by the transport class.*
- **NDDS\_Transport\_Interface\_Status\_t status**  
*The state of the interface.*
- **RTI\_UINT16 rank**  
*Rank of the interface. Used when allow\_interfaces\_list Qos is set. A rank value will be assing to each of the interfaces that match the allow\_interfaces\_list filter allowing an endpoint to prioritace some interfaces upon others.*

### 9.337.1 Detailed Description

Storage for the description of a network interface used by a Transport Plugin.

### 9.337.2 Member Data Documentation

#### 9.337.2.1 transport\_classid

```
NDDS_Transport_ClassId_t NDDS_Transport_Interface_t::transport_classid
```

The transport classid of the interface.

### 9.337.2.2 address

`NDDS_Transport_Address_t` `NDDS_Transport_Interface_t::address`

An unicast address that uniquely identifies this interface in the network specified by the transport class.

### 9.337.2.3 status

`NDDS_Transport_Interface_Status_t` `NDDS_Transport_Interface_t::status`

The state of the interface.

### 9.337.2.4 rank

`RTI_UINT16` `NDDS_Transport_Interface_t::rank`

Rank of the interface. Used when `allow_interfaces_list` Qos is set. A rank value will be assigned to each of the interfaces that match the `allow_interfaces_list` filter allowing an endpoint to prioritize some interfaces upon others.

## 9.338 NDDS\_Transport\_Property\_t Struct Reference

Base configuration structure that must be inherited by derived Transport Plugin classes.

### Public Attributes

- **NDDS\_Transport\_ClassId\_t classid**  
*The Transport-Plugin Class ID.*
- **RTI\_INT32 address\_bit\_count**  
*Number of bits in a 16-byte address that are used by the transport. Should be between -128 and 128.*
- **RTI\_INT32 properties\_bitmap**  
*A bitmap that defines various properties of the transport to the RTI Connex core.*
- **RTI\_INT32 gather\_send\_buffer\_count\_max**  
*Specifies the maximum number of buffers that RTI Connex can pass to the `send()` method of a transport plugin.*
- **RTI\_INT32 message\_size\_max**  
*The maximum size of an RTPS message in bytes that can be sent or received by the transport plugin.*
- **char \*\* allow\_interfaces\_list**  
*A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `allow_interfaces_list_length > 0`), allow the use of only these interfaces. If the list is empty, allow the use of all interfaces.*
- **RTI\_INT32 allow\_interfaces\_list\_length**

*Number of elements in the `allow_interfaces_list`.*

- char \*\* **deny\_interfaces\_list**

*A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `deny_interfaces_list_length > 0`), deny the use of these interfaces.*

- RTI\_INT32 **deny\_interfaces\_list\_length**

*Number of elements in the `deny_interfaces_list`.*

- char \*\* **allow\_multicast\_interfaces\_list**

*A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `allow_multicast_interfaces_list_length > 0`), allow the use of multicast only on these interfaces; otherwise allow the use of all the allowed interfaces.*

- RTI\_INT32 **allow\_multicast\_interfaces\_list\_length**

*Number of elements in the `allow_multicast_interfaces_list`.*

- char \*\* **deny\_multicast\_interfaces\_list**

*A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `deny_multicast_interfaces_list_length > 0`), deny the use of those interfaces for multicast.*

- RTI\_INT32 **deny\_multicast\_interfaces\_list\_length**

*Number of elements in `deny_multicast_interfaces_list`.*

- struct **NDDS\_Transport\_UUID** **transport\_uuid**

*Univocally identifies a transport plugin.*

- char \* **thread\_name\_prefix**

*Prefix used to name the transport threads.*

- RTI\_INT32 **max\_interface\_count**

*Maximum number of addresses from the `allow_interfaces_list` that will be announced.*

### 9.338.1 Detailed Description

Base configuration structure that must be inherited by derived Transport Plugin classes.

This structure contains properties that must be set before registration of any transport plugin with RTI Connex. The RTI Connex core will configure itself to use the plugin based on the properties set within this structure.

A transport plugin may extend from this structure to add transport-specific properties.

In the C-language, this can be done by creating a custom plugin property structure whose first member is a **NDDS\_Transport\_Property\_t** (p. 1776) structure.

For example,

```
struct MyTransport_Plugin_Property_t {
    NDDS_Transport_Property_t base_properties;
    int myIntProperty;
    < etc >;
};
```

**WARNING:** The transport properties of an instance of a Transport Plugin should be considered immutable after the plugin has been created. That means the values contained in the property structure stored as a part of the transport plugin itself should not be changed. If those values are modified, the results are undefined.

### 9.338.2 Member Data Documentation

### 9.338.2.1 classid

`NDDS_Transport_ClassId_t` `NDDS_Transport_Property_t::classid`

The Transport-Plugin Class ID.

The transport plugin sets the value for this field.

Class IDs below **NDDS\_TRANSPORT\_CLASSID\_RESERVED\_RANGE** (p. 251) are reserved for RTI (Real-Time Innovations) usage.

User-defined transports should set an ID above this range.

The ID should be globally unique for each Transport-Plugin class. Transport-Plugin implementors should ensure that the class IDs do not conflict with each other amongst different Transport-Plugin classes.

#### Invariant

The `classid` is invariant for the lifecycle of a transport plugin.

### 9.338.2.2 address\_bit\_count

`RTI_INT32` `NDDS_Transport_Property_t::address_bit_count`

Number of bits in a 16-byte address that are used by the transport. Should be between -128 and 128.

The transport plugin sets the value for this field.

A transport plugin should define the range of addresses that are meaningful to the plugin. It does this by setting the number of bits of an IPv6 address that will be used to designate an address in the network to which the transport plugin is connected. The sign of this field determines whether the count of bits starts on the most significant bit (negative sign) or on the least significant bit (positive sign).

For example, for an address range of 0-255, the `address_bit_count` should be set to 8. For the range of addresses used by IPv4 (4 bytes), it should be set to 32.

#### See also

**Transport Class Attributes** (p. 169)

### 9.338.2.3 properties\_bitmap

```
RTI_INT32 NDDS_Transport_Property_t::properties_bitmap
```

A bitmap that defines various properties of the transport to the RTI Connex core.

Currently, the only property supported is whether or not the transport plugin will always loan a buffer when RTI Connex tries to receive a message using the plugin. This is in support of a zero-copy interface.

See also

**NDDS\_TRANSPORT\_PROPERTY\_BIT\_BUFFER\_ALWAYS\_LOANED** (p. 251)

### 9.338.2.4 gather\_send\_buffer\_count\_max

```
RTI_INT32 NDDS_Transport_Property_t::gather_send_buffer_count_max
```

Specifies the maximum number of buffers that RTI Connex can pass to the `send()` method of a transport plugin.

The transport plugin `send()` API supports a gather-send concept, where the `send()` call can take several discontinuous buffers, assemble and send them in a single message. This enables RTI Connex to send a message from parts obtained from different sources without first having to copy the parts into a single contiguous buffer.

However, most transports that support a gather-send concept have an upper limit on the number of buffers that can be gathered and sent. Setting this value will prevent RTI Connex from trying to gather too many buffers into a send call for the transport plugin.

RTI Connex requires all transport-plugin implementations to support a gather-send of at least a minimum number of buffers. This minimum number is defined to be **NDDS\_TRANSPORT\_PROPERTY\_GATHER\_SEND\_BUFFER\_COUNT\_MIN** (p. 251).

If the underlying transport does not support a gather-send concept directly, then the transport plugin itself must copy the separate buffers passed into the `send()` call into a single buffer for sending or otherwise send each buffer individually. However this is done by the transport plugin, the `receive_rEA()` call of the destination application should assemble, if needed, all of the pieces of the message into a single buffer before the message is passed to the RTI Connex layer.

### 9.338.2.5 message\_size\_max

```
RTI_INT32 NDDS_Transport_Property_t::message_size_max
```

The maximum size of an RTPS message in bytes that can be sent or received by the transport plugin.

If the maximum size of a message that can be sent by a transport plugin is user configurable, the transport plugin should provide a default value for this property. In any case, this value must be set before the transport plugin is registered, so that RTI Connex can properly use the plugin.

For information about the default value for different transports, see the `Core Libraries User's Manual`.

### 9.338.2.6 allow\_interfaces\_list

```
char** NDDS_Transport_Property_t::allow_interfaces_list
```

A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `allow_interfaces_list_length > 0`), allow the use of only these interfaces. If the list is empty, allow the use of all interfaces.

The "white" list restricts *reception* to a particular set of interfaces for unicast UDP.

For UDPv4 and UDPv6 transports, the resulting list also controls the interfaces over which the DomainParticipant will send multicast traffic to the remote DomainParticipants (if multicast is supported on the platform).

*Note:* This property does not affect the interfaces that the transport uses to send unicast data from that DomainParticipant. That decision is made by the OS based on the destination address.

It is up to the transport plugin to interpret the list of strings passed in.

For example, the following are acceptable strings in IPv4 format: 192.168.1.1, 192.168.1.\*, 192.168.\*, 192.\*, ether0

The left-to-right order of this list matters if you are using the `max_interface_count` to limit the allowable interfaces further. See `max_interface_count`.

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

The caller (user) must manage the memory of the list. The memory may be freed after the **DDSDomainParticipant** (p. 1351) is deleted.

**[default]** empty list that represents all available interfaces.

See also

**NDDS\_Transport\_Property\_t::max\_interface\_count** (p. 1783)

### 9.338.2.7 allow\_interfaces\_list\_length

```
RTI_INT32 NDDS_Transport_Property_t::allow_interfaces_list_length
```

Number of elements in the `allow_interfaces_list`.

By default, `allow_interfaces_list_length = 0`, i.e. an empty list.

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

**[default]** 0

### 9.338.2.8 deny\_interfaces\_list

```
char** NDDS_Transport_Property_t::deny_interfaces_list
```

A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `deny_interfaces_list_length > 0`), deny the use of these interfaces.

This "black" list is applied *after* the `allow_interfaces_list` and filters out the interfaces that should not be used.

The resulting list restricts *reception* to a particular set of interfaces for unicast UDP.

For UDPv4 and UDPv6 transports, the resulting list also controls the interfaces over which the DomainParticipant will send multicast traffic to the remote DomainParticipants (if multicast is supported on the platform).

*Note:* This property does not affect the interfaces that the transport uses to send unicast data from that DomainParticipant. That decision is made by the OS based on the destination address.

It is up to the transport plugin to interpret the list of strings passed in.

For example, the following are acceptable strings in IPv4 format: 192.168.1.1, 192.168.1.\*, 192.168.\*, 192.\*, ether0

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

The caller (user) must manage the memory of the list. The memory may be freed after the **DDSDomainParticipant** (p. 1351) is deleted.

**[default]** empty list that represents no denied interfaces.

### 9.338.2.9 deny\_interfaces\_list\_length

```
RTI_INT32 NDDS_Transport_Property_t::deny_interfaces_list_length
```

Number of elements in the `deny_interfaces_list`.

By default, `deny_interfaces_list_length = 0` (i.e., an empty list).

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

**[default]** 0

### 9.338.2.10 allow\_multicast\_interfaces\_list

```
char** NDDS_Transport_Property_t::allow_multicast_interfaces_list
```

A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `allow_multicast_interfaces_list_length > 0`), allow the use of multicast only on these interfaces; otherwise allow the use of all the allowed interfaces.

This "white" list sub-selects from the allowed interfaces obtained *after* applying the `allow_interfaces_list` "white" list *and* the `deny_interfaces_list` "black" list.

After `allow_multicast_interfaces_list`, the `deny_multicast_interfaces_list` is applied. Multicast output will be sent and may be received over the interfaces in the resulting list.

If this list is empty, all the allowed interfaces will be potentially used for multicast. It is up to the transport plugin to interpret the list of strings passed in.

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

The caller (user) must manage the memory of the list. The memory may be freed after the **DDSDomainParticipant** (p. 1351) is deleted.

**[default]** empty list that represents all available interfaces.

### 9.338.2.11 allow\_multicast\_interfaces\_list\_length

```
RTI_INT32 NDDS_Transport_Property_t::allow_multicast_interfaces_list_length
```

Number of elements in the `allow_multicast_interfaces_list`.

By default, `allow_multicast_interfaces_list_length = 0` (i.e., an empty list).

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

**[default]** 0

### 9.338.2.12 deny\_multicast\_interfaces\_list

```
char** NDDS_Transport_Property_t::deny_multicast_interfaces_list
```

A list of strings, each identifying a range of interface addresses or an interface name. If the list is non-empty (i.e., `deny_multicast_interfaces_list_length > 0`), deny the use of those interfaces for multicast.

This "black" list is applied after `allow_multicast_interfaces_list` and filters out interfaces that should not be used for multicast.

Multicast output will be sent and may be received over the interfaces in the resulting list.

It is up to the transport plugin to interpret the list of strings passed in.

This property is not interpreted by the RTI Connext core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

The caller (user) must manage the memory of the list. The memory may be freed after the **DDSDomainParticipant** (p. 1351) is deleted.

**[default]** empty list that represents no denied interfaces.

### 9.338.2.13 deny\_multicast\_interfaces\_list\_length

```
RTI_INT32 NDDS_Transport_Property_t::deny_multicast_interfaces_list_length
```

Number of elements in `deny_multicast_interfaces_list`.

By default, `deny_multicast_interfaces_list_length = 0` (i.e., an empty list).

This property is not interpreted by the RTI Connex core; it is provided merely as a convenient and standardized way to specify the interfaces for the benefit of the transport plugin developer and user.

**[default]** 0

### 9.338.2.14 transport\_uuid

```
struct NDDS_Transport_UUID NDDS_Transport_Property_t::transport_uuid
```

Univocally identifies a transport plugin.

It represents the prefix of the participant GUID.

### 9.338.2.15 thread\_name\_prefix

```
char* NDDS_Transport_Property_t::thread_name_prefix
```

Prefix used to name the transport threads.

This field is optional.

The maximum size of this string is 8 characters.

If "thread\_name\_prefix" is not set by the user, RTI Connex creates the following prefix: 'r' + 'Tr' + participant identifier + '\0'.

Where 'r' indicates this is a thread from RTI, 'Tr' indicates the thread is related to a transport, and participant identifier contains 5 characters as follows:

If `participant_name` is set: The participant identifier will be the first 3 characters and the last 2 characters of the `participant_name`.

If `participant_name` is not set, then the identifier is computed as `domain_id` (3 characters) followed by `participant_id` (2 characters).

If `participant_name` is not set and the `participant_id` is set to -1 (default value), then the participant identifier is computed as the last 5 digits of the `rtps_instance_id` in the participant GUID.

### 9.338.2.16 max\_interface\_count

RTI\_INT32 NDDS\_Transport\_Property\_t::max\_interface\_count

Maximum number of addresses from the `allow_interfaces_list` that will be announced.

By default, `max_interface_count` = `LENGTH_UNLIMITED`: all the interfaces are announced.

This feature is useful if you want to control the network interfaces on which your DomainParticipants receive data. For example, if you have one wired and one wireless interface both up and running, and `max_interface_count` is set to 1, the DomainParticipant will receive data over the interface you list first in the `allow_interfaces_list` -for example, the wired one.

RTI Connex selects the preferred interface(s) by iterating over the list of allowed interfaces until the first `max_↔ interfaces_count` of active interfaces encountered are announced. The order of iteration is left to right as specified in the `allow_interfaces_list` setting.

This setting applies only if the `allow_interfaces_list` is not empty.

The `max_interface_count` setting does not consider end-to-end connectivity to select interfaces. The decision is based purely on whether interfaces are up or down in a node. Therefore, this feature is not intended to be used in the following scenarios:

- A DomainParticipant is not reachable by other DomainParticipants in all the interfaces in the `allow_↔ interfaces_list`. This could occur if the DomainParticipant is in different subnets, and some of these subnets cannot be reached by other DomainParticipants.
- End-to-end connectivity issues lead to situations in which the interfaces selected after applying `max_↔ interface_count` cannot be reached by other DomainParticipants.

For UDPv4 and UDPv6 transports, this feature also affects multicast traffic by limiting the interfaces over which a DomainParticipant sends multicast traffic. The `(allow/deny)_multicast_interfaces_list` applies to the interfaces selected by using the `max_interfaces_count` property.

Note: If a pattern string in the `allow_interfaces_list` matches multiple interface addresses, and `max_↔ interface_count` is set to a finite value, the order for the matching allowed interfaces is decided based on the order in which the operating system provides these interfaces.

**[default]** `LENGTH_UNLIMITED`

**NDDS\_Transport\_Property\_t::allow\_interfaces\_list** (p. 1779)

## 9.339 NDDS\_Transport\_Shmem\_Property\_t Struct Reference

Subclass of **NDDS\_Transport\_Property\_t** (p. 1776) allowing specification of parameters that are specific to the shared-memory transport.

## Public Attributes

- struct **NDDS\_Transport\_Property\_t** **parent**  
*Generic properties of all transport plugins.*
- RTI\_INT32 **received\_message\_count\_max**  
*Number of messages that can be buffered in the receive queue.*
- RTI\_INT32 **receive\_buffer\_size**  
*The total number of bytes that can be buffered in the receive queue.*
- RTIBool **enable\_udp\_debugging**  
*Enables UDP debugging when using shared memory.*
- **NDDS\_Transport\_Address\_t** **udp\_debugging\_address**  
*IP address to which shared memory traffic will be published if `NDDS_Transport_Shmem_Property_t::enable_udp_debugging` (p. 1786) is set to '1'.*
- **NDDS\_Transport\_Port\_t** **udp\_debugging\_port**  
*Port to which shared memory traffic will be published if `NDDS_Transport_Shmem_Property_t::enable_udp_debugging` (p. 1786) is set to '1'.*

### 9.339.1 Detailed Description

Subclass of **NDDS\_Transport\_Property\_t** (p. 1776) allowing specification of parameters that are specific to the shared-memory transport.

See also

**NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838)

### 9.339.2 Member Data Documentation

#### 9.339.2.1 parent

```
struct NDDS_Transport_Property_t NDDS_Transport_Shmem_Property_t::parent
```

Generic properties of all transport plugins.

#### 9.339.2.2 received\_message\_count\_max

```
RTI_INT32 NDDS_Transport_Shmem_Property_t::received_message_count_max
```

Number of messages that can be buffered in the receive queue.

This does not guarantee that the Transport-Plugin will actually be able to buffer `received_message_count_max` messages of the maximum size set in **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779). The total number of bytes that can be buffered for a transport plug-in is actually controlled by `receive_buffer_size`.

See also

**NDDS\_Transport\_Property\_t** (p. 1776), **NDDS\_TRANSPORT\_SHMEM\_RECEIVED\_MESSAGE\_COUNT\_MAX\_DEFAULT** (p. 265)

### 9.339.2.3 receive\_buffer\_size

RTI\_INT32 NDDS\_Transport\_Shmem\_Property\_t::receive\_buffer\_size

The total number of bytes that can be buffered in the receive queue.

This number controls how much memory is allocated by the plugin for the receive queue. The actual number of bytes allocated is:

```
size = receive_buffer_size + message_size_max +
      received_message_count_max * fixedOverhead
```

where `fixedOverhead` is some small number of bytes used by the queue data structure. The following rules are noted:

- `receive_buffer_size < message_size_max * received_message_count_max`, then the transport plugin will not be able to store `received_message_count_max` messages of size `message_size_max`.
- `receive_buffer_size > message_size_max * received_message_count_max`, then there will be memory allocated that cannot be used by the plugin and thus wasted.

To optimize memory usage, the user is allowed to specify a size for the receive queue to be less than that required to hold the maximum number of messages which are all of the maximum size.

In most situations, the average message size may be far less than the maximum message size. So for example, if the maximum message size is 64 K bytes, and the user configures the plugin to buffer at least 10 messages, then 640 K bytes of memory would be needed if all messages were 64 K bytes. Should this be desired, then `receive_buffer_size` should be set to 640 K bytes.

However, if the average message size is only 10 K bytes, then the user could set the `receive_buffer_size` to 100 K bytes. This allows the user to optimize the memory usage of the plugin for the average case and yet allow the plugin to handle the extreme case.

**NOTE**, the queue will always be able to hold 1 message of `message_size_max` bytes, no matter what the value of `receive_buffer_size` is.

### 9.339.2.4 enable\_udp\_debugging

RTIBool NDDS\_Transport\_Shmem\_Property\_t::enable\_udp\_debugging

Enables UDP debugging when using shared memory.

If set to '1', all shared memory traffic will be published to `NDDS_Transport_Shmem_Property_t::udp_debugging_address` (p. 1786) :: `NDDS_Transport_Shmem_Property_t::udp_debugging_port` (p. 1787).

[default] 0

### 9.339.2.5 udp\_debugging\_address

`NDDS_Transport_Address_t` `NDDS_Transport_Shmem_Property_t::udp_debugging_address`

IP address to which shared memory traffic will be published if `NDDS_Transport_Shmem_Property_t::enable_udp_↔_debugging` (p. 1786) is set to '1'.

[default] 239.255.1.2

### 9.339.2.6 udp\_debugging\_port

`NDDS_Transport_Port_t` `NDDS_Transport_Shmem_Property_t::udp_debugging_port`

Port to which shared memory traffic will be published if `NDDS_Transport_Shmem_Property_t::enable_udp_↔_debugging` (p. 1786) is set to '1'.

[default] 7399

### 9.341.1 Detailed Description

Configurable IPv4/UDP Transport-Plugin properties.

You can modify the properties in this structure to configure the plugin. However, you must set the properties before the plugin is instantiated.

See also

**NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838)

**NDDS\_Transport\_UDPv4\_new** (p. 274)

## 9.341.2 Member Data Documentation

### 9.341.2.1 parent

```
struct NDDS_Transport_Property_t NDDS_Transport_UDPv4_Property_t::parent
```

Generic properties of all transport plugins.

### 9.341.2.2 send\_socket\_buffer\_size

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size
```

Size in bytes of the send buffer of a socket used for sending.

On most operating systems, `setsockopt ()` will be called to set the `SENDBUF` to the value of this parameter.

This value must be greater than or equal to `NDDS_Transport_Property_t::message_size_max` (p. 1779). The maximum value is operating system-dependent.

By default, it will be set to `NDDS_TRANSPORT_UDPv4_SEND_SOCKET_BUFFER_SIZE_DEFAULT` (p. 272).

If you configure this parameter to be `NDDS_TRANSPORT_UDPv4_SOCKET_BUFFER_SIZE_OS_DEFAULT` (p. 271), then `setsockopt()` (or equivalent) will not be called to size the send buffer of the socket. The transport will use the OS default.

### 9.341.2.3 recv\_socket\_buffer\_size

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size
```

Size in bytes of the receive buffer of a socket used for receiving.

On most operating systems, `setsockopt ()` will be called to set the `RECVBUF` to the value of this parameter.

This value must be greater than or equal to `NDDS_Transport_Property_t::message_size_max` (p. 1779). The maximum value is operating system-dependent.

By default, it will be set to `NDDS_TRANSPORT_UDPv4_RECV_SOCKET_BUFFER_SIZE_DEFAULT` (p. 272).

If you configure this parameter to be `NDDS_TRANSPORT_UDPv4_SOCKET_BUFFER_SIZE_OS_DEFAULT` (p. 271), then `setsockopt()` (or equivalent) will not be called to size the receive buffer of the socket. The transport will use the OS default.

### 9.341.2.4 unicast\_enabled

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::unicast_enabled
```

Allows the transport plugin to use unicast for sending and receiving.

This value turns unicast UDP on (if set to 1) or off (if set to 0) for this plugin. By default, it will be turned on (1). Also by default, the plugin will use all the allowed network interfaces that it finds up and running when the plugin is instantiated.

### 9.341.2.5 multicast\_enabled

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::multicast_enabled
```

Allows the transport plugin to use multicast for sending and receiving.

This value turns multicast UDP on (if set to 1) or off (if set to 0) for this plugin. By default, it will be turned on (1) for those platforms that support multicast. Also by default, the plugin will use all the network interfaces allowed for multicast that it finds up and running when the plugin is instantiated.

### 9.341.2.6 multicast\_ttl

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::multicast_ttl
```

Value for the time-to-live parameter for all multicast sends using this plugin.

This value is used to set the TTL of multicast packets sent by this transport plugin.

**[default]** 1

See also

**NDDS\_TRANSPORT\_UDPv4\_MULTICAST\_TTL\_DEFAULT** (p. 272)

### 9.341.2.7 multicast\_loopback\_disabled

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::multicast_loopback_disabled
```

Prevents the transport plugin from putting multicast packets onto the loopback interface.

If multicast loopback is disabled (this value is set to 1), then when sending multicast packets, RTI Connex will *not* put a copy of the packets on the loopback interface. This prevents applications on the same node (including itself) from receiving those packets.

This value is set to 0 by default, meaning multicast loopback is *enabled*.

Disabling multicast loopback (setting this value to 1) may result in minor performance gains when using multicast.

[NOTE: Windows CE systems do not support multicast loopback. This field is ignored for Windows CE targets.]

### 9.341.2.8 ignore\_loopback\_interface

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::ignore_loopback_interface
```

Prevents the transport plugin from using the IP loopback interface.

Currently three values are allowed:

- **0**: Forces local traffic to be sent over loopback, even if a more efficient transport (such as shared memory) is installed (in which case traffic will be sent over both transports).
- **1**: Disables local traffic via this plugin. The IP loopback interface is not used, even if no NICs are discovered. This is useful when you want applications running on the same node to use a more efficient plugin (such as shared memory) instead of the IP loopback.
- **-1**: Automatic. Lets RTI Connexx decide between the above two choices.

The current "automatic" (-1) RTI Connexx policy is as follows:

- If a shared memory transport plugin is available for local traffic and there is a locator on the initial peers list that can use shared memory, the effective value is 1 (i.e., disable UPV4 local traffic).
- Otherwise, the effective value is 0 (i.e., use UDPv4 for local traffic also).

**[default]** -1 Automatic RTI Connexx policy based on availability of the shared memory transport.

### 9.341.2.9 ignore\_nonup\_interfaces

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::ignore_nonup_interfaces
```

**[DEPRECATED]** Prevents the transport plugin from using a network interface that is not reported as UP by the operating system.

DEPRECATED: this property has no effect. Non-UP interfaces are ignored until they change their status to UP, unless **NDDS\_Transport\_UDPv4\_Property\_t::disable\_interface\_tracking** (p. 1796) is set to 1, in which case interfaces are ignored even if they change their status at a later point.

The transport checks the flags reported by the operating system for each network interface upon initialization. An interface that is not reported as UP will not be used. This property allows you to configure the transport to start using even the interfaces that were not reported as UP.

Two values are allowed:

- **0**: Allow the use of interfaces that were not reported as UP.
- **1**: Do not use interfaces that were not reported as UP.

**[default]** 1

### 9.341.2.10 ignore\_nonrunning\_interfaces

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::ignore_nonrunning_interfaces
```

Prevents the transport plugin from using a network interface that is not reported as RUNNING by the operating system.

The transport checks the flags reported by the operating system for each network interface upon initialization. An interface that is not reported as UP will not be used. This property allows the same check to be extended to the IFF\_↔\_RUNNING flag implemented by some operating systems. The RUNNING flag is defined to mean that "all resources are allocated," and may be off if there is no link detected, e.g., the network cable is unplugged.

Two values are allowed:

- **0**: Do not check the RUNNING flag when enumerating interfaces, just make sure the interface is UP.
- **1**: Check the flag when enumerating interfaces, and ignore those that are not reported as RUNNING. This can be used on some operating systems to cause the transport to ignore interfaces that are enabled but not connected to the network.

**[default]** 1 (i.e., check RUNNING flag)

### 9.341.2.11 no\_zero\_copy

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::no_zero_copy
```

**[DEPRECATED]** Prevents the transport plugin from doing a zero copy.

DEPRECATED: This property has no effect. By default, this plugin will use the zero copy on OSes that offer it. While this is good for performance, it may sometimes tax the OS resources in a manner that cannot be overcome by the application.

The best example is if the hardware/device driver lends the buffer to the application itself. If the application does not return the loaned buffers soon enough, the node may err or malfunction. In case you cannot reconfigure the H/W, device driver, or the OS to allow the zero copy feature to work for your application, you may have no choice but to turn off zero copy use.

By default this is set to 0, so RTI Connexxt will use the zero-copy API if offered by the OS.

### 9.341.2.12 send\_blocking

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::send_blocking
```

Control blocking behavior of send sockets. CHANGING THIS FROM THE DEFAULT CAN CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

Currently two values are defined:

- **NDDS\_TRANSPORT\_UDPV4\_BLOCKING\_ALWAYS**: Sockets are blocking (default socket options for the operating system).
- **NDDS\_TRANSPORT\_UDPV4\_BLOCKING\_NEVER**: Sockets are modified to make them non-blocking. THIS MAY CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

**[default]** NDDS\_TRANSPORT\_UDPV4\_BLOCKING\_ALWAYS

### 9.341.2.13 use\_checksum

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::use_checksum
```

Configures whether to send UDP checksum.

This property specifies whether the UDP checksum will be computed. On Windows and Linux, the UDP protocol will not set the checksum when `use_checksum` is set to 0. This is useful when RTPS protocol statistics related to corrupted messages need to be collected through the API `DDSDomainParticipant::get_participant_protocol_status` (p. 1407).

**[default]** 1 (enabled)

### 9.341.2.14 transport\_priority\_mask

```
RTI_UINT32 NDDS_Transport_UDPv4_Property_t::transport_priority_mask
```

Set mask for use of transport priority field.

This is used in conjunction with `NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_low` (p. 1794) and `NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high` (p. 1794) to define the mapping from the DDS transport priority (see `TRANSPORT_PRIORITY` (p. 449)) to the IPv4 TOS field. Defines a contiguous region of bits in the 32-bit transport priority value that is used to generate values for the IPv4 TOS field on an outgoing socket.

For example, the value `0x0000ff00` causes bits 9-16 (8 bits) to be used in the mapping. The value will be scaled from the mask range (`0x0000 - 0xff00` in this case) to the range specified by `low` and `high`.

If the mask is set to zero, then the transport will not set IPv4 TOS for send sockets.

**[default]** 0.

### 9.341.2.15 transport\_priority\_mapping\_low

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_low
```

Set low value of output range to IPv4 TOS.

This is used in conjunction with `NDDS_Transport_UDPv4_Property_t::transport_priority_mask` (p. 1794) and `NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high` (p. 1794) to define the mapping from the DDS transport priority to the IPv4 TOS field. Defines the low value of the output range for scaling.

Note that IPv4 TOS is generally an 8-bit value.

**[default]** 0.

### 9.341.2.16 transport\_priority\_mapping\_high

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high
```

Set high value of output range to IPv4 TOS.

This is used in conjunction with **NDDS\_Transport\_UDPv4\_Property\_t::transport\_priority\_mask** (p.1794) and **NDDS\_Transport\_UDPv4\_Property\_t::transport\_priority\_mapping\_low** (p.1794) to define the mapping from the DDS transport priority to the IPv4 TOS field. Defines the high value of the output range for scaling.

Note that IPv4 TOS is generally an 8-bit value.

**[default]** 0xff.

### 9.341.2.17 send\_ping

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::send_ping
```

Configures whether to send PING messages.

This property specifies whether to send a PING message before commencing the discovery process. On certain operating systems or with certain switches the initial UDP packet, while configuring the ARP table, can unfortunately be dropped. To avoid dropping the initial RTPS discovery sample, a PING message is sent to preconfigure the ARP table in those environments.

**[default]** 1 (enabled)

### 9.341.2.18 force\_interface\_poll\_detection

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::force_interface_poll_detection
```

Forces the interface tracker to use a polling mechanism to detect changes on the UDPv4 interfaces.

When possible, the detection of an IP address change is done asynchronously using the APIs offered by the underlying OS. By setting this property on those OSes, the use of a polling mechanism to detect changes can be forced.

**[default]** 0 (disabled).

### 9.341.2.19 interface\_poll\_period

```
RTI_UINT32 NDDS_Transport_UDPv4_Property_t::interface_poll_period
```

Specifies the period in milliseconds to query for changes in the state of all the interfaces.

When possible, the detection of an IP address change is done asynchronously using the APIs offered by the underlying OS. If there is no mechanism to do that, the detection will use a polling strategy where the polling period can be configured by setting this property.

**[default]** 500 milliseconds.

### 9.341.2.20 reuse\_multicast\_receive\_resource

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::reuse_multicast_receive_resource
```

Controls whether or not to reuse multicast receive resources.

Setting this to 0 (FALSE) prevents multicast crosstalk by uniquely configuring a port and creating a receive thread for each multicast group address.

**[default]** 1.

### 9.341.2.21 protocol\_overhead\_max

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::protocol_overhead_max
```

Maximum size in bytes of protocol overhead, including headers.

This value is the maximum size, in bytes, of protocol-related overhead. Normally, the overhead accounts for UDP and IP headers. The default value is set to accommodate the most common UDP/IP header size.

Note that when **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779) plus this overhead is larger than the UDPv4 maximum message size (65535 bytes), the middleware will automatically reduce the effective `message_size_max`, to 65535 minus this overhead.

**[default]** 28.

See also

**NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779)

### 9.341.2.22 disable\_interface\_tracking

```
RTI_INT32 NDDS_Transport_UDPv4_Property_t::disable_interface_tracking
```

Disables detection of network interface changes.

By default, network interface changes are propagated in the form of locators to other applications. This is done to support IP mobility scenarios.

For example, you could start a RTI Connex application with Wi-Fi and move to a wired connection. In order to continue communicating with other applications, this interface change has to be propagated.

In RTI Connex 5.2 (the initial release) and earlier versions of the product, IP mobility scenarios were not supported. 5.2 applications will report errors if they detect locator changes in a DataWriter or DataReader.

You can disable the notification and propagation of interface changes by setting this property to 1.

This way, an interface change in a newer application will not trigger errors in an application running 5.2 or earlier. Of course, this will prevent the new application from being able to detect network interface changes.

**[default]** 0

### 9.341.2.23 join\_multicast\_group\_timeout

```
RTI_UINT32 NDDS_Transport_UDPv4_Property_t::join_multicast_group_timeout
```

[Windows only] Defines how much time (milliseconds) to wait to join a multicast group address when a new interface is detected.

On Windows, a network interface may be detected before it is allowed to join a multicast group address. This property adjusts how much time (milliseconds) to wait for the ADD\_MEMBERSHIP multicast operation to succeed before withdrawing.

**[default]** 5000

### 9.341.2.24 public\_address

```
char* NDDS_Transport_UDPv4_Property_t::public_address
```

Public IP address associated with the transport instantiation.

Setting the public IP address is only necessary to support communication over WAN that involves Network Address Translation (NAT).

Typically, the address is the public address of the IP NAT router that provides access to the WAN.

By default, the **DDSDomainParticipant** (p. 1351) creating the transport will announce the IP addresses obtained from the NICs to other DomainParticipants in the system.

When this property is set, the DomainParticipant will announce the IP address corresponding to the property value instead of the LAN IP addresses associated with the NICs.

**Note 1:** Setting this property is necessary, but is not a sufficient condition for sending and receiving data over the WAN. You must also configure the IP NAT router to allow UDP traffic and to map the public IP address specified by this property to the DomainParticipant's private LAN IP address. This is typically done with one of the following mechanisms:

- Port Forwarding: You must map the private ports used to receive discovery and user data traffic to the corresponding public ports (see **DDS\_RtpsWellKnownPorts\_t** (p. 1076)). Public and private ports must be the same since the transport does not allow you to change the mapping.
- 1:1 NAT: You must add a 1:1 NAT entry that maps the public IP address specified in this property to the private LAN IP address of the DomainParticipant.

**Note 2:** By setting this property, the **DDSDomainParticipant** (p. 1351) only announces its public IP address to other DomainParticipants. Therefore, communication with DomainParticipants within the LAN that are running on different nodes will not work unless the NAT router is configured to enable NAT reflection (hairpin NAT).

There is another way to achieve simultaneous communication with DomainParticipants running in the LAN and WAN, that does not require hairpin NAT. This way uses a gateway application such as RTI Routing Service to provide access to the WAN.

**[default]** NULL (the transport uses the IP addresses obtained from the NICs)

### 9.341.2.25 port\_offset

RTI\_INT32 NDDS\_Transport\_UDPv4\_Property\_t::port\_offset

Port offset to allow multiple instances of UDPv4 transports in the same **DDSDomainParticipant** (p. 1351).

By default, it is not possible to have multiple instances of the UDPv4 transport in the same **DDSDomainParticipant** (p. 1351). This is because all instances will try to bind to the same UDP port(s) for receiving data.

With this property, you can specify an offset that will be added to the RTPS port(s) to determine the UDP port(s) to bind to. This way, you can have multiple instances of the UDPv4 transport in the same **DDSDomainParticipant** (p. 1351).

An RTPS port will be mapped to an UDP port as follows: UDP port = RTPS port + port\_offset.

[default] 0

### 9.342.2 Member Data Documentation

#### 9.342.2.1 parent

```
struct NDDS_Transport_Property_t NDDS_Transport_UDPv4_WAN_Property_t::parent
```

Generic properties of all transport plugins.

### 9.342.2.2 send\_socket\_buffer\_size

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::send\_socket\_buffer\_size

Size in bytes of the send buffer of a socket used for sending.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::send\_socket\_buffer\_size** (p. 1790)

### 9.342.2.3 recv\_socket\_buffer\_size

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::recv\_socket\_buffer\_size

Size in bytes of the receive buffer of a socket used for receiving.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::recv\_socket\_buffer\_size** (p. 1790)

### 9.342.2.4 ignore\_loopback\_interface

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::ignore\_loopback\_interface

Prevents the transport plugin from using the IP loopback interface.

Currently three values are allowed:

- **0**: Forces local traffic to be sent over loopback, even if a more efficient transport (such as shared memory) is installed (in which case traffic will be sent over both transports).
- **1**: Disables local traffic via this plugin. The IP loopback interface is not used, even if no NICs are discovered. This is useful when you want applications running on the same node to use a more efficient plugin (such as shared memory) instead of the IP loopback.
- **-1**: Automatic. Lets RTI Connexx decide between the above two choices.

The current "automatic" (-1) RTI Connexx policy is as follows:

- If a shared memory transport plugin is available for local traffic and there is a locator on the initial peers list that can use shared memory, the effective value is 1 (i.e., disable UPV4 local traffic).
- Otherwise, the effective value is 0 (i.e., use UDPv4 for local traffic also).

**[default]** -1 Automatic RTI Connexx policy based on availability of the shared memory transport.

### 9.342.2.5 ignore\_nonup\_interfaces

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::ignore\_nonup\_interfaces

**[DEPRECATED]** Prevents the transport plugin from using a network interface that is not reported as UP by the operating system.

DEPRECATED: this property has no effect. Non-UP interfaces are ignored until they change their status to UP, unless **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::disable\_interface\_tracking** (p. 1804) is set to 1, in which case interfaces are ignored even if they change their status at a later point.

The transport checks the flags reported by the operating system for each network interface upon initialization. An interface that is not reported as UP will not be used. This property allows you to configure the transport to start using even the interfaces that were not reported as UP.

Two values are allowed:

- **0**: Allow the use of interfaces that were not reported as UP.
- **1**: Do not use interfaces that were not reported as UP.

**[default]** 1

### 9.342.2.6 ignore\_nonrunning\_interfaces

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::ignore\_nonrunning\_interfaces

Prevents the transport plugin from using a network interface that is not reported as RUNNING by the operating system.

The transport checks the flags reported by the operating system for each network interface upon initialization. An interface that is not reported as UP will not be used. This property allows the same check to be extended to the IFF\_↔\_RUNNING flag implemented by some operating systems. The RUNNING flag is defined to mean that "all resources are allocated," and may be off if there is no link detected, e.g., the network cable is unplugged.

Two values are allowed:

- **0**: Do not check the RUNNING flag when enumerating interfaces, just make sure the interface is UP.
- **1**: Check the flag when enumerating interfaces, and ignore those that are not reported as RUNNING. This can be used on some operating systems to cause the transport to ignore interfaces that are enabled but not connected to the network.

**[default]** 1 (i.e., check RUNNING flag)

### 9.342.2.7 no\_zero\_copy

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::no_zero_copy
```

**[DEPRECATED]** Prevents the transport plugin from doing a zero copy.

DEPRECATED: This property has no effect. By default, this plugin will use the zero copy on OSes that offer it. While this is good for performance, it may sometimes tax the OS resources in a manner that cannot be overcome by the application.

The best example is if the hardware/device driver lends the buffer to the application itself. If the application does not return the loaned buffers soon enough, the node may err or malfunction. In case you cannot reconfigure the H/W, device driver, or the OS to allow the zero copy feature to work for your application, you may have no choice but to turn off zero copy use.

By default this is set to 0, so RTI Connexx will use the zero-copy API if offered by the OS.

### 9.342.2.8 send\_blocking

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::send_blocking
```

Control blocking behavior of send sockets. CHANGING THIS FROM THE DEFAULT CAN CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

Currently two values are defined:

- **NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS:** Sockets are blocking (default socket options for the operating system).
- **NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_NEVER:** Sockets are modified to make them non-blocking. THIS MAY CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

**[default]** NDDS\_TRANSPORT\_UDPv4\_BLOCKING\_ALWAYS

### 9.342.2.9 use\_checksum

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::use_checksum
```

Configures whether to send UDP checksum.

This property specifies whether the UDP checksum will be computed. On Windows and Linux, the UDP protocol will not set the checksum when use\_checksum is set to 0. This is useful when RTPS protocol statistics related to corrupted messages need to be collected through the API **DDSDomainParticipant::get\_participant\_protocol\_status** (p. 1407).

**[default]** 1 (enabled)

### 9.342.2.10 transport\_priority\_mask

```
RTT_UINT32 NDDS_Transport_UDPv4_WAN_Property_t::transport_priority_mask
```

Set mask for use of transport priority field.

This is used in conjunction with **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mapping\_low** (p. 1803) and **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mapping\_high** (p. 1803) to define the mapping from the DDS transport priority (see **TRANSPORT\_PRIORITY** (p. 449)) to the IPv4 TOS field. Defines a contiguous region of bits in the 32-bit transport priority value that is used to generate values for the IPv4 TOS field on an outgoing socket.

For example, the value 0x0000ff00 causes bits 9-16 (8 bits) to be used in the mapping. The value will be scaled from the mask range (0x0000 - 0xff00 in this case) to the range specified by low and high.

If the mask is set to zero, then the transport will not set IPv4 TOS for send sockets.

**[default]** 0.

### 9.342.2.11 transport\_priority\_mapping\_low

```
RTT_INT32 NDDS_Transport_UDPv4_WAN_Property_t::transport_priority_mapping_low
```

Set low value of output range to IPv4 TOS.

This is used in conjunction with **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mask** (p. 1802) and **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mapping\_high** (p. 1803) to define the mapping from the DDS transport priority to the IPv4 TOS field. Defines the low value of the output range for scaling.

Note that IPv4 TOS is generally an 8-bit value.

**[default]** 0.

### 9.342.2.12 transport\_priority\_mapping\_high

```
RTT_INT32 NDDS_Transport_UDPv4_WAN_Property_t::transport_priority_mapping_high
```

Set high value of output range to IPv4 TOS.

This is used in conjunction with **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mask** (p. 1802) and **NDDS\_Transport\_UDPv4\_WAN\_Property\_t::transport\_priority\_mapping\_low** (p. 1803) to define the mapping from the DDS transport priority to the IPv4 TOS field. Defines the high value of the output range for scaling.

Note that IPv4 TOS is generally an 8-bit value.

**[default]** 0xff.

### 9.342.2.13 send\_ping

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::send\_ping

Configures whether to send PING messages.

This property specifies whether to send a PING message before commencing the discovery process. On certain operating systems or with certain switches the initial UDP packet, while configuring the ARP table, can unfortunately be dropped. To avoid dropping the initial RTPS discovery sample, a PING message is sent to preconfigure the ARP table in those environments.

**[default]** 1 (enabled)

### 9.342.2.14 force\_interface\_poll\_detection

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::force\_interface\_poll\_detection

Forces the interface tracker to use a polling mechanism to detect changes on the UDPv4 interfaces.

When possible, the detection of an IP address change is done asynchronously using the APIs offered by the underlying OS. By setting this property on those OSes, the use of a polling mechanism to detect changes can be forced.

**[default]** 0 (disabled).

### 9.342.2.15 interface\_poll\_period

RTI\_UINT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::interface\_poll\_period

Specifies the period in milliseconds to query for changes in the state of all the interfaces.

When possible, the detection of an IP address change is done asynchronously using the APIs offered by the underlying OS. If there is no mechanism to do that, the detection will use a polling strategy where the polling period can be configured by setting this property.

**[default]** 500 milliseconds.

### 9.342.2.16 protocol\_overhead\_max

RTI\_INT32 NDDS\_Transport\_UDPv4\_WAN\_Property\_t::protocol\_overhead\_max

Maximum size in bytes of protocol overhead, including headers.

This value is the maximum size, in bytes, of protocol-related overhead. Normally, the overhead accounts for UDP and IP headers. The default value is set to accommodate the most common UDP/IP header size.

Note that when **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779) plus this overhead is larger than the UDPv4 maximum message size (65535 bytes), the middleware will automatically reduce the effective message\_size\_max, to 65535 minus this overhead.

**[default]** 28.

See also

**NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779)

### 9.342.2.17 disable\_interface\_tracking

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::disable_interface_tracking
```

Disables detection of network interface changes.

By default, network interface changes are propagated in the form of locators to other applications. This is done to support IP mobility scenarios.

For example, you could start a RTI Connex application with Wi-Fi and move to a wired connection. In order to continue communicating with other applications, this interface change has to be propagated.

In RTI Connex 5.2 (the initial release) and earlier versions of the product, IP mobility scenarios were not supported. 5.2 applications will report errors if they detect locator changes in a DataWriter or DataReader.

You can disable the notification and propagation of interface changes by setting this property to 1.

This way, an interface change in a newer application will not trigger errors in an application running 5.2 or earlier. Of course, this will prevent the new application from being able to detect network interface changes.

**[default]** 0

### 9.342.2.18 public\_address

```
char* NDDS_Transport_UDPv4_WAN_Property_t::public_address
```

Public IP address associated with the transport instantiation.

Setting the public IP address is only necessary for the Real-Time WAN Transport associated with an external **DDSDomainParticipant** (p. 1351) (publicly reachable) in order to support the two communication scenarios shown in the Figure below.

For an external **DDSDomainParticipant** (p. 1351) behind a NAT-enabled router, this address is the public IP address of the router.

When this property is set, the DomainParticipant will announce PUBLIC+UUID locators to other DomainParticipants. These locators are reachable locators because they contain this public IP address.

For additional information on Real-Time WAN Transport locators, see the `Core Libraries User's Manual`.

with a Participant that has a Public Address"

**[default]** NULL (the transport will announce UUID locators)

### 9.342.2.19 comm\_ports\_list

```
struct NDDS_Transport_UDP_WAN_CommPortsMappingInfo* NDDS_Transport_UDPv4_WAN_Property_t::comm_ports_list
```

Configures the public and private UDP ports that a transport instance uses to receive/send RTPS data.

Array containing the mapping between "RTPS ports", "UDP receive host ports", and "UDP receive public ports".

When the transport is configured using properties, the port mapping array is provided using a JSON string.

For example:

```
{
  "default": {"host": 8192, "public": 9678},
  "mappings": [
    {"rtps": 1234, "host": 9999, "public": 5678},
    {"rtps": 1235, "host": 9990, "public": 5679},
  ]
}
```

It is also possible to configure the mapping with XML:

```
<transport_builtin>
  <udpv4_wan>
    <comm_ports>
      <default>
        <host>8192</host>
        <public>9678</public>
      </default>
      <mappings>
        <element>
          <rtps>1234</rtps>
          <host>9999</host>
          <public>5678</public>
        </element>
        <element>
          <rtps>1235</rtps>
          <host>9990</host>
          <public>5679</public>
        </element>
      </mappings>
    </comm_ports>
  </udpv4_wan>
</transport_builtin>
```

For additional information on how to set the value of this property, see the [Core Libraries User's Manual](#).

**[default]** NULL (The UDP ports used for communications will be derived from the RTPS ports associated with the locators for the DomainParticipant and its Endpoints (DataWriters and DataReaders)).

### 9.342.2.20 comm\_ports\_list\_length

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::comm_ports_list_length
```

Number of elements in the `NDDS_Transport_UDPv4_WAN_Property_t::comm_ports_list` (p.1805).

**[default]** 0

### 9.342.2.21 port\_offset

```
RTI_INT32 NDDS_Transport_UDPv4_WAN_Property_t::port_offset
```

Port offset to allow coexistence with built-in UDPv4 transport.

This property allows using the built-in UDPv4 transport and the Real-Time WAN Transport at the same time.

```
<transport_builtin>
```

```
    <mask>UDPv4_WAN|UDPv4</mask>
```

```
</transport_builtin>
```

When the UDP ports used by Real-Time WAN Transport are not explicitly set, they are calculated as follows: RTPS port + port\_offset.

**[default]** 125

### 9.342.2.22 binding\_ping\_period

```
RTI_UINT32 NDDS_Transport_UDPv4_WAN_Property_t::binding_ping_period
```

Specifies the period in milliseconds at which BINDING\_PINGS messages are sent to keep NAT mappings open.

Configures the period in milliseconds at which BINDING\_PING messages are sent by a local transport instance to a remote transport instance. For example, 1000 means to send BINDING\_PING messages every second.

BINDING\_PING messages are used on the sending side to open NAT bindings from a local transport instance to a remote transport instance and they are sent periodically to keep the bindings open.

On the receiving side, BINDING\_PINGS are used to calculate the public IP transport address of an UUID locator. This address will be used to send data to the locator.

For additional information on the role of BINDING\_PING, see the `Core Libraries User's Manual`.

From a configuration point of view, and to avoid communication disruptions, the period at which a transport instance sends BINDING\_PING messages should be smaller than the NAT binding session timeout. This timeout depends on the NAT router configuration.

**[default]** 1000 (1 sec)

## 9.343 NDDS\_Transport\_UDPv6\_Property\_t Struct Reference

Configurable IPv6/UDP Transport-Plugin properties.

### Public Attributes

- struct **NDDS\_Transport\_Property\_t parent**  
*Generic properties of all transport plugins.*
- RTI\_INT32 **send\_socket\_buffer\_size**  
*Size in bytes of the send buffer of a socket used for sending.*
- RTI\_INT32 **recv\_socket\_buffer\_size**  
*Size in bytes of the receive buffer of a socket used for receiving.*
- RTI\_INT32 **unicast\_enabled**  
*Allows the transport plugin to use unicast for sending and receiving.*
- RTI\_INT32 **multicast\_enabled**  
*Allows the transport plugin to use multicast for sending and receiving.*
- RTI\_INT32 **multicast\_ttl**  
*Value for the time-to-live parameter for all multicast sends using this plugin.*
- RTI\_INT32 **multicast\_loopback\_disabled**  
*Prevents the transport plugin from putting multicast packets onto the loopback interface.*
- RTI\_INT32 **ignore\_loopback\_interface**  
*Prevents the transport plugin from using the IP loopback interface.*
- RTI\_INT32 **ignore\_nonrunning\_interfaces**  
*Prevents the transport plugin from using a network interface that is not reported as RUNNING by the operating system.*
- RTI\_INT32 **no\_zero\_copy**  
**[DEPRECATED]** *Prevents the transport plugin from doing zero copy.*

- RTI\_INT32 **transport\_priority\_mapping\_low**  
*Set low value of output range to IPv6 TCLASS.*
- RTI\_INT32 **transport\_priority\_mapping\_high**  
*Set high value of output range to IPv6 TCLASS.*
- RTI\_INT32 **send\_ping**  
*Configures whether to send PING messages.*
- RTI\_INT32 **force\_interface\_poll\_detection**  
*Forces the interface tracker to use a polling mechanism to detect changes on the UDPv6 interfaces.*
- RTI\_UINT32 **interface\_poll\_period**  
*Specifies the period in milliseconds to query for changes in the state of all the interfaces.*
- RTI\_INT32 **reuse\_multicast\_receive\_resource**  
*Controls whether or not to reuse multicast receive resources.*
- RTI\_INT32 **protocol\_overhead\_max**

*Maximum size in bytes of protocol overhead, including headers.*

- RTI\_INT32 **disable\_interface\_tracking**

*Disables detection of network interface changes.*

- RTI\_UINT32 **join\_multicast\_group\_timeout**

*[Windows only] Defines how much time (milliseconds) to wait to join a multicast group address when a new interface is detected.*

- char \* **public\_address**

*Public IP address associated with the transport instantiation.*

- RTI\_INT32 **port\_offset**

*Port offset to allow multiple instances of UDPv6 transports in the same **DDSDomainParticipant** (p. 1351).*

### 9.343.1 Detailed Description

Configurable IPv6/UDP Transport-Plugin properties.

You can modify the properties in this structure to configure the plugin. However, you must set the properties before the plugin is instantiated.

See also

**NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838)

**NDDS\_Transport\_UDPv6\_new** (p. 290)

### 9.343.2 Member Data Documentation

#### 9.343.2.1 parent

```
struct NDDS_Transport_Property_t NDDS_Transport_UDPv6_Property_t::parent
```

Generic properties of all transport plugins.

#### 9.343.2.2 send\_socket\_buffer\_size

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size
```

Size in bytes of the send buffer of a socket used for sending.

On most operating systems, `setsockopt()` will be called to set the `SENDBUF` to the value of this parameter.

This value must be greater than or equal to **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779). The maximum value is operating system-dependent.

By default, it will be set to **NDDS\_TRANSPORT\_UDPv6\_SEND\_SOCKET\_BUFFER\_SIZE\_DEFAULT** (p. 287).

If you configure this parameter to be **NDDS\_TRANSPORT\_UDPv6\_SOCKET\_BUFFER\_SIZE\_OS\_DEFAULT** (p. 287), then `setsockopt()` (or equivalent) will not be called to size the send buffer of the socket. The transport will use the OS default.

### 9.343.2.3 `recv_socket_buffer_size`

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size
```

Size in bytes of the receive buffer of a socket used for receiving.

On most operating systems, `setsockopt()` will be called to set the `RECVBUF` to the value of this parameter.

This value must be greater than or equal to `NDDS_Transport_Property_t::message_size_max` (p. 1779). The maximum value is operating system-dependent.

By default, it will be set to `NDDS_TRANSPORT_UDPv6_RECV_SOCKET_BUFFER_SIZE_DEFAULT` (p. 288).

If you configure this parameter to be `NDDS_TRANSPORT_UDPv6_SOCKET_BUFFER_SIZE_OS_DEFAULT` (p. 287), then `setsockopt()` (or equivalent) will not be called to size the receive buffer of the socket. The transport will use the OS default.

### 9.343.2.4 `unicast_enabled`

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::unicast_enabled
```

Allows the transport plugin to use unicast for sending and receiving.

This value turns unicast UDP on (if set to 1) or off (if set to 0) for this plugin. By default, it will be turned on (1). Also by default, the plugin will use all the allowed network interfaces that it finds up and running when the plugin is instantiated.

### 9.343.2.5 `multicast_enabled`

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::multicast_enabled
```

Allows the transport plugin to use multicast for sending and receiving.

This value turns multicast UDP on (if set to 1) or off (if set to 0) for this plugin. By default, it will be turned on (1) for those platforms that support multicast. Also by default, the plugin will use the all network interfaces allowed for multicast that it finds up and running when the plugin is instantiated.

### 9.343.2.6 `multicast_ttl`

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::multicast_ttl
```

Value for the time-to-live parameter for all multicast sends using this plugin.

This is used to set the TTL of multicast packets sent by this transport plugin.

**[default]** 1

See also

**`NDDS_TRANSPORT_UDPv6_MULTICAST_TTL_DEFAULT`** (p. 288)

### 9.343.2.7 multicast\_loopback\_disabled

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::multicast_loopback_disabled
```

Prevents the transport plugin from putting multicast packets onto the loopback interface.

If multicast loopback is disabled (this value is set to 1), then when sending multicast packets, RTI Connex will *not* put a copy of the packets on the loopback interface. This prevents applications on the same node (including itself) from receiving those packets.

This value is set to 0 by default, meaning multicast loopback is *enabled*.

Disabling multicast loopback (setting this value to 1) may result in minor performance gains when using multicast.

### 9.343.2.8 ignore\_loopback\_interface

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::ignore_loopback_interface
```

Prevents the transport plugin from using the IP loopback interface.

Currently three values are allowed:

- **0**: Forces local traffic to be sent over loopback, even if a more efficient transport (such as shared memory) is installed (in which case traffic will be sent over both transports).
- **1**: Disables local traffic via this plugin. Do not use the IP loopback interface even if no NICs are discovered. This is useful when you want applications running on the same node to use a more efficient transport (such as shared memory) instead of the IP loopback.
- **-1**: Automatic. Lets RTI Connex decide between the above two choices.

The current "automatic" (-1) RTI Connex policy is as follows.

- If a shared memory transport plugin is available for local traffic and there is a locator on the initial peers list that can use shared memory, the effective value is 1 (i.e., disable UDPv6 local traffic).
- Otherwise, the effective value is 0 (i.e., use UDPv6 for local traffic also).

**[default]** -1 Automatic RTI Connex policy based on availability of the shared memory transport.

### 9.343.2.9 ignore\_nonrunning\_interfaces

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::ignore_nonrunning_interfaces
```

Prevents the transport plugin from using a network interface that is not reported as RUNNING by the operating system.

The transport checks the flags reported by the operating system for each network interface upon initialization. An interface that is not reported as UP will not be used. This property allows the same check to be extended to the IFF\_↔\_RUNNING flag implemented by some operating systems. The RUNNING flag is defined to mean that "all resources are allocated," and may be off if there is no link detected, e.g., the network cable is unplugged.

Two values are allowed:

- **0**: Do not check the RUNNING flag when enumerating interfaces, just make sure interface is UP.
- **1**: Check flag when enumerating interfaces and ignore those that are not reported as RUNNING. This can be used on some operating systems to cause the transport to ignore interfaces that are enabled but not connected to the network.

**[default]** 1 (i.e., check RUNNING flag)

### 9.343.2.10 no\_zero\_copy

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::no_zero_copy
```

**[DEPRECATED]** Prevents the transport plugin from doing zero copy.

DEPRECATED: This property has no effect. By default, this plugin will use the zero copy on OSes that offer it. While this is good for performance, it may sometimes tax the OS resources in a manner that cannot be overcome by the application.

The best example is if the hardware/device driver lends the buffer to the application itself. If the application does not return the loaned buffers soon enough, the node may error or malfunction. If you cannot reconfigure the H/W, device driver, or the OS to allow the zero copy feature to work for your application, you may have no choice but to turn off the use of zero copy.

By default this is set to 0, so RTI Connexxt will use the zero copy API if offered by the OS.

### 9.343.2.11 send\_blocking

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::send_blocking
```

Control blocking behavior of send sockets. CHANGING THIS FROM THE DEFAULT CAN CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

Currently two values are defined:

- **NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_ALWAYS**: Sockets are blocking (default socket options for the operating system).
- **NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_NEVER**: Sockets are modified to make them non-blocking. THIS MAY CAUSE SIGNIFICANT PERFORMANCE PROBLEMS.

**[default]** NDDS\_TRANSPORT\_UDPv6\_BLOCKING\_ALWAYS.

### 9.343.2.12 enable\_v4mapped

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::enable_v4mapped
```

Specify whether UDPv6 transport will process IPv4 addresses.

Set this to 1 to turn on processing of IPv4 addresses. Note that this may make it incompatible with use of the UDPv4 transport within the same domain participant.

**[default]** 0.

### 9.343.2.13 transport\_priority\_mask

```
RTI_UINT32 NDDS_Transport_UDPv6_Property_t::transport_priority_mask
```

Set mask for use of transport priority field.

If transport priority mapping is supported on the platform, this mask is used in conjunction with **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mapping\_low** (p.1813) and **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mapping\_high** (p.1813) to define the mapping from the DDS transport priority (see **TRANSPORT\_PRIORITY** (p.449)) to the IPv6 TCLASS field. Defines a contiguous region of bits in the 32-bit transport priority value that is used to generate values for the IPv6 TCLASS field on an outgoing socket.

For example, the value 0x0000ff00 causes bits 9-16 (8 bits) to be used in the mapping. The value will be scaled from the mask range (0x0000 - 0xff00 in this case) to the range specified by low and high.

If the mask is set to zero, then the transport will not set IPv6 TCLASS for send sockets.

**[default]** 0.

### 9.343.2.14 transport\_priority\_mapping\_low

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::transport_priority_mapping_low
```

Set low value of output range to IPv6 TCLASS.

This is used in conjunction with **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mask** (p.1813) and **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mapping\_high** (p.1813) to define the mapping from the DDS transport priority to the IPv6 TCLASS field. Defines the low value of the output range for scaling.

Note that IPv6 TCLASS is generally an 8-bit value.

**[default]** 0.

### 9.343.2.15 transport\_priority\_mapping\_high

RTI\_INT32 NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mapping\_high

Set high value of output range to IPv6 TCLASS.

This is used in conjunction with **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mask** (p.1813) and **NDDS\_Transport\_UDPv6\_Property\_t::transport\_priority\_mapping\_low** (p.1813) to define the mapping from the DDS transport priority to the IPv6 TCLASS field. Defines the high value of the output range for scaling.

Note that IPv6 TCLASS is generally an 8-bit value.

**[default]** 0xff.

### 9.343.2.16 send\_ping

RTI\_INT32 NDDS\_Transport\_UDPv6\_Property\_t::send\_ping

Configures whether to send PING messages.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::send\_ping** (p. 1795)

### 9.343.2.17 force\_interface\_poll\_detection

RTI\_INT32 NDDS\_Transport\_UDPv6\_Property\_t::force\_interface\_poll\_detection

Forces the interface tracker to use a polling mechanism to detect changes on the UDPv6 interfaces.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::force\_interface\_poll\_detection** (p. 1795)

### 9.343.2.18 interface\_poll\_period

RTI\_UINT32 NDDS\_Transport\_UDPv6\_Property\_t::interface\_poll\_period

Specifies the period in milliseconds to query for changes in the state of all the interfaces.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::interface\_poll\_period** (p. 1795)

### 9.343.2.19 reuse\_multicast\_receive\_resource

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::reuse_multicast_receive_resource
```

Controls whether or not to reuse multicast receive resources.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::reuse\_multicast\_receive\_resource** (p. 1795)

### 9.343.2.20 protocol\_overhead\_max

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::protocol_overhead_max
```

Maximum size in bytes of protocol overhead, including headers.

This value is the maximum size, in bytes, of protocol-related overhead. Normally, the overhead accounts for UDP and IP headers. The default value is set to accommodate the most common UDP/IP header size.

Note that when **NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779) plus this overhead is larger than the UDPv6 maximum message size (65535 bytes), the middleware will automatically reduce the effective `message_size_max`, to 65535 minus this overhead.

**[default]** 48.

See also

**NDDS\_Transport\_Property\_t::message\_size\_max** (p. 1779)

### 9.343.2.21 disable\_interface\_tracking

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::disable_interface_tracking
```

Disables detection of network interface changes.

See also

**NDDS\_Transport\_UDPv4\_Property\_t::disable\_interface\_tracking** (p. 1796)

### 9.343.2.22 `join_multicast_group_timeout`

```
RTI_UINT32 NDDS_Transport_UDPv6_Property_t::join_multicast_group_timeout
```

[Windows only] Defines how much time (milliseconds) to wait to join a multicast group address when a new interface is detected.

See also

**`NDDS_Transport_UDPv4_Property_t::join_multicast_group_timeout`** (p. 1796)

### 9.343.2.23 `public_address`

```
char* NDDS_Transport_UDPv6_Property_t::public_address
```

Public IP address associated with the transport instantiation.

Setting the public IP address is only necessary to support communication over WAN that involves Network Address Translation (NAT).

Typically, the address is the public address of the IP NAT router that provides access to the WAN.

By default, the **`DDSDomainParticipant`** (p. 1351) creating the transport will announce the IP addresses obtained from the NICs to other DomainParticipants in the system.

When this property is set, the DomainParticipant will announce the IP address corresponding to the property value instead of the LAN IP addresses associated with the NICs.

**Note 1:** Setting this property is necessary, but is not a sufficient condition for sending and receiving data over the WAN. You must also configure the IP NAT router to allow UDP traffic and to map the public IP address specified by this property to the DomainParticipant's private LAN IP address. This is typically done with one of the following mechanisms:

- Port Forwarding: You must map the private ports used to receive discovery and user data traffic to the corresponding public ports (see **`DDS_RtpsWellKnownPorts_t`** (p. 1076)). Public and private ports must be the same since the transport does not allow you to change the mapping.
- 1:1 NAT: You must add a 1:1 NAT entry that maps the public IP address specified in this property to the private LAN IP address of the DomainParticipant.

**Note 2:** By setting this property, the **`DDSDomainParticipant`** (p. 1351) only announces its public IP address to other DomainParticipants. Therefore, communication with DomainParticipants within the LAN that are running on different nodes will not work unless the NAT router is configured to enable NAT reflection (hairpin NAT).

There is another way to achieve simultaneous communication with DomainParticipants running in the LAN and WAN, that does not require hairpin NAT. This way uses a gateway application such as RTI Routing Service to provide access to the WAN.

**[default]** NULL (the transport uses the IP addresses obtained from the NICs)

### 9.343.2.24 port\_offset

```
RTI_INT32 NDDS_Transport_UDPv6_Property_t::port_offset
```

Port offset to allow multiple instances of UDPv6 transports in the same **DDSDomainParticipant** (p. 1351).

By default, it is not possible to have multiple instances of the UDPv6 transport in the same **DDSDomainParticipant** (p. 1351). This is because all instances will try to bind to the same UDP port(s) for receiving data.

With this property, you can specify an offset that will be added to the RTPS port(s) to determine the UDP port(s) to bind to. This way, you can have multiple instances of the UDPv6 transport in the same **DDSDomainParticipant** (p. 1351).

An RTPS port will be mapped to an UDP port as follows: UDP port = RTPS port + port\_offset.

[default] 0

## 9.344 NDDS\_Transport\_UUID Struct Reference

Univocally identifies a transport plugin instance.

### 9.344.1 Detailed Description

Univocally identifies a transport plugin instance.

## 9.345 NDDS\_Utility\_NetworkCaptureParams\_t Struct Reference

Input parameters for starting network capture.

### Public Attributes

- struct **DDS\_StringSeq transports**  
*List of transports to capture.*
- **NDDS\_Utility\_NetworkCaptureContentKindMask dropped\_content**  
*Exclude contents from the capture file.*
- **NDDS\_Utility\_NetworkCaptureTrafficKindMask traffic**  
*Traffic direction to capture.*
- **DDS\_Boolean parse\_encrypted\_content**  
*If secure traffic should be decrypted or not.*
- struct **DDS\_ThreadSettings\_t checkpoint\_thread\_settings**  
*The properties of the checkpoint thread.*
- **DDS\_Long frame\_queue\_size**  
*Size of the frame queue (Bytes).*

### 9.345.1 Detailed Description

Input parameters for starting network capture.

### 9.345.2 Member Data Documentation

#### 9.345.2.1 transports

```
struct DDS_StringSeq NDDS_Utility_NetworkCaptureParams_t::transports
```

List of transports to capture.

Network Capture will only save RTPS frames if the associated transport protocol is part of this sequence.

**[default]** Empty sequence initializer. This means that by default all transports will be captured.

#### 9.345.2.2 dropped\_content

```
NDDS_Utility_NetworkCaptureContentKindMask NDDS_Utility_NetworkCaptureParams_t::dropped_content
```

Exclude contents from the capture file.

It accepts values from **NDDS\_Utility\_NetworkCaptureContentKind** (p.545) and **NDDS\_Utility\_NetworkCaptureContentKindMask** (p.544) .

We can choose to exclude user data or encrypted content from the capture file.

**[default]** No content is excluded - **NDDS\_UTILITY\_NETWORK\_CAPTURE\_CONTENT\_MASK\_DEFAULT** (p.543).

#### 9.345.2.3 traffic

```
NDDS_Utility_NetworkCaptureTrafficKindMask NDDS_Utility_NetworkCaptureParams_t::traffic
```

Traffic direction to capture.

It accepts values from **NDDS\_Utility\_NetworkCaptureTrafficKind** (p.545) and **NDDS\_Utility\_NetworkCaptureTrafficKindMask** (p.544) .

**[default]** Capture both inbound and outbound traffic - **NDDS\_UTILITY\_NETWORK\_CAPTURE\_TRAFFIC\_MASK\_DEFAULT** (p.543).

### 9.345.2.4 parse\_encrypted\_content

```
DDS_Boolean NDDS_Utility_NetworkCaptureParams_t::parse_encrypted_content
```

If secure traffic should be decrypted or not.

Network Capture supports decryption of RTPS messages and submessages. It does not support decryption of the user data payload (<data\_protection\_kind> tag in the GovernanceDocument).

**[default]** `DDS_BOOLEAN_FALSE` (p. 317)

### 9.345.2.5 checkpoint\_thread\_settings

```
struct DDS_ThreadSettings_t NDDS_Utility_NetworkCaptureParams_t::checkpoint_thread_settings
```

The properties of the checkpoint thread.

The checkpoint thread is a per-participant thread responsible for reading frames from a queue and saving them to disk (as soon as they are produced).

The members that can be configured are:

- `DDS_ThreadSettings_t::mask` (p. 1123). Default value of (`DDS_THREAD_SETTINGS_PRIORITY_ENFORCE` (p. 352) | `DDS_THREAD_SETTINGS_STDIO` (p. 352)).
- `DDS_ThreadSettings_t::priority` (p. 1123). Platform-dependent - Consult `Platform Notes` for additional details.
- `DDS_ThreadSettings_t::stack_size` (p. 1124). Platform-dependent - Consult `Platform Notes` for additional details.

### 9.345.2.6 frame\_queue\_size

```
DDS_Long NDDS_Utility_NetworkCaptureParams_t::frame_queue_size
```

Size of the frame queue (Bytes).

Network Capture enqueues frames before saving them to disk, which takes place in a separate thread.

Network Capture does not block if the queue becomes full. Attempting to enqueue a frame with a full frame queue will fail (frame won't be captured) with a log message.

The size of the queue is dependent on the network traffic (amount of frames that we want to capture) and system resources (how fast we can capture frames).

**[default]** 2097152 (2MB).

## 9.346 NDDSSConfigActivityContext Class Reference

Activity Context APIs.

### Static Public Member Functions

- static void **set\_attribute\_mask** ( **NDDSSConfigActivityContextAttributeKindMask** attribute\_format)  
*Set the **NDDSSConfigActivityContextAttributeKindMask** (p. 532) of the Activity Context.*

### 9.346.1 Detailed Description

Activity Context APIs.

Activity Context APIs.

## 9.347 NDDSSConfigCompliance Class Reference

APIs to configure the XTypes compliance mask.

### Static Public Member Functions

- static **NDDSSConfigXTypesComplianceMask** **get\_xtypes\_mask** ()  
*Gets the XTypes compliance mask value for the application.*
- static void **set\_xtypes\_mask** ( **NDDSSConfigXTypesComplianceMask** mask)  
*Sets the level of compliance of the application with the XTypes specification.*
- static void **load\_compliance\_masks** ()  
*Load the compliance masks from the environment variables.*

### 9.347.1 Detailed Description

APIs to configure the XTypes compliance mask.

### 9.347.2 Member Function Documentation

### 9.347.2.1 get\_xtypes\_mask()

```
static NDDS_Config_XTypesComplianceMask NDDSSConfigCompliance::get_xtypes_mask ( ) [static]
```

Gets the XTypes compliance mask value for the application.

The **NDDS\_Config\_XTypesComplianceMask** (p. 536) configures different aspects of the Extended CDR encoding (XCDR and XCDR2) for the application.

#### Returns

The **NDDS\_Config\_XTypesComplianceMask** (p. 536) value.

#### See also

**NDDS\_Config\_XTypesComplianceMask** (p. 536)

**NDDSSConfigCompliance::get\_xtypes\_mask** (p. 1820)

**NDDSSConfigCompliance::load\_compliance\_masks** (p. 1821)

### 9.347.2.2 set\_xtypes\_mask()

```
static void NDDSSConfigCompliance::set_xtypes_mask (
    NDDS_Config_XTypesComplianceMask mask ) [static]
```

Sets the level of compliance of the application with the XTypes specification.

The **NDDS\_Config\_XTypesComplianceMask** (p. 536) configures different aspects of the Extended CDR encoding (XCDR and XCDR2) for the application.

Once you call this function the value of the mask will apply to all the DomainParticipants created after the call. It won't apply to DomainParticipants created before the call.

In general, applications should only set the mask once, before executing any other RTI Connex API. The mask can also be set using the environment variable **NDDS\_XTYPES\_COMPLIANCE\_MASK**.

#### Parameters

<i>mask</i>	<< <i>in</i> >> (p. 238) Compliance mask.
-------------	---

#### See also

**NDDS\_Config\_XTypesComplianceMask** (p. 536)

**NDDSSConfigCompliance::get\_xtypes\_mask** (p. 1820)

**NDDSSConfigCompliance::load\_compliance\_masks** (p. 1821)

### 9.347.2.3 load\_compliance\_masks()

```
static void NDDSSConfigCompliance::load_compliance_masks ( ) [static]
```

Load the compliance masks from the environment variables.

The only compliance mask loaded by this function is the XTypes compliance mask, which can be set using the environment variable **NDDSS\_XTYPES\_COMPLIANCE\_MASK**.

See also

**NDDSS\_Config\_XTypesComplianceMask** (p. 536)

**NDDSSConfigCompliance::set\_xtypes\_mask** (p. 1821)

**NDDSSConfigCompliance::get\_xtypes\_mask** (p. 1820)

## 9.348 NDDSSConfigLogger Class Reference

<<*interface*>> (p. 237) The singleton type used to configure RTI Connexxt logging.

### Public Member Functions

- **NDDSS\_Config\_LogVerbosity get\_verbosity ( )**  
*Get the verbosity at which RTI Connexxt is currently logging diagnostic information.*
- **NDDSS\_Config\_LogVerbosity get\_verbosity\_by\_category ( NDDSS\_Config\_LogCategory category)**  
*Get the verbosity at which RTI Connexxt is currently logging diagnostic information in the given category.*
- void **set\_verbosity ( NDDSS\_Config\_LogVerbosity verbosity)**  
*Set the verbosity at which RTI Connexxt will log diagnostic information.*
- void **set\_verbosity\_by\_category ( NDDSS\_Config\_LogCategory category, NDDSS\_Config\_LogVerbosity verbosity)**  
*Set the verbosity at which RTI Connexxt will log diagnostic information in the given category.*
- FILE \* **get\_output\_file ( )**  
*Get the file to which the logged output is redirected.*
- bool **set\_output\_file (FILE \*out)**  
*Set the file to which the logged output is redirected.*
- bool **set\_output\_file\_set (const char \*file\_prefix, const char \*file\_suffix, int max\_capacity, int max\_files)**  
*Configure a set of files to redirect the logged output.*
- **NDDSSConfigLoggerDevice \* get\_output\_device ( )**  
*Return the user device registered with the logger.*
- bool **set\_output\_device ( NDDSSConfigLoggerDevice \*device)**  
*Register a NDDSSConfigLoggerDevice (p. 1829).*
- **NDDSS\_Config\_LogPrintFormat get\_print\_format ( )**  
*Get the current message format for the log level NDDSS\_CONFIG\_LOG\_LEVEL\_ERROR (p. 525).*
- bool **set\_print\_format ( NDDSS\_Config\_LogPrintFormat print\_format)**  
*Set the message format that RTI Connexxt will use to log diagnostic information for all the log levels, except for NDDSS\_CONFIG\_LOG\_LEVEL\_FATAL\_ERROR (p. 525). When the Activity Context (p. 530) is printed, the user can select the information that will be part of the Activity Context (p. 530) by using the API NDDSSConfigActivityContext::set\_attribute\_mask (p. 534).*

- **NDDConfig\_LogPrintFormat get\_print\_format\_by\_log\_level** ( **NDDConfig\_LogLevel** log\_level)
 

*Get the current message format, by log level, that RTI Connexx is using to log diagnostic information.*
- bool **set\_print\_format\_by\_log\_level** ( **NDDConfig\_LogPrintFormat** print\_format, **NDDConfig\_LogLevel** log\_level)
 

*Set the message format, by log level, that RTI Connexx will use to log diagnostic information. When the **Activity Context** (p. 530) is printed, the user can select the information that will be part of the **Activity Context** (p. 530) by using the API **NDDConfigActivityContext::set\_attribute\_mask** (p. 534).*
- void **emergency** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_EMERGENCY** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **alert** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_ALERT** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **critical** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_CRITICAL** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **error** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_ERROR** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **warning** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_WARNING** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **notice** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_NOTICE** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **informational** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_INFORMATIONAL** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*
- void **debug** (const char \*msg)
 

*Logs message with **NDD\_CONFIG\_SYSLOG\_LEVEL\_DEBUG** (p. 526) and **NDD\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).*

## Static Public Member Functions

- static **NDDConfigLogger \* get\_instance** ()
 

*Get the singleton instance of this type.*
- static void **finalize\_instance** ()
 

*Finalize the singleton instance of this type.*

### 9.348.1 Detailed Description

<<**interface**>> (p. 237) The singleton type used to configure RTI Connexx logging.

### 9.348.2 Member Function Documentation

### 9.348.2.1 `get_instance()`

```
static NDDSSConfigLogger * NDDSSConfigLogger::get_instance ( ) [static]
```

Get the singleton instance of this type.

#### Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

### 9.348.2.2 `finalize_instance()`

```
static void NDDSSConfigLogger::finalize_instance ( ) [static]
```

Finalize the singleton instance of this type.

#### MT Safety:

UNSAFE. It is not safe to call this method while another thread may be simultaneously calling another logger-related method, including this one.

### 9.348.2.3 `get_verbosity()`

```
NDDS_Config_LogVerbosity NDDSSConfigLogger::get_verbosity ( )
```

Get the verbosity at which RTI Connex is currently logging diagnostic information.

The default verbosity if **NDDSSConfigLogger::set\_verbosity** (p. 1824) is never called is **NDDS\_CONFIG\_LOG\_↔  
VERBOSITY\_ERROR** (p. 525).

If **NDDSSConfigLogger::set\_verbosity\_by\_category** (p. 1825) has been used to set different verbositys for different categories of messages, this method will return the maximum verbosity of all categories.

### 9.348.2.4 `get_verbosity_by_category()`

```
NDDS_Config_LogVerbosity NDDSSConfigLogger::get_verbosity_by_category (   
    NDDS_Config_LogCategory category )
```

Get the verbosity at which RTI Connex is currently logging diagnostic information in the given category.

The default verbosity if **NDDSSConfigLogger::set\_verbosity** (p. 1824) and **NDDSSConfigLogger::set\_verbosity\_by\_↔  
\_category** (p. 1825) are never called is **NDDS\_CONFIG\_LOG\_VERBOSITY\_ERROR** (p. 525).

### 9.348.2.5 set\_verbosity()

```
void NDDSSConfigLogger::set_verbosity (
    NDDSSConfig_LogVerbosity verbosity )
```

Set the verbosity at which RTI Connexx will log diagnostic information.

*Note:* Logging at high verbosity levels will be detrimental to your application's performance. Your default setting should typically remain at **NDDSS\_CONFIG\_LOG\_VERBOSITY\_WARNING** (p. 525) or below. (The default verbosity if you never set it is **NDDSS\_CONFIG\_LOG\_VERBOSITY\_ERROR** (p. 525).)

#### Examples

**HelloWorld\_publisher.cxx**, and **HelloWorld\_subscriber.cxx**.

### 9.348.2.6 set\_verbosity\_by\_category()

```
void NDDSSConfigLogger::set_verbosity_by_category (
    NDDSSConfig_LogCategory category,
    NDDSSConfig_LogVerbosity verbosity )
```

Set the verbosity at which RTI Connexx will log diagnostic information in the given category.

### 9.348.2.7 get\_output\_file()

```
FILE * NDDSSConfigLogger::get_output_file ( )
```

Get the file to which the logged output is redirected.

If no output file has been registered through **NDDSSConfigLogger::set\_output\_file** (p. 1825), this method will return NULL. In this case, logged output will on most platforms go to standard out as if through printf.

### 9.348.2.8 set\_output\_file()

```
bool NDDSSConfigLogger::set_output_file (
    FILE * out )
```

Set the file to which the logged output is redirected.

The file passed may be NULL, in which case further logged output will be redirected to the platform-specific default output location (standard out on most platforms).

For better performance when log messages are generated frequently, the log messages are not flushed into a file immediately after they are generated. In other words, while writing a log message, RTI Connexx only calls the function `fwrite()` (see <https://pubs.opengroup.org/onlinepubs/009695399/functions/fwrite.html>); it does not call the function `fflush()` (see <https://pubs.opengroup.org/onlinepubs/009695399/functions/fflush.html>). If your application requires a different flushing behavior, you may use **NDDSSConfigLogger::set\_output\_device** (p. 1826) to configure a custom logging device.

### 9.348.2.9 set\_output\_file\_set()

```
bool NDDConfigLogger::set_output_file_set (
    const char * file_prefix,
    const char * file_suffix,
    int max_capacity,
    int max_files )
```

Configure a set of files to redirect the logged output.

The logged output will be redirected to a set of files whose names are configured with a prefix and a suffix. The maximum number of bytes configures how many bytes to write into a file before opening the next file. After reaching the maximum number of files, the first one is overwritten.

For example, if the prefix is 'Foo (p. 1648)', the suffix is '.txt', the max number of bytes is 1GB, and the max number of files is 3, the logger will create (at most) these files: Foo1.txt, Foo2.txt, and Foo3.txt. It will write to Foo1.txt, and after writing 1GB, it will move on to Foo2.txt, then to Foo3.txt, then to Foo1.txt again, and so on.

To stop logging to these files and redirect the output to the platform-specific location, pass NULL, NULL, 0, 0.

See **NDDConfigLogger::set\_output\_file** (p. 1825) for the flushing behavior.

### 9.348.2.10 get\_output\_device()

```
NDDConfigLoggerDevice * NDDConfigLogger::get_output_device ( )
```

Return the user device registered with the logger.

#### Returns

Registered user device or NULL if no user device is registered.

### 9.348.2.11 set\_output\_device()

```
bool NDDConfigLogger::set_output_device (
    NDDConfigLoggerDevice * device )
```

Register a **NDDConfigLoggerDevice** (p. 1829).

Register the specified logging device with the logger.

There can be at most only one device registered with the logger at any given time.

When a device is installed, the logger will stop sending the log messages to the standard output and to the file set with **NDDConfigLogger::set\_output\_file** (p. 1825).

To remove an existing device, use this method with NULL as the device parameter. After a device is removed the logger will continue sending log messages to the standard output and to the output file.

To replace an existing device with a new device, use this method providing the new device as the device parameter.

When a device is unregistered (by setting it to NULL), **NDDConfigLoggerDevice** (p.1829) calls the method **NDDConfigLoggerDevice::close** (p. 1830).

## Parameters

<i>device</i>	<< <i>in</i> >> (p. 238) Logging device.
---------------	--

9.348.2.12 `get_print_format()`

```
NDDS_Config_LogPrintFormat NDDConfigLogger::get_print_format ( )
```

Get the current message format for the log level **NDDS\_CONFIG\_LOG\_LEVEL\_ERROR** (p. 525).

Use **NDDConfigLogger::get\_print\_format\_by\_log\_level** (p. 1827) to retrieve the format for other log levels.

If **NDDConfigLogger::set\_print\_format** (p. 1827) is never called, the default format is **NDDS\_CONFIG\_LOG\_PRINT\_FORMAT\_DEFAULT** (p. 527).

9.348.2.13 `set_print_format()`

```
bool NDDConfigLogger::set_print_format (
    NDDS_Config_LogPrintFormat print_format )
```

Set the message format that RTI Connexx will use to log diagnostic information for all the log levels, except for **NDDS\_CONFIG\_LOG\_LEVEL\_FATAL\_ERROR** (p. 525). When the **Activity Context** (p. 530) is printed, the user can select the information that will be part of the **Activity Context** (p. 530) by using the API **NDDConfigActivityContext::set\_attribute\_mask** (p. 534).

9.348.2.14 `get_print_format_by_log_level()`

```
NDDS_Config_LogPrintFormat NDDConfigLogger::get_print_format_by_log_level (
    NDDS_Config_LogLevel log_level )
```

Get the current message format, by log level, that RTI Connexx is using to log diagnostic information.

If **NDDConfigLogger::set\_print\_format** (p. 1827) is never called, the default format is **NDDS\_CONFIG\_LOG\_PRINT\_FORMAT\_DEFAULT** (p. 527).

9.348.2.15 `set_print_format_by_log_level()`

```
bool NDDConfigLogger::set_print_format_by_log_level (
    NDDS_Config_LogPrintFormat print_format,
    NDDS_Config_LogLevel log_level )
```

Set the message format, by log level, that RTI Connexx will use to log diagnostic information. When the **Activity Context** (p. 530) is printed, the user can select the information that will be part of the **Activity Context** (p. 530) by using the API **NDDConfigActivityContext::set\_attribute\_mask** (p. 534).

### 9.348.2.16 emergency()

```
void NDDSSConfigLogger::emergency (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_EMERGENCY** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).

### 9.348.2.17 alert()

```
void NDDSSConfigLogger::alert (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_ALERT** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).

### 9.348.2.18 critical()

```
void NDDSSConfigLogger::critical (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_CRITICAL** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).

### 9.348.2.19 error()

```
void NDDSSConfigLogger::error (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_ERROR** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).

### 9.348.2.20 warning()

```
void NDDSSConfigLogger::warning (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_WARNING** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_USER** (p. 527).

### 9.348.2.21 notice()

```
void NDDConfigLogger::notice (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_NOTICE** (p. 526) and **NDDS\_CONFIG\_LOG\_CATEGORY\_↔USER** (p. 527).

### 9.348.2.22 informational()

```
void NDDConfigLogger::informational (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_INFORMATIONAL** (p. 526) and **NDDS\_CONFIG\_LOG\_↔CATEGORY\_USER** (p. 527).

### 9.348.2.23 debug()

```
void NDDConfigLogger::debug (
    const char * msg )
```

Logs message with **NDDS\_CONFIG\_SYSLOG\_LEVEL\_DEBUG** (p. 526) and **NDDS\_CONFIG\_LOG\_↔USER** (p. 527).

## 9.349 NDDConfigLoggerDevice Class Reference

<<*interface*>> (p. 237) Logging device interface. Use for user-defined logging devices.

### Public Member Functions

- virtual void **write** (const **NDDS\_Config\_LogMessage** \*message)=0  
*Write a log message to a specified logging device.*
- virtual void **close** ()  
*Close the logging device.*

### 9.349.1 Detailed Description

<<*interface*>> (p. 237) Logging device interface. Use for user-defined logging devices.

Interface for handling log messages.

By default, the logger sends the log messages generated by RTI Connex to the standard output.

You can use the method **NDDConfigLogger::set\_output\_file** (p. 1825) to redirect the log messages to a file.

To further customize the management of generated log messages, the logger offers the method **NDDConfigLogger**↔**::set\_output\_device** (p. 1826) that allows you to install a user-defined logging device.

The logging device installed by the user must implement this interface.

**Note:** It is not safe to make any calls to the RTI Connex core library, including calls to **DDSDomainParticipant**↔**::get**↔**\_current\_time** (p. 1398), from any of the logging device operations.

### 9.349.2 Member Function Documentation

#### 9.349.2.1 write()

```
virtual void NDDConfigLoggerDevice::write (
    const NDDS_Config_LogMessage * message ) [pure virtual]
```

Write a log message to a specified logging device.

**Note:** It is not safe to make any calls to the RTI Connex core library, including calls to **DDSDomainParticipant**↔**::get**↔**\_current\_time** (p. 1398), from any of the logging device operations.

Parameters

<i>message</i>	<< <i>in</i> >> (p. 238) Message to log.
----------------	--

#### 9.349.2.2 close()

```
virtual void NDDConfigLoggerDevice::close ( ) [virtual]
```

Close the logging device.

**Note:** It is not safe to make any calls to the RTI Connex core library, including calls to **DDSDomainParticipant**↔**::get**↔**\_current\_time** (p. 1398), from any of the logging device operations.

## 9.350 NDDSSConfigVersion Class Reference

<<*interface*>> (p. 237) The version of an RTI Connext distribution.

### Public Member Functions

- const **DDS\_ProductVersion\_t** & **get\_product\_version** () const  
*Get the RTI Connext product version.*
- const **NDDSS\_Config\_LibraryVersion\_t** & **get\_cpp\_api\_version** () const  
*Get the version of the C++ API library.*
- const **NDDSS\_Config\_LibraryVersion\_t** & **get\_c\_api\_version** () const  
*Get the version of the C API library.*
- const **NDDSS\_Config\_LibraryVersion\_t** & **get\_core\_version** () const  
*Get the version of the core library.*
- const char \* **to\_string** () const  
*Get this version in string form.*

### Static Public Member Functions

- static const **NDDSSConfigVersion** & **get\_instance** ()  
*Get the singleton instance of this type.*

#### 9.350.1 Detailed Description

<<*interface*>> (p. 237) The version of an RTI Connext distribution.

The complete version is made up of the versions of the individual libraries that make up the product distribution.

#### 9.350.2 Member Function Documentation

##### 9.350.2.1 **get\_instance()**

```
static const NDDSSConfigVersion & NDDSSConfigVersion::get_instance ( ) [static]
```

Get the singleton instance of this type.

### 9.350.2.2 `get_product_version()`

```
const DDS_ProductVersion_t & NDDSSConfigVersion::get_product_version ( ) const
```

Get the RTI Connext product version.

### 9.350.2.3 `get_cpp_api_version()`

```
const NDDS_Config_LibraryVersion_t & NDDSSConfigVersion::get_cpp_api_version ( ) const
```

Get the version of the C++ API library.

### 9.350.2.4 `get_c_api_version()`

```
const NDDS_Config_LibraryVersion_t & NDDSSConfigVersion::get_c_api_version ( ) const
```

Get the version of the C API library.

### 9.350.2.5 `get_core_version()`

```
const NDDS_Config_LibraryVersion_t & NDDSSConfigVersion::get_core_version ( ) const
```

Get the version of the core library.

### 9.350.2.6 `to_string()`

```
const char * NDDSSConfigVersion::to_string ( ) const
```

Get this version in string form.

Combine all of the constituent library versions into a single string.

The memory in which the string is stored is internal to this **NDDSSConfigVersion** (p. 1831). The caller should not modify it.

## 9.351 NDDSLM Class Reference

Other Utilities APIs.

## Static Public Member Functions

- static **DDS\_Boolean** **unload\_activation\_library** ()  
*Unloads the Activation Library (rti\_activation) if it was previously loaded.*

### 9.351.1 Detailed Description

Other Utilities APIs.

### 9.351.2 Member Function Documentation

#### 9.351.2.1 unload\_activation\_library()

```
static DDS_Boolean NDDSLM::unload_activation_library ( ) [static]
```

Unloads the Activation Library (rti\_activation) if it was previously loaded.

This function should be called just before your process finishes. See the License Management section in the Installation Guide for additional details.

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if successful. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

## 9.352 NDDSTransportSupport Class Reference

<<*interface*>> (p. 237) The utility class used to configure RTI Connexx pluggable transports.

### Static Public Member Functions

- static **NDDS\_Transport\_Handle\_t** **register\_transport** ( **DDSDomainParticipant** \*participant\_in, **NDDS\_↔\_Transport\_Plugin** \*transport\_in, const **DDS\_StringSeq** &aliases\_in, const **NDDS\_Transport\_Address\_↔\_t** &network\_address\_in)  
*Register a transport plugin for use with a **DDSDomainParticipant** (p. 1351), assigning it a network\_address.*
- static **NDDS\_Transport\_Handle\_t** **lookup\_transport** ( **DDSDomainParticipant** \*participant\_in, **DDS\_↔\_StringSeq** &aliases\_out, **NDDS\_Transport\_Address\_t** &network\_address\_out, **NDDS\_Transport\_Plugin** \*transport\_in)  
*Look up a transport plugin within a **DDSDomainParticipant** (p. 1351).*
- static **DDS\_ReturnCode\_t** **add\_send\_route** (const **NDDS\_Transport\_Handle\_t** &transport\_handle\_in, const **NDDS\_Transport\_Address\_t** &address\_range\_in, **DDS\_Long** address\_range\_bit\_count\_in)  
*Add a route for outgoing messages.*

- static `DDS_ReturnCode_t add_receive_route` (const `NDDS_Transport_Handle_t` &transport\_handle\_in, const `NDDS_Transport_Address_t` &address\_range\_in, `DDS_Long` address\_range\_bit\_count\_in)  
*Add a route for incoming messages.*
- static `DDS_ReturnCode_t get_builtin_transport_property` (`DDSDomainParticipant` \*participant\_in, `DDS_↔_TransportBuiltinKind` builtin\_transport\_kind\_in, struct `NDDS_Transport_Property_t` &builtin\_transport\_↔\_property\_inout)  
*Get the properties used to create a builtin transport plugin.*
- static `DDS_ReturnCode_t set_builtin_transport_property` (`DDSDomainParticipant` \*participant\_in, `DDS_TransportBuiltinKind` builtin\_transport\_kind\_in, const struct `NDDS_Transport_Property_t` &builtin\_↔\_transport\_property\_in)  
*Set the properties used to create a builtin transport plugin.*
- static `NDDS_Transport_Plugin` \* `get_transport_plugin` (`DDSDomainParticipant` \*participant\_in, const char \*alias\_in)  
*Retrieve a transport plugin registered in a `DDSDomainParticipant` (p. 1351) by its alias.*

### 9.352.1 Detailed Description

<<*interface*>> (p. 237) The utility class used to configure RTI Connexx pluggable transports.

### 9.352.2 Member Function Documentation

#### 9.352.2.1 register\_transport()

```
static NDDS_Transport_Handle_t NDDSTransportSupport::register_transport (
    DDSDomainParticipant * participant_in,
    NDDS_Transport_Plugin * transport_in,
    const DDS_StringSeq & aliases_in,
    const NDDS_Transport_Address_t & network_address_in ) [static]
```

Register a transport plugin for use with a `DDSDomainParticipant` (p. 1351), assigning it a `network_address`.

A transport plugin instance can be used by exactly one `DDSDomainParticipant` (p. 1351) at a time.

When a `DataWriter/DataReader` is created, only those transports already registered to the corresponding `DDSDomainParticipant` (p. 1351) are available to the `DataWriter/DataReader`.

Builtin transports can be automatically registered by RTI Connexx as a convenience to the user. See **Built-in Transport Plugins** (p. 177) for details on how to control the builtin transports that are automatically registered.

#### Precondition

A disabled `DDSDomainParticipant` (p. 1351) and a transport plugin that will be registered exclusively with it.

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 238) A non-null, disabled <b>DDSDomainParticipant</b> (p. 1351).
<i>transport_in</i>	<< <i>in</i> >> (p. 238) A non-null transport plugin that is currently not registered with another <b>DDSDomainParticipant</b> (p. 1351).
<i>aliases_in</i>	<< <i>in</i> >> (p. 238) A non-null sequence of strings used as aliases to symbolically refer to the transport plugins. The transport plugin will be "available for use" by a <b>DDSEntity</b> (p. 1463) in the <b>DDSDomainParticipant</b> (p. 1351) if the transport alias list associated with the <b>DDSEntity</b> (p. 1463) contains one of these transport aliases. An empty alias list represents a wildcard and matches all aliases. Alias names for the builtin transports are defined in <b>TRANSPORT_BUILTIN</b> (p. 443).
<i>network_address_in</i>	<< <i>in</i> >> (p. 238) The network address at which to register this transport plugin. The bits indicated by <code>transport_in.property.address_bit_count</code> will be truncated. The remaining bits are the network address of the transport plugin. (see <b>Transport Class Attributes</b> (p. 169)).

## Returns

Upon success, a valid non-NIL transport handle, representing the association between the **DDSDomainParticipant** (p. 1351) and the transport plugin; a **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 177) upon failure.

Note that a transport plugin's class name is automatically registered as an implicit alias for the plugin. Thus, a class name can be used to refer to all the transport plugin instance of that class.

## See also

**Transport Class Attributes** (p. 169)

**Transport Network Address** (p. 171)

**Locator Format** (p. 465)

**NDDS\_DISCOVERY\_PEERS** (p. 464)

## 9.352.2.2 lookup\_transport()

```
static NDDS_Transport_Handle_t NDDSTransportSupport::lookup_transport (
    DDSDomainParticipant * participant_in,
    DDS_StringSeq & aliases_out,
    NDDS_Transport_Address_t & network_address_out,
    NDDS_Transport_Plugin * transport_in ) [static]
```

Look up a transport plugin within a **DDSDomainParticipant** (p. 1351).

The transport plugin should have already been registered with the **DDSDomainParticipant** (p. 1351).

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 238) A non-null <b>DDSDomainParticipant</b> (p. 1351).
<i>aliases_out</i> Generated by Doxygen	<< <i>inout</i> >> (p. 238) A sequence of string where the aliases used to refer to the transport plugin symbolically will be returned. null if not interested.
<i>network_address_out</i>	<< <i>inout</i> >> (p. 238) The network address at which to register the transport plugin will be returned here. null if not interested.
<i>transport_in</i>	<< <i>in</i> >> (p. 238) A non-null transport plugin that is already registered with the

## Returns

Upon success, a valid non-NIL transport handle, representing the association between the **DDSDomain**↔**Participant** (p. 1351) and the transport plugin; a **NDDS\_TRANSPORT\_HANDLE\_NIL** (p. 177) upon failure.

## See also

**Transport Class Attributes** (p. 169)

**Transport Network Address** (p. 171)

## 9.352.2.3 add\_send\_route()

```
static DDS_ReturnCode_t NDDSTransportSupport::add_send_route (
    const NDDS_Transport_Handle_t & transport_handle_in,
    const NDDS_Transport_Address_t & address_range_in,
    DDS_Long address_range_bit_count_in ) [static]
```

Add a route for outgoing messages.

This method can be used to narrow the range of addresses to which outgoing messages can be sent.

## Precondition

A disabled **DDSDomainParticipant** (p. 1351).

## Parameters

<i>transport_handle_in</i>	<< <i>in</i> >> (p. 238) A valid non-NIL transport handle as a result of a call to <b>NDDSTransportSupport::register_transport()</b> (p. 1834).
<i>address_range_in</i>	<< <i>in</i> >> (p. 238) The outgoing address range for which to use this transport plugin.
<i>address_range_bit_count</i> ↔ <i>_in</i>	<< <i>in</i> >> (p. 238) The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1778).

## Returns

One of the **Standard Return Codes** (p. 336), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

## See also

**Transport Send Route** (p. 171)

### 9.352.2.4 add\_receive\_route()

```
static DDS_ReturnCode_t NDDSTransportSupport::add_receive_route (
    const NDDS_Transport_Handle_t & transport_handle_in,
    const NDDS_Transport_Address_t & address_range_in,
    DDS_Long address_range_bit_count_in ) [static]
```

Add a route for incoming messages.

This method can be used to narrow the range of addresses at which to receive incoming messages.

#### Precondition

A disabled **DDSDomainParticipant** (p. 1351).

#### Parameters

<i>transport_handle_in</i>	<< <i>in</i> >> (p. 238) A valid non-NIL transport handle as a result of a call to <b>NDDSTransportSupport::register_transport()</b> (p. 1834).
<i>address_range_in</i>	<< <i>in</i> >> (p. 238) The incoming address range for which to use this transport plugin.
<i>address_range_bit_count_in</i>	<< <i>in</i> >> (p. 238) The number of most significant bits used to specify the address range. This function only works for transport plugins that have a positive <b>NDDS_Transport_Property_t::address_bit_count</b> (p. 1778).

#### Returns

One of the **Standard Return Codes** (p. 336), or **DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336).

#### See also

**Transport Receive Route** (p. 172)

### 9.352.2.5 get\_builtin\_transport\_property()

```
static DDS_ReturnCode_t NDDSTransportSupport::get_builtin_transport_property (
    DDSDomainParticipant * participant_in,
    DDS_TransportBuiltinKind builtin_transport_kind_in,
    struct NDDS_Transport_Property_t & builtin_transport_property_inout ) [static]
```

Get the properties used to create a builtin transport plugin.

Retrieves the properties that will be used to create a builtin transport plugin.

#### Precondition

The *builtin\_transport\_property\_inout* parameter must be of the type specified by the *builtin\_transport\_kind\_in*.

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 238) A valid non-null <b>DDSDomainParticipant</b> (p. 1351)
<i>builtin_transport_kind_in</i>	<< <i>in</i> >> (p. 238) The builtin transport kind for which to retrieve the properties.
<i>builtin_transport_property_inout</i>	<< <i>inout</i> >> (p. 238) The storage area where the retrieved property will be output. The specific type required by the <i>builtin_transport_kind_in</i> must be used.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

## See also

**NDDSTransportSupport::set\_builtin\_transport\_property()** (p. 1838)

## 9.352.2.6 set\_builtin\_transport\_property()

```
static DDS_ReturnCode_t NDDSTransportSupport::set_builtin_transport_property (
    DDSDomainParticipant * participant_in,
    DDS_TransportBuiltinKind builtin_transport_kind_in,
    const struct NDDS_Transport_Property_t & builtin_transport_property_in ) [static]
```

Set the properties used to create a builtin transport plugin.

Specifies the properties that will be used to create a builtin transport plugin.

If the builtin transport is already registered when this operation is called, these property changes will *not* have any effect. Builtin transport properties should always be set before the transport is registered. See **Built-in Transport Plugins** (p. 177) for details on when a builtin transport is registered.

## Precondition

A disabled **DDSDomainParticipant** (p. 1351). The *builtin\_transport\_property\_inout* parameter must be of the type specified by the *builtin\_transport\_kind\_in*.

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 238) A valid non-null <b>DDSDomainParticipant</b> (p. 1351) that has not been enabled.
<i>builtin_transport_kind_in</i>	<< <i>in</i> >> (p. 238) The builtin transport kind for which to specify the properties.
<i>builtin_transport_property↔_in</i>	<< <i>inout</i> >> (p. 238) The new transport property that will be used to the create the builtin transport plugin. The specific type required by the <i>builtin_transport_kind_in</i> must be used.

## Exceptions

<i>One</i>	of the <b>Standard Return Codes</b> (p. 336), or <b>DDS_RETCODE_PRECONDITION_NOT_MET</b> (p. 336).
------------	--

## See also

**NDDSTransportSupport::get\_built\_in\_transport\_property()** (p. 1837)

## 9.352.2.7 get\_transport\_plugin()

```
static NDDS_Transport_Plugin * NDDSTransportSupport::get_transport_plugin (
    DDSDomainParticipant * participant_in,
    const char * alias_in ) [static]
```

Retrieve a transport plugin registered in a **DDSDomainParticipant** (p. 1351) by its alias.

This method can be used to get a pointer to a transport Plugin that has been registered into the **DDSDomainParticipant** (p. 1351).

## Parameters

<i>participant_in</i>	<< <i>in</i> >> (p. 238) A non-null <b>DDSDomainParticipant</b> (p. 1351).
<i>alias_in</i>	<< <i>in</i> >> (p. 238) A non-null string used to symbolically refer to the transport plugins.

## Returns

Upon success, a valid non-null pointer to a registered plugin; a null pointer if a plugin with that alias is not registered/found in that participant.

## 9.353 NDDUtility Class Reference

Other Utilities APIs.

## Static Public Member Functions

- static void **sleep** (const struct **DDS\_Duration\_t** &durationIn)
  - Block the calling thread for the specified duration.*
- static void **spin** ( **DDS\_UnsignedLongLong** spinCount)
  - Performs the spin operation as many times as indicated.*
- static **DDS\_UnsignedLongLong** **get\_spin\_per\_microsecond** ()

Returns the number of spin operations to perform to wait 1 microsecond.

- static **DDS\_Boolean** **enable\_heap\_monitoring** ()  
*[DEPRECATED]* See: *NDDUtilityHeapMonitoring::enable* (p. 1843).
- static void **disable\_heap\_monitoring** ()  
*[DEPRECATED]* See: *NDDUtilityHeapMonitoring::disable* (p. 1843).
- static **DDS\_Boolean** **pause\_heap\_monitoring** ()  
*[DEPRECATED]* See: *NDDUtilityHeapMonitoring::pause* (p. 1844).
- static **DDS\_Boolean** **resume\_heap\_monitoring** ()  
*[DEPRECATED]* See: *NDDUtilityHeapMonitoring::resume* (p. 1844)
- static **DDS\_Boolean** **take\_heap\_snapshot** (const char \*filename, **DDS\_Boolean** print\_details)  
*[DEPRECATED]* See: *NDDUtilityHeapMonitoring::take\_heap\_snapshot* (p. 1844).

### 9.353.1 Detailed Description

Other Utilities APIs.

### 9.353.2 Member Function Documentation

#### 9.353.2.1 sleep()

```
static void NDDUtility::sleep (
    const struct DDS_Duration_t & durationIn ) [static]
```

Block the calling thread for the specified duration.

Note that the achievable resolution of sleep is OS-dependent. That is, do not assume that you can sleep for 1 nanosecond just because you can specify a 1-nanosecond sleep duration via the API. The sleep resolution on most operating systems is usually 10 ms or greater.

#### Parameters

<i>duration</i> ↔ <i>In</i>	<< <i>in</i> >> (p. 238) Sleep duration.
--------------------------------	--

#### MT Safety:

safe

#### Examples

**HelloWorld\_publisher.cxx.**

### 9.353.2.2 spin()

```
static void NDDSUtility::spin (
    DDS_UnsignedLongLong spinCount ) [static]
```

Performs the spin operation as many times as indicated.

Spinning is the action of performing useless operations in a for loop in order to actively wait some time without yielding the CPU. Given that the resolution of sleep is in the order of ms, you can use this utility to wait times in the order of microseconds. To properly use this functionality, it is useful to measure previously the number of spin operations needed to wait the equivalent to microsecond (using the utility `get_spin_per_microsecond`) and then compute the corresponding spin count desired.

#### Parameters

<i>spinCount</i>	<< <i>in</i> >> (p. 238) Number of spin operations to perform.
------------------	--

### 9.353.2.3 get\_spin\_per\_microsecond()

```
static DDS_UnsignedLongLong NDDSUtility::get_spin_per_microsecond ( ) [static]
```

Returns the number of spin operations to perform to wait 1 microsecond.

This utility can be used to measure how many spin operations must be performed to wait 1 microsecond. Since the time that it takes the CPU to perform 1 spin operation depends on the CPU frequency, it is recommended to use this utility before using `spin()` (p. 1840).

#### Returns

Number of spin operations to wait 1 microsecond.

#### See also

**NDDSUtility::spin** (p. 1840)

### 9.353.2.4 enable\_heap\_monitoring()

```
static DDS_Boolean NDDSUtility::enable_heap_monitoring ( ) [static]
```

**[DEPRECATED]** See: **NDDSUtilityHeapMonitoring::enable** (p. 1843).

### 9.353.2.5 disable\_heap\_monitoring()

```
static void NDDUtility::disable_heap_monitoring ( ) [static]
```

**[DEPRECATED]** See: `NDDUtilityHeapMonitoring::disable` (p. 1843).

### 9.353.2.6 pause\_heap\_monitoring()

```
static DDS_Boolean NDDUtility::pause_heap_monitoring ( ) [static]
```

**[DEPRECATED]** See: `NDDUtilityHeapMonitoring::pause` (p. 1844).

### 9.353.2.7 resume\_heap\_monitoring()

```
static DDS_Boolean NDDUtility::resume_heap_monitoring ( ) [static]
```

**[DEPRECATED]** See: `NDDUtilityHeapMonitoring::resume` (p. 1844)

### 9.353.2.8 take\_heap\_snapshot()

```
static DDS_Boolean NDDUtility::take_heap_snapshot (
    const char * filename,
    DDS_Boolean print_details ) [static]
```

**[DEPRECATED]** See: `NDDUtilityHeapMonitoring::take_heap_snapshot` (p. 1844).

## 9.354 NDDUtilityHeapMonitoring Class Reference

Heap Monitoring APIs.

### Static Public Member Functions

- static **DDS\_Boolean enable** ()  
*Starts monitoring the heap memory used by RTI Connex.*
- static **DDS\_Boolean enable** (const NDDUtilityHeapMonitoringParams\_t &params)  
*Starts monitoring the heap memory used by RTI Connex.*
- static void **disable** ()  
*Stops monitoring the heap memory used by RTI Connex.*

- static **DDS\_Boolean take\_heap\_snapshot** (const char \*filename, **DDS\_Boolean** print\_details)  
*Saves the current heap memory usage in a file.*

## 9.354.1 Detailed Description

Heap Monitoring APIs.

## 9.354.2 Member Function Documentation

### 9.354.2.1 enable() [1/2]

```
static DDS_Boolean NDDUtilityHeapMonitoring::enable ( ) [static]
```

Starts monitoring the heap memory used by RTI Connex.

This function must be called before any other function in the RTI Connex library is called.

Once heap monitoring is enabled, you can take heap snapshots by using **NDDUtilityHeapMonitoring::take\_heap\_snapshot** (p. 1844).

Use this method only for debugging purposes, since it may introduce a significant performance impact.

#### MT Safety:

UNSAFE. It is not safe to call this method while another thread may be simultaneously calling another heap-related method, including this one.

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDUtilityHeapMonitoring::disable** (p. 1843)

### 9.354.2.2 enable() [2/2]

```
static DDS_Boolean NDDUtilityHeapMonitoring::enable (
    const NDDUtility_HeapMonitoringParams_t & params ) [static]
```

Starts monitoring the heap memory used by RTI Connex.

Performs the same function as **NDDUtilityHeapMonitoring::enable** (p. 1843) except that it also provides the values in *params*. Those values will set the format used in the snapshot **NDDUtilityHeapMonitoring::take\_heap\_snapshot** (p. 1844).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDUtilityHeapMonitoring::disable** (p. 1843)

### 9.354.2.3 disable()

```
static void NDDUtilityHeapMonitoring::disable ( ) [static]
```

Stops monitoring the heap memory used by RTI Connex.

This method must be the last method called from RTI Connex.

See also

**NDDUtilityHeapMonitoring::enable** (p. 1843)

### 9.354.2.4 pause()

```
static DDS_Boolean NDDUtilityHeapMonitoring::pause ( ) [static]
```

Pauses heap monitoring.

New memory allocations will not be monitored and they will not appear in the snapshot generated by **NDDUtilityHeapMonitoring::take\_heap\_snapshot** (p. 1844).

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

See also

**NDDUtilityHeapMonitoring::resume** (p. 1844)

### 9.354.2.5 resume()

```
static DDS_Boolean NDDUtilityHeapMonitoring::resume ( ) [static]
```

Resumes heap monitoring.

Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

See also

**NDDUtilityHeapMonitoring::pause** (p. 1844)

### 9.354.2.6 take\_heap\_snapshot()

```
static DDS_Boolean NDDUtilityHeapMonitoring::take_heap_snapshot (
    const char * filename,
    DDS_Boolean print_details ) [static]
```

Saves the current heap memory usage in a file.

After **NDDUtilityHeapMonitoring::enable** (p. 1843) is called, you may invoke this method periodically to save the current heap memory usage to a file.

By comparing two snapshots, you can tell if new memory has been allocated and in many cases where. This is why this operation can be used to debug unexpected memory growth.

The format of a snapshot is as follows:

First, there is a memory usage summary like this:

```
<P>
    Product Version: NDDSCORE_BUILD_6.0.0.0_20200316T123411Z_RTI_ENG
    Process virtual memory: 2552352768
    Process physical memory: 16187392
    Current application heap usage: 10532131
    Approximate total heap usage: 203331110
    High watermark: 10532131
    Alloc count: 17634
    Free count: 3518
```

- Process virtual memory: The amount of virtual memory in bytes taken by the process. This memory includes RTI Connex and non-RTI Connex memory.
- Process physical memory: The amount of physical memory in bytes taken by the process.
- Current application heap usage: The amount of heap memory in bytes used by the middleware. For Java and .NET APIs, this memory only accounts for unmanaged RTI Connex memory, not memory living in the managed heap. This value does not include overhead memory allocations that are used by the Heap Monitoring utility. It therefore provides the heap usage that is used when Heap Monitoring is disabled and does not reflect the actual amount of memory that has been allocated by the middleware. That value is accounted for in 'Approximate total heap usage'.
- Approximate total heap usage: The amount of heap memory in bytes used by the middleware, including overhead allocations from the Heap Monitoring utility. When the Heap Monitoring utility is enabled, every allocation has an additional overhead number of bytes allocated so that the middleware can keep track of the meta-data that is output in the heap snapshots. This overhead is not accounted for in the 'Current application heap usage' summary field, but is included in this field. For Java and .NET APIs, this memory only accounts for unmanaged RTI Connex memory, not memory living in the managed heap.
- High watermark: The maximum amount of heap usage by RTI Connex since **NDDUtilityHeapMonitoring::enable** (p. 1843) was invoked.
- Alloc count: The number of invocations to malloc, realloc, or calloc operations done by RTI Connex.
- Free count: The number of invocations to the free operation done by RTI Connex.

After the previous summary, and only if you set the parameter `print_details` to `DDS_BOOLEAN_TRUE` (p.317), the method will print the details of every single outstanding heap allocation done by RTI Connex. For example:

```
<P>
    block_id, timestamp, block_size, alloc_method_name, type_name, pool_alloc, pool_buffer_size,
    pool_buffer_count, topic_name, function_name, activity_context

    23087, 1586943520, 16, RTIOsapiHeap_allocateArray, struct RTIEncapsulationInfo, MALLOC, 0,
    0, PRESServiceRequest, PRESWriterHistoryDriver_new,
    "0X101175A,0X76DD63D7,0X984377BC:0X1C1{Name=ShapeTypeParticipant,Domain=110}|CREATE
    Participant|ENABLE|:0X80000088{Entity=Pu,Domain=110}|CREATE Writer WITH TOPIC PRESServiceRequest"
```

- `block_id`: Block ID of the allocation. This number increases with every allocation.
- `timestamp`: Timestamp in UTC seconds corresponding to the time where the allocation was done.
- `block_size`: The number of bytes allocated.
- `alloc_method_name`: The allocation RTI Connex method name.
- `type_name`: The allocation typename.
- `pool_alloc`: Indicates if the heap allocation is a RTI Connex pool allocation (POOL) or a regular allocation (MALLOC).
- `pool_buffer_size`: For pool allocations, this number indicates the size of the elements in the pool in number of bytes. `block_size` is equal to (`pool_buffer_size * pool_buffer_count`).
- `pool_buffer_count`: For pool allocations, this number indicates the number of buffers allocated for the pool. `block_size` is equal to (`pool_buffer_size * pool_buffer_count`).
- `topic_name`: The topic name associated with the allocation or 'n/a' if it is not available.
- `function_name`: function name associated with the allocation or 'n/a' if it is not available.
- `activity_context`: **Activity Context** (p.530)

#### Parameters

<code>filename</code>	<< <i>in</i> >> (p.238). Name of file in which to store the snapshot.
<code>print_details</code>	<< <i>in</i> >> (p.238). Indicates if the snapshot will contain only the memory usage summary or the details of the individual allocations.

#### Returns

`DDS_BOOLEAN_TRUE` (p.317) if success. Otherwise, `DDS_BOOLEAN_FALSE` (p.317)

## 9.355 NDDUtilityNetworkCapture Class Reference

Network Capture APIs.

### 9.355.1 Detailed Description

Network Capture APIs.

### 9.355.2 Member Function Documentation

#### 9.355.2.1 enable()

```
static DDS_Boolean NDDSUtilityNetworkCapture::enable ( ) [static]
```

Enable Network Capture.

This method must be called before any other Network Capture method. It must also be called before creating the participants for which we want to capture traffic.

Use this method only for debugging purposes, since it may introduce a significant performance impact.

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

**MT Safety:**

UNSAFE. It is not safe to call this method while another thread may be simultaneously calling another Network Capture related method, including this one.

**MT Safety:**

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simulatenously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

**See also**

**NDDUtilityNetworkCapture::disable** (p. 1848)

**9.355.2.2 disable()**

```
static DDS_Boolean NDDUtilityNetworkCapture::disable ( ) [static]
```

Disable Network Capture.

This method must be the last Network Capture method to be called. It must also be called after deleting the participants for which we captured traffic. Disabling Network Capture without stopping it first is not ok!

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

**MT Safety:**

UNSAFE. It is not safe to call this method while another thread may be simultaneously calling another Network Capture related method, including this one.

**MT Safety:**

UNSAFE. In VxWorks, it is unsafe to call this method while another thread may be simulatenously calling **DDSDomainParticipantFactory::get\_instance** (p. 1429), **DDSDomainParticipantFactory::finalize\_instance** (p. 1429), **DDS\_TypeCodeFactory::get\_instance** (p. 1212), **NDDUtilityNetworkCapture::enable** (p. 1847), or **NDDUtilityNetworkCapture::disable** (p. 1848).

**See also**

**NDDUtilityNetworkCapture::enable** (p. 1847)

### 9.355.2.3 set\_default\_params()

```
static DDS_Boolean NDDUtilityNetworkCapture::set_default_params (
    const NDD_UTILITY_NetworkCaptureParams_t & params ) [static]
```

Set the default Network Capture parameters.

The default parameters are used when Network Capture is started without parameters, i.e., **NDDUtilityNetworkCapture::start** (p. 1849).

#### Precondition

This method requires first enabling Network Capture. See **NDDUtilityNetworkCapture::enable** (p. 1847).

#### Parameters

<i>params</i>	<< <i>in</i> >> (p. 238). Configuration parameters that we want to set as defaults.
---------------	---

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDUtilityNetworkCapture::start** (p. 1849)

**NDDUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*)** (p. 1850)

### 9.355.2.4 start() [1/4]

```
static DDS_Boolean NDDUtilityNetworkCapture::start (
    const char * filename ) [static]
```

Start capturing traffic for all DomainParticipants, with the default parameters.

#### Precondition

This method requires first enabling Network Capture. See **NDDUtilityNetworkCapture::enable** (p. 1847).

#### Parameters

<i>filename</i>	<< <i>in</i> >> (p. 238). The name of the output capture file will be based on this input parameter.
-----------------	--

In particular, the name for the capture file is the concatenation of the *filename* input parameter, the "\_GUID-"

string followed by the decimal representation of bytes 8-11 of the DomainParticipant's GUID, and the file extension (".pcap").

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::stop** (p. 1852)

**NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*)** (p. 1850)

### 9.355.2.5 start() [2/4]

```
static DDS_Boolean NDDSUtilityNetworkCapture::start (
    DDSDomainParticipant * participant,
    const char * filename ) [static]
```

Start capturing traffic for a DomainParticipant, with the default parameters.

#### Precondition

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238). DomainParticipant for which we want to capture traffic.
<i>filename</i>	<< <i>in</i> >> (p. 238). The name of the output capture file will be based on this input parameter.

In particular, the name for the capture file is the concatenation of the *filename* input parameter, and the file extension (".pcap").

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::stop(DDSDomainParticipant \*)** (p. 1852)

**NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*, const NDDS\_UTILITY\_NETWORK\_CAPTURE\_PARAMS\_t&)** (p. 1851)

**NDDSUtilityNetworkCapture::enable** (p. 1847)

**9.355.2.6 start()** [3/4]

```
static DDS_Boolean NDDSUtilityNetworkCapture::start (
    const char * filename,
    const NDDS_Utility_NetworkCaptureParams_t & params ) [static]
```

Start capturing traffic for all DomainParticipants, with the provided parameters.

**Precondition**

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

Performs the same function as **NDDSUtilityNetworkCapture::start** (p. 1849) except that it uses the provided parameters, instead of the default ones.

**Parameters**

<i>filename</i>	<< <i>in</i> >> (p. 238). The name of the output capture file will be based on this input parameter.
-----------------	--

In particular, the name for the capture file is the concatenation of the *filename* input parameter, the "\_GUID-" string followed by the decimal representation of bytes 8-11 of the DomainParticipant's GUID, and the file extension (".pcap").

**Parameters**

<i>params</i>	<< <i>in</i> >> (p. 238). Configuration parameters for the capture.
---------------	---

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

**See also**

**NDDSUtilityNetworkCapture::stop** (p. 1852)

**NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*, const NDDS\_Utility\_NetworkCaptureParams\_t&)** (p. 1851)

**9.355.2.7 start()** [4/4]

```
static DDS_Boolean NDDSUtilityNetworkCapture::start (
    DDSDomainParticipant * participant,
    const char * filename,
    const NDDS_Utility_NetworkCaptureParams_t & params ) [static]
```

Start capturing traffic for a DomainParticipant, with the provided parameters.

**Precondition**

This method requires enabling first Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

## Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238). DomainParticipant for which we want to capture traffic.
<i>filename</i>	<< <i>in</i> >> (p. 238). The name of the output capture file will be based on this input parameter.

In particular, the name for the capture file is the concatenation of the `filename` input parameter, and the file extension (`".pcap"`).

## Parameters

<i>params</i>	<< <i>in</i> >> (p. 238). Parameters for configuring the capture.
---------------	---

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

## See also

**NDDSUtilityNetworkCapture::stop(DDSDomainParticipant \*)** (p. 1852)

**NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*)** (p. 1850)

**9.355.2.8 stop()** [1/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::stop ( ) [static]
```

Stop capturing traffic for all participants.

## Precondition

This method requires enabling first Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

This method can (and must) be called after **NDDSUtilityNetworkCapture::start** (p. 1849), not **NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*)** (p. 1850). That is, if we start capturing traffic globally (for all DomainParticipants), we must stop capturing traffic also globally. It is not possible to start capturing traffic for a participant but stop it globally.

It is possible to start capturing globally and then stop capturing for a participant, as long as we eventually stop capturing traffic globally.

We must stop capturing for a participant before deleting it.

## Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

## See also

**NDDSUtilityNetworkCapture::start** (p. 1849)

**NDDSUtilityNetworkCapture::stop(DDSDomainParticipant \*)** (p. 1852)

### 9.355.2.9 stop() [2/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::stop (
    DDSDomainParticipant * participant ) [static]
```

Stop capturing traffic for a DomainParticipant.

#### Precondition

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238). DomainParticipant for which we want to stop capturing traffic.
--------------------	--

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::start(DDSDomainParticipant \*, const char \*)** (p. 1850)

**NDDSUtilityNetworkCapture::stop** (p. 1852)

### 9.355.2.10 pause() [1/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::pause ( ) [static]
```

Pause capturing traffic for all DomainParticipants.

#### Precondition

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::resume** (p. 1854)

**NDDSUtilityNetworkCapture::pause(DDSDomainParticipant \*)** (p. 1853)

### 9.355.2.11 pause() [2/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::pause (  
    DDSDomainParticipant * participant ) [static]
```

Pause capturing traffic for a DomainParticipant.

#### Precondition

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

#### Parameters

<i>participant</i>	<< <i>in</i> >> (p. 238). DomainParticipant for which we want to pause capturing traffic.
--------------------	---

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::resume(DDSDomainParticipant \*)** (p. 1854)

**NDDSUtilityNetworkCapture::pause** (p. 1853)

### 9.355.2.12 resume() [1/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::resume ( ) [static]
```

Resume capturing traffic for all DomainParticipants.

#### Precondition

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

#### Returns

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

#### See also

**NDDSUtilityNetworkCapture::pause** (p. 1853)

**NDDSUtilityNetworkCapture::resume(DDSDomainParticipant \*)** (p. 1854)

**9.355.2.13 resume()** [2/2]

```
static DDS_Boolean NDDSUtilityNetworkCapture::resume (
    DDSDomainParticipant * participant ) [static]
```

Resume capturing traffic for a DomainParticipant.

**Precondition**

This method requires first enabling Network Capture. See **NDDSUtilityNetworkCapture::enable** (p. 1847).

**Parameters**

<i>participant</i>	<< <i>in</i> >> (p. 238). DomainParticipant for which we want to resume capturing traffic.
--------------------	--

**Returns**

**DDS\_BOOLEAN\_TRUE** (p. 317) if success. Otherwise, **DDS\_BOOLEAN\_FALSE** (p. 317)

**See also**

**NDDSUtilityNetworkCapture::pause(DDSDomainParticipant \*)** (p. 1853)

**NDDSUtilityNetworkCapture::resume** (p. 1854)

**9.356 connext::NotEnabledException Class Reference**

Operation invoked on a **DDSEntity** (p. 1463) that is not yet enabled.

Inheritance diagram for connext::NotEnabledException:

**9.356.1 Detailed Description**

Operation invoked on a **DDSEntity** (p. 1463) that is not yet enabled.

**See also**

## 9.357 rti::flat::OffsetBase Class Reference

Base class of all Offset types.

```
#include <Offset.hpp>
```

Inheritance diagram for rti::flat::OffsetBase:

### Public Member Functions

- bool **is\_null** () const  
*Indicates whether this Offset doesn't point to a valid element.*
- bool **is\_cpp\_compatible** () const  
*Indicates whether **rti::flat::plain\_cast()** (p. 566) is possible.*
- const unsigned char \* **get\_buffer** () const  
*Gets this member's position in the buffer.*
- offset\_t **get\_buffer\_size** () const  
*Gets the size, in bytes, of this member in the buffer.*

### Friends

- bool **operator**< (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Compares two Offsets.*
- bool **operator**> (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Compares two Offsets.*

- bool **operator<=** (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Compares two Offsets.*
- bool **operator>=** (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Compares two Offsets.*
- bool **operator==** (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Determines if two offsets point to the same position.*
- bool **operator!=** (const **OffsetBase** &s1, const **OffsetBase** &s2)  
*Determines if two offsets point to different positions.*

### 9.357.1 Detailed Description

Base class of all Offset types.

See also

**FlatData Offsets** (p. 564)

### 9.357.2 Member Function Documentation

#### 9.357.2.1 is\_null()

```
bool rti::flat::OffsetBase::is_null ( ) const [inline]
```

Indicates whether this Offset doesn't point to a valid element.

See also

**Offset Error Management** (p. 566)

Referenced by **get\_buffer()**.

#### 9.357.2.2 is\_cpp\_compatible()

```
bool rti::flat::OffsetBase::is_cpp_compatible ( ) const [inline]
```

Indicates whether **rti::flat::plain\_cast()** (p. 566) is possible.

Returns

True only if the data pointed to by this Offset can be **rti::flat::plain\_cast()** (p. 566)

See also

**rti::flat::plain\_cast()** (p. 566) for the requirements that a type needs to meet

### 9.357.2.3 get\_buffer()

```
const unsigned char * rti::flat::OffsetBase::get_buffer ( ) const [inline]
```

Gets this member's position in the buffer.

#### Note

This function should be used for debugging purposes only. To access the data in this Offset use the Offset accessor methods or, if this type allows it, `rti::flat::plain_cast()` (p. 566).

Returns the position within the **Sample** (p. 1916)'s buffer that this Offset points to.

#### See also

`get_buffer_size()` (p. 1858)

References `is_null()`.

Referenced by `rti::flat::StringOffset::get_string()`.

### 9.357.2.4 get\_buffer\_size()

```
offset_t rti::flat::OffsetBase::get_buffer_size ( ) const [inline]
```

Gets the size, in bytes, of this member in the buffer.

Returns the number of bytes that this member comprises after the position returned by `get_buffer()`.

Referenced by `rti::flat::AbstractAlignedList< ElementOffset >::begin()`, and `rti::flat::AbstractAlignedList< ElementOffset >::end()`.

## 9.357.3 Friends And Related Function Documentation

### 9.357.3.1 operator<

```
bool operator< (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Compares two Offsets.

#### Returns

True if `s1` points to a position smaller than `s2`'s.

### 9.357.3.2 operator>

```
bool operator> (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Compares two Offsets.

#### Returns

True if s1 points to a position greater than s2's.

### 9.357.3.3 operator<=

```
bool operator<= (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Compares two Offsets.

#### Returns

True if s1 points to a position equal to or smaller than s2's.

### 9.357.3.4 operator>=

```
bool operator>= (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Compares two Offsets.

#### Returns

True if s1 points to a position equal to or greater than s2's.

### 9.357.3.5 operator==

```
bool operator== (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Determines if two offsets point to the same position.

#### Returns

True if s1 points to the same position as s2.

### 9.357.3.6 operator!=

```
bool operator!= (
    const OffsetBase & s1,
    const OffsetBase & s2 ) [friend]
```

Determines if two offsets point to different positions.

#### Returns

True if s1 points to a different position than s2.

## 9.358 connext::OutOfResourcesException Class Reference

RTI Connex ran out of the resources needed to complete the operation.

Inheritance diagram for connext::OutOfResourcesException:

### 9.358.1 Detailed Description

RTI Connex ran out of the resources needed to complete the operation.

See also

**DDS\_RETCODE\_OUT\_OF\_RESOURCES** (p. 337)

## 9.359 connext::PreconditionNotMetException Class Reference

A pre-condition for the operation was not met.

Inheritance diagram for connext::PreconditionNotMetException:

### 9.359.1 Detailed Description

A pre-condition for the operation was not met.

See also

**DDS\_RETCODE\_PRECONDITION\_NOT\_MET** (p. 336)

## 9.360 rti::flat::PrimitiveArrayOffset< T, N > Class Template Reference

Offset to an array of primitive elements.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::PrimitiveArrayOffset< T, N >:

### Public Member Functions

- unsigned int **element\_count** () const

*Returns the number of elements, N.*

### 9.360.1 Detailed Description

```
template<typename T, unsigned int N>
class rti::flat::PrimitiveArrayOffset< T, N >
```

Offset to an array of primitive elements.

### Template Parameters

<i>T</i>	The primitive type
<i>N</i>	The array bound. For multidimensional arrays, <i>N</i> is the product of each dimension bound.

A **PrimitiveArrayOffset** (p. 1861) may meet the requirements to be cast to an array of the equivalent plain C++ element type (see `rti::flat::plain_cast()` (p. 566)).

## 9.360.2 Member Function Documentation

### 9.360.2.1 `element_count()`

```
template<typename T , unsigned int N>
unsigned int rti::flat::PrimitiveArrayOffset< T, N >::element_count ( ) const [inline]
```

Returns the number of elements, *N*.

## 9.361 `rti::flat::PrimitiveConstOffset< T >` Struct Template Reference

A const Offset to an optional primitive member.

```
#include <Offset.hpp>
```

Inheritance diagram for `rti::flat::PrimitiveConstOffset< T >`:

### Public Member Functions

- `T get () const`  
*Gets the value of this primitive member.*

### 9.361.1 Detailed Description

```
template<typename T>
struct rti::flat::PrimitiveConstOffset< T >
```

A const Offset to an optional primitive member.

Read-only version of **PrimitiveOffset** (p. 1863).

If `lis_null()`, the value can be retrieved with `get()` (p. 1863).

### 9.361.2 Member Function Documentation

#### 9.361.2.1 get()

```
template<typename T >
T rti::flat::PrimitiveConstOffset< T >::get ( ) const [inline]
```

Gets the value of this primitive member.

**Precondition**

`!lis_null()`

## 9.362 rti::flat::PrimitiveOffset< T > Struct Template Reference

An Offset to an optional primitive member.

```
#include <Offset.hpp>
```

Inheritance diagram for `rti::flat::PrimitiveOffset< T >`:

### Public Member Functions

- `bool set (T value)`

*Sets a value for this primitive member.*

### 9.362.1 Detailed Description

```
template<typename T>
struct rti::flat::PrimitiveOffset< T >
```

An Offset to an optional primitive member.

### Template Parameters

<i>T</i>	The primitive type
----------	--------------------

Non-optional primitive members are accessed directly using its container type's methods; however, since an optional member may not exist, this Offset is returned instead. The only purpose of the type **PrimitiveOffset** (p. 1863) is to provide a way to check for the member's existence.

If `!is_null()`, the value can be retrieved with `get()` (p. 1863) or set with `set()` (p. 1864).

See also

**MyFlatMutableOffset::my\_optional\_primitive** (p. 1759) vs. **MyFlatMutableOffset::my\_primitive** (p. 1759)

## 9.362.2 Member Function Documentation

### 9.362.2.1 set()

```
template<typename T >
bool rti::flat::PrimitiveOffset< T >::set (
    T value ) [inline]
```

Sets a value for this primitive member.

Precondition

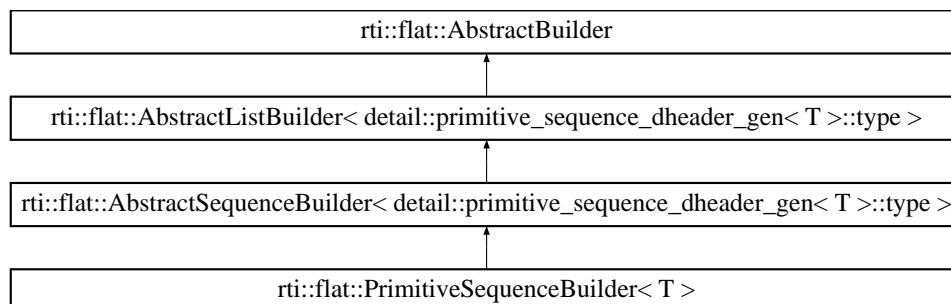

`!is_null()`

## 9.363 rti::flat::PrimitiveSequenceBuilder< T > Class Template Reference

Builds a sequence of primitive members.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for `rti::flat::PrimitiveSequenceBuilder< T >`:

## Public Member Functions

- **PrimitiveSequenceBuilder** & **add\_next** (T value)  
*Adds the next element.*
- **PrimitiveSequenceBuilder** & **add\_n** (const T \*array, unsigned int count)  
*Adds all the elements in an array.*
- **PrimitiveSequenceBuilder** & **add\_n** (unsigned int count, T value)  
*Adds a number of elements with the same value.*
- **PrimitiveSequenceBuilder** & **add\_n** (unsigned int count)  
*Adds a number of uninitialized elements.*
- **Offset finish** ()  
*Finishes building the sequence.*

## Additional Inherited Members

### 9.363.1 Detailed Description

```
template<typename T>
class rti::flat::PrimitiveSequenceBuilder< T >
```

Builds a sequence of primitive members.

The elements can be added one by one with `add_next()` or all at once with `add_n()` (p. 1865).

### 9.363.2 Member Function Documentation

#### 9.363.2.1 add\_next()

```
template<typename T >
PrimitiveSequenceBuilder & rti::flat::PrimitiveSequenceBuilder< T >::add_next (
    T value ) [inline]
```

Adds the next element.

#### Parameters

<i>value</i>	The primitive element to add
--------------	------------------------------

**9.363.2.2 add\_n()** [1/3]

```
template<typename T >
PrimitiveSequenceBuilder & rti::flat::PrimitiveSequenceBuilder< T >::add_n (
    const T * array,
    unsigned int count ) [inline]
```

Adds all the elements in an array.

**Parameters**

<i>array</i>	The array containing the values to add
<i>count</i>	The size of the array

**9.363.2.3 add\_n()** [2/3]

```
template<typename T >
PrimitiveSequenceBuilder & rti::flat::PrimitiveSequenceBuilder< T >::add_n (
    unsigned int count,
    T value ) [inline]
```

Adds a number of elements with the same value.

This overload initializes all the elements to a value.

**Note**

This operation is  $O(\text{count})$ . The other overloads, **add\_n(unsigned int)** (p. 1866) and **add\_n(const T\*, unsigned int)** (p. 1865), are more efficient

**Parameters**

<i>count</i>	The number of elements to add
<i>value</i>	The value to set for each element

**9.363.2.4 add\_n()** [3/3]

```
template<typename T >
PrimitiveSequenceBuilder & rti::flat::PrimitiveSequenceBuilder< T >::add_n (
    unsigned int count ) [inline]
```

Adds a number of uninitialized elements.

This operation is  $O(1)$ , since it leaves the elements uninitialized. They can be initialized using the Offset returned by **finish()** (p. 1867) and **rti::flat::plain\_cast()** (p. 566). For example:

```
MyFlatMutableBuilder builder = ...;
auto seq_builder = builder.build_my_primitive_seq();
seq_builder.add_n(1000);
auto seq_offset = seq_builder.finish();
int32_t *elements = rti::flat::plain_cast(seq_offset);
for (int i = 0; i < 1000; i++) {
    elements[i] = ...;
}
```

#### Parameters

<i>count</i>	The number of elements to add
--------------	-------------------------------

#### 9.363.2.5 finish()

```
template<typename T >
Offset rti::flat::PrimitiveSequenceBuilder< T >::finish ( ) [inline]
```

Finishes building the sequence.

#### Returns

An Offset to the member that has been built.

#### See also

**discard()** (p. 580)

## 9.364 rti::flat::PrimitiveSequenceOffset< T > Class Template Reference

Offset to a sequence of primitive elements.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::PrimitiveSequenceOffset< T >:

## Public Member Functions

- unsigned int **element\_count** () const  
*Returns the number of elements.*

### 9.364.1 Detailed Description

```
template<typename T>
class rti::flat::PrimitiveSequenceOffset< T >
```

Offset to a sequence of primitive elements.

#### Template Parameters

<i>T</i>	The primitive type
----------	--------------------

### 9.364.2 Member Function Documentation

#### 9.364.2.1 element\_count()

```
template<typename T >
unsigned int rti::flat::PrimitiveSequenceOffset< T >::element_count ( ) const [inline]
```

Returns the number of elements.

Referenced by `rti::flat::StringOffset::element_count()`.

## 9.365 connext::Replier< TReq, TRep > Class Template Reference

Allows receiving requests and sending replies.

### Public Types

- typedef TReq **Request**  
*The request type.*
- typedef TRep **Reply**  
*The reply type.*
- typedef dds\_type\_traits< TRep >::DataWriter **ReplyDataWriter**  
*The typed DataWriter for type TRep.*
- typedef dds\_type\_traits< TReq >::DataReader **RequestDataReader**  
*The typed DataReader for type TReq.*

## Public Member Functions

- **Replier** ( **DDSDomainParticipant** \*participant, const std::string &service\_name)
 

*Creates a **Replier** (p. 1868) with the minimum set of parameters.*
- **Replier** (const **ReplierParams**< TReq, TRep > &params)
 

*Creates a **Replier** (p. 1868) with parameters.*
- virtual ~**Replier** ()
 

*Releases the internal entities created by this **Replier** (p. 1868).*
- template<typename URep >
 void **send\_reply** (const URep &reply, const **SampleIdentity\_t** &related\_request\_id)
 

*Sends a reply for a previous request.*

*Waits for multiple requests and provides a loaned container to access them.*
- bool **wait\_for\_requests** (const **DDS\_Duration\_t** &max\_wait)
 

*Waits for requests.*
- bool **wait\_for\_requests** (int min\_count, const **DDS\_Duration\_t** &max\_wait)
 

*Waits for requests.*
- bool **take\_request** ( **connex::Sample**< TReq > &request)
 

*Copies the contents of a request into a **Sample** (p. 1912).*
- bool **take\_request** ( **connex::SampleRef**< TReq > request)
 

*Copies the contents of a request into a **SampleRef** (p. 1920).*
- **LoanedSamplesType** **take\_requests** (int max\_samples= **DDS\_LENGTH\_UNLIMITED**)
 

*Provides a loaned container to access the existing requests.*
- bool **read\_request** ( **connex::Sample**< TReq > &request)
 

*Copies the contents of a request into a **Sample** (p. 1912).*
- bool **read\_request** ( **connex::SampleRef**< TReq > request)
 

*Copies the contents of a request into a **SampleRef** (p. 1920).*
- **LoanedSamplesType** **read\_requests** (int max\_samples= **DDS\_LENGTH\_UNLIMITED**)
 

*Provides a loaned container to access the existing requests.*
- **RequestDataReader** \* **get\_request\_datareader** () const
 

*Retrieves the underlying **DDSDataReader** (p. 1288).*
- **ReplyDataWriter** \* **get\_reply\_datawriter** () const
 

*Retrieves the underlying **DDSDataWriter** (p. 1321).*

### 9.365.1 Detailed Description

```
template<typename TReq, typename TRep>
class connex::Replier< TReq, TRep >
```

Allows receiving requests and sending replies.

A **Replier** (p. 1868) is an entity with two associated **topics** (p.61): a request topic and a reply topic. It can receive requests by subscribing to the request topic and can send replies to those requests by publishing the reply topic.

Valid types for these topics (`TReq` and `TRep`) are: those generated by `rtiddsgen`, the **DDS built-in types** (p.92), and **DDS\_DynamicData** (p.775). See **Creating a Replier** (p.232).

A **Replier** (p. 1868) has four main types of operations:

- Waiting for requests to be received from the middleware
- Getting those requests
- Receiving requests (a convenience operation that is a combination of waiting and getting in a single operation)
- Sending a reply for a previously received request (i.e., publishing a reply sample on the reply topic with special meta-data so that the original **Requester** (p. 1886) can identify it)

For multi-reply scenarios in which a **connex::Replier** (p.1868) generates more than one reply for a request, the **connex::Replier** (p. 1868) should mark all the intermediate replies (all but the last) using the **DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p.475) flag in **DDS\_WriteParams\_t::flag** (p.1254).

Much like a **Requester** (p. 1886), a **Replier** (p. 1868) has an associated **DDSDomainParticipant** (p.1351), which can be shared with other Repliers or RTI Connex routines. All the other entities required for the request-reply interaction, including a **DDSDataWriter** (p.1321) for writing replies and a **DDSDataReader** (p.1288) for reading requests, are automatically created when the **Replier** (p. 1868) is constructed.

Quality of Service for the underlying DataWriter and DataReader can be configured (see **connex::RequesterParams::qos\_profile** (p.1909)). By default, they are created with **DDS\_RELIABLE\_RELIABILITY\_QOS** (p.435). The exact default configuration is described here: **Configuring Request-Reply QoS profiles** (p.234)

There are several ways to use a **Replier** (p. 1868):

- A thread **receives** (p. 1876) requests and then dispatches them. If the computation of a reply is a simple operation, consider using a **connex::SimpleReplier** (p.1935) instead of a **Replier** (p.1868).
- Polling without waiting, using **take\_requests(int)** (p.1878) directly.
- Using a **connex::ReplierListener** (p.1880) to get notified and **get** (p.1878) the requests within the callback.

#### Template Parameters

<i>TReq</i>	The data type for the request topic
<i>TRep</i>	The data type for the reply topic

See also

**connext::Requester** (p. 1886)

**Request-Reply Examples** (p. 226)

**Basic Replier example** (p. 232)

## 9.365.2 Member Typedef Documentation

### 9.365.2.1 Request

```
template<typename TReq , typename TRep >
typedef TReq  connext::Replier< TReq, TRep >::Request
```

The request type.

### 9.365.2.2 Reply

```
template<typename TReq , typename TRep >
typedef TRep  connext::Replier< TReq, TRep >::Reply
```

The reply type.

### 9.365.2.3 ReplyDataWriter

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TRep>::DataWriter  connext::Replier< TReq, TRep >::ReplyDataWriter
```

The typed DataWriter for type TRep.

### 9.365.2.4 RequestDataReader

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TReq>::DataReader  connext::Replier< TReq, TRep >::RequestDataReader
```

The typed DataReader for type TReq.

### 9.365.3 Constructor & Destructor Documentation

#### 9.365.3.1 Replier() [1/2]

```
template<typename TReq , typename TRep >  
connext::Replier< TReq, TRep >::Replier (   
    DDSDomainParticipant * participant,  
    const std::string & service_name )
```

Creates a **Replier** (p. 1868) with the minimum set of parameters.

## Parameters

<i>participant</i>	The DomainParticipant that this <b>Replier</b> (p. 1868) uses to join a domain.
<i>service_name</i>	The service name. See <b>connext::ReplierParams::service_name</b> (p. 1883)

## Exceptions

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37)
------------	---

## 9.365.3.2 Replier() [2/2]

```
template<typename TReq , typename TRep >
connext::Replier< TReq, TRep >::Replier (
    const ReplierParams< TReq, TRep > & params ) [explicit]
```

Creates a **Replier** (p. 1868) with parameters.

## Parameters

<i>params</i>	All the parameters that configure this <b>Replier</b> (p. 1868)
---------------	---

## Exceptions

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37)
------------	---

## See also

**connext::ReplierParams** (p. 1881)

**Creating a Replier** (p. 232)

## 9.365.3.3 ~Replier()

```
template<typename TReq , typename TRep >
connext::Replier< TReq, TRep >::~~Replier [virtual]
```

Releases the internal entities created by this **Replier** (p. 1868).

Among other internal resources, it deletes the **Replier** (p. 1868)'s underlying DataReader and DataWriter.

## See also

**DDSSubscriber::delete\_datareader** (p. 1602)

**DDSPublisher::delete\_datawriter** (p. 1561)

## 9.365.4 Member Function Documentation

### 9.365.4.1 send\_reply() [1/3]

```
template<typename TReq , typename TRep >
template<typename URep >
void connext::Replier< TReq, TRep >::send_reply (
    const URep & reply,
    const SampleIdentity_t & related_request_id )
```

Sends a reply for a previous request.

The related request identity can be retrieved from an existing request sample (**connext::Sample** (p. 1912)).

#### Parameters

<i>reply</i>	The reply to be sent.
<i>related_request_id</i>	The identity of a previously received request

#### Exceptions

<i>One</i>	of the <b>RTI Connext Exceptions</b> (p. 37)
------------	--

#### See also

**connext::Sample::identity()** (p. 1914)  
**receive\_request(Sample<TReq>&, const Duration\_t&)** (p. 1875)  
**receive\_requests(int, int, const Duration\_t&)** (p. 1876)  
**take\_request(Sample<TReq>&)** (p. 1878)  
**take\_requests(int)** (p. 1878)  
**Basic Replier example** (p. 232)

### 9.365.4.2 send\_reply() [2/3]

```
template<typename TReq , typename TRep >
template<typename URep >
void connext::Replier< TReq, TRep >::send_reply (
    WriteSample< URep > & reply,
    const SampleIdentity_t & related_request_id )
```

Sends a reply for a previous request.

Allows you to set custom parameters for writing a reply.

Contrary to the **connext::Requester** (p. 1886), where retrieving the sample identity for correlation is common, on the **Replier** (p. 1868) side using a **WriteSample** (p. 1948) is only necessary when the default write parameters need to be overridden, and **send\_reply(const URep&, const SampleIdentity\_t&)** (p. 1874) may be used if that is not necessary.

One reason to override the default write parameters is a multi-reply scenario in which a **connext::Replier** (p. 1868) generates more than one reply for a request. In this case, all the intermediate replies (all but the last) should be marked with the **DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p. 475) flag in **DDS\_WriteParams\_t::flag** (p. 1254) within **connext::WriteSample::info()** (p. 1951).

A **connext::Requester** (p. 1886) can detect if a reply is the last reply of a sequence of replies by checking that the flag **DDS\_INTERMEDIATE\_REPLY\_SEQUENCE\_SAMPLE** (p. 475) is not set in **DDS\_SampleInfo::flag** (p. 1091) within **connext::Sample::info()** (p. 1915).

See also

**send\_reply(const URep&, const SampleIdentity\_t&)** (p. 1874)

**connext::WriteSample** (p. 1948)

### 9.365.4.3 send\_reply() [3/3]

```
template<typename TReq , typename TRep >
template<typename URep >
void connext::Replier< TReq, TRep >::send_reply (
    WriteSampleRef< URep > & reply,
    const SampleIdentity_t & related_request_id )
```

Sends a reply for a previous request using a **SampleRef** (p. 1920).

See also

**connext::WriteSampleRef** (p. 1952)

**connext::Requester::send\_request(WriteSampleRef<UReq>&)** (p. 1893)

**connext::Replier::send\_reply(WriteSample<URep>&, const SampleIdentity\_t&)** (p. 1874)

**Basic Requester example using SampleRef** (p. 231)

**9.365.4.4 receive\_request()** [1/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::receive_request (
    connex::Sample< TReq > & request,
    const DDS_Duration_t & max_wait )
```

Waits for a request and copies its contents into a **Sample** (p. 1912).

Equivalent to using **wait\_for\_requests(int, const Duration\_t&)** (p.1877) and **take\_request(Sample<TReq>&)** (p. 1878)

See also

**connex::Sample** (p. 1912)

**wait\_for\_requests(int, const Duration\_t&)** (p.1877)

**take\_request(Sample<TReq>&)** (p. 1878)

**Basic Replier example** (p. 232)

**9.365.4.5 receive\_request()** [2/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::receive_request (
    connex::SampleRef< TReq > request,
    const DDS_Duration_t & max_wait )
```

Waits for a request and copies its contents into a **SampleRef** (p. 1920).

See also

**connex::Requester::receive\_reply(SampleRef<TRep>, const Duration\_t&)** (p. 1894)

**9.365.4.6 receive\_requests()** [1/2]

```
template<typename TReq , typename TRep >
Replier< TReq, TRep >::LoanedSamplesType connex::Replier< TReq, TRep >::receive_requests (
    const DDS_Duration_t & max_wait )
```

Waits for multiple requests and provides a loaned container to access them.

Equivalent to using **receive\_requests(int, int, const Duration\_t&)** (p. 1876) with `min_count=1` and `max_count=DDS_LENGTH_UNLIMITED` (p. 438)

See also

**connex::LoanedSamples** (p. 1727)

**receive\_requests(int, int, const Duration\_t&)** (p. 1876)

**9.365.4.7 receive\_requests()** [2/2]

```
template<typename TReq , typename TRep >
Replier< TReq, TRep >::LoanedSamplesType connex::Replier< TReq, TRep >::receive_requests (
    int min_request_count,
    int max_request_count,
    const DDS_Duration_t & max_wait )
```

Waits for multiple requests and provides a loaned container to access them.

Equivalent to using **wait\_for\_requests(int, const Duration\_t&)** (p. 1877) and **take\_requests(int)** (p. 1878)

See also

**connex::LoanedSamples** (p. 1727)

**wait\_for\_requests(int, const Duration\_t&)** (p. 1877)

**take\_requests(int)** (p. 1878)

**9.365.4.8 wait\_for\_requests()** [1/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::wait_for_requests (
    const DDS_Duration_t & max_wait )
```

Waits for requests.

Equivalent to **wait\_for\_requests(int, const Duration\_t&)** (p. 1877) with *min\_count*=1

See also

**wait\_for\_requests(int, const Duration\_t&)** (p. 1877)

**9.365.4.9 wait\_for\_requests()** [2/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::wait_for_requests (
    int min_count,
    const DDS_Duration_t & max_wait )
```

Waits for requests.

This operation waits for *min\_count* requests to be available. It will wait up to *max\_wait* .

This operation is similar to **connex::Requester::wait\_for\_replies(int, const Duration\_t&)** (p. 1896).

## Parameters

<i>min_count</i>	Minimum number of requests that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum waiting time after which this operation unblocks regardless of how many requests are available.

## Returns

true if at least `min_count` requests were available before `max_wait` elapsed, or false otherwise.

## See also

**take\_requests(int)** (p. 1878)

**connex::Requester::wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**9.365.4.10 take\_request()** [1/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::take_request (
    connex::Sample< TReq > & request )
```

Copies the contents of a request into a **Sample** (p. 1912).

## See also

**connex::Requester::take\_reply(Sample<TRep>&)** (p. 1898)

**9.365.4.11 take\_request()** [2/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::take_request (
    connex::SampleRef< TReq > request )
```

Copies the contents of a request into a **SampleRef** (p. 1920).

## See also

**connex::Requester::take\_reply(SampleRef<TRep>)** (p. 1898)

**9.365.4.12 take\_requests()**

```
template<typename TReq , typename TRep >
Replier< TReq, TRep >::LoanedSamplesType connex::Replier< TReq, TRep >::take_requests (
    int max_samples = DDS_LENGTH_UNLIMITED )
```

Provides a loaned container to access the existing requests.

See also

**connex::Requester::take\_replies(int)** (p. 1899)

**9.365.4.13 read\_request()** [1/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::read_request (
    connex::Sample< TReq > & request )
```

Copies the contents of a request into a **Sample** (p. 1912).

This operation is equivalent to **connex::Replier::take\_request(Sample<TReq>&)** (p. 1878) except the request remains in the **Replier** (p. 1868) and can be read or taken again.

**9.365.4.14 read\_request()** [2/2]

```
template<typename TReq , typename TRep >
bool connex::Replier< TReq, TRep >::read_request (
    connex::SampleRef< TReq > request )
```

Copies the contents of a request into a **SampleRef** (p. 1920).

See also

**connex::Requester::read\_reply(SampleRef<TRep>)** (p. 1904)

**9.365.4.15 read\_requests()**

```
template<typename TReq , typename TRep >
Replier< TReq, TRep >::LoanedSamplesType connex::Replier< TReq, TRep >::read_requests (
    int max_samples = DDS_LENGTH_UNLIMITED )
```

Provides a loaned container to access the existing requests.

This operation is equivalent to **connex::Replier::take\_requests(int)** (p. 1878) except the requests remain in the **Replier** (p. 1868) and can be read or taken again.

### 9.365.4.16 `get_request_datareader()`

```
template<typename TReq , typename TRep >
Replier< TReq, TRep > ::RequestDataReader * connext::Replier< TReq, TRep >::get_request_↔
datareader [inline]
```

Retrieves the underlying **DDSDataReader** (p. 1288).

See also

**connext::Requester::get\_reply\_datareader()** (p. 1906)

### 9.365.4.17 `get_reply_datawriter()`

```
template<typename TReq , typename TRep >
Replier< TReq, TRep > ::ReplyDataWriter * connext::Replier< TReq, TRep >::get_reply_datawriter
[inline]
```

Retrieves the underlying **DDSDataWriter** (p. 1321).

See also

**connext::Requester::get\_request\_datawriter()** (p. 1906)

## 9.366 **connext::ReplierListener**< TReq, TRep > Class Template Reference

Called when a **connext::Replier** (p. 1868) has new available requests.

### Public Member Functions

- virtual void **on\_request\_available** ( **Replier**< TReq, TRep > &replier)=0  
*User callback.*

### 9.366.1 Detailed Description

```
template<class TReq, class TRep>
class connext::ReplierListener< TReq, TRep >
```

Called when a **connext::Replier** (p. 1868) has new available requests.

A replier listener is a way to implement a callback that will be invoked when requests are available. It is an optional **connext::ReplierParams** (p. 1881).

This listener simply notifies when requests are available. The callback implementation can then use **connext::Replier**↔  
**::take\_requests(int)** (p. 1878) to retrieve them.

A simpler callback mechanism, where one request sample is a parameter and the reply is the callback return value, is implemented by the **connext::SimpleReplier** (p. 1935).

See also

**connext::Replier::Replier(const ReplierParams&)** (p. 1873)

## 9.366.2 Member Function Documentation

### 9.366.2.1 on\_request\_available()

```
template<class TReq , class TRep >
virtual void connext::ReplierListener< TReq, TRep >::on_request_available (
    Replier< TReq, TRep > & replier ) [pure virtual]
```

User callback.

See also

[DDSDataReaderListener::on\\_data\\_available](#) (p. 1317)

## 9.367 connext::ReplierParams< TReq, TRep > Class Template Reference

Contains the parameters for creating a [connext::Replier](#) (p. 1868).

Inherits [connext::details::EntityParams](#).

### Public Member Functions

- **ReplierParams** ( [DDS::DomainParticipant](#) \*participant)
  - Creates a **ReplierParams** (p. 1881) with the parameters that a **Replier** (p. 1868) always needs.*
- **ReplierParams** & **replier\_listener** ( [ReplierListener](#)< TReq, TRep > &listener)
  - Sets a listener that is called when requests are available.*
- **ReplierParams** & **service\_name** (const std::string &service\_name)
  - The service name the **Replier** (p. 1868) offers and Requesters use to match.*
- **ReplierParams** & **request\_topic\_name** (const std::string &req\_topic)
  - Sets a specific request topic name.*
- **ReplierParams** & **reply\_topic\_name** (const std::string &rep\_topic)
  - Sets a specific reply topic name.*
- **ReplierParams** & **qos\_profile** (const std::string &qos\_library\_name, const std::string &qos\_profile\_name)
  - Sets a QoS profile for the entities in this replier.*
- **ReplierParams** & **datawriter\_qos** (const [DDS\\_DataWriterQos](#) &qos)
  - Sets the quality of service of the reply DataWriter.*
- **ReplierParams** & **datareader\_qos** (const [DDS\\_DataReaderQos](#) &qos)
  - Sets the quality of service of the request DataReader.*
- **ReplierParams** & **publisher** ( [DDS::Publisher](#) \*publisher)
  - Sets a specific Publisher.*
- **ReplierParams** & **subscriber** ( [DDS::Subscriber](#) \*subscriber)
  - Sets a specific Subscriber.*
- **ReplierParams** & **request\_type\_support** ( [DDS::TypeSupport](#) \*type\_support)
  - Sets the type support for the request type.*
- **ReplierParams** & **reply\_type\_support** ( [DDS::TypeSupport](#) \*type\_support)
  - Sets the type support for the reply type.*

### 9.367.1 Detailed Description

```
template<typename TReq, typename TRep>
class connex::ReplierParams< TReq, TRep >
```

Contains the parameters for creating a **connex::Replier** (p. 1868).

See also

**connex::RequesterParams** (p. 1907)

### 9.367.2 Constructor & Destructor Documentation

#### 9.367.2.1 ReplierParams()

```
template<typename TReq , typename TRep >
connex::ReplierParams< TReq, TRep >::ReplierParams (
    DDS::DomainParticipant * participant ) [inline], [explicit]
```

Creates a **ReplierParams** (p. 1881) with the parameters that a **Replier** (p. 1868) always needs.

In addition to the *participant* , a **Replier** (p. 1868) needs either:

- A service name (**service\_name** (p. 1883)), or
- Custom topic names (**reply\_topic\_name** (p. 1883) and **request\_topic\_name** (p. 1883)).

When **DDS\_DynamicData** (p.775) is used, **connex::ReplierParams::request\_type\_support** (p. 1885) and/or **connex::ReplierParams::reply\_type\_support** (p. 1885) are required as well.

The other parameters are optional.

Parameters

<i>participant</i>	The DomainParticipant that this replier uses to join a domain.
--------------------	--

### 9.367.3 Member Function Documentation

### 9.367.3.1 replier\_listener()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::replier_listener (
    ReplierListener< TReq, TRep > & listener ) [inline]
```

Sets a listener that is called when requests are available.

See also

**connext::ReplierListener** (p. 1880)

### 9.367.3.2 service\_name()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::service_name (
    const std::string & service_name ) [inline]
```

The service name the **Replier** (p. 1868) offers and Requesters use to match.

See also

**connext::RequesterParams::service\_name** (p. 1909)

### 9.367.3.3 request\_topic\_name()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::request_topic_name (
    const std::string & req_topic ) [inline]
```

Sets a specific request topic name.

The specified topic name will be used, instead of allowing a topic name to be generated based on the **service\_name** (p. 1883). If that topic already exists, it will be reused. This is useful to have the **Replier** (p. 1868) use a **DDSContentFilteredTopic** (p. 1283) to receive only certain requests.

### 9.367.3.4 reply\_topic\_name()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::reply_topic_name (
    const std::string & rep_topic ) [inline]
```

Sets a specific reply topic name.

The specified topic name will be used, instead of allowing a topic name to be generated based on c the **service\_name** (p. 1883). If that topic already exists, it will be reused.

### 9.367.3.5 qos\_profile()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::qos_profile (
    const std::string & qos_library_name,
    const std::string & qos_profile_name ) [inline]
```

Sets a QoS profile for the entities in this replier.

Specifies the XML QoS profile that will be used to configure the quality of service for the **Replier** (p. 1868)'s underlying reply DataWriter and request DataReader.

#### Parameters

<i>qos_library_name</i>	The name of the QoS library
<i>qos_profile_name</i>	The name of the QoS profile inside the QoS library

#### See also

**connext::RequesterParams::qos\_profile** (p. 1909)

**Configuring Request-Reply QoS profiles** (p. 234)

**Configuring QoS Profiles with XML** (p. 197)

### 9.367.3.6 datawriter\_qos()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::datawriter_qos (
    const DDS_DataWriterQos & qos ) [inline]
```

Sets the quality of service of the reply DataWriter.

#### See also

**qos\_profile** (p. 1883)

### 9.367.3.7 datareader\_qos()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::datareader_qos (
    const DDS_DataReaderQos & qos ) [inline]
```

Sets the quality of service of the request DataReader.

#### See also

**qos\_profile** (p. 1883)

### 9.367.3.8 publisher()

```
template<typename TReq , typename TRep >  
ReplierParams & connext::ReplierParams< TReq, TRep >::publisher (   
    DDS::Publisher * publisher ) [inline]
```

Sets a specific Publisher.

See also

**connext::RequesterParams::publisher** (p. 1910)

### 9.367.3.9 subscriber()

```
template<typename TReq , typename TRep >  
ReplierParams & connext::ReplierParams< TReq, TRep >::subscriber (   
    DDS::Subscriber * subscriber ) [inline]
```

Sets a specific Subscriber.

See also

**connext::RequesterParams::subscriber** (p. 1911)

### 9.367.3.10 request\_type\_support()

```
template<typename TReq , typename TRep >  
ReplierParams & connext::ReplierParams< TReq, TRep >::request_type_support (   
    DDS::TypeSupport * type_support ) [inline]
```

Sets the type support for the request type.

This parameter is required when TReq is **DDS\_DynamicData** (p. 775).

In all other cases, this parameter is ignored and the singleton Reply<TReq, TRep>::RequestTypeSupport is used instead

See also

**DDSDynamicDataTypeSupport** (p. 1456)

### 9.367.3.11 reply\_type\_support()

```
template<typename TReq , typename TRep >
ReplierParams & connext::ReplierParams< TReq, TRep >::reply_type_support (
    DDS::TypeSupport * type_support ) [inline]
```

Sets the type support for the reply type.

This parameter is required when TRep is **DDS\_DynamicData** (p.775).

In all other cases, this parameter is ignored and the singleton Reply<TReq, TRep>::RequestTypeSupport is used instead

See also

**DDSDynamicDataTypeSupport** (p.1456)

## 9.368 connext::Requester< TReq, TRep > Class Template Reference

Allows sending requests and receiving replies.

### Public Types

- typedef TReq **Request**  
*The request type.*
- typedef TRep **Reply**  
*The reply type.*
- typedef dds\_type\_traits< TReq > ::**DataWriter RequestDataWriter**  
*The typed DataWriter for type TReq.*
- typedef dds\_type\_traits< TRep > ::**DataReader ReplyDataReader**  
*The typed DataReader for type TRep.*
- typedef dds\_type\_traits< TReq > ::**TypeSupport RequestTypeSupport**  
*The type support for type TReq.*
- typedef dds\_type\_traits< TRep > ::**TypeSupport ReplyTypeSupport**  
*The type support for type TRep.*

## Public Member Functions

- **Requester** ( **DDSDomainParticipant** \*participant, const std::string &service\_name)  
*Creates a **Requester** (p. 1886) with the minimum set of parameters.*

- `LoanedSamples< TRep > read_replies (int max_count= DDS_LENGTH_UNLIMITED)`  
*Provides a loaned container to access the existing replies.*
- `bool read_reply ( Sample< TRep > &reply, const SampleIdentity_t &related_request_id)`  
*Copies the contents of a reply for a specific request.*
- `bool read_reply ( SampleRef< TRep > reply, const SampleIdentity_t &related_request_id)`  
*Copies the contents of a reply for a specific request.*
- `LoanedSamples< TRep > read_replies (int max_count, const SampleIdentity_t &related_request_id)`  
*Provides a loaned container to access the existing replies for a specific request.*
- `LoanedSamples< TRep > read_replies (const SampleIdentity_t &related_request_id)`  
*Provides a loaned container to access the existing replies for a specific request.*
- `RequestDataWriter * get_request_datawriter ()`  
*Retrieves the underlying **DDSDataWriter** (p. 1321).*
- `ReplyDataReader * get_reply_datareader ()`  
*Retrieves the underlying **DDSDataReader** (p. 1288).*

### 9.368.1 Detailed Description

```
template<typename TReq, typename TRep>
class connex::Requester< TReq, TRep >
```

Allows sending requests and receiving replies.

A requester is an entity with two associated **topics** (p. 61): a request topic and a reply topic. It can send requests by publishing samples of the request topic and receive replies to those requests by subscribing to the reply topic.

Valid types for these topics (TReq and TRep) are: those generated by rttidsgen, the **DDS built-in types** (p. 92), and **DDS\_DynamicData** (p. 775).

For example:

```
using namespace connex;
```

```
Requester<Foo, Bar> requester(...);
Requester<DDS::DynamicData, Bar> requester(...);
Requester<Foo, DDS::Octets> requester(...);
```

A **Replier** (p. 1868) and a **Requester** (p. 1886) communicate when they use the same topics for requests and replies (see `connex::RequesterParams::service_name` (p. 1909)) on the same **domain** (p. 51).

A **Requester** (p. 1886) can send requests and receive one or multiple replies. It does that using the following operations:

- Sending requests (i.e. publishing request samples on the request topic)
- Waiting for replies to be received by the middleware (for any request or for a specific request)

### 9.368.2.2 Reply

```
template<typename TReq , typename TRep >
typedef TRep connext::Requester< TReq, TRep >::Reply
```

The reply type.

### 9.368.2.3 RequestDataWriter

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TReq> ::DataWriter connext::Requester< TReq, TRep >::RequestDataWriter
```

The typed DataWriter for type TReq.

### 9.368.2.4 ReplyDataReader

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TRep> ::DataReader connext::Requester< TReq, TRep >::ReplyDataReader
```

The typed DataReader for type TRep.

### 9.368.2.5 RequestTypeSupport

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TReq> ::TypeSupport connext::Requester< TReq, TRep >::RequestType←
Support
```

The type support for type TReq.

### 9.368.2.6 ReplyTypeSupport

```
template<typename TReq , typename TRep >
typedef dds_type_traits<TRep> ::TypeSupport connext::Requester< TReq, TRep >::ReplyTypeSupport
```

The type support for type TRep.

## 9.368.3 Constructor & Destructor Documentation

### 9.368.3.1 Requester() [1/2]

```
template<typename TReq , typename TRep >
connext::Requester< TReq, TRep >::Requester (
    DDSDomainParticipant * participant,
    const std::string & service_name )
```

Creates a **Requester** (p. 1886) with the minimum set of parameters.

## Parameters

<i>participant</i>	The DomainParticipant this requester uses to join a DDS domain
<i>service_name</i>	The service name. See <b>connext::RequesterParams::service_name</b> (p. 1909)

## Exceptions

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37)
------------	---

## 9.368.3.2 Requester() [2/2]

```
template<typename TReq , typename TRep >
connext::Requester< TReq, TRep >::Requester (
    const RequesterParams & params ) [explicit]
```

Creates a **Requester** (p. 1886) with parameters.

## Parameters

<i>params</i>	All the parameters that configure this requester. See <b>connext::RequesterParams</b> (p. 1907) for the list of mandatory parameters.
---------------	---

## Exceptions

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37)
------------	---

## See also

**connext::RequesterParams** (p. 1907)

**Requester Creation** (p. 228)

## 9.368.3.3 ~Requester()

```
template<typename TReq , typename TRep >
connext::Requester< TReq, TRep >::~~Requester [virtual]
```

Releases the internal entities created by this object.

Among other internal resources, it deletes the underlying DataReader and DataWriter.

## See also

**DDSSubscriber::delete\_datareader** (p. 1602)

**DDSPublisher::delete\_datawriter** (p. 1561)

## 9.368.4 Member Function Documentation

### 9.368.4.1 `send_request()` [1/3]

```
template<typename TReq , typename TRep >
template<typename UReq >
void connext::Requester< TReq, TRep >::send_request (
    const UReq & request )
```

Sends a request.

If a future reply needs to be correlated to exactly this request, use `connext::Requester::send_request(WriteSample<UReq>&)` (p. 1892).

#### Parameters

<i>request</i>	The request to be sent
----------------	------------------------

#### Exceptions

<i>One</i>	of the <b>RTI Connext Exceptions</b> (p. 37)
------------	--

#### MT Safety:

SAFE

#### See also

`send_request(WriteSample<UReq>&)` (p. 1892)

### 9.368.4.2 `send_request()` [2/3]

```
template<typename TReq , typename TRep >
template<typename UReq >
void connext::Requester< TReq, TRep >::send_request (
    WriteSample< UReq > & request )
```

Sends a request and gets back information about it that allows correlation with future replies.

After calling this operation, the sample contains a valid identity that can be used for correlation with future replies.

See example code in **Correlating requests and replies** (p. 230).

## Parameters

<i>request</i>	<< <i>inout</i> >> (p. 238) Contains the request and optional write parameters. When this call ends successfully, <b>connext::WriteSample</b> (p. 1948) contains a valid identity that can be used for correlation with future replies.
----------------	---

## Exceptions

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37) ; <b>connext::TimeoutException</b> (p. 1946) may be reported in the same conditions as in <b>FooDataWriter::write</b> (p. 1683).
------------	--

## MT Safety:

SAFE

## See also

**connext::WriteSample::identity()** (p. 1951)**wait\_for\_replies(int, const Duration\_t&, const SampleIdentity\_t&)** (p. 1897)**take\_replies(int, const SampleIdentity\_t&)** (p. 1901)**Correlating requests and replies** (p. 230)**9.368.4.3 send\_request()** [3/3]

```
template<typename TReq , typename TRep >
template<typename UReq >
void connext::Requester< TReq, TRep >::send_request (
    WriteSampleRef< UReq > & request )
```

Sends a request and gets back information about it that allows correlation with future replies.

This operation is equivalent to **connext::Requester::send\_request(WriteSample<UReq>&)** (p. 1892) except it uses a **WriteSampleRef** (p. 1952).

A **WriteSampleRef** (p. 1952) needs to be initialized with references to existing data and info objects before it can be used. See an example here: **Basic Requester example using SampleRef** (p. 231)

## See also

**connext::Requester::send\_request(WriteSample<UReq>&)** (p. 1892)**Basic Requester example using SampleRef** (p. 231)

**9.368.4.4 receive\_reply()** [1/2]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::receive_reply (
    Sample< TRep > & reply,
    const DDS_Duration_t & timeout ) [inline]
```

Waits for a reply and copies its contents into a **Sample** (p. 1912).

This operation is equivalent to using **wait\_for\_replies(int, const Duration\_t&)** (p. 1896) and **take\_reply(Sample<TRep>&)** (p. 1898).

**MT Safety:**

Same restrictions as **wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**See also**

**connext::Sample** (p. 1912)  
**wait\_for\_replies(int, const Duration\_t&)** (p. 1896)  
**take\_reply(Sample<TRep>&)** (p. 1898)  
**Basic Requester example** (p. 228)

**9.368.4.5 receive\_reply()** [2/2]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::receive_reply (
    SampleRef< TRep > reply,
    const DDS_Duration_t & timeout ) [inline]
```

Waits for a reply and copies its contents into a **SampleRef** (p. 1920).

This operation is equivalent to using **wait\_for\_replies(int, const Duration\_t&)** (p. 1896) and **take\_reply(SampleRef<TRep>)** (p. 1898).

**MT Safety:**

Same restrictions as **wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**See also**

**connext::SampleRef** (p. 1920)  
**wait\_for\_replies(int, const Duration\_t&)** (p. 1896)  
**take\_reply(SampleRef<TRep>)** (p. 1898)  
**Basic Requester example using SampleRef** (p. 231)

**9.368.4.6 receive\_replies()** [1/2]

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connex::Requester< TReq, TRep >::receive_replies (
    const DDS_Duration_t & max_wait )
```

Waits for multiple replies and provides a loaned container to access them.

This operation is equivalent to using **receive\_replies(int,int, const Duration\_t&)** (p. 1895) with *min\_count*=1 and *max\_count*=**DDS\_LENGTH\_UNLIMITED** (p. 438)

**MT Safety:**

See **wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**See also**

**connex::LoanedSamples** (p. 1727)

**receive\_replies(int,int, const Duration\_t&)** (p. 1895)

**9.368.4.7 receive\_replies()** [2/2]

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connex::Requester< TReq, TRep >::receive_replies (
    int min_count,
    int max_count,
    const DDS_Duration_t & max_wait )
```

Waits for multiple replies and provides a loaned container to access them.

This operation is equivalent to using **wait\_for\_replies(int, const Duration\_t&)** (p. 1896) and **take\_replies(int)** (p. 1899).

**MT Safety:**

See **wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**Exceptions**

<i>One</i>	of the <b>RTI Connex Exceptions</b> (p. 37)
------------	---

See also

**connext::LoanedSamples** (p. 1727)  
**wait\_for\_replies(int, const Duration\_t&)** (p. 1896)  
**take\_replies(int)** (p. 1899)

### 9.368.4.8 wait\_for\_replies() [1/3]

```
template<typename TReq , typename TRep >
bool  connext::Requester< TReq, TRep >::wait_for_replies (
    int min_count,
    const  DDS_Duration_t & max_wait )
```

Waits for replies to any request.

This operation waits for min\_count requests to be available for up to max\_wait .

If this operation is called several times but the available replies are not taken (with **take\_replies(int)** (p. 1899)), this operation may return immediately and will not wait for new replies. New replies may replace existing ones if they are not taken, depending on the **DDS\_HistoryQosPolicy** (p. 919) used to configure this **Requester** (p. 1886).

#### Parameters

<i>min_count</i>	Minimum number of replies that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum waiting time after which this operation unblocks, regardless of how many replies are available.

#### Returns

true if at least min\_count replies were available before max\_wait elapsed, or false otherwise.

#### MT Safety:

Concurrent calls to this operation on the same object are not allowed. However, waiting for replies for specific requests in parallel is supported (see **wait\_for\_replies(int, const Duration\_t&, const SampleIdentity\_t&)** (p. 1897)).

See also

**take\_replies(int)** (p. 1899)

**9.368.4.9 wait\_for\_replies()** [2/3]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::wait_for_replies (
    const DDS_Duration_t & max_wait )
```

Waits for replies to any request.

This operation is equivalent to using `wait_for_replies(int, const Duration_t&)` (p. 1896) with `min_count=1`.

See also

`wait_for_replies(int, const Duration_t&)` (p. 1896)

**9.368.4.10 wait\_for\_replies()** [3/3]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::wait_for_replies (
    int min_count,
    const DDS_Duration_t & max_wait,
    const SampleIdentity_t & related_request_id )
```

Waits for replies to a specific request.

This operation is analogous to `wait_for_replies(int, const Duration_t&)` (p. 1896) except this operation waits for replies for a specific request.

**Parameters**

<i>min_count</i>	Minimum number of replies for the related request that need to be available for this operation to unblock.
<i>max_wait</i>	Maximum wait time after which this operation unblocks, regardless of how many replies are available.
<i>related_request_id</i>	The identity of a request previously sent by this <b>Requester</b> (p. 1886)

**Returns**

true if at least `min_count` replies for the related request were available before `max_wait` elapsed, or false otherwise.

**Exceptions**

One	of the <b>RTI Connex Exceptions</b> (p. 37)
-----	---

MT Safety:

SAFE

**wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

#### 9.368.4.11 take\_reply() [1/4]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::take_reply (
    Sample< TRep > & reply ) [inline]
```

Copies the contents of a reply into a **Sample** (p. 1912).

Takes a reply sample from the **Requester** (p. 1886) and makes a copy.

This operation may be used after a call to **wait\_for\_replies(int, const Duration\_t&)** (p. 1896).

To avoid copies, you can use **take\_replies(int)** (p. 1899).

Parameters

<i>reply</i>	The sample where the reply data and the related SampleInfo are copied
--------------	---

Returns

true if there was a reply to get. If this operation returns false, the contents of *reply* remain unchanged, except **DDS\_SampleInfo::valid\_data** (p. 1089) becomes false.

Exceptions

<i>One</i>	of the <b>RTI Connext Exceptions</b> (p. 37)
------------	--

MT Safety:

SAFE

See also

**connext::Sample** (p. 1912)

**wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

**9.368.4.12 take\_reply()** [2/4]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::take_reply (
    SampleRef< TRep > reply ) [inline]
```

Copies the contents of a reply into a **SampleRef** (p. 1920).

This operation is analogous to **connext::Requester::take\_reply(Sample<TRep>&)** (p.1898) except it uses a **SampleRef** (p. 1920) instance.

A **SampleRef** (p. 1920) needs to be initialized with references to existing data and info objects before it can be used. See an example here: **Basic Requester example using SampleRef** (p. 231)

MT Safety:

SAFE

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connext::Requester< TReq, TRep >::take_replies (
    int max_count = DDS_LENGTH_UNLIMITED )
```

Provides a loaned container to access the existing replies.

Takes all the existing replies up to `max_count` and provides a loaned container to access them.

This operation does not make a copy of the data.

The loan is returned with **connext::LoanedSamples::return\_loan** (p. 1734) or in the destructor

This operation may be used after a call to **wait\_for\_replies(int, const Duration\_t&)** (p. 1896)

See an **example** here: **Taking loaned samples** (p. 229)

Parameters

<i>max_count</i>	The maximum number of samples that are taken at a time. The special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) may be used. This value will read up to the limit specified by <b>DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_read</b> (p. 659)
------------------	---

**Returns**

A container with up to `max_count` elements. May be empty if there were no replies to get.

**Exceptions**

<i>One</i>	of the <b>RTI Connex</b> Exceptions (p. 37)
------------	---

**MT Safety:**

SAFE

**Taking samples by copy** (p. 229)

**9.368.4.14 take\_reply() [3/4]**

```
template<typename TReq , typename TRep >
bool connex::Requester< TReq, TRep >::take_reply (
    Sample< TRep > & reply,
    const SampleIdentity_t & related_request_id ) [inline]
```

Copies the contents of a reply for a specific request.

This operation is analogous to **take\_reply(Sample<TRep>&)** (p. 1898) except the reply corresponds to a specific request.

**Parameters**

<i>reply</i>	The sample where a reply is copied into
<i>related_request_id</i>	The identity of a request previously sent by this <b>Requester</b> (p. 1886)

**Returns**

true if there was a reply to get. If this operation returns false, the contents of `reply` remain unchanged, except `DDS_SampleInfo::valid_data` (p. 1089) becomes false.

**MT Safety:**

SAFE

**See also**

**connext::Sample** (p. 1912)

**Basic Requester example using SampleRef** (p. 231)  
**Correlating requests and replies** (p. 230)

**9.368.4.16 take\_replies()** [2/3]

```
template<typename TReq , typename TRep >  
LoanedSamples< TRep > connex::Requester< TReq, TRep >::take_replies (   
    int max_count,  
    const SampleIdentity_t & related_request_id )
```

Provides a loaned container to access the existing replies for a specific request.

This operation is analogous to **take\_replies(int)** (p. 1899) except the replies this operation provides correspond to a specific request.

## Parameters

<i>max_count</i>	The maximum number of samples that are taken at a time. The special value <b>DDS_LENGTH_UNLIMITED</b> (p. 438) may be used.
<i>related_request_id</i>	The identity of a request previously sent by this <b>Requester</b> (p. 1886)

## MT Safety:

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connext::Requester< TReq, TRep >::read_replies (
    int max_count = DDS_LENGTH_UNLIMITED )
```

Provides a loaned container to access the existing replies.

This operation is equivalent to **connext::Requester::take\_replies(int)** (p. 1899) except the replies remain in the **Requester** (p. 1886) and can be read or taken again.

**9.368.4.21 read\_reply()** [3/4]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::read_reply (
    Sample< TRep > & reply,
    const SampleIdentity_t & related_request_id ) [inline]
```

Copies the contents of a reply for a specific request.

This operation is equivalent to **connext::Requester::take\_reply(Sample<TRep>&, const SampleIdentity\_t&)** (p. 1900) except the reply remains in the **Requester** (p. 1886) and can be read or taken again.

**9.368.4.22 read\_reply()** [4/4]

```
template<typename TReq , typename TRep >
bool connext::Requester< TReq, TRep >::read_reply (
    SampleRef< TRep > reply,
    const SampleIdentity_t & related_request_id ) [inline]
```

Copies the contents of a reply for a specific request.

This operation is analogous to **connext::Requester::read\_reply(Sample<TRep>&, const SampleIdentity\_t&)** (p. 1904) except it uses a **SampleRef** (p. 1920) instance.

A **SampleRef** (p. 1920) needs to be initialized with references to existing data and info objects before it can be used. See an example here: **Basic Requester example using SampleRef** (p. 231)

MT Safety:

**9.368.4.23 read\_replies()** [2/3]

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connext::Requester< TReq, TRep >::read_replies (
    int max_count,
    const SampleIdentity_t & related_request_id )
```

Provides a loaned container to access the existing replies for a specific request.

This operation is equivalent to **connext::Requester::take\_replies(int, const SampleIdentity\_t&)** (p. 1901) except the replies remain in the **Requester** (p. 1886) and can be read or taken again.

**9.368.4.24 read\_replies()** [3/3]

```
template<typename TReq , typename TRep >
LoanedSamples< TRep > connext::Requester< TReq, TRep >::read_replies (
    const SampleIdentity_t & related_request_id )
```

Provides a loaned container to access the existing replies for a specific request.

This operation is equivalent to **connext::Requester::take\_replies(const SampleIdentity\_t&)** (p. 1903) except the replies remain in the **Requester** (p. 1886) and can be read or taken again.

References **DDS\_LENGTH\_UNLIMITED**.

**9.368.4.25 get\_request\_datawriter()**

```
template<typename TReq , typename TRep >
Requester< TReq, TRep > ::RequestDataWriter * connext::Requester< TReq, TRep >::get_request_↔
datawriter [inline]
```

Retrieves the underlying **DDSDataWriter** (p. 1321).

Accessing the request DataWriter may be useful for a number of advanced use cases, such as:

- Finding matching subscriptions (e.g., Repliers)
- Setting a DataWriter listener
- Getting DataWriter protocol or cache statuses

**MT Safety:**

SAFE

**See also**

- DDSDataWriter** (p. 1321)

## 9.369 connex::RequesterParams Class Reference

Contains the parameters for creating a **connex::Requester** (p. 1886).

Inherits connex::details::EntityParams.

### Public Member Functions

- **RequesterParams** ( **DomainParticipant** \*participant)
 

*Creates a **RequesterParams** (p. 1907) with the parameters a **Requester** (p. 1886) always needs.*
- **RequesterParams** & **service\_name** (const std::string &name)
 

*The service name that Repliers and **Requester** (p. 1886) use to match and communicate.*
- **RequesterParams** & **request\_topic\_name** (const std::string &name)
 

*Sets a specific request topic name.*
- **RequesterParams** & **reply\_topic\_name** (const std::string &name)
 

*Sets a specific reply topic name.*
- **RequesterParams** & **qos\_profile** (const std::string &qos\_library\_name, const std::string &qos\_profile\_name)

*Sets a QoS profile for the entities in this requester.*

- **RequesterParams** & **datawriter\_qos** (const **DDS\_DataWriterQos** &qos)  
*Sets the quality of service of the request DataWriter.*
- **RequesterParams** & **datareader\_qos** (const **DDS\_DataReaderQos** &qos)  
*Sets the quality of service of the request DataReader.*
- **RequesterParams** & **publisher** ( **DDSPublisher** \*publisher)  
*Sets a specific Publisher.*
- **RequesterParams** & **subscriber** ( **DDSSubscriber** \*subscriber)  
*Sets a specific Subscriber.*
- **RequesterParams** & **request\_type\_support** ( **TypeSupport** \*type\_support)  
*Sets the type support for the request type.*
- **RequesterParams** & **reply\_type\_support** ( **TypeSupport** \*type\_support)  
*Sets the type support for the reply type.*

### 9.369.1 Detailed Description

Contains the parameters for creating a **connext::Requester** (p. 1886).

See also

**Creating a Requester with optional parameters** (p. 228)

### 9.369.2 Constructor & Destructor Documentation

#### 9.369.2.1 RequesterParams()

```
connext::RequesterParams::RequesterParams (
    DomainParticipant * participant ) [explicit]
```

Creates a **RequesterParams** (p. 1907) with the parameters a **Requester** (p. 1886) always needs.

In addition to the participant , a **Requester** (p. 1886) needs either:

- A service name (**service\_name** (p. 1909)),
- Or custom topic names (**request\_topic\_name** (p. 1909) and **reply\_topic\_name** (p. 1909))

When **DDS\_DynamicData** (p. 775) is used, **connext::RequesterParams::request\_type\_support** (p. 1911) and/or **connext::RequesterParams::reply\_type\_support** (p. 1911) are required as well.

The rest of the parameters that can be set in a **RequesterParams** (p. 1907) object are optional.

## Parameters

<i>participant</i>	The <b>DDSDomainParticipant</b> (p. 1351) this requester uses to join a domain.
--------------------	---

## See also

**Creating a Requester with optional parameters** (p. 228)

### 9.369.3 Member Function Documentation

#### 9.369.3.1 service\_name()

```
RequesterParams & connext::RequesterParams::service_name (  
    const std::string & name )
```

The service name that Repliers and **Requester** (p. 1886) use to match and communicate.

A **Requester** (p. 1886) and a **Replier** (p. 1868) need to be configured with the same topic names in order to match.

The service name is used to generate a request topic and a reply topic that the **Requester** (p. 1886) and **Replier** (p. 1868) will use to communicate. For example, the service name "MyService" will be used to create topics named "MyServiceRequest" and "MyServiceReply".

In some cases, the name of these topics is known beforehand or needs to be customized for another reason. The service name can be overridden by setting specific request and reply topic names using **request\_topic\_name** (p. 1909) and **reply\_topic\_name** (p. 1909).

#### 9.369.3.2 request\_topic\_name()

```
RequesterParams & connext::RequesterParams::request_topic_name (  
    const std::string & name )
```

Sets a specific request topic name.

The specified topic name will be used, instead of allowing a topic name to be generated based on the **service\_name** (p. 1909). If that topic already exists, it will be reused.

#### 9.369.3.3 reply\_topic\_name()

```
RequesterParams & connext::RequesterParams::reply_topic_name (  
    const std::string & name )
```

Sets a specific reply topic name.

The specified topic name will be used, instead of allowing a topic name to be generated based on the **service\_name** (p. 1909). If that topic already exists, it will be reused.

### 9.369.3.4 qos\_profile()

```
RequesterParams & connext::RequesterParams::qos_profile (
    const std::string & qos_library_name,
    const std::string & qos_profile_name )
```

Sets a QoS profile for the entities in this requester.

Specifies an XML QoS profile that will be used to configure the quality of service of a **Requester** (p. 1886)'s underlying request DataWriter and reply DataReader.

Within that profile, the DataWriter QoS in <datawriter\_qos> will be used to configure the request DataWriter and the DataReader.

Alternatively, you can set the QoS using the DataWriterQos and DataReaderQos objects (**connext::RequesterParams::datawriter\_qos** (p. 1910), **connext::RequesterParams::datareader\_qos** (p. 1910)).

#### Parameters

<i>qos_library_name</i>	The name of the QoS library
<i>qos_profile_name</i>	The name of the QoS profile inside the QoS library

#### See also

**Configuring Request-Reply QoS profiles** (p. 234)

**Configuring QoS Profiles with XML** (p. 197)

### 9.369.3.5 datawriter\_qos()

```
RequesterParams & connext::RequesterParams::datawriter_qos (
    const DDS_DataWriterQos & qos )
```

Sets the quality of service of the request DataWriter.

#### See also

**qos\_profile** (p. 1909)

### 9.369.3.6 datareader\_qos()

```
RequesterParams & connext::RequesterParams::datareader_qos (
    const DDS_DataReaderQos & qos )
```

Sets the quality of service of the request DataReader.

#### See also

**qos\_profile** (p. 1909)

### 9.369.3.7 publisher()

```
RequesterParams & connext::RequesterParams::publisher (
    DDSPublisher * publisher )
```

Sets a specific Publisher.

By default, a **Requester** (p. 1886) uses the DomainParticipant's implicit Publisher. Sometimes a different Publisher may be needed, for example, to use non-default PublisherQos.

### 9.369.3.8 subscriber()

```
RequesterParams & connext::RequesterParams::subscriber (
    DDSSubscriber * subscriber )
```

Sets a specific Subscriber.

By default, a **Requester** (p. 1886) uses the DomainParticipant's implicit Subscriber. Sometimes a different Subscriber may be needed, for example, to use non-default SubscriberQos.

### 9.369.3.9 request\_type\_support()

```
RequesterParams & connext::RequesterParams::request_type_support (
    TypeSupport * type_support )
```

Sets the type support for the request type.

This parameter is required when TReq is **DDS\_DynamicData** (p. 775).

In all other cases, this parameter is ignored and the singleton **Requester<TReq, TRep>::RequestTypeSupport** (p. 1890) is used instead.

See also

**DDSDynamicDataTypeSupport** (p. 1456)

### 9.369.3.10 reply\_type\_support()

```
RequesterParams & connext::RequesterParams::reply_type_support (
    TypeSupport * type_support )
```

Sets the type support for the reply type.

This parameter is required when TRep is **DDS\_DynamicData** (p. 775).

In all other cases, this parameter is ignored and the singleton **Requester<TReq, TRep>::ReplyTypeSupport** (p. 1890) is used instead.

See also

**DDSDynamicDataTypeSupport** (p. 1456)

## 9.370 connext::RuntimeException Class Reference

Generic, unspecified error.

Inheritance diagram for connext::RuntimeException:

### 9.370.1 Detailed Description

Generic, unspecified error.

Its base class is `std::runtime_error`, from which it inherits the `what()` method.

See also

[DDS\\_RETCODE\\_ERROR](#) (p. 336)

## 9.371 connext::Sample< T > Class Template Reference

A data sample and related info received from the middleware.

Inherits `connext::details::SampleBase< T, I >`.

### Public Member Functions

- **Sample** ()  
*Creates a sample with default data and info values.*
- **Sample** (const **Sample**< T > &other)  
*Creates a sample making a deep copy of another sample.*
- **Sample** ( **SampleRef**< T > sample\_ref)  
*Creates a sample as a deep copy of the contents referenced by a **WriteSampleRef** (p. 1952).*
- **SampleIdentity\_t identity** () const  
*Gets the identity of this sample.*
- **SampleIdentity\_t related\_identity** () const  
*Gets the identity of a sample that is related to this one.*

*Gets the sample information.*
- const T & **data** ()  
*Gets the data this sample contains.*
- const **SampleInfo & info** ()  
*Gets the sample information.*

### 9.371.1 Detailed Description

```
template<typename T>
class connext::Sample< T >
```

A data sample and related info received from the middleware.

Samples contain data received from the middleware and information associated to the data.

#### Template Parameters

<i>T</i>	The data type that this sample contains
----------	---

#### See also

**connext::Requester::receive\_reply(Sample<TRep>&, const Duration\_t&)** (p. 1893)

**connext::Requester::take\_reply(Sample<TRep>&)** (p. 1898)

**connext::Replier::receive\_request(Sample<TReq>&, const Duration\_t&)** (p. 1875)

### 9.371.2 Constructor & Destructor Documentation

#### 9.371.2.1 Sample() [1/3]

```
template<typename T >
connext::Sample< T >::Sample ( ) [inline]
```

Creates a sample with default data and info values.

The data is deeply initialized using the corresponding TypeSupport

#### See also

**FooTypeSupport::initialize\_data** (p. 1718)

#### 9.371.2.2 Sample() [2/3]

```
template<typename T >
connext::Sample< T >::Sample (
    const Sample< T > & other ) [inline]
```

Creates a sample making a deep copy of another sample.

### 9.371.2.3 Sample() [3/3]

```
template<typename T >
connext::Sample< T >::Sample (
    SampleRef< T > sample_ref )
```

Creates a sample as a deep copy of the contents referenced by a **WriteSampleRef** (p. 1952).

## 9.371.3 Member Function Documentation

### 9.371.3.1 identity()

```
template<typename T >
SampleIdentity_t connext::Sample< T >::identity ( ) const [inline]
```

Gets the identity of this sample.

The identity is assigned by the middleware upon reception.

See also

**Correlating requests and replies** (p. 230)

References **connext::Sample**< T >::info().

### 9.371.3.2 related\_identity()

```
template<typename T >
SampleIdentity_t connext::Sample< T >::related_identity ( ) const [inline]
```

Gets the identity of a sample that is related to this one.

When a **connext::Requester** (p. 1886) receives a reply, the reply **Sample** (p. 1912) contains the identity of the related request.

Returns

The identity of another sample that is related to this one, or **DDS\_UNKNOWN\_SAMPLE\_IDENTITY** (p. 479) if there is not a related sample.

See also

**connext::Requester::receive\_reply(Sample<TRep>&, const Duration\_t&)** (p. 1893)

**Correlating requests and replies** (p. 230)

References **connext::Sample**< T >::info().

### 9.371.3.3 data() [1/2]

```
template<typename T >
T & connext::Sample< T >::data ( )
```

Gets the data this sample contains.

See also

**Basic Requester example** (p. 228)

### 9.371.3.4 info() [1/2]

```
template<typename T >
SampleInfo & connext::Sample< T >::info ( )
```

Gets the sample information.

See also

**DDS\_SampleInfo** (p. 1082)

**Basic Requester example** (p. 228)

Referenced by **connext::Sample< T >::identity()**, and **connext::Sample< T >::related\_identity()**.

### 9.371.3.5 data() [2/2]

```
template<typename T >
const T & connext::Sample< T >::data ( )
```

Gets the data this sample contains.

See also

**Basic Requester example** (p. 228)

### 9.371.3.6 info() [2/2]

```
template<typename T >
const SampleInfo & connexr::Sample< T >::info ( )
```

Gets the sample information.

See also

**DDS\_SampleInfo** (p. 1082)

**Basic Requester example** (p. 228)

## 9.372 rti::flat::Sample< OffsetType > Class Template Reference

The generic definition of FlatData topic-types.

```
#include <FlatSample.hpp>
```

Inherits rti::flat::SampleBase.

### Public Types

- typedef OffsetType **Offset**  
*The related Offset type.*
- typedef OffsetType::ConstOffset **ConstOffset**  
*The related read-only Offset type.*

### Public Member Functions

- **Offset root ()**  
*Provides the Offset to the top-level type.*
- **ConstOffset root () const**  
*Provides the Offset to the top-level type.*
- **Sample< OffsetType > \* clone () const**  
*Clones a **Sample** (p. 1916), creating an unmanaged **Sample** (p. 1916).*

### Static Public Member Functions

- static **Sample< OffsetType > \* create\_data ()**  
*Creates an unmanaged FlatData **Sample** (p. 1916).*
- static void **delete\_data ( rti::flat::Sample< OffsetType > \*sample)**  
*Releases an unmanaged **Sample** (p. 1916).*

### 9.372.1 Detailed Description

```
template<typename OffsetType>
class rti::flat::Sample< OffsetType >
```

The generic definition of FlatData topic-types.

## Template Parameters

<i>OffsetType</i>	The Offset to the beginning of the data <b>Sample</b> (p. 1916) (the root), for example <b>MyFlatFinalOffset</b> (p. 1746), or <b>MyFlatMutableOffset</b> (p. 1757).
-------------------	--

For a FlatData IDL type, **rtiddsgen** generates an instantiation of this class, such as **MyFlatFinal** or **MyFlatMutable**. That's the **topic-type** used to declare a **DDSTopic** (p. 1617) and write or read FlatData samples.

A FlatData **Sample** (p. 1916) owns an inline buffer that contains the serialized data. To access the **Sample** (p. 1916) data members we use **Offsets** (p. 564), iterators that point to the position of a member in the **Sample** (p. 1916) buffer. The **root()** (p. 1918) is the Offset to the top-level element (for example **MyFlatMutableOffset** (p. 1757)). From there **MyFlatMutableOffset** (p. 1757)'s member functions provide access to its members.

The method to create a **Sample** (p. 1916) varies depending on whether the type is final or mutable.

Samples of **final** FlatData types always have the same size, and can be obtained directly with **FooDataWriter::get\_loan()** (p. 1695).

Samples of **mutable** FlatData types need to be "built" using the Builder returned by **rti::flat::build\_data()** (p. 560) (**MyFlatMutableBuilder** (p. 1750) in this example). A Builder allows adding each member individually in any order, and sizing sequences as needed.

See **Publishing FlatData** (p. 570) for code snippets.

Samples created with **FooDataWriter::get\_loan()** (p. 1695) or **rti::flat::build\_data()** (p. 560) are DataWriter-managed and do not need to be explicitly deleted. See **FooDataWriter::get\_loan()** (p. 1695) for an explanation of the lifecycle of DataWriter-managed samples.

Samples received with a **FooDataReader** (p. 1649) can be examined by obtaining the **root()** (p. 1918), but cannot be modified. See **Subscribing to FlatData** (p. 570).

FlatData samples are not value types. They don't provide copy constructors or assignment operators, because of their definition as an inline buffer that contains the serialized **Sample** (p. 1916) at all times. A **Sample** (p. 1916) can be cloned with the static function **clone()** (p. 1919). A cloned **Sample** (p. 1916) is unmanaged and has to be deleted with the static function **delete\_data()** (p. 1919).

## 9.372.2 Member Typedef Documentation

### 9.372.2.1 Offset

```
template<typename OffsetType >
typedef OffsetType rti::flat::Sample< OffsetType >::Offset
```

The related Offset type.

This is the template parameter, OffsetType

### 9.372.2.2 ConstOffset

```
template<typename OffsetType >
typedef OffsetType::ConstOffset rti::flat::Sample< OffsetType >::ConstOffset
```

The related read-only Offset type.

For example, **MyFlatMutableOffset::ConstOffset** (p. 1758).

## 9.372.3 Member Function Documentation

### 9.372.3.1 root() [1/2]

```
template<typename OffsetType >
Offset rti::flat::Sample< OffsetType >::root ( ) [inline]
```

Provides the Offset to the top-level type.

#### Returns

An Offset that allows reading and modifying the members of this **Sample** (p. 1916), for example **MyFlatFinalOffset** (p. 1746) or **MyFlatMutableOffset** (p. 1757).

This overload allows modifying the **Sample** (p. 1916).

#### Example:

```
MyFlatFinal *my_sample = ...; // for example, created with DataWriter::get_loan()
MyFlatFinalOffset my_sample_root = my_sample->root();
my_sample_root.my_primitive(33);
auto my_member_offset = my_sample_root.my_complex();
// ... modify my_member_offset
```

### 9.372.3.2 root() [2/2]

```
template<typename OffsetType >
ConstOffset rti::flat::Sample< OffsetType >::root ( ) const [inline]
```

Provides the Offset to the top-level type.

#### Returns

An Offset that allows reading the members of this **Sample** (p. 1916). For example, **MyFlatFinalOffset::ConstOffset** (p. 1747) or **MyFlatMutableOffset::ConstOffset** (p. 1758).

This overload doesn't allow modifying the **Sample** (p. 1916).

#### Example:

```
const MyFlatMutable *my_sample = ...; // for example, read from a DataReader
MyFlatMutableOffset::ConstOffset my_sample_root = my_sample->root();
std::cout << my_sample_root.my_primitive() << std::endl;
auto my_member_offset = my_sample_root.my_mutable_seq();
// ... read my_member_offset
```

### 9.372.3.3 create\_data()

```
template<typename OffsetType >
Sample< OffsetType > * rti::flat::Sample< OffsetType >::create_data [static]
```

Creates an unmanaged FlatData **Sample** (p. 1916).

#### Note

In general on the publication side it is recommended to create DataWriter-managed samples using **FooDataWriter::get\_loan** (p. 1695) (for final types) and **rti::flat::build\_data()** (p. 560) (for mutable types).

If the topic-type is final, the returned **Sample** (p. 1916) can be initialized by obtaining the **root()** (p. 1918).

If the topic-type is mutable, the resulting **Sample** (p. 1916) has no members, and **root()** (p. 1918) returns a **null** (p. 1857) Offset. The result of **create\_data()** (p. 1918) must be used to create a Builder. This is a rare use case, and **rti::flat::build\_data()** (p. 560) should be used in most situations.

In all cases, the returned **Sample** (p. 1916) must be explicitly deleted with **delete\_data()** (p. 1919).

### 9.372.3.4 clone()

```
template<typename OffsetType >
Sample< OffsetType > * rti::flat::Sample< OffsetType >::clone ( ) const [inline]
```

Clones a **Sample** (p. 1916), creating an unmanaged **Sample** (p. 1916).

#### Warning

When this **Sample** (p. 1916) has been created with **FooDataWriter::get\_loan** (p. 1695) or **rti::flat::build\_data()** (p. 560), the clone this function creates cannot be used in **FooDataWriter::write** (p. 1683), because the DataWriter is managing the lifecycle of its samples.

Creates a new **Sample** (p. 1916) and copies the underlying serialized buffer.

**delete\_data()** (p. 1919) must be called to release the **Sample** (p. 1916).

### 9.372.3.5 delete\_data()

```
template<typename OffsetType >
static void rti::flat::Sample< OffsetType >::delete_data (
    rti::flat::Sample< OffsetType > * sample ) [inline], [static]
```

Releases an unmanaged **Sample** (p. 1916).

Unmanaged samples are those created with **create\_data()** (p. 1918) or **clone()** (p. 1919).

#### Precondition

*sample* cannot have been created with **FooDataWriter::get\_loan** (p. 1695) or **rti::flat::build\_data()** (p. 560).

#### Postcondition

*sample* becomes invalid and shouldn't be used

## 9.373 connext::SampleIterator< T, IsConst > Class Template Reference

STL-compliant random-access iterator for SampleRef<T>

### 9.373.1 Detailed Description

```
template<typename T, bool IsConst>
class connext::SampleIterator< T, IsConst >
```

STL-compliant random-access iterator for SampleRef<T>

See also

[connext::LoanedSamples::begin](#) (p. 1735)

## 9.374 connext::SampleRef< T > Class Template Reference

A data sample and related information received from the middleware.

### Public Member Functions

- **SampleRef** ()  
*Creates an object with no data.*
- **SampleRef** (T \* **data**, Info \* **info**)  
*Creates an object with a reference to a data object.*
- **SampleRef** (T & **data**, Info & **info**)  
*Creates an object with a reference to a data object.*
- **SampleRef** ( **Sample**< T > &sample)  
*Copies the references to data and info.*
- **SampleRef** & **operator=** ( **Sample**< T > &sample)  
*Copies the references to data and info.*

*Indicates if this **SampleRef** (p. 1920) contains a reference to data or not.*
- bool **is\_nil\_info** () const  
*Indicates if this **SampleRef** (p. 1920) contains a reference to data or not.*
- **SampleIdentity\_t identity** () const  
*Gets the identity of this sample.*
- **SampleIdentity\_t related\_identity** () const  
*Gets the identity of a sample that is related to this one.*

### 9.374.1 Detailed Description

```
template<typename T>
class connex::SampleRef< T >
```

A data sample and related information received from the middleware.

A **SampleRef** (p. 1920) can be used much like a **connex::Sample** (p. 1912), but it's different in that it holds references to data and **DDS\_SampleInfo** (p. 1082), whereas a **Sample** (p. 1912) is a value type and owns its data and info.

When calling an operation that copies data from the middleware into a **Sample** (p. 1912) (e.g. **connex::Requester**↔**::take\_reply(Sample<TRep>&)** (p. 1898)), the references to its data and information must have been set explicitly (see **connex::SampleRef::set\_data(T&)** (p. 1924) and **connex::SampleRef::set\_info(DDS\_SampleInfo&)** (p. 1925))

When a **SampleRef** (p. 1920) is copied, the destination **SampleRef** (p. 1920) references the same data and info objects as the source. Copying and passing by value are inexpensive operations.

**SampleRef** (p. 1920) is also the type of the elements in a **connex::LoanedSamples** (p. 1727) container and they hold references to data from the middleware.

#### Template Parameters

<i>T</i>	The data type that this sample contains
----------	---

#### See also

**connex::Requester::receive\_reply(Sample<TRep>&, const Duration\_t&)** (p. 1893)

**connex::Requester::take\_reply(Sample<TRep>&)** (p. 1898)

**connex::Replier::receive\_request(Sample<TReq>&, const Duration\_t&)** (p. 1875)

**Basic Requester example using SampleRef** (p. 231)

#### Template Parameters

<i>T</i>	The data type that this sample can contain
----------	--

### 9.374.2 Constructor & Destructor Documentation

#### 9.374.2.1 SampleRef() [1/4]

```
template<typename T >
connex::SampleRef< T >::SampleRef ( ) [inline]
```

Creates an object with no data.

See also

**set\_data(T&)** (p. 1924)

Referenced by **connext::SampleRef< T >::operator=()**.

### 9.374.2.2 SampleRef() [2/4]

```
template<typename T >
connext::SampleRef< T >::SampleRef (
    T * data,
    Info * info ) [inline]
```

Creates an object with a reference to a data object.

See also

**set\_data(T&)** (p. 1924)

### 9.374.2.3 SampleRef() [3/4]

```
template<typename T >
connext::SampleRef< T >::SampleRef (
    T & data,
    Info & info ) [inline]
```

Creates an object with a reference to a data object.

See also

**set\_data(T&)** (p. 1924)

### 9.374.2.4 SampleRef() [4/4]

```
template<typename T >
connext::SampleRef< T >::SampleRef (
    Sample< T > & sample ) [inline]
```

Copies the references to data and info.

After this operation, this object contains a reference to the same data and info instances as the source.

## 9.374.3 Member Function Documentation

### 9.374.3.1 operator=()

```
template<typename T >
SampleRef & connext::SampleRef< T >::operator= (
    Sample< T > & sample ) [inline]
```

Copies the references to data and info.

After this operation, this object contains a reference to the same data and info instances as the source.

References **connext::SampleRef**< T >::**SampleRef**().

### 9.374.3.2 data()

```
template<typename T >
T & connext::SampleRef< T >::data ( ) const [inline]
```

Gets the data this sample contains.

#### Precondition

Data must have been set before

#### See also

**connext::WriteSampleRef::set\_data** (p. 1954)

**connext::WriteSample::data**() (p. 1950)

Referenced by **connext::SampleRef**< T >::**set\_data**().

### 9.374.3.3 info()

```
template<typename T >
Info & connext::SampleRef< T >::info ( ) const [inline]
```

Gets the SampleInfo.

#### Precondition

The info object must have been set

#### See also

**set\_info(DDS\_SampleInfo&)** (p. 1925)

**connext::SampleRef::identity()** (p. 1925)

Referenced by **connext::SampleRef< T >::identity()**, **connext::SampleRef< T >::related\_identity()**, and **connext::SampleRef< T >::set\_info()**.

### 9.374.3.4 operator T&()

```
template<typename T >
connext::SampleRef< T >::operator T& ( ) const [inline]
```

Gets the data this sample contains.

#### Precondition

Data must have been set before

#### See also

**connext::WriteSampleRef::set\_data** (p. 1954)

**connext::WriteSample::data()** (p. 1950)

### 9.374.3.5 set\_data()

```
template<typename T >
void connext::SampleRef< T >::set_data (
    T & data ) [inline]
```

Sets a reference to a data object.

## Parameters

<i>data</i>	The data object this sample will reference
-------------	--

References `connext::SampleRef< T >::data()`.

### 9.374.3.6 set\_info()

```
template<typename T >
void connext::SampleRef< T >::set_info (
    DDS_SampleInfo & info ) [inline]
```

Sets the info object.

References `connext::SampleRef< T >::info()`.

### 9.374.3.7 is\_nil\_data()

```
template<typename T >
bool connext::SampleRef< T >::is_nil_data ( ) const [inline]
```

Indicates if this **SampleRef** (p. 1920) contains a reference to data or not.

## Returns

True if this sample does not contain a reference to data.

## See also

`connext::SampleRef::data` (p. 1923)

`connext::SampleRef::set_data(T&)` (p. 1924)

### 9.374.3.8 is\_nil\_info()

```
template<typename T >
bool connext::SampleRef< T >::is_nil_info ( ) const [inline]
```

Indicates if this **SampleRef** (p. 1920) contains a reference to data or not.

## Returns

True if this sample does not contain a reference to info.

## See also

`connext::SampleRef::info()` (p. 1923)

`connext::SampleRef::set_info(DDS_SampleInfo&)` (p. 1925)

### 9.374.3.9 identity()

```
template<typename T >
SampleIdentity_t connext::SampleRef< T >::identity ( ) const [inline]
```

Gets the identity of this sample.

#### Precondition

The info object must have been set

#### See also

**set\_info(DDS\_SampleInfo&)** (p. 1925)

**connext::Sample::identity()** (p. 1914)

References **connext::SampleRef**< T >::info().

### 9.374.3.10 related\_identity()

```
template<typename T >
SampleIdentity_t connext::SampleRef< T >::related_identity ( ) const [inline]
```

Gets the identity of a sample that is related to this one.

#### Precondition

The info object must have been set

#### See also

**connext::Sample::related\_identity()** (p. 1914)

References **connext::SampleRef**< T >::info().

## 9.375 rti::flat::Sequenceliterator< E, OffsetKind > Class Template Reference

Iterator for collections of Offsets.

```
#include <SequenceIterator.hpp>
```

## Public Types

- typedef std::forward\_iterator\_tag **iterator\_category**  
*The iterator category.*
- typedef E **value\_type**  
*The element type.*
- typedef **value\_type** **reference**  
*The reference type is the same as the value type, an Offset.*
- typedef **value\_type** **pointer**  
*The pointer type is the same as the value type, an Offset.*
- typedef std::ptrdiff\_t **difference\_type**  
*The difference type.*

## Public Member Functions

- **Sequenceliterator** ()  
*Constructs an invalid iterator.*
- bool **is\_null** () const  
*Returns whether the iterator is invalid.*
- **value\_type** **operator\*** () const  
*Returns the Offset of the current element.*
- **value\_type** **operator->** () const  
*Returns the Offset of the current element.*
- bool **advance** ()  
*Advances to the next element, reporting any errors by returning false.*
- **Sequenceliterator** & **operator++** ()  
*Advances to the next element.*
- **Sequenceliterator** **operator++** (int)  
*Advances to the next element.*

## Friends

- bool **operator**< (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*
- bool **operator**> (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*
- bool **operator**<= (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*
- bool **operator**>= (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*
- bool **operator**== (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*
- bool **operator**!= (const **Sequenceliterator** &s1, const **Sequenceliterator** &s2)  
*Compares two iterators.*

### 9.375.1 Detailed Description

```
template<typename E, typename OffsetKind>  
class rti::flat::Sequenceliterator< E, OffsetKind >
```

Iterator for collections of Offsets.

## Template Parameters

<i>E</i>	The Offset type of the elements
<i>OffsetKind</i>	(implementation detail)

## Note

This type should not be declared directly. For example, for a **SequenceOffset** (p. 1934), use **SequenceOffset**↔  
**::iterator** (p. 578) (or simply `auto`).

A **Sequenceliterator** (p. 1926) moves through the Offset to elements of a sequence or array **Offset** (p. 564), and provides the functionality of a standard `forward_iterator`.

Note that a dereferenced **Sequenceliterator** (p. 1926) returns **by value** the Offset to the current element; it doesn't return it by reference.

Since the Traditional C++ API doesn't use exceptions, it is recommended to use the function **advance()** (p. 1931) instead of `operator++` to check for errors

## 9.375.2 Member Typedef Documentation

### 9.375.2.1 iterator\_category

```
template<typename E , typename OffsetKind >
typedef std::forward_iterator_tag  rti::flat::SequenceIterator< E, OffsetKind >::iterator_↔
category
```

The iterator category.

### 9.375.2.2 value\_type

```
template<typename E , typename OffsetKind >
typedef E  rti::flat::SequenceIterator< E, OffsetKind >::value_type
```

The element type.

### 9.375.2.3 reference

```
template<typename E , typename OffsetKind >
typedef value_type rti::flat::SequenceIterator< E, OffsetKind >::reference
```

The reference type is the same as the value type, an Offset.

### 9.375.2.4 pointer

```
template<typename E , typename OffsetKind >
typedef value_type rti::flat::SequenceIterator< E, OffsetKind >::pointer
```

The pointer type is the same as the value type, an Offset.

### 9.375.2.5 difference\_type

```
template<typename E , typename OffsetKind >
typedef std::ptrdiff_t rti::flat::SequenceIterator< E, OffsetKind >::difference_type
```

The difference type.

## 9.375.3 Constructor & Destructor Documentation

### 9.375.3.1 SequenceIterator()

```
template<typename E , typename OffsetKind >
rti::flat::SequenceIterator< E, OffsetKind >::SequenceIterator ( ) [inline]
```

Constructs an invalid iterator.

## 9.375.4 Member Function Documentation

### 9.375.4.1 is\_null()

```
template<typename E , typename OffsetKind >
bool rti::flat::SequenceIterator< E, OffsetKind >::is_null ( ) const [inline]
```

Returns whether the iterator is invalid.

### 9.375.4.2 operator\*()

```
template<typename E , typename OffsetKind >
value_type rti::flat::SequenceIterator< E, OffsetKind >::operator* ( ) const [inline]
```

Returns the Offset of the current element.

#### Returns

The Offset to the current element. Note that this function returns by value, not by reference. This Offset may be **null** (p. 1857) if the iterator has surpassed the length of the collection. See **Offset Error Management** (p. 566).

### 9.375.4.3 operator->()

```
template<typename E , typename OffsetKind >
value_type rti::flat::SequenceIterator< E, OffsetKind >::operator-> ( ) const [inline]
```

Returns the Offset of the current element.

### 9.375.4.4 advance()

```
template<typename E , typename OffsetKind >
bool rti::flat::SequenceIterator< E, OffsetKind >::advance ( ) [inline]
```

Advances to the next element, reporting any errors by returning false.

Since the Traditional C++ API doesn't support exceptions, this function is recommended instead of operator++.

#### Returns

True if the function succeeds, or false if there was an error

### 9.375.4.5 operator++() [1/2]

```
template<typename E , typename OffsetKind >
SequenceIterator & rti::flat::SequenceIterator< E, OffsetKind >::operator++ ( ) [inline]
```

Advances to the next element.

#### Warning

Since the Traditional C++ API doesn't use exceptions, use **advance()** (p. 1931) instead of this operator to check for errors.

### 9.375.4.6 operator++() [2/2]

```
template<typename E , typename OffsetKind >
SequenceIterator rti::flat::SequenceIterator< E, OffsetKind >::operator++ (
    int ) [inline]
```

Advances to the next element.

#### Warning

Since the Traditional C++ API doesn't use exceptions, use **advance()** (p. 1931) instead of this operator to check for errors.

## 9.375.5 Friends And Related Function Documentation

### 9.375.5.1 operator<

```
template<typename E , typename OffsetKind >
bool operator< (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

### 9.375.5.2 operator>

```
template<typename E , typename OffsetKind >
bool operator> (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

### 9.375.5.3 operator<=

```
template<typename E , typename OffsetKind >
bool operator<= (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

### 9.375.5.4 operator>=

```
template<typename E , typename OffsetKind >
bool operator>= (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

### 9.375.5.5 operator==

```
template<typename E , typename OffsetKind >
bool operator== (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

### 9.375.5.6 operator"!=

```
template<typename E , typename OffsetKind >
bool operator!= (
    const SequenceIterator< E, OffsetKind > & s1,
    const SequenceIterator< E, OffsetKind > & s2 ) [friend]
```

Compares two iterators.

## 9.376 rti::flat::SequenceOffset< ElementOffset > Class Template Reference

Offset to a sequence of non-primitive elements.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::SequenceOffset< ElementOffset >:

### Public Member Functions

- ElementOffset **get\_element** (unsigned int i)  
*Gets the Offset to an element.*
- unsigned int **element\_count** () const  
*The number of elements.*

### Additional Inherited Members

#### 9.376.1 Detailed Description

```
template<typename ElementOffset>
class rti::flat::SequenceOffset< ElementOffset >
```

Offset to a sequence of non-primitive elements.

## Template Parameters

<i>ElementOffset</i>	The Offset type, for example <b>MyFlatMutableOffset</b> (p. 1757), <b>MyFlatFinalOffset</b> (p. 1746), or <b>StringOffset</b> (p. 1945).
----------------------	--

Represents an Offset to a sequence member and allows getting an Offset to each of its elements.

A **SequenceOffset** (p. 1934) may meet the requirements to be cast to an array of the equivalent plain C++ element type (see **rti::flat::plain\_cast** (p. 566)), if the `ElementOffset` is a final type.

## 9.376.2 Member Function Documentation

### 9.376.2.1 `get_element()`

```
template<typename ElementOffset >
ElementOffset rti::flat::SequenceOffset< ElementOffset >::get_element (
    unsigned int i ) [inline]
```

Gets the Offset to an element.

## Parameters

<i>i</i>	The zero-based index to the element
----------	-------------------------------------

## Returns

The Offset to the element in the *i*-th position

### 9.376.2.2 `element_count()`

```
template<typename ElementOffset >
unsigned int rti::flat::SequenceOffset< ElementOffset >::element_count ( ) const [inline]
```

The number of elements.

## 9.377 connext::SimpleReplier< TReq, TRep > Class Template Reference

A callback-based replier.

## Public Member Functions

- **SimpleReplier** ( **DDSDomainParticipant** \*participant, const std::string &service\_name, **SimpleReplier**↔  
**Listener**< TReq, TRep > &listener)  
*Creates a new **SimpleReplier** (p. 1935).*
- **SimpleReplier** (const **SimpleReplierParams**< TReq, TRep > &params)  
*Creates a new **SimpleReplier** (p. 1935).*
- virtual ~**SimpleReplier** ()  
*Releases the resources created by this **SimpleReplier** (p. 1935).*

### 9.377.1 Detailed Description

```
template<typename TReq, typename TRep>
class connext::SimpleReplier< TReq, TRep >
```

A callback-based replier.

A **SimpleReplier** (p. 1935) is based on a **connext::SimpleReplierListener** (p. 1937) that users provide . Requests are passed to the callback, which returns a reply. The reply is directed only to the **Requester** (p. 1886) that sent the request.

SimpleRepliers are useful for simple use cases where a single reply for a request can be generated quickly, for example, looking up a table.

When more than one reply for a request can be generated or the processing is complex or needs to happen asynchronously, use a **connext::Replier** (p. 1868) instead.

See also

- connext::Replier** (p. 1868)
- connext::SimpleReplierListener** (p. 1937)
- SimpleReplier example** (p. 233)

### 9.377.2 Constructor & Destructor Documentation

#### 9.377.2.1 SimpleReplier() [1/2]

```
template<typename TReq , typename TRep >
connext::SimpleReplier< TReq, TRep >::SimpleReplier (
    DDSDomainParticipant * participant,
    const std::string & service_name,
    SimpleReplierListener< TReq, TRep > & listener )
```

Creates a new **SimpleReplier** (p. 1935).

See also

- connext::SimpleReplierParams** (p. 1939)
- connext::SimpleReplierListener** (p. 1937)

### 9.377.2.2 SimpleReplier() [2/2]

```
template<typename TReq , typename TRep >
connext::SimpleReplier< TReq, TRep >::SimpleReplier (
    const SimpleReplierParams< TReq, TRep > & params ) [explicit]
```

Creates a new **SimpleReplier** (p. 1935).

See also

**connext::SimpleReplierParams** (p. 1939)

**connext::SimpleReplierListener** (p. 1937)

### 9.377.2.3 ~SimpleReplier()

```
template<typename TReq , typename TRep >
connext::SimpleReplier< TReq, TRep >::~~SimpleReplier [virtual]
```

Releases the resources created by this **SimpleReplier** (p. 1935).

See also

**connext::Replier::~~Replier()** (p. 1873)

## 9.378 connext::SimpleReplierListener< TReq, TRep > Class Template Reference

The listener called by a **SimpleReplier** (p. 1935).

### Public Member Functions

- virtual TRep \* **on\_request\_available** (typename dds\_type\_traits< TReq >::SampleRefType request)=0  
*User callback that receives a request and provides a reply.*
- virtual void **return\_loan** (TRep \*reply)=0  
*Returns a previously generated reply to the user.*

### 9.378.1 Detailed Description

```
template<class TReq, class TRep>
class connext::SimpleReplierListener< TReq, TRep >
```

The listener called by a **SimpleReplier** (p. 1935).

See also

**connext::SimpleReplier** (p. 1935)

**SimpleReplier example** (p. 233)

## 9.378.2 Member Function Documentation

### 9.378.2.1 `on_request_available()`

```
template<class TReq , class TRep >
virtual TRep * connext::SimpleReplierListener< TReq, TRep >::on_request_available (
    typename dds_type_traits< TReq >::SampleRefType request ) [pure virtual]
```

User callback that receives a request and provides a reply.

This operation gets called when a request is available and expects a reply that is automatically sent. Immediately after that, `return_loan` (p. 1938) is called.

#### Parameters

<i>request</i>	The received request
----------------	----------------------

#### Returns

A reply for that request

### 9.378.2.2 `return_loan()`

```
template<class TReq , class TRep >
virtual void connext::SimpleReplierListener< TReq, TRep >::return_loan (
    TRep * reply ) [pure virtual]
```

Returns a previously generated reply to the user.

This operation is always called right after sending the reply created by `on_request_available` (p. 1938). It can be used to release any resources from the reply creation. If there are no resources to release, the implementation body can be empty.

#### Parameters

<i>reply</i>	The reply previously provided in <code>on_request_available</code> (p. 1938)
--------------	--

## 9.379 connext::SimpleReplierParams< TReq, TRep > Class Template Reference

Contains the parameters for creating a **connext::SimpleReplier** (p. 1935).

Inherits connext::details::EntityParams.

### Public Member Functions

- **SimpleReplierParams** ( **DDS::DomainParticipant** \*participant, **SimpleReplierListener**< TReq, TRep > &listener)
 

*Creates **SimpleReplierParams** (p. 1939) with the parameters that a **SimpleReplier** (p. 1935) always needs.*
- **SimpleReplierParams** & **service\_name** (const std::string &service\_name)
 

*The service name the **Replier** (p. 1868) offers and Requesters use to match.*
- **SimpleReplierParams** & **request\_topic\_name** (const std::string &req\_topic)
 

*Sets a specific request topic name.*
- **SimpleReplierParams** & **reply\_topic\_name** (const std::string &rep\_topic)
 

*Sets a specific reply topic name.*
- **SimpleReplierParams** & **qos\_profile** (const std::string &qos\_library\_name, const std::string &qos\_profile\_↔ name)
 

*Sets a QoS profile for the entities in this replier.*
- **SimpleReplierParams** & **datawriter\_qos** (const **DDS\_DataWriterQos** &qos)
 

*Sets the quality of service of the reply **DataWriter**.*
- **SimpleReplierParams** & **datareader\_qos** (const **DDS\_DataReaderQos** &qos)
 

*Sets the quality of service of the request **DataReader**.*
- **SimpleReplierParams** & **publisher** ( **DDSPublisher** \*publisher)
 

*Sets a specific **Publisher**.*
- **SimpleReplierParams** & **subscriber** ( **DDSSubscriber** \*subscriber)
 

*Sets a specific **Subscriber**.*
- **SimpleReplierParams** & **request\_type\_support** ( **DDS::TypeSupport** \*type\_support)
 

*Sets the type support for the request type.*
- **SimpleReplierParams** & **reply\_type\_support** ( **DDS::TypeSupport** \*type\_support)
 

*Sets the type support for the reply type.*

### 9.379.1 Detailed Description

```
template<typename TReq, typename TRep>
class connext::SimpleReplierParams< TReq, TRep >
```

Contains the parameters for creating a **connext::SimpleReplier** (p. 1935).

The parameters for a **SimpleReplier** (p. 1935) are identical to those of the **Replier** (p. 1868), except for the **Simple↔ ReplierListener** (p. 1937), which is required and has a different user callback.

See also

**connext::ReplierParams** (p. 1881)

## 9.379.2 Constructor & Destructor Documentation

### 9.379.2.1 SimpleReplierParams()

```
template<typename TReq , typename TRep >
connext::SimpleReplierParams< TReq, TRep >::SimpleReplierParams (
    DDS::DomainParticipant * participant,
    SimpleReplierListener< TReq, TRep > & listener ) [inline]
```

Creates **SimpleReplierParams** (p. 1939) with the parameters that a **SimpleReplier** (p. 1935) always needs.

In addition to these parameters, a **SimpleReplier** (p. 1935) needs either:

- A service name (**service\_name** (p. 1940)), or
- Custom topic names (**reply\_topic\_name** (p. 1941) and **request\_topic\_name** (p. 1940)).

The other parameters are optional.

#### Parameters

<i>participant</i>	The DomainParticipant that this <b>SimpleReplier</b> (p. 1935) uses to join a domain.
<i>listener</i>	The listener where the user callback that a <b>SimpleReplier</b> (p. 1935) calls is implemented.

## 9.379.3 Member Function Documentation

### 9.379.3.1 service\_name()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::service_name (
    const std::string & service_name ) [inline]
```

The service name the **Replier** (p. 1868) offers and Requesters use to match.

See also

**connext::RequesterParams::service\_name** (p. 1909)

### 9.379.3.2 request\_topic\_name()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connex::SimpleReplierParams< TReq, TRep >::request_topic_name (
    const std::string & req_topic ) [inline]
```

Sets a specific request topic name.

This is an alternative to **service\_name** (p. 1940)

### 9.379.3.3 reply\_topic\_name()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connex::SimpleReplierParams< TReq, TRep >::reply_topic_name (
    const std::string & rep_topic ) [inline]
```

Sets a specific reply topic name.

This is an alternative to **service\_name** (p. 1940)

### 9.379.3.4 qos\_profile()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connex::SimpleReplierParams< TReq, TRep >::qos_profile (
    const std::string & qos_library_name,
    const std::string & qos_profile_name ) [inline]
```

Sets a QoS profile for the entities in this replier.

See also

**connex::ReplierParams::qos\_profile** (p. 1883)

### 9.379.3.5 datawriter\_qos()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connex::SimpleReplierParams< TReq, TRep >::datawriter_qos (
    const DDS_DataWriterQos & qos ) [inline]
```

Sets the quality of service of the reply DataWriter.

See also

**qos\_profile** (p. 1941)

### 9.379.3.6 `datareader_qos()`

```
template<typename TReq , typename TRep >  
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::datareader_qos (   
    const DDS_DataReaderQos & qos ) [inline]
```

Sets the quality of service of the request DataReader.

See also

[qos\\_profile](#) (p. 1941)

### 9.379.3.7 `publisher()`

```
template<typename TReq , typename TRep >  
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::publisher (   
    DDSPublisher * publisher ) [inline]
```

Sets a specific Publisher.

See also

[connext::RequesterParams::publisher](#) (p. 1910)

### 9.379.3.8 `subscriber()`

```
template<typename TReq , typename TRep >  
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::subscriber (   
    DDSSubscriber * subscriber ) [inline]
```

Sets a specific Subscriber.

See also

[connext::RequesterParams::subscriber](#) (p. 1911)

### 9.379.3.9 request\_type\_support()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::request_type_support (
    DDS::TypeSupport * type_support ) [inline]
```

Sets the type support for the request type.

See also

[connext::ReplierParams::request\\_type\\_support](#) (p. 1885)

### 9.379.3.10 reply\_type\_support()

```
template<typename TReq , typename TRep >
SimpleReplierParams & connext::SimpleReplierParams< TReq, TRep >::reply_type_support (
    DDS::TypeSupport * type_support ) [inline]
```

Sets the type support for the reply type.

See also

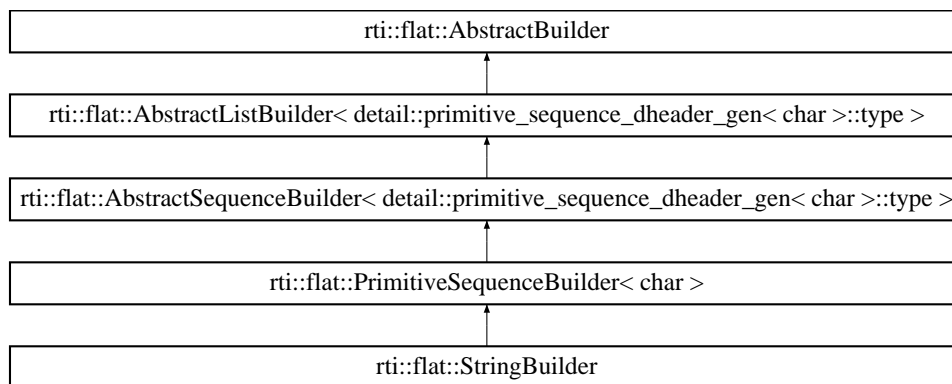

[connext::ReplierParams::reply\\_type\\_support](#) (p. 1885)

## 9.380 rti::flat::StringBuilder Class Reference

Builds a string.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for rti::flat::StringBuilder:

## Public Member Functions

- **StringBuilder** & **set\_string** (const char \*value)  
*Sets the string value.*
- **Offset** **finish** ()  
*Finishes building the string.*

## Additional Inherited Members

### 9.380.1 Detailed Description

Builds a string.

A **StringBuilder** (p. 1943) only provides one method, **set\_string()** (p. 1944), so it can be typically used as follows:

```
MyFlatMutableBuilder my_builder = ...;
my_builder.build_my_string().set_string("Hello!");
```

Note that by relying on the builder destructor, there is no need to call **finish()** (p. 1944) on the object returned by `build_my_string()`.

### 9.380.2 Member Function Documentation

#### 9.380.2.1 set\_string()

```
StringBuilder & rti::flat::StringBuilder::set_string (
    const char * value ) [inline]
```

Sets the string value.

References `rti::flat::PrimitiveSequenceBuilder< char >::add_n()`.

#### 9.380.2.2 finish()

```
Offset rti::flat::StringBuilder::finish ( ) [inline]
```

Finishes building the string.

Returns

An Offset to the member that has been built.

See also

`discard()` (p. 580)

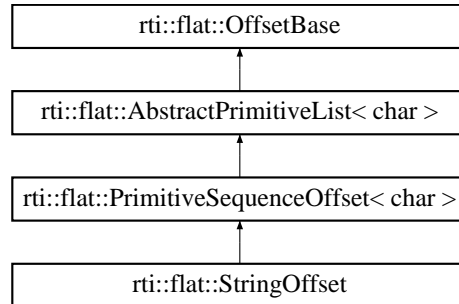

References `rti::flat::PrimitiveSequenceBuilder< char >::add_next()`.

## 9.381 rti::flat::StringOffset Class Reference

Offset to a string.

```
#include <SequenceOffsets.hpp>
```

Inheritance diagram for rti::flat::StringOffset:

### Public Member Functions

- char \* **get\_string** ()  
*Gets the string.*
- const char \* **get\_string** () const  
*Gets the string (const)*
- unsigned int **element\_count** () const  
*Returns the number of characters.*

### 9.381.1 Detailed Description

Offset to a string.

### 9.381.2 Member Function Documentation

#### 9.381.2.1 get\_string() [1/2]

```
char * rti::flat::StringOffset::get_string ( ) [inline]
```

Gets the string.

The string returned can be modified as long as its size doesn't change.

References [rti::flat::OffsetBase::get\\_buffer\(\)](#).

### 9.381.2.2 `get_string()` [2/2]

```
const char * rti::flat::StringOffset::get_string ( ) const [inline]
```

Gets the string (const)

References `rti::flat::OffsetBase::get_buffer()`.

### 9.381.2.3 `element_count()`

```
unsigned int rti::flat::StringOffset::element_count ( ) const [inline]
```

Returns the number of characters.

This number doesn't include the null terminating character.

References `rti::flat::PrimitiveSequenceOffset< T >::element_count()`.

## 9.382 `connext::TimeoutException` Class Reference

The operation timed out (does not apply to wait or receive operations)

Inheritance diagram for `connext::TimeoutException`:

### 9.382.1 Detailed Description

The operation timed out (does not apply to wait or receive operations)

Operations that wait for samples (e.g. `connext::Requester::wait_for_replies(int, const Duration_t&)` (p. 1896) or `connext::Replier::receive_requests(int, int, const Duration_t&)` (p. 1876)) do not throw this exception.

See also

`DDS_RETCODE_TIMEOUT` (p. 337)

## 9.383 TransportAllocationSettings\_t Struct Reference

Allocation settings used by various internal buffers.

### 9.383.1 Detailed Description

Allocation settings used by various internal buffers.

An allocation setting structure defines the rules of memory management used by internal buffers.

An internal buffer can provide blocks of memory of fixed size. They are used in several places of any transport, and this structure defines its starting size, limits, and how to increase its capacity.

It contains three values:

- `initial_count`: the number of individual elements that are allocated when the buffer is created.
- `max_count`: the maximum number of elements the buffer can hold. The buffer will grow up to this amount. After this limit is reached, new allocation requests will fail. For unlimited size, use the value `NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED`
- `incremental_count`: The amount of elements that are allocated at every increment. You can use the value `NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC` to have the buffer double its size at every reallocation request.

## 9.384 rti::flat::UnionBuilder< Discriminator > Class Template Reference

Base class of builders for user-defined mutable unions.

```
#include <AggregationBuilders.hpp>
```

Inheritance diagram for `rti::flat::UnionBuilder< Discriminator >`:

## Additional Inherited Members

### 9.384.1 Detailed Description

```
template<typename Discriminator>
class rti::flat::UnionBuilder< Discriminator >
```

Base class of builders for user-defined mutable unions.

Union builders can only add or build a single member.

This class contains implementation details and doesn't add any public function to **AbstractBuilder** (p. 579).

## 9.385 connext::UnsupportedException Class Reference

Unsupported operation.

Inheritance diagram for connext::UnsupportedException:

### 9.385.1 Detailed Description

Unsupported operation.

See also

**DDS\_RETCODE\_UNSUPPORTED** (p. 336)

## 9.386 connext::WriteSample< T > Class Template Reference

A sample for writing data.

Inherits connext::details::SampleBase< T, I >.

## Public Member Functions

- **WriteSample** ()  
*Creates a sample with default data and info values.*
- **WriteSample** (const **WriteSample**< T > &other)  
*Creates a sample making a deep copy of another sample.*
- **WriteSample** (const T & data)  
*Creates a sample making a deep copy of another sample.*
- **WriteSample** ( **WriteSampleRef**< T > wsref)  
*Creates a sample deep copying the data and info the source references.*
- T & **data** ()  
*Gets the data this sample contains.*
- **WriteParams\_t** & **info** ()  
*Gets the write parameters.*
- const T & **data** ()  
*Gets the data this sample contains.*
- const **WriteParams\_t** & **info** ()  
*Gets the write parameters.*
- **SampleIdentity\_t** **identity** () const  
*Gets the identity of this sample.*

### 9.386.1 Detailed Description

```
template<typename T>
class connext::WriteSample< T >
```

A sample for writing data.

WriteSamples are value types containing data that can be sent and optional parameters that configure how the data is written.

The data is automatically initialized using the corresponding **TypeSupport** (p.1711) for type T, and the memory is released in the destructor.

When the data already exists and allocating a new instance is not required, **connext::WriteSampleRef** (p.1952) can be used instead.

#### Template Parameters

<i>T</i>	The data type that this sample contains
----------	---

### 9.386.2 Constructor & Destructor Documentation

### 9.386.2.1 WriteSample() [1/4]

```
template<typename T >
connext::WriteSample< T >::WriteSample ( ) [inline]
```

Creates a sample with default data and info values.

The data is deeply initialized using the corresponding TypeSupport

See also

**FooTypeSupport::initialize\_data** (p. 1718)

### 9.386.2.2 WriteSample() [2/4]

```
template<typename T >
connext::WriteSample< T >::WriteSample (
    const WriteSample< T > & other ) [inline]
```

Creates a sample making a deep copy of another sample.

### 9.386.2.3 WriteSample() [3/4]

```
template<typename T >
connext::WriteSample< T >::WriteSample (
    const T & data )
```

Creates a sample making a deep copy of another sample.

### 9.386.2.4 WriteSample() [4/4]

```
template<typename T >
connext::WriteSample< T >::WriteSample (
    WriteSampleRef< T > wsref ) [inline]
```

Creates a sample deep copying the data and info the source references.

## 9.386.3 Member Function Documentation

### 9.386.3.1 data() [1/2]

```
template<typename T >
T & connext::WriteSample< T >::data ( )
```

Gets the data this sample contains.

### 9.386.3.2 info() [1/2]

```
template<typename T >
WriteParams_t & connext::WriteSample< T >::info ( )
```

Gets the write parameters.

The parameters are input and output to write operations. They can be set to configure the write operation (e.g. setting a specific publication timestamp) or they can be looked up afterward (e.g. what was the actual timestamp the sample was written with).

See also

**connext::Requester::send\_request(WriteSample<UReq>&)** (p. 1892)

**connext::Replier::send\_reply(WriteSample<URep>&, const SampleIdentity\_t&)** (p. 1874)

Referenced by **connext::WriteSample< T >::identity()**.

### 9.386.3.3 data() [2/2]

```
template<typename T >
const T & connext::WriteSample< T >::data ( )
```

Gets the data this sample contains.

### 9.386.3.4 info() [2/2]

```
template<typename T >
const WriteParams_t & connext::WriteSample< T >::info ( )
```

Gets the write parameters.

The parameters are input and output to write operations. They can be set to configure the write operation (e.g. setting a specific publication timestamp) or they can be looked up afterward (e.g. what was the actual timestamp the sample was written with).

**connext::Requester::send\_request(WriteSample<UReq>&)** (p. 1892)

**connext::Replier::send\_reply(WriteSample<URep>&, const SampleIdentity\_t&)** (p. 1874)

### 9.386.3.5 identity()

```
template<typename T >
SampleIdentity_t connext::WriteSample< T >::identity ( ) const [inline]
```

Gets the identity of this sample.

The identity is assigned by the middleware after writing.

See also

**Correlating requests and replies** (p. 230)

References **DDS\_WriteParams\_t::identity**, and **connext::WriteSample< T >::info()**.

## 9.387 connext::WriteSampleRef< T > Class Template Reference

A reference to a data sample for writing.

### Public Member Functions

- **WriteSampleRef** ()  
*Creates an object with no data.*
- **WriteSampleRef** (T & **data**, **WriteParams\_t** &wparams)  
*Creates an object with a reference to a data object.*
- **WriteSampleRef** ( **WriteSample**< T > &ws)  
*Copies the references to data and params.*
- T & **data** () const  
*Gets the data this sample contains.*
- **WriteParams\_t** & **info** () const  
*Gets the write parameters.*
- void **set\_data** (T & **data**)  
*Sets a reference to the data to be written.*
- void **set\_info** ( **WriteParams\_t** & **info**)  
*Copies the new parameters, overwriting the existing ones*
- bool **is\_nil\_data** () const  
*Indicates if this **WriteSampleRef** (p. 1952) contains a reference to data or not.*
- **SampleIdentity\_t** **identity** () const  
*Gets the identity of this sample.*

### 9.387.1 Detailed Description

```
template<typename T>
class connext::WriteSampleRef< T >
```

A reference to a data sample for writing.

A **WriteSampleRef** (p. 1952) can be used much like a **connext::WriteSample** (p. 1948), but it's different in that it holds references to data and write parameters, which need to be explicitly set to existing objects, whereas **WriteSample** (p. 1948) is a value type and it owns its data and info.

## Template Parameters

<i>T</i>	The data type that this sample can contain
----------	--

## 9.387.2 Constructor & Destructor Documentation

### 9.387.2.1 WriteSampleRef() [1/3]

```
template<typename T >  
connext::WriteSampleRef< T >::WriteSampleRef ( ) [inline]
```

Creates an object with no data.

See also

[set\\_data](#) (p. 1954)

### 9.387.2.2 WriteSampleRef() [2/3]

```
template<typename T >  
connext::WriteSampleRef< T >::WriteSampleRef (  
    T & data,  
    WriteParams_t & wparams ) [inline]
```

Creates an object with a reference to a data object.

See also

[set\\_data](#) (p. 1954)

### 9.387.2.3 WriteSampleRef() [3/3]

```
template<typename T >  
connext::WriteSampleRef< T >::WriteSampleRef (  
    WriteSample< T > & ws ) [inline]
```

Copies the references to data and params.

After this operation, this object contains a reference to the same data and WriteParams instances as the source.

### 9.387.3 Member Function Documentation

#### 9.387.3.1 data()

```
template<typename T >
T & connext::WriteSampleRef< T >::data ( ) const [inline]
```

Gets the data this sample contains.

##### Precondition

Data must have been set before

##### See also

**set\_data** (p. 1954)

**connext::WriteSample::data()** (p. 1950)

Referenced by **connext::WriteSampleRef< T >::set\_data()**.

#### 9.387.3.2 info()

```
template<typename T >
WriteParams_t & connext::WriteSampleRef< T >::info ( ) const [inline]
```

Gets the write parameters.

##### Precondition

The info object must have been set

##### See also

**set\_info()** (p. 1955)

**connext::WriteSample::identity()** (p. 1951)

Referenced by **connext::WriteSampleRef< T >::identity()**, and **connext::WriteSampleRef< T >::set\_info()**.

#### 9.387.3.3 set\_data()

```
template<typename T >
void connext::WriteSampleRef< T >::set_data (
    T & data ) [inline]
```

Sets a reference to the data to be written.

Assigns a reference to the

## Parameters

<i>data</i>	The data this sample will hold a reference to
-------------	---

References `connext::WriteSampleRef< T >::data()`.

9.387.3.4 `set_info()`

```
template<typename T >
void connext::WriteSampleRef< T >::set_info (
    WriteParams_t & info ) [inline]
```

Copies the new parameters, overwriting the existing ones

References `connext::WriteSampleRef< T >::info()`.

9.387.3.5 `is_nil_data()`

```
template<typename T >
bool connext::WriteSampleRef< T >::is_nil_data ( ) const [inline]
```

Indicates if this `WriteSampleRef` (p. 1952) contains a reference to data or not.

## Returns

True if this sample does not contain a reference to data.

## See also

`data()` (p. 1954)

`set_data` (p. 1954)

9.387.3.6 `identity()`

```
template<typename T >
SampleIdentity_t connext::WriteSampleRef< T >::identity ( ) const [inline]
```

Gets the identity of this sample.

## Precondition

The info object must have been set

## See also

`set_info()` (p. 1955)

`connext::WriteSample::identity()` (p. 1951)

References `DDS_WriteParams_t::identity`, and `connext::WriteSampleRef< T >::info()`.

# Chapter 11

## Example Documentation

### 11.1 HelloWorld.idl

#### 11.1.1 IDL Type Description

The data type to be disseminated by RTI Connext is described in language-independent IDL. The IDL file is input to `rtiddsgen` (see the `Code Generator User's Manual` for more information), which produces the following files.

The programming language specific type representation of the type **Foo** (p. 1648) = `HelloWorld`, for use in the application code.

- `HelloWorld.h`
- `HelloWorld.cxx`

**User Data Type Support** (p. 71) types as required by the DDS specification for use in the application code.

- `HelloWorldSupport.h`
- `HelloWorldSupport.cxx`

Methods required by the RTI Connext implementation. These contains the auto-generated methods for serializing and deserializing the type.

- `HelloWorldPlugin.h`
- `HelloWorldPlugin.cxx`

#### 11.1.1.1 HelloWorld.idl

```
struct HelloWorld {  
    string<128> msg;  
};
```

## 11.2 HelloWorld.cxx

### 11.2.1 Programming Language Type Description

The following programming language specific type representation is generated by rtiddsgen (see the Code Generator User's Manual for more information) for use in application code, where:

- **Foo** (p. 1648) = HelloWorld
- **FooSeq** (p. 1697) = HelloWorldSeq

#### 11.2.1.1 HelloWorld.h

```
