RTI Connext Traditional C++ API

Version 7.7.0

1 RTI Connext **1**

1.1 Available Documentation. . . . 1

1.1.1 The documents for the Core Libraries and Utilities are: . . . 2

1.1.2 The API Reference HTML documentation contains: . . . 2

1.2 Feedback and Support for this Release. . . . 2

2 Module Index **3**

2.1 Modules . . . 3

3 Namespace Index **9**

3.1 Namespace List . . . 9

4 Hierarchical Index **11**

4.1 Class Hierarchy . . . 11

5 Class Index **19**

5.1 Class List . . . 19

6 File Index **37**

6.1 File List . . . 37

7 Module Documentation **39**

7.1 RTI Connext Exceptions . . . 39

7.1.1 Detailed Description . . . 40

7.2 Clock Selection . . . 40

7.2.1 Available Clocks . . . 40

7.2.2 Clock Selection Strategy . . . 41

7.2.3 Configuring Clock Selection . . . 41

7.3 Domain Module . . . 41

7.3.1 Detailed Description . . . 42

7.4 DomainParticipantFactory . . . 42

7.4.1 Detailed Description . . . 43

7.4.2 Macro Definition Documentation . . . 43

7.4.2.1 DDSTheParticipantFactory . . . 44

7.4.3 Typedef Documentation . . . 44

7.4.3.1 DDSDomainParticipantFactory_RegisterTypeFunction . . . 44

7.4.4 Function Documentation . . . 44

7.4.4.1 DDS_DomainParticipantFactoryQos_equals() . . . 44

7.4.4.2 print() . . . 45

7.4.4.3 to_string() [1/6] . . . 45

7.4.4.4 to_string() [2/6] . . . 46

7.4.4.5 to_string() [3/6] . . . 47
7.4.4.6 to_string() [4/6] . . . 48
7.4.4.7 to_string() [5/6] . . . 48
7.4.4.8 to_string() [6/6] . . . 49
7.4.5 Variable Documentation . . . 50
7.4.5.1 DDS_PARTICIPANT_QOS_DEFAULT . . . 50
7.4.5.2 DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT . . . 51
7.5 DomainParticipants . . . 51
7.5.1 Detailed Description . . . 52
7.5.2 Typedef Documentation . . . 53
7.5.2.1 DDS_DomainId_t . . . 53
7.5.3 Function Documentation . . . 53
7.5.3.1 DDS_DomainParticipantQos_equals() . . . 53
7.5.3.2 print() . . . 53
7.5.3.3 to_string() [1/6] . . . 54
7.5.3.4 to_string() [2/6] . . . 55
7.5.3.5 to_string() [3/6] . . . 55
7.5.3.6 to_string() [4/6] . . . 56
7.5.3.7 to_string() [5/6] . . . 57
7.5.3.8 to_string() [6/6] . . . 58
7.5.4 Variable Documentation . . . 58
7.5.4.1 DDS_TOPIC_QOS_DEFAULT . . . 58
7.5.4.2 DDS_PUBLISHER_QOS_DEFAULT . . . 59
7.5.4.3 DDS_SUBSCRIBER_QOS_DEFAULT . . . 60
7.5.4.4 DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT . . . 60
7.5.4.5 DDS_SQLFILTER_NAME . . . 61
7.5.4.6 DDS_STRINGMATCHFILTER_NAME . . . 61
7.6 Built-in Topics . . . 61
7.6.1 Detailed Description . . . 62
7.7 Topic Module . . . 63
7.7.1 Detailed Description . . . 64
7.8 Topics . . . 64
7.8.1 Detailed Description . . . 66
7.8.2 Typedef Documentation . . . 66
7.8.2.1 DDS_PrintFormatProperty . . . 66
7.8.3 Enumeration Type Documentation . . . 66
7.8.3.1 DDS_PrintFormatKind . . . 66
7.8.4 Function Documentation . . . 67
7.8.4.1 DDS_TopicQos_equals() . . . 67

7.8.4.2 print() . . . 67
7.8.4.3 to_string() [1/6] . . . 68
7.8.4.4 to_string() [2/6] . . . 68
7.8.4.5 to_string() [3/6] . . . 69
7.8.4.6 to_string() [4/6] . . . 70
7.8.4.7 to_string() [5/6] . . . 71
7.8.4.8 to_string() [6/6] . . . 71
7.8.5 Variable Documentation . . . 72
7.8.5.1 DDS_PRINT_FORMAT_PROPERTY_DEFAULT . . . 72
7.8.5.2 DDS_FILTERSAMPLEINFO_DEFAULT . . . 72
7.9 Zero Copy Transfer Over Shared Memory . . . 73
7.10 User Data Type Support . . . 73
7.10.1 Detailed Description . . . 74
7.10.2 Macro Definition Documentation . . . 74
7.10.2.1 DDS_TYPESUPPORT_CPP . . . 75
7.10.2.2 DDS_DATAWRITER_CPP . . . 75
7.10.2.3 DDS_DATAREADER_W_DATA_CONSISTENCY_CHECK . . . 76
7.10.3 Typedef Documentation . . . 76
7.10.3.1 DDS_InstanceHandle_t . . . 76
7.10.4 Function Documentation . . . 76
7.10.4.1 DDS_InstanceHandle_equals() . . . 76
7.10.4.2 DDS_InstanceHandle_compare() . . . 77
7.10.4.3 DDS_InstanceHandle_copy() . . . 77
7.10.4.4 DDS_InstanceHandle_is_nil() . . . 78
7.10.5 Variable Documentation . . . 78
7.10.5.1 DDS_HANDLE_NIL . . . 78
7.11 Type Code Support . . . 79
7.11.1 Detailed Description . . . 82
7.11.2 Accessing a Local ::DDS_TypeCode . . . 82
7.11.3 Accessing a Remote ::DDS_TypeCode . . . 83
7.11.4 Macro Definition Documentation . . . 83
7.11.4.1 DDS_TYPECODE_MEMBER_ID_INVALID . . . 83
7.11.4.2 DDS_TYPECODE_INDEX_INVALID . . . 83
7.11.4.3 DDS_TYPECODE_NOT_BITFIELD . . . 84
7.11.4.4 DDS_VM_NONE . . . 84
7.11.4.5 DDS_VM_CUSTOM . . . 84
7.11.4.6 DDS_VM_ABSTRACT . . . 84
7.11.4.7 DDS_VM_TRUNCATABLE . . . 85
7.11.4.8 DDS_PRIVATE_MEMBER . . . 85

7.11.4.9 DDS_PUBLIC_MEMBER . . . 85
7.11.4.10 DDS_TYPECODE_NONKEY_MEMBER . . . 86
7.11.4.11 DDS_TYPECODE_KEY_MEMBER . . . 86
7.11.4.12 DDS_TYPECODE_NONKEY_REQUIRED_MEMBER . . . 87
7.11.4.13 DDS_TypeCode_PrintFormat_INITIALIZER . . . 87
7.11.5 Typedef Documentation . . . 87
7.11.5.1 DDS_ValueModifier . . . 88
7.11.5.2 DDS_Visibility . . . 88
7.11.6 Enumeration Type Documentation . . . 88
7.11.6.1 DDS_TypeCodePrintFormatKind . . . 88
7.11.6.2 DDS_TCKind . . . 89
7.11.6.3 DDS_ExtensibilityKind . . . 89
7.11.7 Variable Documentation . . . 90
7.11.7.1 DDS_g_tc_null . . . 90
7.11.7.2 DDS_g_tc_short . . . 91
7.11.7.3 DDS_g_tc_long . . . 91
7.11.7.4 DDS_g_tc_ushort . . . 91
7.11.7.5 DDS_g_tc_ulong . . . 92
7.11.7.6 DDS_g_tc_float . . . 92
7.11.7.7 DDS_g_tc_double . . . 92
7.11.7.8 DDS_g_tc_boolean . . . 93
7.11.7.9 DDS_g_tc_char . . . 93
7.11.7.10 DDS_g_tc_octet . . . 93
7.11.7.11 DDS_g_tc_int8 . . . 94
7.11.7.12 DDS_g_tc_uint8 . . . 94
7.11.7.13 DDS_g_tc_longlong . . . 94
7.11.7.14 DDS_g_tc_ulonglong . . . 95
7.11.7.15 DDS_g_tc_longdouble . . . 95
7.11.7.16 DDS_g_tc_wchar . . . 95
7.12 Built-in Types . . . 95
7.12.1 Detailed Description . . . 96
7.12.2 Managing Memory for Builtin Types . . . 96
7.12.3 Typecodes for Builtin Types . . . 97
7.13 Built-in Topic's Trust Types . . . 99
7.13.1 Detailed Description . . . 100
7.13.2 Typedef Documentation . . . 100
7.13.2.1 DDS_ParticipantTrustAttributesMask . . . 100
7.13.2.2 DDS_PluginParticipantTrustAttributesMask . . . 100
7.13.2.3 DDS_ParticipantTrustProtectionInfo . . . 100

7.13.2.4 DDS_EndpointTrustAttributesMask . . . 101
7.13.2.5 DDS_PluginEndpointTrustAttributesMask . . . 101
7.13.2.6 DDS_VendorEndpointTrustAttributesMask . . . 101
7.13.2.7 DDS_EndpointTrustProtectionInfo . . . 101
7.13.2.8 DDS_TrustAlgorithmBit . . . 101
7.13.2.9 DDS_TrustAlgorithmSet . . . 101
7.13.2.10 DDS_TrustAlgorithmRequirements . . . 101
7.13.2.11 DDS_ParticipantTrustSignatureAlgorithmInfo . . . 102
7.13.2.12 DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo . . . 102
7.13.2.13 DDS_ParticipantTrustInterceptorAlgorithmInfo . . . 102
7.13.2.14 DDS_ParticipantTrustAlgorithmInfo . . . 102
7.13.2.15 DDS_EndpointTrustInterceptorAlgorithmInfo . . . 102
7.13.2.16 DDS_EndpointTrustAlgorithmInfo . . . 103
7.14 Dynamic Data . . . 103
7.14.1 Detailed Description . . . 104
7.14.2 Macro Definition Documentation . . . 105
7.14.2.1 DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED . . . 105
7.14.3 Typedef Documentation . . . 105
7.14.3.1 DDS_DynamicDataMemberId . . . 105
7.14.4 Variable Documentation . . . 105
7.14.4.1 DDS_DYNAMIC_DATA_PROPERTY_DEFAULT . . . 106
7.14.4.2 DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT . . . 106
7.14.4.3 DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT . . . 106
7.15 Publication Module . . . 107
7.15.1 Detailed Description . . . 107
7.16 Publishers . . . 107
7.16.1 Detailed Description . . . 108
7.16.2 Function Documentation . . . 108
7.16.2.1 DDS_PublisherQos_equals() . . . 108
7.16.2.2 print() . . . 109
7.16.2.3 to_string() [1/6] . . . 109
7.16.2.4 to_string() [2/6] . . . 110
7.16.2.5 to_string() [3/6] . . . 111
7.16.2.6 to_string() [4/6] . . . 112
7.16.2.7 to_string() [5/6] . . . 112
7.16.2.8 to_string() [6/6] . . . 113
7.16.3 Variable Documentation . . . 114
7.16.3.1 DDS_DATAWRITER_QOS_DEFAULT . . . 114
7.16.3.2 DDS_DATAWRITER_QOS_USE_TOPIC_QOS . . . 115

7.17 Data Writers . . . 115
7.17.1 Detailed Description . . . 116
7.17.2 Function Documentation . . . 117
7.17.2.1 DDS_DataWriterQos_equals() . . . 117
7.17.2.2 print() . . . 117
7.17.2.3 to_string() [1/6] . . . 118
7.17.2.4 to_string() [2/6] . . . 118
7.17.2.5 to_string() [3/6] . . . 119
7.17.2.6 to_string() [4/6] . . . 120
7.17.2.7 to_string() [5/6] . . . 121
7.17.2.8 to_string() [6/6] . . . 121
7.18 Flow Controllers . . . 122
7.18.1 Detailed Description . . . 123
7.18.2 Enumeration Type Documentation . . . 123
7.18.2.1 DDS_FlowControllerSchedulingPolicy . . . 123
7.18.3 Variable Documentation . . . 125
7.18.3.1 DDS_DEFAULT_FLOW_CONTROLLER_NAME . . . 125
7.18.3.2 DDS_FIXED_RATE_FLOW_CONTROLLER_NAME . . . 126
7.18.3.3 DDS_ON_DEMAND_FLOW_CONTROLLER_NAME . . . 127
7.19 Subscription Module . . . 128
7.19.1 Detailed Description . . . 129
7.19.2 Access to data samples . . . 129
7.19.2.1 Data access patterns . . . 129
7.20 Subscribers . . . 130
7.20.1 Detailed Description . . . 131
7.20.2 Function Documentation . . . 131
7.20.2.1 DDS_SubscriberQos_equals() . . . 131
7.20.2.2 print() . . . 132
7.20.2.3 to_string() [1/6] . . . 132
7.20.2.4 to_string() [2/6] . . . 133
7.20.2.5 to_string() [3/6] . . . 134
7.20.2.6 to_string() [4/6] . . . 134
7.20.2.7 to_string() [5/6] . . . 135
7.20.2.8 to_string() [6/6] . . . 136
7.20.3 Variable Documentation . . . 136
7.20.3.1 DDS_DATAREADER_QOS_DEFAULT . . . 137
7.20.3.2 DDS_DATAREADER_QOS_USE_TOPIC_QOS . . . 137
7.21 DataReaders . . . 138
7.21.1 Detailed Description . . . 140

7.21.2 Enumeration Type Documentation . . . 140
7.21.2.1 DDS_SampleLostStatusKind . . . 140
7.21.2.2 DDS_SampleRejectedStatusKind . . . 144
7.21.3 Function Documentation . . . 146
7.21.3.1 DDS_DataReaderQos_equals() . . . 146
7.21.3.2 print() . . . 146
7.21.3.3 to_string() [1/6] . . . 147
7.21.3.4 to_string() [2/6] . . . 148
7.21.3.5 to_string() [3/6] . . . 148
7.21.3.6 to_string() [4/6] . . . 149
7.21.3.7 to_string() [5/6] . . . 150
7.21.3.8 to_string() [6/6] . . . 151
7.22 Read Conditions . . . 151
7.22.1 Detailed Description . . . 152
7.23 Query Conditions . . . 152
7.23.1 Detailed Description . . . 152
7.24 Data Samples . . . 152
7.24.1 Detailed Description . . . 153
7.24.2 Function Documentation . . . 153
7.24.2.1 DDS_CoherentSetInfo_equals() . . . 153
7.24.2.2 DDS_CoherentSetInfo_copy() . . . 154
7.24.2.3 DDS_SampleInfo_get_sample_identity() . . . 154
7.24.2.4 DDS_SampleInfo_get_related_sample_identity() . . . 154
7.25 Topic Queries . . . 155
7.25.1 Detailed Description . . . 156
7.25.2 Snapshot TopicQueries . . . 156
7.25.3 Reading TopicQuery Samples . . . 157
7.25.4 Debugging Topic Queries . . . 158
7.25.4.1 The Built-in ServiceRequest DataReader . . . 158
7.25.4.2 The on_service_request_accepted DataWriter Listener Callback . . . 158
7.25.5 Typedef Documentation . . . 158
7.25.5.1 DDS_TopicQuerySelection . . . 159
7.25.5.2 DDS_TopicQueryData . . . 159
7.25.6 Enumeration Type Documentation . . . 159
7.25.6.1 DDS_TopicQuerySelectionKind . . . 159
7.25.7 Variable Documentation . . . 160
7.25.7.1 DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER . . . 160
7.25.7.2 DDS_TOPIC_QUERY_SELECTION_SELECT_ALL . . . 160
7.26 Sample States . . . 160

7.26.1 Detailed Description . . . 161
7.26.2 Typedef Documentation . . . 161
7.26.2.1 DDS_SampleStateMask . . . 161
7.26.3 Enumeration Type Documentation . . . 161
7.26.3.1 DDS_SampleStateKind . . . 161
7.26.4 Variable Documentation . . . 162
7.26.4.1 DDS_ANY_SAMPLE_STATE . . . 162
7.27 View States . . . 162
7.27.1 Detailed Description . . . 163
7.27.2 Typedef Documentation . . . 163
7.27.2.1 DDS_ViewStateMask . . . 163
7.27.3 Enumeration Type Documentation . . . 163
7.27.3.1 DDS_ViewStateKind . . . 163
7.27.4 Variable Documentation . . . 164
7.27.4.1 DDS_ANY_VIEW_STATE . . . 164
7.28 Instance States . . . 164
7.28.1 Detailed Description . . . 165
7.28.2 Typedef Documentation . . . 165
7.28.2.1 DDS_InstanceStateMask . . . 165
7.28.3 Enumeration Type Documentation . . . 165
7.28.3.1 DDS_InstanceStateKind . . . 165
7.28.4 Variable Documentation . . . 166
7.28.4.1 DDS_ANY_INSTANCE_STATE . . . 166
7.28.4.2 DDS_NOT_ALIVE_INSTANCE_STATE . . . 166
7.29 Stream Kinds . . . 166
7.29.1 Detailed Description . . . 167
7.29.2 Typedef Documentation . . . 167
7.29.2.1 DDS_StreamKindMask . . . 167
7.29.3 Enumeration Type Documentation . . . 167
7.29.3.1 DDS_StreamKind . . . 167
7.30 Infrastructure Module . . . 167
7.30.1 Detailed Description . . . 169
7.30.2 Variable Documentation . . . 169
7.30.2.1 DDS_QOS_PRINT_ALL . . . 169
7.31 Built-in Sequences . . . 169
7.31.1 Detailed Description . . . 170
7.32 Multi-channel DataWriters . . . 170
7.32.1 What is a Multi-channel DataWriter? . . . 171
7.32.2 Configuration on the Writer Side . . . 171

7.32.3 Configuration on the Reader Side . . . 171
7.32.4 Reliability with Multi-Channel DataWriters . . . 171
7.32.4.1 Reliable Delivery . . . 171
7.32.4.2 Reliable Protocol Considerations . . . 172
7.33 Transports . . . 172
7.33.1 Detailed Description . . . 173
7.33.2 Overview . . . 173
7.33.3 Transport Aliases . . . 173
7.33.4 Transport Lifecycle . . . 174
7.33.5 Transport Class Attributes . . . 174
7.33.6 Transport Instance Attributes . . . 175
7.33.7 Transport Network Address . . . 176
7.33.8 Transport Send Route . . . 176
7.33.9 Transport Receive Route . . . 177
7.34 Installing Transport Plugins . . . 177
7.34.1 Detailed Description . . . 178
7.34.2 Loading Transport Plugins through Property QoS Policy of Domain Participant . . . 178
7.34.3 Typedef Documentation . . . 181
7.34.3.1 NDDS_Transport_Handle_t . . . 181
7.34.3.2 NDDS_Transport_create_plugin . . . 181
7.34.4 Function Documentation . . . 182
7.34.4.1 NDDS_Transport_Handle_is_nil() . . . 182
7.34.5 Variable Documentation . . . 182
7.34.5.1 NDDS_TRANSPORT_HANDLE_NIL . . . 182
7.35 Built-in Transport Plugins . . . 182
7.35.1 Detailed Description . . . 183
7.36 Creating New Transport Plugins . . . 183
7.37 Queries and Filters Syntax . . . 184
7.37.1 Syntax for DDS Queries and Filters . . . 184
7.37.2 SQL grammar in BNF . . . 184
7.37.3 Token expression . . . 185
7.37.4 String Parameters . . . 187
7.37.5 Type compatability in Predicate . . . 187
7.37.6 SQL Extension: Regular Expression Matching . . . 187
7.37.7 Character Encoding . . . 188
7.37.8 Unicode Normalization . . . 188
7.37.9 Examples . . . 189
7.38 Logging and Version . . . 189
7.38.1 Detailed Description . . . 190

7.39 General Utilities and Compliance Configuration . . . 190
7.39.1 Detailed Description . . . 190
7.40 Observability Framework . . . 190
7.40.1 Detailed Description . . . 190
7.41 Request-Reply Pattern . . . 191
7.41.1 Detailed Description . . . 191
7.42 Requester . . . 191
7.42.1 Detailed Description . . . 192
7.43 Replier . . . 192
7.43.1 Detailed Description . . . 192
7.44 Infrastructure . . . 192
7.44.1 Detailed Description . . . 193
7.44.2 Function Documentation . . . 194
7.44.2.1 make_valid_sample_iterator() . . . 194
7.44.2.2 move() . . . 195
7.45 Utilities . . . 195
7.45.1 Detailed Description . . . 196
7.46 Durability and Persistence . . . 196
7.46.1 Durable Writer History . . . 196
7.46.2 Durable Reader State . . . 197
7.46.3 Data Durability . . . 197
7.46.4 Durability and Persistence Based on Virtual GUID . . . 197
7.46.5 Configuring Durable Writer History . . . 198
7.46.6 Configuring Durable Reader State . . . 200
7.46.7 Configuring Data Durability . . . 201
7.47 Basic QoS . . . 201
7.48 DDS Specification QoS . . . 209
7.49 DDS Extension QoS . . . 213
7.50 Functional Categories . . . 252
7.50.1 Detailed Description . . . 253
7.51 Application Acknowledgement . . . 253
7.52 Application-Defined Metadata . . . 254
7.53 Application Startup . . . 256
7.54 Batching . . . 257
7.55 Concurrency . . . 258
7.56 Content Filtering . . . 260
7.57 Data Availability . . . 261
7.58 Debuggability . . . 266
7.59 Discovery . . . 271

7.60 Discovery Isolation . . . 277
7.61 Durability . . . 278
7.62 Flow Control . . . 282
7.63 Fragmentation . . . 284
7.64 Instance Lifecycle . . . 286
7.65 Sending Large Data . . . 290
7.66 Liveliness . . . 292
7.67 Logging . . . 294
7.68 Middleware Memory Management . . . 297
7.69 QoS Profile Management . . . 312
7.70 Reliability QoS . . . 314
7.71 Sample Memory Management QoS . . . 321
7.72 Sample Ordering . . . 324
7.73 Security . . . 325
7.74 Throughput . . . 327
7.75 Transports . . . 327
7.76 Topic Queries . . . 330
7.77 Type System . . . 331
7.78 QoS Mutability . . . 333
7.78.1 Detailed Description . . . 333
7.79 Immutable QoS . . . 333
7.80 Mutable QoS . . . 369
7.81 Other QoS Attributes . . . 375
7.81.1 Detailed Description . . . 375
7.82 Applied Per-Instance . . . 375
7.83 Discovery Metadata . . . 377
7.84 Matching . . . 382
7.85 Deprecated QoS . . . 384
7.86 System Properties . . . 389
7.86.1 System Properties List . . . 390
7.86.2 System Resource Consideration . . . 390
7.87 Configuring QoS Profiles with XML . . . 390
7.87.1 Loading QoS Profiles from XML Resources . . . 390
7.87.2 URL . . . 392
7.87.2.1 URL groups . . . 392
7.87.2.2 NDDS_QOS_PROFILES environment variable . . . 392
7.87.2.3 Built-In QoS Profiles . . . 392
7.88 Publication Example . . . 392
7.88.1 A typical publication example . . . 393

7.89 Subscription Example . . . 393
7.89.1 A typical subscription example . . . 394
7.90 Participant Use Cases . . . 394
7.90.1 Turning off auto-enable of newly created participant(s) . . . 395
7.90.2 Getting the factory . . . 395
7.90.3 Setting up a participant . . . 395
7.90.4 Tearing down a participant . . . 396
7.91 Topic Use Cases . . . 396
7.91.1 Registering a user data type . . . 396
7.91.2 Setting up a topic . . . 396
7.91.3 Tearing down a topic . . . 397
7.92 FlowController Use Cases . . . 397
7.92.1 Creating a flow controller . . . 397
7.92.2 Flow controlling a data writer . . . 397
7.92.3 Using the built-in flow controllers . . . 398
7.92.4 Shaping the network traffic for a particular transport . . . 399
7.92.5 Coalescing multiple samples in a single network packet . . . 399
7.93 Publisher Use Cases . . . 399
7.93.1 Setting up a publisher . . . 399
7.93.2 Tearing down a publisher . . . 399
7.94 DataWriter Use Cases . . . 400
7.94.1 Setting up a data writer . . . 400
7.94.2 Managing instances . . . 400
7.94.3 Sending data . . . 401
7.94.4 Tearing down a data writer . . . 401
7.95 Subscriber Use Cases . . . 401
7.95.1 Setting up a subscriber . . . 401
7.95.2 Set up subscriber to access received data . . . 402
7.95.3 Access received data via a subscriber . . . 402
7.95.4 Access received data coherently and/or in order . . . 403
7.95.5 Tearing down a subscriber . . . 403
7.96 DataReader Use Cases . . . 403
7.96.1 Setting up a data reader . . . 403
7.96.2 Managing instances . . . 404
7.96.3 Set up reader to access received data . . . 404
7.96.4 Access received data via a reader . . . 404
7.96.5 Taking data . . . 404
7.96.6 Reading data . . . 405
7.96.7 Tearing down a data reader . . . 406

7.97 Entity Use Cases . . . 406
7.97.1 Enabling an entity . . . 406
7.97.2 Checking if a status changed on an entity. . . . 406
7.97.3 Changing the QoS for an entity . . . 406
7.97.4 Changing the listener and enabling/disabling statuses associated with it . . . 407
7.97.5 Enabling/Disabling statuses associated with a status condition . . . 407
7.98 Waitset Use Cases . . . 408
7.98.1 Setting up a wait-set . . . 408
7.98.2 Waiting for condition(s) to trigger . . . 409
7.98.3 Tearing down a wait-set . . . 409
7.99 Transport Use Cases . . . 409
7.99.1 Changing the automatically registered built-in transports . . . 409
7.99.2 Changing the properties of the automatically registered builtin transports . . . 410
7.99.3 Creating a transport . . . 410
7.99.4 Deleting a transport . . . 410
7.99.5 Registering a transport with a participant . . . 411
7.99.6 Adding receive routes for a transport . . . 412
7.99.7 Adding send routes for a transport . . . 412
7.100 Filter Use Cases . . . 412
7.100.1 Introduction . . . 412
7.100.1.1 Overview of ContentFilteredTopic . . . 413
7.100.1.2 Overview of QueryCondition . . . 413
7.100.2 Filtering with ContentFilteredTopic . . . 414
7.100.3 Filtering with Query Conditions . . . 414
7.100.4 Filtering Performance . . . 415
7.101 Creating Custom Content Filters . . . 415
7.101.1 Introduction . . . 416
7.101.2 The Custom Content Filter API . . . 416
7.101.2.1 The compile function . . . 416
7.101.2.2 The evaluate function . . . 416
7.101.2.3 The finalize function . . . 417
7.101.3 Example Using C format strings . . . 417
7.101.3.1 Writing the Compile Function . . . 417
7.101.3.2 Writing the Evaluate Function . . . 417
7.101.3.3 Writing the Finalize Function . . . 417
7.101.3.4 Registering the Filter . . . 418
7.101.3.5 Unregistering the Filter . . . 418
7.102 Large Data Use Cases . . . 418
7.102.1 Introduction
 . . . 418

7.102.2 Writing Large Data . . . 419
7.102.3 Receiving Large Data . . . 419
7.103 Request-Reply Examples . . . 419
7.103.1 Request-Reply Examples . . . 419
7.103.2 Requester Creation . . . 421
7.103.3 Creating a Requester with optional parameters . . . 421
7.103.4 Basic Requester example . . . 421
7.103.5 Taking loaned samples . . . 422
7.103.6 Taking samples by copy . . . 422
7.103.7 Correlating requests and replies . . . 423
7.103.8 Basic Requester example using SampleRef . . . 424
7.103.9 Creating a Replier . . . 425
7.103.10 Basic Replier example . . . 425
7.103.11 SimpleReplier example . . . 426
7.103.12 Error handling example . . . 426
7.103.13 Configuring Request-Reply QoS profiles . . . 427
7.104 Documentation Roadmap . . . 430
7.105 Conventions . . . 431
7.105.1 Unsupported Features . . . 431
7.105.2 API Naming Conventions . . . 431
7.105.2.1 Structure & Class Names . . . 431
7.105.3 API Documentation Terms . . . 431
7.105.4 Stereotypes . . . 432
7.105.4.1 Basic Qos . . . 432
7.105.4.2 Extensions . . . 432
7.105.4.3 Experimental . . . 432

Chapter 1

RTI Connext

Core Libraries and Utilities

Real-Time Innovations, Inc.

RTI Connext is network middleware for real-time distributed applications. It provides the communications services that programmers need to distribute time-critical data between embedded and/or enterprise devices or nodes. RTI Connext uses the publish-subscribe communications model to make data distribution efficient and robust.

The RTI Connext Application Programming Interface (API) is based on the OMG's Data Distribution Service (DDS) specification, version 1.4. The most recent publication of this specification can be found in the Catalog of OMG Specifications under "Platform Categories".

Note: This documentation is for the **RTI Connext Traditional C++ API**; the RTI Connext Modern C++ API is also available.

1.1 Available Documentation.

The documentation for this release is provided in two forms: the API Reference HTML documentation and PDF documents. If you are new to RTI Connext, the **Documentation Roadmap** (p. 430) will provide direction on how to learn about this product.

1.1.1 The documents for the Core Libraries and Utilities are:

- **What's New.** An overview of the new features in this release.
- **Release Notes.** System requirements, compatibility, what's fixed in this release, and known issues.
- **Platform Notes.** Specific details, such as compilation setting and libraries, related to building and using RTI Connext on the various supported platforms.
- **Getting Started Guide.** Core value and concepts behind the product, taking you step-by-step through the creation of a simple example application. Developers should read this document first.
- **Code Generator User's Manual.** Information about using rtiddsgen to generate code from data types.
- **User's Manual.** Introduction to RTI Connext, product tour and conceptual presentation of the functionality of RTI Connext.
- **QoS Reference Guide.** A compact summary of supported Quality of Service (QoS) policies.
- **XML-Based Application Creation Getting Started Guide.** Details on how to use XML-Based Application Creation.
- **Extensible Types Guide.** Additional information about extensible types.
- See more `documentation` on RTI Community.

1.1.2 The API Reference HTML documentation contains:

- **RTI Connext DDS API Reference** (p. 434) - The RTI Connext API reference.
- **Additional RTI Connext Communication Patterns** (p. 438) - RTI Connext APIs for additional communication patterns
- **Programming How-To's** (p. 439) - Describes and shows the common tasks done using the API.

The API Reference HTML documentation can be accessed through the tree view in the left frame of the web browser window. The bulk of the documentation is found under the entry labeled "Modules".

1.2 Feedback and Support for this Release.

We welcome any input on how to improve RTI Connext to suit your needs. If you have questions or comments about this release, please visit the RTI Customer Portal at `https://support.rti.com`.

The Customer Portal provides access to RTI software, documentation, and support. It also allows you to log support cases. Furthermore, the portal provides detailed solutions and a free public knowledge base. To access the software, documentation or log support cases, the RTI Customer Portal requires a username and password. You will receive this in the email confirming your purchase. If you do not have this email, please contact `license@rti.com`. Resetting your login password can be done directly at the RTI Customer Portal.

Chapter 5

Class Index

5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

rti::flat::AbstractAlignedList< ElementOffset >
Base class of Offsets to sequences and arrays of non-primitive members . . . 785
rti::flat::AbstractBuilder
Base class of all **Builders** (p. 766) . . . 787
rti::flat::AbstractListBuilder< DHeaderGen >
Base class of all array and sequence builders . . . 789
rti::flat::AbstractPrimitiveList< T >
Base class for Offsets to sequences and arrays of primitive types . . . 790
rti::flat::AbstractSequenceBuilder< DHeaderGen >
Base class of Builders for sequence members . . . 792
rti::flat::AggregationBuilder
Base class of struct and union builders . . . 793
connext::AlreadyDeletedException
The object target of this operation has already been deleted . . . 793
connext::BadParameterException
Illegal parameter value . . . 794
DDS_AcknowledgmentInfo
Information about an application-level acknowledged sample . . . 794
DDS_AckResponseData_t
Data payload of an application-level acknowledgment . . . 796
DDS_AllocationSettings_t
Resource allocation settings . . . 796
DDS_AnnotationParameterValue
Annotation parameter value . . . 798
DDS_AsynchronousPublisherQosPolicy
<<***extension***>> *(p. 213)* Configures the mechanism that sends user data in an external middleware thread . . . 798
DDS_AsyncWaitSetProperty_t
Specifies the **DDSAsyncWaitSet** (p. 1528) behavior . . . 802
DDS_AvailabilityQosPolicy
<<***extension***>> *(p. 213)* Configures the availability of data . . . 805

DDS_BatchQosPolicy
<<***extension***>> *(p. 213)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples . . . 810
DDS_BooleanSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Boolean** (p. 516) > . . . 814
DDS_BuiltinTopicKey_t
The key type of the built-in topic types . . . 814
DDS_BuiltinTopicReaderResourceLimits_t
<<***extension***>> *(p. 213)* Built-in topic reader's resource limits . . . 815
DDS_ChannelSettings_t
<<***extension***>> *(p. 213)* Type used to configure the properties of a channel . . . 822
DDS_ChannelSettingsSeq
Declares IDL sequence< **DDS_ChannelSettings_t** (p. 822) > . . . 824
DDS_CharSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Char** (p. 513) > . . . 824
DDS_CoherentSetInfo_t
<<***extension***>> *(p. 432)* Type definition for a coherent set info . . . 824
DDS_CompressionSettings_t
<<***extension***>> *(p. 213)* Settings related to compressing user data . . . 826
DDS_ContentFilterProperty_t
<<***extension***>> *(p. 432)* Type used to provide all the required information to enable content filtering 828
DDS_Cookie_t
<<***extension***>> *(p. 432)* Sequence of bytes . . . 830
DDS_CookieSeq
Declares IDL sequence < **DDS_Cookie_t** (p. 830) > . . . 830
DDS_DatabaseQosPolicy
<<***extension***>> *(p. 213)* Various threads and resource limits settings used by RTI Connext to control its internal database . . . 831
DDS_DataReaderCacheStatus
<<***extension***>> *(p. 432)* The status of the reader's cache . . . 836
DDS_DataReaderProtocolQosPolicy
<<***extension***>> *(p. 213)* Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataWriterProtocolQosPolicy** (p. 892), this QoS policy configures the DDS on-the-network protocol (RTPS) . . . 843
DDS_DataReaderProtocolStatus
<<***extension***>> *(p. 432)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic . . . 847
DDS_DataReaderQos
QoS policies supported by a **DDSDataReader** (p. 1556) entity . . . 858
DDS_DataReaderResourceLimitsInstanceReplacementSettings
Instance replacement kind applied to each instance state . . . 866
DDS_DataReaderResourceLimitsQosPolicy
<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataReader** (p. 1556) allocates and uses physical memory for internal resources . . . 867
DDS_DataRepresentationIdSeq
Declares IDL sequence < **DDS_DataRepresentationId_t** (p. 568) > . . . 886
DDS_DataRepresentationQosPolicy
<<***spec***>> *(p. 209)* This QoS policy contains a list of representation identifiers and compression settings used by **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities to negotiate which data representation and compression settings to use . . . 886
DDS_DataTags
Definition of **DDS_DataTagQosPolicy** (p. 575) . . . 889

DDS_DataWriterCacheStatus
<<***extension***>> *(p. 432)* The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue 889
DDS_DataWriterProtocolQosPolicy
<<***extension***>> *(p. 213)* Protocol that applies only to **DDSDataWriter** (p. 1589) instances 892
DDS_DataWriterProtocolStatus
<<***extension***>> *(p. 432)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic 897
DDS_DataWriterQos
QoS policies supported by a **DDSDataWriter** (p. 1589) entity 909
DDS_DataWriterResourceLimitsQosPolicy
<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources 917
DDS_DataWriterShmemRefTransferModeSettings
Settings related to transferring data using shared memory references 926
DDS_DataWriterTransferModeQosPolicy
<<***extension***>> *(p. 213)* Qos related to transferring data 927
DDS_DeadlineQosPolicy
<<***spec***>> *(p. 209)* Expresses the maximum duration (deadline) within which an instance is expected to be updated 928
DDS_DestinationOrderQosPolicy
<<***spec***>> *(p. 209)* Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1589) entities for the same instance of data (i.e., same **DDSTopic** (p. 1885) and key) . . . 931
DDS_DiscoveryConfigQosPolicy
Settings for discovery configuration 934
DDS_DiscoveryQosPolicy
<<***extension***>> *(p. 213)* Configures the mechanism used by the middleware to automatically discover and connect with new remote applications 960
DDS_DomainParticipantConfigParams_t
<<***extension***>> *(p. 432)* Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration 964
DDS_DomainParticipantFactoryQos
QoS policies supported by a **DDSDomainParticipantFactory** (p. 1694) 967
DDS_DomainParticipantProtocolStatus
<<***extension***>> *(p. 432)* The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message . 970
DDS_DomainParticipantQos
QoS policies supported by a **DDSDomainParticipant** (p. 1619) entity 971
DDS_DomainParticipantResourceLimitsQosPolicy
<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDomainParticipant** (p. 1619) allocates and uses physical memory for internal resources, including the maximum sizes of various properties 977
DDS_DoubleSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Double** (p. 515) > 1004
DDS_DurabilityQosPolicy
<<***spec***>> *(p. 209)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1556) entities that join the network later 1005
DDS_DurabilityServiceQosPolicy
<<***spec***>> *(p. 209)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **DDS_DurabilityQosPolicy** (p. 1005) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS_TRANSIENT_DURABILITY_QOS** (p. 599) 1009
DDS_Duration_t
Type for *duration* representation 1012

DDS_DynamicData
A sample of any complex data type, which can be inspected and manipulated reflectively 1013
DDS_DynamicDataInfo
A descriptor for a **DDS_DynamicData** (p. 1013) object 1133
DDS_DynamicDataJsonParserProperties_t
A collection of attributes used to configure **DDS_DynamicData** (p. 1013) objects 1134
DDS_DynamicDataMemberInfo
A descriptor for a single member (i.e. field) of dynamically defined data type 1135
DDS_DynamicDataProperty_t
A collection of attributes used to configure **DDS_DynamicData** (p. 1013) objects 1137
DDS_DynamicDataSeq
An ordered collection of **DDS_DynamicData** (p. 1013) elements 1138
DDS_DynamicDataTypeProperty_t
A collection of attributes used to configure **DDSDynamicDataTypeSupport** (p. 1725) objects . . . 1138
DDS_DynamicDataTypeSerializationProperty_t
Properties that govern how data of a certain type will be serialized on the network 1139
DDS_EndpointGroup_t
Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum 1142
DDS_EndpointGroupSeq
A sequence of **DDS_EndpointGroup_t** (p. 1142) 1142
DDS_EndpointTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered endpoint 1143
DDS_EndpointTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered endpoint 1144
DDS_EndpointTrustProtectionInfo
Trust Plugins Protection information associated with the discovered endpoint 1144
DDS_EntityFactoryQosPolicy
<<***spec***>> *(p. 209)* A QoS policy for all **DDSEntity** (p. 1731) types that can act as factories for one or more other **DDSEntity** (p. 1731) types 1145
DDS_EntityNameQosPolicy
<<***extension***>> *(p. 213)* Assigns a name and a role name to a **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556). Except for **DDSPublisher** (p. 1818) and **DDSSubscriber** (p. 1860), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system . 1147
DDS_EnumMember
A description of a member of an enumeration 1149
DDS_EnumMemberSeq
Defines a sequence of enumerator members 1150
DDS_EventQosPolicy
<<***extension***>> *(p. 213)* Settings for event 1150
DDS_ExpressionProperty
Provides additional information about the filter expression passed to **DDSWriterContentFilter**↩ **::writer_compile** (p. 1906) 1152
DDS_FilterSampleInfo
Provides meta information associated with the sample 1153
DDS_FloatSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Float** (p. 515) > 1156
DDS_FlowControllerProperty_t
Determines the flow control characteristics of the **DDSFlowController** (p. 1736) 1156
DDS_FlowControllerTokenBucketProperty_t
DDSFlowController (p. 1736) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties 1157

DDS_GroupDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery . . . 1160
DDS_GUID_t
Type for *GUID* (Global Unique Identifier) representation . . . 1161
DDS_HistoryQosPolicy
<<***spec***>> *(p. 209)* Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers . . . 1162
DDS_InconsistentTopicStatus
DDS_INCONSISTENT_TOPIC_STATUS (p. 539) . . . 1165
DDS_InstanceHandleSeq
Instantiates **FooSeq** (p. 1965) < **DDS_InstanceHandle_t** (p. 76) > . . . 1166
DDS_Int8Seq
Instantiates **FooSeq** (p. 1965) < **DDS_Int8** (p. 514) > . . . 1167
DDS_InvalidLocalAdvanceNoticeStatus
DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS (p. 543) . . . 1167
DDS_KeyedOctets
Built-in type consisting of a variable-length array of opaque bytes and a string that is the key . . . 1168
DDS_KeyedOctetsSeq
Instantiates **FooSeq** (p. 1965) < **DDS_KeyedOctets** (p. 1168) > . . . 1170
DDS_KeyedString
Keyed string built-in type . . . 1171
DDS_KeyedStringSeq
Instantiates **FooSeq** (p. 1965) < **DDS_KeyedString** (p. 1171) > . . . 1173
DDS_LatencyBudgetQosPolicy
<<***spec***>> *(p. 209)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications . . . 1173
DDS_LifespanQosPolicy
<<***spec***>> *(p. 209)* Specifies how long the data written by the **DDSDataWriter** (p. 1589) is considered valid . . . 1175
DDS_LivelinessChangedStatus
DDS_LIVELINESS_CHANGED_STATUS (p. 542) . . . 1176
DDS_LivelinessLostStatus
DDS_LIVELINESS_LOST_STATUS (p. 542) . . . 1179
DDS_LivelinessQosPolicy
Specifies and configures the mechanism that allows **DDSDataReader** (p. 1556) entities to detect when **DDSDataWriter** (p. 1589) entities become disconnected or "dead." . . . 1180
DDS_Locator_t
<<***extension***>> *(p. 213)* Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports . . . 1184
DDS_LocatorFilter_t
<<***extension***>> *(p. 213)* Specifies the configuration of an individual channel within a MultiChannel DataWriter . . . 1185
DDS_LocatorFilterQosPolicy
<<***extension***>> *(p. 213)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS_PublicationBuiltinTopicData** (p. 1264) . . . 1186
DDS_LocatorFilterSeq
Declares IDL sequence< **DDS_LocatorFilter_t** (p. 1185) > . . . 1187
DDS_LocatorSeq
Declares IDL sequence < **DDS_Locator_t** (p. 1184) > . . . 1188
DDS_LoggingQosPolicy
<<***extension***>> *(p. 213)* Configures the RTI Connext logging facility . . . 1188

DDS_LongDoubleSeq
Instantiates **FooSeq** (p. 1965) < **DDS_LongDouble** (p. 516) > . . . 1192
DDS_LongLongSeq
Instantiates **FooSeq** (p. 1965) < **DDS_LongLong** (p. 515) > . . . 1192
DDS_LongSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Long** (p. 515) > . . . 1192
DDS_MonitoringDedicatedParticipantSettings
<<***extension***>> *(p. 213)* Configures the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data . . . 1193
DDS_MonitoringDistributionSettings
<<***extension***>> *(p. 213)* Configures the distribution of telemetry data . . . 1195
DDS_MonitoringEventDistributionSettings
<<***extension***>> *(p. 213)* Configures the distribution of event metrics . . . 1197
DDS_MonitoringLoggingDistributionSettings
<<***extension***>> *(p. 213)* Configures the distribution of log messages . . . 1200
DDS_MonitoringLoggingForwardingSettings
<<***extension***>> *(p. 213)* Configures the forwarding levels of log messages for the different **NDDS_Config_LogFacility** (p. 727) . . . 1204
DDS_MonitoringMetricSelection
<<***extension***>> *(p. 213)* This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources . . . 1206
DDS_MonitoringMetricSelectionSeq
Declares IDL sequence < **DDS_MonitoringMetricSelection** (p. 1206) > . . . 1208
DDS_MonitoringPeriodicDistributionSettings
<<***extension***>> *(p. 213)* Configures the distribution of periodic metrics . . . 1209
DDS_MonitoringQosPolicy
<<***extension***>> *(p. 213)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data . . . 1210
DDS_MonitoringTelemetryData
<<***extension***>> *(p. 213)* Configures the telemetry data that will be distributed . . . 1213
DDS_MultiChannelQosPolicy
<<***extension***>> *(p. 213)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data . . . 1214
DDS_Octets
Built-in type consisting of a variable-length array of opaque bytes . . . 1217
DDS_OctetSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Octet** (p. 514) > . . . 1218
DDS_OctetsSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Octets** (p. 1217) > . . . 1219
DDS_OfferedDeadlineMissedStatus
DDS_OFFERED_DEADLINE_MISSED_STATUS (p. 539) . . . 1219
DDS_OfferedIncompatibleQosStatus
DDS_OFFERED_INCOMPATIBLE_QOS_STATUS (p. 540) . . . 1221
DDS_OwnershipQosPolicy
<<***spec***>> *(p. 209)* Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1589) (s) to write the same instance of the data and if so, how these modifications should be arbitrated . . . 1222
DDS_OwnershipStrengthQosPolicy
Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1589) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1885) + key) . . . 1227
DDS_ParticipantBuiltinTopicData
Entry created when a DomainParticipant object is discovered . . . 1229
DDS_ParticipantBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 1965) < **DDS_ParticipantBuiltinTopicData** (p. 1229) > . . . 1235

DDS_ParticipantTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered DomainParticipant 1235
DDS_ParticipantTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered DomainParticipant 1236
DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo
Trust Plugins key establishment algorithm information associated with the discovered Domain↩ Participant 1237
DDS_ParticipantTrustProtectionInfo
Trust Plugins Protection information associated with the discovered DomainParticipant 1238
DDS_ParticipantTrustSignatureAlgorithmInfo
Trust Plugins signature algorithm information associated with the discovered DomainParticipant . . 1239
DDS_PartitionQosPolicy
<<***spec***>> *(*p. *209)* Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), or **DDSSubscriber** (p. 1860) entities 1240
DDS_PersistentStorageSettings
Configures durable writer history and durable reader state 1242
DDS_PresentationQosPolicy
<<***spec***>> *(*p. *209)* Specifies how the samples representing changes to data instances are presented to a subscribing application 1249
DDS_PrintFormatProperty
A collection of attributes used to configure how data samples will be formatted when converted to a string 1253
DDS_ProductVersion_t
<<***extension***>> *(*p. *432)* Type used to represent the current version of RTI Connext 1255
DDS_ProfileQosPolicy
<<***extension***>> *(*p. *213)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext 1257
DDS_Property_t
Properties are name/value pairs objects 1259
DDS_PropertyQosPolicy
<<***extension***>> *(*p. *213)* Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery 1260
DDS_PropertySeq
Declares IDL `sequence` < **DDS_Property_t** (p. 1259) > 1262
DDS_ProtocolVersion_t
<<***extension***>> *(*p. *432)* Type used to represent the version of the RTPS protocol 1263
DDS_PublicationBuiltinTopicData
Entry created when a **DDSDataWriter** (p. 1589) is discovered in association with its Publisher . . . 1264
DDS_PublicationBuiltinTopicDataSeq
Instantiates **`FooSeq`** (p. 1965) < **DDS_PublicationBuiltinTopicData** (p. 1264) > 1273
DDS_PublicationMatchedStatus
DDS_PUBLICATION_MATCHED_STATUS (p. 543) 1273
DDS_PublisherQos
QoS policies supported by a **DDSPublisher** (p. 1818) entity 1276
DDS_PublishModeQosPolicy
<<***extension***>> *(*p. *213)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread 1279
DDS_QosPolicyCount
Type to hold a counter for a **DDS_QosPolicyId_t** (p. 557) 1283
DDS_QosPolicyCountSeq
Declares IDL `sequence` < **DDS_QosPolicyCount** (p. 1283) > 1284

DDS_QosPrintAll_t
Special type which is used to select the to_string overloads when printing Qos objects 1285
DDS_QosPrintFormat
A collection of attributes used to configure how a QoS appears when printed 1285
DDS_QueryConditionParams
<<***extension***>> *(p. 432)* Input parameters for **DDSDataReader::create_querycondition_w_↩ params** (p. 1562) 1287
DDS_ReadConditionParams
<<***extension***>> *(p. 432)* Input parameters for **DDSDataReader::create_readcondition_w_↩ params** (p. 1561) 1288
DDS_ReaderDataLifecycleQosPolicy
<<***spec***>> *(p. 209)* Controls how a DataReader manages the lifecycle of the data that it has received 1289
DDS_ReceiverPoolQosPolicy
<<***extension***>> *(p. 213)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets) 1293
DDS_ReliabilityQosPolicy
<<***extension***>> *(p. 213)* <<***spec***>> *(p. 209)* Indicates the level of reliability offered/requested by RTI Connext 1295
DDS_ReliableReaderActivityChangedStatus
<<***extension***>> *(p. 432)* Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer 1300
DDS_ReliableWriterCacheChangedStatus
<<***extension***>> *(p. 432)* A summary of the state of a data writer's cache of unacknowledged samples written 1302
DDS_ReliableWriterCacheEventCount
<<***extension***>> *(p. 432)* The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold 1305
DDS_RequestedDeadlineMissedStatus
DDS_REQUESTED_DEADLINE_MISSED_STATUS (p. 540) 1306
DDS_RequestedIncompatibleQosStatus
DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS (p. 540) 1307
DDS_ResourceLimitsQosPolicy
<<***spec***>> *(p. 209)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics 1308
DDS_RTPS_EntityId_t
From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers 1313
DDS_RTPS_GUID_t
From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier . . . 1314
DDS_RtpsReliableReaderProtocol_t
<<***extension***>> *(p. 213)* Qos related to reliable reader protocol defined in RTPS 1314
DDS_RtpsReliableWriterProtocol_t
<<***extension***>> *(p. 213)* QoS related to the reliable writer protocol defined in RTPS 1320
DDS_RtpsWellKnownPorts_t
<<***extension***>> *(p. 213)* RTPS well-known port mapping configuration 1338
DDS_SampleIdentity_t
Type definition for a Sample Identity 1343
DDS_SampleInfo
Information that accompanies each sample that is `read` or `taken` 1344
DDS_SampleInfoSeq
Declares IDL `sequence` < **DDS_SampleInfo** (p. 1344) > 1355

DDS_SampleLostStatus
DDS_SAMPLE_LOST_STATUS (p. 541) . . . 1355
DDS_SampleRejectedStatus
DDS_SAMPLE_REJECTED_STATUS (p. 541) . . . 1356
DDS_SequenceNumber_t
Type for *sequence* number representation . . . 1357
DDS_ServiceQosPolicy
<<***extension***>> *(p. 213)* Service or tool associated with a DDS entity . . . 1358
DDS_ServiceRequest
A request coming from one of the built-in services . . . 1359
DDS_ServiceRequestAcceptedStatus
DDS_SERVICE_REQUEST_ACCEPTED_STATUS (p. 544) . . . 1361
DDS_ServiceRequestSeq
Instantiates **FooSeq** (p. 1965) < **DDS_ServiceRequest** (p. 1359) > . . . 1363
DDS_ShortSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Short** (p. 514) > . . . 1363
DDS_StringSeq
Instantiates **FooSeq** (p. 1965) < char* > with value type semantics . . . 1364
DDS_StructMember
A description of a member of a struct . . . 1365
DDS_StructMemberSeq
Defines a sequence of struct members . . . 1367
DDS_SubscriberQos
QoS policies supported by a **DDSSubscriber** (p. 1860) entity . . . 1367
DDS_SubscriptionBuiltinTopicData
Entry created when a **DDSDataReader** (p. 1556) is discovered in association with its Subscriber . . . 1370
DDS_SubscriptionBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 1965) < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > . . . 1379
DDS_SubscriptionMatchedStatus
DDS_SUBSCRIPTION_MATCHED_STATUS (p. 543) . . . 1379
DDS_SystemResourceLimitsQosPolicy
<<***extension***>> *(p. 213)* Configures **DDSDomainParticipant** (p. 1619)-independent resources used by RTI Connext. Mainly used to change the maximum number of **DDSDomainParticipant** (p. 1619) entities that can be created within a single process (address space) . . . 1382
DDS_Tag
Tags are name/value pair objects . . . 1384
DDS_TagSeq
Declares IDL sequence < **DDS_Tag** (p. 1384) > . . . 1385
DDS_ThreadSettings_t
The properties of a thread of execution . . . 1385
DDS_Time_t
Type for *time* representation . . . 1387
DDS_TimeBasedFilterQosPolicy
<<***spec***>> *(p. 209)* Filter that allows a **DDSDataReader** (p. 1556) to specify that it is interested only in (potentially) a subset of the values of the data . . . 1389
DDS_TopicBuiltinTopicData
Entry created when a Topic object discovered . . . 1391
DDS_TopicBuiltinTopicDataSeq
Instantiates **FooSeq** (p. 1965) < **DDS_TopicBuiltinTopicData** (p. 1391) > . . . 1396
DDS_TopicDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery . . . 1396
DDS_TopicQos
QoS policies supported by a **DDSTopic** (p. 1885) entity . . . 1397

DDS_TopicQueryData
<<***extension***>> *(p. 432)* Provides information about a **DDSTopicQuery** (p. 1895) 1402
DDS_TopicQueryDispatchQosPolicy
<<***extension***>> *(p. 213)* Configures the ability of a **DDSDataWriter** (p. 1589) to publish samples in response to a **DDSTopicQuery** (p. 1895) 1404
DDS_TopicQuerySelection
<<***extension***>> *(p. 432)* Specifies the data query that defines a **DDSTopicQuery** (p. 1895) . . . 1406
DDS_TransportBuiltinQosPolicy
<<***extension***>> *(p. 213)* Specifies which built-in transports are used 1408
DDS_TransportInfo_t
Contains the class_id and message_size_max of an installed transport 1409
DDS_TransportInfoSeq
Instantiates **FooSeq** (p. 1965) < **DDS_TransportInfo_t** (p. 1409) > 1410
DDS_TransportMulticastMapping_t
<<***extension***>> *(p. 213)* Type representing a list of multicast mapping elements 1410
DDS_TransportMulticastMappingFunction_t
Type representing an external mapping function 1412
DDS_TransportMulticastMappingQosPolicy
<<***extension***>> *(p. 213)* Specifies a list of topic_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data 1413
DDS_TransportMulticastMappingSeq
Declares IDL sequence< **DDS_TransportMulticastMapping_t** (p. 1410) > 1415
DDS_TransportMulticastQosPolicy
<<***extension***>> *(p. 213)* Specifies the multicast address on which a **DDSDataReader** (p. 1556) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **DDSDomainParticipant** (p. 1619) level) transports with which to receive the multicast data 1415
DDS_TransportMulticastSettings_t
Type representing a list of multicast locators 1417
DDS_TransportMulticastSettingsSeq
Declares IDL sequence< **DDS_TransportMulticastSettings_t** (p. 1417) > 1419
DDS_TransportPriorityQosPolicy
<<***spec***>> *(p. 209)* This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities 1419
DDS_TransportSelectionQosPolicy
<<***extension***>> *(p. 213)* Specifies the physical transports a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) may use to send or receive data 1421
DDS_TransportUnicastQosPolicy
<<***extension***>> *(p. 213)* Specifies a subset of transports and a port number that can be used by an Entity to receive data 1422
DDS_TransportUnicastSettings_t
Type representing a list of unicast locators 1424
DDS_TransportUnicastSettingsSeq
Declares IDL sequence< **DDS_TransportUnicastSettings_t** (p. 1424) > 1426
DDS_TrustAlgorithmRequirements
Type to describe Trust Plugins algorithm requirements for an entity 1426
DDS_TypeAllocationParams_t
Configures whether or not to allocate pointer and optional members 1427
DDS_TypeCode
The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the Code Generator User's Manual) or to modify types you define yourself at runtime 1428
DDS_TypeCodeFactory
A singleton factory for creating, copying, and deleting data type definitions dynamically 1476

DDS_TypeCodePrintFormatProperty
A collection of attributes used to configure how a TypeCode appears when converted to a string . . 1490
DDS_TypeConsistencyEnforcementQosPolicy
<<***spec***>> *(p. 209)* Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it . . . 1493
DDS_TypeDeallocationParams_t
Configures whether to release or not pointer and optional members . . . 1497
DDS_TypeSupportQosPolicy
[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Allows you to attach application-specific values to a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization . . . 1499
DDS_UInt8Seq
Instantiates **FooSeq** (p. 1965) < **DDS_UInt8** (p. 514) > . . . 1500
DDS_UnionMember
A description of a member of a union . . . 1501
DDS_UnionMemberSeq
Defines a sequence of union members . . . 1502
DDS_UnsignedLongLongSeq
Instantiates **FooSeq** (p. 1965) < **DDS_UnsignedLongLong** (p. 515) > . . . 1503
DDS_UnsignedLongSeq
Instantiates **FooSeq** (p. 1965) < **DDS_UnsignedLong** (p. 515) > . . . 1503
DDS_UnsignedShortSeq
Instantiates **FooSeq** (p. 1965) < **DDS_UnsignedShort** (p. 514) > . . . 1503
DDS_UserDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery . . . 1504
DDS_ValueMember
A description of a member of a value type . . . 1505
DDS_ValueMemberSeq
Defines a sequence of value members . . . 1508
DDS_VendorId_t
<<***extension***>> *(p. 432)* Type used to represent the vendor of the service implementing the RTPS protocol . . . 1508
DDS_VirtualWriterInfo
The structure that contains the information of a virtual writer . . . 1509
DDS_WaitSetProperty_t
<<***extension***>> *(p. 432)* Specifies the **DDSWaitSet** (p. 1897) behavior for multiple trigger events 1509
DDS_WcharSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Wchar** (p. 514) > . . . 1510
DDS_WireProtocolQosPolicy
<<***extension***>> *(p. 213)* Specifies the wire-protocol-related attributes for the **DDSDomainParticipant** (p. 1619) . . . 1511
DDS_WriteParams_t
<<***extension***>> *(p. 432)* Input parameters for writing with **FooDataWriter::write_w_params** (p. 1956), **FooDataWriter::dispose_w_params** (p. 1959), **FooDataWriter::register_instance_w_params** (p. 1948), **FooDataWriter::unregister_instance_w_params** (p. 1951) . . . 1519
DDS_WriterDataLifecycleQosPolicy
<<***spec***>> *(p. 209)* Controls how a **DDSDataWriter** (p. 1589) handles the lifecycle of the instances (keys) that it is registered to manage . . . 1524
DDS_WstringSeq
Instantiates **FooSeq** (p. 1965) < **DDS_Wchar** (p. 514)* > . . . 1527

DDSAsyncWaitSet
A class for dispatching **DDSCondition** (p. 1544) objects using separate threads of execution. You can see this class as an extension of a **DDSWaitSet** (p. 1897) that allows asynchronously waiting for the attached **DDSCondition** (p. 1544) objects to trigger and provide a notification by calling **DDSCondition::dispatch** (p. 1546) 1528
DDSAsyncWaitSetCompletionToken
<<***interface***>> *(p. 433)* Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDSAsyncWaitSet** (p. 1528) behavior 1541
DDSAsyncWaitSetListener
<<***interface***>> *(p. 433)* Listener for receiving event notifications related to the thread pool of the **DDSAsyncWaitSet** (p. 1528) 1543
DDSCondition
<<***interface***>> *(p. 433)* Root class for all the conditions that may be attached to a **DDSWaitSet** (p. 1897) 1544
DDSConditionHandler
<<***extension***>> *(p. 432)* <<***interface***>> *(p. 433)* Handler called by the **DDSCondition::dispatch** (p. 1546) 1546
DDSConditionSeq
Instantiates **FooSeq** (p. 1965) < **DDSCondition** (p. 1544) > 1547
DDSContentFilter
<<***interface***>> *(p. 433)* Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1551) 1548
DDSContentFilteredTopic
<<***interface***>> *(p. 433)* Specialization of **DDSTopicDescription** (p. 1892) that allows for content-based subscriptions 1551
DDSDataReader
<<***interface***>> *(p. 433)* Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **DDSSubscriber** (p. 1860) . 1556
DDSDataReaderListener
<<***interface***>> *(p. 433)* **DDSListener** (p. 1794) for reader status 1583
DDSDataReaderSeq
Declares IDL sequence < **DDSDataReader** (p. 1556) > 1585
DDSDataReaderStatusConditionHandler
<<***interface***>> *(p. 433)* Realization of a **DDSConditionHandler** (p. 1546) that handles the status of a **DDSDataReader** (p. 1556) 1586
DDSDataTagQosPolicyHelper
Policy helpers that facilitate management of the data tags in the input policy 1588
DDSDataWriter
<<***interface***>> *(p. 433)* Allows an application to set the value of the data to be published under a given **DDSTopic** (p. 1885) 1589
DDSDataWriterListener
<<***interface***>> *(p. 433)* **DDSListener** (p. 1794) for writer status 1612
DDSDomainEntity
<<***interface***>> *(p. 433)* Abstract base class for all DDS entities except for the **DDSDomainParticipant** (p. 1619) 1618
DDSDomainParticipant
<<***interface***>> *(p. 433)* Container for all **DDSDomainEntity** (p. 1618) objects 1619
DDSDomainParticipantFactory
<<***singleton***>> *(p. 433)* <<***interface***>> *(p. 433)* Allows creation and destruction of **DDSDomainParticipant** (p. 1619) objects 1694
DDSDomainParticipantListener
<<***interface***>> *(p. 433)* Listener for participant status 1722
DDSDynamicDataReader
Reads (subscribes to) objects of type **DDS_DynamicData** (p. 1013) 1724

DDSDynamicDataTypeSupport
A factory for registering a dynamically defined type and creating **DDS_DynamicData** (p. 1013) objects . . . 1725
DDSDynamicDataWriter
Writes (publishes) objects of type **DDS_DynamicData** (p. 1013) . . . 1730
DDSEntity
<<***interface***>> *(p. 433)* Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition . . . 1731
DDSFlowController
<<***interface***>> *(p. 433)* A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **DDSDataWriter** (p. 1589) instances are allowed to write data . . . 1736
DDSGuardCondition
<<***interface***>> *(p. 433)* A specific **DDSCondition** (p. 1544) whose `trigger_value` is completely under the control of the application . . . 1739
DDSKeyedOctetsDataReader
<<***interface***>> *(p. 433)* Instantiates `DataReader` < **DDS_KeyedOctets** (p. 1168) > . . . 1741
DDSKeyedOctetsDataWriter
<<***interface***>> *(p. 433)* Instantiates `DataWriter` < **DDS_KeyedOctets** (p. 1168) > . . . 1750
DDSKeyedOctetsTypeSupport
<<***interface***>> *(p. 433)* **DDS_KeyedOctets** (p. 1168) type support . . . 1763
DDSKeyedStringDataReader
<<***interface***>> *(p. 433)* Instantiates `DataReader` < **DDS_KeyedString** (p. 1171) > . . . 1769
DDSKeyedStringDataWriter
<<***interface***>> *(p. 433)* Instantiates `DataWriter` < **DDS_KeyedString** (p. 1171) > . . . 1778
DDSKeyedStringTypeSupport
<<***interface***>> *(p. 433)* Keyed string type support . . . 1788
DDSListener
<<***interface***>> *(p. 433)* Abstract base class for all Listener interfaces . . . 1794
DDSMultiTopic
[Not supported (optional)] <<***interface***>> *(p. 433)* A specialization of **DDSTopicDescription** (p. 1892) that allows subscriptions that combine/filter/rearrange data coming from several topics . . . 1797
DDSOctetsDataReader
<<***interface***>> *(p. 433)* Instantiates `DataReader` < **DDS_Octets** (p. 1217) > . . . 1800
DDSOctetsDataWriter
<<***interface***>> *(p. 433)* Instantiates `DataWriter` < **DDS_Octets** (p. 1217) > . . . 1804
DDSOctetsTypeSupport
<<***interface***>> *(p. 433)* **DDS_Octets** (p. 1217) type support . . . 1811
DDSParticipantBuiltinTopicDataDataReader
Instantiates `DataReader` < **DDS_ParticipantBuiltinTopicData** (p. 1229) > . . . 1816
DDSParticipantBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **DDS_ParticipantBuiltinTopicData** (p. 1229) > . . . 1816
DDSPropertyQosPolicyHelper
Policy helpers that facilitate management of the properties in the input policy . . . 1817
DDSPublicationBuiltinTopicDataDataReader
Instantiates `DataReader` < **DDS_PublicationBuiltinTopicData** (p. 1264) > . . . 1817
DDSPublicationBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **DDS_PublicationBuiltinTopicData** (p. 1264) > . . . 1818
DDSPublisher
<<***interface***>> *(p. 433)* A publisher is the object responsible for the actual dissemination of publications . . . 1818
DDSPublisherListener
<<***interface***>> *(p. 433)* **DDSListener** (p. 1794) for **DDSPublisher** (p. 1818) status . . . 1839

DDSPublisherSeq
Declares IDL `sequence` < **DDSPublisher** (p. 1818) > . . . 1840
DDSQueryCondition
<<***interface***>> *(p. 433)* These are specialised **DDSReadCondition** (p. 1842) objects that allow the application to also specify a filter on the locally available data . . . 1841
DDSReadCondition
<<***interface***>> *(p. 433)* Conditions specifically dedicated to read operations and attached to one **DDSDataReader** (p. 1556) . . . 1842
DDSServiceRequestDataReader
Instantiates `DataReader` < **DDS_ServiceRequest** (p. 1359) > . . . 1845
DDSServiceRequestTypeSupport
Instantiates `TypeSupport` < **DDS_ServiceRequest** (p. 1359) > . . . 1845
DDSStatusCondition
<<***interface***>> *(p. 433)* A specific **DDSCondition** (p. 1544) that is associated with each **DDSEntity** (p. 1731) . . . 1846
DDSStringDataReader
<<***interface***>> *(p. 433)* Instantiates `DataReader` < char* > . . . 1848
DDSStringDataWriter
<<***interface***>> *(p. 433)* Instantiates `DataWriter` < char* > . . . 1852
DDSStringTypeSupport
<<***interface***>> *(p. 433)* String type support . . . 1855
DDSSubscriber
<<***interface***>> *(p. 433)* A subscriber is the object responsible for actually receiving data from a subscription . . . 1860
DDSSubscriberListener
<<***interface***>> *(p. 433)* **DDSListener** (p. 1794) for status about a subscriber . . . 1881
DDSSubscriberSeq
Declares IDL `sequence` < **DDSSubscriber** (p. 1860) > . . . 1882
DDSSubscriptionBuiltinTopicDataDataReader
Instantiates `DataReader` < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > . . . 1882
DDSSubscriptionBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > . . . 1883
DDSThreadFactory
<<***extension***>> *(p. 432)* <<***interface***>> *(p. 433)* Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the **DDSThreadFactory_OnSpawnedFunction** (p. 718) that specifies the operation to run in the new thread . . . 1883
DDSTopic
<<***interface***>> *(p. 433)* The most basic description of the data to be published and subscribed . . . 1885
DDSTopicBuiltinTopicDataDataReader
Instantiates `DataReader` < **DDS_TopicBuiltinTopicData** (p. 1391) > . . . 1890
DDSTopicBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **DDS_TopicBuiltinTopicData** (p. 1391) > . . . 1891
DDSTopicDescription
<<***interface***>> *(p. 433)* Base class for **DDSTopic** (p. 1885), **DDSContentFilteredTopic** (p. 1551), and **DDSMultiTopic** (p. 1797) . . . 1892
DDSTopicListener
<<***interface***>> *(p. 433)* **DDSListener** (p. 1794) for **DDSTopic** (p. 1885) entities . . . 1894
DDSTopicQuery
<<***extension***>> *(p. 432)* Allows a **DDSDataReader** (p. 1556) to query the sample cache of its matching **DDSDataWriter** (p. 1589) . . . 1895
DDSTopicQueryHelper
Helpers to provide utility operations related to **DDSTopicQuery** (p. 1895) . . . 1896

DDSTypeSupport
<<***interface***>> *(p. 433)* An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application . . . 1897
DDSWaitSet
<<***interface***>> *(p. 433)* Allows an application to wait until one or more of the attached **DDSCondition** (p. 1544) objects has a `trigger_value` of **DDS_BOOLEAN_TRUE** (p. 513) or else until the timeout expires . . . 1897
DDSWriterContentFilter
<<***interface***>> *(p. 433)* Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1551) . . . 1905
rti::flat::FinalAlignedArrayOffset< ElementOffset, N >
Offset to an array of final elements . . . 1909
rti::flat::FinalArrayOffset< ElementOffset, N >
Offset to an array of final elements . . . 1911
rti::flat::FinalOffset< T >
The base class of all Offsets to a final struct type . . . 1913
rti::flat::FinalSequenceBuilder< ElementOffset >
Builds a sequence member of fixed-size elements . . . 1913
rti::flat::flat_type_traits< T >
Given a **Sample** (p. 2187), an Offset or a Builder, it allows obtaining the other types . . . 1915
Foo
A representative user-defined data type . . . 1916
FooDataReader
<<***interface***>> *(p. 433)* <<***generic***>> *(p. 433)* User data type-specific data reader . . . 1917
FooDataWriter
<<***interface***>> *(p. 433)* <<***generic***>> *(p. 433)* User data type specific data writer . . . 1944
FooSeq
<<***interface***>> *(p. 433)* <<***generic***>> *(p. 433)* A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **`Foo`** (p. 1916) . . . 1965
FooTypeSupport
<<***interface***>> *(p. 433)* <<***generic***>> *(p. 433)* User data type specific interface . . . 1979
connext::IllegalOperationException
The operation was called under improper circumstances . . . 1992
connext::ImmutablePolicyException
Application attempted to modify an immutable QoS policy . . . 1992
connext::InconsistentPolicyException
Application specified a set of QoS policies that are not consistent with each other . . . 1993
connext::IsInvalidSamplePredicate< T >
Predicate-class to determine if a sample contains invalid data . . . 1993
connext::IsReplyRelatedPredicate< T >
Predicate-class to match replies by their related request . . . 1993
connext::IsValidSamplePredicate< T >
Predicate-class to determine if a sample contains valid data . . . 1995
connext::LoanedSamples< T >
Provides access to a collection of middleware-loaned samples . . . 1995
connext::LoanedSamples< T >::LoanMemento
A simple value-type for the internal representation of the a **LoanedSamples** (p. 1995) object . . . 2004
connext::LogicException
Base class of all RTI Connext exceptions caused by a logic error . . . 2005
connext::MessagingLibraryVersion
The Connext Messaging Library version . . . 2005
connext::MessagingVersion
The Connext Messaging version . . . 2006

rti::flat::MutableArrayBuilder< ElementBuilder, N >
Builds an array member of variable-size elements 2008
rti::flat::MutableArrayOffset< ElementOffset, N >
Offset to an array of variable-size elements 2010
rti::flat::MutableOffset
The base class of all Offsets to a final struct type 2011
rti::flat::MutableSequenceBuilder< ElementBuilder >
Builds a sequence member of variable-size elements 2012
MyFlatFinalOffset
Represents the Offset to an arbitrary user-defined FlatData final IDL struct 2014
MyFlatMutableBuilder
Represents the Builder for an arbitrary user-defined mutable type 2018
MyFlatMutableOffset
Represents the Offset to an arbitrary user-defined FlatData mutable IDL struct 2025
MyFlatUnionBuilder
Represents the Builder for an arbitrary user-defined mutable IDL union 2032
MyFlatUnionOffset
Represents the Offset to an arbitrary user-defined FlatData mutable IDL union 2035
NDDS_Config_LibraryVersion_t
The version of a single library shipped as part of an RTI Connext distribution 2039
NDDS_Config_LogMessage
A log message's input parameter to a logging device, including the text and additional information . 2040
NDDS_Transport_Address_t
Addresses are stored individually as network-ordered bytes 2042
NDDS_Transport_Interface_t
Storage for the description of a network interface used by a Transport Plugin 2043
NDDS_Transport_Property_t
Base configuration structure that must be inherited by derived Transport Plugin classes 2044
NDDS_Transport_Shmem_Property_t
Subclass of **NDDS_Transport_Property_t** (p. 2044) allowing specification of parameters that are specific to the shared-memory transport 2052
NDDS_Transport_UDP_WAN_CommPortsMappingInfo
Type for storing UDP WAN communication ports 2055
NDDS_Transport_UDPv4_Property_t
Configurable IPv4/UDP Transport-Plugin properties 2056
NDDS_Transport_UDPv4_WAN_Property_t
Configurable IPv4/UDP WAN Transport-Plugin properties 2067
NDDS_Transport_UDPv6_Property_t
Configurable IPv6/UDP Transport-Plugin properties 2077
NDDS_Transport_UUID
Unequivocally identifies a transport plugin instance 2087
NDDS_Utility_NetworkCaptureParams_t
Input parameters for starting network capture 2087
NDDSConfigActivityContext
Activity Context APIs 2089
NDDSConfigCompliance
APIs to configure all the compliance mask 2090
NDDSConfigLogger
<<interface>> (p. 433) The singleton type used to configure RTI Connext logging 2093
NDDSConfigLoggerDevice
<<interface>> (p. 433) Logging device interface. Use for user-defined logging devices 2100
NDDSConfigVersion
<<interface>> (p. 433) The version of an RTI Connext distribution 2101

NDDSLM
Other Utilities APIs . . . 2103
NDDSTransportSupport
<<***interface***>> *(p. 433)* The utility class used to configure RTI Connext pluggable transports . . . 2104
NDDSUtility
Other Utilities APIs . . . 2110
NDDSUtilityHeapMonitoring
Heap Monitoring APIs . . . 2113
NDDSUtilityNetworkCapture
Network Capture APIs . . . 2117
connext::NotEnabledException
Operation invoked on a **DDSEntity** (p. 1731) that is not yet enabled . . . 2126
rti::flat::OffsetBase
Base class of all Offset types . . . 2126
connext::OutOfResourcesException
RTI Connext ran out of the resources needed to complete the operation . . . 2131
connext::PreconditionNotMetException
A pre-condition for the operation was not met . . . 2132
rti::flat::PrimitiveArrayOffset< T, N >
Offset to an array of primitive elements . . . 2132
rti::flat::PrimitiveConstOffset< T >
A const Offset to an optional primitive member . . . 2133
rti::flat::PrimitiveOffset< T >
An Offset to an optional primitive member . . . 2134
rti::flat::PrimitiveSequenceBuilder< T >
Builds a sequence of primitive members . . . 2135
rti::flat::PrimitiveSequenceOffset< T >
Offset to a sequence of primitive elements . . . 2138
connext::Replier< TReq, TRep >
Allows receiving requests and sending replies . . . 2139
connext::ReplierListener< TReq, TRep >
Called when a **connext::Replier** (p. 2139) has new available requests . . . 2151
connext::ReplierParams< TReq, TRep >
Contains the parameters for creating a **connext::Replier** (p. 2139) . . . 2152
connext::Requester< TReq, TRep >
Allows sending requests and receiving replies . . . 2157
connext::RequesterParams
Contains the parameters for creating a **connext::Requester** (p. 2157) . . . 2178
connext::RuntimeException
Generic, unspecified error . . . 2183
connext::Sample< T >
A data sample and related info received from the middleware . . . 2183
rti::flat::Sample< OffsetType >
The generic definition of FlatData topic-types . . . 2187
connext::SampleIterator< T, IsConst >
STL-compliant random-access iterator for SampleRef<T> . . . 2191
connext::SampleRef< T >
A data sample and related information received from the middleware . . . 2191
rti::flat::SequenceIterator< E, OffsetKind >
Iterator for collections of Offsets . . . 2198
rti::flat::SequenceOffset< ElementOffset >
Offset to a sequence of non-primitive elements . . . 2204
connext::SimpleReplier< TReq, TRep >
A callback-based replier . . . 2206

connext::SimpleReplierListener< TReq, TRep >
The listener called by a **SimpleReplier** (p. 2206) . . . 2208
connext::SimpleReplierParams< TReq, TRep >
Contains the parameters for creating a **connext::SimpleReplier** (p. 2206) . . . 2209
rti::flat::StringBuilder
Builds a string . . . 2214
rti::flat::StringOffset
Offset to a string . . . 2216
connext::TimeoutException
The operation timed out (does not apply to wait or receive operations) . . . 2217
TransportAllocationSettings_t
Allocation settings used by various internal buffers . . . 2218
rti::flat::UnionBuilder< Discriminator >
Base class of builders for user-defined mutable unions . . . 2218
connext::UnsupportedException
Unsupported operation . . . 2219
connext::WriteSample< T >
A sample for writing data . . . 2219
connext::WriteSampleRef< T >
A reference to a data sample for writing . . . 2223

Chapter 7

Module Documentation

7.1 RTI Connext Exceptions

RTI Connext return-code exceptions.

Classes

- class **connext::RuntimeException**

  Generic, unspecified error.
- class **connext::LogicException**

  Base class of all RTI Connext exceptions caused by a logic error.
- class **connext::UnsupportedException**

  Unsupported operation.
- class **connext::BadParameterException**

  Illegal parameter value.
- class **connext::PreconditionNotMetException**

  A pre-condition for the operation was not met.
- class **connext::ImmutablePolicyException**

  Application attempted to modify an immutable QoS policy.
- class **connext::InconsistentPolicyException**

  Application specified a set of QoS policies that are not consistent with each other.
- class **connext::NotEnabledException**

  *Operation invoked on a **DDSEntity** (p. 1731) that is not yet enabled.*
- class **connext::AlreadyDeletedException**

  The object target of this operation has already been deleted.
- class **connext::IllegalOperationException**

  The operation was called under improper circumstances.
- class **connext::TimeoutException**

  The operation timed out (does not apply to wait or receive operations)
- class **connext::OutOfResourcesException**

  RTI Connext ran out of the resources needed to complete the operation.

7.1.1 Detailed Description

RTI Connext return-code exceptions.

The request-reply API reports internal DDS errors as exceptions. Each RTI Connext return code maps to a exception.

All exceptions inherit from the C++ standard exceptions `std::logic_error` or `std::runtime_error`.

Note that RETCODE_TIMEOUT and RETCODE_NO_DATA are not thrown in the request-reply API, because they are not considered errors. For example in case of no data or timeouts operations may return empty containers (e.g. **connext::Requester::take_replies(int)** (p. 2170)) or false (e.g. **connext::Requester::wait_for_replies(int, const Duration_t&)** (p. 2167)).

Return Codes (p. 531)

Error handling example (p. 426)

7.2 Clock Selection

APIs related to clock selection.

APIs related to clock selection.

RTI Connext uses clocks to measure time and generate timestamps.

RTI Connext uses three clocks, an "internal clock," an "external clock," and a "wall clock". The internal clock measures time internally. The external clock generates timestamps, such as the source timestamp and the reception timestamp, in addition to providing the current time given by the Domain Participant's API. The internal and external clocks can be configured via properties. The wall clock is not configurable and always shows the system time. It is used internally whenever a real-world time is necessary, such as for external document time verification.

7.2.1 Available Clocks

Two clock implementations are generally available, the monotonic clock and the realtime clock.

The monotonic clock provides times that are monotonic from a clock that is not adjustable. This clock is useful to use in order to not be subject to changes in the system or realtime clock, which may be adjusted by the user or via time synchronization protocols. However, this time generally starts from an arbitrary point in time, such as system startup. Note that this clock is not available for all architectures. Please see the `Platform Notes` for the architectures on which it is supported. For the purposes of clock selection, this clock can be referenced by the name "monotonic".

The realtime clock provides the real time of the system. This clock may generally be monotonic but may not be guaranteed to be so. It is adjustable and may be subject to small and large changes in time. The time obtained from this clock is generally a meaningful time in that it is the amount of time from a known epoch. For the purposes of clock selection, this clock can be referenced by the names "realtime" or "system".

7.2.2 Clock Selection Strategy

By default, the internal clock uses the monotonic clock and the external clocks uses the realtime clock. The default setup offers robustness to changes in the system time. Since the monotonic clock is not available on all platforms, by default, RTI Connext will attempt to use the monotonic clock, and will fall back to the realtime clock if the monotonic clock is not available.

If you want your application to be robust to changes in the system time, you are not relying on source timestamps, and you want to avoid obtaining times from both clocks, you may use the monotonic clock for both the internal and external clocks.

7.2.3 Configuring Clock Selection

To configure the clock selection, use the **PROPERTY** (p. 617) QoS policy associated with the **DDSDomainParticipant** (p. 1619).

See also

DDS_PropertyQosPolicy (p. 1260)

The following table lists the supported clock selection properties.

Table 7.1 ***Clock Selection Properties***

Property	Description
dds.clock.external_clock	Comma-delimited list of clocks to use for the external clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"
dds.clock.internal_clock	Comma-delimited list of clocks to use for the internal clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "monotonic" if available, "realtime" if not

7.3 Domain Module

Contains the **DDSDomainParticipant** (p. 1619) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1619) also acts as a container for the other objects that make up RTI Connext.

Modules

- **DomainParticipantFactory**

  DDSDomainParticipantFactory *(p. 1694) entity and associated elements*
- **DomainParticipants**

  DDSDomainParticipant *(p. 1619) entity and associated elements*
- **Built-in Topics**

  Built-in objects created by RTI Connext but accessible to the application.

7.3.1 Detailed Description

Contains the **DDSDomainParticipant** (p. 1619) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1619) also acts as a container for the other objects that make up RTI Connext.

7.4 DomainParticipantFactory

DDSDomainParticipantFactory (p. 1694) entity and associated elements

Modules

- **DomainParticipantConfigParams**

  *<<**extension**>> (p. 432)* ***DDS_DomainParticipantConfigParams_t*** *(p. 964)*

Classes

- struct **DDS_DomainParticipantFactoryQos**

  QoS policies supported by a ***DDSDomainParticipantFactory*** *(p. 1694).*
- class **DDSDomainParticipantFactory**

  *<<**singleton**>> (p. 433) <<**interface**>> (p. 433) Allows creation and destruction of* ***DDSDomainParticipant*** *(p. 1619) objects.*

Macros

- #define **DDSTheParticipantFactory** **DDSDomainParticipantFactory::get_instance**()

  Can be used as an alias for the singleton factory returned by the operation ***DDSDomainParticipantFactory::get_instance*** *(p. 1697).*

Typedefs

- typedef **DDS_ReturnCode_t**(∗ **DDSDomainParticipantFactory_RegisterTypeFunction**) (**DDSDomainParticipant** ∗participant, const char ∗type_name)

  Prototype of a register type function.

Functions

- **DDS_Boolean DDS_DomainParticipantFactoryQos_equals** (const struct **DDS_DomainParticipantFactoryQos** *self, const struct **DDS_DomainParticipantFactoryQos** *other)

  *Compares two **DDS_DomainParticipantFactoryQos** (p. 967) for equality.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::print** () const

  *Prints this **DDS_DomainParticipantFactoryQos** (p. 967) to stdout.*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_DomainParticipantFactoryQos** &base) const

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_DomainParticipantFactoryQos** &base, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &) const

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).*
- **DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).*

Variables

- const struct **DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT**

  Special value for creating a DomainParticipant with default QoS.
- const struct **DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT**

  *Special value for creating a **DDSDomainParticipant** (p. 1619) from configuration using default parameters.*

7.4.1 Detailed Description

DDSDomainParticipantFactory (p. 1694) entity and associated elements

7.4.2 Macro Definition Documentation

7.4.2.1 DDSTheParticipantFactory

```
#define DDSTheParticipantFactory  DDSDomainParticipantFactory::get_instance()
```

Can be used as an alias for the singleton factory returned by the operation **DDSDomainParticipantFactory::get_instance** (p. 1697).

See also

DDSDomainParticipantFactory::get_instance (p. 1697)

Examples

HelloWorld_publisher.cxx, and **HelloWorld_subscriber.cxx**.

7.4.3 Typedef Documentation

7.4.3.1 DDSDomainParticipantFactory_RegisterTypeFunction

```
typedef  DDS_ReturnCode_t(* DDSDomainParticipantFactory_RegisterTypeFunction) ( DDSDomainParticipant
*participant, const char *type_name)
```

Prototype of a register type function.

Parameters

participant	<<***inout***>> *(p. 433)* **DDSDomainParticipant** (p. 1619) participant the type is registered with.
type_name	<<***in***>> *(p. 433)* Name the type is registered with.

Exceptions

One	of the **Standard Return Codes** (p. 532)

7.4.4 Function Documentation

7.4.4.1 DDS_DomainParticipantFactoryQos_equals()

```
DDS_Boolean DDS_DomainParticipantFactoryQos_equals (
            const struct  DDS_DomainParticipantFactoryQos * self,
            const struct  DDS_DomainParticipantFactoryQos * other )
```

Compares two **DDS_DomainParticipantFactoryQos** (p. 967) for equality.

Parameters

self	<<***in***>> *(p. 433)* This DomainParticipantFactoryQos.
other	<<***in***>> *(p. 433)* The other DomainParticipantFactoryQos to be compared with this DomainParticipantFactoryQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_DomainParticipantFactoryQos::operator!=()**, and **DDS_DomainParticipantFactoryQos↩ ::operator==()**.

7.4.4.2 print()

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::print ( ) const  [inline]
```

Prints this **DDS_DomainParticipantFactoryQos** (p. 967) to stdout.

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 967) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantFactoryQos::to_string(char∗, DDS↩ _UnsignedLong&, const DDS_DomainParticipantFactoryQos&, const DDS_QosPrintFormat&) const** (p. 47). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.4.4.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 967) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DomainParticipantFactoryQos::to↩ _string(char∗, DDS_UnsignedLong&, const DDS_DomainParticipantFactoryQos&, const DDS_QosPrint↩ Format&) const** (p. 47). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantFactoryQos** (p. 967) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantFactoryQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantFactoryQos&, const DDS_QosPrintFormat&) const (p. 47)

7.4.4.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DomainParticipantFactoryQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).

This overload behaves the same as **DDS_DomainParticipantFactoryQos::to_string** (p. 45) but allows the caller to specify the **DDS_DomainParticipantFactoryQos** (p. 967), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_DomainParticipantFactoryQos** (p. 967) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.4.4.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).

This overload behaves the same as **DDS_DomainParticipantFactoryQos::to_string** (p. 45) but allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantFactoryQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantFactoryQos&, const DDS_QosPrintFormat&) const (p. 47)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.4.4.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DomainParticipantFactoryQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).

Only the differences between this **DDS_DomainParticipantFactoryQos** (p. 967) and the **DDS_DomainParticipant↩ FactoryQos** (p. 967) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantFactoryQos** (p. 967) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_DomainParticipantFactoryQos** (p. 967) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.4.4.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).

This overload behaves the same as **DDS_DomainParticipantFactoryQos::to_string** (p. 45) but prints the entire **DDS↩ _DomainParticipantFactoryQos** (p. 967) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT_ALL** (p. 169).

For example

```
DomainParticipantFactoryQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantFactoryQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantFactoryQos&, const DDS_QosPrintFormat&) const (p. 47)

References **DDS_QosPrintFormat_INITIALIZER**.

7.4.4.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_DomainParticipantFactoryQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantFactoryQos** (p. 967).

This overload behaves the same as the **DDS_DomainParticipantFactoryQos::to_string(char*, DDS_UnsignedLong&, const DDS_QosPrintAll_t&) const** (p. 48) overload. The only difference is that it allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantFactoryQos** (p. 967). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

DDS_DomainParticipantFactoryQos::to_string(char*, DDS_UnsignedLong&, const DDS_Domain↩ ParticipantFactoryQos&, const DDS_QosPrintFormat&) const (p. 47)

7.4.5 Variable Documentation

7.4.5.1 DDS_PARTICIPANT_QOS_DEFAULT

```
const struct DDS_DomainParticipantQos DDS_PARTICIPANT_QOS_DEFAULT [extern]
```

Special value for creating a DomainParticipant with default QoS.

When used in **DDSDomainParticipantFactory::create_participant** (p. 1710), this special value is used to indicate that the **DDSDomainParticipant** (p. 1619) should be created with the default **DDSDomainParticipant** (p. 1619) QoS by means of the operation **DDSDomainParticipantFactory::get_default_participant_qos()** (p. 1700) and using the resulting QoS to create the **DDSDomainParticipant** (p. 1619).

When used in **DDSDomainParticipantFactory::set_default_participant_qos** (p. 1698), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant↩ Factory::set_default_participant_qos** (p. 1698) operation had never been called.

When used in **DDSDomainParticipant::set_qos** (p. 1677), this special value is used to indicate that the QoS of the **DDSDomainParticipant** (p. 1619) should be changed to match the current default QoS set in the **DDSDomain↩ ParticipantFactory** (p. 1694) that the **DDSDomainParticipant** (p. 1619) belongs to.

RTI Connext treats this special value as a constant.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values from the DomainParticipant factory; for this purpose, use **DDSDomainParticipantFactory::get_default_participant↩ _qos** (p. 1700).

7.4.5.2 DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT

```
const struct DDS_DomainParticipantConfigParams_t DDS_PARTICIPANT_CONFIG_PARAMS_DEFAULT [extern]
```

Special value for creating a **DDSDomainParticipant** (p. 1619) from configuration using default parameters.

This value can be used only in **DDSDomainParticipantFactory::create_participant_from_config_w_params** (p. 1718) and indicates that the **DDSDomainParticipant** (p. 1619) must be created applying the information defined in the participant configuration. That is, the domain ID, participant entity name, and QoS profiles for all the entities will be retrieved from the configuration.

RTI Connext treats this special value as a constant.

7.5.1 Detailed Description

DDSDomainParticipant (p. 1619) entity and associated elements

7.5.2 Typedef Documentation

7.5.2.1 DDS_DomainId_t

```
typedef DDS_DOMAINID_TYPE_NATIVE  DDS_DomainId_t
```

An integer that indicates in which domain a **DDSDomainParticipant** (p. 1619) communicates.

Participants with the same **DDS_DomainId_t** (p. 53) are said to be in the same domain, and can thus communicate with one another.

The lower limit for a domain ID is 0. The upper limit for a domain ID is determined by the guidelines stated in **DDS_RtpsWellKnownPorts_t** (p. 1338) (specifically **DDS_RtpsWellKnownPorts_t::domain_id_gain** (p. 1341))

7.5.3 Function Documentation

7.5.3.1 DDS_DomainParticipantQos_equals()

```
DDS_Boolean DDS_DomainParticipantQos_equals (
            const struct  DDS_DomainParticipantQos * self,
            const struct  DDS_DomainParticipantQos * other )
```

Compares two **DDS_DomainParticipantQos** (p. 971) for equality.

Parameters

self	<<***in***>> *(p. 433)* This DomainParticipantQos.
other	<<***in***>> *(p. 433)* The other DomainParticipantQos to be compared with this DomainParticipantQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_DomainParticipantQos::operator!=()**, and **DDS_DomainParticipantQos::operator==()**.

7.5.3.2 print()

```
DDS_ReturnCode_t DDS_DomainParticipantQos::print ( ) const  [inline]
```

Prints this **DDS_DomainParticipantQos** (p. 971) to stdout.

Only the differences between this **DDS_DomainParticipantQos** (p. 971) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantQos&, const DDS_QosPrintFormat&) const** (p. 56). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.5.3.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

Only the differences between this **DDS_DomainParticipantQos** (p. 971) and the documented default are printed. If you wish to print everything regardless, see **DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantQos&, const DDS_QosPrintFormat&) const** (p. 56). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantQos** (p. 971) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantQos&, const DDS_QosPrintFormat&) const (p. 56)

7.5.3.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DomainParticipantQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

This overload behaves the same as **DDS_DomainParticipantQos::to_string** (p. 54) but allows the caller to specify the **DDS_DomainParticipantQos** (p. 971), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_DomainParticipantQos** (p. 971) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipant↩ Qos&, const DDS_QosPrintFormat&) const (p. 56)

References **DDS_QosPrintFormat_INITIALIZER**.

7.5.3.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

This overload behaves the same as **DDS_DomainParticipantQos::to_string** (p. 54) but allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipantQos&, const DDS_QosPrintFormat&) const (p. 56)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.5.3.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DomainParticipantQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

Only the differences between this **DDS_DomainParticipantQos** (p. 971) and the **DDS_DomainParticipantQos** (p. 971) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DomainParticipantQos** (p. 971) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_DomainParticipantQos** (p. 971) to be used as the base QoS profile.
	Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.5.3.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

This overload behaves the same as **DDS_DomainParticipantQos::to_string** (p. 54) but prints the entire **DDS_↩ DomainParticipantQos** (p. 971) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT_ALL** (p. 169).

For example
```
DomainParticipantQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DomainParticipantQos::to_string(char∗, DDS_UnsignedLong&, const DDS_DomainParticipant↩ Qos&, const DDS_QosPrintFormat&) const (p. 56)

References **DDS_QosPrintFormat_INITIALIZER**.

7.5.3.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_DomainParticipantQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DomainParticipantQos** (p. 971).

This overload behaves the same as the **DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_QosPrintAll_t&) const** (p. 57) overload. The only difference is that it allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DomainParticipantQos** (p. 971). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

DDS_DomainParticipantQos::to_string(char*, DDS_UnsignedLong&, const DDS_DomainParticipant↩ Qos&, const DDS_QosPrintFormat&) const (p. 56)

7.5.4 Variable Documentation

7.5.4.1 DDS_TOPIC_QOS_DEFAULT

```
const struct  DDS_TopicQos DDS_TOPIC_QOS_DEFAULT  [extern]
```

Special value for creating a **DDSTopic** (p. 1885) with default QoS.

When used in **DDSDomainParticipant::create_topic** (p. 1650), this special value is used to indicate that the **DDSTopic** (p. 1885) should be created with the default **DDSTopic** (p. 1885) QoS by means of the operation get_default_topic_qos and using the resulting QoS to create the **DDSTopic** (p. 1885).

When used in **DDSDomainParticipant::set_default_topic_qos** (p. 1637), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set_default_↩ topic_qos** (p. 1637) operation had never been called.

When used in **DDSTopic::set_qos** (p. 1887), this special value is used to indicate that the QoS of the **DDSTopic** (p. 1885) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1619) that the **DDSTopic** (p. 1885) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Topic; for this purpose, use **DDSDomainParticipant::get_default_topic_qos** (p. 1636).

See also

DDSDomainParticipant::create_topic (p. 1650)

DDSDomainParticipant::set_default_topic_qos (p. 1637)

DDSTopic::set_qos (p. 1887)

Examples

HelloWorld_publisher.cxx, and **HelloWorld_subscriber.cxx**.

7.5.4.2 DDS_PUBLISHER_QOS_DEFAULT

```
const struct DDS_PublisherQos DDS_PUBLISHER_QOS_DEFAULT [extern]
```

Special value for creating a **DDSPublisher** (p. 1818) with default QoS.

When used in **DDSDomainParticipant::create_publisher** (p. 1644), this special value is used to indicate that the **DDSPublisher** (p. 1818) should be created with the default **DDSPublisher** (p. 1818) QoS by means of the operation get_default_publisher_qos and using the resulting QoS to create the **DDSPublisher** (p. 1818).

When used in **DDSDomainParticipant::set_default_publisher_qos** (p. 1640), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set_↩ default_publisher_qos** (p. 1640) operation had never been called.

When used in **DDSPublisher::set_qos** (p. 1836), this special value is used to indicate that the QoS of the **DDSPublisher** (p. 1818) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1619) that the **DDSPublisher** (p. 1818) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Publisher; for this purpose, use **DDSDomainParticipant::get_default_publisher_qos** (p. 1639).

DDSPublisher::set_qos (p. 1836)

Examples

HelloWorld_publisher.cxx.

7.5.4.3 DDS_SUBSCRIBER_QOS_DEFAULT

```
const struct DDS_SubscriberQos DDS_SUBSCRIBER_QOS_DEFAULT [extern]
```

Special value for creating a **DDSSubscriber** (p. 1860) with default QoS.

When used in **DDSDomainParticipant::create_subscriber** (p. 1647), this special value is used to indicate that the **DDSSubscriber** (p. 1860) should be created with the default **DDSSubscriber** (p. 1860) QoS by means of the operation get_default_subscriber_qos and using the resulting QoS to create the **DDSSubscriber** (p. 1860).

When used in **DDSDomainParticipant::set_default_subscriber_qos** (p. 1642), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set_default_subscriber_qos** (p. 1642) operation had never been called.

When used in **DDSSubscriber::set_qos** (p. 1877), this special value is used to indicate that the QoS of the **DDSSubscriber** (p. 1860) should be changed to match the current default QoS set in the **DDSDomainParticipant** (p. 1619) that the **DDSSubscriber** (p. 1860) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Subscriber; for this purpose, use **DDSDomainParticipant::get_default_subscriber_qos** (p. 1641).

See also

DDSDomainParticipant::create_subscriber (p. 1647)

DDSDomainParticipant::get_default_subscriber_qos (p. 1641)

DDSSubscriber::set_qos (p. 1877)

Examples

HelloWorld_subscriber.cxx.

7.5.4.4 DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT

```
const struct DDS_FlowControllerProperty_t DDS_FLOW_CONTROLLER_PROPERTY_DEFAULT [extern]
```

<<***extension***>> *(p. 432)* Special value for creating a **DDSFlowController** (p. 1736) with default property.

When used in **DDSDomainParticipant::create_flowcontroller** (p. 1659) and **DDSFlowController::set_property** (p. 1737), this special value represents the set of values specified on the last successful call to **DDSDomainParticipant::set_default_flowcontroller_property** (p. 1631), or else, if the call was never made, the default values listed in **DDS_FlowControllerProperty_t** (p. 1156).

When used in **DDSDomainParticipant::set_default_flowcontroller_property** (p. 1631), this special value indicates that the default QoS should be reset back to the initial value that would be used if the **DDSDomainParticipant::set_default_flowcontroller_property** (p. 1631) operation had never been called.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default properties for a FlowController; for this purpose, use **DDSDomainParticipant::get_default_flowcontroller_property** (p. 1630).

See also

DDSDomainParticipant::create_flowcontroller (p. 1659)

DDSDomainParticipant::set_default_flowcontroller_property (p. 1631)

DDSFlowController::set_property (p. 1737)

7.5.4.5 DDS_SQLFILTER_NAME

```
const char* const DDS_SQLFILTER_NAME
```

<<***extension***>> *(p. 432)* The name of the built-in SQL filter that can be used with ContentFilteredTopics and Multi↩ Channel DataWriters.

See also

Queries and Filters Syntax (p. 184)

7.5.4.6 DDS_STRINGMATCHFILTER_NAME

```
const char* const DDS_STRINGMATCHFILTER_NAME
```

<<***extension***>> *(p. 432)* The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

The StringMatch Filter is a subset of the SQL filter; it only supports the MATCH relational operator on a single string field.

See also

Queries and Filters Syntax (p. 184)

7.6 Built-in Topics

Built-in objects created by RTI Connext but accessible to the application.

Modules

- **Participant Built-in Topics**

  Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.
- **Topic Built-in Topics**
- **Publication Built-in Topics**

  Builtin topic for accessing information about the Publications discovered by RTI Connext.
- **Subscription Built-in Topics**

  Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.
- **ServiceRequest Built-in Topic**

  Builtin topic for accessing requests from different services within RTI Connext.
- **Common types and functions**

  Types and functions related to the built-in topics.

7.6.1 Detailed Description

Built-in objects created by RTI Connext but accessible to the application.

RTI Connext must discover and keep track of the remote entities, such as new participants in the domain. This information may also be important to the application, which may want to react to this discovery, or else access it on demand.

A set of built-in topics and corresponding **DDSDataReader** (p. 1556) objects are introduced to be used by the application to access this discovery information.

The information can be accessed as if it were normal application data. This allows the application to know when there are any changes in those values by means of the **DDSListener** (p. 1794) or the **DDSCondition** (p. 1544) mechanisms.

The built-in data-readers all belong to a built-in **DDSSubscriber** (p. 1860), which can be retrieved by using the method **DDSDomainParticipant::get_builtin_subscriber** (p. 1661). The built-in **DDSDataReader** (p. 1556) objects can be retrieved by using the operation **DDSSubscriber::lookup_datareader** (p. 1872), with the topic name as a parameter.

Built-in entities have default listener settings as well. The built-in **DDSSubscriber** (p. 1860) and all of its built-in topics have 'nil' listeners with all statuses appearing in their listener masks (acting as a NO-OP listener that does not reset communication status). The built-in DataReaders have null listeners with no statuses in their masks.

The information that is accessible about the remote entities by means of the built-in topics includes all the QoS policies that apply to the corresponding remote Entity. These QoS policies appear as normal 'data' fields inside the data read by means of the built-in Topic. Additional information is provided to identify the Entity and facilitate the application logic.

The built-in **DDSDataReader** (p. 1556) will not provide data pertaining to entities created from the same **DDSDomain↩ Participant** (p. 1619) under the assumption that such entities are already known to the application that created them.

The discovery information provided by each built-in reader won't be received until it is first looked up. And if the Domain↩ Participant was created in a disabled state (see **DDS_EntityFactoryQosPolicy** (p. 1145)), the built-in subscriber and readers will need to be enabled explicitly (by the **DDSEntity::enable** (p. 1734) operation).

Refer to **DDS_ParticipantBuiltinTopicData** (p. 1229), **DDS_TopicBuiltinTopicData** (p. 1391), **DDS_Subscription↩ BuiltinTopicData** (p. 1370) and **DDS_PublicationBuiltinTopicData** (p. 1264) for a description of all the built-in topics and their contents.

The QoS of the built-in **DDSSubscriber** (p. 1860) and **DDSDataReader** (p. 1556) objects is given by the following table:

Table 7.18 ***QoS of built-in DDSSubscriber (*** p. ***1860) and DDSDataReader (*** p. ***1556)***

QoS	Value
DDS_UserDataQosPolicy (p. 1504)	0-length sequence
DDS_TopicDataQosPolicy (p. 1396)	0-length sequence
DDS_GroupDataQosPolicy (p. 1160)	0-length sequence
DDS_DurabilityQosPolicy (p. 1005)	**DDS_TRANSIENT_LOCAL_DURABILITY_QOS** (p. 599)
DDS_DurabilityServiceQosPolicy (p. 1009)	Does not apply as **DDS_DurabilityQosPolicyKind** (p. 598) is **DDS_TRANSIENT_LOCAL_DURABILITY_QOS** (p. 599)
DDS_PresentationQosPolicy (p. 1249)	access_scope = **DDS_TOPIC_PRESENTATION_QOS** (p. 616) coherent_access = **DDS_BOOLEAN_FALSE** (p. 513) ordered_access = **DDS_BOOLEAN_FALSE** (p. 513)
DDS_DeadlineQosPolicy (p. 928)	Period = infinite
DDS_LatencyBudgetQosPolicy (p. 1173)	duration = 0
DDS_OwnershipQosPolicy (p. 1222)	**DDS_SHARED_OWNERSHIP_QOS** (p. 613)
DDS_OwnershipStrengthQosPolicy (p. 1227)	value = 0
DDS_LivelinessQosPolicy (p. 1180)	kind = **DDS_AUTOMATIC_LIVELINESS_QOS** (p. 608) lease_duration = 0
DDS_TimeBasedFilterQosPolicy (p. 1389)	minimum_separation = 0
DDS_PartitionQosPolicy (p. 1240)	0-length sequence
DDS_ReliabilityQosPolicy (p. 1295)	kind = **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) max_blocking_time = 100 milliseconds
DDS_DestinationOrderQosPolicy (p. 931)	**DDS_BY_RECEPTION_TIMESTAMP_↩ DESTINATIONORDER_QOS** (p. 585)
DDS_HistoryQosPolicy (p. 1162)	kind = **DDS_KEEP_LAST_HISTORY_QOS** (p. 604) depth = 1
DDS_ResourceLimitsQosPolicy (p. 1308)	max_samples = **DDS_LENGTH_UNLIMITED** (p. 636) max_instances = **DDS_LENGTH_UNLIMITED** (p. 636) max_samples_per_instance = **DDS_LENGTH_UNLIMITED** (p. 636)
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	autopurge_nowriter_samples_delay = infinite autopurge_disposed_samples_delay = infinite
DDS_EntityFactoryQosPolicy (p. 1145)	autoenable_created_entities = **DDS_BOOLEAN_TRUE** (p. 513)

7.7 Topic Module

Contains the **DDSTopic** (p. 1885), **DDSContentFilteredTopic** (p. 1551), and **DDSMultiTopic** (p. 1797) classes, the **DDSTopicListener** (p. 1894) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1885) objects and attach QoS policies to them.

Modules

- **Topics**

DDSTopic *(p. 1885) entity and associated elements*

- **Zero Copy Transfer Over Shared Memory**

  *<<**extension**>> (p. 432) Zero Copy transfer over shared memory*
- **User Data Type Support**

  Defines generic classes and macros to support user data types.
- **Type Code Support**

  *<<**extension**>> (p. 432) A **DDS_TypeCode** (p. 1428) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 103) capability or to inspect the type information you receive from remote readers and writers.*
- **Built-in Types**

  RTI Connext provides a set of very simple data types for you to use with the topics in your application.
- **Built-in Topic's Trust Types**

  *Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1229), **DDS_PublicationBuiltinTopicData** (p. 1264), **DDS_SubscriptionBuiltinTopicData** (p. 1370) to describe Trust Plugins configuration.*
- **Dynamic Data**

  *<<**extension**>> (p. 432) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.*
- **DDS-Specific Primitive Types**

  Basic DDS value types for use in user data types.
- **FlatData Topic-Types**

  *<<**extension**>> (p. 432) FlatData Language Binding for IDL topic-types*

7.7.1 Detailed Description

Contains the **DDSTopic** (p. 1885), **DDSContentFilteredTopic** (p. 1551), and **DDSMultiTopic** (p. 1797) classes, the **DDSTopicListener** (p. 1894) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1885) objects and attach QoS policies to them.

7.8 Topics

DDSTopic (p. 1885) entity and associated elements

Classes

- struct **DDS_PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.
- struct **DDS_InconsistentTopicStatus**

  ***DDS_INCONSISTENT_TOPIC_STATUS** (p. 539)*
- struct **DDS_TopicQos**

  *QoS policies supported by a **DDSTopic** (p. 1885) entity.*
- struct **DDS_ExpressionProperty**

  *Provides additional information about the filter expression passed to **DDSWriterContentFilter::writer_compile** (p. 1906) .*
- struct **DDS_FilterSampleInfo**

  Provides meta information associated with the sample.

- class **DDSTopicDescription**

  *<<**interface**>> (p. 433) Base class for **DDSTopic** (p. 1885), **DDSContentFilteredTopic** (p. 1551), and **DDSMultiTopic** (p. 1797).*
- class **DDSContentFilteredTopic**

  *<<**interface**>> (p. 433) Specialization of **DDSTopicDescription** (p. 1892) that allows for content-based subscriptions.*
- class **DDSMultiTopic**

  ***[Not supported (optional)]** <<**interface**>> (p. 433) A specialization of **DDSTopicDescription** (p. 1892) that allows subscriptions that combine/filter/rearrange data coming from several topics.*
- class **DDSTopic**

  *<<**interface**>> (p. 433) The most basic description of the data to be published and subscribed.*
- class **DDSTopicListener**

  *<<**interface**>> (p. 433) **DDSListener** (p. 1794) for **DDSTopic** (p. 1885) entities.*
- class **DDSContentFilter**

  *<<**interface**>> (p. 433) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1551)*
- class **DDSWriterContentFilter**

  *<<**interface**>> (p. 433) Interface to be used by a custom filter of a **DDSContentFilteredTopic** (p. 1551).*

Typedefs

- typedef struct **DDS_PrintFormatProperty** **DDS_PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.

Enumerations

- enum **DDS_PrintFormatKind** {
  DDS_DEFAULT_PRINT_FORMAT ,
  DDS_XML_PRINT_FORMAT ,
  DDS_JSON_PRINT_FORMAT }

  Format kinds available when converting data samples to string representations.

Functions

- **DDS_Boolean** **DDS_TopicQos_equals** (const struct **DDS_TopicQos** *self, const struct **DDS_TopicQos** *other)

  *Compares two **DDS_TopicQos** (p. 1397) for equality.*
- **DDS_ReturnCode_t** **DDS_TopicQos::print** () const

  *Prints this **DDS_TopicQos** (p. 1397) to stdout.*
- **DDS_ReturnCode_t** **DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_TopicQos** (p. 1397).*
- **DDS_ReturnCode_t** **DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_TopicQos** &base) const

  *Obtains a string representation of this **DDS_TopicQos** (p. 1397).*
- **DDS_ReturnCode_t** **DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_TopicQos** (p. 1397).*

- **DDS_ReturnCode_t DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_TopicQos** &base, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_TopicQos*** (p. *1397*).
- **DDS_ReturnCode_t DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &) const

  *Obtains a string representation of this **DDS_TopicQos*** (p. *1397*).
- **DDS_ReturnCode_t DDS_TopicQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_TopicQos*** (p. *1397*).

Variables

- const struct **DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_PrintFormatProperty*** (p. *1253*).
- const struct **DDS_FilterSampleInfo DDS_FILTERSAMPLEINFO_DEFAULT**

  *Initializer for new **DDS_FilterSampleInfo*** (p. *1153*).

7.8.1 Detailed Description

DDSTopic (p. 1885) entity and associated elements

7.8.2 Typedef Documentation

7.8.2.1 DDS_PrintFormatProperty

`typedef struct` **`DDS_PrintFormatProperty DDS_PrintFormatProperty`**

A collection of attributes used to configure how data samples will be formatted when converted to a string.

7.8.3 Enumeration Type Documentation

7.8.3.1 DDS_PrintFormatKind

`enum` **`DDS_PrintFormatKind`**

Format kinds available when converting data samples to string representations.

Enumerator

DDS_DEFAULT_PRINT_FORMAT	Use a default format specific to RTI Connext to represent the data when converting to a string.
DDS_XML_PRINT_FORMAT	Use an XML format to represent the data when converting to a string.
DDS_JSON_PRINT_FORMAT	Use a JSON format to represent the data when converting to a string.

7.8.4 Function Documentation

7.8.4.1 DDS_TopicQos_equals()

```
DDS_Boolean DDS_TopicQos_equals (
            const struct  DDS_TopicQos * self,
            const struct  DDS_TopicQos * other )
```

Compares two **DDS_TopicQos** (p. 1397) for equality.

Parameters

self	<<***in***>> *(p. 433)* This TopicQos.
other	<<***in***>> *(p. 433)* The other TopicQos to be compared with this TopicQos

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_TopicQos::operator!=()**, and **DDS_TopicQos::operator==()**.

7.8.4.2 print()

```
DDS_ReturnCode_t DDS_TopicQos::print ( ) const  [inline]
```

Prints this **DDS_TopicQos** (p. 1397) to stdout.

Only the differences between this **DDS_TopicQos** (p. 1397) and the documented default are printed. If you wish to print everything regardless, see **DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrintFormat&) const** (p. 70). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.8.4.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

Only the differences between this **DDS_TopicQos** (p. 1397) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrintFormat&) const** (p. 70). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_TopicQos** (p. 1397) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrintFormat&) const (p. 70)

7.8.4.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_TopicQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

This overload behaves the same as **DDS_TopicQos::to_string** (p. 67) but allows the caller to specify the **DDS_TopicQos** (p. 1397), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_TopicQos** (p. 1397) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrint↩ Format&) const (p. 70)

References **DDS_QosPrintFormat_INITIALIZER**.

7.8.4.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

This overload behaves the same as **DDS_TopicQos::to_string** (p. 67) but allows the caller to specify the **DDS_Qos↩ PrintFormat** (p. 1285) which is used to format the output.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrint↩ Format&) const (p. 70)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.8.4.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_TopicQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

Only the differences between this **DDS_TopicQos** (p. 1397) and the **DDS_TopicQos** (p. 1397) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_TopicQos** (p. 1397) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_TopicQos** (p. 1397) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.8.4.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

This overload behaves the same as **DDS_TopicQos::to_string** (p. 67) but prints the entire **DDS_TopicQos** (p. 1397) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT_ALL** (p. 169).

For example
```
TopicQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrint↩ Format&) const (p. 70)

References **DDS_QosPrintFormat_INITIALIZER**.

7.8.4.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_TopicQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_TopicQos** (p. 1397).

This overload behaves the same as the **DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_Qos↩ PrintAll_t&) const** (p. 70) overload. The only difference is that it allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_TopicQos** (p. 1397). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(*p. *433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_TopicQos::to_string(char*, DDS_UnsignedLong&, const DDS_TopicQos&, const DDS_QosPrint↩ Format&) const (p. 70)

7.8.5 Variable Documentation

7.8.5.1 DDS_PRINT_FORMAT_PROPERTY_DEFAULT

```
const struct DDS_PrintFormatProperty DDS_PRINT_FORMAT_PROPERTY_DEFAULT
```

Sentinel constant indicating default values for **DDS_PrintFormatProperty** (p. 1253).

Pass this object instead of your own **DDS_PrintFormatProperty** (p. 1253) object to use the default property values:

```
retCode = FooTypeSupport::data_to_string(

    sample,

    DDS_PRINT_FORMAT_PROPERTY_DEFAULT);
```

See also

DDS_PrintFormatProperty (p. 1253)

7.8.5.2 DDS_FILTERSAMPLEINFO_DEFAULT

```
const struct DDS_FilterSampleInfo DDS_FILTERSAMPLEINFO_DEFAULT [extern]
```

Initializer for new **DDS_FilterSampleInfo** (p. 1153).

All new **DDS_FilterSampleInfo** (p. 1153) instances allocated on the stack should be initialized to this value. No memory is allocated.

See also

DDS_FilterSampleInfo (p. 1153)

7.9 Zero Copy Transfer Over Shared Memory

*<<**extension**>> (p. 432)* Zero Copy transfer over shared memory

*<<**extension**>> (p. 432)* Zero Copy transfer over shared memory

Note

For a description of Zero Copy transfer over shared memory and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

Zero Copy transfer over shared memory is available in the C API, in the Traditional C++ API, and in the Modern C++ API.

7.10 User Data Type Support

Defines generic classes and macros to support user data types.

Classes

- struct **DDS_TypeAllocationParams_t**

  Configures whether or not to allocate pointer and optional members.
- struct **DDS_TypeDeallocationParams_t**

  Configures whether to release or not pointer and optional members.
- struct **Foo**

  A representative user-defined data type.
- struct **DDS_InstanceHandleSeq**

  *Instantiates **FooSeq** (p. 1965) < **DDS_InstanceHandle_t** (p. 76) > .*
- class **FooTypeSupport**

  *<<**interface**>> (p. 433) <<**generic**>> (p. 433) User data type specific interface.*
- class **DDSTypeSupport**

  *<<**interface**>> (p. 433) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

Macros

- #define **DDS_TYPESUPPORT_CPP**(TTypeSupport, TData)

  Declares the interface required to support a user data type.
- #define **DDS_DATAWRITER_CPP**(TDataWriter, TData)

  Declares the interface required to support a user data type specific data writer.
- #define **DDS_DATAREADER_W_DATA_CONSISTENCY_CHECK**(TDataReader, TDataSeq, TData)

  Declares the interface required to support a user data type-specific data reader.

Typedefs

- typedef DDS_HANDLE_TYPE_NATIVE **DDS_InstanceHandle_t**

  Type definition for an instance handle.

Functions

- **DDS_Boolean DDS_InstanceHandle_equals** (const **DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Compares this instance handle with another handle for equality.
- int **DDS_InstanceHandle_compare** (const **DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Compares this instance handle with another handle.
- void **DDS_InstanceHandle_copy** (**DDS_InstanceHandle_t** *self, const **DDS_InstanceHandle_t** *other)

  Copies this instance handle into another handle.
- **DDS_Boolean DDS_InstanceHandle_is_nil** (const **DDS_InstanceHandle_t** *self)

  *Compare this handle to **DDS_HANDLE_NIL** (p. 78).*

Variables

- const **DDS_InstanceHandle_t DDS_HANDLE_NIL**

  The NIL instance handle.

7.10.1 Detailed Description

Defines generic classes and macros to support user data types.

DDS specifies strongly typed interfaces to read and write user data. For each data class defined by the application, there is a number of specialised classes that are required to facilitate the type-safe interaction of the application with RTI Connext.

RTI Connext provides an automatic means to generate all these type-specific classes with the rtiddsgen utility. The complete set of automatic classes created for a hypothetical user data type named **Foo** (p. 1916) are shown below.

an application data type named **Foo** (p. 1916) "

The macros defined here declare the strongly typed APIs needed to support an arbitrary user defined data of type **Foo** (p. 1916).

See also

the Code Generator User's Manual

7.10.2 Macro Definition Documentation

7.10.2.1 DDS_TYPESUPPORT_CPP

```
#define DDS_TYPESUPPORT_CPP(
              TTypeSupport,
              TData )
```

Declares the interface required to support a user data type.

Defines:

FooTypeSupport *(*p. *1979)* TypeSupport of type **Foo** (p. 1916), i.e. **FooTypeSupport** (p. 1979)

Examples

HelloWorldSupport.cxx.

7.10.2.2 DDS_DATAWRITER_CPP

```
#define DDS_DATAWRITER_CPP(
              TDataWriter,
              TData )
```

Declares the interface required to support a user data type specific data writer.

Uses:

FooTypeSupport *(*p. *1979)* user data type, **Foo** (p. 1916)

Defines:

FooDataWriter *(*p. *1944)* **DDSDataWriter** (p. 1589) of type **Foo** (p. 1916), i.e. **FooDataWriter** (p. 1944)

7.10.2.3 DDS_DATAREADER_W_DATA_CONSISTENCY_CHECK

```
#define DDS_DATAREADER_W_DATA_CONSISTENCY_CHECK(
             TDataReader,
             TDataSeq,
             TData )
```

Declares the interface required to support a user data type-specific data reader.

Uses:

FooTypeSupport *(*p. *1979)* user data type, **Foo** (p. 1916)
FooSeq (p. 1965) sequence of user data type, sequence<::Foo>

Defines:

FooDataReader *(*p. *1917)* **DDSDataReader** (p. 1556) of type **Foo** (p. 1916), i.e. **FooDataReader** (p. 1917)

See also

FooSeq (p. 1965)

Examples

HelloWorldSupport.cxx.

7.10.3 Typedef Documentation

7.10.3.1 DDS_InstanceHandle_t

```
typedef DDS_HANDLE_TYPE_NATIVE  DDS_InstanceHandle_t
```

Type definition for an instance handle.

Handle to identify different instances of the same **DDSTopic** (p. 1885) of a certain type.

See also

FooDataWriter::register_instance (p. 1946)
DDS_SampleInfo::instance_handle (p. 1349)

7.10.4 Function Documentation

7.10.4.1 DDS_InstanceHandle_equals()

```
DDS_Boolean DDS_InstanceHandle_equals (
            const  DDS_InstanceHandle_t * self,
            const  DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle for equality.

Parameters

self	*<<**in**>> (p. 433)* This handle. Cannot be NULL.
other	*<<**in**>> (p. 433)* The other handle to be compared with this handle. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two handles have equal values, or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

See also

DDS_InstanceHandle_is_nil (p. 78)

7.10.4.2 DDS_InstanceHandle_compare()

```
int DDS_InstanceHandle_compare (
             const  DDS_InstanceHandle_t * self,
             const  DDS_InstanceHandle_t * other )
```

Compares this instance handle with another handle.

Parameters

self	*<<**in**>> (p. 433)* This handle. Cannot be NULL.
other	*<<**in**>> (p. 433)* The other handle to be compared with this handle. Cannot be NULL.

Returns

If the two handles are equal, the function returns 0. If self is greater than other the function returns a positive number; otherwise, it returns a negative number.

See also

DDS_InstanceHandle_is_nil (p. 78)

7.10.4.3 DDS_InstanceHandle_copy()

```
void DDS_InstanceHandle_copy (
              DDS_InstanceHandle_t * self,
             const  DDS_InstanceHandle_t * other )
```

Copies this instance handle into another handle.

Parameters

self	<<***in***>> *(p. 433)* The source handle. Cannot be NULL.
other	<<***in***>> *(p. 433)* The destination handle to be copied into. Cannot be NULL.

7.10.4.4 DDS_InstanceHandle_is_nil()

```
DDS_Boolean DDS_InstanceHandle_is_nil (
            const  DDS_InstanceHandle_t * self )
```

Compare this handle to **DDS_HANDLE_NIL** (p. 78).

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given instance handle is equal to **DDS_HANDLE_NIL** (p. 78) or **DDS_↩ BOOLEAN_FALSE** (p. 513) otherwise.

See also

DDS_InstanceHandle_equals (p. 76)

7.10.5 Variable Documentation

7.10.5.1 DDS_HANDLE_NIL

```
const  DDS_InstanceHandle_t DDS_HANDLE_NIL  [extern]
```

The NIL instance handle.

Special **DDS_InstanceHandle_t** (p. 76) value

See also

DDS_InstanceHandle_is_nil (p. 78)

Examples

HelloWorld_publisher.cxx.

7.11 Type Code Support

*<<**extension**>> (p. 432)* A ***DDS_TypeCode*** *(p. 1428)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 103) capability or to inspect the type information you receive from remote readers and writers.

Classes

- struct **DDS_TypeCodePrintFormatProperty**

  A collection of attributes used to configure how a TypeCode appears when converted to a string.
- struct **DDS_TypeCode**

  The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the `Code Generator User's Manual`) or to modify types you define yourself at runtime.
- struct **DDS_StructMember**

  A description of a member of a struct.
- struct **DDS_StructMemberSeq**

  Defines a sequence of struct members.
- struct **DDS_UnionMember**

  A description of a member of a union.
- struct **DDS_UnionMemberSeq**

  Defines a sequence of union members.
- struct **DDS_EnumMember**

  A description of a member of an enumeration.
- struct **DDS_EnumMemberSeq**

  Defines a sequence of enumerator members.
- struct **DDS_ValueMember**

  A description of a member of a value type.
- struct **DDS_ValueMemberSeq**

  Defines a sequence of value members.
- struct **DDS_TypeCodeFactory**

  A singleton factory for creating, copying, and deleting data type definitions dynamically.

Macros

- #define **DDS_TYPECODE_MEMBER_ID_INVALID**

  *A sentinel indicating an invalid **DDS_TypeCode** (p. 1428) member ID.*
- #define **DDS_TYPECODE_INDEX_INVALID**

  *A sentinel indicating an invalid **DDS_TypeCode** (p. 1428) member index.*
- #define **DDS_TYPECODE_NOT_BITFIELD**

  Indicates that a member of a type is not a bitfield.
- #define **DDS_VM_NONE**

  Constant used to indicate that a value type has no modifiers.
- #define **DDS_VM_CUSTOM**

  Constant used to indicate that a value type has the `custom` modifier.
- #define **DDS_VM_ABSTRACT**

Constant used to indicate that a value type has the `abstract` modifier.

- #define **DDS_VM_TRUNCATABLE**

  Constant used to indicate that a value type has the `truncatable` modifier.

- #define **DDS_PRIVATE_MEMBER**

  Constant used to indicate that a value type member is private.

- #define **DDS_PUBLIC_MEMBER**

  Constant used to indicate that a value type member is public.

- #define **DDS_TYPECODE_NONKEY_MEMBER**

  A flag indicating that a type member is optional and not part of the key.

- #define **DDS_TYPECODE_KEY_MEMBER**

  A flag indicating that a type member is part of the key for that type, and therefore required.

- #define **DDS_TYPECODE_NONKEY_REQUIRED_MEMBER**

  A flag indicating that a type member is not part of the key but is nevertheless required.

- #define **DDS_TypeCode_PrintFormat_INITIALIZER**

  *Static initializer for **DDS_TypeCodePrintFormatProperty** (p. 1490).*

Typedefs

- typedef short **DDS_ValueModifier**

  Modifier type for a value type.

- typedef short **DDS_Visibility**

  Type to indicate the visibility of a value type member.

Enumerations

- enum **DDS_TypeCodePrintFormatKind** {
  DDS_TYPE_CODE_PRINT_KIND_IDL ,
  DDS_TYPE_CODE_PRINT_KIND_XML ,
  DDS_TYPE_CODE_PRINT_KIND_JSON_SCHEMA }

  *The different formats to print a **DDS_TypeCode** (p. 1428).*

- enum **DDS_TCKind** {
  DDS_TK_NULL ,
  DDS_TK_SHORT ,
  DDS_TK_LONG ,
  DDS_TK_USHORT ,
  DDS_TK_ULONG ,
  DDS_TK_FLOAT ,
  DDS_TK_DOUBLE ,
  DDS_TK_BOOLEAN ,
  DDS_TK_CHAR ,
  DDS_TK_OCTET ,
  DDS_TK_STRUCT ,
  DDS_TK_UNION ,
  DDS_TK_ENUM ,
  DDS_TK_STRING ,
  DDS_TK_SEQUENCE ,
  DDS_TK_ARRAY ,
  DDS_TK_ALIAS ,

DDS_TK_LONGLONG ,
DDS_TK_ULONGLONG ,
DDS_TK_LONGDOUBLE ,
DDS_TK_WCHAR ,
DDS_TK_WSTRING ,
DDS_TK_VALUE ,
DDS_TK_INT8 ,
DDS_TK_UINT8 ,
DDS_TK_RAW_BYTES = 0x7e ,
DDS_TK_RAW_BYTES_KEYED = 0x7f ,
DDS_TK_FINAL_EXTENSIBILITY = 0x4000 ,
DDS_TK_MUTABLE_EXTENSIBILITY = 0x2000 ,
DDS_TK_FLAT_DATA_LANGUAGE_BINDING = RTI_XCDR_TK_FLAGS_IS_FLAT_DATA ,
DDS_TK_SHMEM_REF_TRANSFER_MODE = RTI_XCDR_TK_FLAGS_IS_SHMEM_REF }

*Enumeration type for **DDS_TypeCode** (p. 1428) kinds.*

- enum **DDS_ExtensibilityKind** {
DDS_FINAL_EXTENSIBILITY ,
DDS_EXTENSIBLE_EXTENSIBILITY ,
DDS_MUTABLE_EXTENSIBILITY }

  Type to indicate the extensibility of a type.

Variables

- **DDS_TypeCode DDS_g_tc_null**

  Basic NULL type.
- **DDS_TypeCode DDS_g_tc_short**

  Basic 16-bit signed integer type.
- **DDS_TypeCode DDS_g_tc_long**

  Basic 32-bit signed integer type.
- **DDS_TypeCode DDS_g_tc_ushort**

  Basic unsigned 16-bit integer type.
- **DDS_TypeCode DDS_g_tc_ulong**

  Basic unsigned 32-bit integer type.
- **DDS_TypeCode DDS_g_tc_float**

  Basic 32-bit floating point type.
- **DDS_TypeCode DDS_g_tc_double**

  Basic 64-bit floating point type.
- **DDS_TypeCode DDS_g_tc_boolean**

  Basic Boolean type.
- **DDS_TypeCode DDS_g_tc_char**

  Basic single-byte character type.
- **DDS_TypeCode DDS_g_tc_octet**

  Basic octet/byte type.
- **DDS_TypeCode DDS_g_tc_int8**

  Basic signed 8-bit int type.
- **DDS_TypeCode DDS_g_tc_uint8**

  Basic unsigned 8-bit int type.
- **DDS_TypeCode DDS_g_tc_longlong**

Basic 64-bit integer type.

- **DDS_TypeCode DDS_g_tc_ulonglong**

  Basic unsigned 64-bit integer type.

- **DDS_TypeCode DDS_g_tc_longdouble**

  Basic 128-bit floating point type.

- **DDS_TypeCode DDS_g_tc_wchar**

  Basic four-byte character type.

7.11.1 Detailed Description

<<***extension***>> *(p. 432)* A ***DDS_TypeCode*** *(p. 1428)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 103) capability or to inspect the type information you receive from remote readers and writers.

Type codes are values that are used to describe arbitrarily complex types at runtime. Type code values are manipulated via the **DDS_TypeCode** (p. 1428) class, which has an analogue in CORBA.

A **DDS_TypeCode** (p. 1428) value consists of a type code *kind* (represented by the **DDS_TCKind** (p. 89) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **DDS_TypeCode** (p. 1428), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

There are a number of uses for type codes. The type code mechanism can be used to unambiguously match type representations. The **DDS_TypeCode::equal** (p. 1435) method is a more reliable test than comparing the string type names, requiring equivalent definitions of the types.

7.11.2 Accessing a Local ::DDS_TypeCode

When generating types with rtiddsgen, type codes are always enabled. For these types, a **DDS_TypeCode** (p. 1428) may be accessed by calling the `Foo_get_typecode` function for a type "Foo", which returns a **DDS_TypeCode** (p. 1428) pointer. via the **FooTypeCode.VALUE** member. This API also includes support for dynamic creation of **DDS_TypeCode** (p. 1428) values, typically for use with the **Dynamic Data** (p. 103) API. You can create a **DDS_Type↩ Code** (p. 1428) using the **DDS_TypeCodeFactory** (p. 1476) class. You will construct the **DDS_TypeCode** (p. 1428) recursively, from the outside in: start with the type codes for primitive types, then compose them into complex types like arrays, structures, and so on. You will find the following methods helpful:

- **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480), which provides the **DDS_TypeCode** (p. 1428) instances corresponding to the primitive types (e.g. **DDS_TK_LONG** (p. 89), **DDS_TK_SHORT** (p. 89), and so on).
- **DDS_TypeCodeFactory::create_string_tc** (p. 1487) and **DDS_TypeCodeFactory::create_wstring_↩ tc** (p. 1487) create a **DDS_TypeCode** (p. 1428) representing a text string with a certain *bound* (i.e. maximum length).
- **DDS_TypeCodeFactory::create_array_tc** (p. 1489) and **DDS_TypeCodeFactory::create_sequence_↩ tc** (p. 1488) create a **DDS_TypeCode** (p. 1428) for a collection based on the **DDS_TypeCode** (p. 1428) for its elements.
- **DDS_TypeCodeFactory::create_struct_tc** (p. 1480) and **DDS_TypeCodeFactory::create_value_tc** (p. 1482) create a **DDS_TypeCode** (p. 1428) for a structured type.

7.11.3 Accessing a Remote ::DDS_TypeCode

In addition to being used locally, RTI Connext can transmit **DDS_TypeCode** (p. 1428) on the network between participants. This information can be used to access information about types used remotely at runtime, for example to be able to publish or subscribe to topics of arbitrarily types (see **Dynamic Data** (p. 103)). This functionality is useful for a generic system monitoring tool like `rtiddsspy`.

Remote **DDS_TypeCode** (p. 1428) information is shared during discovery over the publication and subscription built-in topics and can be accessed using the built-in readers for these topics; see **Built-in Topics** (p. 61). Discovered **DDS_TypeCode** (p. 1428) values are not cached by RTI Connext upon receipt and are therefore not available from the built-in topic data returned by **DDSDataWriter::get_matched_subscription_data** (p. 1600) or **DDSDataReader::get↩ _matched_publication_data** (p. 1568).

The space available locally to deserialize a discovered remote **DDS_TypeCode** (p. 1428) is specified by the **DDSDomainParticipant** (p. 1619)'s **DDS_DomainParticipantResourceLimitsQosPolicy::type_code_max_↩ serialized_length** (p. 994) QoS parameter. To support especially complex type codes, it may be necessary for you to increase the value of this parameter.

7.11.4 Macro Definition Documentation

7.11.4.1 DDS_TYPECODE_MEMBER_ID_INVALID

```
#define DDS_TYPECODE_MEMBER_ID_INVALID
```

A sentinel indicating an invalid **DDS_TypeCode** (p. 1428) member ID.

7.11.4.2 DDS_TYPECODE_INDEX_INVALID

```
#define DDS_TYPECODE_INDEX_INVALID
```

A sentinel indicating an invalid **DDS_TypeCode** (p. 1428) member index.

7.11.4.3 DDS_TYPECODE_NOT_BITFIELD

```
#define DDS_TYPECODE_NOT_BITFIELD
```

Indicates that a member of a type is not a bitfield.

7.11.4.4 DDS_VM_NONE

```
#define DDS_VM_NONE
```

Constant used to indicate that a value type has no modifiers.

See also

DDS_ValueModifier (p. 87)

Examples

HelloWorld.cxx.

7.11.4.5 DDS_VM_CUSTOM

```
#define DDS_VM_CUSTOM
```

Constant used to indicate that a value type has the `custom` modifier.

This modifier is used to specify whether the value type uses custom marshaling.

See also

DDS_ValueModifier (p. 87)

7.11.4.6 DDS_VM_ABSTRACT

```
#define DDS_VM_ABSTRACT
```

Constant used to indicate that a value type has the `abstract` modifier.

An abstract value type may not be instantiated.

See also

DDS_ValueModifier (p. 87)

7.11.4.7 DDS_VM_TRUNCATABLE

```
#define DDS_VM_TRUNCATABLE
```

Constant used to indicate that a value type has the `truncatable` modifier.

A value with a state that derives from another value with a state can be declared as truncatable. A truncatable type means the object can be truncated to the base type.

See also

DDS_ValueModifier (p. 87)

7.11.4.8 DDS_PRIVATE_MEMBER

```
#define DDS_PRIVATE_MEMBER
```

Constant used to indicate that a value type member is private.

See also

DDS_Visibility (p. 88)
DDS_PUBLIC_MEMBER (p. 85)

7.11.4.9 DDS_PUBLIC_MEMBER

```
#define DDS_PUBLIC_MEMBER
```

Constant used to indicate that a value type member is public.

See also

DDS_Visibility (p. 88)
DDS_PRIVATE_MEMBER (p. 85)

Examples

HelloWorld.cxx.

7.11.4.10 DDS_TYPECODE_NONKEY_MEMBER

```
#define DDS_TYPECODE_NONKEY_MEMBER
```

A flag indicating that a type member is optional and not part of the key.

If a type is used with the **Dynamic Data** (p. 103) facility, a **DDS_DynamicData** (p. 1013) sample of the type will only contain a value for a **DDS_TYPECODE_NONKEY_MEMBER** (p. 85) field if one has been explicitly set (see, for example, **DDS_DynamicData::set_long** (p. 1093)). The middleware will *not* assume any default value.

See also

DDS_TYPECODE_KEY_MEMBER (p. 86)
DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 86)
DDS_TYPECODE_KEY_MEMBER (p. 86)
DDS_TypeCode::add_member (p. 1463)
DDS_TypeCode::add_member_ex (p. 1465)
DDS_TypeCode::is_member_key (p. 1443)
DDS_TypeCode::is_member_required (p. 1443)
DDS_StructMember::is_key (p. 1366)
DDS_ValueMember::is_key (p. 1507)

7.11.4.11 DDS_TYPECODE_KEY_MEMBER

```
#define DDS_TYPECODE_KEY_MEMBER
```

A flag indicating that a type member is part of the key for that type, and therefore required.

If a type is used with the **Dynamic Data** (p. 103) facility, all **DDS_DynamicData** (p. 1013) samples of the type will contain a value for all **DDS_TYPECODE_KEY_MEMBER** (p. 86) fields. If you do not set a value of the member explicitly (see, for example, **DDS_DynamicData::set_long** (p. 1093)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

See also

DDS_TYPECODE_NONKEY_REQUIRED_MEMBER (p. 86)
DDS_TYPECODE_NONKEY_MEMBER (p. 85)
DDS_TypeCode::add_member (p. 1463)
DDS_TypeCode::add_member_ex (p. 1465)
DDS_TypeCode::is_member_key (p. 1443)
DDS_TypeCode::is_member_required (p. 1443)
DDS_StructMember::is_key (p. 1366)
DDS_ValueMember::is_key (p. 1507)

7.11.4.12 DDS_TYPECODE_NONKEY_REQUIRED_MEMBER

```
#define DDS_TYPECODE_NONKEY_REQUIRED_MEMBER
```

A flag indicating that a type member is not part of the key but is nevertheless required.

This is the most common kind of member.

If a type is used with the **Dynamic Data** (p. 103) facility, all **DDS_DynamicData** (p. 1013) samples of the type will contain a value for all **DDS_TYPECODE_NONKEY_REQUIRED_MEMBER** (p. 86) fields. If you do not set a value of the member explicitly (see, for example, **DDS_DynamicData::set_long** (p. 1093)), the middleware will assume a default "zero" value: numeric values will be set to zero; strings and sequences will be of zero length.

DDS_TypeCode::is_member_required (p. 1443)
DDS_StructMember::is_key (p. 1366)
DDS_ValueMember::is_key (p. 1507)

7.11.4.13 DDS_TypeCode_PrintFormat_INITIALIZER

```
#define DDS_TypeCode_PrintFormat_INITIALIZER
```

Static initializer for **DDS_TypeCodePrintFormatProperty** (p. 1490).

Use this initializer to ensure that new objects don't have uninitialized contents.

```
struct DDS_TypeCodePrintFormatProperty property = DDS_TypeCodePrintFormatProperty;
```

7.11.5 Typedef Documentation

7.11.5.1 DDS_ValueModifier

```
typedef short DDS_ValueModifier
```

Modifier type for a value type.

See also

DDS_VM_NONE (p. 84)
DDS_VM_CUSTOM (p. 84)
DDS_VM_ABSTRACT (p. 84)
DDS_VM_TRUNCATABLE (p. 84)

7.11.5.2 DDS_Visibility

```
typedef short DDS_Visibility
```

Type to indicate the visibility of a value type member.

See also

DDS_PRIVATE_MEMBER (p. 85)
DDS_PUBLIC_MEMBER (p. 85)

7.11.6 Enumeration Type Documentation

7.11.6.1 DDS_TypeCodePrintFormatKind

```
enum DDS_TypeCodePrintFormatKind
```

The different formats to print a **DDS_TypeCode** (p. 1428).

Enumerator

DDS_TYPE_CODE_PRINT_KIND_IDL	Indicates that a **DDS_TypeCode** (p. 1428) is to be printed in IDL format.
DDS_TYPE_CODE_PRINT_KIND_XML	Indicates that a **DDS_TypeCode** (p. 1428) is to be printed in XML format.
DDS_TYPE_CODE_PRINT_KIND_JSON_SCHEMA	Indicates that a **DDS_TypeCode** (p. 1428) is printed in JSON Schema format.

7.11.6.2 DDS_TCKind

enum **DDS_TCKind**

Enumeration type for **DDS_TypeCode** (p. 1428) kinds.

Type code kinds are modeled as values of this type.

Enumerator

DDS_TK_NULL	Indicates that a type code does not describe anything.
DDS_TK_SHORT	short type.
DDS_TK_LONG	long type.
DDS_TK_USHORT	unsigned short type.
DDS_TK_ULONG	unsigned long type.
DDS_TK_FLOAT	float type.
DDS_TK_DOUBLE	double type.
DDS_TK_BOOLEAN	boolean type.
DDS_TK_CHAR	char type.
DDS_TK_OCTET	octet type.
DDS_TK_STRUCT	struct type.
DDS_TK_UNION	union type.
DDS_TK_ENUM	enumerated type.
DDS_TK_STRING	string type.
DDS_TK_SEQUENCE	sequence type.
DDS_TK_ARRAY	array type.
DDS_TK_ALIAS	alias (typedef) type.
DDS_TK_LONGLONG	long long type.
DDS_TK_ULONGLONG	unsigned long long type.
DDS_TK_LONGDOUBLE	long double type.
DDS_TK_WCHAR	wide char type.
DDS_TK_WSTRING	wide string type.
DDS_TK_VALUE	value type.
DDS_TK_INT8	8-bit signed integer type.
DDS_TK_UINT8	8-bit unsigned integer type.

7.11.6.3 DDS_ExtensibilityKind

enum **DDS_ExtensibilityKind**

Type to indicate the extensibility of a type.

Enumerator

DDS_FINAL_EXTENSIBILITY	Specifies that a type has FINAL extensibility. A type may be final, indicating that the range of its possible values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability. The following types are always final: • **DDS_TK_ARRAY** (p. 89) • All primitive types
DDS_EXTENSIBLE_EXTENSIBILITY	Specifies that a type has EXTENSIBLE extensibility. A type may be appendable (formerly called extensible), indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.
DDS_MUTABLE_EXTENSIBILITY	Specifies that a type has MUTABLE extensibility. A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable. The following types are always mutable: • **DDS_TK_SEQUENCE** (p. 89) • **DDS_TK_STRING** (p. 89) • **DDS_TK_WSTRING** (p. 89)

7.11.7 Variable Documentation

7.11.7.1 DDS_g_tc_null

```
DDS_TypeCode DDS_g_tc_null
```

Basic NULL type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

7.11.7.2 DDS_g_tc_short

```
DDS_TypeCode DDS_g_tc_short
```

Basic 16-bit signed integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_Short (p. 514)

7.11.7.3 DDS_g_tc_long

```
DDS_TypeCode DDS_g_tc_long
```

Basic 32-bit signed integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_Long (p. 515)

7.11.7.4 DDS_g_tc_ushort

```
DDS_TypeCode DDS_g_tc_ushort
```

Basic unsigned 16-bit integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_UnsignedShort (p. 514)

7.11.7.5 DDS_g_tc_ulong

```
DDS_TypeCode DDS_g_tc_ulong
```

Basic unsigned 32-bit integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_UnsignedLong (p. 515)

7.11.7.6 DDS_g_tc_float

```
DDS_TypeCode DDS_g_tc_float
```

Basic 32-bit floating point type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_Float (p. 515)

7.11.7.7 DDS_g_tc_double

```
DDS_TypeCode DDS_g_tc_double
```

Basic 64-bit floating point type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_Double (p. 515)

7.11.7.8 DDS_g_tc_boolean

```
DDS_TypeCode DDS_g_tc_boolean
```

Basic Boolean type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_Boolean (p. 516)

7.11.7.9 DDS_g_tc_char

```
DDS_TypeCode DDS_g_tc_char
```

Basic single-byte character type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_Char (p. 513)

7.11.7.10 DDS_g_tc_octet

```
DDS_TypeCode DDS_g_tc_octet
```

Basic octet/byte type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)

DDS_Octet (p. 514)

7.11.7.11 DDS_g_tc_int8

```
DDS_TypeCode DDS_g_tc_int8
```

Basic signed 8-bit int type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_Int8 (p. 514)

7.11.7.12 DDS_g_tc_uint8

```
DDS_TypeCode DDS_g_tc_uint8
```

Basic unsigned 8-bit int type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_UInt8 (p. 514)

7.11.7.13 DDS_g_tc_longlong

```
DDS_TypeCode DDS_g_tc_longlong
```

Basic 64-bit integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_LongLong (p. 515)

7.11.7.14 DDS_g_tc_ulonglong

```
DDS_TypeCode DDS_g_tc_ulonglong
```

Basic unsigned 64-bit integer type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_UnsignedLongLong (p. 515)

7.11.7.15 DDS_g_tc_longdouble

```
DDS_TypeCode DDS_g_tc_longdouble
```

Basic 128-bit floating point type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_LongDouble (p. 516)

7.11.7.16 DDS_g_tc_wchar

```
DDS_TypeCode DDS_g_tc_wchar
```

Basic four-byte character type.

For new code, **DDS_TypeCodeFactory::get_primitive_tc** (p. 1480) is preferred to using this global variable.

See also

DDS_TypeCodeFactory::get_primitive_tc (p. 1480)
DDS_Wchar (p. 514)

7.12 Built-in Types

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

Modules

- **String Built-in Type**

  Built-in type consisting of a single character string.
- **KeyedString Built-in Type**

  Built-in type consisting of a string payload and a second string that is the key.
- **Octets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes.
- **KeyedOctets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

7.12.1 Detailed Description

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

The middleware provides four built-in types:

- String: A payload consisting of a single string of characters. This type has no key.
- **DDS_KeyedString** (p. 1171): A payload consisting of a single string of characters and a second string, the key, that identifies the instance to which the sample belongs.
- **DDS_Octets** (p. 1217): A payload consisting of an opaque variable-length array of bytes. This type has no key.
- **DDS_KeyedOctets** (p. 1168): A payload consisting of an opaque variable-length array of bytes and a string, the key, that identifies the instance to which the sample belongs.

The String and **DDS_KeyedString** (p. 1171) types are appropriate for simple text-based applications. The **DDS_Octets** (p. 1217) and **DDS_KeyedOctets** (p. 1168) types are appropriate for applications that perform their own custom data serialization, such as legacy applications still in the process of migrating to RTI Connext. In most cases, string-based or structured data is preferable to opaque data, because the latter cannot be easily visualized in tools or used with content-based filters (see **DDSContentFilteredTopic** (p. 1551)).

The built-in types are very simple in order to get you up and running as quickly as possible. If you need a structured data type you can define your own type with exactly the fields you need in one of two ways:

- At compile time, by generating code from an IDL or XML file using the rtiddsgen utility
- At runtime, by using the **Dynamic Data** (p. 103) API

7.12.2 Managing Memory for Builtin Types

When a sample is written, the DataWriter serializes it and stores the result in a buffer obtained from a pool of preallocated buffers. In the same way, when a sample is received, the DataReader deserializes it and stores the result in a sample coming from a pool of preallocated samples.

For builtin types, the maximum size of the buffers/samples and depends on the nature of the application using the builtin type.

You can configure the maximum size of the builtin types on a per-DataWriter and per-DataReader basis using the **DDS_PropertyQosPolicy** (p. 1260) in DataWriters, DataReaders or Participants.

The following table lists the supported builtin type properties to configure memory allocation. When the properties are defined in the DomainParticipant, they are applicable to all DataWriters and DataReaders belonging to the Domain↩ Participant unless they are overwrittem in the DataWriters and DataReaders.

Table 7.33 ***Builtin Types Allocation Properties***

Property	Description
dds.builtin_type.string.alloc_size	Maximum size of the strings published by the **DDSStringDataWriter** (p. 1852) or received the **DDSStringDataReader** (p. 1848) (includes the NULL-terminated character). Default: dds.builtin_type.string.max_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_key_size	Maximum size of the keys used by the **DDSKeyedStringDataWriter** (p. 1778) or **DDSKeyedStringDataReader** (p. 1769) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_size	Maximum size of the strings published by the **DDSKeyedString↩ DataWriter** (p. 1778) or received by the **DDSKeyedStringData↩ Reader** (p. 1769) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_size if defined. Otherwise, 1024.
dds.builtin_type.octets.alloc_size	Maximum size of the octet sequences published the **DDSOctets↩ DataWriter** (p. 1804) or received by the **DDSOctetsDataReader** (p. 1800). Default: dds.builtin_type.octets.max_size if defined. Otherwise, 2048.
dds.builtin_type.keyed_octets.alloc_key_size	Maximum size of the key published by the **DDSKeyedOctetsData↩ Writer** (p. 1750) or received by the **DDSKeyedOctetsDataReader** (p. 1741) (includes the NULL-terminated character). Default: dds.builtin_type.keyed_octets.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_octets.alloc_size	Maximum size of the octets sequences published by a **DDSKeyed↩ OctetsDataWriter** (p. 1750) or received by a **DDSKeyedOctets↩ DataReader** (p. 1741). Default: dds.builtin_type.keyed_octets.max_size if defined. Otherwise, 2048.

The previous properties must be set consistently with respect to the corresponding $*$.max_size properties that set the maximum size of the builtin types in the typecode.

7.12.3 Typecodes for Builtin Types

The typecodes associated with the builtin types are generated from the following IDL type definitions:

```
module DDS {

    struct String {

        string value;

    };

    struct KeyedString {

        string key;
```

```
        string value;
    };

    struct Octets {
        sequence<octet> value;
    };

    struct KeyedOctets {
        string key;
        sequence<octet> value;
    };
};
```

The maximum size of the strings and sequences that will be included in the type code definitions can be configured on a per-DomainParticipant-basis by using the properties in following table.

Table 7.34 ***Properties for Allocating Size of Builtin Types, per DomainParticipant***

Property	Description
dds.builtin_type.string.max_size	Maximum size of the strings published by the StringDataWriters and received by the StringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_key_size	Maximum size of the keys used by the KeyedStringDataWriters and KeyedStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_size	Maximum size of the strings published by the KeyedStringDataWriters and received by the KeyedStringDataReaders belonging to a DomainParticipant using the builtin type (includes the NULL-terminated character). Default: 1024
dds.builtin_type.octets.max_size	Maximum size of the octet sequences published by the OctetsDataWriters and received by the OctetsDataReader belonging to a DomainParticipant. Default: 2048
dds.builtin_type.keyed_octets.max_key_size	Maximum size of the keys used by the KeyedOctetsStringDataWriters and KeyedOctetsStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_octets.max_size	Maximum size of the octet sequences published by the KeyedOctetsDataWriters and received by the KeyedOctetsDataReaders belonging to a DomainParticipant. Default: 2048

For more information about the built-in types, including how to control memory usage and maximum lengths, please see the "Data Types and DDS Data Samples" chapter in the `User's Manual`.

7.13 Built-in Topic's Trust Types

Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1229), **DDS_PublicationBuiltinTopicData** (p. 1264), **DDS_SubscriptionBuiltinTopicData** (p. 1370) to describe Trust Plugins configuration.

Classes

- struct **DDS_ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- struct **DDS_EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- struct **DDS_TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.
- struct **DDS_ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- struct **DDS_ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- struct **DDS_EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- struct **DDS_EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.

Typedefs

- typedef **DDS_UnsignedLong** **DDS_ParticipantTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_PluginParticipantTrustAttributesMask**
- typedef struct **DDS_ParticipantTrustProtectionInfo** **DDS_ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- typedef **DDS_UnsignedLong** **DDS_EndpointTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_PluginEndpointTrustAttributesMask**
- typedef **DDS_UnsignedLong** **DDS_VendorEndpointTrustAttributesMask**
- typedef struct **DDS_EndpointTrustProtectionInfo** **DDS_EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- typedef **DDS_UnsignedLong** **DDS_TrustAlgorithmBit**
- typedef **DDS_UnsignedLong** **DDS_TrustAlgorithmSet**
- typedef struct **DDS_TrustAlgorithmRequirements** **DDS_TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.
- typedef struct **DDS_ParticipantTrustSignatureAlgorithmInfo** **DDS_ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo** **DDS_ParticipantTrustKey↩ EstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

- typedef struct **DDS_ParticipantTrustInterceptorAlgorithmInfo** **DDS_ParticipantTrustInterceptor↩ AlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_ParticipantTrustAlgorithmInfo** **DDS_ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- typedef struct **DDS_EndpointTrustInterceptorAlgorithmInfo** **DDS_EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- typedef struct **DDS_EndpointTrustAlgorithmInfo** **DDS_EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.

7.13.1 Detailed Description

Types used as part of **DDS_ParticipantBuiltinTopicData** (p. 1229), **DDS_PublicationBuiltinTopicData** (p. 1264), **DDS_SubscriptionBuiltinTopicData** (p. 1370) to describe Trust Plugins configuration.

These types are used to describe how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins.

The meaning of the contents of these types may vary depending on what Trust Plugins the DomainParticipant is using. For information about how these types interact with the RTI Security Plugins, please refer to the `RTI Security Plugins User's Manual`.

7.13.2 Typedef Documentation

7.13.2.1 DDS_ParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_ParticipantTrustAttributesMask
```

7.13.2.2 DDS_PluginParticipantTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginParticipantTrustAttributesMask
```

7.13.2.3 DDS_ParticipantTrustProtectionInfo

```
typedef struct DDS_ParticipantTrustProtectionInfo DDS_ParticipantTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered DomainParticipant.

7.13.2.4 DDS_EndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_EndpointTrustAttributesMask
```

7.13.2.5 DDS_PluginEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_PluginEndpointTrustAttributesMask
```

7.13.2.6 DDS_VendorEndpointTrustAttributesMask

```
typedef DDS_UnsignedLong DDS_VendorEndpointTrustAttributesMask
```

7.13.2.7 DDS_EndpointTrustProtectionInfo

```
typedef struct DDS_EndpointTrustProtectionInfo DDS_EndpointTrustProtectionInfo
```

Trust Plugins Protection information associated with the discovered endpoint.

7.13.2.8 DDS_TrustAlgorithmBit

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmBit
```

7.13.2.9 DDS_TrustAlgorithmSet

```
typedef DDS_UnsignedLong DDS_TrustAlgorithmSet
```

7.13.2.10 DDS_TrustAlgorithmRequirements

```
typedef struct DDS_TrustAlgorithmRequirements DDS_TrustAlgorithmRequirements
```

Type to describe Trust Plugins algorithm requirements for an entity.

7.13.2.11 DDS_ParticipantTrustSignatureAlgorithmInfo

typedef struct **DDS_ParticipantTrustSignatureAlgorithmInfo** **DDS_ParticipantTrustSignatureAlgorithmInfo**

Trust Plugins signature algorithm information associated with the discovered DomainParticipant.

7.13.2.12 DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo

typedef struct **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo** **DDS_ParticipantTrustKeyEstablishmentAlgorithmInfo**

Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.

7.13.2.13 DDS_ParticipantTrustInterceptorAlgorithmInfo

typedef struct **DDS_ParticipantTrustInterceptorAlgorithmInfo** **DDS_ParticipantTrustInterceptorAlgorithmInfo**

Trust Plugins interception algorithm information associated with the discovered DomainParticipant.

7.13.2.14 DDS_ParticipantTrustAlgorithmInfo

typedef struct **DDS_ParticipantTrustAlgorithmInfo** **DDS_ParticipantTrustAlgorithmInfo**

Trust Plugins algorithm information associated with the discovered DomainParticipant.

7.13.2.15 DDS_EndpointTrustInterceptorAlgorithmInfo

typedef struct **DDS_EndpointTrustInterceptorAlgorithmInfo** **DDS_EndpointTrustInterceptorAlgorithmInfo**

Trust Plugins interception algorithm information associated with the discovered endpoint.

7.13.2.16 DDS_EndpointTrustAlgorithmInfo

```
typedef struct DDS_EndpointTrustAlgorithmInfo DDS_EndpointTrustAlgorithmInfo
```

Trust Plugins algorithm information associated with the discovered endpoint.

7.14 Dynamic Data

<<***extension***>> *(*p. *432)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

Classes

- struct **DDS_DynamicDataProperty_t**

  *A collection of attributes used to configure **DDS_DynamicData** (*p. *1013) objects.*
- struct **DDS_DynamicDataTypeSerializationProperty_t**

  Properties that govern how data of a certain type will be serialized on the network.
- struct **DDS_DynamicDataInfo**

  *A descriptor for a **DDS_DynamicData** (*p. *1013) object.*
- struct **DDS_DynamicDataMemberInfo**

  A descriptor for a single member (i.e. field) of dynamically defined data type.
- struct **DDS_DynamicData**

  A sample of any complex data type, which can be inspected and manipulated reflectively.
- struct **DDS_DynamicDataSeq**

  *An ordered collection of **DDS_DynamicData** (*p. *1013) elements.*
- struct **DDS_DynamicDataTypeProperty_t**

  *A collection of attributes used to configure **DDSDynamicDataTypeSupport** (*p. *1725) objects.*
- struct **DDS_DynamicDataJsonParserProperties_t**

  *A collection of attributes used to configure **DDS_DynamicData** (*p. *1013) objects.*
- class **DDSDynamicDataTypeSupport**

  *A factory for registering a dynamically defined type and creating **DDS_DynamicData** (*p. *1013) objects.*
- class **DDSDynamicDataReader**

  *Reads (subscribes to) objects of type **DDS_DynamicData** (*p. *1013).*
- class **DDSDynamicDataWriter**

  *Writes (publishes) objects of type **DDS_DynamicData** (*p. *1013).*

Macros

- #define **DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED**

  A sentinel value that indicates that no member ID is needed in order to perform some operation.

Typedefs

- typedef **DDS_Long DDS_DynamicDataMemberId**

  An integer that uniquely identifies some member of a data type within that type.

Variables

- const struct **DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1137).*
- const struct **DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataTypeProperty_t** (p. 1138).*
- struct **DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT**

  *Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1137).*

7.14.1 Detailed Description

<<***extension***>> *(p. 432)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

1. Obtain a DDS_TypeCode (p. 1428) (see Type Code Support (p. 79)) that defines the type definition you want to use.
A **DDS_TypeCode** (p. 1428) includes a type's *kind* (**DDS_TCKind** (p. 89)), *name*, and *members* (that is, fields). You can create your own **DDS_TypeCode** (p. 1428) using the **DDS_TypeCodeFactory** (p. 1476) class – see, for example, the **DDS_TypeCodeFactory::create_struct_tc** (p. 1480) method. Alternatively, you can use a remote **DDS_TypeCode** (p. 1428) that you discovered on the network (see **Built-in Topics** (p. 61)) or one generated by rtiddsgen (see the `Code Generator User's Manual`). If you are relying on discovering TypeCodes on the network and are using TypeObject v2 (TypeObject v2 is the default behavior, see **DDS_DISCOVERYCONFIG_TYPE_LOOKUP_SERVICE_CHANNEL** (p. 592)), you must set **DDS_DiscoveryConfigQosPolicy::request_types_filter** (p. 959) to a string filter containing all of the topic names for which you want to dynamically discover types ("∗" to request all types). Otherwise, types will only be discovered if a local endpoint is already created on the topic and the local endpoint matches the remote endpoint.

2. Wrap the DDS_TypeCode (p. 1428) in a DDSDynamicDataTypeSupport (p. 1725) object.
See the constructor **DDSDynamicDataTypeSupport::DDSDynamicDataTypeSupport** (p. 1726). This object lets you connect the type definition to a **DDSDomainParticipant** (p. 1619) and manage data samples (of type **DDS_DynamicData** (p. 1013)).

3. Register the DDSDynamicDataTypeSupport (p. 1725) with one or more domain participants.
See **DDSDynamicDataTypeSupport::register_type** (p. 1727). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

4. Create a DDSTopic (p. 1885) from the DDSDomainParticipant (p. 1619).
Use the name under which you registered your data type – see **DDSDomainParticipant::create_topic** (p. 1650). This **DDSTopic** (p. 1885) is what you will use to produce and consume data.

5. Create a DDSDynamicDataWriter (p. 1730) and/or DDSDynamicDataReader (p. 1724).
These objects will produce and/or consume data (of type **DDS_DynamicData** (p. 1013)) on the **DDSTopic** (p. 1885). You can create these objects directly from the **DDSDomainParticipant** (p. 1619) – see **DDSDomainParticipant::create_datawriter** (p. 1683) and **DDSDomainParticipant::create_datareader** (p. 1687) – or by first creating intermediate **DDSPublisher** (p. 1818) and **DDSSubscriber** (p. 1860) objects – see **DDSDomainParticipant::create_publisher** (p. 1644) and **DDSDomainParticipant::create_subscriber** (p. 1647).

6. Write and/or read the data of interest.

7. Tear down the objects described above.
You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **DDSDomainParticipant** (p. 1619) is optional; all types are automatically unregistered when the **DDSDomainParticipant** (p. 1619) itself is deleted.

7.14.2 Macro Definition Documentation

7.14.2.1 DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED

```
#define DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED
```

A sentinel value that indicates that no member ID is needed in order to perform some operation.

Most commonly, this constant will be used in "get" operations to indicate that a lookup should be performed based on a name, not on an ID.

See also

DDS_DynamicDataMemberId (p. 105)

7.14.3 Typedef Documentation

7.14.3.1 DDS_DynamicDataMemberId

```
typedef DDS_Long DDS_DynamicDataMemberId
```

An integer that uniquely identifies some member of a data type within that type.

The range of a member ID is the range of an unsigned short integer, except for the value 0, which is reserved.

See also

DDS_DYNAMIC_DATA_MEMBER_ID_UNSPECIFIED (p. 105)

7.14.4 Variable Documentation

7.14.4.1 DDS_DYNAMIC_DATA_PROPERTY_DEFAULT

```
const struct DDS_DynamicDataProperty_t DDS_DYNAMIC_DATA_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1137).

Pass this object instead of your own **DDS_DynamicDataProperty_t** (p. 1137) object to use the default property values:

```
DDS_DynamicData* sample = new DDS_DynamicData(

    myTypeCode,

    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

DDS_DynamicDataProperty_t (p. 1137)

Examples

HelloWorldPlugin.cxx.

7.14.4.2 DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT

```
const struct DDS_DynamicDataTypeProperty_t DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT [extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataTypeProperty_t** (p. 1138).

Pass this object instead of your own **DDS_DynamicDataTypeProperty_t** (p. 1138) object to use the default property values:

```
DDS_DynamicDataTypeSupport* support = new DDS_DynamicDataTypeSupport(

    myTypeCode,

    &DDS_DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT);
```

See also

DDS_DynamicDataTypeProperty_t (p. 1138)

7.14.4.3 DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT

```
struct DDS_DynamicDataJsonParserProperties_t DDS_DYNAMIC_DATA_JSON_PARSER_PROPERTIES_DEFAULT
[extern]
```

Sentinel constant indicating default values for **DDS_DynamicDataProperty_t** (p. 1137).

Pass this object instead of your own **DDS_DynamicDataProperty_t** (p. 1137) object to use the default property values:

```
DDS_DynamicData* sample = new DDS_DynamicData(

    myTypeCode,

    &DDS_DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

DDS_DynamicDataProperty_t (p. 1137)

7.15 Publication Module

Contains the **DDSFlowController** (p. 1736), **DDSPublisher** (p. 1818), and **DDSDataWriter** (p. 1589) classes as well as the **DDSPublisherListener** (p. 1839) and **DDSDataWriterListener** (p. 1612) interfaces, and more generally, all that is needed on the publication side.

Modules

- **Publishers**

  DDSPublisher *(p. 1818) entity and associated elements*
- **Data Writers**

  DDSDataWriter *(p. 1589) entity and associated elements*
- **Flow Controllers**

  *<<**extension**>> (p. 432)* ***DDSFlowController*** *(p. 1736) and associated elements*
- **Multi-channel DataWriters**

  APIs related to Multi-channel DataWriters.

7.15.1 Detailed Description

Contains the **DDSFlowController** (p. 1736), **DDSPublisher** (p. 1818), and **DDSDataWriter** (p. 1589) classes as well as the **DDSPublisherListener** (p. 1839) and **DDSDataWriterListener** (p. 1612) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

7.16 Publishers

DDSPublisher (p. 1818) entity and associated elements

Classes

- struct **DDS_PublisherQos**

  QoS policies supported by a ***DDSPublisher*** *(p. 1818) entity.*
- class **DDSPublisherListener**

  *<<**interface**>> (p. 433)* ***DDSListener*** *(p. 1794) for* ***DDSPublisher*** *(p. 1818) status.*
- class **DDSPublisherSeq**

  Declares IDL `sequence` *<* ***DDSPublisher*** *(p. 1818) > .*
- class **DDSPublisher**

  *<<**interface**>> (p. 433) A publisher is the object responsible for the actual dissemination of publications.*

Functions

- **DDS_Boolean DDS_PublisherQos_equals** (const struct **DDS_PublisherQos** *self, const struct **DDS_↩ PublisherQos** *other)

  *Compares two **DDS_PublisherQos** (p. 1276) for equality.*
- **DDS_ReturnCode_t DDS_PublisherQos::print** () const

  *Prints this **DDS_PublisherQos** (p. 1276) to stdout.*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_PublisherQos** &base) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_PublisherQos** &base, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*
- **DDS_ReturnCode_t DDS_PublisherQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_PublisherQos** (p. 1276).*

Variables

- const struct **DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT**

  *Special value for creating **DDSDataWriter** (p. 1589) with default QoS.*
- const struct **DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS**

  *Special value for creating **DDSDataWriter** (p. 1589) with a combination of the default **DDS_DataWriterQos** (p. 909) and the **DDS_TopicQos** (p. 1397).*

7.16.1 Detailed Description

DDSPublisher (p. 1818) entity and associated elements

7.16.2 Function Documentation

7.16.2.1 DDS_PublisherQos_equals()

```
DDS_Boolean DDS_PublisherQos_equals (
            const struct  DDS_PublisherQos * self,
            const struct  DDS_PublisherQos * other )
```

Compares two **DDS_PublisherQos** (p. 1276) for equality.

Parameters

self	<<***in***>> *(*p. *433)* This PublisherQos.
other	<<***in***>> *(*p. *433)* The other PublisherQos to be compared with this PublisherQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_PublisherQos::operator!=()**, and **DDS_PublisherQos::operator==()**.

7.16.2.2 print()

```
DDS_ReturnCode_t DDS_PublisherQos::print ( ) const  [inline]
```

Prints this **DDS_PublisherQos** (p. 1276) to stdout.

Only the differences between this **DDS_PublisherQos** (p. 1276) and the documented default are printed. If you wish to print everything regardless, see **DDS_PublisherQos::to_string(char∗, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_QosPrintFormat&) const** (p. 111). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.16.2.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

Only the differences between this **DDS_PublisherQos** (p. 1276) and the documented default are printed to idref_PublisherQose string. If you wish to print everything regardless, see **DDS_PublisherQos::to_string(char∗, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_QosPrintFormat&) const** (p. 111). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_PublisherQos** (p. 1276) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_PublisherQos::to_string(char*, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_QosPrintFormat&) const (p. 111)

7.16.2.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_PublisherQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

This overload behaves the same as **DDS_PublisherQos::to_string** (p. 109) but allows the caller to specify the **DDS_PublisherQos** (p. 1276), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_PublisherQos** (p. 1276) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_PublisherQos::to_string(char*, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_↩ QosPrintFormat&) const (p. 111)

References **DDS_QosPrintFormat_INITIALIZER**.

7.16.2.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

This overload behaves the same as **DDS_PublisherQos::to_string** (p. 109) but allows the caller to specify the **DDS↩ _QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(*p. *433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_PublisherQos::to_string(char*, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_↩ QosPrintFormat&) const (p. 111)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.16.2.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_PublisherQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

Only the differences between this **DDS_PublisherQos** (p. 1276) and the **DDS_PublisherQos** (p. 1276) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_PublisherQos** (p. 1276) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_PublisherQos** (p. 1276) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.16.2.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

This overload behaves the same as **DDS_PublisherQos::to_string** (p. 109) but prints the entire **DDS_PublisherQos** (p. 1276) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT_ALL** (p. 169).

For example

```
PublisherQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_PublisherQos::to_string(char∗, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_↩ QosPrintFormat&) const (p. 111)

References **DDS_QosPrintFormat_INITIALIZER**.

7.16.2.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_PublisherQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_PublisherQos** (p. 1276).

This overload behaves the same as the **DDS_PublisherQos::to_string(char∗, DDS_UnsignedLong&, const DDS↩ _QosPrintAll_t&) const** (p. 112) overload. The only difference is that it allows the caller to specify the **DDS_Qos↩ PrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_PublisherQos** (p. 1276). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(*p. *433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_PublisherQos::to_string(char*, DDS_UnsignedLong&, const DDS_PublisherQos&, const DDS_QosPrintFormat&) const (p. 111)

7.16.3 Variable Documentation

7.16.3.1 DDS_DATAWRITER_QOS_DEFAULT

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_DEFAULT [extern]
```

Special value for creating **DDSDataWriter** (p. 1589) with default QoS.

When used in **DDSPublisher::create_datawriter** (p. 1826), this special value is used to indicate that the **DDSDataWriter** (p. 1589) should be created with the default **DDSDataWriter** (p. 1589) QoS by means of the operation get_default_datawriter_qos and using the resulting QoS to create the **DDSDataWriter** (p. 1589).

When used in **DDSPublisher::set_default_datawriter_qos** (p. 1822), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSPublisher::set_default_datawriter_qos** (p. 1822) operation had never been called.

When used in **DDSDataWriter::set_qos** (p. 1604), this special value is used to indicate that the QoS of the **DDSDataWriter** (p. 1589) should be changed to match the current defualt QoS set in the **DDSPublisher** (p. 1818) that the **DDSDataWriter** (p. 1589) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataWriter; for this purpose, use **DDSDomainParticipant::get_default_datawriter_qos** (p. 1626).

7.16.3.2 DDS_DATAWRITER_QOS_USE_TOPIC_QOS

```
const struct DDS_DataWriterQos DDS_DATAWRITER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDSDataWriter** (p. 1589) with a combination of the default **DDS_DataWriterQos** (p. 909) and the **DDS_TopicQos** (p. 1397).

The use of this value is equivalent to the application obtaining the default **DDS_DataWriterQos** (p. 909) and the **DDS_TopicQos** (p. 1397) (by means of the operation **DDSTopic::get_qos** (p. 1889)) and then combining these two QoS using the operation **DDSPublisher::copy_from_topic_qos** (p. 1834) whereby any policy that is set on the **DDS_TopicQos** (p. 1397) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDSDataWriter** (p. 1589).

This value should only be used in **DDSPublisher::create_datawriter** (p. 1826).

7.17.1 Detailed Description

DDSDataWriter (p. 1589) entity and associated elements

7.17.2 Function Documentation

7.17.2.1 DDS_DataWriterQos_equals()

```
DDS_Boolean DDS_DataWriterQos_equals (
            const struct  DDS_DataWriterQos * self,
            const struct  DDS_DataWriterQos * other )
```

Compares two **DDS_DataWriterQos** (p. 909) for equality.

Parameters

self	<<***in***>> *(p. 433)* This DataWriterQos.
other	<<***in***>> *(p. 433)* The other DataWriterQos to be compared with this DataWriterQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_DataWriterQos::operator!=()**, and **DDS_DataWriterQos::operator==()**.

7.17.2.2 print()

```
DDS_ReturnCode_t DDS_DataWriterQos::print ( ) const  [inline]
```

Prints this **DDS_DataWriterQos** (p. 909) to stdout.

Only the differences between this **DDS_DataWriterQos** (p. 909) and the documented default are printed. If you wish to print everything regardless, see **DDS_DataWriterQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_QosPrintFormat&) const** (p. 120). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.17.2.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

Only the differences between this **DDS_DataWriterQos** (p. 909) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DataWriterQos::to_string(char∗, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_QosPrintFormat&) const** (p. 120). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataWriterQos** (p. 909) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataWriterQos::to_string(char∗, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_↩ QosPrintFormat&) const (p. 120)

7.17.2.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DataWriterQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

This overload behaves the same as **DDS_DataWriterQos::to_string** (p. 117) but allows the caller to specify the **DDS↩ _DataWriterQos** (p. 909), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(*p. *433)* The **DDS_DataWriterQos** (p. 909) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataWriterQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_↩ QosPrintFormat&) const (p. 120)

References **DDS_QosPrintFormat_INITIALIZER**.

7.17.2.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

This overload behaves the same as **DDS_DataWriterQos::to_string** (p. 117) but allows the caller to specify the **DDS↩ _QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(*p. *433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataWriterQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_↩ QosPrintFormat&) const (p. 120)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.17.2.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DataWriterQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

Only the differences between this **DDS_DataWriterQos** (p. 909) and the **DDS_DataWriterQos** (p. 909) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataWriterQos** (p. 909) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_DataWriterQos** (p. 909) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.17.2.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

This overload behaves the same as **DDS_DataWriterQos::to_string** (p. 117) but prints the entire **DDS_DataWriterQos** (p. 909) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT_ALL** (p. 169).

For example
```
DataWriterQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataWriterQos::to_string(char∗, DDS_UnsignedLong&, const DDS_DataWriterQos&, const DDS_↩ QosPrintFormat&) const (p. 120)

References **DDS_QosPrintFormat_INITIALIZER**.

7.17.2.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_DataWriterQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataWriterQos** (p. 909).

This overload behaves the same as the **DDS_DataWriterQos::to_string(char∗, DDS_UnsignedLong&, const DDS↩ _QosPrintAll_t&) const** (p. 120) overload. The only difference is that it allows the caller to specify the **DDS_Qos↩ PrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(*p. *433)* The char buffer that will be used to store the string representation of this **DDS_DataWriterQos** (p. 909). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(*p. *433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(*p. *433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

  Special value of ***DDS_PublishModeQosPolicy::flow_controller_name*** *(p. 1281) that refers to the built-in on-demand flow controller.*

7.18.1 Detailed Description

<<***extension***>> *(p. 432)* **DDSFlowController** (p. 1736) and associated elements

DDSFlowController (p. 1736) provides the network traffic shaping capability to asynchronous **DDSDataWriter** (p. 1589) instances. For use cases and advantages of publishing asnychronously, please refer to **DDS_PublishModeQosPolicy** (p. 1279) of **DDS_DataWriterQos** (p. 909).

DDS_PublishModeQosPolicy (p. 1279)

DDS_DataWriterQos::publish_mode (p. 915)

DDS_AsynchronousPublisherQosPolicy (p. 798)

7.18.2 Enumeration Type Documentation

7.18.2.1 DDS_FlowControllerSchedulingPolicy

enum **DDS_FlowControllerSchedulingPolicy**

Kinds of flow controller scheduling policy.

Samples written by an asynchronous **DDSDataWriter** (p. 1589) are not sent in the context of the **FooDataWriter::write** (p. 1951) call. Instead, the middleware puts the samples in a queue for future processing. The **DDSFlowController** (p. 1736) associated with each asynchronous DataWriter instance determines when the samples are actually sent.

Each **DDSFlowController** (p. 1736) maintains a separate FIFO queue for each unique destination (remote application). Samples written by asynchronous **DDSDataWriter** (p. 1589) instances associated with the flow controller, are placed in the queues that correspond to the intended destinations of the sample.

When tokens become available, a flow controller must decide which queue(s) to grant tokens first. This is determined by the flow controller's scheduling policy. Once a queue has been granted tokens, it is serviced by the asynchronous publishing thread. The queued up samples will be coalesced and sent to the corresponding destination. The number of samples sent depends on the data size and the number of tokens granted.

QoS:

DDS_FlowControllerProperty_t (p. 1156)

Enumerator

DDS_RR_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in a round-robin fashion. Whenever tokens become available, the flow controller distributes the tokens uniformly across all of its (non-empty) destination queues. No destinations are prioritized. Instead, all destinations are treated equally and are serviced in a round-robin fashion.
DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in an earliest-deadline-first fashion. A sample's deadline is determined by the time it was written plus the latency budget of the DataWriter at the time of the write call (as specified in the **DDS_LatencyBudgetQosPolicy** (p. 1173)). The relative priority of a flow controller's destination queue is determined by the earliest deadline across all samples it contains. When tokens become available, the **DDSFlowController** (p. 1736) distributes tokens to the destination queues in order of their deadline priority. In other words, the queue containing the sample with the earliest deadline is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal deadline value, the corresponding destination queues are serviced in a round-robin fashion. Hence, under the default **DDS_LatencyBudgetQosPolicy::duration** (p. 1175) setting, an `EDF_FLOW_CONTROLLER_SCHED_POLICY` **DDSFlowController** (p. 1736) preserves the order in which the user calls **FooDataWriter::write** (p. 1951) across the DataWriters associated with the flow controller. Since the **DDS_LatencyBudgetQosPolicy** (p. 1173) is mutable, a sample written second may contain an earlier deadline than the sample written first if the **DDS_LatencyBudgetQosPolicy::duration** (p. 1175) value is sufficiently decreased in between writing the two samples. In that case, if the first sample is not yet written (still in queue waiting for its turn), it inherits the priority corresponding to the (earlier) deadline from the second sample. In other words, the priority of a destination queue is always determined by the earliest deadline among all samples contained in the queue. This priority inheritance approach is required in order to both honor the updated **DDS_LatencyBudgetQosPolicy::duration** (p. 1175) and adhere to the **DDSDataWriter** (p. 1589) in-order data delivery guarantee. **[default]** for **DDSDataWriter** (p. 1589)

Enumerator

DDS_HPF_FLOW_CONTROLLER_SCHED_POLICY	Indicates to flow control in a highest-priority-first fashion. Determines the next destination queue to service as determined by the publication priority of the **DDSDataWriter** (p. 1589), channel of multi-channel DataWriter, or individual sample. The relative priority of a flow controller's destination queue is determined by the highest publication priority of all samples it contains. When tokens become available, the **DDSFlowController** (p. 1736) distributes tokens to the destination queues in order of their publication priority. In other words, the queue containing the sample with the highest publication priority is serviced first. The number of tokens granted equals the number of tokens required to send the first sample in the queue. Note that the priority of a queue may change as samples are sent (i.e. removed from the queue). If a sample must be sent to multiple destinations or two samples have an equal publication priority, the corresponding destination queues are serviced in a round-robin fashion. This priority inheritance approach is required in order to both honor the designated publication priority and adhere to the **DDSDataWriter** (p. 1589) in-order data delivery guarantee.

7.18.3 Variable Documentation

7.18.3.1 DDS_DEFAULT_FLOW_CONTROLLER_NAME

```
char* DDS_DEFAULT_FLOW_CONTROLLER_NAME  [extern]
```

[default] Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1281) that refers to the built-in default flow controller.

RTI Connext provides several built-in **DDSFlowController** (p. 1736) for use with an asynchronous **DDSDataWriter** (p. 1589). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

By default, flow control is disabled. That is, the built-in **DDS_DEFAULT_FLOW_CONTROLLER_NAME** (p. 125) flow controller does not apply any flow control. Instead, it allows data to be sent asynchronously as soon as it is written by the **DDSDataWriter** (p. 1589).

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1736) with the following **DDS_FlowController↩ Property_t** (p. 1156) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1157) = **DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY** (p. 124)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_added_per_period` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_leaked_per_period` = 0
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `period` = 60 seconds
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `bytes_per_token` = **DDS_LENGTH_UNLIMITED** (p. 636)

See also

DDSPublisher::create_datawriter (p. 1826)

DDSDomainParticipant::lookup_flowcontroller (p. 1660)

DDSFlowController::set_property (p. 1737)

DDS_PublishModeQosPolicy (p. 1279)

DDS_AsynchronousPublisherQosPolicy (p. 798)

7.18.3.2 DDS_FIXED_RATE_FLOW_CONTROLLER_NAME

```
char* DDS_FIXED_RATE_FLOW_CONTROLLER_NAME  [extern]
```

Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1281) that refers to the built-in fixed-rate flow controller.

RTI Connext provides several builtin **DDSFlowController** (p. 1736) for use with an asynchronous **DDSDataWriter** (p. 1589). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS_FIXED_RATE_FLOW_CONTROLLER_NAME** (p. 126) flow controller shapes the network traffic by allowing data to be sent only once every second. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1736) with the following **DDS_FlowControllerProperty_t** (p. 1156) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1157) = **DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY** (p. 124)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_added_per_period` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_leaked_per_period` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `period` = 1 second
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `bytes_per_token` = **DDS_LENGTH_UNLIMITED** (p. 636)

DDS_AsynchronousPublisherQosPolicy (p. 798)

7.18.3.3 DDS_ON_DEMAND_FLOW_CONTROLLER_NAME

```
char* DDS_ON_DEMAND_FLOW_CONTROLLER_NAME  [extern]
```

Special value of **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1281) that refers to the built-in on-demand flow controller.

RTI Connext provides several builtin **DDSFlowController** (p. 1736) for use with an asynchronous **DDSDataWriter** (p. 1589). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **DDS_ON_DEMAND_FLOW_CONTROLLER_NAME** (p. 127) allows data to be sent only when the user calls **DDSFlowController::trigger_flow** (p. 1738). With each trigger, all accumulated data since the previous trigger is sent (across all **DDSPublisher** (p. 1818) or **DDSDataWriter** (p. 1589) instances). In other words, the network traffic shape is fully controlled by the user. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

This external trigger source is ideal for users who want to implement some form of closed-loop flow control or who want to only put data on the wire every so many samples (e.g. with the number of samples based on **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047)).

Essentially, this is equivalent to a user-created **DDSFlowController** (p. 1736) with the following **DDS_FlowControllerProperty_t** (p. 1156) settings:

- **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1157) = **DDS_EDF_FLOW_CONTROLLER_SCHED_POLICY** (p. 124)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `max_tokens` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_added_per_period` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `tokens_leaked_per_period` = **DDS_LENGTH_UNLIMITED** (p. 636)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `period` = **DDS_DURATION_INFINITE** (p. 522)
- **DDS_FlowControllerProperty_t::token_bucket** (p. 1157) `bytes_per_token` = **DDS_LENGTH_UNLIMITED** (p. 636)

7.19 Subscription Module

Contains the **DDSSubscriber** (p. 1860), **DDSDataReader** (p. 1556), **DDSReadCondition** (p. 1842), **DDSQueryCondition** (p. 1841), and **DDSTopicQuery** (p. 1895) classes, as well as the **DDSSubscriberListener** (p. 1881) and **DDSDataReaderListener** (p. 1583) interfaces, and more generally, all that is needed on the subscription side.

Modules

- **Subscribers**

  DDSSubscriber *(p. 1860) entity and associated elements*
- **DataReaders**

  DDSDataReader *(p. 1556) entity and associated elements*
- **Data Samples**

  DDS_SampleInfo *(p. 1344),* ***DDS_SampleStateKind*** *(p. 161),* ***DDS_ViewStateKind*** *(p. 163),* ***DDS_InstanceStateKind*** *(p. 165) and associated elements*
- **SampleProcessor**

  *<<**experimental**>> (p. 432) <<**extension**>> (p. 432) Utility to concurrently read and process the data samples received by* ***DDSDataReader*** *(p. 1556).*

7.19.1 Detailed Description

Contains the **DDSSubscriber** (p. 1860), **DDSDataReader** (p. 1556), **DDSReadCondition** (p. 1842), **DDSQuery↩ Condition** (p. 1841), and **DDSTopicQuery** (p. 1895) classes, as well as the **DDSSubscriberListener** (p. 1881) and **DDSDataReaderListener** (p. 1583) interfaces, and more generally, all that is needed on the subscription side.

"DCPS Subscription package"

7.19.2 Access to data samples

Data is made available to the application by the following operations on **DDSDataReader** (p. 1556) objects: **FooData↩ Reader::read** (p. 1919), **FooDataReader::read_w_condition** (p. 1925), **FooDataReader::take** (p. 1920), **FooData↩ Reader::take_w_condition** (p. 1926), and the other variants of read() and take().

The general semantics of the `read()` operation is that the application only gets access to the corresponding data (i.e. a precise instance value); the data remains the responsibility of RTI Connext and can be read again.

The semantics of the `take()` operations is that the application takes full responsibility for the data; that data will no longer be available locally to RTI Connext. Consequently, it is possible to access the same information multiple times only if all previous accesses were read() operations, not take().

Each of these operations returns a collection of `Data` values and associated **DDS_SampleInfo** (p. 1344) objects. Each data value represents an atom of data information (i.e., a value for one instance). This collection may contain samples related to the same or different instances (identified by the key). Multiple samples can refer to the same instance if the settings of the **HISTORY** (p. 603) QoS allow for it.

These operations reset the read communication statuses; see **Changes in read communication status** (p. 536).

To return the memory back to the middleware, every read() or take() that retrieves a sequence of samples must be followed with a call to FooDataReader::return_loan (p. 1940).

See also

Interpretation of the SampleInfo (p. 1345)

7.19.2.1 Data access patterns

The application accesses data by means of the operations `read` or `take` on the **DDSDataReader** (p. 1556). These operations return an ordered collection of `DataSamples` consisting of a **DDS_SampleInfo** (p. 1344) part and a `Data` part.

The way RTI Connext builds the collection depends on QoS policies set on the **DDSDataReader** (p. 1556) and **DDSSubscriber** (p. 1860), as well as the `source_timestamp` of the samples, and the parameters passed to the `read()` / `take()` operations, namely:

- the desired sample states (any combination of **DDS_SampleStateKind** (p. 161))
- the desired view states (any combination of **DDS_ViewStateKind** (p. 163))

- the desired instance states (any combination of **DDS_InstanceStateKind** (p. 165))

The `read()` and `take()` operations are non-blocking and just deliver what is currently available that matches the specified states.

The `read_w_condition()` and `take_w_condition()` operations take a **DDSReadCondition** (p. 1842) object as a parameter instead of sample, view or instance states. The behaviour is that the samples returned will only be those for which the condition is **DDS_BOOLEAN_TRUE** (p. 513). These operations, in conjunction with **DDSReadCondition** (p. 1842) objects and a **DDSWaitSet** (p. 1897), allow performing waiting reads.

Once the data samples are available to the data readers, they can be read or taken by the application. The basic rule is that the application may do this in any order it wishes. This approach is very flexible and allows the application ultimate control.

To access data coherently, or in order, the **PRESENTATION** (p. 615) QoS must be set properly.

7.20 Subscribers

DDSSubscriber (p. 1860) entity and associated elements

Classes

- struct **DDS_SubscriberQos**

  *QoS policies supported by a **DDSSubscriber** (p. 1860) entity.*
- class **DDSSubscriberListener**

  *<<**interface**>> (p. 433) **DDSListener** (p. 1794) for status about a subscriber.*
- class **DDSSubscriberSeq**

  *Declares IDL `sequence` < **DDSSubscriber** (p. 1860) > .*
- class **DDSSubscriber**

  *<<**interface**>> (p. 433) A subscriber is the object responsible for actually receiving data from a subscription.*

Functions

- **DDS_Boolean DDS_SubscriberQos_equals** (const struct **DDS_SubscriberQos** *self, const struct **DDS_SubscriberQos** *other)

  *Compares two **DDS_SubscriberQos** (p. 1367) for equality.*
- **DDS_ReturnCode_t DDS_SubscriberQos::print** () const

  *Prints this **DDS_SubscriberQos** (p. 1367) to stdout.*
- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).*
- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_SubscriberQos** &base) const

  *Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).*
- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).*

- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_SubscriberQos** &base, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_SubscriberQos*** (p. *1367*).
- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &) const

  *Obtains a string representation of this **DDS_SubscriberQos*** (p. *1367*).
- **DDS_ReturnCode_t DDS_SubscriberQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_SubscriberQos*** (p. *1367*).

Variables

- const struct **DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT**

  Special value for creating data reader with default QoS.
- const struct **DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS**

  *Special value for creating **DDSDataReader*** (p. *1556*) *with a combination of the default **DDS_DataReaderQos*** (p. *858*) *and the **DDS_TopicQos*** (p. *1397*).

7.20.1 Detailed Description

DDSSubscriber (p. 1860) entity and associated elements

7.20.2 Function Documentation

7.20.2.1 DDS_SubscriberQos_equals()

```
DDS_Boolean DDS_SubscriberQos_equals (
            const struct  DDS_SubscriberQos * self,
            const struct  DDS_SubscriberQos * other )
```

Compares two **DDS_SubscriberQos** (p. 1367) for equality.

Parameters

self	*<<**in**>> (p. 433)* This SubscriberQos.
other	*<<**in**>> (p. 433)* The other SubscriberQos to be compared with this SubscriberQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_SubscriberQos::operator!=()**, and **DDS_SubscriberQos::operator==()**.

7.20.2.2 print()

```
DDS_ReturnCode_t DDS_SubscriberQos::print ( ) const  [inline]
```

Prints this **DDS_SubscriberQos** (p. 1367) to stdout.

Only the differences between this **DDS_SubscriberQos** (p. 1367) and the documented default are printed. If you wish to print everything regardless, see **DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_QosPrintFormat&) const** (p. 134). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.20.2.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

Only the differences between this **DDS_SubscriberQos** (p. 1367) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_QosPrintFormat&) const** (p. 134). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_SubscriberQos** (p. 1367) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_↩ QosPrintFormat&) const (p. 134)

7.20.2.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_SubscriberQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

This overload behaves the same as **DDS_SubscriberQos::to_string** (p. 132) but allows the caller to specify the **DDS↩ _SubscriberQos** (p. 1367), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_SubscriberQos** (p. 1367) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_↩ QosPrintFormat&) const (p. 134)

References **DDS_QosPrintFormat_INITIALIZER**.

7.20.2.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

This overload behaves the same as **DDS_SubscriberQos::to_string** (p. 132) but allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_QosPrintFormat&) const (p. 134)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.20.2.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_SubscriberQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

Only the differences between this **DDS_SubscriberQos** (p. 1367) and the **DDS_SubscriberQos** (p. 1367) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_SubscriberQos** (p. 1367) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	<<***in***>> *(p. 433)* The **DDS_SubscriberQos** (p. 1367) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.20.2.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

This overload behaves the same as **DDS_SubscriberQos::to_string** (p. 132) but prints the entire **DDS_Subscriber↩ Qos** (p. 1367) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_↩ PRINT_ALL** (p. 169).

For example

```
SubscriberQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_↩ QosPrintFormat&) const (p. 134)

References **DDS_QosPrintFormat_INITIALIZER**.

7.20.2.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_SubscriberQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_SubscriberQos** (p. 1367).

This overload behaves the same as the **DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS↩ _QosPrintAll_t&) const** (p. 135) overload. The only difference is that it allows the caller to specify the **DDS_Qos↩ PrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_SubscriberQos** (p. 1367). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	<<***in***>> *(p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_SubscriberQos::to_string(char*, DDS_UnsignedLong&, const DDS_SubscriberQos&, const DDS_↩ QosPrintFormat&) const (p. 134)

7.20.3 Variable Documentation

7.20.3.1 DDS_DATAREADER_QOS_DEFAULT

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_DEFAULT [extern]
```

Special value for creating data reader with default QoS.

When used in **DDSSubscriber::create_datareader** (p. 1867), this special value is used to indicate that the **DDSDataReader** (p. 1556) should be created with the default **DDSDataReader** (p. 1556) QoS by means of the operation get_default_datareader_qos and using the resulting QoS to create the **DDSDataReader** (p. 1556).

When used in **DDSSubscriber::set_default_datareader_qos** (p. 1863), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **DDSSubscriber::set_default_datareader_qos** (p. 1863) operation had never been called.

When used in **DDSDataReader::set_qos** (p. 1574), this special value is used to indicate that the QoS of the **DDSDataReader** (p. 1556) should be changed to match the current default QoS set in the **DDSSubscriber** (p. 1860) that the **DDSDataReader** (p. 1556) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a DataReader; for this purpose, use **DDSDomainParticipant::get_default_datareader_qos** (p. 1628).

See also

DDSSubscriber::create_datareader (p. 1867)

DDSSubscriber::set_default_datareader_qos (p. 1863)

DDSDataReader::set_qos (p. 1574)

7.20.3.2 DDS_DATAREADER_QOS_USE_TOPIC_QOS

```
const struct DDS_DataReaderQos DDS_DATAREADER_QOS_USE_TOPIC_QOS [extern]
```

Special value for creating **DDSDataReader** (p. 1556) with a combination of the default **DDS_DataReaderQos** (p. 858) and the **DDS_TopicQos** (p. 1397).

The use of this value is equivalent to the application obtaining the default **DDS_DataReaderQos** (p. 858) and the **DDS_TopicQos** (p. 1397) (by means of the operation **DDSTopic::get_qos** (p. 1889)) and then combining these two QoS using the operation **DDSSubscriber::copy_from_topic_qos** (p. 1876) whereby any policy that is set on the **DDS_TopicQos** (p. 1397) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **DDSDataReader** (p. 1556).

This value should only be used in **DDSSubscriber::create_datareader** (p. 1867).

- **DDS_ReturnCode_t DDS_DataReaderQos::to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DataReaderQos** (p. 858).*

7.21.1 Detailed Description

DDSDataReader (p. 1556) entity and associated elements

7.21.2 Enumeration Type Documentation

7.21.2.1 DDS_SampleLostStatusKind

enum **DDS_SampleLostStatusKind**

<<***extension***>> *(p. 432)* Kinds of reasons why a sample was lost.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

Enumerator

DDS_NOT_LOST	The sample was not lost. This constant is an extension to the DDS standard.
DDS_LOST_BY_WRITER	A **DDSDataWriter** (p. 1589) removed the sample before being received by the **DDSDataReader** (p. 1556). This constant is an extension to the DDS standard.
DDS_LOST_BY_INSTANCES_LIMIT	A resource limit on the number of instances (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1308)
DDS_LOST_BY_REMOTE_WRITERS_PER_↩ INSTANCE_LIMIT	A resource limit on the number of remote writers for a single instance from which a **DDSDataReader** (p. 1556) may read (**DDS_DataReaderResourceLimitsQos**↩ **Policy::max_remote_writers_per_instance** (p. 870)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)

Enumerator

DDS_LOST_BY_INCOMPLETE_COHERENT_SET	A sample is lost because it is part of an incomplete coherent set. An incomplete coherent set is a coherent set for which some of the samples are missing. For example, consider a **DDSDataWriter** (p. 1589) using **DDS_KEEP_LAST_HISTORY_QOS** (p. 604) with a depth of 1. The DataWriter publishes two samples of the same instance as part of a coherent set 'CS1'; the first sample of 'CS1' is replaced by a new sample before it can be successfully delivered to the **DDSDataReader** (p. 1556). In this case, the coherent set containing the two samples is considered incomplete. The new sample, by default, will not be provided to the application, and will be reported as LOST_BY_INCOMPLETE_COHERENT_SET. (You can change this default behavior by setting **DDS_PresentationQosPolicy::drop_incomplete_coherent_set** (p. 1253) to FALSE. If you do, the new sample will be provided to the application, but it will be marked as part of an incomplete coherent set in the **DDS_SampleInfo** (p. 1344) structure.) This constant is an extension to the DDS standard.
DDS_LOST_BY_LARGE_COHERENT_SET	A sample is lost because it is part of a large coherent set. A large coherent set is a coherent set that cannot fit all at once into the **DDSDataReader** (p. 1556) queue because resource limits are exceeded. For example, if **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1311) on the DataReader is 10 and the coherent set has 15 samples for a given instance, the coherent set is a large coherent set that will be considered incomplete. The resource limits that can lead to large coherent sets are: **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311), **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1311), **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311), and **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 870). This constant is an extension to the DDS standard.

Enumerator

DDS_LOST_BY_SAMPLES_PER_REMOTE_↩ WRITER_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633): a resource limit on the number of samples from a given remote writer that a **DDSDataReader** (p. 1556) may store (**DDS_DataReaderResourceLimitsQosPolicy↩ ::max_samples_per_remote_writer** (p. 870)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633), reaching **DDS_DataReaderResourceLimitsQos↩ Policy::max_samples_per_remote_writer** (p. 870) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_SAMPLES_PER_REMOTE_↩ WRITER_LIMIT** (p. 145). This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_LOST_BY_VIRTUAL_WRITERS_LIMIT	A resource limit on the number of virtual writers from which a **DDSDataReader** (p. 1556) may read (**DDS_DataReaderResourceLimitsQosPolicy::max↩ _remote_virtual_writers** (p. 878)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_LOST_BY_REMOTE_WRITERS_PER_↩ SAMPLE_LIMIT	A resource limit on the number of remote writers per sample (**DDS_DataReaderResourceLimitsQos↩ Policy::max_remote_writers_per_sample** (p. 880)) was reached. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_LOST_BY_AVAILABILITY_WAITING_TIME	**DDS_AvailabilityQosPolicy::max_data_availability↩ _waiting_time** (p. 808) expired. This constant is an extension to the DDS standard. **See also** **DDS_AvailabilityQosPolicy** (p. 805)

Enumerator

DDS_LOST_BY_REMOTE_WRITER_SAMPLES_↩ PER_VIRTUAL_QUEUE_LIMIT	A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a **DDSDataReader** (p. 1556) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_LOST_BY_OUT_OF_MEMORY	A sample was lost because there was not enough memory to store the sample. This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_LOST_BY_UNKNOWN_INSTANCE	A received sample was lost because it doesn't contain enough information for the reader to know what instance it is associated with. This constant is an extension to the DDS standard.
DDS_LOST_BY_DESERIALIZATION_FAILURE	A received sample was lost because it could not be deserialized. This constant is an extension to the DDS standard.
DDS_LOST_BY_DECODE_FAILURE	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633): A received sample was lost because it could not be decoded. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633), the sample will be rejected, not lost, with reason **DDS_REJECTED_BY_DECODE_FAILURE** (p. 146). This constant is an extension to the DDS standard.
DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633): A resource limit on the number of samples per instance (**DDS_ResourceLimitsQosPolicy::max_samples_↩ per_instance** (p. 1311)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633), reaching **DDS_ResourceLimitsQosPolicy::max_↩ samples_per_instance** (p. 1311) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_↩ SAMPLES_PER_INSTANCE_LIMIT** (p. 145). This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1308)

Enumerator

DDS_LOST_BY_SAMPLES_LIMIT	When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633): A resource limit on the number of samples (**DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311)) was reached. When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633), reaching **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311) will trigger a rejection, not a loss, with reason **DDS_REJECTED_BY_SAMPLES_LIMIT** (p. 144). This constant is an extension to the DDS standard. **See also** **DDS_ResourceLimitsQosPolicy** (p. 1308)

7.21.2.2 DDS_SampleRejectedStatusKind

enum **DDS_SampleRejectedStatusKind**

Kinds of reasons for rejecting a sample.

MONITOR-273 We assign an integer to the names in order to be compatible with the DDSMonitoring types.

Enumerator

DDS_NOT_REJECTED	The sample was not rejected.
DDS_REJECTED_BY_INSTANCES_LIMIT	Connext DDS does not reject samples based on instance limits (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311)), so this value will never be used. **See also** **DDS_LOST_BY_INSTANCES_LIMIT** (p. 140) This value is not currently used by our middleware, but has been kept because it is part of the DDS specification.
DDS_REJECTED_BY_SAMPLES_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633): A resource limit on the number of samples (**DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633), reaching **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_LIMIT** (p. 144). **See also**
	DDS_ResourceLimitsQosPolicy (p. 1308)

Enumerator

DDS_REJECTED_BY_SAMPLES_PER_INSTANCE_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633): A resource limit on the number of samples per instance (**DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1311)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633), reaching **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1311) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_PER_INSTANCE_LIMIT** (p. 143). **See also** ResourceLimitsQosPolicy
DDS_REJECTED_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633): a resource limit on the number of samples from a given remote writer that a **DDSDataReader** (p. 1556) may store (**DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 870)) was reached. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633), reaching **DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer** (p. 870) will trigger a loss, not a rejection, with reason **DDS_LOST_BY_SAMPLES_PER_REMOTE_WRITER_LIMIT** (p. 142). This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_REJECTED_BY_REMOTE_WRITER_SAMPLES_PER_VIRTUAL_QUEUE_LIMIT	A resource limit on the number of samples published by a remote writer on behalf of a virtual writer that a **DDSDataReader** (p. 1556) may store was reached. (This field is currently not used.) This constant is an extension to the DDS standard. **See also** **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)

Enumerator

DDS_REJECTED_BY_DECODE_FAILURE	When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633): A received sample was rejected because it could not be decoded. When using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633), the sample will be lost, not rejected, with reason **DDS_LOST_BY_DECODE_FAILURE** (p. 143). If a sample was rejected for this reason and the **DDSDataWriter** (p. 1589) set **DDS_DataWriter↩ ProtocolQosPolicy::disable_inline_keyhash** (p. 895) to **DDS_BOOLEAN_TRUE** (p. 513), then **DDS_SampleRejectedStatus::last_instance_handle** (p. 1357) may not be correct if the sample was encrypted. This constant is an extension to the DDS standard.

7.21.3 Function Documentation

7.21.3.1 DDS_DataReaderQos_equals()

```
DDS_Boolean DDS_DataReaderQos_equals (
            const struct  DDS_DataReaderQos * self,
            const struct  DDS_DataReaderQos * other )
```

Compares two **DDS_DataReaderQos** (p. 858) for equality.

Parameters

self	<<***in***>> *(p. 433)* This DataReaderQos.
other	<<***in***>> *(p. 433)* The other DataReaderQos to be compared with this DataReaderQos.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Qos objects are equal or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

Referenced by **DDS_DataReaderQos::operator!=()**, and **DDS_DataReaderQos::operator==()**.

7.21.3.2 print()

```
DDS_ReturnCode_t DDS_DataReaderQos::print ( ) const  [inline]
```

Prints this **DDS_DataReaderQos** (p. 858) to stdout.

Only the differences between this **DDS_DataReaderQos** (p. 858) and the documented default are printed. If you wish to print everything regardless, see **DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS_QosPrintFormat&) const** (p. 149). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.21.3.3 to_string() [1/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

Only the differences between this **DDS_DataReaderQos** (p. 858) and the documented default are printed to the string. If you wish to print everything regardless, see **DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS_QosPrintFormat&) const** (p. 149). The output is formatted according to the default values for **DDS_QosPrintFormat** (p. 1285).

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataReaderQos** (p. 858) is written to the buffer.

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS_QosPrintFormat&) const (p. 149)

7.21.3.4 to_string() [2/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DataReaderQos & base ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

This overload behaves the same as **DDS_DataReaderQos::to_string** (p. 147) but allows the caller to specify the **DDS_DataReaderQos** (p. 858), which is used as the base profile. Only the differences between the QoS and the base profile are included in the output string.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_DataReaderQos** (p. 858) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS_QosPrintFormat&) const (p. 149)

References **DDS_QosPrintFormat_INITIALIZER**.

7.21.3.5 to_string() [3/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

This overload behaves the same as **DDS_DataReaderQos::to_string** (p. 147) but allows the caller to specify the **DDS_QosPrintFormat** (p. 1285) which is used to format the output.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS_QosPrintFormat&) const (p. 149)

References **DDS_RETCODE_ERROR**, and **DDS_RETCODE_OK**.

7.21.3.6 to_string() [4/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_DataReaderQos & base,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

Only the differences between this **DDS_DataReaderQos** (p. 858) and the **DDS_DataReaderQos** (p. 858) supplied as the base are printed to the string.

If the supplied buffer is NULL, the required length of the string is returned via the string_size parameter.

If the supplied buffer is not NULL, the string representation of the **DDS_DataReaderQos** (p. 858) is written to the buffer.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
base	*<<**in**>> (p. 433)* The **DDS_DataReaderQos** (p. 858) to be used as the base QoS profile. Only the differences with respect to this base profile will be included in the output string.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

7.21.3.7 to_string() [5/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t &  ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

This overload behaves the same as **DDS_DataReaderQos::to_string** (p. 147) but prints the entire **DDS_DataReader↩ Qos** (p. 858) object. The only valid value for the argument of type **DDS_QosPrintAll_t** (p. 1285) is **DDS_QOS_PRINT↩ _ALL** (p. 169).

For example
```
DataReaderQos qos;
char *str = NULL;
DDS_UnsignedLong str_size = 0;
qos.to_string(str, str_size, QOS_PRINT_ALL);
```

The resultant string is formatted according to the default value for **DDS_QosPrintFormat** (p. 1285).

Parameters

string	<<***out***>> *(p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	<<***inout***>> *(p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

See also

DDS_DataReaderQos::to_string(char∗, DDS_UnsignedLong&, const DDS_DataReaderQos&, const DDS↩ _QosPrintFormat&) const (p. 149)

References **DDS_QosPrintFormat_INITIALIZER**.

7.21.3.8 to_string() [6/6]

```
DDS_ReturnCode_t DDS_DataReaderQos::to_string (
            char * string,
             DDS_UnsignedLong & string_size,
            const  DDS_QosPrintAll_t & ,
            const  DDS_QosPrintFormat & format ) const  [inline]
```

Obtains a string representation of this **DDS_DataReaderQos** (p. 858).

This overload behaves the same as the **DDS_DataReaderQos::to_string(char∗, DDS_UnsignedLong&, const DDS_QosPrintAll_t&) const** (p. 150) overload. The only difference is that it allows the caller to specify the **DDS↩ _QosPrintFormat** (p. 1285) which is used to format the resultant string.

Parameters

string	*<<**out**>> (p. 433)* The char buffer that will be used to store the string representation of this **DDS_DataReaderQos** (p. 858). If NULL, this function will return the required length of this buffer through the string_size parameter.
string_size	*<<**inout**>> (p. 433)* Cannot be NULL. The size of the supplied buffer. If the supplied buffer is NULL, or if the supplied buffer is not large enough, this value will be updated with the required length of the buffer.
format	*<<**in**>> (p. 433)* The **DDS_QosPrintFormat** (p. 1285) to be used to format the output string.

Returns

DDS_RETCODE_OK (p. 532) if no error was encountered.

- **Stream Kinds**

  DDS_StreamKind *(p. 167) and associated elements*

Classes

- struct **DDS_CoherentSetInfo_t**

  <<***extension***>> (p. *432) Type definition for a coherent set info.*
- struct **DDS_SampleInfo**

  Information that accompanies each sample that is `read` *or* `taken`*.*
- struct **DDS_SampleInfoSeq**

  Declares IDL `sequence` < ***DDS_SampleInfo*** (p. *1344)* > .

Functions

- **DDS_Boolean** **DDS_CoherentSetInfo_equals** (const struct **DDS_CoherentSetInfo_t** ∗self, const struct **DDS_CoherentSetInfo_t** ∗other)

  Compares this CoherentSetInfo with another CoherentSetInfo for equality.
- void **DDS_CoherentSetInfo_copy** (struct **DDS_CoherentSetInfo_t** ∗self, const struct **DDS_CoherentSet↩ Info_t** ∗other)

  Copies another CoherentSetInfo into this CoherentSetInfo.
- void **DDS_SampleInfo_get_sample_identity** (const struct **DDS_SampleInfo** ∗self, struct **DDS_Sample↩ Identity_t** ∗identity)

  <<***extension***>> (p. *432) Retrieves the identity of the sample*
- void **DDS_SampleInfo_get_related_sample_identity** (const struct **DDS_SampleInfo** ∗self, struct **DDS_↩ SampleIdentity_t** ∗related_identity)

  <<***extension***>> (p. *432) Retrieves the identity of a sample related to this one*

7.24.1 Detailed Description

DDS_SampleInfo (p. 1344), **DDS_SampleStateKind** (p. 161), **DDS_ViewStateKind** (p. 163), **DDS_InstanceState↩ Kind** (p. 165) and associated elements

7.24.2 Function Documentation

7.24.2.1 DDS_CoherentSetInfo_equals()

```
DDS_Boolean DDS_CoherentSetInfo_equals (
            const struct  DDS_CoherentSetInfo_t * self,
            const struct  DDS_CoherentSetInfo_t * other )
```

Compares this CoherentSetInfo with another CoherentSetInfo for equality.

Parameters

self	<<***in***>> (p. *433)* This CoherentSetInfo. Cannot be NULL.
other	<<***in***>> (p. *433)* The other CoherentSetInfo to be compared with this GUID. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two CoherentSetInfos have equal values, or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

7.24.2.2 DDS_CoherentSetInfo_copy()

```
void DDS_CoherentSetInfo_copy (
            struct  DDS_CoherentSetInfo_t * self,
            const struct  DDS_CoherentSetInfo_t * other )
```

Copies another CoherentSetInfo into this CoherentSetInfo.

Parameters

self	<<***in***>> *(p. 433)* This CoherentSetInfo. Cannot be NULL.
other	<<***in***>> *(p. 433)* The other CoherentSetInfo to be copied.

7.24.2.3 DDS_SampleInfo_get_sample_identity()

```
void DDS_SampleInfo_get_sample_identity (
            const struct  DDS_SampleInfo * self,
            struct  DDS_SampleIdentity_t * identity )
```

<<***extension***>> *(p. 432)* Retrieves the identity of the sample

The identity is composed of the **DDS_SampleInfo::original_publication_virtual_guid** (p. 1352) and the **DDS_SampleInfo::original_publication_virtual_sequence_number** (p. 1352)

See also

DDS_SampleInfo_get_related_sample_identity (p. 154)

7.24.2.4 DDS_SampleInfo_get_related_sample_identity()

```
void DDS_SampleInfo_get_related_sample_identity (
            const struct  DDS_SampleInfo * self,
            struct  DDS_SampleIdentity_t * related_identity )
```

<<***extension***>> *(p. 432)* Retrieves the identity of a sample related to this one

A sample can be logically related to another sample, when the **DDSDataWriter** (p. 1589) wrote it using **DDS_WriteParams_t::related_sample_identity** (p. 1520). By default, a sample does not have a related sample, and this operation returns **DDS_UNKNOWN_SAMPLE_IDENTITY** (p. 676).

The related identity is composed of the **DDS_SampleInfo::related_original_publication_virtual_guid** (p. 1352) and the **DDS_SampleInfo::related_original_publication_virtual_sequence_number** (p. 1353)

See also

DDS_WriteParams_t::related_sample_identity (p. 1520)

7.25 Topic Queries

DDSTopicQuery (p. 1895) and associated elements.

Classes

- struct **DDS_TopicQuerySelection**

  <<***extension***>> (p. 432) *Specifies the data query that defines a* ***DDSTopicQuery*** (p. 1895)
- struct **DDS_TopicQueryData**

  <<***extension***>> (p. 432) *Provides information about a* ***DDSTopicQuery*** (p. 1895)
- class **DDSTopicQuery**

  <<***extension***>> (p. 432) *Allows a* ***DDSDataReader*** (p. 1556) *to query the sample cache of its matching* ***DDSDataWriter*** (p. 1589).
- class **DDSTopicQueryHelper**

  Helpers to provide utility operations related to ***DDSTopicQuery*** (p. 1895).

Typedefs

- typedef struct **DDS_TopicQuerySelection** **DDS_TopicQuerySelection**

  <<***extension***>> (p. 432) *Specifies the data query that defines a* ***DDSTopicQuery*** (p. 1895)
- typedef struct **DDS_TopicQueryData** **DDS_TopicQueryData**

  <<***extension***>> (p. 432) *Provides information about a* ***DDSTopicQuery*** (p. 1895)

Enumerations

- enum **DDS_TopicQuerySelectionKind** {
  DDS_TOPIC_QUERY_SELECTION_KIND_HISTORY_SNAPSHOT ,
  DDS_TOPIC_QUERY_SELECTION_KIND_CONTINUOUS }

  Kinds of TopicQuerySelection.

Variables

- const struct **DDS_TopicQuerySelection** **DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER**

  Special value for creating a ***DDSTopicQuery*** (p. 1895) *that applies the same filter as the DataReader's* ***DDSContentFilteredTopic*** (p. 1551).
- const struct **DDS_TopicQuerySelection** **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL**

  Special value for creating a ***DDSTopicQuery*** (p. 1895) *that selects all the samples in a* ***DDSDataWriter*** (p. 1589) *cache.*

7.25.1 Detailed Description

DDSTopicQuery (p. 1895) and associated elements.

TopicQueries allow a **DDSDataReader** (p. 1556) to query the sample cache of its matching **DDSDataWriter** (p. 1589). A user can create a **DDSTopicQuery** (p. 1895) with the **DDSDataReader::create_topic_query** (p. 1577) API. When a DataReader
creates a TopicQuery, DDS will propagate it to other DomainParticipants and their DataWriters. When a DataWriter matching with the DataReader that created the TopicQuery receives it, it will send the cached samples that pass the TopicQuery's filter.

To configure how to dispatch a TopicQuery, the **DDS_DataWriterQos** (p. 909) includes the **DDS_TopicQuery↩ DispatchQosPolicy** (p. 1404) policy. By default, a DataWriter ignores TopicQueries unless they are explicitly enabled using this policy.

The delivery of TopicQuery samples occurs in a separate RTPS channel. This allows DataReaders to receive Topic↩ Query samples and live samples in parallel. This is a key difference with respect to the Durability QoS policy.

Late-joining DataWriters will also discover existing TopicQueries. To delete a TopicQuery you must use **DDSData↩ Reader::delete_topic_query** (p. 1578).

After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

By default, a TopicQuery queries the samples that were in the DataWriter's queue at the time the DataWriter received the TopicQuery. These TopicQueries are snapshot TopicQueries. However, a TopicQuery can be created in "continuous" mode; in this case, a DataWriter will continue delivering samples that pass a continuous TopicQuery filter until the DataReader application explicitly deletes it. These TopicQueries are continuous TopicQueries.

The samples received in response to a TopicQuery are stored in the associated DataReader's cache. Any of the read/take operations can retrieve TopicQuery samples. The field **DDS_SampleInfo::topic_query_guid** (p. 1354) associates each sample to its TopicQuery. If the read sample is not in response to a TopicQuery then this field will be **DDS_GUID_UNKNOWN** (p. 527). Note that the same data may be received several times, depending on how many TopicQueries the DataReader creates and their TopicQuerySelection.

You can choose to read or take only TopicQuery samples, only live samples, or both. To support this ReadConditions and QueryConditions provide the **DDSDataReader::create_querycondition_w_params** (p. 1562) and **DDSDataReader↩ ::create_readcondition_w_params** (p. 1561) APIs.

Each TopicQuery is identified by a GUID that can be accessed using the **DDSTopicQuery::get_guid** (p. 1895) method.

7.25.2 Snapshot TopicQueries

A snapshot TopicQuery queries the samples that are in a DataWriter's queue when the DataWriter receives the Topic↩ Query.

When a DataWriter receives a snapshot TopicQuery, it registers the last sequence number available in the DataWriter queue (known as the cut-off SN). Then, the DataWriter applies the TopicQuery expression to all the samples up to the cut-off SN. If a sample with a SN smaller than or equal to the cut-off SN passes the filter expression, it will be included in the TopicQuery response.

When a DataWriter responds to a snapshot TopicQuery, it doesn't create any copies of the samples that are part of the response. As a result, a sample that passes the TopicQuery expression and should have been included in the response may be removed from the DataWriter queue before it reaches the DataReader that issued the TopicQuery. This can result in incomplete TopicQueries, which may or may not be necessary for your application to detect.

For instance, your application may issue a TopicQuery on a keyed topic using a filter on key-only fields and expect to receive the latest value for an instance that passes the filter. However, if the latest value for the instance is replaced with a newer value before the sample is delivered to the DataReader, it is important to detect this situation and re-issue the TopicQuery.

On the other hand, some applications may not care about which samples are returned in response to a TopicQuery, and are only interested in a snapshot of the DataWriter's queue. In such cases, the concept of incomplete TopicQueries can be ignored.

The application can detect incomplete TopicQueries by checking the **DDS_INCOMPLETE_SNAPSHOT_TOPIC_↩ QUERY** (p. 674) bit in the **DDS_SampleInfo::flag** (p. 1353) field of the last sample received for a snapshot TopicQuery.

To reduce the probability of receiving incomplete responses, DataWriters configured with **DDS_KEEP_LAST_↩ HISTORY_QOS** (p. 604) recalculate the cut-off SN for a snapshot TopicQuery if a sample is replaced in the DataWriter queue due to KEEP_LAST replacement before the complete TopicQuery response is published.

Snapshot TopicQueries are not automatically deleted once the DataWriters that respond to the TopicQuery have finished delivering the samples included in the response. It is the responsibility of the user to delete the TopicQuery when it is no longer needed. To detect the end of a snapshot TopicQuery response, check for the **DDS_INTERMEDIATE_TOPIC↩ _QUERY_SAMPLE** (p. 674) flag in the **DDS_SampleInfo::flag** (p. 1353) field of the samples included in the response. For more information on how to use this flag, see **Reading TopicQuery Samples** (p. 157).

7.25.3 Reading TopicQuery Samples

A TopicQuery response is the set of samples published by a DataWriter in response to a TopicQuery. Because multiple DataWriters may respond to a TopicQuery, a DataReader may receive multiple responses for a single TopicQuery.

Responses can be proxied by Routing Service DataWriters by setting <topic_query_proxy>/<mode> to PROPAGATION. These DataWriters forward a TopicQuery response, but they are not considered to be responding to the Topic↩ Query.

Samples that a DataReader receives in response to a TopicQuery have a value for **DDS_SampleInfo::topic_query_↩ guid** (p. 1354) different than **DDS_GUID_UNKNOWN** (p. 527).

In addition, the virtual GUID of the DataWriter(s) that responded to a TopicQuery is set in **DDS_SampleInfo::source↩ _guid** (p. 1353).

Intermediate samples, not the final sample, have the flag **DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE** (p. 674) set in **DDS_SampleInfo::flag** (p. 1353) for a given response to a snapshot TopicQuery.

If two DataWriters respond to a snapshot TopicQuery, you should expect two final samples, one per unique **DDS↩ _SampleInfo::source_guid** (p. 1353) responding to the TopicQuery, assuming that at least one sample passes the TopicQuery filter for each DataWriter.

The **DDS_SampleInfo::flag** (p. 1353) field of the last sample received for a snapshot TopicQuery may have the **DDS↩ _INCOMPLETE_SNAPSHOT_TOPIC_QUERY** (p. 674) bit set if the TopicQuery response is incomplete, which may or may not be necessary for your application to detect. See **Snapshot TopicQueries** (p. 156) for more information.

7.25.4 Debugging Topic Queries

There are a number of ways in which to gain more insight into what is happening in an application that is creating Topic Queries.

7.25.4.1 The Built-in ServiceRequest DataReader

TopicQueries are communicated to publishing applications through a built-in **DDS_ServiceRequest** (p. 1359) channel. The ServiceRequest channel is designed to be generic so that it can be used for many different purposes, one of which is TopicQueries.

When a DataReader creates a TopicQuery, a **DDS_ServiceRequest** (p. 1359) message is sent containing the TopicQuery information. Just as there are built-in DataReaders for **DDS_ParticipantBuiltinTopicData** (p. 1229), **DDS_SubscriptionBuiltinTopicData** (p. 1370), and **DDS_PublicationBuiltinTopicData** (p. 1264), there is a fourth built-in DataReader for ServiceRequests.

The new built-in DataReader can be retrieved using the built-in subscriber and **DDSSubscriber::lookup_datareader** (p. 1872). The topic name is **DDS_SERVICE_REQUEST_TOPIC_NAME** (p. 499). Installing a listener with the **DDSDataReaderListener::on_data_available** (p. 1585) callback implemented will allow a publishing application to be notified whenever a TopicQuery has been received from a subscribing application.

The **DDS_ServiceRequest::service_id** (p. 1360) of a **DDS_ServiceRequest** (p. 1359) corresponding to a **DDSTopicQuery** (p. 1895) will be **DDS_TOPIC_QUERY_SERVICE_REQUEST_ID** (p. 498) and the **DDS_ServiceRequest::instance_id** (p. 1360) will be equal to the GUID of the **DDSTopicQuery** (p. 1895) (see **DDSTopicQuery::get_guid** (p. 1895)).

The **DDS_ServiceRequest::request_body** (p. 1360) is a sequence of bytes containing more information about the TopcQuery. This information can be retrieved using the **DDSTopicQueryHelper::topic_query_data_from_service_request** (p. 1896) function. The resulting **DDS_TopicQueryData** (p. 1402) contains the **DDS_TopicQuerySelection** (p. 1406) that the **DDSTopicQuery** (p. 1895) was created with, the GUID of the original DataReader that created the TopicQuery, and the topic name of that DataReader. Note: When TopicQueries are propagated through one or more Routing Services, the last DataReader that issued the TopicQuery will be a Routing Service DataReader. The **DDS_TopicQueryData::original_related_reader_guid** (p. 1403), however, will be that of the first DataReader to have created the TopicQuery.

7.25.4.2 The on_service_request_accepted DataWriter Listener Callback

It is possible that a **DDS_ServiceRequest** (p. 1359) for a **DDSTopicQuery** (p. 1895) is received but is not immediately dispatched to a DataWriter. This can happen, for example, if a DataWriter was not matching with a DataReader at the time that the TopicQuery was received by the publishing application. The **DDSDataWriterListener::on_service_request_accepted** (p. 1618) callback notifies a DataWriter when a ServiceRequest has been dispatched to that DataWriter. The **DDS_ServiceRequestAcceptedStatus** (p. 1361) provides information about how many ServiceRequests have been accepted by the DataWriter since the last time that the status was read. The status also includes the **DDS_ServiceRequestAcceptedStatus::last_request_handle** (p. 1362), which is the **DDS_InstanceHandle_t** (p. 76) of the last ServiceRequest that was accepted. This instance handle can be used to read samples per instance from the built-in ServiceRequest DataReader and correlate which ServiceRequests have been dispatched to which DataWriters.

7.25.5 Typedef Documentation

7.25.5.1 DDS_TopicQuerySelection

```
typedef struct DDS_TopicQuerySelection DDS_TopicQuerySelection
```

<<***extension***>> *(p. 432)* Specifies the data query that defines a **DDSTopicQuery** (p. 1895)

The query format is similar to the expression and parameters of a **DDSQueryCondition** (p. 1841) or a **DDSContentFilteredTopic** (p. 1551), as described in **DDSDomainParticipant::create_contentfilteredtopic_with_filter** (p. 1654).

There are two special queries:

- **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 160)
- **DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER** (p. 160)

See also

Queries and Filters Syntax (p. 184)

7.25.5.2 DDS_TopicQueryData

```
typedef struct DDS_TopicQueryData DDS_TopicQueryData
```

<<***extension***>> *(p. 432)* Provides information about a **DDSTopicQuery** (p. 1895)

Contains the information about a TopicQuery that can be retrieved using **DDSTopicQueryHelper::topic_query_data_from_service_request** (p. 1896).

See also

DDSTopicQueryHelper::topic_query_data_from_service_request (p. 1896)

7.25.6 Enumeration Type Documentation

7.25.6.1 DDS_TopicQuerySelectionKind

```
enum DDS_TopicQuerySelectionKind
```

Kinds of TopicQuerySelection.

See also

DDS_TopicQuerySelection (p. 1406)

Enumerator

DDS_TOPIC_QUERY_SELECTION_KIND_↩ HISTORY_SNAPSHOT	Indicates that the **DDSTopicQuery** (p. 1895) may only select samples that were in the DataWriter cache upon reception. **[default]**
DDS_TOPIC_QUERY_SELECTION_KIND_↩ CONTINUOUS	Indicates that the **DDSTopicQuery** (p. 1895) may continue selecting samples published after its reception. The subscribing application must explicitly delete the TopicQuery (see **DDSDataReader::delete_topic_query** (p. 1578)) to signal the DataWriters to stop publishing samples for it.

7.25.7 Variable Documentation

7.25.7.1 DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER [extern]
```

Special value for creating a **DDSTopicQuery** (p. 1895) that applies the same filter as the DataReader's **DDSContent↩ FilteredTopic** (p. 1551).

If the **DDSDataReader** (p. 1556) that creates the **DDSTopicQuery** (p. 1895) uses a **DDSContentFilteredTopic** (p. 1551), this **DDS_TopicQuerySelection** (p. 1406) value indicates that the TopicQuery should use the same filter.

Otherwise it behaves as **DDS_TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 160).

7.25.7.2 DDS_TOPIC_QUERY_SELECTION_SELECT_ALL

```
const struct DDS_TopicQuerySelection DDS_TOPIC_QUERY_SELECTION_SELECT_ALL [extern]
```

Special value for creating a **DDSTopicQuery** (p. 1895) that selects all the samples in a **DDSDataWriter** (p. 1589) cache.

7.26 Sample States

DDS_SampleStateKind (p. 161) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_SampleStateMask**

  *A bit-mask (list) of sample states, i.e. **DDS_SampleStateKind** (p. 161).*

Enumerations

- enum **DDS_SampleStateKind** {
  DDS_READ_SAMPLE_STATE = 0x0001 << 0 ,
  DDS_NOT_READ_SAMPLE_STATE = 0x0001 << 1 }

  Indicates whether or not a sample has ever been read.

Variables

- const **DDS_SampleStateMask** **DDS_ANY_SAMPLE_STATE**

  *Any sample state **DDS_READ_SAMPLE_STATE** (p. 162) | **DDS_NOT_READ_SAMPLE_STATE** (p. 162).*

7.26.1 Detailed Description

DDS_SampleStateKind (p. 161) and associated elements

7.26.2 Typedef Documentation

7.26.2.1 DDS_SampleStateMask

`typedef` **`DDS_UnsignedLong DDS_SampleStateMask`**

A bit-mask (list) of sample states, i.e. **DDS_SampleStateKind** (p. 161).

7.26.3 Enumeration Type Documentation

7.26.3.1 DDS_SampleStateKind

`enum` **`DDS_SampleStateKind`**

Indicates whether or not a sample has ever been read.

For each sample received, the middleware internally maintains a sample_state relative to each **DDSDataReader** (p. 1556). The sample state can be either:

- **DDS_READ_SAMPLE_STATE** (p. 162) indicates that the **DDSDataReader** (p. 1556) has already accessed that sample by means of a read or take operation.
- **DDS_NOT_READ_SAMPLE_STATE** (p. 162) indicates that the **DDSDataReader** (p. 1556) has not accessed that sample before.

The sample state will, in general, be different for each sample in the collection returned by read or take.

Enumerator

DDS_READ_SAMPLE_STATE	Sample has been read.
DDS_NOT_READ_SAMPLE_STATE	Sample has not been read.

7.26.4 Variable Documentation

7.26.4.1 DDS_ANY_SAMPLE_STATE

```
const DDS_SampleStateMask DDS_ANY_SAMPLE_STATE [extern]
```

Any sample state **DDS_READ_SAMPLE_STATE** (p. 162) | **DDS_NOT_READ_SAMPLE_STATE** (p. 162).

Examples

HelloWorld_subscriber.cxx.

7.27 View States

DDS_ViewStateKind (p. 163) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_ViewStateMask**
  *A bit-mask (list) of view states, i.e. **DDS_ViewStateKind** (p. 163).*

Enumerations

- enum **DDS_ViewStateKind** {
  DDS_NEW_VIEW_STATE = 0x0001 << 0 ,
  DDS_NOT_NEW_VIEW_STATE = 0x0001 << 1 }
  Indicates whether or not an instance is new.

Variables

- const **DDS_ViewStateMask DDS_ANY_VIEW_STATE**
  *Any view state **DDS_NEW_VIEW_STATE** (p. 164) | **DDS_NOT_NEW_VIEW_STATE** (p. 164).*

7.27.1 Detailed Description

DDS_ViewStateKind (p. 163) and associated elements

7.27.2 Typedef Documentation

7.27.2.1 DDS_ViewStateMask

```
typedef DDS_UnsignedLong DDS_ViewStateMask
```

A bit-mask (list) of view states, i.e. **DDS_ViewStateKind** (p. 163).

7.27.3 Enumeration Type Documentation

7.27.3.1 DDS_ViewStateKind

```
enum DDS_ViewStateKind
```

Indicates whether or not an instance is new.

For each instance (identified by the key), the middleware internally maintains a view state relative to each **DDSDataReader** (p. 1556). The view state can be either:

- **DDS_NEW_VIEW_STATE** (p. 164) indicates that either this is the first time that the **DDSDataReader** (p. 1556) has ever accessed samples of that instance, or else that the **DDSDataReader** (p. 1556) has accessed previous samples of the instance, but the instance has since been reborn (i.e. become not-alive and then alive again). These two cases are distinguished by examining the **DDS_SampleInfo::disposed_generation_count** (p. 1349) and the **DDS_SampleInfo::no_writers_generation_count** (p. 1349).

- **DDS_NOT_NEW_VIEW_STATE** (p. 164) indicates that the **DDSDataReader** (p. 1556) has already accessed samples of the same instance and that the instance has not been reborn since.

The view_state available in the **DDS_SampleInfo** (p. 1344) is a snapshot of the view state of the instance relative to the **DDSDataReader** (p. 1556) used to access the samples at the time the collection was obtained (i.e. at the time read or take was called). The view_state is therefore the same for all samples in the returned collection that refer to the same instance.

Once an instance has been detected as not having any "live" writers and all the samples associated with the instance are "taken" from the **DDSDataReader** (p. 1556), the middleware can reclaim all local resources regarding the instance. Future samples will be treated as "never seen."

Enumerator

DDS_NEW_VIEW_STATE	New instance. This latest generation of the instance has not previously been accessed.
DDS_NOT_NEW_VIEW_STATE	Not a new instance. This latest generation of the instance has previously been accessed.

7.27.4 Variable Documentation

7.27.4.1 DDS_ANY_VIEW_STATE

```
const DDS_ViewStateMask DDS_ANY_VIEW_STATE [extern]
```

Any view state **DDS_NEW_VIEW_STATE** (p. 164) | **DDS_NOT_NEW_VIEW_STATE** (p. 164).

Examples

HelloWorld_subscriber.cxx.

7.28 Instance States

DDS_InstanceStateKind (p. 165) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_InstanceStateMask**
  A bit-mask (list) of instance states, i.e. ***DDS_InstanceStateKind*** *(p. 165).*

Enumerations

- enum **DDS_InstanceStateKind** {
  DDS_ALIVE_INSTANCE_STATE = 0x0001 << 0 ,
  DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE = 0x0001 << 1 ,
  DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE = 0x0001 << 2 }
  Indicates if the samples are from a live ***DDSDataWriter*** *(p. 1589) or not.*

Variables

- const **DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE**
  Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.
- const **DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE**
  Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_STATE.

7.28.1 Detailed Description

DDS_InstanceStateKind (p. 165) and associated elements

7.28.2 Typedef Documentation

7.28.2.1 DDS_InstanceStateMask

`typedef DDS_UnsignedLong DDS_InstanceStateMask`

A bit-mask (list) of instance states, i.e. **DDS_InstanceStateKind** (p. 165).

7.28.3 Enumeration Type Documentation

7.28.3.1 DDS_InstanceStateKind

`enum DDS_InstanceStateKind`

Indicates if the samples are from a live **DDSDataWriter** (p. 1589) or not.

For each instance, the middleware internally maintains an instance state. The instance state can be:

- **DDS_ALIVE_INSTANCE_STATE** (p. 166) indicates that (a) samples have been received for the instance, (b) there are live **DDSDataWriter** (p. 1589) entities writing the instance, and (c) the instance has not been explicitly disposed (or else more samples have been received after it was disposed).
- **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) indicates the instance was explicitly disposed by a **DDSDataWriter** (p. 1589) by means of the dispose operation.
- **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166) indicates the instance has been declared as not-alive by the **DDSDataReader** (p. 1556) because it detected that there are no live **DDSDataWriter** (p. 1589) entities writing that instance.

The precise behavior events that cause the instance state to change depends on the setting of the OWNERSHIP QoS:

- If **OWNERSHIP** (p. 612) is set to **DDS_EXCLUSIVE_OWNERSHIP_QOS** (p. 613), then the instance state becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) only if the **DDSDataWriter** (p. 1589) that "owns" the instance explicitly disposes it. The instance state becomes **DDS_ALIVE_INSTANCE_STATE** (p. 166) again only if the **DDSDataWriter** (p. 1589) that owns the instance writes it.
- If **OWNERSHIP** (p. 612) is set to **DDS_SHARED_OWNERSHIP_QOS** (p. 613), then the instance state becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) if any **DDSDataWriter** (p. 1589) explicitly disposes the instance. The instance state becomes **DDS_ALIVE_INSTANCE_STATE** (p. 166) as soon as any **DDSData↩ Writer** (p. 1589) writes the instance again.

The instance state available in the **DDS_SampleInfo** (p. 1344) is a snapshot of the instance state of the instance at the time the collection was obtained (i.e. at the time read or take was called). The instance state is therefore the same for all samples in the returned collection that refer to the same instance.

Enumerator

DDS_ALIVE_INSTANCE_STATE	Instance is currently in existence.
DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE	Not alive disposed instance. The instance has been disposed by a DataWriter.
DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE	Not alive no writers for instance. None of the **DDSDataWriter** (p. 1589) objects that are currently alive (according to the **LIVELINESS** (p. 607)) are writing the instance.

7.28.4 Variable Documentation

7.28.4.1 DDS_ANY_INSTANCE_STATE

```
const DDS_InstanceStateMask DDS_ANY_INSTANCE_STATE [extern]
```

Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.

Examples

HelloWorld_subscriber.cxx.

7.28.4.2 DDS_NOT_ALIVE_INSTANCE_STATE

```
const DDS_InstanceStateMask DDS_NOT_ALIVE_INSTANCE_STATE [extern]
```

Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_↩ STATE.

7.29 Stream Kinds

DDS_StreamKind (p. 167) and associated elements

Typedefs

- typedef **DDS_UnsignedLong DDS_StreamKindMask**

  A bit-mask (list) of stream kinds, i.e. ***DDS_StreamKind*** *(p. 167).*

Enumerations

- enum **DDS_StreamKind** {
  DDS_LIVE_STREAM = 0x0001 << 0 ,
  DDS_TOPIC_QUERY_STREAM = 0x0001 << 1 }
  Indicates if the samples are TopicQuery samples or not.

7.29.1 Detailed Description

DDS_StreamKind (p. 167) and associated elements

7.29.2 Typedef Documentation

7.29.2.1 DDS_StreamKindMask

`typedef` **`DDS_UnsignedLong DDS_StreamKindMask`**

A bit-mask (list) of stream kinds, i.e. **DDS_StreamKind** (p. 167).

7.29.3 Enumeration Type Documentation

7.29.3.1 DDS_StreamKind

`enum` **`DDS_StreamKind`**

Indicates if the samples are TopicQuery samples or not.

Enumerator

DDS_LIVE_STREAM	Sample is a live data sample.
DDS_TOPIC_QUERY_STREAM	Sample is a TopicQuery sample.

7.30 Infrastructure Module

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

Modules

- **Clock Selection**

  APIs related to clock selection.
- **Time Support**

  Time and duration types and defines.
- **GUID Support**

  *<<**extension**>> (p. 432) GUID type and defines.*
- **Sequence Number Support**

  *<<**extension**>> (p. 432) Sequence number type and defines.*
- **Exception Codes**

  *<<**extension**>> (p. 432) Exception codes.*
- **Return Codes**

  Types of return codes.
- **Status Kinds**

  Kinds of communication status.
- **QoS**

  Quality of Service (QoS) policies.
- **Entity Support**

  ***DDSEntity** (p. 1731), **DDSListener** (p. 1794) and related items.*
- **Conditions and WaitSets**

  ***DDSCondition** (p. 1544) and **DDSWaitSet** (p. 1897) and related items.*
- **Cookie**

  *<<**extension**>> (p. 432) Unique identifier for a written data sample*
- **Sample Flags**

  *<<**extension**>> (p. 432) Flags for samples.*
- **WriteParams**

  *<<**extension**>> (p. 432)*
- **Heap Support in C**

  *<<**extension**>> (p. 432) Heap allocation and free routines in C*
- **Builtin Qos Profiles**

  *<<**extension**>> (p. 432) QoS libraries, profiles, and snippets that are automatically built into RTI Connext.*
- **User-managed Threads**

  User-managed thread infrastructure.
- **Octet Buffer Support**

  *<<**extension**>> (p. 432) Octet buffer creation, cloning, and deletion.*
- **Sequence Support**

  *The **FooSeq** (p. 1965) interface allows you to work with variable-length collections of homogeneous data.*
- **String Support**

  *<<**extension**>> (p. 432) String creation, cloning, assignment, and deletion.*

Classes

- struct **DDS_QosPrintAll_t**

  Special type which is used to select the to_string overloads when printing Qos objects.

Variables

- const **DDS_QosPrintAll_t DDS_QOS_PRINT_ALL**

  Sentinel value that is used to select the to_string overload which prints all of the values of a Qos object.

7.30.1 Detailed Description

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

"DCPS Infrastructure package"

7.30.2 Variable Documentation

7.30.2.1 DDS_QOS_PRINT_ALL

`const` **`DDS_QosPrintAll_t`** `DDS_QOS_PRINT_ALL [extern]`

Sentinel value that is used to select the to_string overload which prints all of the values of a Qos object.

This sentinel value is used to select the to_string overload which prints the entirety of a Qos object (e.g., **DDS_DataReaderQos::to_string(char*, DDS_UnsignedLong&, const DDS_QosPrintAll_t&) const** (p. 150)).

7.31.1 Detailed Description

Defines sequences of primitive data type. .

7.32 Multi-channel DataWriters

APIs related to Multi-channel DataWriters.

APIs related to Multi-channel DataWriters.

7.32.1 What is a Multi-channel DataWriter?

A Multi-channel **DDSDataWriter** (p. 1589) is a **DDSDataWriter** (p. 1589) that is configured to send data over multiple multicast addresses, according to some filtering criteria applied to the data.

To determine which multicast addresses will be used to send the data, the middleware evaluates a set of filters that are configured for the **DDSDataWriter** (p. 1589). Each filter "guards" a channel (a set of multicast addresses). Each time a multi-channel **DDSDataWriter** (p. 1589) writes data, the filters are applied. If a filter evaluates to true, the data is sent over that filter's associated channel (set of multicast addresses). We refer to this type of filter as a Channel Guard filter.

7.32.2 Configuration on the Writer Side

To configure a multi-channel **DDSDataWriter** (p. 1589), simply define a list of all its channels in the **DDS_Multi↩ ChannelQosPolicy** (p. 1214).

The **DDS_MultiChannelQosPolicy** (p. 1214) is propagated along with discovery traffic. The value of this policy is available in **DDS_PublicationBuiltinTopicData::locator_filter** (p. 1271).

7.32.3 Configuration on the Reader Side

No special changes are required in a subscribing application to get data from a multichannel **DDSDataWriter** (p. 1589). If you want the **DDSDataReader** (p. 1556) to subscribe to only a subset of the channels, use a **DDSContentFiltered↩ Topic** (p. 1551).

For more information on Multi-channel DataWriters, refer to the `User's Manual`.

7.32.4 Reliability with Multi-Channel DataWriters

7.32.4.1 Reliable Delivery

Reliable delivery is only guaranteed when the **DDS_PresentationQosPolicy::access_scope** (p. 1252) is set to **DDS↩ _INSTANCE_PRESENTATION_QOS** (p. 616) and the filters in **DDS_MultiChannelQosPolicy** (p. 1214) are keyed-only based.

If any of the guard filters are based on non-key fields, RTI Connext only guarantees reception of the most recent data from the MultiChannel DataWriter.

7.32.4.2 Reliable Protocol Considerations

Reliability is maintained on a per-channel basis. Each channel has its own reliability channel send queue. The size of that queue is limited by **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311) and/or **DDS_DataWriter↩ ResourceLimitsQosPolicy::max_batches** (p. 921).

The protocol parameters described in **DDS_DataWriterProtocolQosPolicy** (p. 892) are applied per channel, with the following exceptions:

DDS_RtpsReliableWriterProtocol_t::low_watermark (p. 1321) and **DDS_RtpsReliableWriterProtocol_t::high_↩ watermark** (p. 1322): The low watermark and high watermark control the queue levels (in number of samples) that determine when to switch between regular and fast heartbeat rates. With MultiChannel DataWriters, high_watermark and low_watermark refer to the DataWriter's queue (not the reliability channel queue). Therefore, periodic heartbeating cannot be controlled on a per-channel basis.

Important: With MultiChannel DataWriters, low_watermark and high_watermark refer to application samples even if batching is enabled. This behavior differs from the one without MultiChannel DataWriters (where low_watermark and high_watermark refer to batches).

DDS_RtpsReliableWriterProtocol_t::heartbeats_per_max_samples (p. 1327): This field defines the number of heartbeats per send queue. For MultiChannel DataWriters, the value is applied per channel. However, the send queue size that is used to calculate the a piggyback heartbeat rate is defined per DataWriter (see **DDS_ResourceLimits↩ QosPolicy::max_samples** (p. 1311))

Important: With MultiChannel DataWriters, heartbeats_per_max_samples refers to samples even if batching is enabled. This behavior differs from the one without MultiChannels DataWriters (where heartbeats_per_max_samples refers to batches).

With batching and MultiChannel DataWriters, the size of the DataWriter's send queue should be configured using **DDS↩ _ResourceLimitsQosPolicy::max_samples** (p. 1311) instead of max_batches **DDS_DataWriterResourceLimitsQosPolicy::max_batches** (p. 921) in order to take advantage of heartbeats_per_↩ max_samples.

7.33 Transports

APIs related to RTI Connext pluggable transports.

Modules

- **Installing Transport Plugins**

  Installing and configuring transports used by RTI Connext.
- **Built-in Transport Plugins**

  Transport plugins delivered with RTI Connext.
- **Creating New Transport Plugins**

  Developing new transport plugins for RTI Connext.
- **Transport Plugins Configuration**

  Transport plugins configuration with RTI Connext.
- **Transport Address**

  Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

7.33.1 Detailed Description

APIs related to RTI Connext pluggable transports.

7.33.2 Overview

RTI Connext has a pluggable transports architecture. The core of RTI Connext is transport agnostic; it does not make any assumptions about the actual transports used to send and receive messages. Instead, the RTI Connext core uses an abstract "transport API" to interact with the **transport plugins** which implement that API.

A transport plugin implements the abstract transport API and performs the actual work of sending and receiving messages over a physical transport. A collection of **builtin plugins** (see **Built-in Transport Plugins** (p. 182)) is delivered with RTI Connext for commonly used transports. New transport plugins can easily be created, thus enabling RTI Connext applications to run over transports that may not even be conceived yet. This is a powerful capability and that distinguishes RTI Connext from competing middleware approaches.

RTI Connext also provides a set of APIs for installing and configuring transport plugins to be used in an application. So that RTI Connext applications work out of the box, a subset of the builtin transport plugins is preconfigured by default (see **DDS_TransportBuiltinQosPolicy** (p. 1408)). You can "turn-off" some or all of the builtin transport plugins. In addition, you can configure other transport plugins for use by the application.

7.33.3 Transport Aliases

In order to use a transport plugin instance in an RTI Connext application, it must be registered with a **DDSDomain↩ Participant** (p. 1619). When you register a transport, you specify a sequence of "alias" strings to symbolically refer to the transport plugin. The same alias strings can be used to register more than one transport plugin.

You can register multiple transport plugins with a **DDSDomainParticipant** (p. 1619). An **alias** symbolically refers to one or more transport plugins registered with the **DDSDomainParticipant** (p. 1619). Builtin transport plugin instances can be referred to using preconfigured aliases (see **TRANSPORT_BUILTIN** (p. 641)).

A transport plugin's class name is automatically used as an implicit alias. It can be used to refer to all the transport plugin instances of that class.

You can use aliases to refer to transport plugins, in order to specify:

- the transport plugins to use for **discovery** (see **DDS_DiscoveryQosPolicy::enabled_transports** (p. 961)), and for **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities (see **DDS_TransportSelectionQosPolicy** (p. 1421)).

- the **multicast** addresses on which to receive discovery messages (see **DDS_DiscoveryQosPolicy::multicast↩ _receive_addresses** (p. 962)), and the multicast addresses and ports on which to receive user data (see **DDS↩ _DataReaderQos::multicast** (p. 864)).

- the **unicast ports** used for user data (see **DDS_TransportUnicastQosPolicy** (p. 1422)) on both **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities.

- the transport plugins used to parse an address string in a locator (**Locator Format** (p. 663) and **NDDS_↩ DISCOVERY_PEERS** (p. 662)).

A **DDSDomainParticipant** (p. 1619) (and contained its entities) start using a transport plugin after the **DDSDomain↩ Participant** (p. 1619) is enabled (see **DDSEntity::enable** (p. 1734)). An entity will use *all* the transport plugins that match the specified transport QoS policy. All transport plugins are treated uniformly, regardless of how they were created or registered; there is no notion of some transports being more "special" that others.

7.33.4 Transport Lifecycle

A transport plugin is owned by whomever creates it. Thus, if you create and register a transport plugin with a **DDSDomainParticipant** (p. 1619), you are responsible for deleting it by calling its destructor. Note that builtin transport plugins (**TRANSPORT_BUILTIN** (p. 641)) and transport plugins that are loaded through the **PROPERTY** (p. 617) QoS policy (see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 178)) are automatically managed by RTI Connext.

A user-created transport plugin must not be deleted while it is still in use by a **DDSDomainParticipant** (p. 1619). This generally means that a user-created transport plugin instance can only be deleted after the **DDSDomainParticipant** (p. 1619) with which it was registered is deleted (see **DDSDomainParticipantFactory::delete_participant** (p. 1713)). Note that a transport plugin *cannot* be "unregistered" from a **DDSDomainParticipant** (p. 1619).

A transport plugin instance cannot be registered with more than one **DDSDomainParticipant** (p. 1619) at a time. This requirement is necessary to guarantee the multi-threaded safety of the transport API.

If the same physical transport resources are to be used with more than one **DDSDomainParticipant** (p. 1619) in the same address space, the transport plugin should be written in such a way so that it can be instantiated multiple times—once for each **DDSDomainParticipant** (p. 1619) in the address space. Note that it is always possible to write the transport plugin so that multiple transport plugin instances share the same underlying resources; however the burden (if any) of guaranteeing multi-threaded safety to access shared resource shifts to the transport plugin developer.

7.33.5 Transport Class Attributes

A transport plugin instance is associated with two kinds of attributes:

- the *class* attributes that are decided by the plugin writer; these are invariant across all instances of the transport plugin class, and
- the *instance* attributes that can be set on a per instance basis by the transport plugin user.

Every transport plugin must specify the following class attributes.

transport class id (see NDDS_Transport_Property_t::classid (p. 2045)) Identifies a transport plugin implementation class. It denotes a unique "class" to which the transport plugin instance belongs. The class is used to distinguish between different transport plugin implementations. Thus, a transport plugin vendor should ensure that its transport plugin implementation has a unique class.

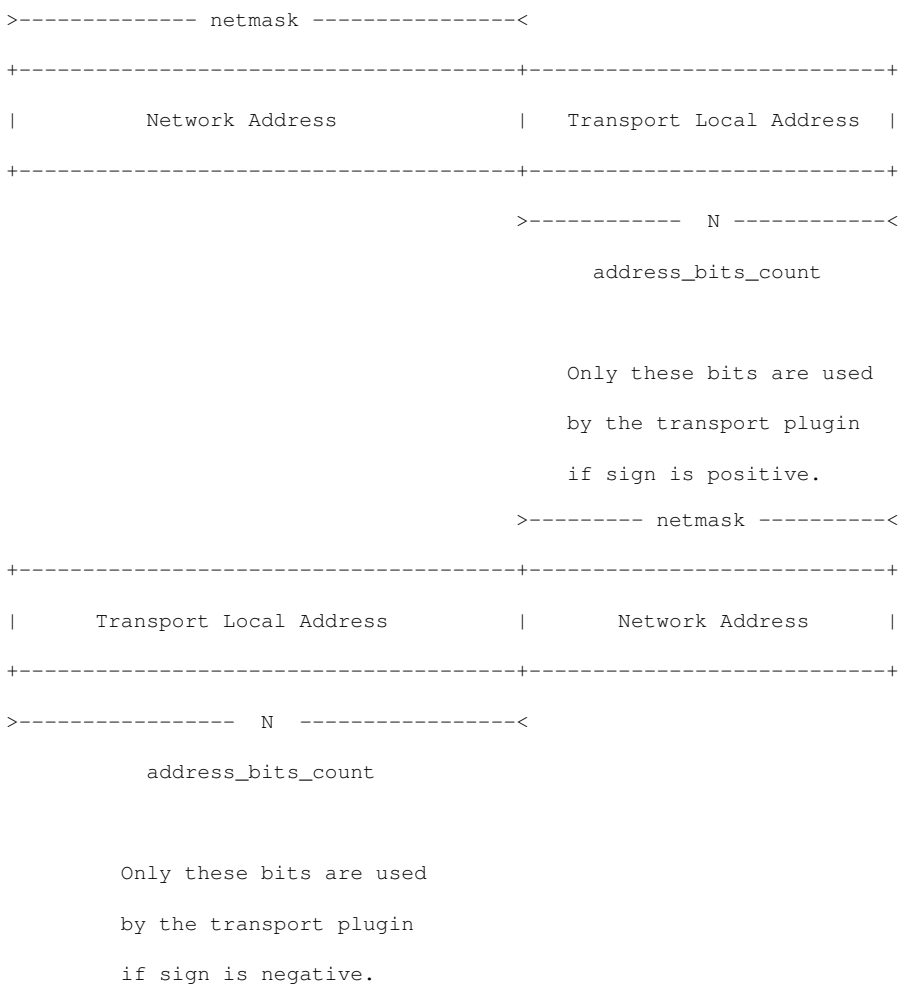
Two transport plugin instances report the same class *iff* they have compatible implementations. Transport plugin instances with mismatching classes are not allowed (by the RTI Connext Core) to communicate with one another.

Multiple implementations (possibly from different vendors) for a physical transport mechanism can co-exist in an RTI Connext application, provided they use different transport class IDs.

The class ID can also be used to distinguish between different transport protocols over the same physical transport network (e.g., UDP vs. TCP over the IP routing infrastructure).

transport significant address bit count (see NDDS_Transport_Property_t::address_bit_count (p. 2046)) RTI Connext's addressing is modeled after the IPv6 and uses 128-bit addresses (**Transport Address** (p. 448)) to route messages.

A transport plugin is expected to map the transport's internal addressing scheme to 128-bit addresses. Depending on the sign of this attribute, this mapping uses only $\mathbb{N}$ least significant bits (LSB) if positive or $\mathbb{N}$ most significant bits (MSB) if negative; these bits are specified by this attribute.



The remaining bits of an address using the 128 - abs(bit address) representation will be considered as part of the "network address" (see **Transport Network Address** (p. 176)) and thus ignored by the transport plugin's internal addressing scheme.

For *unicast* addresses, the transport plugin is expected to ignore the higher (128 - **NDDS_Transport_Property_↩ t::address_bit_count** (p. 2046)) bits. RTI Connext is free to manipulate those bits freely in the addresses passed in/out to the transport plugin APIs.

Theoretically, the significant address bits count, N is related to the size of the underlying transport network as follows:

$$address_bits_count >= ceil(log_2(total_addressable_transport_unicast_interfaces))$$

The equality holds when the most compact (theoretical) internal address mapping scheme is used. A practical address mapping scheme may waste some bits.

7.33.6 Transport Instance Attributes

The *per instance* attributes to configure the plugin instance are generally passed in to the plugin constructor. These are defined by the transport plugin writer, and can be used to:

- customize the behavior of an instance of a transport plugin, including the send and the receiver buffer sizes, the maximum message size, various transport level classes of service (CoS), and so on.

- specify the resource values, network interfaces to use, various transport level policies, and so on.

RTI Connext requires that every transport plugin instance must specify the **NDDS_Transport_Property_t::message_size_max** (p. 2047) and **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).

It is up to the transport plugin developer to make these available for configuration to transport plugin user.

Note that it is important that the instance attributes are "compatible" between the sending side and the receiving side of communicating applications using different instances of a transport plugin class. For example, if one side is configured to send messages larger than can be received by the other side, then communications via the plugin may fail.

7.33.7 Transport Network Address

The address bits not used by the transport plugin for its internal addressing constitute its network address bits.

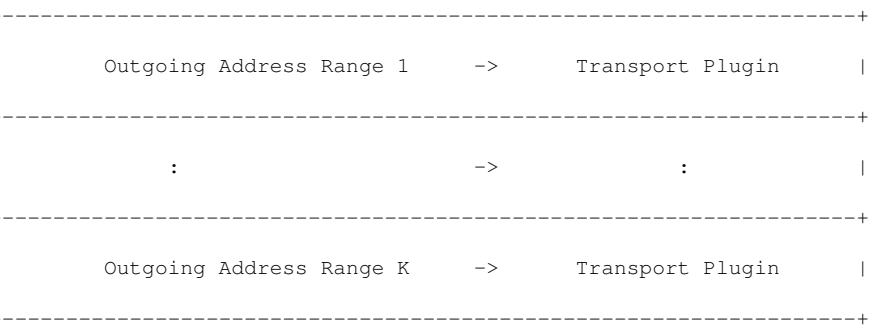
In order for RTI Connext to properly route the messages, each unicast interface in the RTI Connext *domain* must have a unique address. RTI Connext allows the user to specify the value of the network address when installing a transport plugin via the **NDDSTransportSupport::register_transport()** (p. 2104) API.

The network address for a transport plugin should be chosen such that the resulting fully qualified 128-bit address will be unique in the RTI Connext domain. Thus, if two instances of a transport plugin are registered with a **DDSDomainParticipant** (p. 1619), they will be at different network addresses in order for their unicast interfaces to have unique fully qualified 128-bit addresses. It is also possible to create multiple transports with the same network address, as it can be useful for certain use cases; note that this will require special entity configuration for most transports to avoid clashes in resource use (e.g. sockets for UDPv4 transport).

7.33.8 Transport Send Route

By default, a transport plugin is configured to send outgoing messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of outgoing messages via the **NDDSTransportSupport::add_send_route()** (p. 2106) API, so that a transport plugin will be used to send messages only to certain ranges of destination addresses. The method can be called multiple times for a transport plugin, with different address ranges.

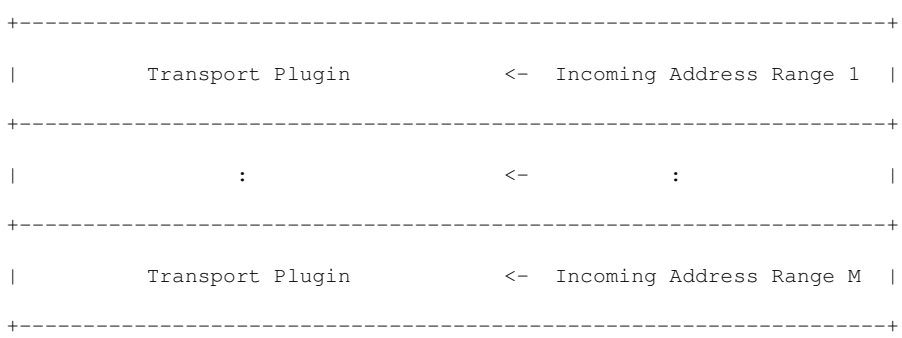


The user can set up a routing table to restrict the use of a transport plugin to send messages to selected addresses ranges.

7.33.9 Transport Receive Route

By default, a transport plugin is configured to receive incoming messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of incoming messages via the **NDDSTransportSupport::add_receive_route()** (p. 2107) API, so that a transport plugin will be used to receive messages only on certain ranges of addresses. The method can be called multiple times for a transport plugin, with different address ranges.



The user can set up a routing table to restrict the use of a transport plugin to receive messages from selected ranges. For example, the user may restrict a transport plugin to

- receive messages from a certain multicast address range.
- receive messages only on certain unicast interfaces (when multiple unicast interfaces are available on the transport plugin).

7.34 Installing Transport Plugins

Installing and configuring transports used by RTI Connext.

Classes

- class **NDDSTransportSupport**

  <<***interface***>> *(p. 433) The utility class used to configure RTI Connext pluggable transports.*

Typedefs

- typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE **NDDS_Transport_Handle_t**

  *An opaque type representing the handle to a transport plugin registered with a **DDSDomainParticipant** (p. 1619).*
- typedef NDDS_Transport_Plugin *(* **NDDS_Transport_create_plugin**) (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in)

  *Function prototype for creating plugin through **DDS_PropertyQosPolicy** (p. 1260).*

Functions

- **DDS_Boolean NDDS_Transport_Handle_is_nil** (const **NDDS_Transport_Handle_t** *self)

  Is the given transport handle the NIL transport handle?

Variables

- const **NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL**

  The NIL transport handle.

7.34.1 Detailed Description

Installing and configuring transports used by RTI Connext.

There is more than one way to install a transport plugin for use with RTI Connext:

- If it is a builtin transport plugin, by specifying a bitmask in **DDS_TransportBuiltinQosPolicy** (p. 1408) (see **Built-in Transport Plugins** (p. 182))
- For all other non-builtin transport plugins, by dynamically loading the plugin through **PROPERTY** (p. 617) QoS policy settings of **DDSDomainParticipant** (p. 1619) (only supported on architectures that support dynamic libraries, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 178))
- By explicitly creating a transport plugin and registering the plugin with a **DDSDomainParticipant** (p. 1619) through **NDDSTransportSupport::register_transport** (p. 2104) (for both builtin and non-builtin plugins)

In the first two cases, the lifecycle of the transport plugin is automatically managed by RTI Connext. In the last case, user is responsible for deleting the transport plugin after the **DDSDomainParticipant** (p. 1619) is deleted. See **Transport Lifecycle** (p. 174) for details.

7.34.2 Loading Transport Plugins through Property QoS Policy of Domain Participant

On architectures that support dynamic libraries, a non-builtin transport plugin written in C/C++ and built as a dynamic-link library (*.dll/*.so) can be loaded by RTI Connext through the **PROPERTY** (p. 617) QoS policy settings of the **DDSDomainParticipant** (p. 1619).

Dynamic libraries are supported on all architectures except INTEGRITY and certain VxWorks platforms. For VxWorks, dynamic libraries are only supported for architectures that are on Pentium/Arm CPUs AND use kernel mode.

The dynamic-link library (and all the dependent libraries) need to be in the library search path during runtime (in the **LD_LIBRARY_PATH** environment variable on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).

To allow dynamic loading of the transport plugin, the transport plugin must implement the RTI Connext abstract transport API and must provide a function with the signature **NDDS_Transport_create_plugin** (p. 181) that can be called by RTI Connext to create an instance of the transport plugin. The name of the dynamic library that contains the transport plugin implementation, the name of the function and properties that can be used to create the plugin, and the aliases and network address that are used to register the plugin can all be specified through the **PROPERTY** (p. 617) QoS policy of the **DDSDomainParticipant** (p. 1619).

The following table lists the property names that are used to load the transport plugins dynamically:

Table 7.73 ***Properties for dynamically loading and registering transport plugins***

Property Name	Description	Required?
dds.transport.load_plugins	Comma-separated strings indicating the prefix names of all plugins that will be loaded by RTI Connext. Up to 8 plugins may be specified. For example, "dds.transport.TCPv4.tcp1, dds.transport.TCPv4.tcp2", In the following examples, <TRANSPORT_PREFIX> is used to indicate one element of this string that is used as a prefix in the property names for all the settings that are related to the plugin. <TRANSPORT_PREFIX> must begin with "dds.transport." (such as "dds.transport.mytransport").	**YES**
<TRANSPORT_PREFIX>.library	Should be set to the name of the dynamic library (*.so for Linux systems, *.dylib for macOS systems, and *.dll for Windows systems) that contains the transport plugin implementation. This library (and all the other dependent dynamic libraries) needs to be in the library search path used by RTI Connext during run time (pointed to by the environment variable **LD_LIBRARY_PATH** on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).	**YES**
<TRANSPORT_PREFIX>.create_function	Should be set to the name of the function with the prototype of **NDDS_Transport_create_plugin** (p. 181) that can be called by RTI Connext to create an instance of the plugin. The resulting transport plugin will then be registered by RTI Connext through **NDDSTransportSupport::register_transport** (p. 2104)	**YES**
<TRANSPORT_PREFIX>.aliases	Used to register the transport plugin returned by **NDDS_Transport_create_plugin** (p. 181) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **DDSDomainParticipant** (p. 1619). Refer to **aliases_in** parameter in **NDDSTransportSupport::register_transport** (p. 2104) for details. Aliases should be specified as a comma-separated string, with each comma delimiting an alias. If it is not specified, <TRANSPORT_PREFIX> –without the leading "dds.transport" – is used as the default alias for the plugin.	NO

Property Name	Description	Required?
<TRANSPORT_PREFIX>.network_address	Used to register the transport plugin returned by **NDDS_Transport_create_plugin** (p. 181) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **DDSDomainParticipant** (p. 1619). Refer to **network_address_in** parameter in **NDDSTransportSupport::register_transport** (p. 2104) for details. If it is not specified, the **network_address_out** output parameter from **NDDS_Transport_create_plugin** (p. 181) is used. The default value is a zeroed out network address.	NO
<TRANSPORT_PREFIX>.<property_name>	Property that is passed into **NDDS_Transport_create_plugin** (p. 181) (as specified by <**TRANSPORT_PREFIX**>**.create_function**) for creating the transport plugin. This property name-value pair will be passed to **NDDS_Transport_create_plugin** (p. 181) after stripping out <TRANSPORT_PREFIX> from the property name. The parsing of this property and configuring the transport using this property should be handled by the implementation of each transport plugin. Multiple <TRANSPORT_PREFIX>.<property_name> can be specified. Note: "library", "create_function", "aliases" and "network_address" cannot be used as the <property_name> due to conflicts with other builtin property names.	NO

A transport plugin is dynamically created and registered to the **DDSDomainParticipant** (p. 1619) by RTI Connext when:

- the **DDSDomainParticipant** (p. 1619) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDSSubscriber::lookup_datareader** (p. 1872)),

whichever happens first.

Any changes to the transport plugin related properties in the **PROPERTY** (p. 617) QoS policy after the transport plugin has been registered with the **DDSDomainParticipant** (p. 1619) will have no effect.

See also

Transport Use Cases (p. 409)

7.34.3 Typedef Documentation

7.34.3.1 NDDS_Transport_Handle_t

```
typedef NDDS_TRANSPORT_HANDLE_TYPE_NATIVE  NDDS_Transport_Handle_t
```

An opaque type representing the handle to a transport plugin registered with a **DDSDomainParticipant** (p. 1619).

A transport handle represents the association between a **DDSDomainParticipant** (p. 1619) and a transport plugin.

7.34.3.2 NDDS_Transport_create_plugin

```
typedef NDDS_Transport_Plugin *(* NDDS_Transport_create_plugin) ( NDDS_Transport_Address_t *default↩
_network_address_out, const struct  DDS_PropertyQosPolicy *property_in)
```

Function prototype for creating plugin through **DDS_PropertyQosPolicy** (p. 1260).

By specifying some predefined property names in **DDS_PropertyQosPolicy** (p. 1260), RTI Connext can call a function from a dynamic library to create a transport plugin and register the returned plugin with a **DDSDomainParticipant** (p. 1619).

This is the function prototype of the function as specified in "<TRANSPORT_PREFIX>.create_function" of **DDS_↩ PropertyQosPolicy** (p. 1260) QoS policy that will be called by RTI Connext to create the transport plugin. See **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 178) for details.

Parameters

default_network_address_out	<<***out***>> *(p. 433)* Optional output parameter. If the network address is not specified in "<TRANSPORT_PREFIX>.network_address" in **DDS_PropertyQosPolicy** (p. 1260), this is the default network address that is used to register the returned transport plugin using **NDDSTransportSupport::register_transport** (p. 2104) . This parameter will never be null. The default value is a zeroed-out network address.
property_in	<<***in***>> *(p. 433)* **property_in** contains all the name-value pair properties that matches the format "<TRANSPORT_PREFIX>.<property_name>" in **DDS_PropertyQosPolicy** (p. 1260) that can be used to create the transport plugin. Only <property_name> is passed in - the plugin prefix will be stripped out in the property name. Note: predefined <TRANSPORT_PREFIX> properties "library", "create_function", "aliases" and "network_address" will not be passed to this function. This parameter will never be null.

Returns

Upon success, a valid non-NIL transport plugin. NIL upon failure.

7.34.4 Function Documentation

7.34.4.1 NDDS_Transport_Handle_is_nil()

```
DDS_Boolean NDDS_Transport_Handle_is_nil (
            const  NDDS_Transport_Handle_t * self )
```

Is the given transport handle the NIL transport handle?

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given transport handle is equal to **NDDS_TRANSPORT_HANDLE_NIL** (p. 182) or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

7.34.5 Variable Documentation

7.34.5.1 NDDS_TRANSPORT_HANDLE_NIL

```
const  NDDS_Transport_Handle_t NDDS_TRANSPORT_HANDLE_NIL  [extern]
```

The NIL transport handle.

7.35 Built-in Transport Plugins

Transport plugins delivered with RTI Connext.

Modules

- **UDP Transport Plugin definitions**

  UDP Transport Plugin definitions.
- **Shared Memory Transport**

  *Built-in transport plug-in for inter-process communications using shared memory (**NDDS_TRANSPORT_CLASSID_SHMEM** (p. 445)) .*
- **UDPv4 Transport**

  *Transport plug-in using UDP/IPv4 (**NDDS_TRANSPORT_CLASSID_UDPv4** (p. 444)) .*
- **Real-Time WAN Transport**

  *Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS_TRANSPORT_CLASSID_UDPv4_WAN** (p. 446)) .*
- **UDPv6 Transport**

  *Transport plug-in using UDP/IPv6 (**NDDS_TRANSPORT_CLASSID_UDPv6** (p. 445)) .*

7.35.1 Detailed Description

Transport plugins delivered with RTI Connext.

The **TRANSPORT_BUILTIN** (p. 641) specifies the collection of transport plugins that can be automatically configured and managed by RTI Connext as a convenience to the user.

These transport plugins can simply be turned "on" or "off" by a specifying a bitmask in **DDS_TransportBuiltinQos↩ Policy** (p. 1408), thus bypassing the steps for setting up a transport plugin. RTI Connext preconfigures the transport plugin properties, the network address, and the aliases to "factory defined" values.

If a builtin transport plugin is turned "on" in **DDS_TransportBuiltinQosPolicy** (p. 1408), the plugin is implicitly created and registered to the corresponding **DDSDomainParticipant** (p. 1619) by RTI Connext when:

- the **DDSDomainParticipant** (p. 1619) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**DDSSubscriber::lookup_datareader** (p. 1872)),

whichever happens first.

Each builtin transport contains its own set of properties. For example, the ::**UDPv4 Transport** (p. 462) allows the application to specify whether or not multicast is supported, the maximum size of the message, and provides a mechanism for the application to filter out network interfaces.

The builtin transport plugin properties can be changed by the method **NDDSTransportSupport::set_builtin_↩ transport_property()** (p. 2109) or by using the **PROPERTY** (p. 617) QoS policy associated with the **DDSDomain↩ Participant** (p. 1619). Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1260) always overwrite the ones specified through **NDDSTransportSupport::set_builtin_transport_property()** (p. 2109). Refer to the specific builtin transport for the list of property names that can be specified through **PROPERTY** (p. 617) QoS policy.

Any changes to the builtin transport properties after the builtin transports have been registered with will have no effect.

See also

NDDSTransportSupport::set_builtin_transport_property() (p. 2109) **DDS_PropertyQosPolicy** (p. 1260)

The built-in transport plugins can also be instantiated and registered by the user, following the steps for **Registering a transport with a participant** (p. 411). This is useful when the application needs different values for the network addresses.

7.36 Creating New Transport Plugins

Developing new transport plugins for RTI Connext.

Developing new transport plugins for RTI Connext.

RTI Connext provides an abstract "C" language API for creating new transport plugins. If you are interested in creating a new transport plugin for RTI Connext, please contact your RTI representative or email `sales@rti.com`.

7.37 Queries and Filters Syntax

7.37.1 Syntax for DDS Queries and Filters

A subset of the WHERE clause in SQL is used in several parts of the specification:

- The `filter_expression` in the **DDSContentFilteredTopic** (p. 1551)
- The `query_expression` in the **DDSQueryCondition** (p. 1841)
- <<***extension***>> *(p. 432)* The `filter_expression` in the **DDS_TopicQuerySelection** (p. 1406)
- <<***extension***>> *(p. 432)* The `filter_expression` in the **DDS_ChannelSettings_t** (p. 822)

Those expressions may use a subset of SQL, extended with the possibility to use program variables in the SQL expression. The allowed SQL expressions are defined with the BNF-grammar below.

The following notational conventions are made:

- *NonTerminals* are typeset in italics.
- `'Terminals'` are quoted and typeset in a fixed width font. They are written in upper case in most cases in the BNF-grammar below, but should be case insensitive.
- **TOKENS** are typeset in bold.
- The notation (*element* // ',') represents a non-empty comma-separated list of *elements*.

7.37.2 SQL grammar in BNF

```
FilterExpression ::=  Condition
Condition   ::=  Predicate
           |    Condition  'AND'  Condition
           |    Condition  'OR'  Condition
           |    'NOT'  Condition
           |    '('  Condition  ')'
Predicate   ::=  ComparisonPredicate
           |    BetweenPredicate
ComparisonPredicate ::=  ComparisonTerm  RelOp  ComparisonTerm
ComparisonTerm      ::= FieldIdentifier
                   |  Parameter
BetweenPredicate    ::=  FieldIdentifier  'BETWEEN'  Range
                   |    FieldIdentifier  'NOT BETWEEN'  Range
FieldIdentifier      ::= FIELDNAME
                   | IDENTIFIER
RelOp     ::=  '=' |  '>' |  '>=' |  '<' |  '<=' |  '<>' |  'LIKE' |  'MATCH'
Range     ::=  Parameter  'AND'  Parameter
Parameter ::= INTEGERVALUE
         |   CHARVALUE
         |   FLOATVALUE
         |   STRING
         |   ENUMERATEDVALUE
         |   BOOLEANVALUE
         |   NULLVALUE
         |   PARAMETER
```

7.37.3 Token expression

The syntax and meaning of the tokens used in the SQL grammar is described as follows:

- **IDENTIFIER** - An identifier for a FIELDNAME, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '_' but may not start with a digit.

Formal notation:

```
IDENTIFIER:  LETTER ( PART_LETTER)*
where  LETTER: [ "A"-"Z","_","a"-"z" ]
       PART_LETTER: [ "A"-"Z","_","a"-"z","0"-"9" ]
```

- **FIELDNAME** - A fieldname is a reference to a field in the data structure. The dot '.' is used to navigate through nested structures. The number of dots that may be used in a FIELDNAME is unlimited. The FIELDNAME can refer to fields at any depth in the data structure. The names of the field are those specified in the IDL definition of the corresponding structure, which may or may not match the fieldnames that appear on the language-specific (e.g., C/C++, Java) mapping of the structure. To reference to the *n*+1 element in an array or sequence, use the notation '[*n*]', where *n* is a natural number (zero included). FIELDNAME must resolve to a primitive IDL type; that is either boolean, octet, (unsigned) short, (unsigned) long, (unsigned) long long, float double, char, wchar, string, wstring, or enum.

Formal notation:

```
FIELDNAME:  FieldNamePart ( "."  FieldNamePart )*
where  FieldNamePart : IDENTIFIER ( "["  Index "]" )*
       Index> : (["0"-"9"])+
              | ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+
```

Primitive IDL types referenced by FIELDNAME are treated as different types in *Predicate* according to the following table:

Predicate Data Type	IDL Type
BOOLEANVALUE	boolean
INTEGERVALUE	octet, (unsigned) short, (unsigned) long, (unsigned) long long
FLOATVALUE	float, double
CHARVALUE	char, wchar
STRING	string, wstring
ENUMERATEDVALUE	enum

- **INTEGERVALUE** - Any series of digits, optionally preceded by a plus or minus sign, representing a decimal integer value within the range of the system. 64-bit integers (int64 and uint64) must be followed by either l or L, otherwise the value is treated as a 32-bit integer. A hexadecimal number is preceded by 0x and must be a valid hexadecimal expression.

Formal notation:

```
INTEGERVALUE : (["+","-"])? (["0"-"9"])+ [("L","l")]?
             | (["+","-"])? ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+ [("L","l")]?
```

- **CHARVALUE** - A single character enclosed between single quotes.

Formal notation:

```
CHARVALUE : "'" (~["'"])? "'"
```

- **FLOATVALUE** - Any series of digits, optionally preceded by a plus or minus sign and optionally including a floating point ('.'). A power-of-ten expression may be postfixed, which has the syntax e*n* or E*n*, where *n* is a number, optionally preceded by a plus or minus sign.

Formal notation:

```
FLOATVALUE : (["+","-"])? (["0"-"9"])* (".")? (["0"-"9"])+ ( EXPONENT)?
where  EXPONENT: ["e","E"] (["+","-"])? (["0"-"9"])+
```

- **STRING** - Any series of characters encapsulated in single quotes, except the single quote itself.

Formal notation:

```
STRING : "'" (~["'"])* "'"
```

- **ENUMERATEDVALUE** - An enumerated value is a reference to a value declared within an enumeration. Enumerated values consist of the name of the enumeration label enclosed in single quotes. The name used for the enumeration label must correspond to the label names specified in the IDL definition of the enumeration.

Formal notation:

```
ENUMERATEDVALUE : "'" ["A" - "Z", "a" - "z"] ["A" - "Z", "a" - "z", "_", "0" - "9"]* "'"
```

- **BOOLEANVALUE** - Can either be 'TRUE' or 'FALSE', case insensitive.

Formal notation (case insensitive):

```
BOOLEANVALUE : ["TRUE","FALSE"]
```

- **NULLVALUE** - Can be null, and is case insensitive.

Formal notation (case insensitive):

```
NULLVALUE : "null"
```

- **PARAMETER** - A parameter is of the form %*n*, where *n* represents a natural number (zero included) smaller than 100. It refers to the n + 1 th argument in the given context. Argument can only in primitive type value format. It cannot be a FIELDNAME.

Formal notation:

```
PARAMETER : "%" (["0"-"9"])+
```

7.37.4 String Parameters

Strings used as parameter values must contain the enclosing quotation marks (') within the parameter value, and not place the quotation marks within the expression statement. For example, the following expression is legal:

```
" symbol MATCH %0 " with parameter 0 = " 'IBM' "
```

whereas the following expression will not compile:

```
" symbol MATCH '%0' " with parameter 0 = " IBM "
```

7.37.5 Type compatability in Predicate

Only certain combination of type comparisons are valid in *Predicate*. The following table marked all the compatible pairs with 'YES':

	BOOLEANVALUE	INTEGERVALUE	FLOATVALUE	CHARVALUE	STRING	ENUMERATEDVALUE
BOOLEAN	YES					
INTEGERVALUE		YES	YES			
FLOATVALUE		YES	YES			
CHARVALUE				YES	YES	YES
STRING				YES	YES(∗1)	YES
ENUMERATEDVALUE		YES		YES(∗2)	YES(∗2)	YES(∗3)

- (∗1) See **SQL Extension: Regular Expression Matching** (p. 187)
- (∗2) Because the formal notation of the Enumeration values, they are compatible with string and char literals, but they are not compatible with string or char variables, i.e., "MyEnum='EnumValue'" would be correct, but "My↩ Enum=MyString" is not allowed.
- (∗3) Only for same type Enums.

7.37.6 SQL Extension: Regular Expression Matching

The relational operator MATCH may only be used with string fields. The right-hand operator is a string *pattern*. A string pattern specifies a template that the left-hand field value must match. The characters ,/\?∗[]-^!% have special meanings unless they are escaped by the escape character '\'.

MATCH is case-sensitive.

The pattern allows limited "wild card" matching under the following rules:

Character	Meaning
,	"," separates a list of alternate patterns. The field string is matched if it matches one or more of the patterns.
/	"/" in the pattern string matches a / in the field string. This character is used to separate a sequence of mandatory substrings.
?	"?" in the pattern string matches any single *non-special* characters in the field string.
*	"*" in the pattern string matches 0 or more *non-special* characters in field string.
[*charlist*]	Matches any one of the characters from the list of characters in *charlist*.
[*s-e*]	Matches any character any character from *s* to *e*, inclusive.
%	"%" is used to designate filter expressions parameters.
[!*charlist*] or [^*charlist*]	Matches any characters not in *charlist* (not supported).
[!*s-e*] or [^*s-e*]	Matches any characters not in the interval [s-e] (not supported).
\	Escape character for special characters.

The syntax is similar to the POSIX fnmatch syntax (1003.2-1992 section B.6). The MATCH syntax is also similar to the 'subject' strings of TIBCO Rendezvous.

Note: To use special characters as regular characters in regular expressions, you must escape them using the character '\'. For example, 'A[' is considered a malformed expression and the result is undefined.

7.37.7 Character Encoding

The default encoding for IDL strings is UTF-8. RTI Connext offers ISO 8859-1 as an alternative encoding for IDL strings.

In order to configure ISO 8859-1 as the encoding for filtering of IDL strings, you can set the DomainParticipant property **dds.domain_participant.filtering_character_encoding** to ISO-8859:

The possible values for **dds.domain_participant.filtering_character_encoding** are:

- **UTF-8** (default value)
- **ISO-8859-1**

7.37.8 Unicode Normalization

Unicode supports multiple ways to encode some characters, most notably accented characters. A composed character in Unicode can often have a number of different ways of representing the character. For example:

- Precomposed is represented by \u1e3c
- Composed = L + ^ is represented by \u004c + \u032d

The lexical comparison of the two characters above will return false. In order to do the correct comparison the characters need to be normalized, that is, reduced to the same character composition.

When the character encoding for filtering of IDL strings is UTF-8, the Unicode normalization behavior can be controlled using a DomainParticipant property called **dds.domain_participant.filtering_unicode_normalization**.

The possible values of the normalization property are:

- **OFF**: Disables normalization
- **NFD**: Canonical Decomposition
- **NFC (default value)**: Canonical Decomposition, followed by Canonical Composition
- **NFK**: Compatibility Decomposition, followed by Canonical Composition
- **NFKC_Casefold**: Casefold followed by NFKC normalization

Because normalization may affect performance, and it is enabled by default, the property allows disabling the normalization process per DomainParticipant using the value OFF. However, you should be aware that doing this may lead to unexpected behavior.

7.37.9 Examples

Assuming Topic "Location" has as an associated type a structure with fields "flight_id, x, y, z", and Topic "FlightPlan" has as fields "flight_id, source, destination". The following are examples of using these expressions.

Example of a **filter_expression** (for **DDSContentFilteredTopic** (p. 1551)) or a **query_expression** (for **DDSQuery↩ Condition** (p. 1841)):

- `"z < 1000 AND x < 23"`

Examples of a **filter_expression** using **MATCH** (for **DDSContentFilteredTopic** (p. 1551)) operator:

- `"symbol MATCH 'NASDAQ/GOOG'"`
- `"symbol MATCH 'NASDAQ/[A-M]*'"`

7.38 Logging and Version

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

Modules

- **Version**

  Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.
- **Logging**

  Configure how much debugging information is reported during runtime and where it is logged.

7.38.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

7.39 General Utilities and Compliance Configuration

API of general utilities used in the RTI Connext distribution.

Modules

- **Compliance Configuration**

  APIs to configure compliance with certain standard specifications.
- **Heap Monitoring**

  Monitor memory allocations done by the middleware on the native heap.
- **Network Capture**

  Save network traffic into a capture file for further analysis.
- **Other Utilities**

  Other Utilities, such as ***NDDSUtility::spin*** *(*p. *2111**).*

7.39.1 Detailed Description

API of general utilities used in the RTI Connext distribution.

7.40 Observability Framework

RTI Connext Observability Framework modules and APIs.

Modules

- **Monitoring Library 2.0**

  RTI Monitoring Library 2.0 public API.

7.40.1 Detailed Description

RTI Connext Observability Framework modules and APIs.

RTI Connext Observability Framework is a holistic solution that uses telemetry data to provide deep visibility into the current and past states of your RTI Connext applications.

7.41 Request-Reply Pattern

Support for the request-reply communication pattern.

Modules

- **Requester**

  connext::Requester *(p. 2157) and associated elements*
- **Replier**

  connext::Replier *(p. 2139),* ***connext::SimpleReplier*** *(p. 2206) and associated elements*

7.41.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- **connext::Requester** (p. 2157)
- **connext::Replier** (p. 2139) (and a simpler version **connext::SimpleReplier** (p. 2206))

This functionality is built on top of RTI Connext.

A Requester publishes a request topic and subscribes to a reply topic. A Replier subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

Internal RTI Connext errors are reported as **exceptions** (p. 39).

To use request-reply in your application, include the following header file:

```
"ndds/ndds_requestreply_cpp.h"
```

See also

Request-Reply Examples (p. 419).

7.42 Requester

connext::Requester (p. 2157) and associated elements

Classes

- class **connext::Requester< TReq, TRep >**
  Allows sending requests and receiving replies.
- class **connext::RequesterParams**
  *Contains the parameters for creating a **connext::Requester*** (p. *2157*).

7.42.1 Detailed Description

connext::Requester (p. 2157) and associated elements

7.43 Replier

connext::Replier (p. 2139), **connext::SimpleReplier** (p. 2206) and associated elements

Classes

- class **connext::Replier< TReq, TRep >**
  Allows receiving requests and sending replies.
- class **connext::SimpleReplierListener< TReq, TRep >**
  *The listener called by a **SimpleReplier*** (p. *2206*).
- class **connext::ReplierListener< TReq, TRep >**
  *Called when a **connext::Replier*** (p. *2139*) *has new available requests.*
- class **connext::ReplierParams< TReq, TRep >**
  *Contains the parameters for creating a **connext::Replier*** (p. *2139*).
- class **connext::SimpleReplierParams< TReq, TRep >**
  *Contains the parameters for creating a **connext::SimpleReplier*** (p. *2206*).
- class **connext::SimpleReplier< TReq, TRep >**
  A callback-based replier.

7.43.1 Detailed Description

connext::Replier (p. 2139), **connext::SimpleReplier** (p. 2206) and associated elements

7.44 Infrastructure

Infrastructure types for Request-Reply.

Modules

- **RTI Connext Exceptions**

  RTI Connext return-code exceptions.

Classes

- class **connext::Sample**< **T** >

  A data sample and related info received from the middleware.
- class **connext::SampleRef**< **T** >

  A data sample and related information received from the middleware.
- class **connext::WriteSample**< **T** >

  A sample for writing data.
- class **connext::WriteSampleRef**< **T** >

  A reference to a data sample for writing.
- class **connext::IsValidSamplePredicate**< **T** >

  Predicate-class to determine if a sample contains valid data.
- class **connext::IsInvalidSamplePredicate**< **T** >

  Predicate-class to determine if a sample contains invalid data.
- class **connext::IsReplyRelatedPredicate**< **T** >

  Predicate-class to match replies by their related request.
- class **connext::SampleIterator**< **T, IsConst** >

  STL-compliant random-access iterator for SampleRef<T>
- class **connext::LoanedSamples**< **T** >

  Provides access to a collection of middleware-loaned samples.

Functions

- template<typename T , bool IsConst>
  ValidSampleIterator< T, IsConst > **connext::make_valid_sample_iterator** (**SampleIterator**< T, IsConst > related_iterator)

  Creates an iterator that only returns valid samples.
- template<typename T >
  LoanedSamples< T > **connext::move** (**LoanedSamples**< T > &ls) throw ()

  *Creates a new **LoanedSamples** (p. 1995) instance by moving the contents of an existing one.*

7.44.1 Detailed Description

Infrastructure types for Request-Reply.

This section describes the sample types used for reading and writing. These types encapsulate data and related information:

- **connext::Sample** (p. 2183) (used for reading)
- **connext::WriteSample** (p. 2219) (used for writing)

Sample and WriteSample are value types. They own the data and the related information and their constructor and destructor initializes and releases the data types.

There are two parallel versions that behave as reference types and hold references to existing data and information instances:

- **connext::SampleRef** (p. 2191)
- **connext::WriteSampleRef** (p. 2223)

There are different operations that provide loaned samples from the middleware. They return a **connext::LoanedSamples** (p. 1995). This container provides STL-compliant iterators.

Other convenience functions and types, useful in combination with STL algorithms are:

- **connext::make_valid_sample_iterator()** (p. 194)
- **connext::IsValidSamplePredicate** (p. 1995)
- **connext::IsReplyRelatedPredicate** (p. 1993)

7.44.2 Function Documentation

7.44.2.1 make_valid_sample_iterator()

```
template<typename T , bool IsConst>
ValidSampleIterator< T, IsConst > connext::make_valid_sample_iterator (
              SampleIterator< T, IsConst > related_iterator )
```

Creates an iterator that only returns valid samples.

This operation returns an iterator adapter that behaves as the associated **connext::SampleIterator** (p. 2191) expect that it skips samples where **SampleRef::info()** (p. 2195).valid_data is false

Parameters

related_iterator	A regular **SampleIterator** (p. 2191) (e.g. **connext::LoanedSamples::begin** (p. 2003)) that serves as the start point.

Returns

An iterator pointing to the first valid sample on or after related_iterator or the end of the associated **connext::LoanedSamples** (p. 1995) if there are no valid samples.

See also

connext::LoanedSamples::begin (p. 2003)

Taking samples by copy (p. 422)

7.44.2.2 move()

```
template<typename T >
LoanedSamples< T > connext::move (
              LoanedSamples< T > & ls ) throw ( )
```

Creates a new **LoanedSamples** (p. 1995) instance by moving the contents of an existing one.

```
The parameter object looses the ownership of the underlying samples and its state
is reset as if it was default initialized. This function must be used to move
any named LoanedSamples instance (lvalue) in and out of a function by-value.
Using this function is not necessary if the original LoanedSamples is an rvalue.
Moving is a very efficient operation and is guaranteed to not throw any exception.
```

Parameters

ls	The **LoanedSamples** (p. 1995) object that transfers its ownership of the contained samples into the returned object. After this call, `ls` is empty.

Returns

A new **LoanedSamples** (p. 1995) object, the new loan owner, with the same contents as `ls` had.

connext::LoanedSamples (p. 1995)

7.45 Utilities

Utilities for the RTI Connext Messaging module.

Classes

- class **connext::MessagingLibraryVersion**

  The Connext Messaging Library version.
- class **connext::MessagingVersion**

  The Connext Messaging version.

7.45.1 Detailed Description

Utilities for the RTI Connext Messaging module.

Connext Messaging Utilities

7.46 Durability and Persistence

APIs related to RTI Connext Durability and Persistence.

APIs related to RTI Connext Durability and Persistence.

RTI Connext offers the following mechanisms for achieving durability and persistence:

- **Durable Writer History** (p. 196)
- **Durable Reader State** (p. 197)
- **Data Durability** (p. 197)

To use the first two features, you need a relational database, which is not included with RTI Connext. Supported databases are listed in the `Release Notes`.

The third feature, provided by RTI Persistence Service, can use the filesystem or a relational database to persist information.

These three features can be used separately or in combination.

7.46.1 Durable Writer History

This feature allows a **DDSDataWriter** (p. 1589) to locally persist its local history cache so that it can survive shutdowns, crashes and restarts. When an application restarts, each **DDSDataWriter** (p. 1589) that has been configured to have durable writer history automatically loads all the data in its history cache from disk and can carry on sending data as if it had never stopped executing. To the rest of the system, it will appear as if the **DDSDataWriter** (p. 1589) had been temporarily disconnected from the network and then reappeared.

See also

Configuring Durable Writer History (p. 198)

7.46.2 Durable Reader State

This feature allows a **DDSDataReader** (p. 1556) to locally persists its state and remember the sequence numbers it has already received. When an application restarts, each **DDSDataReader** (p. 1556) that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the **DDSDataReader** (p. 1556) before the restart will will not be provided to the application again.

See also

Configuring Durable Reader State (p. 200)

7.46.3 Data Durability

This feature is a full implementation of the OMG DDS Persistence Profile. The **DURABILITY** (p. 596) QoS lets an application configure a **DDSDataWriter** (p. 1589) such that the information written by the **DDSDataWriter** (p. 1589) survives beyond the lifetime of the **DDSDataWriter** (p. 1589). In this manner, a late-joining **DDSDataReader** (p. 1556) can subscribe and receive the information even after the **DDSDataWriter** (p. 1589) application is no longer executing. To use this feature, you need RTI Persistence Service – an optional product that can be purchased separately.

7.46.4 Durability and Persistence Based on Virtual GUID

Every modification to the global dataspace made by a **DDSDataWriter** (p. 1589) is identified by a pair (virtual GUID, sequence number).

- The virtual GUID (Global Unique Identifier) is a 16-byte character identifier associated with a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556); it is used to uniquely identify this entity in the global data space.
- The sequence number is a 64-bit identifier that identifies changes published by a specific **DDSDataWriter** (p. 1589).

Several **DDSDataWriter** (p. 1589) entities can be configured with the same virtual GUID. If each of these **DDSDataWriter** (p. 1589) entities publishes a sample with sequence number '0', the sample will only be received once by the **DDSDataReader** (p. 1556) entities subscribing to the content published by the **DDSDataWriter** (p. 1589) entities.

RTI Connext also uses the virtual GUID (Global Unique Identifier) to associate a persisted state (state in permanent storage) to the corresponding DDS entity.

For example, the history of a **DDSDataWriter** (p. 1589) will be persisted in a database table with a name generated from the virtual GUID of the **DDSDataWriter** (p. 1589). If the **DDSDataWriter** (p. 1589) is restarted, it must have associated the same virtual GUID to restore its previous history.

Likewise, the state of a **DDSDataReader** (p. 1556) will be persisted in a database table whose name is generated from the **DDSDataReader** (p. 1556) virtual GUID

A **DDSDataWriter** (p. 1589)'s virtual GUID can be configured using **DDS_DataWriterProtocolQosPolicy::virtual_guid** (p. 893). Similarly, a **DDSDataReader** (p. 1556)'s virtual GUID can be configured using **DDS_DataReaderProtocolQosPolicy::virtual_guid** (p. 844).

The **DDS_PublicationBuiltinTopicData** (p. 1264) and **DDS_SubscriptionBuiltinTopicData** (p. 1370) structures include the virtual GUID associated with the discovered publication or subscription.

Refer to the `User's Manual` for additional use cases.

See also

DDS_DataWriterProtocolQosPolicy::virtual_guid (p. 893) **DDS_DataReaderProtocolQosPolicy::virtual_guid** (p. 844).

7.46.5 Configuring Durable Writer History

To configure a **DDSDataWriter** (p. 1589) to have durable writer history, use the **PROPERTY** (p. 617) QoS policy associated with the **DDSDataWriter** (p. 1589) or the **DDSDomainParticipant** (p. 1619).

Properties defined for the **DDSDomainParticipant** (p. 1619) will be applied to all the **DDSDataWriter** (p. 1589) objects belonging to the **DDSDomainParticipant** (p. 1619), unless the property is overwritten by the **DDSDataWriter** (p. 1589).

See also

DDS_PropertyQosPolicy (p. 1260)

The following table lists the supported durable writer history properties.

Table 7.80 ***Durable Writer History Properties***

Property	Description
dds.data_writer.history.plugin_name	Must be set to "dds.data_writer.history.odbc_plugin.builtin" to enable durable writer history in the DataWriter. This property is required.
dds.data_writer.history.odbc_plugin.builtin.dsn	The ODBC DSN (Data Source Name) associated with the database where the writer history must be persisted. This property is required.
dds.data_writer.history.odbc_plugin.builtin.driver	This property tells RTI Connext which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library: UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems.
dds.data_writer.history.odbc_plugin.builtin.username	Configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.password	Configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.shared	If set to 1, RTI Connext creates a single connection per DSN that will be shared across DataWriters within the same Publisher. If set to 0 (the default), a **DDSDataWriter** (p. 1589) will create its own database connection. Default: 0

Property	Description
dds.data_writer.history.odbc_plugin.builtin.instance_↩ cache_max_size	These properties configure the resource limits associated with the ODBC writer history caches. To minimize the number of accesses to the database, RTI Connext uses two caches, one for samples and one for instances. The initial and maximum sizes of these caches are configured using these properties. The resource limits initial_instances, max_↩ instances, initial_samples, max_samples and max_↩ samples_per_instance in the **DDS_ResourceLimits**↩ **QosPolicy** (p. 1308) are used to configure the maximum number of samples and instances that can be stored in the relational database. Default: **DDS_Resource**↩ **LimitsQosPolicy::max_instances** (p. 1311)
dds.data_writer.history.odbc_plugin.builtin.instance_↩ cache_init_size	See description above. Default: **DDS_Resource**↩ **LimitsQosPolicy::initial_instances** (p. 1312)
dds.data_writer.history.odbc_plugin.builtin.sample_↩ cache_max_size	See description above. Default: 32 (the minimum)
dds.data_writer.history.odbc_plugin.builtin.sample_↩ cache_init_size	See description above. Default: 32
dds.data_writer.history.odbc_plugin.builtin.restore	This property indicates whether or not the persisted writer history must be restored once the **DDSDataWriter** (p. 1589) is restarted. If the value is 0, the content of the database associated with the **DDSDataWriter** (p. 1589) being restarted will be deleted. If the value is 1, the **DDSDataWriter** (p. 1589) will restore its previous state from the database content. Default: 1
dds.data_writer.history.odbc_plugin.builtin.in_memory↩ _state	This property determines how much state will be kept in memory by the ODBC writer history in order to avoid accessing the database. When in_memory_state is equal to 1, instance_↩ cache_max_size is always equal to **DDS_Resource**↩ **LimitsQosPolicy::max_instances** (p. 1311) (it cannot be changed). In addition, the ODBC writer history will keep in memory a fixed state overhead of 24 bytes per sample. In this operating mode, the ODBC writer history provides the best performance. However, the restore operation will be slower and the maximum number of samples that the writer history can manage will be limited by the available physical memory. If in_memory_state is equal to 0, all the state will be kept in the underlying database. In this operating mode, the maximum number of samples in the writer history will not be limited by the physical memory available unless the underlying database is an in-memory database (Times↩ Ten). Default: 1

7.46.6 Configuring Durable Reader State

To configure a **DDSDataReader** (p. 1556) with durable reader state, use the **PROPERTY** (p. 617) QoS policy associated with the **DDSDataReader** (p. 1556) or **DDSDomainParticipant** (p. 1619).

A property defined in the **DDSDomainParticipant** (p. 1619) will be applicable to all the **DDSDataReader** (p. 1556) belonging to the **DDSDomainParticipant** (p. 1619) unless it is overwritten by the **DDSDataReader** (p. 1556).

See also

DDS_PropertyQosPolicy (p. 1260)

The following table lists the supported durable reader state properties.

Table 7.81 ***Durable Reader State Properties***

Property	Description
dds.data_reader.state.odbc.dsn	The ODBC DSN (Data Source Name) associated with the database where the **DDSDataReader** (p. 1556) state must be persisted. This property is required.
dds.data_reader.state.filter_redundant_samples	To enable durable reader state, this property must be set to 1. Otherwise, the reader state will not be kept and/or persisted. When the reader state is not maintained, RTI Connext does not filter duplicate samples that may be coming from the same virtual writer. By default, this property is set to 1.
dds.data_reader.state.odbc.driver	This property is used to indicate which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library↩ : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems).
dds.data_reader.state.odbc.username	This property configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.odbc.password	This property configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.restore	This property indicates if the persisted **DDSData**↩ **Reader** (p. 1556) state must be restored or not once the **DDSDataReader** (p. 1556) is restarted. If this property is 0, the previous state will be deleted from the database. If it is 1, the **DDSDataReader** (p. 1556) will restore its previous state from the database content. Default: 1
dds.data_reader.state.checkpoint_frequency	This property controls how often the reader state is stored in the database. A value of N means to store the state once every N samples. A high value will provide better performance. However, if the reader is restarted it may receive some duplicate samples. These samples will be filtered by the middleware and they will not be propagated to the application. Default: 1

Property	Description
dds.data_reader.state.persistence_service.request_↩ depth	This property indicates the number of most recent historical samples that the persisted **DDSDataReader** (p. 1556) wants to receive when it starts up. Default: 0

7.46.7 Configuring Data Durability

RTI Connext implements **DDS_TRANSIENT_DURABILITY_QOS** (p. 599) and **DDS_PERSISTENT_DURABILITY_↩ QOS** (p. 599) durability using RTI Persistence Service, available for purchase as a separate RTI product.

For more information on RTI Persistence Service, refer to the `User's Manual`, or the RTI Persistence Service API Reference HTML documentation.

DURABILITY (p. 596)

7.47 Basic QoS

QoS that are considered basic and fundamental to RTI Connext.

QoS that are considered basic and fundamental to RTI Connext.

This page lists all QoS that are considered Basic. Basic QoS are applicable to many different use cases, are widely applicable to almost any customer, and should be relatively easy to understand and set.

These are QoS policies and fields that you should be aware of even if you are not setting them today. These QoS are fundamental to DDS and to RTI Connext, and showcase RTI Connext capabilities and features.

All other Qos are applicable to a smaller subset of use cases and customers, or are finer-grained controls for a Basic QoS.

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Structure that contains the compression settings.
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The strength value used to arbitrate among multiple writers.
DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.
DDS_LivelinessQosPolicy (p. 1180)	**assertions_per_lease_duration** (p. 1183)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of assertions a **DDSDataWriter** (p. 1589) will send during a its **DDS_LivelinessQosPolicy::lease_duration** (p. 1182).
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the desired kind of destination order.

DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604)
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_samples** (p. 1312)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) will manage.
DDS_EntityFactoryQosPolicy (p. 1145)	**autoenable_created_entities** (p. 1147)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Maximum duration for the data's validity.
DDS_PublishModeQosPolicy (p. 1279)	**kind** (p. 1281)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Publishing mode
DDS_WireProtocolQosPolicy (p. 1511)	**participant_id** (p. 1514)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_TransportBuiltinQosPolicy (p. 1408)	**mask** (p. 1408)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.
DDS_TransportMulticastQosPolicy (p. 1415)	**value** (p. 1416)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_assert_period** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_announcement_period** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 934)	**initial_participant_announcements** (p. 939)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**new_remote_participant_announcements** (p. 939)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of participant announcements sent when a remote participant is newly discovered.

DDS_DiscoveryConfigQosPolicy (p. 934)	**min_initial_participant_announcement_period** (p. 940)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_initial_participant_announcement_period** (p. 940)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeat_period** (p. 1323)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**fast_heartbeat_period** (p. 1323)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**late_joiner_heartbeat_period** (p. 1324)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_send_window_size** (p. 1333)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_send_window_size** (p. 1333)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Maximum size of send window of unacknowledged samples
DDS_PropertyQosPolicy (p. 1260)	**value** (p. 1262)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of properties.
DDS_EntityNameQosPolicy (p. 1147)	**name** (p. 1148)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The name of the entity.
DDS_BatchQosPolicy (p. 810)	**enable** (p. 810)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies whether or not batching is enabled.

DDS_BatchQosPolicy (p. 810)	**max_data_bytes** (p. 811)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_samples** (p. 811)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum number of samples in a batch.
DDS_ProfileQosPolicy (p. 1257)	**string_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1257)	**url_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **URL groups** (p. 392) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1257)	**ignore_user_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
DDS_ProfileQosPolicy (p. 1257)	**ignore_environment_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 392).
DDS_ProfileQosPolicy (p. 1257)	**ignore_resource_profile** (p. 1259)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_LoggingQosPolicy (p. 1188)	**verbosity** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1188)	**category** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1188)	**output_file** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1188)	**output_file_suffix** (p. 1190)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sets the file suffix when logging to a set of files
DDS_MonitoringEventDistributionSettings (p. 1197)	**publication_period** (p. 1200)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**polling_period** (p. 1210)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**enable** (p. 1193)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings::dedicated_participant** (p. 1196).
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**middleware_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**service_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SERVICE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**user_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ USER** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1213)	**metrics** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **DDS_MonitoringMetricSelection** (p. 1206) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1213)	**logs** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* **DDS_MonitoringLoggingForwardingSettings** (p. 1204) containing the **NDDS_Config_Syslog↩ Verbosity** (p. 727) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 727).
DDS_MonitoringQosPolicy (p. 1210)	**enable** (p. 1211)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1210)	**application_name** (p. 1211)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The name of the resource that represents this RTI Connext application.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**publication_period** (p. 1405)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sets the periodic interval at which samples are published.

7.48 DDS Specification QoS

QoS that are defined in one of the OMG DDS Specifications.

QoS that are defined in one of the OMG DDS Specifications.

This page lists the QoS that are included in an OMG DDS specification. The standards are listed here: https://www.omg.org/spec/category/omg-data-distribution-service/.

DDS_UserDataQosPolicy (p. 1504)	**value** (p. 1505)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1160)	**value** (p. 1161)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The kind of durability.
DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.

DDS_DataRepresentationQosPolicy (p. 886)	**value** (p. 888)
	<<***spec***>> *(p. 209)* Sequence of representation identifiers.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Duration of the deadline period.
DDS_LatencyBudgetQosPolicy (p. 1173)	**duration** (p. 1175)
	<<***spec***>> *(p. 209)* Duration of the maximum acceptable delay.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The strength value used to arbitrate among multiple writers.
DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)

	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Specifies the desired kind of destination order.
DDS_DestinationOrderQosPolicy (p. 931)	**scope** (p. 933)
	*<<**spec**>>* (p. *209)* Specifies the desired scope of the source destination order.
DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604)
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	*<<**spec**>>* (p. *209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_EntityFactoryQosPolicy (p. 1145)	**autoenable_created_entities** (p. 1147)
	*<<**basic**>>* (p. *201)* *<<**spec**>>* (p. *209)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
DDS_TransportPriorityQosPolicy (p. 1419)	**value** (p. 1421)

	<<***spec***>> *(p. 209)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Maximum duration for the data's validity.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autodispose_unregistered_instances** (p. 1525)
	<<***spec***>> *(p. 209)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDSDataWriter** (p. 1589) unregisters from the instance by means of the unregister operations.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 166).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**kind** (p. 1494)
	<<***spec***>> *(p. 209)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_sequence_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether sequence bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_string_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_member_names** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**prevent_type_widening** (p. 1496)

	<<***spec***>> *(p. 209)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**force_type_validation** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1589) and a **DDSData↩Reader** (p. 1556).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_enum_literal_names** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether enumeration constant names are taken into consideration for type assignability.
DDS_DataTags (p. 889)	**tags** (p. 889)
	<<***spec***>> *(p. 209)* Sequence of data tags.

7.49 DDS Extension QoS

QoS that are RTI extensions to the DDS standard.

QoS that are RTI extensions to the DDS standard.

This page lists all of the QoS that are RTI extensions of the DDS Standard. The extension QoS complement the standard QoS specified by the OMG DDS specifications. They are provided to improve product usability and enable access to product-specific features.

DDS_AvailabilityQosPolicy (p. 805)	**enable_required_subscriptions** (p. 808)
	<<***extension***>> *(p. 213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)
DDS_AvailabilityQosPolicy (p. 805)	**max_data_availability_waiting_time** (p. 808)
	<<***extension***>> *(p. 213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 805)	**max_endpoint_availability_waiting_time** (p. 808)
	<<***extension***>> *(p. 213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 805)	**required_matched_endpoint_groups** (p. 809)
	<<***extension***>> *(p. 213)* A sequence of endpoint groups.

DDS_DurabilityQosPolicy (p. 1005)	**direct_communication** (p. 1007)
	<<***extension***>> *(p. 213)* Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1556) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1589)
DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_DurabilityQosPolicy (p. 1005)	**storage_settings** (p. 1008)
	<<***extension***>> *(p. 213)* Configures durable writer history and durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**enable** (p. 1244)
	<<***extension***>> *(p. 213)* Enables durable writer history in a **DDSDataWriter** (p. 1589) and durable reader state in a **DDSDataReader** (p. 1556).
DDS_PersistentStorageSettings (p. 1242)	**file_name** (p. 1244)
	<<***extension***>> *(p. 213)* The file name where the durable writer history or durable reader state will be stored.
DDS_PersistentStorageSettings (p. 1242)	**trace_file_name** (p. 1244)
	<<***extension***>> *(p. 213)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**journal_kind** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the journal mode of the persistent storage.
DDS_PersistentStorageSettings (p. 1242)	**synchronization_kind** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the level of synchronization with the physical disk.
DDS_PersistentStorageSettings (p. 1242)	**vacuum** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the auto-vacuum status of the storage.
DDS_PersistentStorageSettings (p. 1242)	**restore** (p. 1246)
	<<***extension***>> *(p. 213)* Indicates if the persisted writer history or reader state must be restored.
DDS_PersistentStorageSettings (p. 1242)	**writer_instance_cache_allocation** (p. 1246)

	<<***extension***>> *(p. 213)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_sample_cache_allocation** (p. 1247)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the sample durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_memory_state** (p. 1248)
	<<***extension***>> *(p. 213)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_PersistentStorageSettings (p. 1242)	**reader_checkpoint_frequency** (p. 1248)
	<<***extension***>> *(p. 213)* Controls how often the reader state is stored into the database.
DDS_CompressionSettings_t (p. 826)	**compression_ids** (p. 826)
	<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.
DDS_CompressionSettings_t (p. 826)	**writer_compression_level** (p. 827)
	<<***extension***>> *(p. 213)* The level of compression to use when compressing data.
DDS_CompressionSettings_t (p. 826)	**writer_compression_threshold** (p. 827)
	<<***extension***>> *(p. 213)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Structure that contains the compression settings.
DDS_PresentationQosPolicy (p. 1249)	**drop_incomplete_coherent_set** (p. 1253)
	<<***extension***>> *(p. 213)* Indicates whether or not a **DDSDataReader** (p. 1556) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_LivelinessQosPolicy (p. 1180)	**assertions_per_lease_duration** (p. 1183)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The number of assertions a **DDSDataWriter** (p. 1589) will send during a its **DDS_LivelinessQosPolicy::lease_duration** (p. 1182).
DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(p. 213)* Kind of reliable acknowledgment

DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)
	<<***extension***>> *(p. 213)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1295)	**exact_reliability_kind_match** (p. 1299)
	<<***extension***>> *(p. 213)* Whether an exact reliability kind match is required for endpoint matching.
DDS_DestinationOrderQosPolicy (p. 931)	**source_timestamp_tolerance** (p. 933)
	<<***extension***>> *(p. 213)* Allowed tolerance between source timestamps of consecutive samples.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_samples** (p. 1312)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) will manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**instance_hash_buckets** (p. 1313)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Number of hash buckets for instances.
DDS_TypeSupportQosPolicy (p. 1499)	**plugin_data** (p. 1500)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Value to pass into the type plugin's de-/serialization function
DDS_TypeSupportQosPolicy (p. 1499)	**cdr_padding_kind** (p. 1500)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_PublishModeQosPolicy (p. 1279)	**kind** (p. 1281)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Publishing mode
DDS_PublishModeQosPolicy (p. 1279)	**flow_controller_name** (p. 1281)
	<<***extension***>> *(p. 213)* Name of the associated flow controller
DDS_PublishModeQosPolicy (p. 1279)	**priority** (p. 1282)
	<<***extension***>> *(p. 213)* Publication priority
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_write** (p. 800)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**thread** (p. 800)
	<<***extension***>> *(p. 213)* Settings of the publishing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_batch** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**asynchronous_batch_thread** (p. 801)
	<<***extension***>> *(p. 213)* Settings of the batch flushing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_topic_query_publication** (p. 801)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**topic_query_publication_thread** (p. 802)
	<<***extension***>> *(p. 213)* Settings of the **DDSTopic↩ Query** (p. 1895) publication thread.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_unregistered_instances_delay** (p. 1525)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_disposed_instances_delay** (p. 1526)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_instances_delay** (p. 1291)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_instances_delay** (p. 1292)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_↩ state` becomes **DDS_NOT_ALIVE_NO_WRITERS↩ _INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_WireProtocolQosPolicy (p. 1511)	**participant_id** (p. 1514)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_host_id** (p. 1515)
	*<<**extension**>> (p. 213)* The RTPS Host ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_app_id** (p. 1516)
	*<<**extension**>> (p. 213)* The RTPS App ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_instance_id** (p. 1516)
	*<<**extension**>> (p. 213)* The RTPS Instance ID of the **DDSDomainParticipant** (p. 1619).
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_well_known_ports** (p. 1517)
	*<<**extension**>> (p. 213)* Configures the RTPS well-known port mappings.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_reserved_port_mask** (p. 1517)
	*<<**extension**>> (p. 213)* Specifies which well-known ports to reserve when enabling the participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_auto_id_kind** (p. 1518)
	*<<**extension**>> (p. 213)* Kind of auto mechanism used to calculate the GUID prefix.
DDS_WireProtocolQosPolicy (p. 1511)	**compute_crc** (p. 1518)
	*<<**extension**>> (p. 213)* Adds RTPS CRC submessage to every message when this field is set to **DDS_↩ BOOLEAN_TRUE** (p. 513).
DDS_WireProtocolQosPolicy (p. 1511)	**check_crc** (p. 1518)
	*<<**extension**>> (p. 213)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS_BOOLEAN_TRUE** (p. 513).
DDS_TransportSelectionQosPolicy (p. 1421)	**enabled_transports** (p. 1422)
	*<<**extension**>> (p. 213)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
DDS_TransportBuiltinQosPolicy (p. 1408)	**mask** (p. 1408)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.

DDS_TransportUnicastQosPolicy (p. 1422)	**value** (p. 1424)
	<<***extension***>> *(p. 213)* A sequence of unicast communication settings.
DDS_TransportMulticastMappingQosPolicy (p. 1413)	**value** (p. 1415)
	<<***extension***>> *(p. 213)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 1415)	**value** (p. 1416)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* A sequence of multicast communications settings.
DDS_TransportMulticastQosPolicy (p. 1415)	**kind** (p. 1416)
	<<***extension***>> *(p. 213)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DiscoveryQosPolicy (p. 960)	**enabled_transports** (p. 961)
	<<***extension***>> *(p. 213)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
DDS_DiscoveryQosPolicy (p. 960)	**metatraffic_transport_priority** (p. 963)
	<<***extension***>> *(p. 213)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] **(p. 384)** <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_instance** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_remote_writer** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of out-of-order samples from a given remote **DDSDataWriter** (p. 1589) that a **DDSDataReader** (p. 1556) may store when maintaining a reliable connection to the **DDSDataWriter** (p. 1589).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_infos** (p. 871)
	<<***extension***>> *(p. 213)* The maximum number of info units that a **DDSDataReader** (p. 1556) can use to store **DDS_SampleInfo** (p. 1344).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers** (p. 871)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers_per_instance** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_infos** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of info units that a **DDSDataReader** (p. 1556) can have, which are used to store **DDS_SampleInfo** (p. 1344).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_outstanding_reads** (p. 873)
	<<***extension***>> *(p. 213)* The initial number of outstanding calls to read/take (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_outstanding_reads** (p. 873)
	<<***extension***>> *(p. 213)* The maximum number of outstanding read/take calls (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_read** (p. 873)

	<<***extension***>> *(*p. *213)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader::read** (p. 1919) or **FooDataReader::take** (p. 1920). If more data exists in the middleware, the application will need to issue multiple read/take calls.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**disable_fragmentation_support** (p. 874)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(*p. *213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(*p. *213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(*p. *213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(*p. *213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)
	<<***extension***>> *(*p. *213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_total_instances** (p. 877)
	<<***extension***>> *(*p. *213)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers** (p. 878)
	<<***extension***>> *(*p. *213)* The maximum number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers** (p. 878)
	<<***extension***>> *(*p. *213)* The initial number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The maximum number of virtual remote writers that can be associated with an instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The initial number of virtual remote writers per instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_sample** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of remote writers allowed to write the same sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_query_condition_filters** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of query condition filters a reader is allowed.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_app_ack_response_length** (p. 881)
	<<***extension***>> *(p. 213)* Maximum length of application-level acknowledgment response data
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**keep_minimum_state_for_instances** (p. 881)
	<<***extension***>> *(p. 213)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 877).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The initial number of Topic↩ Queries allocated by a **DDSDataReader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The maximum number of active TopicQueries that a **DDSDataReader** (p. 1556) can create.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 883)
	<<***extension***>> *(p. 213)* Allocation resource for the shared memory segments attached by the **DDSData↩ Reader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**instance_replacement** (p. 883)
	<<***extension***>> *(p. 213)* Sets the kind of instances allowed to be replaced for each instance state (**DDS↩ _InstanceStateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_↩ instances** (p. 1311).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**autopurge_remote_not_alive_writer_delay** (p. 884)

	<<***extension***>> *(*p. *213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**lazily_allocate_batch_resources** (p. 885)
	<<***extension***>> *(*p. *213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_reader_filters** (p. 920)
	<<***extension***>> *(*p. *213)* The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1589) will perform content-based filtering.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_batches** (p. 920)
	<<***extension***>> *(*p. *213)* Represents the initial number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_batches** (p. 921)
	<<***extension***>> *(*p. *213)* Represents the maximum number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**instance_replacement** (p. 921)
	<<***extension***>> *(*p. *213)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**replace_empty_instances** (p. 922)
	<<***extension***>> *(*p. *213)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**autoregister_instances** (p. 922)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Whether or not to automatically register new instances

DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The initial number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_remote_readers** (p. 926)
	<<***extension***>> *(p. 213)* Controls the initial memory allocation for the matched remote readers of a **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_readers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_app_ack_remote_readers** (p. 924)
	<<***extension***>> *(p. 213)* The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the initial number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**writer_loaned_sample_allocation** (p. 925)
	<<***extension***>> *(p. 213)* Represents the allocation settings of loaned samples managed by a **DDSData↩ Writer** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initialize_writer_loaned_sample** (p. 925)
	<<***extension***>> *(p. 213)* Whether or not to initialize loaned samples returned by a **DDSDataWriter** (p. 1589)
DDS_DataWriterTransferModeQosPolicy (p. 927)	**shmem_ref_settings** (p. 928)
	<<***extension***>> *(p. 213)* Settings related to transferring data using shared memory references.
DDS_DataReaderProtocolQosPolicy (p. 843)	**virtual_guid** (p. 844)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataReaderProtocolQosPolicy (p. 843)	**rtps_object_id** (p. 844)

	<<***extension***>> *(p. 213)* The RTPS Object ID.
DDS_DataReaderProtocolQosPolicy (p. 843)	**rtps_reliable_reader** (p. 846)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1556). This parameter only has effect if the reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_↩ ReliabilityQosPolicyKind** (p. 632).
DDS_DataReaderProtocolQosPolicy (p. 843)	**expects_inline_qos** (p. 844)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Specifies whether this DataReader expects inline QoS with every sample.
DDS_DataReaderProtocolQosPolicy (p. 843)	**disable_positive_acks** (p. 845)
	<<***extension***>> *(p. 213)* Whether the reader sends positive acknowledgements to writers.
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_dispose_of_unregistered_instances** (p. 845)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 166) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 166) state.
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_unregister_of_disposed_instances** (p. 846)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO↩ _WRITERS_INSTANCE_STATE** (p. 166) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166).
DDS_DataWriterProtocolQosPolicy (p. 892)	**virtual_guid** (p. 893)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataWriterProtocolQosPolicy (p. 892)	**rtps_object_id** (p. 893)
	<<***extension***>> *(p. 213)* The RTPS Object ID.
DDS_DataWriterProtocolQosPolicy (p. 892)	**push_on_write** (p. 894)
	<<***extension***>> *(p. 213)* Whether to push sample out when write is called.
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_positive_acks** (p. 894)
	<<***extension***>> *(p. 213)* Controls whether or not the writer expects positive acknowledgements from matching readers.

DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_inline_keyhash** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not a keyhash is propagated on the wire with each sample.
DDS_DataWriterProtocolQosPolicy (p. 892)	**serialize_key_with_dispose** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
DDS_DataWriterProtocolQosPolicy (p. 892)	**propagate_app_ack_with_no_response** (p. 896)
	<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriter↩ Listener::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.
DDS_DataWriterProtocolQosPolicy (p. 892)	**rtps_reliable_writer** (p. 896)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1589). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_↩ QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).
DDS_DataWriterProtocolQosPolicy (p. 892)	**initial_virtual_sequence_number** (p. 897)
	<<***extension***>> *(p. 213)* Determines, the initial virtual sequence number for this DataWriter.
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**max_objects_per_thread** (p. 1383)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1694).
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**initial_objects_per_thread** (p. 1383)
	<<***extension***>> *(p. 213)* The number of objects per thread for a **DDSDomainParticipantFactory** (p. 1694) for which infrastructure will initially be allocated.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Publisher.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filter.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**read_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to read condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**query_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**outstanding_asynchronous_sample_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to the maximum number of samples (from all **DDSData↩ Writer** (p. 1589)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_allocation** (p. 986)
	<<***extension***>> *(p. 213)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_hash_buckets** (p. 987)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_hash_buckets** (p. 987)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_hash_buckets** (p. 987)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_hash_buckets** (p. 988)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for remote DataWriters.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_gather_destinations** (p. 991)
	<<***extension***>> *(p. 213)* Maximum number of destinations per RTI Connext send.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_user_data_max_length** (p. 991)

	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DomainParticipantQos** (p. 971) and **DDS_↩ ParticipantBuiltinTopicData** (p. 1229)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**topic_data_max_length** (p. 991)
	<<***extension***>> *(p. 213)* Maximum length of topic data in **DDS_TopicQos** (p. 1397), **DDS_TopicBuiltin↩ TopicData** (p. 1391), **DDS_PublicationBuiltinTopic↩ Data** (p. 1264) and **DDS_SubscriptionBuiltinTopic↩ Data** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**publisher_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_PublisherQos** (p. 1276) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**subscriber_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_SubscriberQos** (p. 1367) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_user_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataWriterQos** (p. 909) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_user_data_max_length** (p. 993)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataReaderQos** (p. 858) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partitions** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partition_cumulative_characters** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_code_max_serialized_length** (p. 994)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_serialized_length** (p. 994)
	<<***extension***>> *(p. 213)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_deserialized_length** (p. 996)
	<<***extension***>> *(p. 213)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**deserialized_type_object_dynamic_allocation_threshold** (p. 996)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**serialized_type_object_dynamic_allocation_threshold** (p. 995)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**contentfilter_property_max_length** (p. 997)
	<<***extension***>> *(p. 213)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_seq_max_length** (p. 997)
	<<***extension***>> *(p. 213)* Maximum number of channels that can be specified in **DDS_MultiChannelQosPolicy** (p. 1214) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_filter_expression_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 822) in a MultiChannel DataWriter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_list_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_string_max_length** (p. 998)

	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_string_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_string_max_length** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_groups** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum number of **DDS_EndpointGroup_t** (p. 1142) allowable in a **DDS_AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_group_cumulative_characters** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum number of combined role_name characters allowed in all **DDS_EndpointGroup_t** (p. 1142) in a **DDS_AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**transport_info_list_max_length** (p. 1001)
	<<***extension***>> *(p. 213)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1232).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_replacement_kind** (p. 1001)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_allocation** (p. 984) are reached.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_allocation** (p. 1001)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_hash_buckets** (p. 1002)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_list_max_length** (p. 1002)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_list_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**shmem_ref_transfer_mode_max_segments** (p. 1004)
	<<***extension***>> *(p. 213)* Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1619).
DDS_EventQosPolicy (p. 1150)	**thread** (p. 1151)
	<<***extension***>> *(p. 213)* Event thread QoS.
DDS_EventQosPolicy (p. 1150)	**initial_count** (p. 1151)
	<<***extension***>> *(p. 213)* The initial number of events.
DDS_EventQosPolicy (p. 1150)	**max_count** (p. 1152)
	<<***extension***>> *(p. 213)* The maximum number of events.
DDS_DatabaseQosPolicy (p. 831)	**thread** (p. 832)
	<<***extension***>> *(p. 213)* Database thread settings.

DDS_DatabaseQosPolicy (p. 831)	**shutdown_timeout** (p. 832)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) The maximum wait time during a shutdown.
DDS_DatabaseQosPolicy (p. 831)	**cleanup_period** (p. 833)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) The period at which the database thread wakes up to remove deleted records.
DDS_DatabaseQosPolicy (p. 831)	**shutdown_cleanup_period** (p. 833)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) The clean-up period used during database shut-down.
DDS_DatabaseQosPolicy (p. 831)	**initial_records** (p. 833)
	<<***extension***>> (p. *213*) The initial number of total records.
DDS_DatabaseQosPolicy (p. 831)	**max_skiplist_level** (p. 834)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) The maximum level of the skiplist.
DDS_DatabaseQosPolicy (p. 831)	**initial_weak_references** (p. 835)
	<<***extension***>> (p. *213*) The initial number of weak references.
DDS_DatabaseQosPolicy (p. 831)	**max_weak_references** (p. 834)
	<<***extension***>> (p. *213*) The maximum number of weak references.
DDS_ReceiverPoolQosPolicy (p. 1293)	**thread** (p. 1294)
	<<***extension***>> (p. *213*) Receiver pool thread(s).
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_size** (p. 1294)
	<<***extension***>> (p. *213*) The receive buffer size in bytes.
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_alignment** (p. 1295)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	<<***basic***>> (p. *201*) <<***extension***>> (p. *213*) The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_assert_period** (p. 937)
	<<***basic***>> (p. *201*) <<***extension***>> (p. *213*) The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_announcement_period** (p. 937)

	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 934)	**remote_participant_purge_kind** (p. 938)
	[DEPRECATED] (p. **384)** <<***extension***>> (p. *213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_liveliness_loss_detection_period** (p. 938)
	[DEPRECATED] (p. **384)** <<***extension***>> (p. *213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 934)	**initial_participant_announcements** (p. 939)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**new_remote_participant_announcements** (p. 939)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The number of participant announcements sent when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**min_initial_participant_announcement_period** (p. 940)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_initial_participant_announcement_period** (p. 940)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_reader_resource_limits** (p. 941)
	<<***extension***>> (p. *213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader** (p. 941)
	<<***extension***>> (p. *213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader_resource_limits** (p. 942)
	<<***extension***>> (p. *213)* Resource limits.

DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader** (p. 942)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader_resource_limits** (p. 943)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_writer** (p. 947)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE↩ _RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQos↩ PolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_publish_mode** (p. 948)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_publish_mode** (p. 949)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**asynchronous_publisher** (p. 949)
	<<***extension***>> *(p. 213)* Asynchronous publishing settings for the discovery **DDSPublisher** (p. 1818) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 934)	**default_domain_announcement_period** (p. 949)
	<<***extension***>> *(p. 213)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**ignore_default_domain_announcements** (p. 950)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader** (p. 947)

	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind** (p. 946) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer** (p. 943)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_data_lifecycle** (p. 944)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer** (p. 945)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_data_lifecycle** (p. 945)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**builtin_discovery_plugins** (p. 946)
	<<***extension***>> *(p. 213)* Mask of built-in discovery plugin kinds.
DDS_DiscoveryConfigQosPolicy (p. 934)	**enabled_builtin_channels** (p. 946)
	<<***extension***>> *(p. 213)* The mask specifying which built-in channels should be enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer** (p. 950)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_data_lifecycle** (p. 951)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_publish_mode** (p. 951)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_reader** (p. 952)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 1359) reader.

DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_lease_duration** (p. 953)
	<<***extension***>> *(p. 213)* The time period after which other DomainParticipants can consider one of their locators as "unreachable" if they do not receive a REACHABILITY PING from this DomainParticipant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_assert_period** (p. 952)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_change_detection_period** (p. 953)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer** (p. 954)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer_publish_mode** (p. 955)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_reader** (p. 955)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**endpoint_type_object_lb_serialization_threshold** (p. 956)
	<<***extension***>> *(p. 213)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_DiscoveryConfigQosPolicy (p. 934)	**dns_tracker_polling_period** (p. 956)
	<<***extension***>> *(p. 213)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader** (p. 959)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader_resource_limits** (p. 959)

	<<***extension***>> *(p. 213)* Resource limits for the built-in topic participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_publish_mode** (p. 957)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer** (p. 957)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_data_lifecycle** (p. 958)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**request_types_filter** (p. 959)
	<<***extension***>> *(p. 213)* Topic name pattern for requesting all types via Type Lookup Service.
DDS_RtpsWellKnownPorts_t (p. 1338)	**port_base** (p. 1340)
	<<***extension***>> *(p. 213)* The base port offset.
DDS_RtpsWellKnownPorts_t (p. 1338)	**domain_id_gain** (p. 1341)
	<<***extension***>> *(p. 213)* Tunable domain gain parameter.
DDS_RtpsWellKnownPorts_t (p. 1338)	**participant_id_gain** (p. 1342)
	<<***extension***>> *(p. 213)* Tunable participant gain parameter.
DDS_RtpsWellKnownPorts_t (p. 1338)	**builtin_multicast_port_offset** (p. 1342)
	<<***extension***>> *(p. 213)* Additional offset for **metatraffic** multicast port.
DDS_RtpsWellKnownPorts_t (p. 1338)	**builtin_unicast_port_offset** (p. 1342)
	<<***extension***>> *(p. 213)* Additional offset for **metatraffic** unicast port.
DDS_RtpsWellKnownPorts_t (p. 1338)	**user_multicast_port_offset** (p. 1343)
	<<***extension***>> *(p. 213)* Additional offset for **usertraffic** multicast port.
DDS_RtpsWellKnownPorts_t (p. 1338)	**user_unicast_port_offset** (p. 1343)
	<<***extension***>> *(p. 213)* Additional offset for **usertraffic** unicast port.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_heartbeat_response_delay** (p. 1315)

	<<***extension***>> *(*p. *213)* The minimum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**max_heartbeat_response_delay** (p. 1315)
	<<***extension***>> *(*p. *213)* The maximum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**heartbeat_suppression_duration** (p. 1316)
	<<***extension***>> *(*p. *213)* The duration a reader ignores consecutively received heartbeats
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**nack_period** (p. 1316)
	<<***extension***>> *(*p. *213)* The period at which to send NACKs
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**receive_window_size** (p. 1317)
	<<***extension***>> *(*p. *213)* The number of received out-of-order samples a reader can keep at a time
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**round_trip_time** (p. 1317)
	<<***extension***>> *(*p. *213)* The duration from sending a NACK to receiving a repair of a sample
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**app_ack_period** (p. 1318)
	<<***extension***>> *(*p. *213)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_app_ack_response_keep_duration** (p. 1318)
	<<***extension***>> *(*p. *213)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**samples_per_app_ack** (p. 1319)
	<<***extension***>> *(*p. *213)* The minimum number of samples acknowledged by one application-level acknowledgment message
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**low_watermark** (p. 1321)
	<<***extension***>> *(*p. *213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**high_watermark** (p. 1322)
	<<***extension***>> *(*p. *213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.

DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeat_period** (p. 1323)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**fast_heartbeat_period** (p. 1323)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**late_joiner_heartbeat_period** (p. 1324)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**virtual_heartbeat_period** (p. 1325)
	<<***extension***>> *(p. 213)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**samples_per_virtual_heartbeat** (p. 1325)
	<<***extension***>> *(p. 213)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_heartbeat_retries** (p. 1326)
	<<***extension***>> *(p. 213)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**inactivate_nonprogressing_readers** (p. 1326)
	<<***extension***>> *(p. 213)* Whether to treat remote readers as inactive when their NACKs do not progress
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeats_per_max_samples** (p. 1327)
	<<***extension***>> *(p. 213)* The number of piggyback heartbeats sent per max send window.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**nack_suppression_duration** (p. 1329)

	<<***extension***>> *(p. 213)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_bytes_per_nack_response** (p. 1329)
	<<***extension***>> *(p. 213)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1331)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_min_sample_keep_duration** (p. 1330)
	<<***extension***>> *(p. 213)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_max_sample_keep_duration** (p. 1331)
	<<***extension***>> *(p. 213)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_increase_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Controls rate of growth of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_send_window_size** (p. 1333)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_send_window_size** (p. 1333)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Maximum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_update_period** (p. 1334)
	<<***extension***>> *(p. 213)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_increase_factor** (p. 1335)

	<<***extension***>> *(p. 213)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_decrease_factor** (p. 1336)
	<<***extension***>> *(p. 213)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**enable_multicast_periodic_heartbeat** (p. 1337)
	<<***extension***>> *(p. 213)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**multicast_resend_threshold** (p. 1337)
	<<***extension***>> *(p. 213)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_repair_piggyback_heartbeat** (p. 1338)
	<<***extension***>> *(p. 213)* Prevents piggyback heartbeats from being sent with repair samples
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_samples** (p. 816)
	<<***extension***>> *(p. 213)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples** (p. 816)
	<<***extension***>> *(p. 213)* Maximum number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_infos** (p. 817)
	<<***extension***>> *(p. 213)* Initial number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_infos** (p. 817)
	<<***extension***>> *(p. 213)* Maximum number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_outstanding_reads** (p. 817)
	<<***extension***>> *(p. 213)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_outstanding_reads** (p. 818)
	<<***extension***>> *(p. 213)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples_per_read** (p. 818)
	<<***extension***>> *(p. 213)* Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1556).

DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples** (p. 819)
	<<***extension***>> *(*p. *213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_fragmented_samples** (p. 819)
	<<***extension***>> *(*p. *213)* The initial number of samples for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples_per_remote_writer** (p. 820)
	<<***extension***>> *(*p. *213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragments_per_sample** (p. 820)
	<<***extension***>> *(*p. *213)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**dynamically_allocate_fragmented_samples** (p. 821)
	<<***extension***>> *(*p. *213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_TransportUnicastSettings_t (p. 1424)	**transports** (p. 1425)
	<<***extension***>> *(*p. *213)* A sequence of transport aliases that specifies the unicast interfaces on which to receive *unicast* traffic for the entity.
DDS_TransportUnicastSettings_t (p. 1424)	**receive_port** (p. 1425)
	<<***extension***>> *(*p. *213)* The unicast port on which the entity can receive data.
DDS_TransportMulticastSettings_t (p. 1417)	**transports** (p. 1418)
	<<***extension***>> *(*p. *213)* A sequence of transport aliases that specifies the transports on which to receive *multicast* traffic for the entity.
DDS_TransportMulticastSettings_t (p. 1417)	**receive_address** (p. 1418)
	<<***extension***>> *(*p. *213)* The multicast group address on which the entity can receive data.
DDS_TransportMulticastSettings_t (p. 1417)	**receive_port** (p. 1418)

	<<***extension***>> *(p. 213)* The multicast port on which the entity can receive data.
DDS_TransportMulticastMapping_t (p. 1410)	**addresses** (p. 1411)
	<<***extension***>> *(p. 213)* A string containing a comma-separated list of IP addresses or IP address ranges to be used to receive *multicast* traffic for the entity with a topic that matches the **DDS_TransportMulticastMapping_↩ t::topic_expression** (p. 1411).
DDS_TransportMulticastMapping_t (p. 1410)	**topic_expression** (p. 1411)
	<<***extension***>> *(p. 213)* A regular expression that will be used to map topic names to corresponding multicast receive addresses.
DDS_TransportMulticastMapping_t (p. 1410)	**mapping_function** (p. 1412)
	<<***extension***>> *(p. 213)* Specifies a function that will define the mapping between a topic name and a specific multicast address from a list of addresses.
DDS_PropertyQosPolicy (p. 1260)	**value** (p. 1262)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of properties.
DDS_EntityNameQosPolicy (p. 1147)	**name** (p. 1148)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The name of the entity.
DDS_EntityNameQosPolicy (p. 1147)	**role_name** (p. 1148)
	<<***extension***>> *(p. 213)* The entity role name.
DDS_ServiceQosPolicy (p. 1358)	**kind** (p. 1359)
	<<***extension***>> *(p. 213)* The kind of service.
DDS_BatchQosPolicy (p. 810)	**enable** (p. 810)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 810)	**max_data_bytes** (p. 811)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_samples** (p. 811)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum number of samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_flush_delay** (p. 812)
	<<***extension***>> *(p. 213)* The maximum flush delay.

DDS_BatchQosPolicy (p. 810)	**source_timestamp_resolution** (p. 812)
	<<***extension***>> *(p. 213)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 810)	**thread_safe_write** (p. 813)
	<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.
DDS_ProfileQosPolicy (p. 1257)	**string_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1257)	**url_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of **URL groups** (p. 392) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1257)	**ignore_user_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
DDS_ProfileQosPolicy (p. 1257)	**ignore_environment_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 392).
DDS_ProfileQosPolicy (p. 1257)	**ignore_resource_profile** (p. 1259)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_LoggingQosPolicy (p. 1188)	**verbosity** (p. 1189)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1188)	**category** (p. 1189)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1188)	**print_format** (p. 1189)
	<<***extension***>> *(p. 213)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1188)	**output_file** (p. 1189)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1188)	**output_file_suffix** (p. 1190)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sets the file suffix when logging to a set of files

DDS_LoggingQosPolicy (p. 1188)	**max_bytes_per_file** (p. 1190)
	<<***extension***>> *(p. 213)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1188)	**max_files** (p. 1191)
	<<***extension***>> *(p. 213)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringEventDistributionSettings (p. 1197)	**concurrency_level** (p. 1198)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1197)	**datawriter_qos_profile_name** (p. 1199)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes event metrics.
DDS_MonitoringEventDistributionSettings (p. 1197)	**thread** (p. 1199)
	<<***extension***>> *(p. 213)* The settings of the event metric thread.
DDS_MonitoringEventDistributionSettings (p. 1197)	**publication_period** (p. 1200)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**datawriter_qos_profile_name** (p. 1209)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes periodic metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**thread** (p. 1209)
	<<***extension***>> *(p. 213)* The settings of the periodic metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**polling_period** (p. 1210)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**concurrency_level** (p. 1201)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.

DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**datawriter_qos_profile_name** (p. 1202)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**thread** (p. 1203)
	<<***extension***>> *(p. 213)* The settings of the logging thread.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**enable** (p. 1193)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Enables the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**participant_qos_profile_name** (p. 1194)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDomain↩ Participant** (p. 1619) that will be used to distribute telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings↩ ::dedicated_participant** (p. 1196).
DDS_MonitoringDistributionSettings (p. 1195)	**dedicated_participant** (p. 1196)

	<<***extension***>> *(p. 213)* Configures the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**publisher_qos_profile_name** (p. 1196)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**event_settings** (p. 1196)
	<<***extension***>> *(p. 213)* Configures the distribution of event metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**periodic_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of periodic metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**logging_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of logging messages.
DDS_MonitoringMetricSelection (p. 1206)	**resource_selection** (p. 1206)
	<<***extension***>> *(p. 213)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS_MonitoringMetric↩ Selection::enabled_metrics_selection** (p. 1207) and **DDS_MonitoringMetricSelection::disabled_↩ metrics_selection** (p. 1207) are applied to this subset of resources.
DDS_MonitoringMetricSelection (p. 1206)	**enabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringMetricSelection (p. 1206)	**disabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**middleware_forwarding_level** (p. 1204)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ MIDDLEWARE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**service_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SERVICE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**user_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ USER** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1213)	**metrics** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **DDS_MonitoringMetricSelection** (p. 1206) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1213)	**logs** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* **DDS_MonitoringLoggingForwardingSettings** (p. 1204) containing the **NDDS_Config_Syslog↩ Verbosity** (p. 727) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 727).
DDS_MonitoringQosPolicy (p. 1210)	**enable** (p. 1211)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1210)	**application_name** (p. 1211)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The name of the resource that represents this RTI Connext application.
DDS_MonitoringQosPolicy (p. 1210)	**distribution_settings** (p. 1212)

	<<***extension***>> *(p. 213)* Configures the distribution of telemetry data.
DDS_MonitoringQosPolicy (p. 1210)	**telemetry_data** (p. 1212)
	<<***extension***>> *(p. 213)* Configures the telemetry data that will be distributed.
DDS_LocatorFilter_t (p. 1185)	**locators** (p. 1185)
	<<***extension***>> *(p. 213)* Sequence containing from one to 16 **DDS_Locator_t** (p. 1184), used to specify the multicast address locators of an individual channel within a MultiChannel DataWriter.
DDS_LocatorFilter_t (p. 1185)	**filter_expression** (p. 1185)
	<<***extension***>> *(p. 213)* A logical expression used to determine the data that will be published in the channel.
DDS_LocatorFilterQosPolicy (p. 1186)	**locator_filters** (p. 1187)
	<<***extension***>> *(p. 213)* A sequence of **DDS_LocatorFilter_t** (p. 1185). Each **DDS_LocatorFilter_t** (p. 1185) reports the configuration of a single channel of a MultiChannel DataWriter.
DDS_LocatorFilterQosPolicy (p. 1186)	**filter_name** (p. 1187)
	<<***extension***>> *(p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
DDS_ChannelSettings_t (p. 822)	**multicast_settings** (p. 822)
	<<***extension***>> *(p. 213)* A sequence of **DDS_TransportMulticastSettings_t** (p. 1417) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 822)	**filter_expression** (p. 822)
	<<***extension***>> *(p. 213)* A logical expression used to determine the data that will be published in the channel.
DDS_ChannelSettings_t (p. 822)	**priority** (p. 823)
	<<***extension***>> *(p. 213)* Publication priority
DDS_MultiChannelQosPolicy (p. 1214)	**channels** (p. 1215)
	<<***extension***>> *(p. 213)* A sequence of **DDS_ChannelSettings_t** (p. 822) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1214)	**filter_name** (p. 1215)
	<<***extension***>> *(p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

DDS_TopicQueryDispatchQosPolicy (p. 1404)	**enable** (p. 1405)
	<<***extension***>> *(p. 213)* Allows this writer to dispatch TopicQueries
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**publication_period** (p. 1405)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sets the periodic interval at which samples are published.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**samples_per_period** (p. 1405)
	<<***extension***>> *(p. 213)* Sets the maximum number of samples to publish in each publication_period.

7.50 Functional Categories

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 290), then looking at any QoS in that category will be helpful.

Modules

- **Application Acknowledgement**

  This page lists all QoS related to application acknowledgement.
- **Application-Defined Metadata**

  This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.
- **Application Startup**

  Use these QoS fields to configure entity creation and application startup settings.
- **Batching**

  Use these QoS fields to configure the batching feature.
- **Concurrency**

  Use these QoS fields to configure threads and concurrency settings in RTI Connext.
- **Content Filtering**

  Use these QoS fields if you are using content filtering on your data.
- **Data Availability**

  Use these QoS fields to configure how much data, which data, and when that data is available to an application.
- **Debuggability**

  Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.
- **Discovery**

  Use these QoS fields to configure how applications discover each other.
- **Discovery Isolation**

  Use these QoS fields to isolate applications from each other.
- **Durability**

  Use these QoS fields to configure how much and how long data remains retrievable in the system.
- **Flow Control**

  Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

- **Fragmentation**

  QoS related to DDS-level data fragmentation.
- **Instance Lifecycle**

  QoS that control the lifecycle of instances.
- **Sending Large Data**

  Use these QoS fields to optimize the process of sending large data.
- **Liveliness**

  Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.
- **Logging**

  Use these QoS fields to configure the RTI Connext logging infrastructure.
- **Middleware Memory Management**

  Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.
- **QoS Profile Management**

  Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.
- **Reliability QoS**

  Reliability related QoS.
- **Sample Memory Management QoS**

  Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.
- **Sample Ordering**

  Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.
- **Security**

  Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.
- **Throughput**

  Use these QoS fields to configure features which may be helpful to increase throughput.
- **Transports**

  Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.
- **Topic Queries**

  Use these QoS fields to configure the topic query feature.
- **Type System**

  Use these QoS fields to configure aspects of the type system.

7.50.1 Detailed Description

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 290), then looking at any QoS in that category will be helpful.

7.51 Application Acknowledgement

This page lists all QoS related to application acknowledgement.

This page lists all QoS related to application acknowledgement.

See `Application Acknowledgment`, in the *Core Libraries User's Manual*, for more information about this feature.

Advanced Settings

DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(p. 213)* Kind of reliable acknowledgment
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_app_ack_response_length** (p. 881)
	<<***extension***>> *(p. 213)* Maximum length of application-level acknowledgment response data
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_app_ack_remote_readers** (p. 924)
	<<***extension***>> *(p. 213)* The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterProtocolQosPolicy (p. 892)	**propagate_app_ack_with_no_response** (p. 896)
	<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriter↩ Listener::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**app_ack_period** (p. 1318)
	<<***extension***>> *(p. 213)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_app_ack_response_keep_duration** (p. 1318)
	<<***extension***>> *(p. 213)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**samples_per_app_ack** (p. 1319)
	<<***extension***>> *(p. 213)* The minimum number of samples acknowledged by one application-level acknowledgment message

7.52 Application-Defined Metadata

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

There are also various resource limits related to these QoS which are also listed below.

Basic Settings

DDS_PropertyQosPolicy (p. 1260)	**value** (p. 1262)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of properties.

Advanced Settings

DDS_UserDataQosPolicy (p. 1504)	**value** (p. 1505)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1160)	**value** (p. 1161)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_TypeSupportQosPolicy (p. 1499)	**plugin_data** (p. 1500)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Value to pass into the type plugin's de-/serialization function
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_user_data_max_length** (p. 991)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DomainParticipantQos** (p. 971) and **DDS_↩ ParticipantBuiltinTopicData** (p. 1229)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**topic_data_max_length** (p. 991)
	<<***extension***>> *(p. 213)* Maximum length of topic data in **DDS_TopicQos** (p. 1397), **DDS_TopicBuiltin↩ TopicData** (p. 1391), **DDS_PublicationBuiltinTopic↩ Data** (p. 1264) and **DDS_SubscriptionBuiltinTopic↩ Data** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**publisher_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_PublisherQos** (p. 1276) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**subscriber_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_SubscriberQos** (p. 1367) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_user_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataWriterQos** (p. 909) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_user_data_max_length** (p. 993)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataReaderQos** (p. 858) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_list_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_string_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_string_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_string_max_length** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataReader** (p. 1556).

7.53 Application Startup

Use these QoS fields to configure entity creation and application startup settings.

Use these QoS fields to configure entity creation and application startup settings.

Basic Settings

DDS_EntityFactoryQosPolicy (p. 1145)	**autoenable_created_entities** (p. 1147)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies whether the entity acting as a factory automatically enables the instances it creates.

7.54 Batching

Use these QoS fields to configure the batching feature.

Use these QoS fields to configure the batching feature.

See `BATCH QosPolicy (DDS Extension)`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

DDS_BatchQosPolicy (p. 810)	**enable** (p. 810)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 810)	**max_data_bytes** (p. 811)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_samples** (p. 811)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* The maximum number of samples in a batch.

Advanced Settings

DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_batch** (p. 800)
	[DEPRECATED] (p. **384)** <<***extension***>> (p. *213)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**asynchronous_batch_thread** (p. 801)
	<<***extension***>> (p. *213)* Settings of the batch flushing thread.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_batches** (p. 920)
	<<***extension***>> (p. *213)* Represents the initial number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_batches** (p. 921)
	<<***extension***>> (p. *213)* Represents the maximum number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_BatchQosPolicy (p. 810)	**max_flush_delay** (p. 812)
	<<***extension***>> (p. *213)* The maximum flush delay.
DDS_BatchQosPolicy (p. 810)	**source_timestamp_resolution** (p. 812)

	<<***extension***>> *(p. 213)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 810)	**thread_safe_write** (p. 813)
	<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.

7.55 Concurrency

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

See `Connext Threading Model`, in the *Core Libraries User's Manual*, for more information.

This community article gives a thorough overview of how and why to use many of the QoS listed below: `https://community.rti.com/kb/achieving-low-jitter-performance-connext-pro`.

Advanced Settings

DDS_TransportPriorityQosPolicy (p. 1419)	**value** (p. 1421)
	<<***spec***>> *(p. 209)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_write** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**thread** (p. 800)
	<<***extension***>> *(p. 213)* Settings of the publishing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_batch** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**asynchronous_batch_thread** (p. 801)
	<<***extension***>> *(p. 213)* Settings of the batch flushing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_topic_query_publication** (p. 801)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**topic_query_publication_thread** (p. 802)

	<<***extension***>> *(p. 213)* Settings of the **DDSTopicQuery** (p. 1895) publication thread.
DDS_DiscoveryQosPolicy (p. 960)	**metatraffic_transport_priority** (p. 963)
	<<***extension***>> *(p. 213)* The transport priority to use for the Discovery meta-traffic.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_EventQosPolicy (p. 1150)	**thread** (p. 1151)
	<<***extension***>> *(p. 213)* Event thread QoS.
DDS_DatabaseQosPolicy (p. 831)	**thread** (p. 832)
	<<***extension***>> *(p. 213)* Database thread settings.
DDS_ReceiverPoolQosPolicy (p. 1293)	**thread** (p. 1294)
	<<***extension***>> *(p. 213)* Receiver pool thread(s).
DDS_BatchQosPolicy (p. 810)	**thread_safe_write** (p. 813)
	<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.
DDS_MonitoringEventDistributionSettings (p. 1197)	**concurrency_level** (p. 1198)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1197)	**thread** (p. 1199)
	<<***extension***>> *(p. 213)* The settings of the event metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**thread** (p. 1209)
	<<***extension***>> *(p. 213)* The settings of the periodic metric thread.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**concurrency_level** (p. 1201)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.

DDS_MonitoringLoggingDistributionSettings (p. 1200)	**thread** (p. 1203)
	<<***extension***>> *(p. 213)* The settings of the logging thread.

7.56 Content Filtering

Use these QoS fields if you are using content filtering on your data.

Use these QoS fields if you are using content filtering on your data.

Content filtering most commonly refers to using a **DDSContentFilteredTopic** (p. 1551), but data can also be filtered using **DDSTopicQuery** (p. 1895) to run a new filter over the data in a DataWriter's cache, or **DDSQueryCondition** (p. 1841) to read a subset of the data that is currently stored in the DataReader's cache.

See also

Queries and Filters Syntax (p. 184).

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_query_condition_filters** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of query condition filters a reader is allowed.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_reader_filters** (p. 920)
	<<***extension***>> *(p. 213)* The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1589) will perform content-based filtering.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**query_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_hash_buckets** (p. 990)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**contentfilter_property_max_length** (p. 997)
	<<***extension***>> *(p. 213)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_seq_max_length** (p. 997)
	<<***extension***>> *(p. 213)* Maximum number of channels that can be specified in **DDS_MultiChannelQos↩ Policy** (p. 1214) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_filter_expression_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 822) in a MultiChannel DataWriter.
DDS_ChannelSettings_t (p. 822)	**multicast_settings** (p. 822)
	<<***extension***>> *(p. 213)* A sequence of **DDS_↩ TransportMulticastSettings_t** (p. 1417) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 822)	**filter_expression** (p. 822)
	<<***extension***>> *(p. 213)* A logical expression used to determine the data that will be published in the channel.
DDS_MultiChannelQosPolicy (p. 1214)	**filter_name** (p. 1215)
	<<***extension***>> *(p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

7.57 Data Availability

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Data availability refers to configurations such as ownership and lifespan.

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The strength value used to arbitrate among multiple writers.
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The minimum separation duration between subsequent samples.
DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604)
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)

	<<***basic***>> (p. *201)* <<***spec***>> (p. *209)* Maximum duration for the data's validity.
DDS_MonitoringEventDistributionSettings (p. 1197)	**publication_period** (p. 1200)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**polling_period** (p. 1210)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	<<***basic***>> (p. *201)* <<***extension***>> (p. *213)* Period at which the logging thread publishes log messages.

Advanced Settings

DDS_AvailabilityQosPolicy (p. 805)	**enable_required_subscriptions** (p. 808)
	<<***extension***>> (p. *213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)
DDS_AvailabilityQosPolicy (p. 805)	**max_data_availability_waiting_time** (p. 808)
	<<***extension***>> (p. *213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 805)	**max_endpoint_availability_waiting_time** (p. 808)
	<<***extension***>> (p. *213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 805)	**required_matched_endpoint_groups** (p. 809)
	<<***extension***>> (p. *213)* A sequence of endpoint groups.
DDS_DurabilityQosPolicy (p. 1005)	**direct_communication** (p. 1007)
	<<***extension***>> (p. *213)* Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1556) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1589)
DDS_DurabilityQosPolicy (p. 1005)	**storage_settings** (p. 1008)
	<<***extension***>> (p. *213)* Configures durable writer history and durable reader state.

DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**drop_incomplete_coherent_set** (p. 1253)
	<<***extension***>> *(p. 213)* Indicates whether or not a **DDSDataReader** (p. 1556) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_LatencyBudgetQosPolicy (p. 1173)	**duration** (p. 1175)
	<<***spec***>> *(p. 209)* Duration of the maximum acceptable delay.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_samples_delay** (p. 1291)

	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_instances_delay** (p. 1291)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_instances_delay** (p. 1292)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_TransportMulticastMappingQosPolicy (p. 1413)	**value** (p. 1415)
	<<***extension***>> *(p. 213)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 1415)	**kind** (p. 1416)
	<<***extension***>> *(p. 213)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DataWriterProtocolQosPolicy (p. 892)	**virtual_guid** (p. 893)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataWriterProtocolQosPolicy (p. 892)	**push_on_write** (p. 894)
	<<***extension***>> *(p. 213)* Whether to push sample out when write is called.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_outstanding_reads** (p. 817)
	<<***extension***>> *(p. 213)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).

DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_outstanding_reads** (p. 818)
	<<***extension***>> *(p. 213)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples_per_read** (p. 818)
	<<***extension***>> *(p. 213)* Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1556).
DDS_BatchQosPolicy (p. 810)	**source_timestamp_resolution** (p. 812)
	<<***extension***>> *(p. 213)* Batch source timestamp resolution.
DDS_ChannelSettings_t (p. 822)	**priority** (p. 823)
	<<***extension***>> *(p. 213)* Publication priority
DDS_MultiChannelQosPolicy (p. 1214)	**channels** (p. 1215)
	<<***extension***>> *(p. 213)* A sequence of **DDS_↩ ChannelSettings_t** (p. 822) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1214)	**filter_name** (p. 1215)
	<<***extension***>> *(p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

7.58 Debuggability

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Basic Settings

DDS_EntityNameQosPolicy (p. 1147)	**name** (p. 1148)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The name of the entity.
DDS_LoggingQosPolicy (p. 1188)	**verbosity** (p. 1189)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1188)	**category** (p. 1189)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1188)	**output_file** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1188)	**output_file_suffix** (p. 1190)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sets the file suffix when logging to a set of files
DDS_MonitoringEventDistributionSettings (p. 1197)	**publication_period** (p. 1200)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**polling_period** (p. 1210)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**enable** (p. 1193)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings::dedicated_participant** (p. 1196).
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**middleware_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**service_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**user_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_USER** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1213)	**metrics** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **DDS_MonitoringMetricSelection** (p. 1206) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1213)	**logs** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* **DDS_MonitoringLoggingForwardingSettings** (p. 1204) containing the **NDDS_Config_Syslog_Verbosity** (p. 727) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 727).

DDS_MonitoringQosPolicy (p. 1210)	**enable** (p. 1211)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
DDS_MonitoringQosPolicy (p. 1210)	**application_name** (p. 1211)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The name of the resource that represents this RTI Connext application.

Advanced Settings

DDS_DiscoveryConfigQosPolicy (p. 934)	**default_domain_announcement_period** (p. 949)
	<<***extension***>> *(p. 213)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**ignore_default_domain_announcements** (p. 950)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_EntityNameQosPolicy (p. 1147)	**role_name** (p. 1148)
	<<***extension***>> *(p. 213)* The entity role name.
DDS_ServiceQosPolicy (p. 1358)	**kind** (p. 1359)
	<<***extension***>> *(p. 213)* The kind of service.
DDS_LoggingQosPolicy (p. 1188)	**print_format** (p. 1189)
	<<***extension***>> *(p. 213)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1188)	**max_bytes_per_file** (p. 1190)
	<<***extension***>> *(p. 213)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1188)	**max_files** (p. 1191)
	<<***extension***>> *(p. 213)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringEventDistributionSettings (p. 1197)	**concurrency_level** (p. 1198)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
DDS_MonitoringEventDistributionSettings (p. 1197)	**datawriter_qos_profile_name** (p. 1199)

	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes event metrics.
DDS_MonitoringEventDistributionSettings (p. 1197)	**thread** (p. 1199)
	<<***extension***>> *(p. 213)* The settings of the event metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**datawriter_qos_profile_name** (p. 1209)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes periodic metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**thread** (p. 1209)
	<<***extension***>> *(p. 213)* The settings of the periodic metric thread.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**concurrency_level** (p. 1201)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**datawriter_qos_profile_name** (p. 1202)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**thread** (p. 1203)
	<<***extension***>> *(p. 213)* The settings of the logging thread.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**participant_qos_profile_name** (p. 1194)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDomain↩ Participant** (p. 1619) that will be used to distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**dedicated_participant** (p. 1196)
	<<***extension***>> *(p. 213)* Configures the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**publisher_qos_profile_name** (p. 1196)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

DDS_MonitoringDistributionSettings (p. 1195)	**event_settings** (p. 1196)
	<<***extension***>> *(p. 213)* Configures the distribution of event metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**periodic_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of periodic metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**logging_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of logging messages.
DDS_MonitoringMetricSelection (p. 1206)	**resource_selection** (p. 1206)
	<<***extension***>> *(p. 213)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS_MonitoringMetric↩ Selection::enabled_metrics_selection** (p. 1207) and **DDS_MonitoringMetricSelection::disabled_↩ metrics_selection** (p. 1207) are applied to this subset of resources.
DDS_MonitoringMetricSelection (p. 1206)	**enabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringMetricSelection (p. 1206)	**disabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringQosPolicy (p. 1210)	**distribution_settings** (p. 1212)
	<<***extension***>> *(p. 213)* Configures the distribution of telemetry data.
DDS_MonitoringQosPolicy (p. 1210)	**telemetry_data** (p. 1212)
	<<***extension***>> *(p. 213)* Configures the telemetry data that will be distributed.

7.59 Discovery

Use these QoS fields to configure how applications discover each other.

Use these QoS fields to configure how applications discover each other.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

DDS_WireProtocolQosPolicy (p. 1511)	**participant_id** (p. 1514)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_assert_period** (p. 937)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_announcement_period** (p. 937)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 934)	**initial_participant_announcements** (p. 939)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**new_remote_participant_announcements** (p. 939)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The number of participant announcements sent when a remote participant is newly discovered.

DDS_DiscoveryConfigQosPolicy (p. 934)	**min_initial_participant_announcement_period** (p. 940)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_initial_participant_announcement_period** (p. 940)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings::dedicated_participant** (p. 1196).

Advanced Settings

DDS_WireProtocolQosPolicy (p. 1511)	**rtps_host_id** (p. 1515)
	<<***extension***>> *(p. 213)* The RTPS Host ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_app_id** (p. 1516)
	<<***extension***>> *(p. 213)* The RTPS App ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_instance_id** (p. 1516)
	<<***extension***>> *(p. 213)* The RTPS Instance ID of the **DDSDomainParticipant** (p. 1619).
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_well_known_ports** (p. 1517)
	<<***extension***>> *(p. 213)* Configures the RTPS well-known port mappings.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_reserved_port_mask** (p. 1517)

	<<***extension***>> *(p. 213)* Specifies which well-known ports to reserve when enabling the participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_auto_id_kind** (p. 1518)
	<<***extension***>> *(p. 213)* Kind of auto mechanism used to calculate the GUID prefix.
DDS_DiscoveryQosPolicy (p. 960)	**enabled_transports** (p. 961)
	<<***extension***>> *(p. 213)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 960)	**metatraffic_transport_priority** (p. 963)
	<<***extension***>> *(p. 213)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**remote_participant_purge_kind** (p. 938)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_liveliness_loss_detection_period** (p. 938)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_reader_resource_limits** (p. 941)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader** (p. 941)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader_resource_limits** (p. 942)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader** (p. 942)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader_resource_limits** (p. 943)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_writer** (p. 947)

	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_Reliability↩ QosPolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_publish_mode** (p. 948)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_publish_mode** (p. 949)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**asynchronous_publisher** (p. 949)
	<<***extension***>> *(p. 213)* Asynchronous publishing settings for the discovery **DDSPublisher** (p. 1818) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 934)	**default_domain_announcement_period** (p. 949)
	<<***extension***>> *(p. 213)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**ignore_default_domain_announcements** (p. 950)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader** (p. 947)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy↩ ::participant_message_reader_reliability_kind** (p. 946) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer** (p. 943)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_data_lifecycle** (p. 944)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer** (p. 945)

	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_data_lifecycle** (p. 945)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**builtin_discovery_plugins** (p. 946)
	<<***extension***>> *(p. 213)* Mask of built-in discovery plugin kinds.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer** (p. 950)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_↩ ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_data_lifecycle** (p. 951)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_publish_mode** (p. 951)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_reader** (p. 952)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 1359) reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer** (p. 954)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer_publish_mode** (p. 955)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_reader** (p. 955)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**endpoint_type_object_lb_serialization_threshold** (p. 956)
	<<***extension***>> *(p. 213)* Controls when/if the TypeObject v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_DiscoveryConfigQosPolicy (p. 934)	**dns_tracker_polling_period** (p. 956)
	<<***extension***>> *(p. 213)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.

DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader** (p. 959)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader_resource_limits** (p. 959)
	<<***extension***>> *(p. 213)* Resource limits for the built-in topic participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_publish_mode** (p. 957)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer** (p. 957)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_data_lifecycle** (p. 958)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**request_types_filter** (p. 959)
	<<***extension***>> *(p. 213)* Topic name pattern for requesting all types via Type Lookup Service.

7.60 Discovery Isolation

Use these QoS fields to isolate applications from each other.

Use these QoS fields to isolate applications from each other.

Applications can be isolated through mechanisms such as domain ids, domain tags, and partitions.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* A list of partition names
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.

DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Whether to accept a new participant that is not in the initial peers list.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings**↩ **::dedicated_participant** (p. 1196).

Advanced Settings

DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partitions** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partition_cumulative_characters** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1240).

7.61 Durability

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSData↩ Reader** (p. 1556)) can manage.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Maximum duration for the data's validity.

Advanced Settings

DDS_AvailabilityQosPolicy (p. 805)	**enable_required_subscriptions** (p. 808)
	*<<**extension**>> (p. 213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)
DDS_AvailabilityQosPolicy (p. 805)	**max_data_availability_waiting_time** (p. 808)
	*<<**extension**>> (p. 213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 805)	**max_endpoint_availability_waiting_time** (p. 808)
	*<<**extension**>> (p. 213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 805)	**required_matched_endpoint_groups** (p. 809)
	*<<**extension**>> (p. 213)* A sequence of endpoint groups.
DDS_DurabilityQosPolicy (p. 1005)	**direct_communication** (p. 1007)
	*<<**extension**>> (p. 213)* Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1556) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1589)

DDS_DurabilityQosPolicy (p. 1005)	**storage_settings** (p. 1008)
	<<***extension***>> *(p. 213)* Configures durable writer history and durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**enable** (p. 1244)
	<<***extension***>> *(p. 213)* Enables durable writer history in a **DDSDataWriter** (p. 1589) and durable reader state in a **DDSDataReader** (p. 1556).
DDS_PersistentStorageSettings (p. 1242)	**file_name** (p. 1244)
	<<***extension***>> *(p. 213)* The file name where the durable writer history or durable reader state will be stored.
DDS_PersistentStorageSettings (p. 1242)	**trace_file_name** (p. 1244)
	<<***extension***>> *(p. 213)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**journal_kind** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the journal mode of the persistent storage.
DDS_PersistentStorageSettings (p. 1242)	**synchronization_kind** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the level of synchronization with the physical disk.
DDS_PersistentStorageSettings (p. 1242)	**vacuum** (p. 1245)
	<<***extension***>> *(p. 213)* Sets the auto-vacuum status of the storage.
DDS_PersistentStorageSettings (p. 1242)	**restore** (p. 1246)
	<<***extension***>> *(p. 213)* Indicates if the persisted writer history or reader state must be restored.
DDS_PersistentStorageSettings (p. 1242)	**writer_instance_cache_allocation** (p. 1246)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_sample_cache_allocation** (p. 1247)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the sample durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_memory_state** (p. 1248)
	<<***extension***>> *(p. 213)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.

DDS_PersistentStorageSettings (p. 1242)	**reader_checkpoint_frequency** (p. 1248)
	<<***extension***>> *(p. 213)* Controls how often the reader state is stored into the database.
DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_DataWriterProtocolQosPolicy (p. 892)	**propagate_app_ack_with_no_response** (p. 896)
	<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriterListener::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1331)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_min_sample_keep_duration** (p. 1330)

	<<***extension***>> *(p. 213)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_max_sample_keep_duration** (p. 1331)
	<<***extension***>> *(p. 213)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1332)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1332)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Controls rate of growth of dynamic sample keep duration.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_samples** (p. 816)
	<<***extension***>> *(p. 213)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples** (p. 816)
	<<***extension***>> *(p. 213)* Maximum number of samples.
DDS_EntityNameQosPolicy (p. 1147)	**role_name** (p. 1148)
	<<***extension***>> *(p. 213)* The entity role name.

7.62 Flow Control

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Basic Settings

DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The maximum time a DataWriter can block on a write() call.
DDS_PublishModeQosPolicy (p. 1279)	**kind** (p. 1281)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Publishing mode

DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_send_window_size** (p. 1333)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_send_window_size** (p. 1333)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Maximum size of send window of unacknowledged samples

Advanced Settings

DDS_PublishModeQosPolicy (p. 1279)	**flow_controller_name** (p. 1281)
	<<***extension***>> *(p. 213)* Name of the associated flow controller
DDS_PublishModeQosPolicy (p. 1279)	**priority** (p. 1282)
	<<***extension***>> *(p. 213)* Publication priority
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_write** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous publishing.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**outstanding_asynchronous_sample_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to the maximum number of samples (from all **DDSData↩ Writer** (p. 1589)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_allocation** (p. 986)
	<<***extension***>> *(p. 213)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for flow controllers.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_publish_mode** (p. 948)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_publish_mode** (p. 949)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**asynchronous_publisher** (p. 949)

	<<***extension***>> *(p. 213)* Asynchronous publishing settings for the discovery **DDSPublisher** (p. 1818) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_publish_mode** (p. 951)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer_publish_mode** (p. 955)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_publish_mode** (p. 957)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in participant configuration writer.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_bytes_per_nack_response** (p. 1329)
	<<***extension***>> *(p. 213)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_update_period** (p. 1334)
	<<***extension***>> *(p. 213)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_increase_factor** (p. 1335)
	<<***extension***>> *(p. 213)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_decrease_factor** (p. 1336)
	<<***extension***>> *(p. 213)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_repair_piggyback_heartbeat** (p. 1338)
	<<***extension***>> *(p. 213)* Prevents piggyback heartbeats from being sent with repair samples

7.63 Fragmentation

QoS related to DDS-level data fragmentation.

QoS related to DDS-level data fragmentation.

See `Data Fragmentation`, in the *Core Libraries User's Manual*, for more information about DDS-level fragmentation.

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**disable_fragmentation_support** (p. 874)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(p. 213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)
	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**nack_suppression_duration** (p. 1329)
	<<***extension***>> *(p. 213)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_bytes_per_nack_response** (p. 1329)
	<<***extension***>> *(p. 213)* The maximum total message size when resending rejected samples or data fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)

	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples** (p. 819)
	<<***extension***>> *(*p. *213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_fragmented_samples** (p. 819)
	<<***extension***>> *(*p. *213)* The initial number of samples for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples_per_remote_writer** (p. 820)
	<<***extension***>> *(*p. *213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragments_per_sample** (p. 820)
	<<***extension***>> *(*p. *213)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**dynamically_allocate_fragmented_samples** (p. 821)
	<<***extension***>> *(*p. *213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.

7.64 Instance Lifecycle

QoS that control the lifecycle of instances.

QoS that control the lifecycle of instances.

Use these QoS fields to configure how RTI Connext manages instance lifecycles and resources in the DataReader and DataWriter queues.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	<<***basic***>> *(*p. *201)* <<***spec***>> *(*p. *209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSData↩ Reader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)

	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSData↩ Reader** (p. 1556)) will manage.

Advanced Settings

DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)
	<<***extension***>> *(p. 213)* Whether instance state consistency is enabled
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**instance_hash_buckets** (p. 1313)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Number of hash buckets for instances.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autodispose_unregistered_instances** (p. 1525)
	<<***spec***>> *(p. 209)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDSDataWriter** (p. 1589) unregisters from the instance by means of the unregister operations.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_unregistered_instances_delay** (p. 1525)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_disposed_instances_delay** (p. 1526)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has disposed the instance.

DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_instances_delay** (p. 1291)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_instances_delay** (p. 1292)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_total_instances** (p. 877)
	<<***extension***>> *(p. 213)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**keep_minimum_state_for_instances** (p. 881)
	<<***extension***>> *(p. 213)* Whether or not keep a minimum instance state for up to **DDS_DataReaderResourceLimitsQosPolicy::max_total_instances** (p. 877).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**instance_replacement** (p. 883)
	<<***extension***>> *(p. 213)* Sets the kind of instances allowed to be replaced for each instance state (**DDS_InstanceStateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**autopurge_remote_not_alive_writer_delay** (p. 884)

	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**instance_replacement** (p. 921)
	<<***extension***>> *(p. 213)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**replace_empty_instances** (p. 922)
	<<***extension***>> *(p. 213)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**autoregister_instances** (p. 922)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Whether or not to automatically register new instances
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_dispose_of_unregistered_instances** (p. 845)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 166) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 166) state.
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_unregister_of_disposed_instances** (p. 846)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO↩ _WRITERS_INSTANCE_STATE** (p. 166) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166).
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_inline_keyhash** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not a keyhash is propagated on the wire with each sample.
DDS_DataWriterProtocolQosPolicy (p. 892)	**serialize_key_with_dispose** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_data_lifecycle** (p. 944)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_data_lifecycle** (p. 945)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in subscription writer.

DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_data_lifecycle** (p. 951)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_data_lifecycle** (p. 958)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in participant configuration writer.

7.65 Sending Large Data

Use these QoS fields to optimize the process of sending large data.

Use these QoS fields to optimize the process of sending large data.

This includes QoS which help to reduce the number of copies needed and manage fragmentation.

See `Sending Large Data`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Structure that contains the compression settings.

Advanced Settings

DDS_CompressionSettings_t (p. 826)	**compression_ids** (p. 826)
	<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.
DDS_CompressionSettings_t (p. 826)	**writer_compression_level** (p. 827)
	<<***extension***>> *(p. 213)* The level of compression to use when compressing data.
DDS_CompressionSettings_t (p. 826)	**writer_compression_threshold** (p. 827)
	<<***extension***>> *(p. 213)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**disable_fragmentation_support** (p. 874)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(p. 213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)
	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 883)
	<<***extension***>> *(p. 213)* Allocation resource for the shared memory segments attached by the **DDSData↩ Reader** (p. 1556).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**writer_loaned_sample_allocation** (p. 925)
	<<***extension***>> *(p. 213)* Represents the allocation settings of loaned samples managed by a **DDSData↩ Writer** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initialize_writer_loaned_sample** (p. 925)
	<<***extension***>> *(p. 213)* Whether or not to initialize loaned samples returned by a **DDSDataWriter** (p. 1589)
DDS_DataWriterTransferModeQosPolicy (p. 927)	**shmem_ref_settings** (p. 928)
	<<***extension***>> *(p. 213)* Settings related to transferring data using shared memory references.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**shmem_ref_transfer_mode_max_segments** (p. 1004)
	<<***extension***>> *(p. 213)* Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1619).

DDS_DiscoveryConfigQosPolicy (p. 934)	**endpoint_type_object_lb_serialization_threshold** (p. 956)
	<<***extension***>> *(p. 213)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The initial number of samples for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples_per_remote_writer** (p. 820)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragments_per_sample** (p. 820)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**dynamically_allocate_fragmented_samples** (p. 821)
	<<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.

7.66 Liveliness

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Basic Settings

DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.
DDS_LivelinessQosPolicy (p. 1180)	**assertions_per_lease_duration** (p. 1183)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of assertions a **DDSDataWriter** (p. 1589) will send during a its **DDS_↩ LivelinessQosPolicy::lease_duration** (p. 1182).
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_assert_period** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period to assert liveliness for the participant.

Advanced Settings

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**autopurge_remote_not_alive_writer_delay** (p. 884)
	*<<**extension**>> (p. 213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.
DDS_DiscoveryConfigQosPolicy (p. 934)	**remote_participant_purge_kind** (p. 938)
	[DEPRECATED] (p. 384) *<<**extension**>> (p. 213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_liveliness_loss_detection_period** (p. 938)
	[DEPRECATED] (p. 384) *<<**extension**>> (p. 213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_writer** (p. 947)

	<<***extension***>> *(*p. *213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader** (p. 947)
	<<***extension***>> *(*p. *213)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind** (p. 946) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633).
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_heartbeat_retries** (p. 1326)
	<<***extension***>> *(*p. *213)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**inactivate_nonprogressing_readers** (p. 1326)
	<<***extension***>> *(*p. *213)* Whether to treat remote readers as inactive when their NACKs do not progress

7.67 Logging

Use these QoS fields to configure the RTI Connext logging infrastructure.

Use these QoS fields to configure the RTI Connext logging infrastructure.

This includes settings for configuring the verbosity and directing the output.

See `Logging`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

DDS_LoggingQosPolicy (p. 1188)	**verbosity** (p. 1189)
	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1188)	**category** (p. 1189)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Categories of logged messages.
DDS_LoggingQosPolicy (p. 1188)	**output_file** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1188)	**output_file_suffix** (p. 1190)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sets the file suffix when logging to a set of files
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Period at which the logging thread publishes log messages.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**middleware_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ MIDDLEWARE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**service_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SERVICE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**user_forwarding_level** (p. 1205)

	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_USER** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1213)	**logs** (p. 1213)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* **DDS_MonitoringLoggingForwardingSettings** (p. 1204) containing the **NDDS_Config_SyslogVerbosity** (p. 727) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 727).

Advanced Settings

DDS_LoggingQosPolicy (p. 1188)	**print_format** (p. 1189)
	<<***extension***>> *(p. 213)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1188)	**max_bytes_per_file** (p. 1190)
	<<***extension***>> *(p. 213)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1188)	**max_files** (p. 1191)
	<<***extension***>> *(p. 213)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**concurrency_level** (p. 1201)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**datawriter_qos_profile_name** (p. 1202)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**thread** (p. 1203)
	<<***extension***>> *(p. 213)* The settings of the logging thread.
DDS_MonitoringDistributionSettings (p. 1195)	**logging_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of logging messages.

7.68 Middleware Memory Management

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_samples** (p. 1312)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) will manage.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.

Advanced Settings

DDS_PersistentStorageSettings (p. 1242)	**writer_memory_state** (p. 1248)
	*<<**extension**>> (p. 213)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	*<<**spec**>> (p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.

DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_instance** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_remote_writer** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of out-of-order samples from a given remote **DDSData↩ Writer** (p. 1589) that a **DDSDataReader** (p. 1556) may store when maintaining a reliable connection to the **DDSDataWriter** (p. 1589).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_infos** (p. 871)
	<<***extension***>> *(p. 213)* The maximum number of info units that a **DDSDataReader** (p. 1556) can use to store **DDS_SampleInfo** (p. 1344).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers** (p. 871)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers_per_instance** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_infos** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of info units that a **DDSDataReader** (p. 1556) can have, which are used to store **DDS_SampleInfo** (p. 1344).

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_outstanding_reads** (p. 873)
	<<***extension***>> *(p. 213)* The initial number of outstanding calls to read/take (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_outstanding_reads** (p. 873)
	<<***extension***>> *(p. 213)* The maximum number of outstanding read/take calls (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_read** (p. 873)
	<<***extension***>> *(p. 213)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader::read** (p. 1919) or **FooDataReader::take** (p. 1920). If more data exists in the middleware, the application will need to issue multiple read/take calls.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(p. 213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)
	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_total_instances** (p. 877)
	<<***extension***>> *(p. 213)* Maximum number of instances for which a DataReader will keep state.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers** (p. 878)
	<<***extension***>> *(p. 213)* The maximum number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers** (p. 878)
	<<***extension***>> *(p. 213)* The initial number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The maximum number of virtual remote writers that can be associated with an instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The initial number of virtual remote writers per instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_sample** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of remote writers allowed to write the same sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_query_condition_filters** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of query condition filters a reader is allowed.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_app_ack_response_length** (p. 881)
	<<***extension***>> *(p. 213)* Maximum length of application-level acknowledgment response data
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**keep_minimum_state_for_instances** (p. 881)
	<<***extension***>> *(p. 213)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 877).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The initial number of Topic↩ Queries allocated by a **DDSDataReader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The maximum number of active TopicQueries that a **DDSDataReader** (p. 1556) can create.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 883)

	<<***extension***>> *(p. 213)* Allocation resource for the shared memory segments attached by the **DDSData↩ Reader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**instance_replacement** (p. 883)
	<<***extension***>> *(p. 213)* Sets the kind of instances allowed to be replaced for each instance state (**DDS↩ _InstanceStateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_↩ instances** (p. 1311).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**autopurge_remote_not_alive_writer_delay** (p. 884)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**lazily_allocate_batch_resources** (p. 885)
	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_reader_filters** (p. 920)
	<<***extension***>> *(p. 213)* The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1589) will perform content-based filtering.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_batches** (p. 920)
	<<***extension***>> *(p. 213)* Represents the initial number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_batches** (p. 921)
	<<***extension***>> *(p. 213)* Represents the maximum number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**instance_replacement** (p. 921)

	<<***extension***>> *(p. 213)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**replace_empty_instances** (p. 922)
	<<***extension***>> *(p. 213)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The initial number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_remote_readers** (p. 926)
	<<***extension***>> *(p. 213)* Controls the initial memory allocation for the matched remote readers of a **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_readers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_app_ack_remote_readers** (p. 924)
	<<***extension***>> *(p. 213)* The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the initial number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**writer_loaned_sample_allocation** (p. 925)
	<<***extension***>> *(p. 213)* Represents the allocation settings of loaned samples managed by a **DDSData↩ Writer** (p. 1589).
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**max_objects_per_thread** (p. 1383)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1694).

DDS_SystemResourceLimitsQosPolicy (p. 1382)	**initial_objects_per_thread** (p. 1383)
	<<***extension***>> *(p. 213)* The number of objects per thread for a **DDSDomainParticipantFactory** (p. 1694) for which infrastructure will initially be allocated.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local writer and remote/local reader pairs.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**read_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to read condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**query_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**outstanding_asynchronous_sample_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to the maximum number of samples (from all **DDSData↩ Writer** (p. 1589)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_allocation** (p. 986)
	<<***extension***>> *(p. 213)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local DataReaders.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for content filtered topics.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_gather_destinations** (p. 991)
	<<***extension***>> (p. *213*) Maximum number of destinations per RTI Connext send.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_user_data_max_length** (p. 991)
	<<***extension***>> (p. *213*) Maximum length of user data in **DDS_DomainParticipantQos** (p. 971) and **DDS_ParticipantBuiltinTopicData** (p. 1229)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**topic_data_max_length** (p. 991)
	<<***extension***>> (p. *213*) Maximum length of topic data in **DDS_TopicQos** (p. 1397), **DDS_TopicBuiltinTopicData** (p. 1391), **DDS_PublicationBuiltinTopicData** (p. 1264) and **DDS_SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**publisher_group_data_max_length** (p. 992)
	<<***extension***>> (p. *213*) Maximum length of group data in **DDS_PublisherQos** (p. 1276) and **DDS_PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**subscriber_group_data_max_length** (p. 992)
	<<***extension***>> (p. *213*) Maximum length of group data in **DDS_SubscriberQos** (p. 1367) and **DDS_SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_user_data_max_length** (p. 992)
	<<***extension***>> (p. *213*) Maximum length of user data in **DDS_DataWriterQos** (p. 909) and **DDS_PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_user_data_max_length** (p. 993)

	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataReaderQos** (p. 858) and **DDS_SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partitions** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partition_cumulative_characters** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_code_max_serialized_length** (p. 994)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_serialized_length** (p. 994)
	<<***extension***>> *(p. 213)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_deserialized_length** (p. 996)
	<<***extension***>> *(p. 213)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**deserialized_type_object_dynamic_allocation_threshold** (p. 996)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**serialized_type_object_dynamic_allocation_threshold** (p. 995)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**contentfilter_property_max_length** (p. 997)
	<<***extension***>> *(p. 213)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_seq_max_length** (p. 997)

	<<***extension***>> *(p. 213)* Maximum number of channels that can be specified in **DDS_MultiChannelQos↩ Policy** (p. 1214) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_filter_expression_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 822) in a MultiChannel DataWriter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_list_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_string_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_string_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_string_max_length** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_groups** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum number of **DDS↩ _EndpointGroup_t** (p. 1142) allowable in a **DDS_↩ AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_group_cumulative_characters** (p. 1000)

	<<***extension***>> *(p. 213)* Maximum number of combined role_name characters allowed in all **DDS_EndpointGroup_t** (p. 1142) in a **DDS_AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**transport_info_list_max_length** (p. 1001)
	<<***extension***>> *(p. 213)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1232).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_replacement_kind** (p. 1001)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy::ignored_entity_allocation** (p. 984) are reached.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_allocation** (p. 1001)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_hash_buckets** (p. 1002)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_list_max_length** (p. 1002)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_list_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataReader** (p. 1556).

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**shmem_ref_transfer_mode_max_segments** (p. 1004)
	<<***extension***>> *(p. 213)* Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1619).
DDS_EventQosPolicy (p. 1150)	**initial_count** (p. 1151)
	<<***extension***>> *(p. 213)* The initial number of events.
DDS_EventQosPolicy (p. 1150)	**max_count** (p. 1152)
	<<***extension***>> *(p. 213)* The maximum number of events.
DDS_DatabaseQosPolicy (p. 831)	**initial_records** (p. 833)
	<<***extension***>> *(p. 213)* The initial number of total records.
DDS_DatabaseQosPolicy (p. 831)	**max_skiplist_level** (p. 834)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The maximum level of the skiplist.
DDS_DatabaseQosPolicy (p. 831)	**initial_weak_references** (p. 835)
	<<***extension***>> *(p. 213)* The initial number of weak references.
DDS_DatabaseQosPolicy (p. 831)	**max_weak_references** (p. 834)
	<<***extension***>> *(p. 213)* The maximum number of weak references.
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_size** (p. 1294)
	<<***extension***>> *(p. 213)* The receive buffer size in bytes.
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_alignment** (p. 1295)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_reader_resource_limits** (p. 941)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader_resource_limits** (p. 942)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader_resource_limits** (p. 943)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader_resource_limits** (p. 959)
	<<***extension***>> *(p. 213)* Resource limits for the built-in topic participant configuration reader.

DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_samples** (p. 816)
	<<***extension***>> *(p. 213)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples** (p. 816)
	<<***extension***>> *(p. 213)* Maximum number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_infos** (p. 817)
	<<***extension***>> *(p. 213)* Initial number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_infos** (p. 817)
	<<***extension***>> *(p. 213)* Maximum number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_outstanding_reads** (p. 817)
	<<***extension***>> *(p. 213)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_outstanding_reads** (p. 818)
	<<***extension***>> *(p. 213)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples_per_read** (p. 818)
	<<***extension***>> *(p. 213)* Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The initial number of samples for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples_per_remote_writer** (p. 820)

	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragments_per_sample** (p. 820)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**dynamically_allocate_fragmented_samples** (p. 821)
	<<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_ThreadSettings_t (p. 1385)	**stack_size** (p. 1386)
	The thread stack-size.
DDS_LoggingQosPolicy (p. 1188)	**max_bytes_per_file** (p. 1190)
	<<***extension***>> *(p. 213)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1188)	**max_files** (p. 1191)
	<<***extension***>> *(p. 213)* Specifies the maximum number of files to create before overwritting the previous ones.

7.69 QoS Profile Management

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Basic Settings

DDS_ProfileQosPolicy (p. 1257)	**string_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1257)	**url_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sequence of **URL groups** (p. 392) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1257)	**ignore_user_profile** (p. 1258)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.

DDS_ProfileQosPolicy (p. 1257)	**ignore_environment_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 392).
DDS_ProfileQosPolicy (p. 1257)	**ignore_resource_profile** (p. 1259)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**enable** (p. 1193)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.

Advanced Settings

DDS_MonitoringEventDistributionSettings (p. 1197)	**datawriter_qos_profile_name** (p. 1199)
	*<<**extension**>> (p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes event metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**datawriter_qos_profile_name** (p. 1209)
	*<<**extension**>> (p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**datawriter_qos_profile_name** (p. 1202)
	*<<**extension**>> (p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**participant_qos_profile_name** (p. 1194)
	*<<**extension**>> (p. 213)* The fully qualified name of the profile used to configure the **DDSDomain↩ Participant** (p. 1619) that will be used to distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**dedicated_participant** (p. 1196)
	*<<**extension**>> (p. 213)* Configures the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**publisher_qos_profile_name** (p. 1196)

	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

7.70 Reliability QoS

Reliability related QoS.

Reliability related QoS.

Use these QoS fields to configure the reliable delivery of your application data – this includes those settings that configure the reliability protocol.

See `Reliable Delivery Model`, in the *Core Libraries User's Manual*, for more information about the DDS reliability protocol.

Basic Settings

DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The maximum time a DataWriter can block on a write() call.
DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_↩ KEEP_LAST_HISTORY_QOS** (p. 604)
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeat_period** (p. 1323)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**fast_heartbeat_period** (p. 1323)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**late_joiner_heartbeat_period** (p. 1324)

	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_send_window_size** (p. 1333)
	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_send_window_size** (p. 1333)
	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* Maximum size of send window of unacknowledged samples

Advanced Settings

DDS_AvailabilityQosPolicy (p. 805)	**enable_required_subscriptions** (p. 808)
	<<***extension***>> *(*p. *213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)
DDS_AvailabilityQosPolicy (p. 805)	**max_data_availability_waiting_time** (p. 808)
	<<***extension***>> *(*p. *213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 805)	**max_endpoint_availability_waiting_time** (p. 808)
	<<***extension***>> *(*p. *213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 805)	**required_matched_endpoint_groups** (p. 809)
	<<***extension***>> *(*p. *213)* A sequence of endpoint groups.
DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(*p. *213)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)
	<<***extension***>> *(*p. *213)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1295)	**exact_reliability_kind_match** (p. 1299)
	<<***extension***>> *(*p. *213)* Whether an exact reliability kind match is required for endpoint matching.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_app_ack_response_length** (p. 881)
	<<***extension***>> *(*p. *213)* Maximum length of application-level acknowledgment response data

DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_app_ack_remote_readers** (p. 924)
	<<***extension***>> *(p. 213)* The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataReaderProtocolQosPolicy (p. 843)	**rtps_reliable_reader** (p. 846)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1556). This parameter only has effect if the reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_↩ ReliabilityQosPolicyKind** (p. 632).
DDS_DataReaderProtocolQosPolicy (p. 843)	**disable_positive_acks** (p. 845)
	<<***extension***>> *(p. 213)* Whether the reader sends positive acknowledgements to writers.
DDS_DataWriterProtocolQosPolicy (p. 892)	**push_on_write** (p. 894)
	<<***extension***>> *(p. 213)* Whether to push sample out when write is called.
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_positive_acks** (p. 894)
	<<***extension***>> *(p. 213)* Controls whether or not the writer expects positive acknowledgements from matching readers.
DDS_DataWriterProtocolQosPolicy (p. 892)	**propagate_app_ack_with_no_response** (p. 896)
	<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriter↩ Listener::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.
DDS_DataWriterProtocolQosPolicy (p. 892)	**rtps_reliable_writer** (p. 896)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1589). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_↩ QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader** (p. 941)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader** (p. 942)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.

DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_writer** (p. 947)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE↩ _RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQos↩ PolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader** (p. 947)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_↩ message_reader_reliability_kind** (p. 946) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer** (p. 943)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer** (p. 945)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer** (p. 950)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_reader** (p. 952)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 1359) reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer** (p. 954)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_reader** (p. 955)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.

DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader** (p. 959)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer** (p. 957)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_heartbeat_response_delay** (p. 1315)
	<<***extension***>> *(p. 213)* The minimum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**max_heartbeat_response_delay** (p. 1315)
	<<***extension***>> *(p. 213)* The maximum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**heartbeat_suppression_duration** (p. 1316)
	<<***extension***>> *(p. 213)* The duration a reader ignores consecutively received heartbeats
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**nack_period** (p. 1316)
	<<***extension***>> *(p. 213)* The period at which to send NACKs
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**receive_window_size** (p. 1317)
	<<***extension***>> *(p. 213)* The number of received out-of-order samples a reader can keep at a time
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**round_trip_time** (p. 1317)
	<<***extension***>> *(p. 213)* The duration from sending a NACK to receiving a repair of a sample
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**app_ack_period** (p. 1318)
	<<***extension***>> *(p. 213)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_app_ack_response_keep_duration** (p. 1318)
	<<***extension***>> *(p. 213)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**samples_per_app_ack** (p. 1319)
	<<***extension***>> *(p. 213)* The minimum number of samples acknowledged by one application-level acknowledgment message
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**low_watermark** (p. 1321)

	<<***extension***>> *(*p. *213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**high_watermark** (p. 1322)
	<<***extension***>> *(*p. *213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**virtual_heartbeat_period** (p. 1325)
	<<***extension***>> *(*p. *213)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**samples_per_virtual_heartbeat** (p. 1325)
	<<***extension***>> *(*p. *213)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_heartbeat_retries** (p. 1326)
	<<***extension***>> *(*p. *213)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**inactivate_nonprogressing_readers** (p. 1326)
	<<***extension***>> *(*p. *213)* Whether to treat remote readers as inactive when their NACKs do not progress
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeats_per_max_samples** (p. 1327)
	<<***extension***>> *(*p. *213)* The number of piggyback heartbeats sent per max send window.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_nack_response_delay** (p. 1328)
	<<***extension***>> *(*p. *213)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_nack_response_delay** (p. 1328)
	<<***extension***>> *(*p. *213)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**nack_suppression_duration** (p. 1329)
	<<***extension***>> *(*p. *213)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_bytes_per_nack_response** (p. 1329)

	<<***extension***>> *(p. 213)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1331)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_min_sample_keep_duration** (p. 1330)
	<<***extension***>> *(p. 213)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_max_sample_keep_duration** (p. 1331)
	<<***extension***>> *(p. 213)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_increase_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Controls rate of growth of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_update_period** (p. 1334)
	<<***extension***>> *(p. 213)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_increase_factor** (p. 1335)
	<<***extension***>> *(p. 213)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_decrease_factor** (p. 1336)
	<<***extension***>> *(p. 213)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**enable_multicast_periodic_heartbeat** (p. 1337)
	<<***extension***>> *(p. 213)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**multicast_resend_threshold** (p. 1337)

	<<***extension***>> *(*p. *213)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_repair_piggyback_heartbeat** (p. 1338)
	<<***extension***>> *(*p. *213)* Prevents piggyback heartbeats from being sent with repair samples

7.71 Sample Memory Management QoS

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Basic Settings

DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	<<***basic***>> *(*p. *201)* <<***spec***>> *(*p. *209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	<<***basic***>> *(*p. *201)* <<***spec***>> *(*p. *209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSData↩ Reader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_samples** (p. 1312)
	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)
	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSData↩ Reader** (p. 1556)) will manage.

Advanced Settings

DDS_PersistentStorageSettings (p. 1242)	**writer_instance_cache_allocation** (p. 1246)
	<<***extension***>> *(*p. *213)* Configures the resource limits associated with the instance durable writer history cache.

DDS_PersistentStorageSettings (p. 1242)	**writer_sample_cache_allocation** (p. 1247)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the sample durable writer history cache.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autodispose_unregistered_instances** (p. 1525)
	<<***spec***>> *(p. 209)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDSDataWriter** (p. 1589) unregisters from the instance by means of the unregister operations.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_unregistered_instances_delay** (p. 1525)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_disposed_instances_delay** (p. 1526)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_samples_delay** (p. 1291)

	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_instances_delay** (p. 1291)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_instances_delay** (p. 1292)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_↩ state` becomes **DDS_NOT_ALIVE_NO_WRITERS↩ _INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(p. 213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)

	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_batches** (p. 920)
	<<***extension***>> *(p. 213)* Represents the initial number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_batches** (p. 921)
	<<***extension***>> *(p. 213)* Represents the maximum number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**writer_loaned_sample_allocation** (p. 925)
	<<***extension***>> *(p. 213)* Represents the allocation settings of loaned samples managed by a **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initialize_writer_loaned_sample** (p. 925)
	<<***extension***>> *(p. 213)* Whether or not to initialize loaned samples returned by a **DDSDataWriter** (p. 1589)
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_reader_resource_limits** (p. 941)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader_resource_limits** (p. 942)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader_resource_limits** (p. 943)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader_resource_limits** (p. 959)
	<<***extension***>> *(p. 213)* Resource limits for the built-in topic participant configuration reader.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_samples** (p. 816)
	<<***extension***>> *(p. 213)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples** (p. 816)
	<<***extension***>> *(p. 213)* Maximum number of samples.

7.72 Sample Ordering

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Basic Settings

DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the desired kind of destination order.

Advanced Settings

DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**drop_incomplete_coherent_set** (p. 1253)
	<<***extension***>> *(p. 213)* Indicates whether or not a **DDSDataReader** (p. 1556) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_DestinationOrderQosPolicy (p. 931)	**scope** (p. 933)
	<<***spec***>> *(p. 209)* Specifies the desired scope of the source destination order.
DDS_DestinationOrderQosPolicy (p. 931)	**source_timestamp_tolerance** (p. 933)
	<<***extension***>> *(p. 213)* Allowed tolerance between source timestamps of consecutive samples.

7.73 Security

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

For a complete security solution, you should use the Security Plugins. See the `RTI Security Plugins User's Manual` for more information.

The QoS listed on this page mostly relate to features that are enabled when the Security Plugins are being used.

Basic Settings

DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

Advanced Settings

DDS_TypeSupportQosPolicy (p. 1499)	**cdr_padding_kind** (p. 1500)
	[DEPRECATED] (p. 384) *<<**extension**>> (p. 213)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_WireProtocolQosPolicy (p. 1511)	**compute_crc** (p. 1518)
	*<<**extension**>> (p. 213)* Adds RTPS CRC submessage to every message when this field is set to **DDS_BOOLEAN_TRUE** (p. 513).
DDS_WireProtocolQosPolicy (p. 1511)	**check_crc** (p. 1518)
	*<<**extension**>> (p. 213)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS_BOOLEAN_TRUE** (p. 513).
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer** (p. 954)
	*<<**extension**>> (p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer_publish_mode** (p. 955)
	*<<**extension**>> (p. 213)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_reader** (p. 955)
	*<<**extension**>> (p. 213)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DataTags (p. 889)	**tags** (p. 889)
	*<<**spec**>> (p. 209)* Sequence of data tags.

7.74 Throughput

Use these QoS fields to configure features which may be helpful to increase throughput.

Use these QoS fields to configure features which may be helpful to increase throughput.

Basic Settings

DDS_BatchQosPolicy (p. 810)	**enable** (p. 810)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 810)	**max_data_bytes** (p. 811)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_samples** (p. 811)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum number of samples in a batch.

Advanced Settings

DDS_BatchQosPolicy (p. 810)	**max_flush_delay** (p. 812)
	<<***extension***>> *(p. 213)* The maximum flush delay.
DDS_BatchQosPolicy (p. 810)	**source_timestamp_resolution** (p. 812)
	<<***extension***>> *(p. 213)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 810)	**thread_safe_write** (p. 813)
	<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.

7.75 Transports

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Basic Settings

DDS_TransportBuiltinQosPolicy (p. 1408)	**mask** (p. 1408)
	*<<**basic**>>* (p. *201*) *<<**extension**>>* (p. *213*) Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.
DDS_TransportMulticastQosPolicy (p. 1415)	**value** (p. 1416)
	*<<**basic**>>* (p. *201*) *<<**extension**>>* (p. *213*) A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	*<<**basic**>>* (p. *201*) *<<**extension**>>* (p. *213*) Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)
	*<<**basic**>>* (p. *201*) *<<**extension**>>* (p. *213*) Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the DomainParticipant.
DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	*<<**basic**>>* (p. *201*) *<<**extension**>>* (p. *213*) Whether to accept a new participant that is not in the initial peers list.

Advanced Settings

DDS_TransportPriorityQosPolicy (p. 1419)	**value** (p. 1421)
	*<<**spec**>>* (p. *209*) This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_TransportSelectionQosPolicy (p. 1421)	**enabled_transports** (p. 1422)
	*<<**extension**>>* (p. *213*) A sequence of transport aliases that specifies the transport instances available for use by the entity.
DDS_TransportUnicastQosPolicy (p. 1422)	**value** (p. 1424)
	*<<**extension**>>* (p. *213*) A sequence of unicast communication settings.
DDS_TransportMulticastMappingQosPolicy (p. 1413)	**value** (p. 1415)
	*<<**extension**>>* (p. *213*) A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 1415)	**kind** (p. 1416)
	*<<**extension**>>* (p. *213*) A value that specifies a way to determine how to obtain the multicast address.

DDS_DiscoveryQosPolicy (p. 960)	**enabled_transports** (p. 961)
	<<***extension***>> *(p. 213)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 960)	**metatraffic_transport_priority** (p. 963)
	<<***extension***>> *(p. 213)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**transport_info_list_max_length** (p. 1001)
	<<***extension***>> *(p. 213)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1232).
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_assert_period** (p. 952)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_change_detection_period** (p. 953)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**dns_tracker_polling_period** (p. 956)
	<<***extension***>> *(p. 213)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**enable_multicast_periodic_heartbeat** (p. 1337)
	<<***extension***>> *(p. 213)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**multicast_resend_threshold** (p. 1337)
	<<***extension***>> *(p. 213)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_ChannelSettings_t (p. 822)	**multicast_settings** (p. 822)
	<<***extension***>> *(p. 213)* A sequence of **DDS_↩ TransportMulticastSettings_t** (p. 1417) used to configure the multicast addresses associated with a channel.

DDS_ChannelSettings_t (p. 822)	**priority** (p. 823)
	<<***extension***>> *(p. 213)* Publication priority

7.76 Topic Queries

Use these QoS fields to configure the topic query feature.

Use these QoS fields to configure the topic query feature.

See `Querying Data`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

DDS_TopicQueryDispatchQosPolicy (p. 1404)	**publication_period** (p. 1405)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sets the periodic interval at which samples are published.

Advanced Settings

DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_topic_query_publication** (p. 801)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**topic_query_publication_thread** (p. 802)
	<<***extension***>> *(p. 213)* Settings of the **DDSTopicQuery** (p. 1895) publication thread.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The initial number of TopicQueries allocated by a **DDSDataReader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The maximum number of active TopicQueries that a **DDSDataReader** (p. 1556) can create.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the initial number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_active_topic_queries** (p. 924)

	<<***extension***>> *(p. 213)* Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_allocation** (p. 1001)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_hash_buckets** (p. 1002)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote TopicQueries.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**enable** (p. 1405)
	<<***extension***>> *(p. 213)* Allows this writer to dispatch TopicQueries
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**samples_per_period** (p. 1405)
	<<***extension***>> *(p. 213)* Sets the maximum number of samples to publish in each publication_period.

7.77 Type System

Use these QoS fields to configure aspects of the type system.

Use these QoS fields to configure aspects of the type system.

These settings include how types are sent during discovery, what criteria is used when types should be matched, and how data should be serialized.

Advanced Settings

DDS_DataRepresentationQosPolicy (p. 886)	**value** (p. 888)
	<<***spec***>> *(p. 209)* Sequence of representation identifiers.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**kind** (p. 1494)
	<<***spec***>> *(p. 209)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_sequence_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether sequence bounds are taken into consideration for type assignability.

DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_string_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_member_names** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**prevent_type_widening** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**force_type_validation** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1589) and a **DDSData↩ Reader** (p. 1556).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_enum_literal_names** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether enumeration constant names are taken into consideration for type assignability.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_code_max_serialized_length** (p. 994)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_serialized_length** (p. 994)
	<<***extension***>> *(p. 213)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_deserialized_length** (p. 996)
	<<***extension***>> *(p. 213)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**deserialized_type_object_dynamic_allocation_↩ threshold** (p. 996)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**serialized_type_object_dynamic_allocation_threshold** (p. 995)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
DDS_DiscoveryConfigQosPolicy (p. 934)	**endpoint_type_object_lb_serialization_threshold** (p. 956)
	<<***extension***>> *(p. 213)* Controls when/if the TypeObject v1 is compressed when propagated in Simple Endpoint Discovery.

7.78 QoS Mutability

Some QoS are mutable after an entity is enabled, and others are not.

Modules

- **Immutable QoS**

  This page lists all QoS that are immutable after an entity has been enabled.
- **Mutable QoS**

  This page lists all QoS that are always mutable.

7.78.1 Detailed Description

Some QoS are mutable after an entity is enabled, and others are not.

7.79 Immutable QoS

This page lists all QoS that are immutable after an entity has been enabled.

This page lists all QoS that are immutable after an entity has been enabled.

QoS fall into one of three mutability categories:

- Always mutable, wheter an entity is enabled or not (see **Mutable QoS** (p. 369)).
- Immutable after entity creation.
- *Mutable* after creation but *immutable* after an entity is enabled.

The QoS that fall into the second two categories are listed on this page.

Changeable (p. 556)

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Structure that contains the compression settings.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.
DDS_LivelinessQosPolicy (p. 1180)	**assertions_per_lease_duration** (p. 1183)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of assertions a **DDSDataWriter** (p. 1589) will send during a its **DDS_LivelinessQosPolicy::lease_duration** (p. 1182).
DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the desired kind of destination order.
DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)

	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604)
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum samples the middleware can store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_instances** (p. 1311)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Represents the maximum number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_samples** (p. 1312)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Represents the initial samples the middleware will store for any one **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)).
DDS_ResourceLimitsQosPolicy (p. 1308)	**initial_instances** (p. 1312)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Represents the initial number of instances a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) will manage.
DDS_PublishModeQosPolicy (p. 1279)	**kind** (p. 1281)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Publishing mode
DDS_WireProtocolQosPolicy (p. 1511)	**participant_id** (p. 1514)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* A value used to distinguish among different participants belonging to the same domain on the same host.
DDS_TransportBuiltinQosPolicy (p. 1408)	**mask** (p. 1408)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the built-in transports that are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.
DDS_TransportMulticastQosPolicy (p. 1415)	**value** (p. 1416)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 960)	**initial_peers** (p. 962)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the DomainParticipant.
DDS_DiscoveryQosPolicy (p. 960)	**accept_unknown_peers** (p. 963)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Whether to accept a new participant that is not in the initial peers list.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The liveliness lease duration for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_assert_period** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period to assert liveliness for the participant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_announcement_period** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
DDS_DiscoveryConfigQosPolicy (p. 934)	**initial_participant_announcements** (p. 939)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of initial announcements sent when a participant is first enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**new_remote_participant_announcements** (p. 939)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of participant announcements sent when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**min_initial_participant_announcement_period** (p. 940)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_initial_participant_announcement_period** (p. 940)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeat_period** (p. 1323)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period at which to send heartbeats.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**fast_heartbeat_period** (p. 1323)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**late_joiner_heartbeat_period** (p. 1324)

	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_send_window_size** (p. 1333)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Minimum size of send window of unacknowledged samples
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_send_window_size** (p. 1333)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Maximum size of send window of unacknowledged samples
DDS_EntityNameQosPolicy (p. 1147)	**name** (p. 1148)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The name of the entity.
DDS_BatchQosPolicy (p. 810)	**enable** (p. 810)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies whether or not batching is enabled.
DDS_BatchQosPolicy (p. 810)	**max_data_bytes** (p. 811)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum cumulative length of all serialized samples in a batch.
DDS_BatchQosPolicy (p. 810)	**max_samples** (p. 811)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum number of samples in a batch.
DDS_ProfileQosPolicy (p. 1257)	**string_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of strings containing a XML document to load.
DDS_ProfileQosPolicy (p. 1257)	**url_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **URL groups** (p. 392) containing a set of XML documents to load.
DDS_ProfileQosPolicy (p. 1257)	**ignore_user_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
DDS_ProfileQosPolicy (p. 1257)	**ignore_environment_profile** (p. 1258)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 392).
DDS_ProfileQosPolicy (p. 1257)	**ignore_resource_profile** (p. 1259)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Ignores the file NDDS_QOS_PROFILES.xml.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**publication_period** (p. 1405)

	<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* Sets the periodic interval at which samples are published.

Advanced Settings

DDS_AvailabilityQosPolicy (p. 805)	**enable_required_subscriptions** (p. 808)
	<<***extension***>> *(*p. *213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)
DDS_DurabilityQosPolicy (p. 1005)	**direct_communication** (p. 1007)
	<<***extension***>> *(*p. *213)* Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1556) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1589)
DDS_DurabilityQosPolicy (p. 1005)	**storage_settings** (p. 1008)
	<<***extension***>> *(*p. *213)* Configures durable writer history and durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**enable** (p. 1244)
	<<***extension***>> *(*p. *213)* Enables durable writer history in a **DDSDataWriter** (p. 1589) and durable reader state in a **DDSDataReader** (p. 1556).
DDS_PersistentStorageSettings (p. 1242)	**file_name** (p. 1244)
	<<***extension***>> *(*p. *213)* The file name where the durable writer history or durable reader state will be stored.
DDS_PersistentStorageSettings (p. 1242)	**trace_file_name** (p. 1244)
	<<***extension***>> *(*p. *213)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
DDS_PersistentStorageSettings (p. 1242)	**journal_kind** (p. 1245)
	<<***extension***>> *(*p. *213)* Sets the journal mode of the persistent storage.
DDS_PersistentStorageSettings (p. 1242)	**synchronization_kind** (p. 1245)
	<<***extension***>> *(*p. *213)* Sets the level of synchronization with the physical disk.
DDS_PersistentStorageSettings (p. 1242)	**vacuum** (p. 1245)
	<<***extension***>> *(*p. *213)* Sets the auto-vacuum status of the storage.
DDS_PersistentStorageSettings (p. 1242)	**restore** (p. 1246)

	<<***extension***>> *(p. 213)* Indicates if the persisted writer history or reader state must be restored.
DDS_PersistentStorageSettings (p. 1242)	**writer_instance_cache_allocation** (p. 1246)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the instance durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_sample_cache_allocation** (p. 1247)
	<<***extension***>> *(p. 213)* Configures the resource limits associated with the sample durable writer history cache.
DDS_PersistentStorageSettings (p. 1242)	**writer_memory_state** (p. 1248)
	<<***extension***>> *(p. 213)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
DDS_PersistentStorageSettings (p. 1242)	**reader_checkpoint_frequency** (p. 1248)
	<<***extension***>> *(p. 213)* Controls how often the reader state is stored into the database.
DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_↩ DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_CompressionSettings_t (p. 826)	**compression_ids** (p. 826)
	<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.

DDS_CompressionSettings_t (p. 826)	**writer_compression_level** (p. 827)
	<<***extension***>> *(p. 213)* The level of compression to use when compressing data.
DDS_CompressionSettings_t (p. 826)	**writer_compression_threshold** (p. 827)
	<<***extension***>> *(p. 213)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
DDS_DataRepresentationQosPolicy (p. 886)	**value** (p. 888)
	<<***spec***>> *(p. 209)* Sequence of representation identifiers.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**drop_incomplete_coherent_set** (p. 1253)
	<<***extension***>> *(p. 213)* Indicates whether or not a **DDSDataReader** (p. 1556) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(p. 213)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)
	<<***extension***>> *(p. 213)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1295)	**exact_reliability_kind_match** (p. 1299)
	<<***extension***>> *(p. 213)* Whether an exact reliability kind match is required for endpoint matching.
DDS_DestinationOrderQosPolicy (p. 931)	**scope** (p. 933)

	<<***spec***>> *(p. 209)* Specifies the desired scope of the source destination order.
DDS_DestinationOrderQosPolicy (p. 931)	**source_timestamp_tolerance** (p. 933)
	<<***extension***>> *(p. 213)* Allowed tolerance between source timestamps of consecutive samples.
DDS_ResourceLimitsQosPolicy (p. 1308)	**max_samples_per_instance** (p. 1311)
	<<***spec***>> *(p. 209)* Represents the maximum number of samples of any one instance a **DDSDataWriter** (p. 1589) (or **DDSDataReader** (p. 1556)) can manage.
DDS_ResourceLimitsQosPolicy (p. 1308)	**instance_hash_buckets** (p. 1313)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for instances.
DDS_TransportPriorityQosPolicy (p. 1419)	**value** (p. 1421)
	<<***spec***>> *(p. 209)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
DDS_TypeSupportQosPolicy (p. 1499)	**plugin_data** (p. 1500)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Value to pass into the type plugin's de-/serialization function
DDS_TypeSupportQosPolicy (p. 1499)	**cdr_padding_kind** (p. 1500)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_PublishModeQosPolicy (p. 1279)	**flow_controller_name** (p. 1281)
	<<***extension***>> *(p. 213)* Name of the associated flow controller
DDS_PublishModeQosPolicy (p. 1279)	**priority** (p. 1282)
	<<***extension***>> *(p. 213)* Publication priority
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_write** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**thread** (p. 800)
	<<***extension***>> *(p. 213)* Settings of the publishing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_batch** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**asynchronous_batch_thread** (p. 801)

	<<***extension***>> *(p. 213)* Settings of the batch flushing thread.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_topic_query_publication** (p. 801)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable topic query publication.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**topic_query_publication_thread** (p. 802)
	<<***extension***>> *(p. 213)* Settings of the **DDSTopic↩ Query** (p. 1895) publication thread.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autodispose_unregistered_instances** (p. 1525)
	<<***spec***>> *(p. 209)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **DDSDataWriter** (p. 1589) unregisters from the instance by means of the unregister operations.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_unregistered_instances_delay** (p. 1525)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has unregistered the instance.
DDS_WriterDataLifecycleQosPolicy (p. 1524)	**autopurge_disposed_instances_delay** (p. 1526)
	<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataWriter** (p. 1589) will maintain information regarding an instance once it has disposed the instance.
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_samples_delay** (p. 1291)
	<<***spec***>> *(p. 209)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain samples for an instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 166).
DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_disposed_instances_delay** (p. 1291)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166) and there are no samples for the instance in the DataReader queue.

DDS_ReaderDataLifecycleQosPolicy (p. 1289)	**autopurge_nowriter_instances_delay** (p. 1292)
	<<***extension***>> *(p. 213)* Minimum duration for which the **DDSDataReader** (p. 1556) will maintain information about a received instance once its `instance_state` becomes **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166) and there are no samples for the instance in the DataReader queue.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**kind** (p. 1494)
	<<***spec***>> *(p. 209)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_sequence_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether sequence bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_string_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_member_names** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**prevent_type_widening** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**force_type_validation** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1589) and a **DDSDataReader** (p. 1556).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_enum_literal_names** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether enumeration constant names are taken into consideration for type assignability.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_host_id** (p. 1515)
	<<***extension***>> *(p. 213)* The RTPS Host ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_app_id** (p. 1516)

	<<***extension***>> *(*p. *213)* The RTPS App ID of the domain participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_instance_id** (p. 1516)
	<<***extension***>> *(*p. *213)* The RTPS Instance ID of the **DDSDomainParticipant** (p. 1619).
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_well_known_ports** (p. 1517)
	<<***extension***>> *(*p. *213)* Configures the RTPS well-known port mappings.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_reserved_port_mask** (p. 1517)
	<<***extension***>> *(*p. *213)* Specifies which well-known ports to reserve when enabling the participant.
DDS_WireProtocolQosPolicy (p. 1511)	**rtps_auto_id_kind** (p. 1518)
	<<***extension***>> *(*p. *213)* Kind of auto mechanism used to calculate the GUID prefix.
DDS_WireProtocolQosPolicy (p. 1511)	**compute_crc** (p. 1518)
	<<***extension***>> *(*p. *213)* Adds RTPS CRC submessage to every message when this field is set to **DDS_↩ BOOLEAN_TRUE** (p. 513).
DDS_WireProtocolQosPolicy (p. 1511)	**check_crc** (p. 1518)
	<<***extension***>> *(*p. *213)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to **DDS_BOOLEAN_TRUE** (p. 513).
DDS_TransportSelectionQosPolicy (p. 1421)	**enabled_transports** (p. 1422)
	<<***extension***>> *(*p. *213)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
DDS_TransportUnicastQosPolicy (p. 1422)	**value** (p. 1424)
	<<***extension***>> *(*p. *213)* A sequence of unicast communication settings.
DDS_TransportMulticastMappingQosPolicy (p. 1413)	**value** (p. 1415)
	<<***extension***>> *(*p. *213)* A sequence of multicast communication mappings.
DDS_TransportMulticastQosPolicy (p. 1415)	**kind** (p. 1416)
	<<***extension***>> *(*p. *213)* A value that specifies a way to determine how to obtain the multicast address.
DDS_DiscoveryQosPolicy (p. 960)	**enabled_transports** (p. 961)

	<<***extension***>> *(p. 213)* The transports available for use by the Discovery mechanism.
DDS_DiscoveryQosPolicy (p. 960)	**metatraffic_transport_priority** (p. 963)
	<<***extension***>> *(p. 213)* The transport priority to use for the Discovery meta-traffic.
DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_instance** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_remote_writer** (p. 870)
	<<***extension***>> *(p. 213)* The maximum number of out-of-order samples from a given remote **DDSData↩ Writer** (p. 1589) that a **DDSDataReader** (p. 1556) may store when maintaining a reliable connection to the **DDSDataWriter** (p. 1589).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_infos** (p. 871)
	<<***extension***>> *(p. 213)* The maximum number of info units that a **DDSDataReader** (p. 1556) can use to store **DDS_SampleInfo** (p. 1344).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers** (p. 871)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_writers_per_instance** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_infos** (p. 872)
	<<***extension***>> *(p. 213)* The initial number of info units that a **DDSDataReader** (p. 1556) can have, which are used to store **DDS_SampleInfo** (p. 1344).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_outstanding_reads** (p. 873)

	<<***extension***>> *(p. 213)* The initial number of outstanding calls to read/take (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_outstanding_reads** (p. 873)
	<<***extension***>> *(p. 213)* The maximum number of outstanding read/take calls (or one of their variants) on the same **DDSDataReader** (p. 1556) for which memory has not been returned by calling **FooDataReader::return_loan** (p. 1940).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_samples_per_read** (p. 873)
	<<***extension***>> *(p. 213)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader::read** (p. 1919) or **FooDataReader::take** (p. 1920). If more data exists in the middleware, the application will need to issue multiple read/take calls.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**disable_fragmentation_support** (p. 874)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples** (p. 874)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_fragmented_samples** (p. 875)
	<<***extension***>> *(p. 213)* The initial number of samples for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragmented_samples_per_remote_writer** (p. 875)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a **DDSDataReader** (p. 1556) may store fragments.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_fragments_per_sample** (p. 876)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**dynamically_allocate_fragmented_samples** (p. 876)
	<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_total_instances** (p. 877)
	<<***extension***>> *(p. 213)* Maximum number of instances for which a DataReader will keep state.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers** (p. 878)
	<<***extension***>> *(p. 213)* The maximum number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers** (p. 878)
	<<***extension***>> *(p. 213)* The initial number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The maximum number of virtual remote writers that can be associated with an instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_remote_virtual_writers_per_instance** (p. 879)
	<<***extension***>> *(p. 213)* The initial number of virtual remote writers per instance.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_remote_writers_per_sample** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of remote writers allowed to write the same sample.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_query_condition_filters** (p. 880)
	<<***extension***>> *(p. 213)* The maximum number of query condition filters a reader is allowed.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_app_ack_response_length** (p. 881)
	<<***extension***>> *(p. 213)* Maximum length of application-level acknowledgment response data
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**keep_minimum_state_for_instances** (p. 881)
	<<***extension***>> *(p. 213)* Whether or not keep a minimum instance state for up to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 877).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**initial_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The initial number of Topic↩ Queries allocated by a **DDSDataReader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**max_topic_queries** (p. 882)
	<<***extension***>> *(p. 213)* The maximum number of active TopicQueries that a **DDSDataReader** (p. 1556) can create.

DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**shmem_ref_transfer_mode_attached_segment_↩ allocation** (p. 883)
	*<<**extension**>>* *(p. 213)* Allocation resource for the shared memory segments attached by the **DDSData↩ Reader** (p. 1556).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**instance_replacement** (p. 883)
	*<<**extension**>>* *(p. 213)* Sets the kind of instances allowed to be replaced for each instance state (**DDS↩ _InstanceStateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_↩ instances** (p. 1311).
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**autopurge_remote_not_alive_writer_delay** (p. 884)
	*<<**extension**>>* *(p. 213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**lazily_allocate_batch_resources** (p. 885)
	*<<**extension**>>* *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) *<<**extension**>>* *(p. 213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) *<<**extension**>>* *(p. 213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_reader_filters** (p. 920)
	*<<**extension**>>* *(p. 213)* The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1589) will perform content-based filtering.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_batches** (p. 920)
	*<<**extension**>>* *(p. 213)* Represents the initial number of batches a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_batches** (p. 921)
	*<<**extension**>>* *(p. 213)* Represents the maximum number of batches a **DDSDataWriter** (p. 1589) will manage.

DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**instance_replacement** (p. 921)
	<<***extension***>> *(p. 213)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**replace_empty_instances** (p. 922)
	<<***extension***>> *(p. 213)* Whether or not to replace empty instances during instance replacement
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**autoregister_instances** (p. 922)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Whether or not to automatically register new instances
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_virtual_writers** (p. 923)
	<<***extension***>> *(p. 213)* The initial number of virtual writers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_remote_readers** (p. 926)
	<<***extension***>> *(p. 213)* Controls the initial memory allocation for the matched remote readers of a **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_remote_readers** (p. 923)
	<<***extension***>> *(p. 213)* The maximum number of remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_app_ack_remote_readers** (p. 924)
	<<***extension***>> *(p. 213)* The maximum number of application-level acknowledging remote readers supported by a **DDSDataWriter** (p. 1589)
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the initial number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_active_topic_queries** (p. 924)
	<<***extension***>> *(p. 213)* Represents the maximum number of active topic queries a **DDSDataWriter** (p. 1589) will manage.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**writer_loaned_sample_allocation** (p. 925)
	<<***extension***>> *(p. 213)* Represents the allocation settings of loaned samples managed by a **DDSData↩ Writer** (p. 1589).

DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initialize_writer_loaned_sample** (p. 925)
	<<***extension***>> *(p. 213)* Whether or not to initialize loaned samples returned by a **DDSDataWriter** (p. 1589)
DDS_DataWriterTransferModeQosPolicy (p. 927)	**shmem_ref_settings** (p. 928)
	<<***extension***>> *(p. 213)* Settings related to transferring data using shared memory references.
DDS_DataReaderProtocolQosPolicy (p. 843)	**virtual_guid** (p. 844)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataReaderProtocolQosPolicy (p. 843)	**rtps_object_id** (p. 844)
	<<***extension***>> *(p. 213)* The RTPS Object ID.
DDS_DataReaderProtocolQosPolicy (p. 843)	**rtps_reliable_reader** (p. 846)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1556). This parameter only has effect if the reader is configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_↩ ReliabilityQosPolicyKind** (p. 632).
DDS_DataReaderProtocolQosPolicy (p. 843)	**expects_inline_qos** (p. 844)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Specifies whether this DataReader expects inline QoS with every sample.
DDS_DataReaderProtocolQosPolicy (p. 843)	**disable_positive_acks** (p. 845)
	<<***extension***>> *(p. 213)* Whether the reader sends positive acknowledgements to writers.
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_dispose_of_unregistered_instances** (p. 845)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 166) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 166) state.
DDS_DataReaderProtocolQosPolicy (p. 843)	**propagate_unregister_of_disposed_instances** (p. 846)
	<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO↩ _WRITERS_INSTANCE_STATE** (p. 166) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE↩ _STATE** (p. 166).
DDS_DataWriterProtocolQosPolicy (p. 892)	**virtual_guid** (p. 893)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).

DDS_DataWriterProtocolQosPolicy (p. 892)	**rtps_object_id** (p. 893)
	<<***extension***>> *(p. 213)* The RTPS Object ID.
DDS_DataWriterProtocolQosPolicy (p. 892)	**push_on_write** (p. 894)
	<<***extension***>> *(p. 213)* Whether to push sample out when write is called.
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_positive_acks** (p. 894)
	<<***extension***>> *(p. 213)* Controls whether or not the writer expects positive acknowledgements from matching readers.
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_inline_keyhash** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not a keyhash is propagated on the wire with each sample.
DDS_DataWriterProtocolQosPolicy (p. 892)	**serialize_key_with_dispose** (p. 895)
	<<***extension***>> *(p. 213)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
DDS_DataWriterProtocolQosPolicy (p. 892)	**propagate_app_ack_with_no_response** (p. 896)
	<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriter**↩ **Listener::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.
DDS_DataWriterProtocolQosPolicy (p. 892)	**rtps_reliable_writer** (p. 896)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1589). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_**↩ **QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).
DDS_DataWriterProtocolQosPolicy (p. 892)	**initial_virtual_sequence_number** (p. 897)
	<<***extension***>> *(p. 213)* Determines, the initial virtual sequence number for this DataWriter.
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**max_objects_per_thread** (p. 1383)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1694).
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**initial_objects_per_thread** (p. 1383)
	<<***extension***>> *(p. 213)* The number of objects per thread for a **DDSDomainParticipantFactory** (p. 1694) for which infrastructure will initially be allocated.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_allocation** (p. 981)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_allocation** (p. 982)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_allocation** (p. 983)
	<<***extension***>> *(p. 213)* Allocation settings applied to matching local reader and remote/local writer pairs.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_allocation** (p. 984)
	<<***extension***>> *(p. 213)* Allocation settings applied to content filter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**read_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to read condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**query_condition_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to query condition pool.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**outstanding_asynchronous_sample_allocation** (p. 985)
	<<***extension***>> *(p. 213)* Allocation settings applied to the maximum number of samples (from all **DDSData↩ Writer** (p. 1589)) waiting to be asynchronously written.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_allocation** (p. 986)
	<<***extension***>> *(p. 213)* Allocation settings applied to flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_hash_buckets** (p. 986)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_hash_buckets** (p. 987)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for local Publisher.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> (p. *213*) Number of hash buckets for content filters.

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_hash_buckets** (p. 990)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_gather_destinations** (p. 991)
	<<***extension***>> *(p. 213)* Maximum number of destinations per RTI Connext send.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_user_data_max_length** (p. 991)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DomainParticipantQos** (p. 971) and **DDS_↩ ParticipantBuiltinTopicData** (p. 1229)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**topic_data_max_length** (p. 991)
	<<***extension***>> *(p. 213)* Maximum length of topic data in **DDS_TopicQos** (p. 1397), **DDS_TopicBuiltin↩ TopicData** (p. 1391), **DDS_PublicationBuiltinTopic↩ Data** (p. 1264) and **DDS_SubscriptionBuiltinTopic↩ Data** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**publisher_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_PublisherQos** (p. 1276) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**subscriber_group_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of group data in **DDS_SubscriberQos** (p. 1367) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_user_data_max_length** (p. 992)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataWriterQos** (p. 909) and **DDS_↩ PublicationBuiltinTopicData** (p. 1264)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_user_data_max_length** (p. 993)
	<<***extension***>> *(p. 213)* Maximum length of user data in **DDS_DataReaderQos** (p. 858) and **DDS_↩ SubscriptionBuiltinTopicData** (p. 1370)
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partitions** (p. 993)

	<<***extension***>> *(p. 213)* Maximum number of partition name strings allowable in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_partition_cumulative_characters** (p. 993)
	<<***extension***>> *(p. 213)* Maximum number of combined characters allowable in all partition names in a **DDS_PartitionQosPolicy** (p. 1240).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_code_max_serialized_length** (p. 994)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_serialized_length** (p. 994)
	<<***extension***>> *(p. 213)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_object_max_deserialized_length** (p. 996)
	<<***extension***>> *(p. 213)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**deserialized_type_object_dynamic_allocation_threshold** (p. 996)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**serialized_type_object_dynamic_allocation_threshold** (p. 995)
	<<***extension***>> *(p. 213)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**contentfilter_property_max_length** (p. 997)
	<<***extension***>> *(p. 213)* This field is the maximum length of all data related to a Content-filtered topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_seq_max_length** (p. 997)
	<<***extension***>> *(p. 213)* Maximum number of channels that can be specified in **DDS_MultiChannelQosPolicy** (p. 1214) for MultiChannel DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**channel_filter_expression_max_length** (p. 998)

	<<***extension***>> *(p. 213)* Maximum length of a channel **DDS_ChannelSettings_t::filter_expression** (p. 822) in a MultiChannel DataWriter.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_list_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**participant_property_string_max_length** (p. 998)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with the **DDSDomainParticipant** (p. 1619).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_property_string_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_list_max_length** (p. 999)
	<<***extension***>> *(p. 213)* Maximum number of properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_property_string_max_length** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum string length of the properties associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_groups** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum number of **DDS_EndpointGroup_t** (p. 1142) allowable in a **DDS_AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**max_endpoint_group_cumulative_characters** (p. 1000)
	<<***extension***>> *(p. 213)* Maximum number of combined role_name characters allowed in all **DDS_EndpointGroup_t** (p. 1142) in a **DDS_AvailabilityQosPolicy** (p. 805).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**transport_info_list_max_length** (p. 1001)

	<<***extension***>> *(p. 213)* Maximum number of installed transports to send and receive information about in **DDS_ParticipantBuiltinTopicData::transport_info** (p. 1232).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_replacement_kind** (p. 1001)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy**↩ **::ignored_entity_allocation** (p. 984) are reached.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_allocation** (p. 1001)
	<<***extension***>> *(p. 213)* Allocation settings applied to remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_hash_buckets** (p. 1002)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote TopicQueries.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_list_max_length** (p. 1002)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**writer_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataWriter** (p. 1589).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_list_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum number of data tags associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**reader_data_tag_string_max_length** (p. 1003)
	<<***extension***>> *(p. 213)* Maximum string length of the data tags associated with a **DDSDataReader** (p. 1556).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**shmem_ref_transfer_mode_max_segments** (p. 1004)
	<<***extension***>> *(p. 213)* Maximum number of segments created by all DataWriters belonging to a **DDSDomainParticipant** (p. 1619).
DDS_EventQosPolicy (p. 1150)	**thread** (p. 1151)
	<<***extension***>> *(p. 213)* Event thread QoS.

DDS_EventQosPolicy (p. 1150)	**initial_count** (p. 1151)
	<<***extension***>> *(p. 213)* The initial number of events.
DDS_EventQosPolicy (p. 1150)	**max_count** (p. 1152)
	<<***extension***>> *(p. 213)* The maximum number of events.
DDS_DatabaseQosPolicy (p. 831)	**thread** (p. 832)
	<<***extension***>> *(p. 213)* Database thread settings.
DDS_DatabaseQosPolicy (p. 831)	**shutdown_timeout** (p. 832)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The maximum wait time during a shutdown.
DDS_DatabaseQosPolicy (p. 831)	**cleanup_period** (p. 833)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The period at which the database thread wakes up to remove deleted records.
DDS_DatabaseQosPolicy (p. 831)	**shutdown_cleanup_period** (p. 833)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The clean-up period used during database shut-down.
DDS_DatabaseQosPolicy (p. 831)	**initial_records** (p. 833)
	<<***extension***>> *(p. 213)* The initial number of total records.
DDS_DatabaseQosPolicy (p. 831)	**max_skiplist_level** (p. 834)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* The maximum level of the skiplist.
DDS_DatabaseQosPolicy (p. 831)	**initial_weak_references** (p. 835)
	<<***extension***>> *(p. 213)* The initial number of weak references.
DDS_DatabaseQosPolicy (p. 831)	**max_weak_references** (p. 834)
	<<***extension***>> *(p. 213)* The maximum number of weak references.
DDS_ReceiverPoolQosPolicy (p. 1293)	**thread** (p. 1294)
	<<***extension***>> *(p. 213)* Receiver pool thread(s).
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_size** (p. 1294)
	<<***extension***>> *(p. 213)* The receive buffer size in bytes.
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_alignment** (p. 1295)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 934)	**remote_participant_purge_kind** (p. 938)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_liveliness_loss_detection_period** (p. 938)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_reader_resource_limits** (p. 941)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader** (p. 941)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_reader_resource_limits** (p. 942)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader** (p. 942)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_reader_resource_limits** (p. 943)
	<<***extension***>> *(p. 213)* Resource limits.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_writer** (p. 947)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **DDS_RELIABLE↩ _RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQos↩ PolicyKind** (p. 632).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_publish_mode** (p. 948)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_publish_mode** (p. 949)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in subscription writer.

DDS_DiscoveryConfigQosPolicy (p. 934)	**asynchronous_publisher** (p. 949)
	<<***extension***>> *(p. 213)* Asynchronous publishing settings for the discovery **DDSPublisher** (p. 1818) and all entities that are created by it.
DDS_DiscoveryConfigQosPolicy (p. 934)	**default_domain_announcement_period** (p. 949)
	<<***extension***>> *(p. 213)* The period to announce a participant to the default domain 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**ignore_default_domain_announcements** (p. 950)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Reliability policy for a built-in participant message reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader** (p. 947)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **DDS_DiscoveryConfigQosPolicy::participant_message_reader_reliability_kind** (p. 946) is set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633).
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer** (p. 943)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**publication_writer_data_lifecycle** (p. 944)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in publication writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer** (p. 945)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**subscription_writer_data_lifecycle** (p. 945)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in subscription writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**builtin_discovery_plugins** (p. 946)
	<<***extension***>> *(p. 213)* Mask of built-in discovery plugin kinds.

DDS_DiscoveryConfigQosPolicy (p. 934)	**enabled_builtin_channels** (p. 946)
	<<***extension***>> *(p. 213)* The mask specifying which built-in channels should be enabled.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer** (p. 950)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_data_lifecycle** (p. 951)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in **DDS_ServiceRequest** (p. 1359) writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_writer_publish_mode** (p. 951)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in service request writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**service_request_reader** (p. 952)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for a built-in **DDS_ServiceRequest** (p. 1359) reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_assert_period** (p. 952)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**locator_reachability_change_detection_period** (p. 953)
	<<***extension***>> *(p. 213)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer** (p. 954)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_writer_publish_mode** (p. 955)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in secure volatile writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**secure_volatile_reader** (p. 955)
	<<***extension***>> *(p. 213)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**endpoint_type_object_lb_serialization_threshold** (p. 956)

	<<***extension***>> *(p. 213)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
DDS_DiscoveryConfigQosPolicy (p. 934)	**dns_tracker_polling_period** (p. 956)
	<<***extension***>> *(p. 213)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader** (p. 959)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_reader_resource_limits** (p. 959)
	<<***extension***>> *(p. 213)* Resource limits for the built-in topic participant configuration reader.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_publish_mode** (p. 957)
	<<***extension***>> *(p. 213)* Publish mode policy for the built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer** (p. 957)
	<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_configuration_writer_data_lifecycle** (p. 958)
	<<***extension***>> *(p. 213)* Writer data lifecycle settings for a built-in participant configuration writer.
DDS_DiscoveryConfigQosPolicy (p. 934)	**request_types_filter** (p. 959)
	<<***extension***>> *(p. 213)* Topic name pattern for requesting all types via Type Lookup Service.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_heartbeat_response_delay** (p. 1315)
	<<***extension***>> *(p. 213)* The minimum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**max_heartbeat_response_delay** (p. 1315)
	<<***extension***>> *(p. 213)* The maximum delay to respond to a heartbeat.
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**heartbeat_suppression_duration** (p. 1316)
	<<***extension***>> *(p. 213)* The duration a reader ignores consecutively received heartbeats

DDS_RtpsReliableReaderProtocol_t (p. 1314)	**nack_period** (p. 1316)
	<<***extension***>> *(p. 213)* The period at which to send NACKs
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**receive_window_size** (p. 1317)
	<<***extension***>> *(p. 213)* The number of received out-of-order samples a reader can keep at a time
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**round_trip_time** (p. 1317)
	<<***extension***>> *(p. 213)* The duration from sending a NACK to receiving a repair of a sample
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**app_ack_period** (p. 1318)
	<<***extension***>> *(p. 213)* The period at which application-level acknowledgment messages are sent
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**min_app_ack_response_keep_duration** (p. 1318)
	<<***extension***>> *(p. 213)* Minimum duration for which application-level acknowledgment response data is kept
DDS_RtpsReliableReaderProtocol_t (p. 1314)	**samples_per_app_ack** (p. 1319)
	<<***extension***>> *(p. 213)* The minimum number of samples acknowledged by one application-level acknowledgment message
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**low_watermark** (p. 1321)
	<<***extension***>> *(p. 213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**high_watermark** (p. 1322)
	<<***extension***>> *(p. 213)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the **DDS_RELIABLE_WRITER_CACHE_CHANGED↩ _STATUS** (p. 545) is considered to have changed.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**virtual_heartbeat_period** (p. 1325)
	<<***extension***>> *(p. 213)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**samples_per_virtual_heartbeat** (p. 1325)
	<<***extension***>> *(p. 213)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_heartbeat_retries** (p. 1326)

	<<***extension***>> *(p. 213)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**inactivate_nonprogressing_readers** (p. 1326)
	<<***extension***>> *(p. 213)* Whether to treat remote readers as inactive when their NACKs do not progress
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**heartbeats_per_max_samples** (p. 1327)
	<<***extension***>> *(p. 213)* The number of piggyback heartbeats sent per max send window.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**min_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The minimum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_nack_response_delay** (p. 1328)
	<<***extension***>> *(p. 213)* The maximum delay to respond to a NACK or NACK_FRAG.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**nack_suppression_duration** (p. 1329)
	<<***extension***>> *(p. 213)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**max_bytes_per_nack_response** (p. 1329)
	<<***extension***>> *(p. 213)* The maximum total message size when resending rejected samples or data fragments.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1331)
	[DEPRECATED] (p. **384)** <<***extension***>> *(p. 213)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_min_sample_keep_duration** (p. 1330)
	<<***extension***>> *(p. 213)* The minimum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_max_sample_keep_duration** (p. 1331)
	<<***extension***>> *(p. 213)* The maximum duration a sample is queued for ACK-disabled readers.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1332)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1332)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Controls rate of growth of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_update_period** (p. 1334)
	<<***extension***>> *(p. 213)* Period in which send window may be dynamically changed
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_increase_factor** (p. 1335)
	<<***extension***>> *(p. 213)* Increases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**send_window_decrease_factor** (p. 1336)
	<<***extension***>> *(p. 213)* Decreases send window size by this percentage when reacting dynamically to network conditions
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**enable_multicast_periodic_heartbeat** (p. 1337)
	<<***extension***>> *(p. 213)* Whether periodic heartbeat messages are sent over multicast
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**multicast_resend_threshold** (p. 1337)
	<<***extension***>> *(p. 213)* The minimum number of requesting readers needed to trigger a multicast resend
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_repair_piggyback_heartbeat** (p. 1338)
	<<***extension***>> *(p. 213)* Prevents piggyback heartbeats from being sent with repair samples
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_samples** (p. 816)
	<<***extension***>> *(p. 213)* Initial number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples** (p. 816)
	<<***extension***>> *(p. 213)* Maximum number of samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_infos** (p. 817)
	<<***extension***>> *(p. 213)* Initial number of sample infos.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_infos** (p. 817)
	<<***extension***>> *(p. 213)* Maximum number of sample infos.

DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_outstanding_reads** (p. 817)
	<<***extension***>> *(p. 213)* The initial number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_outstanding_reads** (p. 818)
	<<***extension***>> *(p. 213)* The maximum number of outstanding reads that have not called finish yet on the same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_samples_per_read** (p. 818)
	<<***extension***>> *(p. 213)* Maximum number of samples that can be read/taken on a same built-in topic **DDSDataReader** (p. 1556).
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**initial_fragmented_samples** (p. 819)
	<<***extension***>> *(p. 213)* The initial number of samples for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragmented_samples_per_remote_writer** (p. 820)
	<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**max_fragments_per_sample** (p. 820)
	<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**dynamically_allocate_fragmented_samples** (p. 821)
	<<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.
DDS_DataTags (p. 889)	**tags** (p. 889)
	<<***spec***>> *(p. 209)* Sequence of data tags.
DDS_EntityNameQosPolicy (p. 1147)	**role_name** (p. 1148)

	<<***extension***>> *(p. 213)* The entity role name.
DDS_ServiceQosPolicy (p. 1358)	**kind** (p. 1359)
	<<***extension***>> *(p. 213)* The kind of service.
DDS_BatchQosPolicy (p. 810)	**max_flush_delay** (p. 812)
	<<***extension***>> *(p. 213)* The maximum flush delay.
DDS_BatchQosPolicy (p. 810)	**source_timestamp_resolution** (p. 812)
	<<***extension***>> *(p. 213)* Batch source timestamp resolution.
DDS_BatchQosPolicy (p. 810)	**thread_safe_write** (p. 813)
	<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.
DDS_ChannelSettings_t (p. 822)	**multicast_settings** (p. 822)
	<<***extension***>> *(p. 213)* A sequence of **DDS_TransportMulticastSettings_t** (p. 1417) used to configure the multicast addresses associated with a channel.
DDS_ChannelSettings_t (p. 822)	**filter_expression** (p. 822)
	<<***extension***>> *(p. 213)* A logical expression used to determine the data that will be published in the channel.
DDS_ChannelSettings_t (p. 822)	**priority** (p. 823)
	<<***extension***>> *(p. 213)* Publication priority
DDS_MultiChannelQosPolicy (p. 1214)	**channels** (p. 1215)
	<<***extension***>> *(p. 213)* A sequence of **DDS_ChannelSettings_t** (p. 822) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1214)	**filter_name** (p. 1215)
	<<***extension***>> *(p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**enable** (p. 1405)
	<<***extension***>> *(p. 213)* Allows this writer to dispatch TopicQueries
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**samples_per_period** (p. 1405)
	<<***extension***>> *(p. 213)* Sets the maximum number of samples to publish in each publication_period.

7.80 Mutable QoS

This page lists all QoS that are always mutable.

This page lists all QoS that are always mutable.

Mutable QoS can always be changed regardless of whether the entity has been enabled or not. QoS that are immutable after an entity has been enabled are listed on the **Immutable QoS** (p. 333) page.

Basic Settings

DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The strength value used to arbitrate among multiple writers.
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* A list of partition names
DDS_EntityFactoryQosPolicy (p. 1145)	**autoenable_created_entities** (p. 1147)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Maximum duration for the data's validity.
DDS_PropertyQosPolicy (p. 1260)	**value** (p. 1262)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of properties.
DDS_LoggingQosPolicy (p. 1188)	**verbosity** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The verbosities at which RTI Connext diagnostic information is logged.
DDS_LoggingQosPolicy (p. 1188)	**category** (p. 1189)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Categories of logged messages.

DDS_LoggingQosPolicy (p. 1188)	**output_file** (p. 1189)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies the file to which log messages will be redirected to.
DDS_LoggingQosPolicy (p. 1188)	**output_file_suffix** (p. 1190)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Sets the file suffix when logging to a set of files
DDS_MonitoringEventDistributionSettings (p. 1197)	**publication_period** (p. 1200)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**polling_period** (p. 1210)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the periodic metric thread polls and publishes the periodic metrics.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**max_historical_logs** (p. 1202)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**publication_period** (p. 1203)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Period at which the logging thread publishes log messages.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**enable** (p. 1193)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Enables the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**domain_id** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The domain ID used in the creation of RTI Monitoring Library 2.0 **DDSDomainParticipant** (p. 1619).
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**collector_initial_peers** (p. 1194)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **DDS_MonitoringDistributionSettings**↩ **::dedicated_participant** (p. 1196).

DDS_MonitoringLoggingForwardingSettings (p. 1204)	**middleware_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ MIDDLEWARE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**security_event_forwarding_level** (p. 1204)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SECURITY_EVENT** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**service_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ SERVICE** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringLoggingForwardingSettings (p. 1204)	**user_forwarding_level** (p. 1205)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Log messages with **NDDS_CONFIG_LOG_FACILITY_↩ USER** (p. 727) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
DDS_MonitoringTelemetryData (p. 1213)	**metrics** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of **DDS_MonitoringMetricSelection** (p. 1206) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
DDS_MonitoringTelemetryData (p. 1213)	**logs** (p. 1213)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* **DDS_MonitoringLoggingForwardingSettings** (p. 1204) containing the **NDDS_Config_Syslog↩ Verbosity** (p. 727) levels that will be forwarded for the different **NDDS_Config_LogFacility** (p. 727).
DDS_MonitoringQosPolicy (p. 1210)	**enable** (p. 1211)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.

DDS_MonitoringQosPolicy (p. 1210)	**application_name** (p. 1211)
	<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The name of the resource that represents this RTI Connext application.

Advanced Settings

DDS_UserDataQosPolicy (p. 1504)	**value** (p. 1505)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1160)	**value** (p. 1161)
	<<***spec***>> *(p. 209)* a sequence of octets
DDS_AvailabilityQosPolicy (p. 805)	**max_data_availability_waiting_time** (p. 808)
	<<***extension***>> *(p. 213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
DDS_AvailabilityQosPolicy (p. 805)	**max_endpoint_availability_waiting_time** (p. 808)
	<<***extension***>> *(p. 213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
DDS_AvailabilityQosPolicy (p. 805)	**required_matched_endpoint_groups** (p. 809)
	<<***extension***>> *(p. 213)* A sequence of endpoint groups.
DDS_LatencyBudgetQosPolicy (p. 1173)	**duration** (p. 1175)
	<<***spec***>> *(p. 209)* Duration of the maximum acceptable delay.
DDS_LoggingQosPolicy (p. 1188)	**print_format** (p. 1189)
	<<***extension***>> *(p. 213)* The format used to output RTI Connext diagnostic information.
DDS_LoggingQosPolicy (p. 1188)	**max_bytes_per_file** (p. 1190)
	<<***extension***>> *(p. 213)* Specifies the maximum number of bytes a single file can contain
DDS_LoggingQosPolicy (p. 1188)	**max_files** (p. 1191)
	<<***extension***>> *(p. 213)* Specifies the maximum number of files to create before overwritting the previous ones.
DDS_MonitoringEventDistributionSettings (p. 1197)	**concurrency_level** (p. 1198)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.

DDS_MonitoringEventDistributionSettings (p. 1197)	**datawriter_qos_profile_name** (p. 1199)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes event metrics.
DDS_MonitoringEventDistributionSettings (p. 1197)	**thread** (p. 1199)
	<<***extension***>> *(p. 213)* The settings of the event metric thread.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**datawriter_qos_profile_name** (p. 1209)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes periodic metrics.
DDS_MonitoringPeriodicDistributionSettings (p. 1209)	**thread** (p. 1209)
	<<***extension***>> *(p. 213)* The settings of the periodic metric thread.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**concurrency_level** (p. 1201)
	<<***extension***>> *(p. 213)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**datawriter_qos_profile_name** (p. 1202)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDataWriter** (p. 1589) that distributes log messages.
DDS_MonitoringLoggingDistributionSettings (p. 1200)	**thread** (p. 1203)
	<<***extension***>> *(p. 213)* The settings of the logging thread.
DDS_MonitoringDedicatedParticipantSettings (p. 1193)	**participant_qos_profile_name** (p. 1194)
	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the **DDSDomain↩ Participant** (p. 1619) that will be used to distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**dedicated_participant** (p. 1196)
	<<***extension***>> *(p. 213)* Configures the use of a dedicated **DDSDomainParticipant** (p. 1619) to distribute the RTI Connext application telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**publisher_qos_profile_name** (p. 1196)

	<<***extension***>> *(p. 213)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
DDS_MonitoringDistributionSettings (p. 1195)	**event_settings** (p. 1196)
	<<***extension***>> *(p. 213)* Configures the distribution of event metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**periodic_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of periodic metrics.
DDS_MonitoringDistributionSettings (p. 1195)	**logging_settings** (p. 1197)
	<<***extension***>> *(p. 213)* Configures the distribution of logging messages.
DDS_MonitoringMetricSelection (p. 1206)	**resource_selection** (p. 1206)
	<<***extension***>> *(p. 213)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **DDS_MonitoringMetric↩ Selection::enabled_metrics_selection** (p. 1207) and **DDS_MonitoringMetricSelection::disabled_↩ metrics_selection** (p. 1207) are applied to this subset of resources.
DDS_MonitoringMetricSelection (p. 1206)	**enabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringMetricSelection (p. 1206)	**disabled_metrics_selection** (p. 1207)
	<<***extension***>> *(p. 213)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **DDS_MonitoringMetric↩ Selection::resource_selection** (p. 1206).
DDS_MonitoringQosPolicy (p. 1210)	**distribution_settings** (p. 1212)
	<<***extension***>> *(p. 213)* Configures the distribution of telemetry data.
DDS_MonitoringQosPolicy (p. 1210)	**telemetry_data** (p. 1212)
	<<***extension***>> *(p. 213)* Configures the telemetry data that will be distributed.

7.81 Other QoS Attributes

These attributes are characteristics of the QoS – for example if they are **mutable** (p. 369) or **immutable** (p. 333), or if they **apply per-instance** (p. 375).

Modules

- **Applied Per-Instance**

  These QoS are applied per-instance.
- **Discovery Metadata**

  These QoS are sent as part of one of the built-in discovery topics.
- **Matching**

  These QoS affect participant and endpoint matching.

7.81.1 Detailed Description

These attributes are characteristics of the QoS – for example if they are **mutable** (p. 369) or **immutable** (p. 333), or if they **apply per-instance** (p. 375).

7.82 Applied Per-Instance

These QoS are applied per-instance.

These QoS are applied per-instance.

For example, the **DDS_HistoryQosPolicy::depth** (p. 1164) configures the number of samples that are stored in the DataWriter and DataReader queues *per-instance*.

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**writer_depth** (p. 1008)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Indicates the number of samples per instance that a durable **DDSDataWriter** (p. 1589) will send to a late-joining **DDSDataReader** (p. 1556).
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)

	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The strength value used to arbitrate among multiple writers.
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* The minimum separation duration between subsequent samples.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the desired kind of destination order.
DDS_HistoryQosPolicy (p. 1162)	**kind** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the kind of history to be kept.
DDS_HistoryQosPolicy (p. 1162)	**depth** (p. 1164)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the number of samples per instance to be kept, when the `kind` is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604)

Advanced Settings

DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_DestinationOrderQosPolicy (p. 931)	**scope** (p. 933)
	<<***spec***>> *(p. 209)* Specifies the desired scope of the source destination order.
DDS_DestinationOrderQosPolicy (p. 931)	**source_timestamp_tolerance** (p. 933)
	<<***extension***>> *(p. 213)* Allowed tolerance between source timestamps of consecutive samples.

7.83 Discovery Metadata

These QoS are sent as part of one of the built-in discovery topics.

These QoS are sent as part of one of the built-in discovery topics.

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Structure that contains the compression settings.
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_OwnershipStrengthQosPolicy (p. 1227)	**value** (p. 1228)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The strength value used to arbitrate among multiple writers.
DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.
DDS_TimeBasedFilterQosPolicy (p. 1389)	**minimum_separation** (p. 1391)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The minimum separation duration between subsequent samples.
DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)

	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Kind of reliability.
DDS_ReliabilityQosPolicy (p. 1295)	**max_blocking_time** (p. 1298)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The maximum time a DataWriter can block on a write() call.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Specifies the desired kind of destination order.
DDS_LifespanQosPolicy (p. 1175)	**duration** (p. 1176)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Maximum duration for the data's validity.
DDS_TransportMulticastQosPolicy (p. 1415)	**value** (p. 1416)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* A sequence of multicast communications settings.
DDS_DiscoveryQosPolicy (p. 960)	**multicast_receive_addresses** (p. 962)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the DomainParticipant.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_liveliness_lease_duration** (p. 937)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The liveliness lease duration for the participant.
DDS_PropertyQosPolicy (p. 1260)	**value** (p. 1262)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Sequence of properties.
DDS_EntityNameQosPolicy (p. 1147)	**name** (p. 1148)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The name of the entity.

Advanced Settings

DDS_UserDataQosPolicy (p. 1504)	**value** (p. 1505)
	*<<**spec**>> (p. 209)* a sequence of octets
DDS_GroupDataQosPolicy (p. 1160)	**value** (p. 1161)
	*<<**spec**>> (p. 209)* a sequence of octets

DDS_DurabilityQosPolicy (p. 1005)	**direct_communication** (p. 1007)
	<<***extension***>> *(p. 213)* Indicates whether or not a TRANSIENT or PERSISTENT **DDSDataReader** (p. 1556) should receive samples directly from a TRANSIENT or PERSISTENT **DDSDataWriter** (p. 1589)
DDS_DurabilityServiceQosPolicy (p. 1009)	**service_cleanup_delay** (p. 1010)
	<<***spec***>> *(p. 209)* Controls when the service is able to remove all information regarding a data instances.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_kind** (p. 1010)
	<<***spec***>> *(p. 209)* The kind of history to apply in recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**history_depth** (p. 1011)
	<<***spec***>> *(p. 209)* Setting to use for the **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) when recouping durable data.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_instances** (p. 1011)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_DurabilityServiceQosPolicy (p. 1009)	**max_samples_per_instance** (p. 1012)
	<<***spec***>> *(p. 209)* Part of resource limits QoS policy to apply when feeding a late joiner.
DDS_CompressionSettings_t (p. 826)	**compression_ids** (p. 826)
	<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.
DDS_DataRepresentationQosPolicy (p. 886)	**value** (p. 888)
	<<***spec***>> *(p. 209)* Sequence of representation identifiers.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)

	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_LatencyBudgetQosPolicy (p. 1173)	**duration** (p. 1175)
	<<***spec***>> *(p. 209)* Duration of the maximum acceptable delay.
DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(p. 213)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)
	<<***extension***>> *(p. 213)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1295)	**exact_reliability_kind_match** (p. 1299)
	<<***extension***>> *(p. 213)* Whether an exact reliability kind match is required for endpoint matching.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**kind** (p. 1494)
	<<***spec***>> *(p. 209)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_sequence_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether sequence bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_string_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_member_names** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**prevent_type_widening** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**force_type_validation** (p. 1496)

	<<***spec***>> *(p. 209)* Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1589) and a **DDSData↩ Reader** (p. 1556).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_enum_literal_names** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether enumeration constant names are taken into consideration for type assignability.
DDS_TransportUnicastQosPolicy (p. 1422)	**value** (p. 1424)
	<<***extension***>> *(p. 213)* A sequence of unicast communication settings.
DDS_DataReaderProtocolQosPolicy (p. 843)	**virtual_guid** (p. 844)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataReaderProtocolQosPolicy (p. 843)	**expects_inline_qos** (p. 844)
	[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Specifies whether this DataReader expects inline QoS with every sample.
DDS_DataReaderProtocolQosPolicy (p. 843)	**disable_positive_acks** (p. 845)
	<<***extension***>> *(p. 213)* Whether the reader sends positive acknowledgements to writers.
DDS_DataWriterProtocolQosPolicy (p. 892)	**virtual_guid** (p. 893)
	<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).
DDS_DataWriterProtocolQosPolicy (p. 892)	**disable_positive_acks** (p. 894)
	<<***extension***>> *(p. 213)* Controls whether or not the writer expects positive acknowledgements from matching readers.
DDS_DataTags (p. 889)	**tags** (p. 889)
	<<***spec***>> *(p. 209)* Sequence of data tags.
DDS_EntityNameQosPolicy (p. 1147)	**role_name** (p. 1148)
	<<***extension***>> *(p. 213)* The entity role name.
DDS_ServiceQosPolicy (p. 1358)	**kind** (p. 1359)
	<<***extension***>> *(p. 213)* The kind of service.
DDS_MultiChannelQosPolicy (p. 1214)	**channels** (p. 1215)

	*<<**extension**>> (p. 213)* A sequence of **DDS_ChannelSettings_t** (p. 822) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
DDS_MultiChannelQosPolicy (p. 1214)	**filter_name** (p. 1215)
	*<<**extension**>> (p. 213)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
DDS_TopicQueryDispatchQosPolicy (p. 1404)	**enable** (p. 1405)
	*<<**extension**>> (p. 213)* Allows this writer to dispatch TopicQueries

7.84 Matching

These QoS affect participant and endpoint matching.

These QoS affect participant and endpoint matching.

See the pages of each individual QoS for a desription of how the QoS must be set in order for two applications to be considered matching. Look for information about compatibility or request-offered (**RxO** (p. 556)) semantics.

Basic Settings

DDS_DurabilityQosPolicy (p. 1005)	**kind** (p. 1007)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of durability.
DDS_DataRepresentationQosPolicy (p. 886)	**compression_settings** (p. 888)
	*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* Structure that contains the compression settings.
DDS_DeadlineQosPolicy (p. 928)	**period** (p. 930)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* Duration of the deadline period.
DDS_OwnershipQosPolicy (p. 1222)	**kind** (p. 1227)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of ownership
DDS_LivelinessQosPolicy (p. 1180)	**kind** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The kind of liveliness desired.
DDS_LivelinessQosPolicy (p. 1180)	**lease_duration** (p. 1182)
	*<<**basic**>> (p. 201) <<**spec**>> (p. 209)* The duration within which a **DDSDataWriter** (p. 1589) must be asserted, or else it is assumed to be not alive.

DDS_PartitionQosPolicy (p. 1240)	**name** (p. 1242)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* A list of partition names
DDS_ReliabilityQosPolicy (p. 1295)	**kind** (p. 1298)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Kind of reliability.
DDS_DestinationOrderQosPolicy (p. 931)	**kind** (p. 933)
	<<***basic***>> *(p. 201)* <<***spec***>> *(p. 209)* Specifies the desired kind of destination order.

Advanced Settings

DDS_CompressionSettings_t (p. 826)	**compression_ids** (p. 826)
	<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.
DDS_DataRepresentationQosPolicy (p. 886)	**value** (p. 888)
	<<***spec***>> *(p. 209)* Sequence of representation identifiers.
DDS_PresentationQosPolicy (p. 1249)	**access_scope** (p. 1252)
	<<***spec***>> *(p. 209)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
DDS_PresentationQosPolicy (p. 1249)	**coherent_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
DDS_PresentationQosPolicy (p. 1249)	**ordered_access** (p. 1252)
	<<***spec***>> *(p. 209)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
DDS_LatencyBudgetQosPolicy (p. 1173)	**duration** (p. 1175)
	<<***spec***>> *(p. 209)* Duration of the maximum acceptable delay.
DDS_ReliabilityQosPolicy (p. 1295)	**acknowledgment_kind** (p. 1298)
	<<***extension***>> *(p. 213)* Kind of reliable acknowledgment
DDS_ReliabilityQosPolicy (p. 1295)	**instance_state_consistency_kind** (p. 1299)

	<<***extension***>> *(p. 213)* Whether instance state consistency is enabled
DDS_ReliabilityQosPolicy (p. 1295)	**exact_reliability_kind_match** (p. 1299)
	<<***extension***>> *(p. 213)* Whether an exact reliability kind match is required for endpoint matching.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**kind** (p. 1494)
	<<***spec***>> *(p. 209)* Type consistency kind.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_sequence_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether sequence bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_string_bounds** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether string bounds are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_member_names** (p. 1495)
	<<***spec***>> *(p. 209)* Controls whether member names are taken into consideration for type assignability.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**prevent_type_widening** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type widening is allowed.
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**force_type_validation** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether type information must be available in order to complete matching between a **DDSDataWriter** (p. 1589) and a **DDSData↩ Reader** (p. 1556).
DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)	**ignore_enum_literal_names** (p. 1496)
	<<***spec***>> *(p. 209)* Controls whether enumeration constant names are taken into consideration for type assignability.

7.85 Deprecated QoS

Deprecated QoS.

Deprecated QoS.

This page lists the QoS that are deprecated. Deprecated QoS are still supported, but RTI will not support them in future releases.

DDS_ResourceLimitsQosPolicy (p. 1308)	**instance_hash_buckets** (p. 1313)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for instances.
DDS_TypeSupportQosPolicy (p. 1499)	**plugin_data** (p. 1500)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Value to pass into the type plugin's de-/serialization function
DDS_TypeSupportQosPolicy (p. 1499)	**cdr_padding_kind** (p. 1500)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_write** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous publishing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_asynchronous_batch** (p. 800)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable asynchronous batch flushing.
DDS_AsynchronousPublisherQosPolicy (p. 798)	**disable_topic_query_publication** (p. 801)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Disable topic query publication.
DDS_DiscoveryQosPolicy (p. 960)	**enable_endpoint_discovery** (p. 964)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Whether to automatically enable endpoint discovery for all the remote participants.
DDS_DataReaderResourceLimitsQosPolicy (p. 867)	**disable_fragmentation_support** (p. 874)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**initial_concurrent_blocking_threads** (p. 919)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**max_concurrent_blocking_threads** (p. 919)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).
DDS_DataWriterResourceLimitsQosPolicy (p. 917)	**autoregister_instances** (p. 922)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Whether or not to automatically register new instances
DDS_DataReaderProtocolQosPolicy (p. 843)	**expects_inline_qos** (p. 844)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Specifies whether this DataReader expects inline QoS with every sample.
DDS_SystemResourceLimitsQosPolicy (p. 1382)	**max_objects_per_thread** (p. 1383)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum number of objects that can be stored per thread for a **DDSDomainParticipantFactory** (p. 1694).
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_writer_hash_buckets** (p. 986)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Hash_Buckets settings applied to local DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_reader_hash_buckets** (p. 986)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for local DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_publisher_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for local Publisher.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_subscriber_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for local Subscriber.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**local_topic_hash_buckets** (p. 987)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for local Topic.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_writer_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote DataWriters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_reader_hash_buckets** (p. 988)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote DataReaders.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_participant_hash_buckets** (p. 988)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote DomainParticipants.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_writer_reader_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for matching local writer and remote/local reader pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**matching_reader_writer_pair_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for matching local reader and remote/local writer pairs.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_hash_buckets** (p. 989)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for ignored entities.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filtered_topic_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filtered topics.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**content_filter_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for content filters.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**flow_controller_hash_buckets** (p. 990)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for flow controllers.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**type_code_max_serialized_length** (p. 994)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Maximum size of serialized string for type code.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**ignored_entity_replacement_kind** (p. 1001)

	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Replacement policy for the ignored entities. It sets what entity can be replaced when resource limits set in **DDS_DomainParticipantResourceLimitsQosPolicy**↩ **::ignored_entity_allocation** (p. 984) are reached.
DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)	**remote_topic_query_hash_buckets** (p. 1002)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Number of hash buckets for remote TopicQueries.
DDS_DatabaseQosPolicy (p. 831)	**shutdown_timeout** (p. 832)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum wait time during a shutdown.
DDS_DatabaseQosPolicy (p. 831)	**cleanup_period** (p. 833)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The period at which the database thread wakes up to remove deleted records.
DDS_DatabaseQosPolicy (p. 831)	**shutdown_cleanup_period** (p. 833)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The clean-up period used during database shut-down.
DDS_DatabaseQosPolicy (p. 831)	**max_skiplist_level** (p. 834)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum level of the skiplist.
DDS_ReceiverPoolQosPolicy (p. 1293)	**buffer_alignment** (p. 1295)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The receive buffer alignment.
DDS_DiscoveryConfigQosPolicy (p. 934)	**remote_participant_purge_kind** (p. 938)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
DDS_DiscoveryConfigQosPolicy (p. 934)	**max_liveliness_loss_detection_period** (p. 938)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
DDS_DiscoveryConfigQosPolicy (p. 934)	**ignore_default_domain_announcements** (p. 950)
	[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
DDS_DiscoveryConfigQosPolicy (p. 934)	**participant_message_reader_reliability_kind** (p. 946)

	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Reliability policy for a built-in participant message reader.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1331)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Enables dynamic adjustment of sample keep duration in response to congestion.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_decrease_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Controls rate of contraction of dynamic sample keep duration.
DDS_RtpsReliableWriterProtocol_t (p. 1320)	**disable_positive_acks_increase_sample_keep_duration_factor** (p. 1332)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Controls rate of growth of dynamic sample keep duration.
DDS_BuiltinTopicReaderResourceLimits_t (p. 815)	**disable_fragmentation_support** (p. 818)
	[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.

7.86 System Properties

System Properties.

System Properties.

RTI Connext uses the **DDS_PropertyQosPolicy** (p. 1260) of a DomainParticipant to maintain a set of properties that provide system information such as hostname.

Unless the default **DDS_DomainParticipantQos** (p. 971) value is overwritten, the system properties are automatically set in the **DDS_DomainParticipantQos** (p. 971) obtained by calling the method **DDSDomainParticipantFactory::get_default_participant_qos** (p. 1700) or using the constant **DDS_PARTICIPANT_QOS_DEFAULT** (p. 50).

System properties are also automatically set in the **DDS_DomainParticipantQos** (p. 971) loaded from an XML QoS profile unless you disable property inheritance using the attribute **inherit** in the XML tag <**property**>.

By default, the system properties are propagated to other DomainParticipants in the system and can be accessed through **DDS_ParticipantBuiltinTopicData::property** (p. 1230).

You can disable the propagation of individual properties by setting the flag **DDS_Property_t::propagate** (p. 1260) to **DDS_BOOLEAN_FALSE** (p. 513) or by removing the property using the method **DDSPropertyQosPolicyHelper::remove_property** (p. 625).

The number of system properties set on the **DDS_DomainParticipantQos** (p. 971) is platform specific.

7.86.1 System Properties List

The following table lists the supported system properties. For more information, see `System Properties`, in the Core Libraries User's Manual.

Property Name	Description
dds.sys_info.hostname	Name of the host where the process is running
dds.sys_info.process_id	Process ID
dds.sys_info.username	Name of the user running the process
dds.sys_info.execution_timestamp	Time when the execution started
dds.sys_info.creation_timestamp	Time when the executable was created
dds.sys_info.executable_filepath	Name and full path of the executable
dds.sys_info.target	Architecture for which the library was compiled

7.86.2 System Resource Consideration

System properties are affected by the resource limits **DDS_DomainParticipantResourceLimitsQosPolicy↩ ::participant_property_list_max_length** (p. 998) and **DDS_DomainParticipantResourceLimitsQosPolicy↩ ::participant_property_string_max_length** (p. 998).

7.87 Configuring QoS Profiles with XML

APIs related to XML QoS Profiles.

APIs related to XML QoS Profiles.

7.87.1 Loading QoS Profiles from XML Resources

A 'QoS profile' is a group of QoS settings, specified in XML format. By using QoS profiles, you can change QoS settings without recompiling the application.

The Qos profiles are loaded the first time any of the following operations are called:

- **DDSDomainParticipantFactory::create_participant** (p. 1710)
- **DDSDomainParticipantFactory::create_participant_with_profile** (p. 1711)
- **DDSDomainParticipantFactory::set_default_participant_qos_with_profile** (p. 1699)
- **DDSDomainParticipantFactory::get_default_participant_qos** (p. 1700)
- **DDSDomainParticipantFactory::set_default_library** (p. 1701)

- **DDSDomainParticipantFactory::set_default_profile** (p. 1702)
- **DDSDomainParticipantFactory::get_participant_qos_from_profile** (p. 1704)
- **DDSDomainParticipantFactory::get_topic_qos_from_profile** (p. 1708)
- **DDSDomainParticipantFactory::get_topic_qos_from_profile_w_topic_name** (p. 1709)
- **DDSDomainParticipantFactory::get_publisher_qos_from_profile** (p. 1705)
- **DDSDomainParticipantFactory::get_subscriber_qos_from_profile** (p. 1705)
- **DDSDomainParticipantFactory::get_datawriter_qos_from_profile** (p. 1706)
- **DDSDomainParticipantFactory::get_datawriter_qos_from_profile_w_topic_name** (p. 1706)
- **DDSDomainParticipantFactory::get_datareader_qos_from_profile** (p. 1707)
- **DDSDomainParticipantFactory::get_datareader_qos_from_profile_w_topic_name** (p. 1708)
- **DDSDomainParticipantFactory::get_qos_profile_libraries** (p. 1710)
- **DDSDomainParticipantFactory::get_qos_profiles** (p. 1710)
- **DDSDomainParticipantFactory::load_profiles** (p. 1715)

The QoS profiles are reloaded replacing previously loaded profiles when the following operations are called:

- **DDSDomainParticipantFactory::set_qos** (p. 1714)
- **DDSDomainParticipantFactory::reload_profiles** (p. 1715)

The **DDSDomainParticipantFactory::unload_profiles** (p. 1716) operation will free the resources associated with the XML QoS profiles.

There are five ways to configure the XML resources (listed by load order):

- The file NDDS_QOS_PROFILES.xml in $NDDSHOME/resource/xml is loaded if it exists and **DDS_ProfileQos↩ Policy::ignore_resource_profile** (p. 1259) in **DDS_ProfileQosPolicy** (p. 1257) is set to **DDS_BOOLEAN_↩ FALSE** (p. 513) (first to be loaded). An example file, `NDDS_QOS_PROFILES.example.xml`, is available for reference.

- The URL groups separated by semicolons referenced by the enviroment variable NDDS_QOS_PROFILES are loaded if they exist and **DDS_ProfileQosPolicy::ignore_environment_profile** (p. 1258) in **DDS_ProfileQos↩ Policy** (p. 1257) is set to **DDS_BOOLEAN_FALSE** (p. 513).

- The file USER_QOS_PROFILES.xml in the working directory will be loaded if it exists and **DDS_ProfileQos↩ Policy::ignore_user_profile** (p. 1258) in **DDS_ProfileQosPolicy** (p. 1257) is set to **DDS_BOOLEAN_FALSE** (p. 513).

- The URL groups referenced by **DDS_ProfileQosPolicy::url_profile** (p. 1258) in **DDS_ProfileQosPolicy** (p. 1257) will be loaded if specified.

- The sequence of XML strings referenced by **DDS_ProfileQosPolicy::string_profile** (p. 1258) will be loaded if specified (last to be loaded).

The above methods can be combined together.

7.87.2 URL

The location of the XML resources (only files and strings are supported) is specified using a URL (Uniform Resource Locator) format. For example:

File Specification: `file:///usr/local/default_dds.xml`

String Specification: str://"<dds><qos_library> . . . lt;/qos_library>&lt/dds>"

If the URL schema name is omitted, RTI Connext will assume a file name. For example:

File Specification: /usr/local/default_dds.xml

7.87.2.1 URL groups

To provide redundancy and fault tolerance, you can specify multiple locations for a single XML document via URL groups. The syntax of a URL group is as follows:

[URL1 | URL2 | URL2 | . . .| URLn]

For example:

[`file:///usr/local/default_dds.xml` | `file:///usr/local/alternative_default_dds.xml`]

Only one of the elements in the group will be loaded by RTI Connext, starting from the left.

Brackets are not required for groups with a single URL.

7.87.2.2 NDDS_QOS_PROFILES environment variable

The environment variable NDDS_QOS_PROFILES contains a list of URL groups separated by ';'

The URL groups referenced by the environment variable are loaded if they exist and **DDS_ProfileQosPolicy::ignore_environment_profile** (p. 1258) is set to **DDS_BOOLEAN_FALSE** (p. 513)

7.87.2.3 Built-In QoS Profiles

There are also a number of built-in QoS profiles that can be used without having to load any configurations from outside XML resources. For more information on these built-in profiles see **Built-in Qos Profiles** (p. 679).

For more information on XML Configuration, refer to the `User's Manual`.

7.88 Publication Example

A data publication example.

A data publication example.

7.88.1 A typical publication example

Prep

- Create user data types using rtiddsgen. See the `Code Generator User's Manual`.

Set up

- **Get the factory** (p. 395)
- **Set up participant** (p. 395)
- **Set up publisher** (p. 399)
- **Register user data type(s)** (p. 396)
- **Set up topic(s)** (p. 396)
- **Set up data writer(s)** (p. 400)

Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 406)

Send data

- **Send data** (p. 401)

Tear down

- **Tear down data writer(s)** (p. 401)
- **Tear down topic(s)** (p. 397)
- **Tear down publisher** (p. 399)
- **Tear down participant** (p. 396)

7.89 Subscription Example

A data subscription example.

A data subscription example.

7.89.1 A typical subscription example

Prep

- Create user data types using rtiddsgen. See the `Code Generator User's Manual`.

Set up

- **Get the factory** (p. 395)
- **Set up participant** (p. 395)
- **Set up subscriber** (p. 401)
- **Register user data type(s)** (p. 396)
- **Set up topic(s)** (p. 396)
- **Set up data reader(s)** (p. 403)
- **Set up data reader** (p. 404) **OR Set up subscriber** (p. 402) to receive data

Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 406)

Receive data

- Access received data either **via a reader** (p. 404) **OR via a subscriber** (p. 402) (possibly in a **ordered or coherent** (p. 403) manner)

Tear down

- **Tear down data reader(s)** (p. 406)
- **Tear down topic(s)** (p. 397)
- **Tear down subscriber** (p. 403)
- **Tear down participant** (p. 396)

7.90 Participant Use Cases

Working with domain participants.

Working with domain participants.

7.90.1 Turning off auto-enable of newly created participant(s)

- **Get the factory** (p. 395)

- Change the value of the **ENTITY_FACTORY** (p. 600) for the **DDSDomainParticipantFactory** (p. 1694)

```
DDS_DomainParticipantFactoryQos factory_qos;

if (factory->get_qos(factory_qos) != DDS_RETCODE_OK) {
     printf("***Error: failed to get domain participant factory qos\n");
}
/* Change the QosPolicy to create disabled participants */
factory_qos.entity_factory.autoenable_created_entities = DDS_BOOLEAN_FALSE;
if (factory->set_qos(factory_qos) != DDS_RETCODE_OK) {
    printf("***Error: failed to set domain participant factory qos\n");
}
```

7.90.2 Getting the factory

- Get the **DDSDomainParticipantFactory** (p. 1694) instance:

```
DDSDomainParticipantFactory* factory = NULL;
factory = DDSDomainParticipantFactory::get_instance();
if (factory == NULL) {
   // ... error
}
```

7.90.3 Setting up a participant

- **Get the factory** (p. 395)

- Create **DDSDomainParticipant** (p. 1619):

```
 DDS_DomainParticipantQos participant_qos;
    DDSDomainParticipantListener* participant_listener = NULL;
    DDS_ReturnCode_t retcode;
 // Set the initial peers. This list includes all the computers the
 // application may communicate with, along with the maximum number of
 // RTI Data Distribution Service participants that can concurrently
 // run on that computer. This list only needs to be a superset of the
 // actual list of computers and participants that will be running at
 // any time.
 const char* NDDS_DISCOVERY_INITIAL_PEERS[] = {
  "host1",
  "10.10.30.192",
  "1@localhost",
  "2@host2",
  "my://", /* all unicast addrs on transport plugins with alias "my" */
  "2@shmem://", /* shared memory */
  "FF00:ABCD::0",
  "sf://0/0/R", /* StarFabric transport plugin */
  "1@FF00:0:1234::0",
  "225.1.2.3",
  "3@225.1.0.55",
  "FAA0::0#0/0/R",
};
const DDS_Long NDDS_DISCOVERY_INITIAL_PEERS_LENGTH =
      sizeof(NDDS_DISCOVERY_INITIAL_PEERS)/sizeof(const char*);
// initialize participant_qos with default values
retcode = factory->get_default_participant_qos(participant_qos);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default participant qos\n");
}
if (!participant_qos.discovery.initial_peers.from_array(
                        NDDS_DISCOVERY_INITIAL_PEERS,
                         NDDS_DISCOVERY_INITIAL_PEERS_LENGTH)) {
    printf("***Error: failed to set discovery.initial_peers qos\n");
}
// Create the participant
```

```
DDSDomainParticipant* participant =
    factory->create_participant(domain_id,
                                participant_qos,
                                participant_listener,
                                        DDS_STATUS_MASK_NONE);
if (participant == NULL) {
     printf("***Error: failed to create domain participant\n");
};
return participant;
```

7.90.4 Tearing down a participant

- **Get the factory** (p. 395)
- Delete **DDSDomainParticipant** (p. 1619):
```
DDS_ReturnCode_t retcode;
retcode = factory->delete_participant(participant);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.91 Topic Use Cases

Working with topics.

Working with topics.

7.91.1 Registering a user data type

- **Set up participant** (p. 395)
- Register user data type of type `T` under the name "My_Type"
```
const char* type_name = "My_Type";
DDS_ReturnCode_t retcode;
retcode = FooTypeSupport::register_type(participant, type_name);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
```

7.91.2 Setting up a topic

- **Set up participant** (p. 395)
- **Ensure user data type is registered** (p. 396)
- Create a **DDSTopic** (p. 1885) under the name "my_topic"
```
const char* topic_name = "my_topic";
const char* type_type = "My_Type";   // user data type
DDS_TopicQos topic_qos;
DDS_ReturnCode_t retcode;
// MyTopicListener is user defined and
// extends DDSTopicListener
DDSTopicListener* topic_listener = new MyTopicListener(); // or = NULL
retcode = participant->get_default_topic_qos(topic_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
DDSTopic* topic = participant->create_topic(topic_name, type_name,
                                    topic_qos, topic_listener,
                                    DDS_STATUS_MASK_ALL);
if (topic == NULL) {
    // ... error
};
```

7.91.3 Tearing down a topic

- Delete **DDSTopic** (p. 1885):
```
DDS_ReturnCode_t retcode;
retcode = participant->delete_topic(topic);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.92 FlowController Use Cases

Working with flow controllers.

Working with flow controllers.

7.92.1 Creating a flow controller

- **Set up participant** (p. 395)
- Create a flow controller
```
DDS_ReturnCode_t retcode;
DDSFlowController *controller = NULL;
DDS_FlowControllerProperty_t property;
retcode = participant->get_default_flowcontroller_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get default flow controller property\n");
}
// optionally modify flow controller property values
controller = participant->create_flowcontroller(
    "my flow controller name", property);
if (controller == NULL) {
    printf("***Error: failed to create flow controller\n");
}
```

7.92.2 Flow controlling a data writer

- **Set up participant** (p. 395)
- **Create flow controller** (p. 397)
- Create an asynchronous data writer, **FooDataWriter** (p. 1944), of user data type **Foo** (p. 1916):
```
DDS_DataWriterQos writer_qos;
DDS_ReturnCode_t retcode;
// MyWriterListener is user defined and
// extends DDSDataWriterListener
MyWriterListener* writer_listener = new MyWriterListener(); // or = NULL
retcode = publisher->get_default_datawriter_qos(writer_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
/* Change the writer QoS to publish asnychronously */
writer_qos.publish_mode.kind = DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS;
/* Setup to use the previously created flow controller */
writer_qos.publish_mode.flow_controller_name =
    DDS_String_dup("my flow controller name");
/* Samples queued for asynchronous write are subject to the History Qos policy */
writer_qos.history.kind = DDS_KEEP_ALL_HISTORY_QOS;
FooDataWriter* writer = publisher->create_datawriter(topic,
                                        writer_qos,
                                        writer_listener,
                        DDS_STATUS_MASK_ALL);
```

```
if (writer == NULL) {
    // ... error
};
/* Send data asynchronously... */
/* Wait for asynchronous send completes, if desired */
retcode = writer->wait_for_asynchronous_publishing(timout);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to wait for asynchronous publishing\n");
}
```

7.92.3 Using the built-in flow controllers

RTI Connext provides several built-in flow controllers.

The **DDS_DEFAULT_FLOW_CONTROLLER_NAME** (p. 125) built-in flow controller provides the basic asynchronous writer behavior. When calling **FooDataWriter::write** (p. 1951), the call signals the **DDSPublisher** (p. 1818) asynchronous publishing thread (**DDS_PublisherQos::asynchronous_publisher** (p. 1279)) to send the actual data. As with any **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 629) **DDSDataWriter** (p. 1589), the **FooDataWriter::write** (p. 1951) call returns immediately afterwards. The data is sent immediately in the context of the **DDSPublisher** (p. 1818) asynchronous publishing thread.

When using the **DDS_FIXED_RATE_FLOW_CONTROLLER_NAME** (p. 126) flow controller, data is also sent in the context of the **DDSPublisher** (p. 1818) asynchronous publishing thread, but at a regular fixed interval. The thread accumulates samples from different **DDSDataWriter** (p. 1589) instances and generates data on the wire only once per **DDS_FlowControllerTokenBucketProperty_t::period** (p. 1159).

In contrast, the **DDS_ON_DEMAND_FLOW_CONTROLLER_NAME** (p. 127) flow controller permits flow only when **DDSFlowController::trigger_flow** (p. 1738) is called. The data is still sent in the context of the **DDSPublisher** (p. 1818) asynchronous publishing thread. The thread accumulates samples from different **DDSDataWriter** (p. 1589) instances (across any **DDSPublisher** (p. 1818)) and sends all data since the previous trigger.

The properties of the built-in **DDSFlowController** (p. 1736) instances can be adjusted.

- **Set up participant** (p. 395)
- Lookup built-in flow controller

```
DDSFlowController *controller = NULL;
controller = participant->lookup_flowcontroller(
    DDS_DEFAULT_FLOW_CONTROLLER_NAME);
/* This should never happen, built-in flow controllers are always created */
if (controller == NULL) {
    printf("***Error: failed to lookup flow controller\n");
}
```

- Change property of built-in flow controller, if desired

```
DDS_ReturnCode_t retcode;
DDS_FlowControllerProperty_t property;
/* Get the property of the flow controller */
retcode = controller->get_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to get flow controller property\n");
}
/* Change the property value as desired */
property.token_bucket.period.sec = 2;
property.token_bucket.period.nanosec = 0;
/* Update the flow controller property */
retcode = controller->set_property(property);
if (retcode != DDS_RETCODE_OK) {
    printf("***Error: failed to set flow controller property\n");
}
```

- **Create a data writer using the correct flow controller name** (p. 397)

7.92.4 Shaping the network traffic for a particular transport

- **Set up participant** (p. 395)
- **Create the transports** (p. 409)
- **Create a separate flow controller for each transport** (p. 397)
- Configure **DDSDataWriter** (p. 1589) instances to only use a single transport
- **Associate all data writers using the same transport to the corresponding flow controller** (p. 397)
- For each transport, the corresponding flow controller limits the network traffic based on the token bucket properties

7.92.5 Coalescing multiple samples in a single network packet

- **Set up participant** (p. 395)
- **Create a flow controller with a desired token bucket period** (p. 397)
- **Associate the data writer with the flow controller** (p. 397)
- Multiple samples written within the specified period will be coalesced into a single network packet (provided that `tokens_added_per_period` and `bytes_per_token` permit).

7.93 Publisher Use Cases

Working with publishers.

Working with publishers.

7.93.1 Setting up a publisher

- **Set up participant** (p. 395)
- Create a **DDSPublisher** (p. 1818)

```
DDS_PublisherQos publisher_qos;
// MyPublisherListener is user defined and
// extends DDSPublisherListener
DDSPublisherListener* publisher_listener =
        =                    new MyPublisherListener(); // or = NULL
participant->get_default_publisher_qos(publisher_qos);
DDSPublisher* publisher = participant->create_publisher(publisher_qos,
                                                        publisher_listener,
                                                       DDS_STATUS_MASK_ALL);
if (publisher == NULL) {
    // ... error
};
```

7.93.2 Tearing down a publisher

- Delete **DDSPublisher** (p. 1818):

```
DDS_ReturnCode_t retcode;
retcode = participant->delete_publisher(publisher);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.94 DataWriter Use Cases

Working with data writers.

Working with data writers.

7.94.1 Setting up a data writer

- **Set up publisher** (p. 399)
- **Set up a topic** (p. 396)
- Create a data writer, **FooDataWriter** (p. 1944), of user data type **Foo** (p. 1916) **:**

```
DDS_DataWriterQos writer_qos;
DDS_ReturnCode_t retcode;
// MyWriterListener is user defined and
// extends DDSDataWriterListener
MyWriterListener* writer_listener = new MyWriterListener(); // or = NULL
retcode = publisher->get_default_datawriter_qos(writer_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
FooDataWriter* writer = publisher->create_datawriter(topic,
                                          writer_qos,
                                          writer_listener,
                                            DDS_STATUS_MASK_ALL);
if (writer == NULL) {
    // ... error
};
```

7.94.2 Managing instances

- Getting an instance "key" value of user data type **Foo** (p. 1916)

```
Foo* data = ...;     // user data
retcode = writer->get_key_value(*data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- Registering an instance of type **Foo** (p. 1916)

```
DDS_InstanceHandle_t instance_handle = DDS_HANDLE_NIL;
instance_handle = writer->register_instance(data);
```

- Unregistering an instance of type **Foo** (p. 1916)

```
retcode = writer->unregister_instance(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- Disposing of an instance of type **Foo** (p. 1916)

```
retcode = writer->dispose(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.94.3 Sending data

- **Set up data writer** (p. 400)
- **Register instance** (p. 400)
- Write instance of type **Foo** (p. 1916)

```
Foo* data;     // user data
DDS_InstanceHandle_t instance_handle =
                 DDS_HANDLE_NIL; // or a valid registered handle
DDS_ReturnCode_t retcode;
retcode = writer->write(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.94.4 Tearing down a data writer

- Delete **DDSDataWriter** (p. 1589):

```
DDS_ReturnCode_t retcode;
retcode = publisher->delete_datawriter(writer);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.95 Subscriber Use Cases

Working with subscribers.

Working with subscribers.

7.95.1 Setting up a subscriber

- **Set up participant** (p. 395)
- Create a **DDSSubscriber** (p. 1860)

```
DDS_SubscriberQos subscriber_qos;
DDS_ReturnCode_t retcode;
// MySubscriberListener is user defined and
// extends DDSSubscriberListener
DDSSubscriberListener* subscriber_listener =
                               new MySubscriberListener(); // or = NULL
retcode = participant->get_default_subscriber_qos(subscriber_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
};
DDSSubscriber* subscriber =
                participant->create_subscriber(subscriber_qos,
                                               subscriber_listener,
                                               DDS_STATUS_MASK_ALL);
if (subscriber == NULL) {
    // ... error
};
```

7.95.2 Set up subscriber to access received data

- **Set up subscriber** (p. 401)
- Set up to handle the DDS_DATA_ON_READERS_STATUS status, in one or both of the following two ways.
- **Enable DDS_DATA_ON_READERS_STATUS for the DDSSubscriberListener associated with the subscriber** (p. 407)
  - The processing to handle the status change is done in the **DDSSubscriberListener::on_data_on_readers()** (p. 1882) method of the attached listener.
  - Typical processing will **access the received data** (p. 402), either in arbitrary order or in a **coherent and ordered manner** (p. 403).
- **Enable DDS_DATA_ON_READERS_STATUS for the DDSStatusCondition associated with the subscriber** (p. 407)
  - The processing to handle the status change is done **when the subscriber's attached status condition is triggered** (p. 409) and the DDS_DATA_ON_READERS_STATUS status on the subscriber is changed.
  - Typical processing will **access the received data** (p. 402), either in an arbitrary order or in a **coherent and ordered manner** (p. 403).

7.95.3 Access received data via a subscriber

- **Ensure subscriber is set up to access received data** (p. 402)
- Get the list of readers that have data samples available:

```
DDSDataReaderSeq reader_seq;  // holder for list/set of readers
DDS_SampleStateMask     sample_state_mask = DDS_NOT_READ_SAMPLE_STATE;
DDS_ViewStateMask       view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask   instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t retcode;
// get_datareadersX is not supported yet.
retcode = subscriber->get_datareaders(reader_seq,
                                      sample_state_mask,
                                      view_state_mask,
                                      instance_state_mask);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- Upon successfully getting the list of readers with data, process the data readers to either:
  - **Read the data in each reader** (p. 405), **OR**
  - **Take the data in each reader** (p. 404)

  If the intent is to access the data **coherently or in order** (p. 403), the list of data readers *must* be processed in the order returned:

```
for(int i = 0; i < reader_seq.length(); ++i) {

  TDataReader* reader = reader_seq[i];
  // Take the data from reader,
  //              OR
  // Read the data from reader
}
```

- **Alternatively**, call **DDSSubscriber::notify_datareaders** (p. 1876) to invoke the **DDSDataReaderListener** (p. 1583) for each of the data readers.

```
retcode = subscriber->notify_datareaders();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.95.4 Access received data coherently and/or in order

To access the received data coherently and/or in an ordered manner, according to the settings of the **DDS_↩ PresentationQosPolicy** (p. 1249) attached to a **DDSSubscriber** (p. 1860):

- **Ensure subscriber is set up to access received data** (p. 402)
- Indicate that data will be accessed via the subscriber:
```
retcode = subscriber->begin_access();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```
- **Access received data via the subscriber, making sure that the data readers are processed in the order returned.** (p. 402)
- Indicate that the data access via the subscriber is done:
```
retcode = subscriber->end_access();
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.95.5 Tearing down a subscriber

- Delete **DDSSubscriber** (p. 1860):
```
DDS_ReturnCode_t retcode;
retcode = participant->delete_subscriber(subscriber);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.96 DataReader Use Cases

Working with data readers.

Working with data readers.

7.96.1 Setting up a data reader

- **Set up subscriber** (p. 401)
- **Set up a topic** (p. 396)
- Create a data reader, **FooDataReader** (p. 1917), of user data type **Foo** (p. 1916):
```
DDS_DataReaderQos reader_qos;
DDS_ReturnCode_t retcode;
// MyReaderListener is user defined and
// extends DDSDataReaderListener
DDSDataReaderListener* reader_listener =
      new MyReaderListener(); // or = NULL
retcode = subscriber->get_default_datareader_qos(reader_qos);
if (retcode != DDS_RETCODE_OK) {
    // ... error
};
FooDataReader* reader = subscriber->create_datareader(topic,
                                                      reader_qos,
                                                      reader_listener,
                                                  DDS_STATUS_MASK_ALL);
if (reader == NULL) {
    // ... error
};
```

7.96.2 Managing instances

- Given a data reader
```
FooDataReader* reader = ...;
```
- Getting an instance "key" value of user data type **Foo** (p. 1916)
```
Foo data;     // user data of type Foo
// ...
retcode = reader->get_key_value(data, instance_handle);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.96.3 Set up reader to access received data

- **Set up data reader** (p. 403)
- Set up to handle the DDS_DATA_AVAILABLE_STATUS status, in one or both of the following two ways.
- **Enable DDS_DATA_AVAILABLE_STATUS for the DDSDataReaderListener associated with the data reader** (p. 407)
  - The processing to handle the status change is done in the **DDSDataReaderListener::on_data_available** (p. 1585) method of the attached listener.
  - Typical processing will **access the received data** (p. 404).
- **Enable DDS_DATA_AVAILABLE_STATUS for the DDSStatusCondition associated with the data reader** (p. 407)
  - The processing to handle the status change is done **when the data reader's attached status condition is triggered** (p. 409) and the DDS_DATA_AVAILABLE_STATUS status on the data reader is changed.
  - Typical processing will **access the received data** (p. 404).

7.96.4 Access received data via a reader

- **Ensure reader is set up to access received data** (p. 404)
- Access the received data, by either:
  - **Taking the received data in the reader** (p. 404), **OR**
  - **Reading the received data in the reader** (p. 405)

7.96.5 Taking data

- **Ensure reader is set up to access received data** (p. 404)

- Take samples of user data type `T`. The samples are removed from the Service. The caller is responsible for deallocating the buffers.

```
FooSeq                data_seq; // holder for sequence of user data type Foo
DDS_SampleInfoSeq     info_seq; // holder for sequence of DDS_SampleInfo
long                  max_samples       = DDS_LENGTH_UNLIMITED;
DDS_SampleStateMask   sample_state_mask = DDS_ANY_SAMPLE_STATE;
DDS_ViewStateMask     view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t retcode;
retcode = reader->take(data_seq, info_seq,
                 max_samples,
                       sample_state_mask,
                       view_state_mask,
                       instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- Use the received data

```
// Use the received data samples 'data_seq' and associated information 'info_seq'
for(int i = 0; i < data_seq.length(); ++i) {
    // use... data_seq[i] ...
    // use... info_seq[i] ...
}
```

- Return the data samples and the information buffers back to the middleware. *IMPORTANT*: Once this call returns, you must not retain any pointers to any part of any sample or sample info object.

```
retcode = reader->return_loan(data_seq, info_seq);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.96.6 Reading data

- **Ensure reader is set up to access received data** (p. 404)

- Read samples of user data type **`Foo`** (p. 1916). The samples are not removed from the Service. It remains responsible for deallocating the buffers.

```
FooSeq                data_seq; // holder for sequence of user data type Foo
DDS_SampleInfoSeq      info_seq; // holder for sequence of DDS_SampleInfo
long                  max_samples       = DDS_LENGTH_UNLIMITED;
DDS_SampleStateMask   sample_state_mask = DDS_NOT_READ_SAMPLE_STATE;
DDS_ViewStateMask     view_state_mask = DDS_ANY_VIEW_STATE;
DDS_InstanceStateMask instance_state_mask = DDS_ANY_INSTANCE_STATE;
DDS_ReturnCode_t retcode;
retcode = reader->read(data_seq, info_seq,
                 max_samples,
                       sample_state_mask,
                       view_state_mask,
                       instance_state_mask);
if (retcode == DDS_RETCODE_NO_DATA) {
    return;
} else if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

- Use the received data

```
// Use the received data samples 'data_seq' and associated
// information 'info_seq'
for(int i = 0; i < data_seq.length(); ++i) {
    // use... data_seq[i] ...
    // use... info_seq[i] ...
}
```

- Return the data samples and the information buffers back to the middleware

```
retcode = reader->return_loan(data_seq, info_seq);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.96.7 Tearing down a data reader

- Delete **DDSDataReader** (p. 1556):
```
DDS_ReturnCode_t retcode;
retcode = subscriber->delete_datareader(reader);
if (retcode != DDS_RETCODE_OK) {
    // ... check for cause of failure
}
```

7.97 Entity Use Cases

Working with entities.

Working with entities.

7.97.1 Enabling an entity

- To enable an **DDSEntity** (p. 1731)
```
    if (entity->enable() != DDS_RETCODE_OK) {
        printf("***Error: failed to enable entity\n");
    }
```

7.97.2 Checking if a status changed on an entity.

- Given an **DDSEntity** (p. 1731) and a **DDS_StatusKind** (p. 538) to check for, get the list of statuses that have changed since the last time they were respectively cleared.
```
    DDS_StatusMask status_changes_mask = entity->get_status_changes();
```
- Check if `status_kind` was changed since the last time it was cleared. A plain communication status change is cleared when the status is read using the entity's `get_<plain communication status>()` method. A read communication status change is cleared when the data is taken from the middleware via a TDataReader_↩ take() call [see **Changes in Status** (p. 535) for details].
```
    if (status_changes_mask & status_kind) {
        return true;
    } else {           /* ... YES, status_kind changed ... */
        return false;  /* ... NO, status_kind did NOT change ... */
    }
```

7.97.3 Changing the QoS for an entity

The QoS for an entity can be specified at the entity creation time. Once an entity has been created, its QoS can be manipulated as follows.

- Get an entity's QoS settings using **get_qos (abstract)** (p. 1733)
```
    if (entity->get_qos(qos) != DDS_RETCODE_OK) {
        printf("***Error: failed to get qos\n");
    }
```
- Change the desired qos policy fields
```
    /* Change the desired qos policies */
    /* qos.policy.field = ... */
```

- Set the qos using **set_qos (abstract)** (p. 1732).
```
switch (entity->set_qos(qos)) {
    case DDS_RETCODE_OK: { /* success */
    } break;
    case DDS_RETCODE_IMMUTABLE_POLICY: {
        printf("***Error: tried changing a policy that can only be"
               "          set at entity creation time\n");
    } break;
    case DDS_RETCODE_INCONSISTENT_POLICY: {
        printf("***Error: tried changing a policy to a value inconsistent"
               "          with other policy settings\n");
    } break;
    default: {
        printf("***Error: some other failure\n");
    }
}
```

7.97.4 Changing the listener and enabling/disabling statuses associated with it

The listener for an entity can be specified at the entity creation time. By default the listener is *enabled* for all the statuses supported by the entity.

Once an entity has been created, its listener and/or the statuses for which it is enabled can be manipulated as follows.

- User defines entity listener methods
```
/* ... methods defined by EntityListener ... */
public class MyEntityListener implements DDSListener {
    // ... methods defined by EntityListener ...
}
```

- Get an entity's listener using **get_listener (abstract)** (p. 1734)
```
entity_listener = entity->get_listener();
```
- Enable `status_kind` for the `listener`
```
enabled_status_list |= status_kind;
```
- Disable `status_kind` for the `listener`
```
enabled_status_list &= ~status_kind;
```
- Set an entity's listener to `entity_listener` using **set_listener (abstract)** (p. 1733). Only enable the listener for the statuses specified by the `enabled_status_list`.
```
if (entity->set_listener(entity_listener, enabled_status_list)
            != DDS_RETCODE_OK) {
    printf("***Error: setting entity listener\n");
}
```

7.97.5 Enabling/Disabling statuses associated with a status condition

Upon entity creation, by default, all the statuses are *enabled* for the DDS_StatusCondition associated with the entity.

Once an entity has been created, the list of statuses for which the DDS_StatusCondition is triggered can be manipulated as follows.

- Given an `entity`, a `status_kind`, and the associated `status_condition`:
```
statuscondition = entity->get_statuscondition();
```
  - Get the list of statuses enabled for the `status_condition`
```
enabled_status_list = statuscondition->get_enabled_statuses();
```

- Check if the given `status_kind` is enabled for the `status_condition`

```
if (enabled_status_list & status_kind) {
    /*... YES, status_kind is enabled ... */
} else {
    /* ... NO, status_kind is NOT enabled ... */
}
```

- Enable `status_kind` for the `status_condition`

```
if (statuscondition->set_enabled_statuses(enabled_status_list | status_kind)
            != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

- Disable `status_kind` for the `status_condition`

```
if (statuscondition->set_enabled_statuses(enabled_status_list & ~status_kind)
            != DDS_RETCODE_OK) {
    /* ... check for cause of failure */
}
```

7.98 Waitset Use Cases

Using wait-sets and conditions.

Using wait-sets and conditions.

7.98.1 Setting up a wait-set

- Create a wait-set

```
DDSWaitSet* waitset = new DDSWaitSet();
```

- Attach conditions

```
DDSCondition* cond1 = ...;
DDSCondition* cond2 = entity->get_statuscondition();
DDSCondition* cond3 = reader->create_readcondition(DDS_NOT_READ_SAMPLE_STATE,
                                                   DDS_ANY_VIEW_STATE,
                                                   DDS_ANY_INSTANCE_STATE);
DDSCondition* cond4 = new DDSGuardCondition();
DDSCondition* cond5 = ...;
DDS_ReturnCode_t retcode;
retcode = waitset->attach_condition(cond1);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond2);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond3);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond4);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
retcode = waitset->attach_condition(cond5);
if (retcode != DDS_RETCODE_OK) {
    // ... error
}
```

7.98.2 Waiting for condition(s) to trigger

- **Set up a wait-set** (p. 408)
- Wait for a condition to trigger or `timeout`, whichever occurs first

```
DDS_Duration_t timeout = { 0, 1000000 }; // 1ms
DDSConditionSeq active_conditions; // holder for active conditions
bool is_cond1_triggered = false;
bool is_cond2_triggered = false;
DDS_ReturnCode_t retcode;
retcode = waitset->wait(active_conditions, timeout);
if (retcode != DDS_RETCODE_OK) {
    if (retcode == DDS_RETCODE_TIMEOUT) {
        // Timeout
    } else {
        // Failure
} else {
    // success, check if "cond1" or "cond2" are triggered:
        for(int i = 0; i < active_conditions.length(); ++i) {
           if (active_conditions[i] == cond1) {
              printf("Cond1 was triggered!");
              is_cond1_triggered = true;
           }
           if (active_conditions[i] == cond2) {
              printf("Cond2 was triggered!");
              is_cond2_triggered = true;
           }
           if (is_cond1_triggered && is_cond2_triggered) {
              break;
           }
       }
}
if (is_cond1_triggered) {
    // ... do something because "cond1" was triggered ...
}
if (is_cond2_triggered) {
    // ... do something because "cond2" was triggered ...
}
return retcode;
```

7.98.3 Tearing down a wait-set

- Delete the wait-set

```
delete waitset;
waitset = NULL;
```

7.99 Transport Use Cases

Working with pluggable transports.

Working with pluggable transports.

7.99.1 Changing the automatically registered built-in transports

- The **DDS_TRANSPORTBUILTIN_MASK_DEFAULT** (p. 642) specifies the transport plugins that will be automatically registered with a newly created **DDSDomainParticipant** (p. 1619) by default.
- This default can be changed by changing the value of the value of **TRANSPORT_BUILTIN** (p. 641) Qos Policy on the **DDSDomainParticipant** (p. 1619)
- To change the **DDS_DomainParticipantQos::transport_builtin** (p. 974) Qos Policy:

```
    DDS_DomainParticipantQos participant_qos;

    factory->get_default_participant_qos(participant_qos);

    participant_qos.transport_builtin.mask = DDS_TRANSPORTBUILTIN_SHMEM |
                                             DDS_TRANSPORTBUILTIN_UDPv4;
```

7.99.2 Changing the properties of the automatically registered builtin transports

The behavior of the automatically registered builtin transports can be altered by changing their properties.

- Tell the **DDSDomainParticipantFactory** (p. 1694) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 395)
- Get the property of the desired builtin transport plugin, say ::**UDPv4 Transport** (p. 462)

```
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPV4_PROPERTY_DEFAULT;

if (NDDSTransportSupport::get_builtin_transport_property(
                                    participant,
                                    DDS_TRANSPORTBUILTIN_UDPv4,
                                    (struct NDDS_Transport_Property_t&)property)
       != DDS_RETCODE_OK) {
    printf("***Error: get builtin transport property\n");
}
```

- Change the property fields as desired. Note that the properties should be changed carefully, as inappropriate values may prevent communications. For example, the ::**UDPv4 Transport** (p. 462) properties can be changed to support **large messages** (assuming the underlying operating system's UDPv4 stack supports the large message size). Note: if message_size_max is increased from the default for any of the built-in transports, then the **DDS_ReceiverPoolQosPolicy::buffer_size** (p. 1294) on the DomainParticipant should also be changed.

```
/* Decrease the UDPv4 maximum message size to 9K (small messages). */
property.parent.message_size_max =  9216;
property.recv_socket_buffer_size =  9216;
property.send_socket_buffer_size =  9216;
```

- Set the property of the desired builtin transport plugin, say ::**UDPv4 Transport** (p. 462)

```
if (NDDSTransportSupport::set_builtin_transport_property(
                                    participant,
                                    DDS_TRANSPORTBUILTIN_UDPv4,
                                    (struct NDDS_Transport_Property_t&)property)
       != DDS_RETCODE_OK) {
    printf("***Error: set builtin transport property\n");
}
```

- **Enable the participant** (p. 406) to turn on communications with other participants in the domain using the new properties for the automatically registered builtin transport plugins.

7.99.3 Creating a transport

- A transport plugin is created using methods provided by the supplier of the transport plugin.
- For example to create an instance of the ::**UDPv4 Transport** (p. 462)

```
NDDS_Transport_Plugin* transport = NULL;
struct NDDS_Transport_UDPv4_Property_t property = NDDS_TRANSPORT_UDPV4_PROPERTY_DEFAULT;
transport = NDDS_Transport_UDPv4_new(&property);
if (transport == NULL) {
   printf("***Error: creating transport plugin\n");
}
```

7.99.4 Deleting a transport

- A transport plugin can only be deleted only after the **DDSDomainParticipant** (p. 1619) with which it is registered is deleted.
- The virtual destructor provided by the abstract transport plugin API can be used to delete a transport plugin.

```
transport->delete_cEA(transport, NULL);
```

7.99.5 Registering a transport with a participant

The basic steps for setting up transport plugins for use in an RTI Connext application are described below.

- Tell the **DDSDomainParticipantFactory** (p. 1694) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 395)

Optionally **Changing the automatically registered built-in transports** (p. 409)

Optionally **Changing the properties of the automatically registered builtin transports** (p. 410)

- Create a disabled **DDSDomainParticipant** (p. 1619), as described in **Setting up a participant** (p. 395)
- Decide on the **network address** (p. 176) for the transport plugin. The network address should be chosen so that the resulting fully qualified address is globally unique (across all transports used in the domain).

```
/* Decide on a network address (96 bits for UDPv4), such that the fully
   qualified unicast address for the transport's interfaces will be
   globally unique. For example, we use the network address:
            1234:1234:1234:0000
   It will be prepended to the unicast addresses of the transport plugin's
   interfaces, to give a fully qualified address that is unique in the
   domain.
*/
NDDS_Transport_Address_t network_address = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 0,0,0,0}};
```

- Decide on the **aliases** (p. 173) for the transport plugin. An alias can refer to one or more transport plugins. The transport class name (see **Builtin Transport Class Names** (p. 668)) are automatically appended to the user-provided aliases. Alias names are useful in creating logical groupings of transports, e.g. all the transports that are configured to support large messages may be given the alias "large_message".

```
/* Decide aliases, i.e. the names by which this transport plugin will be known */
const char* ALIASES[] = {
    "my",
    "large_message",
};
const DDS_Long ALIASES_LENGTH = sizeof(ALIASES)/sizeof(const char*);

/* Initialize the aliases StringSeq */
DDS_StringSeq aliases;
if (!aliases.from_array(ALIASES, ALIASES_LENGTH)) {
    printf("***Error: creating initializing aliases\n");
}
```

- Register the transport plugin with the **DDSDomainParticipant** (p. 1619). Note that a transport plugin should **NOT be registered with more than one DomainParticipant**. It is the responsibility of the application programmer to ensure that this requirement is not violated.

```
NDDS_Transport_Handle_t handle = NDDS_TRANSPORT_HANDLE_NIL;

handle = NDDSTransportSupport::register_transport(
                        participant,          /* Disabled Domain Participant */
                        transport,            /* Transport plugin */
                        aliases,              /* Transport aliases */
                        network_address);     /* Transport network address */
if (NDDS_Transport_Handle_is_nil(&handle)) {
   printf("***Error: registering transport\n");
}
```

Optionally **Adding receive routes for a transport** (p. 412)

Optionally **Adding send routes for a transport** (p. 412)

- **Enable the participant** (p. 406) to turn on communications with other participants in the domain, using the newly registered transport plugins, and automatically registered builtin transport plugins (if any).

7.99.6 Adding receive routes for a transport

- Receive routes can be added to restrict address ranges on which incoming messages can be received. Any number of receive routes can be added, but these must be done before the participant is enabled.
- To restrict the address range from which incoming messages can be received by the transport plugin:

```
/* Restrict to receiving messages only on interfaces
           1234:1234:1234:10.10.*.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,0,0}};
if (NDDSTransportSupport::add_receive_route(handle, subnet, 112)
                          != DDS_RETCODE_OK) {
   printf("***Error: adding receive route\n");
}
```

7.99.7 Adding send routes for a transport

- Send routes can be added to restrict the address ranges to which outgoing messages can be sent by the transport plugin. Any number of send routes can be added, but these must be done before the participant is enabled.
- To restrict address ranges to which outgoing messages can be sent by the transport plugin:

```
/* Restrict to sending messages only to addresses (subnets)
             1234:1234:1234:10.10.30.*
*/
NDDS_Transport_Address_t subnet = {{1,2,3,4, 1,2,3,4, 1,2,3,4, 10,10,30,0}};
if (NDDSTransportSupport::add_send_route(handle, subnet, 120)
                          != DDS_RETCODE_OK) {
   printf("***Error: adding send route\n");
}
```

7.100 Filter Use Cases

Working with data filters.

Working with data filters.

7.100.1 Introduction

RTI Connext supports filtering data either during the exchange from **DDSDataWriter** (p. 1589) to **DDSDataReader** (p. 1556), or after the data has been stored at the **DDSDataReader** (p. 1556).

Filtering during the exchange process is performed by a **DDSContentFilteredTopic** (p. 1551), which is created by the **DDSDataReader** (p. 1556) as a way of specifying a subset of the data samples that it wishes to receive.

Filtering samples that have already been received by the **DDSDataReader** (p. 1556) is performed by creating a **DDSQueryCondition** (p. 1841), which can then used to check for matching samples, be alerted when matching samples arrive, or retrieve matching samples through use of the **FooDataReader::read_w_condition** (p. 1925) or **FooData↩Reader::take_w_condition** (p. 1926) functions. (Conditions may also be used with the APIs **FooDataReader::read↩_next_instance_w_condition** (p. 1938) and **FooDataReader::take_next_instance_w_condition** (p. 1939).)

Filtering may be performed on any topic, either keyed or un-keyed, except the **Built-in Topics** (p. 61). Filtering may be perfomed on any field, subset of fields, or combination of fields, subject only to the limitations of the filter syntax, and some restrictions against filtering some *sparse value types* of the **Dynamic Data** (p. 103) API.

RTI Connext contains built in support for filtering using SQL syntax, described in the **Queries and Filters Syntax** (p. 184) module.

7.100.1.1 Overview of ContentFilteredTopic

Each **DDSContentFilteredTopic** (p. 1551) is created based on an existing **DDSTopic** (p. 1885). The **DDSTopic** (p. 1885) specifies the **field_names** and **field_types** of the data contained within the topic. The **DDSContentFiltered↩ Topic** (p. 1551), by means of its `filter_expression` and `expression_parameters`, further specifies the *values* of the data which the **DDSDataReader** (p. 1556) wishes to receive.

Custom filters may also be constructed and utilized as described in the **Creating Custom Content Filters** (p. 415) module.

Once the **DDSContentFilteredTopic** (p. 1551) has been created, a **DDSDataReader** (p. 1556) can be created using the filtered topic. The filter's characteristics are exchanged between the **DDSDataReader** (p. 1556) and any matching **DDSDataWriter** (p. 1589) during the discovery process.

If the **DDSDataWriter** (p. 1589) allows (by **DDS_DataWriterResourceLimitsQosPolicy::max_remote_reader_filters** (p. 920)), and the **DDSDataReader** (p. 1556) 's **DDS_TransportMulticastQosPolicy** (p. 1415) is empty, then the **DDSDataWriter** (p. 1589) will filter out samples that don't meet the filtering criteria.

If disallowed by the **DDSDataWriter** (p. 1589), or the **DDSDataReader** (p. 1556) has set the **DDS_TransportMulticast↩ QosPolicy** (p. 1415), then the **DDSDataWriter** (p. 1589) sends all samples to the **DDSDataReader** (p. 1556), and the **DDSDataReader** (p. 1556) discards any samples that do not meet the filtering criteria.

The `expression_parameters` can be modified using **DDSContentFilteredTopic::set_expression_parameters** (p. 1553). Any changes made to the filtering criteria by means of **DDSContentFilteredTopic::set_expression_↩ parameters** (p. 1553), will be conveyed to any connected **DDSDataWriter** (p. 1589). New samples will be subject to the modified filtering criteria, but samples that have already been accepted or rejected are unaffected. However, if the **DDSDataReader** (p. 1556) connects to a **DDSDataWriter** (p. 1589) that *re-sends* its data, the re-sent samples will be subjected to the new filtering criteria.

7.100.1.2 Overview of QueryCondition

DDSQueryCondition (p. 1841) combine aspects of the content filtering capabilities of **DDSContentFilteredTopic** (p. 1551) with state filtering capabilities of **DDSReadCondition** (p. 1842) to create a reconfigurable means of filtering or searching data in the **DDSDataReader** (p. 1556) queue.

DDSQueryCondition (p. 1841) may be created on a disabled **DDSDataReader** (p. 1556), or after the **DDSDataReader** (p. 1556) has been enabled. If the **DDSDataReader** (p. 1556) is enabled, and has already recevied and stored samples in its queue, then all data samples in the are filtered against the **DDSQueryCondition** (p. 1841) filter criteria at the time that the **DDSQueryCondition** (p. 1841) is created. (Note that an exclusive lock is held on the **DDSDataReader** (p. 1556) sample queue for the duration of the **DDSQueryCondition** (p. 1841) creation).

Once created, incoming samples are filtered against all **DDSQueryCondition** (p. 1841) filter criteria at the time of their arrival and storage into the **DDSDataReader** (p. 1556) queue.

The number of **DDSQueryCondition** (p. 1841) filters that an individual **DDSDataReader** (p. 1556) may create is set by **DDS_DataReaderResourceLimitsQosPolicy::max_query_condition_filters** (p. 880), to an upper maximum of 32.

7.100.2 Filtering with ContentFilteredTopic

- **Set up subscriber** (p. 401)
- **Set up a topic** (p. 396)
- Create a ContentFilteredTopic, of user data type **Foo** (p. 1916):

```
DDSContentFilteredTopic *cft = NULL;
DDS_StringSeq cft_parameters(2);
const char* cft_param_list[] = {"1", "100"};
cft_parameters.from_array(cft_param_list, 2);
cft = participant->create_contentfilteredtopic("ContentFilteredTopic",
                                               Foo_topic,
                                               "value > %0 AND value < %1",
                                               cft_parameters);
if (cft == NULL) {
    printf("create_contentfilteredtopic error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

- Create a FooReader using the ContentFilteredTopic:

```
DDSDataReader *reader = NULL;
reader = subscriber->create_datareader(cft,
                                       datareader_qos, // or DDS_DATAREADER_QOS_DEFAULT
                                       reader_listener, // or NULL
                                       DDS_STATUS_MASK_ALL);
if (reader == NULL) {
    printf("create_datareader error\n");
    subscriber_shutdown(participant);
    return -1;
}
FooDataReader *Foo_reader = FooDataReader::narrow(reader);
if (Foo_reader == NULL) {
    printf("DataReader narrow error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

Once setup, reading samples with a **DDSContentFilteredTopic** (p. 1551) is exactly the same as normal reads or takes, as decribed in **DataReader Use Cases** (p. 403).

- Changing filter crieria using set_expression_parameters:

```
cft->get_expression_parameters(cft_parameters);
DDS_String_free(cft_parameters[0]);
DDS_String_free(cft_parameters[1]);
cft_parameters[0] = DDS_String_dup("5");
cft_arameters[1] = DDS_String_dup("9");
retcode = cft->set_expression_parameters(cft_arameters);
if (retcode != DDS_RETCODE_OK) {
    printf("set_expression_parameters error\n");
    subscriber_shutdown(participant);
    return -1;
}
```

7.100.3 Filtering with Query Conditions

- Given a data reader of type **Foo** (p. 1916)

```
DDSDataReader *reader = ...;
FooDataReader *Foo_reader = FooDataReader::narrow(reader);
```

- Creating a QueryCondition

```
DDSQueryCondition *queryCondition = NULL;
DDS_StringSeq qc_parameters(2);
const char *qc_param_list[] = {"0","100"};
qc_parameters.from_array(qc_param_list,2);
queryCondition = reader->create_querycondition(DDS_NOT_READ_SAMPLE_STATE,
                                               DDS_ANY_VIEW_STATE,
                                               DDS_ALIVE_INSTANCE_STATE,
                                               "value > %0 AND value < %1",
                                               qc_parameters);
```

```
if (queryCondition == NULL) {
    printf("create_query_condition error\n");
    goto error_exit;
}
```

- Reading matching samples with a **DDSQueryCondition** (p. 1841)

```
FooSeq data_seq;
DDS_SampleInfoSeq info_seq;
retcode = Foo_reader->read_w_condition(data_seq, info_seq,
                                       DDS_LENGTH_UNLIMITED,
                                       queryCondition);
if (retcode == DDS_RETCODE_NO_DATA) {
    printf("no matching data\n");
} else if (retcode != DDS_RETCODE_OK) {
    printf("read_w_condition error %d\n", retcode);
    subscriber_shutdown(participant);
    return -1;
} else {
    for (i = 0; i < data_seq.length(); ++i) {
        if (info_seq[i].valid_data) {
            /* process your data here */
        }
    retcode = Foo_reader->return_loan(data_seq, info_seq);
    if (retcode != DDS_RETCODE_OK) {
        printf("return loan error %d\n", retcode);
        subscriber_shutdown(participant);
        return -1;
    }
}
```

- **DDSQueryCondition::set_query_parameters** (p. 1842) is used similarly to **DDSContentFilteredTopic::set_↩ expression_parameters** (p. 1553), and the same coding techniques can be used.
- Any **DDSQueryCondition** (p. 1841) that have been created must be deleted before the **DDSDataReader** (p. 1556) can be deleted. This can be done using **DDSDataReader::delete_contained_entities** (p. 1563) or manually as in:

```
retcode = reader->delete_readcondition(queryCondition);
```

7.100.4 Filtering Performance

Although RTI Connext supports filtering on any field or combination of fields using the SQL syntax of the built-in filter, filters for keyed topics that filter solely on the contents of key fields have the potential for much higher performance. This is because for key-only filters, the **DDSDataReader** (p. 1556) caches the results of the filter (pass or not pass) for each instance. When another sample of the same instance is seen at the **DDSDataReader** (p. 1556), the filter results are retrieved from the cache, dispensing with the need to call the filter function.

This optimization applies to all filtering using the built-in SQL filter, performed by the **DDSDataReader** (p. 1556), for either **DDSContentFilteredTopic** (p. 1551) or **DDSQueryCondition** (p. 1841). This does *not* apply to filtering perfomed for **DDSContentFilteredTopic** (p. 1551) by the **DDSDataWriter** (p. 1589).

7.101 Creating Custom Content Filters

Working with custom content filters.

Working with custom content filters.

7.101.1 Introduction

By default, RTI Connext creates content filters with the DDS_SQL_FILTER, which implements a superset of the DDS-specified SQL WHERE clause. However, in many cases this filter may not be what you want. Some examples are:

- The default filter can only filter based on the content of a sample, not on a computation on the content of a sample. You can use a custom filter that is customized for a specific type and can filter based on a computation of the type members.
- You want to use a different filter language then SQL

This HOWTO explains how to write your own custom filter and is divided into the following sections:

- **The Custom Content Filter API** (p. 416)
- **Example Using C format strings** (p. 417)

7.101.2 The Custom Content Filter API

A custom content filter is created by calling the **DDSDomainParticipant::register_contentfilter** (p. 1632) function with a **DDSContentFilter** (p. 1548) that contains a **compile**, an **evaluate** function and a **finalize** function. **DDSContentFilteredTopic** (p. 1551) can be created with **DDSDomainParticipant::create_contentfilteredtopic_↩ with_filter** (p. 1654) to use this filter.

A custom content filter is used by RTI Connext at the following times during the life-time of a **DDSContentFilteredTopic** (p. 1551) (the function called is shown in parenthesis).

- When a **DDSContentFilteredTopic** (p. 1551) is created (**compile** (p. 416))
- When the filter parameters are changed on the **DDSContentFilteredTopic** (p. 1551) (**compile** (p. 416)) with **DDSContentFilteredTopic::set_expression_parameters** (p. 1553)
- When a sample is filtered (**evaluate** (p. 416)). This function is called by the RTI Connext core with a de-serialized sample
- When a **DDSContentFilteredTopic** (p. 1551) is deleted (**finalize** (p. 417))

7.101.2.1 The compile function

The **compile** (p. 417) function is used to **compile** a filter expression and expression parameters. Please note that the term **compile** is intentionally loosely defined. It is up to the user to decide what this function should do and return.

See **DDSContentFilter::compile** (p. 1548) for details.

7.101.2.2 The evaluate function

The **evaluate** (p. 417) function is called each time a sample is received to determine if a sample should be filtered out and discarded.

See **DDSContentFilter::evaluate** (p. 1550) for details.

7.101.2.3 The finalize function

The **finalize** (p. 417) function is called when an instance of the custom content filter is no longer needed. When this function is called, it is safe to free all resources used by this particular instance of the custom content filter.

See **DDSContentFilter::finalize** (p. 1550) for details.

7.101.3 Example Using C format strings

Assume that you have a type **Foo** (p. 1916).

You want to write a custom filter function that will drop all samples where the value of Foo.x $>$ x and x is a value determined by an expression parameter. The filter will **only** be used to filter samples of type **Foo** (p. 1916).

7.101.3.1 Writing the Compile Function

The first thing to note is that we can ignore the filter expression, since we already know what the expression is. The second is that x is a parameter that can be changed. By using this information, the compile function is very easy to implement. Simply return the parameter string. This string will then be passed to the evaluate function every time a sample of this type is filtered.

Below is the entire **compile** (p. 416) function.

```
DDS_ReturnCode_t MyContentFilter::compile(
    void** new_compile_data, const char * /* expression */,
    const DDS_StringSeq& parameters,const DDS_TypeCode* /* type_code */,
    const char * /* type_class_name */,
    void * /* old_compile_data */) {
    *new_compile_data = (void*)DDS_String_dup(parameters[0]);
    return DDS_RETCODE_OK;
}
```

7.101.3.2 Writing the Evaluate Function

The next step is to implement the **evaluate** function. The evaluate function receives the parameter string with the actual value to test against. Thus the evaluate function must read the actual value from the parameter string before evaluating the expression. Below is the entire **evaluate** (p. 416) function.

```
DDS_Boolean MyContentFilter::evaluate(
    void* compile_data,const void* sample,const struct DDS_FilterSampleInfo * meta_data) {
    char *parameter = (char*)compile_data;
    DDS_Long x;
    Foo *foo_sample = (Foo*)sample;
    sscanf(parameter,"%d",&x);
    return (foo_sample->x > x ? DDS_BOOLEAN_FALSE : DDS_BOOLEAN_TRUE);
}
```

7.101.3.3 Writing the Finalize Function

The last function to write is the finalize function. It is safe to free all resources used by this particular instance of the custom content filter that is allocated in **compile**. Below is the entire **finalize** (p. 417) function.

```
void MyContentFilter::finalize(
    void* compile_data) {
    /* free parameter string from compile function */
    DDS_String_free((char *)compile_data);
}
```

7.101.3.4 Registering the Filter

Before the custom filter can be used, it must be registered with RTI Connext:

```
DDSDomainParticipant *myParticipant=NULL;
/* myParticipant = .... */
DDSContentFilter *myCustomFilter = new MyContentFilter();
if (myParticipant->register_contentfilter(
    (char*)"MyCustomFilter",
    myCustomFilter) != DDS_RETCODE_OK) {
    printf("Failed to register custom filter\n");
}
```

7.101.3.5 Unregistering the Filter

When the filter is no longer needed, it can be unregistered from RTI Connext:

```
DDSDomainParticipant *myParticipant = NULL;
/* myParticipant = .... */
DDSContentFilter *myCustomFilter =
    myParticipant->lookup_contentfilter((char*)"MyCustomFilter");
if (myCustomFilter != NULL) {
    if (myParticipant->unregister_contentfilter(
        (char*)"MyCustomFilter") != DDS_RETCODE_OK) {
        printf("Failed to unregister custom filter\n");
    }
    delete myCustomFilter;
}
```

7.102 Large Data Use Cases

Working with large data types.

Working with large data types.

7.102.1 Introduction

RTI Connext supports data types whose size exceeds the maximum message size of the underlying transports. A **DDSDataWriter** (p. 1589) will fragment data samples when required. Fragments are automatically reassembled at the receiving end.

Once all fragments of a sample have been received, the new sample is passed to the **DDSDataReader** (p. 1556) which can then make it available to the user. Note that the new sample is treated as a regular sample at that point and its availability depends on standard QoS settings such as **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311) and **DDS_KEEP_LAST_HISTORY_QOS** (p. 604).

The large data feature is fully supported by all DDS API's, so its use is mostly transparent. Some additional considerations apply as explained below.

7.102.2 Writing Large Data

In order to use the large data feature with the **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) setting, the **DDSData↩ Writer** (p. 1589) must be configured as an asynchronous writer (**DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 629)) with associated **DDSFlowController** (p. 1736).

While the use of an asynchronous writer and flow controller is optional when using the **DDS_BEST_EFFORT_↩ RELIABILITY_QOS** (p. 633) setting, most large data use cases will benefit from the use of a flow controller to prevent flooding the network when fragments are being sent.

- **Set up writer** (p. 400)
- **Add flow control** (p. 397)

7.102.3 Receiving Large Data

Large data is supported by default and in most cases, no further changes are required.

The **DDS_DataReaderResourceLimitsQosPolicy** (p. 867) allows tuning the resources available to the **DDSData↩ Reader** (p. 1556) for reassembling fragmented large data.

- **Set up reader** (p. 403)

7.103 Request-Reply Examples

Examples on how to use the request-reply API .

Examples on how to use the request-reply API .

Request-Reply code examples.

7.103.1 Request-Reply Examples

Requesters and Repliers provide a way to use the Request-Reply communication pattern on top of the DDS entities. An application uses a Requester to send requests to a Replier; another application using a Replier receives a request and can send one or more replies for that request. The Requester that sent the request (and only that one) will receive the reply (or replies).

DDS Types

RTI Connext uses DDS data types for sending and receiving requests and replies. Valid types are those generated by the rtiddsgen code generator, the DDS built-in types, and `DynamicData`. Refer to the `Core Libraries User's Manual` and the following links for more information:

- Code Generator User's Manual,
- **Using the DDS built-in types** (p. 95),
- **Using DynamicData** (p. 103)

Set up

- **Create a DomainParticipant** (p. 395)
- **Create a requester** (p. 421)
- **Create a requester with parameters** (p. 421)
- **Create a replier** (p. 425)

Requester: sending requests and receiving replies

- **Basic Requester example** (p. 421)
- **Taking loaned samples** (p. 422)
- **Taking samples by copy** (p. 422)
- **Correlation between requests and replies** (p. 423)

Replier: receiving requests and sending replies

- **Basic Replier example** (p. 425)
- **SimpleReplier example** (p. 426)
- **Taking loaned samples** (p. 422)
- **Taking samples by copy** (p. 422)

Error handling

- **Error handling example** (p. 426)

Note

To use Request-Reply you need to build and link your application with the additional `rticonnextmsgcpp` library and include `ndds/ndds_requestreply_cpp.h`.

7.103.2 Requester Creation

- **Setting up a participant** (p. 395)
- Creating a Requester

```
using namespace connext;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Requester (if creation fails, the constructor throws)
Requester<Foo, Bar> * requester =
    new Requester<Foo, Bar>(participant, "TestService");
```

7.103.3 Creating a Requester with optional parameters

- **Setting up a participant** (p. 395)
- Creating a Requester with additional parameters

```
using namespace connext;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Requester with a QoS profile (located for example in
// USER_QOS_PROFILES.xml, in the current working directory)
RequesterParams requester_params(participant);
requester_params.service_name("TestService");
requester_params.qos_profile(
    "RequestReplyExampleProfiles", "RequesterExampleProfile");
Requester<Foo, Bar> * requester = new Requester<Foo, Bar>(requester_params);
```

See also

Requester Creation (p. 421)

Configuring Request-Reply QoS profiles (p. 427)

7.103.4 Basic Requester example

- **Requester Creation** (p. 421)
- **Creating a Requester with optional parameters** (p. 421)
- Basic Requester example

```
using namespace connext;
// Send request
WriteSample<Foo> request;
strcpy(request.data().message, "A Request");
requester->send_request(request);
// Create a reply Sample
Sample<Bar> reply;
// Receive reply (wait for it and get the sample)
bool received = requester->receive_reply(reply, MAX_WAIT);
if (received) {
    if(reply.info().valid_data) {
        std::cout << "Received reply: " << reply.data().message << std::endl;
    } else {
        std::cout << "Received invalid reply" << std::endl;
    }
} else {
    std::cout << "Reply not received" << std::endl;
}
```

- Basic Requester example using the **String built-in type** (p. 508)

```
using namespace connext;
// Create a Requester (this time we create it on the stack)
// The template parameter std::string maps to the String DDS built-in type
Requester<std::string, std::string> requester(participant, "TestServiceString");
// Send a request
requester.send_request("A string request");
// Receive reply
LoanedSamples<std::string> replies = requester.receive_replies(MAX_WAIT);
for (LoanedSamples<std::string>::iterator it = replies.begin();
     it != replies.end();
     ++it) {
    if (it->info().valid_data) {
        std::cout << "Received string reply: " << it->data() << std::endl;
    }
}
// When replies go out of scope, the loan is automatically returned
```

See also

Basic Replier example (p. 425)

SimpleReplier example (p. 426)

7.103.5 Taking loaned samples

- **Requester Creation** (p. 421)
- Get iterator to loaned replies (no copies)

```
using namespace connext;
// Get loaned samples
// Unlike receive_replies(), take_replies() doesn't block and returns an
// empty collection if there are no replies at that moment.
// (before that we can call requester->wait_for_replies)
LoanedSamples<Bar> replies = requester->take_replies();
// Iterate through the container of loaned samples.
// If there were no replies, the container is empty
for (LoanedSamples<Bar>::const_iterator it = replies.begin();
    it != replies.end();
    ++it) {
    if (it->info().valid_data) {
        std::cout << "Received reply: " << it->data().message << std::endl;
    }
}
// When replies go out of scope, the loan is automatically returned
```

See also

Basic Requester example (p. 421)

Basic Replier example (p. 425)

Taking samples by copy (p. 422)

7.103.6 Taking samples by copy

- **Requester Creation** (p. 421)
- Get copies of the replies:

```
using namespace connext;
// Get loaned samples
LoanedSamples<Bar> replies = requester->take_replies();
// Copy the contents using the STL-compliant iterator in LoanedSamples
std::list<Sample<Bar> > my_list;
std::copy(replies.begin(), replies.end(), std::back_inserter(my_list));
```

```
// We can copy to a container of Bar rather than Sample<Bar>,
// thanks to the implicit conversion from Sample<Bar> to Bar.
// If our application works with instances, we may have received
// invalid data (e.g. disposed instance). We can iterate through valid
// samples only using an iterator adapter.
std::vector<Bar> my_vector;
std::copy(
    make_valid_sample_iterator(replies.begin()),
    make_valid_sample_iterator(replies.end()),
    std::back_inserter(my_vector));
// When replies go out of scope, the loan is automatically returned
```

See also

Basic Replier example (p. 425)

Taking loaned samples (p. 422)

7.103.7 Correlating requests and replies

- **Requester Creation** (p. 421)
- Example 1) Waiting for a reply to a specific request

```
using namespace connext;
// Create requests
WriteSample<Foo> request1, request2;
strcpy(request1.data().message, "Request 1");
strcpy(request2.data().message, "Request 2");
// Send requests using WriteSample
requester->send_request(request1);
requester->send_request(request2);
// Wait for a reply to the second request
Sample<Bar> reply;
bool received = requester->wait_for_replies(
    1, MAX_WAIT, request2.identity());
if (!received) {
    std::cout << "Did not receive reply for request 2" << std::endl;
    return;
}
// Take that reply
requester->take_reply(reply, request2.identity());
// This postcondition should always be true
if (reply.related_identity() != request2.identity()) {
    throw std::runtime_error("postcondition failed");
}
if (reply.info().valid_data) {
    std::cout << "Received reply for request 2: "
              << reply.data().message << std::endl;
}
// Wait for a reply to the first request
received = requester->wait_for_replies(1, MAX_WAIT, request1.identity());
if (!received) {
    std::cout << "Did not receive reply for request 1" << std::endl;
    return;
}
// Take that reply
requester->take_reply(reply, request1.identity());
// This postcondition should always be true
if (reply.related_identity() != request1.identity()) {
    throw std::runtime_error("postcondition failed");
}
if (reply.info().valid_data) {
    std::cout << "Received reply for request 1: "
              << reply.data().message << std::endl;
}
```

- Example 2) Correlating a reply after receiving it

```
using namespace connext;
// Create requests
WriteSample<Foo> request1, request2;
strcpy(request1.data().message, "Request 1");
strcpy(request2.data().message, "Request 2");
```

```
// Send requests using WriteSample
requester->send_request(request1);
requester->send_request(request2);
// Wait for two replies. In this case we don't mind the
// reception order
bool received = requester->wait_for_replies(2, MAX_WAIT);
if (!received) {
    std::cout « "Replies not received" « std::endl;
    return;
}
LoanedSamples<Bar>::iterator it;
// Get all the replies
LoanedSamples<Bar> replies = requester->take_replies();
// Find the reply for request 1.
//
// We search using the STL find_if algorithm. The search range is all
// the elements in the replies container (from beginning to end).
// We use a predicate included in the Connext namespace that evaluates to
// true when a Sample's related_identity equals the identity that
// is passed to the constructor (request1's, in this case)
it = std::find_if(replies.begin(), replies.end(),
                  IsReplyRelatedPredicate<Bar>(request1.identity()));
if (it != replies.end()) {
    std::cout « "Received reply for request 1: "
              « it->data().message « std::endl;
}
// Find the reply for request 2
it = std::find_if(replies.begin(), replies.end(),
                  IsReplyRelatedPredicate<Bar>(request2.identity()));
if (it != replies.end()) {
    std::cout « "Received reply for request 2: "
              « it->data().message « std::endl;
}
// When replies go out of scope, the loan is automatically returned
```

7.103.8 Basic Requester example using SampleRef

This example is similar to **Basic Requester example** (p. 421) except it uses a SampleRef instance instead of a Sample instance.

- Assuming the variables you want to use already exist:

```
Foo request_data;
DDS::WriteParams_t request_params;
Bar reply_data;
DDS::SampleInfo reply_info;
// ...
```

- You can use WriteSampleRef and SampleRef:

```
using namespace connext;
// Create a request WriteSampleRef
WriteSampleRef<Foo> request;
request.set_data(request_data);
request.set_info(request_params);
// Send request
requester->send_request(request);
// Create a reply SampleRef
SampleRef<Bar> reply;
reply.set_data(reply_data);
reply.set_info(reply_info);
// Receive reply
bool received = requester->receive_reply(reply, MAX_WAIT);
if (received) {
    if(reply_info.valid_data) {
        std::cout « "Received reply: " « reply_data.message « std::endl;
```

```
        } else {
            std::cout « "Received invalid reply" « std::endl;
        }
    } else {
        std::cout « "Reply not received" « std::endl;
    }
```

7.103.9 Creating a Replier

- **Setting up a participant** (p. 395)
- Create a Replier

```
using namespace connext;
// Note: error checking omitted for simplicity
// Create a DomainParticipant
DDS::DomainParticipant * participant =
    DDS::DomainParticipantFactory::get_instance()->create_participant(
        domain_id, DDS::PARTICIPANT_QOS_DEFAULT,
        NULL, DDS::STATUS_MASK_NONE);
// Create a Replier (if creation fails, the constructor throws exception)
Replier<Foo, Bar> * replier =
    new Replier<Foo, Bar>(participant, "TestService");
```

7.103.10 Basic Replier example

- **Creating a Replier** (p. 425)
- Basic Replier example

```
using namespace connext;
Sample<Foo> request;
// Receive one request
bool received = replier->receive_request(request, MAX_WAIT);
if (!received) {
    std::cout « "Requests not received" « std::endl;
    return false;
}
// A WriteSample automatically initializes and finalizes
// the data using the TypeSupport (in this case BarTypeSupport)
WriteSample<Bar> reply;
if (request.info().valid_data) {
    sprintf(reply.data().message, "Reply for %s", request.data().message);
    // Send a reply for that request
    replier->send_reply(reply, request.identity());
    // Note: a replier can send more than one reply for the same request
}
```

Basic Requester example (p. 421)

7.103.11 SimpleReplier example

- Implement a listener

```
class MySimpleReplierListener : public SimpleReplierListener<Foo, Bar>
{
public:
    Bar * on_request_available(SampleRef<Foo> request)
    {
        if (!request.info().valid_data) {
            // In this example we don't reply to invalid data samples.
            // In other cases, it could make sense to reply
            // to a disposed instance, for example.
            return NULL;
        }
        sprintf(_reply.data().message, "Simple reply for %s",
                request.data().message);
        return &_reply.data();
    }
    void return_loan(Bar * reply)
    {
        // nothing to do
    }
private:
    // By using a WriteSample (instead of just Bar), the sample is
    // automatically initialized and released.
    WriteSample<Bar> _reply;
};
```

- And create a SimpleReplier with the listener

```
    using namespace connext;
    // Note: error checking omitted for simplicity
    MySimpleReplierListener * listener = new MySimpleReplierListener();
    SimpleReplier<Foo, Bar> * replier = new SimpleReplier<Foo, Bar>(
        participant, "TestService", *listener);
    // After creation the SimpleReplier is already active and may call
    // the listener
```

- This next example shows how to implement a listener for a SimpleReplier using the std::string type

```
class MyStringSimpleReplierListener :
    public SimpleReplierListener<std::string, std::string>
{
public:
    // Note that the actual received type is const char*,
    // because internally, the middleware uses char*
    std::string * on_request_available(SampleRef<const char*> request)
    {
        if (!request.info().valid_data) {
            return NULL;
        }
        _reply = std::string("Simple string reply for ") + request.data();
        return &_reply;
    }
    void return_loan(std::string * reply)
    {
        // nothing to do
    }
private:
    std::string _reply;
};
```

Basic Requester example (p. 421)

7.103.12 Error handling example

- Catching an exception from the request-reply API

```
    using namespace connext;
    // All the operations in the request-reply API
    // throw exceptions in case of error.
    // You can also set the verbosity level to warning for
    // additional information
    NDDSConfigLogger::get_instance()->set_verbosity(
```

```
    NDDS_CONFIG_LOG_VERBOSITY_WARNING);
//
// For example, this replier is sending a reply for a nonexistent request
//
WriteSample<Bar> reply;
DDS::SampleIdentity_t invalid_request_id;
try {
    replier->send_reply(reply, invalid_request_id);
} catch (const BadParameterException& ex) {
    std::cout << "Exception while sending reply: "
              << ex.what() << std::endl;
}
// Exceptions inherit from std::runtime_error or std::logic_error,
// so you can have a more general catch statement:
//
// This piece of code produces the same result as the previous one:
//
try {
    replier->send_reply(reply, invalid_request_id);
} catch (const std::exception& ex) {
    std::cout << "Exception while sending request: "
              << ex.what() << std::endl;
}
```

7.103.13 Configuring Request-Reply QoS profiles

If you do not specify your own QoS parameters (in **connext::RequesterParams** (p. 2178) and **connext::ReplierParams** (p. 2152)), a **connext::Requester** (p. 2157) and **connext::Replier** (p. 2139) are created using a default configuration defined in the built-in profile **DDS_PROFILE_PATTERN_RPC** (p. 697). You use this built-in profile as the base for your own profiles:

```
<?xml version="1.0" encoding="UTF-8"?>
<!--
Description
Example XML QoS Profile for HelloWorld

(c) Copyright, Real-Time Innovations, 2012.  All rights reserved.
RTI grants Licensee a license to use, modify, compile, and create derivative
works of the software solely for use with RTI Connext DDS. Licensee may
redistribute copies of the software provided that all such copies are
subject to this license. The software is provided "as is", with no warranty
of any type, including any warranty for fitness for any purpose. RTI is
under no obligation to maintain or support the software. RTI shall not be
liable for any incidental or consequential damages arising out of the use
or inability to use the software.

The QoS configuration of the DDS entities in the generated example is loaded
from this file.

This file is used only when it is in the current working directory, the
environment variable NDDS_QOS_PROFILES is defined and points to this file, or
if the filename is specified in code.

QoS profiles are a tool for pre-specifying behavior of DDS entities (e.g.
DomainParticipants, DataReaders, and DataWriters).  For Domain Participants, this
means primarily configuring platform resources (e.g. UDP buffers sizes). For
DataReaders and DataWriters, it is aligning their behavior with the required
design patterns and ensuring the QoS for DataWriters and DataReaders are
compatible at runtime.

The profiles in this file use inheritance from built-in QoS Profiles and
composition from "QoS Snippets", which are provided in this product, to create
Four example profiles.  One for a DomainParticipant, and three additional profiles
which specify DataReader and DataWriter behavior for common communication design
Patterns.

The profiles will require optimization for networks that are highly variable in
throughput, latency, and/or sample loss, or have other unique characteristics.
Applications with special resource, latency or throughput requirements will also
require optimized profiles.
```

```
A collection of built-in profiles can be found in the
BuiltinProfiles.documentationONLY.xml file located in the
$NDDSHOME/resource/xml/ directory.

Any of these "base" QoS configurations may be employed by referring to them by
the name shown in the BuiltinProfiles.documentationONLY.xml file.

There is also a library that contains a collection of
QoS Snippets that set some specific features or configurations. They are
also located in the BuiltinProfiles.documentationONLY.xml file.
https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance

The file BuiltinProfiles.documentationONLY.xml is not intended to
be changed by users. To modify any of the values in a built-in profile,
the example in this file which inherits from a built-in profile should be
used, with changes applied as needed.

The "Configuring QoS with XML" chapter in the RTI Connext DDS Core Libraries User's Manual
has more information about managing QoS using XML QoS Profiles.

7.104 Documentation Roadmap

This section contains a roadmap for the new user with pointers on what to read first.

If you are new to RTI Connext, we recommend starting in the following order:

- See the `Getting Started Guide`. This document provides download and installation instructions. It also lays out the core value and concepts behind the product and takes you step-by-step through the creation of a simple example application.

- The `User's Manual` describes the features of the product and how to use them. It is organized around the structure of the DDS APIs and certain common high-level tasks.

- The documentation in the **RTI Connext DDS API Reference** (p. 434) provides an overview of API classes and modules for the DDS data-centric publish-subscribe (DCPS) package from a programmer's perspective. Start by reading the documentation on the main page.
- After reading the high level module documentation, look at the **Publication Example** (p. 392) and **Subscription Example** (p. 393) for step-by-step examples of creating a publication and subscription. These are hyperlinked code snippets to the full API documentation, and provide a good place to begin learning the APIs.

- Next, work through your own application using the example code files generated by rtiddsgen. See the `Code Generator User's Manual`.
- To integrate similar code into your own application and build system, you will likely need to refer to the `Platform Notes`.

7.105 Conventions

This section describes the conventions used in the API documentation.

7.105.1 Unsupported Features

[Not supported (optional)] This note means that the optional feature from the DDS specification is not supported in the current release.

7.105.2 API Naming Conventions

7.105.2.1 Structure & Class Names

RTI Data Distribution Service 4 makes a distinction between *value types* and *interface types*. Value types are types such as primitives, enumerations, strings, and structures whose identity and equality are determined solely by explicit state. Interface types are those abstract opaque data types that conceptually have an identity apart from their explicit state. Examples include all of the **DDSEntity** (p. 1731) subtypes, the **DDSCondition** (p. 1544) subtypes, and **DDSWaitSet** (p. 1897). Instances of value types are frequently transitory and are declared on the stack. Instances of interface types typically have longer lifecycles, are accessible by pointer only, and may be managed by a factory object.

Value and interface types are distinguished by their names: value types have names beginning with "DDS_" (i.e. with an underscore); interface types have names beginning with "DDS" (i.e. with no underscore). Another way to think of it: C-style types – structures, enumerations, etc. – have names beginning with "DDS_"; C++ classes have names beginning with "DDS."

7.105.3 API Documentation Terms

In the API documentation, the term module refers to a logical grouping of documentation and elements in the API.

At this time, typedefs that occur in the API, such as **DDS_ReturnCode_t** (p. 532) do not show up in the compound list or indices. This is a known limitation in the generated HTML.

7.105.4 Stereotypes

Commonly used stereotypes in the API documentation include the following.

7.105.4.1 Basic Qos

- *<<**basic**>> (p. 201)*
  - A QoS that Connext considers Basic.
  - See **Basic QoS** (p. 201) for a full list.

7.105.4.2 Extensions

- *<<**spec**>>* (p. *209)*
  - Part of a DDS standard specification.
  - See **DDS Specification QoS** (p. 209) for a full list of the QoS policies and fields that are part of a DDS standard specification.
- *<<**extension**>>* (p. *432)*
  - An RTI Connext product extension to the DDS standard specification.
  - The extension APIs complement the standard APIs specified by the OMG DDS specification. They are provided to improve product usability and enable access to product-specific features such as pluggable transports.
  - See **DDS Extension QoS** (p. 213) for a full list of QoS policies and fields that are extensions.

7.105.4.3 Experimental

- *<<**experimental**>> (p. 432)*
  - RTI Connext experimental features are used to evaluate new features and get user feedback.
  - These features are not guaranteed to be fully supported and might be implemented only of some of the programming languages supported bt RTI Connext
  - The functional APIs corresponding to experimental features can be distinguished from other APIs by the suffix '_exp'.
  - Experimental features may or may not appear in future product releases.
  - The name of the experimental features APIs will change if they become officially supported. At the very least the suffix '_exp' will be removed.
  - Experimental features should not be used in production.

7.105.4.4 Types

- *<<**interface**>> (p. 433)*
  - Pure interface type with *no state*.
  - Languages such as Java natively support the concept of an *interface* type, which is a collection of method signatures devoid of any dynamic state.
  - In C++, this is achieved via a class with all *pure virtual* methods and devoid of any instance variables (ie no dynamic state).
  - Interfaces are generally organized into a type hierarchy. Static typecasting along the interface type hierarchy is "safe" for valid objects.
- *<<**generic**>> (p. 433)*
  - A *generic* type is a *skeleton* class written in terms of generic parameters. Type-specific instantiations of such types are conventionally referred to in this documentation in terms of the hypothetical type "Foo"; for example: **FooSeq** (p. 1965), FooDataType, **FooDataWriter** (p. 1944), and **FooDataReader** (p. 1917).
  - For portability and efficiency, we implement generics using C preprocessor macros, rather than using C++ templates.
  - A *generic* type interface is declared via a #define macro.
  - Concrete types are generated from the generic type statically at compile time. The implementation of the concrete types is provided via the generic macros which can then be compiled as normal C or C++ code.
- *<<**singleton**>> (p. 433)*
  - Singleton class. There is a single instance of the class.
  - Generally acccessed via a `get_instance()` static method.

7.105.4.5 Method Parameters

- *<<**in**>> (p. 433)*
  - An *input* parameter.
- *<<**out**>> (p. 433)*
  - An *output* parameter.
- *<<**inout**>> (p. 433)*
  - An *input* and *output* parameter.

7.106 Using DDS:: Namespace

This section describes the C++ namespace support in the DDS API.

7.106.1 DDS Namespace Support

In this documentation, all C++ classes, value types, interface types and constants have names beginning with either **"DDS_"** or **"DDS"**. Alternatively, **DDS** namespace can also be used to refer to all these classes, types or constant.

All the C++ API that begins with either **"DDS_"** or **"DDS"** can be replaced with its namespace equivalent. For example, **DDSDomainParticipant (**p. **1619)** has a namespace equivalent of **DDS::DomainParticipant**, and **DDS_Domain↩ ParticipantQos (**p. **971)** has a namespace equivalent of **DDS::DomainParticipantQos**.

In order to use the **DDS** namespace, an additional header file, **ndds_namespace_cpp.h** , will need to be included in your source file:

```
#include "ndds/ndds_cpp.h"
#include "ndds/ndds_namespace_cpp.h"
DDS::DomainParticipant *participant = NULL;
DDS::DomainParticipantQos participant_qos;
DDS::DomainParticipantListener *listener = NULL;
DDS::StatusKind status_kind = DDS::INCONSISTENT_TOPIC_STATUS;
DDS::Long counter = 0L;
```

If the namespace header file is not included in the source file, DDS namespace cannot be used in the RTI Connext API.

7.106.2 DDS Namespace and Primitive Types

By default, **DDS** namespace support for primitive types are included. With **DDS** namespace support, the difference between DDS types and native types can just be the capitalization in some cases:

```
#include "ndds/ndds_cpp.h"
#include "ndds/ndds_namespace_cpp.h"
using namespace DDS;
Long ddsCounter = 0L;
long nativeCounter = 0L;
```

If you want to exclude the DDS namespace support for primitive types, you can define **NDDS_EXCLUDE_PRIMITIVE_↩ TYPES_FROM_NAMESPACE** in you application before including the namespace header file. **DDS** namespace support for primitive types will then be excluded:

```
#include "ndds/ndds_cpp.h"
#define NDDS_EXCLUDE_PRIMITIVE_TYPES_FROM_NAMESPACE
#include "ndds/ndds_namespace_cpp.h"
using namespace DDS;
DDS_Long ddsCounter = 0;
long nativeCounter = 0;
```

For the rest of the documentation, the **DDS** prefix is used for all class /types/constants names. However, all the API with the **DDS** prefix can be replaced with **DDS** namespace instead if the namespace header file is included.

7.107 RTI Connext DDS API Reference

RTI Connext modules following the DDS module definitions.

Modules

- **Domain Module**

  *Contains the **DDSDomainParticipant** (p. 1619) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1619) also acts as a container for the other objects that make up RTI Connext.*
- **Topic Module**

  *Contains the **DDSTopic** (p. 1885), **DDSContentFilteredTopic** (p. 1551), and **DDSMultiTopic** (p. 1797) classes, the **DDSTopicListener** (p. 1894) interface, and more generally, all that is needed by an application to define **DDSTopic** (p. 1885) objects and attach QoS policies to them.*
- **Publication Module**

  *Contains the **DDSFlowController** (p. 1736), **DDSPublisher** (p. 1818), and **DDSDataWriter** (p. 1589) classes as well as the **DDSPublisherListener** (p. 1839) and **DDSDataWriterListener** (p. 1612) interfaces, and more generally, all that is needed on the publication side.*
- **Subscription Module**

  *Contains the **DDSSubscriber** (p. 1860), **DDSDataReader** (p. 1556), **DDSReadCondition** (p. 1842), **DDSQuery↩ Condition** (p. 1841), and **DDSTopicQuery** (p. 1895) classes, as well as the **DDSSubscriberListener** (p. 1881) and **DDSDataReaderListener** (p. 1583) interfaces, and more generally, all that is needed on the subscription side.*
- **Infrastructure Module**

  Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.
- **Transports**

  APIs related to RTI Connext pluggable transports.
- **Queries and Filters Syntax**
- **Logging and Version**

  APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.
- **General Utilities and Compliance Configuration**

  API of general utilities used in the RTI Connext distribution.
- **Observability Framework**

  RTI Connext Observability Framework modules and APIs.
- **Durability and Persistence**

  APIs related to RTI Connext Durability and Persistence.
- **System Properties**

  System Properties.
- **Configuring QoS Profiles with XML**

  APIs related to XML QoS Profiles.
- **Additional RTI Connext Communication Patterns**

  Extensions to the RTI Connext publish-subscribe functionality.

7.107.1 Detailed Description

RTI Connext modules following the DDS module definitions.

7.107.2 Overview

Information flows with the aid of the following constructs: **DDSPublisher** (p. 1818) and **DDSDataWriter** (p. 1589) on the sending side, **DDSSubscriber** (p. 1860) and **DDSDataReader** (p. 1556) on the receiving side.

- A **DDSPublisher** (p. 1818) is an object responsible for data distribution. It may publish data of different data types. A TDataWriter acts as a *typed* (i.e. each **DDSDataWriter** (p. 1589) object is dedicated to one application data type) accessor to a publisher. A **DDSDataWriter** (p. 1589) is the object the application must use to communicate to a publisher the existence and value of data objects of a given type. When data object values have been communicated to the publisher through the appropriate data-writer, it is the publisher's responsibility to perform the distribution (the publisher will do this according to its own QoS, or the QoS attached to the corresponding data-writer). A *publication* is defined by the association of a data-writer to a publisher. This association expresses the intent of the application to publish the data described by the data-writer in the context provided by the publisher.
- A **DDSSubscriber** (p. 1860) is an object responsible for receiving published data and making it available (according to the Subscriber's QoS) to the receiving application. It may receive and dispatch data of different specified types. To access the received data, the application must use a *typed* TDataReader attached to the subscriber. Thus, a *subscription* is defined by the association of a data-reader with a subscriber. This association expresses the intent of the application to subscribe to the data described by the data-reader in the context provided by the subscriber.

DDSTopic (p. 1885) objects conceptually fit between publications and subscriptions. Publications must be known in such a way that subscriptions can refer to them unambiguously. A **DDSTopic** (p. 1885) is meant to fulfill that purpose: it associates a name (unique in the domain i.e. the set of applications that are communicating with each other), a data type, and QoS related to the data itself. In addition to the topic QoS, the QoS of the **DDSDataWriter** (p. 1589) associated with that Topic and the QoS of the **DDSPublisher** (p. 1818) associated to the **DDSDataWriter** (p. 1589) control the behavior on the publisher's side, while the corresponding **DDSTopic** (p. 1885), **DDSDataReader** (p. 1556) and **DDSSubscriber** (p. 1860) QoS control the behavior on the subscriber's side.

When an application wishes to publish data of a given type, it must create a **DDSPublisher** (p. 1818) (or reuse an already created one) and a **DDSDataWriter** (p. 1589) with all the characteristics of the desired publication. Similarly, when an application wishes to receive data, it must create a **DDSSubscriber** (p. 1860) (or reuse an already created one) and a **DDSDataReader** (p. 1556) to define the subscription.

7.107.3 Conceptual Model

The overall conceptual model is shown below.

Notice that all the main communication objects (the specializations of Entity) follow unified patterns of:

- Supporting QoS (made up of several QosPolicy); QoS provides a generic mechanism for the application to control the behavior of the Service and tailor it to its needs. Each **DDSEntity** (p. 1731) supports its own specialized kind of QoS policies (see **All QoS Policies** (p. 549)).
- Accepting a **DDSListener** (p. 1794); listeners provide a generic mechanism for the middleware to notify the application of relevant asynchronous events, such as arrival of data corresponding to a subscription, violation of a QoS setting, etc. Each **DDSEntity** (p. 1731) supports its own specialized kind of listener. Listeners are related to changes in status conditions (see **Status Kinds** (p. 533)).

  Note that only one Listener per entity is allowed (instead of a list of them). The reason for that choice is that this allows a much simpler (and, thus, more efficient) implementation as far as the middleware is concerned. Moreover, if it were required, the application could easily implement a listener that, when triggered, triggers in return attached 'sub-listeners'.

- Accepting a **DDSStatusCondition** (p. 1846) (and a set of **DDSReadCondition** (p. 1842) objects for the **DDSDataReader** (p. 1556)); conditions (in conjunction with **DDSWaitSet** (p. 1897) objects) provide support for an alternate communication style between the middleware and the application (i.e., wait-based rather than notification-based).

All DCPS entities are attached to a **DDSDomainParticipant** (p. 1619). A domain participant represents the local membership of the application in a domain. A *domain* is a distributed concept that links all the applications able to communicate with each other. It represents a communication plane: only the publishers and the subscribers attached to the same domain may interact.

DDSDomainEntity (p. 1618) is an intermediate object whose only purpose is to state that a DomainParticipant cannot contain other domain participants.

At the DCPS level, data types represent information that is sent atomically. For performance reasons, only plain data structures are handled by this level.

By default, each data modification is propagated individually, independently, and uncorrelated with other modifications. However, an application may request that several modifications be sent as a whole and interpreted as such at the recipient side. This functionality is offered on a Publisher/Subscriber basis. That is, these relationships can only be specified among **DDSDataWriter** (p. 1589) objects attached to the same **DDSPublisher** (p. 1818) and retrieved among **DDSDataReader** (p. 1556) objects attached to the same **DDSSubscriber** (p. 1860).

By definition, a **DDSTopic** (p. 1885) corresponds to a single data type. However, several topics may refer to the same data type. Therefore, a **DDSTopic** (p. 1885) identifies data of a single type, ranging from one single instance to a whole collection of instances of that given type. This is shown below for the hypothetical data type **Foo** (p. 1916).

In case a set of instances is gathered under the same topic, different instances must be distinguishable. This is achieved by means of the values of some data fields that form the **key** to that data set. The *key description* (i.e., the list of data fields whose value forms the key) has to be indicated to the middleware. The rule is simple: *different data samples with the same key value represent successive values for the same instance, while different data samples with different key values represent different instances*. If no key is provided, the data set associated with the **DDSTopic** (p. 1885) is restricted to a *single instance*.

Topics need to be known by the middleware and potentially propagated. Topic objects are created using the create operations provided by **DDSDomainParticipant** (p. 1619).

The interaction style is straightforward on the publisher's side: when the application decides that it wants to make data available for publication, it calls the appropriate operation on the related **DDSDataWriter** (p. 1589) (this, in turn, will trigger its **DDSPublisher** (p. 1818)).

On the subscriber's side however, there are more choices: relevant information may arrive when the application is busy doing something else or when the application is just waiting for that information. Therefore, depending on the way the application is designed, asynchronous notifications or synchronous access may be more appropriate. Both interaction modes are allowed, a **DDSListener** (p. 1794) is used to provide a callback for synchronous access and a **DDSWaitSet** (p. 1897) associated with one or several **DDSCondition** (p. 1544) objects provides asynchronous data access.

The same synchronous and asynchronous interaction modes can also be used to access changes that affect the middleware communication status (see **Status Kinds** (p. 533)). For instance, this may occur when the middleware asynchronously detects an inconsistency. In addition, other middleware information that may be relevant to the application (such as the list of the existing topics) is made available by means of **built-in topics** (p. 61) that the application can access as plain application data, using built-in data-readers.

7.107.4 Modules

DCPS consists of five modules:

- **Infrastructure module** (p. 167) defines the abstract classes and the interfaces that are refined by the other modules. It also provides support for the two interaction styles (notification-based and wait-based) with the middleware.
- **Domain module** (p. 41) contains the **DDSDomainParticipant** (p. 1619) class that acts as an entrypoint of the Service and acts as a factory for many of the classes. The **DDSDomainParticipant** (p. 1619) also acts as a container for the other objects that make up the Service.
- **Topic module** (p. 63) contains the **DDSTopic** (p. 1885) class, the **DDSTopicListener** (p. 1894) interface, and more generally, all that is needed by the application to define **DDSTopic** (p. 1885) objects and attach QoS policies to them.
- **Publication module** (p. 107) contains the **DDSPublisher** (p. 1818) and **DDSDataWriter** (p. 1589) classes as well as the **DDSPublisherListener** (p. 1839) and **DDSDataWriterListener** (p. 1612) interfaces, and more generally, all that is needed on the publication side.
- **Subscription module** (p. 128) contains the **DDSSubscriber** (p. 1860), **DDSDataReader** (p. 1556), **DDSReadCondition** (p. 1842), and **DDSQueryCondition** (p. 1841) classes, as well as the **DDSSubscriberListener** (p. 1881) and **DDSDataReaderListener** (p. 1583) interfaces, and more generally, all that is needed on the subscription side.

7.108 Additional RTI Connext Communication Patterns

Extensions to the RTI Connext publish-subscribe functionality.

Modules

- **Request-Reply Pattern**

  Support for the request-reply communication pattern.
- **Infrastructure**

  Infrastructure types for Request-Reply.
- **Utilities**

  Utilities for the RTI Connext Messaging module.

7.108.1 Detailed Description

Extensions to the RTI Connext publish-subscribe functionality.

This section includes the **Request-Reply API** (p. 191).

7.109 Programming How-To's

These "How To"s illustrate how to apply RTI Connext APIs to common use cases.

Modules

- **Publication Example**

  A data publication example.
- **Subscription Example**

  A data subscription example.
- **Participant Use Cases**

  Working with domain participants.
- **Topic Use Cases**

  Working with topics.
- **FlowController Use Cases**

  Working with flow controllers.
- **Publisher Use Cases**

  Working with publishers.
- **DataWriter Use Cases**

  Working with data writers.
- **Subscriber Use Cases**

  Working with subscribers.
- **DataReader Use Cases**

  Working with data readers.
- **Entity Use Cases**

  Working with entities.
- **Waitset Use Cases**

  Using wait-sets and conditions.
- **Transport Use Cases**

  Working with pluggable transports.
- **Filter Use Cases**

  Working with data filters.
- **Creating Custom Content Filters**

  Working with custom content filters.
- **Large Data Use Cases**

  Working with large data types.
- **Request-Reply Examples**

  Examples on how to use the request-reply API .

7.109.1 Detailed Description

These "How To"s illustrate how to apply RTI Connext APIs to common use cases.

These are a good starting point to familiarize yourself with DDS. You can use these code fragments as "templates" for writing your own code.

7.110 Interface

Abstraction of a Transport Plugin network interface.

Classes

- struct **NDDS_Transport_Interface_t**

  Storage for the description of a network interface used by a Transport Plugin.

Enumerations

- enum **NDDS_Transport_Interface_Status_t** {
  NDDS_TRANSPORT_INTERFACE_OFF = 0 ,
  NDDS_TRANSPORT_INTERFACE_ON = 1 }

  Interface status.

7.110.1 Detailed Description

Abstraction of a Transport Plugin network interface.

A Transport Plugin may be able to use several logical or physical network interfaces in a single node (machine). For example, there may be multiple NICs for IP networks or multiple serial ports for serial networks.

An instance of a Transport Plugin is a conduit to one or more network interfaces associated with the transport.

Instances of a Transport Plugin must assign a unique unicast address to each of the network interfaces that it can use to send and receive messages. The unicast address should be within the range of addresses that are addressable by the Transport Plugin (as defined by the plugin itself).

Then, when RTI Connext sends a message to an unicast destination address, the destination address will be made of two parts. The network address and an interface address. The network address portion will be used by RTI Connext to select the Transport Plugin instance that will send the message. The interface address portion is passed to the Transport Plugin instance as the destination interface to which the message should be sent.

See also

NDDS_Transport_Address_t (p. 2042) **NDDS_Transport_ClassId_t** (p. 447)

7.110.2 Enumeration Type Documentation

7.110.2.1 NDDS_Transport_Interface_Status_t

`enum` **`NDDS_Transport_Interface_Status_t`**

Interface status.

Enumerator

NDDS_TRANSPORT_INTERFACE_OFF	The transport interface is OFF.
NDDS_TRANSPORT_INTERFACE_ON	The transport interface is ON.

7.111 Transport Plugins Configuration

Transport plugins configuration with RTI Connext.

Classes

- struct **NDDS_Transport_UUID**

  Unequivocally identifies a transport plugin instance.
- struct **TransportAllocationSettings_t**

  Allocation settings used by various internal buffers.
- struct **NDDS_Transport_Property_t**

  Base configuration structure that must be inherited by derived Transport Plugin classes.

Macros

- #define **NDDS_TRANSPORT_PORT_INVALID** ((**NDDS_Transport_Port_t**) 0)

  Port 0 is considered to be invalid.
- #define **NDDS_TRANSPORT_UUID_SIZE** 12

  *Size of a **NDDS_Transport_UUID** (p. 2087).*
- #define **NDDS_TRANSPORT_LENGTH_UNLIMITED** -1

  Represent an unlimited length.
- #define **NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN** 0

  Rank interface as unknown or not yet set.
- #define **NDDS_TRANSPORT_UUID_UNKNOWN**

  Value for UUIDs that have no known value. Used as default.
- #define **NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED** (-1)

  *The constant used as 'unlimited' for the 'max_count' field of the structure **TransportAllocationSettings_t** (p. 2218).*
- #define **NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC** (-1)

  *The constant used as 'automatic' for the 'incremental_count' field of the structure **TransportAllocationSettings_t** (p. 2218).*
- #define **NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT**

  *The constant used as default value for the struct **TransportAllocationSettings_t** (p. 2218).*
- #define **NDDS_TRANSPORT_CLASSID_INVALID** (-1)

  Invalid Transport Class ID.
- #define **NDDS_TRANSPORT_CLASSID_UDPv4** (1)

  Builtin IPv4 UDP/IP Transport Plugin class ID.
- #define **NDDS_TRANSPORT_CLASSID_SHMEM** (0x01000000)

  Builtin Shared-Memory Transport Plugin class ID.

- #define **NDDS_TRANSPORT_CLASSID_SHMEM_510** (2)

  Builtin Shared-Memory Transport Plugin class ID for Connext 5.1.0 and earlier.
- #define **NDDS_TRANSPORT_CLASSID_UDPv6** (2)

  Builtin IPv6 UDP/IP Transport Plugin class ID.
- #define **NDDS_TRANSPORT_CLASSID_UDPv6_510** (5)

  Builtin IPv6 UDP/IP Transport Plugin class ID for Connext 5.1.0 and earlier.
- #define **NDDS_TRANSPORT_CLASSID_TCPV4_LAN** (8)

  IPv4 TCP/IP Transport Plugin class ID for LAN case.
- #define **NDDS_TRANSPORT_CLASSID_TCPV4_WAN** (9)

  IPv4 TCP/IP Transport Plugin class ID for WAN case.
- #define **NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN** "tcpv4_wan"

  IPv4 TCP/IP Transport Plugin class name for WAN case.
- #define **NDDS_TRANSPORT_CLASSID_TLSV4_LAN** (10)

  IPv4 TCP/IP Transport Plugin class ID for LAN case with TLS enabled.
- #define **NDDS_TRANSPORT_CLASSID_TLSV4_WAN** (11)

  IPv4 TCP/IP Transport Plugin class ID for WAN case with TLS enabled.
- #define **NDDS_TRANSPORT_CLASSID_UDPv4_WAN** (0x01000001)

  Builtin IPv4 UDP/IP Asymmetric Transport Plugin class ID.
- #define **NDDS_TRANSPORT_CLASSID_RESERVED_RANGE** (1000)

  Transport Plugin class IDs below this are reserved by RTI.
- #define **NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED** (0x2)

  Specified zero-copy behavior of transport.
- #define **NDDS_TRANSPORT_PROPERTY_GATHER_SEND_BUFFER_COUNT_MIN** (3)

  Minimum number of gather-send buffers that must be supported by a Transport Plugin implementation.

Typedefs

- typedef RTI_UINT32 **NDDS_Transport_Port_t**

  Type for storing RTI Connext RTPS ports.
- typedef RTI_INT32 **NDDS_Transport_ClassId_t**

  Type for storing RTI Connext Transport Plugin class IDs.

7.111.1 Detailed Description

Transport plugins configuration with RTI Connext.

Transport plugins are configured using properties. Each transport plugin must derive its property from a base configuration structure **NDDS_Transport_Property_t** (p. 2044).

To see how to configure the Built-in Transport Plugins, see **Built-in Transport Plugins** (p. 182).

See also

Built-in Transport Plugins (p. 182)

7.111.2 Macro Definition Documentation

7.111.2.1 NDDS_TRANSPORT_PORT_INVALID

```
#define NDDS_TRANSPORT_PORT_INVALID (( NDDS_Transport_Port_t) 0)
```

Port 0 is considered to be invalid.

7.111.2.2 NDDS_TRANSPORT_UUID_SIZE

```
#define NDDS_TRANSPORT_UUID_SIZE 12
```

Size of a **NDDS_Transport_UUID** (p. 2087).

7.111.2.3 NDDS_TRANSPORT_LENGTH_UNLIMITED

```
#define NDDS_TRANSPORT_LENGTH_UNLIMITED -1
```

Represent an unlimited length.

7.111.2.4 NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN

```
#define NDDS_TRANSPORT_INTERFACE_RANK_UNKNOWN 0
```

Rank interface as unknown or not yet set.

7.111.2.5 NDDS_TRANSPORT_UUID_UNKNOWN

```
#define NDDS_TRANSPORT_UUID_UNKNOWN
```

Value:

```
{ \
  { \
    0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0 \
  } \
}
```

Value for UUIDs that have no known value. Used as default.

7.111.2.6 NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED (-1)
```

The constant used as 'unlimited' for the 'max_count' field of the structure **TransportAllocationSettings_t** (p. 2218).

7.111.2.7 NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC (-1)
```

The constant used as 'automatic' for the 'incremental_count' field of the structure **TransportAllocationSettings_t** (p. 2218).

Automatic means the buffer size will double at every reallocation.

7.111.2.8 NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT

```
#define NDDS_TRANSPORT_ALLOCATION_SETTINGS_DEFAULT
```

Value:

```
        {                                   \
        2L, /* initial_count */                                                 \
        NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED, /* max_count */     \
        NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC /* incremental_count */ \
}
```

The constant used as default value for the struct **TransportAllocationSettings_t** (p. 2218).

The default value defined in this constant, sets the buffer to have:

- initial_count = 2 elements
- max_count = **NDDS_TRANSPORT_ALLOCATION_SETTINGS_MAX_COUNT_UNLIMITED** (p. 443)
- incremental_count = NDDS_TRANSPORT_ALLOCATION_SETTINGS_INCREMENTAL_COUNT_AUTOMATIC

7.111.2.9 NDDS_TRANSPORT_CLASSID_INVALID

```
#define NDDS_TRANSPORT_CLASSID_INVALID (-1)
```

Invalid Transport Class ID.

Transport-Plugins implementations should set their class ID to a value different than this.

7.111.2.10 NDDS_TRANSPORT_CLASSID_UDPv4

```
#define NDDS_TRANSPORT_CLASSID_UDPv4 (1)
```

Builtin IPv4 UDP/IP Transport Plugin class ID.

7.111.2.11 NDDS_TRANSPORT_CLASSID_SHMEM

```
#define NDDS_TRANSPORT_CLASSID_SHMEM (0x01000000)
```

Builtin Shared-Memory Transport Plugin class ID.

7.111.2.12 NDDS_TRANSPORT_CLASSID_SHMEM_510

```
#define NDDS_TRANSPORT_CLASSID_SHMEM_510 (2)
```

Builtin Shared-Memory Transport Plugin class ID for Connext 5.1.0 and earlier.

7.111.2.13 NDDS_TRANSPORT_CLASSID_UDPv6

```
#define NDDS_TRANSPORT_CLASSID_UDPv6 (2)
```

Builtin IPv6 UDP/IP Transport Plugin class ID.

7.111.2.14 NDDS_TRANSPORT_CLASSID_UDPv6_510

```
#define NDDS_TRANSPORT_CLASSID_UDPv6_510 (5)
```

Builtin IPv6 UDP/IP Transport Plugin class ID for Connext 5.1.0 and earlier.

7.111.2.15 NDDS_TRANSPORT_CLASSID_TCPV4_LAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_LAN (8)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case.

7.111.2.16 NDDS_TRANSPORT_CLASSID_TCPV4_WAN

```
#define NDDS_TRANSPORT_CLASSID_TCPV4_WAN (9)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case.

7.111.2.17 NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN

```
#define NDDS_TRANSPORT_CLASSNAME_TCPV4_WAN "tcpv4_wan"
```

IPv4 TCP/IP Transport Plugin class name for WAN case.

7.111.2.18 NDDS_TRANSPORT_CLASSID_TLSV4_LAN

```
#define NDDS_TRANSPORT_CLASSID_TLSV4_LAN (10)
```

IPv4 TCP/IP Transport Plugin class ID for LAN case with TLS enabled.

7.111.2.19 NDDS_TRANSPORT_CLASSID_TLSV4_WAN

```
#define NDDS_TRANSPORT_CLASSID_TLSV4_WAN (11)
```

IPv4 TCP/IP Transport Plugin class ID for WAN case with TLS enabled.

7.111.2.20 NDDS_TRANSPORT_CLASSID_UDPv4_WAN

```
#define NDDS_TRANSPORT_CLASSID_UDPv4_WAN (0x01000001)
```

Builtin IPv4 UDP/IP Asymmetric Transport Plugin class ID.

7.111.2.21 NDDS_TRANSPORT_CLASSID_RESERVED_RANGE

```
#define NDDS_TRANSPORT_CLASSID_RESERVED_RANGE (1000)
```

Transport Plugin class IDs below this are reserved by RTI.

User-defined Transport-Plugins should use a class ID greater than this number.

7.111.2.22 NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED

```
#define NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED (0x2)
```

Specified zero-copy behavior of transport.

A Transport Plugin may commit to one of three behaviors for zero copy receives:

1. Always does zero copy.
2. Sometimes does zero copy, up to the transport discretion.
3. Never does zero copy.

This bit should be set only if the Transport Plugin commits to always doing a zero copy receive, or more specifically, always loaning a buffer through its `receive_rEA()` call.

In that case, RTI Connext will not need to allocate storage for a message that it retrieves with the `receive_rEA()` call.

7.111.2.23 NDDS_TRANSPORT_PROPERTY_GATHER_SEND_BUFFER_COUNT_MIN

```
#define NDDS_TRANSPORT_PROPERTY_GATHER_SEND_BUFFER_COUNT_MIN (3)
```

Minimum number of gather-send buffers that must be supported by a Transport Plugin implementation.

For the **NDDS_Transport_Property_t** (p. 2044) structure to be valid, the value of **NDDS_Transport_Property_t↩ ::gather_send_buffer_count_max** (p. 2047) must be greater than or equal to this value.

7.111.3 Typedef Documentation

7.111.3.1 NDDS_Transport_Port_t

```
typedef RTI_UINT32 NDDS_Transport_Port_t
```

Type for storing RTI Connext RTPS ports.

Unlike IPv4 Socket API ports, which are 2 bytes long, the RTI Connext representation of an RTPS port is 4 bytes.

7.111.3.2 NDDS_Transport_ClassId_t

```
typedef RTI_INT32 NDDS_Transport_ClassId_t
```

Type for storing RTI Connext Transport Plugin class IDs.

Each implementation of a Transport Plugin must have a unique ID. For example, a UDP/IP Transport Plugin implementation must have a different ID than a Shared Memory Transport Plugin.

User-implemented Transport Plugins must have an ID higher than **NDDS_TRANSPORT_CLASSID_RESERVED_RANGE** (p. 446).

7.112 Transport Address

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

Classes

- struct **NDDS_Transport_Address_t**

  Addresses are stored individually as network-ordered bytes.

Macros

- #define **NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER**

  An invalid transport address. Used as an initializer.
- #define **NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE** (72)

  *The minimum size of the buffer that should be passed to **NDDS_Transport_Address_to_string** (p. 450).*

Functions

- RTIBool **NDDS_Transport_Address_to_string** (const **NDDS_Transport_Address_t** *self, char *buffer_inout, size_t buffer_size_in)

  Converts a numerical address to a printable string representation.
- RTIBool **NDDS_Transport_Address_to_string_with_protocol_family_format** (const **NDDS_Transport_Address_t** *me, char *buffer, size_t buffer_size_in, RTIOsapiSocketAFKind family)

  Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.
- RTI_INT32 **NDDS_Transport_Address_from_string** (**NDDS_Transport_Address_t** *address_out, const char *address_in)

  Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.
- void **NDDS_Transport_Address_print** (const **NDDS_Transport_Address_t** *address_in, const char *desc_in, RTI_INT32 indent_in)

  Prints an address to standard out.
- RTI_INT32 **NDDS_Transport_Address_is_ipv4** (const **NDDS_Transport_Address_t** *address_in)

  Checks if an address is an IPv4 address.
- RTI_INT32 **NDDS_Transport_Address_is_multicast** (const **NDDS_Transport_Address_t** *address_in)

  Checks if an address is an IPv4 or IPv6 multicast address.

Variables

- const **NDDS_Transport_Address_t NDDS_TRANSPORT_ADDRESS_INVALID**

  An invalid transport address.

7.112.1 Detailed Description

Transport-independent addressing scheme using IPv6 presentation strings and numerically stored in network-ordered format.

The APIs of RTI Connext uses IPv6 address notation for all transports.

Transport Plugin implementations that are not IP-based are required to map whatever addressing scheme natively used by the physical transport (if any) to an address in IPv6 notation and vice versa.

IPv6 addresses are numerically stored in 16 bytes. An IPv6 address can be presented In string notation in a variety of ways. For example,

```
"00AF:0000:0037:FE01:0000:0000:034B:0089"
"AF:0:37:FE01:0:0:34B:89"
"AF:0:37:FE01::34B:89"
```

are all valid IPv6 presentation of the same address.

IPv4 address in dot notation can be used to specify the last 4 bytes of the address. For example,

```
"0000:0000:0000:0000:0000:0000:192.168.0.1"
"0:0:0:0:0:0:192.168.0.1"
"::192.168.0.1"
```

are all valid IPv6 presentation of the same address.

For a complete description of valid IPv6 address notation, consult the IPv6 Addressing Architecture (RFC 2373).

Addresses are divided into unicast addresses and multicast addresses.

Multicast addresses are defined as

- Addresses that start with 0xFF. That is `FFxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx`.

or an IPv4 multicast address

- Address in the range [::224.0.0.0, ::239.255.255.255]

Multicast addresses do not refer to any specific destination (network interface). Instead, they usually refer to a group of network interfaces, often called a "multicast group".

Unicast addresses always refer to a specific network interface.

7.112.2 Macro Definition Documentation

7.112.2.1 NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER

```
#define NDDS_TRANSPORT_ADDRESS_INVALID_INITIALIZER
```

Value:

```
  { \
    { \
      0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0 \
    } \
  }
```

An invalid transport address. Used as an initializer.

For example: **NDDS_Transport_Address_t** (p. 2042) address = NDDS_TRANSPORT_ADDRESS_INVALID_↩ INITIALIZER;

7.112.2.2 NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE

```
#define NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE (72)
```

The minimum size of the buffer that should be passed to **NDDS_Transport_Address_to_string** (p. 450).

For regular addresses, the string size needs to be at least 40 to include space for 8 tuples of 4 characters each plus 7 delimiting colons plus a terminating NULL.

To support UDPv4_WAN strings, it has been adjusted to 72 to fit the following representation (plus NULL terminator): f=XXXXRBPU,u={FF,FF,FF,FF,FF,FF,FF,FF},p=255.255.255.255:65555:65555

7.112.3 Function Documentation

7.112.3.1 NDDS_Transport_Address_to_string()

```
RTIBool NDDS_Transport_Address_to_string (
            const  NDDS_Transport_Address_t * self,
            char * buffer_inout,
            size_t buffer_size_in )
```

Converts a numerical address to a printable string representation.

Precondition

The `buffer_inout` provided must be at least **NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE** (p. 450) characters long.

Parameters

self	<<***in***>> *(p. 433)* The address to be converted.
buffer_inout	<<***inout***>> *(p. 433)* Storage passed in which to return the string corresponding to the address.
buffer_size_in	<<***in***>> *(p. 433)* The size of the storage buffer. Must be >= **NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE** (p. 450)

Returns

1 upon success; 0 upon failure (not enough space in the provided buffer)

7.112.3.2 NDDS_Transport_Address_to_string_with_protocol_family_format()

```
RTIBool NDDS_Transport_Address_to_string_with_protocol_family_format (
            const  NDDS_Transport_Address_t * me,
            char * buffer,
            size_t buffer_size_in,
            RTIOsapiSocketAFKind family )
```

Converts a numerical address to a printable string representation with IPv4 dotted notation or IPv6 presentation string depending on the provided protocol family.

Precondition

The `buffer_inout` provided must be at least **NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE** (p. 450) characters long.

Parameters

me	<<***in***>> *(p. 433)* The address to be converted.
buffer	<<***inout***>> *(p. 433)* Storage passed in which to return the string corresponding to the address.
buffer_size_in	<<***in***>> *(p. 433)* The size of the storage buffer. Must be >= **NDDS_TRANSPORT_ADDRESS_STRING_BUFFER_SIZE** (p. 450)
family	<<***in***>> *(p. 433)* The protocol family RTI_OSAPI_SOCKET_AF_INET or RTI_OSAPI_SOCKET_AF_INET6

Returns

RTI_TRUE upon success; 0 upon failure (not enough space in the provided buffer)

7.112.3.3 NDDS_Transport_Address_from_string()

```
RTI_INT32 NDDS_Transport_Address_from_string (
              NDDS_Transport_Address_t * address_out,
             const char * address_in )
```

Converts an address (IPv4 dotted notation or IPv6 presentation string) into a numerical address.

The address string must be in IPv4 dotted notation (X.X.X.X) or IPv6 presentation notation. The string cannot be a hostname since this function does not perform a hostname lookup.

Parameters

address_out	<<***out***>> *(*p. *433)* Numerical value of the address.
address_in	<<***in***>> *(*p. *433)* String representation of an address.

Returns

1 if address_out contains a valid address, 0 if it was not able to convert the string into an address.

7.112.3.4 NDDS_Transport_Address_print()

```
void NDDS_Transport_Address_print (
             const  NDDS_Transport_Address_t * address_in,
             const char * desc_in,
             RTI_INT32 indent_in )
```

Prints an address to standard out.

Parameters

address_in	<<***in***>> *(*p. *433)* Address to be printed.
desc_in	<<***in***>> *(*p. *433)* A prefix to be printed before the address.
indent_in	<<***in***>> *(*p. *433)* Indentation level for the printout.

7.112.3.5 NDDS_Transport_Address_is_ipv4()

```
RTI_INT32 NDDS_Transport_Address_is_ipv4 (
             const  NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 address.

Parameters

address_in	<<**in**>> *(p. 433)* Address to be tested.

Note

May be implemented as a macro for efficiency.

Returns

1 if address is an IPv4 address, 0 otherwise.

7.112.3.6 NDDS_Transport_Address_is_multicast()

```
RTI_INT32 NDDS_Transport_Address_is_multicast (
            const  NDDS_Transport_Address_t * address_in )
```

Checks if an address is an IPv4 or IPv6 multicast address.

Parameters

address_in	<<**in**>> *(p. 433)* Address to be tested.

May be implemented as a macro for efficiency.

Returns

1 if address is a multicast address, 0 otherwise.

7.112.4 Variable Documentation

7.112.4.1 NDDS_TRANSPORT_ADDRESS_INVALID

```
const  NDDS_Transport_Address_t NDDS_TRANSPORT_ADDRESS_INVALID  [extern]
```

An invalid transport address.

7.113 UDP Transport Plugin definitions

UDP Transport Plugin definitions.

Classes

- struct **NDDS_Transport_UDP_WAN_CommPortsMappingInfo**

  Type for storing UDP WAN communication ports.

Macros

- #define **NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT** (0)

  *Default value of **NDDS_Transport_Property_t::properties_bitmap*** (p. *2046*).
- #define **NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT** (16)

  *Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max*** (p. *2047*).
- #define **NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_MAX** RTI_OSAPI_UDP_SOCKET_↩ BUFFER_SIZE_OS_MAX

  Used to specify that os maximum be used to specify socket buffer size.
- #define **NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT** RTI_OSAPI_UDP_SOCKET↩ _BUFFER_SIZE_OS_DEFAULT

  Used to specify that os default be used to specify socket buffer size.
- #define **NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT** RTI_OSAPI_UDP_SEND↩ _SOCKET_BUFFER_SIZE_DEFAULT

  Default value of send_socket_buffer_size.
- #define **NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT** RTI_OSAPI_UDP_RECV↩ _SOCKET_BUFFER_SIZE_DEFAULT

  Default value of recv_socket_buffer_size.
- #define **NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT** (1)

  Default value of multicast_ttl.

Typedefs

- typedef RTI_UINT16 **NDDS_Transport_UDP_Port**

  UDP port.

7.113.1 Detailed Description

UDP Transport Plugin definitions.

7.113.2 Macro Definition Documentation

7.113.2.1 NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT

```
#define NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT (0)
```

Default value of **NDDS_Transport_Property_t::properties_bitmap** (p. 2046).

7.113.2.2 NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (16)
```

Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).

This is also the maximum value that can be used when instantiating the udp transport.

16 is sufficient for RTI Connext, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

7.113.2.3 NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_MAX

```
#define NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_MAX  RTI_OSAPI_UDP_SOCKET_BUFFER_SIZE_OS_MAX
```

Used to specify that os maximum be used to specify socket buffer size.

This property, if set, uses the maximum allowable size set in your OS for send and receive socket buffer sizes. If you update the maximum allowable size in your OS setting, then RTI Connext will automatically pick up that change. This property is not supported on all platforms because not all platforms have maximum values for the size of the send and receive buffers for sockets. If the platform does not support this property, then the property will be set to **NDDS_Transport_UDP_Plugin::NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT** (p. 455) or **NDDS_Transport_UDP_Plugin::NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT** (p. 456), depending on the property being set. See the Platform Notes to determine if this property is supported on your platform.

This value is -2.

7.113.2.4 NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT  RTI_OSAPI_UDP_SOCKET_BUFFER_SIZE_OS_↩
DEFAULT
```

Used to specify that os default be used to specify socket buffer size.

This property, if set, uses the default size set in your OS for send and receive socket buffer sizes. If you update the default size in your OS settings, then RTI Connext will automatically pick up that change.

This value is -1.

7.113.2.5 NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT  RTI_OSAPI_UDP_SEND_SOCKET_BUFFER_↩
SIZE_DEFAULT
```

Default value of send_socket_buffer_size.

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.113.2.6 NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT  RTI_OSAPI_UDP_RECV_SOCKET_BUFFER_↩
SIZE_DEFAULT
```

Default value of recv_socket_buffer_size.

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.113.2.7 NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT

```
#define NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT (1)
```

Default value of multicast_ttl.

7.113.3 Typedef Documentation

7.113.3.1 NDDS_Transport_UDP_Port

```
typedef RTI_UINT16  NDDS_Transport_UDP_Port
```

UDP port.

7.114 Shared Memory Transport

Built-in transport plug-in for inter-process communications using shared memory (**NDDS_TRANSPORT_CLASSID_↩SHMEM** (p. 445)) .

Classes

- struct **NDDS_Transport_Shmem_Property_t**

  *Subclass of **NDDS_Transport_Property_t** (p. 2044) allowing specification of parameters that are specific to the shared-memory transport.*

Macros

- #define **NDDS_TRANSPORT_SHMEM_ADDRESS_BIT_COUNT** (-96)

  *Default value of **NDDS_Transport_Property_t::address_bit_count** (p. 2046).*
- #define **NDDS_TRANSPORT_SHMEM_PROPERTIES_BITMAP_DEFAULT** (**NDDS_TRANSPORT_↩ PROPERTY_BIT_BUFFER_ALWAYS_LOANED**)

  *Default value of **NDDS_Transport_Property_t::properties_bitmap** (p. 2046).*
- #define **NDDS_TRANSPORT_SHMEM_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT** (1024)

  *Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).*
- #define **NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT** (65536)

  *Default value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).*
- #define **NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT** (64)

  *Default value of **NDDS_Transport_Shmem_Property_t::received_message_count_max** (p. 2053).*
- #define **NDDS_TRANSPORT_SHMEM_RECEIVE_BUFFER_SIZE_DEFAULT**

  *Default value of **NDDS_Transport_Shmem_Property_t::receive_buffer_size** (p. 2053).*
- #define **NDDS_TRANSPORT_SHMEM_MAJOR_AFTER_BUG_14240_FIX** (2)

  Major version for the transport plugin after fixing bug 14240 (RTI-28)
- #define **NDDS_TRANSPORT_SHMEM_PROPERTY_DEFAULT**

  Use this to initialize stack variable.

Functions

- NDDS_Transport_Plugin * **NDDS_Transport_Shmem_new** (const struct **NDDS_Transport_Shmem_↩ Property_t** *property_in)

  Create a new shmem process transport.
- NDDS_Transport_Plugin * **NDDS_Transport_Shmem_create** (**NDDS_Transport_Address_t** *default_↩ network_address_out, const struct **DDS_PropertyQosPolicy** *property_in, const struct **DDS_Product↩ Version_t** *minimum_compatibility_version)

  Create a new shmem process transport, using PropertyQosPolicy.

7.114.1 Detailed Description

Built-in transport plug-in for inter-process communications using shared memory (**NDDS_TRANSPORT_CLASSID_↩ SHMEM** (p. 445)) .

This transport plugin uses System Shared Memory to send messages between processes on the same node. This transport is installed as a built-in transport plugin with the alias **DDS_TRANSPORTBUILTIN_SHMEM_ALIAS** (p. 644).

7.114.2 Compatibility of Sender and Receiver Transports

Opening a receiver "port" on shared memory corresponds to creating a shared memory segment using a name based on the port number. The transport plugin's properties are embedded in the shared memory segment.

When a sender tries to send to the shared memory port, it verifies that properties of the receiver's shared memory transport are compatible with those specified in its transport plugin. If not, the sender will fail to attach to the port and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_attachShmem:failed to initialize incompatible properties

NDDS_Transport_Shmem_attachShmem:countMax 0 > -19417345 or max size -19416188 > 2147482624
```

In this scenario, the properties of the sender or receiver transport plugin instances should be adjusted, so that they are compatible.

7.114.3 Crashing and Restarting Programs

If a process using shared memory crashes (say because the user typed in ^C), resources associated with its shared memory ports may not be properly cleaned up. Later, if another RTI Connext process needs to open the same ports (say, the crashed program is restarted), it will attempt to reuse the shared memory segment left behind by the crashed process.

The reuse is allowed iff the properties of transport plugin are compatible with those embedded in the shared memory segment (i.e., of the original creator). Otherwise, the process will fail to open the ports, and will output messages such as below (with numbers appropriate to the properties of the transport plugins involved).

```
NDDS_Transport_Shmem_create_recvresource_rrEA:failed to initialize shared

    memory resource Cannot recycle existing shmem: size not compatible for key 0x1234
```

In this scenario, the shared memory segments must be cleaned up using appropriate platform specific commands. For details, please refer to the `Platform Notes`.

7.114.4 Shared Resource Keys

The transport uses the **shared memory segment keys**, given by the formula below.
`0x400000 + port`

The transport also uses signaling **shared semaphore** keys given by the formula below.
`0x800000 + port`

The transport also uses mutex **shared semaphore keys** given by the formula below.
`0xb00000 + port`

wher the `port` is a function of the `domain_id` and the `participant_id`, as described in **DDS_WireProtocol↩ QosPolicy::participant_id** (p. 1514)

See also

DDS_WireProtocolQosPolicy::participant_id (p. 1514)

NDDSTransportSupport::set_builtin_transport_property() (p. 2109)

7.114.5 Creating and Registering Shared Memory Transport Plugin

RTI Connext can implicitly create this plugin and register with the **DDSDomainParticipant** (p. 1619) if this transport is specified in **DDS_TransportBuiltinQosPolicy** (p. 1408).

To specify the properties of the builtin shared memory transport that is implicitly registered, you can either:

- call **NDDSTransportSupport::set_builtin_transport_property** (p. 2109) or
- specify the pre-defined property names in **DDS_PropertyQosPolicy** (p. 1260) associated with the **DDSDomain↩ Participant** (p. 1619). (see **Shared Memory Transport Property Names in Property QoS Policy of Domain Participant** (p. 459)).

Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1260) always overwrite the ones specified through **NDDSTransportSupport::set_builtin_transport_property()** (p. 2109). The default value is assumed on any unspecified property. Note that all properties should be set before the transport is implicitly created and registered by RTI Connext. See **Built-in Transport Plugins** (p. 182) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, **NDDS_Transport_Shmem_new()** (p. 461) should be called. The instance should be registered with RTI Connext, see **NDDSTransportSupport::register_transport** (p. 2104). In some configurations, you may have to disable the builtin shared memory transport plugin instance (**DDS_TransportBuiltinQosPolicy** (p. 1408), **DDS_TRANSPORTBUILTIN_SHMEM** (p. 644)), to avoid port conflicts with the newly created plugin instance.

7.114.6 Shared Memory Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS_DomainParticipantQos::property** (p. 975) to to configure the builtin shared memory transport plugin.

Table 7.152 ***Property Strings for Shared Memory Transport***

Name	Descriptions
dds.transport.shmem.builtin.parent.address_bit_count	See **NDDS_Transport_Property_t::address_bit_count** (p. 2046)
dds.transport.shmem.builtin.parent.properties_bitmap	See **NDDS_Transport_Property_t::properties_bitmap** (p. 2046)
dds.transport.shmem.builtin.parent.gather_send_buffer_count_max	See **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047)
dds.transport.shmem.builtin.parent.message_size_max	See **NDDS_Transport_Property_t::message_size_max** (p. 2047)
dds.transport.shmem.builtin.parent.allow_interfaces	See **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047) and **NDDS_Transport_Property_t::allow_interfaces_list_length** (p. 2048). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.deny_interfaces	See **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048) and **NDDS_Transport_Property_t::deny_interfaces_list_length** (p. 2049). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.allow_multicast_interfaces	See **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049) and **NDDS_Transport_Property_t::allow_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.deny_multicast_interfaces	See **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050) and **NDDS_Transport_Property_t::deny_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.shmem.builtin.parent.max_interface_count	See **NDDS_Transport_Property_t::max_interface_count** (p. 2051)
dds.transport.shmem.builtin.parent.thread_name_prefix	See **NDDS_Transport_Property_t::thread_name_prefix** (p. 2051)
dds.transport.shmem.builtin.received_message_count_max	See **NDDS_Transport_Shmem_Property_t::received_message_count_max** (p. 2053)

Name	Descriptions
dds.transport.shmem.builtin.receive_buffer_size	See **NDDS_Transport_Shmem_Property_t::receive_buffer_size** (p. 2053)
dds.transport.shmem.builtin.enable_udp_debugging	See **NDDS_Transport_Shmem_Property_t::enable_udp_debugging** (p. 2054)
dds.transport.shmem.builtin.udp_debugging_address	See **NDDS_Transport_Shmem_Property_t::udp_debugging_address** (p. 2054)
dds.transport.shmem.builtin.udp_debugging_port	See **NDDS_Transport_Shmem_Property_t::udp_debugging_port** (p. 2055)

7.114.7 Macro Definition Documentation

7.114.7.1 NDDS_TRANSPORT_SHMEM_ADDRESS_BIT_COUNT

```
#define NDDS_TRANSPORT_SHMEM_ADDRESS_BIT_COUNT (-96)
```

Default value of **NDDS_Transport_Property_t::address_bit_count** (p. 2046).

7.114.7.2 NDDS_TRANSPORT_SHMEM_PROPERTIES_BITMAP_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_PROPERTIES_BITMAP_DEFAULT ( NDDS_TRANSPORT_PROPERTY_BIT_BUFFER_ALWAYS_LOANED)
```

Default value of **NDDS_Transport_Property_t::properties_bitmap** (p. 2046).

7.114.7.3 NDDS_TRANSPORT_SHMEM_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT (1024)
```

Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).

7.114.7.4 NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT (65536)
```

Default value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.114.7.5 NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT (64)
```

Default value of **NDDS_Transport_Shmem_Property_t::received_message_count_max** (p. 2053).

7.114.7.6 NDDS_TRANSPORT_SHMEM_RECEIVE_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_RECEIVE_BUFFER_SIZE_DEFAULT
```

Value:

```
(NDDS_TRANSPORT_SHMEM_RECEIVED_MESSAGE_COUNT_MAX_DEFAULT \
 * NDDS_TRANSPORT_SHMEM_MESSAGE_SIZE_MAX_DEFAULT / 4)
```

Default value of **NDDS_Transport_Shmem_Property_t::receive_buffer_size** (p. 2053).

7.114.7.7 NDDS_TRANSPORT_SHMEM_MAJOR_AFTER_BUG_14240_FIX

```
#define NDDS_TRANSPORT_SHMEM_MAJOR_AFTER_BUG_14240_FIX (2)
```

Major version for the transport plugin after fixing bug 14240 (RTI-28)

7.114.7.8 NDDS_TRANSPORT_SHMEM_PROPERTY_DEFAULT

```
#define NDDS_TRANSPORT_SHMEM_PROPERTY_DEFAULT
```

Use this to initialize stack variable.

7.114.8 Function Documentation

7.114.8.1 NDDS_Transport_Shmem_new()

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_new (
            const struct  NDDS_Transport_Shmem_Property_t * property_in )
```

Create a new shmem process transport.

An application may create multiple transports, possibly for use in different domains.

Parameters

property_in	<<***in***>> *(p. 433)* Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.

Returns

handle to a Shmem inter-process Transport Plugin on success

NULL on failure.

7.114.8.2 NDDS_Transport_Shmem_create()

```
NDDS_Transport_Plugin * NDDS_Transport_Shmem_create (
             NDDS_Transport_Address_t * default_network_address_out,
            const struct  DDS_PropertyQosPolicy * property_in,
            const struct  DDS_ProductVersion_t * minimum_compatibility_version )
```

Create a new shmem process transport, using PropertyQosPolicy.

An application may create multiple transports, possibly for use in different domains.

Parameters

default_network_address_out	<<***out***>> *(p. 433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(p. 433)* Desired behavior of this transport. May be NULL for default property. The transport plugin can only support one unicast receive interface; therefore the interface selection lists are ignored.
minimum_compatibility_version	<<***in***>> *(p. 433)* Desired product version for the shared memory transport. If NULL, the default shared memory transport is used (no additional compatibility restrictions for the transport version). Please refer to the minimum_compatibility_version property for more information.

Returns

handle to a Shmem inter-process Transport Plugin on success

NULL on failure.

7.115 UDPv4 Transport

Transport plug-in using UDP/IPv4 (**NDDS_TRANSPORT_CLASSID_UDPv4** (p. 444)) .

Classes

- struct **NDDS_Transport_UDPv4_Property_t**

  Configurable IPv4/UDP Transport-Plugin properties.

Macros

- #define **NDDS_TRANSPORT_UDPV4_ADDRESS_BIT_COUNT** (32)

  *Default value of **NDDS_Transport_Property_t::address_bit_count*** (p. *2046*).
- #define **NDDS_TRANSPORT_UDPV4_WAN_ADDRESS_BIT_COUNT** (128)

  *Default value of **NDDS_Transport_Property_t::address_bit_count*** (p. *2046*) *for UDPv4 asymmetric transport.*
- #define **NDDS_TRANSPORT_UDPV4_PROPERTIES_BITMAP_DEFAULT** **NDDS_TRANSPORT_UDP_↩ PROPERTIES_BITMAP_DEFAULT**

  *Default value of **NDDS_Transport_Property_t::properties_bitmap*** (p. *2046*).
- #define **NDDS_TRANSPORT_UDPV4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT** **NDDS_↩ TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT**

  *Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max*** (p. *2047*).
- #define **NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_MAX** **NDDS_TRANSPORT_UDP_↩ SOCKET_BUFFER_SIZE_OS_MAX**

  OS maximum to be used to specify the socket buffer size.
- #define **NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_DEFAULT** **NDDS_TRANSPORT_↩ UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT**

  OS default to be used to specify the socket buffer size.
- #define **NDDS_TRANSPORT_UDPV4_SEND_SOCKET_BUFFER_SIZE_DEFAULT** **NDDS_TRANSPORT_↩ UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT**

  *Default value for **NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size*** (p. *2058*) *and **NDDS_Transport_↩ UDPv4_WAN_Property_t::send_socket_buffer_size*** (p. *2068*).
- #define **NDDS_TRANSPORT_UDPV4_RECV_SOCKET_BUFFER_SIZE_DEFAULT** **NDDS_TRANSPORT_↩ UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT**

  *Default value for **NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size*** (p. *2058*) *and **NDDS_Transport_↩ UDPv4_WAN_Property_t::recv_socket_buffer_size*** (p. *2068*).
- #define **NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX** (65507)

  *Maximum value of **NDDS_Transport_Property_t::message_size_max*** (p. *2047*).
- #define **NDDS_TRANSPORT_UDPV4_MESSAGE_SIZE_MAX_DEFAULT** **NDDS_TRANSPORT_UDPV4_↩ PAYLOAD_SIZE_MAX**

  *Maximum value of **NDDS_Transport_Property_t::message_size_max*** (p. *2047*).
- #define **NDDS_TRANSPORT_UDPV4_MULTICAST_TTL_DEFAULT** **NDDS_TRANSPORT_UDP_↩ MULTICAST_TTL_DEFAULT**

  *Default value of **NDDS_Transport_UDPv4_Property_t::multicast_ttl*** (p. *2059*).
- #define **NDDS_TRANSPORT_UDPV4_BLOCKING_NEVER**

  *Value for **NDDS_Transport_UDPv4_Property_t::send_blocking*** (p. *2062*) *to specify non-blocking sockets.*
- #define **NDDS_TRANSPORT_UDPV4_BLOCKING_ALWAYS**

  [default]** Value for **NDDS_Transport_UDPv4_Property_t::send_blocking (p. *2062*) *to specify blocking sockets.*
- #define **NDDS_TRANSPORT_UDPV4_BLOCKING_DEFAULT** NDDS_TRANSPORT_UDP_BLOCKING_↩ DEFAULT

  *Default value for **NDDS_Transport_UDPv4_Property_t::send_blocking*** (p. *2062*) *to specify blocking sockets.*
- #define **NDDS_TRANSPORT_UDPV4_PROPERTY_DEFAULT**

  *Use this to initialize a **NDDS_Transport_UDPv4_Property_t*** (p. *2056*) *structure.*
- #define **NDDS_Transport_UDPv4_string_to_address_cEA** NDDS_Transport_UDP_string_to_address_cEA

  Realization of NDDS_Transport_String_To_Address_Fcn_cEA for IP transports.

Functions

- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_new** (const struct **NDDS_Transport_UDPv4_Property_t** *property_in)

  Create an instance of a UDPv4 Transport Plugin.
- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_create** (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in)

  Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.
- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_create_from_properties_with_prefix** (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in, const char *propertyPrefix)

  Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_UDPv4_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

7.115.1 Detailed Description

Transport plug-in using UDP/IPv4 (**NDDS_TRANSPORT_CLASSID_UDPv4** (p. 444)) .

This transport plugin uses UDPv4 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS_TRANSPORTBUILTIN_UDPv4_ALIAS** (p. 644).

You can configure an instance of this plugin to only use unicast or only use multicast, see **NDDS_Transport_UDPv4_Property_t::unicast_enabled** (p. 2059) and **NDDS_Transport_UDPv4_Property_t::multicast_enabled** (p. 2059).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the **NDDS_Transport_Property_t::max_interface_count** (p. 2051) and the "white" and "black" lists in the base property's fields (**NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047), **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048), **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049), **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050)).

RTI Connext can implicitly create this plugin and register with the **DDSDomainParticipant** (p. 1619) if this transport is specified in **DDS_TransportBuiltinQosPolicy** (p. 1408).

To specify the properties of the builtin UDPv4 transport that is implicitly registered, you can either:

- call **NDDSTransportSupport::set_builtin_transport_property** (p. 2109) or
- specify the predefined property names in **DDS_PropertyQosPolicy** (p. 1260) associated with the **DDSDomainParticipant** (p. 1619). (see **UDPv4 Transport Property Names in Property QoS Policy of Domain Participant** (p. 465)). Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1260) always overwrite the ones specified through **NDDSTransportSupport::set_builtin_transport_property()** (p. 2109). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connext. Any properties set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 182) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, **NDDS_Transport_UDPv4_new()** (p. 470) should be called. The instance should be registered with RTI Connext, see **NDDSTransportSupport::register_transport** (p. 2104). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (**DDS_TransportBuiltinQosPolicy** (p. 1408), **DDS_TRANSPORTBUILTIN_UDPv4** (p. 644)), to avoid port conflicts with the newly created plugin instance.

7.115.2 UDPv4 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS_DomainParticipantQos::property** (p. 975) to configure the builtin UDPv4 transport plugin.

Table 7.155 ***Property Names for UDPv4 Transport Plugin***

Property Name	Description
dds.transport.UDPv4.builtin.parent.classid	See **NDDS_Transport_Property_t::classid** (p. 2045) Should be set to "**NDDS_TRANSPORT_CLASSID_UDPv6** (p. 444)"
dds.transport.UDPv4.builtin.parent.address_bit_count	See **NDDS_Transport_Property_t::address_bit_count** (p. 2046)
dds.transport.UDPv4.builtin.parent.properties_bitmap	See **NDDS_Transport_Property_t::properties_bitmap** (p. 2046)
dds.transport.UDPv4.builtin.parent.gather_send_buffer_count_max	See **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047)
dds.transport.UDPv4.builtin.parent.message_size_max	See **NDDS_Transport_Property_t::message_size_max** (p. 2047)
dds.transport.UDPv4.builtin.parent.allow_interfaces	See **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047) and **NDDS_Transport_Property_t::allow_interfaces_list_length** (p. 2048). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.deny_interfaces	See **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048) and **NDDS_Transport_Property_t::deny_interfaces_list_length** (p. 2049). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.allow_multicast_interfaces	See **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049) and **NDDS_Transport_Property_t::allow_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.deny_multicast_interfaces	See **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050) and **NDDS_Transport_Property_t::deny_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4.builtin.parent.max_interface_count	See **NDDS_Transport_Property_t::max_interface_count** (p. 2051)
dds.transport.UDPv4.builtin.parent.thread_name_prefix	See **NDDS_Transport_Property_t::thread_name_prefix** (p. 2051)
dds.transport.UDPv4.builtin.send_socket_buffer_size	See **NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size** (p. 2058)
dds.transport.UDPv4.builtin.recv_socket_buffer_size	See **NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size** (p. 2058)

Property Name	Description
dds.transport.UDPv4.builtin.unicast_enabled	See **NDDS_Transport_UDPv4_Property_t::unicast_enabled** (p. 2059)
dds.transport.UDPv4.builtin.multicast_enabled	See **NDDS_Transport_UDPv4_Property_t::multicast_enabled** (p. 2059)
dds.transport.UDPv4.builtin.multicast_ttl	See **NDDS_Transport_UDPv4_Property_t::multicast_ttl** (p. 2059)
dds.transport.UDPv4.builtin.multicast_loopback_disabled	See **NDDS_Transport_UDPv4_Property_t::multicast_loopback_disabled** (p. 2060)
dds.transport.UDPv4.builtin.ignore_loopback_interface	See **NDDS_Transport_UDPv4_Property_t::ignore_loopback_interface** (p. 2060)
dds.transport.UDPv4.builtin.ignore_nonrunning_interfaces	See **NDDS_Transport_UDPv4_Property_t::ignore_nonrunning_interfaces** (p. 2061)
dds.transport.UDPv4.builtin.ignore_nonup_interfaces	**[DEPRECATED]** See **NDDS_Transport_UDPv4_Property_t::ignore_nonup_interfaces** (p. 2060)
dds.transport.UDPv4.builtin.no_zero_copy	**[DEPRECATED]** See **NDDS_Transport_UDPv4_Property_t::no_zero_copy** (p. 2061)
dds.transport.UDPv4.builtin.send_blocking	See **NDDS_Transport_UDPv4_Property_t::send_blocking** (p. 2062)
dds.transport.UDPv4.builtin.transport_priority_mask	See **NDDS_Transport_UDPv4_Property_t::transport_priority_mask** (p. 2062)
dds.transport.UDPv4.builtin.transport_priority_mapping_low	See **NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_low** (p. 2063)
dds.transport.UDPv4.builtin.transport_priority_mapping_high	See **NDDS_Transport_UDPv4_Property_t::transport_priority_mapping_high** (p. 2063)
dds.transport.UDPv4.builtin.send_ping	See **NDDS_Transport_UDPv4_Property_t::send_ping** (p. 2063)
dds.transport.UDPv4.builtin.force_interface_poll_detection	See **NDDS_Transport_UDPv4_Property_t::force_interface_poll_detection** (p. 2064)
dds.transport.UDPv4.builtin.interface_poll_period	See **NDDS_Transport_UDPv4_Property_t::interface_poll_period** (p. 2064)
dds.transport.UDPv4.builtin.reuse_multicast_receive_resource	See **NDDS_Transport_UDPv4_Property_t::reuse_multicast_receive_resource** (p. 2064)
dds.transport.UDPv4.builtin.protocol_overhead_max	See **NDDS_Transport_UDPv4_Property_t::protocol_overhead_max** (p. 2064)
dds.transport.UDPv4.builtin.disable_interface_tracking	See **NDDS_Transport_UDPv4_Property_t::disable_interface_tracking** (p. 2065)
dds.transport.UDPv4.builtin.public_address	See **NDDS_Transport_UDPv4_Property_t::public_address** (p. 2065)
dds.transport.UDPv4.builtin.join_multicast_group_timeout	See **NDDS_Transport_UDPv4_Property_t::join_multicast_group_timeout** (p. 2065)
dds.transport.UDPv4.builtin.port_offset	See **NDDS_Transport_UDPv4_Property_t::port_offset** (p. 2066)

NDDSTransportSupport::set_builtin_transport_property() (p. 2109)

7.115.3 Macro Definition Documentation

7.115.3.1 NDDS_TRANSPORT_UDPV4_ADDRESS_BIT_COUNT

```
#define NDDS_TRANSPORT_UDPV4_ADDRESS_BIT_COUNT (32)
```

Default value of **NDDS_Transport_Property_t::address_bit_count** (p. 2046).

7.115.3.2 NDDS_TRANSPORT_UDPV4_WAN_ADDRESS_BIT_COUNT

```
#define NDDS_TRANSPORT_UDPV4_WAN_ADDRESS_BIT_COUNT (128)
```

Default value of **NDDS_Transport_Property_t::address_bit_count** (p. 2046) for UDPv4 asymmetric transport.

7.115.3.3 NDDS_TRANSPORT_UDPV4_PROPERTIES_BITMAP_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_PROPERTIES_BITMAP_DEFAULT   NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_↩
DEFAULT
```

Default value of **NDDS_Transport_Property_t::properties_bitmap** (p. 2046).

7.115.3.4 NDDS_TRANSPORT_UDPV4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT   NDDS_TRANSPORT_UDP_GATHER_↩
SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for RTI Connext, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

7.115.3.5 NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_MAX

```
#define NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_MAX   NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_↩
OS_MAX
```

OS maximum to be used to specify the socket buffer size.

This property, if set, uses the maximum allowable size set in your OS for send and receive socket buffer sizes. If you update the maximum allowable size in your OS setting, then RTI Connext will automatically pick up that change. This property is not supported on all platforms because not all platforms have maximum values for the size of the send and receive buffers for sockets. See the `Platform Notes` to determine if this property is supported on your platform.

7.115.3.6 NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_SOCKET_BUFFER_SIZE_OS_DEFAULT   NDDS_TRANSPORT_UDP_SOCKET_BUFFER_↩
SIZE_OS_DEFAULT
```

OS default to be used to specify the socket buffer size.

7.115.3.7 NDDS_TRANSPORT_UDPV4_SEND_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_SEND_SOCKET_BUFFER_SIZE_DEFAULT   NDDS_TRANSPORT_UDP_SEND_SOCKET_↩
BUFFER_SIZE_DEFAULT
```

Default value for **NDDS_Transport_UDPv4_Property_t::send_socket_buffer_size** (p. 2058) and **NDDS_Transport↩ _UDPv4_WAN_Property_t::send_socket_buffer_size** (p. 2068).

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.115.3.8 NDDS_TRANSPORT_UDPV4_RECV_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_RECV_SOCKET_BUFFER_SIZE_DEFAULT   NDDS_TRANSPORT_UDP_RECV_SOCKET_↩
BUFFER_SIZE_DEFAULT
```

Default value for **NDDS_Transport_UDPv4_Property_t::recv_socket_buffer_size** (p. 2058) and **NDDS_Transport↩ _UDPv4_WAN_Property_t::recv_socket_buffer_size** (p. 2068).

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.115.3.9 NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX

```
#define NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX (65507)
```

Maximum value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.115.3.10 NDDS_TRANSPORT_UDPV4_MESSAGE_SIZE_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_MESSAGE_SIZE_MAX_DEFAULT   NDDS_TRANSPORT_UDPV4_PAYLOAD_SIZE_MAX
```

Maximum value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.115.3.11 NDDS_TRANSPORT_UDPV4_MULTICAST_TTL_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_MULTICAST_TTL_DEFAULT   NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of **NDDS_Transport_UDPv4_Property_t::multicast_ttl** (p. 2059).

7.115.3.12 NDDS_TRANSPORT_UDPV4_BLOCKING_NEVER

```
#define NDDS_TRANSPORT_UDPV4_BLOCKING_NEVER
```

Value for **NDDS_Transport_UDPv4_Property_t::send_blocking** (p. 2062) to specify non-blocking sockets.

7.115.3.13 NDDS_TRANSPORT_UDPV4_BLOCKING_ALWAYS

```
#define NDDS_TRANSPORT_UDPV4_BLOCKING_ALWAYS
```

[default] Value for **NDDS_Transport_UDPv4_Property_t::send_blocking** (p. 2062) to specify blocking sockets.

7.115.3.14 NDDS_TRANSPORT_UDPV4_BLOCKING_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_BLOCKING_DEFAULT  NDDS_TRANSPORT_UDP_BLOCKING_DEFAULT
```

Default value for **NDDS_Transport_UDPv4_Property_t::send_blocking** (p. 2062) to specify blocking sockets.

7.115.3.15 NDDS_TRANSPORT_UDPV4_PROPERTY_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_PROPERTY_DEFAULT
```

Use this to initialize a **NDDS_Transport_UDPv4_Property_t** (p. 2056) structure.

7.115.3.16 NDDS_Transport_UDPv4_string_to_address_cEA

```
#define NDDS_Transport_UDPv4_string_to_address_cEA  NDDS_Transport_UDP_string_to_address_cEA
```

Realization of NDDS_Transport_String_To_Address_Fcn_cEA for IP transports.

Converts a host name string to a IPv4 address.

Parameters

self	NOT USED. May be NULL.
address_out	<<***out***>> *(*p. *433)* The corresponding numerical value in IPv4 format.
address_in	<<***in***>> *(*p. *433)* The name of the IPv4 address. It can be a dot notation name or a host name. If NULL, then the IP address of the localhost will be returned.

See also

NDDS_Transport_String_To_Address_Fcn_cEA for complete documentation.

7.115.4 Function Documentation

7.115.4.1 NDDS_Transport_UDPv4_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_new (
            const struct  NDDS_Transport_UDPv4_Property_t * property_in )
```

Create an instance of a UDPv4 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the NDDS_Transport_UDP_↩ Property_t::parent:

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),
- **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049),
- **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.∗.∗
- 192.168.1.∗
- etc. Strings not in the correct format will be ignored.

Parameters

property_in	<<***in***>> *(*p. *433)* Desired behavior of this transport. May be NULL for default property.

Returns

A UDPv4 Transport Plugin instance on success; or NULL on failure.

7.115.4.2 NDDS_Transport_UDPv4_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create (
             NDDS_Transport_Address_t * default_network_address_out,
            const struct  DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS_Transport_UDPv4_Property_t::parent** (p. 2058):

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),
- **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049),
- **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050)

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.*.*
- 192.168.1.*
- etc. Strings not in the correct format will be ignored.

Parameters

default_network_address_out	<<***out***>> *(*p. *433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(*p. *433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).

Returns

A UDPv4 Transport Plugin instance on success; or NULL on failure.

7.115.4.3 NDDS_Transport_UDPv4_create_from_properties_with_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_create_from_properties_with_prefix (
             NDDS_Transport_Address_t * default_network_address_out,
            const struct  DDS_PropertyQosPolicy * property_in,
            const char * propertyPrefix )
```

Create an instance of a UDPv4 Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_UDPv4_↩ create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

Parameters

default_network_address_out	<<***out***>> *(*p. *433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(*p. *433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).
propertyPrefix	a prefix for the properties. Expected UDP properties have the form prefix.property_name

7.116 Real-Time WAN Transport

Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS_TRANSPORT_CLASSID_UDPv4_WAN** (p. 446)) .

Classes

- struct **NDDS_Transport_UDPv4_WAN_Property_t**

  Configurable IPv4/UDP WAN Transport-Plugin properties.

Macros

- #define **NDDS_TRANSPORT_UDPV4_WAN_MESSAGE_SIZE_MAX_DEFAULT** (1400)

  *Maximum value of **NDDS_Transport_Property_t::message_size_max** (*p. *2047).*
- #define **NDDS_TRANSPORT_UDPV4_WAN_PROPERTY_DEFAULT**

  *Use this to initialize a **NDDS_Transport_UDPv4_WAN_Property_t** (*p. *2067) structure.*

Functions

- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_WAN_new** (const struct **NDDS_Transport_UDPv4_WAN_Property_t** *property_in)

  Create an instance of a UDPv4_WAN Transport Plugin.
- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_WAN_create** (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in)

  Create an instance of a UDPv4_WAN Transport Plugin, using the PropertyQosPolicy.
- NDDS_Transport_Plugin * **NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix** (**NDDS_Transport_Address_t** *default_network_address_out, const struct **DDS_PropertyQosPolicy** *property_in, const char *propertyPrefix)

  Create an instance of a UDPv4_WAN Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_UDPv4_WAN_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

7.116.1 Detailed Description

Transport plug-in using UDP/IPv4 for WAN communications. (**NDDS_TRANSPORT_CLASSID_UDPv4_WAN** (p. 446)) .

RTI Real-Time WAN Transport (RWT) is a transport that enables secure, scalable, and high-performance communication over wide area networks (WANs), including public networks.

It extends RTI Connext capabilities to WAN environments. Real-Time WAN Transport uses UDPv4 as the underlying IP transport-layer protocol to better anticipate and adapt to the challenges of diverse network conditions, device mobility, and the dynamic nature of WAN system architectures.

Real-Time WAN Transport, in combination with RTI Cloud Discovery Service (CDS), provides a complete, seamless solution out of the box for WAN connectivity.

This transport is not installed as part of an RTI Connext package; it must be downloaded and installed separately.

Real-Time WAN Transport replaces the transport capabilities of the Secure WAN Transport optionally available with previous RTI Connext releases (prior to 7.0.0), and provides the following capabilities:

- NAT (Network Address Translator) traversal: Ability to communicate between DomainParticipants running in a Local Area Network (LAN) that is behind a NAT-enabled router, and DomainParticipants on the outside of the NAT across a WAN. This functionality is provided in combination with Cloud Discovery Service.

- IP mobility: Support for network transitions and changes in IP addresses in any of the DomainParticipants participating in the communication.

- Security: Secure communications between DomainParticipants using Security Plugins.

Real-Time WAN Transport does not require third-party components, such as STUN servers, or protocols like SIP to handle session establishment. Using a single API and security model, you can leverage the extensive capabilities of the RTI Connext framework and ecosystem, including tools and infrastructure services, even for real-time connectivity from edge to cloud and back in highly distributed systems that communicate across wide area networks.

This transport plugin uses UDPv4 sockets to send and receive messages. It supports unicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS_↩ TRANSPORTBUILTIN_UDPv4_WAN_ALIAS** (p. 644).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node by specifying the **NDDS_Transport_Property_t::max_interface_count** (p. 2051) and the "white" and "black" lists in the base property's fields (**NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047), **NDDS_Transport_Property_t::deny_↩ interfaces_list** (p. 2048)).

RTI Connext can implicitly create this plugin and register with the **DDSDomainParticipant** (p. 1619) if this transport is specified in **DDS_TransportBuiltinQosPolicy** (p. 1408).

To specify the properties of the Real-Time WAN Transport that is implicitly registered, you can either:

- call **NDDSTransportSupport::set_builtin_transport_property** (p. 2109) or
- specify the predefined property names in **DDS_PropertyQosPolicy** (p. 1260) associated with the **DDSDomain↩ Participant** (p. 1619). (see **Real-Time WAN Transport Property** (p. 474)). Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1260) always overwrite the ones specified through **NDDSTransport↩ Support::set_builtin_transport_property()** (p. 2109). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connext. Any properties set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 182) for details on when a builtin transport is registered. To explicitly create an instance of this plugin, **NDDS_Transport_UDPv4_↩ WAN_new()** (p. 477) should be called. The instance should be registered with RTI Connext, see **NDDSTransport↩ Support::register_transport** (p. 2104). In some configurations one may have to disable the builtin UDPv4 transport plugin instance (**DDS_TransportBuiltinQosPolicy** (p. 1408), **DDS_TRANSPORTBUILTIN_UDPv4_WAN** (p. 644)), to avoid port conflicts with the newly created plugin instance.

For additional details on how to configure and use the Real-Time WAN Transport, see the `Core Libraries User's Manual`.

7.116.2 Real-Time WAN Transport Property

Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in the **DDS_DomainParticipantQos::property** (p. 975) to configure the Real-Time WAN Transport plugin.

Table 7.160 ***Property Names for Real-Time WAN Transport Plugin***

Property Name	Description
dds.transport.UDPv4_WAN.builtin.parent.classid	See **NDDS_Transport_Property_t::classid** (p. 2045) Should be set to "**NDDS_TRANSPORT_CLASSID_↩ UDPv4_WAN** (p. 446)"
dds.transport.UDPv4_WAN.builtin.parent.address_bit↩ _count	See **NDDS_Transport_Property_t::address_bit_↩ count** (p. 2046)
dds.transport.UDPv4_WAN.builtin.parent.properties_↩ bitmap	See **NDDS_Transport_Property_t::properties_↩ bitmap** (p. 2046)
dds.transport.UDPv4_WAN.builtin.parent.gather_↩ send_buffer_count_max	See **NDDS_Transport_Property_t::gather_send_↩ buffer_count_max** (p. 2047)
dds.transport.UDPv4_WAN.builtin.parent.message_↩ size_max	See **NDDS_Transport_Property_t::message_size_↩ max** (p. 2047)
dds.transport.UDPv4_WAN.builtin.parent.allow_↩ interfaces	See **NDDS_Transport_Property_t::allow_↩ interfaces_list** (p. 2047) and **NDDS_Transport_↩ Property_t::allow_interfaces_list_length** (p. 2048). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example, 127.0.0.1,eth0
dds.transport.UDPv4_WAN.builtin.parent.deny_↩ interfaces	See **NDDS_Transport_Property_t::deny_interfaces↩ _list** (p. 2048) and **NDDS_Transport_Property_t↩ ::deny_interfaces_list_length** (p. 2049). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv4_WAN.builtin.parent.max_↩ interface_count	See **NDDS_Transport_Property_t::max_interface_↩ count** (p. 2051)
dds.transport.UDPv4_WAN.builtin.parent.thread_↩ name_prefix	See **NDDS_Transport_Property_t::thread_name_↩ prefix** (p. 2051)
dds.transport.UDPv4_WAN.builtin.send_socket_↩ buffer_size	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::send_socket_buffer_size** (p. 2068)
dds.transport.UDPv4_WAN.builtin.recv_socket_buffer↩ _size	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::recv_socket_buffer_size** (p. 2068)
dds.transport.UDPv4_WAN.builtin.ignore_loopback_↩ interface	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::ignore_loopback_interface** (p. 2069)
dds.transport.UDPv4_WAN.builtin.ignore_nonrunning↩ _interfaces	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::ignore_nonrunning_interfaces** (p. 2070)
dds.transport.UDPv4_WAN.builtin.ignore_nonup_↩ interfaces	**[DEPRECATED]** See **NDDS_Transport_UDPv4_↩ WAN_Property_t::ignore_nonup_interfaces** (p. 2069)
dds.transport.UDPv4_WAN.builtin.no_zero_copy	**[DEPRECATED]** See **NDDS_Transport_UDPv4_↩ WAN_Property_t::no_zero_copy** (p. 2070)
dds.transport.UDPv4_WAN.builtin.send_blocking	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::send_blocking** (p. 2071)
dds.transport.UDPv4_WAN.builtin.transport_priority_↩ mask	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::transport_priority_mask** (p. 2071)
dds.transport.UDPv4_WAN.builtin.transport_priority_↩ mapping_low	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::transport_priority_mapping_low** (p. 2072)
dds.transport.UDPv4_WAN.builtin.transport_priority_↩ mapping_high	See **NDDS_Transport_UDPv4_WAN_Property_t↩ ::transport_priority_mapping_high** (p. 2072)

Property Name	Description
dds.transport.UDPv4_WAN.builtin.send_ping	See **NDDS_Transport_UDPv4_WAN_Property_t::send_ping** (p. 2072)
dds.transport.UDPv4_WAN.builtin.force_interface_poll_detection	See **NDDS_Transport_UDPv4_WAN_Property_t::force_interface_poll_detection** (p. 2073)
dds.transport.UDPv4_WAN.builtin.interface_poll_period	See **NDDS_Transport_UDPv4_WAN_Property_t::interface_poll_period** (p. 2073)
dds.transport.UDPv4_WAN.builtin.protocol_overhead_max	See **NDDS_Transport_UDPv4_WAN_Property_t::protocol_overhead_max** (p. 2073)
dds.transport.UDPv4_WAN.builtin.disable_interface_tracking	See **NDDS_Transport_UDPv4_WAN_Property_t::disable_interface_tracking** (p. 2073)
dds.transport.UDPv4_WAN.builtin.public_address	See **NDDS_Transport_UDPv4_WAN_Property_t::public_address** (p. 2074)
dds.transport.UDPv4_WAN.builtin.comm_ports	See **NDDS_Transport_UDPv4_WAN_Property_t::comm_ports_list** (p. 2074)
dds.transport.UDPv4_WAN.builtin.port_offset	See **NDDS_Transport_UDPv4_WAN_Property_t::port_offset** (p. 2076)
dds.transport.UDPv4_WAN.builtin.binding_ping_period	See **NDDS_Transport_UDPv4_WAN_Property_t::binding_ping_period** (p. 2076)

NDDSTransportSupport::set_builtin_transport_property() (p. 2109)

7.116.3 Macro Definition Documentation

7.116.3.1 NDDS_TRANSPORT_UDPV4_WAN_MESSAGE_SIZE_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_WAN_MESSAGE_SIZE_MAX_DEFAULT (1400)
```

Maximum value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.116.3.2 NDDS_TRANSPORT_UDPV4_WAN_PROPERTY_DEFAULT

```
#define NDDS_TRANSPORT_UDPV4_WAN_PROPERTY_DEFAULT
```

Use this to initialize a **NDDS_Transport_UDPv4_WAN_Property_t** (p. 2067) structure.

7.116.4 Function Documentation

7.116.4.1 NDDS_Transport_UDPv4_WAN_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_new (
            const struct  NDDS_Transport_UDPv4_WAN_Property_t * property_in )
```

Create an instance of a UDPv4_WAN Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the NDDS_Transport_UDP_Property_t↩ ::parent:

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.∗.∗
- 192.168.1.∗
- etc. Strings not in the correct format will be ignored.

Parameters

property↩ _in	*<<**in**>> (p. 433)* Desired behavior of this transport. May be NULL for default property.

Returns

A UDPv4_WAN Transport Plugin instance on success; or NULL on failure.

7.116.4.2 NDDS_Transport_UDPv4_WAN_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create (
```

```
 NDDS_Transport_Address_t * default_network_address_out,
const struct  DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv4_WAN Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface "white" and "black" lists specified in the **NDDS_Transport_UDPv4_WAN_↩ Property_t::parent** (p. 2068):

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),

The format of a string in these lists is assumed to be in standard IPv4 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.∗.∗
- 192.168.1.∗
- etc. Strings not in the correct format will be ignored.

Parameters

default_network_address_out	*<<**out**>> (p. 433)* Network address to be used when registering the transport.
property_in	*<<**in**>> (p. 433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).

Returns

A UDPv4_WAN Transport Plugin instance on success; or NULL on failure.

7.116.4.3 NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv4_WAN_create_from_properties_with_prefix (
 NDDS_Transport_Address_t * default_network_address_out,
const struct  DDS_PropertyQosPolicy * property_in,
const char * propertyPrefix )
```

Create an instance of a UDPv4_WAN Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_↩ UDPv4_WAN_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

Parameters

default_network_address_out	<<***out***>> *(*p. *433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(*p. *433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).
propertyPrefix	Prefix for the properties. Expected UDP properties have the form prefix.property_name

7.117 UDPv6 Transport

Transport plug-in using UDP/IPv6 (**NDDS_TRANSPORT_CLASSID_UDPv6** (p. 445)) .

Classes

- struct **NDDS_Transport_UDPv6_Property_t**

  Configurable IPv6/UDP Transport-Plugin properties.

Macros

- #define **NDDS_TRANSPORT_UDPV6_ADDRESS_BIT_COUNT** (128)

  *Default value of **NDDS_Transport_Property_t::address_bit_count** (*p. *2046).*
- #define **NDDS_TRANSPORT_UDPV6_PROPERTIES_BITMAP_DEFAULT** **NDDS_TRANSPORT_UDP_↩ PROPERTIES_BITMAP_DEFAULT**

  *Default value of **NDDS_Transport_Property_t::properties_bitmap** (*p. *2046).*
- #define **NDDS_TRANSPORT_UDPV6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT** **NDDS_↩ TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT**

  *Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (*p. *2047).*
- #define **NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_MAX** **NDDS_TRANSPORT_UDP_↩ SOCKET_BUFFER_SIZE_OS_MAX**

  OS maximum to be used to specify the socket buffer size.
- #define **NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_DEFAULT** **NDDS_TRANSPORT_↩ UDP_SOCKET_BUFFER_SIZE_OS_DEFAULT**

  OS default to be used to specify the socket buffer size.
- #define **NDDS_TRANSPORT_UDPV6_SEND_SOCKET_BUFFER_SIZE_DEFAULT** **NDDS_TRANSPORT_↩ UDP_SEND_SOCKET_BUFFER_SIZE_DEFAULT**

  *Default value for **NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size** (*p. *2078).*
- #define **NDDS_TRANSPORT_UDPV6_RECV_SOCKET_BUFFER_SIZE_DEFAULT** **NDDS_TRANSPORT_↩ UDP_RECV_SOCKET_BUFFER_SIZE_DEFAULT**

  *Default value for **NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size** (*p. *2079).*
- #define **NDDS_TRANSPORT_UDPV6_PAYLOAD_SIZE_MAX** (65487)

  *Maximum value of **NDDS_Transport_Property_t::message_size_max** (*p. *2047).*
- #define **NDDS_TRANSPORT_UDPV6_MESSAGE_SIZE_MAX_DEFAULT** **NDDS_TRANSPORT_UDPV6_↩ PAYLOAD_SIZE_MAX**

  *Default value of **NDDS_Transport_Property_t::message_size_max** (*p. *2047).*

- #define **NDDS_TRANSPORT_UDPV6_MULTICAST_TTL_DEFAULT** **NDDS_TRANSPORT_UDP_↩ MULTICAST_TTL_DEFAULT**

  *Default value of **NDDS_Transport_UDPv6_Property_t::multicast_ttl** (p. 2080).*
- #define **NDDS_TRANSPORT_UDPV6_BLOCKING_NEVER**

  *Value for **NDDS_Transport_UDPv6_Property_t::send_blocking** (p. 2082) to specify non-blocking sockets.*
- #define **NDDS_TRANSPORT_UDPV6_BLOCKING_ALWAYS**

  ***[default]** Value for **NDDS_Transport_UDPv6_Property_t::send_blocking** (p. 2082) to specify blocking sockets.*
- #define **NDDS_Transport_UDPv6_string_to_address_cEA** NDDS_Transport_UDP_string_to_address_cEA

  Realization of NDDS_Transport_String_To_Address_Fcn_cEA for IP transports.

Functions

- NDDS_Transport_Plugin ∗ **NDDS_Transport_UDPv6_new** (const struct **NDDS_Transport_UDPv6_↩ Property_t** ∗property_in)

  Create an instance of a UDPv6 Transport Plugin.
- NDDS_Transport_Plugin ∗ **NDDS_Transport_UDPv6_create** (**NDDS_Transport_Address_t** ∗default_↩ network_address_out, const struct **DDS_PropertyQosPolicy** ∗property_in)

  Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy.
- NDDS_Transport_Plugin ∗ **NDDS_Transport_UDPv6_create_from_properties_with_prefix** (**NDDS_↩ Transport_Address_t** ∗default_network_address_out, const struct **DDS_PropertyQosPolicy** ∗property_in, const char ∗propertyPrefix)

  Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_UDPv6_create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

7.117.1 Detailed Description

Transport plug-in using UDP/IPv6 (**NDDS_TRANSPORT_CLASSID_UDPv6** (p. 445)) .

This transport plugin uses UDPv6 sockets to send and receive messages. It supports both unicast and multicast communications in a single instance of the plugin. By default, this plugin will use all interfaces that it finds enabled and "UP" at instantiation time to send and receive messages. This transport is installed as a built-in transport plugin with the alias **DDS_TRANSPORTBUILTIN_UDPv6_ALIAS** (p. 644).

You can configure an instance of this plugin to only use unicast or only use multicast, see **NDDS_Transport_UDPv6↩ _Property_t::unicast_enabled** (p. 2079) and **NDDS_Transport_UDPv6_Property_t::multicast_enabled** (p. 2080).

In addition, you can configure an instance of this plugin to selectively use the network interfaces of a node (and restrict a plugin from sending multicast messages on specific interfaces) by specifying the **NDDS_Transport_↩ Property_t::max_interface_count** (p. 2051) and the "white" and "black" lists in the base property's fields (**NDDS↩ _Transport_Property_t::allow_interfaces_list** (p. 2047), **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048), **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049), **NDDS_Transport_Property_↩ t::deny_multicast_interfaces_list** (p. 2050)).

RTI Connext can implicitly create this plugin and register it with the **DDSDomainParticipant** (p. 1619) if this transport is specified in the **DDS_TransportBuiltinQosPolicy** (p. 1408).

To specify the properties of the builtin UDPv6 transport that is implicitly registered, you can either:

- call **NDDSTransportSupport::set_builtin_transport_property** (p. 2109) or
- specify the predefined property names in **DDS_PropertyQosPolicy** (p. 1260) associated with the **DDSDomain↩ Participant** (p. 1619). (see **UDPv6 Transport Property Names in Property QoS Policy of Domain Participant** (p. 481)). Builtin transport plugin properties specified in **DDS_PropertyQosPolicy** (p. 1260) always overwrite the ones specified through **NDDSTransportSupport::set_builtin_transport_property()** (p. 2109). The default value is assumed on any unspecified property.

Note that all properties should be set before the transport is implicitly created and registered by RTI Connext. Any properties that are set after the builtin transport is registered will be ignored. See **Built-in Transport Plugins** (p. 182) for details on when a builtin transport is registered.

To explicitly create an instance of this plugin, **NDDS_Transport_UDPv6_new()** (p. 486) should be called. The instance should be registered with RTI Connext, see **NDDSTransportSupport::register_transport** (p. 2104). In some configurations, you may have to disable the builtin UDPv6 transport plugin instance (**DDS_TransportBuiltinQosPolicy** (p. 1408), **DDS_TRANSPORTBUILTIN_UDPv6** (p. 644)), to avoid port conflicts with the newly created plugin instance.

7.117.2 UDPv6 Transport Property Names in Property QoS Policy of Domain Participant

The following table lists the predefined property names that can be set in **DDS_PropertyQosPolicy** (p. 1260) of a **DDSDomainParticipant** (p. 1619) to configure the builtin UDPv6 transport plugin.

Table 7.164 ***Property Names for UDPv6 Transport Plugin***

Property Name	Description
dds.transport.UDPv6.builtin.parent.address_bit_count	See **NDDS_Transport_Property_t::address_bit_↩ count** (p. 2046)
dds.transport.UDPv6.builtin.parent.properties_bitmap	See **NDDS_Transport_Property_t::properties_↩ bitmap** (p. 2046)
dds.transport.UDPv6.builtin.parent.gather_send_↩ buffer_count_max	See **NDDS_Transport_Property_t::gather_send_↩ buffer_count_max** (p. 2047)
dds.transport.UDPv6.builtin.parent.message_size_max	See **NDDS_Transport_Property_t::message_size_↩ max** (p. 2047)
dds.transport.UDPv6.builtin.parent.allow_interfaces	See **NDDS_Transport_Property_t::allow_↩ interfaces_list** (p. 2047) and **NDDS_Transport_↩ Property_t::allow_interfaces_list_length** (p. 2048). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.deny_interfaces	See **NDDS_Transport_Property_t::deny_interfaces↩ _list** (p. 2048) and **NDDS_Transport_Property_t↩ ::deny_interfaces_list_length** (p. 2049). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.allow_multicast_↩ interfaces	See **NDDS_Transport_Property_t::allow_multicast↩ _interfaces_list** (p. 2049) and **NDDS_Transport_↩ Property_t::allow_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0

Property Name	Description
dds.transport.UDPv6.builtin.parent.deny_multicast_↩ interfaces	See **NDDS_Transport_Property_t::deny_multicast↩ _interfaces_list** (p. 2050) and **NDDS_Transport_↩ Property_t::deny_multicast_interfaces_list_length** (p. 2050). Interfaces should be specified as comma-separated strings, with each comma delimiting an interface. For example: 127.0.0.1,eth0
dds.transport.UDPv6.builtin.parent.max_interface_count	See **NDDS_Transport_Property_t::max_interface_↩ count** (p. 2051)
dds.transport.UDPv6.builtin.parent.thread_name_prefix	See **NDDS_Transport_Property_t::thread_name_↩ prefix** (p. 2051)
dds.transport.UDPv6.builtin.send_socket_buffer_size	See **NDDS_Transport_UDPv6_Property_t::send_↩ socket_buffer_size** (p. 2078)
dds.transport.UDPv6.builtin.recv_socket_buffer_size	See **NDDS_Transport_UDPv6_Property_t::recv_↩ socket_buffer_size** (p. 2079)
dds.transport.UDPv6.builtin.unicast_enabled	See **NDDS_Transport_UDPv6_Property_t::unicast↩ _enabled** (p. 2079)
dds.transport.UDPv6.builtin.multicast_enabled	See **NDDS_Transport_UDPv6_Property_t↩ ::multicast_enabled** (p. 2080)
dds.transport.UDPv6.builtin.multicast_ttl	See **NDDS_Transport_UDPv6_Property_t↩ ::multicast_ttl** (p. 2080)
dds.transport.UDPv6.builtin.multicast_loopback_↩ disabled	See **NDDS_Transport_UDPv6_Property_t↩ ::multicast_loopback_disabled** (p. 2080)
dds.transport.UDPv6.builtin.ignore_loopback_interface	See **NDDS_Transport_UDPv6_Property_t::ignore_↩ loopback_interface** (p. 2080)
dds.transport.UDPv6.builtin.ignore_nonrunning_↩ interfaces	See **NDDS_Transport_UDPv6_Property_t::ignore_↩ nonrunning_interfaces** (p. 2081)
dds.transport.UDPv6.builtin.no_zero_copy	**[DEPRECATED]** See **NDDS_Transport_UDPv6_↩ Property_t::no_zero_copy** (p. 2081)
dds.transport.UDPv6.builtin.send_blocking	See **NDDS_Transport_UDPv6_Property_t::send_↩ blocking** (p. 2082)
dds.transport.UDPv6.builtin.enable_v4mapped	See **NDDS_Transport_UDPv6_Property_t::enable_↩ v4mapped** (p. 2082)
dds.transport.UDPv6.builtin.transport_priority_mask	See **NDDS_Transport_UDPv6_Property_t↩ ::transport_priority_mask** (p. 2082)
dds.transport.UDPv6.builtin.transport_priority_↩ mapping_low	See **NDDS_Transport_UDPv6_Property_t↩ ::transport_priority_mapping_low** (p. 2083)
dds.transport.UDPv6.builtin.transport_priority_↩ mapping_high	See **NDDS_Transport_UDPv6_Property_t↩ ::transport_priority_mapping_high** (p. 2083)
dds.transport.UDPv6.builtin.send_ping	See **NDDS_Transport_UDPv6_Property_t::send_↩ ping** (p. 2083) interface_poll_detection_kind
dds.transport.UDPv6.builtin.force_interface_poll_↩ detection	See **NDDS_Transport_UDPv6_Property_t::force_↩ interface_poll_detection** (p. 2084)
dds.transport.UDPv6.builtin.interface_poll_period	See **NDDS_Transport_UDPv6_Property_t↩ ::interface_poll_period** (p. 2084)
dds.transport.UDPv6.builtin.reuse_multicast_receive_↩ resource	See **NDDS_Transport_UDPv6_Property_t::reuse_↩ multicast_receive_resource** (p. 2084)
dds.transport.UDPv6.builtin.protocol_overhead_max	See **NDDS_Transport_UDPv6_Property_t↩ ::protocol_overhead_max** (p. 2084)

Property Name	Description
dds.transport.UDPv6.builtin.disable_interface_tracking	See **NDDS_Transport_UDPv6_Property_t::disable_interface_tracking** (p. 2085)
dds.transport.UDPv6.builtin.public_address	See **NDDS_Transport_UDPv6_Property_t::public_address** (p. 2085)
dds.transport.UDPv6.builtin.join_multicast_group_timeout	See **NDDS_Transport_UDPv6_Property_t::join_multicast_group_timeout** (p. 2085)
dds.transport.UDPv6.builtin.port_offset	See **NDDS_Transport_UDPv6_Property_t::port_offset** (p. 2086)

NDDSTransportSupport::set_builtin_transport_property() (p. 2109)

7.117.3 Macro Definition Documentation

7.117.3.1 NDDS_TRANSPORT_UDPV6_ADDRESS_BIT_COUNT

```
#define NDDS_TRANSPORT_UDPV6_ADDRESS_BIT_COUNT (128)
```

Default value of **NDDS_Transport_Property_t::address_bit_count** (p. 2046).

7.117.3.2 NDDS_TRANSPORT_UDPV6_PROPERTIES_BITMAP_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_PROPERTIES_BITMAP_DEFAULT NDDS_TRANSPORT_UDP_PROPERTIES_BITMAP_DEFAULT
```

Default value of **NDDS_Transport_Property_t::properties_bitmap** (p. 2046).

7.117.3.3 NDDS_TRANSPORT_UDPV6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT NDDS_TRANSPORT_UDP_GATHER_SEND_BUFFER_COUNT_MAX_DEFAULT
```

Default value of **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047).

This is also the maximum value that can be used when instantiating the UDP transport.

16 is sufficient for NDDS, but more may improve discovery and reliable performance. Porting note: find out what the maximum gather buffer count is on your OS!

7.117.3.4 NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_MAX

```
#define NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_MAX   NDDS_TRANSPORT_UDP_SOCKET_BUFFER_SIZE_↩
OS_MAX
```

OS maximum to be used to specify the socket buffer size.

This property, if set, uses the maximum allowable size set in your OS for send and receive socket buffer sizes. If you update the maximum allowable size in your OS setting, then RTI Connext will automatically pick up that change. This property is not supported on all platforms because not all platforms have maximum values for the size of the send and receive buffers for sockets. See the `Platform Notes` to determine if this property is supported on your platform.

7.117.3.5 NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_SOCKET_BUFFER_SIZE_OS_DEFAULT   NDDS_TRANSPORT_UDP_SOCKET_BUFFER_↩
SIZE_OS_DEFAULT
```

OS default to be used to specify the socket buffer size.

7.117.3.6 NDDS_TRANSPORT_UDPV6_SEND_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_SEND_SOCKET_BUFFER_SIZE_DEFAULT   NDDS_TRANSPORT_UDP_SEND_SOCKET_↩
BUFFER_SIZE_DEFAULT
```

Default value for **NDDS_Transport_UDPv6_Property_t::send_socket_buffer_size** (p. 2078).

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.117.3.7 NDDS_TRANSPORT_UDPV6_RECV_SOCKET_BUFFER_SIZE_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_RECV_SOCKET_BUFFER_SIZE_DEFAULT   NDDS_TRANSPORT_UDP_RECV_SOCKET_↩
BUFFER_SIZE_DEFAULT
```

Default value for **NDDS_Transport_UDPv6_Property_t::recv_socket_buffer_size** (p. 2079).

The default value is 2097152 bytes (1048576 bytes on AIX platforms).

7.117.3.8 NDDS_TRANSPORT_UDPV6_PAYLOAD_SIZE_MAX

```
#define NDDS_TRANSPORT_UDPV6_PAYLOAD_SIZE_MAX (65487)
```

Maximum value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.117.3.9 NDDS_TRANSPORT_UDPV6_MESSAGE_SIZE_MAX_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_MESSAGE_SIZE_MAX_DEFAULT    NDDS_TRANSPORT_UDPV6_PAYLOAD_SIZE_MAX
```

Default value of **NDDS_Transport_Property_t::message_size_max** (p. 2047).

7.117.3.10 NDDS_TRANSPORT_UDPV6_MULTICAST_TTL_DEFAULT

```
#define NDDS_TRANSPORT_UDPV6_MULTICAST_TTL_DEFAULT    NDDS_TRANSPORT_UDP_MULTICAST_TTL_DEFAULT
```

Default value of **NDDS_Transport_UDPv6_Property_t::multicast_ttl** (p. 2080).

7.117.3.11 NDDS_TRANSPORT_UDPV6_BLOCKING_NEVER

```
#define NDDS_TRANSPORT_UDPV6_BLOCKING_NEVER
```

Value for **NDDS_Transport_UDPv6_Property_t::send_blocking** (p. 2082) to specify non-blocking sockets.

7.117.3.12 NDDS_TRANSPORT_UDPV6_BLOCKING_ALWAYS

```
#define NDDS_TRANSPORT_UDPV6_BLOCKING_ALWAYS
```

[default] Value for **NDDS_Transport_UDPv6_Property_t::send_blocking** (p. 2082) to specify blocking sockets.

7.117.3.13 NDDS_Transport_UDPv6_string_to_address_cEA

```
#define NDDS_Transport_UDPv6_string_to_address_cEA  NDDS_Transport_UDP_string_to_address_cEA
```

Realization of NDDS_Transport_String_To_Address_Fcn_cEA for IP transports.

Converts a host name string to a IPv6 address.

Parameters

self	NOT USED. May be NULL.
address_out	<<***out***>> *(p. 433)* The corresponding numerical value in IPv6 format.
address_in	<<***in***>> *(p. 433)* The name of the IPv6 address. It can be a dot notation name or a host name. If NULL, then the IP address of the localhost will be returned.

See also

NDDS_Transport_String_To_Address_Fcn_cEA for complete documentation.

7.117.4 Function Documentation

7.117.4.1 NDDS_Transport_UDPv6_new()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_new (
            const struct  NDDS_Transport_UDPv6_Property_t * property_in )
```

Create an instance of a UDPv6 Transport Plugin.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS_Transport_UDPv6_Property_t::parent** (p. 2078):

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),
- **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049),
- **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- 10.10.30.232
- 10.10.*.*
- 192.168.1.*
- etc. Strings not in the correct format will be ignored.

Parameters

property_in	<<***in***>> *(p. 433)* Desired behavior of this transport. May be NULL for default property.

Returns

A UDPv6 Transport Plugin instance on success; or NULL on failure.

7.117.4.2 NDDS_Transport_UDPv6_create()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create (
             NDDS_Transport_Address_t * default_network_address_out,
            const struct  DDS_PropertyQosPolicy * property_in )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy.

An application may create and register multiple instances of this Transport Plugin with RTI Connext. Multiple instances of the plugin may be useful for partitioning the network interfaces across multiple RTI Connext domains. However, note that the underlying transport, the operating system's IP layer, is still a "singleton." For example, if a unicast transport has already bound to a port, and another unicast transport tries to bind to the same port, the second attempt will fail.

The transport plugin honors the interface/multicast "white" and "black" lists specified in the **NDDS_Transport_UDPv6_Property_t::parent** (p. 2078):

- **NDDS_Transport_Property_t::allow_interfaces_list** (p. 2047),
- **NDDS_Transport_Property_t::deny_interfaces_list** (p. 2048),
- **NDDS_Transport_Property_t::allow_multicast_interfaces_list** (p. 2049),
- **NDDS_Transport_Property_t::deny_multicast_interfaces_list** (p. 2050)

The format of a string in these lists is assumed to be in standard IPv6 dot notation, possibly containing wildcards. For example:

- *:*:*:*:*:*:*:*
- FE80:aBc::202:*:*
- *:aBC::*2*::2*
- etc. Strings not in the correct format will be ignored.

Parameters

default_network_address_out	<<***out***>> *(p. 433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(p. 433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).

Returns

A UDPv6 Transport Plugin instance on success; or NULL on failure.

7.117.4.3 NDDS_Transport_UDPv6_create_from_properties_with_prefix()

```
NDDS_Transport_Plugin * NDDS_Transport_UDPv6_create_from_properties_with_prefix (
             NDDS_Transport_Address_t * default_network_address_out,
            const struct  DDS_PropertyQosPolicy * property_in,
            const char * propertyPrefix )
```

Create an instance of a UDPv6 Transport Plugin, using the PropertyQosPolicy. Same as NDDS_Transport_UDPv6_↩ create but with a prefix for the input properties. It is used to create pluggable transports that use an underlying UDP transport.

Parameters

default_network_address_out	<<***out***>> *(*p. *433)* Network address to be used when registering the transport.
property_in	<<***in***>> *(*p. *433)* Desired behavior of this transport as defined in the **DDS_DomainParticipantQos::property** (p. 975).
propertyPrefix	a prefix for the properties. Expected UDP properties have the form prefix.property_name

7.118 AsyncWaitSet

<<***extension***>> *(*p. *432)* A specialization of **DDSWaitSet** (p. 1897) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1544).

Classes

- struct **DDS_AsyncWaitSetProperty_t**

  *Specifies the **DDSAsyncWaitSet** (*p. *1528) behavior.*
- class **DDSAsyncWaitSetListener**

  <<***interface***>> *(*p. *433) Listener for receiving event notifications related to the thread pool of the **DDSAsyncWaitSet** (*p. *1528).*
- class **DDSAsyncWaitSetCompletionToken**

  <<***interface***>> *(*p. *433) Implementation of the completion token role element of the asynchronous completion token pattern that is part of the **DDSAsyncWaitSet** (*p. *1528) behavior.*
- class **DDSAsyncWaitSet**

  *A class for dispatching **DDSCondition** (*p. *1544) objects using separate threads of execution. You can see this class as an extension of a **DDSWaitSet** (*p. *1897) that allows asynchronously waiting for the attached **DDSCondition** (*p. *1544) objects to trigger and provide a notification by calling **DDSCondition::dispatch** (*p. *1546).*
- class **DDSDataReaderStatusConditionHandler**

  <<***interface***>> *(*p. *433) Realization of a **DDSConditionHandler** (*p. *1546) that handles the status of a **DDSDataReader** (*p. *1556).*

Variables

- const struct **DDS_AsyncWaitSetProperty_t DDS_ASYNC_WAITSET_PROPERTY_DEFAULT**

  *Constant that defines the default property for a **DDSAsyncWaitSet** (p. 1528).*
- static **DDSAsyncWaitSetCompletionToken** ∗const **DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT**

  *For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1541), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1528) to use the implicit completion token and wait on it for request completion.*
- static **DDSAsyncWaitSetCompletionToken** ∗const **DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE**

  *For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1541), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1528) to perform the action associating a 'null' completion token.*

7.118.1 Detailed Description

<<***extension***>> *(p. 432)* A specialization of **DDSWaitSet** (p. 1897) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1544).

This class is a realization of the `Proactor` pattern applied to WaitSets and Conditions that provide a powerful component for your application process events leveraging concurrency.

7.118.2 Variable Documentation

7.118.2.1 DDS_ASYNC_WAITSET_PROPERTY_DEFAULT

`const struct` **DDS_AsyncWaitSetProperty_t** `DDS_ASYNC_WAITSET_PROPERTY_DEFAULT`

Constant that defines the default property for a **DDSAsyncWaitSet** (p. 1528).

Value: `wait_set_property` = **DDS_WaitSetProperty_t_INITIALIZER** (p. 670), `thread_pool_size` = 1, `thread_settings` DDS_THREAD_SETTINGS_DEFAULT, `thread_base_name` = NULL `wait_timeout` = **DDS_DURATION_INFINITE** (p. 522) `level` = 1

7.118.2.2 COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT

DDSAsyncWaitSetCompletionToken∗ `const DDSAsyncWaitSet::COMPLETION_TOKEN_USE_IMPLICIT_AND_WAIT` `[static]`

For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1541), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1528) to use the implicit completion token and wait on it for request completion.

If this sentinel is used, the **DDSAsyncWaitSet** (p. 1528) will use the completion token associated with the calling thread and will wait with an infinite timeout until the request completes successfully.

7.118.2.3 COMPLETION_TOKEN_IGNORE

```
DDSAsyncWaitSetCompletionToken* const DDSAsyncWaitSet::COMPLETION_TOKEN_IGNORE  [static]
```

For the operations that allow an **DDSAsyncWaitSetCompletionToken** (p. 1541), this sentinel can be provided to indicate an **DDSAsyncWaitSet** (p. 1528) to perform the action associating a 'null' completion token.

This sentinel is a realization of the null object pattern of an **DDSAsyncWaitSetCompletionToken** (p. 1541). If this object is provided to a **DDSAsyncWaitSet** (p. 1528) operation, the resulting operation request will be associated with a 'null' completion token that behaves as no-op.

When 'nul' completion token is provided, the **DDSAsyncWaitSet** (p. 1528) operation returns immediately after it issues the internal request, and there is no mean for your application to wait for the request to complete.

You can use this sentinel when your application can operate on an **DDSAsyncWaitSet** (p. 1528) without needing to known when operation requests complete or your application uses other strategies to synchronize resources.

This sentinel is also useful when you need to perform operations on **DDSAsyncWaitSet** (p. 1528) from within one of the threads from its thread pool, where waiting on a valid **DDSAsyncWaitSetCompletionToken** (p. 1541) is forbidden.

7.119 Participant Built-in Topics

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.

Classes

- struct **DDS_ParticipantBuiltinTopicData**

  Entry created when a DomainParticipant object is discovered.
- struct **DDS_ParticipantBuiltinTopicDataSeq**

  Instantiates ***FooSeq*** *(p. 1965) < **DDS_ParticipantBuiltinTopicData** (p. 1229) > .*
- class **DDSParticipantBuiltinTopicDataTypeSupport**

  Instantiates `TypeSupport` *< **DDS_ParticipantBuiltinTopicData** (p. 1229) > .*
- class **DDSParticipantBuiltinTopicDataDataReader**

  Instantiates `DataReader` *< **DDS_ParticipantBuiltinTopicData** (p. 1229) > .*

Typedefs

- typedef struct **DDS_ParticipantBuiltinTopicData** **DDS_ParticipantBuiltinTopicData**

  Entry created when a DomainParticipant object is discovered.

Variables

- const char * **DDS_PARTICIPANT_TOPIC_NAME**

  Participant topic name.

7.119.1 Detailed Description

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.

7.119.2 Typedef Documentation

7.119.2.1 DDS_ParticipantBuiltinTopicData

```
typedef struct DDS_ParticipantBuiltinTopicData DDS_ParticipantBuiltinTopicData
```

Entry created when a DomainParticipant object is discovered.

Data associated with the built-in topic **DDS_PARTICIPANT_TOPIC_NAME** (p. 491). It contains QoS policies and additional information that apply to the remote **DDSDomainParticipant** (p. 1619).

See also

DDS_PARTICIPANT_TOPIC_NAME (p. 491)

DDSParticipantBuiltinTopicDataDataReader (p. 1816)

7.119.3 Variable Documentation

7.119.3.1 DDS_PARTICIPANT_TOPIC_NAME

```
const char* DDS_PARTICIPANT_TOPIC_NAME [extern]
```

Participant topic name.

Topic name of **DDSParticipantBuiltinTopicDataDataReader** (p. 1816)

See also

DDS_ParticipantBuiltinTopicData (p. 1229)

DDSParticipantBuiltinTopicDataDataReader (p. 1816)

7.120 Topic Built-in Topics

Classes

- struct **DDS_TopicBuiltinTopicData**

  Entry created when a Topic object discovered.
- struct **DDS_TopicBuiltinTopicDataSeq**

  Instantiates ***FooSeq*** *(p. 1965) < **DDS_TopicBuiltinTopicData** (p. 1391) > .*
- class **DDSTopicBuiltinTopicDataTypeSupport**

  Instantiates `TypeSupport` *< **DDS_TopicBuiltinTopicData** (p. 1391) > .*
- class **DDSTopicBuiltinTopicDataDataReader**

  Instantiates `DataReader` *< **DDS_TopicBuiltinTopicData** (p. 1391) > .*

Typedefs

- typedef struct **DDS_TopicBuiltinTopicData** **DDS_TopicBuiltinTopicData**

  Entry created when a Topic object discovered.

Variables

- const char * **DDS_TOPIC_TOPIC_NAME**

  Topic topic name.

7.120.1 Detailed Description

Builtin topic for accessing information about the Topics discovered by RTI Connext.

7.120.2 Typedef Documentation

7.120.2.1 DDS_TopicBuiltinTopicData

`typedef struct` **`DDS_TopicBuiltinTopicData`** **`DDS_TopicBuiltinTopicData`**

Entry created when a Topic object discovered.

Data associated with the built-in topic **DDS_TOPIC_TOPIC_NAME** (p. 493). It contains QoS policies and additional information that apply to the remote **DDSTopic** (p. 1885).

Note: The **DDS_TopicBuiltinTopicData** (p. 1391) built-in topic is meant to convey information about discovered Topics. This Topic's samples are not propagated in a separate packet on the wire. Instead, the data is sent as part of the information carried by other built-in topics (**DDS_PublicationBuiltinTopicData** (p. 1264) and **DDS_Subscription↩ BuiltinTopicData** (p. 1370)). Therefore TopicBuiltinTopicData DataReaders will not receive any data.

7.120.3 Variable Documentation

7.120.3.1 DDS_TOPIC_TOPIC_NAME

```
const char* DDS_TOPIC_TOPIC_NAME  [extern]
```

Topic topic name.

Topic name of **DDSTopicBuiltinTopicDataDataReader** (p. 1890)

See also

DDS_TopicBuiltinTopicData (p. 1391)

DDSTopicBuiltinTopicDataDataReader (p. 1890)

7.121 Publication Built-in Topics

Builtin topic for accessing information about the Publications discovered by RTI Connext.

Classes

- struct **DDS_PublicationBuiltinTopicData**

  *Entry created when a **DDSDataWriter** (p. 1589) is discovered in association with its Publisher.*
- struct **DDS_PublicationBuiltinTopicDataSeq**

  *Instantiates **FooSeq** (p. 1965) < **DDS_PublicationBuiltinTopicData** (p. 1264) > .*
- class **DDSPublicationBuiltinTopicDataTypeSupport**

  *Instantiates TypeSupport < **DDS_PublicationBuiltinTopicData** (p. 1264) > .*
- class **DDSPublicationBuiltinTopicDataDataReader**

  *Instantiates DataReader < **DDS_PublicationBuiltinTopicData** (p. 1264) > .*

Typedefs

- typedef struct **DDS_PublicationBuiltinTopicData** **DDS_PublicationBuiltinTopicData**

  *Entry created when a **DDSDataWriter** (p. 1589) is discovered in association with its Publisher.*

Variables

- const char * **DDS_PUBLICATION_TOPIC_NAME**

  Publication topic name.

7.121.1 Detailed Description

Builtin topic for accessing information about the Publications discovered by RTI Connext.

7.121.2 Typedef Documentation

7.121.2.1 DDS_PublicationBuiltinTopicData

```
typedef struct DDS_PublicationBuiltinTopicData DDS_PublicationBuiltinTopicData
```

Entry created when a **DDSDataWriter** (p. 1589) is discovered in association with its Publisher.

Data associated with the built-in topic **DDS_PUBLICATION_TOPIC_NAME** (p. 494). It contains QoS policies and additional information that apply to the remote **DDSDataWriter** (p. 1589) the related **DDSPublisher** (p. 1818).

7.121.3 Variable Documentation

7.121.3.1 DDS_PUBLICATION_TOPIC_NAME

```
const char* DDS_PUBLICATION_TOPIC_NAME [extern]
```

Publication topic name.

Topic name of **DDSPublicationBuiltinTopicDataDataReader** (p. 1817)

See also

DDS_PublicationBuiltinTopicData (p. 1264)

DDSPublicationBuiltinTopicDataDataReader (p. 1817)

7.122 Subscription Built-in Topics

Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.

Classes

- struct **DDS_SubscriptionBuiltinTopicData**

  *Entry created when a **DDSDataReader** (p. 1556) is discovered in association with its Subscriber.*
- struct **DDS_SubscriptionBuiltinTopicDataSeq**

  *Instantiates **FooSeq** (p. 1965) < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > .*
- class **DDSSubscriptionBuiltinTopicDataTypeSupport**

  *Instantiates TypeSupport < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > .*
- class **DDSSubscriptionBuiltinTopicDataDataReader**

  *Instantiates DataReader < **DDS_SubscriptionBuiltinTopicData** (p. 1370) > .*

Typedefs

- typedef struct **DDS_SubscriptionBuiltinTopicData** **DDS_SubscriptionBuiltinTopicData**

  *Entry created when a **DDSDataReader** (p. 1556) is discovered in association with its Subscriber.*

Variables

- const char * **DDS_SUBSCRIPTION_TOPIC_NAME**

  Subscription topic name.

7.122.1 Detailed Description

Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.

7.122.2 Typedef Documentation

7.122.2.1 DDS_SubscriptionBuiltinTopicData

```
typedef struct DDS_SubscriptionBuiltinTopicData DDS_SubscriptionBuiltinTopicData
```

Entry created when a **DDSDataReader** (p. 1556) is discovered in association with its Subscriber.

Data associated with the built-in topic **DDS_SUBSCRIPTION_TOPIC_NAME** (p. 496). It contains QoS policies and additional information that apply to the remote **DDSDataReader** (p. 1556) the related **DDSSubscriber** (p. 1860).

See also

DDS_SUBSCRIPTION_TOPIC_NAME (p. 496)

7.122.3 Variable Documentation

7.122.3.1 DDS_SUBSCRIPTION_TOPIC_NAME

```
const char* DDS_SUBSCRIPTION_TOPIC_NAME  [extern]
```

Subscription topic name.

Topic name of **DDSSubscriptionBuiltinTopicDataDataReader** (p. 1882)

See also

DDS_SubscriptionBuiltinTopicData (p. 1370)

DDSSubscriptionBuiltinTopicDataDataReader (p. 1882)

7.123 ServiceRequest Built-in Topic

Builtin topic for accessing requests from different services within RTI Connext.

Classes

- struct **DDS_ServiceRequest**

  A request coming from one of the built-in services.
- struct **DDS_ServiceRequestSeq**

  Instantiates ***FooSeq*** *(p. 1965) < **DDS_ServiceRequest** (p. 1359) > .*
- class **DDSServiceRequestTypeSupport**

  Instantiates `TypeSupport` *< **DDS_ServiceRequest** (p. 1359) > .*
- class **DDSServiceRequestDataReader**

  Instantiates `DataReader` *< **DDS_ServiceRequest** (p. 1359) > .*

Typedefs

- typedef struct **DDS_ServiceRequest** **DDS_ServiceRequest**

  A request coming from one of the built-in services.

Variables

- const **DDS_Long DDS_UNKNOWN_SERVICE_REQUEST_ID**

  An invalid Service Id.
- const **DDS_Long DDS_TOPIC_QUERY_SERVICE_REQUEST_ID**

  *Service Id for the **DDSTopicQuery** (p. 1895) Service.*
- const **DDS_Long DDS_LOCATOR_REACHABILITY_SERVICE_REQUEST_ID**

  Service Id for the Locator Reachability Service.
- const **DDS_Long DDS_INSTANCE_STATE_SERVICE_REQUEST_ID**

  Service Id for the Instance State Request service.
- const **DDS_Long DDS_MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID**

  Service Id for RTI Monitoring Library 2.0 Command Service Request.
- const **DDS_Long DDS_MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID**

  Service Id for RTI Monitoring Library 2.0 Reply Service Requests.
- const char * **DDS_SERVICE_REQUEST_TOPIC_NAME**

  Service Request topic name.

7.123.1 Detailed Description

Builtin topic for accessing requests from different services within RTI Connext.

Currently, the **DDSTopicQuery** (p. 1895), Locator Reachability Instance State Consistency and Controlability (part of Observability) all rely on this topic.

See also

Topic Queries (p. 155) for an explanation of how TopicQueries use ServiceRequests and how you can access the ServiceRequests for debugging purposes in the section **The Built-in ServiceRequest DataReader** (p. 158).

7.123.2 Typedef Documentation

7.123.2.1 DDS_ServiceRequest

```
typedef struct DDS_ServiceRequest DDS_ServiceRequest
```

A request coming from one of the built-in services.

Data associated with the built-in topic **DDS_SERVICE_REQUEST_TOPIC_NAME** (p. 499). It contains service-specific information.

See also

DDS_SERVICE_REQUEST_TOPIC_NAME (p. 499)

DDSParticipantBuiltinTopicDataDataReader (p. 1816)

7.123.3 Variable Documentation

7.123.3.1 DDS_UNKNOWN_SERVICE_REQUEST_ID

```
const DDS_Long DDS_UNKNOWN_SERVICE_REQUEST_ID [extern]
```

An invalid Service Id.

7.123.3.2 DDS_TOPIC_QUERY_SERVICE_REQUEST_ID

```
const DDS_Long DDS_TOPIC_QUERY_SERVICE_REQUEST_ID [extern]
```

Service Id for the **DDSTopicQuery** (p. 1895) Service.

7.123.3.3 DDS_LOCATOR_REACHABILITY_SERVICE_REQUEST_ID

```
const DDS_Long DDS_LOCATOR_REACHABILITY_SERVICE_REQUEST_ID [extern]
```

Service Id for the Locator Reachability Service.

7.123.3.4 DDS_INSTANCE_STATE_SERVICE_REQUEST_ID

```
const DDS_Long DDS_INSTANCE_STATE_SERVICE_REQUEST_ID [extern]
```

Service Id for the Instance State Request service.

7.123.3.5 DDS_MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID

```
const DDS_Long DDS_MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID [extern]
```

Service Id for RTI Monitoring Library 2.0 Command Service Request.

RTI Monitoring Library 2.0 remote commands are sent using this service.

7.123.3.6 DDS_MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID

```
const  DDS_Long DDS_MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID  [extern]
```

Service Id for RTI Monitoring Library 2.0 Reply Service Requests.

Replies to RTI Monitoring Library 2.0 remote commands are sent using this service.

7.123.3.7 DDS_SERVICE_REQUEST_TOPIC_NAME

```
const char* DDS_SERVICE_REQUEST_TOPIC_NAME  [extern]
```

Service Request topic name.

Topic name of the **DDSServiceRequestDataReader** (p. 1845)

See also

DDS_ServiceRequest (p. 1359)

DDSServiceRequestDataReader (p. 1845)

7.124 Common types and functions

Types and functions related to the built-in topics.

Classes

- struct **DDS_Locator_t**

  *<<**extension**>> (p. 213) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.*
- struct **DDS_LocatorSeq**

  *Declares IDL `sequence` < **DDS_Locator_t** (p. 1184) >*
- struct **DDS_ProtocolVersion_t**

  *<<**extension**>> (p. 432) Type used to represent the version of the RTPS protocol.*
- struct **DDS_VendorId_t**

  *<<**extension**>> (p. 432) Type used to represent the vendor of the service implementing the RTPS protocol.*
- struct **DDS_ProductVersion_t**

  *<<**extension**>> (p. 432) Type used to represent the current version of RTI Connext.*
- struct **DDS_TransportInfo_t**

  Contains the class_id and message_size_max of an installed transport.
- struct **DDS_TransportInfoSeq**

  *Instantiates **FooSeq** (p. 1965) < **DDS_TransportInfo_t** (p. 1409) > .*
- struct **DDS_BuiltinTopicKey_t**

  The key type of the built-in topic types.
- struct **DDS_ContentFilterProperty_t**

  *<<**extension**>> (p. 432) Type used to provide all the required information to enable content filtering.*

Macros

- #define **DDS_LOCATOR_ADDRESS_LENGTH_MAX** 16

  Declares length of address field in locator.
- #define **DDS_PROTOCOLVERSION_1_0** { 1, 0 }

  The protocol version 1.0.
- #define **DDS_PROTOCOLVERSION_1_1** { 1, 1 }

  The protocol version 1.1.
- #define **DDS_PROTOCOLVERSION_1_2** { 1, 2 }

  The protocol version 1.2.
- #define **DDS_PROTOCOLVERSION_2_0** { 2, 0 }

  The protocol version 2.0.
- #define **DDS_PROTOCOLVERSION_2_1** { 2, 1 }

  The protocol version 2.1.
- #define **DDS_PROTOCOLVERSION** { 2, 1 }

  The most recent protocol version. Currently 2.1.
- #define **DDS_VENDOR_ID_LENGTH_MAX** 2

  Length of vendor id.
- #define **DDS_PRODUCTVERSION_UNKNOWN**

  The value used when the product version is unknown.

Typedefs

- typedef struct **DDS_Locator_t** **DDS_Locator_t**

  *<<**extension**>> (p. 213) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.*
- typedef struct **DDS_ProtocolVersion_t** **DDS_ProtocolVersion_t**

  *<<**extension**>> (p. 432) Type used to represent the version of the RTPS protocol.*
- typedef struct **DDS_BuiltinTopicKey_t** **DDS_BuiltinTopicKey_t**

  The key type of the built-in topic types.

Functions

- **DDS_Boolean** **DDS_BuiltinTopicKey_equals** (const **DDS_BuiltinTopicKey_t** *self, const **DDS_Builtin↩TopicKey_t** *other)

  Compares this Key with another Key for equality.
- void **DDS_BuiltinTopicKey_copy** (**DDS_BuiltinTopicKey_t** *dst, const **DDS_BuiltinTopicKey_t** *src)

  Copies another Key into this Key.
- void **DDS_BuiltinTopicKey_to_guid** (const **DDS_BuiltinTopicKey_t** *self, **DDS_GUID_t** *dst)

  Converts this Key into a GUID.
- void **DDS_BuiltinTopicKey_from_guid** (**DDS_BuiltinTopicKey_t** *self, const **DDS_GUID_t** *src)

  Initializes this Key from the input GUID.
- **DDS_Boolean** **DDS_BuiltinTopicKey_to_instance_handle** (const **DDS_BuiltinTopicKey_t** *self, **DDS_↩InstanceHandle_t** *dst)

  Converts this Key into an InstanceHandle.
- **DDS_Boolean** **DDS_BuiltinTopicKey_from_instance_handle** (**DDS_BuiltinTopicKey_t** *self, const **DDS↩_InstanceHandle_t** *src)

  Initializes this Key from the input InstanceHandle.

Variables

- const struct **DDS_Locator_t DDS_LOCATOR_INVALID**

  An invalid locator.
- const **DDS_Long DDS_LOCATOR_KIND_INVALID**

  Locator of this kind is invalid.
- const **DDS_UnsignedLong DDS_LOCATOR_PORT_INVALID**

  An invalid port.
- const **DDS_Octet DDS_LOCATOR_ADDRESS_INVALID** [**DDS_LOCATOR_ADDRESS_LENGTH_MAX**]

  An invalid address.
- const **DDS_Long DDS_LOCATOR_KIND_UDPv4**

  A locator for a UDPv4 address.
- const **DDS_Long DDS_LOCATOR_KIND_UDPv4_WAN**

  A locator for a UDPv4 asymmetric transport address.
- const **DDS_Long DDS_LOCATOR_KIND_SHMEM**

  A locator for an address acessed via shared memory.
- const **DDS_Long DDS_LOCATOR_KIND_SHMEM_510**

  A locator for an address acessed via shared memory for RTI Connext 5.1.0 and earlier.
- const **DDS_Long DDS_LOCATOR_KIND_UDPv6**

  A locator for a UDPv6 address.
- const **DDS_Long DDS_LOCATOR_KIND_UDPv6_510**

  A locator for a UDPv6 address for RTI Connext 5.1.0 and earlier.
- const **DDS_Long DDS_LOCATOR_KIND_RESERVED**

  Locator of this kind is reserved.
- DDS_BUILTIN_TOPIC_KEY_TYPE_NATIVE **DDS_BuiltinTopicKey_t::value** [DDS_BUILTIN_TOPIC_KEY_↩ TYPE_NATIVE_LENGTH]

  *An array of four integers that uniquely represents a remote **DDSEntity** (p. 1731).*
- const struct **DDS_BuiltinTopicKey_t DDS_BUILTIN_TOPIC_KEY_UNKNOWN**

  Constant representing an unknown value.

7.124.1 Detailed Description

Types and functions related to the built-in topics.

7.124.2 Macro Definition Documentation

7.124.2.1 DDS_LOCATOR_ADDRESS_LENGTH_MAX

```
#define DDS_LOCATOR_ADDRESS_LENGTH_MAX 16
```

Declares length of address field in locator.

7.124.2.2 DDS_PROTOCOLVERSION_1_0

```
#define DDS_PROTOCOLVERSION_1_0 { 1, 0 }
```

The protocol version 1.0.

7.124.2.3 DDS_PROTOCOLVERSION_1_1

```
#define DDS_PROTOCOLVERSION_1_1 { 1, 1 }
```

The protocol version 1.1.

7.124.2.4 DDS_PROTOCOLVERSION_1_2

```
#define DDS_PROTOCOLVERSION_1_2 { 1, 2 }
```

The protocol version 1.2.

7.124.2.5 DDS_PROTOCOLVERSION_2_0

```
#define DDS_PROTOCOLVERSION_2_0 { 2, 0 }
```

The protocol version 2.0.

7.124.2.6 DDS_PROTOCOLVERSION_2_1

```
#define DDS_PROTOCOLVERSION_2_1 { 2, 1 }
```

The protocol version 2.1.

7.124.2.7 DDS_PROTOCOLVERSION

```
#define DDS_PROTOCOLVERSION { 2, 1 }
```

The most recent protocol version. Currently 2.1.

7.124.2.8 DDS_VENDOR_ID_LENGTH_MAX

```
#define DDS_VENDOR_ID_LENGTH_MAX 2
```

Length of vendor id.

7.124.2.9 DDS_PRODUCTVERSION_UNKNOWN

```
#define DDS_PRODUCTVERSION_UNKNOWN
```

Value:

```
  { \
  DDS_PRODUCTVERSION_MAJOR_UNKNOWN, \
  DDS_PRODUCTVERSION_MINOR_UNKNOWN, \
  DDS_PRODUCTVERSION_RELEASE_UNKNOWN, \
  DDS_PRODUCTVERSION_REVISION_UNKNOWN \
}
```

The value used when the product version is unknown.

7.124.3 Typedef Documentation

7.124.3.1 DDS_Locator_t

```
typedef struct  DDS_Locator_t  DDS_Locator_t
```

<<***extension***>> *(*p. *213)* Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.

7.124.3.2 DDS_ProtocolVersion_t

```
typedef struct  DDS_ProtocolVersion_t  DDS_ProtocolVersion_t
```

<<***extension***>> *(*p. *432)* Type used to represent the version of the RTPS protocol.

7.124.3.3 DDS_BuiltinTopicKey_t

```
typedef struct  DDS_BuiltinTopicKey_t  DDS_BuiltinTopicKey_t
```

The key type of the built-in topic types.

Each remote **DDSEntity** (p. 1731) to be discovered can be uniquely identified by this key. This is the key of all the built-in topic data types.

See also

DDS_ParticipantBuiltinTopicData (p. 1229)

DDS_PublicationBuiltinTopicData (p. 1264)

DDS_SubscriptionBuiltinTopicData (p. 1370)

7.124.4 Function Documentation

7.124.4.1 DDS_BuiltinTopicKey_equals()

```
DDS_Boolean DDS_BuiltinTopicKey_equals (
            const  DDS_BuiltinTopicKey_t * self,
            const  DDS_BuiltinTopicKey_t * other )
```

Compares this Key with another Key for equality.

Parameters

self	<<***in***>> *(p. 433)* This Key. Cannot be NULL.
other	<<***in***>> *(p. 433)* The other Key to be compared with this Key. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two Keys have equal values, or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

7.124.4.2 DDS_BuiltinTopicKey_copy()

```
void DDS_BuiltinTopicKey_copy (
             DDS_BuiltinTopicKey_t * dst,
            const  DDS_BuiltinTopicKey_t * src )
```

Copies another Key into this Key.

Parameters

dst	<<***out***>> *(*p. *433)* This Key. Cannot be NULL.
src	<<***in***>> *(*p. *433)* The other Key to be copied. Cannot be NULL.

7.124.4.3 DDS_BuiltinTopicKey_to_guid()

```
void DDS_BuiltinTopicKey_to_guid (
             const  DDS_BuiltinTopicKey_t * self,
              DDS_GUID_t * dst )
```

Converts this Key into a GUID.

Parameters

self	<<***in***>> *(*p. *433)* This Key. Cannot be NULL.
dst	<<***out***>> *(*p. *433)* The destination GUID. Cannot be NULL.

7.124.4.4 DDS_BuiltinTopicKey_from_guid()

```
void DDS_BuiltinTopicKey_from_guid (
              DDS_BuiltinTopicKey_t * self,
             const  DDS_GUID_t * src )
```

Initializes this Key from the input GUID.

Parameters

self	<<***out***>> *(*p. *433)* This Key. Cannot be NULL.
src	<<***in***>> *(*p. *433)* The GUID to be used to initialize this Key. Cannot be NULL.

7.124.4.5 DDS_BuiltinTopicKey_to_instance_handle()

```
DDS_Boolean DDS_BuiltinTopicKey_to_instance_handle (
             const  DDS_BuiltinTopicKey_t * self,
              DDS_InstanceHandle_t * dst )
```

Converts this Key into an InstanceHandle.

Parameters

self	<<***in***>> *(p. 433)* This Key. Cannot be NULL.
dst	<<***out***>> *(p. 433)* The destination InstanceHandle. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 513) on success or **DDS_BOOLEAN_FALSE** (p. 513) on failure

7.124.4.6 DDS_BuiltinTopicKey_from_instance_handle()

```
DDS_Boolean DDS_BuiltinTopicKey_from_instance_handle (
            DDS_BuiltinTopicKey_t * self,
           const  DDS_InstanceHandle_t * src )
```

Initializes this Key from the input InstanceHandle.

Parameters

self	<<***out***>> *(p. 433)* This Key. Cannot be NULL.
src	<<***in***>> *(p. 433)* The InstanceHandle to be used to initialize this Key. Cannot be NULL.

Returns

DDS_BOOLEAN_TRUE (p. 513) on success or **DDS_BOOLEAN_FALSE** (p. 513) on failure

7.124.5 Variable Documentation

7.124.5.1 DDS_LOCATOR_INVALID

```
const struct  DDS_Locator_t DDS_LOCATOR_INVALID  [extern]
```

An invalid locator.

7.124.5.2 DDS_LOCATOR_KIND_INVALID

```
const  DDS_Long DDS_LOCATOR_KIND_INVALID  [extern]
```

Locator of this kind is invalid.

7.124.5.3 DDS_LOCATOR_PORT_INVALID

```
const DDS_UnsignedLong DDS_LOCATOR_PORT_INVALID [extern]
```

An invalid port.

7.124.5.4 DDS_LOCATOR_ADDRESS_INVALID

```
const DDS_Octet DDS_LOCATOR_ADDRESS_INVALID[ DDS_LOCATOR_ADDRESS_LENGTH_MAX] [extern]
```

An invalid address.

7.124.5.5 DDS_LOCATOR_KIND_UDPv4

```
const DDS_Long DDS_LOCATOR_KIND_UDPv4 [extern]
```

A locator for a UDPv4 address.

7.124.5.6 DDS_LOCATOR_KIND_UDPv4_WAN

```
const DDS_Long DDS_LOCATOR_KIND_UDPv4_WAN [extern]
```

A locator for a UDPv4 asymmetric transport address.

7.124.5.7 DDS_LOCATOR_KIND_SHMEM

```
const DDS_Long DDS_LOCATOR_KIND_SHMEM [extern]
```

A locator for an address acessed via shared memory.

7.124.5.8 DDS_LOCATOR_KIND_SHMEM_510

```
const DDS_Long DDS_LOCATOR_KIND_SHMEM_510 [extern]
```

A locator for an address acessed via shared memory for RTI Connext 5.1.0 and earlier.

7.124.5.9 DDS_LOCATOR_KIND_UDPv6

```
const DDS_Long DDS_LOCATOR_KIND_UDPv6 [extern]
```

A locator for a UDPv6 address.

7.124.5.10 DDS_LOCATOR_KIND_UDPv6_510

```
const DDS_Long DDS_LOCATOR_KIND_UDPv6_510 [extern]
```

A locator for a UDPv6 address for RTI Connext 5.1.0 and earlier.

7.124.5.11 DDS_LOCATOR_KIND_RESERVED

```
const DDS_Long DDS_LOCATOR_KIND_RESERVED [extern]
```

Locator of this kind is reserved.

7.124.5.12 value

```
DDS_BUILTIN_TOPIC_KEY_TYPE_NATIVE DDS_BuiltinTopicKey_t::value[DDS_BUILTIN_TOPIC_KEY_TYPE_NATIVE↩
_LENGTH]
```

An array of four integers that uniquely represents a remote **DDSEntity** (p. 1731).

7.124.5.13 DDS_BUILTIN_TOPIC_KEY_UNKNOWN

```
const struct DDS_BuiltinTopicKey_t DDS_BUILTIN_TOPIC_KEY_UNKNOWN [extern]
```

Constant representing an unknown value.

7.125 String Built-in Type

Built-in type consisting of a single character string.

Classes

- class **DDSStringTypeSupport**
  *<<**interface**>> (p. 433) String type support.*
- class **DDSStringDataReader**
  *<<**interface**>> (p. 433) Instantiates `DataReader` < char* >.*
- class **DDSStringDataWriter**
  *<<**interface**>> (p. 433) Instantiates `DataWriter` < char* >.*

7.125.1 Detailed Description

Built-in type consisting of a single character string.

7.126 KeyedString Built-in Type

Built-in type consisting of a string payload and a second string that is the key.

Classes

- struct **DDS_KeyedString**
  Keyed string built-in type.
- struct **DDS_KeyedStringSeq**
  *Instantiates **`FooSeq`** (p. 1965) < **DDS_KeyedString** (p. 1171) > .*
- class **DDSKeyedStringTypeSupport**
  *<<**interface**>> (p. 433) Keyed string type support.*
- class **DDSKeyedStringDataReader**
  *<<**interface**>> (p. 433) Instantiates `DataReader` < **DDS_KeyedString** (p. 1171) >.*
- class **DDSKeyedStringDataWriter**
  *<<**interface**>> (p. 433) Instantiates `DataWriter` < **DDS_KeyedString** (p. 1171) >.*

Typedefs

- typedef struct **DDS_KeyedString** **DDS_KeyedString**
  Keyed string built-in type.

7.126.1 Detailed Description

Built-in type consisting of a string payload and a second string that is the key.

7.126.2 Typedef Documentation

7.126.2.1 DDS_KeyedString

```
typedef struct DDS_KeyedString DDS_KeyedString
```

Keyed string built-in type.

7.127 Octets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes.

Classes

- struct **DDS_Octets**

  Built-in type consisting of a variable-length array of opaque bytes.
- struct **DDS_OctetsSeq**

  Instantiates ***FooSeq*** *(p. 1965) < **DDS_Octets** (p. 1217) > .*
- class **DDSOctetsTypeSupport**

  *<<**interface**>> (p. 433) **DDS_Octets** (p. 1217) type support.*
- class **DDSOctetsDataReader**

  *<<**interface**>> (p. 433) Instantiates `DataReader` < **DDS_Octets** (p. 1217) >.*
- class **DDSOctetsDataWriter**

  *<<**interface**>> (p. 433) Instantiates `DataWriter` < **DDS_Octets** (p. 1217) >.*

Typedefs

- typedef struct **DDS_Octets** **DDS_Octets**

  Built-in type consisting of a variable-length array of opaque bytes.

7.127.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes.

7.127.2 Typedef Documentation

7.127.2.1 DDS_Octets

```
typedef struct DDS_Octets DDS_Octets
```

Built-in type consisting of a variable-length array of opaque bytes.

7.128 KeyedOctets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

Classes

- struct **DDS_KeyedOctets**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.
- struct **DDS_KeyedOctetsSeq**

  Instantiates ***FooSeq*** *(p. 1965) < **DDS_KeyedOctets** (p. 1168) >.*
- class **DDSKeyedOctetsTypeSupport**

  *<<**interface**>> (p. 433) **DDS_KeyedOctets** (p. 1168) type support.*
- class **DDSKeyedOctetsDataReader**

  *<<**interface**>> (p. 433) Instantiates `DataReader` < **DDS_KeyedOctets** (p. 1168) >.*
- class **DDSKeyedOctetsDataWriter**

  *<<**interface**>> (p. 433) Instantiates `DataWriter` < **DDS_KeyedOctets** (p. 1168) >.*

Typedefs

- typedef struct **DDS_KeyedOctets** **DDS_KeyedOctets**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

7.128.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

7.128.2 Typedef Documentation

7.128.2.1 DDS_KeyedOctets

`typedef struct` **`DDS_KeyedOctets`** **`DDS_KeyedOctets`**

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

7.129 DDS-Specific Primitive Types

Basic DDS value types for use in user data types.

Macros

- #define **DDS_BOOLEAN_TRUE**

  *Defines "true" value of **DDS_Boolean** (p. 516) data type.*
- #define **DDS_BOOLEAN_FALSE**

  *Defines "false" value of **DDS_Boolean** (p. 516) data type.*

Typedefs

- typedef RTICdrChar **DDS_Char**

  Defines a character data type, equivalent to IDL/CDR `char`.
- typedef RTICdrWchar **DDS_Wchar**

  Defines a wide character data type, equivalent to IDL/CDR `wchar`.
- typedef RTICdrOctet **DDS_Octet**

  Defines an opaque byte data type, equivalent to IDL/CDR `octet`.
- typedef RTICdrOctet **DDS_UInt8**

  Defines a data type, equivalent to IDL/CDR `uint8`.
- typedef RTICdrInt8 **DDS_Int8**

  Defines a data type, equivalent to IDL/CDR `int8`.
- typedef RTICdrShort **DDS_Short**

  Defines a short integer data type, equivalent to IDL/CDR `short`.
- typedef RTICdrUnsignedShort **DDS_UnsignedShort**

  Defines an unsigned short integer data type, equivalent to IDL/CDR `unsigned short`.
- typedef RTICdrLong **DDS_Long**

  Defines a long integer data type, equivalent to IDL/CDR `long`.
- typedef RTICdrUnsignedLong **DDS_UnsignedLong**

  Defines an unsigned long integer data type, equivalent to IDL/CDR `unsigned long`.
- typedef RTICdrLongLong **DDS_LongLong**

  Defines an extra-long integer data type, equivalent to IDL/CDR `long long`.
- typedef RTICdrUnsignedLongLong **DDS_UnsignedLongLong**

  Defines an unsigned extra-long data type, equivalent to IDL/CDR `unsigned long long`.
- typedef RTICdrFloat **DDS_Float**

  Defines a single-precision floating-point data type, equivalent to IDL/CDR `float`.
- typedef RTICdrDouble **DDS_Double**

  Defines a double-precision floating-point data type, equivalent to IDL/CDR `double`.
- typedef RTICdrLongDouble **DDS_LongDouble**

  Defines an extra-precision floating-point data type, equivalent to IDL/CDR `long double`.
- typedef RTICdrBoolean **DDS_Boolean**

  Defines a Boolean data type, equivalent to IDL/CDR `boolean`.
- typedef RTICdrEnum **DDS_Enum**

  Defines an enumerated data type.

7.129.1 Detailed Description

Basic DDS value types for use in user data types.

As part of the finalization of the DDS standard, a number of DDS-specific primitive types will be introduced. By using these types, you will ensure that your data is serialized consistently across platforms even if the C/C++ built-in types have different sizes on those platforms.

In this version of RTI Connext, the DDS primitive types are defined using the OMG's Common Data Representation (CDR) standard. In a future version of RTI Connext, you will be given the choice of whether to use these CDR-based types or C/C++ built-in types through a flag provided to the rtiddsgen tool.

Typedef's that begin with RTICdr are defined in <NDDSHOME>/include/ndds/cdr/cdr_type.h, which uses types that are further defined in <NDDSHOME>/include/ndds/osapi/osapi_type.h.

7.129.2 Macro Definition Documentation

7.129.2.1 DDS_BOOLEAN_TRUE

```
#define DDS_BOOLEAN_TRUE
```

Defines "true" value of **DDS_Boolean** (p. 516) data type.

Examples

HelloWorld.cxx.

7.129.2.2 DDS_BOOLEAN_FALSE

```
#define DDS_BOOLEAN_FALSE
```

Defines "false" value of **DDS_Boolean** (p. 516) data type.

Examples

HelloWorld.cxx.

7.129.3 Typedef Documentation

7.129.3.1 DDS_Char

```
typedef RTICdrChar DDS_Char
```

Defines a character data type, equivalent to IDL/CDR `char`.

An 8-bit quantity that encodes a single byte charater from any byte-oriented code set.

7.129.3.2 DDS_Wchar

```
typedef RTICdrWchar DDS_Wchar
```

Defines a wide character data type, equivalent to IDL/CDR `wchar`.

A 16-bit quantity that contains a wide character encoded in UTF-16.

7.129.3.3 DDS_Octet

```
typedef RTICdrOctet DDS_Octet
```

Defines an opaque byte data type, equivalent to IDL/CDR `octet`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

7.129.3.4 DDS_UInt8

```
typedef RTICdrOctet DDS_UInt8
```

Defines a data type, equivalent to IDL/CDR `uint8`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

7.129.3.5 DDS_Int8

```
typedef RTICdrInt8 DDS_Int8
```

Defines a data type, equivalent to IDL/CDR `int8`.

An 8-bit quantity that is guaranteed not to undergo any conversion when transmitted by the middleware.

7.129.3.6 DDS_Short

```
typedef RTICdrShort DDS_Short
```

Defines a short integer data type, equivalent to IDL/CDR `short`.

A 16-bit signed short integer value.

7.129.3.7 DDS_UnsignedShort

```
typedef RTICdrUnsignedShort DDS_UnsignedShort
```

Defines an unsigned short integer data type, equivalent to IDL/CDR `unsigned short`.

A 16-bit unsigned short integer value.

7.129.3.8 DDS_Long

```
typedef RTICdrLong DDS_Long
```

Defines a long integer data type, equivalent to IDL/CDR `long`.

A 32-bit signed long integer value.

7.129.3.9 DDS_UnsignedLong

```
typedef RTICdrUnsignedLong DDS_UnsignedLong
```

Defines an unsigned long integer data type, equivalent to IDL/CDR `unsigned long`.

A 32-bit unsigned long integer value.

7.129.3.10 DDS_LongLong

```
typedef RTICdrLongLong DDS_LongLong
```

Defines an extra-long integer data type, equivalent to IDL/CDR `long long`.

A 64-bit signed long long integer value.

7.129.3.11 DDS_UnsignedLongLong

```
typedef RTICdrUnsignedLongLong DDS_UnsignedLongLong
```

Defines an unsigned extra-long data type, equivalent to IDL/CDR `unsigned long long`.

A 64-bit unsigned long long integer value.

7.129.3.12 DDS_Float

```
typedef RTICdrFloat DDS_Float
```

Defines a single-precision floating-point data type, equivalent to IDL/CDR `float`.

A 32-bit floating-point value.

7.129.3.13 DDS_Double

```
typedef RTICdrDouble DDS_Double
```

Defines a double-precision floating-point data type, equivalent to IDL/CDR `double`.

A 64-bit floating-point value.

7.129.3.14 DDS_LongDouble

```
typedef RTICdrLongDouble DDS_LongDouble
```

Defines an extra-precision floating-point data type, equivalent to IDL/CDR `long double`.

A 128-bit floating-point value.

Since some architectures do not support long double, RTI has defined character arrays that match the expected size of this type. On systems that do have native long double, you have to define RTI_CDR_SIZEOF_LONG_DOUBLE as 16 to map them to native types.

7.129.3.15 DDS_Boolean

```
typedef RTICdrBoolean DDS_Boolean
```

Defines a Boolean data type, equivalent to IDL/CDR `boolean`.

An 8-bit Boolean value that is used to denote a data item that can only take one of the values **DDS_BOOLEAN_TRUE** (p. 513) (1) or **DDS_BOOLEAN_FALSE** (p. 513) (0).

Examples

HelloWorld.cxx.

7.129.3.16 DDS_Enum

```
typedef RTICdrEnum DDS_Enum
```

Defines an enumerated data type.

Encoded as a signed 32-bit integer value. By default, the first enum identifier has the numeric value zero (0) (unless the value is provided explicitly). Successive enum identifiers take ascending numeric values, in order of declaration from left to right.

7.130 Time Support

Time and duration types and defines.

Classes

- struct **DDS_Duration_t**

  Type for duration representation.
- struct **DDS_Time_t**

  Type for time representation.

Macros

- #define **DDS_TIME_ZERO**

  The default instant in time: zero seconds and zero nanoseconds.

Functions

- static **DDS_Duration_t** **DDS_Duration_t::from_micros** (**DDS_UnsignedLongLong** microseconds)

  Creates a new duration object from a duration expressed in microseconds.
- static **DDS_Duration_t** **DDS_Duration_t::from_millis** (**DDS_UnsignedLongLong** milliseconds)

  Creates a new duration object from a duration expressed in milliseconds.
- static **DDS_Duration_t** **DDS_Duration_t::from_nanos** (**DDS_UnsignedLongLong** nanoseconds)

  Creates a new duration object from a duration expressed in nanoseconds.
- static **DDS_Duration_t** **DDS_Duration_t::from_seconds** (**DDS_UnsignedLong** seconds)

  Creates a new duration object from a duration expressed in seconds.
- static **DDS_Time_t** **DDS_Time_t::from_micros** (**DDS_UnsignedLongLong** microseconds)

  Creates a new time object from a time expressed in microseconds.
- static **DDS_Time_t** **DDS_Time_t::from_millis** (**DDS_UnsignedLongLong** milliseconds)

  Creates a new time object from a time expressed in milliseconds.
- static **DDS_Time_t** **DDS_Time_t::from_nanos** (**DDS_UnsignedLongLong** nanoseconds)

  Creates a new time object from a time expressed in nanoseconds.
- static **DDS_Time_t** **DDS_Time_t::from_seconds** (**DDS_UnsignedLongLong** seconds)

  Creates a new time object from a time expressed in seconds.
- **DDS_Boolean** **DDS_Time_is_zero** (const struct **DDS_Time_t** *time)

  Check if time is zero.
- **DDS_Boolean** **DDS_Time_is_invalid** (const struct **DDS_Time_t** *time)
- **DDS_Boolean** **DDS_Duration_is_infinite** (const struct **DDS_Duration_t** *duration)
- **DDS_Boolean** **DDS_Duration_is_auto** (const struct **DDS_Duration_t** *duration)
- **DDS_Boolean** **DDS_Duration_is_zero** (const struct **DDS_Duration_t** *duration)

Variables

- const struct **DDS_Time_t DDS_TIME_MAX**

  The maximum value of time.
- const **DDS_LongLong DDS_TIME_INVALID_SEC**

  A sentinel indicating an invalid second of time.
- const **DDS_UnsignedLong DDS_TIME_INVALID_NSEC**

  A sentinel indicating an invalid nano-second of time.
- const struct **DDS_Time_t DDS_TIME_INVALID**

  A sentinel indicating an invalid time.
- const **DDS_Long DDS_DURATION_INFINITE_SEC**

  An infinite second period of time.
- const **DDS_UnsignedLong DDS_DURATION_INFINITE_NSEC**

  An infinite nano-second period of time.
- const struct **DDS_Duration_t DDS_DURATION_INFINITE**

  An infinite period of time.
- const **DDS_Long DDS_DURATION_AUTO_SEC**

  An auto second period of time.
- const **DDS_UnsignedLong DDS_DURATION_AUTO_NSEC**

  An auto nano-second period of time.
- const struct **DDS_Duration_t DDS_DURATION_AUTO**

  Duration is automatically assigned.
- const **DDS_Long DDS_DURATION_ZERO_SEC**

  A zero-length second period of time.
- const **DDS_UnsignedLong DDS_DURATION_ZERO_NSEC**

  A zero-length nano-second period of time.
- const struct **DDS_Duration_t DDS_DURATION_ZERO**

  A zero-length period of time.

7.130.1 Detailed Description

Time and duration types and defines.

7.130.2 Macro Definition Documentation

7.130.2.1 DDS_TIME_ZERO

```
#define DDS_TIME_ZERO
```

The default instant in time: zero seconds and zero nanoseconds.

7.130.3 Function Documentation

7.130.3.1 from_micros() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_micros (
            DDS_UnsignedLongLong microseconds ) [static]
```

Creates a new duration object from a duration expressed in microseconds.

In case of an overflow this function returns **DDS_DURATION_INFINITE** (p. 522).

7.130.3.2 from_millis() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_millis (
            DDS_UnsignedLongLong milliseconds ) [static]
```

Creates a new duration object from a duration expressed in milliseconds.

In case of an overflow this function returns **DDS_DURATION_INFINITE** (p. 522).

7.130.3.3 from_nanos() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_nanos (
            DDS_UnsignedLongLong nanoseconds ) [static]
```

Creates a new duration object from a duration expressed in nanoseconds.

In case of an overflow this function returns **DDS_DURATION_INFINITE** (p. 522).

7.130.3.4 from_seconds() [1/2]

```
static DDS_Duration_t DDS_Duration_t::from_seconds (
            DDS_UnsignedLong seconds ) [static]
```

Creates a new duration object from a duration expressed in seconds.

In case of an overflow this function returns **DDS_DURATION_INFINITE** (p. 522).

7.130.3.5 from_micros() [2/2]

```
static DDS_Time_t DDS_Time_t::from_micros (
            DDS_UnsignedLongLong microseconds ) [static]
```

Creates a new time object from a time expressed in microseconds.

In case of an overflow this function returns **DDS_TIME_MAX** (p. 521).

7.130.3.6 from_millis() [2/2]

```
static DDS_Time_t DDS_Time_t::from_millis (
            DDS_UnsignedLongLong milliseconds ) [static]
```

Creates a new time object from a time expressed in milliseconds.

In case of an overflow this function returns **DDS_TIME_MAX** (p. 521).

7.130.3.7 from_nanos() [2/2]

```
static DDS_Time_t DDS_Time_t::from_nanos (
            DDS_UnsignedLongLong nanoseconds ) [static]
```

Creates a new time object from a time expressed in nanoseconds.

In case of an overflow this function returns **DDS_TIME_MAX** (p. 521).

7.130.3.8 from_seconds() [2/2]

```
static DDS_Time_t DDS_Time_t::from_seconds (
            DDS_UnsignedLongLong seconds ) [static]
```

Creates a new time object from a time expressed in seconds.

In case of an overflow this function returns **DDS_TIME_MAX** (p. 521).

7.130.3.9 DDS_Time_is_zero()

```
DDS_Boolean DDS_Time_is_zero (
            const struct DDS_Time_t * time )
```

Check if time is zero.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given time is equal to **DDS_TIME_ZERO** (p. 518) or **DDS_BOOLEAN_↩ FALSE** (p. 513) otherwise.

7.130.3.10 DDS_Time_is_invalid()

```
DDS_Boolean DDS_Time_is_invalid (
            const struct DDS_Time_t * time )
```

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given time is not valid (i.e. is negative)

7.130.3.11 DDS_Duration_is_infinite()

```
DDS_Boolean DDS_Duration_is_infinite (
            const struct  DDS_Duration_t * duration )
```

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given duration is of infinite length.

7.130.3.12 DDS_Duration_is_auto()

```
DDS_Boolean DDS_Duration_is_auto (
            const struct  DDS_Duration_t * duration )
```

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given duration has auto value.

7.130.3.13 DDS_Duration_is_zero()

```
DDS_Boolean DDS_Duration_is_zero (
            const struct  DDS_Duration_t * duration )
```

Returns

DDS_BOOLEAN_TRUE (p. 513) if the given duration is of zero length.

7.130.4 Variable Documentation

7.130.4.1 DDS_TIME_MAX

```
const struct  DDS_Time_t DDS_TIME_MAX  [extern]
```

The maximum value of time.

7.130.4.2 DDS_TIME_INVALID_SEC

```
const DDS_LongLong DDS_TIME_INVALID_SEC [extern]
```

A sentinel indicating an invalid second of time.

7.130.4.3 DDS_TIME_INVALID_NSEC

```
const DDS_UnsignedLong DDS_TIME_INVALID_NSEC [extern]
```

A sentinel indicating an invalid nano-second of time.

7.130.4.4 DDS_TIME_INVALID

```
const struct DDS_Time_t DDS_TIME_INVALID [extern]
```

A sentinel indicating an invalid time.

7.130.4.5 DDS_DURATION_INFINITE_SEC

```
const DDS_Long DDS_DURATION_INFINITE_SEC [extern]
```

An infinite second period of time.

7.130.4.6 DDS_DURATION_INFINITE_NSEC

```
const DDS_UnsignedLong DDS_DURATION_INFINITE_NSEC [extern]
```

An infinite nano-second period of time.

7.130.4.7 DDS_DURATION_INFINITE

```
const struct DDS_Duration_t DDS_DURATION_INFINITE [extern]
```

An infinite period of time.

7.130.4.8 DDS_DURATION_AUTO_SEC

```
const DDS_Long DDS_DURATION_AUTO_SEC [extern]
```

An auto second period of time.

7.130.4.9 DDS_DURATION_AUTO_NSEC

```
const DDS_UnsignedLong DDS_DURATION_AUTO_NSEC [extern]
```

An auto nano-second period of time.

7.130.4.10 DDS_DURATION_AUTO

```
const struct DDS_Duration_t DDS_DURATION_AUTO [extern]
```

Duration is automatically assigned.

7.130.4.11 DDS_DURATION_ZERO_SEC

```
const DDS_Long DDS_DURATION_ZERO_SEC [extern]
```

A zero-length second period of time.

7.130.4.12 DDS_DURATION_ZERO_NSEC

```
const DDS_UnsignedLong DDS_DURATION_ZERO_NSEC [extern]
```

A zero-length nano-second period of time.

7.130.4.13 DDS_DURATION_ZERO

```
const struct DDS_Duration_t DDS_DURATION_ZERO [extern]
```

A zero-length period of time.

7.131 GUID Support

<<***extension***>> *(p. 432)* GUID type and defines.

Classes

- struct **DDS_RTPS_EntityId_t**

  From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.
- struct **DDS_RTPS_GUID_t**

  From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.
- struct **DDS_GUID_t**

  Type for GUID (Global Unique Identifier) representation.

Typedefs

- typedef **DDS_Octet** **DDS_RTPS_GuidPrefix_t**[DDS_RTPS_GUID_PREFIX_LENGTH]

  From the DDS-RTPS specification: type used to hold the prefix of the globally-unique RTPS-entity identifiers.
- typedef struct **DDS_RTPS_EntityId_t** **DDS_RTPS_EntityId_t**

  From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.
- typedef struct **DDS_RTPS_GUID_t** **DDS_RTPS_GUID_t**

  From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.
- typedef struct **DDS_GUID_t** **DDS_GUID_t**

  Type for GUID (Global Unique Identifier) representation.

Functions

- **DDS_Boolean** **DDS_GUID_equals** (const struct **DDS_GUID_t** *self, const struct **DDS_GUID_t** *other)

  Compares this GUID with another GUID for equality.
- int **DDS_GUID_compare** (const struct **DDS_GUID_t** *self, const struct **DDS_GUID_t** *other)

  Compares two GUIDs.
- void **DDS_GUID_copy** (struct **DDS_GUID_t** *self, const struct **DDS_GUID_t** *other)

  Copies another GUID into this GUID.

Variables

- const struct **DDS_GUID_t** **DDS_GUID_AUTO**

  Indicates that RTI Connext should choose an appropriate virtual GUID.
- const struct **DDS_GUID_t** **DDS_GUID_UNKNOWN**

  Unknown GUID.
- const struct **DDS_GUID_t** **DDS_GUID_ZERO**

  Zero GUID.

7.131.1 Detailed Description

<<***extension***>> *(p. 432)* GUID type and defines.

7.131.2 Typedef Documentation

7.131.2.1 DDS_RTPS_GuidPrefix_t

```
typedef  DDS_Octet DDS_RTPS_GuidPrefix_t[DDS_RTPS_GUID_PREFIX_LENGTH]
```

From the DDS-RTPS specification: type used to hold the prefix of the globally-unique RTPS-entity identifiers.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

7.131.2.2 DDS_RTPS_EntityId_t

```
typedef struct  DDS_RTPS_EntityId_t  DDS_RTPS_EntityId_t
```

From the DDS-RTPS specification: type used to hold the suffix part of the globally-unique RTPS-entity identifiers.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

7.131.2.3 DDS_RTPS_GUID_t

```
typedef struct  DDS_RTPS_GUID_t  DDS_RTPS_GUID_t
```

From the DDS-RTPS specification: type used to hold a globally-unique RTPS-entity identifier.

From DDS-RTPS Specification, clauses 8.4.2.1 and 9.3.1.

7.131.2.4 DDS_GUID_t

```
typedef struct  DDS_GUID_t  DDS_GUID_t
```

Type for *GUID* (Global Unique Identifier) representation.

Represents a 128 bit GUID.

Alternative representation of **DDS_RTPS_GUID_t** (p. 1314). Memory and wire representation for this type is the same as the one for **DDS_RTPS_GUID_t** (p. 1314).

7.131.3 Function Documentation

7.131.3.1 DDS_GUID_equals()

```
DDS_Boolean DDS_GUID_equals (
            const struct  DDS_GUID_t * self,
            const struct  DDS_GUID_t * other )
```

Compares this GUID with another GUID for equality.

Parameters

self	<<***in***>> *(p. 433)* This GUID.
other	<<***in***>> *(p. 433)* The other GUID to be compared with this GUID.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two GUIDs have equal values, or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

7.131.3.2 DDS_GUID_compare()

```
int DDS_GUID_compare (
            const struct  DDS_GUID_t * self,
            const struct  DDS_GUID_t * other )
```

Compares two GUIDs.

Parameters

self	<<***in***>> *(p. 433)* GUID to compare.
other	<<***in***>> *(p. 433)* GUID to compare.

Returns

If the two GUIDs are equal or NULL, the function returns 0. If self is greater than other, the function returns a positive number; otherwise, it returns a negative number. Note that non-NULL is considered greater than NULL.

7.131.3.3 DDS_GUID_copy()

```
void DDS_GUID_copy (
            struct  DDS_GUID_t * self,
            const struct  DDS_GUID_t * other )
```

Copies another GUID into this GUID.

Parameters

self	<<***in***>> *(p. 433)* This GUID. Cannot be NULL.
other	<<***in***>> *(p. 433)* The other GUID to be copied. Cannot be NULL.

7.131.4 Variable Documentation

7.131.4.1 DDS_GUID_AUTO

```
const struct DDS_GUID_t DDS_GUID_AUTO [extern]
```

Indicates that RTI Connext should choose an appropriate virtual GUID.

If this special value is assigned to **DDS_DataWriterProtocolQosPolicy::virtual_guid** (p. 893) or **DDS_DataReader↩ ProtocolQosPolicy::virtual_guid** (p. 844), RTI Connext will assign the virtual GUID automatically based on the RTPS or physical GUID.

7.131.4.2 DDS_GUID_UNKNOWN

```
const struct DDS_GUID_t DDS_GUID_UNKNOWN [extern]
```

Unknown GUID.

7.131.4.3 DDS_GUID_ZERO

```
const struct DDS_GUID_t DDS_GUID_ZERO [extern]
```

Zero GUID.

7.132 Sequence Number Support

<<***extension***>> *(p. 432)* Sequence number type and defines.

Classes

- struct **DDS_SequenceNumber_t**
  Type for sequence number representation.

Typedefs

- typedef struct **DDS_SequenceNumber_t** **DDS_SequenceNumber_t**
  Type for sequence number representation.

Variables

- const struct **DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_UNKNOWN**
  Unknown sequence number.
- const struct **DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_ZERO**
  Zero value for the sequence number.
- const struct **DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_MAX**
  Highest, most positive value for the sequence number.
- const struct **DDS_SequenceNumber_t DDS_AUTO_SEQUENCE_NUMBER**
  The sequence number is internally determined by RTI Connext.

7.132.1 Detailed Description

<<***extension***>> *(*p. *432)* Sequence number type and defines.

7.132.2 Typedef Documentation

7.132.2.1 DDS_SequenceNumber_t

```
typedef struct DDS_SequenceNumber_t DDS_SequenceNumber_t
```

Type for *sequence* number representation.

Represents a 64-bit sequence number.

7.132.3 Variable Documentation

7.132.3.1 DDS_SEQUENCE_NUMBER_UNKNOWN

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_UNKNOWN [extern]
```

Unknown sequence number.

7.132.3.2 DDS_SEQUENCE_NUMBER_ZERO

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_ZERO [extern]
```

Zero value for the sequence number.

7.132.3.3 DDS_SEQUENCE_NUMBER_MAX

```
const struct DDS_SequenceNumber_t DDS_SEQUENCE_NUMBER_MAX [extern]
```

Highest, most positive value for the sequence number.

7.132.3.4 DDS_AUTO_SEQUENCE_NUMBER

```
const struct DDS_SequenceNumber_t DDS_AUTO_SEQUENCE_NUMBER [extern]
```

The sequence number is internally determined by RTI Connext.

7.133 Exception Codes

<<***extension***>> *(*p. *432)* Exception codes.

Enumerations

- enum **DDS_ExceptionCode_t** {
  DDS_NO_EXCEPTION_CODE ,
  DDS_USER_EXCEPTION_CODE ,
  DDS_SYSTEM_EXCEPTION_CODE ,
  DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE ,
  DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE ,
  DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_CODE ,
  DDS_BADKIND_USER_EXCEPTION_CODE ,
  DDS_BOUNDS_USER_EXCEPTION_CODE ,
  DDS_IMMUTABLE_TYPECODE_SYSTEM_EXCEPTION_CODE = 8 ,
  DDS_BAD_MEMBER_NAME_USER_EXCEPTION_CODE = 9 ,
  DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE = 10 }

  *Error codes used by the **DDS_TypeCode** (*p. *1428) class.*

7.133.1 Detailed Description

<<***extension***>> *(p. 432)* Exception codes.

These exceptions are used for error handling by the **Type Code Support** (p. 79) API.

7.133.2 Enumeration Type Documentation

7.133.2.1 DDS_ExceptionCode_t

enum **DDS_ExceptionCode_t**

Error codes used by the **DDS_TypeCode** (p. 1428) class.

Exceptions are modeled via a special parameter passed to the operations.

Enumerator

DDS_NO_EXCEPTION_CODE	No failure occurred.
DDS_USER_EXCEPTION_CODE	User exception. This class is based on a similar class in CORBA.
DDS_SYSTEM_EXCEPTION_CODE	System exception. This class is based on a similar class in CORBA.
DDS_BAD_PARAM_SYSTEM_EXCEPTION_CODE	Exception thrown when a parameter passed to a call is considered illegal.
DDS_NO_MEMORY_SYSTEM_EXCEPTION_CODE	Exception thrown when there is not enough memory for a dynamic memory allocation.
DDS_BAD_TYPECODE_SYSTEM_EXCEPTION_↩ CODE	Exception thrown when a malformed type code is found (for example, a type code with an invalid TCKind value).
DDS_BADKIND_USER_EXCEPTION_CODE	The exception BadKind is thrown when an inappropriate operation is invoked on a TypeCode object.
DDS_BOUNDS_USER_EXCEPTION_CODE	A user exception thrown when a parameter is not within the legal bounds.
DDS_IMMUTABLE_TYPECODE_SYSTEM_↩ EXCEPTION_CODE	An attempt was made to modify a **DDS_TypeCode** (p. 1428) that was received from a remote object. The built-in publication and subscription readers provide access to information about the remote **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities in the distributed system. Among other things, the data from these built-in readers contains the **DDS_TypeCode** (p. 1428) for these entities. Modifying this received **DDS_TypeCode** (p. 1428) is not permitted.

Enumerator

DDS_BAD_MEMBER_NAME_USER_EXCEPTION_↩ CODE	The specified **DDS_TypeCode** (p. 1428) member name is invalid. This failure can occur, for example, when querying a field by name when no such name is defined in the type. **See also** **DDS_BAD_MEMBER_ID_USER_EXCEPTION↩ _CODE** (p. 531)
DDS_BAD_MEMBER_ID_USER_EXCEPTION_CODE	The specified **DDS_TypeCode** (p. 1428) member ID is invalid. This failure can occur, for example, when querying a field by ID when no such ID is defined in the type. **See also** **DDS_BAD_MEMBER_NAME_USER_↩ EXCEPTION_CODE** (p. 531)

7.134 Return Codes

Types of return codes.

Enumerations

- enum **DDS_ReturnCode_t** {
  DDS_RETCODE_OK ,
  DDS_RETCODE_ERROR ,
  DDS_RETCODE_UNSUPPORTED ,
  DDS_RETCODE_BAD_PARAMETER ,
  DDS_RETCODE_PRECONDITION_NOT_MET ,
  DDS_RETCODE_OUT_OF_RESOURCES ,
  DDS_RETCODE_NOT_ENABLED ,
  DDS_RETCODE_IMMUTABLE_POLICY ,
  DDS_RETCODE_INCONSISTENT_POLICY ,
  DDS_RETCODE_ALREADY_DELETED ,
  DDS_RETCODE_TIMEOUT ,
  DDS_RETCODE_NO_DATA ,
  DDS_RETCODE_ILLEGAL_OPERATION ,
  DDS_RETCODE_NOT_ALLOWED_BY_SECURITY }

  Type for return codes.

7.134.1 Detailed Description

Types of return codes.

7.134.2 Standard Return Codes

Any operation with return type **DDS_ReturnCode_t** (p. 532) may return **DDS_RETCODE_OK** (p. 532) **DDS_↩ RETCODE_ERROR** (p. 532) or **DDS_RETCODE_ILLEGAL_OPERATION** (p. 533). Any operation that takes one or more input parameters may additionally return **DDS_RETCODE_BAD_PARAMETER** (p. 532). Any operation on an object created from any of the factories may additionally return **DDS_RETCODE_ALREADY_DELETED** (p. 533). Any operation that is stated as optional may additionally return **DDS_RETCODE_UNSUPPORTED** (p. 532).

Thus, the standard return codes are:

- **DDS_RETCODE_ERROR** (p. 532)
- **DDS_RETCODE_ILLEGAL_OPERATION** (p. 533)
- **DDS_RETCODE_ALREADY_DELETED** (p. 533)
- **DDS_RETCODE_BAD_PARAMETER** (p. 532)
- **DDS_RETCODE_UNSUPPORTED** (p. 532)

Operations that may return any of the additional return codes will state so explicitly.

7.134.3 Enumeration Type Documentation

7.134.3.1 DDS_ReturnCode_t

`enum` **`DDS_ReturnCode_t`**

Type for return codes.

Errors are modeled as operation return codes of this type.

Enumerator

DDS_RETCODE_OK	Successful return.
DDS_RETCODE_ERROR	Generic, unspecified error.
DDS_RETCODE_UNSUPPORTED	Unsupported operation. Only returned by operations that are unsupported.
DDS_RETCODE_BAD_PARAMETER	Illegal parameter value. The value of the parameter that is passed in has llegal value. Things that fall into this category include NULL parameters and parameter values that are out of range.
DDS_RETCODE_PRECONDITION_NOT_MET	A pre-condition for the operation was not met. The system is not in the expected state when the function is called, or the parameter itself is not in the expected state when the function is called.

Enumerator

DDS_RETCODE_OUT_OF_RESOURCES	RTI Connext ran out of the resources needed to complete the operation.
DDS_RETCODE_NOT_ENABLED	Operation invoked on a **DDSEntity** (p. 1731) that is not yet enabled.
DDS_RETCODE_IMMUTABLE_POLICY	Application attempted to modify an immutable QoS policy.
DDS_RETCODE_INCONSISTENT_POLICY	Application specified a set of QoS policies that are not consistent with each other.
DDS_RETCODE_ALREADY_DELETED	The object target of this operation has already been deleted.
DDS_RETCODE_TIMEOUT	The operation timed out.
DDS_RETCODE_NO_DATA	Indicates a transient situation where the operation did not return any data but there is no inherent error.
DDS_RETCODE_ILLEGAL_OPERATION	The operation was called under improper circumstances. An operation was invoked on an inappropriate object or at an inappropriate time. This return code is similar to **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532), except that there is no precondition that could be changed to make the operation succeed.
DDS_RETCODE_NOT_ALLOWED_BY_SECURITY	An operation on the DDS API that fails because the security plugins do not allow it. An operation on the DDS API that fails because the security plugins do not allow it.

7.135 Status Kinds

Kinds of communication status.

Macros

- #define **DDS_STATUS_MASK_NONE**

  No bits are set.
- #define **DDS_STATUS_MASK_ALL**

  All bits are set.

Typedefs

- typedef **DDS_UnsignedLong DDS_StatusMask**

  A bit-mask (list) of concrete status types, i.e. ***DDS_StatusKind*** *(p. 538)[].*

Enumerations

- enum **DDS_StatusKind** {
  DDS_INCONSISTENT_TOPIC_STATUS ,
  DDS_OFFERED_DEADLINE_MISSED_STATUS ,
  DDS_REQUESTED_DEADLINE_MISSED_STATUS ,
  DDS_OFFERED_INCOMPATIBLE_QOS_STATUS ,
  DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS ,
  DDS_SAMPLE_LOST_STATUS ,
  DDS_SAMPLE_REJECTED_STATUS ,
  DDS_DATA_ON_READERS_STATUS ,
  DDS_DATA_AVAILABLE_STATUS ,
  DDS_LIVELINESS_LOST_STATUS ,
  DDS_LIVELINESS_CHANGED_STATUS ,
  DDS_PUBLICATION_MATCHED_STATUS ,
  DDS_SUBSCRIPTION_MATCHED_STATUS ,
  DDS_DATA_WRITER_EMPTY_VIRTUAL_WRITER_STATUS = 0x0001U << 19 ,
  DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS ,
  DDS_SERVICE_REQUEST_ACCEPTED_STATUS ,
  DDS_DATA_WRITER_APPLICATION_ACKNOWLEDGMENT_STATUS ,
  DDS_DATA_WRITER_INSTANCE_REPLACED_STATUS ,
  DDS_RELIABLE_WRITER_CACHE_CHANGED_STATUS ,
  DDS_RELIABLE_READER_ACTIVITY_CHANGED_STATUS ,
  DDS_DATA_WRITER_CACHE_STATUS ,
  DDS_DATA_WRITER_PROTOCOL_STATUS ,
  DDS_DATA_READER_CACHE_STATUS ,
  DDS_DATA_READER_PROTOCOL_STATUS ,
  DDS_DATA_WRITER_DESTINATION_UNREACHABLE_STATUS = 0x00000001U << 30 ,
  DDS_DATA_WRITER_SAMPLE_REMOVED_STATUS }

  Type for status kinds.

7.135.1 Detailed Description

Kinds of communication status.

Entity:

DDSEntity (p. 1731)

QoS:

All QoS Policies (p. 549)

Listener:

DDSListener (p. 1794)

Each concrete **DDSEntity** (p. 1731) is associated with a set of Status objects whose value represents the communication status of that entity. Each status value can be accessed with a corresponding method on the **DDSEntity** (p. 1731).

When these status values change, the corresponding **DDSStatusCondition** (p. 1846) objects are activated and the proper **DDSListener** (p. 1794) objects are invoked to asynchronously inform the application.

An application is notified of communication status by means of the **DDSListener** (p. 1794) or the **DDSWaitSet** (p. 1897) / **DDSCondition** (p. 1544) mechanism. The two mechanisms may be combined in the application (e.g., using **DDSWaitSet** (p. 1897) (s) / **DDSCondition** (p. 1544) (s) to access the data and **DDSListener** (p. 1794) (s) to be warned asynchronously of erroneous communication statuses).

It is likely that the application will choose one or the other mechanism for each particular communication status (not both). However, if both mechanisms are enabled, then the **DDSListener** (p. 1794) mechanism is used first and then the **DDSWaitSet** (p. 1897) objects are signalled.

The statuses may be classified into:

- *read communication statuses*: i.e., those that are related to arrival of data, namely **DDS_DATA_ON_READERS_STATUS** (p. 541) and **DDS_DATA_AVAILABLE_STATUS** (p. 541).

- *plain communication statuses*: i.e., all the others.

Read communication statuses are treated slightly differently than the others because they don't change independently. In other words, at least two changes will appear at the same time (**DDS_DATA_ON_READERS_STATUS** (p. 541) and **DDS_DATA_AVAILABLE_STATUS** (p. 541)) and even several of the last kind may be part of the set. This 'grouping' has to be communicated to the application.

For each plain communication status, there is a corresponding structure to hold the status value. These values contain the information related to the change of status, as well as information related to the statuses themselves (e.g., contains cumulative counts).

"Status Values"

7.135.2 Changes in Status

Associated with each one of an **DDSEntity** (p. 1731)'s communication status is a logical `StatusChangedFlag`. This flag indicates whether that particular communication status has changed since the last time the status was read by the application. The way the status changes is slightly different for the Plain Communication Status and the Read Communication status.

"\p StatusChangedFlag indicates if status has changed"

7.135.2.1 Changes in plain communication status

For the plain communication status, the `StatusChangedFlag` flag is initially set to FALSE. It becomes TRUE whenever the plain communication status changes and it is reset to **DDS_BOOLEAN_FALSE** (p. 513) each time the application accesses the plain communication status via the proper `get_<plain communication status>()` operation on the **DDSEntity** (p. 1731).

The communication status is also reset to FALSE whenever the associated listener operation is called as the listener implicitly accesses the status which is passed as a parameter to the operation. The fact that the status is reset prior to calling the listener means that if the application calls the get_<plain communication status> from inside the listener it will see the status already reset.

An exception to this rule is when the associated listener is the 'nil' listener. The 'nil' listener is treated as a NOOP and the act of calling the 'nil' listener does not reset the communication status.

For example, the value of the `StatusChangedFlag` associated with the **DDS_REQUESTED_DEADLINE_↩ MISSED_STATUS** (p. 540) will become TRUE each time new deadline occurs (which increases **DDS_Requested↩ DeadlineMissedStatus::total_count** (p. 1306)). The value changes to FALSE when the application accesses the status via the corresponding **DDSDataReader::get_requested_deadline_missed_status** (p. 1571) method on the proper Entity

"Changes in \p StatusChangedFlag for plain communication status"

7.135.2.2 Changes in read communication status

For the read communication status, the `StatusChangedFlag` flag is initially set to FALSE. The `Status↩ ChangedFlag` becomes TRUE when either a data-sample arrives or else the **DDS_ViewStateKind** (p. 163), **DDS↩ _SampleStateKind** (p. 161), or **DDS_InstanceStateKind** (p. 165) of any existing sample changes for any reason other than a call to **FooDataReader::read** (p. 1919), **FooDataReader::take** (p. 1920) or their variants. Specifically any of the following events will cause the `StatusChangedFlag` to become TRUE:

- The arrival of new data.
- A change in the **DDS_InstanceStateKind** (p. 165) of a contained instance. This can be caused by either:
  - The arrival of the notification that an instance has been disposed by:
    - the **DDSDataWriter** (p. 1589) that owns it if **OWNERSHIP** (p. 612) QoS kind= **DDS_EXCLUSIVE_↩ OWNERSHIP_QOS** (p. 613)
    - or by any **DDSDataWriter** (p. 1589) if **OWNERSHIP** (p. 612) QoS kind= **DDS_SHARED_↩ OWNERSHIP_QOS** (p. 613)
  - The loss of liveliness of the **DDSDataWriter** (p. 1589) of an instance for which there is no other **DDSData↩ Writer** (p. 1589).
  - The arrival of the notification that an instance has been unregistered by the only **DDSDataWriter** (p. 1589) that is known to be writing the instance.

Depending on the kind of `StatusChangedFlag`, the flag transitions to FALSE again as follows:

- The **DDS_DATA_AVAILABLE_STATUS** (p. 541) `StatusChangedFlag` becomes FALSE when either the corresponding listener operation (on_data_available) is called or the read or take operation (or their variants) is called on the associated **DDSDataReader** (p. 1556).

- The **DDS_DATA_ON_READERS_STATUS** (p. 541) `StatusChangedFlag` becomes FALSE when any of the following events occurs:
  - The corresponding listener operation (on_data_on_readers) is called.
  - The on_data_available listener operation is called on any **DDSDataReader** (p. 1556) belonging to the **DDSSubscriber** (p. 1860).
  - The read or take operation (or their variants) is called on any **DDSDataReader** (p. 1556) belonging to the **DDSSubscriber** (p. 1860).

"Changes in \p StatusChangedFlag for read communication status"

7.135.3 Macro Definition Documentation

7.135.3.1 DDS_STATUS_MASK_NONE

```
#define DDS_STATUS_MASK_NONE
```

No bits are set.

Examples

HelloWorld_publisher.cxx, and **HelloWorld_subscriber.cxx**.

7.135.3.2 DDS_STATUS_MASK_ALL

```
#define DDS_STATUS_MASK_ALL
```

All bits are set.

7.135.4 Typedef Documentation

7.135.4.1 DDS_StatusMask

```
typedef  DDS_UnsignedLong  DDS_StatusMask
```

A bit-mask (list) of concrete status types, i.e. **DDS_StatusKind** (p. 538)[].

The bit-mask is an efficient and compact representation of a fixed-length list of **DDS_StatusKind** (p. 538) values.

Bits in the mask correspond to different statuses. You can choose which changes in status will trigger a callback by setting the corresponding status bits in this bit-mask and installing callbacks for each of those statuses.

The bits that are true indicate that the listener will be called back for changes in the corresponding status.

For example:
```
DDS_StatusMask mask = DDS_REQUESTED_DEADLINE_MISSED_STATUS |
                      DDS_DATA_AVAILABLE_STATUS;
datareader->set_listener(listener, mask);
```

or
```
DDS_StatusMask mask = DDS_REQUESTED_DEADLINE_MISSED_STATUS |
                      DDS_DATA_AVAILABLE_STATUS;
datareader = subscriber->create_datareader(topic,
                                DDS_DATAREADER_QOS_DEFAULT,
                                 listener, mask);
```

7.135.5 Enumeration Type Documentation

7.135.5.1 DDS_StatusKind

```
enum  DDS_StatusKind
```

Type for *status* kinds.

Each concrete **DDSEntity** (p. 1731) is associated with a set of `*Status` objects whose values represent the communication status of that **DDSEntity** (p. 1731).

The communication statuses whose changes can be communicated to the application depend on the **DDSEntity** (p. 1731).

Each status value can be accessed with a corresponding method on the **DDSEntity** (p. 1731). The changes on these status values cause activation of the corresponding **DDSStatusCondition** (p. 1846) objects and trigger invocation of the proper **DDSListener** (p. 1794) objects to asynchronously inform the application. Note that not all statuses will activate the **DDSStatusCondition** (p. 1846) or have a corresponding listener callback. Refer to the documentation of the individual statuses for that information.

DDSEntity (p. 1731), **DDSStatusCondition** (p. 1846), **DDSListener** (p. 1794)

Enumerator

DDS_INCONSISTENT_TOPIC_STATUS	Another topic exists with the same name but different characteristics. **Entity:** **DDSTopic** (p. 1885) **Status:** **DDS_InconsistentTopicStatus** (p. 1165) **Listener:** **DDSTopicListener** (p. 1894)
DDS_OFFERED_DEADLINE_MISSED_STATUS	The deadline that the **DDSDataWriter** (p. 1589) has committed through its **DDS_DeadlineQosPolicy** (p. 928) was not respected for a specific instance. **Entity:** **DDSDataWriter** (p. 1589) **QoS:** **DEADLINE** (p. 583) **Status:** **DDS_OfferedDeadlineMissedStatus** (p. 1219) **Listener:** **DDSDataWriterListener** (p. 1612)

Enumerator

DDS_REQUESTED_DEADLINE_MISSED_STATUS	The deadline that the **DDSDataReader** (p. 1556) was expecting through its **DDS_DeadlineQosPolicy** (p. 928) was not respected for a specific instance. **Entity:** **DDSDataReader** (p. 1556) **QoS:** **DEADLINE** (p. 583) **Status:** **DDS_RequestedDeadlineMissedStatus** (p. 1306) **Listener:** **DDSDataReaderListener** (p. 1583)
DDS_OFFERED_INCOMPATIBLE_QOS_STATUS	A QosPolicy value was incompatible with what was requested. **Entity:** **DDSDataWriter** (p. 1589) **Status:** **DDS_OfferedIncompatibleQosStatus** (p. 1221) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS	A QosPolicy value was incompatible with what is offered. **Entity:** **DDSDataReader** (p. 1556) **Status:** **DDS_RequestedIncompatibleQosStatus** (p. 1307) **Listener:** **DDSDataReaderListener** (p. 1583)

Enumerator

DDS_SAMPLE_LOST_STATUS	A sample has been lost (i.e., was never received). **Entity:** **DDSDataReader** (p. 1556) **Status:** **DDS_SampleLostStatus** (p. 1355) **Listener:** **DDSDataReaderListener** (p. 1583)
DDS_SAMPLE_REJECTED_STATUS	A (received) sample has been rejected. **Entity:** **DDSDataReader** (p. 1556) **QoS:** **RESOURCE_LIMITS** (p. 635) **Status:** **DDS_SampleRejectedStatus** (p. 1356) **Listener:** **DDSDataReaderListener** (p. 1583)
DDS_DATA_ON_READERS_STATUS	New data is available. **Entity:** **DDSSubscriber** (p. 1860) **Listener:** **DDSSubscriberListener** (p. 1881)
DDS_DATA_AVAILABLE_STATUS	One or more new data samples have been received. **Entity:** **DDSDataReader** (p. 1556) **Listener:** **DDSDataReaderListener** (p. 1583)

Enumerator

DDS_LIVELINESS_LOST_STATUS	The liveliness that the **DDSDataWriter** (p. 1589) has committed to through its **DDS_LivelinessQosPolicy** (p. 1180) was not respected, thus **DDSDataReader** (p. 1556) entities will consider the **DDSDataWriter** (p. 1589) as no longer alive. **Entity:** **DDSDataWriter** (p. 1589) **QoS:** **LIVELINESS** (p. 607) **Status:** **DDS_LivelinessLostStatus** (p. 1179) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_LIVELINESS_CHANGED_STATUS	The liveliness of one or more **DDSDataWriter** (p. 1589) that were writing instances read through the **DDSDataReader** (p. 1556) has changed. Some **DDSDataWriter** (p. 1589) have become alive or not_alive. **Entity:** **DDSDataReader** (p. 1556) **QoS:** **LIVELINESS** (p. 607) **Status:** **DDS_LivelinessChangedStatus** (p. 1176) **Listener:** **DDSDataReaderListener** (p. 1583)

Enumerator

DDS_PUBLICATION_MATCHED_STATUS	The **DDSDataWriter** (p. 1589) has found **DDSDataReader** (p. 1556) that matches the **DDSTopic** (p. 1885) and has compatible QoS. **Entity:** **DDSDataWriter** (p. 1589) **Status:** **DDS_PublicationMatchedStatus** (p. 1273) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_SUBSCRIPTION_MATCHED_STATUS	The **DDSDataReader** (p. 1556) has found **DDSDataWriter** (p. 1589) that matches the **DDSTopic** (p. 1885) and has compatible QoS. **Entity:** **DDSDataReader** (p. 1556) **Status:** **DDS_SubscriptionMatchedStatus** (p. 1379) **Listener:** **DDSDataReaderListener** (p. 1583)
DDS_DATA_WRITER_EMPTY_VIRTUAL_WRITER_↩ STATUS	The status kind for the status when a data writer does not have samples for a virtual writer for which before it had samples.
DDS_INVALID_LOCAL_ADVANCE_NOTICE_STATUS	<<***extension***>> *(p. 432)* The local **DDSDomainParticipant** (p. 1619) has or is about to have an invalid identity or permissions credential. Enables a **DDSDomainParticipant** (p. 1619) callback that is called when the local **DDSDomainParticipant** (p. 1619) has or is about to have an invalid identity or permissions credential. Currently, this status is only triggered when enabling the RTI Security Plugins. Please refer to the `RTI Security Plugins User's Manual` for more information. **Entity:** **DDSDomainParticipant** (p. 1619) **Listener:** **DDSDomainParticipantListener** (p. 1722)

Enumerator

DDS_SERVICE_REQUEST_ACCEPTED_STATUS	<<***extension***>> *(p. 432)* A **DDSDataWriter** (p. 1589) has been issued a **DDS_ServiceRequest** (p. 1359) Enables a **DDSDataWriter** (p. 1589) callback that is called when a **DDS_ServiceRequest** (p. 1359) has been accepted and dispatched to the DataWriter. **Entity:** **DDSDataWriter** (p. 1589) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_DATA_WRITER_APPLICATION_↩ ACKNOWLEDGMENT_STATUS	<<***extension***>> *(p. 432)* A **DDSDataWriter** (p. 1589) has received an application-level acknowledgment for a sample Enables a **DDSDataWriter** (p. 1589) callback that is called when an application-level acknowledgment from a **DDSDataReader** (p. 1556) is received. The callback is called for each sample that is application-level acknowledged. Changes to this status do not trigger a **DDSStatusCondition** (p. 1846). **Entity:** **DDSDataWriter** (p. 1589) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_DATA_WRITER_INSTANCE_REPLACED_↩ STATUS	<<***extension***>> *(p. 432)* A **DDSDataWriter** (p. 1589) instance has been replaced Enables a **DDSDataWriter** (p. 1589) callback that is called when an instance in the writer queue is replaced. **Entity:** **DDSDataWriter** (p. 1589) **Listener:** **DDSDataWriterListener** (p. 1612)

Enumerator

DDS_RELIABLE_WRITER_CACHE_CHANGED_↩ STATUS	<<***extension***>> *(p. 432)* The number of unacknowledged samples in a reliable writer's cache has changed such that it has reached a pre-defined trigger point. This status is considered changed at the following times: the cache is empty (i.e., contains no unacknowledged samples), the cache is full (i.e., the sample count has reached the value specified in **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311)), or the number of samples has reached a high (see **DDS_RtpsReliableWriterProtocol_t::high_↩ watermark** (p. 1322)) or low (see **DDS_RtpsReliableWriterProtocol_t::low_watermark** (p. 1321)) watermark. **Entity:** **DDSDataWriter** (p. 1589) **Status:** **DDS_ReliableWriterCacheChangedStatus** (p. 1302) **Listener:** **DDSDataWriterListener** (p. 1612)
DDS_RELIABLE_READER_ACTIVITY_CHANGED_↩ STATUS	<<***extension***>> *(p. 432)* One or more reliable readers has become active or inactive. A reliable reader is considered active by a reliable writer with which it is matched if that reader acknowledges the samples it has been sent in a timely fashion. For the definition of "timely" in this case, see **DDS_RtpsReliableWriterProtocol_t** (p. 1320) and **DDS_ReliableReaderActivityChangedStatus** (p. 1300). **See also** **DDS_RtpsReliableWriterProtocol_t** (p. 1320) **DDS_ReliableReaderActivityChangedStatus** (p. 1300)
DDS_DATA_WRITER_CACHE_STATUS	<<***extension***>> *(p. 432)* The status of the writer's cache. Changes to this status do not trigger a **DDSStatusCondition** (p. 1846).
DDS_DATA_WRITER_PROTOCOL_STATUS	<<***extension***>> *(p. 432)* The status of a writer's internal protocol related metrics The status of a writer's internal protocol-related metrics, such as the number of samples pushed, pulled, and filtered and the status of wire protocol traffic. Changes to this status information do not trigger a **DDSStatusCondition** (p. 1846).

Enumerator

DDS_DATA_READER_CACHE_STATUS	<<***extension***>> *(p. 432)* The status of the reader's cache. Changes to this status do not trigger a **DDSStatusCondition** (p. 1846).
DDS_DATA_READER_PROTOCOL_STATUS	<<***extension***>> *(p. 432)* The status of a reader's internal protocol related metrics The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic. Changes to this status do not trigger a **DDSStatusCondition** (p. 1846).
DDS_DATA_WRITER_SAMPLE_REMOVED_STATUS	<<***extension***>> *(p. 432)* A **DDSDataWriter** (p. 1589) has removed a sample from its queue. Enables a **DDSDataWriter** (p. 1589) callback that is called when a sample is removed from its queue. **Entity:** **DDSDataWriter** (p. 1589) **Listener:** **DDSDataWriterListener** (p. 1612)

7.136 Thread Settings

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

Classes

- struct **DDS_ThreadSettings_t**
  The properties of a thread of execution.

Macros

- #define **DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT**
  The mask of default thread options.

Typedefs

- typedef **DDS_UnsignedLong DDS_ThreadSettingsKindMask**
  *A mask of which each bit is taken from **DDS_ThreadSettingsKind** (p. 548).*

Enumerations

- enum **DDS_ThreadSettingsKind** {
  DDS_THREAD_SETTINGS_FLOATING_POINT ,
  DDS_THREAD_SETTINGS_STDIO ,
  DDS_THREAD_SETTINGS_REALTIME_PRIORITY ,
  DDS_THREAD_SETTINGS_PRIORITY_ENFORCE ,
  DDS_THREAD_SETTINGS_CANCEL_ASYNCHRONOUS }

  A collection of flags used to configure threads of execution.
- enum **DDS_ThreadSettingsCpuRotationKind** {
  DDS_THREAD_SETTINGS_CPU_NO_ROTATION ,
  DDS_THREAD_SETTINGS_CPU_RR_ROTATION }

  *Determines how **DDS_ThreadSettings_t::cpu_list** (p. 1386) affects processor affinity for thread-related QoS policies that apply to multiple threads.*

7.136.1 Detailed Description

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

7.136.2 Macro Definition Documentation

7.136.2.1 DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT

```
#define DDS_THREAD_SETTINGS_KIND_MASK_DEFAULT
```

The mask of default thread options.

7.136.3 Typedef Documentation

7.136.3.1 DDS_ThreadSettingsKindMask

```
typedef DDS_UnsignedLong DDS_ThreadSettingsKindMask
```

A mask of which each bit is taken from **DDS_ThreadSettingsKind** (p. 548).

See also

DDS_ThreadSettings_t (p. 1385)

7.136.4 Enumeration Type Documentation

7.136.4.1 DDS_ThreadSettingsKind

enum **DDS_ThreadSettingsKind**

A collection of flags used to configure threads of execution.

Not all of these options may be relevant for all operating systems. Consult `Platform Notes` for additional details.

See also

DDS_ThreadSettingsKindMask (p. 547)

Enumerator

DDS_THREAD_SETTINGS_FLOATING_POINT	Code executed within the thread may perform floating point operations. Currently applicable only for VxWorks platforms, where user callbacks use floating-point operations.
DDS_THREAD_SETTINGS_STDIO	Code executed within the thread may access standard I/O. Currently applicable only for VxWorks platforms, where user callbacks do standard I/O operations.
DDS_THREAD_SETTINGS_REALTIME_PRIORITY	The thread will be scheduled on a FIFO basis.
DDS_THREAD_SETTINGS_PRIORITY_ENFORCE	Strictly enforce this thread's priority.
DDS_THREAD_SETTINGS_CANCEL_↩ ASYNCHRONOUS	Allows the thread to be cancelled without first reaching a cancellable state or cancellation point.

7.136.4.2 DDS_ThreadSettingsCpuRotationKind

enum **DDS_ThreadSettingsCpuRotationKind**

Determines how **DDS_ThreadSettings_t::cpu_list** (p. 1386) affects processor affinity for thread-related QoS policies that apply to multiple threads.

7.136.5 Controlling CPU Core Affinity for RTI Threads

Most thread-related QoS settings apply to a single thread (such as for the **DDS_EventQosPolicy** (p. 1150), **DDS_↩ DatabaseQosPolicy** (p. 831), and **DDS_AsynchronousPublisherQosPolicy** (p. 798)). However, the thread settings in the **DDS_ReceiverPoolQosPolicy** (p. 1293) control every receive thread created. In this case, there are several schemes to map M threads to N processors; the rotation kind controls which scheme is used.

Controlling CPU Core Affinity is only relevant to the **DDS_ReceiverPoolQosPolicy** (p. 1293). It is ignored within other QoS policies that include **DDS_ThreadSettings_t** (p. 1385).

If **DDS_ThreadSettings_t::cpu_list** (p. 1386) is empty, the rotation is irrelevant since no affinity adjustment will occur. Suppose instead that **DDS_ThreadSettings_t::cpu_list** (p. 1386) = {0, 1} and that the middleware creates three receive threads: {A, B, C}. If **DDS_ThreadSettings_t::cpu_rotation** (p. 1387) is **DDS_THREAD_SETTINGS_CPU_↩ NO_ROTATION** (p. 549), threads A, B and C will have the same processor affinities (0-1), and the OS will control thread scheduling within this bound. It is common to denote CPU affinities as a bitmask, where set bits represent allowed processors to run on. This mask is printed in hex, so a CPU core affinity of 0-1 can be represented by the mask 0x3.

If **DDS_ThreadSettings_t::cpu_rotation** (p. 1387) is **DDS_THREAD_SETTINGS_CPU_RR_ROTATION** (p. 549), each thread will be assigned in round-robin fashion to one of the processors in **DDS_ThreadSettings_t::cpu_list** (p. 1386); perhaps thread A to 0, B to 1, and C to 0. Note that the order in which internal middleware threads spawn is unspecified.

Not all of these options may be relevant for all operating systems. Refer to the Platform Notes for further information.

Enumerator

DDS_THREAD_SETTINGS_CPU_NO_ROTATION	Any thread controlled by this QoS can run on any listed processor, as determined by OS scheduling.
DDS_THREAD_SETTINGS_CPU_RR_ROTATION	Threads controlled by this QoS will be assigned one processor from the list in round-robin order.

7.137 QoS

Quality of Service (QoS) policies.

Modules

- **All QoS Policies**

  All Quality of Service (QoS) policies.
- **QoS by Category**

  Quality of Service (QoS) organized into categories.

7.137.1 Detailed Description

Quality of Service (QoS) policies.

7.138 All QoS Policies

All Quality of Service (QoS) policies.

Modules

- **ASYNCHRONOUS_PUBLISHER**

  *<<**extension**>> (p. 213) Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1818) instances.*
- **AVAILABILITY**

  *<<**extension**>> (p. 213) Configures the availability of data.*
- **BATCH**

  *<<**extension**>> (p. 213) Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1589) instances.*
- **DATABASE**

  *<<**extension**>> (p. 213) Various threads and resource limits settings used by RTI Connext to control its internal database.*
- **DATA_READER_PROTOCOL**

  *<<**extension**>> (p. 213) Specifies the DataReader-specific protocol QoS.*
- **DATA_READER_RESOURCE_LIMITS**

  *<<**extension**>> (p. 213) Various settings that configure how DataReaders allocate and use physical memory for internal resources.*
- **DATA_REPRESENTATION**

  *<<**spec**>> (p. 209) A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556).*
- **DATA_TAG**

  *<<**spec**>> (p. 209) Stores (name, value) pairs that can be used to determine access permissions.*
- **DATA_WRITER_PROTOCOL**

  *<<**extension**>> (p. 213) Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataReaderProtocolQos**↩**Policy** (p. 843), this QoS policy configures the DDS on-the-network protocol (RTPS).*
- **DATA_WRITER_RESOURCE_LIMITS**

  *<<**extension**>> (p. 213) Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.*
- **DATA_WRITER_TRANSFER_MODE**

  *<<**extension**>> (p. 213) Specifies the DataWriter transfer mode QoS.*
- **DEADLINE**

  *<<**spec**>> (p. 209) Expresses the maximum duration (deadline) within which an instance is expected to be updated.*
- **DESTINATION_ORDER**

  *<<**spec**>> (p. 209) Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1818) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1885) and key).*
- **DISCOVERY**

  *<<**extension**>> (p. 213) Specifies the attributes required to discover participants in the domain.*
- **DISCOVERY_CONFIG**

  *<<**extension**>> (p. 213) Specifies the discovery configuration QoS.*
- **DOMAIN_PARTICIPANT_RESOURCE_LIMITS**

  *<<**extension**>> (p. 213) Various settings that configure how a **DDSDomainParticipant** (p. 1619) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*
- **DURABILITY**

  *<<**spec**>> (p. 209) This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1556) entities that join the network later.*
- **DURABILITY_SERVICE**

  *<<**spec**>> (p. 209) Various settings to configure the external RTI Persistence Service used by RTI Connext for Data↩Writers with a **DDS_DurabilityQosPolicy** (p. 1005) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS**↩**_TRANSIENT_DURABILITY_QOS** (p. 599).*
- **ENTITY_FACTORY**

<<***spec***>> (p. 209) A QoS policy for all ***DDSEntity*** (p. 1731) types that can act as factories for one or more other ***DDSEntity*** (p. 1731) types.

- **ENTITY_NAME**

  <<***extension***>> (p. 213) Assigns a name to a ***DDSDomainParticipant*** (p. 1619), ***DDSPublisher*** (p. 1818), ***DDSSubscriber*** (p. 1860), ***DDSDataWriter*** (p. 1589) or ***DDSDataReader*** (p. 1556). Except for ***DDSPublisher*** (p. 1818) and ***DDSSubscriber*** (p. 1860), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

- **EVENT**

  <<***extension***>> (p. 213) Configures the internal thread in a DomainParticipant that handles timed events.

- **HISTORY**

  <<***spec***>> (p. 209) Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

- **GROUP_DATA**

  Attaches a buffer of opaque data that is distributed by means of ***Built-in Topics*** (p. 61) during discovery.

- **LATENCY_BUDGET**

  <<***spec***>> (p. 209) Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

- **LIFESPAN**

  <<***spec***>> (p. 209) Specifies how long the data written by the ***DDSDataWriter*** (p. 1589) is considered valid.

- **LIVELINESS**

  <<***spec***>> (p. 209) Specifies and configures the mechanism that allows ***DDSDataReader*** (p. 1556) entities to detect when ***DDSDataWriter*** (p. 1589) entities become disconnected or "dead."

- **LOCATORFILTER**

  <<***extension***>> (p. 213) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of ***DDS_PublicationBuiltinTopicData*** (p. 1264).

- **LOGGING**

  <<***extension***>> (p. 213) Configures the RTI Connext logging facility.

- **MONITORING**

  <<***extension***>> (p. 213) Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.

- **MULTICHANNEL**

  <<***extension***>> (p. 213) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

- **OWNERSHIP**

  <<***spec***>> (p. 209) Specifies whether it is allowed for multiple ***DDSDataWriter*** (p. 1589) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

- **OWNERSHIP_STRENGTH**

  <<***spec***>> (p. 209) Specifies the value of the strength used to arbitrate among multiple ***DDSDataWriter*** (p. 1589) objects that attempt to modify the same instance of a data type (identified by ***DDSTopic*** (p. 1885) + key).

- **PARTITION**

  <<***spec***>> (p. 209) Set of strings that introduces logical partitions in ***DDSDomainParticipant*** (p. 1619), ***DDSPublisher*** (p. 1818), or ***DDSSubscriber*** (p. 1860) entities.

- **PRESENTATION**

  <<***spec***>> (p. 209) Specifies how the samples representing changes to data instances are presented to a subscribing application.

- **PROFILE**

  <<***extension***>> (p. 213) Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.

- **PROPERTY**

  <<***extension***>> (p. 213) Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

- **PUBLISH_MODE**

  *<<**extension**>> (p. 213) Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its own thread to send data, instead of the user thread.*
- **READER_DATA_LIFECYCLE**

  *<<**spec**>> (p. 209) Controls how a DataReader manages the lifecycle of the data that it has received.*
- **RECEIVER_POOL**

  *<<**extension**>> (p. 213) Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).*
- **RELIABILITY**

  *<<**spec**>> (p. 209) Indicates the level of reliability offered/requested by RTI Connext.*
- **RESOURCE_LIMITS**

  *<<**spec**>> (p. 209) Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.*
- **SERVICE**

  *<<**extension**>> (p. 213) Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.*
- **SYSTEM_RESOURCE_LIMITS**

  *<<**extension**>> (p. 213) Configures DomainParticipant-independent resources used by RTI Connext.*
- **TIME_BASED_FILTER**

  *<<**spec**>> (p. 209) Filter that allows a **DDSDataReader** (p. 1556) to specify that it is interested only in (potentially) a subset of the values of the data.*
- **TOPIC_DATA**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.*
- **TOPIC_QUERY_DISPATCH**

  *<<**extension**>> (p. 213) Configures the ability of a **DDSDataWriter** (p. 1589) to publish historical samples*
- **TRANSPORT_BUILTIN**

  *<<**extension**>> (p. 213) Specifies which built-in transports are used.*
- **TRANSPORT_MULTICAST**

  *<<**extension**>> (p. 213) Specifies the multicast address on which a **DDSDataReader** (p. 1556) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1619) level) transports with which to receive the multicast data.*
- **TRANSPORT_MULTICAST_MAPPING**

  *<<**extension**>> (p. 213) Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.*
- **TRANSPORT_PRIORITY**

  *<<**spec**>> (p. 209) This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.*
- **TRANSPORT_SELECTION**

  *<<**extension**>> (p. 213) Specifies the physical transports that a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) may use to send or receive data.*
- **TRANSPORT_UNICAST**

  *<<**extension**>> (p. 213) Specifies a subset of transports and a port number that can be used by an Entity to receive data.*
- **TYPE_CONSISTENCY_ENFORCEMENT**

  *<<**spec**>> (p. 209) Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.*
- **TYPESUPPORT**

  ***[DEPRECATED]** (p. **384**) <<**extension**>> (p. 213) Allows you to attach application-specific values to a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.*

- **USER_DATA**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.*
- **WRITER_DATA_LIFECYCLE**

  *<<**spec**>> (p. 209) Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.*
- **WIRE_PROTOCOL**

  *<<**extension**>> (p. 213) Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1619).*
- **Extended Qos Support**

  *<<**extension**>> (p. 213) Types and defines used in extended QoS policies.*

Classes

- struct **DDS_QosPrintFormat**

  A collection of attributes used to configure how a QoS appears when printed.
- struct **DDS_QosPolicyCount**

  *Type to hold a counter for a **DDS_QosPolicyId_t** (p. 557).*
- struct **DDS_QosPolicyCountSeq**

  *Declares IDL `sequence` < **DDS_QosPolicyCount** (p. 1283) >*

Macros

- #define **DDS_QosPrintFormat_INITIALIZER**

  *Static initializer for **DDS_QosPrintFormat** (p. 1285).*
- #define **DDS_QOS_POLICY_COUNT**

  *Number of QoS policies in **DDS_QosPolicyId_t** (p. 557).*

Type to identify `QosPolicies`.

7.138.1 Detailed Description

All Quality of Service (QoS) policies.

Data Distribution Service (DDS) relies on the use of QoS. A QoS is a set of characteristics that controls some aspect of the behavior of DDS. A QoS is comprised of individual QoS policies (objects conceptually deriving from an *abstract* `QosPolicy` class).

"Supported QoS policies"

The QosPolicy provides the basic mechanism for an application to specify quality of service parameters. It has an attribute name that is used to uniquely identify each `QosPolicy`.

QosPolicy implementation is comprised of a name, an ID, and a type. The type of a `QosPolicy` value may be atomic, such as an integer or float, or compound (a structure). Compound types are used whenever multiple parameters must be set coherently to define a consistent value for a QosPolicy.

QoS (i.e., a list of `QosPolicy` objects) may be associated with all **DDSEntity** (p. 1731) objects in the system such as **DDSTopic** (p. 1885), **DDSDataWriter** (p. 1589), **DDSDataReader** (p. 1556), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), and **DDSDomainParticipant** (p. 1619).

7.138.2 Specifying QoS on entities

QosPolicies can be set programmatically when an **DDSEntity** (p. 1731) is created, or modified with the **DDSEntity** (p. 1731)'s **set_qos (abstract)** (p. 1732) method.

QosPolicies can also be configured from XML resources (files, strings). With this approach, you can change the QoS without recompiling the application. For more information, see **Configuring QoS Profiles with XML** (p. 390).

To customize a **DDSEntity** (p. 1731)'s QoS before creating the entity, the correct pattern is:

- First, initialize a QoS object with the appropriate INITIALIZER constructor.
- Call the relevant get_<entity>_default_qos() method.
- Modify the QoS values as desired.
- Finally, create the entity.

Each `QosPolicy` is treated independently from the others. This approach has the advantage of being very extensible. However, there may be cases where several policies are in conflict. Consistency checking is performed each time the policies are modified via the **set_qos (abstract)** (p. 1732) operation, or when the **DDSEntity** (p. 1731) is created.

When a policy is changed after being set to a given value, it is not required that the new value be applied instantaneously; RTI Connext is allowed to apply it after a transition phase. In addition, some `QosPolicy` have immutable semantics, meaning that they can only be specified either at **DDSEntity** (p. 1731) creation time or else prior to calling the **DDSEntity::enable** (p. 1734) operation on the entity.

Each **DDSEntity** (p. 1731) can be configured with a list of `QosPolicy` objects. However, not all QosPolicies are supported by each **DDSEntity** (p. 1731). For instance, a **DDSDomainParticipant** (p. 1619) supports a different set of QosPolicies than a **DDSTopic** (p. 1885) or a **DDSPublisher** (p. 1818).

Additional properties that are not exposed through the formal QoS policies can also be set for an **DDSEntity** (p. 1731) via the **DDS_PropertyQosPolicy** (p. 1260). These properties are described in the `Property Reference Guide`.

7.138.3 QoS compatibility

In several cases, for communications to occur properly (or efficiently), a QosPolicy on the publisher side must be compatible with a corresponding policy on the subscriber side. For example, if a **DDSSubscriber** (p. 1860) requests to receive data reliably while the corresponding **DDSPublisher** (p. 1818) defines a best-effort policy, communication will not happen as requested.

To address this issue and maintain the desirable decoupling of publication and subscription as much as possible, the QosPolicy specification follows the **subscriber-requested, publisher-offered pattern**.

In this pattern, the subscriber side can specify a "requested" value for a particular `QosPolicy`. The publisher side specifes an "offered" value for that `QosPolicy`. RTI Connext will then determine whether the value requested by the subscriber side is compatible with what is offered by the publisher side. If the two policies are compatible, then communication will be established. If the two policies are not compatible, RTI Connext will not establish communications between the two **DDSEntity** (p. 1731) objects and will record this fact by means of the **DDS_OFFERED_INCOMPATIBLE_↩ QOS_STATUS** (p. 540) on the publisher end and **DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS** (p. 540) on the subscriber end. The application can detect this fact by means of a **DDSListener** (p. 1794) or a **DDSCondition** (p. 1544).

The following **properties** are defined on a QosPolicy.

- **RxO (**p. **556) property**
  The QosPolicy objects that need to be set in a compatible manner between the **publisher** and **subscriber** end are indicated by the setting of the **RxO** (p. 556) property:
  - **RxO** (p. 556) = **YES**
    indicates that the policy can be set both at the publishing and subscribing ends and the values must be set in a compatible manner. In this case the compatible values are explicitly defined.
  - **RxO** (p. 556) = **NO**
    indicates that the policy can be set both at the publishing and subscribing ends but the two settings are independent. That is, all combinations of values are compatible.
  - **RxO** (p. 556) = **N/A**
    indicates that the policy can only be specified at either the publishing or the subscribing end, but not at both ends. So compatibility does not apply.
- **Changeable (**p. **556)property**
  Determines whether a QosPolicy can be changed.
  - **NO (**p. **556)** -- policy can only be specified at **DDSEntity** (p. 1731) creation time.
  - **UNTIL ENABLE (**p. **556)** -- policy can only be changed before the **DDSEntity** (p. 1731) is enabled.
  - **YES (**p. **556)** -- policy can be changed at any time.

7.138.4 Macro Definition Documentation

7.138.4.1 DDS_QosPrintFormat_INITIALIZER

```
#define DDS_QosPrintFormat_INITIALIZER
```

Static initializer for **DDS_QosPrintFormat** (p. 1285).

Use this initializer to ensure that new objects do not have uninitialized contents.
```
struct DDS_QosPrintFormat format = DDS_QosPrintFormat_INITIALIZER;
```

See also

DDS_QosPrintFormat (p. 1285)

7.138.4.2 DDS_QOS_POLICY_COUNT

```
#define DDS_QOS_POLICY_COUNT
```

Number of QoS policies in **DDS_QosPolicyId_t** (p. 557).

7.138.5 Enumeration Type Documentation

7.138.5.1 DDS_QosPolicyId_t

```
enum DDS_QosPolicyId_t
```

Type to identify `QosPolicies`.

Enumerator

DDS_INVALID_QOS_POLICY_ID	Identifier for an invalid QoS policy.
DDS_USERDATA_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_UserDataQosPolicy** (p. 1504)
DDS_DURABILITY_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_DurabilityQosPolicy** (p. 1005)
DDS_PRESENTATION_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_PresentationQosPolicy** (p. 1249)
DDS_DEADLINE_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_DeadlineQosPolicy** (p. 928)
DDS_LATENCYBUDGET_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_LatencyBudgetQosPolicy** (p. 1173)
DDS_OWNERSHIP_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_OwnershipQosPolicy** (p. 1222)

Enumerator

DDS_OWNERSHIPSTRENGTH_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_OwnershipStrengthQosPolicy** (p. 1227)
DDS_LIVELINESS_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_LivelinessQosPolicy** (p. 1180)
DDS_TIMEBASEDFILTER_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_TimeBasedFilterQosPolicy** (p. 1389)
DDS_PARTITION_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_PartitionQosPolicy** (p. 1240)
DDS_RELIABILITY_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_ReliabilityQosPolicy** (p. 1295)
DDS_DESTINATIONORDER_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_DestinationOrderQosPolicy** (p. 931)
DDS_HISTORY_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_HistoryQosPolicy** (p. 1162)
DDS_RESOURCELIMITS_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_ResourceLimitsQosPolicy** (p. 1308)
DDS_ENTITYFACTORY_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_EntityFactoryQosPolicy** (p. 1145)
DDS_WRITERDATALIFECYCLE_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_WriterDataLifecycleQosPolicy** (p. 1524)
DDS_READERDATALIFECYCLE_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_ReaderDataLifecycleQosPolicy** (p. 1289)
DDS_TOPICDATA_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_TopicDataQosPolicy** (p. 1396)
DDS_GROUPDATA_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_GroupDataQosPolicy** (p. 1160)
DDS_TRANSPORTPRIORITY_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_TransportPriorityQosPolicy** (p. 1419)
DDS_LIFESPAN_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_LifespanQosPolicy** (p. 1175)
DDS_DURABILITYSERVICE_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_DurabilityServiceQosPolicy** (p. 1009)
DDS_DATA_REPRESENTATION_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_DataRepresentationQosPolicy** (p. 886)
DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_ID	<<***spec***>> *(p. 209)* Identifier for **DDS_TypeConsistencyEnforcementQosPolicy** (p. 1493)
DDS_DATATAG_QOS_POLICY_ID	Identifier for **DDS_DataTagQosPolicy** (p. 575).
DDS_WIREPROTOCOL_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_WireProtocolQosPolicy** (p. 1511)
DDS_DISCOVERY_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DiscoveryQosPolicy** (p. 960)
DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DataWriterResourceLimitsQosPolicy** (p. 917)

Enumerator

DDS_DATAREADERPROTOCOL_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DataReaderProtocolQosPolicy** (p. 843)
DDS_DATAWRITERPROTOCOL_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DataWriterProtocolQosPolicy** (p. 892)
DDS_DOMAINPARTICIPANTRESOURCELIMITS_↩ QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 977)
DDS_EVENT_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_EventQosPolicy** (p. 1150)
DDS_DATABASE_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DatabaseQosPolicy** (p. 831)
DDS_RECEIVERPOOL_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_ReceiverPoolQosPolicy** (p. 1293)
DDS_DISCOVERYCONFIG_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DiscoveryConfigQosPolicy** (p. 934)
DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_SystemResourceLimitsQosPolicy** (p. 1382)
DDS_TRANSPORTSELECTION_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TransportSelectionQosPolicy** (p. 1421)
DDS_TRANSPORTUNICAST_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TransportUnicastQosPolicy** (p. 1422)
DDS_TRANSPORTMULTICAST_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TransportMulticastQosPolicy** (p. 1415)
DDS_TRANSPORTBUILTIN_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TransportBuiltinQosPolicy** (p. 1408)
DDS_TYPESUPPORT_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TypeSupportQosPolicy** (p. 1499)
DDS_PROPERTY_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_PropertyQosPolicy** (p. 1260)
DDS_PUBLISHMODE_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_PublishModeQosPolicy** (p. 1279)
DDS_ASYNCHRONOUSPUBLISHER_QOS_↩ POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_AsynchronousPublisherQosPolicy** (p. 798)
DDS_ENTITYNAME_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_EntityNameQosPolicy** (p. 1147)
DDS_BATCH_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_BatchQosPolicy** (p. 810)
DDS_PROFILE_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_ProfileQosPolicy** (p. 1257)
DDS_LOCATORFILTER_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_LocatorFilterQosPolicy** (p. 1186)
DDS_MULTICHANNEL_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_MultiChannelQosPolicy** (p. 1214)
DDS_AVAILABILITY_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_AvailabilityQosPolicy** (p. 805)
DDS_TRANSPORTMULTICASTMAPPING_QOS_↩ POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TransportMulticastMappingQosPolicy** (p. 1413)

Enumerator

DDS_LOGGING_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_LoggingQosPolicy** (p. 1188)
DDS_TOPICQUERYDISPATCH_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_TopicQueryDispatchQosPolicy** (p. 1404)
DDS_DATAWRITERTRANSFERMODE_QOS_↩ POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_DataWriterTransferModeQosPolicy** (p. 927)
DDS_MONITORING_QOS_POLICY_ID	<<***extension***>> *(p. 213)* Identifier for **DDS_MonitoringQosPolicy** (p. 1210)

7.139 QoS by Category

Quality of Service (QoS) organized into categories.

Modules

- **Basic QoS**

  QoS that are considered basic and fundamental to RTI Connext.
- **DDS Specification QoS**

  QoS that are defined in one of the OMG DDS Specifications.
- **DDS Extension QoS**

  QoS that are RTI extensions to the DDS standard.
- **Functional Categories**

  *These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 290), then looking at any QoS in that category will be helpful.*
- **QoS Mutability**

  Some QoS are mutable after an entity is enabled, and others are not.
- **Other QoS Attributes**

  *These attributes are characteristics of the QoS – for example if they are **mutable** (p. 369) or **immutable** (p. 333), or if they **apply per-instance** (p. 375).*
- **Deprecated QoS**

  Deprecated QoS.

7.139.1 Detailed Description

Quality of Service (QoS) organized into categories.

The QoS have been grouped into a number of different categories.

These categories can help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 290), then looking at any QoS in that category will be helpful. The different functional categories are listed on **Functional Categories** (p. 252).

Some categories are not necessarily related to achieving a specific functionality, but are characteristics of the QoS – for example if they are **mutable** (p. 369) or **immutable** (p. 333), or if they **apply per-instance** (p. 375). These categories are listed under **QoS Mutability** (p. 333) and **Other QoS Attributes** (p. 375).

7.140 ASYNCHRONOUS_PUBLISHER

<<***extension***>> *(p. 213)* Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1818) instances.

Classes

- struct **DDS_AsynchronousPublisherQosPolicy**
  <<***extension***>> *(p. 213) Configures the mechanism that sends user data in an external middleware thread.*

Variables

- const char ∗const **DDS_ASYNCHRONOUSPUBLISHER_QOS_POLICY_NAME**
  *Stringified human-readable name for **DDS_AsynchronousPublisherQosPolicy** (p. 798).*

7.140.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the asynchronous publishing settings of the **DDSPublisher** (p. 1818) instances.

7.140.2 Variable Documentation

7.140.2.1 DDS_ASYNCHRONOUSPUBLISHER_QOS_POLICY_NAME

```
const char* const DDS_ASYNCHRONOUSPUBLISHER_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_AsynchronousPublisherQosPolicy** (p. 798).

7.141 AVAILABILITY

<<***extension***>> *(p. 213)* Configures the availability of data.

Classes

- struct **DDS_EndpointGroup_t**
  Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.
- struct **DDS_EndpointGroupSeq**
  *A sequence of **DDS_EndpointGroup_t** (p. 1142).*
- struct **DDS_AvailabilityQosPolicy**
  <<***extension***>> *(p. 213) Configures the availability of data.*

Variables

- const char ∗const **DDS_AVAILABILITY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_AvailabilityQosPolicy** (p. 805).*

7.141.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the availability of data.

7.141.2 Variable Documentation

7.141.2.1 DDS_AVAILABILITY_QOS_POLICY_NAME

```
const char* const DDS_AVAILABILITY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_AvailabilityQosPolicy** (p. 805).

7.142 BATCH

<<***extension***>> *(p. 213)* Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1589) instances.

Classes

- struct **DDS_BatchQosPolicy**

  <<***extension***>> *(p. 213) Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.*

Variables

- const char ∗const **DDS_BATCH_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_BatchQosPolicy** (p. 810).*

7.142.1 Detailed Description

<<***extension***>> *(p. 213)* Batch QoS policy used to enable batching in **DDSDataWriter** (p. 1589) instances.

7.142.2 Variable Documentation

7.142.2.1 DDS_BATCH_QOS_POLICY_NAME

```
const char* const DDS_BATCH_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_BatchQosPolicy** (p. 810).

7.143 DATABASE

<<***extension***>> *(p. 213)* Various threads and resource limits settings used by RTI Connext to control its internal database.

Classes

- struct **DDS_DatabaseQosPolicy**

  <<***extension***>> *(p. 213) Various threads and resource limits settings used by RTI Connext to control its internal database.*

Variables

- const char ∗const **DDS_DATABASE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DatabaseQosPolicy** (p. 831).*

7.143.1 Detailed Description

<<***extension***>> *(p. 213)* Various threads and resource limits settings used by RTI Connext to control its internal database.

7.143.2 Variable Documentation

7.143.2.1 DDS_DATABASE_QOS_POLICY_NAME

```
const char* const DDS_DATABASE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DatabaseQosPolicy** (p. 831).

7.144 DATA_READER_PROTOCOL

<<***extension***>> *(*p. *213)* Specifies the DataReader-specific protocol QoS.

Classes

- struct **DDS_DataReaderProtocolQosPolicy**

  <<***extension***>> *(*p. *213) Along with* ***DDS_WireProtocolQosPolicy*** *(*p. *1511) and* ***DDS_DataWriterProtocolQosPolicy*** *(*p. *892), this QoS policy configures the DDS on-the-network protocol (RTPS).*

Variables

- const char ∗const **DDS_DATAREADERPROTOCOL_QOS_POLICY_NAME**

  Stringified human-readable name for ***DDS_DataReaderProtocolQosPolicy*** *(*p. *843).*

7.144.1 Detailed Description

<<***extension***>> *(*p. *213)* Specifies the DataReader-specific protocol QoS.

7.144.2 Variable Documentation

7.144.2.1 DDS_DATAREADERPROTOCOL_QOS_POLICY_NAME

```
const char* const DDS_DATAREADERPROTOCOL_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataReaderProtocolQosPolicy** (p. 843).

7.145 DATA_READER_RESOURCE_LIMITS

<<***extension***>> *(*p. *213)* Various settings that configure how DataReaders allocate and use physical memory for internal resources.

Classes

- struct **DDS_DataReaderResourceLimitsInstanceReplacementSettings**

  Instance replacement kind applied to each instance state.

- struct **DDS_DataReaderResourceLimitsQosPolicy**

  <<***extension***>> *(*p. *213) Various settings that configure how a* ***DDSDataReader*** *(*p. *1556) allocates and uses physical memory for internal resources.*

Enumerations

- enum **DDS_DataReaderInstanceRemovalKind** {
  DDS_NO_INSTANCE_REMOVAL = PRES_NO_INSTANCE_REMOVAL ,
  DDS_EMPTY_INSTANCE_REMOVAL = PRES_EMPTY_INSTANCE_REMOVAL ,
  DDS_FULLY_PROCESSED_INSTANCE_REMOVAL = PRES_FULLY_PROCESSED_INSTANCE_REMOVAL ,
  DDS_ANY_INSTANCE_REMOVAL = PRES_ANY_INSTANCE_REMOVAL }

  *Sets the kinds of instances that can be replaced when instance resource limits (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311)) are reached.*

Variables

- const char ∗const **DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DataReaderResourceLimitsQosPolicy** (p. 867).*
- const **DDS_Long** **DDS_AUTO_MAX_TOTAL_INSTANCES**

  *<<**extension**>> (p. 213) This value is used to make **DDS_DataReaderResourceLimitsQosPolicy::max_total_instances** (p. 877) equal to **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).*

7.145.1 Detailed Description

*<<**extension**>> (p. 213)* Various settings that configure how DataReaders allocate and use physical memory for internal resources.

7.145.2 Enumeration Type Documentation

7.145.2.1 DDS_DataReaderInstanceRemovalKind

`enum` **DDS_DataReaderInstanceRemovalKind**

Sets the kinds of instances that can be replaced when instance resource limits (**DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311)) are reached.

See also

DDS_DataReaderResourceLimitsQosPolicy::instance_replacement (p. 883)

Enumerator

DDS_NO_INSTANCE_REMOVAL	No instance can be removed. If an instance resource is required because **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311) is reached, this setting will disallow instances from being replaced. Samples for new instances will be dropped and reported as lost with reason **DDS_LOST_BY_INSTANCES_LIMIT** (p. 140).
DDS_EMPTY_INSTANCE_REMOVAL	Only empty instances can be removed. Instances can be replaced only if they are empty. An instance is considered empty when all samples have been taken or removed from the DataReader queue due to the **DDS_LifespanQosPolicy** (p. 1175) or sample purging due to the **DDS_ReaderDataLifecycleQosPolicy** (p. 1289), and there are no outstanding loans on any of the instance's samples.
DDS_FULLY_PROCESSED_INSTANCE_REMOVAL	Only fully-processed instances can be removed. An instance is considered fully processed if every sample for the instance has been processed by the application. A sample is considered processed by the application depending on the **DDS_ReliabilityQosPolicy::kind** (p. 1298): • **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) (depends on the **DDS_ReliabilityQosPolicy↩ AcknowledgmentModeKind** (p. 633)): – **DDS_PROTOCOL_↩ ACKNOWLEDGMENT_MODE** (p. 633) or **DDS_APPLICATION_AUTO_↩ ACKNOWLEDGMENT_MODE** (p. 633): The sample is considered processed when it has been read or taken by the application and return_loan has been called. – **DDS_APPLICATION_EXPLICIT_↩ ACKNOWLEDGMENT_MODE** (p. 634): The sample is considered processed when the subscribing application has explicitly acknowledged the DDS sample, the AppAckConf has been received, and the application has called return_loan. • **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633): All samples are considered processed when they have been read or taken by the application and return_loan has been called.
DDS_ANY_INSTANCE_REMOVAL	Any instance can be removed. Instances can be replaced regardless of whether the subscribing application has processed all of the samples. Samples that have not been processed will be removed.

7.145.3 Variable Documentation

7.145.3.1 DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_NAME

```
const char* const DDS_DATAREADERRESOURCELIMITS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataReaderResourceLimitsQosPolicy** (p. 867).

7.145.3.2 DDS_AUTO_MAX_TOTAL_INSTANCES

```
const  DDS_Long DDS_AUTO_MAX_TOTAL_INSTANCES  [extern]
```

<<***extension***>> *(p. 213)* This value is used to make **DDS_DataReaderResourceLimitsQosPolicy::max_total_instances** (p. 877) equal to **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).

7.146 DATA_REPRESENTATION

<<***spec***>> *(p. 209)* A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556).

Modules

- **Compression Settings**

  <<***extension***>> *(p. 213) Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.*

Classes

- struct **DDS_DataRepresentationIdSeq**

  Declares IDL `sequence` *<* ***DDS_DataRepresentationId_t*** *(p. 568) >*
- struct **DDS_DataRepresentationQosPolicy**

  <<***spec***>> *(p. 209) This QoS policy contains a list of representation identifiers and compression settings used by* ***DDSDataWriter*** *(p. 1589) and* ***DDSDataReader*** *(p. 1556) entities to negotiate which data representation and compression settings to use.*

Typedefs

- typedef **DDS_Short DDS_DataRepresentationId_t**

  A two-byte signed integer that identifies a data representation.

Variables

- const **DDS_DataRepresentationId_t DDS_XCDR_DATA_REPRESENTATION**

  Corresponds to the Extended Common Data Representation encoding version 1.
- const **DDS_DataRepresentationId_t DDS_XML_DATA_REPRESENTATION**

  Corresponds to the XML Data Representation (unsupported).
- const **DDS_DataRepresentationId_t DDS_XCDR2_DATA_REPRESENTATION**

  Corresponds to the Extended Common Data Representation encoding version 2.
- const **DDS_DataRepresentationId_t DDS_AUTO_DATA_REPRESENTATION**

  Representation is automatically chosen based on the type.
- const char *const **DDS_DATA_REPRESENTATION_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DataRepresentationQosPolicy** (p. 886).*

7.146.1 Detailed Description

<<***spec***>> *(p. 209)* A list of data representations and compression methods supported by a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556).

7.146.2 Typedef Documentation

7.146.2.1 DDS_DataRepresentationId_t

```
typedef DDS_Short DDS_DataRepresentationId_t
```

A two-byte signed integer that identifies a data representation.

7.146.3 Variable Documentation

7.146.3.1 DDS_XCDR_DATA_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XCDR_DATA_REPRESENTATION [extern]
```

Corresponds to the Extended Common Data Representation encoding version 1.

7.146.3.2 DDS_XML_DATA_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XML_DATA_REPRESENTATION [extern]
```

Corresponds to the XML Data Representation (unsupported).

Note

This value is currently not supported.

7.146.3.3 DDS_XCDR2_DATA_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_XCDR2_DATA_REPRESENTATION [extern]
```

Corresponds to the Extended Common Data Representation encoding version 2.

7.146.3.4 DDS_AUTO_DATA_REPRESENTATION

```
const DDS_DataRepresentationId_t DDS_AUTO_DATA_REPRESENTATION [extern]
```

Representation is automatically chosen based on the type.

For plain language binding, if the allowed_data_representation annotation is not specified or if it contains the value XCDR, RTI Connext translates this field to **DDS_XCDR_DATA_REPRESENTATION** (p. 568). Otherwise, it translates this field to **DDS_XCDR2_DATA_REPRESENTATION** (p. 569).

For the **FlatData language binding** (p. 776), RTI Connext translates this field to **DDS_XCDR2_DATA_↩ REPRESENTATION** (p. 569).

Examples

HelloWorldPlugin.cxx.

7.146.3.5 DDS_DATA_REPRESENTATION_QOS_POLICY_NAME

```
const char* const DDS_DATA_REPRESENTATION_QOS_POLICY_NAME [extern]
```

Stringified human-readable name for **DDS_DataRepresentationQosPolicy** (p. 886).

7.147 Compression Settings

<<***extension***>> *(p. 213)* Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.

Classes

- struct **DDS_CompressionSettings_t**

  <<***extension***>> *(p. 213) Settings related to compressing user data.*

Macros

- #define **DDS_COMPRESSION_ID_MASK_NONE** ((**DDS_CompressionIdMask**) (0))

  DDS_CompressionIdMask *(p. 573) used to disable user-data compression for an endpoint.*
- #define **DDS_COMPRESSION_ID_MASK_ALL**

  DDS_CompressionIdMask *(p. 573) mask with all the suported built-in compression algorithms enabled.*
- #define **DDS_COMPRESSION_LEVEL_BEST_COMPRESSION** (10)

  The best compression ratio possible for a compression algorithm.
- #define **DDS_COMPRESSION_LEVEL_BEST_SPEED** (1)

  The best compression speed possible for a compression algorithm.
- #define **DDS_COMPRESSION_LEVEL_DEFAULT DDS_COMPRESSION_LEVEL_BEST_COMPRESSION**

  Default level of compression.
- #define **DDS_COMPRESSION_THRESHOLD_DEFAULT** 8192

  Default threshold from which a serialized sample will be eligible to be compressed.
- #define **DDS_COMPRESSION_ID_MASK_PUBLICATION_DEFAULT DDS_COMPRESSION_ID_MASK_↩ NONE**

  DDS_CompressionIdMask *(p. 573) mask with the default value for publication.*
- #define **DDS_COMPRESSION_ID_MASK_SUBSCRIPTION_DEFAULT**

  DDS_CompressionIdMask *(p. 573) mask with the default value for subscription.*

Typedefs

- typedef **DDS_UnsignedLong DDS_CompressionId_t**

  A four-byte signed integer that identifies a single compression algorithm.
- typedef **DDS_UnsignedLong DDS_CompressionIdMask**

  A four-byte signed integer that identifies a mask of the compression IDs that the algorithms enabled.

Variables

- const **DDS_CompressionId_t DDS_COMPRESSION_ID_ZLIB**

  Corresponds to the ID of the compression algorithm ZLIB. This is the only built-in compression algorithm that is supported when batching is enabled.
- const **DDS_CompressionId_t DDS_COMPRESSION_ID_BZIP2**

  Corresponds to the ID of the compression algorithm BZIP2.
- const **DDS_CompressionId_t DDS_COMPRESSION_ID_LZ4**

  Corresponds to the ID of the compression algorithm LZ4.

7.147.1 Detailed Description

<<***extension***>> *(p. 213)* Compression settings that can be applied to data that is sent and received by DataWriters and DataReaders.

7.147.2 Macro Definition Documentation

7.147.2.1 DDS_COMPRESSION_ID_MASK_NONE

```
#define DDS_COMPRESSION_ID_MASK_NONE (( DDS_CompressionIdMask) (0))
```

DDS_CompressionIdMask (p. 573) used to disable user-data compression for an endpoint.

7.147.2.2 DDS_COMPRESSION_ID_MASK_ALL

```
#define DDS_COMPRESSION_ID_MASK_ALL
```

Value:

```
((DDS_CompressionIdMask) \
        (DDS_COMPRESSION_ID_ZLIB_BIT | DDS_COMPRESSION_ID_BZIP2_BIT \
                | DDS_COMPRESSION_ID_LZ4_BIT))
```

DDS_CompressionIdMask (p. 573) mask with all the suported built-in compression algorithms enabled.

7.147.2.3 DDS_COMPRESSION_LEVEL_BEST_COMPRESSION

```
#define DDS_COMPRESSION_LEVEL_BEST_COMPRESSION (10)
```

The best compression ratio possible for a compression algorithm.

See also

DDS_CompressionSettings_t::writer_compression_level (p. 827)

7.147.2.4 DDS_COMPRESSION_LEVEL_BEST_SPEED

```
#define DDS_COMPRESSION_LEVEL_BEST_SPEED (1)
```

The best compression speed possible for a compression algorithm.

See also

DDS_CompressionSettings_t::writer_compression_level (p. 827)

7.147.2.5 DDS_COMPRESSION_LEVEL_DEFAULT

```
#define DDS_COMPRESSION_LEVEL_DEFAULT  DDS_COMPRESSION_LEVEL_BEST_COMPRESSION
```

Default level of compression.

See also

DDS_CompressionSettings_t::writer_compression_level (p. 827)

7.147.2.6 DDS_COMPRESSION_THRESHOLD_DEFAULT

```
#define DDS_COMPRESSION_THRESHOLD_DEFAULT 8192
```

Default threshold from which a serialized sample will be eligible to be compressed.

See also

DDS_CompressionSettings_t::writer_compression_threshold (p. 827)

This value has been decided after some performance tests, it's a prudent value that will ensure, in most cases with all of the algorithms, that we are going to compress the sample.

7.147.2.7 DDS_COMPRESSION_ID_MASK_PUBLICATION_DEFAULT

```
#define DDS_COMPRESSION_ID_MASK_PUBLICATION_DEFAULT  DDS_COMPRESSION_ID_MASK_NONE
```

DDS_CompressionIdMask (p. 573) mask with the default value for publication.

See also

DDS_CompressionSettings_t::compression_ids (p. 826)

DDS_COMPRESSION_ID_MASK_SUBSCRIPTION_DEFAULT (p. 572)

7.147.2.8 DDS_COMPRESSION_ID_MASK_SUBSCRIPTION_DEFAULT

```
#define DDS_COMPRESSION_ID_MASK_SUBSCRIPTION_DEFAULT
```

Value:

```
(DDS_COMPRESSION_ID_ZLIB_BIT | DDS_COMPRESSION_ID_BZIP2_BIT \
    | DDS_COMPRESSION_ID_LZ4_BIT)
```

DDS_CompressionIdMask (p. 573) mask with the default value for subscription.

See also

DDS_CompressionSettings_t::compression_ids (p. 826)

DDS_COMPRESSION_ID_MASK_PUBLICATION_DEFAULT (p. 572)

7.147.3 Typedef Documentation

7.147.3.1 DDS_CompressionId_t

```
typedef DDS_UnsignedLong DDS_CompressionId_t
```

A four-byte signed integer that identifies a single compression algorithm.

7.147.3.2 DDS_CompressionIdMask

```
typedef DDS_UnsignedLong DDS_CompressionIdMask
```

A four-byte signed integer that identifies a mask of the compression IDs that the algorithms enabled.

7.147.4 Variable Documentation

7.147.4.1 DDS_COMPRESSION_ID_ZLIB

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_ZLIB [extern]
```

Corresponds to the ID of the compression algorithm ZLIB. This is the only built-in compression algorithm that is supported when batching is enabled.

7.147.4.2 DDS_COMPRESSION_ID_BZIP2

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_BZIP2 [extern]
```

Corresponds to the ID of the compression algorithm BZIP2.

7.147.4.3 DDS_COMPRESSION_ID_LZ4

```
const DDS_CompressionId_t DDS_COMPRESSION_ID_LZ4 [extern]
```

Corresponds to the ID of the compression algorithm LZ4.

7.148 DATA_TAG

<<***spec***>> *(*p. *209)* Stores (name, value) pairs that can be used to determine access permissions.

Classes

- struct **DDS_Tag**
  Tags are name/value pair objects.
- struct **DDS_TagSeq**
  Declares IDL `sequence` *<* ***DDS_Tag*** *(*p. *1384)* *>*
- struct **DDS_DataTags**
  Definition of ***DDS_DataTagQosPolicy*** *(*p. *575).*
- class **DDSDataTagQosPolicyHelper**
  Policy helpers that facilitate management of the data tags in the input policy.

Typedefs

- typedef struct **DDS_DataTags** **DDS_DataTagQosPolicy**
  <<***spec***>> *(*p. *209) Stores (name, value) pairs that can be used to determine access permissions.*

Functions

- static **DDS_Long** **DDSDataTagQosPolicyHelper::get_number_of_tags** (**DDS_DataTagQosPolicy** &policy)
  Gets the number of data tags in the input policy.
- static **DDS_ReturnCode_t** **DDSDataTagQosPolicyHelper::assert_tag** (**DDS_DataTagQosPolicy** &policy, const char ∗name, const char ∗value)
  Asserts the tag identified by name in the input policy.
- static **DDS_ReturnCode_t** **DDSDataTagQosPolicyHelper::add_tag** (**DDS_DataTagQosPolicy** &policy, const char ∗name, const char ∗value)
  Adds a new tag to the input policy.
- static struct **DDS_Tag** ∗ **DDSDataTagQosPolicyHelper::lookup_tag** (**DDS_DataTagQosPolicy** &policy, const char ∗name)
  Searches by tag name for a tag in the input policy.
- static **DDS_ReturnCode_t** **DDSDataTagQosPolicyHelper::remove_tag** (**DDS_DataTagQosPolicy** &policy, const char ∗name)
  Removes a tag from the input policy.

Variables

- const char ∗const **DDS_DATATAG_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DataTagQosPolicy** (p. 575).*

7.148.1 Detailed Description

<<***spec***>> *(p. 209)* Stores (name, value) pairs that can be used to determine access permissions.

The **DDS_DataTagQosPolicy** (p. 575) can be used to associate a set of tags in the form of (name, value) pairs with a **DDSDataReader** (p. 1556) or **DDSDataWriter** (p. 1589). This is similar to the **DDS_PropertyQosPolicy** (p. 1260), except you cannot select whether or not a particular pair should be propagated (included in the built-in topic). Data tags are always propagated. The Access Control plugin may use the tags to determine publish and subscribe permissions.

7.148.2 Typedef Documentation

7.148.2.1 DDS_DataTagQosPolicy

`typedef struct` **`DDS_DataTags`** **`DDS_DataTagQosPolicy`**

<<***spec***>> *(p. 209)* Stores (name, value) pairs that can be used to determine access permissions.

Entity:

DDSDataReader (p. 1556) **DDSDataWriter** (p. 1589)

Properties:

RxO (p. 556) = N/A;
Changeable (p. 556) = **NO** (p. 556)

7.148.3 Usage

The DATA_TAG QoS policy can be used to associate a set of tags in the form of (name, value) pairs with a **DDSData↩ Reader** (p. 1556) or **DDSDataWriter** (p. 1589). This is similar to the **DDS_PropertyQosPolicy** (p. 1260), except for the following differences:

- Data tags are always propagated. You cannot select whether or not a particular pair should be propagated.
- Data tags are not exposed to API functions, such as **DDSDataWriter::get_matched_subscription_data** (p. 1600), that receive **DDS_PublicationBuiltinTopicData** (p. 1264) or **DDS_SubscriptionBuiltinTopicData** (p. 1370) as a parameter.
- Connext passes data tags to the Access Control Security Plugin, which may use them to decide whether to allow or deny the corresponding entities.

There are helper functions to facilitate working with data tags. See the **DATA_TAG** (p. 574) page.

7.148.4 Function Documentation

7.148.4.1 get_number_of_tags()

```
static  DDS_Long DDSDataTagQosPolicyHelper::get_number_of_tags (
              DDS_DataTagQosPolicy & policy )  [static]
```

Gets the number of data tags in the input policy.

Precondition

policy cannot be NULL.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.

Returns

Number of data tags.

7.148.4.2 assert_tag()

```
static  DDS_ReturnCode_t DDSDataTagQosPolicyHelper::assert_tag (
              DDS_DataTagQosPolicy & policy,
             const char * name,
             const char * value )  [static]
```

Asserts the tag identified by name in the input policy.

If the tag already exists, this function replaces its current value with the new one.

If the tag identified by name does not exist, this function adds it to the tag set.

This function increases the maximum number of elements of the policy sequence by 10 when this number is not enough to store the new tag.

Precondition

policy, name and value cannot be NULL.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Tag name.
value	<<***in***>> *(*p. *433)* Tag value.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533)

7.148.4.3 add_tag()

```
static  DDS_ReturnCode_t DDSDataTagQosPolicyHelper::add_tag (
              DDS_DataTagQosPolicy & policy,
             const char * name,
             const char * value )  [static]
```

Adds a new tag to the input policy.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connext.

If the maximum number of elements of the policy sequence is not enough to store the new tag, this function will increase it by 10.

If the tag already exists, the function will fail with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532).

Precondition

policy, name and value cannot be NULL.

The tag is not in the policy.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Tag name.
value	<<***in***>> *(*p. *433)* Tag value.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533)

7.148.4.4 lookup_tag()

```
static struct  DDS_Tag * DDSDataTagQosPolicyHelper::lookup_tag (
              DDS_DataTagQosPolicy & policy,
             const char * name )  [static]
```

Searches by tag name for a tag in the input policy.

Precondition

policy, name and value cannot be NULL.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Tag name.

Returns

The function returns the first tag with the given name. If such a tag does not exist, the function returns NULL.

7.148.4.5 remove_tag()

```
static  DDS_ReturnCode_t DDSDataTagQosPolicyHelper::remove_tag (
              DDS_DataTagQosPolicy & policy,
             const char * name )  [static]
```

Removes a tag from the input policy.

If the tag does not exist, the function fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532).

Precondition

policy and name cannot be NULL.

The tag is in the policy.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Tag name.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532)

7.148.5 Variable Documentation

7.148.5.1 DDS_DATATAG_QOS_POLICY_NAME

```
const char* const DDS_DATATAG_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataTagQosPolicy** (p. 575).

7.149 DATA_WRITER_PROTOCOL

<<***extension***>> *(p. 213)* Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataReaderProtocolQos↩ Policy** (p. 843), this QoS policy configures the DDS on-the-network protocol (RTPS).

Classes

- struct **DDS_DataWriterProtocolQosPolicy**

  <<***extension***>> *(p. 213) Protocol that applies only to **DDSDataWriter** (p. 1589) instances.*

Variables

- const char *const **DDS_DATAWRITERPROTOCOL_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DataWriterProtocolQosPolicy** (p. 892).*

7.149.1 Detailed Description

<<***extension***>> *(p. 213)* Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataReaderProtocolQos↩ Policy** (p. 843), this QoS policy configures the DDS on-the-network protocol (RTPS).

7.149.2 Variable Documentation

7.149.2.1 DDS_DATAWRITERPROTOCOL_QOS_POLICY_NAME

```
const char* const DDS_DATAWRITERPROTOCOL_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataWriterProtocolQosPolicy** (p. 892).

7.150 DATA_WRITER_RESOURCE_LIMITS

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.

Classes

- struct **DDS_DataWriterResourceLimitsQosPolicy**

  <<***extension***>> *(p. 213) Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.*

Enumerations

- enum **DDS_DataWriterResourceLimitsInstanceReplacementKind** {
  DDS_UNREGISTERED_INSTANCE_REPLACEMENT ,
  DDS_ALIVE_INSTANCE_REPLACEMENT ,
  DDS_DISPOSED_INSTANCE_REPLACEMENT ,
  DDS_ALIVE_THEN_DISPOSED_INSTANCE_REPLACEMENT ,
  DDS_DISPOSED_THEN_ALIVE_INSTANCE_REPLACEMENT ,
  DDS_ALIVE_OR_DISPOSED_INSTANCE_REPLACEMENT }

  Sets the kinds of instances that can be replaced when instance resource limits are reached.

Variables

- const char ∗const **DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DataWriterResourceLimitsQosPolicy** (p. 917).*

7.150.1 Detailed Description

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.

7.150.2 Enumeration Type Documentation

7.150.2.1 DDS_DataWriterResourceLimitsInstanceReplacementKind

enum **DDS_DataWriterResourceLimitsInstanceReplacementKind**

Sets the kinds of instances that can be replaced when instance resource limits are reached.

When **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311) is reached, a **DDSDataWriter** (p. 1589) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kind specified by **DDS_DataWriterResourceLimitsQosPolicy::instance_replacement** (p. 921).

Only instances whose states match the specified kinds are eligible to be replaced. In addition, an instance must have had all of its samples fully acknowledged for it to be considered replaceable.

For all kinds, a **DDSDataWriter** (p. 1589) will replace the oldest instance satisfying that kind. For example, when the kind is **DDS_UNREGISTERED_INSTANCE_REPLACEMENT** (p. 581), a **DDSDataWriter** (p. 1589) will remove the oldest, fully acknowledged, unregistered instance, if such an instance exists.

If no replaceable instance exists, the invoked function will either return with an appropriate out-of-resources return code, or in the case of a write, it may first block to wait for an instance to be acknowledged. Otherwise, the **DDSDataWriter** (p. 1589) will replace the old instance with the new instance, and invoke, if available, the **DDSDataWriterListener::on↩ _instance_replaced** (p. 1617) to notify the user about an instance being replaced.

A **DDSDataWriter** (p. 1589) checks for replaceable instances in the following order, stopping once a replaceable instance is found:

- If **DDS_DataWriterResourceLimitsQosPolicy::replace_empty_instances** (p. 922) is **DDS_BOOLEAN_TRUE** (p. 513), a **DDSDataWriter** (p. 1589) first tries replacing instances that have no samples. These empty instances can be unregistered, disposed, or alive.
- Next, a **DDSDataWriter** (p. 1589) tries replacing unregistered instances. Since an unregistered instance indicates that the **DDSDataWriter** (p. 1589) is done modifying it, unregistered instances are replaced before instances of any other state (alive, disposed). This is the same as the **DDS_UNREGISTERED_INSTANCE_REPLACEMENT** (p. 581) kind.
- Then, a **DDSDataWriter** (p. 1589) tries replacing what is specified by **DDS_DataWriterResourceLimitsQos↩ Policy::instance_replacement** (p. 921). With unregistered instances already checked, this leaves alive and disposed instances. When both alive and disposed instances may be replaced, the kind specifies whether the particular order matters (e.g., DISPOSED_THEN_ALIVE, ALIVE_THEN_DISPOSED) or not (ALIVE_OR_DISPOSED).

QoS:

DDS_DataWriterResourceLimitsQosPolicy (p. 917)

Enumerator

DDS_UNREGISTERED_INSTANCE_REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) to reclaim unregistered acknowledged instances. By default, all instance replacement kinds first attempt to reclaim an unregistered, acknowledged instance. Used in **DDS_DataWriterResourceLimitsQosPolicy↩ ::instance_replacement** (p. 921) **[default]**

Enumerator

DDS_ALIVE_INSTANCE_REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) to reclaim alive, acknowledged instances. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **DDSDataWriter** (p. 1589) to reclaim an alive, acknowledged instance, where an alive instance is a registered, non-disposed instance. The least recently registered or written alive instance will be reclaimed.
DDS_DISPOSED_INSTANCE_REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) to reclaim disposed acknowledged instances. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **DDSDataWriter** (p. 1589) to reclaim a disposed, acknowledged instance. The least recently disposed instance will be reclaimed.
DDS_ALIVE_THEN_DISPOSED_INSTANCE_↩ REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) first to reclaim an alive, acknowledged instance, and then, if necessary, a disposed, acknowledged instance. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **DDSDataWriter** (p. 1589) to first try reclaiming an alive, acknowledged instance. If no instance is reclaimable, then it tries reclaiming a disposed, acknowledged instance. The least recently used (i.e., registered, written, or disposed) instance will be reclaimed.
DDS_DISPOSED_THEN_ALIVE_INSTANCE_↩ REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) first to reclaim a disposed, acknowledged instance, and then, if necessary, an alive, acknowledged instance. When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **DDSDataWriter** (p. 1589) to first try reclaiming a disposed, acknowledged instance. If no instance is reclaimable, then it tries reclaiming an alive, acknowledged instance. The least recently used (i.e., disposed, registered, or written) instance will be reclaimed.
DDS_ALIVE_OR_DISPOSED_INSTANCE_↩ REPLACEMENT	Allows a **DDSDataWriter** (p. 1589) to reclaim a either an alive acknowledged instance or a disposed acknowledged instance. When an unregistered acknowledged instance is not available to reclaim, this kind allows a **DDSDataWriter** (p. 1589) to reclaim either an alive, acknowledged instance or a disposed, acknowledged instance. If both instance kinds are available to reclaim, the **DDSDataWriter** (p. 1589) will reclaim the least recently used (i.e. disposed, registered, or written) instance.

7.150.3 Variable Documentation

7.150.3.1 DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_NAME

```
const char* const DDS_DATAWRITERRESOURCELIMITS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataWriterResourceLimitsQosPolicy** (p. 917).

7.151 DATA_WRITER_TRANSFER_MODE

<<***extension***>> *(p. 213)* Specifies the DataWriter transfer mode QoS.

Classes

- struct **DDS_DataWriterShmemRefTransferModeSettings**
  Settings related to transferring data using shared memory references.
- struct **DDS_DataWriterTransferModeQosPolicy**
  <<***extension***>> *(p. 213) Qos related to transferring data*

Variables

- const char *const **DDS_DATAWRITERTRANSFERMODE_QOS_POLICY_NAME**
  *Stringified human-readable name for **DDS_DataWriterTransferModeQosPolicy** (p. 927).*

7.151.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the DataWriter transfer mode QoS.

7.151.2 Variable Documentation

7.151.2.1 DDS_DATAWRITERTRANSFERMODE_QOS_POLICY_NAME

```
const char* const DDS_DATAWRITERTRANSFERMODE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DataWriterTransferModeQosPolicy** (p. 927).

7.152 DEADLINE

<<***spec***>> *(p. 209)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

Classes

- struct **DDS_DeadlineQosPolicy**

  *<<**spec**>> (p. 209) Expresses the maximum duration (deadline) within which an instance is expected to be updated.*

Variables

- const char *const **DDS_DEADLINE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DeadlineQosPolicy** (p. 928).*

7.152.1 Detailed Description

<<**spec**>> *(p. 209)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

7.152.2 Variable Documentation

7.152.2.1 DDS_DEADLINE_QOS_POLICY_NAME

```
const char* const DDS_DEADLINE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DeadlineQosPolicy** (p. 928).

7.153 DESTINATION_ORDER

<<**spec**>> *(p. 209)* Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1818) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1885) and key).

Classes

- struct **DDS_DestinationOrderQosPolicy**

  *<<**spec**>> (p. 209) Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1589) entities for the same instance of data (i.e., same **DDSTopic** (p. 1885) and key).*

Enumerations

- enum **DDS_DestinationOrderQosPolicyKind** { **DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS** , **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** }

  Kinds of destination order.
- enum **DDS_DestinationOrderQosPolicyScopeKind** { **DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS** , **DDS_TOPIC_SCOPE_DESTINATIONORDER_QOS** }

  Scope of source destination order.

Variables

- const char ∗const **DDS_DESTINATIONORDER_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DestinationOrderQosPolicy** (p. 931).*

7.153.1 Detailed Description

<<***spec***>> *(p. 209)* Controls the criteria used to determine the logical order among changes made by **DDSPublisher** (p. 1818) entities to the same instance of data (i.e., matching **DDSTopic** (p. 1885) and key).

7.153.2 Enumeration Type Documentation

7.153.2.1 DDS_DestinationOrderQosPolicyKind

`enum` **DDS_DestinationOrderQosPolicyKind**

Kinds of destination order.

QoS:

DDS_DestinationOrderQosPolicy (p. 931)

Enumerator

DDS_BY_RECEPTION_TIMESTAMP_↩ DESTINATIONORDER_QOS	**[default]** Indicates that data is ordered based on the reception time at each **DDSSubscriber** (p. 1860). Since each subscriber may receive the data at different times there is no guarantee that the changes will be seen in the same order. Consequently, it is possible for each subscriber to end up with a different final value for the data.
DDS_BY_SOURCE_TIMESTAMP_↩ DESTINATIONORDER_QOS	Indicates that data is ordered based on a time-stamp placed at the source (by RTI Connext or by the application). In any case this guarantees a consistent final value for the data in all subscribers. Note: If Batching is needed along with **DDS_BY_↩ SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585) and **DDS_INSTANCE_SCOPE_↩ DESTINATIONORDER_QOS** (p. 586), then the **DDS_BatchQosPolicy::source_timestamp_↩ resolution** (p. 812) and **DDS_BatchQosPolicy::thread_safe_write** (p. 813) setting of **DDS_BatchQosPolicy** (p. 810) should be set to **DDS_DURATION_ZERO** (p. 523) and **DDS_BOOLEAN_TRUE** (p. 513) respectively.

7.153.2.2 DDS_DestinationOrderQosPolicyScopeKind

enum **DDS_DestinationOrderQosPolicyScopeKind**

Scope of source destination order.

QoS:

DDS_DestinationOrderQosPolicy (p. 931)

Enumerator

DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS	**[default]** Indicates that data is ordered on a per instance basis if used along with **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585). The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same instance. The tolerance check is also applied per instance.
DDS_TOPIC_SCOPE_DESTINATIONORDER_QOS	Indicates that data is ordered on a per topic basis if used along with **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585). The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same topic. The tolerance check is also applied per topic.

7.153.3 Variable Documentation

7.153.3.1 DDS_DESTINATIONORDER_QOS_POLICY_NAME

const char* const DDS_DESTINATIONORDER_QOS_POLICY_NAME [extern]

Stringified human-readable name for **DDS_DestinationOrderQosPolicy** (p. 931).

7.154 DISCOVERY

<<***extension***>> *(p. 213)* Specifies the attributes required to discover participants in the domain.

Modules

- **NDDS_DISCOVERY_PEERS**

  *Environment variable or a file that specifies the default values of **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) and **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 962) contained in the **DDS_DomainParticipantQos::discovery** (p. 974) qos policy.*

Classes

- struct **DDS_DiscoveryQosPolicy**

  *<<**extension**>> (p. 213) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.*

Variables

- const char *const **DDS_DISCOVERY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DiscoveryQosPolicy** (p. 960).*

7.154.1 Detailed Description

<<**extension**>> *(p. 213)* Specifies the attributes required to discover participants in the domain.

7.154.2 Variable Documentation

7.154.2.1 DDS_DISCOVERY_QOS_POLICY_NAME

```
const char* const DDS_DISCOVERY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DiscoveryQosPolicy** (p. 960).

7.155 DISCOVERY_CONFIG

<<**extension**>> *(p. 213)* Specifies the discovery configuration QoS.

Classes

- struct **DDS_BuiltinTopicReaderResourceLimits_t**

  *<<**extension**>> (p. 213) Built-in topic reader's resource limits.*
- struct **DDS_DiscoveryConfigQosPolicy**

  Settings for discovery configuration.

Macros

- #define **DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_NONE**

  No bits are set.
- #define **DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_DEFAULT**

  *The default value of **DDS_DiscoveryConfigQosPolicy::builtin_discovery_plugins** (p. 946).*
- #define **DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_NONE**

  *No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by **DDS_DiscoveryConfigBuiltinChannelKind** (p. 592) are able to be enabled or disabled by the user.*
- #define **DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_DEFAULT**

  *The default value of **DDS_DiscoveryConfigQosPolicy::enabled_builtin_channels** (p. 946).*
- #define **DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_ALL**

  All bits are set, indicating that all channels are enabled.

Typedefs

- typedef **DDS_Long DDS_DiscoveryConfigBuiltinPluginKindMask**

  A bit-mask (list) of built-in discovery plugins.
- typedef **DDS_UnsignedLong DDS_DiscoveryConfigBuiltinChannelKindMask**

  A bit-mask (list) of built-in channels.

Enumerations

- enum **DDS_DiscoveryConfigBuiltinPluginKind** {
  DDS_DISCOVERYCONFIG_BUILTIN_SPDP ,
  DDS_DISCOVERYCONFIG_BUILTIN_SEDP ,
  DDS_DISCOVERYCONFIG_BUILTIN_SDP ,
  DDS_DISCOVERYCONFIG_BUILTIN_EDS = 0x0001 << 2 ,
  DDS_DISCOVERYCONFIG_BUILTIN_DPSE ,
  DDS_DISCOVERYCONFIG_BUILTIN_SPDP2 ,
  DDS_DISCOVERYCONFIG_BUILTIN_SDP2 }

  Built-in discovery plugins that can be used.
- enum **DDS_DiscoveryConfigBuiltinChannelKind** {
  DDS_DISCOVERYCONFIG_SERVICE_REQUEST_CHANNEL ,
  DDS_DISCOVERYCONFIG_TYPE_LOOKUP_SERVICE_REQUEST_CHANNEL ,
  DDS_DISCOVERYCONFIG_TYPE_LOOKUP_SERVICE_REPLY_CHANNEL ,
  DDS_DISCOVERYCONFIG_TYPE_LOOKUP_SERVICE_CHANNEL }

  Built-in channels that can be enabled.
- enum **DDS_RemoteParticipantPurgeKind** {
  DDS_LIVELINESS_BASED_REMOTE_PARTICIPANT_PURGE ,
  DDS_NO_REMOTE_PARTICIPANT_PURGE }

  Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.

Variables

- const char *const **DDS_DISCOVERYCONFIG_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DiscoveryConfigQosPolicy** (p. 934).*

7.155.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the discovery configuration QoS.

7.155.2 Macro Definition Documentation

7.155.2.1 DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_NONE

```
#define DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_NONE
```

No bits are set.

See also

DDS_DiscoveryConfigBuiltinPluginKindMask (p. 590)

7.155.2.2 DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_DEFAULT

```
#define DDS_DISCOVERYCONFIG_BUILTIN_PLUGIN_MASK_DEFAULT
```

The default value of **DDS_DiscoveryConfigQosPolicy::builtin_discovery_plugins** (p. 946).

See also

DDS_DiscoveryConfigBuiltinPluginKindMask (p. 590)

7.155.2.3 DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_NONE

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_NONE
```

No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by **DDS_DiscoveryConfigBuiltinChannelKind** (p. 592) are able to be enabled or disabled by the user.

See also

DDS_DiscoveryConfigBuiltinChannelKindMask (p. 590)

7.155.2.4 DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_DEFAULT

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_DEFAULT
```

The default value of **DDS_DiscoveryConfigQosPolicy::enabled_builtin_channels** (p. 946).

See also

DDS_DiscoveryConfigBuiltinChannelKindMask (p. 590)

7.155.2.5 DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_ALL

```
#define DDS_DISCOVERYCONFIG_BUILTIN_CHANNEL_MASK_ALL
```

All bits are set, indicating that all channels are enabled.

See also

DDS_DiscoveryConfigBuiltinChannelKindMask (p. 590)

7.155.3 Typedef Documentation

7.155.3.1 DDS_DiscoveryConfigBuiltinPluginKindMask

```
typedef DDS_Long DDS_DiscoveryConfigBuiltinPluginKindMask
```

A bit-mask (list) of built-in discovery plugins.

The bit-mask is an efficient and compact representation of a fixed-length list of **DDS_DiscoveryConfigBuiltinPlugin↩ Kind** (p. 591) values.

QoS:

DDS_DiscoveryConfigQosPolicy (p. 934)

7.155.3.2 DDS_DiscoveryConfigBuiltinChannelKindMask

```
typedef DDS_UnsignedLong DDS_DiscoveryConfigBuiltinChannelKindMask
```

A bit-mask (list) of built-in channels.

The bit-mask is an efficient and compact representation of a fixed-length list of **DDS_DiscoveryConfigBuiltin↩ ChannelKind** (p. 592) values.

QoS:

DDS_DiscoveryConfigQosPolicy (p. 934)

7.155.4 Enumeration Type Documentation

7.155.4.1 DDS_DiscoveryConfigBuiltinPluginKind

```
enum DDS_DiscoveryConfigBuiltinPluginKind
```

Built-in discovery plugins that can be used.

See also

DDS_DiscoveryConfigBuiltinPluginKindMask (p. 590)

Enumerator

DDS_DISCOVERYCONFIG_BUILTIN_SPDP	Simple Participant Discovery Protocol. Enables the first phase of the Simple Discovery Protocol (SDP), in which DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant declaration messages, also known as participant DATA submessages or participant announcements.
DDS_DISCOVERYCONFIG_BUILTIN_SEDP	Simple Endpoint Discovery Protocol. Enables the second phase of the Simple Discovery Protocol (SDP), in which the information (GUID, QoS, etc.) about your application's DataReaders and DataWriters is exchanged by sending publication/subscription declarations in DATA messages, also known as publication DATAs and subscription DATAs.
DDS_DISCOVERYCONFIG_BUILTIN_SDP	**[default]** Simple discovery plugin. It is equivalent to SPDP + SEDP.

Enumerator

DDS_DISCOVERYCONFIG_BUILTIN_DPSE	Dynamic Participant discovery, Static Endpoint discovery. Enables static endpoint discovery for a DomainParticipant. In this type of discovery, information from remote endpoints is extracted from a local DDS-XML file instead of being received over the network, reducing the number of exchanged packets and consequently reducing bandwidth consumption used for discovery. Using this value in **DDS_DiscoveryConfigBuiltinPluginKindMask** (p. 590) requires the 'librtilbedisc' library (included in the RTI Connext Professional bundles) to be reachable (PATH, LD_LIBRARY_PATH or DYLD_LIBRARY_PATH).
DDS_DISCOVERYCONFIG_BUILTIN_SPDP2	Simple Participant Discovery Protocol 2.0 (SPDP2) Enables the Simple Participant Discovery Protocol 2.0, in which a DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant bootstrap messages. These bootstrap messages contain only a subset of the information in the Simple Participant Discovery Protocol (SPDP) participant announcements that is required to match two participants and bootstrap the system. The DomainParticpant's full configuration is then sent reliably with participant configuration announcements. Two DomainParticipants that use SPDP2 will maintain liveliness using liveliness participant messages.
DDS_DISCOVERYCONFIG_BUILTIN_SDP2	Simple discovery plugin 2.0. It is equivalent to SPDP2 + SEDP.

7.155.4.2 DDS_DiscoveryConfigBuiltinChannelKind

`enum` **`DDS_DiscoveryConfigBuiltinChannelKind`**

Built-in channels that can be enabled.

See also

DDS_DiscoveryConfigBuiltinChannelKindMask (p. 590)

Enumerator

DDS_DISCOVERYCONFIG_SERVICE_REQUEST_↩ CHANNEL	**[default]** Built-in ServiceRequest channel. Enables the ServiceRequest channel, which is required by the TopicQuery and locator reachability features. Disabling the ServiceRequest channel reduces resource consumption including network bandwidth, CPU utilization, and memory.
DDS_DISCOVERYCONFIG_TYPE_LOOKUP_↩ SERVICE_CHANNEL	**[default]** Built-in Type Lookup Service channel. Enables both the Type Lookup Service Request channel and Type Lookup Service Reply channel.

7.155.4.3 DDS_RemoteParticipantPurgeKind

enum **DDS_RemoteParticipantPurgeKind**

Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.

When discovery communication with a remote participant has been lost, the local participant must make a decision about whether to continue attempting to communicate with that participant and its contained entities. This "kind" is used to select the desired behavior.

This "kind" does not pertain to the situation in which a remote participant has been gracefully deleted and notification of that deletion have been successfully received by its peers. In that case, the local participant will immediately stop attempting to communicate with those entities and will remove the associated remote entity records from its internal database.

See also

DDS_DiscoveryConfigQosPolicy::remote_participant_purge_kind (p. 938)

Enumerator

DDS_LIVELINESS_BASED_REMOTE_↩ PARTICIPANT_PURGE	**[default]** Maintain knowledge of the remote participant for as long as it maintains its liveliness contract. A participant will continue attempting communication with its peers, even if discovery communication with them is lost, as long as the remote participants maintain their liveliness. If both discovery communication and participant liveliness are lost, however, the local participant will remove all records of the remote participant and its contained endpoints, and no further data communication with them will occur until and unless they are rediscovered. The liveliness contract a participant promises to its peers – its "liveliness lease duration" – is specified in its **DDS_DiscoveryConfigQosPolicy::participant_↩ liveliness_lease_duration** (p. 937) QoS field. It maintains that contract by writing data to those other participants with a writer that has a **DDS_LivelinessQosPolicyKind** (p. 607) of **DDS_AUTOMATIC_LIVELINESS_QOS** (p. 608) or **DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_↩ QOS** (p. 608) and by asserting itself (at the **DDS_DiscoveryConfigQosPolicy::participant_↩ liveliness_assert_period** (p. 937)) over the Simple Discovery Protocol.

Enumerator

DDS_NO_REMOTE_PARTICIPANT_PURGE	Never "forget" a remote participant with which discovery communication has been lost. If a participant with this behavior loses discovery communication with a remote participant, it will nevertheless remember that remote participant and its endpoints and continue attempting to communicate with them indefinitely. This value has consequences for a participant's resource usage. If discovery communication with a remote participant is lost, but the same participant is later rediscovered, any relevant records that remain in the database will be reused. However, if it is not rediscovered, the records will continue to take up space in the database for as long as the local participant remains in existence.

7.155.5 Variable Documentation

7.155.5.1 DDS_DISCOVERYCONFIG_QOS_POLICY_NAME

```
const char* const DDS_DISCOVERYCONFIG_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DiscoveryConfigQosPolicy** (p. 934).

7.156 DOMAIN_PARTICIPANT_RESOURCE_LIMITS

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDomainParticipant** (p. 1619) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

Classes

- struct **DDS_AllocationSettings_t**

  Resource allocation settings.
- struct **DDS_DomainParticipantResourceLimitsQosPolicy**

  <<***extension***>> *(p. 213) Various settings that configure how a **DDSDomainParticipant** (p. 1619) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*

Enumerations

- enum **DDS_DomainParticipantResourceLimitsIgnoredEntityReplacementKind** { **DDS_NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT** , **DDS_NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT** }

  Available replacement policies for the ignored entities.

Variables

- const **DDS_Long DDS_AUTO_COUNT**

  A special value indicating a quantity that is derived from another QoS value.
- const char ∗const **DDS_DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 977).*

7.156.1 Detailed Description

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDomainParticipant** (p. 1619) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

7.156.2 Enumeration Type Documentation

7.156.2.1 DDS_DomainParticipantResourceLimitsIgnoredEntityReplacementKind

`enum` **`DDS_DomainParticipantResourceLimitsIgnoredEntityReplacementKind`**

Available replacement policies for the ignored entities.

QoS:

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)

Enumerator

DDS_NO_REPLACEMENT_IGNORED_ENTITY_↩ REPLACEMENT	Default value for ignored_entity_replacement_kind, no replacement is done, the ignore will fail if the ignored_entity table is full.
DDS_NOT_ALIVE_FIRST_IGNORED_ENTITY_↩ REPLACEMENT	If the ignored_entity table is full and if there is at least one ignored participant in the table, the participant record that has been not updated for the longest time will be replaced. Note that if the table is full and there are no participant records to replace, the ignore will fail.

7.156.3 Variable Documentation

7.156.3.1 DDS_AUTO_COUNT

```
const  DDS_Long DDS_AUTO_COUNT  [extern]
```

A special value indicating a quantity that is derived from another QoS value.

7.156.3.2 DDS_DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_NAME

```
const char* const DDS_DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 977).

7.157 DURABILITY

<<***spec***>> *(p. 209)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1556) entities that join the network later.

Classes

- struct **DDS_PersistentStorageSettings**

  Configures durable writer history and durable reader state.
- struct **DDS_DurabilityQosPolicy**

  *<<**spec**>> (p. 209) This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1556) entities that join the network later.*

Enumerations

- enum **DDS_PersistentJournalKind** {
  DDS_DELETE_PERSISTENT_JOURNAL ,
  DDS_TRUNCATE_PERSISTENT_JOURNAL ,
  DDS_PERSIST_PERSISTENT_JOURNAL ,
  DDS_MEMORY_PERSISTENT_JOURNAL ,
  DDS_WAL_PERSISTENT_JOURNAL ,
  DDS_OFF_PERSISTENT_JOURNAL }

  Sets the journal mode of the persistent storage.
- enum **DDS_PersistentSynchronizationKind** {
  DDS_NORMAL_PERSISTENT_SYNCHRONIZATION ,
  DDS_FULL_PERSISTENT_SYNCHRONIZATION ,
  DDS_OFF_PERSISTENT_SYNCHRONIZATION }

  Determines the level of synchronization with the physical disk.
- enum **DDS_DurabilityQosPolicyKind** {
  DDS_VOLATILE_DURABILITY_QOS ,
  DDS_TRANSIENT_LOCAL_DURABILITY_QOS ,
  DDS_TRANSIENT_DURABILITY_QOS ,
  DDS_PERSISTENT_DURABILITY_QOS }

  Kinds of durability.

Variables

- const char ∗const **DDS_DURABILITY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DurabilityQosPolicy** (p. 1005).*
- const **DDS_Long** **DDS_AUTO_WRITER_DEPTH**

  *A special value used as the default value for **DDS_DurabilityQosPolicy::writer_depth** (p. 1008).*

7.157.1 Detailed Description

<<***spec***>> *(p. 209)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **DDSDataReader** (p. 1556) entities that join the network later.

7.157.2 Enumeration Type Documentation

7.157.2.1 DDS_PersistentJournalKind

enum **DDS_PersistentJournalKind**

Sets the journal mode of the persistent storage.

The rollback journal is used in SQLite to store the state of the persistent storage before a transaction is committed.

QoS:

DDS_DurabilityQosPolicy (p. 1005)

Enumerator

DDS_DELETE_PERSISTENT_JOURNAL	Deletes the rollback journal at the conclusion of each transaction.
DDS_TRUNCATE_PERSISTENT_JOURNAL	Commits transactions by truncating the rollback journal to zero-length instead of deleting it.
DDS_PERSIST_PERSISTENT_JOURNAL	Prevents the rollback journal from being deleted at the end of each transaction. Instead, the header of the journal is overwritten with zeros.
DDS_MEMORY_PERSISTENT_JOURNAL	Stores the rollback journal in volatile RAM. This saves disk I/O.
DDS_WAL_PERSISTENT_JOURNAL	Uses a write-ahead log instead of a rollback journal to implement transactions.
DDS_OFF_PERSISTENT_JOURNAL	Completely disables the rollback journal. If the application crashes in the middle of a transaction when the OFF journaling mode is set, the persistent storage will very likely be corrupted.

7.157.2.2 DDS_PersistentSynchronizationKind

enum **DDS_PersistentSynchronizationKind**

Determines the level of synchronization with the physical disk.

QoS:

DDS_DurabilityQosPolicy (p. 1005)

Enumerator

DDS_NORMAL_PERSISTENT_SYNCHRONIZATION	Data (e.g., new sample) is written to disk at critical moments.
DDS_FULL_PERSISTENT_SYNCHRONIZATION	Data (e.g., new sample) is written to physical disk immediately.
DDS_OFF_PERSISTENT_SYNCHRONIZATION	No synchronization is enforced. Data will be written to physical disk when the operating system flushes its buffers.

7.157.2.3 DDS_DurabilityQosPolicyKind

enum **DDS_DurabilityQosPolicyKind**

Kinds of durability.

QoS:

DDS_DurabilityQosPolicy (p. 1005)

Enumerator

DDS_VOLATILE_DURABILITY_QOS	**[default]** RTI Connext does not need to keep any samples of data instances on behalf of any **DDSDataReader** (p. 1556) that is unknown by the **DDSDataWriter** (p. 1589) at the time the instance is written. In other words, RTI Connext will only attempt to provide the data to existing subscribers. This option does not require RTI Persistence Service.

Enumerator

DDS_TRANSIENT_LOCAL_DURABILITY_QOS	RTI Connext will attempt to keep some samples so that they can be delivered to any potential late-joining **DDSDataReader** (p. 1556). Which particular samples are kept depends on other QoS such as **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308). RTI Connext is only required to keep the data in memory of the **DDSDataWriter** (p. 1589) that wrote the data. Data is not required to survive the **DDSDataWriter** (p. 1589). For this setting to be effective, you must also set the **DDS_ReliabilityQosPolicy::kind** (p. 1298) to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633). This option does not require RTI Persistence Service.
DDS_TRANSIENT_DURABILITY_QOS	RTI Connext will attempt to keep some samples so that they can be delivered to any potential late-joining **DDSDataReader** (p. 1556). Which particular samples are kept depends on other QoS such as **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308). RTI Connext is only required to keep the data in memory and not in permanent storage. Data is not tied to the lifecycle of the **DDSDataWriter** (p. 1589). Data will survive the **DDSDataWriter** (p. 1589). This option requires RTI Persistence Service.
DDS_PERSISTENT_DURABILITY_QOS	Data is kept on permanent storage, so that they can outlive a system session. This option requires RTI Persistence Service.

7.157.3 Variable Documentation

7.157.3.1 DDS_DURABILITY_QOS_POLICY_NAME

```
const char* const DDS_DURABILITY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DurabilityQosPolicy** (p. 1005).

7.157.3.2 DDS_AUTO_WRITER_DEPTH

```
const  DDS_Long DDS_AUTO_WRITER_DEPTH  [extern]
```

A special value used as the default value for **DDS_DurabilityQosPolicy::writer_depth** (p. 1008).

This values resolves to the following:

- **DDS_HistoryQosPolicy::depth** (p. 1164) if the history kind is **DDS_KEEP_LAST_HISTORY_QOS** (p. 604).
- **DDS_ResourceLimitsQosPolicy::max_samples_per_instance** (p. 1311) in the **DDS_ResourceLimitsQos↩ Policy** (p. 1308) if the history kind is **DDS_KEEP_ALL_HISTORY_QOS** (p. 604).

7.158 DURABILITY_SERVICE

<<***spec***>> *(*p. *209)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **DDS_DurabilityQosPolicy** (p. 1005) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS_TRANSIENT_DURABILITY_QOS** (p. 599).

Classes

- struct **DDS_DurabilityServiceQosPolicy**

  <<***spec***>> (p. *209) Various settings to configure the external RTI Persistence Service used by RTI Connext for Data↩ Writers with a **DDS_DurabilityQosPolicy** (p. 1005) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS↩ _TRANSIENT_DURABILITY_QOS** (p. 599).*

Variables

- const char ∗const **DDS_DURABILITYSERVICE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_DurabilityServiceQosPolicy** (p. 1009).*

7.158.1 Detailed Description

<<***spec***>> *(*p. *209)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **DDS_DurabilityQosPolicy** (p. 1005) setting of **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS_TRANSIENT_DURABILITY_QOS** (p. 599).

7.158.2 Variable Documentation

7.158.2.1 DDS_DURABILITYSERVICE_QOS_POLICY_NAME

```
const char* const DDS_DURABILITYSERVICE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_DurabilityServiceQosPolicy** (p. 1009).

7.159 ENTITY_FACTORY

<<***spec***>> *(*p. *209)* A QoS policy for all **DDSEntity** (p. 1731) types that can act as factories for one or more other **DDSEntity** (p. 1731) types.

Classes

- struct **DDS_EntityFactoryQosPolicy**

  *<<**spec**>> (p. 209) A QoS policy for all **DDSEntity** (p. 1731) types that can act as factories for one or more other **DDSEntity** (p. 1731) types.*

Variables

- const char *const **DDS_ENTITYFACTORY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_EntityFactoryQosPolicy** (p. 1145).*

7.159.1 Detailed Description

*<<**spec**>> (p. 209)* A QoS policy for all **DDSEntity** (p. 1731) types that can act as factories for one or more other **DDSEntity** (p. 1731) types.

7.159.2 Variable Documentation

7.159.2.1 DDS_ENTITYFACTORY_QOS_POLICY_NAME

```
const char* const DDS_ENTITYFACTORY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_EntityFactoryQosPolicy** (p. 1145).

7.160 ENTITY_NAME

*<<**extension**>> (p. 213)* Assigns a name to a **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556). Except for **DDSPublisher** (p. 1818) and **DDSSubscriber** (p. 1860), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

Classes

- struct **DDS_EntityNameQosPolicy**

  *<<**extension**>> (p. 213) Assigns a name and a role name to a **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556). Except for **DDSPublisher** (p. 1818) and **DDSSubscriber** (p. 1860), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.*

Variables

- const char ∗const **DDS_ENTITYNAME_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_EntityNameQosPolicy** (p. 1147).*

7.160.1 Detailed Description

<<***extension***>> *(p. 213)* Assigns a name to a **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556). Except for **DDSPublisher** (p. 1818) and **DDSSubscriber** (p. 1860), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

7.160.2 Variable Documentation

7.160.2.1 DDS_ENTITYNAME_QOS_POLICY_NAME

```
const char* const DDS_ENTITYNAME_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_EntityNameQosPolicy** (p. 1147).

7.161 EVENT

<<***extension***>> *(p. 213)* Configures the internal thread in a DomainParticipant that handles timed events.

Classes

- struct **DDS_EventQosPolicy**

  <<***extension***>> *(p. 213) Settings for event.*

Variables

- const char ∗const **DDS_EVENT_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_EventQosPolicy** (p. 1150).*

7.161.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the internal thread in a DomainParticipant that handles timed events.

7.161.2 Variable Documentation

7.161.2.1 DDS_EVENT_QOS_POLICY_NAME

```
const char* const DDS_EVENT_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_EventQosPolicy** (p. 1150).

7.162 HISTORY

<<***spec***>> *(p. 209)* Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

Classes

- struct **DDS_HistoryQosPolicy**

  <<***spec***>> (p. *209) Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.*

Enumerations

- enum **DDS_HistoryQosPolicyKind** {
  DDS_KEEP_LAST_HISTORY_QOS ,
  DDS_KEEP_ALL_HISTORY_QOS }

  Kinds of history.

Variables

- const char ∗const **DDS_HISTORY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_HistoryQosPolicy** (p. 1162).*

7.162.1 Detailed Description

<<***spec***>> *(p. 209)* Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

7.162.2 Enumeration Type Documentation

7.162.2.1 DDS_HistoryQosPolicyKind

```
enum DDS_HistoryQosPolicyKind
```

Kinds of history.

QoS:

DDS_HistoryQosPolicy (p. 1162)

Enumerator

DDS_KEEP_LAST_HISTORY_QOS	**[default]** Keep the last `depth` samples. On the publishing side, RTI Connext will only attempt to keep the most recent `depth` samples of each instance of data (identified by its key) managed by the **DDSDataWriter** (p. 1589). Invalid samples representing a disposal or unregistration of an instance count towards the depth and may replace other DDS samples currently in the DataWriter queue for the same instance. On the subscribing side, the **DDSDataReader** (p. 1556) will only attempt to keep the most recent `depth` samples received for each instance (identified by its key) until the application takes them via the **DDSDataReader** (p. 1556) 's **take()** operation. Invalid samples representing a disposal or unregistration of an instance do not count towards the history depth and will not replace other DDS samples currently in the DataReader queue for the same instance.
DDS_KEEP_ALL_HISTORY_QOS	Keep *all* the samples. On the publishing side, RTI Connext will attempt to keep all samples (representing each value written) of each instance of data (identified by its key) managed by the **DDSDataWriter** (p. 1589) until they can be delivered to all subscribers. On the subscribing side, RTI Connext will attempt to keep all samples of each instance of data (identified by its key) managed by the **DDSDataReader** (p. 1556). These samples are kept until the application takes them from RTI Connext via the **take()** operation.

7.162.3 Variable Documentation

7.162.3.1 DDS_HISTORY_QOS_POLICY_NAME

```
const char* const DDS_HISTORY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_HistoryQosPolicy** (p. 1162).

7.163 GROUP_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

Classes

- struct **DDS_GroupDataQosPolicy**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.*

Variables

- const char ∗const **DDS_GROUPDATA_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_GroupDataQosPolicy** (p. 1160).*

7.163.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

7.163.2 Variable Documentation

7.163.2.1 DDS_GROUPDATA_QOS_POLICY_NAME

```
const char* const DDS_GROUPDATA_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_GroupDataQosPolicy** (p. 1160).

7.164 LATENCY_BUDGET

<<***spec***>> *(p. 209)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

Classes

- struct **DDS_LatencyBudgetQosPolicy**

  *<<**spec**>> (p. 209) Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.*

Variables

- const char ∗const **DDS_LATENCYBUDGET_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_LatencyBudgetQosPolicy** (p. 1173).*

7.164.1 Detailed Description

<<***spec***>> *(p. 209)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

7.164.2 Variable Documentation

7.164.2.1 DDS_LATENCYBUDGET_QOS_POLICY_NAME

```
const char* const DDS_LATENCYBUDGET_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_LatencyBudgetQosPolicy** (p. 1173).

7.165 LIFESPAN

<<***spec***>> *(p. 209)* Specifies how long the data written by the **DDSDataWriter** (p. 1589) is considered valid.

Classes

- struct **DDS_LifespanQosPolicy**
  <<***spec***>> *(p. 209) Specifies how long the data written by the **DDSDataWriter** (p. 1589) is considered valid.*

Variables

- const char *const **DDS_LIFESPAN_QOS_POLICY_NAME**
  *Stringified human-readable name for **DDS_LifespanQosPolicy** (p. 1175).*

7.165.1 Detailed Description

<<***spec***>> *(p. 209)* Specifies how long the data written by the **DDSDataWriter** (p. 1589) is considered valid.

7.165.2 Variable Documentation

7.165.2.1 DDS_LIFESPAN_QOS_POLICY_NAME

```
const char* const DDS_LIFESPAN_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_LifespanQosPolicy** (p. 1175).

7.166 LIVELINESS

<<***spec***>> *(p. 209)* Specifies and configures the mechanism that allows **DDSDataReader** (p. 1556) entities to detect when **DDSDataWriter** (p. 1589) entities become disconnected or "dead."

Classes

- struct **DDS_LivelinessQosPolicy**

  *Specifies and configures the mechanism that allows **DDSDataReader** (p. 1556) entities to detect when **DDSDataWriter** (p. 1589) entities become disconnected or "dead.".*

Enumerations

- enum **DDS_LivelinessQosPolicyKind** {
  DDS_AUTOMATIC_LIVELINESS_QOS ,
  DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_QOS ,
  DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS }

  Kinds of liveliness.

Variables

- const char ∗const **DDS_LIVELINESS_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_LivelinessQosPolicy** (p. 1180).*

7.166.1 Detailed Description

<<***spec***>> *(p. 209)* Specifies and configures the mechanism that allows **DDSDataReader** (p. 1556) entities to detect when **DDSDataWriter** (p. 1589) entities become disconnected or "dead."

7.166.2 Enumeration Type Documentation

7.166.2.1 DDS_LivelinessQosPolicyKind

`enum` **`DDS_LivelinessQosPolicyKind`**

Kinds of liveliness.

QoS:

DDS_LivelinessQosPolicy (p. 1180)

Enumerator

DDS_AUTOMATIC_LIVELINESS_QOS	**[default]** The infrastructure will automatically signal liveliness for the **DDSDataWriter** (p. 1589) (s) at least as often as required by the **DDSDataWriter** (p. 1589) (S) `lease_duration`. A **DDSDataWriter** (p. 1589) with this setting does not need to take any specific action in order to be considered 'alive.' The **DDSDataWriter** (p. 1589) is only 'not alive' when the participant to which it belongs terminates (gracefully or not), or when there is a network problem that prevents the current participant from contacting that remote participant.
DDS_MANUAL_BY_PARTICIPANT_LIVELINESS_QOS	RTI Connext will assume that as long as at least one **DDSDataWriter** (p. 1589) belonging to the **DDSDomainParticipant** (p. 1619) (or the **DDSDomainParticipant** (p. 1619) itself) has asserted its liveliness, then the other DataWriters belonging to that same **DDSDomainParticipant** (p. 1619) are also alive. The user application takes responsibility to signal liveliness to RTI Connext either by calling **DDSDomainParticipant::assert_liveliness** (p. 1667), or by calling **DDSDataWriter::assert_liveliness** (p. 1597), or **FooDataWriter::write** (p. 1951) on any **DDSDataWriter** (p. 1589) belonging to the **DDSDomainParticipant** (p. 1619).
DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS	RTI Connext will only assume liveliness of the **DDSDataWriter** (p. 1589) if the application has asserted liveliness of that **DDSDataWriter** (p. 1589) itself. The user application takes responsibility to signal liveliness to RTI Connext using the **DDSDataWriter::assert_liveliness** (p. 1597) method, or by writing some data.

7.166.3 Variable Documentation

7.166.3.1 DDS_LIVELINESS_QOS_POLICY_NAME

```
const char* const DDS_LIVELINESS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_LivelinessQosPolicy** (p. 1180).

7.167 LOCATORFILTER

<<***extension***>> *(p. 213)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS_PublicationBuiltinTopicData** (p. 1264).

Classes

- struct **DDS_LocatorFilter_t**

  *<<**extension**>> (p. 213) Specifies the configuration of an individual channel within a MultiChannel DataWriter.*
- struct **DDS_LocatorFilterSeq**

  *Declares IDL `sequence<` **DDS_LocatorFilter_t** (p. 1185) `>`.*
- struct **DDS_LocatorFilterQosPolicy**

  *<<**extension**>> (p. 213) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS_PublicationBuiltinTopicData** (p. 1264).*

Variables

- const char ∗const **DDS_LOCATORFILTER_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_LocatorFilterQosPolicy** (p. 1186).*

7.167.1 Detailed Description

*<<**extension**>> (p. 213)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **DDS_PublicationBuiltinTopicData** (p. 1264).

7.167.2 Variable Documentation

7.167.2.1 DDS_LOCATORFILTER_QOS_POLICY_NAME

```
const char* const DDS_LOCATORFILTER_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_LocatorFilterQosPolicy** (p. 1186).

7.168 LOGGING

*<<**extension**>> (p. 213)* Configures the RTI Connext logging facility.

Classes

- struct **DDS_LoggingQosPolicy**

  *<<**extension**>> (p. 213) Configures the RTI Connext logging facility.*

7.168.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the RTI Connext logging facility.

7.169 MONITORING

<<***extension***>> *(p. 213)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.

Classes

- struct **DDS_MonitoringDedicatedParticipantSettings**

  <<***extension***>> *(p. 213) Configures the use of a dedicated* ***DDSDomainParticipant*** *(p. 1619) to distribute the RTI Connext application telemetry data.*
- struct **DDS_MonitoringEventDistributionSettings**

  <<***extension***>> *(p. 213) Configures the distribution of event metrics.*
- struct **DDS_MonitoringPeriodicDistributionSettings**

  <<***extension***>> *(p. 213) Configures the distribution of periodic metrics.*
- struct **DDS_MonitoringLoggingDistributionSettings**

  <<***extension***>> *(p. 213) Configures the distribution of log messages.*
- struct **DDS_MonitoringDistributionSettings**

  <<***extension***>> *(p. 213) Configures the distribution of telemetry data.*
- struct **DDS_MonitoringMetricSelection**

  <<***extension***>> *(p. 213) This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.*
- struct **DDS_MonitoringMetricSelectionSeq**

  Declares IDL `sequence` *<* ***DDS_MonitoringMetricSelection*** *(p. 1206) >*
- struct **DDS_MonitoringLoggingForwardingSettings**

  <<***extension***>> *(p. 213) Configures the forwarding levels of log messages for the different* ***NDDS_Config_LogFacility*** *(p. 727).*
- struct **DDS_MonitoringTelemetryData**

  <<***extension***>> *(p. 213) Configures the telemetry data that will be distributed.*
- struct **DDS_MonitoringQosPolicy**

  <<***extension***>> *(p. 213) Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.*

Variables

- const char ∗const **DDS_MONITORING_QOS_POLICY_NAME**

  Stringified human-readable name for ***DDS_MonitoringQosPolicy*** *(p. 1210).*

7.169.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.

7.169.2 Variable Documentation

7.169.2.1 DDS_MONITORING_QOS_POLICY_NAME

```
const char* const DDS_MONITORING_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_MonitoringQosPolicy** (p. 1210).

7.170 MULTICHANNEL

*<<**extension**>> (p. 213)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

Classes

- struct **DDS_ChannelSettings_t**

  *<<**extension**>> (p. 213) Type used to configure the properties of a channel.*
- struct **DDS_ChannelSettingsSeq**

  *Declares IDL `sequence`< **DDS_ChannelSettings_t** (p. 822) >*
- struct **DDS_MultiChannelQosPolicy**

  *<<**extension**>> (p. 213) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.*

Variables

- const char *const **DDS_MULTICHANNEL_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_MultiChannelQosPolicy** (p. 1214).*

7.170.1 Detailed Description

*<<**extension**>> (p. 213)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

7.170.2 Variable Documentation

7.170.2.1 DDS_MULTICHANNEL_QOS_POLICY_NAME

```
const char* const DDS_MULTICHANNEL_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_MultiChannelQosPolicy** (p. 1214).

7.171 OWNERSHIP

<<***spec***>> *(p. 209)* Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1589) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

Classes

- struct **DDS_OwnershipQosPolicy**

  <<***spec***>> *(p. 209) Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1589) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.*

Enumerations

- enum **DDS_OwnershipQosPolicyKind** {
  DDS_SHARED_OWNERSHIP_QOS ,
  DDS_EXCLUSIVE_OWNERSHIP_QOS }

  Kinds of ownership.

Variables

- const char ∗const **DDS_OWNERSHIP_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_OwnershipQosPolicy** (p. 1222).*

7.171.1 Detailed Description

<<***spec***>> *(p. 209)* Specifies whether it is allowed for multiple **DDSDataWriter** (p. 1589) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

7.171.2 Enumeration Type Documentation

7.171.2.1 DDS_OwnershipQosPolicyKind

```
enum DDS_OwnershipQosPolicyKind
```

Kinds of ownership.

QoS:

DDS_OwnershipQosPolicy (p. 1222)

Enumerator

DDS_SHARED_OWNERSHIP_QOS	**[default]** Indicates shared ownership for each instance. Multiple writers are allowed to update the same instance and all the updates are made available to the readers. In other words there is no concept of an owner for the instances. This is the **default** behavior if the **OWNERSHIP** (p. 612) policy is not specified or supported.
DDS_EXCLUSIVE_OWNERSHIP_QOS	Indicates each instance can only be owned by one **DDSDataWriter** (p. 1589), but the owner of an instance can change dynamically. The selection of the owner is controlled by the setting of the **OWNERSHIP_STRENGTH** (p. 613) policy. The owner is always set to be the highest-strength **DDSDataWriter** (p. 1589) object among the ones currently active (as determined by the **LIVELINESS** (p. 607)).

7.171.3 Variable Documentation

7.171.3.1 DDS_OWNERSHIP_QOS_POLICY_NAME

```
const char* const DDS_OWNERSHIP_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_OwnershipQosPolicy** (p. 1222).

7.172 OWNERSHIP_STRENGTH

<<***spec***>> *(p. 209)* Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1589) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1885) + key).

Classes

- struct **DDS_OwnershipStrengthQosPolicy**

  *Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1589) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1885) + key).*

Variables

- const char *const **DDS_OWNERSHIPSTRENGTH_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_OwnershipStrengthQosPolicy** (p. 1227).*

7.172.1 Detailed Description

<<***spec***>> *(*p. *209)* Specifies the value of the strength used to arbitrate among multiple **DDSDataWriter** (p. 1589) objects that attempt to modify the same instance of a data type (identified by **DDSTopic** (p. 1885) + key).

7.172.2 Variable Documentation

7.172.2.1 DDS_OWNERSHIPSTRENGTH_QOS_POLICY_NAME

```
const char* const DDS_OWNERSHIPSTRENGTH_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_OwnershipStrengthQosPolicy** (p. 1227).

7.173 PARTITION

<<***spec***>> *(*p. *209)* Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), or **DDSSubscriber** (p. 1860) entities.

Classes

- struct **DDS_PartitionQosPolicy**

  <<***spec***>> *(*p. *209) Set of strings that introduces logical partitions in **DDSDomainParticipant** (*p. *1619), **DDSPublisher** (*p. *1818), or **DDSSubscriber** (*p. *1860) entities.*

Variables

- const char ∗const **DDS_PARTITION_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_PartitionQosPolicy** (*p. *1240).*

7.173.1 Detailed Description

<<***spec***>> *(*p. *209)* Set of strings that introduces logical partitions in **DDSDomainParticipant** (p. 1619), **DDSPublisher** (p. 1818), or **DDSSubscriber** (p. 1860) entities.

7.173.2 Variable Documentation

7.173.2.1 DDS_PARTITION_QOS_POLICY_NAME

```
const char* const DDS_PARTITION_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_PartitionQosPolicy** (p. 1240).

7.174 PRESENTATION

<<***spec***>> *(p. 209)* Specifies how the samples representing changes to data instances are presented to a subscribing application.

Classes

- struct **DDS_PresentationQosPolicy**

  <<***spec***>> *(p. 209) Specifies how the samples representing changes to data instances are presented to a subscribing application.*

Enumerations

- enum **DDS_PresentationQosPolicyAccessScopeKind** {
  DDS_INSTANCE_PRESENTATION_QOS ,
  DDS_TOPIC_PRESENTATION_QOS ,
  DDS_GROUP_PRESENTATION_QOS ,
  DDS_HIGHEST_OFFERED_PRESENTATION_QOS }

  Kinds of presentation "access scope".

Variables

- const char ∗const **DDS_PRESENTATION_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_PresentationQosPolicy** (p. 1249).*

7.174.1 Detailed Description

<<***spec***>> *(p. 209)* Specifies how the samples representing changes to data instances are presented to a subscribing application.

7.174.2 Enumeration Type Documentation

7.174.2.1 DDS_PresentationQosPolicyAccessScopeKind

```
enum DDS_PresentationQosPolicyAccessScopeKind
```

Kinds of presentation "access scope".

Access scope determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.

QoS:

DDS_PresentationQosPolicy (p. 1249)

Enumerator

DDS_INSTANCE_PRESENTATION_QOS	**[default]** Scope spans only a single instance. Indicates that changes to one instance need not be coherent nor ordered with respect to changes to any other instance. In other words, order and coherent changes apply to each instance separately.
DDS_TOPIC_PRESENTATION_QOS	Scope spans all instances within the same **DDSDataWriter** (p. 1589), but not across instances in different **DDSDataWriter** (p. 1589) entities.
DDS_GROUP_PRESENTATION_QOS	Scope spans all instances belonging to **DDSDataWriter** (p. 1589) entities within the same **DDSPublisher** (p. 1818).
DDS_HIGHEST_OFFERED_PRESENTATION_QOS	This value only applies to a **DDSSubscriber** (p. 1860). The **DDSSubscriber** (p. 1860) will use the access scope specified by each remote **DDSPublisher** (p. 1818).

7.174.3 Variable Documentation

7.174.3.1 DDS_PRESENTATION_QOS_POLICY_NAME

```
const char* const DDS_PRESENTATION_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_PresentationQosPolicy** (p. 1249).

7.175 PROFILE

<<***extension***>> *(p. 213)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.

Classes

- struct **DDS_ProfileQosPolicy**

  <<***extension***>> *(p. 213) Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.*

Variables

- const char *const **DDS_PROFILE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_ProfileQosPolicy** (p. 1257).*

7.175.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.

7.175.2 Variable Documentation

7.175.2.1 DDS_PROFILE_QOS_POLICY_NAME

```
const char* const DDS_PROFILE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ProfileQosPolicy** (p. 1257).

7.176 PROPERTY

<<***extension***>> *(p. 213)* Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

Classes

- struct **DDS_Property_t**

  Properties are name/value pairs objects.
- struct **DDS_PropertySeq**

  Declares IDL `sequence` *<* ***DDS_Property_t*** *(p. 1259) >*
- struct **DDS_PropertyQosPolicy**

  *<<**extension**>> (p. 213) Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*
- class **DDSPropertyQosPolicyHelper**

  Policy helpers that facilitate management of the properties in the input policy.

Typedefs

- typedef struct **DDS_PropertyQosPolicy** **DDS_PropertyQosPolicy**

  *<<**extension**>> (p. 213) Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*
- typedef enum **DDS_PropertyQosPolicyMutability** **DDS_PropertyQosPolicyMutability**

  Determines if, and when, the value of a property can change.

Enumerations

- enum **DDS_PropertyQosPolicyMutability** {
  DDS_PROPERTY_QOS_MUTABLE ,
  DDS_PROPERTY_QOS_MUTABLE_UNTIL_ENABLE ,
  DDS_PROPERTY_QOS_IMMUTABLE }

  Determines if, and when, the value of a property can change.

Functions

- **DDS_PropertyQosPolicyMutability** **DDS_PropertyQosPolicyHelper_get_property_mutability** (const char ∗name, const struct **DDS_PropertyQosPolicy** ∗policy)

  Returns the mutability type of a property.
- static **DDS_Long** **DDSPropertyQosPolicyHelper::get_number_of_properties** (**DDS_PropertyQosPolicy** &policy)

  Gets the number of properties in the input policy.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::assert_property** (**DDS_PropertyQosPolicy** &policy, const char ∗name, const char ∗value, **DDS_Boolean** propagate)

  Asserts the property identified by name in the input policy.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::add_property** (**DDS_PropertyQosPolicy** &policy, const char ∗name, const char ∗value, **DDS_Boolean** propagate)

  Adds a new property to the input policy.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::assert_pointer_property** (**DDS_PropertyQos↩ Policy** &policy, const char ∗name, const void ∗pointer)

  Asserts the property identified by name in the input policy. Used when the property to store is a pointer.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::add_pointer_property** (**DDS_PropertyQos↩ Policy** &policy, const char ∗name, const void ∗pointer)

  Adds a new property to the input policy. Used when the property to store is a pointer.
- static struct **DDS_Property_t** ∗ **DDSPropertyQosPolicyHelper::lookup_property** (**DDS_PropertyQosPolicy** &policy, const char ∗name)

  Searches for a property in the input policy given its name.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::remove_property** (**DDS_PropertyQosPolicy** &policy, const char ∗name)

  Removes a property from the input policy.
- static **DDS_ReturnCode_t** **DDSPropertyQosPolicyHelper::get_properties** (**DDS_PropertyQosPolicy** &policy, struct **DDS_PropertySeq** &properties, const char ∗name_prefix)

  Retrieves a list of properties whose names match the input prefix.

Variables

- const char ∗const **DDS_PROPERTY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_PropertyQosPolicy** (p. 1260).*

7.176.1 Detailed Description

<<***extension***>> *(p. 213)* Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

RTI Connext will automatically set some system properties in the **DDS_PropertyQosPolicy** (p. 1260) associated with a **DDS_DomainParticipantQos** (p. 971). See **System Properties** (p. 389) for additional details.

7.176.2 Typedef Documentation

7.176.2.1 DDS_PropertyQosPolicy

`typedef struct` **`DDS_PropertyQosPolicy DDS_PropertyQosPolicy`**

<<***extension***>> *(p. 213)* Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

Entity:

DDSDomainParticipant (p. 1619) **DDSDataReader** (p. 1556) **DDSDataWriter** (p. 1589)

Properties:

RxO (p. 556) = N/A;
Changeable (p. 556) = **YES** (p. 556)

See also

DDSDomainParticipant::get_builtin_subscriber (p. 1661)

7.176.3 Usage

The PROPERTY QoS policy can be used to associate a set of properties in the form of (name, value) pairs with a **DDSDataReader** (p. 1556), **DDSDataWriter** (p. 1589), or **DDSDomainParticipant** (p. 1619). This is similar to the **DDS_UserDataQosPolicy** (p. 1504), except this policy uses (name, value) pairs, and you can select whether or not a particular pair should be propagated (included in the builtin topic).

You can find a complete list of predefined properties in the `Property Reference Guide`.

This QoS policy may be used to configure:

- Durable Writer History, see **Configuring Durable Writer History** (p. 198)
- Durable Reader State, see **Configuring Durable Reader State** (p. 200)
- Builtin Transport Plugins, see **UDPv4 Transport Property Names in Property QoS Policy of Domain Participant** (p. 465), **UDPv6 Transport Property Names in Property QoS Policy of Domain Participant** (p. 481), and **Shared Memory Transport Property Names in Property QoS Policy of Domain Participant** (p. 459)
- Extension Transport Plugins, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 178)
- **Clock Selection** (p. 40)

In addition, you may add your own name/value pairs to the Property QoS policy of an Entity. Via this QoS policy, you can direct RTI Connext to propagate these name/value pairs with the discovery information for the Entity. Applications that discover the Entity can then access the user-specific name/value pairs in the discovery information of the remote Entity. This allows you to add meta-information about an Entity for application-specific use, for example, authentication/authorization certificates (which can also be done using the **DDS_UserDataQosPolicy** (p. 1504) or **DDS_Group↩ DataQosPolicy** (p. 1160)).

7.176.3.1 Reasons for Using the PropertyQosPolicy

- Supports dynamic loading of extension transports
- Supports multiple instances of the builtin transports
- Allows full pluggable transport configuration for non-C/C++ language bindings (Java, .NET, etc.)
- Avoids the process of creating entities disabled, changing their QoS settings, then enabling them
- Allows selection of clock

Some of the RTI Connext capabilities configurable via the Property QoS policy can also be configured in code via APIs. However, the Property QoS policy allows you to configure those parameters via XML files. In addition, some of the configuration APIs will only work if the Entity was created in a disabled state and then enabled after the configuration change was applied. By configuring those parameters using the Property QoS policy during entity creation, you avoid the additional work of first creating a disabled entity and then enabling it afterwards.

There are helper functions to facilitate working with properties, see the **PROPERTY** (p. 617) page.

7.176.3.2 DDS_PropertyQosPolicyMutability

`typedef enum` **`DDS_PropertyQosPolicyMutability`** **`DDS_PropertyQosPolicyMutability`**

Determines if, and when, the value of a property can change.

7.176.4 Enumeration Type Documentation

7.176.4.1 DDS_PropertyQosPolicyMutability

`enum` **`DDS_PropertyQosPolicyMutability`**

Determines if, and when, the value of a property can change.

Enumerator

DDS_PROPERTY_QOS_MUTABLE	The property is mutable: it can be changed at any time.
DDS_PROPERTY_QOS_MUTABLE_UNTIL_ENABLE	The property can only be changed before enabling the entity.
DDS_PROPERTY_QOS_IMMUTABLE	The property is immutable: it can only be specified when creating the entity.

7.176.5 Function Documentation

7.176.5.1 DDS_PropertyQosPolicyHelper_get_property_mutability()

```
DDS_PropertyQosPolicyMutability DDS_PropertyQosPolicyHelper_get_property_mutability (
            const char * name,
            const struct  DDS_PropertyQosPolicy * policy )
```

Returns the mutability type of a property.

If the property does not exist, **DDS_PROPERTY_QOS_MUTABLE** (p. 620) is returned. Otherwise, it returns the mutability type of the specified property. See **DDS_PropertyQosPolicyMutability** (p. 620) for more information of the different mutability types.

Parameters

name	*<<**in**>> (p. 433)*. The name of the property for which we want to know the mutability type.
policy	*<<**in**>> (p. 433)*. These are the properties in which we are going to look for the property with the provided name.

Returns

The mutability type of the input property.

7.176.5.2 get_number_of_properties()

```
static  DDS_Long DDSPropertyQosPolicyHelper::get_number_of_properties (
              DDS_PropertyQosPolicy & policy )  [static]
```

Gets the number of properties in the input policy.

Precondition

policy cannot be NULL.

Parameters

policy	*<<**in**>> (p. 433)* Input policy.

Returns

Number of properties.

7.176.5.3 assert_property()

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::assert_property (
            DDS_PropertyQosPolicy & policy,
            const char * name,
            const char * value,
            DDS_Boolean propagate )  [static]
```

Asserts the property identified by name in the input policy.

If the property already exists, this function replaces its current value with the new one.

If the property identified by name does not exist, this function adds it to the property set.

This function increases the maximum number of elements of the policy sequence when this number is not enough to store the new property.

Precondition

policy, name and value cannot be NULL.

Parameters

policy	<<***in***>> *(p. 433)* Input policy.
name	<<***in***>> *(p. 433)* Property name.
value	<<***in***>> *(p. 433)* Property value.
propagate	<<***in***>> *(p. 433)* Indicates if the property will be propagated on discovery.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533)

7.176.5.4 add_property()

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::add_property (
            DDS_PropertyQosPolicy & policy,
            const char * name,
```

```
            const char * value,
             DDS_Boolean propagate )  [static]
```

Adds a new property to the input policy.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connext.

If the maximum number of elements of the policy sequence is not enough to store the new property, this function will increase it.

If the property already exists the function fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532).

Precondition

policy, name and value cannot be NULL.

The property is not in the policy.

Parameters

policy	<<***in***>> *(p. 433)* Input policy.
name	<<***in***>> *(p. 433)* Property name.
value	<<***in***>> *(p. 433)* Property value.
propagate	<<***in***>> *(p. 433)* Indicates if the property will be propagated on discovery.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532), **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533)

7.176.5.5 assert_pointer_property()

```
static  DDS_ReturnCode_t DDSPropertyQosPolicyHelper::assert_pointer_property (
             DDS_PropertyQosPolicy & policy,
            const char * name,
            const void * pointer )  [static]
```

Asserts the property identified by name in the input policy. Used when the property to store is a pointer.

This is a function similar to **DDSPropertyQosPolicyHelper::assert_property** (p. 622). However, instead of passing a stringified version of the pointer, this function receives a pointer as the value.

If the property already exists, this function replaces its current value with the new one.

If the property identified by name does not exist, this function adds it to the property set.

This function increases the maximum number of elements of the policy sequence when this number is not enough to store the new property.

The properties asserted by this function will not be propagated on discovery.

Precondition

policy and name cannot be NULL.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Property name.
pointer	<<***in***>> *(*p. *433)* The pointer to store in the property.

Returns

One of the **Standard Return Codes** (p. 532) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533).

7.176.5.6 add_pointer_property()

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::add_pointer_property (
            DDS_PropertyQosPolicy & policy,
            const char * name,
            const void * pointer )  [static]
```

Adds a new property to the input policy. Used when the property to store is a pointer.

This is a function similar to **DDSPropertyQosPolicyHelper::add_property** (p. 622). However, instead of passing a stringified version of the pointer, this function receives a pointer as the value.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connext.

If the maximum number of elements of the policy sequence is not enough to store the new property, this function will increase it.

If the property already exists the function fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532).

The properties added by this function will not be propagated on discovery.

Precondition

policy and name cannot be NULL.

The property is not in the policy.

Parameters

policy	<<***in***>> *(*p. *433)* Input policy.
name	<<***in***>> *(*p. *433)* Property name.
pointer	<<***in***>> *(*p. *433)* The pointer to store in the property.

Returns

One of the **Standard Return Codes** (p. 532) or **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533) or **DDS_↩ RETCODE_PRECONDITION_NOT_MET** (p. 532)

7.176.5.7 lookup_property()

```
static struct  DDS_Property_t * DDSPropertyQosPolicyHelper::lookup_property (
             DDS_PropertyQosPolicy & policy,
            const char * name )  [static]
```

Searches for a property in the input policy given its name.

Precondition

policy, name and value cannot be NULL.

Parameters

policy	<<***in***>> *(p. 433)* Input policy.
name	<<***in***>> *(p. 433)* Property name.

Returns

The function returns the first property with the given name. If such a property does not exist, the function returns NULL.

7.176.5.8 remove_property()

```
static  DDS_ReturnCode_t DDSPropertyQosPolicyHelper::remove_property (
             DDS_PropertyQosPolicy & policy,
            const char * name )  [static]
```

Removes a property from the input policy.

If the property does not exist, the function fails with **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532).

Precondition

policy and name cannot be NULL.

The property is in the policy.

Parameters

policy	*<<**in**>> (*p. *433)* Input policy.
name	*<<**in**>> (*p. *433)* Property name.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532)

7.176.5.9 get_properties()

```
static DDS_ReturnCode_t DDSPropertyQosPolicyHelper::get_properties (
            DDS_PropertyQosPolicy & policy,
            struct DDS_PropertySeq & properties,
            const char * name_prefix ) [static]
```

Retrieves a list of properties whose names match the input prefix.

If the properties sequence doesn't own its buffer, and its maximum is less than the total number of properties matching the input prefix, it will be filled up to its maximum and fail with an error of **DDS_RETCODE_OUT_OF_RESOURCES** (p. 533).

Precondition

policy, properties and name_prefix cannot be NULL.

Parameters

policy	*<<**in**>> (*p. *433)* Input policy.
properties	*<<**inout**>> (*p. *433)* A **DDS_PropertySeq** (p. 1262) object where the set or list of properties will be returned.
name_prefix	Name prefix.

Exceptions

One	of the **Standard Return Codes** (p. 532), **DDS_RETCODE_PRECONDITION_NOT_MET** (p. 532)

7.176.6 Variable Documentation

7.176.6.1 DDS_PROPERTY_QOS_POLICY_NAME

```
const char* const DDS_PROPERTY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_PropertyQosPolicy** (p. 1260).

7.177 PUBLISH_MODE

<<***extension***>> *(p. 213)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread.

Classes

- struct **DDS_PublishModeQosPolicy**

  <<***extension***>> *(p. 213) Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its own thread to send data, instead of the user thread.*

Macros

- #define **DDS_PUBLICATION_PRIORITY_UNDEFINED**

  *Initializer value for **DDS_PublishModeQosPolicy::priority** (p. 1282) and/or **DDS_ChannelSettings_t::priority** (p. 823).*
- #define **DDS_PUBLICATION_PRIORITY_AUTOMATIC**

  *Constant value for **DDS_PublishModeQosPolicy::priority** (p. 1282) and/or **DDS_ChannelSettings_t::priority** (p. 823).*

Enumerations

- enum **DDS_PublishModeQosPolicyKind** {
  DDS_SYNCHRONOUS_PUBLISH_MODE_QOS ,
  DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS }

  Kinds of publishing mode.

Variables

- const char ∗const **DDS_PUBLISHMODE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_PublishModeQosPolicy** (p. 1279).*

7.177.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread.

7.177.2 Macro Definition Documentation

7.177.2.1 DDS_PUBLICATION_PRIORITY_UNDEFINED

```
#define DDS_PUBLICATION_PRIORITY_UNDEFINED
```

Initializer value for **DDS_PublishModeQosPolicy::priority** (p. 1282) and/or **DDS_ChannelSettings_t::priority** (p. 823).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the lowest possible value. For muilti-channel data writers, if either the data writer or channel priority is NOT set to this value, then the publication priority of the entity will be set to the defined value.

7.177.2.2 DDS_PUBLICATION_PRIORITY_AUTOMATIC

```
#define DDS_PUBLICATION_PRIORITY_AUTOMATIC
```

Constant value for **DDS_PublishModeQosPolicy::priority** (p. 1282) and/or **DDS_ChannelSettings_t::priority** (p. 823).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the largest priority value of any sample currently queued for publication by the data writer or data writer channel.

7.177.3 Enumeration Type Documentation

7.177.3.1 DDS_PublishModeQosPolicyKind

```
enum DDS_PublishModeQosPolicyKind
```

Kinds of publishing mode.

QoS:

DDS_PublishModeQosPolicy (p. 1279)

Enumerator

DDS_SYNCHRONOUS_PUBLISH_MODE_QOS	Indicates to send data synchronously. If **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) is **DDS_BOOLEAN_TRUE** (p. 513), data is sent immediately in the context of **FooDataWriter::write** (p. 1951). As data is sent immediately in the context of the user thread, no flow control is applied. **See also** **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) **[default]** for **DDSDataWriter** (p. 1589)
DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS	Indicates to send data asynchronously. Configures the **DDSDataWriter** (p. 1589) to delegate the task of data transmission to a separate publishing thread. The **FooDataWriter::write** (p. 1951) call does not send the data, but instead schedules the data to be sent later by its associated **DDSPublisher** (p. 1818). Each **DDSPublisher** (p. 1818) uses its dedicated publishing thread (**DDS_PublisherQos::asynchronous_publisher** (p. 1279)) to send data for all its asynchronous DataWriters. For each asynchronous DataWriter, the associated **DDSFlowController** (p. 1736) determines when the publishing thread is allowed to send the data. **DDSDataWriter::wait_for_asynchronous_publishing** (p. 1603) and **DDSPublisher::wait_for_asynchronous_publishing** (p. 1835) enable you to determine when the data has actually been sent. **See also** **DDSFlowController** (p. 1736) **DDS_HistoryQosPolicy** (p. 1162) **DDSDataWriter::wait_for_asynchronous_publishing** (p. 1603) **DDSPublisher::wait_for_asynchronous_publishing** (p. 1835) **NDDS_Transport_Property_t::gather_send_buffer_count_max** (p. 2047)

7.177.4 Variable Documentation

7.177.4.1 DDS_PUBLISHMODE_QOS_POLICY_NAME

```
const char* const DDS_PUBLISHMODE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_PublishModeQosPolicy** (p. 1279).

7.178 READER_DATA_LIFECYCLE

<<***spec***>> *(p. 209)* Controls how a DataReader manages the lifecycle of the data that it has received.

Classes

- struct **DDS_ReaderDataLifecycleQosPolicy**
  <<***spec***>> *(p. 209) Controls how a DataReader manages the lifecycle of the data that it has received.*

Variables

- const char *const **DDS_READERDATALIFECYCLE_QOS_POLICY_NAME**
  *Stringified human-readable name for **DDS_ReaderDataLifecycleQosPolicy** (p. 1289).*

7.178.1 Detailed Description

<<***spec***>> *(p. 209)* Controls how a DataReader manages the lifecycle of the data that it has received.

7.178.2 Variable Documentation

7.178.2.1 DDS_READERDATALIFECYCLE_QOS_POLICY_NAME

```
const char* const DDS_READERDATALIFECYCLE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ReaderDataLifecycleQosPolicy** (p. 1289).

7.179 RECEIVER_POOL

<<***extension***>> *(p. 213)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).

Classes

- struct **DDS_ReceiverPoolQosPolicy**

  <<***extension***>> *(p. 213) Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).*

Variables

- const **DDS_Long DDS_LENGTH_AUTO**

  A special value indicating that the actual value will be automatically resolved.
- const char *const **DDS_RECEIVERPOOL_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_ReceiverPoolQosPolicy** (p. 1293).*

7.179.1 Detailed Description

<<***extension***>> *(p. 213)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).

7.179.2 Variable Documentation

7.179.2.1 DDS_LENGTH_AUTO

```
const  DDS_Long DDS_LENGTH_AUTO  [extern]
```

A special value indicating that the actual value will be automatically resolved.

7.179.2.2 DDS_RECEIVERPOOL_QOS_POLICY_NAME

```
const char* const DDS_RECEIVERPOOL_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ReceiverPoolQosPolicy** (p. 1293).

7.180 RELIABILITY

<<***spec***>> *(p. 209)* Indicates the level of reliability offered/requested by RTI Connext.

Classes

- struct **DDS_ReliabilityQosPolicy**

  *<<**extension**>> (p. 213) <<**spec**>> (p. 209) Indicates the level of reliability offered/requested by RTI Connext.*

Enumerations

- enum **DDS_ReliabilityQosPolicyKind** {
  DDS_BEST_EFFORT_RELIABILITY_QOS ,
  DDS_RELIABLE_RELIABILITY_QOS }

  Kinds of reliability.
- enum **DDS_ReliabilityQosPolicyAcknowledgmentModeKind** {
  DDS_PROTOCOL_ACKNOWLEDGMENT_MODE ,
  DDS_APPLICATION_AUTO_ACKNOWLEDGMENT_MODE ,
  DDS_APPLICATION_ORDERED_ACKNOWLEDGMENT_MODE ,
  DDS_APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE }

  *<<**extension**>> (p. 213) Kinds of acknowledgment.*
- enum **DDS_InstanceStateConsistencyKind** {
  DDS_NO_RECOVER_INSTANCE_STATE_CONSISTENCY ,
  DDS_RECOVER_INSTANCE_STATE_CONSISTENCY }

  *<<**extension**>> (p. 213) Whether instance state consistency is enabled.*

Variables

- const char *const **DDS_RELIABILITY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_ReliabilityQosPolicy** (p. 1295).*

7.180.1 Detailed Description

*<<**spec**>> (p. 209)* Indicates the level of reliability offered/requested by RTI Connext.

7.180.2 Enumeration Type Documentation

7.180.2.1 DDS_ReliabilityQosPolicyKind

`enum` **`DDS_ReliabilityQosPolicyKind`**

Kinds of reliability.

QoS:

DDS_ReliabilityQosPolicy (p. 1295)

Enumerator

DDS_BEST_EFFORT_RELIABILITY_QOS	Indicates that it is acceptable to not retry propagation of any samples. Presumably new values for the samples are generated often enough that it is not necessary to re-send or acknowledge any samples. **[default]** for **DDSDataReader** (p. 1556) and **DDSTopic** (p. 1885)
DDS_RELIABLE_RELIABILITY_QOS	Specifies RTI Connext will attempt to deliver all samples in its history. Missed samples may be retried. In steady-state (no modifications communicated via the **DDSDataWriter** (p. 1589)), RTI Connext guarantees that all samples in the **DDSDataWriter** (p. 1589) history will eventually be delivered to all the **DDSDataReader** (p. 1556) objects (subject to timeouts that indicate loss of communication with a particular **DDSSubscriber** (p. 1860)). Outside steady state, the **HISTORY** (p. 603) and **RESOURCE_LIMITS** (p. 635) policies will determine how samples become part of the history and whether samples can be discarded from it. **[default]** for **DDSDataWriter** (p. 1589)

7.180.2.2 DDS_ReliabilityQosPolicyAcknowledgmentModeKind

`enum` **`DDS_ReliabilityQosPolicyAcknowledgmentModeKind`**

<<***extension***>> *(p. 213)* Kinds of acknowledgment.

QoS:

DDS_ReliabilityQosPolicy (p. 1295)

Enumerator

DDS_PROTOCOL_ACKNOWLEDGMENT_MODE	Samples are acknowledged by RTPS protocol. Samples are acknowledged according to the Real-Time Publish-Subscribe (RTPS) interoperability protocol.
DDS_APPLICATION_AUTO_ACKNOWLEDGMENT_↩ MODE	Samples are acknowledged automatically after a subscribing application has accessed them. A sample received by a **FooDataReader** (p. 1917) is acknowledged after the subscribing application accesses it, either through calling **FooDataReader::take** (p. 1920) or **FooDataReader::read** (p. 1919) on the DDS sample. If the read or take operation loans the samples, the acknowledgment is done after **FooDataReader::return_loan** (p. 1940) is called. Otherwise, for read or take operations that make a copy, acknowledgment is done after the read or take operations are executed.

Enumerator

DDS_APPLICATION_EXPLICIT_↩ ACKNOWLEDGMENT_MODE	Samples are acknowledged after the subscribing application explicitly calls acknowledge on the samples. Samples received by a **DDSDataReader** (p. 1556) are explicitly acknowledged by the subscribing application, after it calls either **DDSDataReader::acknowledge_all** (p. 1565) or **DDSDataReader::acknowledge_sample** (p. 1564).

7.180.2.3 DDS_InstanceStateConsistencyKind

enum **DDS_InstanceStateConsistencyKind**

<<***extension***>> *(p. 213)* Whether instance state consistency is enabled.

QoS:

DDS_ReliabilityQosPolicy (p. 1295)

Enumerator

DDS_NO_RECOVER_INSTANCE_STATE_↩ CONSISTENCY	Instance state is not restored on a DataReader after reconnecting with a DataWriter until the DataWriter sends a new sample. When DataReaders rediscover DataWriters, they will not request updated instance state data. DataWriters always provide instance state data alongside each sample update regardless of this setting.
DDS_RECOVER_INSTANCE_STATE_CONSISTENCY	Instance state is restored on the DataReader after it reconnects with a DataWriter that has regained liveliness, even before the DataWriter sends a new sample. When DataReaders rediscover DataWriters, they will request updated instance state data. DataWriters will respond to requests for updated instance state data and publish updates on a builtin channel. DataWriters still provide instance state data alongside each sample update regardless of this setting. The following limitation applies to using RECOVER_INSTANCE_STATE_CONSISTENCY: If the **DDS_DestinationOrderQosPolicyKind** (p. 585) is set to **DDS_BY_SOURCE_TIMESTAMP_**↩ **DESTINATIONORDER_QOS** (p. 585), RECOVER_INSTANCE_STATE_CONSISTENCY can only be used if scope is set to **DDS_INSTANCE_**↩ **SCOPE_DESTINATIONORDER_QOS** (p. 586) (the default).

7.180.3 Variable Documentation

7.180.3.1 DDS_RELIABILITY_QOS_POLICY_NAME

```
const char* const DDS_RELIABILITY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ReliabilityQosPolicy** (p. 1295).

7.181 RESOURCE_LIMITS

*<<**spec**>> (p. 209)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

Classes

- struct **DDS_ResourceLimitsQosPolicy**

  *<<**spec**>> (p. 209) Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.*

Variables

- const char *const **DDS_RESOURCELIMITS_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_ResourceLimitsQosPolicy** (p. 1308).*
- const **DDS_Long DDS_LENGTH_UNLIMITED**

  A special value indicating an unlimited quantity.

7.181.1 Detailed Description

*<<**spec**>> (p. 209)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

7.181.2 Variable Documentation

7.181.2.1 DDS_RESOURCELIMITS_QOS_POLICY_NAME

```
const char* const DDS_RESOURCELIMITS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ResourceLimitsQosPolicy** (p. 1308).

7.181.2.2 DDS_LENGTH_UNLIMITED

```
const  DDS_Long DDS_LENGTH_UNLIMITED  [extern]
```

A special value indicating an unlimited quantity.

Examples

HelloWorld_subscriber.cxx.

Referenced by **connext::Requester< TReq, TRep >::read_replies()**, and **connext::Requester< TReq, TRep >::take_replies()**.

7.182 SERVICE

*<<**extension**>> (p. 213)* Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.

Classes

- struct **DDS_ServiceQosPolicy**

  *<<**extension**>> (p. 213) Service or tool associated with a DDS entity.*

Enumerations

- enum **DDS_ServiceQosPolicyKind** {
  DDS_NO_SERVICE_QOS ,
  DDS_PERSISTENCE_SERVICE_QOS ,
  DDS_QUEUING_SERVICE_QOS ,
  DDS_ROUTING_SERVICE_QOS ,
  DDS_RECORDING_SERVICE_QOS ,
  DDS_REPLAY_SERVICE_QOS ,
  DDS_DATABASE_INTEGRATION_SERVICE_QOS ,
  DDS_WEB_INTEGRATION_SERVICE_QOS ,
  DDS_OBSERVABILITY_COLLECTOR_SERVICE_QOS ,
  DDS_ADMIN_CONSOLE_SERVICE_QOS }

  Kinds of service.

Variables

- const char ∗const **DDS_SERVICE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_ServiceQosPolicy** (p. 1358).*

7.182.1 Detailed Description

<<***extension***>> *(p. 213)* Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.

7.182.2 Enumeration Type Documentation

7.182.2.1 DDS_ServiceQosPolicyKind

enum **DDS_ServiceQosPolicyKind**

Kinds of service.

QoS:

DDS_ServiceQosPolicy (p. 1358)

Enumerator

DDS_NO_SERVICE_QOS	There is no service associated with the entity.
DDS_PERSISTENCE_SERVICE_QOS	The entity is an entity created by RTI Persistence Service.
DDS_QUEUING_SERVICE_QOS	The entity is an entity created by RTI Queuing Service.
DDS_ROUTING_SERVICE_QOS	The entity is an entity created by RTI Routing Service.
DDS_RECORDING_SERVICE_QOS	The entity is an entity created by RTI Recording Service.
DDS_REPLAY_SERVICE_QOS	The entity is an entity created by RTI Replay Service.
DDS_DATABASE_INTEGRATION_SERVICE_QOS	The entity is an entity created by RTI Database Integration Service.
DDS_WEB_INTEGRATION_SERVICE_QOS	The entity is an entity created by RTI Web Integration Service.
DDS_OBSERVABILITY_COLLECTOR_SERVICE_QOS	The entity is an entity created by RTI Observability Collector Service.
DDS_ADMIN_CONSOLE_SERVICE_QOS	The entity is an entity created by RTI Admin Console.

7.182.3 Variable Documentation

7.182.3.1 DDS_SERVICE_QOS_POLICY_NAME

```
const char* const DDS_SERVICE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_ServiceQosPolicy** (p. 1358).

7.183 SYSTEM_RESOURCE_LIMITS

<<***extension***>> *(p. 213)* Configures DomainParticipant-independent resources used by RTI Connext.

Classes

- struct **DDS_SystemResourceLimitsQosPolicy**

  <<***extension***>> (p. *213) Configures* ***DDSDomainParticipant*** *(p. 1619)-independent resources used by RTI Connext. Mainly used to change the maximum number of* ***DDSDomainParticipant*** *(p. 1619) entities that can be created within a single process (address space).*

Variables

- const char ∗const **DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_NAME**

  Stringified human-readable name for ***DDS_SystemResourceLimitsQosPolicy*** *(p. 1382).*

7.183.1 Detailed Description

<<***extension***>> *(p. 213)* Configures DomainParticipant-independent resources used by RTI Connext.

7.183.2 Variable Documentation

7.183.2.1 DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_NAME

```
const char* const DDS_SYSTEMRESOURCELIMITS_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_SystemResourceLimitsQosPolicy** (p. 1382).

7.184 TIME_BASED_FILTER

<<***spec***>> *(p. 209)* Filter that allows a **DDSDataReader** (p. 1556) to specify that it is interested only in (potentially) a subset of the values of the data.

Classes

- struct **DDS_TimeBasedFilterQosPolicy**

  <<***spec***>> *(p. 209) Filter that allows a **DDSDataReader** (p. 1556) to specify that it is interested only in (potentially) a subset of the values of the data.*

Variables

- const char ∗const **DDS_TIMEBASEDFILTER_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TimeBasedFilterQosPolicy** (p. 1389).*

7.184.1 Detailed Description

<<***spec***>> *(p. 209)* Filter that allows a **DDSDataReader** (p. 1556) to specify that it is interested only in (potentially) a subset of the values of the data.

7.184.2 Variable Documentation

7.184.2.1 DDS_TIMEBASEDFILTER_QOS_POLICY_NAME

```
const char* const DDS_TIMEBASEDFILTER_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TimeBasedFilterQosPolicy** (p. 1389).

7.185 TOPIC_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

Classes

- struct **DDS_TopicDataQosPolicy**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.*

Variables

- const char ∗const **DDS_TOPICDATA_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TopicDataQosPolicy** (p. 1396).*

7.185.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

7.185.2 Variable Documentation

7.185.2.1 DDS_TOPICDATA_QOS_POLICY_NAME

```
const char* const DDS_TOPICDATA_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TopicDataQosPolicy** (p. 1396).

7.186 TOPIC_QUERY_DISPATCH

<<***extension***>> *(p. 213)* Configures the ability of a **DDSDataWriter** (p. 1589) to publish historical samples

Classes

- struct **DDS_TopicQueryDispatchQosPolicy**

  <<***extension***>> *(p. 213) Configures the ability of a **DDSDataWriter** (p. 1589) to publish samples in response to a **DDSTopicQuery** (p. 1895)*

Variables

- const char ∗const **DDS_TOPICQUERYDISPATCH_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TopicQueryDispatchQosPolicy** (p. 1404).*

7.186.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the ability of a **DDSDataWriter** (p. 1589) to publish historical samples

7.186.2 Variable Documentation

7.186.2.1 DDS_TOPICQUERYDISPATCH_QOS_POLICY_NAME

```
const char* const DDS_TOPICQUERYDISPATCH_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TopicQueryDispatchQosPolicy** (p. 1404).

7.187 TRANSPORT_BUILTIN

<<***extension***>> *(p. 213)* Specifies which built-in transports are used.

Classes

- struct **DDS_TransportBuiltinQosPolicy**
  <<***extension***>> *(p. 213) Specifies which built-in transports are used.*

Macros

- #define **DDS_TRANSPORTBUILTIN_MASK_NONE**
  *None of the built-in transports will be registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.*
- #define **DDS_TRANSPORTBUILTIN_MASK_DEFAULT**
  *The default value of **DDS_TransportBuiltinQosPolicy::mask** (p. 1408).*
- #define **DDS_TRANSPORTBUILTIN_MASK_ALL**
  *All the available built-in transports are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.*

Typedefs

- typedef **DDS_Long** **DDS_TransportBuiltinKindMask**
  *A mask of **DDS_TransportBuiltinKind** (p. 643) bits.*

Enumerations

- enum **DDS_TransportBuiltinKind** {
  DDS_TRANSPORTBUILTIN_UDPv4 ,
  DDS_TRANSPORTBUILTIN_SHMEM ,
  DDS_TRANSPORTBUILTIN_INTRA = 0x00000001 << 2 ,
  DDS_TRANSPORTBUILTIN_UDPv6 ,
  DDS_TRANSPORTBUILTIN_UDPv4_WAN }
  Built-in transport kind.

Variables

- const char ∗const **DDS_TRANSPORTBUILTIN_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportBuiltinQosPolicy** (p. 1408).*
- const char ∗const **DDS_TRANSPORTBUILTIN_SHMEM_ALIAS**

  Alias name for the shared memory built-in transport: "builtin.shmem".
- const char ∗const **DDS_TRANSPORTBUILTIN_UDPv4_ALIAS**

  Alias name for the UDPv4 built-in transport: "builtin.udpv4".
- const char ∗const **DDS_TRANSPORTBUILTIN_UDPv4_WAN_ALIAS**

  Alias name for the UDPv4 asymmetric built-in transport: "builtin.udpv4_wan".
- const char ∗const **DDS_TRANSPORTBUILTIN_UDPv6_ALIAS**

  Alias name for the UDPv6 built-in transport: "builtin.udpv6".

7.187.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies which built-in transports are used.

See also

Changing the automatically registered built-in transports (p. 409)

7.187.2 Macro Definition Documentation

7.187.2.1 DDS_TRANSPORTBUILTIN_MASK_NONE

```
#define DDS_TRANSPORTBUILTIN_MASK_NONE
```

None of the built-in transports will be registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.

The user must explictly register transports using **NDDSTransportSupport::register_transport** (p. 2104).

See also

DDS_TransportBuiltinKindMask (p. 643)

7.187.2.2 DDS_TRANSPORTBUILTIN_MASK_DEFAULT

```
#define DDS_TRANSPORTBUILTIN_MASK_DEFAULT
```

The default value of **DDS_TransportBuiltinQosPolicy::mask** (p. 1408).

The set of builtin transport plugins that will be automatically registered with the participant by default. The user can register additional transports using **NDDSTransportSupport::register_transport** (p. 2104).

[default] [UDPv4|Shmem]

See also

DDS_TransportBuiltinKindMask (p. 643)

7.187.2.3 DDS_TRANSPORTBUILTIN_MASK_ALL

```
#define DDS_TRANSPORTBUILTIN_MASK_ALL
```

All the available built-in transports are registered automatically when the **DDSDomainParticipant** (p. 1619) is enabled.

See also

DDS_TransportBuiltinKindMask (p. 643)

7.187.3 Typedef Documentation

7.187.3.1 DDS_TransportBuiltinKindMask

```
typedef DDS_Long DDS_TransportBuiltinKindMask
```

A mask of **DDS_TransportBuiltinKind** (p. 643) bits.

QoS:

DDS_TransportBuiltinQosPolicy (p. 1408)

7.187.4 Enumeration Type Documentation

7.187.4.1 DDS_TransportBuiltinKind

```
enum DDS_TransportBuiltinKind
```

Built-in transport kind.

See also

DDS_TransportBuiltinKindMask (p. 643)

Enumerator

DDS_TRANSPORTBUILTIN_UDPv4	Built-in UDPv4 transport, ::**UDPv4 Transport** (p. 462).
DDS_TRANSPORTBUILTIN_SHMEM	Built-in shared memory transport, ::**Shared Memory Transport** (p. 456).
DDS_TRANSPORTBUILTIN_UDPv6	Built-in UDPv6 transport, ::**UDPv6 Transport** (p. 479).
DDS_TRANSPORTBUILTIN_UDPv4_WAN	Built-in UDPv4 asymmetric transport, ::**Real-Time WAN Transport** (p. 472).

7.187.5 Variable Documentation

7.187.5.1 DDS_TRANSPORTBUILTIN_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTBUILTIN_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportBuiltinQosPolicy** (p. 1408).

7.187.5.2 DDS_TRANSPORTBUILTIN_SHMEM_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_SHMEM_ALIAS  [extern]
```

Alias name for the shared memory built-in transport: "builtin.shmem".

7.187.5.3 DDS_TRANSPORTBUILTIN_UDPv4_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv4_ALIAS  [extern]
```

Alias name for the UDPv4 built-in transport: "builtin.udpv4".

7.187.5.4 DDS_TRANSPORTBUILTIN_UDPv4_WAN_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv4_WAN_ALIAS  [extern]
```

Alias name for the UDPv4 asymmetric built-in transport: "builtin.udpv4_wan".

7.187.5.5 DDS_TRANSPORTBUILTIN_UDPv6_ALIAS

```
const char* const DDS_TRANSPORTBUILTIN_UDPv6_ALIAS  [extern]
```

Alias name for the UDPv6 built-in transport: "builtin.udpv6".

7.188 TRANSPORT_MULTICAST

<<***extension***>> *(p. 213)* Specifies the multicast address on which a **DDSDataReader** (p. 1556) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1619) level) transports with which to receive the multicast data.

Modules

- **Multicast Settings**

  <<***extension***>> *(p. 213) Multicast communication settings.*
- **Multicast Mapping**

  <<***extension***>> *(p. 213) Multicast communication mapping.*

Classes

- struct **DDS_TransportMulticastQosPolicy**

  <<***extension***>> *(p. 213) Specifies the multicast address on which a **DDSDataReader** (p. 1556) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **DDSDomainParticipant** (p. 1619) level) transports with which to receive the multicast data.*

Enumerations

- enum **DDS_TransportMulticastQosPolicyKind** {
  DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS ,
  DDS_UNICAST_ONLY_TRANSPORT_MULTICAST_QOS }

  Transport Multicast Policy Kind.

Variables

- const char ∗const **DDS_TRANSPORTMULTICAST_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportMulticastQosPolicy** (p. 1415).*

7.188.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the multicast address on which a **DDSDataReader** (p. 1556) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **DDSDomainParticipant** (p. 1619) level) transports with which to receive the multicast data.

7.188.2 Enumeration Type Documentation

7.188.2.1 DDS_TransportMulticastQosPolicyKind

```
enum DDS_TransportMulticastQosPolicyKind
```

Transport Multicast Policy Kind.

See also

DDS_TransportMulticastQosPolicy (p. 1415)

Enumerator

DDS_AUTOMATIC_TRANSPORT_MULTICAST_QOS	Selects the multicast address automatically. NOTE: This setting is required when using the **DDS_TransportMulticastMappingQosPolicy** (p. 1413).
DDS_UNICAST_ONLY_TRANSPORT_MULTICAST_↩ QOS	Selects a unicast-only mode.

7.188.3 Variable Documentation

7.188.3.1 DDS_TRANSPORTMULTICAST_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTMULTICAST_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportMulticastQosPolicy** (p. 1415).

7.189 TRANSPORT_MULTICAST_MAPPING

<<***extension***>> *(p. 213)* Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

Classes

- struct **DDS_TransportMulticastMappingQosPolicy**

  <<***extension***>> *(p. 213) Specifies a list of topic_expressions and multicast addresses that can be used by an Entity with a specific topic name to receive data.*

Variables

- const char ∗const **DDS_TRANSPORTMULTICASTMAPPING_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportMulticastMappingQosPolicy** (p. 1413).*

7.189.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

7.189.2 Variable Documentation

7.189.2.1 DDS_TRANSPORTMULTICASTMAPPING_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTMULTICASTMAPPING_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportMulticastMappingQosPolicy** (p. 1413).

7.190 TRANSPORT_PRIORITY

<<***spec***>> *(p. 209)* This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

Classes

- struct **DDS_TransportPriorityQosPolicy**

  *<<**spec**>> (p. 209) This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities.*

Variables

- const char ∗const **DDS_TRANSPORTPRIORITY_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportPriorityQosPolicy** (p. 1419).*

7.190.1 Detailed Description

<<***spec***>> *(p. 209)* This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

7.190.2 Variable Documentation

7.190.2.1 DDS_TRANSPORTPRIORITY_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTPRIORITY_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportPriorityQosPolicy** (p. 1419).

7.191 TRANSPORT_SELECTION

<<***extension***>> *(p. 213)* Specifies the physical transports that a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) may use to send or receive data.

Classes

- struct **DDS_TransportSelectionQosPolicy**

  <<***extension***>> *(p. 213) Specifies the physical transports a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) may use to send or receive data.*

Variables

- const char *const **DDS_TRANSPORTSELECTION_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportSelectionQosPolicy** (p. 1421).*

7.191.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the physical transports that a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) may use to send or receive data.

7.191.2 Variable Documentation

7.191.2.1 DDS_TRANSPORTSELECTION_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTSELECTION_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportSelectionQosPolicy** (p. 1421).

7.192 TRANSPORT_UNICAST

<<***extension***>> *(p. 213)* Specifies a subset of transports and a port number that can be used by an Entity to receive data.

Modules

- **Unicast Settings**

  <<***extension***>> *(p. 213) Unicast communication settings.*

Classes

- struct **DDS_TransportUnicastQosPolicy**

  <<***extension***>> *(p. 213) Specifies a subset of transports and a port number that can be used by an Entity to receive data.*

Variables

- const char ∗const **DDS_TRANSPORTUNICAST_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TransportUnicastQosPolicy** (p. 1422).*

7.192.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies a subset of transports and a port number that can be used by an Entity to receive data.

7.192.2 Variable Documentation

7.192.2.1 DDS_TRANSPORTUNICAST_QOS_POLICY_NAME

```
const char* const DDS_TRANSPORTUNICAST_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TransportUnicastQosPolicy** (p. 1422).

7.193 TYPE_CONSISTENCY_ENFORCEMENT

<<***spec***>> *(p. 209)* Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

Classes

- struct **DDS_TypeConsistencyEnforcementQosPolicy**

  *<<**spec**>> (p. 209) Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.*

Enumerations

- enum **DDS_TypeConsistencyKind** {
  DDS_DISALLOW_TYPE_COERCION ,
  DDS_ALLOW_TYPE_COERCION ,
  DDS_AUTO_TYPE_COERCION }

  Kinds of type consistency.

Variables

- const char *const **DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TypeConsistencyEnforcementQosPolicy** (p. 1493).*

7.193.1 Detailed Description

<<**spec**>> (p. 209) Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

7.193.2 Enumeration Type Documentation

7.193.2.1 DDS_TypeConsistencyKind

`enum` **DDS_TypeConsistencyKind**

Kinds of type consistency.

QoS:

DDS_TypeConsistencyEnforcementQosPolicy (p. 1493)

Enumerator

DDS_DISALLOW_TYPE_COERCION	The DataWriter and the DataReader must support the same data type in order for them to communicate. This is the degree of type consistency enforcement required by the OMG DDS Specification prior to the OMG Extensible and Dynamic Topic Types for DDS Specification.

DDS_ALLOW_TYPE_COERCION	The DataWriter and the DataReader need not support the same data type in order for them to communicate as long as the DataReader's type is assignable from the DataWriter's type. For example, the following two extensible types will be assignable to each other since MyDerivedType contains all the members of MyBaseType (member_1) plus some additional elements (member_2).
	`struct MyBaseType { long member_1; };`
	`struct MyDerivedType: MyBaseType { long member_2; };`
	Even if MyDerivedType was not explicitly inheriting from MyBaseType the types would still be assignable. For example:
	`struct MyBaseType { long member_1; };`
	`struct MyDerivedType { long member_1; long member_2; };`
	For additional information on type assignability refer to the OMG Extensible and Dynamic Topic Types for DDS Specification.

DDS_AUTO_TYPE_COERCION	This AUTO value will be applied as **DDS_DISALLOW_TYPE_COERCION** (p. 651) when the data type is annotated with @transfer_mode(SHMEM_REF) and the @language_binding is PLAIN (default) while using C, Traditional C++, or Modern C++ APIs. In all other cases, this AUTO value will be applied as **DDS_ALLOW_TYPE_COERCION** (p. 651). **[default]**

7.193.3 Variable Documentation

7.193.3.1 DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_NAME

```
const char* const DDS_TYPE_CONSISTENCY_ENFORCEMENT_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TypeConsistencyEnforcementQosPolicy** (p. 1493).

7.194 TYPESUPPORT

[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Allows you to attach application-specific values to a **DDSData↩ Writer** (p. 1589) or **DDSDataReader** (p. 1556), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

Classes

- struct **DDS_TypeSupportQosPolicy**

  [DEPRECATED] (p. ***384***) *<<**extension**>> (p. 213) Allows you to attach application-specific values to a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.*

Enumerations

- enum **DDS_CdrPaddingKind** {
  DDS_ZERO_CDR_PADDING ,
  DDS_NOT_SET_CDR_PADDING ,
  DDS_AUTO_CDR_PADDING }

  The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

Variables

- const char ∗const **DDS_TYPESUPPORT_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_TypeSupportQosPolicy** (p. 1499).*

7.194.1 Detailed Description

[DEPRECATED] (p. **384**) *<<**extension**>> (p. 213)* Allows you to attach application-specific values to a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

7.194.2 Enumeration Type Documentation

7.194.2.1 DDS_CdrPaddingKind

enum **DDS_CdrPaddingKind**

The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

Enumerator

DDS_ZERO_CDR_PADDING	Padding bytes will be set to zeros during CDR serialization.
DDS_NOT_SET_CDR_PADDING	Padding bytes will not be set to any value during CDR serialization.
DDS_AUTO_CDR_PADDING	When set on a **DDSDomainParticipant** (p. 1619) the default behavior is **DDS_NOT_SET_CDR_PADDING** (p. 652). When set on a **DDSDataWriter** (p. 1589) or **DDSDataReader** (p. 1556) the behavior is to inherit the value from the **DDSDomainParticipant** (p. 1619).

7.194.3 Variable Documentation

7.194.3.1 DDS_TYPESUPPORT_QOS_POLICY_NAME

```
const char* const DDS_TYPESUPPORT_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_TypeSupportQosPolicy** (p. 1499).

7.195 USER_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

Classes

- struct **DDS_UserDataQosPolicy**
  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.*

Variables

- const char *const **DDS_USERDATA_QOS_POLICY_NAME**
  *Stringified human-readable name for **DDS_UserDataQosPolicy** (p. 1504).*

7.195.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 61) during discovery.

7.195.2 Variable Documentation

7.195.2.1 DDS_USERDATA_QOS_POLICY_NAME

```
const char* const DDS_USERDATA_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_UserDataQosPolicy** (p. 1504).

7.196 WRITER_DATA_LIFECYCLE

<<***spec***>> *(p. 209)* Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

Classes

- struct **DDS_WriterDataLifecycleQosPolicy**

  <<***spec***>> *(p. 209) Controls how a **DDSDataWriter** (p. 1589) handles the lifecycle of the instances (keys) that it is registered to manage.*

Variables

- const char ∗const **DDS_WRITERDATALIFECYCLE_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_WriterDataLifecycleQosPolicy** (p. 1524).*

7.196.1 Detailed Description

<<***spec***>> *(p. 209)* Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

7.196.2 Variable Documentation

7.196.2.1 DDS_WRITERDATALIFECYCLE_QOS_POLICY_NAME

```
const char* const DDS_WRITERDATALIFECYCLE_QOS_POLICY_NAME  [extern]
```

Stringified human-readable name for **DDS_WriterDataLifecycleQosPolicy** (p. 1524).

7.197 WIRE_PROTOCOL

<<***extension***>> *(p. 213)* Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1619).

Classes

- struct **DDS_RtpsWellKnownPorts_t**

  <<***extension***>> *(p. 213) RTPS well-known port mapping configuration.*
- struct **DDS_WireProtocolQosPolicy**

  DDS_RTPS_RESERVED_PORT_USER_UNICAST = 0x0001 << 2 ,
  DDS_RTPS_RESERVED_PORT_USER_MULTICAST = 0x0001 << 3 }

  RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable.
- enum **DDS_WireProtocolQosPolicyAutoKind** {
  DDS_RTPS_AUTO_ID_FROM_IP = 0 ,
  DDS_RTPS_AUTO_ID_FROM_MAC = 1 ,
  DDS_RTPS_AUTO_ID_FROM_UUID = 2 }

  Mechanism to automatically calculate the GUID prefix.

Variables

- const struct **DDS_RtpsWellKnownPorts_t DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_↩ KNOWN_PORTS**

  Assign to use well-known port mappings which are compatible with previous versions of the RTI Connext middleware.
- const struct **DDS_RtpsWellKnownPorts_t DDS_INTEROPERABLE_RTPS_WELL_KNOWN_PORTS**

  Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.
- const char *const **DDS_WIREPROTOCOL_QOS_POLICY_NAME**

  *Stringified human-readable name for **DDS_WireProtocolQosPolicy** (p. 1511).*

7.197.1 Detailed Description

<<***extension***>> *(p. 213)* Specifies the wire protocol related attributes for the **DDSDomainParticipant** (p. 1619).

7.197.2 Macro Definition Documentation

7.197.2.1 DDS_RTPS_RESERVED_PORT_MASK_DEFAULT

```
#define DDS_RTPS_RESERVED_PORT_MASK_DEFAULT
```

Value:

```
((DDS_RtpsReservedPortKindMask) DDS_RTPS_RESERVED_PORT_BUILTIN_UNICAST \
 | DDS_RTPS_RESERVED_PORT_BUILTIN_MULTICAST | DDS_RTPS_RESERVED_PORT_USER_UNICAST)
```

The default value of **DDS_WireProtocolQosPolicy::rtps_reserved_port_mask** (p. 1517).

Most of the ports that may be needed by DDS will be reserved by the transport when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **DDS_RtpsWellKnownPorts_t** (p. 1338) will be detected at this time and the enable operation will fail.

This setting will avoid reserving the **usertraffic** multicast port, which is not actually used unless there are DataReaders that enable multicast but fail to specify a port.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

See also

DDS_RtpsReservedPortKindMask (p. 657)

7.197.2.2 DDS_RTPS_RESERVED_PORT_MASK_NONE

```
#define DDS_RTPS_RESERVED_PORT_MASK_NONE
```

No bits are set.

None of the ports that are needed by DDS will be allocated until they are specifically required. With this value set, automatic participant Id selection will be based on selecting a port for discovery (metatraffic) unicast traffic on a single transport.

See also

DDS_RtpsReservedPortKindMask (p. 657)

7.197.2.3 DDS_RTPS_RESERVED_PORT_MASK_ALL

```
#define DDS_RTPS_RESERVED_PORT_MASK_ALL
```

All bits are set.

All of the ports that may be needed by DDS will be reserved when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **DDS_RtpsWellKnownPorts_t** (p. 1338) will be detected at this time, and the enable operation will fail.

Note that this will also reserve the **usertraffic** multicast port which is not actually used unless there are DataReaders that enable multicast but fail to specify a port. To avoid unnecesary resource usage for these ports, use RTPS_↩ RESERVED_PORT_MASK_DEFAULT.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

DDS_RTPS_RESERVED_PORT_USER_UNICAST	Select the **usertraffic** unicast port.
DDS_RTPS_RESERVED_PORT_USER_MULTICAST	Select the **usertraffic** multicast port.

7.197.4.2 DDS_WireProtocolQosPolicyAutoKind

`enum` **`DDS_WireProtocolQosPolicyAutoKind`**

Mechanism to automatically calculate the GUID prefix.

See also

DDS_WireProtocolQosPolicy::rtps_auto_id_kind (p. 1518)

Enumerator

DDS_RTPS_AUTO_ID_FROM_IP	Builds the GUID prefix using the IPv4 address and process ID. Uses the IPv4 address of the first up-and-running interface of the host machine and the process ID to build the GUID prefix.
DDS_RTPS_AUTO_ID_FROM_MAC	Builds the GUID prefix using the MAC address and process ID. Uses the first 32 bits of the MAC address assigned to the first up-and-running interface and the process ID to build the GUID prefix. Note to Android Users: DDS_RTPS_AUTO_ID_FROM_MAC is not supported in recent versions of Android (6.0 and later).
DDS_RTPS_AUTO_ID_FROM_UUID	Builds the GUID prefix by selecting the UUID-based algorithm (default). This method of generating the GUID prefix does not require having a network interface and is friendly to IP mobility scenarios in which an RTI Connext application may start in a node that does not have a physical network interface enabled.

7.197.5 Variable Documentation

7.197.5.1 DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS

`const struct` **`DDS_RtpsWellKnownPorts_t`** `DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS [extern]`

Assign to use well-known port mappings which are compatible with previous versions of the RTI Connext middleware.

Assign **DDS_WireProtocolQosPolicy::rtps_well_known_ports** (p. 1517) to this value to remain compatible with previous versions of the RTI Connext middleware that used fixed port mappings.

The following are the `rtps_well_known_ports` values for **DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_↩ WELL_KNOWN_PORTS** (p. 658):

`port_base` = 7400
`domain_id_gain` = 10
`participant_id_gain` = 1000
`builtin_multicast_port_offset` = 2
`builtin_unicast_port_offset` = 0
`user_multicast_port_offset` = 1
`user_unicast_port_offset` = 3

These settings are *not* compliant with OMG's DDS Interoperability Wire Protocol. To comply with the specification, please use **DDS_INTEROPERABLE_RTPS_WELL_KNOWN_PORTS** (p. 659).

See also

DDS_WireProtocolQosPolicy::rtps_well_known_ports (p. 1517)

DDS_INTEROPERABLE_RTPS_WELL_KNOWN_PORTS (p. 659)

7.197.5.2 DDS_INTEROPERABLE_RTPS_WELL_KNOWN_PORTS

`const struct` **DDS_RtpsWellKnownPorts_t** `DDS_INTEROPERABLE_RTPS_WELL_KNOWN_PORTS [extern]`

Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

Assign **DDS_WireProtocolQosPolicy::rtps_well_known_ports** (p. 1517) to this value to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

The following are the `rtps_well_known_ports` values for **DDS_INTEROPERABLE_RTPS_WELL_KNOWN_↩ PORTS** (p. 659):

`port_base` = 7400
`domain_id_gain` = 250
`participant_id_gain` = 2
`builtin_multicast_port_offset` = 0
`builtin_unicast_port_offset` = 10
`user_multicast_port_offset` = 1
`user_unicast_port_offset` = 11

Assuming a maximum port number of 65535 (UDPv4), the above settings enable the use of about 230 domains with up to 120 Participants per node per domain.

These settings are *not* backwards compatible with previous versions of the RTI Connext middleware that used fixed port mappings. For backwards compability, please use **DDS_RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN↩ _PORTS** (p. 658).

7.202 NDDS_DISCOVERY_PEERS

Environment variable or a file that specifies the default values of **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) and **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 962) contained in the **DDS_DomainParticipantQos**↩ **::discovery** (p. 974) qos policy.

Environment variable or a file that specifies the default values of **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) and **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 962) contained in the **DDS_DomainParticipantQos**↩ **::discovery** (p. 974) qos policy.

The default value of the **DDS_DomainParticipantQos** (p. 971) is obtained by calling **DDSDomainParticipantFactory**↩ **::get_default_participant_qos()** (p. 1700).

NDDS_DISCOVERY_PEERS specifies the default value of the **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) and **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 962) fields, when the default participant QoS policies have not been explictly set by the user (i.e., **DDSDomainParticipantFactory::set_default_participant_qos()** (p. 1698) has never been called or was called using **DDS_PARTICIPANT_QOS_DEFAULT** (p. 50)).

If NDDS_DISCOVERY_PEERS does *not* contain a multicast address, then the string sequence **DDS_DiscoveryQos**↩ **Policy::multicast_receive_addresses** (p. 962) is cleared and the RTI discovery process will not listen for discovery messages via multicast.

If NDDS_DISCOVERY_PEERS contains one or more multicast addresses, the addresses will be stored in **DDS_**↩ **DiscoveryQosPolicy::multicast_receive_addresses** (p. 962), starting at element 0. They will be stored in the order in which they appear in NDDS_DISCOVERY_PEERS.

Note: IPv4 multicast addresses must have a prefix. Therefore, when using the UDPv6 transport: if there are any IPv4 multicast addresses in the peers list, make sure they have "udpv4://" in front of them (such as udpv4://239.255.0.1).

Note: Currently, RTI Connext will only listen for discovery traffic on the first multicast address (element 0) in **DDS_**↩ **DiscoveryQosPolicy::multicast_receive_addresses** (p. 962).

NDDS_DISCOVERY_PEERS provides a mechanism to dynamically switch the discovery configuration of an RTI Connext application without recompilation. The application programmer is free to not use the default values; instead use values supplied by other means.

NDDS_DISCOVERY_PEERS can be specified either in an environment variable as comma (',') separated "peer descriptors" (see **Peer Descriptor Format** (p. 663)) or in a file. These formats are described below.

7.202.1 Peer Descriptor Format

A **peer descriptor** string specifies a range of participants at a given `locator`. Peer descriptor strings are used in the **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) field and the **DDSDomainParticipant::add_peer()** (p. 1678) operation.

The anatomy of a `peer` descriptor is illustrated below using a UDPv4 transport and a custom "StarFabric" transport example.

A peer descriptor consists of:

optional **Participant ID Limit**. If a simple integer is specified, it indicates the maximum participant ID to be contacted by the RTI Connext discovery mechanism at the given locator. If that integer is enclosed in square brackets (e.g.: [2]) *only* that Participant ID will be used. You can also specify a range in the form of [a-b]: in this case only the Participant IDs in that specific range are contacted. If omitted, a default value of 4 is implied: participant IDs 0,1,2,3, and 4 will be contacted.

- **Locator**. See **Locator Format** (p. 663).

These are separated by the '@' character. The separator may be omitted if a participant ID limit is not explictly specified.

Note that the "participant ID limit" only applies to unicast locators; it is ignored for multicast locators (and therefore should be omitted for multicast peer descriptors).

7.202.1.1 Locator Format

A **locator** string specifies a transport and an address in string format. Locators are used to form peer descriptors. A locator is equivalent to a peer descriptor with the default maximum participant ID.

A locator consists of:

optional **Transport name** (**alias** or class). This identifies the set of transport plugins (**Transport Aliases** (p. 173)) that may be used to parse the `address` portion of the locator. Note that a transport class name is an implicit alias that is used to refer to all the transport plugin instances of that class.

optional **Address**. See **Address Format** (p. 664).

These are separated by the "//:" string. The separator is specified if and only if a transport name is specified.

If a transport name is specified, the address may be omitted; in that case, all the unicast addresses (across all transport plugin instances) associated with the transport class are implied. Thus, a locator string may specify several addresses.

If an address is specified, the transport name and the separator string may be omitted; in that case all the available transport plugins (for the **DDSEntity** (p. 1731)) may be used to parse the address string.

7.202.1.2 Address Format

An **address** string specifies a transport-independent network address that qualifies a **transport-dependent** address string. Addresses are used to form locators. Addresses are also used in **DDS_DiscoveryQosPolicy::multicast_receive_addresses** (p. 962), and **DDS_TransportMulticastSettings_t::receive_address** (p. 1418) fields. An address is equivalent to a locator in which the transport name and separator are omitted.

An address consists of:

optional **Network Address**. An address in IPv4 or IPv6 string notation. If omitted, the network address of the transport is implied (**Transport Network Address** (p. 176)).

optional **Transport Address**. A string that is passed to the transport for processing. The transport maps this string into **NDDS_Transport_Property_t::address_bit_count** (p. 2046) bits. If omitted the network address is used as the fully qualified address.

These are separated by the '#' character. If a separator is specified, it must be followed by a non-empty string which is passed to the transport plugin. If the separator is omitted, it is treated as a transport address with an implicit network address (of the transport plugin). The implicit network address is the address used when registering the transport: e.g, the UDPv4 implicit network address is 0.0.0.0.0.0.0.0.0.0.0.0.

The bits resulting from the transport address string are combined with the network address. The least or most significant **NDDS_Transport_Property_t::address_bit_count** (p. 2046) bits of the network address are ignored and replaced with the transport address. The sign of the **NDDS_Transport_Property_t::address_bit_count** (p. 2046) value determines whether the most significant bits (negative sign) or least significant bits (positive sign) are ignored (**Transport Network Address** (p. 176)).

You can use a hostname instead of a transport address. If a hostname is used, the transport will attempt to resolve the hostname upon enabling the DomainParticipant. Changes to the hostname resolution will only be detected if the DNS tracker is enabled (it is enabled by default); see `Using DNS Tracker to Keep Peer List Updated`, in the Core Libraries User's Manual. For example:

```
<domain_participant_qos>

    <discovery>

        <initial_peers>

            <element>udpv4://myhostname</element>

        </initial_peers>

    </discovery>

</domain_participant_qos>
```

In this example, the DomainParticipant will attempt to resolve "myhostname" using the UDPv4 transport.

7.202.2 NDDS_DISCOVERY_PEERS Environment Variable Format

NDDS_DISCOVERY_PEERS can be specified via an environment variable of the same name, consisting of a sequence of peer descriptors separated by the comma (',') character.

Examples

Multicast (maximum participant ID is irrelevant)

- 239.255.0.1

Default maximum participant ID on localhost

- localhost

Default maximum participant ID on host 192.168.1.1 (IPv4)

- 192.168.1.1

Default maximum participant ID on host FAA0::0 (IPv6)

- FAA0::1

Default maximum participant ID on host himalaya accessed using the "udpv4" transport plugin(s) (IPv4)

- udpv4://himalaya

Default maximum participant ID on localhost using the "udpv4" transport plugin(s) registered at network address FAA0::0

- udpv4://FAA0::0#localhost

Default maximum participant ID on host 0/0/R (StarFabric)

- 0/0/R
- #0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s)

- starfabric://0/0/R
- starfabric://#0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s) registered at network address FAA0::0

- starfabric://FBB0::0#0/0/R

Default maximum participant ID on all unicast addresses accessed via the "starfabric" (StarFabric) transport plugin(s)

- starfabric://

Default maximum participant ID on all unicast addresses accessed via the "shmem" (shared memory) transport plugin(s) registered at network address FCC0::0

- shmem://FCC0::0

Default maximum participant ID on hosts himalaya and gangotri

- himalaya,gangotri

Maximum participant ID of 1 on hosts himalaya and gangotri

- 1@himalaya,1@gangotri

Combinations of above

- 239.255.0.1,localhost,192.168.1.1,0/0/R
- FAA0::1,FAA0::0#localhost,FBB0::0#0/0/R
- udpv4://himalaya,udpv4://FAA0::0#localhost,#0/0/R
- starfabric://0/0/R,starfabric://FBB0::0#0/0/R,shmem://
- starfabric://,shmem://FCC0::0,1@himalaya,1@gangotri

7.202.3 NDDS_DISCOVERY_PEERS File Format

NDDS_DISCOVERY_PEERS can be specified via a file of the same name in the program's current working directory. A NDDS_DISCOVERY_PEERS file would contain a sequence of peer descriptors separated by whitespace or the comma (',') character. The file may also contain comments starting with a semicolon (';') character till the end of the line.

Example:

```
;; NDDS_DISCOVERY_PEERS - Discovery Configuration File
;;
;;
;; NOTE:
;;   1. This file must be in the current working directory, i.e.
;;      in the folder from which the application is launched.
;;
;;   2. This file takes precedence over the environment variable NDDS_DISCOVERY_PEERS
;;
;; Multicast
```

```
239.255.0.1                 ; The default dds discovery multicast address
;; Unicast
localhost,192.168.1.1       ; A comma can be used a separator
FAA0::1  FAA0::0#localhost  ; Whitespace can be used as a separator
1@himalaya                  ; Maximum participant ID of 1 on 'himalaya'
1@gangotri
;; UDPv4
udpv4://himalaya            ; 'himalaya' via 'udpv4' transport plugin(s)
udpv4://FAA0::0#localhost   ; 'localhost' via 'updv4' transport
                            ;  plugin registered at network address FAA0::0
;; Shared Memory
shmem://                    ; All 'shmem' transport plugin(s)
builtin.shmem://            ; The builtin 'shmem' transport plugin
shmem://FCC0::0             ; Shared memory transport plugin registered
                            ;                at network address FCC0::0
;; StarFabric
0/0/R                       ; StarFabric node 0/0/R
starfabric://0/0/R          ; 0/0/R accessed via 'starfabric'
                            ;             transport plugin(s)
starfabric://FBB0::0#0/0/R  ; StarFabric transport plugin registered
                            ;             at network address FBB0::0
starfabric://               ; All 'starfabric' transport plugin(s)
```

7.202.4 NDDS_DISCOVERY_PEERS Precedence

If the current working directory from which the RTI Connext application is launched contains a file called NDDS_↩ DISCOVERY_PEERS, and an environment variable named NDDS_DISCOVERY_PEERS is also defined, the file takes precedence; the environment variable is ignored.

7.202.5 NDDS_DISCOVERY_PEERS Default Value

If NDDS_DISCOVERY_PEERS is not specified (either as a file in the current working directory, or as an environment variable), it implicitly defaults to the following.

```
;; Multicast (only on platforms which allow UDPv4 multicast out of the box)
;;
;; This allows any dds applications anywhere on the local network to
```

```
;; discover each other over UDPv4.
builtin.udpv4://239.255.0.1  ; dds's default discovery multicast address
                             ; This is also the default multicast receive address
;; Unicast - UDPv4 (on all platforms)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over UDP/IPv4.
builtin.udpv4://127.0.0.1
;; Unicast - Shared Memory (only on platforms that support shared memory)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over shared memory.
builtin.shmem://
```

7.202.6 Builtin Transport Class Names

The class names for the builtin transport plugins are:

- `shmem` - ::**Shared Memory Transport** (p. 456)
- `udpv4` - ::**UDPv4 Transport** (p. 462)
- `udpv6` - ::**UDPv6 Transport** (p. 479)

These may be used as the transport names in the **Locator Format** (p. 663).

7.202.7 NDDS_DISCOVERY_PEERS and Local Host Communication

Suppose you want to communicate with other RTI Connext applications on the same host and you are setting NDDS↩ _DISCOVERY_PEERS explicitly (generally in order to use unicast discovery with applications on other hosts).

If the local host platform does not support the shared memory transport, then you can include the name of the local host in the NDDS_DISCOVERY_PEERS list.

If the local host platform supports the shared memory transport, then you can do one of the following:

- Include "shmem://" in the NDDS_DISCOVERY_PEERS list. This will cause shared memory to be used for discovery and data traffic for applications on the same host.

or:

- Include the name of the local host in the NDDS_DISCOVERY_PEERS list and disable the shared memory transport in the **DDS_TransportBuiltinQosPolicy** (p. 1408) of the **DDSDomainParticipant** (p. 1619). This will cause UDP loopback to be used for discovery and data traffic for applications on the same host.

(To check if your platform supports shared memory, see the `Platform Notes`.)

  *<<**interface**>> (p. 433) Abstract base class for all Listener interfaces.*
- class **DDSEntity**

  *<<**interface**>> (p. 433) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.*
- class **DDSDomainEntity**

  *<<**interface**>> (p. 433) Abstract base class for all DDS entities except for the **DDSDomainParticipant** (p. 1619).*

7.203.1 Detailed Description

DDSEntity (p. 1731), **DDSListener** (p. 1794) and related items.

DDSEntity (p. 1731) subtypes are created and destroyed by factory objects. With the exception of **DDSDomain↩ Participant** (p. 1619), whose factory is **DDSDomainParticipantFactory** (p. 1694), all **DDSEntity** (p. 1731) factory objects are themselves **DDSEntity** (p. 1731) subtypes as well.

Important: all **DDSEntity** (p. 1731) delete operations are inherently thread-unsafe. The user must take extreme care that a given **DDSEntity** (p. 1731) is not destroyed in one thread while being used concurrently (including being deleted concurrently) in another thread. An operation's effect in the presence of the concurrent deletion of the operation's target **DDSEntity** (p. 1731) is undefined.

7.204 Conditions and WaitSets

DDSCondition (p. 1544) and **DDSWaitSet** (p. 1897) and related items.

Modules

- **AsyncWaitSet**

  *<<**extension**>> (p. 432) A specialization of **DDSWaitSet** (p. 1897) that provides a mechanism to perform the wait asynchronously and uses a thread pool to dispatch the attached active **DDSCondition** (p. 1544).*

Classes

- struct **DDS_WaitSetProperty_t**

  *<<**extension**>> (p. 432) Specifies the **DDSWaitSet** (p. 1897) behavior for multiple trigger events.*
- struct **DDSConditionSeq**

  *Instantiates **FooSeq** (p. 1965) < **DDSCondition** (p. 1544) >*
- class **DDSConditionHandler**

  *<<**extension**>> (p. 432) <<**interface**>> (p. 433) Handler called by the **DDSCondition::dispatch** (p. 1546).*
- class **DDSCondition**

  *<<**interface**>> (p. 433) Root class for all the conditions that may be attached to a **DDSWaitSet** (p. 1897).*
- class **DDSGuardCondition**

  *<<**interface**>> (p. 433) A specific **DDSCondition** (p. 1544) whose `trigger_value` is completely under the control of the application.*
- class **DDSStatusCondition**

  *<<**interface**>> (p. 433) A specific **DDSCondition** (p. 1544) that is associated with each **DDSEntity** (p. 1731).*
- class **DDSWaitSet**

  *<<**interface**>> (p. 433) Allows an application to wait until one or more of the attached **DDSCondition** (p. 1544) objects has a `trigger_value` of **DDS_BOOLEAN_TRUE** (p. 513) or else until the timeout expires.*

Macros

- #define **DDS_WaitSetProperty_t_INITIALIZER**

  *<<**extension**>> (p. 432) Initializer for new property instances.*

7.204.1 Detailed Description

DDSCondition (p. 1544) and **DDSWaitSet** (p. 1897) and related items.

7.204.2 Macro Definition Documentation

7.204.2.1 DDS_WaitSetProperty_t_INITIALIZER

```
#define DDS_WaitSetProperty_t_INITIALIZER
```

Value:

```
   {  \
   1, DDS_DURATION_INFINITE_VALUE \
}
```

<<***extension***>> *(*p. *432)* Initializer for new property instances.

Default property specifies `max_event_count` = 1 and `max_event_delay` = `DDS_DURATION_INFINITE`

7.205 Cookie

<<***extension***>> *(*p. *432)* Unique identifier for a written data sample

Classes

- struct **DDS_Cookie_t**

  <<***extension***>> *(*p. *432) Sequence of bytes.*
- struct **DDS_CookieSeq**

  Declares IDL `sequence` < ***DDS_Cookie_t*** *(*p. *830)* > .

Functions

- void * **DDS_Cookie_t::to_pointer** () const

  Returns the pointer previously stored in the cookie.

7.205.1 Detailed Description

<<***extension***>> *(*p. *432)* Unique identifier for a written data sample

7.205.2 Function Documentation

7.205.2.1 to_pointer()

```
void * DDS_Cookie_t::to_pointer ( ) const
```

Returns the pointer previously stored in the cookie.

Precondition

The cookie's value was filled with a pointer; otherwise, the value returned may not be a valid memory address.

Returns

The pointer stored in the cookie.

7.206 Sample Flags

<<***extension***>> *(p. 432)* Flags for samples.

Typedefs

- typedef enum **DDS_SampleFlagBits** **DDS_SampleFlagBits**
  Type to identify the sample flags reserved by RTI.
- typedef **DDS_Long** **DDS_SampleFlag**
  A set of flags that can be associated with a sample.

Enumerations

- enum **DDS_SampleFlagBits** {
  DDS_REDELIVERED_SAMPLE ,
  DDS_INTERMEDIATE_REPLY_SEQUENCE_SAMPLE ,
  DDS_REPLICATE_SAMPLE ,
  DDS_LAST_SHARED_READER_QUEUE_SAMPLE ,
  DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE ,
  DDS_INCOMPLETE_SNAPSHOT_TOPIC_QUERY ,
  DDS_WRITER_REMOVED_BATCH_SAMPLE = PRES_WRITER_REMOVED_BATCH_SAMPLE ,
  DDS_DISCOVERY_SERVICE_SAMPLE = PRES_DISCOVERY_SERVICE_SAMPLE }
  Type to identify the sample flags reserved by RTI.

7.206.1 Detailed Description

<<***extension***>> *(p. 432)* Flags for samples.

7.206.2 Typedef Documentation

7.206.2.1 DDS_SampleFlagBits

`typedef enum` **`DDS_SampleFlagBits DDS_SampleFlagBits`**

Type to identify the sample flags reserved by RTI.

7.206.2.2 DDS_SampleFlag

`typedef` **`DDS_Long DDS_SampleFlag`**

A set of flags that can be associated with a sample.

- Least-significant bits [0-7] are reserved by RTI
- Least-significant bits [8-15] are application specific
- Least-significant bits [16-31] are invalid and cannot be used

7.206.3 Enumeration Type Documentation

7.206.3.1 DDS_SampleFlagBits

`enum` **`DDS_SampleFlagBits`**

Type to identify the sample flags reserved by RTI.

Enumerator

DDS_REDELIVERED_SAMPLE	Indicates that a sample has been redelivered by RTI Queuing Service.
DDS_INTERMEDIATE_REPLY_SEQUENCE_SAMPLE	Indicates that a response sample is not the last response sample for a given request. This bit is usually set by Connext Repliers sending multiple responses for a request.
DDS_REPLICATE_SAMPLE	Indicates if a sample must be broadcast by one RTI Queuing Service replica to other replicas.

Enumerator

DDS_LAST_SHARED_READER_QUEUE_SAMPLE	Indicates that a sample is the last sample in a SharedReaderQueue for a QueueConsumer DataReader.
DDS_INTERMEDIATE_TOPIC_QUERY_SAMPLE	Indicates that a sample for a TopicQuery will be followed by more samples. This flag only applies to samples that have been published as a response to a **DDSTopicQuery** (p. 1895). When this bit is not set and **DDS_SampleInfo::topic_query_guid** (p. 1354) is different from **DDS_GUID_UNKNOWN** (p. 527), this sample is the last sample for that TopicQuery coming from the DataWriter identified by **DDS_SampleInfo::source_guid** (p. 1353).
DDS_INCOMPLETE_SNAPSHOT_TOPIC_QUERY	Indicates that some of the samples that were published as part of a snapshot TopicQuery were lost. This flag is set in the last sample of the snapshot.
DDS_WRITER_REMOVED_BATCH_SAMPLE	This flag will be set if the sample was accepted into the DataReader queue even though it was marked by the DataWriter as removed. A sample can be marked as removed by the DataWriter in a batch when it is replaced due to the **DDS_KEEP_LAST_HISTORY_QOS** (p. 604) **DDS_HistoryQosPolicy** (p. 1162) QoS or because the duration in **DDS_LifespanQosPolicy** (p. 1175) was reached. If the DataReader sets the property "dds.data_reader.↩ accept_writer_removed_batch_samples" to true, the removed sample will be accepted into the DataReader queue and this flag will be set.
DDS_DISCOVERY_SERVICE_SAMPLE	This flag will be set if the sample was sent by Cloud Discovery Service. The samples sent by Cloud Discovery Service are participant announcement samples on the ParticipantBuiltinTopic.

7.207 WriteParams

*<<**extension**>> (p. 432)*

Classes

- struct **DDS_SampleIdentity_t**

  Type definition for a Sample Identity.
- struct **DDS_AckResponseData_t**

  Data payload of an application-level acknowledgment.
- struct **DDS_WriteParams_t**

  *<<**extension**>> (p. 432) Input parameters for writing with **FooDataWriter::write_w_params** (p. 1956), **FooData↩ Writer::dispose_w_params** (p. 1959), **FooDataWriter::register_instance_w_params** (p. 1948), **FooDataWriter↩ ::unregister_instance_w_params** (p. 1951)*

Functions

- **DDS_Boolean DDS_SampleIdentity_equals** (const struct **DDS_SampleIdentity_t** *self, const struct **DDS_SampleIdentity_t** *other)

  Compares this sample identity with another sample identity for equality.
- void **DDS_WriteParams_reset** (struct **DDS_WriteParams_t** *self)

  Resets all the fields to their default values.

Variables

- struct **DDS_GUID_t DDS_SampleIdentity_t::writer_guid**

  16-byte identifier identifying the virtual GUID.
- struct **DDS_SequenceNumber_t DDS_SampleIdentity_t::sequence_number**

  monotonically increasing 64-bit integer that identifies the sample in the data source.
- const struct **DDS_SampleIdentity_t DDS_AUTO_SAMPLE_IDENTITY**

  The AUTO sample identity.
- const struct **DDS_SampleIdentity_t DDS_UNKNOWN_SAMPLE_IDENTITY**

  An invalid or unknown sample identity.
- const struct **DDS_WriteParams_t DDS_WRITEPARAMS_DEFAULT**

  *Initializer for **DDS_WriteParams_t** (p. 1519).*

7.207.1 Detailed Description

*<<**extension**>> (p. 432)*

7.207.2 Function Documentation

7.207.2.1 DDS_SampleIdentity_equals()

```
DDS_Boolean DDS_SampleIdentity_equals (
            const struct  DDS_SampleIdentity_t * self,
            const struct  DDS_SampleIdentity_t * other )
```

Compares this sample identity with another sample identity for equality.

Parameters

self	*<<**in**>> (p. 433)* This sample identity.
other	*<<**in**>> (p. 433)* The other sample identity to be compared with this sample identity.

Returns

DDS_BOOLEAN_TRUE (p. 513) if the two sample identities have equal values, or **DDS_BOOLEAN_FALSE** (p. 513) otherwise.

7.207.2.2 DDS_WriteParams_reset()

```
void DDS_WriteParams_reset (
            struct  DDS_WriteParams_t * self )
```

Resets all the fields to their default values.

This operation is useful to reset all the fields to their automatic value when **DDS_WriteParams_t::replace_auto** (p. 1520) is enabled and the same params instance is used in multiple calls to **FooDataWriter::write_w_params** (p. 1956)

7.207.3 Variable Documentation

7.207.3.1 writer_guid

```
struct  DDS_GUID_t DDS_SampleIdentity_t::writer_guid
```

16-byte identifier identifying the virtual GUID.

7.207.3.2 sequence_number

```
struct  DDS_SequenceNumber_t DDS_SampleIdentity_t::sequence_number
```

monotonically increasing 64-bit integer that identifies the sample in the data source.

7.207.3.3 DDS_AUTO_SAMPLE_IDENTITY

```
const struct  DDS_SampleIdentity_t DDS_AUTO_SAMPLE_IDENTITY  [extern]
```

The AUTO sample identity.

Special **DDS_AUTO_SAMPLE_IDENTITY** (p. 676) value {**DDS_GUID_AUTO** (p. 527), **DDS_AUTO_SEQUENCE_↩ NUMBER** (p. 529)}

7.207.3.4 DDS_UNKNOWN_SAMPLE_IDENTITY

```
const struct  DDS_SampleIdentity_t DDS_UNKNOWN_SAMPLE_IDENTITY  [extern]
```

An invalid or unknown sample identity.

Special **DDS_UNKNOWN_SAMPLE_IDENTITY** (p. 676) value {**DDS_GUID_UNKNOWN** (p. 527), **DDS_SEQUENCE_NUMBER_UNKNOWN** (p. 528)}

7.207.3.5 DDS_WRITEPARAMS_DEFAULT

```
const struct  DDS_WriteParams_t DDS_WRITEPARAMS_DEFAULT  [extern]
```

Initializer for **DDS_WriteParams_t** (p. 1519).

7.208 Heap Support in C

<<***extension***>> *(*p. *432)* Heap allocation and free routines in C

Functions

- void * **DDS_Heap_calloc** (size_t numElem, size_t size)

  Peforms the logical equivalent of calloc().
- void * **DDS_Heap_malloc** (size_t size)

  Peforms the logical equivalent of malloc().
- void **DDS_Heap_free** (void *ptr)

  Performs the logical equivalent of free().

7.208.1 Detailed Description

<<***extension***>> *(*p. *432)* Heap allocation and free routines in C

The methods in this class ensure consistent cross-platform implementations for memory allocation (**DDS_Heap_malloc()** (p. 678) and **DDS_Heap_calloc()** (p. 678)) and deletion (**DDS_Heap_free()** (p. 678)).

Applications need to use these routines to reserve memory that the middleware will release or to free memory that the middleware has allocated.

For example, to allocate an optional member in a sample use **DDS_Heap_malloc()** (p. 678)/ **DDS_Heap_calloc()** (p. 678); to release an optional member previously reserved by **FooTypeSupport::create_data()** (p. 1983), use **DDS_Heap_free()** (p. 678).

7.208.2 Function Documentation

7.208.2.1 DDS_Heap_calloc()

```
void * DDS_Heap_calloc (
            size_t numElem,
            size_t size )
```

Peforms the logical equivalent of calloc().

Allocates unused space for an array with `numElem` elements each of whose size in bytes is `size`. The memory will be initialized to zeros.

Parameters

numElem	<<***in***>> *(*p. *433)* The number of elements in the array to be allocated
size	<<***in***>> *(*p. *433)* The size in bytes of each element in the array

Returns

If insufficient memory is available, this method will return NULL. Otherwise, upon success it returns a pointer to the allocated space.

7.208.2.2 DDS_Heap_malloc()

```
void * DDS_Heap_malloc (
            size_t size )
```

Peforms the logical equivalent of malloc().

Allocates unused space for an object of the specified `size`. The memory will be initialized to zeros.

Parameters

size	<<***in***>> *(*p. *433)* The size in bytes of the object to be allocated

Returns

If insufficient memory is available, this method will return NULL. Otherwise, upon success it returns a pointer to the allocated space.

7.208.2.3 DDS_Heap_free()

```
void DDS_Heap_free (
             void * ptr )
```

Performs the logical equivalent of free().

Deallocates the space pointed to by `ptr` and made available for further allocation.

Parameters

ptr	<<***in***>> *(*p. *433)* A pointer to the space to be deallocated

7.209 Builtin Qos Profiles

<<***extension***>> *(*p. *432)* QoS libraries, profiles, and snippets that are automatically built into RTI Connext.

Variables

- const char ∗const **DDS_BUILTIN_QOS_LIB**

  A library of non-experimental QoS profiles.
- const char ∗const **DDS_PROFILE_BASELINE_ROOT**

  The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.
- const char ∗const **DDS_PROFILE_BASELINE**

  The most up-to-date QoS default values.
- const char ∗const **DDS_PROFILE_BASELINE_5_0_0**

  The QoS default values for version 5.0.0.
- const char ∗const **DDS_PROFILE_BASELINE_5_1_0**

  The QoS default values for version 5.1.0.
- const char ∗const **DDS_PROFILE_BASELINE_5_2_0**

  The QoS default values for version 5.2.0.
- const char ∗const **DDS_PROFILE_BASELINE_5_3_0**

  The QoS default values for version 5.3.0.
- const char ∗const **DDS_PROFILE_BASELINE_6_0_0**

  The QoS default values for version 6.0.0.
- const char ∗const **DDS_PROFILE_BASELINE_6_1_0**

  The QoS default values for version 6.1.0.
- const char ∗const **DDS_PROFILE_BASELINE_7_0_0**

  The QoS default values for version 7.0.0.
- const char ∗const **DDS_PROFILE_BASELINE_7_1_0**

  The QoS default values for version 7.1.0.
- const char ∗const **DDS_PROFILE_GENERIC_COMMON**

  A common Participant base profile.
- const char ∗const **DDS_PROFILE_GENERIC_MONITORING_COMMON**

Enables RTI Monitoring Library.

- const char *const **DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY**

  Sets the values necessary to communicate with RTI Connext Micro.
- const char *const **DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.4 through at least 2.4.9.
- const char *const **DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.3 and ealier.
- const char *const **DDS_PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY**

  Sets the values necessary to interoperate with other DDS vendors.
- const char *const **DDS_PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY**

  Sets the values necessary to interoperate with RTI Connext 5.1.0 using the UDPv6 and/or SHMEM transports.
- const char *const **DDS_BUILTIN_QOS_LIB_EXP**

  A library of experimental QoS profiles.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE**

  Enables strict reliability.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE**

  Enables keep-last reliability.
- const char *const **DDS_PROFILE_GENERIC_BEST_EFFORT**

  Enables best-effort reliability kind.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT**

  A profile that can be used to achieve high throughput.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY**

  A profile that can be used to achieve low latency.
- const char *const **DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA**

  A common Participant base profile to facilitate sending large data.
- const char *const **DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING**

  Configures Participants for large data and monitoring.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with strict reliability.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with keep-last reliability.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures strictly reliable communication for large data with a fast flow controller.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures strictly reliable communication for large data with a medium flow controller.
- const char *const **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures strictly reliable communication for large data with a slow flow controller.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures keep-last reliable communication for large data with a fast flow controller.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures keep-last reliable communication for large data with a medium flow controller.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures keep-last reliable communication for large data with a slow flow controller.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL**

  Persists the samples of a DataWriter as long as the entity exists.
- const char *const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT**

  Persists samples using RTI Persistence Service.

- const char ∗const **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT**

  Persists samples in permanent storage, like a disk, using RTI Persistence Service.
- const char ∗const **DDS_PROFILE_GENERIC_AUTO_TUNING**

  Enables the Turbo Mode batching and Auto Throttle experimental features.
- const char ∗const **DDS_PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT**

  Uses a set of QoS which reduces the memory footprint of the application.
- const char ∗const **DDS_PROFILE_GENERIC_SECURITY**

  Loads the DDS Secure builtin plugins.
- const char ∗const **DDS_PROFILE_GENERIC_MONITORING2**

  The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.
- const char ∗const **DDS_PROFILE_GENERIC_MONITORING2_WAN**

  The QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use to communicate over WAN with a Collector Service.
- const char ∗const **DDS_PROFILE_PATTERN_RPC**

  This profile contains the default RPC and Request-Reply QoS settings.
- const char ∗const **DDS_PROFILE_PATTERN_PERIODIC_DATA**

  Used for applications that expect periodic data.
- const char ∗const **DDS_PROFILE_PATTERN_STREAMING**

  Used for applications that stream data.
- const char ∗const **DDS_PROFILE_PATTERN_RELIABLE_STREAMING**

  Used for applications that stream data and require reliable communication.
- const char ∗const **DDS_PROFILE_PATTERN_EVENT**

  Used for applications that handle events.
- const char ∗const **DDS_PROFILE_PATTERN_ALARM_EVENT**

  Used for applications that handle alarm events.
- const char ∗const **DDS_PROFILE_PATTERN_STATUS**

  Used for applications whose samples represent statuses.
- const char ∗const **DDS_PROFILE_PATTERN_ALARM_STATUS**

  Used for applications in which samples represent alarm statuses.
- const char ∗const **DDS_PROFILE_PATTERN_LAST_VALUE_CACHE**

  Used for applications that only need the last published value.
- const char ∗const **DDS_BUILTIN_QOS_SNIPPET_LIB**

  A library of QoS Snippets.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON**

  QoS Snippet that configures the reliability protocol with a common configuration.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL**

  QoS Snippet that configures the reliability protocol for KEEP_ALL.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST**

  QoS Snippet that configures the reliability protocol for KEEP_LAST.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE**

  QoS Snippet that configures the reliability protocol for sending data at a high rate.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY**

  QoS Snippet that configures the reliability protocol for sending data at low latency.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA**

  QoS Snippet that configures the reliability protocol for large data.
- const char ∗const **DDS_SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC**

  Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.

- const char *const **DDS_SNIPPET_OPTIMIZATION_DISCOVERY_COMMON**

  QoS Snippet that optimizes discovery with a common configuration.
- const char *const **DDS_SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT**

  QoS Snippet that optimizes the Participant QoS to send less discovery information.
- const char *const **DDS_SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST**

  QoS Snippet that optimizes the Endpoint Discovery to be faster.
- const char *const **DDS_SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS**

  QoS Snippet that increases the Participant default buffer that shmem and udpv4 use.
- const char *const **DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE**

  QoS Snippet that sets RELIABILITY QoS to RELIABLE.
- const char *const **DDS_SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT**

  QoS Snippet that sets RELIABILITY QoS to BEST_EFFORT.
- const char *const **DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1**

  QoS Snippet that sets HISTORY QoS to KEEP_LAST kind with depth 1.
- const char *const **DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL**

  QoS Snippet that sets HISTORY QosPolicy to KEEP_ALL kind.
- const char *const **DDS_SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS**

  QoS Snippet that sets PUBLISH_MODE QosPolicy to ASYNCHRONOUS kind.
- const char *const **DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL**

  QoS Snippet that sets DURABILITY QosPolicy to TRANSIENT_LOCAL kind.
- const char *const **DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT**

  QoS Snippet that sets DURABILITY QosPolicy to TRANSIENT kind.
- const char *const **DDS_SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT**

  QoS Snippet that sets DURABILITY QosPolicy to PERSISTENT kind.
- const char *const **DDS_SNIPPET_QOS_POLICY_BATCHING_ENABLE**

  QoS Snippet that sets BATCH QosPolicy to true.
- const char *const **DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS**

  QoS Snippet that configures and set a FlowController of 838 Mbps.
- const char *const **DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS**

  QoS Snippet that configures and sets a FlowController of 209 Mbps.
- const char *const **DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS**

  QoS Snippet that configures and sets a FlowController of 52 Mbps.
- const char *const **DDS_SNIPPET_FEATURE_AUTO_TUNING_ENABLE**

  QoS Snippet that enables auto_throttle and turbo_mode to true.
- const char *const **DDS_SNIPPET_FEATURE_MONITORING_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library.
- const char *const **DDS_SNIPPET_FEATURE_MONITORING2_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library 2.0.
- const char *const **DDS_SNIPPET_FEATURE_SECURITY_ENABLE**

  QoS Snippet that enables security using the Builtin Security Plugins.
- const char *const **DDS_SNIPPET_FEATURE_TOPIC_QUERY_ENABLE**

  QoS Snippet that enables Topic Query.
- const char *const **DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE**

  QoS Snippet that enables TypeObject V1 propagation.
- const char *const **DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE**

  QoS Snippet that disables TypeObject V1 propagation.
- const char *const **DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE**

QoS Snippet that enables TypeObject V2 propagation.

- const char *const **DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE**

  QoS Snippet that disables TypeObject V2 propagation.
- const char *const **DDS_SNIPPET_TRANSPORT_TCP_LAN_CLIENT**

  QoS Snippet that configures a TCP LAN Client over DDS.
- const char *const **DDS_SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT**

  QoS Snippet that configures a symmetric WAN TCP Client over DDS.
- const char *const **DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER**

  QoS Snippet that an asymmetric WAN TCP Server over DDS.
- const char *const **DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT**

  QoS Snippet that configures an asymmetric WAN TCP Client over DDS.
- const char *const **DDS_SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION**

  QoS Snippet that configures RTI Connext and the UDP built-in transports (UDPv4, UDPv6, UDPv4_WAN) to avoid IP fragmentation.
- const char *const **DDS_SNIPPET_TRANSPORT_UDP_WAN**

  QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4_WAN).
- const char *const **DDS_SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3**

  QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connext Micro 2.4.3.
- const char *const **DDS_SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with other DDS vendors.
- const char *const **DDS_SNIPPET_5_1_0_TRANSPORT_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with RTI Connext 5.1.0 and below for UDPv6 and SHMEM transports.

7.209.1 Detailed Description

<<***extension***>> *(*p. *432)* QoS libraries, profiles, and snippets that are automatically built into RTI Connext.

The built-in profiles can be accessed in QoS XML configuration files and by using any of the APIs that accept library and profiles names by using the constants or string versions as documented on this page.

The built-in profiles are provided as a way to quickly and easily configure RTI Connext applications with a set of QoS values aimed at achieving a specific behavior.

There are three built-in QoS libraries:

- BuiltinQosLib: A library containing built-in QoS Profiles.

- BuiltinQosLibExp: A library containing experimental QoS Profiles. Experimental QoS Profiles are new QoS Profiles that have been tested internally but have not gone through an extensive validation period. Therefore, some of the settings may change in future releases based on customer and internal feedback. After validation, experimental QoS Profiles will be moved into the non-experimental library.

- BuiltinQosSnippetLib: A library containing QoS Snippets that are ready to use as elements for the QoS Profile composition pattern. For further information about this pattern visit the following article: `https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance`

There are three types of profiles:

- Baseline.X.X.X: These profiles represent the QoS defaults for /ndds version X.X.X. To access the defaults for the latest RTI Connext version, use the BuiltinQosLib::Baseline profile.
- Generic.X: These profiles allow you to easily configure different features and communication use-cases with RTI Connext. For example, there is a Generic.StrictReliable profile for use when your application has a requirement for no data loss.
- Pattern.X: These profiles inherit from the Generic.X profiles and allow you to configure various domain-specific communication use cases. For example, there is a Pattern.Alarm profile that can be used to manage the generation and consumption of alarm events.

There are several types of QoS Snippets. These are the current QoS Snippets available:

- Optimization.X: these QoS Snippets optimize one or more parameters related to the X QoS Policy or a specific use-case.
- QosPolicy.X.Y: these QoS Snippets set a specific QoS Policy X to the value Y.
- Feature.X: these QoS Snippets set all the needed QoS values to enable/modify a specific feature.
- Transport.X: these QoS Snippets set a specific transport defined by X. This transport may have specific scenarios that are also specified in the name.
- Compatibility.X: these QoS Snippets change the specific QoS policies to ensure compatibility with specific products or versions specified by X.

These QoS Profiles can be used as base profiles in XML configuration, then QoS Snippets can modify specific aspects of this base QoS Profile, and finally files and values can be modified to fit a specific system's needs. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.Common">

   <domain_participant_qos base_name="BuiltinQosLib::Generic.Monitoring.Common">

     <base_name>

       <element>BuiltinQosSnippetLib::Feature.Monitoring.Enable</element>

     </base_name>

     <!-- Override and add values -->

   </domain_participant_qos>

</qos_profile>
```

The QoS Profiles can also be used in any APIs that call for a QoS library and profile name, for example, the create_*↩ _with_profile() APIs. To create a **DDSDataWriter** (p. 1589) configured to send large data asynchronously:

```
writer = DDS_DomainParticipant_create_datawriter_with_profile(

                 participant, topic,

                 ::DDS_BUILTIN_QOS_LIB,

                 ::DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW,

                 NULL, ::DDS_STATUS_MASK_NONE);
```

All the built-in QoS Profiles and QoS Snippets are documented in the BaselineRoot.documentationONLY.xml and BuiltinProfiles.documentationONLY.xml files that are included in the NDDSHOME/xml directory of the RTI Connext installation.

- BaselineRoot.documentationONLY.xml contains the root baseline QoS profile that corresponds to the default values of RTI Connext 5.0.0.
- BuiltinProfiles.documentationONLY.xml contains the rest of the built-in Qos Profiles and QoS Snippets.

7.209.2 Variable Documentation

7.209.2.1 DDS_BUILTIN_QOS_LIB

```
const char* const DDS_BUILTIN_QOS_LIB  [extern]
```

A library of non-experimental QoS profiles.

String-version: "BuiltinQosLib"

7.209.2.2 DDS_PROFILE_BASELINE_ROOT

```
const char* const DDS_PROFILE_BASELINE_ROOT  [extern]
```

The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.

This profile contains the root baseline QoS values from which all other Baseline.X.X.X profiles inherit. These values correspond to the default values for RTI Connext 5.0.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.Root"

7.209.2.3 DDS_PROFILE_BASELINE

```
const char* const DDS_PROFILE_BASELINE  [extern]
```

The most up-to-date QoS default values.

You can use this profile if you want your application to pick up and use any new QoS default settings each time a new RTI Connext version is released – without changing your application code.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline"

7.209.2.4 DDS_PROFILE_BASELINE_5_0_0

```
const char* const DDS_PROFILE_BASELINE_5_0_0  [extern]
```

The QoS default values for version 5.0.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.5.0.0"

7.209.2.5 DDS_PROFILE_BASELINE_5_1_0

```
const char* const DDS_PROFILE_BASELINE_5_1_0  [extern]
```

The QoS default values for version 5.1.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.5.1.0"

7.209.2.6 DDS_PROFILE_BASELINE_5_2_0

```
const char* const DDS_PROFILE_BASELINE_5_2_0  [extern]
```

The QoS default values for version 5.2.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.5.2.0"

7.209.2.7 DDS_PROFILE_BASELINE_5_3_0

```
const char* const DDS_PROFILE_BASELINE_5_3_0  [extern]
```

The QoS default values for version 5.3.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.5.3.0"

7.209.2.8 DDS_PROFILE_BASELINE_6_0_0

```
const char* const DDS_PROFILE_BASELINE_6_0_0  [extern]
```

The QoS default values for version 6.0.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.6.0.0"

7.209.2.9 DDS_PROFILE_BASELINE_6_1_0

```
const char* const DDS_PROFILE_BASELINE_6_1_0  [extern]
```

The QoS default values for version 6.1.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.6.1.0"

7.209.2.10 DDS_PROFILE_BASELINE_7_0_0

```
const char* const DDS_PROFILE_BASELINE_7_0_0  [extern]
```

The QoS default values for version 7.0.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.7.0.0"

7.209.2.11 DDS_PROFILE_BASELINE_7_1_0

```
const char* const DDS_PROFILE_BASELINE_7_1_0  [extern]
```

The QoS default values for version 7.1.0.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Baseline.7.1.0"

7.209.2.12 DDS_PROFILE_GENERIC_COMMON

```
const char* const DDS_PROFILE_GENERIC_COMMON  [extern]
```

A common Participant base profile.

All Generic.X and Pattern.X profiles inherit from this profile.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.Common"

7.209.2.13 DDS_PROFILE_GENERIC_MONITORING_COMMON

```
const char* const DDS_PROFILE_GENERIC_MONITORING_COMMON  [extern]
```

Enables RTI Monitoring Library.

Generic Base participant QoS Profile that enables RTI Monitoring Library.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Monitoring.Common", apply the QoS Snippet "BuiltinQos↩ SnippetLib::Feature.Monitoring.Enable" via composition. For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosSnippetLib::Feature.Monitoring.Enable</element>

    </base_name>

</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">

    <domain_participant_qos base_name="BuiltinQosLib::Generic.Monitoring.Common">

</qos_profile>
```

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.Monitoring.Common"

7.209.2.14 DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY  [extern]
```

Sets the values necessary to communicate with RTI Connext Micro.

This profile will always represent the QoS values required for interoperability between the most recent version of RTI Connext Micro at the time of release of the most recent version of RTI Connext.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.ConnextMicroCompatibility"

7.209.2.15 DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9  [extern]
```

Sets the values necessary to communicate with RTI Connext Micro versions 2.4.4 through at least 2.4.9.

At the time of the release of RTI Connext 5.3.0 it was not necessary to set any QoS values in order to interoperate with RTI Connext Micro. This applies to RTI Connext Micro versions 2.4.4 and later. The most recent version of RTI Connext Micro at the time of release of RTI Connext 5.3.0 was 2.4.9. There is no guarantee that this profile will interoperate with versions of RTI Connext Micro after 2.4.9.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.ConnextMicroCompatibility.2.4.9"

7.209.2.16 DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3

```
const char* const DDS_PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3  [extern]
```

Sets the values necessary to communicate with RTI Connext Micro versions 2.4.3 and ealier.

RTI Connext Micro versions 2.4.3 and earlier only supported the **DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS** (p. 608) LivelinessQos kind. In order to be compatible with these versions of RTI Connext Micro, the **DDSDataReader** (p. 1556) and **DDSDataWriter** (p. 1589) must have their Liveliness kind changed to this value because the default kind in RTI Connext is **DDS_AUTOMATIC_LIVELINESS_QOS** (p. 608).

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.ConnextMicroCompatibility.2.4.3"

7.209.2.17 DDS_PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY  [extern]
```

Sets the values necessary to interoperate with other DDS vendors.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.OtherDDSVendorCompatibility"

7.209.2.18 DDS_PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY

```
const char* const DDS_PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY  [extern]
```

Sets the values necessary to interoperate with RTI Connext 5.1.0 using the UDPv6 and/or SHMEM transports.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.510TransportCompatibility"

7.209.2.19 DDS_BUILTIN_QOS_LIB_EXP

```
const char* const DDS_BUILTIN_QOS_LIB_EXP  [extern]
```

A library of experimental QoS profiles.

Experimental profiles are new profiles that have been tested internally but have not gone through an extensive validation period. Therefore some of the settings may change in future releases based on customer and internal feedback. After validation, experimental profiles will be moved into the non-experimental library.

QoS Profiles in this library are deprecated. They have been moved to "BuiltinQosLib". You should use the QoS Profiles from "BuiltinQosLib" instead of the ones in "BuiltinQosLibExp". The experimental profiles are still defined here to avoid backward compatibility issues.

String-version: "BuiltinQosLibExp"

7.209.2.20 DDS_PROFILE_GENERIC_STRICT_RELIABLE

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE  [extern]
```

Enables strict reliability.

Configures communication to be "strict reliable" where every sample is reliably delivered.

Combines the use of the **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) for **DDS_ReliabilityQosPolicy** (p. 1295) with a **DDS_KEEP_ALL_HISTORY_QOS** (p. 604) for the **DDS_HistoryQosPolicyKind** (p. 603).

This QoS Profile also optimizes the reliability protocol setting for this configuration.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable"

7.209.2.21 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE  [extern]
```

Enables keep-last reliability.

Like the Generic.StrictReliable profile, this profile ensures in-order delivery of samples. However, new data can overwrite data that has not yet been acknowledged by the reader, therefore causing possible sample loss.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable"

7.209.2.22 DDS_PROFILE_GENERIC_BEST_EFFORT

```
const char* const DDS_PROFILE_GENERIC_BEST_EFFORT  [extern]
```

Enables best-effort reliability kind.

This profile enables best-effort communication. No effort or resources are spent to track whether or not sent samples are received. Minimal resources are used. This is the most deterministic method of sending data since there is no indeterministic delay that can be introduced by resending data. Data samples may be lost. This setting is good for periodic data.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.BestEffort"

7.209.2.23 DDS_PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT  [extern]
```

A profile that can be used to achieve high throughput.

This QoS Profile extends the **DDS_PROFILE_GENERIC_STRICT_RELIABLE** (p. 689) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **DDS_PROFILE_GENERIC_STRICT_RELIABLE** (p. 689) QoS Profile..

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.HighThroughput"

7.209.2.24 DDS_PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY  [extern]
```

A profile that can be used to achieve low latency.

This QoS Profile extends the **DDS_PROFILE_GENERIC_STRICT_RELIABLE** (p. 689) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **DDS_PROFILE_GENERIC_STRICT_RELIABLE** (p. 689) QoS Profile.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.LowLatency"

7.209.2.25 DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA

```
const char* const DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA  [extern]
```

A common Participant base profile to facilitate sending large data.

This is a common Participant base QoS Profile that configures 3 different flow controllers: 838, 209, and 52 Mbps that can each be used to throttle application data flow at different rates.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.Participant.LargeData"

7.209.2.26 DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING

```
const char* const DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING  [extern]
```

Configures Participants for large data *and* monitoring.

This is a common base Participant QoS Profile to configure Participants to both handle large data and use RTI Monitoring Library.

This QoS Profile is deprecated. It is included for backwards compatibility.

It is recommended that instead of inheriting from this QoS Profile, new applications apply the following QoS Snippets to their application-specific QoS Profiles:

Enable Monitoring

- **DDS_SNIPPET_FEATURE_MONITORING_ENABLE** (p. 710)

Enable Large Data optimizations

- **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA** (p. 702)
- **DDS_SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC** (p. 703) In Library↩ : **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.Participant.LargeData.Monitoring"

See also

DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA (p. 690)
DDS_PROFILE_GENERIC_MONITORING_COMMON (p. 687)

7.209.2.27 DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA [extern]
```

Configures endpoints for sending large data with strict reliability.

This QoS Profile extends the **DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA** (p. 690) QoS Profile to handle sending large samples reliably. This QoS Profile optimizes memory usage per sample within RTI Connext. You can use this QoS Profile directly, which doesn't perform any flow control, or you can use one of the three QoS Profiles below (Generic.StrictReliable.LargeData.∗Flow), which use this QoS Profile as a common base QoS Profile, but additionally enable asynchronous publication. Each of these three QoS Profiles uses one of the three flow controllers defined in **DDS_PROFILE_GENERIC_PARTICIPANT_LARGE_DATA** (p. 690) in order to throttle application data flow.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.LargeData"

7.209.2.28 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA [extern]
```

Configures endpoints for sending large data with keep-last reliability.

This QoS Profile is similar to the **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 689) QoS Profile, but also adds QoS Snippets to handle sending large samples reliably. You can use this QoS Profile directly, which doesn't perform any flow control, or you can use one of the three QoS Profiles below (Generic.KeepLastReliable.LargeData.∗Flow), which use this QoS Profile as a common base QoS Profile, but additionally enable asynchronous publication. Each of these three QoS Profiles uses one of the three flow controllers defined in **DDS_PROFILE_GENERIC_PARTICIPANT↩ _LARGE_DATA** (p. 690) in order to throttle application data flow.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.LargeData"

7.209.2.29 DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW [extern]
```

Configures strictly reliable communication for large data with a fast flow controller.

Strictly reliable communication for large data with a 838 Mbps ($\sim$ 100 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.LargeData.FastFlow"

7.209.2.30 DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW  [extern]
```

Configures strictly reliable communication for large data with a medium flow controller.

Strictly reliable communication for large data with a 209Mbps ($\sim$ 25 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.LargeData.MediumFlow"

7.209.2.31 DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW

```
const char* const DDS_PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW  [extern]
```

Configures strictly reliable communication for large data with a slow flow controller.

Strictly reliable communication for large data with a 52 MB/sec ($\sim$ 6.25 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.StrictReliable.LargeData.SlowFlow"

7.209.2.32 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW  [extern]
```

Configures keep-last reliable communication for large data with a fast flow controller.

Keep-last reliable communication for large data with a 838 Mbps ($\sim$ 100 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.LargeData.FastFlow"

7.209.2.33 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW  [extern]
```

Configures keep-last reliable communication for large data with a medium flow controller.

Keep-last reliable communication for large data with a 209Mbps ($\sim$ 25 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.LargeData.MediumFlow"

7.209.2.34 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW  [extern]
```

Configures keep-last reliable communication for large data with a slow flow controller.

Keep-last reliable communication for large data with a 52 MB/sec ($\sim$ 6.25 MB/sec) flow controller.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.LargeData.SlowFlow"

7.209.2.35 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL  [extern]
```

Persists the samples of a DataWriter as long as the entity exists.

This profile extends the **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 689) profile, but persists the samples of a **DDSDataWriter** (p. 1589) as long as the entity exists in order to deliver them to late-joining DataReaders.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.TransientLocal"

7.209.2.36 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT  [extern]
```

Persists samples using RTI Persistence Service.

This profile extends the **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 689) profile, but persists samples using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.Transient"

7.209.2.37 DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT

```
const char* const DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT  [extern]
```

Persists samples in permanent storage, like a disk, using RTI Persistence Service.

This profile extends the **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 689) profile, but persists samples in permanent storage, such as a disk, using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.KeepLastReliable.Persistent"

7.209.2.38 DDS_PROFILE_GENERIC_AUTO_TUNING

```
const char* const DDS_PROFILE_GENERIC_AUTO_TUNING  [extern]
```

Enables the Turbo Mode batching and Auto Throttle experimental features.

Turbo Mode batching adjusts the maximum number of bytes of a batch based on how frequently samples are being written. Auto Throttle auto-adjusts the speed at which a writer will write samples, based on the number of unacknowledged samples in its queue.

These features are designed to auto-adjust the publishing behavior within a system in order to achieve the best possible performance with regards to throughput and latency.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.AutoTuning"

7.209.2.39 DDS_PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT

```
const char* const DDS_PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT  [extern]
```

Uses a set of QoS which reduces the memory footprint of the application.

Uses a set of QoS which reduces the memory footprint of the application.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Generic.MinimalMemoryFootprint"

7.209.2.40 DDS_PROFILE_GENERIC_SECURITY

```
const char* const DDS_PROFILE_GENERIC_SECURITY  [extern]
```

Loads the DDS Secure builtin plugins.

Generic Base Participant Profile that enables the builtin DDS Security Plugins.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Security", apply the QoS Snippet "BuiltinQosSnippetLib::↩ Feature.Security.Enable" via composition. For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosSnippetLib::Feature.Security.Enable</element>

    </base_name>

</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">

    <domain_participant_qos base_name="BuiltinQosLib::Generic.Security">

</qos_profile>
```

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685)

String-version: "Generic.Security"

7.209.2.41 DDS_PROFILE_GENERIC_MONITORING2

```
const char* const DDS_PROFILE_GENERIC_MONITORING2  [extern]
```

The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.

This profile inherits from **DDS_PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT** (p. 695).

The following DomainParticipant QoS policy of this profile cannot be modified and it is overwritten by the RTI Monitoring Library 2.0:

- Discovery Config Built-in Channel Kind.

The following DataWriter and DataReader QoS policies of this profile cannot be modified and they are overwritten by the RTI Monitoring Library 2.0:

- Reliability Kind.
- Durability Kind.
- History Kind.
- Publish Mode Kind.
- Protocol -> RTPS Reliable Writer -> Max Heartbeat Retries.

This profile uses Topic Filters to select the DataWriter and DataReader QoS depending on the Observability Distribution Topic.

You should be using this profile or a profile inheriting from it when you configure the distribution of telemetry data using the <distribution_settings> tag under <monitoring> for the <participant_factory_qos>.

Note: This profile does not enable the use of the RTI Monitoring Library 2.0. To do that you can use the Snippet **DDS_SNIPPET_FEATURE_MONITORING2_ENABLE** (p. 711).

String-version: "Generic.Monitoring2"

See also

RTI_MONITORING_PERIODIC_TOPIC_NAME (p. 720)

RTI_MONITORING_EVENT_TOPIC_NAME (p. 720)

RTI_MONITORING_LOGGING_TOPIC_NAME (p. 721)

7.209.2.42 DDS_PROFILE_GENERIC_MONITORING2_WAN

```
const char* const DDS_PROFILE_GENERIC_MONITORING2_WAN  [extern]
```

The QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use to communicate over WAN with a Collector Service.

This profile inherits from **DDS_PROFILE_GENERIC_MONITORING2** (p. 695).

Note: This profile does not enable the use of the RTI Monitoring Library 2.0. To do that you can use the Snippet **DDS_SNIPPET_FEATURE_MONITORING2_ENABLE** (p. 711).

String-version: "Generic.Monitoring2.WAN"

See also

DDS_PROFILE_GENERIC_MONITORING2 (p. 695)

7.209.2.43 DDS_PROFILE_PATTERN_RPC

```
const char* const DDS_PROFILE_PATTERN_RPC  [extern]
```

This profile contains the default RPC and Request-Reply QoS settings.

This profile contains the QoS that is used to create the DataReaders and DataWriters in a Requester, a Replier, a Client or a Service.

Use this profile as the base profile if you need to customize the QoS settings of any of these entities.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Pattern.RPC"

7.209.2.44 DDS_PROFILE_PATTERN_PERIODIC_DATA

```
const char* const DDS_PROFILE_PATTERN_PERIODIC_DATA  [extern]
```

Used for applications that expect periodic data.

This QoS Profile is intended to be used for applications that expect periodic data such as sensor data. The deadline that is set in this profile can be used to detect when DataWriters are not publishing data with the expected periodicity.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.PeriodicData"

7.209.2.45 DDS_PROFILE_PATTERN_STREAMING

```
const char* const DDS_PROFILE_PATTERN_STREAMING  [extern]
```

Used for applications that stream data.

The data sent in streaming applications is commonly periodic. Therefore this profile simply inherits from the **DDS_PROFILE_PATTERN_PERIODIC_DATA** (p. 697) profile. Note: With this QoS Profile, the application may lose data, which may be acceptable in use cases such as video conferencing.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.Streaming"

7.209.2.46 DDS_PROFILE_PATTERN_RELIABLE_STREAMING

```
const char* const DDS_PROFILE_PATTERN_RELIABLE_STREAMING  [extern]
```

Used for applications that stream data *and* require reliable communication.

Sometimes streaming applications require reliable communication while still tolerating some data loss. In this case, we inherit from the **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 689) QoS Profile and the following QoS Snippets:

- **DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE** (p. 705)
- **DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1** (p. 706)
- **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST** (p. 701)

This QoS Snippet also increases the **DDS_HistoryQosPolicy::depth** (p. 1164) to reduce the probability of losing samples.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.ReliableStreaming"

7.209.2.47 DDS_PROFILE_PATTERN_EVENT

```
const char* const DDS_PROFILE_PATTERN_EVENT  [extern]
```

Used for applications that handle events.

This QoS Profile can be used by applications in which samples represent events such as button pushes or alerts. When events are triggered, the system should almost always do something, meaning that you don't want the system to lose the event. This means that the system requires strictly reliable communication. To enable it, use the following QoS Snippets:

- **DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE** (p. 705)
- **DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL** (p. 706)
- **DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL** (p. 700)

Since events and alerts are critical and non-periodic data, it is important to detect situations in which communication between a **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) is broken. This is why this profile sets the **DDS_LivelinessQosPolicy** (p. 1180). If the **DDSDataWriter** (p. 1589) does not assert its liveliness in a timely manner, the **DDSDataReader** (p. 1556) will report 'loss of liveliness' to the application.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.Event"

7.209.2.48 DDS_PROFILE_PATTERN_ALARM_EVENT

```
const char* const DDS_PROFILE_PATTERN_ALARM_EVENT  [extern]
```

Used for applications that handle alarm events.

An alarm is a type of event; therefore this profile simply inherits from **DDS_PROFILE_PATTERN_EVENT** (p. 698).

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.AlarmEvent"

7.209.2.49 DDS_PROFILE_PATTERN_STATUS

```
const char* const DDS_PROFILE_PATTERN_STATUS  [extern]
```

Used for applications whose samples represent statuses.

This QoS Profile can be used by applications in which samples represent state variables whose values remain valid as long as they don't explicitly change. State variables typically do not change periodically. State variables and their values should also be available to applications that appear after the value originally changed because it is unreasonable to have to wait until the next change of state, which may be indeterminate.

Whether to use this QoS Profile or **DDS_PROFILE_PATTERN_PERIODIC_DATA** (p. 697) can often be an application choice. For example, if a DataWriter is publishing temperature sensor data, it could use the **DDS_PROFILE_PATTERN_PERIODIC_DATA** (p. 697) QoS Profile and publish the data at a fixed rate or it could use the **DDS_PROFILE_PATTERN_STATUS** (p. 699) QoS Profile and only publish the temperature when it changes more than 1 degree.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.Status"

7.209.2.50 DDS_PROFILE_PATTERN_ALARM_STATUS

```
const char* const DDS_PROFILE_PATTERN_ALARM_STATUS  [extern]
```

Used for applications in which samples represent alarm statuses.

An alarm status is a type of status; therefore this QoS Profile simply inherits from **DDS_PROFILE_PATTERN_STATUS** (p. 699).

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.AlarmStatus"

7.209.2.51 DDS_PROFILE_PATTERN_LAST_VALUE_CACHE

```
const char* const DDS_PROFILE_PATTERN_LAST_VALUE_CACHE  [extern]
```

Used for applications that only need the last published value.

With this QoS Profile, a **DDSDataWriter** (p. 1589) will keep in its queue the last value that was published for each sample instance. Late-joining DataReaders will get that value when they join the system. This QoS Profile inherits from **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL** (p. 694) because the use case requires delivery to late-joiners.

In Library: **DDS_BUILTIN_QOS_LIB** (p. 685) and **DDS_BUILTIN_QOS_LIB_EXP** (p. 689)

String-version: "Pattern.LastValueCache"

7.209.2.52 DDS_BUILTIN_QOS_SNIPPET_LIB

```
const char* const DDS_BUILTIN_QOS_SNIPPET_LIB  [extern]
```

A library of QoS Snippets.

String-version: "BuiltinQosSnippetLib"

7.209.2.53 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON  [extern]
```

QoS Snippet that configures the reliability protocol with a common configuration.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet defines parameters common to a set of "alternative" QoS Snippets that configure the reliability protocol.

Modified QoS Parameters:

- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

This QoS Snippet configures the reliability protocol parameters for more aggressive (faster) heartbeats so that sample loss is detected and repaired faster.

This QoS Snippet also sets the **DDS_RtpsReliableWriterProtocol_t::max_heartbeat_retries** (p. 1326), which works in combination with the heartbeat rate to determine when the **DDSDataWriter** (p. 1589) considers a **DDSDataReader** (p. 1556) non-responsive. This QoS Snippet configures the **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896) parameters so that the **DDSDataWriter** (p. 1589) considers the **DDSDataReader** (p. 1556) to be "inactive" after 500 unresponded heartbeats.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.Common"

7.209.2.54 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL  [extern]
```

QoS Snippet that configures the reliability protocol for KEEP_ALL.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1589) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1589) with **DDS_HistoryQosPolicyKind** (p. 603) set to **DDS_KEEP_ALL_HISTORY_QOS** (p. 604).

Modified QoS Parameters:

- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

Note that this QoS Snippet does not configure the **DDS_ReliabilityQosPolicy** (p. 1295) or **DDS_HistoryQosPolicy** (p. 1162) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.KeepAll"

7.209.2.55 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST  [extern]
```

QoS Snippet that configures the reliability protocol for KEEP_LAST.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1589) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1589) with **DDS_HistoryQosPolicyKind** (p. 603) set to **DDS_KEEP_LAST_HISTORY_QOS** (p. 604).

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

Note that this QoS Snippet does not configure the **DDS_ReliabilityQosPolicy** (p. 1295) or **DDS_HistoryQosPolicy** (p. 1162) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.KeepLast"

7.209.2.56 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE  [extern]
```

QoS Snippet that configures the reliability protocol for sending data at a high rate.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **DDSDataWriter** (p. 1589) reliable protocol parameters for a reliable **DDSDataWriter** (p. 1589) that is writing messages at high rates, especially in situations where throughput is favored over latency.

Modified QoS Parameters:

- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

This QoS Snippet sets a fast rate of heartbeats so that errors are detected and repaired more swiftly.

Note that to get the highest thoughout you may need to apply additional changes to the final QoS Profile. See the QoS Profile **DDS_PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT** (p. 690) for further information.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.HighRate"

7.209.2.57 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY  [extern]
```

QoS Snippet that configures the reliability protocol for sending data at low latency.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet modifies the Reliable Protocol parameters to accomplish low latency.

Modified QoS Parameters:

- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

Note that to get the lowest latency you may need to apply additional changes to the final QoS Profile. See the QoS Profile **DDS_PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY** (p. 690) for further information.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.LowLatency"

7.209.2.58 DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA

```
const char* const DDS_SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA [extern]
```

QoS Snippet that configures the reliability protocol for large data.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

Modifies the Reliable Protocol parameters and Resource Limits to work better with Large Data.

Modified QoS Parameters:

- **DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer** (p. 896)
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader** (p. 846)

Note that, to send large data, it is recommended to apply additional changes that configure the data caches, transport buffers, etc. See, for example, **DDS_PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA** (p. 692), and derivatives for fully functional Large Data QoS Profiles.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.ReliabilityProtocol.LargeData"

7.209.2.59 DDS_SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC

```
const char* const DDS_SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC [extern]
```

Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataWriterQos** (p. 909) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.data_writer.history.memory_manager.*"
- **DDS_DataReaderQos** (p. 858) => **DDS_ResourceLimitsQosPolicy** (p. 1308)
- **DDS_DataReaderResourceLimitsQosPolicy** (p. 867)
- **DDS_DataReaderQos** (p. 858) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.data_reader.history.memory_manager.*"

This configuration is needed to handle data that contains unbounded sequences or strings. This QoS Snippet is also recommended if samples can have very different sizes and the bigger samples can be very large.

If dynamic memory allocation is not used for the larger samples, then all samples are allocated to their maximum size which can consume a lot of resources.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.DataCache.LargeData.DynamicMemAlloc"

7.209.2.60 DDS_SNIPPET_OPTIMIZATION_DISCOVERY_COMMON

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_COMMON  [extern]
```

QoS Snippet that optimizes discovery with a common configuration.

Optimizes the **DDS_DomainParticipantQos** (p. 971) to detect faster discovery changes. This QoS Snippet increases the speed moderately so that it fits the normal scenarios.

Modified QoS Parameters:

- **DDS_DiscoveryConfigQosPolicy::participant_liveliness_lease_duration** (p. 937)
- **DDS_DiscoveryConfigQosPolicy::participant_liveliness_assert_period** (p. 937)
- **DDS_DiscoveryConfigQosPolicy::max_liveliness_loss_detection_period** (p. 938)
- **DDS_DiscoveryConfigQosPolicy::initial_participant_announcements** (p. 939)
- **DDS_DiscoveryConfigQosPolicy::publication_writer** (p. 943)
- **DDS_DiscoveryConfigQosPolicy::subscription_writer** (p. 945)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.Discovery.Common"

7.209.2.61 DDS_SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT  [extern]
```

QoS Snippet that optimizes the Participant QoS to send less discovery information.

Modified QoS Parameters:

- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.participant.inter_↩ participant.*"
- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.sys_info.*"

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.Discovery.Participant.Compact"

7.209.2.62 DDS_SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST

```
const char* const DDS_SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST  [extern]
```

QoS Snippet that optimizes the Endpoint Discovery to be faster.

This is useful when using security, to prevent a noticeable delay.

Modified QoS Parameters:

- **DDS_DiscoveryConfigQosPolicy::publication_writer** (p. 943)
- **DDS_DiscoveryConfigQosPolicy::subscription_writer** (p. 945)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.Discovery.Endpoint.Fast"

7.209.2.63 DDS_SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS

```
const char* const DDS_SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS  [extern]
```

QoS Snippet that increases the Participant default buffer that shmem and udpv4 use.

This is useful when using Large Data

Modified QoS Parameters:

- **DDS_ReceiverPoolQosPolicy** (p. 1293)
- **DDS_TransportBuiltinQosPolicy** (p. 1408)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Optimization.Transport.LargeBuffers"

7.209.2.64 DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE

```
const char* const DDS_SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE  [extern]
```

QoS Snippet that sets RELIABILITY QoS to RELIABLE.

This also configures a blocking time in case the **DDSDataWriter** (p. 1589) writes faster than the DataReaders can accommodate.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_ReliabilityQosPolicy** (p. 1295)
- **DDS_DataReaderQos** (p. 858) => **DDS_ReliabilityQosPolicy** (p. 1295)

Note that by itself enabling reliability does not ensure that every sample written is delivered to the DataReaders. This is because the **DDSDataWriter** (p. 1589) and/or **DDSDataReader** (p. 1556) can be configured to override samples in its cache based on the configuration of the **DDS_HistoryQosPolicy** (p. 1162) QoS policy.

To ensure delivery of every sample (at the expense of potentially blocking the **DDSDataWriter** (p. 1589)), use the QoS Profile **DDS_PROFILE_GENERIC_STRICT_RELIABLE** (p. 689) or one of the derived QoS Profiles.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Reliability.Reliable"

7.209.2.65 DDS_SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT

```
const char* const DDS_SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT  [extern]
```

QoS Snippet that sets RELIABILITY QoS to BEST_EFFORT.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_ReliabilityQosPolicy** (p. 1295)
- **DDS_DataReaderQos** (p. 858) => **DDS_ReliabilityQosPolicy** (p. 1295)

With best-effort, there are no resources spent to confirm delivery of samples nor repairs of any samples that may be lost.

Best-effort communication reduces jitter; therefore, the delay between sending data and receiving it is more deterministic for the samples that are actually received. Best-effort is good for periodic data where it may be better to get the next value than to wait for the previous one to be repaired.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Reliability.BestEffort"

7.209.2.66 DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1

```
const char* const DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1  [extern]
```

QoS Snippet that sets HISTORY QoS to KEEP_LAST kind with depth 1.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_HistoryQosPolicy** (p. 1162)
- **DDS_DataReaderQos** (p. 858) => **DDS_HistoryQosPolicy** (p. 1162)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.History.KeepLast_1"

7.209.2.67 DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL

```
const char* const DDS_SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL  [extern]
```

QoS Snippet that sets HISTORY QosPolicy to KEEP_ALL kind.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_HistoryQosPolicy** (p. 1162)
- **DDS_DataReaderQos** (p. 858) => **DDS_HistoryQosPolicy** (p. 1162)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.History.KeepAll"

7.209.2.68 DDS_SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS

```
const char* const DDS_SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS  [extern]
```

QoS Snippet that sets PUBLISH_MODE QosPolicy to ASYNCHRONOUS kind.

Modified QoS Parameters:

- **DDS_PublishModeQosPolicy** (p. 1279)

Asynchronous Publish mode decouples the application thread that calls the **DDSDataWriter** (p. 1589) "write" operation from the thread used to send the data on the network. See https://community.rti.↩ com/glossary/asynchronous-writer

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.PublishMode.Asynchronous"

7.209.2.69 DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL  [extern]
```

QoS Snippet that sets DURABILITY QosPolicy to TRANSIENT_LOCAL kind.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_DurabilityQosPolicy** (p. 1005)
- **DDS_DataReaderQos** (p. 858) => **DDS_DurabilityQosPolicy** (p. 1005)

DataWriters will store and send previously published DDS samples for delivery to newly discovered DataReaders as long as the **DDSDataWriter** (p. 1589) still exists. For this setting to be effective, you must also set the **DDS_ReliabilityQos**↩ **PolicyKind** (p. 632) to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) (not Best Effort). Which particular DDS samples are kept depends on other QoS settings such as **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQos**↩ **Policy** (p. 1308).

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Durability.TransientLocal"

7.209.2.70 DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT  [extern]
```

QoS Snippet that sets DURABILITY QosPolicy to TRANSIENT kind.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_DurabilityQosPolicy** (p. 1005)
- **DDS_DataReaderQos** (p. 858) => **DDS_DurabilityQosPolicy** (p. 1005)

RTI Connext will store previously published DDS samples in memory using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308) of the Persistence Service DataWriters. These QosPolicies can be configured in the Persistence Service configuration file or through the **DDS_DurabilityQosPolicyKind** (p. 598) of the DataWriters configured with **DDS_TRANSIENT_DURABILITY_QOS** (p. 599).

You need a Persistence Service instance running to use this behavior.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Durability.Transient"

7.209.2.71 DDS_SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT

```
const char* const DDS_SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT  [extern]
```

QoS Snippet that sets DURABILITY QosPolicy to PERSISTENT kind.

Modified QoS Parameters:

- **DDS_DataWriterQos** (p. 909) => **DDS_DurabilityQosPolicy** (p. 1005)
- **DDS_DataReaderQos** (p. 858) => **DDS_DurabilityQosPolicy** (p. 1005)

RTI Connext will store previously published DDS samples in permanent storage, like a disk, using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308) in the Persistence Service DataWriters. These QosPolicies can be configured in the Persistence Service configuration file or through the **DDS_DurabilityQosPolicyKind** (p. 598) of the DataWriters configured with **DDS_PERSISTENT_↩ DURABILITY_QOS** (p. 599).

You need a Persistence Service instance running to use this behavior.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Durability.Persistent"

7.209.2.72 DDS_SNIPPET_QOS_POLICY_BATCHING_ENABLE

```
const char* const DDS_SNIPPET_QOS_POLICY_BATCHING_ENABLE  [extern]
```

QoS Snippet that sets BATCH QosPolicy to true.

Modified QoS Parameters:

- **DDS_BatchQosPolicy** (p. 810)

This QoS Snippet specifies and configures the mechanism that allows RTI Connext to collect multiple user data DDS samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "QosPolicy.Batching.Enable"

7.209.2.73 DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS  [extern]
```

QoS Snippet that configures and set a FlowController of 838 Mbps.

Defines a **DDSFlowController** (p. 1736) and configures the **DDS_DataWriterQos** (p. 909) with it.

This is a **DDSFlowController** (p. 1736) of 838 Mbps ($\sim$ 100 MB/sec)

Modified QoS Parameters:

- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.flow_controller.↩ token_bucket.*"
- **DDS_PublishModeQosPolicy** (p. 1279)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.FlowController.838Mbps"

7.209.2.74 DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS  [extern]
```

QoS Snippet that configures and sets a FlowController of 209 Mbps.

Defines a **DDSFlowController** (p. 1736) and configures the **DDS_DataWriterQos** (p. 909) with it.

This is a **DDSFlowController** (p. 1736) of 209 Mbps ($\sim$ 25 MB/sec)

Modified QoS Parameters:

- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.flow_controller.↩ token_bucket.*"
- **DDS_PublishModeQosPolicy** (p. 1279)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.FlowController.209Mbps"

7.209.2.75 DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS

```
const char* const DDS_SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS  [extern]
```

QoS Snippet that configures and sets a FlowController of 52 Mbps.

Defines a **DDSFlowController** (p. 1736) and configures the **DDS_DataWriterQos** (p. 909) with it.

This is a **DDSFlowController** (p. 1736) of 52 Mbps ($\sim$ 6.25 MB/sec)

Modified QoS Parameters:

- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.flow_controller.↩ token_bucket.∗"
- **DDS_PublishModeQosPolicy** (p. 1279)

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.FlowController.52Mbps"

7.209.2.76 DDS_SNIPPET_FEATURE_AUTO_TUNING_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_AUTO_TUNING_ENABLE  [extern]
```

QoS Snippet that enables auto_throttle and turbo_mode to true.

Sets the **DDS_DomainParticipantQos** (p. 971) properties to enable auto_throttle and turbo_mode to true.

Modified QoS Parameters:

- **DDS_DomainParticipantQos** (p. 971) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.domain_↩ participant.auto_throttle"
- **DDS_DataWriterQos** (p. 909) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.data_writer.auto_throttle.↩ enable"
- **DDS_DataWriterQos** (p. 909) => **DDS_PropertyQosPolicy** (p. 1260) named "dds.data_writer.enable_turbo_↩ mode"

The domain_participant.auto_throttle configures the **DDSDomainParticipant** (p. 1619) to gather internal measurements (during **DDSDomainParticipant** (p. 1619) creation) that are required for the Auto Throttle feature. This allows Data↩ Writers belonging to this **DDSDomainParticipant** (p. 1619) to use the Auto Throttle feature.

The turbo_mode adjusts the batch max_data_bytes based on how frequently the **DDSDataWriter** (p. 1589) writes data.

Data_writer.auto_throttle enables automatic throttling in the **DDSDataWriter** (p. 1589) so it can automatically adjust the writing rate and the send window size; this minimizes the need for repairing DDS samples and improves latency.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.AutoTuning.Enable"

7.209.2.77 DDS_SNIPPET_FEATURE_MONITORING_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_MONITORING_ENABLE  [extern]
```

QoS Snippet that enables the use of the RTI Monitoring Library.

To enable the use of RTI Monitoring Library apply this QoS Snippet to the QoS Profile used to create your **DDSDomain↩ Participant** (p. 1619). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.Monitoring.Enable</element>

    </base_name>

</qos_profile>
```

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.Monitoring.Enable"

7.209.2.78 DDS_SNIPPET_FEATURE_MONITORING2_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_MONITORING2_ENABLE  [extern]
```

QoS Snippet that enables the use of the RTI Monitoring Library 2.0.

QoS Snippet to enable the use of the RTI Monitoring Library 2.0 with a dedicated DomainParticipant publishing telemetry data from your application in domain ID 2. All metrics are enabled for all resources in this profile.

To enable the use of RTI Monitoring Library 2.0, apply this QoS Snippet to the QoS Profile used to create your Domain↩ ParticipantFactory. For example:

```
<qos_profile name="MyProfile" is_default_participant_factory_profile="true">
  <base_name>
    <element>BuiltinQosSnippetLib::Feature.Monitoring2.Enable</element>
  </base_name>
</qos_profile>
```

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.Monitoring2.Enable"

7.209.2.79 DDS_SNIPPET_FEATURE_SECURITY_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_SECURITY_ENABLE  [extern]
```

QoS Snippet that enables security using the Builtin Security Plugins.

To enable the use of the Builtin DDS Security Library apply this QoS Snippet to the QoS Profile used to create your **DDSDomainParticipant** (p. 1619). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.Security.Enable</element>

    </base_name>

</qos_profile>
```

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.Security.Enable"

7.209.2.80 DDS_SNIPPET_FEATURE_TOPIC_QUERY_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_TOPIC_QUERY_ENABLE  [extern]
```

QoS Snippet that enables Topic Query.

To enable the use of the RTI Connext **DDSTopicQuery** (p. 1895) feature, apply this QoS Snippet to the QoS Profile used to create your **DDSDataWriter** (p. 1589). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TopicQuery.Enable</element>

    </base_name>

</qos_profile>
```

For more information on Topic Query see the "Topic Queries" chapter in the `User's Manual`.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Feature.TopicQuery.Enable"

7.209.2.81 DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE  [extern]
```

QoS Snippet that enables TypeObject V1 propagation.

To enable TypeObject V1 propagation apply this QoS Snippet to the QoS Profile used to create your **DDSDomain↩ Participant** (p. 1619). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V1.Enable</element>

    </base_name>

</qos_profile>
```

7.209.2.82 DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE

```
const char* const DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE  [extern]
```

QoS Snippet that disables TypeObject V1 propagation.

To disable TypeObject V1 propagation apply this QoS Snippet to the QoS Profile used to create your **DDSDomain↩ Participant** (p. 1619). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V1.Disable</element>

    </base_name>

</qos_profile>
```

7.209.2.83 DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE

```
const char* const DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE  [extern]
```

QoS Snippet that enables TypeObject V2 propagation.

To enable TypeObject V2 propagation apply this QoS Snippet to the QoS Profile used to create your **DDSDomain↩ Participant** (p. 1619). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V2.Enable</element>

    </base_name>

</qos_profile>
```

7.209.2.84 DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE

```
const char* const DDS_SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE  [extern]
```

QoS Snippet that disables TypeObject V2 propagation.

To disable TypeObject V2 propagation apply this QoS Snippet to the QoS Profile used to create your **DDSDomain↩ Participant** (p. 1619). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V2.Disable</element>

    </base_name>

</qos_profile>
```

7.209.2.85 DDS_SNIPPET_TRANSPORT_TCP_LAN_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_LAN_CLIENT  [extern]
```

QoS Snippet that configures a TCP LAN Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the initial_peers and the property dds.transport.TCPv4.tcp1.server_bind_port are incorrect (just sample strings). Therefore, they must be modified:

- initial_peers: should point to the remote client IP and port.
- server_bind_port: is the port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1731). These new values will overwrite the current invalid values.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.TCP.LAN.Client"

7.209.2.86 DDS_SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT  [extern]
```

QoS Snippet that configures a symmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties dds.transport.TCPv4.tcp1.public_address and dds.transport.TCPv4.tcp1.server_bind_port are incorrect (just sample strings). Also the initial_peers information is not correct. Therefore, the following must be modified:

- initial_peers: should point to the remote client IP and port.
- public_address: public IP address where this application can be reached.
- server_bind_port: port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1731). These new values will overwrite the current invalid values.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.TCP.WAN.Symmetric.Client"

7.209.2.87 DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER  [extern]
```

QoS Snippet that an asymmetric WAN TCP Server over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties dds.transport.TCPv4.tcp1.public_address and dds.transport.TCPv4.tcp1.server_bind_port are incorrect (just sample strings). Therefore, they must be modified to the corresponding public_address and port_↩ number. This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1731). These new values will overwrite the current invalid values.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.TCP.WAN.Asymmetric.Server"

7.209.2.88 DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT

```
const char* const DDS_SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT  [extern]
```

QoS Snippet that configures an asymmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The value of discovery.initial_peers and public_ip have to match the values set on the Server side (**DDS_SNIPPET_**↩ **TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER** (p. 714)). This modification should be done in the QoS Profile that will be used to create the **DDSEntity** (p. 1731). This new value will overwrite the current invalid value.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.TCP.WAN.Asymmetric.Client"

7.209.2.89 DDS_SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION

```
const char* const DDS_SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION [extern]
```

QoS Snippet that configures RTI Connext and the UDP built-in transports (UDPv4, UDPv6, UDPv4_WAN) to avoid IP fragmentation.

For WAN communications and, in general, for communications in third party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

This snippet provides a way to avoid IP fragmentation in Connext applications using the built-in UDP transports. Instead, Connext will be responsible for fragmentation, which is done at the RTPS level.

Among other changes, this configuration changes the transport MTU (message_size_max) to be 1400 bytes. Notice that this change will affect other transports such as SHMEM since Connext chooses the minimum transport MTU across all enabled transports to determine the maximum size of outgoing RTPS messages.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.UDP.AvoidIPFragmentation"

7.209.2.90 DDS_SNIPPET_TRANSPORT_UDP_WAN

```
const char* const DDS_SNIPPET_TRANSPORT_UDP_WAN [extern]
```

QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4_WAN).

The snippet disables all the other built-in transports and avoids the use of IP fragmentation.

For WAN communications and, in general, for communications in third-party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Transport.UDP.WAN"

7.209.2.91 DDS_SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3

```
const char* const DDS_SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3 [extern]
```

QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connext Micro 2.4.3.

QoS Snippet that sets the **DDS_DataReaderQos** (p. 858) and **DDS_DataWriterQos** (p. 909) **DDS_LivelinessQos↩ PolicyKind** (p. 607) to **DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS** (p. 608) It also disables the built-in shared memory transport.

Modified QoS Parameters:

- **DDS_DataReaderQos** (p. 858) => **DDS_LivelinessQosPolicy** (p. 1180)
- **DDS_DataWriterQos** (p. 909) => **DDS_LivelinessQosPolicy** (p. 1180)
- **DDS_TransportBuiltinQosPolicy** (p. 1408)

RTI Connext Micro versions 2.4.3 and earlier only supported **DDS_MANUAL_BY_TOPIC_LIVELINESS_QOS** (p. 608) **DDS_LivelinessQosPolicyKind** (p. 607). In order to be compatible with RTI Connext Micro 2.4.3, the **DDSDataReader** (p. 1556) and **DDSDataWriter** (p. 1589) must have their **DDS_LivelinessQosPolicyKind** (p. 607) changed to this value because the default kind in RTI Connext is **DDS_AUTOMATIC_LIVELINESS_QOS** (p. 608).

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Compatibility.ConnextMicro.Version243"

7.209.2.92 DDS_SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE

```
const char* const DDS_SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE  [extern]
```

QoS Snippet that configures RTI Connext to interoperate with other DDS vendors.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Compatibility.OtherDDSVendor.Enable"

7.209.2.93 DDS_SNIPPET_5_1_0_TRANSPORT_ENABLE

```
const char* const DDS_SNIPPET_5_1_0_TRANSPORT_ENABLE  [extern]
```

QoS Snippet that configures RTI Connext to interoperate with RTI Connext 5.1.0 and below for UDPv6 and SHMEM transports.

In Library: **DDS_BUILTIN_QOS_SNIPPET_LIB** (p. 700)

String-version: "Compatibility.510Transport.Enable"

7.210 DomainParticipantConfigParams

<<***extension***>> *(p. 432)* **DDS_DomainParticipantConfigParams_t** (p. 964)

Classes

- struct **DDS_DomainParticipantConfigParams_t**

  <<***extension***>> *(p. 432) Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration.*

Macros

- #define **DDS_DomainParticipantConfigParams_t_INITIALIZER**

  <<***extension***>> *(p. 432) Initializer for new* ***DDS_DomainParticipantConfigParams_t*** *(p. 964).*

Variables

- const int **DDS_DOMAIN_ID_USE_XML_CONFIG**

  <<***extension***>> *(p. 432) Special value to be used with* ***DDS_DomainParticipantConfigParams_t*** *(p. 964) to indicate that a participant is created using the domain ID specified in the participant configuration.*
- const char * **DDS_ENTITY_NAME_USE_XML_CONFIG**

  <<***extension***>> *(p. 432) Special value to be used with* ***DDS_DomainParticipantConfigParams_t*** *(p. 964) to indicate that a participant created is with an autogenerated entity name.*
- const char * **DDS_QOS_ELEMENT_NAME_USE_XML_CONFIG**

  <<***extension***>> *(p. 432) Special value to be used with* ***DDS_DomainParticipantConfigParams_t*** *(p. 964) to indicate that entities are created from the QoS profile specified in the participant configuration.*

7.210.1 Detailed Description

<<***extension***>> *(*p. *432)* **DDS_DomainParticipantConfigParams_t** (p. 964)

7.210.2 Macro Definition Documentation

7.210.2.1 DDS_DomainParticipantConfigParams_t_INITIALIZER

```
#define DDS_DomainParticipantConfigParams_t_INITIALIZER
```

<<***extension***>> *(*p. *432)* Initializer for new **DDS_DomainParticipantConfigParams_t** (p. 964).

No memory is allocated. New **DDS_DomainParticipantConfigParams_t** (p. 964) instances stored in the stack should be initialized with this value before they are passed to any methods. .

7.210.3 Variable Documentation

7.210.3.1 DDS_DOMAIN_ID_USE_XML_CONFIG

```
const int DDS_DOMAIN_ID_USE_XML_CONFIG  [extern]
```

<<***extension***>> *(*p. *432)* Special value to be used with **DDS_DomainParticipantConfigParams_t** (p. 964) to indicate that a participant is created using the domain ID specified in the participant configuration.

This variable contains a constant sentinel value that is compared when creating the entities from configuration.

7.210.3.2 DDS_ENTITY_NAME_USE_XML_CONFIG

```
const char* DDS_ENTITY_NAME_USE_XML_CONFIG  [extern]
```

<<***extension***>> *(*p. *432)* Special value to be used with **DDS_DomainParticipantConfigParams_t** (p. 964) to indicate that a participant created is with an autogenerated entity name.

This variable contains a constant sentinel value that is lexicographically compared when creating the entities from configuration.

7.210.3.3 DDS_QOS_ELEMENT_NAME_USE_XML_CONFIG

```
const char* DDS_QOS_ELEMENT_NAME_USE_XML_CONFIG  [extern]
```

<<***extension***>> *(p. 432)* Special value to be used with **DDS_DomainParticipantConfigParams_t** (p. 964) to indicate that entities are created from the QoS profile specified in the participant configuration.

This variable contains a constant sentinel value that is lexicographically compared when creating the entities from configuration.

7.211 User-managed Threads

User-managed thread infrastructure.

Classes

- class **DDSThreadFactory**

  <<***extension***>> (p. *432)* <<***interface***>> *(p. 433) Interface for providing the threads needed by the middleware. It consists of operations to create and delete threads. The interface depends on the* ***DDSThreadFactory_OnSpawned↩ Function*** *(p. 718) that specifies the operation to run in the new thread.*

Typedefs

- typedef DDS_ThreadFactory_OnSpawnedFunction **DDSThreadFactory_OnSpawnedFunction**

  Prototype of the function that must be called on a new thread created by a ***DDSThreadFactory*** *(p. 1883).*

7.211.1 Detailed Description

User-managed thread infrastructure.

Core feature that allows users to provide the threads to RTI Connext.

"::DDSThreadFactory"

The model follows the abstract factory pattern. A **DDSThreadFactory** (p. 1883) instance can be set in the **DDSDomainParticipantFactory** (p. 1694) so that **DDSDomainParticipant** (p. 1619) will use it for thread creation and deletion.

7.211.2 Typedef Documentation

7.211.2.1 DDSThreadFactory_OnSpawnedFunction

```
typedef DDS_ThreadFactory_OnSpawnedFunction  DDSThreadFactory_OnSpawnedFunction
```

Prototype of the function that must be called on a new thread created by a **DDSThreadFactory** (p. 1883).

Parameters

thread_param	<<***in***>> *(*p. *433)* Single argument that this operation receives. It is the data this operation needs to perform.

7.212 Monitoring Library 2.0

RTI Monitoring Library 2.0 public API.

Functions

- void **RTI_Monitoring_initialize** (void)

  Initializes Monitoring Library 2.0.

Variables

- const char ∗const **RTI_MONITORING_PERIODIC_TOPIC_NAME**

  The name of the Monitoring Topic used for periodic metrics distribution.
- const char ∗const **RTI_MONITORING_EVENT_TOPIC_NAME**

  The name of the Monitoring Topic used for event metrics distribution.
- const char ∗const **RTI_MONITORING_LOGGING_TOPIC_NAME**

  The name of the Monitoring Topic used for log messages distribution.

7.212.1 Detailed Description

RTI Monitoring Library 2.0 public API.

RTI Monitoring Library 2.0 is one component of the RTI Connext Observability Framework which allows collecting and distributing telemetry data (metrics and logs) associated with the observable resources created by an RTI Connext application.

In this release, the only Observable resources are the following entities: **DDSDataWriter** (p. 1589), **DDSDataReader** (p. 1556), **DDSPublisher** (p. 1818), **DDSSubscriber** (p. 1860), **DDSDomainParticipant** (p. 1619), **DDSTopic** (p. 1885) and Application (a process running RTI Connext).

The library also accepts remote commands to change the set of distributed telemetry data at run-time.

The data distributed by RTI Monitoring Library 2.0 is sent to an RTI Observability Collector Service instance, which forwards the data to other RTI Observability Collector Service instances or stores the data in third-party observability backends such as Prometheus or Grafana Loki.

RTI Monitoring Library 2.0 is a separate library (rtimonitoring2), and applications can use it in three different modes:

- **Dynamically loaded:** This is the default mode, and it requires that the rtimonitoring2 shared library is in the library search path.
- **Dynamic linking:** The application is linked with the rtimonitoring2 shared library.
- **Static linking:** The application is linked with the rtimonitoring2 static library.

The last two modes require calling the API **RTI_Monitoring_initialize** (p. 720) in your application before any other RTI Connext APIs. This API is defined in the header file `ndds/monitoring/monitoring_monitoringClass.h`.

Dynamic and static linking are only supported in C and C++ applications.

To enable use of RTI Monitoring Library 2.0 and configure its behavior, use the **DDS_MonitoringQosPolicy** (p. 1210) QoS policy on the **DDSDomainParticipantFactory** (p. 1694). This QoS policy can be configured programmatically or via XML.

7.212.2 Function Documentation

7.212.2.1 RTI_Monitoring_initialize()

```
void RTI_Monitoring_initialize (
             void  )
```

Initializes Monitoring Library 2.0.

This method must be called before calling any other RTI Connext API if the application links with RTI Monitoring Library 2.0 dynamically or statically.

7.212.3 Variable Documentation

7.212.3.1 RTI_MONITORING_PERIODIC_TOPIC_NAME

```
const char* const RTI_MONITORING_PERIODIC_TOPIC_NAME
```

The name of the Monitoring Topic used for periodic metrics distribution.

String version: "DCPSPeriodicStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

7.212.3.2 RTI_MONITORING_EVENT_TOPIC_NAME

```
const char* const RTI_MONITORING_EVENT_TOPIC_NAME
```

The name of the Monitoring Topic used for event metrics distribution.

String version: "DCPSEventStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

7.212.3.3 RTI_MONITORING_LOGGING_TOPIC_NAME

```
const char* const RTI_MONITORING_LOGGING_TOPIC_NAME
```

The name of the Monitoring Topic used for log messages distribution.

String version: "DCPSLoggingStatusMonitoring".

This topic is used internally by Monitoring Library 2.0 and RTI Observability Collector Service. You should not publish or subscribe to it.

7.213 Version

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

Classes

- struct **NDDS_Config_LibraryVersion_t**
  The version of a single library shipped as part of an RTI Connext distribution.
- class **NDDSConfigVersion**
  *<<**interface**>> (p. 433) The version of an RTI Connext distribution.*

7.213.1 Detailed Description

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

There are three ways to obtain version information: looking at the revision files, using Visual Studio or the command line, or programmatically at run time. This HTML documentation includes a reference for consulting the APIs that allow you to get version information programmatically. For more information see the RTI Connext DDS Core Libraries User's Manual.

The version information includes four fields:

- Major product version.
- Minor product version.
- Release letter for product version.
- Revision number of product.

7.214 Logging

Configure how much debugging information is reported during runtime and where it is logged.

Modules

- **Activity Context**

  Add contextual information to log messages.

Classes

- struct **NDDS_Config_LogMessage**

  A log message's input parameter to a logging device, including the text and additional information.
- class **NDDSConfigLoggerDevice**

  *<<**interface**>> (*p. *433) Logging device interface. Use for user-defined logging devices.*
- class **NDDSConfigLogger**

  *<<**interface**>> (*p. *433) The singleton type used to configure RTI Connext logging.*

Enumerations

- enum **NDDS_Config_LogVerbosity** {
  NDDS_CONFIG_LOG_VERBOSITY_SILENT ,
  NDDS_CONFIG_LOG_VERBOSITY_ERROR ,
  NDDS_CONFIG_LOG_VERBOSITY_WARNING ,
  NDDS_CONFIG_LOG_VERBOSITY_STATUS_LOCAL ,
  NDDS_CONFIG_LOG_VERBOSITY_STATUS_REMOTE ,
  NDDS_CONFIG_LOG_VERBOSITY_STATUS_ALL }

  The verbosities at which RTI Connext diagnostic information is logged.
- enum **NDDS_Config_LogLevel** {
  NDDS_CONFIG_LOG_LEVEL_FATAL_ERROR ,
  NDDS_CONFIG_LOG_LEVEL_ERROR ,
  NDDS_CONFIG_LOG_LEVEL_WARNING ,
  NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL ,
  NDDS_CONFIG_LOG_LEVEL_STATUS_REMOTE ,
  NDDS_CONFIG_LOG_LEVEL_DEBUG }

  Level category assigned to RTI Connext log messages returned to an output device.
- enum **NDDS_Config_SyslogLevel** {
  NDDS_CONFIG_SYSLOG_LEVEL_EMERGENCY ,
  NDDS_CONFIG_SYSLOG_LEVEL_ALERT ,
  NDDS_CONFIG_SYSLOG_LEVEL_CRITICAL ,
  NDDS_CONFIG_SYSLOG_LEVEL_ERROR ,
  NDDS_CONFIG_SYSLOG_LEVEL_WARNING ,
  NDDS_CONFIG_SYSLOG_LEVEL_NOTICE ,
  NDDS_CONFIG_SYSLOG_LEVEL_INFORMATIONAL ,
  NDDS_CONFIG_SYSLOG_LEVEL_DEBUG }

  Syslog level category assigned to RTI Connext log messages. See `Syslog Level and Verbosity Mapping`*, in the Core Libraries User's Manual, for more information.*

- enum **NDDS_Config_LogCategory** {
  NDDS_CONFIG_LOG_CATEGORY_PLATFORM ,
  NDDS_CONFIG_LOG_CATEGORY_COMMUNICATION ,
  NDDS_CONFIG_LOG_CATEGORY_DATABASE ,
  NDDS_CONFIG_LOG_CATEGORY_ENTITIES ,
  NDDS_CONFIG_LOG_CATEGORY_API ,
  NDDS_CONFIG_LOG_CATEGORY_DISCOVERY ,
  NDDS_CONFIG_LOG_CATEGORY_SECURITY ,
  NDDS_CONFIG_LOG_CATEGORY_USER ,
  NDDS_CONFIG_LOG_CATEGORY_ALL }

  Categories of logged messages.
- enum **NDDS_Config_LogPrintFormat** { }

  The format used to output RTI Connext diagnostic information.
- enum **NDDS_Config_LogFacility** {
  NDDS_CONFIG_LOG_FACILITY_USER ,
  NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT ,
  NDDS_CONFIG_LOG_FACILITY_SERVICE ,
  NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE }

  A number that identifies the source of a log message.
- enum **NDDS_Config_SyslogVerbosity** {
  NDDS_CONFIG_SYSLOG_VERBOSITY_SILENT ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_EMERGENCY ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_ALERT ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_CRITICAL ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_ERROR ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_WARNING ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_NOTICE ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_INFORMATIONAL ,
  NDDS_CONFIG_SYSLOG_VERBOSITY_DEBUG }

  The Syslog verbosities at which RTI Connext diagnostic information is logged. These Syslog verbosities are mapped to ***NDDS_Config_LogVerbosity*** *(*p. 723*). See* `Syslog Level and Verbosity Mapping`*, in the Core Libraries User's Manual, for more information.*

7.214.1 Detailed Description

Configure how much debugging information is reported during runtime and where it is logged.

7.214.2 Enumeration Type Documentation

7.214.2.1 NDDS_Config_LogVerbosity

`enum` **`NDDS_Config_LogVerbosity`**

The verbosities at which RTI Connext diagnostic information is logged.

Enumerator

NDDS_CONFIG_LOG_VERBOSITY_SILENT	No further output will be logged.
NDDS_CONFIG_LOG_VERBOSITY_ERROR	Only error and fatal error messages will be logged. An error indicates something wrong in the functioning of RTI Connext. The most common cause of errors is incorrect configuration.
NDDS_CONFIG_LOG_VERBOSITY_WARNING	Both error and warning messages will be logged. A warning indicates that RTI Connext is taking an action that may or may not be what you intended. Some configuration information is also logged at this verbosity to aid in debugging.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_LOCAL	Errors, warnings, and verbose information about the lifecycles of local RTI Connext objects will be logged.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_↩ REMOTE	Errors, warnings, and verbose information about the lifecycles of remote RTI Connext objects will be logged.
NDDS_CONFIG_LOG_VERBOSITY_STATUS_ALL	Errors, warnings, verbose information about the lifecycles of local and remote RTI Connext objects, and periodic information about RTI Connext threads will be logged.

7.214.2.2 NDDS_Config_LogLevel

enum **NDDS_Config_LogLevel**

Level category assigned to RTI Connext log messages returned to an output device.

Enumerator

NDDS_CONFIG_LOG_LEVEL_FATAL_ERROR	The message describes a fatal error. A fatal error indicates an unrecoverable situation in the functioning of RTI Connext. Error messages with this log level usually indicate a violation of an internal invariant or a segfault, and may include the function call stack where the fatal error happened.
NDDS_CONFIG_LOG_LEVEL_ERROR	The message describes an error. An error indicates a non-fatal problem in the functioning of RTI Connext. Errors are usually recoverable and will not stop application execution, although they may prevent some features from working properly. The most common cause of non-fatal errors is incorrect configuration and incorrect arguments.
NDDS_CONFIG_LOG_LEVEL_WARNING	The message describes a warning. A warning indicates that RTI Connext is taking an action that may or may not be what you intended. Some configuration information is also logged at this verbosity to aid in debugging.
NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL	The message contains information about the lifecycles of local RTI Connext objects will be logged.
NDDS_CONFIG_LOG_LEVEL_STATUS_REMOTE	The message contains information about the lifecycles of remote RTI Connext objects will be logged.
NDDS_CONFIG_LOG_LEVEL_DEBUG	The message contains debug information that might be relevant to your application.

7.214.2.3 NDDS_Config_SyslogLevel

enum **NDDS_Config_SyslogLevel**

Syslog level category assigned to RTI Connext log messages. See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.

Enumerator

NDDS_CONFIG_SYSLOG_LEVEL_EMERGENCY	System is unusable. Maps to **NDDS_CONFIG_LOG_LEVEL_FATAL_ERROR** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_ALERT	Should be corrected immediately. Maps to **NDDS_CONFIG_LOG_LEVEL_ERROR** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_CRITICAL	Critical conditions. Maps to **NDDS_CONFIG_LOG_LEVEL_ERROR** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_ERROR	Error conditions. Maps to **NDDS_CONFIG_LOG_LEVEL_ERROR** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_WARNING	May indicate that an error will occur if action is not taken. Maps to **NDDS_CONFIG_LOG_LEVEL_WARNING** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_NOTICE	Events that are unusual, but not error conditions. Maps to **NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_INFORMATIONAL	Normal operational messages that require no action. Maps to **NDDS_CONFIG_LOG_LEVEL_STATUS_LOCAL** (p. 724).
NDDS_CONFIG_SYSLOG_LEVEL_DEBUG	Information useful to developers for debugging the application. Maps to **NDDS_CONFIG_LOG_LEVEL_DEBUG** (p. 724).

7.214.2.4 NDDS_Config_LogCategory

enum **NDDS_Config_LogCategory**

Categories of logged messages.

The **NDDSConfigLogger::get_verbosity_by_category** (p. 2095) and **NDDSConfigLogger::set_verbosity_by_↩ category** (p. 2095) can be used to specify different verbosities for different categories of messages.

Enumerator

NDDS_CONFIG_LOG_CATEGORY_PLATFORM	Log messages pertaining to the underlying platform (hardware and OS) on which RTI Connext is running are in this category.
NDDS_CONFIG_LOG_CATEGORY_↩ COMMUNICATION	Log messages pertaining to data serialization and deserialization and network traffic are in this category.
NDDS_CONFIG_LOG_CATEGORY_DATABASE	Log messages pertaining to the internal database in which RTI Connext objects are stored are in this category.
NDDS_CONFIG_LOG_CATEGORY_ENTITIES	Log messages pertaining to local and remote entities, and to a subset of the discovery process, are in this category. (To see all discovery-related messages, use the DISCOVERY category.)
NDDS_CONFIG_LOG_CATEGORY_API	Log messages pertaining to the API layer of RTI Connext (such as method argument validation) are in this category.
NDDS_CONFIG_LOG_CATEGORY_DISCOVERY	Log messages pertaining to discovery are in this category.
NDDS_CONFIG_LOG_CATEGORY_SECURITY	Log messages pertaining to security are in this category. These messages include any messages logged by RTI Connext components even if they are not related to the Security Plugins.
NDDS_CONFIG_LOG_CATEGORY_USER	Log messages that are generated by the user using the following log APIs: **NDDSConfigLogger::emergency** (p. 2098), **NDDSConfigLogger::alert** (p. 2098), **NDDSConfigLogger::critical** (p. 2099), **NDDSConfigLogger::error** (p. 2099), **NDDSConfigLogger::warning** (p. 2099), **NDDSConfigLogger::notice** (p. 2099), **NDDSConfigLogger::informational** (p. 2099), **NDDSConfigLogger::debug** (p. 2100).
NDDS_CONFIG_LOG_CATEGORY_ALL	Log messages pertaining to all categories in RTI Connext.

7.214.2.5 NDDS_Config_LogPrintFormat

enum **NDDS_Config_LogPrintFormat**

The format used to output RTI Connext diagnostic information.

Enumerator

NDDS_CONFIG_LOG_PRINT_FORMAT_DEFAULT	(default) Print message, method name, log level, **Activity Context** (p. 729) (what was happening when the event occurred), and logging category.
NDDS_CONFIG_LOG_PRINT_FORMAT_↩ TIMESTAMPED	Print message, method name, log level, **Activity Context** (p. 729), logging category, and timestamp.

Enumerator

NDDS_CONFIG_LOG_PRINT_FORMAT_VERBOSE	Print message with all available context information (includes thread identifier, message location).
NDDS_CONFIG_LOG_PRINT_FORMAT_VERBOSE↩ _TIMESTAMPED	Print message with all available context information, and timestamp.
NDDS_CONFIG_LOG_PRINT_FORMAT_DEBUG	Print a set of fields (including message number and backtrace information) that may be useful for internal debugging.
NDDS_CONFIG_LOG_PRINT_FORMAT_MINIMAL	Print only message number and message location.
NDDS_CONFIG_LOG_PRINT_FORMAT_MAXIMAL	Print all available fields.

7.214.2.6 NDDS_Config_LogFacility

enum **NDDS_Config_LogFacility**

A number that identifies the source of a log message.

In the Syslog Protocol, the Facility is a numerical code that represents the machine process that created a Syslog event. RTI Connext uses the facility to represent the source of a given log message.

Enumerator

NDDS_CONFIG_LOG_FACILITY_USER	A log message produced by the APIs that log user messages in **NDDSConfigLogger** (p. 2093) (e.g, **NDDSConfigLogger::emergency** (p. 2098)). Numerical code: 1
NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT	A security-related message logged by the RTI Security Plugins Logging Plugin. Numerical code: 10
NDDS_CONFIG_LOG_FACILITY_SERVICE	A log message produced by an Infrastructure Service, such as Routing Service. Infrastructure Services operate using the Core Libraries. The messages that the Core Libraries create are categorized under the MIDDLEWARE facility. Log messages that are directly generated by the Infrastructure Service itself are marked with the SERVICE facility. Numerical code: 22
NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE	A log message produced by RTI Connext Core Libraries. Numerical code: 23

7.214.2.7 NDDS_Config_SyslogVerbosity

enum **NDDS_Config_SyslogVerbosity**

The Syslog verbosities at which RTI Connext diagnostic information is logged. These Syslog verbosities are mapped to **NDDS_Config_LogVerbosity** (p. 723). See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.

Enumerator

NDDS_CONFIG_SYSLOG_VERBOSITY_SILENT	No messages will be logged. (lowest verbosity) Equivalent to **NDDS_CONFIG_LOG_VERBOSITY_SILENT** (p. 724).
NDDS_CONFIG_SYSLOG_VERBOSITY_↩ EMERGENCY	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_ERROR** (p. 724) when interpreted by RTI Connext. (That's why this level actually logs more than just emergency messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_ALERT	Emergency, critical, and alert messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_ERROR** (p. 724) when interpreted by RTI Connext. (That's why this level actually logs more than just emergency, critical and alert messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_CRITICAL	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_ERROR** (p. 724) when interpreted by RTI Connext. (That's why this level actually logs more than just emergency and critical messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_ERROR	Emergency, critical, alert, and error messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_ERROR** (p. 724) when interpreted by RTI Connext.
NDDS_CONFIG_SYSLOG_VERBOSITY_WARNING	Emergency, critical, alert, error, and warning messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_WARNING** (p. 724) when interpreted by RTI Connext.
NDDS_CONFIG_SYSLOG_VERBOSITY_NOTICE	Emergency, critical, alert, error, warning, notice and informational messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_↩ VERBOSITY_STATUS_REMOTE** (p. 724) when interpreted by RTI Connext. (That's why this level actually logs more than just emergency, critical, alert, error, warning and notice messages.)
NDDS_CONFIG_SYSLOG_VERBOSITY_↩ INFORMATIONAL	Emergency, critical, alert, error, warning, notice, and informational messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_↩ VERBOSITY_STATUS_REMOTE** (p. 724) when interpreted by RTI Connext.
NDDS_CONFIG_SYSLOG_VERBOSITY_DEBUG	All messages will be logged. This Syslog verbosity level is translated to **NDDS_CONFIG_LOG_VERBOSITY_STATUS_ALL** (p. 724) when interpreted by RTI Connext.

7.215 Activity Context

Add contextual information to log messages.

Classes

- class **NDDSConfigActivityContext**

  Activity Context APIs.

Macros

- #define **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT** RTI_OSAPI_ACTIVITY_↩ CONTEXT_ATTRIBUTE_MASK_DEFAULT

  Provide the default attributes of the resource of the Activity Context.
- #define **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE** RTI_OSAPI_ACTIVITY_↩ CONTEXT_ATTRIBUTE_MASK_NONE

  Not provide any attribute of the resource of the Activity Context.
- #define **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL** RTI_OSAPI_ACTIVITY_↩ CONTEXT_ATTRIBUTE_MASK_ALL

  Provide all the possibles attributes of the resource of the Activity Context.

Typedefs

- typedef **DDS_Long NDDS_Config_ActivityContextAttributeKindMask**

  *The attributes **NDDS_Config_ActivityContextAttributeKind** (p. 731) used in the string representation of the Activity Context can be configured through this mask.*

Enumerations

- enum **NDDS_Config_ActivityContextAttributeKind** {
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_GUID_PREFIX ,
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TOPIC ,
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TYPE ,
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_KIND ,
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_DOMAIN_ID ,
  NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_NAME }

  *The resources of the **Activity Context** (p. 729) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.*

Functions

- static void **NDDSConfigActivityContext::set_attribute_mask** (**NDDS_Config_ActivityContextAttribute**↩ **KindMask** attribute_format)

  *Set the **NDDS_Config_ActivityContextAttributeKindMask** (p. 731) of the Activity Context.*

7.215.1 Detailed Description

Add contextual information to log messages.

The Activity Context is a group of resources and activities associated with an action such as the creation of an entity.

- A resource is a abstraction of an entity. It can contain attributes such as Topic or domain ID.
- An activity is a general task that the resource is doing, such as "Getting QoS".

Logging context is one of the formats RTI Connext logging infrastructure supports. It is used by default in **NDDS_CONFIG_LOG_PRINT_FORMAT_DEFAULT** (p. 726). It provides information about resources and activities. The activity context is used in two places:

- Logging: activity context is one of the **NDDS_Config_LogPrintFormat** (p. 726) DDS logging infrastructure supports. If that format is set every time RTI Connext logs a message, it will contain the contextual information.
- Heap monitoring: every time memory is allocated and heap monitoring is enabled, the string representation of the activity context will be associated with the allocation. This information will be available when taking the snapshot.

For example, in the creation of a DataWriter, the activity context will provide information about:

- Resource: the Publisher creating the DataWriter. Attributes of the publisher will be GUID, kind, name and domain ID.
- Activity: entity creation. It will have two parameters, the entity kind and the Topic. In the example below, these are "Writer" and "TestTopic".

The string representation of the above activity context would be:

```
[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000088{Entity=Pu,Name=TestPublisher,Domain=1}|CREATE Writer WITH TOPIC
       TestTopic]
```

Another example could be when a DataWriter writes a sample. The activity context will provide information about:

- Resource: the DataWriter writing the sample. The attributes of the DataWriter will be GUID, name, kind, Topic, data type, and the domain ID.
- Activity will be "write a sample".

The string representation of the activity context will be:

```
[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]
```

7.215.2 Macro Definition Documentation

7.215.2.1 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT  RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE↩
_MASK_DEFAULT
```

Provide the default attributes of the resource of the Activity Context.

7.215.2.2 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE  RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE_↩
MASK_NONE
```

Not provide any attribute of the resource of the Activity Context.

7.215.2.3 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL

```
#define NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL  RTI_OSAPI_ACTIVITY_CONTEXT_ATTRIBUTE_↩
MASK_ALL
```

Provide all the possibles attributes of the resource of the Activity Context.

7.215.3 Typedef Documentation

7.215.3.1 NDDS_Config_ActivityContextAttributeKindMask

```
typedef DDS_Long NDDS_Config_ActivityContextAttributeKindMask
```

The attributes **NDDS_Config_ActivityContextAttributeKind** (p. 731) used in the string representation of the Activity Context can be configured through this mask.

This mask indicates what attributes of the resource are used when RTI Connext logs a message or when the Heap Monitoring utility saves statistics for a memory allocation.

7.215.4 Enumeration Type Documentation

7.215.4.1 NDDS_Config_ActivityContextAttributeKind

```
enum NDDS_Config_ActivityContextAttributeKind
```

The resources of the **Activity Context** (p. 729) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.

Enumerator

NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_GUID_PREFIX	Provide the entity GUID prefix to the resource of the Activity Context. For example:
	• For the following string representation of the context:
	`[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`
	• The GUID prefix is 0X101A76B,0X79E5D71,0X50EE914. If the bit **NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_GUID_PREFIX** (p. 732) is not set, the string representation will not show the GUID prefix:
	`[:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo`

NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_TOPIC	Provide the Topic to the resource of the Activity Context. The topic attribute is specified by "Topic". For example: • For the following string representation of the context: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite` • The Topic is "test." If the bit **NDDS_CONFIG_↩ ACTIVITY_CONTEXT_ATTRIBUTE_TOPIC** (p. 732) is not set, the string representation will not show the Topic: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`
NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_TYPE	Provide the data type to the resource of the Activity Context. The type attribute is specified by "Type". For example: • For the following string representation of the context: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite` • The data type is "Foo." If the bit **NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_TYPE** (p. 732) is not set, the string representation will not show the data type: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`

Enumerator

NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_ENTITY_KIND	Provide the entity kind to the resource of the Activity Context. The kind attribute is specified by "Entity". For example: • For the following string representation of the context: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite` • The entity kind is "Writer." If the bit **NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_ENTITY_KIND** (p. 733) is not set, the string representation will not show the entity kind: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`
NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_DOMAIN_ID	Provide the domain ID to the resource of the Activity Context. The domain attribute is specified by "Domain". For example: • For the following string representation of the context: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite` • The domain ID is "1." If the bit **NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_DOMAIN_ID** (p. 733) is not set, the string representation will not show the domain ID: `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`

NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_ENTITY_NAME	Provide the entity name to the resource of the Activity Context. The name attribute is specified by "Name". For example:
	• For the following string representation of the context:
	`[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWrite`
	• The entity name is "testDataWriterName." If the bit **NDDS_CONFIG_ACTIVITY_CONTEXT_↩ ATTRIBUTE_ENTITY_NAME** (p. 733) is not set, the string representation will not show the entity name:
	`[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Entity=DW,Topic=te`

7.215.5 Function Documentation

7.215.5.1 set_attribute_mask()

```
static void NDDSConfigActivityContext::set_attribute_mask (
              NDDS_Config_ActivityContextAttributeKindMask attribute_format )  [static]
```

Set the **NDDS_Config_ActivityContextAttributeKindMask** (p. 731) of the Activity Context.

7.216 Compliance Configuration

APIs to configure compliance with certain standard specifications.

Classes

- class **NDDSConfigCompliance**

  APIs to configure all the compliance mask.

Macros

- #define **NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_VENDOR**

  XTypes vendor compliance mask. This value is fully aligned with the XTypes specification.
- #define **NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT**

  Default XTypes compliance mask.
- #define **NDDS_CONFIG_RPC_COMPLIANCE_MASK_VENDOR**

  This mask configures compliance with the OMG DDS-RPC specification.
- #define **NDDS_CONFIG_RPC_COMPLIANCE_MASK_DEFAULT**

  Default RPC compliance mask.

Typedefs

- typedef **DDS_UnsignedLong NDDS_Config_XTypesComplianceMask**

  XTypes compliance mask.
- typedef **DDS_UnsignedLong NDDS_Config_RpcComplianceMask**

  Mask to configure compliance with the OMG DDS-RPC specification.

Enumerations

- enum **NDDS_Config_XTypesComplianceMaskBits** {
  NDDS_CONFIG_XTYPES_DHEADER_IN_NON_PRIMITIVE_COLLECTIONS_BIT ,
  NDDS_CONFIG_XTYPES_ENUM_AS_PRIMITIVE_IN_COLLECTIONS_BIT ,
  NDDS_CONFIG_XTYPES_PARAMETER_LENGTH_WITH_PADDING_BIT ,
  NDDS_CONFIG_XTYPES_ENCAPSULATION_OPTIONS_WITH_PADDING_BIT ,
  NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_ENUM_VALUE_BIT ,
  NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_DISCRIMINATOR_BIT ,
  NDDS_CONFIG_XTYPES_SELECT_DEFAULT_DISCRIMINATOR_BIT ,
  NDDS_CONFIG_XTYPES_SENTINEL_IN_EMPTY_UNION_BIT ,
  NDDS_CONFIG_XTYPES_INITIALIZE_DISCRIMINATOR_TO_DEFAULT_BIT ,
  NDDS_CONFIG_XTYPES_JAVA_KEYHASH_750_BIT ,
  NDDS_CONFIG_XTYPES_PYTHON_INT8_730_BIT ,
  NDDS_CONFIG_XTYPES_MUST_UNDERSTAND_IN_KEY_AND_DISCRIMINATOR_BIT }

  *The bits for the **NDDS_Config_XTypesComplianceMask** (p. 736) with different aspects of the Extended CDR encoding (XCDR and XCDR2).*
- enum **NDDS_Config_RpcComplianceMaskBits** { **NDDS_CONFIG_RPC_USE_STANDARD_RELATED_SAMPLE_PID_BIT** }

  *The bits for the **NDDS_Config_RpcComplianceMask** (p. 737) with different aspects of RPC and Request Reply.*

7.216.1 Detailed Description

APIs to configure compliance with certain standard specifications.

7.216.2 Macro Definition Documentation

7.216.2.1 NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_VENDOR

```
#define NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_VENDOR
```

XTypes vendor compliance mask. This value is fully aligned with the XTypes specification.

The mask sets the following bits:

- **NDDS_CONFIG_XTYPES_DHEADER_IN_NON_PRIMITIVE_COLLECTIONS_BIT** (p. 739)
- **NDDS_CONFIG_XTYPES_ENCAPSULATION_OPTIONS_WITH_PADDING_BIT** (p. 740)
- **NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_DISCRIMINATOR_BIT** (p. 741)
- **NDDS_CONFIG_XTYPES_SENTINEL_IN_EMPTY_UNION_BIT** (p. 742)
- **NDDS_CONFIG_XTYPES_INITIALIZE_DISCRIMINATOR_TO_DEFAULT_BIT** (p. 743)

The HEX value for the mask is: 0x000001a9.

Warning

This mask will always include all known fixes to ensure full alignment with the XTypes specification. As a result, its contents may change between releases or patches. If you want to ensure that your application's behavior remains unaffected by future changes, you should specify the exact bits you are interested in.

7.216.2.2 NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT

```
#define NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT
```

Default XTypes compliance mask.

The mask sets the following bits:

- **NDDS_CONFIG_XTYPES_PARAMETER_LENGTH_WITH_PADDING_BIT** (p. 739)
- **NDDS_CONFIG_XTYPES_ENCAPSULATION_OPTIONS_WITH_PADDING_BIT** (p. 740)
- **NDDS_CONFIG_XTYPES_SENTINEL_IN_EMPTY_UNION_BIT** (p. 742)
- **NDDS_CONFIG_XTYPES_INITIALIZE_DISCRIMINATOR_TO_DEFAULT_BIT** (p. 743)

The HEX value for the mask is: 0x0000018C.

7.216.2.3 NDDS_CONFIG_RPC_COMPLIANCE_MASK_VENDOR

```
#define NDDS_CONFIG_RPC_COMPLIANCE_MASK_VENDOR
```

This mask configures compliance with the OMG DDS-RPC specification.

The mask sets the following bits:

- **NDDS_CONFIG_RPC_USE_STANDARD_RELATED_SAMPLE_PID_BIT** (p. 745)

The HEX value for the mask is: 0x00000001.

7.216.2.4 NDDS_CONFIG_RPC_COMPLIANCE_MASK_DEFAULT

```
#define NDDS_CONFIG_RPC_COMPLIANCE_MASK_DEFAULT
```

Default RPC compliance mask.

The mask does not sets any bits.

The HEX value for the mask is: 0x00000000.

7.216.3 Typedef Documentation

7.216.3.1 NDDS_Config_XTypesComplianceMask

```
typedef DDS_UnsignedLong NDDS_Config_XTypesComplianceMask
```

XTypes compliance mask.

The **NDDS_Config_XTypesComplianceMask** (p. 736) configures different aspects of the Extended CDR encoding (XCDR and XCDR2).

Applications that don't use the exact same XTypes compliance mask may not be interoperable.

By default, data serialization is not fully compliant with Extended CDR encoding. While this doesn't affect correctness, it may prevent interoperability with other vendors.

You can change the default compliance mask for an application using any of the following mechanisms:

- Setting the environment variable **NDDS_XTYPES_COMPLIANCE_MASK**
- Calling the function **NDDSConfigCompliance::set_xtypes_mask** (p. 2090)

The environment variable will be automatically loaded when a **DDSDomainParticipantFactory** (p. 1694) is created. If you need to load it before that, use the function **NDDSConfigCompliance::load_compliance_masks** (p. 2091).

The format of the environment variable is an unsigned integer, which can be in HEX notation. For example: 0x00000001.

The default value is **NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735).

To be fully compliant with the XTypes specification, set the mask to **NDDS_CONFIG_XTYPES_COMPLIANCE_↩ MASK_VENDOR** (p. 735).

[default] NDDS_CONFIG_XTYPES_COMPLIANCE_MASK_DEFAULT (p. 735)

When changing the mask for an application is not desired, the property dds.xtypes.compliance_mask will change the mask at the DomainParticipant or DataWriter level. When set in the DomainParticipant, it configures the mask for all DataWriters in the participant. See `Extensible Types Compliance Mask` in the RTI Connext Core Libraries Extensible Types Guide.

7.216.3.2 NDDS_Config_RpcComplianceMask

```
typedef DDS_UnsignedLong NDDS_Config_RpcComplianceMask
```

Mask to configure compliance with the OMG DDS-RPC specification.

The **NDDS_Config_RpcComplianceMask** (p. 737) configures different aspects of RPC communication.

By default, the PID_RELATED_SAMPLE_IDENTITY used in RPC is not compliant with DDS RPC specification. This issue only affect interoperability with other vendors.

You can change the default compliance mask for an application using any of the following mechanisms:

- Setting the environment variable **NDDS_RPC_COMPLIANCE_MASK**

- Calling the function **NDDSConfigCompliance::set_rpc_mask** (p. 2092)

The environment variable will be automatically loaded when a **DDSDomainParticipantFactory** (p. 1694) is created. If you need to load it before that, use the function **NDDSConfigCompliance::load_compliance_masks** (p. 2091).

The format of the environment variable is an unsigned integer, which can be in HEX notation. For example: 0x00000001.

The default value is **NDDS_CONFIG_RPC_COMPLIANCE_MASK_DEFAULT** (p. 736).

To be fully compliant with the DDS RPC specification, set the mask to **NDDS_CONFIG_RPC_COMPLIANCE_MASK↩ _VENDOR** (p. 736).

[default] NDDS_CONFIG_RPC_COMPLIANCE_MASK_DEFAULT (p. 736)

If changing the the mask in an application is not desired, the property dds.rpc.compliance_mask will change the mask at Participant or DataWriter level. When set in the Participant it configures the mask for all DataWriters in the Participant. See Using RPC compliance mask in the RTI Connext Core Libraries Users Manual.

7.216.4 Enumeration Type Documentation

7.216.4.1 NDDS_Config_XTypesComplianceMaskBits

`enum` **`NDDS_Config_XTypesComplianceMaskBits`**

The bits for the **NDDS_Config_XTypesComplianceMask** (p. 736) with different aspects of the Extended CDR encoding (XCDR and XCDR2).

See also

NDDS_Config_XTypesComplianceMask (p. 736)

Enumerator

NDDS_CONFIG_XTYPES_DHEADER_IN_NON_↩ PRIMITIVE_COLLECTIONS_BIT	When this bit is set, the serialization of sequences and arrays with non-primitive members includes a DHEADER. Value: 0x00000001 To be compatible with the XTypes specification, this bit must be set. This bit only applies to XCDR2 encoding. Limitation: For FlatData, the compliant encoding is applied to arrays and sequences of mutable types, but not final types . The serialization of final types containing arrays of non-primitive types in the FlatData language binding is not compliant with Extended CDR encoding version 2 in any case. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)
NDDS_CONFIG_XTYPES_ENUM_AS_PRIMITIVE_↩ IN_COLLECTIONS_BIT	When this bit is set, enums are considered primitive types in collection types. Value: 0x00000002 A DHEADER will not be added to collections of enums if **NDDS_CONFIG_XTYPES_DHEADER_IN_NON_↩ PRIMITIVE_COLLECTIONS_BIT** (p. 739) is set. To be compatible with the XTypes specification, this bit must be unset. This bit only applies to XCDR2 encoding. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)
NDDS_CONFIG_XTYPES_PARAMETER_LENGTH↩ _WITH_PADDING_BIT	When this bit is set, the length of a member header in a mutable type or an optional member will include padding bytes to a 4-byte boundary. Value: 0x00000004 To be compatible with the XTypes specification, this bit must be unset. This bit only applies to XCDR encoding. This bit is set by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_ENCAPSULATION_↩ OPTIONS_WITH_PADDING_BIT	When this bit is set, RTI Connext will set the padding bits in the options field of the encapsulation header of a serialized payload. Value: 0x00000008 When this bit is set RTI Connext will set the least significant two bits in the second byte of the options field to a value that encodes the number of padding bytes needed after the end of the serialized payload in order to reach the next 4-byte aligned offset. Specifically, the least significant two bits shall be set to binary 00 if no padding bits would be needed and binary 01, 10, or 11 if, respectively, there would be one, two, or three bytes of padding needed. These bits in the options field will be interpreted by a DataReader to determine where the serialized data exactly ended. To be compatible with the XTypes specification, this bit must be set. To be compatible with the following Micro versions this bit must be unset because those versions of Micro did not support padding bits and will discard any data with encapsulations options not set to 0. • RTI Connext Micro 3.x.y.z • RTI Connext Micro 2.4.15.1 • RTI Connext Micro 2.4.14.0 and 2.4.14.1 • RTI Connext Micro 2.4.13.1 through 2.4.13.5 • RTI Connext Micro 2.4.12.z This bit applies to both, XCDR and XCDR2 encodings. This bit is set by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)
NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_↩ ENUM_VALUE_BIT	When this bit is set, samples containing an unknown enumerator can be successfully deserialized to the default enumeration value. Value: 0x00000010 To be compatible with the XTypes specification, this bit must be unset. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_↩ DISCRIMINATOR_BIT	When this bit is set, samples containing an unknown discriminator can be successfully deserialized, and the sample won't be dropped. Value: 0x00000020 When this bit is set, samples containing an unknown discriminator won't be dropped, and the discriminator value assigned to the sample will depend on whether or not the bit **NDDS_CONFIG_XTYPES_SELECT_↩ DEFAULT_DISCRIMINATOR_BIT** (p. 741) is set. To be compatible with the XTypes specification, this bit must be set. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)
NDDS_CONFIG_XTYPES_SELECT_DEFAULT_↩ DISCRIMINATOR_BIT	When this bit is set, samples containing a discriminator value that does not select any member in the union will be assigned the default discriminator value; if the bit is not set, the sample will preserve the discriminator value. Value: 0x00000040 When this bit is set, samples containing a discriminator value that does not select any member in the union will be assigned the default discriminator value. If the default value selects a valid union member, that member will be initialized to the default value of its type. If the bit is not set, the sample will preserve the discriminator value. The bit **NDDS_CONFIG_XTYPES_INITIALIZE↩ _DISCRIMINATOR_TO_DEFAULT_BIT** (p. 743) determines what the default discriminator value is. This bit is only relevant when the bit **NDDS_CONFIG_XTYPES_ACCEPT_UNKNOWN_↩ DISCRIMINATOR_BIT** (p. 741) is set, and it is used to determine the value of the discriminator when the sample contains an unknown discriminator. To be compatible with the XTypes specification, this bit must be unset. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_SENTINEL_IN_EMPTY_↩ UNION_BIT	When this bit is set, samples of a mutable union that contain an unknown discriminator will be serialized with a 4-byte sentinel value. Value: 0x00000080 When this bit is set, samples of a mutable union that contain an unknown discriminator will be serialized with a 4-byte sentinel value: 0x027f0000. This is the same sentinel value as the one used for samples of a mutable union that contain a known discriminator. This bit only applies to XCDR encoding, Dynamic Data, and language APIs other than Java. When using Java and not using Dynamic Data, the sentinel is always added. To be compatible with the XTypes specification and with Connext version 5.3.x, this bit must be set. This bit is set by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_INITIALIZE_↩ DISCRIMINATOR_TO_DEFAULT_BIT	When this bit is set, the union discriminator will be initialized to the default value of its type. Value: 0x00000100 When this bit is set, the union discriminator will be initialized to the default value of its type. This means 0 for numeric discriminators, false for boolean discriminators, and the first literal of the enumeration for enumerated discriminators. As a result, a union may be initialized with a discriminator value that does not correspond to any of its members. The default value of the type can be modified by creating an alias type and using the **[default]** annotation to specify the desired default value. You can then use that alias type as the discriminator type, and the default discriminator value will be the one specified in the alias type. When this bit is unset, the discriminator will be set to select to a value that selects the default union member, if one is defined, or otherwise to the lowest value associated with any member. If you generated code (using Code Generator) with this bit configured one way using the -xTypesComplianceMask flag (for example, -xTypesComplianceMask 0x00000100) and then configure it the opposite way in the API (for example, unset at 0x00000000), you must regenerate code using Code Generator's -xTypesComplianceMask flag configured the same way as it is in the API (for example, -xTypesComplianceMask 0x00000000). Note that this bit is the only bit that Code Generator uses; therefore, you have to set it the same both in the API and in Code Generator. See information about Code Generator's -xTypesComplianceMask command-line option in `Command-Line Arguments for rtiddsgen`, in the RTI Code Generator User's Manual. This bit affects **NDDS_CONFIG_XTYPES_SELECT_↩ DEFAULT_DISCRIMINATOR_BIT** (p. 741). (See that bit's description above.) To be compatible with the XTypes specification, this bit must be set. This bit is set by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_JAVA_KEYHASH_750_BIT	When this bit is set, the KeyHash calculation for a Java instance will match the one produced by the Java API in Connext 7.5.0 and earlier versions. Value: 0x00000200 When this bit is set, the KeyHash calculation for a Java instance will match the one produced by the Java API in Connext 7.5.0 and earlier versions. This affects KeyHash calculation only when using XCDR encoding and the Java language API for mutable types and either of the following conditions is met: • The key is not a primitive type, and the maximum serialized size of a sample for the type exceeds 65KB. • At least one key member has a member ID greater than 16128. To be compatible with the XTypes specification, this bit must be unset. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)
NDDS_CONFIG_XTYPES_PYTHON_INT8_730_BIT	Set this bit to interoperate with Connext 7.3.0 Python applications that published or subscribed to types with int8 members. Value: 0x00000400 When this bit is set, the TypeCode generation for a Python type that contains an int8 member will match the one produced by the Python API in Connext 7.3.0. However, this behavior is not compliant with the XTypes specification, and Python types with int8 members won't interoperate with other APIs. When this bit is unset, the TypeCode generation for a Python type that contains an int8 member will be done according to the XTypes specification, allowing interoperability with all the APIs except Python in Connext 7.3.0. To be compatible with the XTypes specification, this bit must be unset. This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

Enumerator

NDDS_CONFIG_XTYPES_MUST_UNDERSTAND_↩ IN_KEY_AND_DISCRIMINATOR_BIT	When this bit is set, the parameter ID for members that are part of the key, or for the discriminator of a union, will have the parameter ID's FLAG_MUST_UNDERSTAND bit set when serialized using XCDR2. Value: 0x00000800 To be compatible with the XTypes specification, this bit must be set. This bit only applies when you are using XCDR2. (For XCDR, the parameter ID's FLAG_MUST_UNDERSTAND bit will never be set for key members and union discriminators, because doing so would change the key hash computation and disrupt communication with older versions of RTI Connext.) This bit is unset by default. See **NDDS_CONFIG_↩ XTYPES_COMPLIANCE_MASK_DEFAULT** (p. 735)

7.216.4.2 NDDS_Config_RpcComplianceMaskBits

enum **NDDS_Config_RpcComplianceMaskBits**

The bits for the **NDDS_Config_RpcComplianceMask** (p. 737) with different aspects of RPC and Request Reply.

Enumerator

NDDS_CONFIG_RPC_USE_STANDARD_RELATED↩ _SAMPLE_PID_BIT	This bit configures a standard value for PID_RELATED_SAMPLE_IDENTITY. Value: 0x00000001 Set this bit to be compliant with the OMG DDS-RPC specification. The PID_RELATED_SAMPLE_IDENTITY will be 0x0083 as is defined as is defined in the RPC over DDS OMG specification. See https://www.omg.org/spec/DDS-RPC Using **NDDS_CONFIG_RPC_USE_STANDARD_↩ RELATED_SAMPLE_PID_BIT** (p. 745) will affect both RPC and Request-Reply communtications. The PID_RELATED_SAMPLE_IDENTITY is a parameter identifier (PID) used by the RTPS wire protocol and required for Request-Reply and RPC communications. By default, this PID takes a non-standard value that is compatible with previous versions of Connext. This bit is unset by default. See **NDDS_CONFIG_↩ RPC_COMPLIANCE_MASK_DEFAULT** (p. 736)

7.217 Heap Monitoring

Monitor memory allocations done by the middleware on the native heap.

Classes

- class **NDDSUtilityHeapMonitoring**

  Heap Monitoring APIs.

Enumerations

- enum **NDDS_Utility_HeapMonitoringSnapshotContentFormat** {
  NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_TOPIC ,
  NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_FUNCTION ,
  NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_BIT_ACTIVITY ,
  NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_DEFAULT ,
  NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT_CONTENT_MINIMAL }

  Bitmap used to decide which information of the snapshot will be displayed.

7.217.1 Detailed Description

Monitor memory allocations done by the middleware on the native heap.

RTI Connext allows you to monitor the memory allocations done by the middleware on the native heap. This feature can be used to analyze and debug unexpected memory growth.

After **NDDSUtilityHeapMonitoring::enable** (p. 2114) is called, you may invoke **NDDSUtilityHeapMonitoring::take_↩ heap_snapshot** (p. 2115) to save the current heap memory usage to a file. By comparing two snapshots, you can tell if new memory has been allocated and, in many cases, where.

7.217.2 Enumeration Type Documentation

Enumerator

7.217.2.1 NDDS_Utility_HeapMonitoringSnapshotContentFormat

enum **NDDS_Utility_HeapMonitoringSnapshotContentFormat**

Bitmap used to decide which information of the snapshot will be displayed.

Enumerator

NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT↩ _CONTENT_BIT_TOPIC	Add the topic to the snapshot of heap monitoring.
NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT↩ _CONTENT_BIT_FUNCTION	Add the function name to the snapshot of heap monitoring.
NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT↩ _CONTENT_BIT_ACTIVITY	Add the activity context to the snapshot of heap monitoring. The user can select the information that will be part of the activity context by using the API **NDDSConfigActivityContext::set_attribute_mask** (p. 733).
NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT↩ _CONTENT_DEFAULT	Add all the optional attributes to the snapshot of heap monitoring.
NDDS_UTILITY_HEAP_MONITORING_SNAPSHOT↩ _CONTENT_MINIMAL	Not add any optional attribute to the snapshot of heap monitoring.

7.218 Network Capture

Save network traffic into a capture file for further analysis.

Classes

- struct **NDDS_Utility_NetworkCaptureParams_t**

  Input parameters for starting network capture.
- class **NDDSUtilityNetworkCapture**

  Network Capture APIs.

Macros

- #define **NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_DEFAULT**

  *Default mask for **NDDS_Utility_NetworkCaptureContentKind** (p. 752): do not remove any content.*
- #define **NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_NONE**

  The RTPS frames in the capture file will be saved as they are.
- #define **NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_ALL**

The RTPS frames in the capture file will not include user data (either plain or encrypted).

- #define **NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_DEFAULT**

  *Default mask for **NDDS_Utility_NetworkCaptureTrafficKindMask** (p. 751).*

- #define **NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_NONE**

  Do not capture any traffic.

- #define **NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_ALL**

  Capture all traffic (both inbound and outbound).

Typedefs

- typedef **DDS_Long NDDS_Utility_NetworkCaptureContentKindMask**

  Mask that indicates a combination of content types.

- typedef **DDS_Long NDDS_Utility_NetworkCaptureTrafficKindMask**

  Mask that indicates the traffic direction to capture.

- typedef struct **NDDS_Utility_NetworkCaptureParams_t NDDS_Utility_NetworkCaptureParams_t**

  Input parameters for starting network capture.

Enumerations

- enum **NDDS_Utility_NetworkCaptureContentKind** {
  NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_USER_SERIALIZED_DATA ,
  NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_ENCRYPTED_DATA }

  Bitmap used to specify a content type, i.e., a part of the RTPS frame.

- enum **NDDS_Utility_NetworkCaptureTrafficKind** {
  NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_OUT ,
  NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_IN }

  Bitmap used to specify whether we want to capture inbound or outbound traffic.

Variables

- const **NDDS_Utility_NetworkCaptureParams_t NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_↩ DEFAULT**

  Default parameters used in Network Capture.

7.218.1 Detailed Description

Save network traffic into a capture file for further analysis.

RTI Connext allows you to capture the network traffic that one or more DomainParticipants send or receive. This feature can be used to analyze and debug communication problems between your DDS applications. When network capture is enabled, each DomainParticipant will generate a pcap-based file that can then be opened by a packet analyzer like Wireshark, provided the right dissectors are installed.

To some extent, network capture can be used as an alternative to existing pcap-based network capture software (such as Wireshark). This will be the case when you are only interested in analyzing the traffic a DomainParticipant

sends/receives. In this scenario, network capture will actually have some advantages over using more general pcap-based network capture applications: RTI's network capture includes additional information such as security-related data; it also removes information that is not needed, such as user data, when you want to reduce the capture size. That said, RTI's network capture is not a replacement for other pcap-based network capture applications: it only captures the traffic exchanged by the DomainParticipants, but it does not capture any other traffic exchanged through the system network interfaces.

To capture network traffic **NDDSUtilityNetworkCapture::enable** (p. 2118) must be invoked before creating any DomainParticipant. Similarly, **NDDSUtilityNetworkCapture::disable** (p. 2119) must be called after deleting all participants. In between these calls, you may start, stop, pause or resume capturing traffic for one or all participants.

7.218.2 Capturing

Shared Memory Traffic

Every RTPS frame in network capture has a source and a destination associated with it. In the case of shared memory traffic, a process identifier and a port determine the source and destination endpoints.

Access to the process identifier (PID) of the source for inbound traffic requires changes in the shared memory segments. These changes would break shared memory compatibility with previous versions of RTI Connext. For this reason, by default, network capture will not populate the value of the source PID for inbound shared memory traffic.

If interoperability with previous versions of RTI Connext is not necessary, you can generate capture files containing the source PID for inbound traffic. To do so, configure the value of the *'dds.transport.minimum_compatibility_version'* property to 6.1.0. (See **DDS_PropertyQosPolicy** (p. 1260)).

```
<domain_participant_qos>

    <property>

        <value>

            <element>

                <name>dds.transport.minimum_compatibility_version</name>

                <value>6.1.0</value>

                <propagate>false</propagate>

            </element>

        </value>

    </property>

</domain_participant_qos>
```

This property is never propagated, so it must be consistently configured throughout the whole system.

Note: Changing the value of this property affects the type of shared memory segments that RTI Connext uses. For that reason, you may see the following warning, resulting from leftover shared memory segments:

```
[0xC733A001,0xB248F671,0xAEC4A0C1:0x000001C1{Domain=200}|CREATE DP|ENABLE]
       NDDS_Transport_Shmem_is_segment_compatible:incompatible shared memory protocol detected.

Current version 4.0 not compatible with 2.0.
```

The leftover shared memory segments can be removed using the `ipcrm` command. See `https://community.rti.com/kb/what-are-possible-solutions-common-shared-memory-issues` for more information.

7.218.3 Macro Definition Documentation

7.218.3.1 NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_DEFAULT

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_DEFAULT
```

Default mask for **NDDS_Utility_NetworkCaptureContentKind** (p. 752): do not remove any content.

It is equivalent to **NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_NONE** (p. 750).

[default] Do not remove any content.

7.218.3.2 NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_NONE

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_NONE
```

The RTPS frames in the capture file will be saved as they are.

7.218.3.3 NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_ALL

```
#define NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_MASK_ALL
```

The RTPS frames in the capture file will not include user data (either plain or encrypted).

Its value is the result of setting the bits for removing user data and removing encrypted data: (**NDDS_↩ UTILITY_NETWORK_CAPTURE_CONTENT_USER_SERIALIZED_DATA** (p. 752)) | **NDDS_UTILITY_NETWORK_↩ CAPTURE_CONTENT_ENCRYPTED_DATA** (p. 752))

7.218.3.4 NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_DEFAULT

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_DEFAULT
```

Default mask for **NDDS_Utility_NetworkCaptureTrafficKindMask** (p. 751).

It is equivalent to **NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_ALL** (p. 751).

[default] Capture all traffic: inbound and outbound.

7.218.3.5 NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_NONE

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_NONE
```

Do not capture any traffic.

7.218.3.6 NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_ALL

```
#define NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_MASK_ALL
```

Capture all traffic (both inbound and outbound).

The value is equal to setting both the input and output bits of the mask: (**NDDS_UTILITY_NETWORK_CAPTURE_↩ TRAFFIC_OUT** (p. 752) | **NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_OUT** (p. 752)).

7.218.4 Typedef Documentation

7.218.4.1 NDDS_Utility_NetworkCaptureContentKindMask

```
typedef DDS_Long NDDS_Utility_NetworkCaptureContentKindMask
```

Mask that indicates a combination of content types.

The masks are based on a combination (or only one) of the **NDDS_Utility_NetworkCaptureContentKind** (p. 752) bitmaps.

See also

NDDS_Utility_NetworkCaptureContentKind (p. 752)

7.218.4.2 NDDS_Utility_NetworkCaptureTrafficKindMask

```
typedef DDS_Long NDDS_Utility_NetworkCaptureTrafficKindMask
```

Mask that indicates the traffic direction to capture.

The masks are based on a combination (or only one) of the **NDDS_Utility_NetworkCaptureTrafficKind** (p. 752) bitmaps.

See also

NDDS_Utility_NetworkCaptureTrafficKind (p. 752)

7.218.4.3 NDDS_Utility_NetworkCaptureParams_t

```
typedef struct NDDS_Utility_NetworkCaptureParams_t NDDS_Utility_NetworkCaptureParams_t
```

Input parameters for starting network capture.

7.218.5 Enumeration Type Documentation

7.218.5.1 NDDS_Utility_NetworkCaptureContentKind

```
enum NDDS_Utility_NetworkCaptureContentKind
```

Bitmap used to specify a content type, i.e., a part of the RTPS frame.

Several values can be combined. Read **NDDS_Utility_NetworkCaptureContentKindMask** (p. 751) for typical combinations.

Enumerator

NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_USER_SERIALIZED_DATA	The serialized data coming from a user.
NDDS_UTILITY_NETWORK_CAPTURE_CONTENT_ENCRYPTED_DATA	The encrypted user data.

7.218.5.2 NDDS_Utility_NetworkCaptureTrafficKind

```
enum NDDS_Utility_NetworkCaptureTrafficKind
```

Bitmap used to specify whether we want to capture inbound or outbound traffic.

Several values can be combined. Read **NDDS_Utility_NetworkCaptureTrafficKindMask** (p. 751) for typical combinations.

Enumerator

NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_OUT	Do not capture outbound traffic.
NDDS_UTILITY_NETWORK_CAPTURE_TRAFFIC_IN	Do not capture inbound traffic.

7.218.6 Variable Documentation

7.218.6.1 NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_DEFAULT

```
const NDDS_Utility_NetworkCaptureParams_t NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_DEFAULT [extern]
```

Default parameters used in Network Capture.

The default parameters can be used as initilizers to ensure that new objects do not have uninitialized contents.

Initialization of a **NDDS_Utility_NetworkCaptureParams_t** (p. 2087) type can be done either by assigning to the default parameters:

```
struct NDDS_Utility_NetworkCaptureParams_t params = NDDS_UTILITY_NETWORK_CAPTURE_PARAMETERS_DEFAULT;
```

Or equivalently, by using its initializer method:

```
struct NDDS_Utility_NetworkCaptureParams_t params;

NDDS_Utility_NetworkCaptureParams_t_initialize(&params);
```

In either case, do not forget to finalize the parameters when you don't need them any more:

```
NDDS_Utility_NetworkCaptureParams_t_finalize(&params);
```

The values that are used by default for the parameters can be found in the description of each of the members in **NDDS_Utility_NetworkCaptureParams_t** (p. 2087).

7.219 Other Utilities

Other Utilities, such as **NDDSUtility::spin** (p. 2111).

Classes

- class **NDDSLM**

  Other Utilities APIs.
- class **NDDSUtility**

  Other Utilities APIs.

7.219.1 Detailed Description

Other Utilities, such as **NDDSUtility::spin** (p. 2111).

7.220 Octet Buffer Support

<<***extension***>> *(p. 432)* Octet buffer creation, cloning, and deletion.

Functions

- unsigned char * **DDS_OctetBuffer_alloc** (unsigned int size)

  Create a new empty OctetBuffer that can hold up to `size` octets.
- unsigned char * **DDS_OctetBuffer_dup** (const unsigned char *buffer, unsigned int size)

  Clone an OctetBuffer.
- void **DDS_OctetBuffer_free** (unsigned char *buffer)

  Delete an OctetBuffer.

7.220.1 Detailed Description

<<***extension***>> *(p. 432)* Octet buffer creation, cloning, and deletion.

The methods in this class ensure consistent cross-platform implementations for OctetBuffer creation (**DDS_Octet↩ Buffer_alloc()** (p. 755)), deletion (**DDS_OctetBuffer_free()** (p. 756)), and cloning (**DDS_OctetBuffer_dup()** (p. 755)) that preserve the mutable value type semantics. These are to be viewed as methods that define an `OctetBuffer` class whose data is represented by a '`unsigned` char*'.

7.220.2 Conventions

The following conventions govern the memory management of OctetBuffers in RTI Connext.

- The DDS implementation ensures that when value types containing OctetBuffers are passed back and forth to the DDS APIs, the OctetBuffers are created/deleted/cloned using the `OctetBuffer` class methods.
  - Value types containing OctetBuffers have ownership of the contained OctetBuffer. Thus, when a value type is deleted, the contained octet buffer field is also deleted.
- The user must ensure that when value types containing OctetBuffers are passed back and forth to the DDS APIs, the OctetBuffers are created/deleted/cloned using the OctetBuffer class methods.

The representation of an OctetBuffer in C/C++ unfortunately does not allow programs to detect how much memory has been allocated for a OctetBuffer. RTI Connext must therefore make some assumptions when a user requests that a OctetBuffer be copied into. The following rules apply when RTI Connext is copying into an OctetBuffer.

- If the 'unsigned char*' is NULL, RTI Connext will allocate a new OctetBuffer on behalf of the user. *To avoid leaking memory, you must ensure that the OctetBuffer will be freed (see **Usage** (p. 755) below) in C. For C++, the destructor of the valuetype containing the OctetBuffer will free it automatically.*.
- If the 'unsigned char*' is not NULL, RTI Connext will assume that you are managing the OctetBuffer's memory yourself and have allocated enough memory to store the OctetBuffer to be copied. *RTI Connext will copy into your memory; to avoid memory corruption, be sure to allocate enough of it.* Also, *do not pass structures containing junk pointers into RTI Connext*; you are likely to crash.

7.220.3 Usage

This requirement can generally be assured by adhering to the following *idiom* for manipulating OctetBuffers.

```
Always use
     DDS_OctetBuffer_alloc() to create,
     DDS_OctetBuffer_dup() to clone,
     DDS_OctetBuffer_free() to delete
 a 'unsigned char*' that is passed back and forth between
 user code and the DDS C/C++ APIs.
```

Not adhering to this idiom can result in bad pointers, and incorrect memory being freed.

In addition, the user code should be vigilant to avoid memory leaks. It is good practice to:

- Balance occurrences of **DDS_OctetBuffer_alloc()** (p. 755), with matching occurrences of **DDS_OctetBuffer_↩ free()** (p. 756) in the code.
- Finalize value types containing OctetBuffer. In C++ the destructor accomplishes this automatically. in C, explicit "destructor" functions are provided.

7.220.4 Function Documentation

7.220.4.1 DDS_OctetBuffer_alloc()

```
unsigned char * DDS_OctetBuffer_alloc (
             unsigned int size )
```

Create a new empty OctetBuffer that can hold up to `size` octets.

An OctetBuffer created by this method must be deleted using **DDS_OctetBuffer_free()** (p. 756).

This function will allocate enough memory to hold an OctetBuffer of `size` octets.

Parameters

size	<<***in***>> *(p. 433)* Size of the buffer.

Returns

A newly created non-NULL OctetBuffer upon success or NULL upon failure.

Referenced by **DDS_KeyedOctets::DDS_KeyedOctets()**, and **DDS_Octets::DDS_Octets()**.

7.220.4.2 DDS_OctetBuffer_dup()

```
unsigned char * DDS_OctetBuffer_dup (
            const unsigned char * buffer,
            unsigned int size )
```

Clone an OctetBuffer.

```
An OctetBuffer created by this method must be deleted using
DDS_OctetBuffer_free()
```

Parameters

buffer	<<***in***>> *(p. 433)* The OctetBuffer to duplicate.
size	<<***in***>> *(p. 433)* Size of the OctetBuffer to duplicate.

Returns

If `src` == NULL or size <0, this method always returns NULL. Otherwise, upon success it returns a newly created OctetBuffer whose value is `src`; upon failure it returns NULL.

7.220.4.3 DDS_OctetBuffer_free()

```
void DDS_OctetBuffer_free (
            unsigned char * buffer )
```

Delete an OctetBuffer.

Precondition

`buffer` must be either NULL, or must have been created using **DDS_OctetBuffer_alloc()** (p. 755), **DDS_↩ OctetBuffer_dup()** (p. 755)

Parameters

buffer	<<***in***>> *(p. 433)* The buffer to delete.

Referenced by **DDS_KeyedOctets::∼DDS_KeyedOctets()**, and **DDS_Octets::∼DDS_Octets()**.

7.221 SampleProcessor

<<***experimental***>> *(p. 432)* <<***extension***>> *(p. 432)* Utility to concurrently read and process the data samples received by **DDSDataReader** (p. 1556).

*<<**experimental**>> (p. 432) <<**extension**>> (p. 432)* Utility to concurrently read and process the data samples received by **DDSDataReader** (p. 1556).

7.222 Sequence Support

The **FooSeq** (p. 1965) interface allows you to work with variable-length collections of homogeneous data.

Modules

- **Built-in Sequences**

  Defines sequences of primitive data type. .

Classes

- struct **FooSeq**

  *<<**interface**>> (p. 433) <<**generic**>> (p. 433) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **`Foo`** (p. 1916).*

7.222.1 Detailed Description

The **FooSeq** (p. 1965) interface allows you to work with variable-length collections of homogeneous data.

This interface is instantiated for each concrete element type in order to provide compile-time type safety to applications. The **Built-in Sequences** (p. 169) are pre-defined instantiations for the primitive data types.

When you use the rtiddsgen code generation tool, it will automatically generate concrete sequence instantiations for each of your own custom types.

7.223 String Support

*<<**extension**>> (p. 432)* String creation, cloning, assignment, and deletion.

Functions

- char * **DDS_String_alloc** (size_t length)

  Create a new empty string that can hold up to `length` *characters.*
- char * **DDS_String_dup** (const char *str)

  Clone a string. Creates a new string that duplicates the value of `string`*.*
- char * **DDS_String_replace** (char **string_ptr, const char *new_value)

  Assign a new value to a string. Replaces the string pointed to by `string_ptr`*, with a string whose value is* `new_value`*.*
- void **DDS_String_free** (char *str)

  Delete a string.
- **DDS_Wchar** * **DDS_Wstring_alloc** (**DDS_UnsignedLong** length)

  Create a new empty string that can hold up to `length` *wide characters.*
- **DDS_UnsignedLong** **DDS_Wstring_length** (const **DDS_Wchar** *str)

  Get the number of wide characters in the given string.
- **DDS_Wchar** * **DDS_Wstring_copy** (**DDS_Wchar** *dst, const **DDS_Wchar** *src)

  Copy the source string over the destination string reallocating the space if it's necessary.
- **DDS_Wchar** * **DDS_Wstring_copy_and_widen** (**DDS_Wchar** *dst, const char *src)

  Copy the source string over the destination string, widening each character.
- **DDS_Wchar** * **DDS_Wstring_dup** (const **DDS_Wchar** *str)

  Clone a string of wide characters. Creates a new string that duplicates the value of `string`*.*
- **DDS_Wchar** * **DDS_Wstring_dup_and_widen** (const char *str)

  Clone a string of characters as a string of wide characters.
- void **DDS_Wstring_free** (**DDS_Wchar** *str)

  Delete a string.

7.223.1 Detailed Description

<<***extension***>> *(*p. *432)* String creation, cloning, assignment, and deletion.

The methods in this class ensure consistent cross-platform implementations for string creation (**DDS_String_alloc()** (p. 759)), deletion (**DDS_String_free()** (p. 762)), and cloning (**DDS_String_dup()** (p. 761)) that preserve the mutable value type semantics. These are to be viewed as methods that define a `string` class whose data is represented by a `'char*'`.

7.223.2 String Conventions

The following conventions govern the memory management of strings in RTI Connext.

- The DDS implementation ensures that when value types containing strings are passed back and forth to the DDS APIs, the strings are created/deleted/assigned/cloned using the `string` class methods.
  - Value types containing strings have ownership of the contained string. Thus, when a value type is deleted, the contained string field is also deleted.
  - **DDS_StringSeq** (p. 1364) is a value type that contains strings; it owns the memory for the contained strings. When a **DDS_StringSeq** (p. 1364) is assigned or deleted, the contained strings are also assigned or deleted respectively.

- The user must ensure that when value types containing strings are passed back and forth to the DDS APIs, the strings are created/deleted/assigned/cloned using the String class methods.

The representation of a string in C/C++ unfortunately does not allow programs to detect how much memory has been allocated for a string. RTI Connext must therefore make some assumptions when a user requests that a string be copied into. The following rules apply when RTI Connext is copying into a string or string sequence:

- If the 'char∗' is NULL, RTI Connext will log a warning and allocate a new string on behalf of the user. *To avoid leaking memory, you must ensure that the string will be freed (see **Usage** (p. 759) below).*
- If the 'char∗' is not NULL, RTI Connext will assume that you are managing the string's memory yourself and have allocated enough memory to store the string to be copied. *RTI Connext will copy into your memory; to avoid memory corruption, be sure to allocate enough of it.* Also, *do not pass structures containing junk pointers into RTI Connext*; you are likely to crash.

7.223.3 Usage

This requirement can generally be assured by adhering to the following *idiom* for manipulating strings.

```
Always use
     DDS_String_alloc() to create,
     DDS_String_dup() to clone,
     DDS_String_free() to delete
 a string 'char*' that is passed back and forth between
 user code and the DDS C/C++ APIs.
```

Not adhering to this idiom can result in bad pointers, and incorrect memory being freed.

In addition, the user code should be vigilant to avoid memory leaks. It is good practice to:

- Balance occurrences of **DDS_String_alloc()** (p. 759), **DDS_String_dup()** (p. 761), with matching occurrences of **DDS_String_free()** (p. 762) in the code.
- Finalize value types containing strings. In C++ the destructor accomplishes this automatically. in C, explicit "destructor" functions are provided; these functions are typically called "finalize."

Note

When dealing with the **DDS_PublishModeQosPolicy::flow_controller_name** (p. 1281) and **DDS_Multi↩ ChannelQosPolicy::filter_name** (p. 1215) fields, we advise taking a look at the sample code for how to properly assign new values and free the old ones.

See also

DDS_StringSeq (p. 1364)

7.223.4 Function Documentation

7.223.4.1 DDS_String_alloc()

```
char * DDS_String_alloc (
            size_t length )
```

Create a new empty string that can hold up to `length` characters.

A string created by this method must be deleted using **DDS_String_free()** (p. 762).

This function will allocate enough memory to hold a string of `length` characters, **plus** one additional byte to hold the NULL terminating character.

Parameters

length	<<***in***>> *(*p. *433)* Capacity of the string.

Returns

A newly created non-NULL string upon success or NULL upon failure.

Examples

HelloWorld.cxx.

Referenced by **DDS_KeyedOctets::DDS_KeyedOctets()**, and **DDS_KeyedString::DDS_KeyedString()**.

7.223.4.2 DDS_String_dup()

```
char * DDS_String_dup (
            const char * str )
```

Clone a string. Creates a new string that duplicates the value of `string`.

A string created by this method must be deleted using **DDS_String_free()** (p. 762)

Parameters

str	<<***in***>> *(*p. *433)* The string to duplicate.

Returns

If `string` == NULL, this method always returns NULL. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns NULL.

7.223.4.3 DDS_String_replace()

```
char * DDS_String_replace (
            char ** string_ptr,
            const char * new_value )
```

Assign a new value to a string. Replaces the string pointed to by `string_ptr`, with a string whose value is `new_value`.

A string created by this method must be deleted using **DDS_String_free()** (p. 762).

This function is most commonly used when manipulating string sequences, **DDS_StringSeq** (p. 1364).

Precondition

`string_ptr` be a non-NULL pointer. ∗string_ptr must be either NULL, or a string created using **DDS_String_alloc()** (p. 759) or **DDS_String_dup()** (p. 761), or **DDS_String_replace()** (p. 761).

Parameters

string_ptr	<<***inout***>> *(p. 433)* Pointer to the string to replace.
new_value	<<***in***>> *(p. 433)* The value of the replacement string.

Returns

If `new_value` = NULL, this method always returns NULL. Otherwise, upon success it returns ∗string_ptr whose value is `new_value`; upon failure it returns NULL.

Postcondition

If `new_value` = NULL, ∗string_ptr == NULL. Otherwise, upon success `string_ptr` contains a pointer to a string whose value is `new_value`; upon failure, `string_ptr` is left unchanged.

7.223.4.4 DDS_String_free()

```
void DDS_String_free (
             char * str )
```

Delete a string.

Precondition

`string` must be either NULL, or must have been created using **DDS_String_alloc()** (p. 759), **DDS_String_dup()** (p. 761)

Parameters

str	<<***in***>> *(p. 433)* The string to delete.

Examples

HelloWorld.cxx.

Referenced by **DDS_KeyedOctets::DDS_KeyedOctets()**, **DDS_KeyedString::DDS_KeyedString()**, **DDS_KeyedOctets::∼DDS_KeyedOctets()**, and **DDS_KeyedString::∼DDS_KeyedString()**.

7.223.4.5 DDS_Wstring_alloc()

```
DDS_Wchar * DDS_Wstring_alloc (
            DDS_UnsignedLong length )
```

Create a new empty string that can hold up to `length` wide characters.

A string created by this method must be deleted using **DDS_Wstring_free()** (p. 765)

This function will allocate enough memory to hold a string of `length` characters, **plus** one additional wide character to hold the NULL terminator.

Parameters

length	<<***in***>> *(p. 433)* Capacity of the string.

Returns

A newly created non-NULL string upon success or NULL upon failure.

7.223.4.6 DDS_Wstring_length()

```
DDS_UnsignedLong DDS_Wstring_length (
            const  DDS_Wchar * str )
```

Get the number of wide characters in the given string.

The result does not count the terminating zero character.

Parameters

str	<<***in***>> *(p. 433)* A non-NULL string.

Returns

The number of wide characters in the string.

7.223.4.7 DDS_Wstring_copy()

```
DDS_Wchar * DDS_Wstring_copy (
            DDS_Wchar * dst,
           const  DDS_Wchar * src )
```

Copy the source string over the destination string reallocating the space if it's necessary.

Parameters

dst	
src	

Returns

dst

7.223.4.8 DDS_Wstring_copy_and_widen()

```
DDS_Wchar * DDS_Wstring_copy_and_widen (
            DDS_Wchar * dst,
            const char * src )
```

Copy the source string over the destination string, widening each character.

Parameters

dst	<<***in***>> *(*p. *433)* A non-NULL string to be overwritten by src.
src	<<***in***>> *(*p. *433)* A non-NULL string to be copied over dst

Returns

dst

7.223.4.9 DDS_Wstring_dup()

```
DDS_Wchar * DDS_Wstring_dup (
            const  DDS_Wchar * str )
```

Clone a string of wide characters. Creates a new string that duplicates the value of string.

A string created by this method must be deleted using **DDS_Wstring_free()** (p. 765).

Parameters

str	<<***in***>> *(*p. *433)* The string to duplicate.

Returns

If `string` == NULL, this method always returns NULL. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns NULL.

7.223.4.10 DDS_Wstring_dup_and_widen()

```
DDS_Wchar * DDS_Wstring_dup_and_widen (
            const char * str )
```

Clone a string of characters as a string of wide characters.

A string created by this method must be deleted using **DDS_Wstring_free()** (p. 765)

Parameters

str	*<<**in**>> (p. 433)* The string to duplicate.

Returns

If `string` == NULL, this method always returns NULL. Otherwise, upon success it returns a newly created string whose value is `string`; upon failure it returns NULL.

7.223.4.11 DDS_Wstring_free()

```
void DDS_Wstring_free (
             DDS_Wchar * str )
```

Delete a string.

Precondition

`string` must either NULL, or must have been created using **DDS_Wstring_alloc()** (p. 762), **DDS_Wstring_dup()** (p. 764), or DDS_Wstring_replace()

Parameters

str	*<<**in**>> (p. 433)* The string to delete.

7.224 FlatData Builders

A Builder allows creating and initializing variable-size data.

Classes

- class **rti::flat::AggregationBuilder**
  Base class of struct and union builders.
- class **rti::flat::UnionBuilder< Discriminator >**
  Base class of builders for user-defined mutable unions.
- class **MyFlatMutableBuilder**
  Represents the Builder for an arbitrary user-defined mutable type.
- class **MyFlatUnionBuilder**
  Represents the Builder for an arbitrary user-defined mutable IDL union.
- class **rti::flat::AbstractBuilder**
  *Base class of all **Builders** (p. 766).*
- class **rti::flat::AbstractListBuilder< DHeaderGen >**
  Base class of all array and sequence builders.
- class **rti::flat::MutableArrayBuilder< ElementBuilder, N >**
  Builds an array member of variable-size elements.
- class **rti::flat::AbstractSequenceBuilder< DHeaderGen >**
  Base class of Builders for sequence members.
- class **rti::flat::MutableSequenceBuilder< ElementBuilder >**
  Builds a sequence member of variable-size elements.
- class **rti::flat::FinalSequenceBuilder< ElementOffset >**
  Builds a sequence member of fixed-size elements.
- class **rti::flat::PrimitiveSequenceBuilder< T >**
  Builds a sequence of primitive members.
- class **rti::flat::StringBuilder**
  Builds a string.

Functions

- template<typename TopicType >
  rti::flat::flat_type_traits< TopicType >::builder **rti::flat::build_data** (typename TopicType::DataWriter *writer)
  Begins building a new sample.
- template<typename BuilderType >
  void **rti::flat::discard_builder** (typename **rti::flat::flat_type_traits**< BuilderType >::flat_type::DataWriter *writer, BuilderType &builder)
  Discards a sample builder.

7.224.1 Detailed Description

A Builder allows creating and initializing variable-size data.

Builders allow creating variable-size **FlatData samples** (p. 769), as described in **Publishing FlatData** (p. 777).

There are the following Builder types:

Category	Builder type
User types	For example: • **MyFlatMutableBuilder** (p. 2018), a mutable struct • **MyFlatUnionBuilder** (p. 2032), a union • Final structs are fixed-size and do not have a Builder (see for example **MyFlatMutable↩ Builder::add_my_final()** (p. 2023)).
Arrays	• **rti::flat::MutableArrayBuilder** (p. 2008) • Arrays of final elements are fixed-size and do not have a Builder (see for example **MyFlat↩ MutableBuilder::add_my_final_array()** (p. 2023)).
Sequences	• **rti::flat::MutableSequenceBuilder** (p. 2012) for sequences of mutable elements • **rti::flat::FinalSequenceBuilder** (p. 1913) for sequences of final elements • **rti::flat::PrimitiveSequenceBuilder** (p. 2135) for sequences of primitive elements • **rti::flat::StringBuilder** (p. 2214)
Primitive types	• Primitive members are added using one of the member functions of the Builder of the type that contains them. See for example **MyFlatMutableBuilder::add_my_primitive()** (p. 2022)<

Builder for user types, such as **MyFlatMutableBuilder** (p. 2018), can behave as **sample builders**, when they build a sample, or **member builders** when they build a member for another Builder (such as the Builder returned by **MyFlat↩ MutableBuilder::build_my_mutable()** (p. 2024)). All the other Builder types (sequences, arrays) are always member builders (such as the Builder returned by **MyFlatMutableBuilder::build_my_final_seq()** (p. 2023)).

Builders are **move-only** types. They cannot be copied, only moved. When you assign a Builder as the return value of a function, this happens automatically.

```
// the return value of 'build_data' is moved into 'builder'
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
```

To explicitly move a Builder variable in the Traditional C++ API, call its **move()** (p. 195) member function

7.224.2 Builder Error Management

The Traditional C++ API reports Builder errors by setting a flag that can be checked with the member function **check↩ _failure()** (p. 789). After each Builder operation, `check_failure()` must be called to check (and clear) the error flag.

In addition, in case of error, operations that return another Builder, such as **MyFlatMutableBuilder::build_my_↩ mutable()** (p. 2024), return an invalid Builder (**is_valid()** (p. 788) is `false`). Operations that return an Offset, such as **MyFlatMutableBuilder::add_my_final()** (p. 2023) return a "null" Offset when they fail (see **Offset Error Management** (p. 773)).

See also

MyFlatMutableBuilder (p. 2018) for more information specific to builders for user types.

7.224.3 Function Documentation

7.224.3.1 build_data()

```
template<typename TopicType >
rti::flat::flat_type_traits< TopicType >::builder rti::flat::build_data (
            typename TopicType::DataWriter * writer )
```

Begins building a new sample.

Template Parameters

TopicType	A FlatData mutable type that corresponds to the type of the DataWriter argument.

Parameters

writer	The writer that will be used to write this sample.

Returns

The Builder to build the sample. For example if TopicType is **MyFlatMutable** (p. 770), this function returns a **MyFlatMutableBuilder** (p. 2018). In case of error, this function returns an **invalid Builder** (p. 788)

Once you have completed the sample, call **finish_sample()** (p. 2021) to obtain a **MyFlatMutable** (p. 770) sample that can be written with `writer`.

If the building of this sample needs to be aborted before calling finish_sample(), use **rti::flat::discard_builder()** (p. 768). If, after obtaining a sample with finish_sample(), this sample is not written, then discard it with **FooDataWriter::discard_loan()** (p. 1964).

See also

FooDataWriter::get_loan (p. 1963), the function that **build_data()** (p. 768) uses to obtain the memory required to build the sample.

Publishing FlatData (p. 777)

References **DDS_BOOLEAN_TRUE**, and **DDS_RETCODE_OK**.

7.224.3.2 discard_builder()

```
template<typename BuilderType >
void rti::flat::discard_builder (
            typename  rti::flat::flat_type_traits< BuilderType >::flat_type::DataWriter * writer,
            BuilderType & builder )
```

Discards a sample builder.

Template Parameters

TopicType	An IDL-defined FlatData type that corresponds to the type of the DataWriter argument.

This function invalidates and discards a builder before it is finished() and before the sample it would have created was written.

Parameters

writer	The writer that was used to create the builder
builder	The builder, created with `rti::flat::build_data(writer);`

7.225 FlatData Samples

A Sample represents an instance of the IDL topic-type and contains the data in serialized format.

Classes

- class **rti::flat::Sample**< **OffsetType** >

  The generic definition of FlatData topic-types.
- struct **rti::flat::flat_type_traits**< **T** >

  *Given a **Sample** (p. 2187), an Offset or a Builder, it allows obtaining the other types.*

Typedefs

- typedef **rti::flat::Sample**< **MyFlatFinalOffset** > **MyFlatFinal**

  Represents an arbitrary user-defined FlatData final IDL struct.
- typedef **rti::flat::Sample**< **MyFlatMutableOffset** > **MyFlatMutable**

  Represents an arbitrary user-defined flat mutable IDL struct.
- typedef **rti::flat::Sample**< **MyFlatUnionOffset** > **MyFlatUnion**

  Represents an arbitrary user-defined flat mutable IDL union.

7.225.1 Detailed Description

A Sample represents an instance of the IDL topic-type and contains the data in serialized format.

All FlatData topic-types are instantiations of **rti::flat::Sample** (p. 2187). This documentation uses the following three example types to illustrate the different ways FlatData IDL types map to C++:

- **MyFlatFinal** (p. 770), the type generated for a final IDL struct
- **MyFlatMutable** (p. 770), the type generated for a mutable IDL struct
- **MyFlatUnion** (p. 770), the type generated for an IDL union

7.225.2 Typedef Documentation

7.225.2.1 MyFlatFinal

typedef **rti::flat::Sample**< **MyFlatFinalOffset**> **MyFlatFinal**

Represents an arbitrary user-defined FlatData final IDL struct.

This documentation uses the following example IDL definition of MyFlatFinal:

```
@language_binding(FLAT_DATA)
@final
struct MyFlatFinal {
    long my_primitive;
    FlatFinalBar my_complex; // Another arbitrary final FlatData type
    long my_primitive_array[10];
    FlatFinalBar my_complex_array[10];
};
```

For this type, **rtiddsgen** generates:

- MyFlatFinal (this instantiation of Sample),
- **MyFlatFinalOffset** (p. 2014).

Note that, as a final FlatData type, MyFlatFinal can only contain fixed-size types, such as primitives, other final FlatData structs, and arrays of fixed-size types.

Samples of MyFlatFinal are created with **FooDataWriter::get_loan** (p. 1963). After creating a final Sample, modify its values using the **MyFlatFinalOffset** (p. 2014) returned by **root()** (p. 2189).

7.225.2.2 MyFlatMutable

typedef **rti::flat::Sample**< **MyFlatMutableOffset**> **MyFlatMutable**

Represents an arbitrary user-defined flat mutable IDL struct.

This documentation uses the following example IDL definition of MyFlatMutable:

```
@language_binding(FLAT_DATA)
@mutable
struct MyFlatMutable {
    long my_primitive;
    @optional long my_optional_primitive;
    long my_primitive_array[10];
    sequence<long, 10> my_primitive_seq;
    MyFlatFinal my_final;
    MyFlatFinal my_final_array[10];
    sequence<MyFlatFinal, 10> my_final_seq;
    FlatMutableBar my_mutable;
    FlatMutableBar my_mutable_array[10];
    sequence<FlatMutableBar, 10> my_mutable_seq;
    string<255> my_string;
    sequence<string<255>, 10> my_string_seq;
};
```

For this type, **rtiddsgen** generates:

- MyFlatMutable (this instantiation of Sample),
- **MyFlatMutableOffset** (p. 2025),
- **MyFlatMutableBuilder** (p. 2018).

As a mutable FlatData type, MyFlatMutable is not restricted to fixed-size members. Samples of MyFlatMutable are created with **rti::flat::build_data()** (p. 768), which returns a **MyFlatMutableBuilder** (p. 2018). Once built, a mutable Sample can't change in size, but the value of members that already exist can be changed using the **MyFlatMutable↩ Offset** (p. 2025) returned by **root()** (p. 2189).

7.225.2.3 MyFlatUnion

```
typedef rti::flat::Sample< MyFlatUnionOffset> MyFlatUnion
```

Represents an arbitrary user-defined flat mutable IDL union.

This documentation uses the following example IDL definition of MyFlatUnion:

```
@language_binding(FLAT_DATA)
@mutable
union MyFlatUnion switch (long) {
    case 0:
        long my_primitive;
    case 1:
    case 2:
        MyFlatMutable my_mutable;
    case 3:
        MyFlatFinal my_final;
};
```

Note

FlatData unions can only be **mutable** since unions are, by definition, variable-size types.

For this type, **rtiddsgen** generates:

- MyFlatUnion (this instantiation of Sample),
- **MyFlatUnionOffset** (p. 2035),
- **MyFlatUnionBuilder** (p. 2032).

7.226 FlatData Offsets

Offsets provide access to the members of a FlatData Sample.

Classes

- class **MyFlatFinalOffset**

  Represents the Offset to an arbitrary user-defined FlatData final IDL struct.
- class **MyFlatMutableOffset**

  Represents the Offset to an arbitrary user-defined FlatData mutable IDL struct.
- class **MyFlatUnionOffset**

  Represents the Offset to an arbitrary user-defined FlatData mutable IDL union.
- class **rti::flat::OffsetBase**

  Base class of all Offset types.
- class **rti::flat::FinalOffset**< **T** >

  The base class of all Offsets to a final struct type.
- class **rti::flat::MutableOffset**

  The base class of all Offsets to a final struct type.
- struct **rti::flat::PrimitiveConstOffset**< **T** >

  A const Offset to an optional primitive member.

- struct **rti::flat::PrimitiveOffset< T >**

  An Offset to an optional primitive member.
- class **rti::flat::SequenceIterator< E, OffsetKind >**

  Iterator for collections of Offsets.
- class **rti::flat::AbstractPrimitiveList< T >**

  Base class for Offsets to sequences and arrays of primitive types.
- class **rti::flat::PrimitiveSequenceOffset< T >**

  Offset to a sequence of primitive elements.
- class **rti::flat::PrimitiveArrayOffset< T, N >**

  Offset to an array of primitive elements.
- class **rti::flat::StringOffset**

  Offset to a string.
- class **rti::flat::AbstractAlignedList< ElementOffset >**

  Base class of Offsets to sequences and arrays of non-primitive members.
- class **rti::flat::SequenceOffset< ElementOffset >**

  Offset to a sequence of non-primitive elements.
- class **rti::flat::MutableArrayOffset< ElementOffset, N >**

  Offset to an array of variable-size elements.
- class **rti::flat::FinalArrayOffset< ElementOffset, N >**

  Offset to an array of final elements.
- class **rti::flat::FinalAlignedArrayOffset< ElementOffset, N >**

  Offset to an array of final elements.

Functions

- template<typename OffsetType >
  flat_type_traits< OffsetType >::plain_type * **rti::flat::plain_cast** (OffsetType &offset)

  Casts into an equivalent plain C++ type.
- template<typename OffsetType >
  const **flat_type_traits**< OffsetType >::plain_type * **rti::flat::plain_cast** (const OffsetType &offset)

  Const version of plain_cast.

7.226.1 Detailed Description

Offsets provide access to the members of a FlatData Sample.

An Offset represents a position within a **FlatData Sample** (p. 769) that allows accessing a member of that Sample, or the Sample's **root** (p. 2189).

Offsets can be described as **iterators**. They represent a position in a buffer, not the value itself. As such, they're lightweight objects that can be copied to point to the same data.

There are the following Offset types to access the different IDL types:

Category	Offset type
User types	For example: • **MyFlatFinalOffset** (p. 2014), an Offset to a final struct • **MyFlatMutableOffset** (p. 2025), an Offset to a mutable struct • **MyFlatUnionOffset** (p. 2035), an Offset to a union
Arrays	• **rti::flat::PrimitiveArrayOffset** (p. 2132) • **rti::flat::FinalArrayOffset** (p. 1911) (array of final elements in a final type) • **rti::flat::FinalAlignedArrayOffset** (p. 1909) (array of final elements in a mutable type) • **rti::flat::MutableArrayOffset** (p. 2010)
Sequences	• **rti::flat::PrimitiveSequenceOffset** (p. 2138) • **rti::flat::SequenceOffset** (p. 2204)
Primitive types	• The type itself, such as `double` • **rti::flat::PrimitiveOffset** (p. 2134) (when the member is optional)

Offsets for user types are generated by **rtiddsgen** and provide methods to access the type's members by their names. Offsets for arrays and sequences provide methods to access each element.

Some offsets allow accessing the data through a pointer to the equivalent plain C++ type, which generally provides better performance. See **rti::flat::plain_cast()** (p. 773).

7.226.2 Offset Error Management

Functions that return an Offset may return a "null" Offset (one such that **is_null()** (p. 2128) returns `true`).

An Offset may be null if a member doesn't exist in the **Sample** (p. 769). For example, if the member 'my_final' in **My↩ FlatMutable** (p. 770) doesn't exist (because it wasn't added while building the Sample, or because it wasn't received in the subscribing application), **MyFlatMutableOffset::my_final()** (p. 2030) returns an null Offset. Note that a **member in a final type** (for example, **MyFlatFinalOffset::my_complex()** (p. 2017)) always exists, except in the case of an error.

In addition to that, a function may return a null Offset for any error condition.

7.226.3 Function Documentation

7.226.3.1 plain_cast() [1/2]

```
template<typename OffsetType >
flat_type_traits< OffsetType >::plain_type * rti::flat::plain_cast (
            OffsetType & offset )
```

Casts into an equivalent plain C++ type.

Some FlatData types can be cast to their equivalent **plain** definition as a regular non-FlatData C++ type. This is a more efficient way to access the data. This function casts, if possible, the member pointed to by the offset argument to an equivalent plain C++ type. Any changes made through the plain type are reflected in the FlatData sample.

Template Parameters

OffsetType	The Offset type

Precondition

plain_cast requires the type to meet the following restrictions:

- The type must be a final struct, or an array or sequence of members of a type that meets these restrictions (including primitive types)
- The type must be defined in a way such that the packing of the plain C++ type doesn't differ from the padding in XCDR2.
- The type may not inherit from another type.
- In addition, the sample must be serialized in the native endianness. For example, if a subscribing application on a little-endian platform receives a sample published from a big-endian system, it is not possible to plain↩ _cast the sample or any of its members, except if the member is a primitive array or sequence of 1-byte elements.

offset.is_cpp_compatible() (p. 2128) indicates if the member meets the requirements. If the type doesn't, this function returns NULL.

Parameters

offset	The offset to the member to cast.

Returns

The data that `offset` referred to, cast as a plain C++ type with the same definition. If `offset` is an array or sequence member, the returned pointer represents a C++ array with the same number of elements.

The following table summarizes the possible parameters to this function (assuming that they meet the previous requirements), and the return type in each case:

OffsetType	return type
Offset to a final struct, such as **MyFlatFinalOffset** (p. 2014)	`MyFlatFinalPlainHelper*` (pointer to a single element). This is a type with the same IDL definition, but without `@language_binding(FLAT_DATA)`.

OffsetType	return type
Offset to an array of final structs, such as **Final↩ ArrayOffset** (p. 1911)<**MyFlatFinal↩ Offset** (p. 2014), N>	MyFlatFinalPlainHelper* (array of N elements)
Offset to a sequence of final structs, such as **SequenceOffset** (p. 2204)<**MyFlatFinal↩ Offset** (p. 2014)>	MyFlatFinalPlainHelper* (array of offset.element_count() elements)
Offset to an array of primitive types, such as **PrimitiveArrayOffset** (p. 2132)<int32↩ _t, N>	int32_t* (array of N elements)
Offset to a sequence of primitive types, such as **PrimitiveSequenceOffset** (p. 2138)<int32_t>	int32_t* (array of offset.element_count() elements)

Due to the performance advantages that plain_cast offers, it is recommended to define FlatData types in a way that their largest member(s) can be plain_cast.

The following example shows how to use plain_cast to cast a **MyFlatFinalOffset** (p. 2014) into the type with the same IDL definition as **MyFlatFinal** (p. 770), but without the @language_binding(FLAT_DATA) annotation:

```
MyFlatMutable *my_sample = ...;
auto my_root = my_sample->root();
auto my_final = my_root.my_final();
// Get the plain C++ type and modify an array
auto my_final_plain = rti::flat::plain_cast(my_final);
my_final_plain->my_primitive(3); // this is using the plain C++ setter
my_final_plain->my_complex_array()[1].x(20); // this is a std::array
// The change to my_complex_array is reflected in the FlatData sample
std::cout « my_final.my_primitive() « std::endl; // 3
std::cout « my_final.my_complex_array().get_element(1).x() « std::endl; // 20
```

This example shows how to use plain_cast to efficiently build a sequence of final elements and a sequence of integers, both members of a mutable type:

```
MyFlatMutableBuilder builder = rti::flat::build_data(writer);
// 1)
//
// Build a sequence of 5 elements with add_n() instead of 5 calls to
// add_next()
rti::flat::FinalSequenceBuilder<MyFlatFinalOffset> seq_builder =
          builder.build_my_final_seq();
seq_builder.add_n(5);
// Finish the member, getting the offset to the member
rti::flat::SequenceOffset<MyFlatFinalOffset> seq_offset = seq_builder.finish();
// Cast it to an array of plain C++ type and initialize it.
// This way to initialize it is more efficient than add_next().
auto seq_elements = rti::flat::plain_cast(seq_offset);
for (int i = 0; i < 5; i++) {
    seq_elements[i].my_primitive(i);
    // ...
}
// 2)
//
// Build a sequence of 1000 integers
auto seq_builder = builder.build_my_primitive_seq();
// make space for 1000 elements, but leave them uninitialized
seq_builder.add_n(1000);
auto seq_offset = seq_builder.finish();
// Initialize the elements:
int32_t *elements = rti::flat::plain_cast(seq_offset);
for (int i = 0; i < 1000; i++) {
    elements[i] = ...;
}
// ... continue building the sample using 'builder'
```

7.226.3.2 plain_cast() [2/2]

```
template<typename OffsetType >
const  flat_type_traits< OffsetType >::plain_type * rti::flat::plain_cast (
             const OffsetType & offset )
```

Const version of plain_cast.

7.227 FlatData Topic-Types

<<***extension***>> *(p. 432)* FlatData Language Binding for IDL topic-types

Modules

- **FlatData Builders**

  A Builder allows creating and initializing variable-size data.
- **FlatData Samples**

  A Sample represents an instance of the IDL topic-type and contains the data in serialized format.
- **FlatData Offsets**

  Offsets provide access to the members of a FlatData Sample.

7.227.1 Detailed Description

<<***extension***>> *(p. 432)* FlatData Language Binding for IDL topic-types

Note

For a complete description of the FlatData language binding and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

The FlatData language binding is available in the Traditional C++ API and in the Modern C++ API.

RTI FlatData™ is a language binding for IDL types in which the in-memory representation of a sample matches the wire representation. Therefore, the cost of serialization/deserialization is zero.

To select FlatData as the language binding of a type, annotate it with `@language_binding(FLAT_DATA)` in IDL or apply the attribute `languageBinding="flat_data"` in XML.

There are some restrictions regarding the kinds of types to which the FlatData language binding can be applied.

- For final types, the FlatData language binding can be applied only to fixed-size types. A fixed-size type is a type whose wire representation always has the same size. This includes primitive types, arrays of fixed-size types, and structs containing only members of fixed-size types. Unions are not fixed-size types.
- For mutable types, any member is permitted.

- Extensible types cannot be marked as FlatData.

Final types are more efficient, but more restrictive. In general, a good compromise is to define mutable top-level types, but making sure their largest data members are final.

When a type is marked with the FlatData language binding, its mapping into C++ is different than that of a regular type (plain language binding). Rather than a single C++ class with direct access to its members, for a FlatData type **rtiddsgen** generates the following:

- A **Sample** (p. 769), the data in serialized format
- An **Offset** (p. 771), which allows reading the data members of that type inside a Sample, and modifying them without changing the size
- A **Builder** (p. 766), if the type is mutable, which allows creating a variable-size Sample

For example, for the IDL types **MyFlatFinal** (p. 770) and **MyFlatMutable** (p. 770) **rtiddsgen** generates the following C++ types:

- The Sample types **MyFlatFinal** (p. 770) and **MyFlatMutable** (p. 770)
- The Offset types **MyFlatFinalOffset** (p. 2014) and **MyFlatMutableOffset** (p. 2025).
- The Builder type **MyFlatMutableBuilder** (p. 2018).

7.227.2 Publishing FlatData

The typical way to publish FlatData samples includes the following steps:

- Create a **FooDataWriter** (p. 1944) as you would for a non-FlatData (plain) topic-type (see **Setting up a data writer** (p. 400)).

(For final topic-types such as **MyFlatFinal** (p. 770))

- Obtain a FlatData sample with **FooDataWriter::get_loan** (p. 1963).
```
MyFlatFinal *foo_sample = writer.get_loan();
```
- Initialize the sample, starting from the **root()** (p. 2189) offset.
```
MyFlatFinalOffset foo_root = foo_sample->root();
foo_root.my_primitive(3);
auto my_complex_offset = foo_root.my_complex();
// ... initialize my_complex_offset
```

(For mutable topic-types such as **MyFlatMutable** (p. 770))

- Obtain a **Builder** (p. 766) to create a variable-size sample with **rti::flat::build_data()** (p. 768).
```
MyFlatMutableBuilder foo_builder = rti::flat::build_data(writer);
```

- Use this builder (and possibly nested member builders) to initialize the members.
```
foo_builder.add_my_primitive(3);
auto my_mutable_builder = foo_builder.build_my_mutable();
// ... build 'my_mutable' (a member with a mutable type)
my_mutable_builder.finish(); // completes a member
auto my_final_offset = foo_builder.add_my_final();
// ... initialize 'my_final' (a member with a final type)
```
- Obtain the completed sample with **MyFlatMutableBuilder::finish_sample()** (p. 2021). After that, the builder is no longer usable, and the sample size cannot change.
```
MyFlatMutable *foo_sample = foo_builder.finish_sample();
```
- Optionally, it is possible to change the values of the sample accessing its root(), as long as the size doesn't change. For example, if the sample was built with a sequence member with two elements, it is possible to modify any of those elements, but it's not possible to add a third element.

(For both final and mutable topic-types)

- Write the sample with **FooDataWriter::write** (p. 1951).
```
writer.write(*foo_sample);
```

After write, the DataWriter owns the FlatData sample. This allows avoiding additional copies, the main goal of the Flat↩ Data language binding. This means that the sample cannot be reused. The DataWriter will return it to the sample pool when appropriate, as described in **FooDataWriter::get_loan** (p. 1963).

7.227.3 Subscribing to FlatData

To subscribe to a topic using a FlatData topic-type:

- Create a **FooDataReader** (p. 1917) normally (see **Setting up a data reader** (p. 403)).
- Read or take the samples using a loaning operation, such as **FooDataReader::take** (p. 1920) (copying read/take operations cannot be used with FlatData types).
- Access the **root()** (p. 2189) offset, and any of the sample's members from there.

Note that the language binding is a local concept. It is possible to publish with a FlatData topic-type and subscribe to it with a **plain** topic-type with the same (or assignable) definition. It is also possible to use a plain topic-type on the publisher side and subscribe to it using FlatData. The DataWriter or DataReader of the plain topic-type has to use **DDS_XCDR2_DATA_REPRESENTATION** (p. 569) in **DDS_DataRepresentationQosPolicy** (p. 886).

Chapter 8

Namespace Documentation

8.1 connext Namespace Reference

Namespace for Connext.

Classes

- class **AlreadyDeletedException**

  The object target of this operation has already been deleted.
- class **BadParameterException**

  Illegal parameter value.
- class **IllegalOperationException**

  The operation was called under improper circumstances.
- class **ImmutablePolicyException**

  Application attempted to modify an immutable QoS policy.
- class **InconsistentPolicyException**

  Application specified a set of QoS policies that are not consistent with each other.
- class **IsInvalidSamplePredicate**

  Predicate-class to determine if a sample contains invalid data.
- class **IsReplyRelatedPredicate**

  Predicate-class to match replies by their related request.
- class **IsValidSamplePredicate**

  Predicate-class to determine if a sample contains valid data.
- class **LoanedSamples**

  Provides access to a collection of middleware-loaned samples.
- class **LogicException**

  Base class of all RTI Connext exceptions caused by a logic error.
- class **MessagingLibraryVersion**

  The Connext Messaging Library version.
- class **MessagingVersion**

  The Connext Messaging version.

- class **NotEnabledException**

  *Operation invoked on a **DDSEntity** (p. 1731) that is not yet enabled.*
- class **OutOfResourcesException**

  RTI Connext ran out of the resources needed to complete the operation.
- class **PreconditionNotMetException**

  A pre-condition for the operation was not met.
- class **Replier**

  Allows receiving requests and sending replies.
- class **ReplierListener**

  *Called when a **connext::Replier** (p. 2139) has new available requests.*
- class **ReplierParams**

  *Contains the parameters for creating a **connext::Replier** (p. 2139).*
- class **Requester**

  Allows sending requests and receiving replies.
- class **RequesterParams**

  *Contains the parameters for creating a **connext::Requester** (p. 2157).*
- class **RuntimeException**

  Generic, unspecified error.
- class **Sample**

  A data sample and related info received from the middleware.
- class **SampleIterator**

  STL-compliant random-access iterator for SampleRef<T>
- class **SampleRef**

  A data sample and related information received from the middleware.
- class **SimpleReplier**

  A callback-based replier.
- class **SimpleReplierListener**

  *The listener called by a **SimpleReplier** (p. 2206).*
- class **SimpleReplierParams**

  *Contains the parameters for creating a **connext::SimpleReplier** (p. 2206).*
- class **TimeoutException**

  The operation timed out (does not apply to wait or receive operations)
- class **UnsupportedException**

  Unsupported operation.
- class **WriteSample**

  A sample for writing data.
- class **WriteSampleRef**

  A reference to a data sample for writing.

Functions

- template<typename T , bool IsConst>
  ValidSampleIterator< T, IsConst > **make_valid_sample_iterator** (**SampleIterator**< T, IsConst > related_↩ iterator)

  Creates an iterator that only returns valid samples.
- template<typename T >
  LoanedSamples< T > **move** (**LoanedSamples**< T > &ls) throw ()

  *Creates a new **LoanedSamples** (p. 1995) instance by moving the contents of an existing one.*

8.1.1 Detailed Description

Namespace for Connext.

8.2 rti Namespace Reference

The RTI namespace.

Namespaces

- namespace **flat**

  <<***extension***>> *(*p. *432) Support for* ***FlatData Topic-Types*** *(*p. *776)*

8.2.1 Detailed Description

The RTI namespace.

8.3 rti::flat Namespace Reference

<<***extension***>> *(*p. *432)* Support for **FlatData Topic-Types** (p. 776)

Classes

- class **AbstractAlignedList**

  Base class of Offsets to sequences and arrays of non-primitive members.
- class **AbstractBuilder**

  Base class of all ***Builders*** *(*p. *766).*
- class **AbstractListBuilder**

  Base class of all array and sequence builders.
- class **AbstractPrimitiveList**

  Base class for Offsets to sequences and arrays of primitive types.
- class **AbstractSequenceBuilder**

  Base class of Builders for sequence members.
- class **AggregationBuilder**

  Base class of struct and union builders.
- class **FinalAlignedArrayOffset**

  Offset to an array of final elements.
- class **FinalArrayOffset**

  Offset to an array of final elements.
- class **FinalOffset**

  The base class of all Offsets to a final struct type.

- class **FinalSequenceBuilder**

  Builds a sequence member of fixed-size elements.
- struct **flat_type_traits**

  *Given a **Sample** (p. 2187), an Offset or a Builder, it allows obtaining the other types.*
- class **MutableArrayBuilder**

  Builds an array member of variable-size elements.
- class **MutableArrayOffset**

  Offset to an array of variable-size elements.
- class **MutableOffset**

  The base class of all Offsets to a final struct type.
- class **MutableSequenceBuilder**

  Builds a sequence member of variable-size elements.
- class **OffsetBase**

  Base class of all Offset types.
- class **PrimitiveArrayOffset**

  Offset to an array of primitive elements.
- struct **PrimitiveConstOffset**

  A const Offset to an optional primitive member.
- struct **PrimitiveOffset**

  An Offset to an optional primitive member.
- class **PrimitiveSequenceBuilder**

  Builds a sequence of primitive members.
- class **PrimitiveSequenceOffset**

  Offset to a sequence of primitive elements.
- class **Sample**

  The generic definition of FlatData topic-types.
- class **SequenceIterator**

  Iterator for collections of Offsets.
- class **SequenceOffset**

  Offset to a sequence of non-primitive elements.
- class **StringBuilder**

  Builds a string.
- class **StringOffset**

  Offset to a string.
- class **UnionBuilder**

  Base class of builders for user-defined mutable unions.

Functions

- template<typename OffsetType >
  flat_type_traits< OffsetType >::plain_type * **plain_cast** (OffsetType &offset)

  Casts into an equivalent plain C++ type.
- template<typename OffsetType >
  const **flat_type_traits**< OffsetType >::plain_type * **plain_cast** (const OffsetType &offset)

  Const version of plain_cast.
- template<typename TopicType >
  rti::flat::flat_type_traits< TopicType >::builder **build_data** (typename TopicType::DataWriter *writer)

Begins building a new sample.

- template<typename BuilderType >
  void **discard_builder** (typename **rti::flat::flat_type_traits**< BuilderType >::flat_type::DataWriter *writer, BuilderType &builder)

  Discards a sample builder.

8.3.1 Detailed Description

<<***extension***>> *(*p. *432)* Support for **FlatData Topic-Types** (p. 776)

Chapter 9

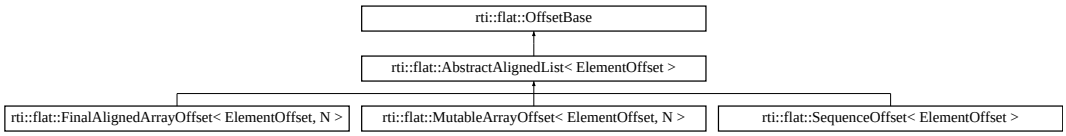
Class Documentation

9.1 rti::flat::AbstractAlignedList< ElementOffset > Class Template Reference

Base class of Offsets to sequences and arrays of non-primitive members.

`#include <SequenceOffsets.hpp>`

Inheritance diagram for rti::flat::AbstractAlignedList< ElementOffset >:



Public Types

- typedef **SequenceIterator**< ElementOffset, typename ElementOffset::offset_kind > **iterator**
  *The iterator type, **SequenceIterator** (p. 2198).*

Public Member Functions

- **iterator begin** ()
  Gets an iterator to the first Offset.
- **iterator end** ()
  Gets an iterator to the past-the-end element.

9.1.1 Detailed Description

template<typename ElementOffset>
class rti::flat::AbstractAlignedList< ElementOffset >

Base class of Offsets to sequences and arrays of non-primitive members.

Template Parameters

ElementOffset	The Offset type of the elements

9.1.2 Member Typedef Documentation

9.1.2.1 iterator

```
template<typename ElementOffset >
typedef SequenceIterator<ElementOffset, typename ElementOffset::offset_kind> rti::flat::↩
AbstractAlignedList< ElementOffset >::iterator
```

The iterator type, **SequenceIterator** (p. 2198).

9.1.3 Member Function Documentation

9.1.3.1 begin()

```
template<typename ElementOffset >
iterator rti::flat::AbstractAlignedList< ElementOffset >::begin ( ) [inline]
```

Gets an iterator to the first Offset.

begin() (p. 786) and **end()** (p. 786) enable the use of range-for loops, for example:

```
SequenceOffset<MyFlatMutableOffset> sequence_offset = my_type_offset.my_sequence();
for (auto element : sequence_offset) {
    std::cout « element.x() « std::endl;
}
```

References **rti::flat::OffsetBase::get_buffer_size()**.

9.1.3.2 end()

```
template<typename ElementOffset >
iterator rti::flat::AbstractAlignedList< ElementOffset >::end ( ) [inline]
```

Gets an iterator to the past-the-end element.

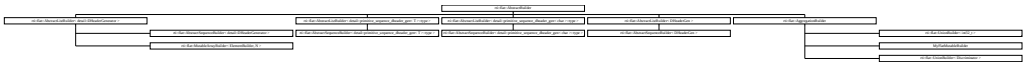
References **rti::flat::OffsetBase::get_buffer_size()**.

9.2 rti::flat::AbstractBuilder Class Reference

Base class of all **Builders** (p. 766).

`#include <Builder.hpp>`

Inheritance diagram for rti::flat::AbstractBuilder:



Public Member Functions

- void **discard** ()
  Discards a member in process of being built.
- bool **is_nested** () const
  Returns whether this is a member Builder.
- bool **is_valid** () const
  Whether this Builder is valid.
- rti::xcdr::length_t **capacity** () const
  Returns the total capacity in bytes.
- bool **check_failure** ()
  Checks if the previous operation failed and resets the failure flag.

Protected Member Functions

- virtual ~**AbstractBuilder** ()
  If this is a member Builder, it calls finish().

9.2.1 Detailed Description

Base class of all **Builders** (p. 766).

9.2.2 Constructor & Destructor Documentation

9.2.2.1 ~AbstractBuilder()

`virtual rti::flat::AbstractBuilder::~AbstractBuilder ( ) [inline], [protected], [virtual]`

If this is a member Builder, it calls finish().

If this Builder is building a member (that is, **is_nested()** (p. 788) is true), and the object goes out of scope before finish() has been called, its destructor calls finish(). Note, however, that it won't report any error.

If this Builder is building a sample (!is_nested()), its destructor doesn't do anything.

9.2.3 Member Function Documentation

9.2.3.1 discard()

```
void rti::flat::AbstractBuilder::discard ( )  [inline]
```

Discards a member in process of being built.

This function ends the creation of a member, returning the Builder of the type that contains the member to its previous state, as if this member had never been built.

Precondition

This object must be a member Builder, not a sample Builder.

This method is useful when during the building of a member an error occurs and the application wants to roll back, instead of finishing an incomplete member.

9.2.3.2 is_nested()

```
bool rti::flat::AbstractBuilder::is_nested ( ) const  [inline]
```

Returns whether this is a member Builder.

A member Builder is a Builder that has been created by calling a "`build_<member>`" function on another Builder (for example, **MyFlatMutableBuilder::build_my_mutable()** (p. 2024)).

Returns

True if this is a member Builder, or false if this is a sample Builder.

9.2.3.3 is_valid()

```
bool rti::flat::AbstractBuilder::is_valid ( ) const  [inline]
```

Whether this Builder is valid.

A Builder is not valid when it is default-constructed, or after any of these functions is called: finish(), finish_sample(), **discard()** (p. 788).

Since the Traditional C++ API doesn't use exceptions, certain function failures due to the Builder running out resources are also reported by invalidating the Builder.

9.2.3.4 capacity()

```
rti::xcdr::length_t rti::flat::AbstractBuilder::capacity ( ) const  [inline]
```

Returns the total capacity in bytes.

The capacity is the total number of bytes this Builder can contain. For a sample Builder (that is, one such that **is_nested()** (p. 788) returns false), **rti::flat::build_data** (p. 768) reserves enough bytes to accommodate any sample of a given type.

9.2.3.5 check_failure()

```
bool rti::flat::AbstractBuilder::check_failure ( )  [inline]
```

Checks if the previous operation failed and resets the failure flag.

This function must be called after each Builder operation to check if it succeeded. Note that after calling **check_failure()** (p. 789) the error flag is reset, so a subsequent call will always return false.

Returns

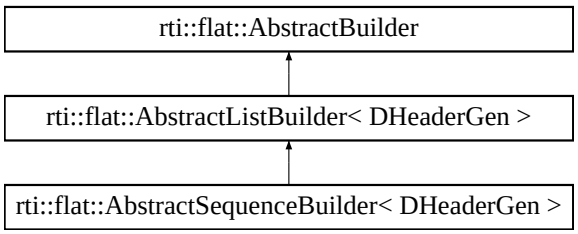
True if there was a failure in the previous operation, false if there was no failure since the last call to check_failure.

9.3 rti::flat::AbstractListBuilder< DHeaderGen > Class Template Reference

Base class of all array and sequence builders.

```
#include <SequenceBuilders.hpp>
```

Inheritance diagram for rti::flat::AbstractListBuilder< DHeaderGen >:



Protected Member Functions

- unsigned int **element_count** () const

  Returns the current number of elements that have been added.

Additional Inherited Members

9.3.1 Detailed Description

template<typename DHeaderGen>
class rti::flat::AbstractListBuilder< DHeaderGen >

Base class of all array and sequence builders.

9.3.2 Member Function Documentation

9.3.2.1 element_count()

```
template<typename DHeaderGen >
unsigned int  rti::flat::AbstractListBuilder< DHeaderGen >::element_count ( ) const  [inline],
[protected]
```

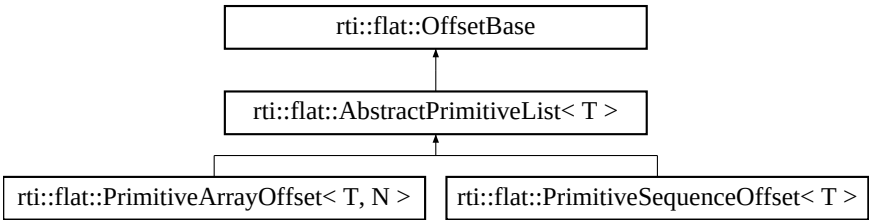
Returns the current number of elements that have been added.

9.4 rti::flat::AbstractPrimitiveList< T > Class Template Reference

Base class for Offsets to sequences and arrays of primitive types.

`#include <SequenceOffsets.hpp>`

Inheritance diagram for rti::flat::AbstractPrimitiveList< T >:



Public Member Functions

- T **get_element** (unsigned int i) const
  Returns an element by index.
- bool **set_element** (unsigned int i, T value)
  Sets an element by index.

9.4.1 Detailed Description

template<typename T>
class rti::flat::AbstractPrimitiveList< T >

Base class for Offsets to sequences and arrays of primitive types.

Template Parameters

T	The primitive type

9.4.2 Member Function Documentation

9.4.2.1 get_element()

```
template<typename T >
T  rti::flat::AbstractPrimitiveList< T >::get_element (
            unsigned int i ) const  [inline]
```

Returns an element by index.

Parameters

i	The zero-based index of the element

See also

rti::flat::plain_cast() (p. 773) for a method to access all the elements at once

9.4.2.2 set_element()

```
template<typename T >
bool  rti::flat::AbstractPrimitiveList< T >::set_element (
            unsigned int i,
            T value )  [inline]
```

Sets an element by index.

Parameters

i	The zero-based index of the element to set
value	The value to set

Returns

true if it was possible to set the element, or false if this collection has less than i - 1 elements.

See also

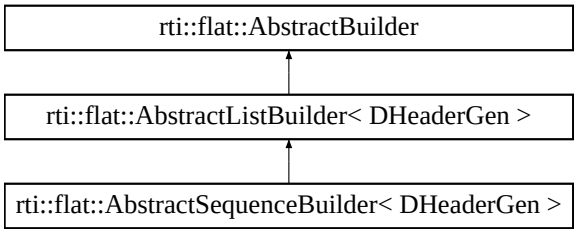
rti::flat::plain_cast() (p. 773) for a method to access all the elements at once

9.5 rti::flat::AbstractSequenceBuilder< DHeaderGen > Class Template Reference

Base class of Builders for sequence members.

`#include <SequenceBuilders.hpp>`

Inheritance diagram for rti::flat::AbstractSequenceBuilder< DHeaderGen >:



Public Member Functions

- unsigned int **element_count** () const

  Returns the current number of elements that have been added.

Additional Inherited Members

9.5.1 Detailed Description

template<typename DHeaderGen>
class rti::flat::AbstractSequenceBuilder< DHeaderGen >

Base class of Builders for sequence members.

This class contains only implementation details and doesn't add any public function to **AbstractListBuilder** (p. 789).

9.5.2 Member Function Documentation

9.5.2.1 element_count()

```
template<typename DHeaderGen >
unsigned int  rti::flat::AbstractListBuilder< DHeaderGen >::element_count ( ) const  [inline]
```

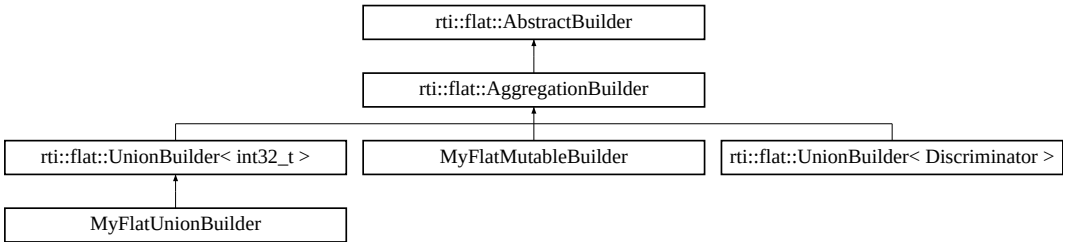
Returns the current number of elements that have been added.

9.6 rti::flat::AggregationBuilder Class Reference

Base class of struct and union builders.

```
#include <AggregationBuilders.hpp>
```

Inheritance diagram for rti::flat::AggregationBuilder:



Additional Inherited Members

9.6.1 Detailed Description

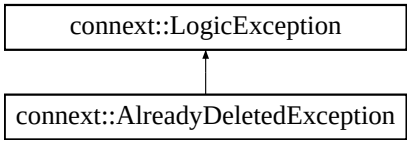
Base class of struct and union builders.

This class contains implementation details and doesn't add any public function to **AbstractBuilder** (p. 787). See **My↩ FlatMutableBuilder** (p. 2018) for a concrete example of a struct builder.

9.7 connext::AlreadyDeletedException Class Reference

The object target of this operation has already been deleted.

Inheritance diagram for connext::AlreadyDeletedException:



9.7.1 Detailed Description

The object target of this operation has already been deleted.

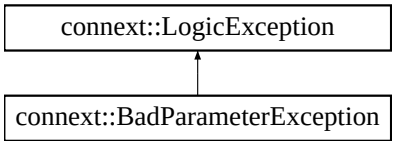
See also

DDS_RETCODE_ALREADY_DELETED (p. 533)

9.8 connext::BadParameterException Class Reference

Illegal parameter value.

Inheritance diagram for connext::BadParameterException:



9.8.1 Detailed Description

Illegal parameter value.

See also

DDS_RETCODE_BAD_PARAMETER (p. 532)

9.9 DDS_AcknowledgmentInfo Struct Reference

Information about an application-level acknowledged sample.

Public Attributes

- **DDS_InstanceHandle_t subscription_handle**

  *Subscription handle of the acknowledging **DDSDataReader** (p. 1556).*
- struct **DDS_SampleIdentity_t sample_identity**

  Identity of the sample being acknowledged.
- **DDS_Boolean valid_response_data**

  Flag indicating validity of the user response data in the acknowledgment.
- struct **DDS_AckResponseData_t response_data**

  User data payload of application-level acknowledgment message.

9.9.1 Detailed Description

Information about an application-level acknowledged sample.

When acknowledging a sample, the reader provides the writer with information about the sample being acknowledged. The AcknowledgmentInfo structure provides the identity and cookie of the sample being acknowledged, as well as user data payload provided by the reader.

9.9.2 Member Data Documentation

9.9.2.1 subscription_handle

```
DDS_InstanceHandle_t DDS_AcknowledgmentInfo::subscription_handle
```

Subscription handle of the acknowledging **DDSDataReader** (p. 1556).

9.9.2.2 sample_identity

```
struct DDS_SampleIdentity_t DDS_AcknowledgmentInfo::sample_identity
```

Identity of the sample being acknowledged.

See also

DDS_SampleIdentity_t (p. 1343)

9.9.2.3 valid_response_data

```
DDS_Boolean DDS_AcknowledgmentInfo::valid_response_data
```

Flag indicating validity of the user response data in the acknowledgment.

This flag is true when the **DDS_RtpsReliableReaderProtocol_t::min_app_ack_response_keep_duration** (p. 1318) has not yet elapsed for the acknowledgment's response data.

The flag is false when that duration has elapsed for the response data.

9.9.2.4 response_data

`struct` **`DDS_AckResponseData_t`** `DDS_AcknowledgmentInfo::response_data`

User data payload of application-level acknowledgment message.

Response data set by **DDSDataReader** (p. 1556) when sample was acknowledged.

9.10 DDS_AckResponseData_t Struct Reference

Data payload of an application-level acknowledgment.

Public Attributes

- struct **DDS_OctetSeq value**
  a sequence of octets

9.10.1 Detailed Description

Data payload of an application-level acknowledgment.

9.10.2 Member Data Documentation

9.10.2.1 value

`struct` **`DDS_OctetSeq`** `DDS_AckResponseData_t::value`

a sequence of octets

[default] empty (zero-length)

[range] Octet sequence of length [0, **DDS_DataReaderResourceLimitsQosPolicy::max_app_ack_response_length** (p. 881)],

9.11 DDS_AllocationSettings_t Struct Reference

Resource allocation settings.

Public Attributes

- **DDS_Long initial_count**
  The initial count of resources.
- **DDS_Long max_count**
  The maximum count of resources.
- **DDS_Long incremental_count**
  The incremental count of resources.

9.11.1 Detailed Description

Resource allocation settings.

QoS:

DDS_DomainParticipantResourceLimitsQosPolicy (p. 977)

9.11.2 Member Data Documentation

9.11.2.1 initial_count

```
DDS_Long DDS_AllocationSettings_t::initial_count
```

The initial count of resources.

The initial resources to be allocated.

[default] It depends on the case.

[range] [0, 1 million], <= max_count

9.11.2.2 max_count

```
DDS_Long DDS_AllocationSettings_t::max_count
```

The maximum count of resources.

The maximum resources to be allocated.

[default] Depends on the case.

[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_count

9.11.2.3 incremental_count

```
DDS_Long DDS_AllocationSettings_t::incremental_count
```

The incremental count of resources.

The resource to be allocated when more resources are needed.

[default] Depends on the case.

[range] -1 (Double the amount of extra memory allocated each time memory is needed) or [1,1 million] (or = 0 only if initial_count == max_count)

9.12 DDS_AnnotationParameterValue Struct Reference

Annotation parameter value.

9.12.1 Detailed Description

Annotation parameter value.

This structure is use to represent an annotation parameter value. For example, the value of the annotation **[default]** for an aggregation type member.

9.13 DDS_AsynchronousPublisherQosPolicy Struct Reference

<<***extension***>> *(*p. *213)* Configures the mechanism that sends user data in an external middleware thread.

Public Attributes

- **DDS_Boolean disable_asynchronous_write**

  [DEPRECATED] (p. ***384)*** <<***extension***>> *(*p. *213) Disable asynchronous publishing.*
- struct **DDS_ThreadSettings_t thread**

  <<***extension***>> *(*p. *213) Settings of the publishing thread.*
- **DDS_Boolean disable_asynchronous_batch**

  [DEPRECATED] (p. ***384)*** <<***extension***>> *(*p. *213) Disable asynchronous batch flushing.*
- struct **DDS_ThreadSettings_t asynchronous_batch_thread**

  <<***extension***>> *(*p. *213) Settings of the batch flushing thread.*
- **DDS_Boolean disable_topic_query_publication**

  [DEPRECATED] (p. ***384)*** <<***extension***>> *(*p. *213) Disable topic query publication.*
- struct **DDS_ThreadSettings_t topic_query_publication_thread**

  <<***extension***>> *(*p. *213) Settings of the* ***DDSTopicQuery*** *(*p. *1895) publication thread.*

9.13.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the mechanism that sends user data in an external middleware thread.

Specifies the asynchronous publishing and asynchronous batch flushing settings of the **DDSPublisher** (p. 1818) instances.

The QoS policy specifies whether asynchronous publishing and asynchronous batch flushing are enabled for the **DDSDataWriter** (p. 1589) entities belonging to this **DDSPublisher** (p. 1818). If so, the publisher will spawn up to two threads, one for asynchronous publishing and one for asynchronous batch flushing.

This policy also configures the settings of the **DDSTopicQuery** (p. 1895) publication thread. The publisher will spawn this thread only if one or more DataWriters enable TopicQueries.

See also

DDS_BatchQosPolicy (p. 810).

DDS_PublishModeQosPolicy (p. 1279).

Entity:

DDSPublisher (p. 1818)

Properties:

RxO (p. 556) = N/A

Changeable (p. 556) = **NO** (p. 556)

9.13.2 Usage

You can use this QoS policy to reduce the amount of time your application thread spends sending data.

The asynchronous *publisher* thread is shared by all **DDS_ASYNCHRONOUS_PUBLISH_MODE_QOS** (p. 629) **DDSDataWriter** (p. 1589) instances that belong to this publisher and handles their data transmission chores.

The asynchronous *batch flushing* thread is shared by all **DDSDataWriter** (p. 1589) instances with batching enabled that belong to this publisher.

This QoS policy also allows you to adjust the settings of the asynchronous publishing and the asynchronous batch flushing threads. To use different threads for two different **DDSDataWriter** (p. 1589) entities, the instances must belong to different **DDSPublisher** (p. 1818) instances.

A **DDSPublisher** (p. 1818) must have asynchronous publishing enabled for its **DDSDataWriter** (p. 1589) instances to write asynchronously.

A **DDSPublisher** (p. 1818) must have asynchronous batch flushing enabled in order to flush the batches of its **DDSDataWriter** (p. 1589) instances asynchronously. However, no asynchronous batch flushing thread will be started until the first **DDSDataWriter** (p. 1589) instance with batching enabled is created from this **DDSPublisher** (p. 1818).

9.13.3 Member Data Documentation

9.13.3.1 disable_asynchronous_write

```
DDS_Boolean DDS_AsynchronousPublisherQosPolicy::disable_asynchronous_write
```

[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* Disable asynchronous publishing.

If set to **DDS_BOOLEAN_TRUE** (p. 513), any **DDSDataWriter** (p. 1589) created with **DDS_ASYNCHRONOUS_↩ PUBLISH_MODE_QOS** (p. 629) will fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533).

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Flow Control** (p. 282), **Concurrency** (p. 258)

9.13.3.2 thread

```
struct DDS_ThreadSettings_t DDS_AsynchronousPublisherQosPolicy::thread
```

<<***extension***>> *(*p. *213)* Settings of the publishing thread.

There is only one asynchronous publishing thread per **DDSPublisher** (p. 1818).

Specifies the **DDSAsyncWaitSet** (p. 1528) behavior.

Public Attributes

- struct **DDS_WaitSetProperty_t waitset_property**

  *Specifies the behavior of the asynchronous wait behavior, which is equivalent to the wait mechanism of a **DDSWaitSet** (p. 1897).*
- **DDS_UnsignedLong thread_pool_size**

  *Number of threads that comprise the thread pool of the **DDSAsyncWaitSet** (p. 1528).*
- struct **DDS_ThreadSettings_t thread_settings**

  ***DDS_ThreadSettings_t** (p. 1385) for each thread comprising the thread pool of the **DDSAsyncWaitSet** (p. 1528).*
- char * **thread_name_prefix**

  *Prefix used to compose the name of each thread that comprises the thread pool of the **DDSAsyncWaitSet** (p. 1528).*
- struct **DDS_Duration_t wait_timeout**

  Asynchronous wait timeout.
- **DDS_Long level**

  *Specifies the level of an **DDSAsyncWaitSet** (p. 1528).*

9.14.1 Detailed Description

Specifies the **DDSAsyncWaitSet** (p. 1528) behavior.

This property allows configuring the behavior of the asynchronous wait and the **DDSCondition** (p. 1544) dispatch, as well as the parameters of the thread pool.

See also

DDS_WaitSetProperty_t (p. 1509)

DDS_ThreadSettings_t (p. 1385)

9.14.2 Member Data Documentation

9.14.2.1 waitset_property

```
struct DDS_WaitSetProperty_t DDS_AsyncWaitSetProperty_t::waitset_property
```

Specifies the behavior of the asynchronous wait behavior, which is equivalent to the wait mechanism of a **DDSWaitSet** (p. 1897).

See also

DDS_WaitSetProperty_t (p. 1509)

9.14.2.2 thread_pool_size

```
DDS_UnsignedLong DDS_AsyncWaitSetProperty_t::thread_pool_size
```

Number of threads that comprise the thread pool of the **DDSAsyncWaitSet** (p. 1528).

Size must be equal to or greater than one.

[default] 1

9.14.2.3 thread_settings

```
struct DDS_ThreadSettings_t DDS_AsyncWaitSetProperty_t::thread_settings
```

DDS_ThreadSettings_t (p. 1385) for each thread comprising the thread pool of the **DDSAsyncWaitSet** (p. 1528).

Each thread within the pool is created with the same settings.

[default] Default thread settings values.

See also

DDS_ThreadSettings_t (p. 1385)

9.14.2.4 thread_name_prefix

```
char* DDS_AsyncWaitSetProperty_t::thread_name_prefix
```

Prefix used to compose the name of each thread that comprises the thread pool of the **DDSAsyncWaitSet** (p. 1528).

The composed name has the form:

`thread_name_prefix##[index]AWs` where [index] is an integer that identifies the thread relative to the **DDSAsyncWaitSet** (p. 1528).

If NULL, the default prefix will be used.

[default] NULL (use default prefix)

9.14.2.5 wait_timeout

```
struct DDS_Duration_t DDS_AsyncWaitSetProperty_t::wait_timeout
```

Asynchronous wait timeout.

Specifies the maximum amount of time the leader thread of the **DDSAsyncWaitSet** (p. 1528) waits for an attached **DDSCondition** (p. 1544) to trigger before it wakes up.

Duration must be a value greater than zero.

See also

DDSWaitSet::wait (p. 1901)

[default] DDS_DURATION_INFINITE (p. 522)

9.14.2.6 level

```
DDS_Long DDS_AsyncWaitSetProperty_t::level
```

Specifies the level of an **DDSAsyncWaitSet** (p. 1528).

The level prevents an application to deadlock when it uses multiple **DDSAsyncWaitSet** (p. 1528) instances that call operations on each other from the context of one of their thread pool's thread.

Inside the context of one of these threads, the application can synchronize only with other **DDSAsyncWaitSet** (p. 1528) of bigger level.

[default] 1

9.15 DDS_AvailabilityQosPolicy Struct Reference

<<***extension***>> *(p. 213)* Configures the availability of data.

Public Attributes

- **DDS_Boolean enable_required_subscriptions**

- struct **DDS_EndpointGroupSeq required_matched_endpoint_groups**

  <<***extension***>> *(p. 213) A sequence of endpoint groups.*

9.15.1 Detailed Description

<<***extension***>> *(p. 213)* Configures the availability of data.

Entity:

DDSDataReader (p. 1556), **DDSDataWriter** (p. 1589)

Properties:

RxO (p. 556) = NO
Changeable (p. 556) = **YES** (p. 556) (only on a **DDSDataWriter** (p. 1589) except for the member **DDS_AvailabilityQosPolicy::enable_required_subscriptions** (p. 808))

9.15.2 Usage

This QoS policy is used in the context of two features:

- Collaborative DataWriters
- Required Subscriptions

Collaborative DataWriters

The Collaborative DataWriters feature allows having multiple DataWriters publishing samples from a common logical data source. The DataReaders will combine the samples coming from the DataWriters in order to reconstruct the correct order at the source.

This QoS policy allows you to configure the ordering and combination process in the DataReader and can be used to support two different use cases:

- **Ordered delivery of samples in high-availability scenarios** One example of this is RTI Persistence Service. When a late-joining DataReader configured with **DDS_DurabilityQosPolicy** (p. 1005) set to **DDS_PERSISTENT_DURABILITY_QOS** (p. 599) or **DDS_TRANSIENT_DURABILITY_QOS** (p. 599) joins a DDS domain, it will start receiving historical samples from multiple DataWriters. For example, if the original DataWriter is still alive, the newly created DataReader will receive samples from the original DataWriter and one or more RTI Persistence Service DataWriters (PRSTDataWriters). This policy can be used to configure the sample ordering process on the DataReader.

- **Ordered delivery of samples in load-balanced scenarios** Multiple instances of the same application can work together to process and deliver samples. When the samples arrive through different data-paths out of order, the DataReader will be able to reconstruct the order at the destination. An example of this is when multiple instances of RTI Persistence Service are used to persist the data. Persisting data to a database on disk can be a bottleneck for throughput. You can improve scalability and performance by dividing the workload across different instances of RTI Persistence Service that use different databases. For example, samples larger than 10 are persisted by Persistence Service 1, samples less than or equal to 10 are persisted by Persistence Service 2.

- **Ordered delivery of samples with Group Ordered Access** This policy can also be used to configure the sample ordering process when the Subscriber is configured with **DDS_PresentationQosPolicy** (p. 1249) access_scope set to **DDS_GROUP_PRESENTATION_QOS** (p. 616). In this case, the Subscriber must deliver in order the samples published by a group of DataWriters that belong to the same Publisher and have access_scope set to **DDS_GROUP_PRESENTATION_QOS** (p. 616).

Each sample published in a DDS domain for a given logical data source is uniquely identified by a pair (virtual GUID, virtual sequence number). Samples from the same data source (same virtual GUID) can be published by different DataWriters. A DataReader will deliver a sample (VGUIDn, VSNm) to the application if one of the following conditions is satisfied:

- (VGUIDn, VSNm-1) has already been delivered to the application.
- All the known DataWriters publishing VGUIDn have announced that they do not have (VGUIDn, VSNm-1).
- None of the known DataWriters publishing GUIDn have announced potential availability of (VGUIDn, VSNm-1) and both timeouts in this QoS policy have expired.

A DataWriter announces potential availability of samples by using virtual heartbeats (HBs).

When **DDS_PresentationQosPolicy::access_scope** (p. 1252) is set to **DDS_TOPIC_PRESENTATION_QOS** (p. 616) or **DDS_INSTANCE_PRESENTATION_QOS** (p. 616), the virtual HB contains information about the samples contained in the **DDSDataWriter** (p. 1589) history.

When **DDS_PresentationQosPolicy::access_scope** (p. 1252) is set to **DDS_GROUP_PRESENTATION_QOS** (p. 616), the virtual HB contains information about all DataWriters in the **DDSPublisher** (p. 1818).

The frequency at which virtual HBs are sent is controlled by the protocol parameters **DDS_RtpsReliableWriter↩ Protocol_t::virtual_heartbeat_period** (p. 1325) and **DDS_RtpsReliableWriterProtocol_t::samples_per_virtual_↩ heartbeat** (p. 1325).

Required Subscriptions

In the context of Required Subscriptions, this QoS policy can be used to configure a set of Required Subscriptions on a **DDSDataWriter** (p. 1589).

Required subscriptions are preconfigured, named subscriptions that may leave and subsequently rejoin the network from time to time, at the same or different physical locations. Any time a required subscription is disconnected, any samples that would have been delivered to it are stored for delivery if and when the subscription rejoins the network.

9.15.3 Consistency

For a DataWriter, the setting of **AVAILABILITY** (p. 561) must be set consistenly with that of the **RELIABILITY** (p. 631) and **DURABILITY** (p. 596).

If **DDS_AvailabilityQosPolicy::enable_required_subscriptions** (p. 808) is set to **DDS_BOOLEAN_TRUE** (p. 513), **DDS_ReliabilityQosPolicy::kind** (p. 1298) must be set to **DDS_RELIABLE_RELIABILITY_QOS** (p. 633), **DDS_↩ DurabilityQosPolicy** (p. 1005) must be set to a value different than **DDS_VOLATILE_DURABILITY_QOS** (p. 598), and **DDS_DurabilityQosPolicy::writer_depth** (p. 1008) must be set to either **DDS_AUTO_WRITER_DEPTH** (p. 599) or **DDS_LENGTH_UNLIMITED** (p. 636).

9.15.4 Member Data Documentation

9.15.4.1 enable_required_subscriptions

```
DDS_Boolean DDS_AvailabilityQosPolicy::enable_required_subscriptions
```

<<***extension***>> *(p. 213)* Enables support for required subscriptions in a **DDSDataWriter** (p. 1589)

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Reliability** (p. 314), **Durability** (p. 278), **Data Availability** (p. 261)

9.15.4.2 max_data_availability_waiting_time

```
struct DDS_Duration_t DDS_AvailabilityQosPolicy::max_data_availability_waiting_time
```

<<***extension***>> *(p. 213)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.

Collaborative DataWriters

A sample identified by (VGUIDn, VSNm) will be delivered to the application if this timeout expires for the sample and the following two conditions are satisfied:

- None of the known DataWriters publishing VGUIDn have announced potential availability of (VGUIDn, VSNm-1).
- The DataWriters for all the endpoint groups specified in **required_matched_endpoint_groups** (p. 809) have been discovered or **max_endpoint_availability_waiting_time** (p. 808) has expired.

Required Subscriptions

This field is not applicable to Required Subscriptions.

[default] DDS_DURATION_AUTO (p. 523) (**DDS_DURATION_INFINITE** (p. 522) for **DDS_GROUP_PRESENTATION_QOS** (p. 616). Otherwise, 0 seconds)

[range] [0, **DDS_DURATION_INFINITE** (p. 522)], **DDS_DURATION_AUTO** (p. 523)

Categories

Mutable (p. 369), **Reliability** (p. 314), **Durability** (p. 278), **Data Availability** (p. 261)

9.15.4.3 max_endpoint_availability_waiting_time

`struct` **`DDS_Duration_t`** `DDS_AvailabilityQosPolicy::max_endpoint_availability_waiting_time`

<<***extension***>> *(p. 213)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).

Collaborative DataWriters

The set of endpoint groups that are required to provide samples for a data source can be configured using **required_matched_endpoint_groups** (p. 809).

A non-consecutive sample identified by (VGUIDn, VSNm) cannot be delivered to the application unless DataWriters for all the endpoint groups in **required_matched_endpoint_groups** (p. 809) are discovered or this timeout expires.

Required Subscriptions

This field is not applicable to Required Subscriptions.

[default] DDS_DURATION_AUTO (p. 523) (**DDS_DURATION_INFINITE** (p. 522) for **DDS_GROUP_PRESENTATION_QOS** (p. 616). Otherwise, 0 seconds)

[range] [0, **DDS_DURATION_INFINITE** (p. 522)], **DDS_DURATION_AUTO** (p. 523)

Categories

Mutable (p. 369), **Reliability** (p. 314), **Durability** (p. 278), **Data Availability** (p. 261)

9.15.4.4 required_matched_endpoint_groups

`struct` **`DDS_EndpointGroupSeq`** `DDS_AvailabilityQosPolicy::required_matched_endpoint_groups`

<<***extension***>> *(p. 213)* A sequence of endpoint groups.

Collaborative DataWriters

In the context of Collaborative DataWriters, it specifies the set of endpoint groups that are expected to provide samples for the same data source.

The quorum count in a group represents the number of DataWriters that must be discovered for that group before the DataReader is allowed to provide non consecutive samples to the application.

A DataWriter becomes a member of an endpoint group by configuring the role_name in **DDS_DataWriterQos::publication_name** (p. 916).

Required Subscriptions

In the context of Required Subscriptions, it specifies the set of Required Subscriptions on a **DDSDataWriter** (p. 1589).

Each Required Subscription is specified by a name and a quorum count.

The quorum count represents the number of DataReaders that have to acknowledge the sample before it can be considered fully acknowledged for that Required Subscription.

A DataReader is associated with a Required Subscription by configuring the role_name in **DDS_DataReaderQos::subscription_name** (p. 865).

[default] Empty sequence

  *<<**extension**>> (p. 213) The maximum flush delay.*
- struct **DDS_Duration_t source_timestamp_resolution**

  *<<**extension**>> (p. 213) Batch source timestamp resolution.*
- **DDS_Boolean thread_safe_write**

  *<<**extension**>> (p. 213) Determines whether or not the write operation is thread safe.*

9.16.1 Detailed Description

*<<**extension**>> (p. 213)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.

This QoS policy configures the ability of the middleware to collect multiple user data samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

This QoS policy can be used to dramatically increase effective throughput for small data samples. Usually, throughput for small samples (size $<$ 2048 bytes) is limited by CPU capacity and not by network bandwidth. Batching many smaller samples to be sent in a single large packet will increase network utilization, and thus throughput, in terms of samples per second.

Entity:

DDSDataWriter (p. 1589)

Properties:

RxO (p. 556) = NO
Changeable (p. 556) = **UNTIL ENABLE** (p. 556)

9.16.2 Member Data Documentation

9.16.2.1 enable

```
DDS_Boolean DDS_BatchQosPolicy::enable
```

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* Specifies whether or not batching is enabled.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Batching** (p. 257), **Throughput** (p. 327)

9.16.2.2 max_data_bytes

```
DDS_Long DDS_BatchQosPolicy::max_data_bytes
```

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum cumulative length of all serialized samples in a batch.

A batch is flushed automatically when this maximum is reached.

max_data_bytes does not include the meta data associated with the batch samples. Each sample has at least 8 bytes of meta data containing information such as the timestamp and sequence number. The meta data can be as large as 52 bytes for keyed topics and 20 bytes for unkeyed topics.

Note: Batches must contain whole samples. If a new batch is started and its initial sample causes the serialized size to exceed max_data_bytes, RTI Connext will send the sample in a single batch.

[default] 1024

[range] [1,**DDS_LENGTH_UNLIMITED** (p. 636)]

9.16.3 Consistency

The setting of **DDS_BatchQosPolicy::max_data_bytes** (p. 811) must be consistent with **DDS_BatchQosPolicy**↩ **::max_samples** (p. 811). For these two values to be consistent, they cannot be both **DDS_LENGTH_UNLIMITED** (p. 636).

Categories

Immutable (p. 333), **Batching** (p. 257), **Throughput** (p. 327)

9.16.3.1 max_samples

```
DDS_Long DDS_BatchQosPolicy::max_samples
```

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The maximum number of samples in a batch.

A batch is flushed automatically when this maximum is reached.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1,**DDS_LENGTH_UNLIMITED** (p. 636)]

9.16.4 Consistency

The setting of **DDS_BatchQosPolicy::max_samples** (p. 811) must be consistent with **DDS_BatchQosPolicy::max_data_bytes** (p. 811). For these two values to be consistent, they cannot be both **DDS_LENGTH_UNLIMITED** (p. 636).

Categories

Immutable (p. 333), **Batching** (p. 257), **Throughput** (p. 327)

9.16.4.1 max_flush_delay

```
struct DDS_Duration_t DDS_BatchQosPolicy::max_flush_delay
```

<<***extension***>> *(p. 213)* The maximum flush delay.

A batch is flushed automatically after the delay specified by this parameter.

The delay is measured from the time the first sample in the batch is written by the application.

[default] DDS_DURATION_INFINITE (p. 522)

[range] [0,**DDS_DURATION_INFINITE** (p. 522)]

9.16.5 Consistency

The setting of **DDS_BatchQosPolicy::max_flush_delay** (p. 812) must be consistent with **DDS_AsynchronousPublisherQosPolicy::disable_asynchronous_batch** (p. 800) and **DDS_BatchQosPolicy::thread_safe_write** (p. 813). If the delay is different than **DDS_DURATION_INFINITE** (p. 522), **DDS_AsynchronousPublisherQosPolicy::disable_asynchronous_batch** (p. 800) must be set to **DDS_BOOLEAN_FALSE** (p. 513) and **DDS_BatchQosPolicy::thread_safe_write** (p. 813) must be set to **DDS_BOOLEAN_TRUE** (p. 513).

Categories

Immutable (p. 333), **Batching** (p. 257), **Throughput** (p. 327)

9.16.5.1 source_timestamp_resolution

```
struct  DDS_Duration_t DDS_BatchQosPolicy::source_timestamp_resolution
```

<<***extension***>> *(p. 213)* Batch source timestamp resolution.

The value of this field determines how the source timestamp is associated with the samples in a batch.

A sample written with timestamp 't' inherits the source timestamp 't2' associated with the previous sample unless ('t' - 't2') > source_timestamp_resolution.

If source_timestamp_resolution is set to **DDS_DURATION_INFINITE** (p. 522), every sample in the batch will share the source timestamp associated with the first sample.

If source_timestamp_resolution is set to zero, every sample in the batch will contain its own source timestamp corresponding to the moment when the sample was written.

The performance of the batching process is better when source_timestamp_resolution is set to **DDS_DURATION_INFINITE** (p. 522).

[default] DDS_DURATION_INFINITE (p. 522)

[range] [0,**DDS_DURATION_INFINITE** (p. 522)]

9.16.6 Consistency

The setting of **DDS_BatchQosPolicy::source_timestamp_resolution** (p. 812) must be consistent with **DDS_BatchQosPolicy::thread_safe_write** (p. 813). If **DDS_BatchQosPolicy::thread_safe_write** (p. 813) is set to **DDS_BOOLEAN_FALSE** (p. 513), **DDS_BatchQosPolicy::source_timestamp_resolution** (p. 812) must be set to **DDS_DURATION_INFINITE** (p. 522).

Categories

Immutable (p. 333), **Batching** (p. 257), **Throughput** (p. 327), **Data Availability** (p. 261)

9.16.6.1 thread_safe_write

```
DDS_Boolean DDS_BatchQosPolicy::thread_safe_write
```

<<***extension***>> *(p. 213)* Determines whether or not the write operation is thread safe.

If this parameter is set to **DDS_BOOLEAN_TRUE** (p. 513), multiple threads can call write on the **DDSDataWriter** (p. 1589) concurrently.

[default] DDS_BOOLEAN_TRUE (p. 513)

9.16.7 Consistency

The setting of **DDS_BatchQosPolicy::thread_safe_write** (p. 813) must be consistent with **DDS_BatchQosPolicy::source_timestamp_resolution** (p. 812). If **DDS_BatchQosPolicy::thread_safe_write** (p. 813) is set to **DDS_BOOLEAN_FALSE** (p. 513), **DDS_BatchQosPolicy::source_timestamp_resolution** (p. 812) must be set to **DDS_DURATION_INFINITE** (p. 522).

9.19.2.8 disable_fragmentation_support

```
DDS_Boolean DDS_BuiltinTopicReaderResourceLimits_t::disable_fragmentation_support
```

[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Fragmentation** (p. 284), **Sending Large Data** (p. 290)

9.19.2.9 max_fragmented_samples

```
DDS_Long DDS_BuiltinTopicReaderResourceLimits_t::max_fragmented_samples
```

<<***extension***>> *(p. 213)* The maximum number of samples for which the built-in topic **DDSDataReader** (p. 1556) may store fragments at a given point in time.

At any given time, a built-in topic **DDSDataReader** (p. 1556) may store fragments for up to `max_fragmented_samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different built-in topic **DDSDataWriter** (p. 1589) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **DDS_BuiltinTopicReaderResourceLimits_t::max_samples** (p. 816).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **DDS_BuiltinTopicReaderResourceLimits_t::disable_fragmentation_support** (p. 818) is **DDS_BOOLEAN_FALSE** (p. 513).

[default] 1024

[range] [1, 1 million]

Categories

```
DDS_Long DDS_BuiltinTopicReaderResourceLimits_t::max_fragmented_samples_per_remote_writer
```

<<***extension***>> *(p. 213)* The maximum number of samples per remote writer for which a built-in topic **DDSDataReader** (p. 1556) may store fragments.

Logical limit so a single remote writer cannot consume all available resources.

Only applies if **DDS_BuiltinTopicReaderResourceLimits_t::disable_fragmentation_support** (p. 818) is **DDS_BOOLEAN_FALSE** (p. 513).

[default] 256

[range] [1, 1 million], <= max_fragmented_samples

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Fragmentation** (p. 284), **Sending Large Data** (p. 290)

9.19.2.12 max_fragments_per_sample

```
DDS_Long DDS_BuiltinTopicReaderResourceLimits_t::max_fragments_per_sample
```

<<***extension***>> *(p. 213)* Maximum number of fragments for a single sample.

Only applies if **DDS_BuiltinTopicReaderResourceLimits_t::disable_fragmentation_support** (p. 818) is **DDS_↩ BOOLEAN_FALSE** (p. 513).

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Fragmentation** (p. 284), **Sending Large Data** (p. 290)

9.19.2.13 dynamically_allocate_fragmented_samples

```
DDS_Boolean DDS_BuiltinTopicReaderResourceLimits_t::dynamically_allocate_fragmented_samples
```

<<***extension***>> *(p. 213)* Determines whether the built-in topic **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to **DDS_BOOLEAN_FALSE** (p. 513), the middleware will allocate memory upfront for storing fragments for up to **DDS_DataReaderResourceLimitsQosPolicy↩ ::initial_fragmented_samples** (p. 875) samples. This memory may grow up to **DDS_DataReaderResourceLimits↩ QosPolicy::max_fragmented_samples** (p. 874) if needed.

Only applies if **DDS_DataReaderResourceLimitsQosPolicy::disable_fragmentation_support** (p. 874) is **DDS_↩ BOOLEAN_FALSE** (p. 513).

[default] DDS_BOOLEAN_TRUE (p. 513)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Fragmentation** (p. 284), **Sending Large Data** (p. 290)

9.20 DDS_ChannelSettings_t Struct Reference

<<***extension***>> *(p. 213)* Type used to configure the properties of a channel.

Public Attributes

- struct **DDS_TransportMulticastSettingsSeq multicast_settings**

  <<***extension***>> *(p. 213) A sequence of* ***DDS_TransportMulticastSettings_t*** *(p. 1417) used to configure the multicast addresses associated with a channel.*
- char * **filter_expression**

  <<***extension***>> *(p. 213) A logical expression used to determine the data that will be published in the channel.*
- **DDS_Long priority**

  <<***extension***>> *(p. 213) Publication priority*

9.20.1 Detailed Description

<<***extension***>> *(p. 213)* Type used to configure the properties of a channel.

QoS:

DDS_MultiChannelQosPolicy (p. 1214)

9.20.2 Member Data Documentation

9.20.2.1 multicast_settings

```
struct DDS_TransportMulticastSettingsSeq DDS_ChannelSettings_t::multicast_settings
```

<<***extension***>> *(p. 213)* A sequence of **DDS_TransportMulticastSettings_t** (p. 1417) used to configure the multicast addresses associated with a channel.

The sequence cannot be empty.

The maximum number of multicast locators in a channel is limited to 16 (a locator is defined by a transport alias, a multicast address and a port). Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain_participant.max_announced_locator_list_size' property in the **DDS_PropertyQosPolicy** (p. 1260) associated with the **DDS_DomainParticipantQos** (p. 971).

[default] Empty sequence (invalid value)

Categories

Immutable (p. 333), **Transports** (p. 327), **Content Filtering** (p. 260)

9.20.2.2 filter_expression

```
char* DDS_ChannelSettings_t::filter_expression
```

<<***extension***>> *(p. 213)* A logical expression used to determine the data that will be published in the channel.

If the expression evaluates to TRUE, a sample will be published on the channel.

An empty string always evaluates the expression to TRUE.

A NULL value is not allowed.

The syntax of the expression will depend on the value of **DDS_MultiChannelQosPolicy::filter_name** (p. 1215)

Important: This value must be an allocated string with **DDS_String_alloc** (p. 759) or **DDS_String_dup** (p. 761). It should not be assigned to a string constant.

The filter expression length (including NULL-terminated character) cannot be greater than **DDS_DomainParticipant↩ ResourceLimitsQosPolicy::channel_filter_expression_max_length** (p. 998).

See also

Queries and Filters Syntax (p. 184)

[default] NULL (invalid value)

Categories

Immutable (p. 333), **Content Filtering** (p. 260)

9.20.2.3 priority

```
DDS_Long DDS_ChannelSettings_t::priority
```

<<***extension***>> *(p. 213)* Publication priority

A positive integer value designating the relative priority of the channel, used to determine the transmission order of pending writes.

Use of publication priorities requires the asynchronous publisher (**DDS_ASYNCHRONOUS_PUBLISH_MODE↩ _QOS** (p. 629)) with **DDS_FlowControllerProperty_t::scheduling_policy** (p. 1157) set to **DDS_HPF_FLOW_↩ CONTROLLER_SCHED_POLICY** (p. 125).

Larger numbers have higher priority.

If the publication priority of the channel is any value other than **DDS_PUBLICATION_PRIORITY_UNDEFINED** (p. 628), then the channel's priority will take precedence over the data writer's priority.

If the publication priority of the channel is set to **DDS_PUBLICATION_PRIORITY_UNDEFINED** (p. 628), then the channel's priority will be set to the value of the data writer's priority.

If the publicaton priority of both the data writer and the channel are **DDS_PUBLICATION_PRIORITY_UNDEFINED** (p. 628), the channel will be assigned the lowest priority value.

If the publication priority of the channel is **DDS_PUBLICATION_PRIORITY_AUTOMATIC** (p. 628), then the channel will be assigned the priority of the largest publication priority of all samples in the channel. The publication priority of each sample can be set in the **DDS_WriteParams_t** (p. 1519) of the **FooDataWriter::write_w_params** (p. 1956) function.

[default] DDS_PUBLICATION_PRIORITY_UNDEFINED (p. 628)

Categories

Immutable (p. 333), **Transports** (p. 327), **Data Availability** (p. 261)

9.21 DDS_ChannelSettingsSeq Struct Reference

Declares IDL sequence< **DDS_ChannelSettings_t** (p. 822) >

9.21.1 Detailed Description

Declares IDL sequence< **DDS_ChannelSettings_t** (p. 822) >

A sequence of **DDS_ChannelSettings_t** (p. 822) used to configure the channels' properties. If the length of the sequence is zero, the **DDS_MultiChannelQosPolicy** (p. 1214) has no effect.

Instantiates:

9.23 DDS_CoherentSetInfo_t Struct Reference

<<***extension***>> *(*p. *432)* Type definition for a coherent set info.

Public Attributes

- **DDS_GUID_t group_guid**

  The coherent set group GUID.
- **DDS_SequenceNumber_t coherent_set_sequence_number**

  *Sequence number that identifies a sample as part of a **DDSDataWriter** (p. 1589) coherent set.*
- **DDS_SequenceNumber_t group_coherent_set_sequence_number**

  Sequence number that identifies a sample as part of a group coherent set.
- **DDS_Boolean incomplete_coherent_set**

  Indicates if a sample is part of an incomplete coherent set.

9.23.1 Detailed Description

<<***extension***>> *(p. 432)* Type definition for a coherent set info.

A CoherentSetInfo provides information about the coherent set associated with a sample.

9.23.2 Member Data Documentation

9.23.2.1 group_guid

DDS_GUID_t DDS_CoherentSetInfo_t::group_guid

The coherent set group GUID.

This GUID identifies the **DDSDataWriter** (p. 1589) or the group of DataWriters publishing the coherent set, depending on the value of **DDS_PresentationQosPolicy::access_scope** (p. 1252) in the **DDSSubscriber** (p. 1860).

9.23.2.2 coherent_set_sequence_number

DDS_SequenceNumber_t DDS_CoherentSetInfo_t::coherent_set_sequence_number

Sequence number that identifies a sample as part of a **DDSDataWriter** (p. 1589) coherent set.

When **DDS_PresentationQosPolicy::access_scope** (p. 1252) in the **DDSSubscriber** (p. 1860) is set to **DDS_↩ INSTANCE_PRESENTATION_QOS** (p. 616) or **DDS_TOPIC_PRESENTATION_QOS** (p. 616), the coherent set associated with a sample is identified by the pair (group_guid, coherent_set_sequence_number).

9.23.2.3 group_coherent_set_sequence_number

```
DDS_SequenceNumber_t DDS_CoherentSetInfo_t::group_coherent_set_sequence_number
```

Sequence number that identifies a sample as part of a group coherent set.

When **DDS_PresentationQosPolicy::access_scope** (p. 1252) in the **DDSSubscriber** (p. 1860) is set to **DDS_↩ GROUP_PRESENTATION_QOS** (p. 616), the coherent set associated with a sample is identified by the pair (group_↩ guid, group_coherent_set_sequence_number).

9.23.2.4 incomplete_coherent_set

```
DDS_Boolean DDS_CoherentSetInfo_t::incomplete_coherent_set
```

Indicates if a sample is part of an incomplete coherent set.

9.24 DDS_CompressionSettings_t Struct Reference

*<<**extension**>> (p. 213)* Settings related to compressing user data.

Public Attributes

- **DDS_CompressionIdMask compression_ids**
  *<<**extension**>> (p. 213) Mask that represents the compression algorithms enabled.*
- **DDS_UnsignedLong writer_compression_level**
  *<<**extension**>> (p. 213) The level of compression to use when compressing data.*
- **DDS_Long writer_compression_threshold**
  *<<**extension**>> (p. 213) The threshold, in bytes, above which a serialized sample will be eligible to be compressed.*

9.24.1 Detailed Description

*<<**extension**>> (p. 213)* Settings related to compressing user data.

QoS:

DDS_DataRepresentationQosPolicy (p. 886)

9.24.2 Member Data Documentation

9.24.2.1 compression_ids

DDS_CompressionIdMask DDS_CompressionSettings_t::compression_ids

<<***extension***>> *(p. 213)* Mask that represents the compression algorithms enabled.

A bitmap that represents the compression algorithm IDs (**DDS_CompressionIdMask** (p. 573)) that are supported by the endpoint. The **DDSDataWriter** (p. 1589) creation will fail if more than one algorithm is provided.

If a **DDSDataWriter** (p. 1589) inherits multiple compression IDs from a **DDSTopic** (p. 1885), only the least significant bit enabled will be inherited. This forces the following order of preference: **DDS_COMPRESSION_ID_ZLIB** (p. 573), **DDS_COMPRESSION_ID_BZIP2** (p. 573), **DDS_COMPRESSION_ID_LZ4** (p. 574).

Interactions with Security and Batching: Currently, the only algorithm that is supported when compression and batching are enabled on the same **DDSDataWriter** (p. 1589) is **DDS_COMPRESSION_ID_ZLIB** (p. 573).

The combination of compression, batching, and data protection is supported. First, compression is applied to the entire batch. Then, data protection is applied to the compressed batch.

Note: When **DDS_DataWriterProtocolQosPolicy::serialize_key_with_dispose** (p. 895) is enabled and a dispose message is sent, the serialized key is not compressed.

[default] For **DDSTopic** (p. 1885), **DDSDataWriter** (p. 1589) a **DDS_CompressionIdMask** (p. 573) mask set to **DDS_COMPRESSION_ID_MASK_NONE** (p. 571)

[default] For **DDSDataReader** (p. 1556) a **DDS_CompressionIdMask** (p. 573) mask set to **DDS_COMPRESSION_ID_MASK_ALL** (p. 571).

Categories

Immutable (p. 333), **Matching** (p. 382), **Discovery Metadata** (p. 377), **Sending Large Data** (p. 290)

9.24.2.2 writer_compression_level

DDS_UnsignedLong DDS_CompressionSettings_t::writer_compression_level

<<***extension***>> *(p. 213)* The level of compression to use when compressing data.

Compression algorithms typically allow you to choose a level with which to compress the data. Each level has trade-offs between the resulting compression ratio and the speed of compression.

[range] [0, 10]

The value 1 represents the fastest compression time and the lowest compression ratio. The value 10 represents the slowest compression time but the highest compression ratio.

A value of 0 disables compression.

[default] DDS_COMPRESSION_LEVEL_BEST_COMPRESSION (p. 571)

Note

Only available for a **DDSDataWriter** (p. 1589) and **DDSTopic** (p. 1885).

Categories

Immutable (p. 333), **Sending Large Data** (p. 290)

9.24.2.3 writer_compression_threshold

```
DDS_Long DDS_CompressionSettings_t::writer_compression_threshold
```

<<***extension***>> *(p. 213)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.

Any sample with a serialized size greater than or equal to the threshold will be eligible to be compressed. All samples with an eligible serialized size will be compressed. Only if the compressed size is smaller than the serialized size will the sample be stored and sent compressed on the wire.

For batching we check the maximum serialized size of the batch, calculated as serialized_sample_max_size * **DDS_BatchQosPolicy::max_samples** (p. 811)

[range] [0, 2147483647] or **DDS_LENGTH_UNLIMITED** (p. 636)

Setting the threshold to **DDS_LENGTH_UNLIMITED** (p. 636) disables the compression.

[default] DDS_COMPRESSION_THRESHOLD_DEFAULT (p. 572) (8192)

Note

Only available for a **DDSDataWriter** (p. 1589) and **DDSTopic** (p. 1885).

Categories

Immutable (p. 333), **Sending Large Data** (p. 290)

9.25 DDS_ContentFilterProperty_t Struct Reference

<<***extension***>> *(p. 432)* Type used to provide all the required information to enable content filtering.

Public Attributes

- char * **content_filter_topic_name**

  Name of the Content-filtered Topic associated with the Reader.
- char * **related_topic_name**

  Name of the Topic related to the Content-filtered Topic.
- char * **filter_class_name**

  Identifies the filter class this filter belongs to. RTPS can support multiple filter classes (SQL, regular expressions, custom filters, etc).
- char * **filter_expression**

  The actual filter expression. Must be a valid expression for the filter class specified using filterClassName.
- struct **DDS_StringSeq expression_parameters**

  Defines the value for each parameter in the filter expression.

9.25.1 Detailed Description

<<***extension***>> *(p. 432)* Type used to provide all the required information to enable content filtering.

9.25.2 Member Data Documentation

9.25.2.1 content_filter_topic_name

- **DDS_Long initial_weak_references**

  <<***extension***>> *(p. 213) The initial number of weak references.*

9.28.1 Detailed Description

<<***extension***>> *(p. 213)* Various threads and resource limits settings used by RTI Connext to control its internal database.

RTI uses an internal in-memory "database" to store information about entities created locally as well as remote entities found during the discovery process. This database uses a background thread to garbage-collect records related to deleted entities. When the **DDSDomainParticipant** (p. 1619) that maintains this database is deleted, it shuts down this thread.

The Database QoS policy is used to configure how RTI Connext manages its database, including how often it cleans up, the priority of the database thread, and limits on resources that may be allocated by the database.

You may be interested in modifying the **DDS_DatabaseQosPolicy::shutdown_timeout** (p. 832) and **DDS_Database↩ QosPolicy::shutdown_cleanup_period** (p. 833) parameters to decrease the time it takes to delete a **DDSDomain↩ Participant** (p. 1619) when your application is shutting down.

The **DDS_DomainParticipantResourceLimitsQosPolicy** (p. 977) controls the memory allocation for elements stored in the database.

This QoS policy is an extension to the DDS standard.

Entity:

DDSDomainParticipant (p. 1619)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) **NO** (p. 556)

9.28.2 Member Data Documentation

9.28.2.1 thread

`struct` **`DDS_ThreadSettings_t`** `DDS_DatabaseQosPolicy::thread`

<<***extension***>> *(p. 213)* Database thread settings.

There is only one database thread: the clean-up thread.

[default] Priority: LOW.
The actual value depends on your architecture:

For Windows: -3
For Linux: OS default priority
For a complete list of platform specific values, please refer to `Platform Notes`.

[default] Stack Size: The actual value depends on your architecture:

For Windows: OS default stack size
For Linux: OS default stack size
For a complete list of platform specific values, please refer to `Platform Notes`.

[default] Mask: **DDS_THREAD_SETTINGS_STDIO** (p. 548)

Categories

Immutable (p. 333), **Concurrency** (p. 258)

9.28.2.2 shutdown_timeout

`struct` **`DDS_Duration_t`** `DDS_DatabaseQosPolicy::shutdown_timeout`

[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The maximum wait time during a shutdown.

The domain participant will exit after the timeout, even if the database has not been fully cleaned up.

[default] 15 seconds

[range] [0,**DDS_DURATION_INFINITE** (p. 522)]

Categories

Immutable (p. 333)

9.28.2.3 cleanup_period

`struct` **`DDS_Duration_t`** `DDS_DatabaseQosPolicy::cleanup_period`

[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The period at which the database thread wakes up to remove deleted records.

[default] 61 seconds

[range] [0,1 year]

Categories

Immutable (p. 333)

9.28.2.4 shutdown_cleanup_period

`struct` **`DDS_Duration_t`** `DDS_DatabaseQosPolicy::shutdown_cleanup_period`

[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* The clean-up period used during database shut-down.

If you would like to shorten the time taken for a DomainParticipant to shutdown, you can decrease this value.

It is recommended to set this value to something other than 0 if running in an RTOS environment, to avoid CPU starvation.

[default] 10 milliseconds

[range] [0,1 year]

Categories

Immutable (p. 333)

9.28.2.5 initial_records

```
DDS_Long DDS_DatabaseQosPolicy::initial_records
```

<<***extension***>> *(p. 213)* The initial number of total records.

[default] 1024

[range] [1,10 million]

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.28.2.6 max_skiplist_level

```
DDS_Long DDS_DatabaseQosPolicy::max_skiplist_level
```

[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The maximum level of the skiplist.

The skiplist is used to keep records in the database. Usually, the search time is log2(N), where N is the total number of records in one skiplist. However, once N exceeds 2^n, where n is the maximum skiplist level, the search time will become more and more linear. Therefore, the maximum level should be set such that 2^n is larger than the maximum(N among all skiplists). Usually, the maximum N is the maximum number of remote and local writers or readers.

[default] 7

[range] [1,31]

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.28.2.7 max_weak_references

```
DDS_Long DDS_DatabaseQosPolicy::max_weak_references
```

<<***extension***>> *(p. 213)* The maximum number of weak references.

A weak reference is an internal data structure that refers to a record within RTI Connext' internal database. This field configures the maximum number of such references that RTI Connext may create.

The actual number of weak references is permitted to grow from an initial value (indicated by **DDS_DatabaseQos↩ Policy::initial_weak_references** (p. 835)) to this maximum. To prevent RTI Connext from allocating any weak references after the system has reached a steady state, set the initial and maximum values equal to one another. To indicate that the number of weak references should continue to grow as needed indefinitely, set this field to **DDS_LENGTH↩ _UNLIMITED** (p. 636). Be aware that although a single weak reference occupies very little memory, allocating a very large number of them can have a significant impact on your overall memory usage.

Tuning this value precisely is difficult without intimate knowledge of the structure of RTI Connext' database; doing so is an advanced feature not required by most applications. The default value has been chosen to be sufficient for reasonably large systems. If you believe you may need to modify this value, please consult with RTI support personnel for assistance.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 100 million] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_weak_references

See also

DDS_DatabaseQosPolicy::initial_weak_references (p. 835)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.28.2.8 initial_weak_references

```
DDS_Long DDS_DatabaseQosPolicy::initial_weak_references
```

<<***extension***>> *(p. 213)* The initial number of weak references.

See **DDS_DatabaseQosPolicy::max_weak_references** (p. 834) for more information about what a weak reference is.

If the QoS set contains an initial_weak_references value that is too small to ever grow to **DDS_DatabaseQosPolicy↩ ::max_weak_references** (p. 834) using RTI Connext' internal algorithm, this value will be adjusted upwards as necessary. Subsequent accesses of this value will reveal the actual initial value used.

Changing the value of this field is an advanced feature; it is recommended that you consult with RTI support personnel before doing so.

[default] 2049, which is the minimum initial value imposed by RTI Connext when the maximum is unlimited. If a lower value is specified, it will simply be increased to 2049 automatically.

[range] [1, 100 million], <= max_weak_references

9.29 DDS_DataReaderCacheStatus Struct Reference

<<***extension***>> *(*p. *432)* The status of the reader's cache.

Public Attributes

- **DDS_LongLong sample_count_peak**

  The highest number of samples in the reader's queue over the lifetime of the reader.
- **DDS_LongLong sample_count**

  The number of samples in the reader's queue.
- **DDS_LongLong old_source_timestamp_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample older than the last one, using ***DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS*** *(*p. *585).*
- **DDS_LongLong tolerance_source_timestamp_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample in the future, using ***DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS*** *(*p. *585).*
- **DDS_LongLong ownership_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.
- **DDS_LongLong content_filter_dropped_sample_count**

  The number of user samples filtered by the DataReader due to Content-Filtered Topics.
- **DDS_LongLong time_based_filter_dropped_sample_count**

  The number of user samples filtered by the DataReader due to ***DDS_TimeBasedFilterQosPolicy*** *(*p. *1389).*
- **DDS_LongLong expired_dropped_sample_count**

  The number of samples expired by the DataReader due to ***DDS_LifespanQosPolicy*** *(*p. *1175) or the autopurge sample delays.*
- **DDS_LongLong virtual_duplicate_dropped_sample_count**

  The number of virtual duplicate samples dropped by the DataReader. A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.
- **DDS_LongLong replaced_dropped_sample_count**

  The number of samples replaced by the DataReader due to ***DDS_KEEP_LAST_HISTORY_QOS*** *(*p. *604) replacement.*
- **DDS_LongLong writer_removed_batch_sample_dropped_sample_count**

  The number of batch samples received by the DataReader that were marked as removed by the DataWriter.
- **DDS_LongLong total_samples_dropped_by_instance_replacement**

  The number of samples with sample state ***DDS_NOT_READ_SAMPLE_STATE*** *(*p. *162) that were dropped when removing an instance due to instance replacement. See* ***DDS_DataReaderResourceLimitsQosPolicy::instance_replacement*** *(*p. *883) for more details about when instances are replaced.*
- **DDS_LongLong alive_instance_count**

  The number of instances in the DataReader's queue with an instance state equal to ***DDS_ALIVE_INSTANCE_STATE*** *(*p. *166).*
- **DDS_LongLong alive_instance_count_peak**

  The highest value of ***DDS_DataReaderCacheStatus::alive_instance_count*** *(*p. *840) over the lifetime of the DataReader.*
- **DDS_LongLong no_writers_instance_count**

  The number of instances in the DataReader's queue with an instance state equal to ***DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE*** *(*p. *166).*
- **DDS_LongLong no_writers_instance_count_peak**

  The highest value of ***DDS_DataReaderCacheStatus::no_writers_instance_count*** *(*p. *841) over the lifetime of the DataReader.*

- **DDS_LongLong disposed_instance_count**

  *The number of instances in the DataReader's queue with an instance state equal to **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).*
- **DDS_LongLong disposed_instance_count_peak**

  *The highest value of **DDS_DataReaderCacheStatus::disposed_instance_count** (p. 841) over the lifetime of the DataReader.*
- **DDS_LongLong detached_instance_count**

  The number of minimal instance states currently being maintained in the DataReader's queue.
- **DDS_LongLong detached_instance_count_peak**

  *The highest value of **DDS_DataReaderCacheStatus::detached_instance_count** (p. 842) over the lifetime of the DataReader.*
- **DDS_LongLong compressed_sample_count**

  The number of received samples compressed by a DataWriter.

9.29.1 Detailed Description

<<***extension***>> *(p. 432)* The status of the reader's cache.

Entity:

DDSDataReader (p. 1556)

9.29.2 Member Data Documentation

9.29.2.1 sample_count_peak

```
DDS_LongLong DDS_DataReaderCacheStatus::sample_count_peak
```

The highest number of samples in the reader's queue over the lifetime of the reader.

9.29.2.2 sample_count

```
DDS_LongLong DDS_DataReaderCacheStatus::sample_count
```

The number of samples in the reader's queue.

includes samples that may not yet be available to be read or taken by the user, due to samples being received out of order or **PRESENTATION** (p. 615)

9.29.2.3 old_source_timestamp_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::old_source_timestamp_dropped_sample_count

The number of samples dropped as a result of receiving a sample older than the last one, using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585).

When the DataReader is using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585):

- If the DataReader receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped.
- If the DataReader receives a sample for an instance with a source timestamp that is equal to the last source timestamp received for the instance and the writer has a higher virtual GUID, the sample is dropped.

9.29.2.4 tolerance_source_timestamp_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::tolerance_source_timestamp_dropped_sample_count

The number of samples dropped as a result of receiving a sample in the future, using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585).

When the DataReader is using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585): the DataReader will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than the source_timestamp_tolerance. Otherwise, the sample is dropped.

9.29.2.5 ownership_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::ownership_dropped_sample_count

The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.

When using Exclusive Ownership, the DataReader receives data from multiple DataWriters. Each instance can only be owned by one DataWriter.

If other DataWriters write samples on this instance, the samples will be dropped.

9.29.2.6 content_filter_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::content_filter_dropped_sample_count

The number of user samples filtered by the DataReader due to Content-Filtered Topics.

When using a content filter on the DataReader side, if the sample received by the DataReader does not pass the filter, it will be dropped.

9.29.2.7 time_based_filter_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count

The number of user samples filtered by the DataReader due to **DDS_TimeBasedFilterQosPolicy** (p. 1389).

When using **TIME_BASED_FILTER** (p. 639) on the DataReader side, if the sample received by the DataReader does not pass the minimum_separation filter, it will be dropped.

9.29.2.8 expired_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::expired_dropped_sample_count

The number of samples expired by the DataReader due to **DDS_LifespanQosPolicy** (p. 1175) or the autopurge sample delays.

- **DDS_LifespanQosPolicy** (p. 1175)
  When a sample expires due to **DDS_LifespanQosPolicy** (p. 1175), the data is removed from the DataReader caches. This sample will be considered dropped if its **DDS_SampleStateKind** (p. 161) was **DDS_NOT_READ↩ _SAMPLE_STATE** (p. 162).
- **DDS_ReaderDataLifecycleQosPolicy::autopurge_nowriter_samples_delay** (p. 1291)
  When a sample expires due to **DDS_ReaderDataLifecycleQosPolicy::autopurge_nowriter_samples_delay** (p. 1291), this sample will be considered dropped if its **DDS_SampleStateKind** (p. 161) was **DDS_NOT_READ↩ _SAMPLE_STATE** (p. 162).
- **DDS_ReaderDataLifecycleQosPolicy::autopurge_disposed_samples_delay** (p. 1291)
  When a sample expires due to **DDS_ReaderDataLifecycleQosPolicy::autopurge_disposed_samples_delay** (p. 1291), this sample will be considered dropped if its **DDS_SampleStateKind** (p. 161) was **DDS_NOT_READ↩ _SAMPLE_STATE** (p. 162).

9.29.2.9 virtual_duplicate_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::virtual_duplicate_dropped_sample_count

The number of virtual duplicate samples dropped by the DataReader. A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.

When two DataWriters with the same logical data source publish a sample with the same sequence_number, one sample will be dropped and the other will be received by the DataReader.

This can happen when multiple writers are writing on behalf of the same original DataWriter: for example, in systems with redundant Routing Services or when a DataReader is receiving samples both directly from the original DataWriter and from an instance of Persistence Service.

9.29.2.10 replaced_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::replaced_dropped_sample_count

The number of samples replaced by the DataReader due to **DDS_KEEP_LAST_HISTORY_QOS** (p. 604) replacement.

When the number of samples for an instance in the queue reaches the **DDS_HistoryQosPolicy::depth** (p. 1164) value, a new sample for the instance will replace the oldest sample for the instance in the queue.

The new sample will be accepted and the old sample will be dropped.

This counter will only be updated if the replaced sample's **DDS_SampleStateKind** (p. 161) was **DDS_NOT_READ_↩ SAMPLE_STATE** (p. 162).

9.29.2.11 writer_removed_batch_sample_dropped_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::writer_removed_batch_sample_dropped_sample_count

The number of batch samples received by the DataReader that were marked as removed by the DataWriter.

When the DataReader receives a batch, the batch can contain samples marked as removed by the DataWriter. Examples of removed samples in a batch could be because of sample replacement due to **DDS_KEEP_LAST_HISTORY↩ _QOS** (p. 604) **DDS_HistoryQosPolicy** (p. 1162) QoS on the DataWriter or because the duration in **DDS_Lifespan↩ QosPolicy** (p. 1175) was reached. By default, any sample marked as removed from a batch is dropped (unless you set the dds.data_reader.accept_writer_removed_batch_samples property in the **DDS_PropertyQosPolicy** (p. 1260) to true). Note: Historical data with removed batch samples written before the DataReader joined the DDS domain will also be included in the count.

9.29.2.12 total_samples_dropped_by_instance_replacement

DDS_LongLong DDS_DataReaderCacheStatus::total_samples_dropped_by_instance_replacement

The number of samples with sample state **DDS_NOT_READ_SAMPLE_STATE** (p. 162) that were dropped when removing an instance due to instance replacement. See **DDS_DataReaderResourceLimitsQosPolicy::instance_↩ replacement** (p. 883) for more details about when instances are replaced.

9.29.2.13 alive_instance_count

DDS_LongLong DDS_DataReaderCacheStatus::alive_instance_count

The number of instances in the DataReader's queue with an instance state equal to **DDS_ALIVE_INSTANCE_STATE** (p. 166).

9.29.2.14 alive_instance_count_peak

DDS_LongLong DDS_DataReaderCacheStatus::alive_instance_count_peak

The highest value of **DDS_DataReaderCacheStatus::alive_instance_count** (p. 840) over the lifetime of the DataReader.

See also

DDS_DataReaderCacheStatus::alive_instance_count (p. 840)

9.29.2.15 no_writers_instance_count

DDS_LongLong DDS_DataReaderCacheStatus::no_writers_instance_count

The number of instances in the DataReader's queue with an instance state equal to **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166).

9.29.2.16 no_writers_instance_count_peak

DDS_LongLong DDS_DataReaderCacheStatus::no_writers_instance_count_peak

The highest value of **DDS_DataReaderCacheStatus::no_writers_instance_count** (p. 841) over the lifetime of the DataReader.

See also

DDS_DataReaderCacheStatus::no_writers_instance_count (p. 841)

9.29.2.17 disposed_instance_count

DDS_LongLong DDS_DataReaderCacheStatus::disposed_instance_count

The number of instances in the DataReader's queue with an instance state equal to **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).

9.29.2.18 disposed_instance_count_peak

DDS_LongLong DDS_DataReaderCacheStatus::disposed_instance_count_peak

The highest value of **DDS_DataReaderCacheStatus::disposed_instance_count** (p. 841) over the lifetime of the DataReader.

See also

DDS_DataReaderCacheStatus::disposed_instance_count (p. 841)

9.29.2.19 detached_instance_count

DDS_LongLong DDS_DataReaderCacheStatus::detached_instance_count

The number of minimal instance states currently being maintained in the DataReader's queue.

If **DDS_DataReaderResourceLimitsQosPolicy::keep_minimum_state_for_instances** (p. 881) is true, the Data↩ Reader will keep up to a maximum of **DDS_DataReaderResourceLimitsQosPolicy::max_total_instances** (p. 877) detached instances in its queue. For a more in-depth description of detached instances, refer to **DDS_DataReader↩ ResourceLimitsQosPolicy::max_total_instances** (p. 877).

9.29.2.20 detached_instance_count_peak

DDS_LongLong DDS_DataReaderCacheStatus::detached_instance_count_peak

The highest value of **DDS_DataReaderCacheStatus::detached_instance_count** (p. 842) over the lifetime of the DataReader.

See also

DDS_DataReaderCacheStatus::detached_instance_count (p. 842)

9.29.2.21 compressed_sample_count

DDS_LongLong DDS_DataReaderCacheStatus::compressed_sample_count

The number of received samples compressed by a DataWriter.

These include data, dispose, and unregister samples sent by a DataWriter.

9.30 DDS_DataReaderProtocolQosPolicy Struct Reference

<<***extension***>> *(p. 213)* Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataWriterProtocolQos↩ Policy** (p. 892), this QoS policy configures the DDS on-the-network protocol (RTPS).

Public Attributes

- struct **DDS_GUID_t virtual_guid**

  <<***extension***>> *(p. 213) The virtual GUID (Global Unique Identifier).*
- **DDS_UnsignedLong rtps_object_id**

  <<***extension***>> *(p. 213) The RTPS Object ID.*
- **DDS_Boolean expects_inline_qos**

  [DEPRECATED] *(p. **384**)* <<***extension***>> *(p. 213) Specifies whether this DataReader expects inline QoS with every sample.*
- **DDS_Boolean disable_positive_acks**

  <<***extension***>> *(p. 213) Whether the reader sends positive acknowledgements to writers.*
- **DDS_Boolean propagate_dispose_of_unregistered_instances**

  <<***extension***>> *(p. 213) Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 166) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 166) state.*
- **DDS_Boolean propagate_unregister_of_disposed_instances**

  <<***extension***>> *(p. 213) Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 166) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).*
- struct **DDS_RtpsReliableReaderProtocol_t rtps_reliable_reader**

  <<***extension***>> *(p. 213) RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1556). This parameter only has effect if the reader is configured with **DDS_RELIABLE_↩ RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).*

9.30.1 Detailed Description

<<***extension***>> *(p. 213)* Along with **DDS_WireProtocolQosPolicy** (p. 1511) and **DDS_DataWriterProtocolQos↩ Policy** (p. 892), this QoS policy configures the DDS on-the-network protocol (RTPS).

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and **DDS_DataReaderProtocolQosPolicy** (p. 843) give you control over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connext responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **DDS_ReliabilityQosPolicy** (p. 1295) for more information on the per-Data↩ Reader/DataWriter reliability configuration. **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

DDSDataReader (p. 1556)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

9.30.2 Member Data Documentation

9.30.2.1 virtual_guid

`struct` **DDS_GUID_t** `DDS_DataReaderProtocolQosPolicy::virtual_guid`

<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **DDSDataReader** (p. 1556).

The association between a **DDSDataReader** (p. 1556) and its persisted state is done using the virtual GUID.

[default] DDS_GUID_AUTO (p. 527)

Categories

Immutable (p. 333), **Discovery Metadata** (p. 377)

9.30.2.2 rtps_object_id

DDS_UnsignedLong `DDS_DataReaderProtocolQosPolicy::rtps_object_id`

<<***extension***>> *(p. 213)* The RTPS Object ID.

This value is used to determine the RTPS object ID of a data reader according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connext will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data reader.

A rtps_object_id value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connext. In those cases, the recomendation is not to use automatic object ID assigment.

[default] DDS_RTPS_AUTO_ID (p. **??**)

[range] [0,0x00ffffff]

Categories

Immutable (p. 333)

9.30.2.3 expects_inline_qos

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::expects_inline_qos
```

[DEPRECATED] (p. **384**) <<***extension***>> *(p. 213)* Specifies whether this DataReader expects inline QoS with every sample.

RTI Connext DataWriters do not match with DataReaders that set this field to **DDS_BOOLEAN_TRUE** (p. 513) (because RTI Connext DataWriters do not support sending inline QoS), but here is how the field is meant to be used:

In RTI Connext, a **DDSDataReader** (p. 1556) nominally relies on Discovery to propagate QoS on a matched **DDSDataWriter** (p. 1589).

Alternatively, a **DDSDataReader** (p. 1556) may get information on a matched **DDSDataWriter** (p. 1589) through QoS sent inline with a sample.

Asserting **DDS_DataReaderProtocolQosPolicy::expects_inline_qos** (p. 844) indicates to a matching **DDSDataWriter** (p. 1589) that this **DDSDataReader** (p. 1556) expects to receive inline QoS with every sample. The complete set of inline QoS that a **DDSDataWriter** (p. 1589) may send inline is specified by the Real-Time Publish-Subscribe (RTPS) Wire Interoperability Protocol.

Because RTI Connext **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) cache Discovery information, inline QoS are largely redundant and thus unecessary. Only for other stateless implementations whose **DDSDataReader** (p. 1556) does not cache Discovery information is inline QoS necessary.

Also note that inline QoS are additional wire-payload that consume additional bandwidth and serialization and deserialization time.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Discovery Metadata** (p. 377)

9.30.2.4 disable_positive_acks

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::disable_positive_acks
```

<<***extension***>> *(p. 213)* Whether the reader sends positive acknowledgements to writers.

If set to **DDS_BOOLEAN_TRUE** (p. 513), the reader does not send positive acknowledgments (ACKs) in response to Heartbeat messages. The reader will send negative acknowledgements (NACKs) when a Heartbeat advertises samples that it has not received.

Otherwise, if set to **DDS_BOOLEAN_FALSE** (p. 513) (the default), the reader will send ACKs to writers that expect ACKs (**DDS_DataWriterProtocolQosPolicy::disable_positive_acks** (p. 894) = **DDS_BOOLEAN_FALSE** (p. 513)) and it will not send ACKs to writers that disable ACKs (**DDS_DataWriterProtocolQosPolicy::disable_positive_acks** (p. 894) = **DDS_BOOLEAN_TRUE** (p. 513))

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Discovery Metadata** (p. 377), **Reliability** (p. 314)

9.30.2.5 propagate_dispose_of_unregistered_instances

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::propagate_dispose_of_unregistered_instances
```

<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) state without being in the **DDS_ALIVE_INSTANCE_STATE** (p. 166) state.

This field only applies to keyed readers.

When the field is set to **DDS_BOOLEAN_TRUE** (p. 513), the DataReader will receive dispose notifications even if the instance is not alive.

To guarantee the key availability through the usage of the API **FooDataReader::get_key_value** (p. 1941), this option should be used in combination with setting **DDS_DataWriterProtocolQosPolicy::serialize_key_with_dispose** (p. 895) on the DataWriter to **DDS_BOOLEAN_TRUE** (p. 513).

[default] DDS_BOOLEAN_FALSE (p. 513)

9.30.2.6 propagate_unregister_of_disposed_instances

```
DDS_Boolean DDS_DataReaderProtocolQosPolicy::propagate_unregister_of_disposed_instances
```

<<***extension***>> *(p. 213)* Indicates whether or not an instance can move to the **DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166) state directly from the **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166).

This field only applies to keyed readers.

When the field is set to **DDS_BOOLEAN_TRUE** (p. 513), the DataReader will receive unregister notifications even if the instance is not alive.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Instance Lifecycle** (p. 286)

9.30.2.7 rtps_reliable_reader

`struct` **`DDS_RtpsReliableReaderProtocol_t`** `DDS_DataReaderProtocolQosPolicy::rtps_reliable_reader`

<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **DDSDataReader** (p. 1556). This parameter only has effect if the reader is configured with **DDS_RELIABLE_↩ RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).

For details, refer to the **DDS_RtpsReliableReaderProtocol_t** (p. 1314)

[default] See **DDS_RtpsReliableReaderProtocol_t** (p. 1314)

Categories

Immutable (p. 333), **Reliability** (p. 314)

9.31 DDS_DataReaderProtocolStatus Struct Reference

<<***extension***>> *(p. 432)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.

Public Attributes

- **DDS_LongLong received_sample_count**

  The number of samples received by a DataReader.
- **DDS_LongLong received_sample_count_change**

  *The change in **DDS_DataReaderProtocolStatus::received_sample_count** (p. 849) since the last time the status was read.*
- **DDS_LongLong received_sample_bytes**

  The number of bytes received by a DataReader.

  The change in ***DDS_DataReaderProtocolStatus::sent_nack_bytes*** *(p. 854) since the last time the status was read.*

- **DDS_LongLong received_gap_count**

  The number of GAPs received from remote DataWriter to this DataReader.

- **DDS_LongLong received_gap_count_change**

  The change in ***DDS_DataReaderProtocolStatus::received_gap_count*** *(p. 854) since the last time the status was read.*

- **DDS_LongLong received_gap_bytes**

  The number of bytes of GAPs received from remote DataWriter to this DataReader.

- **DDS_LongLong received_gap_bytes_change**

  The change in ***DDS_DataReaderProtocolStatus::received_gap_bytes*** *(p. 855) since the last time the status was read.*

- **DDS_LongLong rejected_sample_count**

  The number of times a sample is rejected because it cannot be accepted by a reliable DataReader.

- **DDS_LongLong rejected_sample_count_change**

  The change in ***DDS_DataReaderProtocolStatus::rejected_sample_count*** *(p. 855) since the last time the status was read.*

- struct **DDS_SequenceNumber_t first_available_sample_sequence_number**

Sequence number of the first available sample in a matched DataWriters reliability queue.

- struct **DDS_SequenceNumber_t last_available_sample_sequence_number**

  Sequence number of the last available sample in a matched Datawriter's reliability queue.
- struct **DDS_SequenceNumber_t last_committed_sample_sequence_number**

  Sequence number of the newest sample received from the matched DataWriter committed to the DataReader's queue.
- **DDS_Long uncommitted_sample_count**

  Number of received samples that are not yet available to be read or taken, due to being received out of order.
- **DDS_LongLong out_of_range_rejected_sample_count**

  The number of samples dropped by the DataReader due to received window is full and the sample is out-of-order.
- **DDS_LongLong received_fragment_count**

  The number of DATA_FRAG messages that have been received by this DataReader.
- **DDS_LongLong dropped_fragment_count**

  The number of DATA_FRAG messages that have been dropped by a DataReader.
- **DDS_LongLong reassembled_sample_count**

  The number of fragmented samples that have been reassembled by a DataReader.
- **DDS_LongLong sent_nack_fragment_count**

  The number of NACK fragments that have been sent from a DataReader to a DataWriter.
- **DDS_LongLong sent_nack_fragment_bytes**

  The number of NACK fragment bytes that have been sent from a DataReader to a DataWriter.

9.31.1 Detailed Description

<<***extension***>> *(p. 432)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.

Entity:

DDSDataReader (p. 1556)

9.31.2 Member Data Documentation

9.31.2.1 received_sample_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_count
```

The number of samples received by a DataReader.

Depending on how the **DDS_DataReaderProtocolStatus** (p. 847) was obtained this may count samples coming from a specific DataWriter or from all the DataWriters that are matched with the DataReader.

If the **DDS_DataReaderProtocolStatus** (p. 847) is obtained using the **DDSDataReader::get_datareader_protocol_status** (p. 1573) operation then it will count samples from any DataWriter. If the DataReaderProtocolStatus is obtained using the **DDSDataReader::get_matched_publication_datareader_protocol_status** (p. 1573) then it will count the samples for the DataWriter specified as a parameter to the function.

Duplicate samples arriving from the DataWriter(s) (e.g. via multiple network paths) are detected prior to increasing this counter. The duplicate samples are counted by **DDS_DataReaderProtocolStatus::duplicate_sample_count** (p. 851).

If the DataReader has specified a ContentFilter the received samples that do not pass the filter are part of this counter. The filtered samples are counted by **DDS_DataReaderProtocolStatus::filtered_sample_count** (p. 851).

Samples rejected because they do not fit on the DataReader Queue are also part of this counter.

Note the received_sample_count counts samples received from all DataWriters and it does not necessarily match the number of samples accepted into the DataReader Queue. This is because:

- Samples can also be inserted into the DataReader Queue by lifecycle events that are locally detected like an instance becoming not alive as a result of DataWriters leaving the network.
- Samples can be filtered out due to ContentFilter or TimeFilter
- Samples can be rejected because there is no space in DataReader Queue

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

9.31.2.2 received_sample_count_change

```
DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_count_change
```

The change in **DDS_DataReaderProtocolStatus::received_sample_count** (p. 849) since the last time the status was read.

See also

DDS_DataReaderProtocolStatus::received_sample_count (p. 849)

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

9.31.2.3 received_sample_bytes

```
DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_bytes
```

The number of bytes received by a DataReader.

See also

DDS_DataReaderProtocolStatus::received_sample_count (p. 849)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

9.31.2.4 received_sample_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::received_sample_bytes_change

The change in **DDS_DataReaderProtocolStatus::received_sample_bytes** (p. 850) since the last time the status was read.

See also

DDS_DataReaderProtocolStatus::received_sample_count_change (p. 850)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

9.31.2.5 duplicate_sample_count

DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_count

The number of samples from a remote DataWriter received, not for the first time, by a local DataReader.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

9.31.2.6 duplicate_sample_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_count_change

The change in **DDS_DataReaderProtocolStatus::duplicate_sample_count** (p. 851) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

9.31.2.7 duplicate_sample_bytes

DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_bytes

The number of bytes of samples from a remote DataWriter received, not for the first time, by a local DataReader.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

9.31.2.8 duplicate_sample_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::duplicate_sample_bytes_change

The change in **DDS_DataReaderProtocolStatus::duplicate_sample_bytes** (p. 851) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

9.31.2.9 filtered_sample_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_count
```

[DEPRECATED]. See: **DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count** (p. 838) **DDS_DataReaderCacheStatus::content_filter_dropped_sample_count** (p. 838)

9.31.2.10 filtered_sample_count_change

```
DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_count_change
```

[DEPRECATED]. See: **DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count** (p. 838) **DDS_DataReaderCacheStatus::content_filter_dropped_sample_count** (p. 838)

9.31.2.11 filtered_sample_bytes

```
DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_bytes
```

[DEPRECATED]. See: **DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count** (p. 838) **DDS_DataReaderCacheStatus::content_filter_dropped_sample_count** (p. 838)

9.31.2.12 filtered_sample_bytes_change

```
DDS_LongLong DDS_DataReaderProtocolStatus::filtered_sample_bytes_change
```

[DEPRECATED]. See: **DDS_DataReaderCacheStatus::time_based_filter_dropped_sample_count** (p. 838) **DDS_DataReaderCacheStatus::content_filter_dropped_sample_count** (p. 838)

9.31.2.13 received_heartbeat_count

```
DDS_LongLong DDS_DataReaderProtocolStatus::received_heartbeat_count
```

The number of Heartbeats from a remote DataWriter received by a local DataReader.

9.31.2.14 received_heartbeat_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::received_heartbeat_count_change

The change in **DDS_DataReaderProtocolStatus::received_heartbeat_count** (p. 852) since the last time the status was read.

9.31.2.15 received_heartbeat_bytes

DDS_LongLong DDS_DataReaderProtocolStatus::received_heartbeat_bytes

The number of bytes of Heartbeats from a remote DataWriter received by a local DataReader.

9.31.2.16 received_heartbeat_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::received_heartbeat_bytes_change

The change in **DDS_DataReaderProtocolStatus::received_heartbeat_bytes** (p. 853) since the last time the status was read.

9.31.2.17 sent_ack_count

DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_count

The number of ACKs sent from a local DataReader to a matching remote DataWriter.

9.31.2.18 sent_ack_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_count_change

The change in **DDS_DataReaderProtocolStatus::sent_ack_count** (p. 853) since the last time the status was read.

9.31.2.19 sent_ack_bytes

DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_bytes

The number of bytes of ACKs sent from a local DataReader to a matching remote DataWriter.

9.31.2.20 sent_ack_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::sent_ack_bytes_change

The change in **DDS_DataReaderProtocolStatus::sent_ack_bytes** (p. 853) since the last time the status was read.

9.31.2.21 sent_nack_count

DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_count

The number of NACKs sent from a local DataReader to a matching remote DataWriter.

9.31.2.22 sent_nack_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_count_change

The change in **DDS_DataReaderProtocolStatus::sent_nack_count** (p. 854) since the last time the status was read.

9.31.2.23 sent_nack_bytes

DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_bytes

The number of bytes of NACKs sent from a local DataReader to a matching remote DataWriter.

9.31.2.24 sent_nack_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_bytes_change

The change in **DDS_DataReaderProtocolStatus::sent_nack_bytes** (p. 854) since the last time the status was read.

9.31.2.25 received_gap_count

DDS_LongLong DDS_DataReaderProtocolStatus::received_gap_count

The number of GAPs received from remote DataWriter to this DataReader.

9.31.2.26 received_gap_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::received_gap_count_change

The change in **DDS_DataReaderProtocolStatus::received_gap_count** (p. 854) since the last time the status was read.

9.31.2.27 received_gap_bytes

DDS_LongLong DDS_DataReaderProtocolStatus::received_gap_bytes

The number of bytes of GAPs received from remote DataWriter to this DataReader.

9.31.2.28 received_gap_bytes_change

DDS_LongLong DDS_DataReaderProtocolStatus::received_gap_bytes_change

The change in **DDS_DataReaderProtocolStatus::received_gap_bytes** (p. 855) since the last time the status was read.

9.31.2.29 rejected_sample_count

DDS_LongLong DDS_DataReaderProtocolStatus::rejected_sample_count

The number of times a sample is rejected because it cannot be accepted by a reliable DataReader.

Samples rejected by a reliable DataReader will be NACKed, and they will have to be resent by the DataWriter if they are still available in the DataWriter queue.

This counter will always be 0 when using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633).

9.31.2.30 rejected_sample_count_change

DDS_LongLong DDS_DataReaderProtocolStatus::rejected_sample_count_change

The change in **DDS_DataReaderProtocolStatus::rejected_sample_count** (p. 855) since the last time the status was read.

This counter will always be 0 when using **DDS_BEST_EFFORT_RELIABILITY_QOS** (p. 633).

9.31.2.31 first_available_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataReaderProtocolStatus::first_available_sample_sequence_number

Sequence number of the first available sample in a matched DataWriters reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

9.31.2.32 last_available_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataReaderProtocolStatus::last_available_sample_sequence_number

Sequence number of the last available sample in a matched Datawriter's reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

9.31.2.33 last_committed_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataReaderProtocolStatus::last_committed_sample_sequence_number

Sequence number of the newest sample received from the matched DataWriter committed to the DataReader's queue.

Applicable only when retrieving matched DataWriter statuses.

For best-effort DataReaders, this is the sequence number of the latest sample received.

For reliable DataReaders, this is the sequence number of the latest sample that is available to be read or taken from the DataReader's queue.

9.31.2.34 uncommitted_sample_count

DDS_Long DDS_DataReaderProtocolStatus::uncommitted_sample_count

Number of received samples that are not yet available to be read or taken, due to being received out of order.

Applicable only when retrieving matched DataWriter statuses.

9.31.2.35 out_of_range_rejected_sample_count

DDS_LongLong DDS_DataReaderProtocolStatus::out_of_range_rejected_sample_count

The number of samples dropped by the DataReader due to received window is full and the sample is out-of-order.

When using **DDS_RELIABLE_RELIABILITY_QOS** (p. 633); if the DataReader received samples out-of-order, they are stored internally until the missing samples are received. The number of out-of-order samples that the DataReader can keep is set by **DDS_RtpsReliableReaderProtocol_t::receive_window_size** (p. 1317). When the received window is full any out-of-order sample received will be dropped.

9.31.2.36 received_fragment_count

DDS_LongLong DDS_DataReaderProtocolStatus::received_fragment_count

The number of DATA_FRAG messages that have been received by this DataReader.

This statistic is incremented upon the receipt of each DATA_FRAG message. Fragments from duplicate samples do not count towards this statistic. Applicable only when data is fragmented.

9.31.2.37 dropped_fragment_count

DDS_LongLong DDS_DataReaderProtocolStatus::dropped_fragment_count

The number of DATA_FRAG messages that have been dropped by a DataReader.

This statistic does not include malformed fragments. Applicable only when data is fragmented.

9.31.2.38 reassembled_sample_count

DDS_LongLong DDS_DataReaderProtocolStatus::reassembled_sample_count

The number of fragmented samples that have been reassembled by a DataReader.

This statistic is incremented when all of the fragments which are required to reassemble an entire sample have been received. Applicable only when data is fragmented.

9.31.2.39 sent_nack_fragment_count

DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_fragment_count

The number of NACK fragments that have been sent from a DataReader to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

9.31.2.40 sent_nack_fragment_bytes

```
DDS_LongLong DDS_DataReaderProtocolStatus::sent_nack_fragment_bytes
```

The number of NACK fragment bytes that have been sent from a DataReader to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

9.32 DDS_DataReaderQos Struct Reference

QoS policies supported by a **DDSDataReader** (p. 1556) entity.

Public Member Functions

- bool **operator==** (const **DDS_DataReaderQos** &r) const

  Compares two DataReaderQos objects for equality.
- bool **operator!=** (const **DDS_DataReaderQos** &r) const

  Compares two DataReaderQos objects for inequality.
- **DDS_ReturnCode_t print** () const

  *Prints this **DDS_DataReaderQos** (p. 858) to stdout.*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_DataReaderQos** (p. 858).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_DataReaderQos** &base) const

  *Obtains a string representation of this **DDS_DataReaderQos** (p. 858).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

9.32.1 Detailed Description

QoS policies supported by a **DDSDataReader** (p. 1556) entity.

You must set certain members in a consistent manner:

DDS_DataReaderQos::deadline (p. 861) .period >= **DDS_DataReaderQos::time_based_filter** (p. 863) .minimum↩
_separation

DDS_DataReaderQos::history (p. 862) .depth <= **DDS_DataReaderQos::resource_limits** (p. 862) .max_samples↩
_per_instance

DDS_DataReaderQos::resource_limits (p. 862) .max_samples_per_instance <= **DDS_DataReaderQos↩
::resource_limits** (p. 862) .max_samples **DDS_DataReaderQos::resource_limits** (p. 862) .initial_samples <= **DDS↩
_DataReaderQos::resource_limits** (p. 862) .max_samples

DDS_DataReaderQos::resource_limits (p. 862) .initial_instances <= **DDS_DataReaderQos::resource_limits** (p. 862) .max_instances

DDS_DataReaderQos::reader_resource_limits (p. 864) .initial_remote_writers_per_instance <= **DDS_Data↩
ReaderQos::reader_resource_limits** (p. 864) .max_remote_writers_per_instance

DDS_DataReaderQos::reader_resource_limits (p. 864) .initial_infos <= **DDS_DataReaderQos::reader_resource↩
_limits** (p. 864) .max_infos

DDS_DataReaderQos::reader_resource_limits (p. 864) .max_remote_writers_per_instance <= **DDS_DataReader↩
Qos::reader_resource_limits** (p. 864) .max_remote_writers

DDS_DataReaderQos::reader_resource_limits (p. 864) .max_samples_per_remote_writer <= **DDS_DataReader↩
Qos::resource_limits** (p. 862) .max_samples

length of **DDS_DataReaderQos::user_data** (p. 862) .value <= **DDS_DomainParticipantQos::resource_limits** (p. 974) .reader_user_data_max_length

If any of the above are not true, **DDSDataReader::set_qos** (p. 1574) and **DDSDataReader::set_qos_with_profile** (p. 1575) will fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533) and **DDSSubscriber::create_datareader** (p. 1867) will return NULL.

9.32.2 Member Function Documentation

9.32.2.1 operator==()

```
bool DDS_DataReaderQos::operator== (
            const  DDS_DataReaderQos & r ) const  [inline]
```

Compares two DataReaderQos objects for equality.

See also

DDS_DataReaderQos_equals (p. 146)

References **DDS_DataReaderQos_equals()**.

9.32.2.2 operator"!=()

```
bool DDS_DataReaderQos::operator!= (
            const  DDS_DataReaderQos & r ) const  [inline]
```

Compares two DataReaderQos objects for inequality.

See also

DDS_DataReaderQos_equals (p. 146)

References **DDS_DataReaderQos_equals()**.

9.32.3 Member Data Documentation

9.32.3.1 durability

```
struct  DDS_DurabilityQosPolicy DDS_DataReaderQos::durability
```

Durability policy, **DURABILITY** (p. 596).

9.32.3.2 deadline

```
struct  DDS_DeadlineQosPolicy DDS_DataReaderQos::deadline
```

<<***basic***>> *(p. 201)* Deadline policy, **DEADLINE** (p. 583).

9.32.3.3 latency_budget

`struct` **DDS_LatencyBudgetQosPolicy** `DDS_DataReaderQos::latency_budget`

Latency budget policy, **LATENCY_BUDGET** (p. 605).

9.32.3.4 liveliness

`struct` **DDS_LivelinessQosPolicy** `DDS_DataReaderQos::liveliness`

Liveliness policy, **LIVELINESS** (p. 607).

9.32.3.5 reliability

`struct` **DDS_ReliabilityQosPolicy** `DDS_DataReaderQos::reliability`

Reliability policy, **RELIABILITY** (p. 631).

9.32.3.6 destination_order

`struct` **DDS_DestinationOrderQosPolicy** `DDS_DataReaderQos::destination_order`

Destination order policy, **DESTINATION_ORDER** (p. 584).

9.32.3.7 history

`struct` **DDS_HistoryQosPolicy** `DDS_DataReaderQos::history`

<<***basic***>> *(p. 201)* History policy, **HISTORY** (p. 603).

9.32.3.8 resource_limits

`struct` **DDS_ResourceLimitsQosPolicy** `DDS_DataReaderQos::resource_limits`

Resource limits policy, **RESOURCE_LIMITS** (p. 635).

9.32.3.9 user_data

`struct` **DDS_UserDataQosPolicy** DDS_DataReaderQos::user_data

User data policy, **USER_DATA** (p. 653).

9.32.3.10 ownership

`struct` **DDS_OwnershipQosPolicy** DDS_DataReaderQos::ownership

<<***basic***>> *(p. 201)* Ownership policy, **OWNERSHIP** (p. 612).

9.32.3.11 time_based_filter

`struct` **DDS_TimeBasedFilterQosPolicy** DDS_DataReaderQos::time_based_filter

<<***basic***>> *(p. 201)* Time-based filter policy, **TIME_BASED_FILTER** (p. 639)

9.32.3.12 reader_data_lifecycle

`struct` **DDS_ReaderDataLifecycleQosPolicy** DDS_DataReaderQos::reader_data_lifecycle

Reader data lifecycle policy, **READER_DATA_LIFECYCLE** (p. 630).

9.32.3.13 representation

`struct` **DDS_DataRepresentationQosPolicy** DDS_DataReaderQos::representation

Data representation policy, **DATA_REPRESENTATION** (p. 567).

9.32.3.14 type_consistency

`struct` **DDS_TypeConsistencyEnforcementQosPolicy** DDS_DataReaderQos::type_consistency

Type consistency enforcement policy, **TYPE_CONSISTENCY_ENFORCEMENT** (p. 649).

9.32.3.15 data_tags

DDS_DataTagQosPolicy DDS_DataReaderQos::data_tags

DataTag policy, **DATA_TAG** (p. 574).

9.32.3.16 reader_resource_limits

struct **DDS_DataReaderResourceLimitsQosPolicy** DDS_DataReaderQos::reader_resource_limits

<<***extension***>> *(p. 432)* **DDSDataReader** (p. 1556) resource limits policy, **DATA_READER_RESOURCE_LIMITS** (p. 564). This policy is an extension to the DDS standard.

9.32.3.17 protocol

struct **DDS_DataReaderProtocolQosPolicy** DDS_DataReaderQos::protocol

<<***extension***>> *(p. 432)* **DDSDataReader** (p. 1556) protocol policy, **DATA_READER_PROTOCOL** (p. 564)

9.32.3.18 transport_selection

struct **DDS_TransportSelectionQosPolicy** DDS_DataReaderQos::transport_selection

<<***extension***>> *(p. 432)* Transport selection policy, **TRANSPORT_SELECTION** (p. 648).

Specifies the transports available for use by the **DDSDataReader** (p. 1556).

9.32.3.19 unicast

struct **DDS_TransportUnicastQosPolicy** DDS_DataReaderQos::unicast

<<***extension***>> *(p. 432)* Unicast transport policy, **TRANSPORT_UNICAST** (p. 649).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **DDSDataWriter** (p. 1589) entities in the domain.

9.32.3.20 multicast

`struct` **DDS_TransportMulticastQosPolicy** DDS_DataReaderQos::multicast

<<***extension***>> *(p. 432)* Multicast transport policy, **TRANSPORT_MULTICAST** (p. 645).

Specifies the multicast group addresses and ports on which **messages** can be received.

The multicast addresses are used to receive messages from **DDSDataWriter** (p. 1589) entities in the domain.

9.32.3.21 property

`struct` **DDS_PropertyQosPolicy** DDS_DataReaderQos::property

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 432)* Property policy, **PROPERTY** (p. 617). See also `Property Reference Guide`.

9.32.3.22 service

`struct` **DDS_ServiceQosPolicy** DDS_DataReaderQos::service

<<***extension***>> *(p. 432)* Service policy, **SERVICE** (p. 636).

9.32.3.23 availability

`struct` **DDS_AvailabilityQosPolicy** DDS_DataReaderQos::availability

<<***extension***>> *(p. 432)* Availability policy, **AVAILABILITY** (p. 561).

9.32.3.24 subscription_name

`struct` **DDS_EntityNameQosPolicy** DDS_DataReaderQos::subscription_name

<<***extension***>> *(p. 432)* EntityName policy, **ENTITY_NAME** (p. 601).

9.32.3.25 transport_priority

```
struct DDS_TransportPriorityQosPolicy DDS_DataReaderQos::transport_priority
```

Transport priority policy, **TRANSPORT_PRIORITY** (p. 647).

9.32.3.26 type_support

```
struct DDS_TypeSupportQosPolicy DDS_DataReaderQos::type_support
```

<<***extension***>> *(p. 432)* type support data, **TYPESUPPORT** (p. 651).

Optional value that is passed to a type plugin's on_endpoint_attached and deserialization functions.

9.33 DDS_DataReaderResourceLimitsInstanceReplacementSettings Struct Reference

Instance replacement kind applied to each instance state.

Public Attributes

- **DDS_DataReaderInstanceRemovalKind alive_instance_removal**
  *Removal kind applied to alive (**DDS_ALIVE_INSTANCE_STATE** (p. 166)) instances.*
- **DDS_DataReaderInstanceRemovalKind disposed_instance_removal**
  *Removal kind applied to disposed (**DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166)) instances.*
- **DDS_DataReaderInstanceRemovalKind no_writers_instance_removal**
  *Removal kind applied to fully-unregistered (**DDS_NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 166)) instances.*

9.33.1 Detailed Description

Instance replacement kind applied to each instance state.

[default]

- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::alive_instance_removal** (p. 867) = **DDS_NO_INSTANCE_REMOVAL** (p. 566)
- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::disposed_instance_removal** (p. 867) = **DDS_EMPTY_INSTANCE_REMOVAL** (p. 566)
- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::no_writers_instance_removal** (p. 867) = **DDS_EMPTY_INSTANCE_REMOVAL** (p. 566)

  *<<**extension**>> (p. 213) The initial number of TopicQueries allocated by a **DDSDataReader** (p. 1556).*
- **DDS_Long max_topic_queries**

  *<<**extension**>> (p. 213) The maximum number of active TopicQueries that a **DDSDataReader** (p. 1556) can create.*
- struct **DDS_AllocationSettings_t shmem_ref_transfer_mode_attached_segment_allocation**

  *<<**extension**>> (p. 213) Allocation resource for the shared memory segments attached by the **DDSDataReader** (p. 1556).*
- struct **DDS_DataReaderResourceLimitsInstanceReplacementSettings instance_replacement**

  *<<**extension**>> (p. 213) Sets the kind of instances allowed to be replaced for each instance state (**DDS_Instance↩ StateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).*
- struct **DDS_Duration_t autopurge_remote_not_alive_writer_delay**

  *<<**extension**>> (p. 213) Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.*
- **DDS_Boolean lazily_allocate_batch_resources**

  *<<**extension**>> (p. 213) Determines whether the **DDSDataReader** (p. 1556) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.*

9.34.1 Detailed Description

*<<**extension**>> (p. 213)* Various settings that configure how a **DDSDataReader** (p. 1556) allocates and uses physical memory for internal resources.

DataReaders must allocate internal structures to handle the maximum number of DataWriters that may connect to it, whether or not a **DDSDataReader** (p. 1556) handles data fragmentation and how many data fragments that it may handle (for data samples larger than the MTU of the underlying network transport), how many simultaneous outstanding loans of internal memory holding data samples can be provided to user code, as well as others.

Most of these internal structures start at an initial size and, by default, will grow as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **DDSDataReader** (p. 1556). By setting the initial size to the maximum size, you will prevent RTI Connext from dynamically allocating any memory after the creation of the **DDSDataReader** (p. 1556).

This QoS policy is an extension to the DDS standard.

Entity:

DDSDataReader (p. 1556)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

9.34.2 Member Data Documentation

9.34.2.1 max_remote_writers

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers

<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read, including all instances.

[default] DDS_LENGTH_UNLIMITED (p. 636)
[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_remote_writers, >= max_remote_writers_↩ per_instance

For unkeyed types, this value has to be equal to max_remote_writers_per_instance if max_remote_writers_per_instance is not equal to **DDS_LENGTH_UNLIMITED** (p. 636).

Note: For efficiency, set max_remote_writers >= **DDS_DataReaderResourceLimitsQosPolicy::max_↩ remote_writers_per_instance** (p. 870).

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.34.2.2 max_remote_writers_per_instance

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers_per_instance

<<***extension***>> *(p. 213)* The maximum number of remote writers from which a **DDSDataReader** (p. 1556) may read a single instance.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 1024] or **DDS_LENGTH_UNLIMITED** (p. 636), <= max_remote_writers or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_remote_writers_per_instance

For unkeyed types, this value has to be equal to max_remote_writers if it is not **DDS_LENGTH_UNLIMITED** (p. 636).

Note: For efficiency, set max_remote_writers_per_instance <= **DDS_DataReaderResourceLimitsQos↩ Policy::max_remote_writers** (p. 870)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.34.2.3 max_samples_per_remote_writer

```
DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_remote_writer
```

<<***extension***>> *(p. 213)* The maximum number of out-of-order samples from a given remote **DDSDataWriter** (p. 1589) that a **DDSDataReader** (p. 1556) may store when maintaining a reliable connection to the **DDSDataWriter** (p. 1589).

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 100 million] or **DDS_LENGTH_UNLIMITED** (p. 636), <= **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.34.2.4 max_infos

```
DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_infos
```

<<***extension***>> *(p. 213)* The maximum number of info units that a **DDSDataReader** (p. 1556) can use to store **DDS_SampleInfo** (p. 1344).

When read/take is called on a DataReader, the DataReader passes a sequence of data samples and an associated sample info sequence. The sample info sequence contains additional information for each data sample.

max_infos determines the resources allocated for storing sample info. This memory is loaned to the application when passing a sample info sequence.

Note that sample info is a snapshot, generated when read/take is called.

max_infos should not be less than max_samples.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_infos

Categories

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_samples_per_read
```

<<***extension***>> *(p. 213)* The maximum number of data samples that the application can receive from the middleware in a single call to **FooDataReader::read** (p. 1919) or **FooDataReader::take** (p. 1920). If more data exists in the middleware, the application will need to issue multiple read/take calls.

When reading data using listeners, the expected number of samples available for delivery in a single `take` call is typically small: usually just one, in the case of unbatched data, or the number of samples in a single batch, in the case of batched data. (See **DDS_BatchQosPolicy** (p. 810) for more information about this feature.) When polling for data or using a **DDSWaitSet** (p. 1897), however, multiple samples (or batches) could be retrieved at once, depending on the data rate.

A larger value for this parameter makes the API simpler to use at the expense of some additional memory consumption.

[default] 1024

[range] [1,65536]

9.34.2.11 disable_fragmentation_support

```
DDS_Boolean DDS_DataReaderResourceLimitsQosPolicy::disable_fragmentation_support
```

[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Fragmentation** (p. 284), **Sending Large Data** (p. 290)

9.34.2.12 max_fragmented_samples

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_fragmented_samples

<<***extension***>> *(p. 213)* The maximum number of samples for which the **DDSDataReader** (p. 1556) may store fragments at a given point in time.

At any given time, a **DDSDataReader** (p. 1556) may store fragments for up to `max_fragmented_samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different **DDSDataWriter** (p. 1589) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **DDS_ResourceLimitsQosPolicy::max_samples** (p. 1311).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **DDS_DataReaderResourceLimitsQosPolicy::disable_fragmentation_support** (p. 874) is **DDS_↩ BOOLEAN_FALSE** (p. 513).

[default] 1024

9.34.2.16 dynamically_allocate_fragmented_samples

```
DDS_Boolean DDS_DataReaderResourceLimitsQosPolicy::dynamically_allocate_fragmented_samples
```

<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to **DDS_BOOLEAN_FALSE** (p. 513), the middleware will allocate memory upfront for storing fragments for up to **DDS_DataReaderResourceLimitsQosPolicy::initial_fragmented_samples** (p. 875) samples. This memory may grow up to **DDS_DataReaderResourceLimitsQosPolicy::max_fragmented_samples** (p. 874) if needed.

Only applies if **DDS_DataReaderResourceLimitsQosPolicy::disable_fragmentation_support** (p. 874) is **DDS_BOOLEAN_FALSE** (p. 513).

[default] DDS_BOOLEAN_TRUE (p. 513)

9.34.2.17 max_total_instances

```
DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_total_instances
```

<<***extension***>> *(p. 213)* Maximum number of instances for which a DataReader will keep state.

The maximum number of instances actively managed by a DataReader is determined by **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).

These instances have associated DataWriters or samples in the DataReader's queue and are visible to the user through operations such as **FooDataReader::take** (p. 1920), **FooDataReader::read** (p. 1919), and **FooDataReader::get_key_value** (p. 1941).

The features Durable Reader State, MultiChannel DataWriters and RTI Persistence Service require RTI Connext to keep some internal state even for instances without DataWriters or samples in the DataReader's queue. The additional state is used to filter duplicate samples that could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

The total maximum number of instances that will be managed by the middleware, including instances without associated DataWriters or samples, is determined by max_total_instances.

When a new instance is received, RTI Connext will check the resource limit **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311). If the limit is exceeded, RTI Connext will drop the sample with the reason LOST_BY_INSTANCES_LIMIT. If the limit is not exceeded, RTI Connext will check max_total_instances. If max_total_instances is exceeded, RTI Connext will replace an existing instance without DataWriters and samples with the new one. The application could receive duplicate samples for the replaced instance if it becomes alive again.

The max_total_instances limit is not used if **DDS_DataReaderResourceLimitsQosPolicy::keep_minimum_state_for_instances** (p. 881) is false, and in that case should be left at the default value.

[default] DDS_AUTO_MAX_TOTAL_INSTANCES (p. 567)

[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636) or **DDS_AUTO_MAX_TOTAL_INSTANCES** (p. 567), >= **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311)

9.34.2.19 initial_remote_virtual_writers

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::initial_remote_virtual_writers

<<***extension***>> *(p. 213)* The initial number of remote virtual writers from which a **DDSDataReader** (p. 1556) may read, including all instances.

[default] 2
[range] [1, 1 million] or **DDS_LENGTH_UNLIMITED** (p. 636), <= max_remote_virtual_writers

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297)

9.34.2.20 max_remote_virtual_writers_per_instance

DDS_Long DDS_DataReaderResourceLimitsQosPolicy::max_remote_virtual_writers_per_instance

<<***extension***>> *(p. 213)* The maximum number of virtual remote writers that can be associated with an instance.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 1024] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_remote_virtual_writers_per_instance

For unkeyed types, this value is ignored.

The features of Durable Reader State and MultiChannel DataWriters, and RTI Persistence Service require RTI Connext to keep some internal state per virtual writer and instance that is used to filter duplicate samples. These duplicate samples could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

Once an association between a remote virtual writer and an instance is established, it is permanent – it will not disappear even if the physical writer incarnating the virtual writer is destroyed.

If max_remote_virtual_writers_per_instance is exceeded for an instance, RTI Connext will not associate this instance with new virtual writers. Duplicates samples from these virtual writers will not be filtered on the reader.

If you are not using Durable Reader State, MultiChannel DataWriters or RTI Persistence Service in your system, you can set this property to 1 to optimize resources.

Categories

9.34.2.29 instance_replacement

`struct` **DDS_DataReaderResourceLimitsInstanceReplacementSettings** `DDS_DataReaderResourceLimitsQos↩ Policy::instance_replacement`

<<***extension***>> *(p. 213)* Sets the kind of instances allowed to be replaced for each instance state (**DDS_Instance↩ StateKind** (p. 165)) when a DataReader reaches **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311).

When **DDS_ResourceLimitsQosPolicy::max_instances** (p. 1311) is reached, a **DDSDataReader** (p. 1556) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kinds specified by this field.

A DataReader can choose what kinds of instances can be replaced for each **DDS_InstanceStateKind** (p. 165) separately. This means, for example, that a DataReader can choose to not allow replacing alive (**DDS_ALIVE_INSTANCE↩ _STATE** (p. 166)) instances but allow replacement of empty disposed (**DDS_NOT_ALIVE_DISPOSED_INSTANCE_↩ STATE** (p. 166)) instances.

Only instances whose states match the specified kinds are eligible to be replaced. In addition, there must be no outstanding loans on any of the samples belonging to the instance for it to be considered for replacement.

For all kinds, a **DDSDataReader** (p. 1556) will replace the least-recently-updated instance satisfying that kind. An instance is considered 'updated' when a valid sample or dispose sample is received and accepted for that instance. When using **DDS_EXCLUSIVE_OWNERSHIP_QOS** (p. 613), only samples that are received from the owner of the instance will cause the instance to be considered updated. An instance is not considered updated when an unregister sample is received because the unregister message simply indicates that there is one less writer that has updates for the instance, not that the instance itself was updated.

If no replaceable instance exists, the sample for the new instance will be considered lost with lost reason **DDS_LOST↩ _BY_INSTANCES_LIMIT** (p. 140) and the instance will not be asserted into the DataReader queue.

[default]

- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::alive_instance_removal** (p. 867) = **DDS↩ _NO_INSTANCE_REMOVAL** (p. 566)
- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::disposed_instance_removal** (p. 867) = **DDS_EMPTY_INSTANCE_REMOVAL** (p. 566)
- **DDS_DataReaderResourceLimitsInstanceReplacementSettings::no_writers_instance_removal** (p. 867) = **DDS_EMPTY_INSTANCE_REMOVAL** (p. 566)

See also

DDS_DataReaderResourceLimitsInstanceReplacementSettings (p. 866)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Instance Lifecycle** (p. 286)

9.34.2.30 autopurge_remote_not_alive_writer_delay

`struct` **`DDS_Duration_t`** `DDS_DataReaderResourceLimitsQosPolicy::autopurge_remote_not_alive_writer_delay`

<<***extension***>> *(p. 213)* Maximum duration for which the **DDSDataReader** (p. 1556) will maintain information regarding a **DDSDataWriter** (p. 1589) once the **DDSDataWriter** (p. 1589) has become not alive.

After this time elapses, the **DDSDataReader** (p. 1556) will purge all internal information regarding the not alive **DDSDataWriter** (p. 1589).

See also

DDS_LivelinessQosPolicy (p. 1180) for more information on when a **DDSDataWriter** (p. 1589) is considered not alive.

When set to **DDS_DURATION_AUTO** (p. 523), this parameter is set to 10 times the value of **DDS_DiscoveryConfigQosPolicy::participant_liveliness_lease_duration** (p. 937).

This QoS only applies when the **DDSDataReader** (p. 1556) is using **DDS_RECOVER_INSTANCE_STATE_CONSISTENCY** (p. 634) for the **DDS_ReliabilityQosPolicy::instance_state_consistency_kind** (p. 1299) QoS. When using **DDS_RECOVER_INSTANCE_STATE_CONSISTENCY** (p. 634), a **DDSDataReader** (p. 1556) keeps state about all **DDSDataWriter** (p. 1589) entities and the instances they were writing in order to be able to transition those instances back to their correct state if liveliness with the **DDSDataWriter** (p. 1589) is recovered. This can cause unbounded memory growth if that state is never purged and **DDSDataWriter** (p. 1589) entities continuously come and go in a system. This QoS avoids that unbounded memory growth by setting a time at which that state will be purged.

This QoS should be set such that it is longer than the longest period of time for which a **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) are expected to be disconnected and then reconnected in your system.

An alternative to using this QoS to purge the state is to set the **DDS_DataReaderResourceLimitsQosPolicy::max_remote_writers** (p. 870) QoS to a finite value. If that QoS is set to a finite value and the number of alive + not alive **DDSDataWriter** (p. 1589) entities reaches the limit when a new **DDSDataWriter** (p. 1589) is discovered, the oldest not alive **DDSDataWriter** (p. 1589) will be replaced.

[default] DDS_DURATION_AUTO (p. 523)

[range] $>$ 0 or **DDS_DURATION_AUTO** (p. 523)

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Instance Lifecycle** (p. 286), **Liveliness** (p. 292)

9.34.2.31 lazily_allocate_batch_resources

```
DDS_Boolean DDS_DataReaderResourceLimitsQosPolicy::lazily_allocate_batch_resources
```

<<***extension***>> *(p. 213)* Determines whether the **DDSDataReader** (p. 1556) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.

By default, the middleware does not allocate memory up front to manage the batches of samples received, but instead allocates memory from the heap upon receiving the first batch of samples.

Lazily allocating batching resources helps reduce memory consumption when batches are not used, but it may introduce some latency when receiving the first batch of samples, since memory needs to be allocated from the heap. If you know that your application will be using batches, you may set this value to **DDS_BOOLEAN_FALSE** (p. 513) if you are concerned about that latency.

<<***spec***>> *(p. 209)* This QoS policy contains a list of representation identifiers and compression settings used by **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities to negotiate which data representation and compression settings to use.

Public Attributes

- struct **DDS_DataRepresentationIdSeq value**

  <<***spec***>> *(p. 209) Sequence of representation identifiers.*
- struct **DDS_CompressionSettings_t compression_settings**

  <<***basic***>> *(p. 201)* <<***extension***>> *(p. 213) Structure that contains the compression settings.*

9.36.1 Detailed Description

<<***spec***>> *(p. 209)* This QoS policy contains a list of representation identifiers and compression settings used by **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) entities to negotiate which data representation and compression settings to use.

Entity:

DDSTopic (p. 1885), **DDSDataReader** (p. 1556), **DDSDataWriter** (p. 1589)

Status:

DDS_OFFERED_INCOMPATIBLE_QOS_STATUS (p. 540), **DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS** (p. 540)

Properties:

RxO (p. 556) = YES
Changeable (p. 556) = **UNTIL ENABLE** (p. 556)

See also

DATA_REPRESENTATION (p. 567)

This policy has request-offer semantics for both representation and compression. For representation, a **DDSDataWriter** (p. 1589) may only offer a single representation. Attempting to put multiple representations in a **DDSDataWriter** (p. 1589) will result in **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533). A **DDSDataWriter** (p. 1589) will use its offered policy to communicate with its matched **DDSDataReader** (p. 1556) entities. A **DDSDataReader** (p. 1556) requests one or more representations. If a **DDSDataWriter** (p. 1589) offers a representation that is contained within the sequence of the **DDSDataReader** (p. 1556), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When representations are specified in the **DDS_TopicQos** (p. 1397), **DDSPublisher::copy_from_topic_qos** (p. 1834) copies the first element of the sequence, and **DDSSubscriber::copy_from_topic_qos** (p. 1876) copies the whole sequence.

For Compression, only the **DDS_CompressionSettings_t::compression_ids** (p. 826) is propagated and a **DDSDataWriter** (p. 1589) may only offer a single compression id. Attempting to put multiple compression_ids in a **DDSDataWriter** (p. 1589) will result in **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533).

A **DDSDataWriter** (p. 1589) will use its offered compression algorithm to compress data that it sends to its matched **DDSDataReader** (p. 1556) entities. A **DDSDataReader** (p. 1556) requests zero or more compression algorithms. If a **DDSDataWriter** (p. 1589) offers a representation that is contained within the algorithms requested by the **DDSDataReader** (p. 1556), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When compression IDs are specified in the **DDS_TopicQos** (p. 1397), **DDSPublisher::copy_from_topic_qos** (p. 1834) copies a single compression ID (see **DDS_CompressionSettings_t::compression_ids** (p. 826)), and **DDSSubscriber::copy_from_topic_qos** (p. 1876) copies all of the compression_ids.

9.36.2 Member Data Documentation

9.36.2.1 value

`struct` **`DDS_DataRepresentationIdSeq`** `DDS_DataRepresentationQosPolicy::value`

<<***spec***>> *(p. 209)* Sequence of representation identifiers.

[default] For **DDSTopic** (p. 1885), **DDSDataWriter** (p. 1589), and **DDSDataReader** (p. 1556), a list with one element: **DDS_AUTO_DATA_REPRESENTATION** (p. 569).

Note

An empty sequence is equivalent to a list with one element: **DDS_XCDR_DATA_REPRESENTATION** (p. 568).

9.38 DDS_DataWriterCacheStatus Struct Reference

<<***extension***>> *(p. 432)* The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.

Public Attributes

- **DDS_LongLong sample_count_peak**

  *The highest value of **DDS_DataWriterCacheStatus::sample_count** (p. 890) over the lifetime of the DataWriter.*
- **DDS_LongLong sample_count**

  The number of samples in the DataWriter's queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.
- **DDS_LongLong alive_instance_count**

  *The number of instances currently in the DataWriter's queue that have an instance_state equal to **DDS_ALIVE_INSTANCE_STATE** (p. 166).*
- **DDS_LongLong alive_instance_count_peak**

  *The highest value of **DDS_DataWriterCacheStatus::alive_instance_count** (p. 891) over the lifetime of the DataWriter.*
- **DDS_LongLong disposed_instance_count**

  *The number of instances currently in the DataWriter's queue that have an instance_state equal to **DDS_NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) (due to, for example, being disposed via the **FooDataWriter::dispose** (p. 1957) operation).*
- **DDS_LongLong disposed_instance_count_peak**

  *The highest value of **DDS_DataWriterCacheStatus::disposed_instance_count** (p. 891) over the lifetime of the DataWriter.*
- **DDS_LongLong unregistered_instance_count**

  *The number of instances currently in the DataWriter's queue that the DataWriter has unregistered from via the **FooDataWriter::unregister_instance** (p. 1948) operation.*
- **DDS_LongLong unregistered_instance_count_peak**

  *The highest value of **DDS_DataWriterCacheStatus::unregistered_instance_count** (p. 891) over the lifetime of the DataWriter.*

9.38.1 Detailed Description

<<***extension***>> *(p. 432)* The status of the DataWriter's cache. Provides information on cache related metrics such as the number of samples and instances in the DataWriter queue.

Entity:

DDSDataWriter (p. 1589)

9.38.2 Member Data Documentation

9.38.2.1 sample_count_peak

```
DDS_LongLong DDS_DataWriterCacheStatus::sample_count_peak
```

The highest value of **DDS_DataWriterCacheStatus::sample_count** (p. 890) over the lifetime of the DataWriter.

9.38.2.2 sample_count

```
DDS_LongLong DDS_DataWriterCacheStatus::sample_count
```

The number of samples in the DataWriter's queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.

9.38.2.3 alive_instance_count

```
DDS_LongLong DDS_DataWriterCacheStatus::alive_instance_count
```

The number of instances currently in the DataWriter's queue that have an instance_state equal to **DDS_ALIVE_↩ INSTANCE_STATE** (p. 166).

9.38.2.4 alive_instance_count_peak

```
DDS_LongLong DDS_DataWriterCacheStatus::alive_instance_count_peak
```

The highest value of **DDS_DataWriterCacheStatus::alive_instance_count** (p. 891) over the lifetime of the DataWriter.

9.38.2.5 disposed_instance_count

```
DDS_LongLong DDS_DataWriterCacheStatus::disposed_instance_count
```

The number of instances currently in the DataWriter's queue that have an instance_state equal to **DDS_NOT_↩ ALIVE_DISPOSED_INSTANCE_STATE** (p. 166) (due to, for example, being disposed via the **FooDataWriter::dispose** (p. 1957) operation).

9.38.2.6 disposed_instance_count_peak

```
DDS_LongLong DDS_DataWriterCacheStatus::disposed_instance_count_peak

  <<***extension***>> *(p. 213) RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1589). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).*
- struct **DDS_SequenceNumber_t initial_virtual_sequence_number**

  <<***extension***>> *(p. 213) Determines, the initial virtual sequence number for this DataWriter.*

9.39.1 Detailed Description

<<***extension***>> *(p. 213)* Protocol that applies only to **DDSDataWriter** (p. 1589) instances.

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and **DDS_DataWriterProtocolQosPolicy** (p. 892) give you control over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **DDSDataWriter** (p. 1589) and **DDSDataReader** (p. 1556) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connext responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **DDS_ReliabilityQosPolicy** (p. 1295) for more information on the per-DataReader/DataWriter reliability configuration. **DDS_HistoryQosPolicy** (p. 1162) and **DDS_ResourceLimitsQosPolicy** (p. 1308) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

DDSDataWriter (p. 1589)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

9.39.2 Member Data Documentation

9.39.2.1 virtual_guid

`struct DDS_GUID_t DDS_DataWriterProtocolQosPolicy::virtual_guid`

<<***extension***>> *(p. 213)* The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **DDSDataWriter** (p. 1589).

RTI Connext uses the virtual GUID to associate a persisted writer history to a specific **DDSDataWriter** (p. 1589).

The RTI Connext Persistence Service uses the virtual GUID to send samples on behalf of the original **DDSDataWriter** (p. 1589).

[default] DDS_GUID_AUTO (p. 527)

Categories

Immutable (p. 333), **Discovery Metadata** (p. 377), **Data Availability** (p. 261)

9.39.2.2 rtps_object_id

```
DDS_UnsignedLong DDS_DataWriterProtocolQosPolicy::rtps_object_id
```

<<***extension***>> *(p. 213)* The RTPS Object ID.

This value is used to determine the RTPS object ID of a data writer according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connext will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data writer.

A rtps_object_id value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connext. In those cases, the recomendation is not to use automatic object ID assigment.

[default] DDS_RTPS_AUTO_ID (p. **??**)

[range] [0,0x00ffffff]

Categories

Immutable (p. 333)

9.39.2.3 push_on_write

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::push_on_write
```

<<***extension***>> *(p. 213)* Whether to push sample out when write is called.

If set to **DDS_BOOLEAN_TRUE** (p. 513) (the default), the writer will send a sample every time write is called. Otherwise, the sample is put into the queue waiting for a NACK from remote reader(s) to be sent out.

[default] DDS_BOOLEAN_TRUE (p. 513)

Categories

Immutable (p. 333), **Reliability** (p. 314), **Data Availability** (p. 261)

9.39.2.4 disable_positive_acks

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::disable_positive_acks
```

<<***extension***>> *(p. 213)* Controls whether or not the writer expects positive acknowledgements from matching readers.

If set to **DDS_BOOLEAN_TRUE** (p. 513), the writer does not expect readers to send send positive acknowledgments to the writer. Consequently, instead of keeping a sample queued until all readers have positively acknowledged it, the writer will keep a sample for at least **DDS_RtpsReliableWriterProtocol_t::disable_positive_acks_min_sample_keep_duration** (p. 1330), after which the sample is logically considered as positively acknowledged.

If set to **DDS_BOOLEAN_FALSE** (p. 513) (the default), the writer expects to receive positive acknowledgements from its acknowledging readers (**DDS_DataReaderProtocolQosPolicy::disable_positive_acks** (p. 845) = **DDS_BOOLEAN_FALSE** (p. 513)) and it applies the keep-duration to its non-acknowledging readers (**DDS_DataReaderProtocolQosPolicy::disable_positive_acks** (p. 845) = **DDS_BOOLEAN_TRUE** (p. 513)).

A writer with both acknowledging and non-acknowledging readers keeps a sample queued until acknowledgements have been received from all acknowledging readers and the keep-duration has elapsed for non-acknowledging readers.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Discovery Metadata** (p. 377), **Reliability** (p. 314)

9.39.2.5 disable_inline_keyhash

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::disable_inline_keyhash
```

<<***extension***>> *(p. 213)* Controls whether or not a keyhash is propagated on the wire with each sample.

This field only applies to keyed writers.

With each key, RTI Connext associates an internal 16-byte representation, called a keyhash.

When this field is **DDS_BOOLEAN_FALSE** (p. 513), the keyhash is sent on the wire with every data instance.

When this field is **DDS_BOOLEAN_TRUE** (p. 513), the keyhash is not sent on the wire and the readers must compute the value using the received data.

If the *reader* is CPU bound, sending the keyhash on the wire may increase performance, because the reader does not have to get the keyhash from the data.

If the *writer* is CPU bound, sending the keyhash on the wire may decrease performance, because it requires more bandwidth (16 more bytes per sample).

Note: Setting disable_inline_keyhash to **DDS_BOOLEAN_TRUE** (p. 513) is not compatible with using RTI Real-Time Connect or RTI Recorder.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Instance Lifecycle** (p. 286)

9.39.2.6 serialize_key_with_dispose

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::serialize_key_with_dispose
```

<<***extension***>> *(p. 213)* Controls whether or not the serialized key is propagated on the wire with dispose samples.

This field only applies to keyed writers.

We recommend setting this field to **DDS_BOOLEAN_TRUE** (p. 513) if there are DataReaders where **DDS_Data↩ ReaderProtocolQosPolicy::propagate_dispose_of_unregistered_instances** (p. 845) is also **DDS_BOOLEAN_↩ TRUE** (p. 513).

When setting serialize_key_with_dispose to FALSE, only a key hash is included in the dispose meta-sample sent by a DataWriter for a dispose action. If a dispose meta-sample only includes the key hash, then DataReaders must have previously received an actual data sample for the instance being disposed, in order for a DataReader to map a key hash/instance handle to actual key values.

If an actual data sample was never received for an instance and serialize_key_with_dispose is set to FALSE, then the DataReader application will not be able to determine the value of the key that was disposed, since **FooDataReader↩ ::get_key_value** (p. 1941) will not be able to map an instance handle to actual key values.

By setting serialize_key_with_dispose to TRUE, the values of the key members of a data type will be sent in the dispose meta-sample for a dispose action by the DataWriter. This allows the DataReader to map an instance handle to the values of the key members even when receiving a dispose meta-sample without previously having received a data sample for the instance.

Important: When this field is **DDS_BOOLEAN_TRUE** (p. 513), batching will not be compatible with RTI Connext 4.3e, 4.4b, or 4.4c. The **DDSDataReader** (p. 1556) entities will receive incorrect data and/or encounter deserialization errors.

[default] DDS_BOOLEAN_FALSE (p. 513)

Categories

Immutable (p. 333), **Instance Lifecycle** (p. 286)

9.39.2.7 propagate_app_ack_with_no_response

```
DDS_Boolean DDS_DataWriterProtocolQosPolicy::propagate_app_ack_with_no_response
```

<<***extension***>> *(p. 213)* Controls whether or not a **DDSDataWriter** (p. 1589) receives **DDSDataWriterListener↩ ::on_application_acknowledgment** (p. 1617) notifications with an empty or invalid response.

When this field is set to **DDS_BOOLEAN_FALSE** (p. 513), the callback **DDSDataWriterListener::on_application_↩ acknowledgment** (p. 1617) will not be invoked if the sample being acknowledged has an empty or invalid response.

[default] DDS_BOOLEAN_TRUE (p. 513)

Categories

Immutable (p. 333), **Reliability** (p. 314), **Application Acknowledgement** (p. 253), **Durability** (p. 278)

9.39.2.8 rtps_reliable_writer

```
struct DDS_RtpsReliableWriterProtocol_t DDS_DataWriterProtocolQosPolicy::rtps_reliable_writer
```

<<***extension***>> *(p. 213)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **DDSDataWriter** (p. 1589). This parameter only has effect if both the writer and the matching reader are configured with **DDS_RELIABLE_RELIABILITY_QOS** (p. 633) **DDS_ReliabilityQosPolicyKind** (p. 632).

For details, refer to the **DDS_RtpsReliableWriterProtocol_t** (p. 1320)

[default] [default] See **DDS_RtpsReliableWriterProtocol_t** (p. 1320)

Categories

Immutable (p. 333), **Reliability** (p. 314)

9.39.2.9 initial_virtual_sequence_number

```
struct DDS_SequenceNumber_t DDS_DataWriterProtocolQosPolicy::initial_virtual_sequence_number
```

<<***extension***>> *(p. 213)* Determines, the initial virtual sequence number for this DataWriter.

By default, the virtual sequence number of the first sample published by a DataWriter will be 1 for DataWriters that do not use durable writer history. For durable writers, the default virtual sequence number will be the last sequence number they published in a previous execution, plus one. So, when a non-durable DataWriter is restarted and must continue communicating with the same DataReaders, its samples start over with sequence number 1. Durable DataWriters start over where the last sequence number left off, plus one.

This QoS setting allows overwriting the default initial virtual sequence number.

Normally, this parameter is not expected to be modified; however, in some scenarios when continuing communication after restarting, applications may require the DataWriter's virtual sequence number to start at something other than the value described above. An example would be to enable non-durable DataWriters to start at the last sequence number published, plus one, similar to the durable DataWriter. This property enables you to make such a configuration, if desired.

The virtual sequence number can be overwritten as well on a per sample basis by updating **DDS_WriteParams_t**↩ **::identity** (p. 1520) in the **FooDataWriter::write_w_params** (p. 1956).

[default] DDS_AUTO_SEQUENCE_NUMBER (p. 529)

Categories

Immutable (p. 333)

9.40 DDS_DataWriterProtocolStatus Struct Reference

<<***extension***>> *(p. 432)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

Public Attributes

- **DDS_LongLong pushed_sample_count**

  The number of user samples pushed on write from a local DataWriter to a matching remote DataReader.
- **DDS_LongLong pushed_sample_count_change**

  *The change in **DDS_DataWriterProtocolStatus::pushed_sample_count** (p. 900) since the last time the status was read.*
- **DDS_LongLong pushed_sample_bytes**

  *The change in **DDS_DataWriterProtocolStatus::pulled_sample_bytes** (p. 903) since the last time the status was read.*
- **DDS_LongLong received_ack_count**

  The number of ACKs from a remote DataReader received by a local DataWriter.
- **DDS_LongLong received_ack_count_change**

  *The change in **DDS_DataWriterProtocolStatus::received_ack_count** (p. 903) since the last time the status was read.*
- **DDS_LongLong received_ack_bytes**

  The number of bytes of ACKs from a remote DataReader received by a local DataWriter.
- **DDS_LongLong received_ack_bytes_change**

  *The change in **DDS_DataWriterProtocolStatus::received_ack_bytes** (p. 903) since the last time the status was read.*
- **DDS_LongLong received_nack_count**

  The number of NACKs from a remote DataReader received by a local DataWriter.
- **DDS_LongLong received_nack_count_change**

*The change in **DDS_DataWriterProtocolStatus::received_nack_count** (p. 904) since the last time the status was read.*

- **DDS_LongLong received_nack_bytes**

  The number of bytes of NACKs from a remote DataReader received by a local DataWriter.
- **DDS_LongLong received_nack_bytes_change**

  *The change in **DDS_DataWriterProtocolStatus::received_nack_bytes** (p. 904) since the last time the status was read.*
- **DDS_LongLong sent_gap_count**

  The number of GAPs sent from local DataWriter to matching remote DataReaders.
- **DDS_LongLong sent_gap_count_change**

  *The change in **DDS_DataWriterProtocolStatus::sent_gap_count** (p. 904) since the last time the status was read.*
- **DDS_LongLong sent_gap_bytes**

  The number of bytes of GAPs sent from local DataWriter to matching remote DataReaders.
- **DDS_LongLong sent_gap_bytes_change**

  *The change in **DDS_DataWriterProtocolStatus::sent_gap_bytes** (p. 905) since the last time the status was read.*
- **DDS_LongLong rejected_sample_count**

  [Not supported.]
- **DDS_LongLong rejected_sample_count_change**

  [Not supported.]
- **DDS_Long send_window_size**

  Current maximum number of outstanding samples allowed in the DataWriter's queue.
- struct **DDS_SequenceNumber_t first_available_sample_sequence_number**

  The sequence number of the first available sample currently queued in the local DataWriter.
- struct **DDS_SequenceNumber_t last_available_sample_sequence_number**

  The sequence number of the last available sample currently queued in the local DataWriter.
- struct **DDS_SequenceNumber_t first_unacknowledged_sample_sequence_number**

  The sequence number of the first unacknowledged sample currently queued in the local DataWriter.
- struct **DDS_SequenceNumber_t first_available_sample_virtual_sequence_number**

  The virtual sequence number of the first available sample currently queued in the local DataWriter.
- struct **DDS_SequenceNumber_t last_available_sample_virtual_sequence_number**

  The virtual sequence number of the last available sample currently queued in the local DataWriter.
- struct **DDS_SequenceNumber_t first_unacknowledged_sample_virtual_sequence_number**

  The virtual sequence number of the first unacknowledged sample currently queued in the local DataWriter.
- **DDS_InstanceHandle_t first_unacknowledged_sample_subscription_handle**

  The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local DataWriter.
- struct **DDS_SequenceNumber_t first_unelapsed_keep_duration_sample_sequence_number**

  The sequence number of the first sample whose keep duration has not yet elapsed.
- **DDS_LongLong pushed_fragment_count**

  The number of DATA_FRAG messages that have been pushed by this DataWriter.
- **DDS_LongLong pushed_fragment_bytes**

  The number of bytes of DATA_FRAG messages that have been pushed by this DataWriter.
- **DDS_LongLong pulled_fragment_count**

  The number of DATA_FRAG messages that have been pulled from this DataWriter.
- **DDS_LongLong pulled_fragment_bytes**

  The number of bytes of DATA_FRAG messages that have been pulled from this DataWriter.
- **DDS_LongLong received_nack_fragment_count**

  The number of NACK_FRAG messages that have been received by this DataWriter.
- **DDS_LongLong received_nack_fragment_bytes**

  The number of bytes of NACK_FRAG messages that have been received by this DataWriter.

9.40.1 Detailed Description

<<***extension***>> *(p. 432)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

Entity:

DDSDataWriter (p. 1589)

9.40.2 Member Data Documentation

9.40.2.1 pushed_sample_count

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_count

The number of user samples pushed on write from a local DataWriter to a matching remote DataReader.

Counts protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing. The count is the number of sends done internally, and it may be greater than the number of user writes.

For large data, counts whole samples, not fragments. The fragment count is tracked in the **DDS_DataWriterProtocol↩ Status::pushed_fragment_count** (p. 907) statistic.

9.40.2.2 pushed_sample_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_count_change

The change in **DDS_DataWriterProtocolStatus::pushed_sample_count** (p. 900) since the last time the status was read.

Counts protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing.

For large data, counts whole samples, not fragments.

9.40.2.3 pushed_sample_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_bytes

The number of bytes of user samples pushed on write from a local DataWriter to a matching remote DataReader.

Counts bytes of protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing. The count of bytes corresponds to the number of sends done internally, and it may be greater than the number of user writes.

When data fragmentation is used, this statistic is incremented as fragments are written.

9.40.2.4 pushed_sample_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_sample_bytes_change

The change in **DDS_DataWriterProtocolStatus::pushed_sample_bytes** (p. 900) since the last time the status was read.

Counts bytes of protocol (RTPS) messages pushed by a DataWriter when writing, unregistering, and disposing.

When data fragmentation is used, this statistic is incremented as fragments are written.

9.40.2.5 filtered_sample_count

DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_count

[Not supported.] The number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics.

9.40.2.6 filtered_sample_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_count_change

[Not supported.] The incremental change in the number of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.

9.40.2.7 filtered_sample_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_bytes

[Not supported.] The number of bytes of user samples preemptively filtered by a local DataWriter due to Content-↩ Filtered Topics.

9.40.2.8 filtered_sample_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::filtered_sample_bytes_change

[Not supported.] The incremental change in the number of bytes of user samples preemptively filtered by a local DataWriter due to Content-Filtered Topics since the last time the status was read.

9.40.2.9 sent_heartbeat_count

DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_count

The number of Heartbeats sent between a local DataWriter and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

9.40.2.10 sent_heartbeat_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_count_change

The change in **DDS_DataWriterProtocolStatus::sent_heartbeat_count** (p. 901) since the last time the status was read.

9.40.2.11 sent_heartbeat_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_bytes

The number of bytes of Heartbeats sent between a local DataWriter and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

9.40.2.12 sent_heartbeat_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::sent_heartbeat_bytes_change

The change in **DDS_DataWriterProtocolStatus::sent_heartbeat_bytes** (p. 902) since the last time the status was read.

9.40.2.13 pulled_sample_count

DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_count

The number of user samples pulled from local DataWriter by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) is **DDS_BOOLEAN_FALSE** (p. 513).

When data fragmentation is used, this statistic is incremented as fragments are written.

9.40.2.14 pulled_sample_count_change

```
DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_count_change
```

The change in **DDS_DataWriterProtocolStatus::pulled_sample_count** (p. 902) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) is **DDS_BOOLEAN_FALSE** (p. 513).

For large data, counts whole samples, not fragments.

9.40.2.15 pulled_sample_bytes

```
DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_bytes
```

The number of bytes of user samples pulled from local DataWriter by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) is **DDS_BOOLEAN_FALSE** (p. 513).

When data fragmentation is used, this statistic is incremented as fragments are written.

9.40.2.16 pulled_sample_bytes_change

```
DDS_LongLong DDS_DataWriterProtocolStatus::pulled_sample_bytes_change
```

The change in **DDS_DataWriterProtocolStatus::pulled_sample_bytes** (p. 903) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local DataWriter when **DDS_DataWriterProtocolQosPolicy::push_on_write** (p. 894) is **DDS_BOOLEAN_FALSE** (p. 513).

For large data, counts bytes of whole samples, not fragments.

9.40.2.17 received_ack_count

```
DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_count
```

The number of ACKs from a remote DataReader received by a local DataWriter.

9.40.2.18 received_ack_count_change

```
DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_count_change
```

The change in **DDS_DataWriterProtocolStatus::received_ack_count** (p. 903) since the last time the status was read.

9.40.2.19 received_ack_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_bytes

The number of bytes of ACKs from a remote DataReader received by a local DataWriter.

9.40.2.20 received_ack_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::received_ack_bytes_change

The change in **DDS_DataWriterProtocolStatus::received_ack_bytes** (p. 903) since the last time the status was read.

9.40.2.21 received_nack_count

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_count

The number of NACKs from a remote DataReader received by a local DataWriter.

9.40.2.22 received_nack_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_count_change

The change in **DDS_DataWriterProtocolStatus::received_nack_count** (p. 904) since the last time the status was read.

9.40.2.23 received_nack_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_bytes

The number of bytes of NACKs from a remote DataReader received by a local DataWriter.

9.40.2.24 received_nack_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_bytes_change

The change in **DDS_DataWriterProtocolStatus::received_nack_bytes** (p. 904) since the last time the status was read.

9.40.2.25 sent_gap_count

DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_count

The number of GAPs sent from local DataWriter to matching remote DataReaders.

9.40.2.26 sent_gap_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_count_change

The change in **DDS_DataWriterProtocolStatus::sent_gap_count** (p. 904) since the last time the status was read.

9.40.2.27 sent_gap_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_bytes

The number of bytes of GAPs sent from local DataWriter to matching remote DataReaders.

9.40.2.28 sent_gap_bytes_change

DDS_LongLong DDS_DataWriterProtocolStatus::sent_gap_bytes_change

The change in **DDS_DataWriterProtocolStatus::sent_gap_bytes** (p. 905) since the last time the status was read.

9.40.2.29 rejected_sample_count

DDS_LongLong DDS_DataWriterProtocolStatus::rejected_sample_count

[Not supported.]

9.40.2.30 rejected_sample_count_change

DDS_LongLong DDS_DataWriterProtocolStatus::rejected_sample_count_change

[Not supported.]

9.40.2.31 send_window_size

DDS_Long DDS_DataWriterProtocolStatus::send_window_size

Current maximum number of outstanding samples allowed in the DataWriter's queue.

Spans the range from **DDS_RtpsReliableWriterProtocol_t::min_send_window_size** (p. 1333) to **DDS_Rtps↩ ReliableWriterProtocol_t::max_send_window_size** (p. 1333).

9.40.2.32 first_available_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::first_available_sample_sequence_number

The sequence number of the first available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.33 last_available_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::last_available_sample_sequence_number

The sequence number of the last available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.34 first_unacknowledged_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::first_unacknowledged_sample_sequence_↩ number

The sequence number of the first unacknowledged sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.35 first_available_sample_virtual_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::first_available_sample_virtual_sequence↩ _number

The virtual sequence number of the first available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.36 last_available_sample_virtual_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::last_available_sample_virtual_sequence_number

The virtual sequence number of the last available sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.37 first_unacknowledged_sample_virtual_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::first_unacknowledged_sample_virtual_sequence_number

The virtual sequence number of the first unacknowledged sample currently queued in the local DataWriter.

Applies only for local DataWriter status.

9.40.2.38 first_unacknowledged_sample_subscription_handle

DDS_InstanceHandle_t DDS_DataWriterProtocolStatus::first_unacknowledged_sample_subscription_handle

The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local DataWriter.

Applies only for local DataWriter status.

9.40.2.39 first_unelapsed_keep_duration_sample_sequence_number

struct **DDS_SequenceNumber_t** DDS_DataWriterProtocolStatus::first_unelapsed_keep_duration_sample_sequence_number

The sequence number of the first sample whose keep duration has not yet elapsed.

Applicable only when **DDS_DataWriterProtocolQosPolicy::disable_positive_acks** (p. 894) is set.

Sequence number of the first sample kept in the DataWriter's queue whose keep_duration (applied when **DDS_DataWriterProtocolQosPolicy::disable_positive_acks** (p. 894) is set) has not yet elapsed.

Applies only for local DataWriter status.

9.40.2.40 pushed_fragment_count

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_fragment_count

The number of DATA_FRAG messages that have been pushed by this DataWriter.

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

9.40.2.41 pushed_fragment_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::pushed_fragment_bytes

The number of bytes of DATA_FRAG messages that have been pushed by this DataWriter.

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

9.40.2.42 pulled_fragment_count

DDS_LongLong DDS_DataWriterProtocolStatus::pulled_fragment_count

The number of DATA_FRAG messages that have been pulled from this DataWriter.

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

9.40.2.43 pulled_fragment_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::pulled_fragment_bytes

The number of bytes of DATA_FRAG messages that have been pulled from this DataWriter.

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

9.40.2.44 received_nack_fragment_count

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_fragment_count

The number of NACK_FRAG messages that have been received by this DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

9.40.2.45 received_nack_fragment_bytes

DDS_LongLong DDS_DataWriterProtocolStatus::received_nack_fragment_bytes

The number of bytes of NACK_FRAG messages that have been received by this DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

9.41 DDS_DataWriterQos Struct Reference

QoS policies supported by a **DDSDataWriter** (p. 1589) entity.

Public Member Functions

- bool **operator==** (const **DDS_DataWriterQos** &r) const

  Compares two DataWriterQos objects for equality.
- bool **operator!=** (const **DDS_DataWriterQos** &r) const

  Compares two DataWriterQos objects for inequality.
- **DDS_ReturnCode_t print** () const

  *Prints this **DDS_DataWriterQos** (p. 909) to stdout.*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_DataWriterQos** &base) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_DataWriterQos** &base, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*
- **DDS_ReturnCode_t to_string** (char *string, **DDS_UnsignedLong** &string_size, const **DDS_QosPrintAll_t** &, const **DDS_QosPrintFormat** &format) const

  *Obtains a string representation of this **DDS_DataWriterQos** (p. 909).*

9.41.1 Detailed Description

QoS policies supported by a **DDSDataWriter** (p. 1589) entity.

You must set certain members in a consistent manner:

- **DDS_DataWriterQos::history** (p. 913) .depth <= **DDS_DataWriterQos::resource_limits** (p. 913) .max_samples_per_instance
- **DDS_DataWriterQos::resource_limits** (p. 913) .max_samples_per_instance <= **DDS_DataWriterQos::resource_limits** (p. 913) .max_samples
- **DDS_DataWriterQos::resource_limits** (p. 913) .initial_samples <= **DDS_DataWriterQos::resource_limits** (p. 913) .max_samples
- **DDS_DataWriterQos::resource_limits** (p. 913) .initial_instances <= **DDS_DataWriterQos::resource_limits** (p. 913) .max_instances
- length of **DDS_DataWriterQos::user_data** (p. 914) .value <= **DDS_DomainParticipantQos::resource_limits** (p. 974) .writer_user_data_max_length

If any of the above are not true, **DDSDataWriter::set_qos** (p. 1604) and **DDSDataWriter::set_qos_with_profile** (p. 1605) and **DDSPublisher::set_default_datawriter_qos** (p. 1822) and **DDSPublisher::set_default_datawriter_qos_with_profile** (p. 1823) will fail with **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533) and **DDSPublisher::create_datawriter** (p. 1826) and **DDSPublisher::create_datawriter_with_profile** (p. 1827) and will return NULL.

Entity:

DDSDataWriter (p. 1589)

All QoS Policies (p. 549) allowed ranges within each Qos.

9.41.2 Member Function Documentation

9.41.2.1 operator==()

```
bool DDS_DataWriterQos::operator== (
            const  DDS_DataWriterQos & r ) const  [inline]
```

Compares two DataWriterQos objects for equality.

See also

DDS_DataWriterQos_equals (p. 117)

References **DDS_DataWriterQos_equals()**.

9.41.2.2 operator"!=()

```
bool DDS_DataWriterQos::operator!= (
            const  DDS_DataWriterQos & r ) const  [inline]
```

Compares two DataWriterQos objects for inequality.

See also

DDS_DataWriterQos_equals (p. 117)

References **DDS_DataWriterQos_equals()**.

9.41.3 Member Data Documentation

9.41.3.1 durability

```
struct  DDS_DurabilityQosPolicy DDS_DataWriterQos::durability
```

Durability policy, **DURABILITY** (p. 596).

9.41.3.2 durability_service

```
struct  DDS_DurabilityServiceQosPolicy DDS_DataWriterQos::durability_service
```

DurabilityService policy, **DURABILITY_SERVICE** (p. 600).

9.41.3.3 deadline

```
struct  DDS_DeadlineQosPolicy DDS_DataWriterQos::deadline
```

<<***basic***>> *(p. 201)* Deadline policy, **DEADLINE** (p. 583).

9.41.3.4 latency_budget

`struct` **DDS_LatencyBudgetQosPolicy** `DDS_DataWriterQos::latency_budget`

Latency budget policy, **LATENCY_BUDGET** (p. 605).

9.41.3.5 liveliness

`struct` **DDS_LivelinessQosPolicy** `DDS_DataWriterQos::liveliness`

Liveliness policy, **LIVELINESS** (p. 607).

9.41.3.6 reliability

`struct` **DDS_ReliabilityQosPolicy** `DDS_DataWriterQos::reliability`

Reliability policy, **RELIABILITY** (p. 631).

9.41.3.7 destination_order

`struct` **DDS_DestinationOrderQosPolicy** `DDS_DataWriterQos::destination_order`

Destination order policy, **DESTINATION_ORDER** (p. 584).

9.41.3.8 history

`struct` **DDS_HistoryQosPolicy** `DDS_DataWriterQos::history`

<<***basic***>> *(p. 201)* History policy, **HISTORY** (p. 603).

9.41.3.9 resource_limits

`struct` **DDS_ResourceLimitsQosPolicy** `DDS_DataWriterQos::resource_limits`

Resource limits policy, **RESOURCE_LIMITS** (p. 635).

9.41.3.10 transport_priority

`struct` **DDS_TransportPriorityQosPolicy** DDS_DataWriterQos::transport_priority

Transport priority policy, **TRANSPORT_PRIORITY** (p. 647).

9.41.3.11 lifespan

`struct` **DDS_LifespanQosPolicy** DDS_DataWriterQos::lifespan

<<***basic***>> *(p. 201)* Lifespan policy, **LIFESPAN** (p. 606).

9.41.3.12 user_data

`struct` **DDS_UserDataQosPolicy** DDS_DataWriterQos::user_data

User data policy, **USER_DATA** (p. 653).

9.41.3.13 ownership

`struct` **DDS_OwnershipQosPolicy** DDS_DataWriterQos::ownership

<<***basic***>> *(p. 201)* Ownership policy, **OWNERSHIP** (p. 612).

9.41.3.14 ownership_strength

`struct` **DDS_OwnershipStrengthQosPolicy** DDS_DataWriterQos::ownership_strength

<<***basic***>> *(p. 201)* Ownership strength policy, **OWNERSHIP_STRENGTH** (p. 613).

9.41.3.15 writer_data_lifecycle

`struct` **DDS_WriterDataLifecycleQosPolicy** DDS_DataWriterQos::writer_data_lifecycle

Writer data lifecycle policy, **WRITER_DATA_LIFECYCLE** (p. 654).

9.41.3.16 representation

`struct` **DDS_DataRepresentationQosPolicy** DDS_DataWriterQos::representation

Data representation policy, **DATA_REPRESENTATION** (p. 567).

9.41.3.17 data_tags

DDS_DataTagQosPolicy DDS_DataWriterQos::data_tags

DataTag policy, **DATA_TAG** (p. 574).

9.41.3.18 writer_resource_limits

`struct` **DDS_DataWriterResourceLimitsQosPolicy** DDS_DataWriterQos::writer_resource_limits

<<***extension***>> *(p. 432)* Writer resource limits policy, **DATA_WRITER_RESOURCE_LIMITS** (p. 580).

9.41.3.19 protocol

`struct` **DDS_DataWriterProtocolQosPolicy** DDS_DataWriterQos::protocol

<<***extension***>> *(p. 432)* **DDSDataWriter** (p. 1589) protocol policy, **DATA_WRITER_PROTOCOL** (p. 579)

9.41.3.20 transport_selection

`struct` **DDS_TransportSelectionQosPolicy** DDS_DataWriterQos::transport_selection

<<***extension***>> *(p. 432)* Transport plugin selection policy, **TRANSPORT_SELECTION** (p. 648).

Specifies the transports available for use by the **DDSDataWriter** (p. 1589).

9.41.3.21 unicast

`struct` **DDS_TransportUnicastQosPolicy** DDS_DataWriterQos::unicast

<<***extension***>> *(p. 432)* Unicast transport policy, **TRANSPORT_UNICAST** (p. 649).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **DDSDataReader** (p. 1556) entities in the domain.

9.41.3.22 publish_mode

`struct` **DDS_PublishModeQosPolicy** DDS_DataWriterQos::publish_mode

<<***extension***>> *(p. 432)* Publish mode policy, **PUBLISH_MODE** (p. 627).

Determines whether the **DDSDataWriter** (p. 1589) publishes data synchronously or asynchronously and how.

9.41.3.23 property

`struct` **DDS_PropertyQosPolicy** DDS_DataWriterQos::property

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 432)* Property policy, **PROPERTY** (p. 617). See also `Property Reference Guide`.

9.41.3.24 service

`struct` **DDS_ServiceQosPolicy** DDS_DataWriterQos::service

<<***extension***>> *(p. 432)* Service policy, **SERVICE** (p. 636).

9.41.3.25 batch

`struct` **DDS_BatchQosPolicy** DDS_DataWriterQos::batch

<<***extension***>> *(p. 432)* Batch policy, **BATCH** (p. 562).

9.41.3.26 multi_channel

`struct` **DDS_MultiChannelQosPolicy** DDS_DataWriterQos::multi_channel

<<***extension***>> *(p. 432)* Multi channel policy, **MULTICHANNEL** (p. 611).

9.41.3.27 availability

`struct` **DDS_AvailabilityQosPolicy** DDS_DataWriterQos::availability

<<***extension***>> *(p. 432)* Availability policy, **AVAILABILITY** (p. 561).

9.41.3.28 publication_name

`struct` **`DDS_EntityNameQosPolicy`** `DDS_DataWriterQos::publication_name`

<<***extension***>> *(p. 432)* EntityName policy, **ENTITY_NAME** (p. 601).

9.41.3.29 topic_query_dispatch

`struct` **`DDS_TopicQueryDispatchQosPolicy`** `DDS_DataWriterQos::topic_query_dispatch`

<<***extension***>> *(p. 432)* Topic Query dispatch policy, **TOPIC_QUERY_DISPATCH** (p. 640).

9.41.3.30 transfer_mode

`struct` **`DDS_DataWriterTransferModeQosPolicy`** `DDS_DataWriterQos::transfer_mode`

<<***extension***>> *(p. 432)* TransferMode policy, **DATA_WRITER_TRANSFER_MODE** (p. 583).

9.41.3.31 type_support

`struct` **`DDS_TypeSupportQosPolicy`** `DDS_DataWriterQos::type_support`

<<***extension***>> *(p. 432)* Type support data, **TYPESUPPORT** (p. 651).

Optional value that is passed to a type plugin's on_endpoint_attached and serialization functions.

9.42 DDS_DataWriterResourceLimitsQosPolicy Struct Reference

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.

9.42.1 Detailed Description

<<***extension***>> *(p. 213)* Various settings that configure how a **DDSDataWriter** (p. 1589) allocates and uses physical memory for internal resources.

DataWriters must allocate internal structures to handle the simultaneously blocking of threads trying to call **FooDataWriter::write** (p. 1951) on the same **DDSDataWriter** (p. 1589), for the storage used to batch small samples, and for content-based filters specified by DataReaders.

Most of these internal structures start at an initial size and, by default, will be grown as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **DDSDataWriter** (p. 1589). By setting the initial size to the maximum size, you will prevent RTI Connext from dynamically allocating any memory after the creation of the **DDSDataWriter** (p. 1589).

This QoS policy is an extension to the DDS standard.

Entity:

DDSDataWriter (p. 1589)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

9.42.2 Member Data Documentation

9.42.2.1 initial_concurrent_blocking_threads

```
DDS_Long DDS_DataWriterResourceLimitsQosPolicy::initial_concurrent_blocking_threads
```

[DEPRECATED] (p. 384) <<***extension***>> *(p. 213)* The initial number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).

This value only applies if **DDS_HistoryQosPolicy** (p. 1162) has its kind set to **DDS_KEEP_ALL_HISTORY_QOS** (p. 604) and **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1298) is > 0.

[default] 1

[range] [1, 10000], <= max_concurrent_blocking_threads

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Concurrency** (p. 258)

9.42.2.2 max_concurrent_blocking_threads

```
DDS_Long DDS_DataWriterResourceLimitsQosPolicy::max_concurrent_blocking_threads
```

[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* The maximum number of threads that are allowed to concurrently block on write call on the same **DDSDataWriter** (p. 1589).

This value only applies if **DDS_HistoryQosPolicy** (p. 1162) has its kind set to **DDS_KEEP_ALL_HISTORY_QOS** (p. 604) and **DDS_ReliabilityQosPolicy::max_blocking_time** (p. 1298) is > 0.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [1, 10000] or **DDS_LENGTH_UNLIMITED** (p. 636), >= initial_concurrent_blocking_threads

Categories

Immutable (p. 333), **Middleware Memory Management** (p. 297), **Concurrency** (p. 258)

9.42.2.3 max_remote_reader_filters

```
DDS_Long DDS_DataWriterResourceLimitsQosPolicy::max_remote_reader_filters
```

<<***extension***>> *(*p. *213)* The maximum number of remote DataReaders for which the **DDSDataWriter** (p. 1589) will perform content-based filtering.

[default] DDS_LENGTH_UNLIMITED (p. 636)

[range] [0, (2^31)-2] or **DDS_LENGTH_UNLIMITED** (p. 636).

0: The **DDSDataWriter** (p. 1589) will not perform filtering for any **DDSDataReader** (p. 1556).

1 to (2^31)-2: The DataWriter will filter for up to the specified number of DataReaders. In addition, the Datawriter will store the result of the filtering per sample per DataReader.

DDS_LENGTH_UNLIMITED (p. 636): The DataWriter will filter for up to (2^31)-2 DataReaders. However, in this case, the DataWriter will not store the filtering result per sample per DataReader. Thus, if a sample is resent (such as due to a loss of reliable communication), the sample will be filtered again.

9.43 DDS_DataWriterShmemRefTransferModeSettings Struct Reference

Settings related to transferring data using shared memory references.

Public Attributes

- **DDS_Boolean enable_data_consistency_check**

  Controls if samples can be checked for consistency.

9.43.1 Detailed Description

Settings related to transferring data using shared memory references.

It is used to configure a **DDSDataWriter** (p. 1589) using **Zero Copy transfer over shared memory** (p. 73).

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

QoS:

DDS_DataWriterTransferModeQosPolicy (p. 927)

9.43.2 Member Data Documentation

9.43.2.1 enable_data_consistency_check

```
DDS_Boolean DDS_DataWriterShmemRefTransferModeSettings::enable_data_consistency_check
```

Controls if samples can be checked for consistency.

When this setting is true, the **DDSDataWriter** (p. 1589) sends an incrementing sequence number as an inline QoS with every sample. This sequence number allows a **DDSDataReader** (p. 1556) to use the **FooDataReader::is_data_consistent** (p. 1943) API to detect if the **DDSDataWriter** (p. 1589) overwrote the sample before the **DDSDataReader** (p. 1556) could complete processing the sample.

[default] DDS_BOOLEAN_TRUE (p. 513)

9.45 DDS_DeadlineQosPolicy Struct Reference

<<***spec***>> *(p. 209)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

Public Attributes

- struct **DDS_Duration_t period**

  <<***basic***>> *(p. 201)* <<***spec***>> *(p. 209) Duration of the deadline period.*

9.45.1 Detailed Description

<<***spec***>> *(p. 209)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

A **DDSDataReader** (p. 1556) expects a new sample updating the value of each instance at least once every `period`. That is, `period` specifies the maximum expected elapsed time between arriving data samples.

A **DDSDataWriter** (p. 1589) indicates that the application commits to write a new value (using the **DDSDataWriter** (p. 1589)) for each instance managed by the **DDSDataWriter** (p. 1589) at least once every `period`.

This QoS can be used during system integration to ensure that applications have been coded to meet design specifications.

It can also be used during runtime to detect when systems are performing outside of design specifications. Receiving applications can take appropriate actions to prevent total system failure when data is not received in time. For topics on which data is not expected to be periodic, `period` should be set to an infinite value.

Entity:

DDSTopic (p. 1885), **DDSDataReader** (p. 1556), **DDSDataWriter** (p. 1589)

Status:

DDS_OFFERED_DEADLINE_MISSED_STATUS (p. 539), **DDS_REQUESTED_DEADLINE_MISSED_STATUS** (p. 540), **DDS_OFFERED_INCOMPATIBLE_QOS_STATUS** (p. 540), **DDS_REQUESTED_INCOMPATIBLE_↩ QOS_STATUS** (p. 540)

Properties:

RxO (p. 556) = YES
Changeable (p. 556) = **YES** (p. 556)

9.45.2 Usage

This policy is useful for cases where a **DDSTopic** (p. 1885) is expected to have each instance updated periodically. On the publishing side this setting establishes a contract that the application must meet. On the subscribing side the setting establishes a minimum requirement for the remote publishers that are expected to supply the data values.

When RTI Connext 'matches' a **DDSDataWriter** (p. 1589) and a **DDSDataReader** (p. 1556) it checks whether the settings are compatible (i.e., *offered deadline* <= *requested deadline*); if they are not, the two entities are informed (via the **DDSListener** (p. 1794) or **DDSCondition** (p. 1544) mechanism) of the incompatibility of the QoS settings and communication will not occur.

Assuming that the reader and writer ends have compatible settings, the fulfilment of this contract is monitored by RTI Connext and the application is informed of any violations by means of the proper **DDSListener** (p. 1794) or **DDSCondition** (p. 1544).

9.45.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered period* <= *requested period* holds.

9.45.4 Consistency

The setting of the **DEADLINE** (p. 583) policy must be set consistently with that of the **TIME_BASED_FILTER** (p. 639).

For these two policies to be consistent the settings must be such that *deadline period* >= *minimum_separation*.

An attempt to set these policies in an inconsistent manner will result in **DDS_RETCODE_INCONSISTENT_POLICY** (p. 533) in **set_qos (abstract)** (p. 1732), or the **DDSEntity** (p. 1731) will not be created.

For a **DDSDataReader** (p. 1556), the **DEADLINE** (p. 583) policy and **DDS_TimeBasedFilterQosPolicy** (p. 1389) may interact such that even though the **DDSDataWriter** (p. 1589) is writing samples fast enough to fulfill its commitment to its own deadline, the **DDSDataReader** (p. 1556) may see violations of its deadline. This happens because RTI Connext will drop any samples received within the **DDS_TimeBasedFilterQosPolicy::minimum_separation** (p. 1391). To avoid triggering the **DDSDataReader** (p. 1556)'s deadline, even though the matched **DDSDataWriter** (p. 1589) is meeting its own deadline, set the two QoS parameters so that:

reader deadline >= *reader minimum_separation + writer deadline*

See **DDS_TimeBasedFilterQosPolicy** (p. 1389) for more information about the interactions between deadlines and time-based filters.

9.46.1 Detailed Description

<<***spec***>> *(p. 209)* Controls how the middleware will deal with data sent by multiple **DDSDataWriter** (p. 1589) entities for the same instance of data (i.e., same **DDSTopic** (p. 1885) and key).

Entity:

DDSTopic (p. 1885), **DDSDataReader** (p. 1556), **DDSDataWriter** (p. 1589)

Status:

DDS_OFFERED_INCOMPATIBLE_QOS_STATUS (p. 540), **DDS_REQUESTED_INCOMPATIBLE_QOS_STATUS** (p. 540)

Properties:

RxO (p. 556) = YES
Changeable (p. 556) = **UNTIL ENABLE** (p. 556)

9.46.2 Usage

When multiple DataWriters send data for the same topic, the order in which data from different DataWriters are received by the applications of different DataReaders may be different. So different DataReaders may not receive the same "last" value when DataWriters stop sending data.

This QoS policy controls how each subscriber resolves the final value of a data instance that is written by multiple **DDSDataWriter** (p. 1589) entities (which may be associated with different **DDSPublisher** (p. 1818) entities) running on different nodes.

This QoS can be used to create systems that have the property of "eventual consistency." Thus intermediate states across multiple applications may be inconsistent, but when DataWriters stop sending changes to the same topic, all applications will end up having the same state.

This QoS policy can be set for both DataWriters and DataReaders.

For the DataReader:

The default setting, **DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), indicates that (assuming the **OWNERSHIP_STRENGTH** (p. 613) policy allows it) the latest received value for the instance should be the one whose value is kept. That is, data will be delivered by a **DDSDataReader** (p. 1556) in the order in which it was *received* (which may lead to inconsistent final values).

For **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), if the scope is set to **DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS** (p. 586) (default), within each instance, the sample's source timestamp shall be used to determine the most recent information. This is the only setting that, in the case of concurrent same-strength DataWriters updating the same instance, ensures that all DataReaders end up with the same final value for the instance. If a DataReader receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped. The SAMPLE_REJECTED status or the SAMPLE_LOST status will not be updated.

If scope is set to **DDS_TOPIC_SCOPE_DESTINATIONORDER_QOS** (p. 586), the ordering is enforced per topic across all instances.

In addition, a DataReader will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than source_timestamp_tolerance. Otherwise, the DDS sample is dropped. The SAMPLE_REJECTED status or the SAMPLE_LOST status will not be updated.

For the DataWriter:

For the default setting, **DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), the DataWriter will not enforce source timestamp ordering when writing samples using the **FooDataWriter::write_w_params** (p. 1956) or **FooDataWriter::write_w_timestamp** (p. 1955) API. The source timestamp of a new sample can be older than the source timestamp of the previous samples.

When using **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), If scope is set to **DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS** (p. 586) (default), when writing a sample, the sample's timestamp must not be older than the timestamp of the previously written DDS sample for the same instance. If, however, the timestamp is older than the timestamp of the previously written DDS sample—but the difference is less than the source_timestamp_tolerance—the DDS sample will use the previously written DDS sample's timestamp as its timestamp. Otherwise, if the difference is greater than the tolerance, the write will fail with retcode **DDS_RETCODE_BAD_PARAMETER** (p. 532).

If scope is set to **DDS_TOPIC_SCOPE_DESTINATIONORDER_QOS** (p. 586), a new sample timestamp must not be older than the timestamp of the previously written DDS sample, across all instances. (The ordering is enforced across all instances.)

9.46.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered kind >= requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of **DDS_DestinationOrderQosPolicy::kind** (p. 933) are considered ordered such that **DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585) < **DDS_BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS** (p. 585)

9.46.4 Member Data Documentation

9.46.4.1 kind

DDS_DestinationOrderQosPolicyKind DDS_DestinationOrderQosPolicy::kind

<<***basic***>> *(*p. *201)* <<***spec***>> *(*p. *209)* Specifies the desired kind of destination order.

[default] DDS_BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS (p. 585),

Categories

Immutable (p. 333), **Matching** (p. 382), **Discovery Metadata** (p. 377), **Applied Per-Instance** (p. 375), **Sample Ordering** (p. 324)

9.46.4.2 scope

DDS_DestinationOrderQosPolicyScopeKind DDS_DestinationOrderQosPolicy::scope

<<***spec***>> *(*p. *209)* Specifies the desired scope of the source destination order.

Indicates if tolerance check and the current sample's timestamp is computed based on instance or topic basis.
[default] DDS_INSTANCE_SCOPE_DESTINATIONORDER_QOS (p. 586)

Categories

Immutable (p. 333), **Applied Per-Instance** (p. 375), **Sample Ordering** (p. 324)

9.46.4.3 source_timestamp_tolerance

struct **DDS_Duration_t** DDS_DestinationOrderQosPolicy::source_timestamp_tolerance

<<***extension***>> *(*p. *213)* Allowed tolerance between source timestamps of consecutive samples.

When a **DDSDataWriter** (p. 1589) sets **DDS_DestinationOrderQosPolicyKind** (p. 585) to **DDS_BY_SOURCE_↩ TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), when writing a sample, its timestamp must not be less than the timestamp of the previously written sample. However, if it is less than the timestamp of the previously written sample but the difference is less than this tolerance, the sample will use the previously written sample's timestamp as its timestamp. Otherwise, if the difference is greater than this tolerance, the write will fail.

When a **DDSDataReader** (p. 1556) sets **DDS_DestinationOrderQosPolicyKind** (p. 585) to **DDS_BY_SOURCE_↩ TIMESTAMP_DESTINATIONORDER_QOS** (p. 585), the **DDSDataReader** (p. 1556) will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than this tolerance. Otherwise, the sample is dropped.

[default] 100 milliseconds for **DDSDataWriter** (p. 1589), 30 seconds for **DDSDataReader** (p. 1556)

Categories

Immutable (p. 333), **Applied Per-Instance** (p. 375), **Sample Ordering** (p. 324)

9.47.1 Detailed Description

Settings for discovery configuration.

*<<**extension**>> (p. 213)* This QoS policy controls the amount of delay in discovering entities in the system and the amount of discovery traffic in the network.

The amount of network traffic required by the discovery process can vary widely, based on how your application has chosen to configure the middleware's network addressing (e.g., unicast vs. multicast, multicast TTL, etc.), the size of the system, whether all applications are started at the same time or whether start times are staggered, and other factors. Your application can use this policy to make tradeoffs between discovery completion time and network bandwidth utilization. In addition, you can introduce random back-off periods into the discovery process to decrease the probability of network contention when many applications start simultaneously.

Entity:

DDSDomainParticipant (p. 1619)

Properties:

RxO (p. 556) = N/A
Changeable (p. 556) = **NO** (p. 556)

9.47.2 Member Data Documentation

9.47.2.1 participant_liveliness_lease_duration

`struct` **`DDS_Duration_t`** `DDS_DiscoveryConfigQosPolicy::participant_liveliness_lease_duration`

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The liveliness lease duration for the participant.

This is the same as the expiration time of the DomainParticipant as defined in the RTPS protocol.

If the participant has not refreshed its own liveliness to other participants at least once within this period, it may be considered as stale by other participants in the network.

Should be strictly greater than **DDS_DiscoveryConfigQosPolicy::participant_liveliness_assert_period** (p. 937).

[default] 100 seconds

[range] [1 nanosec,1 year], > participant_liveliness_assert_period

Categories

Immutable (p. 333), **Discovery** (p. 271), **Liveliness** (p. 292), **Discovery Metadata** (p. 377)

9.47.2.2 participant_liveliness_assert_period

`struct` **`DDS_Duration_t`** `DDS_DiscoveryConfigQosPolicy::participant_liveliness_assert_period`

<<***basic***>> *(p. 201)* <<***extension***>> *(p. 213)* The period to assert liveliness for the participant.

The period at which the participant will refresh its liveliness to all the peers.

Should be strictly less than **DDS_DiscoveryConfigQosPolicy::participant_liveliness_lease_duration** (p. 937).

[default] 30 seconds

[range] [1 nanosec,1 year], < participant_liveliness_lease_duration

Categories

Immutable (p. 333), **Discovery** (p. 271), **Liveliness** (p. 292)

9.47.2.3 participant_announcement_period

`struct` **`DDS_Duration_t`** `DDS_DiscoveryConfigQosPolicy::participant_announcement_period`

*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).

The **DDS_DiscoveryQosPolicy::initial_peers** (p. 962) list **DDSDomainParticipant::add_peer** (p. 1678) API are used to configure a set of potential peers that a DomainParticipant may discover. The **DDS_DiscoveryConfigQosPolicy::participant_announcement_period** (p. 937) configures how frequently a DomainParticipant will announce itself to the subset of the configured potential peers that it has not matched with yet. Once a DomainParticipant matches with a DomainParticipant at one of configured potential peer locators, it will no longer announce itself to that locator at this period unless liveliness is lost.

This QoS policy is only supported when using the Simple Participant Discovery Protocol 2.0 (SPDP2). Setting this value when using the Simple Participant Discovery Protocol (SPDP) or other participant discovery protocols is not supported and will result in an error.

[default] DDS_DURATION_AUTO (p. 523) (Takes the value of **DDS_DiscoveryConfigQosPolicy::participant_liveliness_assert_period** (p. 937))

[range] [1 nanosec,1 year]

Categories

Immutable (p. 333), **Discovery** (p. 271)

9.47.2.4 remote_participant_purge_kind

`DDS_RemoteParticipantPurgeKind` `DDS_DiscoveryConfigQosPolicy::remote_participant_purge_kind`

[DEPRECATED] (p. 384) *<<**extension**>> (p. 213)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.

Most users will not need to change this value from its default, **DDS_LIVELINESS_BASED_REMOTE_PARTICIPANT_PURGE** (p. 593). However, **DDS_NO_REMOTE_PARTICIPANT_PURGE** (p. 594) may be a good choice if the following conditions apply:

1. Discovery communication with a remote participant may be lost while data communication remains intact. Such will not typically be the case if discovery takes place over the Simple Discovery Protocol, but may be the case if the RTI Enterprise Discovery Service is used.
2. Extensive and prolonged lack of discovery communication between participants is not expected to be common, either because participant loss itself is expected to be rare, or because participants may be lost sporadically but will typically return again.
3. Maintaining inter-participant liveliness is problematic, perhaps because a participant has no writers with the appropriate **DDS_LivelinessQosPolicyKind** (p. 607).

[default] DDS_LIVELINESS_BASED_REMOTE_PARTICIPANT_PURGE (p. 593)

Categories

Immutable (p. 333), **Discovery** (p. 271), **Liveliness** (p. 292)

9.47.2.5 max_liveliness_loss_detection_period

```
struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::max_liveliness_loss_detection_period
```

[DEPRECATED] (p. **384)** <<***extension***>> *(*p. *213)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.

Notification of the loss of liveliness of a remote entity may come more quickly than this duration, depending on the liveliness contract between the local and remote entities and the capabilities of the discovery mechanism in use. For example, a **DDSDataReader** (p. 1556) will learn of the loss of liveliness of a matched **DDSDataWriter** (p. 1589) within the reader's offered liveliness lease duration.

Shortening this duration will increase the responsiveness of entities to communication failures. However, it will also increase the CPU usage of the application, as the liveliness of remote entities will be examined more frequently.

[default] 60 seconds

[range] [1 nanosec, 1 year]

Categories

Immutable (p. 333), **Discovery** (p. 271), **Liveliness** (p. 292)

9.47.2.6 initial_participant_announcements

```
DDS_Long DDS_DiscoveryConfigQosPolicy::initial_participant_announcements
```

<<***basic***>> *(*p. *201)* <<***extension***>> *(*p. *213)* The number of initial announcements sent when a participant is first enabled.

[default] 5

[range] [1,1 million]

Categories

Immutable (p. 333), **Discovery** (p. 271)

9.47.2.7 new_remote_participant_announcements

`DDS_Long DDS_DiscoveryConfigQosPolicy::new_remote_participant_announcements`

*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The number of participant announcements sent when a remote participant is newly discovered.

These announcements are only sent to the newly discovered remote participant, they are not also broadcast to the initial_peers list.

[default] 2

[range] [0,1 million]

Categories

Immutable (p. 333), **Discovery** (p. 271)

9.47.2.8 min_initial_participant_announcement_period

`struct DDS_Duration_t DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period`

*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between this and **DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period** (p. 940) is introduced in between initial announcements when a new remote participant is discovered.

The setting of **DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period** (p. 940) must be consistent with **DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period** (p. 940). For these two values to be consistent, they must verify that:

DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period (p. 940) <= **DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period** (p. 940).

[default] 10 milliseconds

[range] [1 nanosec,1 year]

Categories

Immutable (p. 333), **Discovery** (p. 271)

9.47.2.9 max_initial_participant_announcement_period

`struct` **`DDS_Duration_t`** `DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period`

*<<**basic**>> (p. 201) <<**extension**>> (p. 213)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between **DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period** (p. 940) and this is introduced in between initial announcements when a new remote participant is discovered.

The setting of **DDS_DiscoveryConfigQosPolicy::max_initial_participant_announcement_period** (p. 940) must be consistent with **DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period** (p. 940). For these two values to be consistent, they must verify that:

DDS_DiscoveryConfigQosPolicy::min_initial_participant_announcement_period (p. 940) <= **DDS_Discovery↩ ConfigQosPolicy::max_initial_participant_announcement_period** (p. 940).

[default] 1 second

[range] [1 nanosec,1 year]
